CHAPTER 101 MORTGAGES, DEEDS OF TRUSTS AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions § 101.03

AUTHOR: Professor Jerome J. Curtis, Jr. McGeorge School of Law University of the Pacific

§ 101.03 Termination of Mortgages.

§ 101.03(a) Termination of Mortgage by Reconveyance or Release.

Mortgages can be terminated in a number of ways. The most obvious method is by the voluntary act of the secured party, usually by reconveyance and release on payment of the debt. In title theory states and under deeds of trusts, where theoretically a legal title is transferred when the security is given, a deed of reconveyance is an appropriate device to terminate the security interest, n279 although any written and delivered instrument manifesting the intent to renounce the mortgage should suffice. n280 In lien theory jurisdictions, mortgage liens may be terminated by release. n281 A release on the margin of the recorded copy of a mortgage or a deed of trust may suffice to terminate a security interest in land. n282

A reconveyance is a written instrument, delivered to the mortgagor or his successor, transferring the legal title of a mortgagee or trustee. n283 It must satisfy the usual requirements for deeds in that it must name a grantor and grantee, describe the realty, and manifest the intent to transfer the interest of the mortgagee or trustee. In California, and perhaps elsewhere, it is customary to reconvey to "the person or persons legally entitled thereto" rather than reconvey to specific grantees by name in order to avoid conducting title examinations to identify and designate as grantees all those with interests of record in the property.

A release can take the form of a separate writing whereby the mortgagee renounces all interest in the property or indicates that the debt is satisfied. n284 It may also take the form of notation in the margin of the copy of the security instrument in the official records. n285 The notation should be signed by the mortgagee or duly authorized agent in the presence of the custodian of the official records. n286

Mortgages and deeds of trust may be terminated without a reconveyance or release, but, until a reconveyance or release is recorded, title will be unmarketable.

§ 101.03(b) Wrongful Release of Deed of Trust.

The title of a trustee under a deed of trust puts the trustee in a position to release the security via a deed of reconveyance or release. Occasions can arise in which the trustee, in good faith or otherwise, reconveys in violation of the terms of the security agreement. While such wrongful conduct will render the trustee liable to the secured party, courts are not in agreement about the efficacy of the reconveyance with respect to the rights of purchasers and encumbrancers after the wrongful reconveyance.

Certainly, subsequent purchasers and encumbrancers who have knowledge of the wrongful reconveyance or who do not part with value take their interests subject to the equitable right of the beneficiary under the wrongfully terminated deed of trust to set aside the reconveyance. Unless the later purchasers or encumbrancers qualify as bona fide purchasers or encumbrancers for value, it makes little difference whether the wrongful reconveyance is deemed void or voidable, for in either case the equitable right of the beneficiary is superior. Thus, if a trustee reconveys without authorization to do so and the lack of authority is known to a subsequent mortgagee, the mortgagee takes subject to the right of the beneficiary to have the reconveyance vitiated.

However, it has sometimes been held that a reconveyance by a trustee without authority is utterly void. Under this reasoning, a reconveyance made while the debt was outstanding and without the consent of the beneficiary was set aside even as against a subsequent bona fide purchaser or encumbrancer. n287 Yet, courts are divided about the proper characterization of an unauthorized reconveyance by a trustee. Many hold the reconveyance merely voidable, and thus unassailable, after a transfer to a bona fide purchaser or encumbrancer. n288

Trustees are personally liable to beneficiaries under deeds of trusts for damages occasioned by the loss of security resulting from a wrongful reconveyance. n289

§ 101.03(c) Termination by Payment.

Under the rubric that there can be no mortgage without a debt, an accepted payment of the debt automatically terminates a mortgage in lien theory jurisdictions. n290 This cannot be said of all payments under deeds of trust or under mortgages in title theory states. While timely payment extinguishes the mortgage in title theory states, because the condition subsequent which qualified the mortgagee's title has occurred, i.e., payment at or before maturity, n291 acceptance by the mortgagee of a delinquent payment in these states does not terminate the mortgagee's title, which becomes legally absolute upon default. n292

> [I]t is well settled in this State, that upon payment *after* condition broken, the *legal* estate remains in the mortgage, until it is released, so that the mortgager [sic] cannot maintain a writ of entry against him ... n293

In lien theory states, payment, whether timely or not, discharges the lien *ipso facto*:

> The mortgage being a mere security for a debt, it must follow that the payment of the debt, whether before or after default, will operate as an extinguishment of the mortgage. n294

With respect to deeds of trust, the effect of payment upon the trustee's powers, as opposed the right, to conduct a foreclosure sale is problematical. It has been stated that the deed of trust is extinguished by payment, n295 and even that a subsequent purchase by an innocent purchaser at a foreclosure is void. n296 In any event, it would seem that the trustee is bound to reconvey to the trustor upon payment and may be liable for damages flowing from a refusal to reconvey. n297

To have the effect of terminating the mortgage, the payment must be made to a party entitled to it. Under the law of negotiable instruments, when an instrument is held by a holder in due course, payment made to anyone else is ineffective. Thus, if a mortgagee has negotiated a mortgage note to a holder in due course, subsequent payment of the note to the mortgagee will not terminate the mortgage, because the holder in due course was the only party to whom proper payment could be made. It is immaterial that the holder in due course did not cause notice of the transfer to be recorded in the land records or that the mortgagor was unaware of the negotiation. The debtor is entitled to production of the negotiable instrument upon tendering payment, regardless of whether the payment is periodic or final. Not having insisted upon production of the instrument, the debtor takes the risk that the mortgagee has negotiated the note to a holder in due course who, in most states, is entitled to enforce the mortgage as well as the note. n298 When the evidence of indebtedness is not held by a holder in due course or is not negotiable, the common law rule would give the mortgagor the benefit of payments made to the mortgagee until the assignee of the obligation notified the mortgagor of the transfer. n299

Although accepted payment may terminate a mortgage, the mortgagor's title is clouded by any unreleased recorded mortgage. If the secured party refuses to execute the necessary instrument to remove the cloud, an action may be commenced to compel the release. n300 A refusal of the secured party to deliver the required instrument gives rise to a claim for damages. n301

§ 101.03(d) Termination by Tender.

A timely, but rejected, tender of the debt discharges a mortgage while leaving the debt itself enforceable as an unsecured obligation. n302 In title theory states, the timely tender is the occurrence of the condition which determines the title of the mortgagee. n303 Most lien theory states seem to reach the same result in the apparent belief that the improper rejection should forfeit the lien. n304 Seemingly at variance with cases permitting a trustee's sale after the debt is time-barred, n305 it has been held that a rejected tender terminates a power of sale under deed of trust. n306

Tenders which are not timely are treated differently in title and lien theory states. Title theory states reason that a late tender has no effect on the mortgage, since the condition divesting the mortgagee's title can only occur at or before maturity, n307 although equity may enjoin foreclosure in such circumstances. n308 Since mortgagees do not hold title in lien theory states, most lien theory states treat late and timely tenders alike. n309 Rejections of tenders made before they are payable have no effect on the security interest, since mortgagees are entitled to interest as agreed. n310

Mortgagors may not be significantly advantaged by the termination of their mortgages upon improper rejections of tenders. Foreclosure may be barred because of the rejection, but the underlying debt remains collectable. n311 However, the rejection will preclude collection of interest, costs, and attorney fees accruing thereafter. n312 Courts will not remove the cloud on the mortgagor's title represented by the discharged mortgage merely as a result of the improper rejection, because equity requires actual payment before it will compel termination; however, such relief may be available if the tender is kept good. If the debtor desires judicial assistance in clearing the title or in recovering

possession from a mortgagee in possession, the debtor must pay the debt. n313

To have the effect of terminating a mortgage or deed of trust, a tender must be correct, unconditional and unambiguous. n314 To be correct, the tender must be in the medium and amount due and made to the creditor by one entitled to make the tender. n315 Further, the party making the tender must have the present ability to perform forthwith. n316 Although a tender must be unconditional, the mortgagor or trustor may be entitled to demand surrender of the evidence of indebtedness, together with a release of the security. n317 In some states, however, the party receiving payment may not be obliged to release the security for a period of time after payment. n318 Except where authorized by state statute or the federal bankruptcy laws, a tender merely of arrears made after an acceleration of the entire balance of the mortgage debt is not a correct tender. n319

A stranger is not entitled to redeem a mortgage by making an officious tender. It would seem that anyone with an interest in the property that would be affected by foreclosure should be entitled to the benefit of a rejected tender. n320

Tender must be made to the creditor or one authorized by the creditor to receive payment. n321 It has been held that a trustee under a deed of trust does not have, merely by virtue of the office, authority to receive payment on behalf of a beneficiary. n322

A tender must be kept good, according to the majority of jurisdictions, if it is to have any impact on the security. n323 Even where the tender need not be maintained to effect a discharge, interest will continue to accrue unless the tender is kept good. n324 Some courts, in dealing with this issue, distinguish between timely and delinquent tenders, requiring that the tender be maintained only for delinquent tenders. n325

Where the mortgagor is indebted to the mortgagee on several obligations, the mortgagor is entitled to designate the debt to which a tender is to be applied. However, if the debtor omits to designate the account to which a payment is to be credited, the creditor may make the selection. n326

Where a mortgage debt is payable in installments, a rejected tender of one installment may render the claim to that installment unsecured, but it will not affect the security for future installments. n327

§ 101.03(e) Termination by Merger.

In accord with the principle that, when two or more interests in land vest in common ownership, the interests shall unite to form a single interest, it would seem that a mortgagee who acquires the mortgagor's interest should be deemed to have one interest rather than to hold separately the mortgage and the equity of redemption. n328 Similarly, a release of a mortgage to a mortgagor should effect a merger. n329 In most states a merger is presumed when both a mortgage and the equity come into common ownership. n330 Yet, because circumstances can arise in which merger would produce unintended and unjust results, the presumption is rebuttable.

Probably the best illustration of a case in which merger would produce an unfair result is that of a first mortgagee accepting a deed in lieu of foreclosure while a junior mortgage is outstanding. In such a case, were merger applied, the first mortgagee would be deemed an owner subject to one mortgage which was formerly a second mortgage. If the value of the land were less than the sum of the debts secured by both mortgages, merging the first with the equity and thereby elevating the junior to a senior position would unjustly enrich the junior who, without any change of position, would

acquire a first mortgage. To avoid this unjust result, courts traditionally refuse merger when doing so would adversely affect the party holding the successive interests. In the above example, therefore, the first mortgagee, after accepting the "in lieu deed," holds two distinct interests; the equity of redemption and the first mortgage, which do not merge. n331 In reaching this result, courts often acknowledge that the parties did not intend a merger, but even where parties gave no thought to the issue, and where they clearly contemplated terminating the senior mortgage, the tendency is to find no merger. n332 In effect, the court presumes an intention in accord with the interests of the party holding the several interests.

A related question is the effect on the underlying debt of a transfer of the equity to a mortgage. Normally, the acquisition of the equity by a mortgagee purchasing at the mortgagee's own foreclosure has no impact on the debt other than to reduce it by the net proceeds of the foreclosure sale, unless an anti-deficiency or fair value statute is applicable. n333 Where the equity is acquired by deed in lieu of foreclosure, it is likely the parties will have agreed about the impact of the transfer on the debt, usually stipulating that the debt is discharged. n334 However, there is always the risk that a court will characterize the "in lieu deed" as an equitable mortgage. n335 The results are not so straightforward where the mortgagee acquiring the equity held several encumbrances on the property. Where a mortgagee acquires the equity burdened by a prior encumbrance securing another debt held by the same mortgagee, that other debt should be discharged. This follows from the fact that the mortgagee is taking subject to the senior encumbrance so that the land is the primary fund while the mortgagor becomes a surety. A mortgagee with a first and second mortgage, who purchases the property at a foreclosure of the junior mortgage, will be presumed to have taken the amount of debt secured by the senior mortgage into consideration in bidding at the sale and to have taken subject to the first mortgage, with the result that the debt secured by the senior mortgage is discharged. Had the mortgagee purchased at the foreclosure of the senior mortgage, there would have been no impact on the debt secured by the junior mortgage, because purchasers do not take subject to junior encumbrances. n336

§ 101.03(f) Termination Under Statutes of Limitation.

Statutes of limitations can significantly affect the respective rights of mortgagors and mortgagees, but the statutes governing claims on the debt must be distinguished from those governing claims against the security. n337 Although the debt may be rendered unenforceable because a limitation period has run, it is possible that the mortgagee might nevertheless be entitled to foreclose the mortgage or succeed in ejectment. n338

Theoretically, in lien theory states there should be no right to proceed against the security once the debt is unenforceable, since the mortgage lien is dependent on the debt. n339 In practice, though, lien theory states do not always follow the theory to its logical conclusion. Nevertheless, the interplay between the theory of mortgages espoused in a particular jurisdiction and the effect of the running of the limitation period on the debt is not insignificant.

Title theory states generally hold that statutes of limitation governing contract actions are immaterial in determining the right of mortgagees to proceed against the security. Having gotten legal title to a possessory estate upon the making of the mortgage, mortgagees in these states have an interest in the realty that will be unaffected by the running of the statute on the debt. Rather, unless the mortgagors have conducted themselves in such a way as to extinguish their mortgagees' claims by adverse possession, the mortgagees may foreclose or, where permitted, eject the mortgagors. n340 It has been held that a mortgagor in possession after a default does not hold adversely unless the mortgagor takes possession without the consent of the mortgagee or successfully resists attempts by the mortgagee to take possession. n341

Trustees under deeds of trust also hold a legal title, and, it has been held, this title may survive the running of the statute of limitations on the debt even though, under local law, mortgages would create only liens which would not survive the running of the statute. n342 Since a trust continues until its purposes are fulfilled, there is no limitation period governing the exercise of the trustee's powers, including the power of sale.

Upon a showing of prejudice by reason of the delay in foreclosing, courts in title theory jurisdictions may estop a mortgagee from going against the security. n343 Also, if the debt has been in default long enough to raise a presumption that it has been paid, foreclosure may not be allowed in title theory states. n344

Lien theory states are in disarray on the question of the impact of the running of the statute of limitations on the debt upon the mortgagee's remedies against the security. In theory, it would seem that they would hold that, once the debt is time-barred, so too is the recourse against the property, but most of them appear to handle the matter as though they were title theory states. n345 They reason that the remedies on the debt are separate from those against the security. n346 Other lien theory states, recognizing that a mortgage is merely security, conclude that the security cannot be realized once the debt is unenforceable. n347 California, a lien theory state, while precluding foreclosure of a mortgage once the debt is time-barred, does allow trustee sales thereafter on the ground that trustees hold title. n348 In contrast, with the refusal to grant mortgagors affirmative relief upon a rejected tender of payment, n349 lien theory states which deny recourse against the security after the debt is time-barred do authorize judicial action to remove the cloud on the title represented by the unenforceable mortgage. n350

Non-claim statutes barring claims of creditors against a decedent's estate have been held inapplicable to foreclosure actions. n351

A debtor may revive a mortgage debt after it has become time-barred. An acknowledgment of the debt will start the statute of limitations running anew and, when the debt was formerly secured by a mortgage, will revive the mortgage as well. n352 Similarly, an acknowledgment of the debt while the limitation period is running serves to establish a new starting point under the statute and thus to extend the time for both the debt and the mortgage. n353

Interesting questions can arise about the effect of a revival or extension by a predecessor upon subsequent grantees or encumbrancers. If a debt and mortgage have been rendered unenforceable under the statute of limitations by the time of the subsequent transfer or encumbrance, the action of the mortgagor will not revive the mortgage against the subsequent transferee or encumbrancer though it will suffice to revive the debt against the mortgagor. n354 If an effective revival or extension of the debt and mortgage preceded the transfer or encumbrance, the transferee or encumbrancer should take subject to the mortgage, although that transferee or encumbrancer will have no personal liability on the revived debt without assuming it. n355 However, if the property is transferred or encumbered while the statute is running on the debt, and before an extension is given, courts are in disagreement about the impact on the transferee or encumbrancer. Most would probably decide in favor of the mortgagee, believing that, because the debt was enforceable at the time of the later transfer or encumbrance, the transferee or encumbrancer took subject to the power of the mortgagor to extend the mortgage. n356 Others conclude that the transferee or encumbrancer is not bound by intervening extensions so long as the mortgagee is notified of the transfer or encumbrance before the extension. Under this latter view, it has been held that recordation of the transfer or encumbrance constitutes notice to the mortgagee. n357

Successors in interest to mortgagors may, by their own acts, extend or revive debts and the mortgages securing them. Assumptions by grantees, whether before or after the statute has run, normally extend or revive the debt assumed and the security interest. n358 A transfer to a non-assuming grantee, however, should only extend or revive the mortgage and will not subject the grantee to personal liability. n359

CHAPTER 101 MORTGAGES, DEEDS OF TRUSTS AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions § 101.04

AUTHOR: Professor Jerome J. Curtis, Jr. McGeorge School of Law University of the Pacific

§ 101.04 Foreclosure.

§ 101.04(a) Strict Foreclosure.

At common law the mortgagee's legal title became absolute upon default, since thereafter the condition of timely payment, upon which the mortgagor was entitled to re-enter or the mortgagee was bound to reconvey, could not occur. The mortgagor's equity of redemption, however, survived the default, and the chancellor permitted the mortgagor to redeem so long as laches or some other equitable defense was not established. As a consequence, the mortgagee's legal title was subject to destruction at any time the chancellor should permit redemption and, hence, unmarketable. To remove the cloud on the mortgagee's title, a proceeding in equity could be instituted seeking the setting of a time certain within which the mortgagor could redeem; the right would be lost if not exercised within the time allotted. n360 The procedure was known as strict foreclosure and, once the allowed period expired, the mortgagee's title was good both at law and in equity.

Strict foreclosure is seldom permitted in the United States, where it is thought it too often unjustly enriches mortgagees by allowing them to acquire land worth much more than the balance of the secured obligation. n361 Foreclosure by public sale is the preferred foreclosure method because it allows the value of the property to be tested by auction and requires that any sale surplus be distributed to mortgagors or others whose interests are extinguished by the foreclosure. In a few states, though, strict foreclosure remains a generally accepted foreclosure device, n362 and many states permit it at the behest of a purchaser at a prior foreclosure from which a necessary party was omitted. n363 Thus, if a junior lienor was not made a party to the earlier foreclosure, the purchaser at that foreclosure will not be compelled to foreclosure against the omitted junior by sale but may foreclose strictly. Kansas seems to allow strict foreclosure at the discretion of the court. n364 Strict foreclosure may be denied where a junior encumbrancer was intentionally omitted from a foreclosure. n365 Where a mortgagor or mortgagor's successor has been omitted, though, the preference for foreclosure by sale is so strong that strict foreclosure is generally unavailable. n366 Some states recognize strict foreclosure as a remedy of sellers under installment land contracts after breach by buyers. n367

A deficiency judgment may be available in a strict foreclosure proceeding to the extent that the value of interest foreclosed is less than the amount owing on the debt. n368

Where the value of the interest strictly foreclosed exceeds the amount of the debt, the mortgagor or successor may sometimes be entitled to any profit realized by the mortgagee on a later sale of the property. n369

§ 101.04(b) Judicial Foreclosure.

Foreclosure through a judicially supervised sale is a lawful method of foreclosure in every state, and it is the only sanctioned method in about half of the states. n370 By a judicial foreclosure, the mortgagee seeks a determination of the amount of the indebtedness due and an order for the sale of the security at public auction. Though statutes usually prescribe the procedure to be followed in judicial foreclosures, the sale is normally conducted by an officer of the court, usually the sheriff, or a master or referee appointed for the purpose by the court. n371 In most states the sale is subject to court confirmation, which must be obtained for title to pass to the purchaser at the sale. n372 If court confirmation is not required by statute, it can be required by the order authorizing the sale. n373 Foreclosing lienors wanting to bid at their own foreclosures should consider the consequences of full credit bids under local law, for by purchasing for the full amount of the debt they may be barred from asserting that the property was worth less than the debt and, as a result, be precluded from seeking a deficiency judgment. n374

As a species of equitable relief, foreclosure is not a matter of right, and the court is to consider the equities in determining whether to decree foreclosure. n375 Accordingly, foreclosure has been denied where a mortgagee failed to comply with regulations under the Agricultural Credit Act n376 regarding restructure rights of the mortgagor n377 and also where a mortgagee accelerated the balance of the debt when the mortgagor made a periodic payment during a grace period. n378

A claim on the debt may be joined with the foreclosure action. n379 When a claim on the debt is joined in the foreclosure action, the mortgagee is entitled to a personal judgment against the mortgagor for any deficiency between the balance on the debt and the proceeds of the foreclosure sale unless restricted by statute n380 or equitable considerations. Even a mortgagee who purchases at the foreclosure sale and who thus sets the sale price may be entitled to a deficiency. n381 Except in states with on statutes, mortgagees may split their claims on the debt and under the mortgage. n382 In states with on statutes, a failure to join all claims in a single proceeding may work the forfeiture of the omitted claims. n383

The proceeds of the sale are applied first to the expenses of sale and then to the obligation. Mortgagees senior to the mortgage foreclosed are not entitled to share in the surplus because their interests are not affected by the foreclosure. n384

Those who owned junior interests that were "sold out" at the foreclosure are entitled to share in any surplus in accord with the relative priorities. n385

§ 101.04(b)(1) Necessary Parties to Judicial Foreclosure.

A judicial foreclosure is designed to transfer to the sale purchaser whatever title the mortgagor held at the time the mortgage was given. n386 Mortgagees bargain for the right, upon default, to sell via foreclosure that interest on the faith

of which they extended credit. If foreclosure purchasers were to buy subject to subsequent charges, that faith would prove false. Upon a proper foreclosure, therefore, the purchaser takes title free of subsequent encumbrances. n387 Yet, before a judicial foreclosure can cut off junior interests, the owners of those interests are entitled to their day in court. Because of the pervasive involvement of the courts in judicial foreclosures, common law and constitutional concepts of procedural due process dictate that the owners of junior interests be made parties to the proceedings if their interests are to be affected by the proceedings. n388 The interest of any junior encumbrancer omitted from the foreclosure action is not affected by the action, n389 and a foreclosure sale, even if confirmed by the court, will not affect the interest, so the purchaser takes subject to the omitted interest. n390

Mortgagors or their successors are also entitled to procedural due process so that, if they are not made parties to the foreclosure action, and given notice and an opportunity to defend, n391 their interests survive the foreclosure. n392 However, mortgagors who have transferred all their interest need not be joined. n393

Because of the common law doctrine of lis pendens, those who acquire interests in the property after a foreclosure action has been commenced are not necessary parties although, in many states, this is true only as to interests acquired after a notice of lis pendens has been placed in the land records. The lis pendens doctrine subjects all interests acquired after a suit has begun to the outcome of the litigation. The harshness of the common law doctrine, which operates against subsequent takers even though they are unaware of the litigation and have no means of discovering it, has led to the enactment of statutes requiring the recordation of a notice of lis pendens in the land records if subsequent takers are to be subjected to the doctrine. n394 Thus, once the action has begun and, where necessary, a notice of lis pendens has been recorded, later takers will be subject to the result of the litigation whether or not made parties, and foreclosing mortgagees need not be concerned about locating and making them parties to the action. n395

Owners of interests created before the mortgage being foreclosed was given are not necessary parties because a foreclosure will have no impact on their interests. Nevertheless, senior interests may be extinguished under the recording statutes as a result of a completed foreclosure. n396 The recording acts often operate to destroy prior interests which are not evidenced in the land records in favor of subsequent purchasers and encumbrancers. The purchaser at the foreclosure sale, at least if not the foreclosing mortgagee, may qualify as a subsequent purchaser and thus prevail over prior interests not evidenced in the land records. Except in states with pure race recording statutes, actual knowledge of the unrecorded interest will deny the purchaser protection, n397 and often inquiry notice will have the same effect.

Mortgagees purchasing at their own foreclosures may qualify as bona fide purchasers for value under the recording statutes. Some recording statutes n398 provide simply that unrecorded interests may be void with respect to subsequent judgments, and under this type of statute it would seem that mortgagees are entitled to the benefit of the judgments directing or confirming the sale. Moreover, recording statutes that merely protect subsequent bona fide purchasers for value, without any explicit provisions for judgments, have been interpreted as covering foreclosing mortgagees. n399 In California, a state where actual notice normally precludes priority under the recording statute, even mortgagees purchasing with actual knowledge of unrecorded interests are extended the protection of the recording statute. n400

Persons who would otherwise be necessary parties, but whose interests do not appear of record when a foreclosure action is commenced, may be omitted from the proceedings. n401 Thus, it would seem that foreclosing mortgagees do not have to conduct title examinations to discover junior interests under instruments recorded after commencement of the foreclosure action. The interests of such individuals are extinguished to the same extent as if they had been joined, provided that the purchaser at the foreclosure sale qualifies as a protected person under the recording act. n402

§ 101.04(b)(2) Rights of Mortgagor or Successor Omitted from Judicial Foreclosure.

Mortgagors and their successors who are not joined in a judicial action are not affected by any judgment or sale resulting from the proceedings. n403 Because purchasers at foreclosure sales acquire only the estate of the mortgagor at the time the mortgage was given, those owning interests which antedate the mortgage will not be affected by the foreclosure and are therefore not necessary parties. n404 When a mortgagor or successor has been omitted, the foreclosure purchaser takes title subject to the redemption interest of the omitted mortgagor or successor. n405 The omitted mortgagor or successor is entitled to redeem by paying the purchaser a sum equal to the amount of the debt secured at the foreclosure regardless of whether the purchaser paid a greater or a lesser sum. Before foreclosure, the mortgagor or successor could have redeemed for this amount and, since the mortgagor or successor is not affected by the proceedings, may still do so. Upon redeeming from the purchaser, the mortgagor or successor reacquires whatever interest was held when the mortgage was given, and the purchaser is left with the redemption price.

§ 101.04(b)(3) Rights of Junior Encumbrancers Omitted from Judicial Foreclosure.

The interests of junior lienors, like those of mortgagors, with the exception in a very few states of the interests of junior lessees, are not affected by judicial foreclosures to which they were not made parties. Despite the general rule that junior encumbrances are destroyed by a foreclosure, a purchaser at a foreclosure sale under a senior mortgage takes subject to any subordinate interests held by those not joined in the action. The omitted junior mortgagee is, therefore, entitled to foreclose the junior mortgage against the purchaser or seek damages. n406

Several states, though, hold that junior leases are cut off even if the tenants are omitted from the foreclosure proceeding. n407

Foreclosure of the junior mortgage by an omitted junior mortgagee is not always a viable remedy, since such a foreclosure will revive the senior mortgage which was foreclosed in the proceedings from which the junior mortgagee was omitted. n408 The revived senior encumbrance will then be held by the purchaser at the senior encumbrancer's foreclosure. Should the omitted junior mortgagee foreclose the junior mortgage, the purchaser at the junior mortgagee's foreclosure sale will take subject to the revived senior encumbrance and, thus, unless the property has a value in excess of the debt secured by the revived senior mortgage, lively bidding is unlikely at the foreclosure sale for the junior mortgage. Further, because the purchaser in the foreclosure from which the junior mortgagee was omitted acquired the equity of redemption, the purchaser has the right to redeem from the junior mortgagee. This right can be exercised at any time before foreclosure of the junior mortgage.

Foreclosure is not the only remedy available to omitted junior encumbrancers, for they may also "redeem the mortgage" by paying to the purchaser the amount due on the debt secured by the senior mortgage when it was foreclosed. n409 From the omitted junior's perspective, the first mortgage and the equity do not merge in the purchaser at the foreclosure from which the junior mortgagee was omitted; the omitted junior mortgagee may therefore redeem the senior mortgage in the hands of the purchaser. The junior mortgagee then holds two mortgages: the original junior mortgage and the senior mortgage acquired through redemption.

Regardless of the action taken by the omitted junior mortgagee (either foreclosure or redemption), the purchaser at the

senior foreclosure sale can always thwart the junior mortgagee. If the omitted junior mortgagee forecloses, the purchaser who then holds the revived senior mortgage can foreclose the revived mortgage and join the junior mortgagee. In many states, this second foreclosure of the senior encumbrance may be by strict foreclosure. n410 If the omitted junior mortgagee redeems, the purchaser who then holds the equity of redemption can redeem the senior mortgage acquired by the junior mortgagee by tendering the amount secured by the senior mortgage, which amount is the identical sum used by the junior mortgagee to redeem the senior mortgage.

§ 101.04(b)(4) Confirmation of the Sale.

In many states, probably most, n411 title does not pass to the purchaser at a judicial foreclosure until the sale is confirmed by the court. n412 Yet, not all states require confirmation. n413 Where confirmation is required, the successful bidder merely acquires the right to a judicial hearing to determine whether the sale should be confirmed and, without confirmation, acquires no legal interest in the realty, despite the acceptance of the bid by the party conducting the sale. n414 Upon acceptance, however, the purchaser cannot withdraw the bid and, subject to court confirmation, is contractually bound to close the sale. n415 In many states, though, the contract contains an implied covenant of marketable title on the part of the seller so that the purchaser will not be compelled to take a defective title. n416 If a defect in the sale proceedings produces a cloud on the title, it is generally agreed that the purchaser cannot be forced to close the transaction. n417 Equitable defenses, such as misrepresentation, may also justify a bidder's refusal to pay. n418

Desirous of encouraging responsible bidding at foreclosure sales, courts are somewhat reluctant to deny confirmation and generally do so only upon proof of prejudice to interested parties. n419 Failure to comply with statutory regulations of foreclosure sale may justify denying confirmation, n420 but generally a showing of prejudice is also required. n421 While confirmation lies within the discretion of the court, it is legal discretion requiring proof of recognized grounds if confirmation is to be denied. n422 Grounds are limited to matters surrounding the sale and do not include matters that could have been raised in the proceedings seeking an order of foreclosure. n423 This limitation follows from the fact that the order of foreclosure constitutes an appealable order so that an appeal lies though no confirmed sale has been had. n424

Improper behavior in the conduct of the sale can be grounds for denying confirmation. Confirmation may be denied if the purchaser and another collude to injure the mortgagor. n425 Where conflicting representations as to the terms of the sale are made in the notices, which may have influenced potential bidders, confirmation has been denied. n426 Failure to provide accurate notice of the place and time of the sale or to provide an accurate description of the realty has also been treated as justification for denying confirmation. n427

Inadequacy of the purchase price, without other factors, is seldom regarded as a sufficient basis for denying confirmation. n428 Some courts deny confirmation of sales for prices grossly disproportionate to the value of the land, n429 and a few have indicated a willingness to deny confirmation where the bid was not sufficiently inadequate to shock their consciences. n430 Nevertheless, it is generally accepted that inadequacy in the price, when coupled with slight evidence of some irregularity, will justify refusing confirmation. n431 In other states, confirmation may be denied unless the price bid equalled or exceeded the fair value of the land or that value is credited toward the debt. n432

Regardless of the existence of grounds, confirmation should be granted unless the court is persuaded that a higher price can be had on a resale than the bid returned for confirmation. n433

§ 101.04(c) Private Foreclosure.

§ 101.04(c)(1) Private Foreclosure Generally.

In about half of the states, foreclosure can be effected by a private sale without judicial authorization or supervision. Typically, such a sale is made by a trustee under a deed of trust that confers a private power of sale exercisable upon default and request from the beneficiary, but mortgagees can also be empowered by the terms of the mortgage to conduct a private sale. n434 Secured parties usually prefer private over judicial foreclosure, because private sales are normally less time-consuming and expensive than judicial sales.

Private foreclosure is available only where the security instrument authorizes it. Even with such authorization, the secured party may elect to foreclose judicially. n435 The mere filing of an action to foreclose should not constitute an election to forego private foreclosure, because such an election occurs only upon the entry of a judgment of foreclosure. n436 In some states, judicial foreclosure is the only viable option for secured parties wanting to take deficiency judgments, since such judgments are sometimes forbidden after a private foreclosure. n437 Further, where uncertainty exists over the priorities of competing encumbrances, judicial foreclosure would seem preferable in order to obtain a court determination of the priorities. n438 Judicial foreclosure may be the only avenue of recourse against the property, other than perhaps obtaining and foreclosing a judgment lien in an action on the debt, where the security takes the form of an equitable mortgage since mortgage substitutes usually contain no provisions authorizing private foreclosure.

Private foreclosures can be highly regulated by statute. The California statutes, for example, require that defaulting mortgagors or trustors be afforded a three-month period within which to cure defaults and that both a notice of default and an election to sell and a notice of sale be recorded and served on the mortgagor or trustor, or their successors, junior lienors, and those who have requested notice. n439 Other states have similar requirements. n440 In contrast, notice requirements in some states are minimal at best, and some of them would appear to be unconstitutional. n441 The place and conduct of the sale may also be regulated by statute.

A properly conducted private foreclosure sale will transfer to the purchaser whatever title the mortgagor or trustor held when the security interest was created. n442 The purchaser will take subject to such interests as predate the interest being foreclosed unless the recording statutes or the common law priority principles produce a contrary result. n443 Yet, due to the high degree of statutory regulation of private foreclosures, opportunities abound for defects to arise in the conduct of these sales, giving rise to disputes over the finality of the sale. n444 Similarly, this pervasive regulation opens the door to claims that sufficient state action is present to entitle affected parties to due process safeguards which are often not afforded under the statutes. n445 Nevertheless, in the main, private foreclosure usually provides a relatively rapid and effective means of foreclosure.

§ 101.04(c)(2) Purchaser's Title; Faulty Sales.

If a private foreclosure sale is conducted in perfect compliance with all statutory and constitutional requirements, as well as with the requirements set forth in the security instrument, the purchaser acquires good title to whatever interest or estate the mortgagor or trustor held when the foreclosed mortgage or deed of trust was given. n446 When the sale is flawed by a failure to comply with one or more of these requirements, n447 the title acquired by the purchaser depends

upon the nature of the flaw and whether the purchaser qualifies as a bona fide purchaser for value.

Theoretically, the purchaser at a private sale is buying a legal title. Under a deed of trust, the trustee holds a legal title in trust for both the trustor and the beneficiary and has the power to convey that title upon default and request of the beneficiary. A mortgagee too, holding a power of sale, can convey a legal title; in a title theory state, the mortgagee with such a power acquired a legal title when the mortgage was created, and in lien theory states, though the mortgagee obtained only a lien, the power enables the mortgagee to transfer the mortgagor's legal title. But, when the power is exercised in violation of the laws or of the security instrument terms, questions arise as to whether compliance with the laws or instrument provisions is a prerequisite for the exercise of the power so that the purported sale is utterly void, or whether the violation is merely sufficiently egregious as to produce a voidable sale, or whether it is so insignificant as to have no impact on the sale.

§ 101.04(c)(2)(i) Void Sales.

Courts frequently speak of flaws in private sales so serious that they produce a void sale. Of course, no sale is ever void in the absolute sense since the mortgagor, trustor, or his successor may elect to take no steps to set the sale aside, that is, in effect to ratify the sale. What the courts mean in denominating a sale as void is that adversely affected parties may have the sale set aside even though the property passed into the hands of a bona fide purchaser. n448 In this sense of the term, there are very few void sales. Most of the cases in which a sale to a bona fide purchaser was set aside involved sales by trustees or mortgagees who lacked the power to sell. n449 Thus, where a trustee was authorized by the deed of trust to sell upon request of the beneficiary but sold without such a request, the purchaser's title was found void. n450 So too, a void sale resulted where there was no default since, without a default, there is no power to foreclose. n451 Under the federal bankruptcy laws, it should be noted, a sale after a bankruptcy petition has been filed may be void. n452

Some courts have been moved to characterize as void those sales that produce fundamentally unfair results; but in most of these cases the foreclosing creditor was the purchaser and did not qualify as a bona fide purchaser, so that the decisions can be defended on the ground that the sales were merely voidable. n453 Nevertheless, despite the tendency to treat defects as, at most, resulting in a voidable rather than void title, "substantially defective sales have been held void where the defect lay in a particular as to which ...[a] statutory provision was regarded as mandatory ... ." n454 In Oregon, under this approach, a trustee's sale has no effect on the interests of persons entitled to but not given notice of the sale. n455 Unfortunately, the cases provide no "bright line" to distinguish between those defects which are so substantial as to produce void sales and those which result in merely voidable title. n456

COMPUTER-ASSISTED RESEARCH

LEXIS: foreclosure w/15 private or trustee
w/50 void w/3 sale

§ 101.04(c)(2)(ii) Voidable Sales.

Where a defect is not so egregious as to make the sale utterly void but not so inconsequential as to be overlooked, the sale will be voidable; that is, it can be set aside at the request of an injured party so long as the legal title has not been transferred to a bona fide purchaser. This follows from the traditional common law rule that a subsequent bona fide purchaser of a legal title takes free of hidden equities. The right of an injured party to set aside a deed because of flaws that produce only a voidable title is an equitable right cut off by transfer to a bona fide purchaser. A purchaser at a private foreclosure sale may qualify as a bona fide purchaser. A mortgagee purchasing at a sale conducted by the mortgagee will not likely qualify as a bona fide purchaser, since the mortgagee/purchaser should be aware of the irregularity which makes the sale voidable; but a beneficiary under a deed of trust may qualify by making an adequate bid and taking without notice of the flaw. n457

Various formulations have been employed to describe when a voidable sale occurs. Sometimes abuse of the power of sale coupled with injury is identified as the standard. n458 The most frequently articulated standard is that the flaw must have actually chilled the bidding, for without such effect no prejudice is established. n459 One recent decision indicated that the presence of an unjust extreme was necessary before a sale would be set aside. n460

A sale is neither void nor voidable merely because the price received at the foreclosure sale was inadequate or less than the fair value of the interest sold. n461 However, inadequacy in the price when accompanied by some irregularity, however slight, is often said to be sufficient basis for rendering the sale voidable. n462 On the other hand, some courts will set the sale aside where the inadequacy is so gross as to shock the conscience and to raise a presumption of fraud. n463

Except where sufficient state action is present to entitle affected parties to procedural due process, it is generally held that such parties are entitled only to such notice as required by statute or the security instrument. n464

Even where by statute the mortgagor is entitled to notice at the last known address, the party conducting the sale might not be obliged to take steps to ascertain the mortgagor's address, but may rely on the last address known to such party. n465 Thus, where the requirements of the security instrument and of applicable statutes are satisfied, the lack of actual notice to affected parties does not render a private sale voidable. n466

Many states have statutory presumptions of the truthfulness of recitations in the foreclosure deed that proper notice has been given. n467 Where the purchasers qualify as bona fide purchasers and receive deeds containing such recitations, the sale cannot be set aside on grounds of lack of notice absent a finding that state action is sufficiently present to entitle the "sold-out" parties to procedural due process. n468

Because of the conflict inherent in purchasing at a sale conducted by the purchasing party, most states characterize a purchase by a mortgagee conducting the sale as voidable. n469 Likewise, a voidable title results when a trustee purchases at a sale the trustee conducts. n470 On the other hand, where an independent trustee conducts the sale under a deed of trust, most courts conclude that the obligations of the trustee sufficiently insulate the beneficiary so that a purchase by the beneficiary is not voidable by reason of the purchase alone. n471

Private sales have also been set aside as voidable where collusive or unconscionable conduct has suppressed bidding at the sale. Although, as a general rule, the party conducting the sale may accept, and indeed may be obliged to accept, the highest bid even if it is the only bid submitted, n472 the party conducting the sale nevertheless owes the mortgagors and others with interests affected by the sale the duty of acting fairly and reasonably to protect their interests. n473

Where several parcels are covered by the security instrument, the debtor often has the right to insist that foreclosure proceed against each parcel separately. n474 Where the debtor makes a timely demand for sale by parcels, but the sale is in bulk, the sale may be set aside. n475

§ 101.04(c)(3) Due Process and Private Foreclosure.

Although most courts which have been asked to pass on the question have concluded that private foreclosures brought by private parties do not entail sufficient state involvement to trigger the procedural due process requirements of the *14th Amendment*, n476 some courts have found otherwise. Further, it would seem that procedural due process

guarantees are always implicated when the government is the foreclosing mortgagee. n477

The 14th Amendment to the Federal Constitution provides, among other matters, that no state shall deprive anyone of property without due process of law. Due process has been held to include notice of proceedings and adequate opportunity to appear before a tribunal to state one's case. Where state action is involved, the Constitution demands that reasonable steps be taken to provide actual notice to defendants of suits filed against them. Notice by publication does not suffice if reasonable means are available to give actual notice; in those instances, such steps to give actual notice must be taken. n478

Notice other than by publication to mortgagors, their successors, and junior encumbrancers is statutorily not required at all in some states, n479 while in others notice is statutorily sufficient if delivered at the address set forth in the mortgage or elsewhere, even though such address is not the actual address of the party and even though the foreclosing mortgagee is aware of or has the means of discovering the true address. n480 In light of the constitutional requirement that reasonable steps be pursued to provide actual notice, the validity of private foreclosure sales is questionable where concerned parties were not personally alerted to the proceedings and where reasonable steps were not taken to provide them with actual notice. Yet, unless state action within the meaning of the 14th Amendment can be found, those adversely affected by a foreclosure have no constitutional basis for complaint if they are not afforded notice of the foreclosure or given hearing before the sale.

While other bases n481 for finding state action in a private foreclosure have been advanced, only one of them has won wide acceptance: that is, that the state is directly or indirectly involved in the sale. State involvement may be predicated upon participation of state officials in the conduct of a private foreclosure instituted by private mortgagees or in the institution of private foreclosure by the government as mortgagee.

It is rare that the state is deemed to participate in private foreclosures, since private foreclosures sales usually do not require any involvement by the government. In North Carolina, however, state officials do participate in private foreclosures, and this participation has prompted decisions invalidating private foreclosures where the procedural due process obligations imposed on the states by the *14th Amendment* have not been satisfied. n482

When the government is the foreclosing mortgagee, state action is, of course, present. n483 States and their instrumentalities are bound by the due process clause of the 14th Amendment when foreclosing mortgages held by them, and the federal government is similarly bound by the due process provisions of the 5th Amendment. Not all entities connected with the federal government, though, are regarded as instrumentalities of the government for purposes of the due process clause. Those entities that lend federal funds and take back security interests surely are constrained by the due process clause. The Farmers Home Administration has been held to be acting for the United States in foreclosing mortgages it took as security for such loans. n484 Likewise, a federal agency foreclosing privately on a mortgage it had insured and then, after default, accepted from the mortgagee would be acting for the government. n485 With other types of entities, matters are not so clear. Some federally chartered corporations, organized to provide some public benefit, are wholly owned by the United States; others are owned wholly or partially by private investors. The Federal National Mortgage Association (FNMA), for example, is entirely privately owned, but its policies are heavily regulated by the government, and several of its directors are appointed by the president. Notwithstanding the high degree of government regulation, the Sixth Circuit ruled that, in foreclosing its mortgages, FNMA does not act as the government. n486 The Federal Land Bank, which is a wholly-owned cooperative, has also been found not to be subject to the due process constraints in foreclosing its mortgages. n487

In the event that a private foreclosure sale is found to have been concluded in violation of due process entitlements, the impact on the rights of those who trace their titles to the foreclosure is unclear. n488

§ 101.04(d) Foreclosure by Entry.

Several state statutes permit foreclosure by self-help; that is, they allow mortgagees to secure possession of the premises peaceably without judicial oversight or sanction and bar the equity of redemption if possession is maintained for a specified period of time. n489 The period of time during which possession must be kept varies from one year in New Hampshire to three years in Massachusetts. n490 The statutes require that notice of foreclosure by entry and possession be given the mortgagor or successor. In Massachusetts, filing a certificate of entry in the land record satisfies the notice requirements, n491 while elsewhere other types of notice are called for. n492

Deficiency judgments are possible after foreclosure by entry and possession. n493

§ 101.04(e) Marshalling: General Principles.

Because it often happens that several parcels have been encumbered to secure a debt and that others besides the mortgagor have subordinate interests in one or more of these parcels which could be prejudiced by a foreclosure, equity, in an effort to minimize the prejudice to the junior interest holders, has traditionally fettered the discretion of the secured party to determine the order in which the senior secured party will foreclose on the various parcels. In general, equity requires the senior encumbrancer to marshal the claims against the security to preserve, if possible, the claims of the junior interest holders.

Fact patterns raising marshalling issues frequently fall into one of two categories. This has led to two articulations of the marshalling principles, but all too often situations arise in which the categories are blended. In the first category are cases in which the mortgagor has given a mortgage on several parcels to one creditor and a junior mortgage on a smaller number of parcels to a second creditor. In this scenario, the first mortgagee is said to have two funds from which to seek satisfaction, i.e., the parcels covered by the mortgage not included in the junior's mortgage as well as the parcels covered by the junior's mortgage, while the junior mortgagee has only one fund, i.e., those parcels covered by the junior mortgage. Because a foreclosure by the senior mortgagee against any parcel covered by the junior mortgagee would destroy the junior mortgagee's interest in that parcel, equity may compel the senior to proceed first against those parcels not encumbered by the junior mortgage. If foreclosure against those parcels does not produce sufficient funds to satisfy the senior's debt, then foreclosure by the senior against the remaining parcel or parcels will be allowed. n494

The second category relates to successive transfers of parcels encumbered by a blanket mortgage, most simply illustrated where the mortgagor, owning two parcels, mortgages them both for the same debt and then sells one to a third party while retaining the other. Here, the inverse order of alienation aspect of marshalling is applied to require the mortgagee to proceed first against the retained parcel before foreclosing against the equity of the mortgagor's grantee. n495 Of course, this result assumes that the grantee did not assume or "take subject to" all or part of the mortgage debt; otherwise, to prevent the mortgagee from interfering with the surety relation between the mortgagor and the grantee and/or the grantee's land, the mortgagee should be required to go first against the grantee or the grantee's parcel. n496

Because cases arise in which both the two funds and the inverse order of alienation principles seem applicable, adherence to the traditional formulations can produce confusion. n497 Consider the facts of a 1990 Oklahoma case, n498 *Equitable Life Assurance Soc'y v. Lane*, in which an insurance company held a first mortgage on a 140-acre parcel, and a bank held a second mortgage on 139 of those acres, and Lane held title to the single acre covered by the

insurance company's mortgage but not covered by the bank's mortgage. Under the two funds rule, the bank argued that the senior mortgage should be foreclosed first against the one acre held by Lane. Lane, on the other hand, argued that since his deed preceded the bank's mortgage, the inverse order of alienation principle should be applied to preclude foreclosure against his property until all other parcels had been exhausted.

Neither principle of marshalling should be invoked when doing so would prejudice the secured party against whom it is sought to compel marshalling. n499 A secured party with a senior position should not be subjected to a risk of losing the full satisfaction of the secured claim. n500 In passing on requests to marshal, courts often inquire into whether the security not encumbered by the junior's interest will be adequate to discharge the senior lienor's claim; for, if it is not, the senior should not be forced to suffer the burden of bringing several actions in order to avoid loss of the security of junior encumbrancers. n501 Nor should marshalling be applied where the rights of parties other than the senior mortgagee and the mortgagor might be jeopardized. n502

Marshalling may be invoked whether foreclosure is by court proceeding or by private sale. However, if one entitled to marshal does not demand it before foreclosure, the right may be lost. Where a foreclosure takes place in a bankruptcy proceeding, an affirmative request to marshal through an adversary proceeding is required. n503

§ 101.04(e)(1) Two Funds Rule.

The two funds rule provides that, as between competing mortgagees, where a senior mortgagee has more distinct parcels as security than a junior mortgagee, the senior mortgagee must first proceed against the parcels not burdened by the junior encumbrance. The principle is designed to prevent the destruction of junior security interests where senior mortgagees will not be injured by deferring foreclosure on the parcels burdened by junior mortgages until it can be determined if enough can be realized from the sale of the lands burdened only by the senior mortgages to retire the senior debts.

It has been held that three requirements are necessary to marshal under this rule.

> More specifically, before a court of equity will marshal assets between two persons it must appear that (1) they are creditors of the same debtor, (2) there are two funds belonging to that debtor, and (3) only of the creditors has the right to resort to both funds. n504

Thus, marshalling was denied where the blanket senior mortgage holder was a creditor of a partnership and the other mortgagee was a member of the partnership since the partnership and partner were distinct debtors. n505 Nor was marshalling permitted where one mortgagor was a corporation and the other mortgagor was the owner of all or a major portion of the shares in the corporation. n506

As a general rule, mortgagors are not permitted to invoke the two funds rule since applying it to them would bring about the unilateral modification of their contracts with their mortgagees, who bargained for the right to reach all the debtor's mortgaged property at any time upon default. n507 However, if the mortgagor should become a junior mortgagee, the mortgagee ought then to be in a position to compel marshalling. For example, if the mortgagor subdivides land and conveys one of the resultant parcels to a third party and takes back a second mortgage as security for part of the purchase price, the blanket mortgagee should be compelled to foreclose first against the parcel held by the third person.

§ 101.04(e)(2) Inverse Order of Alienation.

The cornerstone of the inverse order of alienation principle is that a purchaser who buys encumbered property and pays the full purchase price (that is, a buyer who neither assumes nor takes "subject to" the mortgage debt) has a right to expect the seller to discharge the mortgage. In such a case, as between the seller and buyer, the buyer's land is surety, and the seller is principal obligor. n508 Thus, where the seller has previously encumbered several parcels to secure a debt and then sells one of them to a buyer, who pays the full contract price, upon a default, the buyer should be able to force the mortgagee to respect this principal-surety relationship, if the mortgagee can do so without injury to the mortgagee's interest, and to proceed against the seller's retained parcels before seeking recourse against the buyer's property. The buyer has an equity in the retained land of the seller so as to compel marshalling.

The operation of the inverse order of alienation principle seems almost self-evident with respect to encumbered lands retained by mortgagors; but such is not the case when the mortgagor has transferred the mortgagor's equity in all the encumbered lands. Assume that after mortgaging two lots to secure a single debt, the mortgagor sells one lot to A and later the other lot to B, neither of whom assumes or "takes subject to" the mortgage debt. Before the sale to B, A clearly had the right to expect the mortgagee to proceed first against the lot retained by the mortgagor. But does this right survive the transfer of the second lot to B? Some courts would answer affirmatively if B has notice of the prior equity of A to marshal against the mortgagor under the general rule that a purchaser of legal title takes subject to prior equities of which the purchaser is aware. Surely, this ought to be the result where B has actual knowledge of the prior conveyance to A, for then B should also appreciate that A may have had the right to compel the mortgagee to go against the lot B now owns. The difficult question is whether the recordation of the deed to A should put B on notice of A's prior equity in B's lot. The result should turn upon whether the deed from the mortgagor to A is in B's chain of title, n509 and that is a matter about which jurisdictions are divided. Some hold that A's deed is not in B's chain, since it does not convey an interest in the land B was buying. Others hold that all deeds from the common grantor are in all subsequent grantees' chains of title. n510 If A did not record A's deed and if B had no actual knowledge of that deed, it would seem that B is protected under the recording acts from a claim by A to marshal against B. n511

A mortgagor's grantee who assumes or takes "subject to" the mortgage debt is not entitled to the benefit of the inverse order of alienation principle, since such a grantee and/or the grantee's land, as between the grantee and the mortgagor, is the principal obligor. In fact, in such cases, the mortgagor, with respect to any retained mortgaged lands, can compel marshalling against the land transferred to the grantee. n512 Thus, in the example last given, if A had assumed the mortgage debt or taken "subject to" it, not only would A be unable to force the mortgagee to proceed against the mortgagor's retained land first if that could be done without injury to the mortgagee, but the mortgagor would be able to force the mortgagee to proceed first against A's land if the mortgagee would not be harmed by deferring foreclosure against the mortgagor's land. n513

Where there are successive junior mortgages on parcels burdened by a senior blanket mortgage, the inverse order of alienation principle can also be applied. Suppose, after giving a mortgage on two parcels to secure a single debt, a mortgagor borrows from X and gives X a second mortgage on one of the parcels and later borrows from Y and gives Y a second mortgage on the remaining parcel. Before the mortgage to Y, X could compel the senior mortgagee to proceed first against the parcel then retained by the mortgagor under either the two funds or the inverse order of alienation principles. Here the two funds principle seems inapposite since both X and Y cannot invoke it simultaneously, for that would leave the senior mortgagee unsecured. Some states in such facts resort to the inverse order of alienation rule, holding that the earlier right of X to force marshalling against the mortgagor's retained land created in that land an equity in favor of X in that land which survived the mortgaging of the retained parcel to Y. n514 These courts are treating successive junior mortgagees just as they would successive purchasers of the equity. n515 Other courts refuse to employ the inverse order of alienation rule against competing successive junior mortgagees. Reasoning that the later

junior mortgagees would invariably be rendered totally unsecured if the blanket mortgagees were forced to go against them first, these courts prorate the senior's debt among the juniors. n516

CHAPTER 101 MORTGAGES, DEEDS OF TRUSTS AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions § 101.05

AUTHOR: Professor Jerome J. Curtis, Jr. McGeorge School of Law University of the Pacific

§ 101.05 Transfers of Mortgages.

§ 101.05(a) Transfer of the Interests of Mortgagors.

§ 101.05(a)(1) General Principles: Transferability and Direct Restraints on Alienation.

The traditional policy of the common law in favor of alienability extends to mortgaged interests of estates which are themselves alienable. Thus, a mortgagor who has encumbered a fee simply retains an alienable interest while one who has mortgaged an estate for years may or may not hold an alienable interest, depending on whether the lease contains valid restrictions on transfer. In lien theory states certainly the mortgagor, as the holder of legal title to a possessory estate, holds an alienable interest, but title theory states recognize the reality that, wherever legal title might reside technically, the mortgagor is in fact an owner of a sufficiently significant interest that the mortgagor is entitled to alienate it. n517 Of course, unless recording statutes or common law rules of priority provide otherwise, the transferee of mortgaged premises will take them subject to the mortgage under the familiar rule that one can pass no greater rights than one has.

A transfer by a mortgagor will have no effect on the personal liabilities, if any, of the transferor on the underlying debt, since the privity of contract between the transferor and the transferor's mortgagee cannot be severed without the consent of the mortgagee. n518

The common law policy favoring alienability cannot be frustrated by a covenant between mortgagor and mortgagee prohibiting alienation. Surely, this principle applies to direct restraints on alienation. No court would, for example, enforce a provision in a mortgage that the premises could not be alienated without the consent of the mortgagee. Mortgages typically create no direct restraints on the transfer of the mortgagor's interest, but they customarily contain provisions that arguably erect indirect barriers to alienation. The most common illustration of a potentially indirect restraint is the due-on-sale or due-on-encumbrance clause, which authorizes the mortgagee to accelerate the mortgage debt upon any transfer or encumbering of the land. Other examples are clauses calling for an increase in the interest rate upon transfer, or prohibiting transfer by assumption. The indirect restraints have received inconsistent treatment; however, most states have countenanced them and in 1982 federal legislation preempted the field to a great extent.

§ 101.05(a)(2) General Principles: Indirect Restraints on Alienation.

While direct restraints on the alienability of mortgaged land are void in every jurisdiction, the enforceability of indirect restraints has provided fertile ground for litigation and legislation. An indirect restraint can be defined as one which, although not prohibiting a transfer or working a forfeiture upon an attempt to transfer, has in practice the effect of inhibiting alienation. A provision calling for the forfeiture of the land to the mortgagee upon an attempt to sell it would clearly be a void direct restraint on alienation. A provision permitting the mortgagee to accelerate a debt upon such attempts, however, would not be treated as a direct restraint because no absolute bar to transfer or forfeiture upon attempt to transfer is created; rather, the debt must be paid upon demand before a transfer can be consummated. n519

The prevailing attitude seems to be that indirect restraints are valid and enforceable according to their terms. Thus, a provision calling for an increase in the interest rate on the mortgage debt upon a transfer has been upheld, n520 as has been a contractual prohibition of transfer by assumption. n521 Most courts even have enforced due-on-sale clauses in the face of arguments that they not only deter sales to buyers wanting to assume or take subject to a mortgage, but also discriminate between mortgagors bound by due-on-sale provisions and those without such clauses in their mortgages by making it more difficult for those with the clause to sell their property than those without the clause. Some courts, on the other hand, have been susceptible to arguments that some indirect restraints, and particularly the due-on-sale clause, constitute unenforceable restraints. n522

The general principle is that indirect restraints are valid only if reasonable. In determining whether the restraint is reasonable, most jurisdictions look to the interests of the lenders and conclude that, so long as some legitimate interest of the lenders is served, enforcement is proper. Thus, for example, mortgagees in most states have been permitted to accelerate loans upon transfer under due-on-sale clauses in times of rising interest rates on the grounds that the lenders have a legitimate interest in calling existing loans with relatively low interest rates in order to reinvest the proceeds in higher yielding loans. When interest rates rise, lenders must pay high rates to attract funds from investors; if these same lenders must continue to lend funds to assuming grantees under outstanding loans carrying comparatively low interest rates, the lenders' profit margins may be jeopardized, and funds that would be available for new loans if the outstanding loans could not be called would be unavailable for new borrowers. n523 In contrast, other courts balance the interests of the lenders and borrowers alike to determine the reasonableness of an indirect restraint. This weighing of interests caused some of them to prohibit automatic enforcement of the due-on-sale clauses except where the transfer impaired the lender's security. n524 Although there is very little case law on indirect restraints other than the due-on-sale clause, n525 it would seem that the same factors considered in evaluating due-on-sale clauses would be weighed in passing upon other types. n526

LEXIS: mortgage or deed pre/2 trust & indirect or reasonable pre/1 restraint w/5 alienat!

§ 101.05(a)(3) Indirect Restraints on Alienation: Federal Preemption.

In the controversy over automatic enforcement of due-on-sale clauses, pressures from the real estate and lending industries prompted Congress to pass the Garn-St. Germain Depository Institutions Act in 1982. This act makes due-on-sale clauses enforceable and restricts enforceability of due-on-encumbrance clauses. The act covers lenders of all kinds and is not restricted to those loans made or insured by the federal government or its agencies or by those in the business of lending. n527 Further, it covers a wide variety of loans, including every "loan, mortgage, advance, or credit sale secured by a lien on real property." n528

Due-on-sale clauses are rendered enforceable by the Act, which expressly provides that state laws to the contrary are preempted. n529 The act defines a sale under a due-on-sale clause as:

> a contract provision which authorizes a lender, at its option, to declare due and payable sums secured by the lender's security instrument if all or any part of the property, or an interest therein, securing the real property loan is sold or transferred without the lender's prior written consent. n530

This broad definition in its inclusion of a transfer of "an interest" covers not only a conveyance of title but also the creation of junior encumbrances, although other provisions in the act prevent acceleration upon the creation of a junior encumbrance under certain circumstances. The Federal Home Loan Bank Board, pursuant to power conferred upon it by the Act to promulgate regulations interpreting the Act, n531 ruled that installment land contracts fall within the phrase "[l]oan secured by a lien on real property." n532 All loans, whether made before or after 1982 are covered, but Congress did provide for a window period, which has now closed, during which loans in states in which due-on-sale clauses were not automatically enforceable would continue to be governed by local law. n533 During the window period, states within a window were authorized to extend window period protection to loans outstanding on the effective date of the act. n534

The act also preempts local law and outlaws acceleration on any of the following grounds: n535

1. creation of junior encumbrances which do not impair security.

2. creation of purchase money security interests for household appliances.

3. transfer by devise, descent or operation of law upon the death of a joint tenant or a tenant by the entirety.

4. granting of leases of less than three years, so long as they do not involve an option to buy.

5. transfer upon the debtor's death to a relative.

6. transfer to a spouse or child.

7. transfer to a spouse incident to a divorce, separation, or property settlement agreement.

8. transfer to a self-settled, inter vivos trust which does not involve a transfer of occupancy.

9. transfer described in regulations of the Director of the Office of Thrift Supervision and, until its abolition in 1989, the Federal Home Loan Bank Board, until the Board's abolition in 1989. n536

The federal ban on acceleration on these grounds, however, applies only when the loan is secured by residential realty with less than five dwelling units or by a residential manufactured home. When other types of security are involved, acceleration would be permissible. Further, under the regulations, the transferee must occupy the land to qualify for preemption when the transfer results from the mortgagor's death or where the transferee is the mortgagor's spouse or child, or when the transfer is incident to a divorce. n537

While there is nothing in the Act to compel mortgagees to exercise their rights under due-on-encumbrance clauses, if a lender permits a transferee to assume a loan, the regulations mandate release of the original debtor. n538 This requirement has been characterized as resting on a "rather thin reed" and without "justification for it in the Act." n539

§ 101.05(a)(4) Transfers by Assumption.

§ 101.05(a)(4)(i) Creation of Assumption Obligation.

In alienating encumbered property, mortgagors or their successors may transfer with or without an assumption of the underlying debt by their grantees. A transfer by assumption is one whereby the transferee assumes or agrees to become personally liable on the mortgage debt. It is common to refer to a transfer in which the transfer does not assume the mortgage debt as a transfer "subject to" the mortgage; but it should be noted that even grantees who assume the debt also take subject to the mortgage in the sense that their interests are burdened by and subordinate to the mortgage.

The transfer to an assuming grantee must meet the usual requirements for a writing and delivery that govern transfers of realty interests generally. The assumption of the mortgage debt, though usually expressly provided for in the instrument of transfer, can be made in a separate writing, and is generally enforceable even if totally parol. n540 The promise could be performed within a year unless prepayment within a year, even with penalty, is prohibited and is regarded as a promise to pay the assuming grantee's own debt to the grantor rather than a promise to pay the grantor's debt to the mortgagee. n541 By statute in a few states, assumption promises must be in writing to be enforceable. n542

When the assumption promise is contained within the instrument of transfer, there is no need for the assuming grantee to sign the instrument since under the doctrine of deed poll the acceptance of the deed by the grantee is the equivalent of the grantee's signature. n543

A few states are willing to presume a promise to assume where the mortgage debt has been credited against the purchase price. n544 This position seems wrong since the odds are that, where the grantee does not expressly assume the obligation, both the grantor and the grantee in all likelihood contemplate simply a transfer subject to the mortgage with no personal liability on the grantee. n545 Sometimes a duty on the part of the grantee is assumed to indemnify the grantor even though doing so forces the grantor to redeem before going against the grantee. n546

Absent fraud or mistake, the parol evidence rule should bar proof that, despite a recitation in a deed that the grantee assumes an existing mortgage debt, the parties to the transaction did not intend an assumption. n547 Nevertheless, there is some authority for the position that, at least in an action against the grantee by the mortgagee, parol evidence can be used to show no assumption was intended. Thus, evidence of a side agreement between the mortgagor and a grantee under a deed containing an assumption clause to the effect that the former would discharge the debt has sometimes been held, in an action by the mortgagee against the grantee, to establish that no assumption was meant. n548

The presence of a covenant against encumbrances is not generally a bar to receipt of evidence that an assumption was intended. It would seem that, when the evidence of assumption rests in parol, the parol evidence rule would preclude proof of the assumption in the face of the grantor-covenantor's warranty. Despite this theoretical objection to the proof, the parol evidence is admitted. n549 Receipt of extraneous evidence is not precluded by a deed reciting that title is transferred subject to a mortgage but containing no assumption. Here, there is no contradiction between the instrument and the proof since, even with an assumption, the transfer would be subject to the mortgage. n550

LEXIS: mortgage or debt or (deed pre/2 trust) w/15
assum! w/50 writing or deliver! or parol

§ 101.05(a)(4)(ii) Rights and Duties Under Assumptions.

A mortgagor is not relieved of any personal liability on the mortgage debt by reason of an assumption by a grantee. The same is true of an assuming grantee who has transferred his interest to a grantee who has assumed the debt. The obligation on the debt is based on contract and, despite the transfer of the security, privity of contract continues between the mortgagor and the mortgagee. In the absence of defenses such as estoppel or the running of the statute of limitations, consent by the obligee is necessary to terminate the mortgagor's personal liability.

Notwithstanding the continuing personal liability of the mortgagor, the mortgagee is usually entitled to enforce the assumption promise against the assuming grantee personally. Thus, after an assumption, the mortgagee has two in personam claims on the debt, one against the mortgagor on the original debt and the other against the grantee on the assumption promise; these claims are in addition to the mortgagee's foreclosure rights against the land. Unless precluded by a one action rule, the mortgagee may proceed against the land by foreclosure and later go against the assuming grantee for any deficiency. n551 The theoretical justification for allowing the mortgagee the benefit of the assumption varies from state to state, but the prevailing theory is that the mortgagee is the third party beneficiary of the promise to assume, that is, that privity of contract exists between the assuming grantee and the mortgagee. n552 Some states, however, reject this basis and rely upon principles of subrogation.

Under the third party beneficiary theory, the mortgagee must be shown to have been intended to have the benefit of the promise. n553 The trend in states recognizing mortgagees as potential beneficiaries of assumption promises is to presume that the parties to the assumption transaction intended to confer a benefit on the mortgagee; but this is not always true. It may be that the mortgagor was bargaining for a promise benefitting only himself and not the mortgage. Some states continue to recognize a distinction between creditor and donee beneficiaries despite the abandonment of these categories by the Restatement of Contracts in favor of a single category of intended beneficiaries. n554 In such states, a promise to assume given to a mortgagor who had no personal liability or given to a successor to a mortgagor who had not assumed would not benefit the mortgagee. There are also differences as to when the mortgagee's rights vest as a third party beneficiary so that the assuming grantee and the promisor are not permitted by agreement to rescind or modify the assumption promise. n555

The competing subrogation theory permits the mortgagee to reach the mortgagor's rights as surety to enforce the assumption promise. n556 In equity, a suretyship relationship is present where there exists a common creditor of two debtors and where there is an agreement between the debtors that one of them will discharge the obligation. In the case of an assumption, the common debtors are the mortgagor, who is liable on the original mortgage obligation, and the assuming grantee, who is liable on the assumption promise; the assumption promise establishes that, as between them, the grantee is to pay the mortgage debt and treat the mortgagor as a surety. n557 In equity the common creditor is entitled to be subrogated to rights held by the surety against the principal debtor. Although from the creditor's perspective there are two principal debtors, the mortgagor and the assuming grantee, from the perspective of the mortgagor and assuming grantee the latter is the primary obligor and the former a surety. Accordingly, the mortgagee is subrogated to the rights of the mortgagor against the assuming grantee. As has been frequently observed, the subrogation theory is built on circular reasoning. Its goal is to give the mortgagee a claim against the assuming grantee, but the theory requires a predicate in the form of a claim held by the mortgagee against the assuming grantee. There is no need for subrogation if the mortgagee already holds a claim against the assuming grantee. n558 Yet, the theory retains its adherents and often produces results at variance with those obtained under the third party beneficiary theory. Professor Williston sought to avoid some of inconsistency in the subrogation theory by suggesting that the mortgagee simply attached the assuming grantee's promise to the mortgagor. n559

Under both theories, the rights of the mortgagee can rise no higher than those held by the mortgagor against the assuming grantee. This is obvious under the subrogation theory, where the mortgagee is simply subrogated to the mortgagor's rights against the assuming grantee; but it is also true under the other theory, which recognizes that defenses held by the assuming grantee against the grantor are also assertable against the mortgagee. n560 If an

assumption is the result of a fraud practiced by the mortgagor upon the assuming grantee, the fraud may constitute a defense by the grantee to an action by the mortgagee on the promise. n561

Though the assuming grantee is entitled to assert against the mortgagee any defenses the grantee has against the mortgagor, the assuming grantee is not entitled to any defenses the mortgagor may have against the mortgagee. This rule is based on the view that to permit the assuming grantee the benefit of the mortgagor's defenses against the mortgagee would unjustly enrich the grantee who, having assumed the debt, would obtain title for less than the agreed price if the grantee were allowed to raise defenses of the grantor. Accordingly, it has been held that the fact that the original loan was usurious is not a good defense in an action by the mortgagee against the assuming grantee. n562 Identical reasoning prevents those who have taken "subject to" a mortgage from avoiding foreclosure by invoking their mortgagors' defenses. n563 If the assuming party is a junior lienor, rather than a purchaser, courts are divided about the application of the rule barring the assuming party from asserting the defenses of the transferor. Those courts that deny the mortgagor's defenses to assuming lienors stress that no privity of contract exists between the mortgagee and the assuming junior lienor; those taking the contrary position emphasize that there is no unjust enrichment in the case of an assuming lienor whose interest is confined to the recovery of his debt. n564

One of the practical differences between the two theories involves modifications and rescissions of assumption agreements between assuming grantees and their grantors. Under the subrogation theory, if the grantor and assuming grantee modify or rescind the assumption agreement, the subrogation rights of the mortgagee are subject to the modification or rescission. n565 Thus, under this view, the grantee and grantor are free to rescind the assumption and leave the mortgagee without recourse against the grantee.

In contrast, where the mortgagee is viewed as a third party beneficiary, once the mortgagee's rights have vested they cannot be compromised by the actions of the mortgagor and mortgagee. Under the First Restatement of Contracts, which distinguishes between creditor and donee third party beneficiaries, the rights of a donee third party beneficiary vest immediately upon the formation of the contract, while those of creditor third party beneficiaries do not vest until suit is brought by the beneficiary, or the beneficiary otherwise changes position in reliance on the contract. n566 Under this view, where the transferor has no personal liability on the mortgage debt, such as when the transferee has taken subject to the debt, the mortgagee is a donee third party beneficiary with an immediately vested right. n567 The Second Restatement of Contracts abolishes the distinction between donee and creditor third party beneficiaries in favor of a single classification of intended beneficiaries. The rights of intended beneficiaries, according to the Second Restatement, vest when the beneficiary "materially changes his position in justifiable reliance on the promise or brings suit on it or manifests assent to it at the request of the promisor or promisee." n568 There is also authority to the effect that the rights vest upon knowledge of and consent by the beneficiary. n569

A second practical difference between the two theories is in the treatment of the rights of mortgagees against assuming grantees whose grantors have no personal liability on the mortgage debt. Although the discussion of assumptions has focused mainly upon assumption promises made to original mortgagors by their immediate grantees, an assumption can be made to a prior grantee of the mortgagee. In such cases, whether the mortgagee has any recourse personally against the assuming grantee can depend upon whether the person to whom the assumption promise was made was personally liable on the mortgage debt and upon whether the third party beneficiary or subrogation theory is applied. Under the third party beneficiary theory, even such donee beneficiaries may have rights under the contract, and therefore mortgagees can enforce assumptions where the promisee was not personally liable (as would be the case if the promisee had taken "subject to" and not assumed the debt). n570 Under the subrogation theory, in contrast, the mortgagee is able to enforce the assumption promise only if the grantor-promisee is personally liable to the mortgagee, for only then would the requisite of a common creditor of two debtors be present. n571

Because of the suretyship relationship between the mortgagor and an assuming grantee, the mortgagor will have a right against the assuming grantee for any sums the mortgagor is compelled to pay to the mortgagee which should have paid by the assuming grantee. n572 Upon an acceleration following a default, for example, the mortgagee may sue the

assuming grantee personally or foreclose. But if, instead, the mortgagee elects to proceed against the mortgagor, while the mortgagor would be obliged to discharge the mortgage debt, the mortgagor would in turn be entitled to indemnity from the assuming grantee under the assumption agreement. Further, whenever a surety discharges an obligation of a principal debtor, the surety is subrogated to all rights the creditor has against the principal debtor. Therefore, in the example, the mortgagor upon discharging the debt steps into the shoes of the mortgagee and acquires the status of mortgagee. As a result, not only is the mortgagor entitled to indemnity on the assumption promise, but the mortgagor may foreclose the mortgage. The mortgagor is also subrogated to the mortgagee's rights under the assumption promise; but there is no point in distinguishing between the rights of the mortgagor and of the mortgagee under that promise, since the remedies against the assuming grantee are identical under each. Because a surety must discharge the creditor's claim in order to acquire subrogation rights, the mortgagor is not subrogated to any rights of the mortgagee under the mortgage or on the chose in action of the mortgagee on the assumption promise until the mortgagor pays the mortgagee's claims. However, upon being sued by the mortgagee, the mortgagor is, of course, entitled to implead the assuming grantee. n573 Had the mortgagee, in the first instance, gone against the land by means of foreclosure or against the assuming grantee on the assumption promise and obtained satisfaction, there would be no need for subrogation since the mortgagee by this election of remedies would have put liability where it ultimately belonged, that is, on the assuming grantee. n574 Finally, the mortgagee retains his mortgage despite the assumption, for the mortgagor could grant only the encumbered interest to the assuming grantee.

In summary, after an assumption, the mortgagee holds three interests: (1) a claim personally against the mortgagor on the original debt, (2) a claim personally against the assuming grantee, as long as the requirements of the third party beneficiary theory or the subrogation theory are satisfied, on the promise to assume, and (3) a right to go against the land by foreclosing the mortgage. The mortgagee may pursue these claims in any order, unless state on or anti-deficiency laws require otherwise. Both the mortgagor and the assuming grantee are personally and primarily liable to the mortgagee; but between them a suretyship relationship exists which relegates the mortgagor to a position of surety.

LEXIS: mortgag! w/20 assum! w/20 subrogat! or suret!

§ 101.05(a)(5) Transfers Subject to a Mortgage.

A grantee of encumbered property always takes title subject to the encumbrance unless the recording statute or common law principles of priority require a contrary result. Nevertheless, it is common to limit the phrase "subject to the mortgage" to transfers of mortgaged property in which the transferee does not assume the mortgage debt, and in this section it is so employed.

A conveyance subject to a mortgage, like a transfer with assumption, does not relieve the mortgagor of any personal liability on the mortgage debt; but, unlike the assumption situation, the transferee does not enter into privity of contract with the mortgagee and acquires no personal liability for that debt because the transferee does not assume it. n575 A mortgage debt does not run with the land so as to bind successors of the mortgagor personally, although certainly successors taking subject to the mortgage are at risk of losing their interests through foreclosure. n576

A suretyship relationship is established when a transfer subject to a mortgage takes place, but it is different from that relationship arising under an assumption and varies with the terms of the transfer. When land is sold subject to a mortgage, the terms of the sale must be examined to determine whether the seller received the full contract price or deducted all or part of the amount of the mortgage debt from that price, in order to determine where parties are meant to place ultimate responsibility for discharging the debt. Of course, the non-assuming grantee has no personal liability on the mortgage debt to anyone; but if the amount of the debt was deducted from the purchase price, it may be inferred that the buyer and seller alike envisioned that the buyer would discharge the debt even though the buyer assumed no

personal liability; n577 they contemplated that the land should bear responsibility for the debt. The seller, having deducted the amount of the debt from the purchase price, had the right to expect the buyer's land to discharge the debt and exonerate the seller. While it may seem strange to view land as a debtor, that is how equity traditionally views it when a buyer takes land subject to a mortgage and receives a credit toward the purchase price. In this situation, the elements of a suretyship relationship exist in that a common creditor, the mortgagee, has two claims, one on the debt against the mortgagor and the other under the mortgage against the land, while between these two the land is primarily chargeable. Of course, the creditor may ignore the surety status of the mortgagor and proceed against the mortgagor alone, but the mortgagor would, upon paying the debt, be subrogated to the rights of the mortgagee under the mortgage and be entitled to foreclose it. n578

On the other hand, where the buyer pays the full contract price to the mortgagor, the principal-surety relationship would be reversed, for then the mortgagor implicitly is primarily obligated to exonerate the land. n579 The land, in effect, would be the surety, and the mortgagor the principal obligor. If, on default, the mortgagee now were to go against the mortgagor alone, there would be no subrogation rights, since the surety would not have been called upon to respond for the principal's debt. In contrast, were the mortgagee to foreclose the mortgage, the grantee would be subrogated to the mortgagee's rights on the debt. n580

§ 101.05(a)(6) Post-Transfer Dealings with Mortgagees.

Because transfers of mortgaged premises, whether by assumption or not, create suretyship relationships, mortgagees must carefully consider the obligations the law of suretyship imposes on them in dealing with the mortgagors and their grantees. A fundamental principle of suretyship law is that a creditor, in dealing with a principal obligor, must do nothing to prejudice the subrogation rights of the surety. In the mortgage context, this principle is implicated in dealings between the mortgagee and the surety, whether the surety be the mortgagor, a mortgagor's successor, or the land itself. Agreements between principal obligors and mortgagees have the potential of compromising the right of sureties to pay the debt when due and then invoke their subrogation rights, thus imperiling the mortgagee's rights against the surety.

Upon a transfer by a mortgagor to an assuming grantee or to a grantee who "takes subject to" the mortgage debt, a suretyship relationship arises between the transferor and the transferee and/or the land. n581 Where the transferor is a mortgagor with personal liability on the debt n582 or a prior assuming grantee, n583 the transfer does not relieve the transferor of liability to the mortgagee; but this does not alter the fact that, as between the parties to the transfer, the transferor has become surety for the transferor and/or the land. In dealing with the transferee or the land, the secured party must respect this suretyship relationship or risk losing the claims against the surety.

The common illustration of this phenomenon is that of a mortgagee granting to an assuming grantee an extension of time to pay the debt. Because of the extension, the mortgagee has no right to foreclose against the land until the extension period has elapsed and, consequently, until that time the mortgagor cannot be subrogated to any right to foreclose upon the failure of the assuming grantee to pay the debt at its original due date. Because the mortgagor bargained for the right to be subrogated to a right to foreclose upon default under terms of the original debt, so the theory goes, the mortgagor has been prejudiced by the extension and should be totally discharged. n584 Other instances include the release of the personal liability of an assuming grantee and the release of the security, both of which are the usual consequences of the acceptance of a deed in lieu of foreclosure by the secured party. n585

Because mortgagors also have subrogation rights against the land when their grantees "take subject to" a mortgage debt, actions by mortgagees prejudicing those rights may effect a discharge of the liability of the mortgagors. Most states in

these situations hold that the mortgagor is discharged only to the extent of the value of the security when the extension or other modification is given. n586 Others will reduce the mortgagor's liability only to the extent, if any, that the worth of the security has declined after the extension or other modification, reasoning that there can be no prejudice beyond that extent. n587 California, at least where the debt is not evidenced by a promissory note, has given a total discharge on these facts. n588 It has sometimes been held, however, that the modification given to a grantee who took "subject to" has no effect on the mortgagor's liability to the mortgagee. n589

For a modification to have any effect upon the mortgagor's liability to the mortgagee, the mortgagee at the time of the modification must have notice of the surety status of the mortgagor. n590 In almost all cases, though, this requirement is easily met, for in dealing with a grantee the creditor will either be actually aware of an assumption or of a taking "subject to" or, at least, should be expected to inquire about the relation between grantee and the mortgagor so as to have knowledge of the suretyship relationship imputed to the creditor. n591

Mortgagees are able to avoid the normal consequences of granting modifications and releases through the simple expedient of reserving the rights of the sureties at the time of the modification or release, or even at the time the debt is incurred. The common law recognized that creditors could reserve rights against sureties despite their dealings with principal obligors, n592 although it may not have allowed a reservation unless the surety had consented to it either when the debt was incurred or when the subsequent modification or release was given. n593 Section 3-606(1) of the pre-1990 version of the Uniform Commercial Code provided:

> The holder discharges any party to the instrument to the extent that without such party's consent the holder
>
> (a) without express reservation of rights releases or agrees not to sue any person against whom the party has to the knowledge of the holder a right of recourse or agrees to suspend the right to enforce against such person the instrument or collateral or otherwise discharges such person ... ; or
>
> (b) unjustifiably impairs any collateral for the instrument given by or on behalf of the party or any person against whom he has a right of recourse.

By the reservation, the right of the creditor to proceed against the surety "as of the time when the instrument was originally due" is preserved, and similarly preserved is the right of the surety to pay the debt according to its original tenor and thereupon to proceed, by subrogation, against the assuming grantee and/or the land as though the modification had never been given. n594 The theory is that the reservation of rights prevents the mortgagor from being prejudiced by the modification, since the surety may pay the debt according to its original tenor immediately after the modification or release and the exercise forthwith the subrogation rights. n595 However, since there is usually no requirement that the mortgagor be given notice of the modification, let alone of the reservation of rights, this theory sounds rather hollow. n596 For example, when an extension is given the grantee and no notice is given to the mortgagor, the mortgagor may easily assume that the debt was paid at its original maturity date and will be quite surprised later to learn that an extension had been given and that the mortgagor could have paid the debt and then been subrogated to the mortgagee's rights against the grantee and/or the land.

Although it has no direct application to dealings between mortgagees and grantees of mortgagors, the 1990 version of the Uniform Commercial Code did away with the traditional rules discharging obligors to negotiable instruments whenever they grant extensions or modifications to principal obligors. The main thrust of the 1990 reforms was to condition such a discharge on a showing of injury to those secondarily liable for affecting a discharge through an extension or modification. n597 It also prohibits reservations of rights at the time of a modification or extension, though

it permits them in the original agreement. While this reform is salutary, it unfortunately does not address dealings between mortgagees and the grantees of mortgagors, because the 1990 Code provisions address only dealings with parties to the instruments, and the grantees, unless they endorse the instrument, are not parties. n598

§ 101.05(b) Transfer of Mortgagees' Interests.

§ 101.05(b)(1) General Principles.

One fundamental principle governs the transfer of the interests of mortgagees: the mortgage follows the debt. Accordingly, in the absence of countervailing considerations such as the rights of holders in due course or of those who rely on the recording statutes, transfers of the interests of secured parties are effected by assignments of the underlying debt, and whoever holds the debt will also have the benefit of the mortgage without a formal transfer of the security interest. The focus, therefore, of inquiries involving purported transfers of a mortgagee's interest should begin with the debt, for normally the owner of the debt, by reason solely of that ownership, will own the mortgage.

Controversies arising out of transfers of mortgagees' interests fall into two main categories. First, there are the competing claims of successive transferees of the debt and mortgage as to priority. Where the mortgagee has made successive purported assignments of the debt, the common law maxim "*Qui prior est tempore potior est jure*" n599 presumptively obtains, although the law of negotiable instruments, the recording statutes, and equitable considerations often give preference to subsequent transferees. Second, there are cases involving the validity of defenses of mortgagors and their successors against transferees of the mortgage debt. Here, the beginning premise is that the mortgagee's transferee can have no greater rights than the transferor had and hence should be subject to all defenses that could have been asserted against the grantor, but, as with the case of successive transfers, other principles often free the transferee from being limited to the defenses of the debtor. The first category of disputes is sometimes said to involve latent equities, being latent or hidden in the sense that they would not normally be discoverable by a subsequent assignee upon inquiry of the transferor, who would be unlikely to admit the previously transferred right. The second category is frequently described as involving patent equities since they are usually readily discoverable by making inquiry of the debtor, who is not likely to be reticent about asserting defenses.

w/50 claim or equity or defense

§ 101.05(b)(2) Successive Transfers (Latent Equities).

In determining the relative priorities between mortgagees' successive transferees, it is necessary to distinguish between obligations governed by the Uniform Commercial Code and those governed by general contract principles. If the mortgage debt is represented by a negotiable instrument, the Code determines the priorities of competing claimants to the instrument although the Code itself may in certain instances incorporate non-Code law. n600 The pre-1990 version of the Code also applied when the instrument lacked negotiability merely because it was not payable to order or bearor. n601

§ 101.05(b)(2)(i) Obligations Not Governed by the Uniform Commercial Code.

Two different common law approaches are used to determine priority between successive assignees of a debt. One view

is to prefer the first assignee under the rubric "first in time, first in right," unless a later assignee qualifies as a bona fide purchaser for value and meets one of certain additional requirements. This is the view taken by the *Restatement of Contracts*:

> Except as otherwise provided by statute, the right of an assignee is superior to that of a subsequent assignee of the same right from the same assignor, unless
>
> (a) the first assignment is ineffective or revocable or is voidable by the assignor or by the subsequent assignee; or
>
> (b) the subsequent assignee in good faith and without knowledge or reason to know of the prior assignment gives value and obtains
>
> (i) payment or satisfaction of the obligation,
>
> (ii) judgment against the obligor,
>
> (iii) a new contract with the obligor by novation, or
>
> (iv) possession of a writing of a type customarily accepted as a symbol or as evidence of the right assigned. n602

The provisions of the *Restatement* position that are most often relevant in the mortgage context are subsections (b)(i) and (b)(iv). Under those provisions a subsequent good faith purchaser of the mortgage debt will prevail if the purchaser obtains satisfaction or acquires possession of the non-negotiable evidence of indebtedness, provided the evidence is regarded as a customary symbol of the debt.

The second view is that the first assignee to notify the obligor of the assignment has priority. n603

Under the *Restatement* position, the subsequent assignee prevails only by taking the interest in good faith and without reason to know of the prior assignment. Thus, a subsequent assignee with actual knowledge of an earlier assignment will take subject to it. In the mortgage context, it becomes important to determine whether recordation of a prior assignment of the mortgage provides notice to later assignees of the obligation. It would seem that, unless the subsequent assignee has reason to know that the obligation is secured by a mortgage, that assignee would have no reason to examine the land records, and that in turn would render recordation irrelevant. n604 Where the later assignee has reason to know that the debt is secured by land, constructive notice of prior assignments is imputed to the later assignee. n605 The recording statutes usually provide that recordation of a mortgage assignment is notice to subsequent assignees so that, once an assignment is recorded, whatever the common law rules would say about priorities is irrelevant, the recording statutes mandate that subsequent assignees are subordinate. n606 At first blush, it may appear that imparting notice of a recorded mortgage assignment to a subsequent assignee is inconsistent with the view that the mortgage follows the debt. While the transfer of a security interest in land is usually recorded to preserve priority over subsequent grantees and encumbrancers, assignments of chooses in action are not normally recorded in the land records. Thus, it could be contended that, since the debt is the primary interest, relative priorities should be determined under the law of contracts. However, such an argument overlooks the fact that the mortgage assignment is also an assignment of the debt and, unlike the case with negotiable instruments, no negotiation of an instrument is necessary to effect an assignment. n607

LEXIS: mortgage or (deed pre/2 trust) w/50 priority w/50 successive or subsequent w/15 transfer! or assign!

§ 101.05(b)(2)(ii) Obligations Governed by the Uniform Commercial Code.

When the Uniform Commercial Code is applicable, distinctions must be drawn between holders in due course and other claimants to the instrument. A holder in due course acquires title good against all other claimants regardless of the order of transfers to the competing transferees. Those who are not holders in due course are "subject to a claim of a property or possessory right in the instrument or its proceeds ... ." n608

A holder in due course is one who, among other things, acquires possession of the instrument, properly endorsed if the instrument is order paper, without notice of defenses or claims to the instrument. n609 The underlying goal of imparting negotiability to certain instruments would be severely compromised if holders in due course were expected to examine the land records before purchasing an instrument. Accordingly, the Code provides that recordation in the land records "does not of itself constitute notice of a ... claim to the instrument." n610 The fair inference to be drawn from this provision is that recordation will not impute knowledge of a prior recorded mortgage assignment to a subsequent holder. n611 Some courts, however, have distinguished between the subsequent holder's status as a secured party and as a creditor, concluding that record notice will not impact on the holder in due course status with respect to the instrument, but will prevent the holder from attaining priority with respect to the security. n612 Under the Code, it would seem that, if one of several claimants to an instrument is a holder in due course, the holder will prevail without regard to the order of recordation and even without regard to whether the transfer to him is recorded at all. Further, under the maxim that the mortgage follows the debt, the holder in due course should also have the benefit of the mortgage regardless of whether the holder has recorded an assignment of the mortgage. Likewise, the law of negotiable instruments rather than of property should operate to confer priority to a prior holder in due course of a note secured by a mortgage over a later assignee who acquired only a copy of the note. n613

Where none of the competing claimants to the instrument is a holder in due course, the Code provides that one "taking an instrument ... is subject to a claim of a property or possessory right in the instrument or its proceeds ... ." n614 Under this provision, it would seem that non-Code law determines whether another claim exists, that is, the applicable law of contracts discussed in the preceding section. Although the Code empowers a holder of a negotiable instrument who is not a holder in due course to enforce the instrument against an obligor, the Code does not address the question of ultimate ownership of the instrument or its proceeds. Thus, for example, a holder may enforce the instrument against its maker even though the holder took the instrument with notice of a prior assignment of the claim represented by the instrument and thus did not qualify as a holder in due course. On these facts, the holder may have taken subject to the right of the prior assignee and, accordingly, should hold the proceeds for the account of the prior assignee. n615

Although the recordation of an assignment in the land records may not always provide notice to assignees, and while such recordation should never constitute notice to holders in due course, nevertheless, one court held that the doctrine of lis pendens subjects assignees and holders in due course alike to the outcome of suits pending at the time of assignment or negotiation. n616 This decision seems out of step with contemporary notions of negotiability. n617 Under the common law doctrine of lis pendens, all transferees take subject to the outcome of litigation pending at the time of the transfer in which rights in the property transferred are involved. n618 Thus, it is arguable that, where a suit is pending over a negotiable instrument, a negotiation from one of the litigants is subject to the outcome of the suit. n619 On the other hand, subjecting those taking negotiable instruments to the burden of examining court records seems just as incompatible with negotiability as forcing them to examine the land records. The harshness of the rule subjecting assignees and holders to the doctrine is mitigated somewhat by frequent statutes limiting the rule to cases where a notice of lis pendens is placed in the land records, n620 but general notions of negotiation would suggest that those who would otherwise qualify as holders in due course should not be denied that status because of notice imputed to them under the land records. n621

§ 101.05(b)(3) Defenses of Obligors (Patent Equities).

§ 101.05(b)(3)(i) General Principles.

Despite the general common law rule that an assignee has no better rights than the assignor against an obligor, there are instances where defenses good against the assignor are not valid against the assignee. This section examines the impact of a transfer by a mortgagee upon defenses of mortgagors and their successors. It will be recalled that these defenses are often referred to as patent equities, because they should be readily discoverable upon making inquiry of the obligor and are thus not concealed as are the claims of prior assignees, who are said to hold latent equities.

Under the common law of contracts, an assignee takes subject to all real n622 and personal defenses n623 of the assignor, and this rule governs mortgage assignments except where the law of negotiable instruments provides otherwise. The recording act too can sometimes preclude an otherwise valid defense, but almost invariably the defense is payment, so the role of the recording act in this context is deferred to the section on payment. n624 Hence, if a mortgagee obtains the mortgagor's non-negotiable note secured by a mortgage, but the mortgagor has a personal defense on the note, such as fraud, that defense will be good against both the mortgagee and any assignee of the mortgagee. However, where the obligation takes the form of a negotiable instrument and is negotiated to a holder in due course, the result is otherwise. Here, in keeping with the purpose of encouraging the use of negotiable paper as a medium of exchange, the holder in due course takes free of personal defenses. n625 Fraud being one of the personal defenses, the mortgagor cannot defend an action on the note brought by the holder in due course on the ground that the note was fraudulently obtained by the mortgagee.

LEXIS: mortgage or (deed pre/2 trust) & successive or
subsequent w/15 transfer! or assign! w/50
defense or patent

§ 101.05(b)(3)(ii) Payment and Mortgage Assignments.

Payment is a personal defense. It is therefore a defense good against an assignee, but not good against a holder in due course. Where a mortgage assignee is not a holder in due course, the common law of contracts provides that all payments made to the mortgagee's assignee before the obligor is notified of the assignment are good and can be credited against the debt. n626 The prudent assignee, if not a holder in due course, should therefore make inquiry of the obligor before taking the assignment in order both to alert the obligor of the impending assignment and to ascertain whether any payments have been made to the assignor. On the other hand, if the benefit of the obligation has been transferred to a holder in due course, the holder in due course is, in nearly all cases, entitled to payment whether or not notice has been given to the obligor. n627 Some consumer protection legislation gives mortgagors and their successors the benefit of payments made to transferors of the debt after the transfer but before notification of the transfer, thereby treating alike payments to assignees and holders in due course. n628 It is, therefore, incumbent on one making payment on a negotiable instrument to insist on production of the instrument, for, if the instrument has been negotiated to a holder in due course, payment to someone else will be no defense to a claim by the holder in due course. Of course, it is the rare obligor who insists on production of an instrument when making a periodic payment on a negotiable instrument, but nevertheless these rules are well established.

Because mortgagors cannot be expected to conduct title examinations every time they make a payment, recordation of a

mortgage assignment is usually not deemed notice to mortgagors, who thus may continue to make payments to mortgagees until they have other notice of the assignment. n629 However, in this connection, it should be reemphasized that notice is almost always irrelevant where the assignee is also a holder in due course. n630 Nevertheless, as against a successor to the mortgagor who acquires the interest after recordation of the assignment, the recorded assignment does provide notice, at least if the successor has reason to know the debt is secured by real estate and thus can be expected to search the land records. n631 The difference in treatment of obligors whose interests arise before and after the recordation of a mortgage assignment is justified by the reality that, while most debtors do not search the land records every time they make a payment, those who acquire interests in the realty after the recordation usually inspect the records before accepting the conveyance.

Despite the foregoing, some decisions indicate that, if a final payment rather than an installment payment, is tendered, the obligor should insist on production of the evidence of the debt, even though it is not a negotiable instrument. Under this approach, a final payment to a mortgagee who cannot produce the non-negotiable evidence of indebtedness is no defense against an assignee who holds the instrument. n632

(n99)Footnote 615. *U.C.C. § 3-301* recognizes that a holder may enforce an instrument "even though the person is not the owner of the instrument or is in wrongful possession of the instrument."

(n100)Footnote 616. *First Md. Fin. Servs. Corp. v. District Realty Title Ins. Corp., 548 A.2d 787 (D.C. 1988)* (doctrine precludes holder in due course status).

(n101)Footnote 617. *Picerne v. Redd, 47 A.2d 906 (R.I. 1946)* (doctrine inapplicable to negotiable instruments); *Stavros v. Karkomi, 349 N.E.2d 599 (Ill. App. 1976)* (doctrine applicable to personalty except negotiable paper).

(n102)Footnote 618. Restatement (Second) of Judgments § 44 (1982). *See also* Page's *Ohio Rev. Code Ann., § 2703.26* (1981). Many jurisdictions limit the doctrine to suits involving realty. *Wigram v. Buckley, 3 Ch. (L.R.) 483 (1894); Parke v. Superior Ct., 88 Cal. Rptr. 352 (1970)* ; *Kirk v. Bauman, 336 So. 2d 125 (Fla. App. 1976)* . Some extend it to personalty. *Larkins-Warr Trust v. Ray, 232 P.2d 156 (Okla. 1951)* ; others extend it to personalty but exclude negotiable paper. *Stavros v. Karkomi, 349 N.E.2d 599 (Ill. App. 1976)* ; *Picerne v. Redd, 47 A.2d 906 (R.I. 1946)* .

(n103)Footnote 619. *First Md. Fin. Servs. Corp. v. District Realty Title Ins. Corp., 548 A.2d 787 (D.C. 1988)* .

(n104)Footnote 620. *E.g., Ala. Code § 35-4-135* (1991); *Cal. Civ. Code § 3146*; *N.J. Stat. Ann. § 2A:15-7* (1987); *N.M. Stat. Ann. § 38-1-14* (1991).

(n105)Footnote 621. *See supra* note 605.

(n106)Footnote 622. Real defenses include infancy; duress, lack of capacity, illegality that makes the debt a nullity, fraud in the factum, and discharge in bankruptcy. *U.C.C. § 3-305(a)(1)*.

(n107)Footnote 623. The personal defenses are all those not classified as real defenses, the most frequently occurring examples being failure of consideration and fraud in the inducement.

(n108)Footnote 624. *See* § 101.05(b)(3)(ii), *infra*.

(n109)Footnote 625. *Am West Sav. Ass'n v. Farmers Mkt. of Odessa, Inc., 753 F. Supp. 1339 (W.D. Tex. 1990)* .

(n110)Footnote 626. *Buffalo Pipeline Co. v. Bell, 694 S.W.2d 592 (Tex. App. 1985)* , *writ refused n.r.e.* (1985); *Horbal v. Moxham Nat'l Bank, 697 A.2d 577 (Pa. 1997)* .

(n111)Footnote 627. *State Bank of Culbertson v. Dahl, 617 P.2d 1295 (Mont. 1980)* ; *Groover v. Peters, 203 S.E.2d 413 (Ga. 1973)* ; *Assets Realization Co. v. Clark, 123 N.Y.S. 1105 (1909)* , *aff'd, 98 N.E. 457 (N.Y. 1912)* ; *Bank One, NA v. Dillon, 2005 Ohio 1950* (Ohio App. 9 Dist. 2005) (although assignee did not record mortgage in timely manner, assignee still had ability to enforce mortgage in foreclosure proceeding).

(n112)Footnote 628. Wyoming has interpreted the Uniform Consumer Credit Code as permitting assuming grantee to pay original mortgagee until actual notice of assignment received. *Young v. Hawks, 624 P.2d 235 (Wyo. 1981)* . The Uniform Land Transactions Act has similar provisions. Uniform Land Transactions Act § 3-206(c) (1975). *See also Md. Code, Real Prop., § 7-103(b)* (1988 Repl.).

Several states have attempted to mitigate the harshness of the rule that payments made to a transferor after negotiation to a holder in due course may not credited toward the debt by sanctioning payments to transferors before recordation of the transfer. *Kan. Stat. Ann., §§ 58-2321* and *58-2322* (1983); *N.M. Stat. Ann. §§ 48-7-2* and *48-7-3* (1987 Repl.). *See also Wagner v. GMAC Mtg. Corp. of Iowa, 775 S.W.2d 71, 73 (Tex. App. 1989)* ("... when a mortgage is assigned to another party, a payment made in good faith without notice of the assignment to the original creditor operates as a defense to a suit by the assignee"; but not clear from the case whether the assignee was also a holder in due course).

CHAPTER 101 MORTGAGES, DEEDS OF TRUSTS AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions § 101.06

AUTHOR: Professor Jerome J. Curtis, Jr. McGeorge School of Law University of the Pacific

§ 101.06 Priorities.

§ 101.06(a) Priorities Generally.

The relative priority of competing encumbrances determines who are necessary parties to a foreclosure and the order in which the claimants are entitled to be satisfied out of the security. The basic maxim is "first in time, first in right." n633 Unless within one of the exceptions to this principle, then, the order in which the competing encumbrances attach fixes their relative priorities. Thus, where a mortgagor has given two successive mortgages on the same property, the mortgage given first is superior to the other so that the first mortgagee is not a necessary party to a foreclosure of the second mortgage, since the first mortgage will not be affected by a foreclosure of the second; in addition, in the event of a foreclosure of the mortgage given first, the first is entitled to be satisfied from the foreclosure sale proceeds before the second mortgagee is entitled to participate. The exceptions to this basic principle are the focus of this part. Rent control statutes and similar types of legislation may confer on mortgagors' tenants rights superior to those of mortgagees. For example, the New Jersey anti-eviction statute protects tenants from foreclosures under mortgages antedating the tenancy. n634

§ 101.06(b) Recording Statutes and Common Law Priorities.

Even in the absence of a recording statute, the common law sometimes produces results at variance with the "first in time, first in right" principle. Where the competitors each claim legal interests, the "first in time, first in right" principle is invariably followed at common law, n635 and the same approach is usually taken where they each claim equitable interests. n636 When, however, one competitor holds an equitable interest and the other a legal one, the common law departs from the principle if the earlier claim is equitable while the latter legal claim is held by a good faith purchaser for value. n637 The preference for the subsequent good faith purchaser of a legal interest over a prior equitable interest can have contemporary application where the earlier interest is an equitable mortgage or a vendor's lien. Here, even without a recording statute, the subsequent purchaser or legal mortgagee in good faith of a legal interest will take free of

the prior equitable interests, and the order of recordation should not affect the result. If a subsequent legal mortgagee with no notice of a prior equitable mortgage should record first, there should be no question of the priority of the legal mortgage, but even if the prior equitable mortgagee records first, the subsequent legal mortgagee taking in good faith before that recordation ought to prevail, since the legal mortgagor would have priority under the common law and because the recording statutes, excepting pure race statutes, are not designed to protect prior claimants who do not record. n638

Of course, all states have enacted recording statutes which can operate to deny one, including a mortgagee, a priority to which one would be entitled under these common principles of priority. n639 Transferees enjoy the relative priorities of their transferors. Thus, the assignee of a senior lien retains priority over a junior lien recorded before the transfer. n640

§ 101.06(c) Purchase Money Mortgages.

A purchase money security interest has priority, as a general rule, over all other encumbrances. n641 A purchase money security interest is one given to secure a debt incurred to finance the acquisition of property. It may be given to secure a debt held by a seller who extended credit in selling the property, n642 or it may be security given a third party lender who advanced funds used to buy the property. n643 In either case, the purchase money mortgagee will usually have priority over competing liens. Under the general maxim, "first in time, first in right," the purchase money mortgagee will be superior to those acquiring encumbrances after the purchase money security interest attached, absent other considerations. n644 The preference accorded a purchase money security interest is justified by the realization that, if credit had not been extended by the purchase money creditor, the asset would not have been acquired by the debtor and thus made available to satisfy the purchaser's other creditors. n645

Under this principle, mortgagees under security agreements containing after-acquired *property clauses* are subordinated to purchase money mortgagees. n646 Similarly general judgment liens are junior to subsequent purchase money mortgages. n647 The purchase money mortgage also has priority over federal tax liens. n648

It often happens that several purchase money security interests are created at the same time. A seller, for example, may take back a buyer's note and mortgage for part of the purchase price while a lending institution lends the buyer funds to pay the balance of the price and also takes a mortgage. In such cases, it is presumed that the seller-mortgagee has priority over the third-party lender although both, as purchase money mortgagees, have priority over others. This is because the law has traditionally favored sellers, who part with property on the faith of a mortgage, over third-party lenders, who part only with money. n649 Nevertheless, the presumption can be overcome by proof of an agreement by the seller to subordinate the seller's interest to that of the third-party lender. Lending institutions, of course, desire to have first position and often are precluded by law from taking junior mortgages. The prudent third-party lender will accordingly enter into a written subordination agreement with the seller before advancing funds. Without such an agreement third-party lenders are in jeopardy of taking second place vis-a-vis vendor-mortgagees. The third-party lender may prevail because of the recording act or, if the vendor's interest is merely equitable, because of the common law principle that a subsequent mortgagee in good faith takes free of prior equities. n650 Of course, neither the recording statutes, except the pure race statutes, nor the common law priority rules will avail a third-party lender who has notice of the prior interest of the vendor. If a third-party purchase money mortgagee is unaware that the vendor is advancing credit, the third-party lender should prevail in states with notice recording statutes and, if the lender records first, in those states with race or race-notice statutes. An intermediate appellate court in California, refusing to recognize the similarity between vendors' liens and purchase money mortgages held by sellers, ruled that a third-party purchase money mortgage had priority over a vendor's lien even where the third-party mortgagee had knowledge of the lien. n651 In discounting the mortgagee's knowledge of the vendor's lien, this decision is highly questionable since it repudiates

the traditional notion that a purchaser with knowledge of a superior claim, be it legal or equitable, takes subject to it.

Occasionally, third-party lenders attempt to attain priority over sellers by requiring that their mortgages be recorded before those of the sellers. This approach may succeed if it can be shown that the seller and third-party lender agreed that priority would be established by the order of recordation, but usually the order of recordation alone will not subordinate the sellers' mortgages. n652

Unless they are recorded, the common law priority afforded to purchase money mortgagees often proves illusory with respect to subsequent encumbrances. Subsequent grantees and encumbrancers who lack notice of prior encumbrances have priority under the recording statutes over prior unrecorded encumbrances, and this is true with respect to prior unrecorded purchase money mortgages. n653 Thus, a seller who does not record a purchase money mortgage may lose the priority otherwise enjoyed over a third-party purchase money mortgagee if the latter is not otherwise aware of the seller's mortgage. Of course, in states with race or race-notice recording statutes, the subsequent third-party lender would have to record the lender's own mortgage first to overcome the seller's priority.

trust or security w/15 priority or record!

§ 101.06(d) Subordination Agreements.

A subordination agreement is an undertaking by a mortgagee to reverse priority between the mortgagee's interest and another encumbrance. The other encumbrance may be one already in existence, as when a construction lender agrees to lend construction monies only if an existing mortgagee agrees to subordinate to the construction mortgage. It may also be an encumbrance created simultaneously with that held by the promisee of the agreement, as when a third-party purchase money mortgagee agrees with a seller purchase money mortgagee that the third-party's mortgage will have priority. Finally, it may be a future encumbrance, as when a seller takes back a purchase money mortgage but agrees to subordinate it to a future construction mortgage. n654

Subordination agreements may be executory or executed. Executory subordination agreements may not be self-executing and, for a number a reasons, equity may decline specifically to enforce them, thereby leaving priorities as they stand and the promisee with only a claim for money damages. Once the subordination agreement has been performed, however, priorities are reversed, and the promisor will have a heavy burden if the promisor seeks to set the subordination aside.

There is some disagreement among the courts as to what constitutes a subordination. What is the proper characterization of an express "subordination" to a future mortgage or of the agreed upon recordation of a subordinated mortgage after recordation of the subordinating one? Should a provision in a purchase money mortgage whereby the seller, rather than agreeing to subordinate to a future construction mortgage, purports presently to subordinate to such a mortgage be deemed to have given an executory contract to subordinate or simply to have taken a junior mortgage? Some argue: n655

> When the seller contracts initially to receive a junior lien, there is no issue of the alteration of the priority of his lien ... . In this situation, the seller receives a *second lien*, which is exactly what he bargained for. (Emphasis in original.) n656

The California decisions seem to treat such provisions as subordinations:

> In our view there is no justification, legal or otherwise, which would call for a different result

whether the seller in a joint transaction records first and then agrees that his lien will be subordinated or whether he agrees that the lender may achieve priority through first recording. n657

The distinction between taking a junior encumbrance and taking a senior one and agreeing to subordinate it can be crucial to priorities. As discussed in the next section, a subordination agreement may be subject to certain contingencies, usually actions of the mortgagee, but with an executed junior mortgage, it is difficult to conceive that the relative priorities have not been indelibly established.

§ 101.06(d)(1) Executory Subordination Agreements.

A subordination agreement, like any other contract, must be certain in its terms, and further, to be specifically enforceable, those terms must be equitable.

Some courts require the inclusion of certain terms which define and limit the promisor's risk before they will enforce executory subordination agreements. n658 Presumably, the absence of these terms will also preclude successful pursuit of a legal action for breach of an undertaking to subordinate. The California Supreme Court has indicated that the standard is "terms that will define and minimize" the risk to the subordinating lienor. n659 That California case involved an agreement to subordinate to a construction loan and, although the court declined to enforce the agreement specifically, it is difficult to determine whether it so declined because it felt the terms of the agreement were too uncertain or too harsh, i.e., the terms were not sufficiently just to prompt equitable relief. In any event, the deficiencies in the agreement upon which the court relied were (1) no requirement that loan proceeds be invested in the mortgaged property, (2) no guaranty that the advances would not exceed the value of improvements, and (3) no ceiling on the amount of the advances. Other courts are taking the same tack, refusing to enforce subordination agreements unless they not only set forth with some specificity the terms of the mortgage loan to which the promisor agrees to subordinate, but also provide some assurance that the promisor will not be unduly prejudiced. North Carolina, for example, reasoning that contracts calling for future agreement on material terms are void for uncertainty, refused to enforce a promise to subordinate on request to a future lien securing any "amount as may be reasonably requested." n660 By these standards, it would seem that an enforceable subordination agreement should establish a maximum debt to which the promisor agrees to subordinate, together with the maximum interest rate and loan period, and also stipulate that the loan proceeds be invested in the property. n661

Not all courts adhere to such rigid standards for enforcing subordination agreements. n662

w/15 subordinat! w/15 agreement or contract

§ 101.06(d)(2) Executed Subordination Agreements.

Once a mortgagee actually subordinates to another encumbrance, the arguments that could have been raised to defeat enforcement of the promise often disappear. If the executed subordination identifies the encumbrance to which it is subordinated, or if the terms of the debt were known to the promisor when the subordination was executed, it is difficult to contend that the terms of the subordination agreement were uncertain. Of course, it may still be that an executed subordination is inequitable, as, for example, in not providing that funds advanced be invested in the property; such a claim, however, may be countered with the argument that, having in fact subordinated and the promisee having changed position in reliance on the executed subordination, the promisor is estopped from seeking to set the subordination aside. n663 Nevertheless, executed subordinations have sometimes been set aside on the ground that the subordination was subject to conditions which had not occurred.

In accepting the benefits of a subordination agreement, a lender may expressly or implicitly assume obligations to the subordinating mortgagee, and the faithful performance of these obligations may be a condition of the subordination. Should the condition not be fulfilled, the subordination itself will then be vitiated. The easiest cases in this area involve express conditions. n664 A few courts, however, are willing to infer conditions. n665 The California courts have gone so far as to assume that a subordination executed by a seller in favor of a construction lender is implicitly conditioned upon investment of construction funds in the property. n666 Under this reasoning, construction lenders, aware of the seller's subordination, even though they may have no direct dealings with the seller, obtain priority over the seller only to the extent that advances are actually invested in the property. n667 Kentucky has held that the beneficiary of a subordination is implicitly bound to apply any payments the beneficiary receives from the mortgagor toward the debt secured by the mortgage. n668 It appears that most courts are unwilling to accept the notion of implied conditions, however. n669 This reluctance may be particularly strong where all parties to the subordination are experienced lenders. n670

LEXIS: mortgage or (deed pre/2 trust) w/50 executed w/15 subordinat! w/15 agreement or contract

§ 101.06(e) Replacement Mortgages.

Mortgagees sometimes release their security and take back another security interest to replace the security released, giving rise to questions about the relative priorities of the substitutionary security and encumbrances that attached after the released security interest attached. Certainly, if no changes in the underlying debt accompanied the substitution of security, the intervening encumbrancers should not rise in priority merely because the former senior mortgagee substituted another mortgage. n671 The intervening encumbrancers should have been aware of the released mortgage when they extended credit and did not rely on the release. But, if changes were made in the debt when the substitution was effected, and if those changes reflect additional extensions of credit, the intervening encumbrancers are in the position to claim that, to the extent that further credit has been extended, the substituted security should be junior.

In resolving disputes between competing mortgagees when a substitution of security interests has taken place, courts entertain a presumption that the parties to the substitution intended no adverse consequences for the mortgagee. n672 Thus, absent proof that the mortgagee meant to subordinate the mortgage, the presumption is that the subordination was not intended. Competing encumbrancers, however, are not bound by any agreement between the parties to a substitution, and upon detrimentally relying upon the release may establish priority over the substituted mortgage. n673

If the substitution were recorded before other parties extended credit, the subsequent creditors would certainly be junior. If the substitution were not recorded after the releases, and if credit were later extended on the faith of the release, the equities might very well favor the later creditors; but cases of substitutions not accompanied by a simultaneous recordation of the release and the substitute mortgage are rather rare.

Where the underlying debt is modified and secured by the substituted mortgage, the question turns on whether the intervening encumbrancers are prejudiced by the modification. To the extent that the debt of the mortgagor is increased by the modification, prejudice is generally established. If the principal amount of the debt is increased, the mortgagee will retain priority only with respect to the former principal balance and will be subordinate with respect to the increase. Similar treatment is afforded modifications which increase the rate of interest. A modification which merely extends the repayment schedule is usually presumed beneficial to other creditors, since they are not immediately threatened with foreclosure of the senior mortgage and the need to redeem or lose their security. n674

§ 101.06(f) Future Advances.

Mortgages often secure not only sums loaned at or before the time the mortgages are given, but also sums to be loaned in the future. Such mortgages are said to secure future advances. n675 The most common examples of such mortgages are the construction mortgage, which secures sums to be disbursed in installments during the course of construction, and the home equity mortgage, which secures revolving lines of credit. Questions can arise as to the priority of such mortgages to the extent that other encumbrances intervene between the giving of the mortgage and the subsequent advances.

Often priority is possible only if the security instrument meets certain statutory requirements. n676 Sometimes specific headings must appear in the instrument, n677 particular language must be included respecting advances, n678 the period during which advances may be made must be set forth, n679 or the maximum amount to be secured must be stated. n680

The orthodox view is that an earlier mortgage confers priority with respect to advances over intervening encumbrancers only if the advance was obligatory or, if not obligatory, made without actual knowledge of the intervening encumbrance. n681 In a few states, constructive notice of an intervening encumbrance imparted by the land records will deny the earlier encumbrancer priority with respect to optional advances. n682 A minority but growing view is that no distinction between obligatory and optional advances should be drawn and that either type should have priority over intervening liens. n683 The reporters for the Restatement, Third, on Mortgages, identified 36 states which, under various conditions, grant priority to optional advances. n684 There may well be a trend toward the minority position, at least where the total amount secured does not exceed the maximum indebtedness stated in the security instrument. n685

The rationale of the orthodox view is to protect mortgagors who, if optional advances under prior mortgages are given priority, will find themselves unable to borrow. Prior mortgagees would be reluctant to make advances once they are aware of subsequent encumbrances, and later lenders would also hesitate to extend credit lest they be rendered insecure through future advances by earlier mortgagees. Nevertheless, because of the difficulties in distinguishing obligatory and optional advances, the orthodox view has come under attack.

Under the traditional view, of course, it is not always easy to determine if a particular disbursement is optional or not. In the typical case of a construction lender vying with a subcontractor, can it be said that advances made by the former are truly obligatory, where the loan agreement obliged the constructor to advance funds at various stages of construction provided construction was proceeding in a manner satisfactory to the lender? A lender who retains a great deal of discretion, for example, in advancing monies runs the risk that the advances will be found to be optional. One lender was found to have made optional payments under a loan agreement authorizing disbursements "at such times and in such amounts as the Lender shall determine." n686 Conditioning advances upon a construction lender's verification of the cost of completed work was found not to leave the lender with such discretion as would render the disbursement optional. n687 Some speculate that there may be a trend to liberalize the definition of "obligatory" in an effort to preserve the priorities of construction lenders who make advances or expend funds to save a project from collapsing. n688

Construction lenders may elect to make advances not strictly mandatory in the belief that doing so is essential to completion of a project and to maintaining the value of their investment in it. Should the economic necessity or, perhaps, reasonableness of such disbursements be considered in determining whether they should be labelled optional or obligatory? The cases are divided. Where a construction lender took over and completed a project after the contractor-borrower's default, one court held, the lender had not acted as a volunteer but had fulfilled the duty of a mortgagee in possession to prevent deterioration and thus made obligatory advances. n689 Many courts, in contrast, would not have so characterized the disbursements, finding that the lender had no duty to disburse. n690

Recognizing the economic factors under which construction lenders often are compelled to make what might be characterized as optional advancements, California preserves their priority if the optional advances are used to discharge certain mechanics' liens or to pay the cost of the improvement. n691

Difficulties may also arise if lenders waive compliance with the terms of the loan agreement and disburse funds when the conditions precedent to the obligation to disburse have not been met. If the conditions were waived in the belief that doing so was essential to the economic survival of the project, the same type of considerations described in the preceding paragraphs are present. Yet, disbursements in the absence of compliance with certain stipulations have been treated as optional. n692

Several legislatures have attempted to avoid the obligatory-optional quagmire for construction mortgages by eliminating the mortgagor's default and/or occurrence of conditions that may relieve the lender of the duty to disburse as a basis for characterizing disbursements as optional. n693 This approach parrots the Uniform Land Transactions Act, the Uniform Simplification of Land Transfers Act, and the Uniform Land Security Interest Act. n694 The comments to these acts indicate the intent is to preserve the priority of a lender even though, at the time an advance is made, the "borrower's breach or other circumstance might justify refusal to make the advance." n695

Statutes have also been enacted to maintain the relative priority of home equity or other revolving line of credit mortgages. n696 The North Carolina statute preserves the lender's priority if the "lender is obligated," n697 but it appears that the obligation may be ephemeral since the statute contemplates that the lender may "[reserve] the right to cancel or terminate the obligation." n698

The traditional solicitude for the ability of mortgagors to obtain further financing may not be consistent with maintaining the priority of advances without regard to whether they are obligatory or optional. In an effort to reconcile abolition of the need to distinguish between obligatory and optional advances with this concern for mortgagors, some jurisdictions recognize a so-called "cut-off" right in mortgagors. n699 By serving such a notice on the mortgagee, the mortgagor removes any further disbursements from the coverage of the mortgage, thus enhancing the mortgagor's ability to secure secured financing from other lenders.

The standard American Land Title Association Loan policy excludes future advances from coverage, other than sums expended to protect the security, although most insurers will endorse their policies to insure the validity and priority of mortgages as they relate to later advances. n700

LEXIS: mortgage or (deed pre./2 trust) w/50 obligat! or option! w/15 future pre/2 advance

§ 101.06(g) Subrogation.

Where one pays another's debt, other than as a volunteer, the payor often is deemed to acquire by operation of law the rights the creditor formerly had against the debtor. Payment by one who is not a volunteer, in effect, brings about a transfer of the creditor's rights to the payor; the payor is said to be subrogated to the creditor's rights against the debtor and against the debtor's property. Where the payment is paid to protect the interests of the payor or to satisfy the payor's liability as a surety, the subrogation right is usually described as legal subrogation n701 and, sometimes as equitable subrogation. n702 In the context of mortgages, this type of subrogation can be illustrated in those cases in which a mortgagor is compelled to pay the mortgage debt after an assuming grantee breaches the assumption agreement. In such a case, upon paying a debt which should have been discharged by the assuming grantee, the mortgagor is subrogated to the rights of the mortgagee and entitled to foreclose the mortgage against the assuming grantee.

Another type of subrogation, unlike legal or equitable subrogation, arises because of an agreement between one who pays another's debt and either the debtor or the creditor. This type of subrogation is based on contractual expectations of the payor and is generally referred to as conventional subrogation. n703

Under both types of subrogation, the interest to which the payor is subrogated can retain its relative priority over other interests in the property. n704 Thus, where three mortgages encumber the land, the third mortgagee may discharge the first mortgage to preserve the third mortgage from being sold out and be equitably subrogated to the first mortgage, leaving the second mortgagee in second position behind the mortgage to which the payor is subrogated but still ahead of the third mortgage.

§ 101.06(g)(1) Legal, Sometimes Called Equitable, Subrogation.

Only those who discharge another's debt in order to protect their own interests or fulfill their obligations as surety for the debt are entitled to legal subrogation. n705 Those who pay the debt as mere acts of charity or who do so under no economic or legal compulsion are deemed to have made a simple gift and thus are denied subrogation rights. n706 One who lends funds to be used to discharge an existing secured obligation runs the risk of being treated as a volunteer unless the lender is interested in discharging the lien in order to preserve a junior interest of the lender or is entitled to conventional subrogation. n707

One is not a volunteer when one pays a debt on which one is personally liable as a surety. Certainly, a guarantor of a mortgage note is not a volunteer when paying the note upon demand after unsuccessful presentment to the primary obligor. In such a case, the guarantor was never a primary obligor. However, one who was once a primary obligor can later become remitted to surety status. Suppose a mortgagor transfers to an assuming grantee and that the grantee later grants a second, non-purchase money mortgage. Here, though the mortgagor was and remains a primary obligor from the perspective of the mortgagee, at least as between the mortgagor and the assuming grantee, the grantee has become a primary obligor and the mortgagor is now a surety. Should the mortgagor become compelled to pay the debt, the mortgagor should be subrogated to the first mortgagee's right with priority over the second mortgagee.

Even where the grantee takes "subject to" the first mortgage, the mortgagor, upon payment of the debt should be subrogated to the first mortgagee's priority over the second mortgagee although there would be no rights *in personam* against the non-assuming grantee to which the mortgagor could be subrogated. n708 Arizona dissents from this view and refuses to subrogate mortgagors to the rights of their mortgagees against non-assuming grantees, on the theory that payment of the debt by the mortgagor discharges the debt and the mortgage so that there is nothing to which the mortgagor can be subrogated. n709 This view is based upon the pre-1990 Uniform Commercial Code which provides that reacquisition of an instrument by one who is a party to the instrument with no right thereon against another discharges the liability of all parties to the instrument. n710 The Uniform Commercial Code provision, however, was probably not intended to apply where the party reacquiring the instrument is a "surety for another party." n711 The position also clashes with recognition that subrogation rights are available to mortgagors who pay the mortgage debt after an assumption by a grantee, n712 for reacquisition under either rationale would extinguish the debt. n713 Section 3-601(3) was omitted from the 1990 version of the Uniform Commercial Code.

One who pays a secured debt in order to protect one's own junior interest is not a volunteer and is entitled to equitable subrogation. Thus, a mortgagee who had subordinated the mortgage to another mortgage is subrogated to the rights of the senior mortgagee upon payment on the senior obligation. n714 Similarly treated are cotenants who discharge debt secured by a lien on their property. n715

COMPUTER-ASSISTED RESEARCH

LEXIS: mortgage or (deed pre/2 trust) w/50 equitable or legal w/5 subrogat!

§ 101.06(g)(2) Conventional Subrogation.

Where one advances funds to discharge a mortgage pursuant to an agreement, explicit or implicit, that the new lender will step into the shoes of the mortgagee whose debt is paid with the funds advanced, the new lender should be subrogated to the rights of the creditor whose debt is discharged. n716 The new lender, of course, is not legally obligated to advance the funds and is not advancing them to preserve the lender's own interest in the property and is, therefore, not entitled to legal subrogation. Nevertheless, the lender made the loan in the expectation of security, and the loan preserved the interest of junior secured parties, who would be unjustly enriched if they were given priority over the new lender. Certainly, the new lender would have been given priority if the new lender had taken an assignment of the mortgage discharged with the funds advanced, and the equities between the new lender and lienors junior to the mortgage discharged are not really changed by the failure of the new lender to obtain an assignment. Thus, it is generally held that one advancing funds to discharge an encumbrance is subrogated to the rights of the party whose claim is discharged, if the funds are advanced with the understanding that the lender will be secured. n717 In recognizing subrogation here, equity is fulfilling the expectations of those who advance money in the reasonable expectation of acquiring a senior security. n718

Loans made with no expectation of security do not entitle the lenders to priority over subordinate encumbrances. Parents who lend a child funds to discharge a mortgage obligation with no agreement that they will succeed to the rights of the mortgagee will not be subrogated to rights and priorities of the mortgagee whose encumbrance is removed with the loan proceeds. n719 Nor will a lender who refinances a mortgage loan, by that fact alone, be subrogated to the rights of the mortgagee whose encumbrance is satisfied. n720

It has been said that a lender with actual knowledge of junior liens cannot reasonably expect to acquire senior status over those liens by lending money to discharge a senior lien. n721 Yet, it is difficult to understand how knowledge that junior encumbrances exist justifies denying subrogation, since the junior interests are benefitted by the payment of the senior encumbrance in the sense that it has not been foreclosed against them and because there is no prejudice to the junior encumbrancers, who are in the same position after the new loan as before it. n722 Indeed, it would seem that, so long as the new lender bargained for security, the lender should not be treated as a volunteer and should have expectations fulfilled. Knowledge that junior liens exist should not, of itself, preclude a finding that the new lender advanced funds in the expectation of priority. n723

Most courts hold that constructive notice will not bar subrogation and priority over junior mortgages. n724 Some courts, however, do deny priority to lenders who negligently fail to discover intervening encumbrances. n725

§ 101.06(h) Competing Real Estate and Chattel Security Interests.

It frequently happens that a creditor acquires a security interest in a chattel which is attached to real estate burdened by, or which is later burdened by, a real estate mortgage. Before the adoption of the Uniform Commercial Code, the decisions and statutes in this area were "complicated and voluminous, but now [are] obsolete" because of the adoption of the Uniform Commercial Code. n726

Except for excluding "ordinary building materials incorporated into an improvement," n727 the Code does not provide much guidance as to what constitutes a fixture, leaving the definitional task to the law of real property generally. n728 Thus, resort must still be made to earlier case law to determine whether a particular chattel has, for some purposes at least, metamorphosed into realty. A fixture has been defined as "realty with a chattel past and fear of a chattel future." n729 It is an attachment to real estate which may be classified for some purposes as land and for others as personalty.

Thus, for example, an attachment made to land by a tenant may be treated as removable personalty in a dispute between the tenant and the landlord, but treated as land in a dispute between the tenant and a purchaser from the landlord believing in good faith that the landlord had made the annexation.

Section 9-313 contains the principal provisions of the Uniform Commercial Code for resolving priority controversies between real estate mortgagees and those who claim security interests in chattels affixed to the land. Section 9-313(4)(b) lays down the basic premise that a perfected security interest in a fixture has priority over real estate interests, including real estate mortgages, which are not matters of record at the time the chattel security interest is perfected. Of course, as is so often true with broad legal rules, there are numerous exceptions to this rule contained in other parts of § 9-313, but the starting point is that, between lienors claiming realty and chattel interests, the first to record has priority. In essence, subject to the exceptions, the Code creates a pure race recording system for priorities. "Perfection by a fixture filing" is the term of art employed in the Code to denote recording of a security interest in a chattel. A fixture filing is the filing in the office of the custodian of the land records of a financing statement that covers "goods which are or are to become fixtures ... ." n730

Those claiming security interests in fixtures may also acquire an encumbrance by taking and recording a real estate mortgage or deed of trust, n731 and a prudent creditor may consider perfecting by both a fixture filing and a real estate mortgage recordation.

In accord with the general "first to file or record" n732 principle, but subject to exceptions described below, a prior recorded real estate mortgage will have priority over a subsequent perfected security interest, n733 and a subsequent real estate mortgage will have priority over a earlier security interest in the fixture if the real estate mortgage is recorded before the security interest is perfected.

§ 101.06(h)(1) Purchase Money Security Interests.

One exception to the "first to file or record" principle is that purchase money security interests in fixtures, which arise before the goods become fixtures, are ahead of prior real estate interests, provided that a fixture filing is made before the goods become fixtures or within 10 days thereafter. n734 Perfection within the 10 days following annexation is good only against prior real estate claimants; real estate mortgages arising during the 10-day period thus have priority over security interests in fixtures unless they are perfected by fixture filing before the real estate mortgages are recorded. n735 Many states took a similar approach as a matter of common law before the promulgation of the Code in the belief that real estate mortgagees would be unjustly enriched if the result were otherwise. n736 The Code continues this approach although the 10-day limitation will operate to subordinate even purchase money fixture security interests to prior real estate interests if there is no fixture filing within 10 days of annexation. n737

The special treatment afforded purchase money security interests in fixtures is denied to such interests perfected after the recordation of a real estate construction mortgage. n738

LEXIS: fixture or chattel w/15 purchase pre/1 money w/5 mortgage or security

§ 101.06(h)(2) Factory or Office Machinery and Domestic Appliances.

Another exception to the "first to file or record" principle involves factory and office machinery and replacements of

domestic appliances. n739 Security interests in such goods may have priority over real estate interests if they are perfected by any method permitted in Article 9 of the Code. The drafters felt that this special exception was necessary because of the difficulty in many cases of determining whether machinery and appliances have become fixtures. Of course, if it is clear under applicable law that the machinery or appliances have not become fixtures, a fixture filing would not be required to perfect a security interest, but, in order to obviate the need to litigate the issue, the Code simply provides that an Article 9 security interest, no matter how perfected, will be valid against real estate interest in certain cases. n740

To qualify for this special treatment, factory and office machinery must be readily removable. If the machinery is readily removable, the security interest will also have priority over construction mortgagees relying on the general preference for construction mortgages under section 9-313(6). n741

Domestic appliances qualify under this exception only if they are replacements of consumer goods. n742 Original installations of appliances are not covered because of a desire to "facilitate financing of original appliances in new dwellings as part of the real estate financing of the dwellings." n743 The restriction of such appliances to consumer goods further limits the exception to goods "used or bought for use primarily for personal, family, or household purposes." n744 For example, appliances installed by landlords for use by residential tenants are not covered by the exception. n745

§ 101.06(h)(3) Judgment Liens.

Real estate liens obtained through judicial proceedings will be junior to any security interest in fixtures perfected by any means authorized by Article 9 of the Code before the real estate lien is recorded. n746 While the "first to file or record" principle functions in this context, the security interest in fixtures thus may be perfected by means other than a fixture filing.

The intent of this exception is to preserve against the claims of a trustee in bankruptcy the priority of security interests obtained through legal or equitable proceedings, but not perfected by a fixture filing. n747

§ 101.06(h)(4) Removal Rights of Debtor.

A security interest in fixtures, even if unperfected by any means, is superior to a real estate interest if the debtor has the right to remove the fixture as against the real estate owner or encumbrancer. n748 This provision is primarily of benefit to those taking security interests in goods from tenants who install fixtures on leased premises. n749 If a tenant, for example, purchases goods on credit and gives the seller a security interest in them, and if the tenant then affixes the goods to the land but is legally entitled to remove them as against the landlord, the security interest will have priority over a competing real estate mortgage even though the seller does not perfect the security interest.

§ 101.06(h)(5) Construction Mortgages.

The current version of the Uniform Commercial Code contains a simple and direct provision affording real estate construction lenders who record their mortgages priority over subsequently perfected purchase money security interests in goods which become fixtures. n750 The priority accorded construction mortgages also attaches to mortgages given to refinance construction mortgages.

No distinction is made between obligatory and optional advances in giving priority to construction mortgages which are recorded before the perfection by a fixture filing of a security interest in fixtures. n751 Mortgages given to secure debts incurred in improving a building after completion of construction are not entitled to this special treatment, even if they are funded through an advance clause in a construction mortgage. n752

The 1962 version of the Uniform Commercial Code gave priority to construction mortgagees only if they were recorded before the claimant of the security interest in goods had made or contracted to make disbursements without knowledge of the security interest and before it was perfected. n753 This provision denied construction lenders priority, with respect to subsequent advances, over vendors taking security interests in fixtures if the vendors filed a security agreement before the advance. n754 Because of the concerns of construction lenders, some states refused to adopt the earlier version of § 9-313.

§ 101.06(h)(6) Security in Crops.

The Uniform Commercial Code includes crops within its definition of goods. n755 Nevertheless, so long as questions of priorities between or among competing secured creditors are not involved, it is clear that real estate mortgages can attach to crops grown on mortgaged land, even though an Article 9 financing statement has not been filed. In title theory states, the mortgagee may, upon default, take possession of the premises and the crops. n756 Where strict foreclosure is permitted, the foreclosing mortgagee can become the owner of the crops. In lien theory states, though, the mortgagor's interest in the crops will not be lost until foreclosure or until a rents and profits clause is properly invoked by the mortgagee. However, regardless of the theory of mortgages in force, crops actually harvested by a mortgagor lawfully in possession of the land belong to the mortgagor free of the mortgage lien. n757

When competing creditors claim security in crops, some claiming security as real estate mortgagees and others as holders of Article 9 security interests, it would seem that the relative priorities ought to be determined under Article 9 in light of its inclusion of crops within its definition of goods. After reviewing pre-Code decisions, Professor Grant Gilmore concluded:

> No discernible consensus, even on a regional scale, resulted from the considerable amount of priority litigation of this type which dragged through the courts between 1925 and 1940. Many of the cases involved atypical or weird fact situations and, even when they did not, the courts seem instinctively to have preferred narrow holdings to broad ones ... The impression gained by reading through a substantial number of these cases may be thus summed up: the crop mortgagee won over the real estate mortgagee more often than not, but rarely in a way that decisively or clearly established the crop mortgage priority for future cases; the situations in which the crop mortgage won and those in which it lost were in many jurisdictions nearly indistinguishable from each other n758

However, because n759 the Code governs the validity and priority of security interests in goods, n760 regardless of what may have been the rule before its adoption for determining priorities in crops, it seems clear that today the Code, not real estate law, governs "secured financing of crops." n761

The Code provides that no security interest in crops is enforceable against the debtor or others with respect to the crops unless the debtor has signed a security agreement describing the collateral and the land (or the secured party possesses the collateral, an unlikely scenario), value has been given, and the debtor has rights in the collateral. n762 When these requirements have been met, the security interest in crops is said to attach. n763 A real estate mortgage presumably may qualify as a security agreement if it specifically covers crops as well as land. n764

Validity of the security interest, however, must be distinguished from its perfection, for the priority of a security interest over competing liens is often dependent on its perfection. The general principle for determining priorities under the Code is that priority is dependent on the order of filing or perfection. n765 However, where there has been no filing or perfection, the order of attachment determines priorities. n766 In the case of crops, the filing of a financing statement is the only method of perfection, except in the most unlikely circumstance that the crop lender retains possession of the collateral. n767 The Code offers three alternatives for states to select as to where financing statements shall be filed. Only two of the alternatives specifically address financing statements dealing with crops, these providing for filing of a financing statement over crops "in the office of the _____ in the county where the land is located." n768 These two alternatives do not require of themselves that the filing be in the land records, but only in some specified office in the county where the land is located. It would therefore seem that a real estate mortgage specifically covering crops recorded in the land records would constitute a perfected security interest only if the local version of the Code permitted perfection by filing in the land records. If a financing statement, by local law, must be filed somewhere other than in the land records, a prior real estate mortgage filed only in the land records would not constitute a perfected security interest in the crops even if it specifically mentioned crops.

Section 9-312(2) provides a major exception, designed especially for crop financiers, to the general rule that the order of perfection should determine the priorities of competing security claims. If the requirements of this section are met, the crop financier will have priority over some earlier security interests even though those earlier interests are perfected and even though the later secured party has knowledge of the earlier interests. Section 9-312(2) grants this extraordinary priority where the crop financier gives "new value ... to enable the debtor to produce the crops during the production season" so long as the value is given "not more than three months before the crops become growing crops by planting or otherwise ... ." This special priority, however, is granted only over such earlier security interests as secure debts due more than six months before the crops become growing crops, and is therefore almost meaningless.

> The scope of this provision is carved down almost to insignificance by the last clause in it which provides that the security interest which meets the three tests above enjoys priority only over interests that secure "obligations due more than six months before the crops become growing crops ... ." That is, subsection (2) entitles one to priority only over obligations more than six months overdue at the time the crops in question become growing crops. n769

CHAPTER 101 MORTGAGES, DEEDS OF TRUSTS AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions § 101.07

AUTHOR: Professor Jerome J. Curtis, Jr. McGeorge School of Law University of the Pacific

§ 101.07 Mortgagor Relief Statutes.

§ 101.07(a) Mortgagor Relief Statutes Generally.

Both federal and state legislation afford mortgagors and trustors significant avenues to avoid the usual remedies against them and their property in the event of a default.

The federal bankruptcy laws have long provided refuge for distressed debtors, not only by discharging their debts but also by permitting the delay of foreclosure proceedings and even allowing foreclosure sales to be set aside. In fact, bankruptcy law plays a major role in the field of real estate security interests.

Many states, too, have enacted protective measures for secured debtors. Much of the state legislation came out of the Depression in the 1930's, when so many faced the loss of their homes, businesses, and farms through foreclosure. While much of this legislation was later repealed, a great deal of it survives and, indeed, some of it was reenacted in the 1980's, particularly in agricultural states. State relief measures come in varied forms, ranging from moratoria on foreclosures, to bans on deficiency judgments and requirements that the fair market value of the interest foreclosed be credited toward the debt. One common state provision permits redemption after foreclosure.

§ 101.07(b) Moratorium Legislation.

During the Great Depression, many states enacted laws providing for staying foreclosures, although most of the moratorium legislation was subsequently repealed. While an occasional moratorium statute is struck down on constitutional grounds, n770 they are generally upheld as reasonable exercises of the police power. n771 They are said to regulate remedies rather than to affect rights. n772

The recession of the 1980's and early 1990's rekindled legislative interest in this type of legislation and prompted several legislatures to enact or reenact such laws. Iowa, for example, the first state to pass a moratorium act in the 1930's, amended the moratorium statute in 1985 to authorize courts to continue foreclosure proceedings for certain periods upon a declaration by the governor of an economic emergency. n773 Minnesota, as well, passed legislation permitting judicial continuance of certain foreclosure actions. n774

§ 101.07(c) Statutory Redemption.

§ 101.07(c)(1) Statutory Redemption Generally.

In addition to the common law right of equitable redemption, which allows mortgagors and their successors and junior encumbrancers to redeem at any time before foreclosure, many states have created a statutory right to redeem after foreclosure. n775 In some states, though, statutory redemption may not be available to junior encumbrancers.

While this form of redemption is solely a creation of statute and while the various statutes vary considerably, several generalizations are appropriate. First, the right does not arise until the equitable right of redemption has been foreclosed. n776 Accordingly, those who have been omitted from prior foreclosure proceedings, because they still hold their rights to redeem equitably, may not redeem statutorily. n777 Secondly, the consequences of redemption by junior encumbrancers are different under each type of redemption. A junior encumbrancer who redeems statutorily obtains whatever interest was acquired by the party from whom the encumbrancer redeems; normally this interest is a fee simple, although the interest may be subject to statutory redemption rights held by others; a junior lienor redeeming equitably is simply subrogated to the interest of senior lienors. n778 Third, the redemption price varies between the two types of redemptions. The price to redeem statutorily is the price paid by the purchaser at the foreclosure sale from which the redemption is made, but the price to redeem before foreclosure is the debt secured. n779 It must be noted, however, that if the purchaser held an encumbrance subordinate to the one foreclosed, a junior encumbrancer redeeming statutorily from the purchaser often must pay, in addition to the purchase price, the amount of the purchaser's lien. n780 Fourth, the debtor is invariably allowed to continue to occupy the property during the redemption period.

Most states with statutory redemption make it available after judicial and private foreclosure sales. n781 Several states do not permit statutory redemption after a private foreclosure. n782 Missouri permits a statutory redemption after only a private foreclosure. n783

Statutory redemption is said to provide several protections to mortgagors. Probably the objective most often cited is to encourage full value bidding at foreclosure sales on the theory that bidders will realize that, unless they offer an adequate price, mortgagors will redeem after the sale. Other purposes are (1) to provide an easily available device for avoiding allegedly wrongful foreclosure without the litigation efforts to set the sale aside would entail, (2) to overcome the adverse effects of temporary declines in land values, and (3) to allow debtors to occupy the property during the redemption period. n784 Statutory redemption has been the subject of considerable criticism, such as frustrating the realization of the goals it is designed to serve and encouraging adverse consequences. It is often argued, for example, that it discourages full value bidding because bidders will not offer a full value bid when the mortgagor or the mortgagor's successor will be entitled to possess the land for some time into the future, and because the mere possibility of a post sale redemption deters full value bidding. Other criticisms are that statutory redemption encourages debtors to default and allows foreclosed debtors to continue to occupy the property after foreclosure with little incentive to husband it. n785

§ 101.07(c)(2) Statutory Redemption by Mortgagors and Their Successors.

All states with statutory redemption permit mortgagors and their successors to redeem. A successor in interest is one who has succeeded to the mortgagor's interest, n786 but one who has acquired a mere lien or mortgage is not deemed a successor in interest. n787 Yet, to be a successor in interest, one need not acquire the entirety of the mortgagor's equity, for buyers under installment land contracts and widows claiming dower have been deemed successors. n788 A mortgagor who has transferred the interest is not entitled to redeem.

Although others may also have a right to redeem statutorily, a redemption by a mortgagor or the successor terminates the rights of all others to redeem. n789

Statutory redemption by a mortgagor or a successor restores the redemptioner to the estate before the foreclosure, but jurisdictions divide over the effect of the redemption upon encumbrances which had been cut off by the foreclosure. In California, none of these encumbrances is revived upon a statutory redemption, and further, no judgment lien for any deficiency can attach to the property, although the judgment lien may attach to other property of the judgment debtor. n790 In some states, liens on which the redemptioner is personally liable reattach; in these states, redemptions by a non-assuming grantee would not cause the liens to reattach. n791 In other states, junior liens will be revived, but the lien of the mortgage which was foreclosed will not be. n792

§ 101.07(c)(3) Statutory Redemption by Encumbrancers.

Most states with statutory redemption make it available to junior encumbrancers as well as to mortgagors and their successors. n793 Thus, junior encumbrancers whose interests were destroyed may be able to redeem.

In nearly all states which permit statutory redemption by junior encumbrancers, a redemption by them confers the title of the foreclosure sale purchaser upon the junior encumbrancer who redeems. n794 This places the redeeming junior in a position quite different from that of a redeeming mortgagor or mortgagor's successor. As previously observed, n795 the redeeming mortgagor or mortgagor's successor often reacquires the foreclosed interest subject to revived mortgages and other encumbrances. The junior encumbrancer who redeems, however, acquires the full interest of the purchaser at the foreclosure sale and, as the purchaser's interest is not subject to the claims of sold-out juniors, neither is the redeeming junior. n796 The interest of a redeeming junior may be subject to the statutory redemption rights of others. n797

Statutes vary in the procedures for redemptions by sold-out juniors. Some grant each junior a period of time within which to redeem in the order of their relative priorities. Thus, for example, a second mortgagee may be afforded the right to redeem for a specified period after the redemption rights of the mortgagor or the successor have expired and thereafter a third mortgagee may be given a like opportunity after the redemption rights of the second have expired or been exercised. n798 If the second mortgagee had redeemed within the allotted time, the third mortgagee would be entitled to redeem from the second mortgagee by paying the aggregate of the debt formerly secured by the second mortgagee's mortgage, and the sum paid by the second mortgagee to redeem from the purchaser. If the second mortgagee had declined to redeem during the time allowed, the third mortgagee could redeem from the foreclosure purchase by paying the sum paid by the purchaser. n799

Other states follow what is known as scrambling redemption, under which the sold-out junior mortgagees may redeem in any order, but earlier redemptions by remote sold-out junior mortgagees can be effectively avoided by more senior mortgagees who redeem later. n800 Under this approach, redeeming junior mortgagees must pay any senior encumbrancers from whom they redeem the redemption price paid by the senior encumbrancers and the amount of the

seniors' encumbrances. n801 For example, assume that Blackacre is subject to a first mortgage securing a debt of $50,000 held by E1, a second mortgage securing a debt of $25,000 held by E2, and third mortgage held by E3 securing a debt of $10,000. E1 forecloses and purchases at the foreclosure sale for $50,000. Under the scrambling system, E3 may redeem before E2 by paying $50,000 to E1. But if that occurs, E2 may thereafter redeem from E3 by paying E3 the same amount ($50,000). Now, if E3 wishes to redeem again, E3 must deal with E2, who has succeeded to the rights of the purchaser, and thus to redeem, E3 must pay E2 $75,000.

In some jurisdictions sold-out junior encumbrancers may not redeem until a time certain has passed during which the mortgagor or the mortgagor's successor is given the exclusive right to redeem statutorily. n802 In others, the respective redemption periods of mortgagors or their successors and of junior encumbrancers overlap. n803 But, whatever the scheme, a redemption by a mortgagor or successor terminates the right of any junior encumbrancer to redeem. n804

States take different approaches to the effect of redemption by sold-out junior encumbrancers upon the debts owed them. Though nearly all these states concur that the redeeming junior encumbrancers acquire title free of all encumbrances that were destroyed by the foreclosure, some hold that the debt is extinguished to the extent that the value of the property exceeded the redemption price. n805 Thus, if a first mortgagee who was owed $15,000 foreclosed and became the purchaser at the foreclosure sale for $12,000, a second mortgagee with a debt of $20,000 could redeem from the sale by paying the first mortgagee $12,000. Yet, if the land had a value of $32,000, the debt owed the second mortgagee would be extinguished because the redemption price was exactly $20,000 less than the value of the property. Iowa takes the novel approach of requiring the redeeming junior encumbrancer to state what amount will be applied toward the debt and permitting the re-redemption from the junior encumbrancer by those who believe the land is worth more than the sum of the redemption price and the amount applied by the redeeming junior encumbrancer. n806 Of course, the problem does not arise where the effect of redemption by the junior encumbrancer is to revive the junior encumbrance. n807

§ 101.07(d) Right of First Refusal Statutes.

Minnesota farmers who lose their farms to foreclosure are entitled, in certain instances, to buy them back from mortgagees who become purchasers at a foreclosure sale where the mortgagees later sell the property. The foreclosed farmers are given a statutory right of first refusal in these cases. n808 A similar right is afforded farmers throughout the nation in connection with loans under the Farm Credit System. n809

In Minnesota the right of first refusal creates an insurable interest even after the period of statutory redemption has expired. n810 Apparently, farmers can waive the benefits of the Minnesota first refusal law by backdating their mortgages to a time preceding the enactment of the statute. n811

§ 101.07(e) One Action Statutes.

Several western states n812 have enacted so-called "one action" statutes, which in theory are designed to compel

secured parties to prosecute all claims on, and arising out of, the debt in a single proceeding. Minnesota also has a one action statute covering lands used in agricultural production on or before March 22, 1986. n813

These statutes, while obviously protecting debtors from having to defend multiple suits, often have the additional effect of requiring the secured parties to proceed against the security first before obtaining judgments against the debtors personally, and hence are often described as "security first" statutes. Thus, in California, the applicable statute not only requires that all relief be sought in one action, but, by limiting the amount of any personal judgment to the deficiency between the debt and the foreclosure sale price, it also mandates that foreclosure precede entry of a personal judgment. n814 The application of these statutes is not as straight forward as may first appear, since some steps taken by secured parties may not be deemed actions and because courts recognize certain exceptions to the operation of the statutes.

Although at first blush it might appear that any invocation of a judicial action by a mortgagee would constitute an action, California courts permit secured parties who dismiss their suits before judgment to escape the prohibition of the one action statute. n815 Thus, a mortgage may not be foreclosed once a judgment is obtained on the debt, n816 but a settlement reached after the institution of suit may not constitute an action under the California statute. n817 The entry of the mortgagor's default may not constitute an action in California, so long as a judgment is not entered thereon. n818 Yet, certain remedies pursued privately so closely resemble an action, at least in their impact on mortgagors and trustors, that questions can arise about the application of the one action statute. Foreclosure by the exercise of a private power of sale, while not much different from a judicial foreclosure in the eyes of most mortgagors, has not usually been regarded as an action. n819 Lenders accordingly may pursue multiple security by successive private foreclosures, since earlier non-judicial foreclosure will not be treated as an action. n820 Other forms of self-help, however, may be treated as actions. Private measures taken, other than private foreclosure, that produce funds which the creditor applies to the debt, might be viewed as actions, e.g., a setoff of the amount in a bank account against a mortgage debt by the bank-mortgagee. n821 Nevada, on the other hand, has not treated setoffs as actions. n822

Disapproving case law to the contrary, the California Supreme Court in 1990 concluded that judicial action is essential before an action under that state's on statute can be found, but the court nevertheless also found that a private setoff violates the statute, since it frustrates the "security first" principle inherent in the statute:

> Section 726 embodies more than the "on" rule ... . [the section] and the statutory scheme of which it is a part require a secured creditor to proceed against the security before enforcing the underlying debt ... [Citation omitted.] This rule is hornbook law in California and warrants no extended discussion. n823

In accord with this reasoning, a California lender, in a decertified opinion, was found to have violated the on statute when it secured an order directing a receiver to apply receipts to the debt and then later sought private foreclosure. n824 While the appointment of a receiver itself is not viewed as an action under the statute, n825 the application of the rents to the debt by the receiver may be perceived of as contrary to the "security first" principle. A prejudgment attachment in Korea was held to violate the security first aspect of California's one action statute because it was "a provisional remedy ... substantially beyond the mere filing of a lawsuit." n826

Also, California legislation specifically provides that secured parties may obtain the appointment of receivers to enter and inspect the security to locate hazardous substances without invoking that state's one action statute. Further, in the case of environmentally impaired security, secured parties may, within limits, elect to waive the security and proceed as unsecured parties. n827

The on rule may be used as a sword or a shield by mortgagors and trustors. If a secured party institutes action without joining all claims secured by the debt, the action should be dismissed on motion of the debtor. Thus, an action on the debt not accompanied by a prayer for foreclosure should be dismissed on request of the mortgagor. Yet, if the debtor allows judgment to be entered against the debtor without objecting to a violation of the on statute, the violation may thereafter be used as a defense to any later action taken against the debtor. n828

It has been held that guarantors are not protected by one action statutes, because a contract of guaranty is an undertaking separate and apart from the debt guaranteed. n829 Accordingly, mortgagees have been permitted without sanction to proceed against guarantors personally without first going against the principal debtors or the security. n830 Similarly, mortgagees are not barred by the one action rule from proceeding first against the principal obligors or their property before suing on the guaranty. n831 However, mortgagees who do proceed first against the principal debtors or their property may nevertheless forfeit rights to proceed later against the guarantors, if their actions interfere with the guarantors' subrogation rights against the principal obligors or their assets. Thus, where deficiency judgments were barred after a private foreclosure, a creditor which first foreclosed non-judicially was held to have lost its rights against a guarantor because the creditor's action had destroyed rights against the principal debtor to which the guarantor could have been subrogated but for the non-judicial foreclosure. n832

It is generally recognized that a lender whose security has become legally worthless is not bound by the one action rule. n833 The worthless security exception is not triggered if purely economic factors have rendered the security worthless; only legal or physical factors can be the predicate for the exception. If the property is physically destroyed through no fault of the creditor, action on the debt is proper without joining a claim to foreclose. n834 Similarly, because a junior mortgage is destroyed by the foreclosure of a senior encumbrance, a sold-out junior may sue on the debt without also seeking foreclosure, the courts having rejected the suggestion that a sold-out junior encumbrancer is responsible for the destruction of the security by failing to outbid others at the foreclosure sale of the senior encumbrance. n835 Declines in value for economic reasons provide no escape from the one action statutes. A junior mortgagee is, therefore, not relieved from the constraints of the one action rule merely because a decline in property values has left no equity on which to foreclose. n836

§ 101.07(f) Fair Value Statutes.

Many states statutorily limit deficiency judgments after foreclosure to the difference between the greater of the fair value of the land and the foreclosure sale price, on the one hand, and the amount of the debt. n837 The obvious purpose of this legislation is to avoid unjustly enriching mortgagees who may purchase encumbered lands at foreclosure for less than the fair value and then claim a deficiency equal to the difference between the foreclosure sale price and the debt. n838 Other terms besides "fair" may be used to describe the value to be credited against the debt, n839 but it seems clear that the foreclosure sale price should not be determinative of the amount of the deficiency.

Some fair value statutes apply only where the secured party is the purchaser at the foreclosure sale. n840 Others apply only where foreclosure is by private, as opposed to judicial, sale. n841

A common difficulty under these statutes is defining the fair value. Although some statutes speak of the "fair market value," n842 under others the present fair market value at the time of the foreclosure sale is not necessarily the "fair" value. n843 It is often said the fair value is the "intrinsic or potential worth of the property on the open market." n844 The Washington statute contemplates a price a competitive bidder would pay under normal circumstances. n845 The North Dakota Court, while listing several factors to be considered in determining the fair value, has essentially left the determination to triers of fact on an ad hoc basis. n846 The factors cited by the North Dakota Courts include the amount of the mortgage, the amount of junior mortgages, fluctuation in land values, the amount of the debt, and the foreclosure sale price. n847 The existence of a statutory redemption right is also a relevant factor. n848 Such vagueness seems designed to sanction relief on subjective bases to their defaulting neighbors and reflects a legislative determination that lenders should "share the risk of loss if market values fall." n849 Florida's legislation explicitly authorizes determination

of deficiency judgments in accord with "equitable principles" n850 although, in light of the judicial construction of this statute, n851 it is "inaccurate to assert that Florida is a 'fair value' jurisdiction." n852

LEXIS: deficiency /50 fair pre/1 value w/5 statut! rule

§ 101.07(g) Anti-Deficiency Statutes.

§ 101.07(g)(1) Types of Statutes.

In addition to the one action and fair value statutes, which restrict the amount of deficiency judgments or the methods of obtaining them, there are also statutes prohibiting them altogether in many situations.

At least one jurisdiction once outlawed deficiency judgments in all situations. North Dakota had such a total ban from 1933 until 1951, when the state was forced to relax the ban because of the refusal of the Federal Farm Bank to make loans in the state until deficiencies were permitted. n853

Some states prohibit deficiency judgments on purchase money obligations secured by mortgages and deeds of trust. n854 California prohibits any deficiency on purchase money obligations held by sellers and also on purchase money obligations held by third party lenders if the security is residential property. n855 Oregon, too, treats security interests given to sellers somewhat differently than purchase money security interests given to third party lenders. n856 South Dakota will not permit a deficiency after any foreclosure of a purchase money security interest. n857 Iowa does not allow deficiencies on debts secured by agricultural lands. n858

Some states do not sanction deficiency judgments after foreclosure by private sale. California has an outright prohibition in such cases. n859 Georgia mortgagees and beneficiaries cannot obtain deficiencies after private foreclosure unless the sales are returned for judicial confirmation. n860 Other states with statutory restrictions on deficiencies after a non-judicial foreclosure include Alaska n861 and Washington. n862

Deficiency judgments are sometimes forbidden where the secured party is the foreclosure purchaser. n863 In Colorado, the amount of the deficiency will be adjusted where the mortgagee fails to submit a bid based on a good faith estimate of the value of the security. n864

Under these statutes intriguing questions can arise as to what constitutes a deficiency. In the purest sense, a deficiency is a judgment for the difference between the amount of the mortgage debt and the foreclosure sale price, yet some courts have expanded it to include other monetary claims. The North Carolina Court, for example, has held that a secured party's obligation for attorney's fees incurred in connection with a statutory redemption could not be recouped, the court treating the claim for the fees as one for a deficiency. n865 California has held that even a claim for waste committed by a beneficiary under a deed of trust is unenforceable as a deficiency unless the waste is "willful." n866 On the other hand, California has allowed a claim for fraud against third parties to be prosecuted by a mortgagee which purchased the security after making a full credit bid on foreclosure, at least if the fraud influenced the bid. n867 Sold-out junior encumbrancers who, of course, have no security on which to foreclose and hold only an unsecured claim have been treated in California as seeking a deficiency when suing on the debt. n868 Under this view the claim on the debt itself is characterized as a deficiency, even though no foreclosure has taken place under the claim. In North Carolina and Utah, in contrast, sold-out junior encumbrancers are not seen as seeking deficiencies when they sue on the debt. n869 Once a foreclosure has taken place though, it would seem that any later claim on the debt *in personam* against the debtor would be for a deficiency, whether the foreclosure was by judicial or private sale. Foreclosure against other security, after one foreclosure has failed to generate sufficient bidding to discharge the debt, may not be equated with a deficiency judgment. A second foreclosure does not itself produce a personal judgment against the debtor, and so California

mortgagees and beneficiaries may foreclose by private sale against multiple securities in successive foreclosures without running afoul of either California's ban on deficiency judgments after a private sale or of the state's one action statute. n870

Debtors' pre-default waivers of the protection of these anti-deficiency acts are generally unenforceable. n871 Indirect attempts by lenders to avoid the statutes have generally proven unsuccessful. Thus, where a husband and wife guaranteed a purchase money loan to their inter vivos revocable trust, they were regarded as the real borrowers, whose protections under the California restriction of deficiencies on purchase money obligations could not be waived. n872 Similarly, mortgagors who executed the loan documents as guarantors rather than as borrowers did not forfeit the protection of the North Dakota anti-deficiency law. n873

Attempts by mortgagees and beneficiaries to escape the restraints of the anti-deficiency statutes, by waiving the security and then arguing that they no longer hold secured obligations, have usually been unsuccessful. Thus, in many of these states, purchase money secured lenders may not elect to forego foreclosure and seek only a personal judgment. n874 In other states, secured parties may elect between a personal judgment and foreclosure. n875 Frequently, these decisions denying mortgagees and beneficiaries the right to waive the security are founded upon the "security first" principle underlying many one action statutes. n876 The anti-deficiency statutes generally do not protect guarantors. n877

COMPUTER-ASSISTED RESEARCH

LEXIS: mortgage or (deed pre/1 trust) w/15 anti-deficiency

§ 101.07(g)(2) "Non-Standard" Transaction Exception.

Despite literal requirements of the anti-deficiency statutes, courts may look to the purposes underlying the legislation and decline to apply the ban of deficiency judgments when persuaded that the debt arose out of a transaction not meant by the legislature to be covered by the anti-deficiency statutes.

In the leading California case of *Brown v. Jensen*, n878 those legislative goals in the case of purchase money obligations were said to be (1) to discourage overvaluation of property and (2) to prevent the economic downturn that might result if purchasers were subjected to personal liability as well as the loss of their land. n879 Other states have followed California in accepting these objectives. Where the value of the security is not attributable to the price agreed to by a vendor-mortgagee, the California courts have carved out an exception to the anti-deficiency prohibition on purchase money debts, saying that the ban applies automatically only to "standard" transactions. Accordingly, several California decisions have permitted vendor-beneficiaries under deeds of trust to collect deficiency judgments after their security interests were destroyed by the foreclosure of senior construction encumbrances to which the vendors had subordinated their deeds of trusts. n880 In these cases, the courts reasoned that the purchasers, rather than the sellers, controlled the value of the security, since it was the construction contemplated by the purchasers that constituted the major ingredient in the worth of the property. Permitting sold-out sellers to collect deficiencies in such cases, so goes the reasoning, deters purchasers from overvaluing the property. n881 Yet, if the project financed by a secured loan to which the seller subordinates does not have major impact on the value of the security, California's ban of purchase money deficiencies will apply, since the seller then plays a greater role in establishing the valuation than the buyer. n882 Nor does the mere subordination of a seller's security alone trigger the "non-standard" exception. n883

A number of other situations are treated as "non-standard" and thus not governed by California's prohibition on purchase money deficiencies. Where assets other than the property purchased are given as security, sellers are permitted to collect deficiencies on the ground that, since the property purchased is not used as security, there is no encouragement of overvaluation. n884 Purchase money obligations which are unsecured are exempt from the prohibition. n885 Likewise, the prohibition can be circumvented by representing the debt by several evidences of indebtedness and securing some of them with parcels other than the parcel purchased. n886 In so dividing the debt, care

must be taken to fractionalize it, that is, to insure that the total of all instruments of indebtedness does not exceed the amount financed, for, if it does, then the property purchased may constitute security for all the instruments and thus bring all instruments within the purchase money deficiency prohibition. n887

Whether other states with prohibitions on purchase money deficiencies will follow California's lead in recognizing that only "standard" transactions are covered remains to be seen. North Carolina, at least, has adamantly refused to do so, holding that its statute imposes an absolute bar to all deficiencies on purchase money secured obligations. n888 Alaska has indicated an unwillingness to exclude any type of transaction from that state's anti-deficiency laws. n889

The "non-standard" transaction exception appears to be limited to restrictions on deficiencies under purchase money obligations. Prohibitions on deficiencies following a private foreclosure sale seem enforceable in all contexts. This makes sense because the rationale for forbidding deficiencies after private sale is quite different from that outlawing them on purchase money obligations. California originally adopted the ban on deficiencies after a private foreclosure in an effort to encourage adequate bidding at private sales. When the California statute was enacted, judicial foreclosures were subject to statutory redemption rights if deficiencies were sought, but private sales were never subject to statutory redemption. The prohibition on deficiencies after non-judicial foreclosures was meant to equalize "judicial and non-judicial foreclosure sales, by burdening them, respectively, with the risk of redemption and a deficiency bar." n890 In Arizona the legislative objective in forbidding deficiencies after private foreclosures on residential realty is to "abolish personal liability" of all who encumber such lands. n891 In view of such purposes, a distinction between "standard" and "non-standard" seems inapposite.

§ 101.07(h) Mortgages and Bankruptcy Laws.

The Constitution of the United States grants the national government the power to enact bankruptcy laws. n892 These debtor relief laws have superiority over all conflicting state laws, including those dealing with the rights and liabilities of parties to mortgages and deeds of trust. n893 Thus, in a very real sense, there is a uniform national mortgage law whenever a mortgagor voluntarily files a bankruptcy petition or is involuntarily thrust into bankruptcy proceedings by a creditor.

One of the primary concerns of the Bankruptcy Act is to preserve as much as possible of the debtor's estate so that as many assets as possible can be applied to satisfy the claims of his creditors. In the mortgage context, the Act seeks to do this in three ways. First, there is the "automatic stay" of all suits and foreclosures upon the mere filing of a bankruptcy petition; after the petition is filed, no creditor is allowed to take any action against the debtor without permission of the bankruptcy court. Second, the bankruptcy court is often authorized to modify the terms of the debtor's obligations; for example, in some cases, the bankruptcy court may set aside a creditor's acceleration of the balance due on mortgage note. Third, the bankruptcy trustee's "avoidance powers" allow certain transfers and contracts of the debtor's assets, including sales of the property through foreclosure, to be set aside. Before each of these three vehicles can be described in detail, an examination of the various types of bankruptcies is in order.

§ 101.07(h)(1) Types of Bankruptcy.

All bankruptcy proceedings are commenced by filing a petition in the United States Bankruptcy Court. The petition may be filed either by a debtor seeking relief from creditors or by creditors fearful that their claims against the debtor or the debtor's property are in jeopardy. With the exception of most business reorganizations, once the petition is filed, the court will appoint a "trustee in bankruptcy," whose primary responsibility is to take charge of the debtor's assets and manage them for the benefit of the debtor and the creditors, although in many instances the debtor is permitted to

continue to conduct affairs under the supervision of the bankruptcy court. There are four types of bankruptcy proceedings, and the powers of the trustee and the powers of the bankruptcy court vary depending upon the type of proceeding.

§ 101.07(h)(1)(i) Straight Bankruptcy (Chapter 7).

A proceeding under Chapter 7, n894 commonly called "straight bankruptcy," contemplates the rapid settlement of the debtor's affairs. All creditors are invited to present their claims to the trustee in bankruptcy, who will liquidate the debtor's assets in an effort to satisfy as many of his debts as possible. Inevitably, the debtor's estate will be insufficient to permit the total satisfaction of the debts, and each unsecured creditor will receive pro rata satisfaction. Once the estate has been liquidated, the bankruptcy court will grant the debtor a "discharge in bankruptcy," which relieves the debtor of all further liability on the debts. n895 Chapter 7 is called "straight bankruptcy" because it contemplates a quick liquidation and discharge. Unlike the other types of bankruptcies, in Chapter 7 there is no effort to give the debtor a period of time to restructure his financial affairs, and the bankruptcy court has no power to modify any of the obligations of the debtor.

Because there is no power to modify obligations in Chapter 7, the rights of secured creditors must be respected. Although secured creditors are subject to the automatic stay and cannot foreclose without permission from bankruptcy court, their liens must be honored and they normally have no difficulty in having the stay lifted. In the event a mortgagee forecloses after the automatic stay is lifted but does not realize enough at the foreclosure sale to discharge his claim fully, the creditor is treated as an unsecured creditor to the extent of the deficiency and will share ratably with other unsecured creditors.

COMPUTER-ASSISTED RESEARCH

LEXIS: (chapter pre/1) or (straight pre/1 bankruptcy)
w/50 settl! or liquidat!

§ 101.07(h)(1)(ii) Wage Earner Plan (Chapter 13).

In a Chapter 13 n896 bankruptcy, the debtor is afforded a period of time, usually three years, to attempt financial rehabilitation. n897 If, at the end of the period, the debtor has not discharged all the obligations, the estate will then be liquidated and the debts discharged just as in Chapter 7. n898 Many debtors prefer Chapter 13 to Chapter 7 because their personal senses of honor compel them to seek to pay all their debts rather than run away from their obligations immediately. Some feel there is less social stigma attached to a Chapter 13 than to a Chapter 7 bankruptcy.

Chapter 13 is available only if the debtor's unsecured obligations do not exceed $100,000 and the secured debts do not exceed $350,000. n899

In Chapter 13, however, because the purpose is to give the debtor time to recover financially, the bankruptcy court is authorized to modify many of the obligations. For example, as is discussed *infra* n900 the court may set aside accelerations of debts secured by land other than the debtor's principal residence. Similarly, in keeping with the goal of allowing the debtor opportunity for rehabilitation, the debtor is usually permitted to retain possession of his property while the plan is in effect, although technically the title to the assets has passed to the trustee in bankruptcy. n901 This feature often makes Chapter 13 preferable to Chapter 7 for individual debtors. Under Chapter 13 they are not compelled, as they are under Chapter 7, to forego immediately the enjoyment of their non-exempt assets and they have the hope, if they succeed in discharging their debts over the life of the plan, of keeping their assets. In Chapter 7, on the other hand, with the exception of exempt assets, rather prompt liquidation follows filing the petition.

COMPUTER-ASSISTED RESEARCH

LEXIS: chapter pre/1 13 w/50 rehbilitat! or reorganiz!

§ 101.07(h)(1)(iii) Reorganization (Chapter 11).

Chapter 11 n902 is intended primarily for businesses seeking to rehabilitate themselves much like Chapter 13 is directed at individual debtors with the same objectives. Nevertheless, despite its focus on business entities, Chapter 11 can be used by individuals n903 and, in a few cases, Chapter 11 offers individuals better protection than Chapter 13. In general, Chapter 11 contemplates a reorganization plan which has been approved by each class of the debtor's creditors, but creditors who are not impaired by the plan cannot veto the plan n904 and, in certain cases, impaired creditors who object to the plan can be forced to accept it. n905 This latter feature is commonly known as "cram-down." However, the plan cannot be "crammed down" on secured creditors unless the plan provides:

1. that the creditors retain their security interests and receive deferred cash payments equal to the value of their interest in the security, or

2. that the security be sold free of the security interest which then shall attach to the proceeds of the sale, or

3. that the creditors receive the "indubitable equivalent" of their claims. n906

It is beyond the scope of this work to examine the complexities of reorganizations, but two observations about the relation between Chapter 11 bankruptcy and mortgagees' rights are noteworthy. First, although each class of creditors must approve a plan by a vote representing a majority of creditors in the class and two-thirds of the debts in that class, n907 individual real estate mortgagees are almost always deemed to be distinct classes. n908 This makes sense in view of the fact that mortgagees hold security interests in parcels of land, each of which is unique, and the fact that, where several mortgages exist on the same parcel, they each have a unique priority which sets them apart from the others. The only exception to this rule is in cases of co-mortgagees holding concurrently a debt secured by the same mortgage. n909 Second, in Chapter 11, the bankruptcy court has broad power to modify the terms of debts, even those secured by mortgages. n910

Mortgagees under Chapter 11 face an important election of remedies early in the proceedings. Under section 1111 of the Bankruptcy Code they must elect either (1) to limit the amount of their secured debt to the value of the mortgaged land at the time the plan is approved and assume the status of unsecured creditors to the extent the amount of the debt is more than the value of the land, or (2) to retain their mortgage to secure the full amount of their claim and forego all claims for deficiencies if foreclosure, whenever the stay is lifted, does not bring enough to retire the claim. If a mortgagee believes there will not be enough assets in the estate to permit a full recovery as an unsecured creditor but also thinks the security, though currently of insufficient worth to offer adequate protection, will appreciate in value during the plan sufficiently to afford full protection, the mortgagee will opt for the second choice. Often the bankruptcy court will not lift the automatic stay to permit mortgage foreclosure during a plan because the debtor might need the use of the security if the plan is to have any chance of success. n911 Thus, mortgagees must carefully consider the potential for appreciation of the security during the plan in making the section 1111 election.

More often than not, the debtor in a Chapter 11 proceeding will be permitted to continue using assets in the estate during the plan in spite of the title held by the bankruptcy trustee. As in Chapter 13 plans, the debtor's chances of successful rehabilitation (reorganization under Chapter 11) may require that the debtor have the use of the property

during the plan.

§ 101.07(h)(1)(iv) Family Farmer Plan (Chapter 12).

Most family farmers do not qualify for the Wage Earner Plan (Chapter 13) because the amount of their debt loan exceeds the Chapter 13 ceilings, so the Family Farmer Plan was created under Chapter 12 n912 in 1986. Chapter 12 closely resembles the Wage Earner Plan, but differs profoundly in the way it treats mortgagees.

Unless reenacted, Chapter 12 was to expire in 1998. n913

There is nothing comparable to the Section 1111 election under Chapter 12. Under Chapter 12, mortgagee liens are restricted to the value of the security at the time the plan is approved, n914 and mortgagees may not elect to retain the full amount of their liens as they can in Chapter 11 proceedings. n915 Further, under Chapter 12, if the security is inadequate when the plan is approved, any claim the mortgagees might have for a deficiency is limited to the amount they would receive if the debtor's estate were liquidated at once. n916 Under Chapter 11, in contrast, mortgagees, by electing to limit their mortgages to the value of the security when the plan is approved, obtain the right to be treated as unsecured creditors with respect to the difference between the debt and the value of the security and therefore may share in any subsequent appreciation in the value during the plan. Not so under Chapter 12, where the debtor can write the debt down to the "current depressed value of his land": n917

> The debtor, under Chapter 12, is allowed to keep his land, pay the former secured debtor [sic] only "liquidation value" on the newly created unsecured debt, and receive a bankruptcy discharge on the rest of the debt, while the creditor is precluded from sharing in any future appreciation of the land. n918

§ 101.07(h)(2) The Automatic Stay.

Once a bankruptcy petition is filed in the bankruptcy court all pending judicial and non-judicial actions against the debtor are automatically stayed, and no other judicial or non-judicial actions may be taken against the debtor, nor may pending actions be prosecuted, until the bankruptcy court lifts the stay. n919 This is true for all types of bankruptcies. Creditors wishing to continue actions already underway when the petition was filed, or desiring to commence actions against the debtor, may do so only if the stay is lifted by order of the bankruptcy court, and any actions taken before the stay is lifted are void. n920 Section 362(d) of the Bankruptcy Code authorizes lifting the stay:

(1) for cause, including lack of adequate protection of an interest in the property of such Mortgagee; or

(2) with respect to a stay of an act against property, if--

(A) the Mortgagor does not have an equity in such property; and

(B) such property is not necessary to an effective reorganization.

Because the application of Section 362(d) varies somewhat with the type of bankruptcy proceeding, the grounds for lifting the stay are discussed separately in the next subsection under separate headings relating to the four kinds of bankruptcy.

Nevertheless, regardless of the type of bankruptcy, the automatic stay attaches as soon as the petition is filed. Thereafter, unless the bankruptcy court lifts the stay, all pending judicial actions, including judicial foreclosures, are stayed. Notice to third parties, while desirable, is not necessary to impose the stay, as the filing of the bankruptcy petition alone suffices. n921 Likewise, pending private foreclosures are also stayed, whether or not notice has been given to the party conducting the private sale. n922 However, the bankruptcy court has discretion to relieve secured parties who are not given notice of and are otherwise unaware of the bankruptcy proceedings from the normal consequences of violating the automatic stay. The court may, for example, decline to set aside a private foreclosure conducted after the filing of the bankruptcy petition on proof that the secured party had no notice of the bankruptcy case. n923

§ 101.07(h)(2)(i) The Automatic Stay in Chapter 7 Bankruptcies.

Even though a Chapter 7 bankruptcy envisions a speedy liquidation of the debtor's estate, there may be occasions when a mortgagee does not wish to delay foreclosure until the bankruptcy case is concluded. Mortgagees are entitled under Chapter 7, as in any other type of bankruptcy, to petition the bankruptcy court to lift the stay under Section 362(d)(1) and (2). Because straight bankruptcy contemplates no period of rehabilitation or reorganization, the provisions of Section 362(d)(2) relating to a finding that the property is not necessary for an effective reorganization are not germane.

Thus, in Chapter 7 bankruptcies, when a mortgagee seeks a lifting of the automatic stay, the only issues to be resolved are whether the interest of the secured party is adequately protected under Section 362(d)(1) and whether, under Section 362(d)(2), the debtor has an equity in the mortgaged premises. Unless the value of the security can be shown to be in danger of declining during the relatively short time involved in a Chapter 7 proceeding, it is unlikely mortgagees can establish a lack of adequate protection under Section 362(d)(1). There is some dispute over the meaning of "adequate protection" in Section 362(d)(1). Many decisions indicate that the term refers to a decline in value after the filing of the bankruptcy petition. n924 Others suggest that, so long as the secured party has an adequate equity cushion, protection is adequate. n925 A lack of equity, in any event, is the more usual basis for lifting the stay in Chapter 7. Section 544 of the Bankruptcy Code directs the trustee to abandon the security if the debtor has no equity in it. Without an equity in the property, there will be no surplus generated from a foreclosure sale to be applied to the claims of unsecured creditors, and there is thus no legitimate trustee's interest in continuing to hold the security as part of the debtor's estate.

§ 101.07(h)(2)(ii) The Automatic Stay in Chapter 13 Bankruptcies.

Unlike straight bankruptcies, wage earner plans under Chapter 13 contemplate a lengthy period during which the debtor

attempts rehabilitation. Because rehabilitation often depends upon the debtor being able to use property encumbered by mortgages, Section 362(d)(2) may apply to proceedings under Chapter 13 since "reorganization" arguably includes a wage earner's plan. The decisions, however, are divided on the question. A number of courts interpret "reorganization" as referring only to proceedings under Chapter 11. n926 Others accept the broader interpretation of the term. n927 One court has concluded that the requirement of necessity should be more strict under Chapter 13 than under Chapter 11. n928 If Section 362(d)(2) does apply in Chapter 13 proceedings, lack of equity alone will not justify lifting the stay; in addition, under Section 362(d)(2), the secured party would have to establish that the property is not necessary to the effective implementation of the plan. Of course, the secured party might succeed in lifting the stay under Section 362(d)(1) by showing that the security is not adequately protected.

COMPUTER-ASSISTED RESEARCH

LEXIS: chapter pre/1 13 w/50 automatic pre/1 stay

§ 101.07(h)(2)(iii) The Automatic Stay in Chapter 11 Bankruptcies.

Clearly, Section 362(d)(2) applies to Chapter 11 proceedings, as is apparent in the reference to an effective reorganization. Under this provision, it will be recalled, the stay may be lifted if (1) the debtor has no equity and (2) the security is not necessary for an effective reorganization. Unfortunately, controversy surrounds the meaning of "equity" when property is burdened by several encumbrances. n929 Most decisions employ the common understanding of the term and define "equity" as the difference between the market value of the security and all encumbrances against it, n930 but some courts have given the term a narrower definition by ignoring all encumbrances junior to the encumbrance held by the creditor seeking to have the stay lifted. n931 Junior mortgagees obviously prefer the latter definition since it increases the odds they will be able to retain their liens until the reorganization is completed.

Even if the debtor has no equity in the security, the stay will not be lifted under Section 362(d)(2) unless the property is not necessary for an effective reorganization. This requires a realistic evaluation of the probable success of the plan and findings that the plan will be effective and that the property is needed to implement the plan. n932

Section 363(d)(1) is also available in Chapter 11 proceedings, but subject to the conflict over the meaning of "adequate protection" previously mentioned. Even so, secured parties prefer to base their cases for lifting the stay on Section 362(d)(2) rather than on Section 362(d)(1) because, under the latter, courts often provide additional protection in lieu of lifting the stay. n933

COMPUTER-ASSISTED RESEARCH

LEXIS: chapter pre/1 11 or reorganization w/50 automatic pre/1 stay

§ 101.07(h)(2)(iv) The Automatic Stay in Chapter 12 Bankruptcies.

The stay provisions respecting Chapter 12 proceedings are much like those governing Chapter 11 bankruptcies, since both types of proceedings contemplate a period of reorganization. n934 In one major respect, however, it is easier for the debtor to avoid a lifting of the stay under Chapter 12 than under Chapter 11. In addition to the types of evidence useful in Chapter 11 bankruptcies to show that a creditor is adequately protected and thus not entitled to have the stay lifted under Section 362(d)(1), Chapter 12 provides that a creditor is adequately protected if the creditor receives the reasonable rental value of the farmland. n935 Hence, the farmer-debtor can defeat an effort by a mortgagee to have the stay lifted simply by paying a reasonable rent to the mortgagee. n936

§ 101.07(h)(3) Avoidance Powers.

In keeping with the goals of sequestering as many assets as possible in order to apply them to satisfaction of the debtor's creditors, the Bankruptcy Code contains several provisions empowering the trustee in bankruptcy to recapture for the debtor's estate assets voluntarily or involuntarily transferred before the bankruptcy petition was filed. The thrust of these provisions is to enable the trustee to set aside transfers made by the debtor before filing which were in fraud of creditors or which resulted in giving preference to one or more creditors. But, they go much further than addressing these rather obvious situations, for they also permit the trustee, under certain circumstances, to attack foreclosure sales and recover for the debtor's estate property sold at regularly conducted foreclosure sales. Further, one of them gives the trustee priority over prior secured creditors who fail to perfect their interests under state law. Each of these provisions granting the trustee powers to avoid transfers is discussed separately in the following sections.

§ 101.07(h)(3)(i) Hypothetical Bona Fide Purchaser Status of the Trustee.

Under Section 544(a)(3) of the Bankruptcy Code, the trustee in bankruptcy is treated as a bona fide purchaser with a perfected interest under state law. This provision gives the trustee priority over prior purchasers and encumbrancers who have not perfected their interests under state law before the bankruptcy petition is filed. Perfection, in the mortgage context, means recording one's mortgage in the land records under state law. Section 544(a)(3) thus grants the trustee priority over any mortgagees who have not recorded their mortgages by the time the bankruptcy petition is filed. n937 State law determines whether earlier interests have been perfected; accordingly, the trustee has been found to take subsequent to a security interest given to a former spouse in a divorce decree, which under state law was sufficient to put subsequent purchasers on notice of the interest. n938

It makes no difference under Section 544 that the trustee might have actual knowledge of prior unrecorded mortgages, for the statute expressly renders the trustee's actual knowledge irrelevant. n939 However, inquiry notice of off-record claims may suffice to disqualify the trustee as a bona fide purchaser if such notice under state law deprives one of such status. n940 Thus, if the mortgagee under an unrecorded mortgagee were in possession of the premises and if, under state law, possession imparts notice, the trustee would probably be denied the benefits of Section 544(a)(3). n941 The trustee is not required to record anything in the land records since the Section creates the fiction that the trustee has done whatever is required under state law to perfect.

Although the trustee takes free of prior unrecorded liens, the debts secured by them are not extinguished, since the Section permits the trustee to avoid only such transfers and obligations as are voidable. State law may make prior unrecorded transfers voidable, but the recording statutes have no effect on the underlying obligations secured by unrecorded mortgages.

§ 101.07(h)(3)(ii) Preferential Transfers.

One policy underlying the Bankruptcy Code is that creditors who are similarly situated should be treated equally. If, for example, in an effort to keep a creditor at bay, a debtor on the eve of bankruptcy makes a payment to the creditor, the creditor is advantaged vis-a-vis other similarly situated creditors. To prevent such preferment, Section 547 of the Bankruptcy Code authorizes the trustee to set aside any transfer made to a creditor within 90 days of the filing of the bankruptcy petition if the debtor was insolvent when the transfer occurred and if the creditor received more than could

have been obtained through a Chapter 7 liquidation. Insolvency is presumed. n942 In certain cases, the relevant period is one year instead of 90 days. n943

Section 547(a)(3) can be the basis for setting aside a regularly conducted mortgage foreclosure sale where the foreclosing mortgagee was the successful bidder at the sale. n944 A common difficulty in successfully invoking Section 547(a)(3) is proving that the foreclosure produced less than would have been realized under a Chapter 7 liquidation. n945 Perhaps the price received at a regularly conducted foreclosure sale will be conclusively presumed to establish the liquidation value, as it has for purposes of establishing "reasonably equivalent value" under section 548 of the Bankruptcy Act dealing with fraudulent transfers. n946 Theoretically, foreclosure sale purchases by creditors other than the foreclosing mortgagee could qualify as voidable preferences.

§ 101.07(h)(3)(iii) Fraudulent Transfers.

Section 548 of the Bankruptcy Code permits transfers in fraud of creditors made within one year of the filing of the bankruptcy petition to be set aside. In 1994, the United States Supreme Court resolved a debate among the lower courts about whether a regularly conducted foreclosure sale would ever produce a sales price that was not a reasonably equivalent value. The Court held that the price obtained at a regularly conducted foreclosure is conclusively presumed to be for a reasonably equivalent value. n947

Before the Supreme Court's resolution of the matter, there had been disagreement among the lower courts about whether a regularly conducted foreclosure sale could ever constitute a fraudulent transfer under the Bankruptcy Code. The Fifth Circuit Court of Appeals had held that a foreclosure sales price less than 70% of the market value of the security was not in exchange of "reasonably equivalent value." n948 Another court went so far as to conclude that, for purposes of Section 548, the transfer occurred not at the foreclosure sale but rather upon the creation of the security interest. n949 The Bankruptcy Code, however, was amended in 1984 to include foreclosures within the term "transfer" as used in the section and, as noted, the Supreme Court has now ruled that a regularly conducted foreclosure sale cannot produce a fraudulent transfer under Section 548. n950

§ 101.07(h)(4) Setting Aside Accelerations in Bankruptcy.

In bankruptcies under Chapters 11, 12, and 13 it is often possible to set aside an acceleration of a mortgage debt under the power given the bankruptcy court to approve plans modifying the rights of secured creditors.

In Chapter 11 bankruptcies, reorganization plans must be acceptable to each class of creditors or, unless the plan is crammed down, must leave those classes of creditors which reject the plan unimpaired. Since parties secured under a real estate mortgage are usually a distinct class, n951 this means that, unless the cram down requirements are satisfied, a plan cannot be forced upon them unless they are deemed unimpaired. However, deceleration under a plan cannot alone cause impairment, with the result that the mortgagee after deceleration is usually not impaired and thus the plan may be approved without such mortgagee's consent. n952

In Chapter 12 plans, deceleration is clearly permissible. n953

In Chapter 13 proceedings (wage earner plans) the power to modify is often invoked to avoid an acceleration of the mortgage debt after a default. The statutory authorization for modification in Chapter 13 proceedings excludes from the court's modification powers "a claim secured only by a security interest in real property that is the debtor's principal residence," n954 but it also grants the court power to "provide for the curing or waiving of any default." n955 Concluding that a cure is not a modification, the United States Supreme Court has held that a wage earner's plan may provide for setting aside or "decelerating" the acceleration of a mortgage debt secured by a debtor's residence. n956

Questions arise in each type of bankruptcy as to when, if ever, the debtor's right to decelerate ends. n957 It is generally accepted that deceleration is not authorized if the bankruptcy proceedings are not commenced until after a foreclosure sale has been conducted to collect the accelerated debt and any applicable statutory redemption period has expired. n958 Whether the mere entry of a judgment directing foreclosure should terminate deceleration rights is an unsettled question. n959 Some courts have allowed deceleration during any statutory redemption period following foreclosure. n960 In chapter 13 proceedings, home mortgagors are not entitled to strip down the value of an oversecured mortgagee's secured to the value of the security--a remedy generally available under Section 506(a) of the Bankruptcy Act--and then seek a modification of the unsecured portion of the claim. n961 In chapter 11 proceedings, however, most courts have allowed the secured portion of a loan secured by a residence to be stripped down to the value of the security. n962

§ 101.07(h)(5) Installment Land Contracts in Bankruptcy.

Section 365 of the Bankruptcy Code authorizes the trustee in bankruptcy to accept or reject the executory contracts of the debtor in order to permit the utilization for the debtor's estate of advantageous contracts and the repudiation of those detrimental to the estate. An issue sometimes arises whether installment land contracts qualify as executory contracts under this Section. The trend among state courts seems to be to regard these agreements as disguised security devices or as equitable mortgages rather than as contracts. The federal courts, however, are not in agreement as to the proper role of state law in characterizing these contracts under Section 365. Many bankruptcy courts have looked to state law and indicated that, if state law treats installment land contracts as security devices, Section 365 is inapplicable. n963 Other federal courts hold that federal law determines whether installment land contracts fall within the Section. n964 Professor Countryman's conclusion that an executory contract under Section 365 is one that either party may yet materially breach, n965 has influenced some courts to hold that state law is relevant only in determining whether material breaches are still possible and that, if so, Section 365 is applicable. n966 Under this latter view, if according to state law a forfeiture of the debtor-vendee's rights under the agreement has been lawfully declared by the vendor after a default by the debtor-vendee and neither party then has any further liability, there would presumably no longer be an executory contract under Section 365; but, if after the default state law recognizes continuing liabilities, including merely an obligation to make restitution, an executory contract under Section 365 may exist. n967

Where the debtor is the purchaser under an installment land contract, this section permits the trustee in bankruptcy to accept the contract only if the seller is given adequate assurance of future performance and compensated for all defaults. n968 If these conditions are not met, the contract is deemed rejected. If the contract is treated as a security device, the buyer's trustee will avoid Section 365 and then claim the benefits of the automatic stay.

If the seller is in bankruptcy, the trustee in bankruptcy may accept or reject installment contracts, except where the buyer is in possession of the property. However, a buyer in possession has the right to continue making the periodic payments and to demand a conveyance after the last payment. n969 Even if the contract is treated as a mortgage, at least where the buyer is in possession, the results should not differ greatly from those which would flow from Section 365. Whether the buyer is deemed an installment vendee or a mortgagor, the buyer should have the right to continue

performance and to expect counter-performance. As a mortgagor, the buyer would have title subject to the mortgage; as a contract obligee in possession, the buyer would be similarly protected under Section 365. If the buyer were not in possession, though, the characterization of status is quite significant. As a contract vendee not in possession, the buyer's rights are subject to repudiation by the trustee, and the land may be lost; as a mortgagor, again, the buyer has good title subject to the mortgage and can salvage the title through redemption.

CHAPTER 101 MORTGAGES, DEEDS OF TRUSTS AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions § 101.08

AUTHOR: Professor Jerome J. Curtis, Jr. McGeorge School of Law University of the Pacific

§ 101.08 Equitable Mortgages and Miscellaneous Liens.

§ 101.08(a) Absolute Deeds Intended as Security.

For centuries, equity has received proof that deeds purporting to convey an absolute legal and equitable interest were, in fact, meant to grant only a security interest and, upon a finding of such intent, has recognized an equity of redemption in the grantor. Because oppressed debtors are often enticed into delivering absolute conveyances to their creditors upon the creditors' assurances to reconvey upon discharge of the debts, equity has traditionally guarded the interests of the grantors in such situations and, despite the absence of a legal mortgage, has treated the conveyance as an equitable mortgage. n970 Almost all American jurisdictions agree, but at least one state will accept evidence outside the conveyance only if offered to establish grounds to reform the conveyance. n971

The evidence that security only was intended may be written or oral. n972 The statute of frauds is not a bar to proof by parol that a deed absolute on its face was meant as a mortgage. n973 The English statute, adopted in 1677, by its terms did not apply to trusts or confidences that arise by implication or construction of law. n974 Because equity had so long enforced equitable mortgages, it is usually held that the equitable mortgage based upon the grantor's intent to grant a security interest is such a trust or confidence. n975 An occasional statute codifies the rule. n976

The parol evidence rule bars the use of parol evidence to contradict the plain meaning of a writing unless grounds for rescission or reformation (fraud, mistake, and the like) exist. It is therefore possible that the parol evidence rule may prevent proof that a deed was meant as a security device, even though the statute of frauds might not stand in the way of the proof. If the deed does not clearly and unambiguously preclude the notion that it was intended as security, the parol evidence rule should not rule out the use of evidence outside the deed to establish an equitable mortgage. Thus, if the deed merely purports to transfer title to the grantee, but does not indicate whether the grantee is to hold for the grantee's own use or for the benefit of another, the deed by its terms may be regarded as dealing only with the legal title, so that parol evidence would be proper to establish that an equitable mortgage was intended. However, the parol evidence rule may preclude resort to parol evidence if the deed recites that the grantee is to hold for the grantee's own use, since the evidence would then be proffered in an effort to contradict the plain meaning of the deed. n977

Proof that the conveyance was intended as security must establish that the grantor was indebted to the grantee and that

the conveyance was intended by the grantor as a security device. An equitable mortgage is not established simply by proof that the grantor executed a note at the same time as the deed, evidence that the note or some other obligation was intended to be secured by the conveyance also being necessary. n978 Intent that the transfer create only a security interest can be established circumstantially. Among the factors to be considered on the question of intent are (1) the existence of a debt, (2) the relationship between the parties, (3) the availability of legal advice, (4) the sophistication and circumstances of the parties, (5) the adequacy of consideration, and (6) the possession of the property. n979 Where the grantor continues to occupy the premises and to pay the property taxes and hazard insurance premiums and where the consideration received by the grantor is much less than the value of the property, the inference is particularly strong that a security device was intended. n980 Where the grantee takes possession, and pays the property taxes and insurance premiums, the contrary inference may well arise. n981

The *sine qua non* for establishing that the deed was meant as a mortgage is proof of an underlying debt. While a legal mortgage can exist where there is no underlying personal debt, n982 courts appear unwilling to find an equitable mortgage without proof of an underlying personal obligation. n983 The debt may arise at the time of the conveyance, or it may be a pre-existing obligation.

The grantor bears the risk of non-persuasion on the issue of whether a deed absolute was meant as a security device. The majority of states require clear and convincing proof. n984

Often the deed is accompanied by other writings, and the question arises whether the deed and the other writing may together establish an equitable mortgage. Thus, the grantee may lease the land back to the grantor and bestow on the grantor-lessee an option to buy the land, or the grantee may simply execute an option to purchase in favor of the grantor. In such cases, grantors frequently contend that the option was actually intended to confer redemption rights and that an equitable mortgage was created. n985

A major theoretical argument against allowing proof that the deed and collateral documents give rise to an equitable mortgage is the parol evidence rule since arguably the evidence is offered to contradict the meaning of the written provisions. Indeed, one court has refused to admit parol evidence where the lease-back and option agreement recited that the transaction was "not for purposes of security." n986 Still, at least in the absence of such a stipulation, most courts do not allow the parol evidence rule to block the proof. n987

The types of proof that may establish an equitable mortgage where other writings exist besides the deed absolute are identical with those to which resort is had in the case of absolute deeds standing alone. The existence of a debt is often said to be essential. n988 One court found the conclusion that an equitable mortgage existed "inescapable" where the grantee accepted a conveyance to save the property from foreclosure and gave the grantor a lease-back and option to purchase. n989

§ 101.08(b) Installment Land Contracts.

§ 101.08(b)(1) Installment Land Contracts Generally.

Agreements for the purchase of land calling for payment of the sale price over time and deferring the transfer of title to the purchaser until all or a specified portion of the price is paid have been treated in several different ways. Traditionally they were viewed as contracts to be enforced as written. Because installment land contracts invariably stipulate that time is of the essence, any default by the buyer could be the predicate for forfeiture of rights under the contract. If the buyer missed a payment, the seller could elect to terminate the contract and retain all previous payments. Because of the

harshness of forfeiture of the buyer's previous payments, coupled with the loss of the right to complete the contract and acquire title, many courts and some legislatures restrict the remedies available to sellers upon breaches by buyers. So pervasive are the efforts to ameliorate the harshness of the traditional approach, that two scholars have concluded, "While forfeitures are still occasionally judicially enforced, it nevertheless can be safely stated that in no jurisdiction today will a vendor be able to assume that forfeiture provisions will be automatically enforced as written." n990 In a number of states, these contracts have come to be equated with mortgages, and it is possible that the trend is in that direction. n991

Sellers resort to the installment land contract in an effort to deny their buyers the redemption rights so central to mortgages and to avoid procedural and time-consuming requirements of foreclosure. Certainly, in the sellers' ideal world nothing could surpass an installment land contract enforceable according to its terms. Should a buyer miss a single installment, the seller, under the provision which makes time of the essence, could simply exercise the right to declare the contract at an end, require forfeiture of installments already paid, and re-acquire marketable title to the land. Buyers would have no right to reinstate the contract by late tender of the missed installment or to redeem by tendering the remaining unpaid balance. Likewise, upon breach by buyers, sellers would have no need to resort to foreclosure, would hold title free of any statutory redemption rights, and would be able to sell to another purchaser. It has been observed that land installment contracts have been particularly common in those states which do not recognize foreclosure by private sale since, in those jurisdictions, sellers may feel that the burdens of judicial foreclosure are too heavy to be endured. n992 Where foreclosure by private sale is allowed, sellers forego the right to private foreclosure when they employ the installment land contract unless the contract authorizes a private foreclosure. n993

LEXIS: installment or land w/2 contract or agreement or deed

§ 101.08(b)(2) Installment Land Contract as an Equitable Mortgage.

By statute or case law a number of states have come to view the installment land contract as a mortgage. In these states the contract may not give rise to a legal mortgage since the usual requirements of legal mortgages are missing, but the contract is seen as an equitable mortgage. As an equitable mortgagee, the seller is thus unable to invoke the contractual remedy of forfeiture and must resort to foreclosure to terminate the purchaser's interest in the land. n994

Statutory recognition of the installment land contract is sparse and often equates land installment contracts with mortgages only in limited situations. Oklahoma has addressed the question directly and unambiguously by a statute mandating that installment land contracts shall be deemed to be mortgages if the contract contemplates that the buyer shall take possession of the property. n995 The Maryland statute restricting sellers to the same remedies as are available to mortgagees covers only residential property sold to individuals. n996 Ohio treats installment land contracts as mortgages only if the security is residential property and either the contract has been in effect for five years or 20% of the principal has been paid. n997

Courts without the aid of legislation have been moving toward equating installment land contracts with mortgages. Often, however, the equation is neither absolute nor automatic as the courts struggle to fit the installment land contract into the mold of a mortgage. The most recent pronouncement on the issue by the California Supreme Court perhaps best exemplifies the judicial efforts in the area. After a long series of cases curtailing the prerogatives of sellers under installment land contracts, the California court recognized an unqualified right in vendees, who have made "substantial payments" under the contract, to redeem by tendering the unpaid balance on the contract. n998 Yet, the court refused to grant redemption rights to buyers who had not made substantial payments on the debt, leaving the question for future consideration. n999 In restricting its holding to situations in which there has been a substantial reduction in the debt, the California court was following the leads of several other courts, which so far have been unwilling to extend mortgagor status to buyers who have not substantially reduced the principal. n1000

It may be that a few courts have shed all fetters preventing equating land installment contracts with mortgages and always treat them as mortgages without regard to the wilfullness of a buyer's breach or the amount by which the debt has been reduced. Professors Nelson and Whitman, relying in part on the practice of sellers in Florida, speculate that Florida has done so. n1001

Where land installment contracts are regarded as a species of equitable mortgage, buyers may be exposed to the usual risks of those claiming only equitable interests, that is, they may lose their interests upon a conveyance of the legal interest to a bona fide purchaser for value. Few courts have explicitly stated that foreclosure is the only method by which the interest of buyers under these contracts may be extinguished. n1002 Unless foreclosure is necessary, sellers may continue to declare forfeiture of their buyers' rights upon default and thereby compel the buyers to take some action to have the respective rights of the parties determined. Until the buyers take the initiative, it is arguable that sellers, after declaring a forfeiture, hold a legal title which they can transfer to third party bona fide purchasers free of the buyers' claims. On the other hand, the mere presence of land installment contract in the land records may suffice to deny subsequent purchasers bona fide status. Still, until the buyers do something affirmatively, the risk is always present, where foreclosure is not required, that their equitable interests may be lost.

A frequent action taken by buyers in default is suit for specific performance of the contract after a rejected tender of either the arrearages or the full unpaid balance. Despite the usual inclusion of "time is of the essence clauses" in the contracts, many courts have been receptive to these claims for specific performance. n1003 Because of the discretionary nature of equitable relief, the results of these actions are not uniform. It has been held, for example, that a buyer in wilful breach is not entitled to specific performance. n1004 Likewise, buyers who appear before the chancellor with unclean hands have been denied relief. Thus, a buyer who failed to maintain hazard insurance and to keep the premises in good repair was denied redemption rights. n1005 Laches, too, might be a basis for denying relief to defaulting buyers if they wait too long after a forfeiture is declared to take some action to avoid the forfeiture. n1006 A buyer's action for specific performance is the equivalent of a bill to redeem, and, while some courts acknowledge as much and afford buyers the full panoply of mortgagors' rights, others, by weighing such factors as the amount by which the debt has been reduced and the bona fides of buyers, seem reluctant to accord buyers all the rights of mortgagors. n1007

Even when they hesitate to treat the buyer in all respects as the equivalent of a mortgagor, courts strive in other ways to assist buyers to avoid total forfeitures of their rights to complete the contract as well as of their payments before defaults. These courts strain to find waivers by sellers of their rights to declare forfeitures and require sellers to make restitution to buyers of such payments as are necessary to avoid unjustly enriching the sellers.

LEXIS: installment or land w/2 contract or agreement or deed w/50 equitable pre/1 mortgage

§ 101.08(b)(3) Waiver of Sellers' Rights to Declare Forfeiture.

The typical installment land contract permits the seller, upon a default by the buyer, to declare the buyer's rights under the contract forfeited and to retain all sums already paid by the buyer. n1008 Courts are reluctant to enforce such draconian measures, and, in an effort to avoid them, seize on past failures to accelerate upon buyers' delinquencies to find that sellers have waived their rights to call the unpaid balances due upon later defaults in paying installments, thereby conferring upon the buyers "a right analogous to an equity of redemption." n1009

> The waiver cases vary and are difficult to reconcile. In some cases rather innocuous forbearances by vendors have been translated into favorable holdings for vendees, while in other quite substantial leniency has been unavailing. n1010

Once sellers have waived the right to insist on timely payment of installments, they may reinstate the right by clearly informing the buyers that strict compliance with the payment schedule will be required henceforth:

> Where a party accepts late payments it may waive or suspend its right to timely payments and its right to declare a forfeiture unless the buyer is given a definite and written notice of the intention to require strict compliance with the contract in the future. n1011

Oregon will not permit forfeiture unless the buyer first is given an opportunity to cure the default and fails to do so. n1012

LEXIS: installment or land w/2 contract or agreement or deed w/15 waiv! or forfeit!

§ 101.08(b)(4) Election of Remedies by Sellers.

Where forfeiture is a permissible remedy for sellers after a default by buyers, most states require the sellers to choose between that remedy and damages. n1013 Under this view, after obtaining what amounts to strict foreclosure, sellers "are barred from seeking to recover the mortgage equivalent of a deficiency judgment ..." n1014 An election of remedies is required to prevent unjust enrichment that would result if sellers could recover the land and collect damages equal to the difference between the contract price and the amount of payments made by buyers before forfeiture. n1015

The authorities are divided about whether a mere declaration of forfeiture upon default constitutes an election of remedy that precludes later action for damages. The tendency is to require something more than a simple declaration of forfeiture, such as a final judgment of forfeiture or the actual receipt of some benefit after the declaration of forfeiture. The resumption of possession after declaring a forfeiture is the receipt of such a benefit as to constitute an election. n1016

§ 101.08(b)(5) Restitution of Payments in Excess of Sellers' Damages.

Many jurisdictions, even some that do not treat installment land contracts as equitable mortgages, will not allow sellers to retain payments made by buyers which exceed the actual damages occasioned by the buyers' breaches. Recognizing the unjust enrichment that results from sellers who both reclaim the land and simultaneously retain all payments made by buyers, these require sellers to make restitution to their buyers if the payments made before default exceed the seller's damages. n1017 In many respects, these courts are invoking a fair value procedure for installment land contracts since they require that any appreciation in the value of the property be credited against the debt. n1018 If the land has doubled in value between the date of the contract and the time of the buyer's breach, the seller under this approach is entitled to the land but will probably not be able to recover damages for the breach and will be compelled to return to the buyer all payments made because the interim appreciation, which is now the seller's, will likely have produced more than ample compensation for any injury the breach occasioned the seller. Even if the land has declined in value, the seller will be permitted to retain only as much of the payments as necessary to make him whole.

Differences exist as to how the restitutionary amount is to be calculated. Two formulae have been employed: (1) the amount by which the buyer's payments exceed the difference between the value of the land at forfeiture and the sale price, and (2) the amount by which the buyer's payments exceed the fair value of the buyer's occupancy of the land.

The first approach is designed to limit the amount which the seller may retain to a sum equal to the benefit of the bargain plus any incidental expenses. Under this formula, where the land has declined in value in the time between sale and forfeiture, the seller's damages are the difference between the contract price and the value of the property at the time of forfeiture, and, if the payments exceed that amount, restitution must be made to the extent of the excess. n1019 The

seller is entitled not only to the agreed purchase price but also to any interest thereon stipulated in the sales contract. n1020 In computing the seller's damages, therefore, the current unpaid balance at forfeiture should be compared with the total of the value of the land and the amount of all payments made by the buyer. Suppose the sales price were $120,000, calling for 120 monthly payments of $1,585.81, n1021 and that the buyer breaches and the seller lawfully declares a forfeiture when the buyer misses the 61st payment after making 60 timely payments. Though the total payments made aggregated $95,148.60, the price will have been reduced by only $45,363.51, leaving an unpaid balance of $74,636.48, because part of each payment represented interest of 10% per year. In order to compute seller's actual damages and compensate for loss of investment up to the time of forfeiture, one should not subtract the value of the land at forfeiture from the unpaid balance; doing so in the hypothetical would require the seller to make restitution to the buyer in the amount of $65,148.60. n1022 Rather, one should ask what should the seller legitimately be expected to have at the time of forfeiture and compare that with what the seller actually has at that time. In the hypothetical, the forfeiture occurred when the 61st payment was due; at that time, the seller expected to have in hand $199,082.38. n1023 In fact, the seller had the land, worth $90,000, plus the 60 installments which, we may presume, were invested at the stated interest rate and are now worth in the aggregate $123,823.70. Thus, the seller now should have $14,741.32 more than if the buyer had not breached ($213,823.70 less $199,082.38) and to that extent may be compelled to make restitution to the buyer.

On the other hand, if forfeiture took place when the buyer missed the 13th payment, the combination of the land and the payments made and compounded would not meet the seller's investment expectations and, except where deficiencies would be prohibited, n1024 the seller would be entitled to $23,577.63 from the buyer:

Seller's anticipated receipts after 13 months		$133,670.28
Value of land	$ 90,000.00	
12 payments compounded	$ 20,092.65	
Deficiency	$ 23,577.63	
	$133,670.28	$133,670.28

Under the second approach, after forfeiture, the seller may retain out of the buyer's total payments only a sum sufficient to compensate the seller for the buyer's occupancy of the land under the contract. n1025

Obviously, both of these approaches cannot be used simultaneously. One or the other can be applied, but not both. The California Supreme Court has held that the seller may elect between them, observing that to allow the buyer to make the selection would amount to permitting all buyers, at their option, to convert their installment contracts into leases. n1026 Subsequently, in *Petersen v. Hartell,* n1027 the California Court severely limited the power of sellers to declare forfeitures by holding that, except where buyers had not made substantial payments, the sole remedy of sellers is to foreclose. Nevertheless, restitution remains a possibility in California, where at foreclosure the property sells for a price that, together with the payments previously received by the seller, will give the seller more than the original sales price plus incidental expenses.

Even though some courts are concerned about avoiding unjust enrichment to sellers who lawfully forfeit the rights of buyers under installment land contracts, some seem reluctant to compel restitution except in extreme cases. Several courts require restitution only if it would be unconscionable to do otherwise. n1028 Apparently, these courts will require a large discrepancy between the actual damages and the total payments and, even then, may not be sympathetic with buyers who breach toward the end of the contract period on the theory that the seller has removed the property from the market for a long period and should be compensated for lost opportunities by means of the forfeited payments. n1029

§ 101.08(c) Vendors' Liens.

In England the doctrine developed that sellers of land who conveyed to their buyers without receiving the full sales price retained a lien to secure that price. The lien arose even without a contractual understanding that the seller would retain a security interest in the land until the debt was discharged. As Lord Eldon put it:

> It goes upon this; that a person, having got the estate of another shall not, as between them, keep it, and not pay the consideration. n1030

It was thought that natural equity required that the seller who extends purchase money credit retain security for the purchase money obligation. The lien is thus implied in law and not in fact, since it is not dependent upon an agreement for security. n1031 The lien, however, arises only in equity since a legal lien by implication of law is dependent upon retention of possession by the creditor whereas the vendor's lien exists notwithstanding the passage of title and possession to the purchaser. n1032

This doctrine has been accepted in the majority of American states although in some it may be rejected as conflicting with the policy that interests in realty should be evidenced by recordable instruments. n1033 A few states reach results comparable with those attained under the doctrine by treating the purchaser as a trustee for the seller until the purchase price is paid. n1034

If the instrument of transfer recites that a vendor's lien is retained or that the full purchase has not been paid, most of the cases treat the lien as an equitable mortgage rather than as an implied lien. n1035 The taking of a purchase money mortgage has been deemed a waiver of the lien n1036 although there is no reason that the lien and express security interest could not coexist. n1037 It would seem that the taking of an express security interest should be treated as a lien replacement analogous to a mortgage replacement, so that intervening lienors, with notice of the vendor's lien, should not rise in priority merely because the vendor accepts a mortgage as a replacement of the vendor's lien. n1038

Although the lien normally arises in favor of a seller, others may sometimes be entitled to an implied vendor's lien. Some courts have recognized the lien in favor of third party beneficiaries of the sales contract. Thus, if the parties agree that the sales price shall be paid to a third party, the third party may be entitled to the lien. n1039 A seller's real estate broker has also been permitted a vendor's lien if the listing agreement gave the broker an interest in the price. n1040

Where the doctrine exists, a presumption that a vendor's lien is retained arises from the mere fact that title was transferred without full payment. While this presumption is rebuttable, proof that the seller did not intend to retain a purchase money security interest or was ignorant of the doctrine will not overcome the presumption. n1041 Rebuttal of the presumption requires a clear showing that the seller did not desire security. n1042 A recitation in the instrument of transfer that full payment was made or an acknowledgment of such payment will overcome the presumption but is not necessarily fatal to the claim of lien, since the seller may nevertheless offer affirmative proof that full payment was not made. n1043

Disputes can arise between claimants of a vendor's lien and third party lenders who also extend purchase money credit to vendees. If a third party lender is aware that a seller is financing part of the purchase price, the third party lender should appreciate that the seller may retain a vendor's lien, unless the seller is somehow precluded from asserting it; yet, uncertainty exists about the priority of a third party in such a situation. n1044 Because the lien arises only in equity, it will be defeated by a transfer of the legal title to a subsequent bona fide purchaser for value, a result consonant with both the common law rules of priorities and most recording statutes. n1045 It has priority over prior judgments against

the vendee for the same reasons that purchase money mortgagees come ahead of such interests. n1046

§ 101.08(d) Mechanics' Liens.

All states provide statutory liens for those who supply labor or materials for the improvements of land. The statutes creating these liens, commonly referred to as mechanics' liens or mechanics' and materialmans' liens, vary greatly from state to state. Yet, the basic policy behind all mechanics' lien statutes is that those who invest labor and material in improving land ought to have a security in the land or improvement to secure their compensation claims. A common feature of the various statutory schemes is that the lien may attach when labor or materials are furnished to a project, without the necessity for the execution or recordation of any writing, so that those subsequently acquiring interests or liens upon the land will take subject to the lien, even though the existence of the lien could not be discovered by an examination of the land records. This viability of unrecorded mechanics' liens against subsequent parties makes it imperative that subsequent parties examine the property before taking a conveyance or lien in order to satisfy themselves that no recent improvement has taken place. Of course, mechanics' liens are subordinate to prior interests and encumbrances, except those unrecorded interests which would be subordinated to the mechanics' lien under a recording statute.

This survey of mechanics' lien law is included in this chapter dealing primarily with mortgages in order to provide a more comprehensive perspective on this type of real property encumbrance. An independent and more detailed exposition of the law of mechanics' liens is found in the following chapter, Chapter 102, "Mechanics' Liens."

§ 101.08(d)(1) Persons Entitled to Mechanics' Liens.

As a general rule, all those who supply labor or materials to improve real property with the actual or imputed consent of the owner are entitled to a mechanics' lien. n1047 The California statute typifies the broad range of potential mechanics' line claimants:

> Mechanics, materialmen, contractors, subcontractors, lessors of equipment, artisans, architects, registered engineers, licensed land surveyors, machinists, builders, teamsters, and draymen, and all persons and laborers of every class performing labor upon or bestowing skill or other necessary services on, or furnishing materials or leasing equipment to be used or consumed in or furnishing appliances, teams, or power contributing to a work of improvement shall have a lien ... n1048

The lien claimants must not be volunteers, that is, they must have furnished labor or materials at the instance of an owner. This consent, however, need not be direct or actual. Those who have been retained by an owner to improve land, often general contractors, have the authority to retain others--subcontractors, laborers, suppliers, and others--to assist in the project, and these other persons may then be entitled to a mechanics' lien. California, for example, while limiting the lien to those supplying labor or material "at the instance of the owner or of any person acting by his authority," also makes anyone having charge of the project "the agent of the owner" for purpose of arranging for others to supply labor and material. n1049 In some states, no direct dealings upon the part of anyone with the owner is essential; in these states, an owner is deemed to have authorized an improvement if the owner does not object to the project after becoming aware of it, n1050 and some of them provide that, by failing to file a notice of non-responsibility within a designated period of time after learning of the improvement, an owner shall be deemed to have authorized it. n1051

Even in jurisdictions giving direct liens to all claimants, the liens of those who have not contracted with an owner directly should not include services and materials which were known to be beyond the terms of the main contract. A general contractor, for example, may be presumed to have authority to bind the owner by contracting with subcontractors, but that presumption should not be entertained where subcontractors are aware that the general contractor is exceeding authority. Actual or constructive notice of the general contract should suffice to deny a lien to those providing services or material not contemplated by the contract. n1052 Some statutes permit an owner to record

the main contract and, thereby, to impart constructive notice of its provisions to those dealing with the general contractor. n1053 Those not parties to the main contract may even be obliged to read the agreement to determine that the work or material they are to provide is within the authority of the general contractor to contract. n1054

It is generally held that those engaged in activities for which a license is required are not entitled to an mechanics' lien unless they are duly licensed. n1055 The employees of unlicensed contractors, however, are entitled to a lien despite their employer's unlicensed status. n1056

COMPUTER-ASSISTED RESEARCH

LEXIS: mechanic! pre/1 lien! or claimant

§ 101.08(d)(2) Amount of Lien.

For those who have contracted directly with an owner, the price stipulated in the contract establishes the maximum amount of the lien. n1057 The lien of a general contractor dealing directly with an owner is, therefore, limited to the contract price.

States are divided about the lien amount for those who have not dealt with an owner directly, *e.g.*, subcontractors and suppliers who have dealt only with the general contractor. Some states recognize a direct claim of such persons independent of the contract price agreed upon by the owner and without regard to payments by the owner to the general contractor, n1058 but others regard the rights of those who did not deal directly with the owner as derivative and thus limit the subcontractor's lien to the contract price under the prime contract less payments made by the owner thereunder. n1059

In those states giving subcontractors direct claims against owners, the contract price does not set a ceiling on the liability of the owners, since subcontractors are given a lien for up to the lesser of their contributions to the project or their own contract prices. n1060 Further, in these jurisdictions, the amount of the subcontractor's lien is not reduced by any payments made by the owner to the general contractor; in some of these states, however, it is only payments made by the owner within a stipulated time period before receiving notice of the subcontractors' claims that cannot be credited against the claims of the subcontractors. n1061 Thus, where a general contractor has agreed to complete a project for $100,000 and then has retained a subcontractor to complete a portion of the project for a price of $20,000, the subcontractor under this view will have a lien for $20,000 or, if the fair value of his contribution is less than $20,000, for the smaller sum. This lien may exist even though the owner has paid the full $100,000 stipulated in the contract with the general contractor, who has not in turn compensated the subcontractor. A number of states in this group permit owners to establish the contract price as a ceiling on their liability either by posting a bond or by recording the contract with the general contractor. Others make the contract price a ceiling but deny owners credits for payments made to the general contractor, which has the effect of exposing owners to the possibility of paying the contract price twice. n1062

It is sometimes provided, in states with direct lien statutes, that those who have not contracted directly with the owner must notify the owner of their claims within a stipulated time period time after beginning to contribute to the project. In California, for example, a subcontractor's lien will be lost unless the subcontractor serves a preliminary notice on the owner, on the general contractor, and on any construction lender within twenty days of beginning performance. n1063

In those jurisdictions which deny subcontractors direct claims against owners for the amount of their contract or contribution, their lien amounts can rise no higher than the amount due on the main contract at the time the subcontractors' liens are filed. n1064 This means that the lien amount for anyone with no direct contractual relation with the owner is restricted to the amount stated in the main contract and must be reduced by any payments made on that contract by the owner before the subcontractor's lien is asserted. The protection of owners under this approach may be dependent upon their meeting statutory requirements, such as obtaining from general contractors verified statements of

amounts owed subcontractors. n1065

Some states follow the direct claim approach in most cases, but employ the derivative approach where the lien is a claim on owner-occupied residential property. n1066

In the Uniform Construction Lien Act, the commissioners on uniform state laws recommended adoption of the derivative approach but, aware of the popularity of the direct lien tack, they presented an alternative which would provide for such an approach, except in owner-occupied residential situations. n1067

LEXIS: mechanic! pre/1 lien w/50 amount or value w/50 direct or derivative w/15 claim

§ 101.08(d)(3) Attachment and Perfection.

A mechanics' lien will be lost unless perfected by filing a notice of lien. Usually the statutes provide that this notice must be recorded and served within a certain time after the claimant has completed performance. In California, for example, unless a notice of completion or cessation has been recorded, the notice of a claim of lien must be filed within 90 days of completion of the project. n1068 It has been held that the time for filing the notice of claim cannot be extended by a "delayed provision of some trivial amount of work" after performance has been substantially completed. n1069

Furthermore, after perfection, the claimant must sue to foreclose it judicially within a stipulated period. n1070 Failure to commence suit within the stipulated period may forfeit the lien. n1071

LEXIS: I. mechanic! pre/1 lien w/50 attach! w/15 time or date
II. mechanic! pre/1 lien w/50 perfect! w/50 notice

§ 101.08(d)(4) Priorities.

Statutes usually provide that, once perfected, a mechanics' lien relates back to the time the improvement commenced. n1072 Usually, the liens of all improvers on a common project share a common priority. n1073 Under this approach, the lien of a subcontractor who does not begin work until the general contract is nearly completed will relate back to the first time any work under the general contract was performed. n1074 Other views are that each claimant's lien has priority from the time the claimant's first contribution is made n1075 or from the execution of a contract n1076 or recordation of the claimant's claim. n1077

Of course, under the recording statutes and common law rules of priorities, mechanics' liens may also have precedence over prior interests or liens not evidenced in the land records. n1078

Conflicts frequently arise between construction lenders with prior recorded construction mortgages and subsequent mechanics' lien claimants. Although mechanics' liens are usually junior to prior mortgages and liens, claimants often argue that disbursements made by the construction lender during the course of construction were optional and thus should be subordinated to previously attached mechanics' liens. The treatment of optional advances and the difficulties of distinguishing obligatory and optional advances is discussed at § 101.06(f). At this juncture, it should simply be recalled that, in most jurisdictions, if a payment is deemed optional with the construction lender, the previously attached mechanics' liens will have priority even though the construction mortgage was recorded before work on the improvement commenced. On the other hand, the construction lender will retain priority with respect to obligatory

advances.

In a few states, statutes provide a means to give a mechanics' lien claimant priority over obligatory advances by construction lenders. Under these statutes, mechanics' lien claimants may serve a "stop notice" on the construction lender or an owner which will have the effect of giving the claimant priority over any undisbursed construction monies in the hands of the lender or owner. n1079 The construction mortgage will retain priority with respect to funds disbursed before the stop notice was given. Because a dispute between general contractors and their subcontractors involving the propriety of a stop notice may hinder completion of a project, some statutes preclude stop notices where a bond is filed. n1080

COMPUTER-ASSISTED RESEARCH

LEXIS: mechanic! pre/1 lien w/50 priority w/15 lien! or claimant

§ 101.08(d)(5) Waiver.

Certainly holders of mechanics' liens may waive or release them. Indeed, it is common practice for construction lenders to require waivers before each draw under a construction loan. n1081 The drafting of a waiver or release may call for careful attention. In California, for example, waivers and releases are ineffective unless they substantially follow forms set out by statute. n1082 Because of the favored status of mechanics' liens, waivers are strictly construed in favor of the claimant. n1083 Thus, waivers given in the course of the claimant's work will be presumed to relate solely to work completed and not to potential liens for future work. n1084

A basic difference of opinion exists concerning the power of general contractors to deny mechanics' liens to their subcontractors through a "no lien" clause in the original agreements with the owners. States which regard the subcontractors' rights as deriving from those of the general contractor tend to enforce against the subcontractors provisions in the main contract that no liens shall be asserted. n1085 Under this view, subcontractors may be bound to ascertain the terms of the general contracts and may have imputed to them knowledge of "no lien" clauses in the general contract, at least where the terms of their own contracts with the general contractor incorporate the terms of the general contract. n1086 In some of these states, the subcontractors will not be bound by the provision unless they have actual or record notice of it when their contribution commences. n1087 Where subcontractors hold direct lien rights, the tendency is to hold that they are not subject to "no lien" clauses in the general contract. Reflecting this approach is a California statute which provides:

> Neither the owner nor original contractor by any term of their contract, or otherwise, shall waive, affect, or impair the claims and liens of other persons whether with or without notice except by their written consent n1088

§ 101.08(e) Judgment Liens.

All states have statutory provisions authorizing judgment liens upon the lands of judgment debtors. No such liens exist at common law, and therefore the particular statutes of each state must be consulted in determining the scope of judgment liens. n1089 It is generally provided that judgments constitute general charges upon the lands of a judgment debtor from the date the judgment is docketed n1090 or the judgment or abstract of judgment is recorded in the land records. n1091 The judgment lien is thus distinguishable from a mere execution lien, which is effective only upon levy or issuance. n1092

Generally, to have the effect of creating a lien, a judgment must be final, and be for a sum certain or payable in installments. n1093

A judgment lien constitutes a lien on the debtor's interests in realty in the local jurisdiction, usually a county, n1094 in which the judgment is docketed or an abstract is recorded. It may thus attach to lands outside the county in which the judgment is rendered upon the recording of the judgment or an abstract in other jurisdictions. The judgments of federal courts can give rise to judgment liens upon recordation in the appropriate local offices of the state. n1095

A judgment lien should be distinguished from a lis pendens or memorandum of suit pending. While a judgment lien arises only after a judgment has become final, litigants can sometimes acquire interests in an adversary's lands as of the date of the commencement of suit, by recording in the land records a lis pendens or a memorandum of suit pending. The purpose of the lis pendens is to put subsequent purchasers and encumbrancers on notice of the pending litigation, and to subject them to the outcome of the suit. Unlike the judgment lien, the lis pendens is not itself a lien but merely a device to subordinate subsequent takers to the results of the suit. Not all claims in litigation can be protected by a lis pendens, for the statutes usually permit the recordation of a lis pendens only in connection with claims to an interest in the property. In California, for example, the lis pendens is proper in "any action concerning real property or affecting the title or the right of possession of real property," n1096 while the Minnesota statute covers actions "in which title to, or any interest in or lien upon real property" is involved. n1097

The duration of a judgment lien varies from state to state. The length of time the lien is valid ranges from 20 years n1098 to one year. n1099 All states apparently permit judgment liens to be extended beyond their normal life span by filing a renewal before the expiration. n1100 Some statutes even permit the revival of expired judgment liens. n1101

The nature of the property affected by a judgment lien also varies among the states. Most legal interests are subject to them in all states, and many states also subject equitable interests to judgment liens. n1102 However, in some jurisdictions, equitable interests are not subject to judgment liens so that equitable proceedings are necessary to reach such assets. n1103 Among the interests that are sometimes immune from the lien are rents and lessors' reversions. n1104 Realty interests acquired by the judgment debtor after the general judgment lien arises are subject to it. n1105

Judgment liens are junior to all interests existing at the time of attachment unless, under the applicable recording statute, judgment lien creditors are protected against prior unrecorded interests. Many states have recording acts that limit their protection to "purchasers," and many courts in construing such statutes do not regard judgment lien creditors as purchasers. n1106 In contrast, other statutes expressly cover judgment lien creditors. n1107 Although the California recording statute includes "judgments affecting title" within its scope, the California courts have held that a prior, unrecorded conveyance is superior to a subsequent judgment lien, reasoning that judgment liens attach only to a debtor's actual interest. n1108 In California, judgment liens, presumably because they arise from judgments for sums certain, do not qualify as "judgments affecting title" under that state's recording act.

Generally, judgment liens are superior to all interests arising after they have attached. They are, however, subordinate to purchase money liens. n1109

§ 101.08(f) Innocent Improver Liens and Related Remedies.

All states provide remedies of one kind or another to those who make improvements on lands they do not own, but the

grounds for relief vary tremendously from jurisdiction to jurisdiction. Most states have enacted statutes which address the subject, n1110 but common law principles also may coexist alongside these statutes. In reviewing the cases, therefore, care must be taken not only to distinguish between those based on legislation and on case law, but also to note differences in statutory language and interpretation.

At common law, one who improves another's property without the consent of the owner makes, in essence, a gift of the improvement to the owner. The improvement becomes a permanent part of the land, and the landowner is under no legal obligation to compensate the improver for the enhanced value of the land attributable to the improvement. These principles apply whether the improver believes in good faith to be the owner of the land or is a willful trespasser. n1111

§ 101.08(f)(1) Equitable Innocent Improver's Lien.

Equity overcame the rigidity of the common law rule by permitting an innocent improver relief in two circumstances. First, the improver was given a lien to secure a reimbursement right when the improver was misled by the owner into making the improvement or the owner acquiesced in the improvement by standing silently by while the improvement was underway. n1112 Second, equity compelled the owner to set-off the value of the improvements against any claim for rents and profits. In this approach, equity followed the civil law, which awarded good faith improvers expenses incurred in improving another's land up to the value of the improvement. While equity did not go so far as the civil law in allowing a direct claim against the owner, it did give the owner a choice between accepting the improvement without compensation for any use or occupancy by the innocent improver, and recovery of the rental value reduced by the value of the improvements. n1113 The equitable lien is often based on the principle that those seeking equity must do equity.

The law courts adopted the equitable standard when, in connection with a successful ejectment claim, a landowner sought mesne profits in trespass. At law, as in equity, absent acquiescence or misrepresentation on the part of the owner, the sole remedy of the innocent improver lay in setoff; no direct claim for reimbursement was recognized. n1114

Many American courts, in the absence of a statute providing otherwise, continue to adhere to the rules prohibiting a direct claim for reimbursement, unless the owner has engaged in conduct estopping the owner from treating the improvement as the equivalent of a gift. n1115 Illustrative of the appeal of this view are the words of Chancellor Kent:

> There is no moral obligation which should compel a man to pay for improvement upon his own land, which he never authorized, and which originated in tort. n1116

Yet, the number of states in the majority camp may be declining as many n1117 accept the view that unjust enrichment, rather than the owner's conduct alone, should be the focus. n1118 Joseph Story laid the groundwork for discarding the traditional rules in *Bright v. Boyd* n1119 in 1841. Indeed, it has been speculated that Story's opinion would have prevailed long ago had not legislatures enacted improvers' statutes which inhibited judicial innovation. n1120 Under the minority view, the innocent improver is entitled to a lien without regard to the conduct of the owner. One approach gives the improver the choice of removing the improvement, if that can be effected without injuring the land, or asserting a lien on the land for the increased value that was conferred. n1121 Another approach gives the improver the option of claiming a lien or buying the land for its fair market value less the value of the improvement. n1122

It is often asserted, under either the majority or minority view, that the lien or set-off exists only in favor of those making permanent improvements in good faith and under color of title. n1123 Differences exist as to the import of each of the requirements of good faith and color of title. Although an occupier who fails to obtain title by adverse possession may nevertheless be entitled to a lien for improvements, n1124 some courts deny good faith status to improvers who believe they own the land but are aware of claims of others to it. n1125 Under this view, mere knowledge of another claim, even if the improver earnestly felt that the claim was spurious, would deny the improver a lien or set-off right. n1126 Further, without the aid of a statute, it is generally held that the improver must have color of title, that is, a written instrument on which the belief was founded. This is a particularly harsh requirement in cases of good faith

mistakes as to the location of a boundary between contiguous parcels, when the improvement straddles the boundary and was built in the belief that the improvement was entirely on the improver's land. n1127

§ 101.08(f)(2) Statutory Liens and Related Remedies for Innocent Improvers.

Statutes exist, probably in all states, attempting to protect the expectations of innocent improvers, but often they impose requirements similar to those of the judicially recognized equitable liens. Some can be used by the improvers only defensively, harkening back to the traditional restrictions on the equitable improver's lien. The statutes usually protect only good faith improvers, raising the same kinds of quibbles over the definition of good faith that plague claims under the equitable lien. n1128 Frequently, the statute requires that the improver have acted under a color of title, n1129 have been in adverse possession, or have occupied the land for at least a specified period of time. A common statutory provision leaves the improver's remedy in the hands of the owner by giving the owner a choice between paying for the improvement or selling the land to the improver. n1130

Supp. To CHAPTER 101 MORTGAGES, DEEDS OF TRUST AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions Supp. to § 101.09

Supp. to § 101.09 A Review of Mortgage History and the Subprime Mortgage Crisis.1 This section was written by Prof. David A. Thomas.

Add new § 101.09.

Add new section:
[Go To Main]

§ 101.09(a) A Brief Review of the History of Medieval Mortgages. [Go To Main]

§ 101.09(a)(1) Lender Rights in the 14th and 15th Centuries: Title and Possession.

Under the form of mortgage used in 14th- and 15th-century England, the lender took fee simple ownership and possession of the borrower's property. Only if the debt were satisfied would the lender be obligated to return the property to the borrower. Today conveyancers would call this a fee simple subject to condition subsequent. While holding the property, the lender had, among other significant rights, the right to collect and keep rents and profits without applying them to the loan balance. This was important, because, at the time, charging interest on the loan was considered to be usury and to be unlawful.

§ 101.09(a)(2) In the 17th Century: Borrower Retains Possession.

The next major development in mortgage law was a custom by which the borrower remained in possession, even though the lender continued to hold title to land. Under a provision for entry the lender had the right to take possession at any time. If the lender did take possession, rents and profits from the mortgaged property had to be applied to the mortgage debt. The change in custom from the lender taking possession of the property to the borrower usually being left in possession of the property occurred between about 1600 and 1650.

The provision for lender's entry was then displaced by a custom requiring the lender, who held the estate or title, to reconvey when the debt was fully satisfied. However, if payment was not made promptly, when required, the borrower forfeited the right to insist on reconveyance, and the lender's estate in the land became absolute.

§ 101.09(a)(3) Equitable Relief: Late Payments Permitted in Limited Circumstances.

When it became clear that English common law courts would enforce forfeitures of borrowers' rights for even the most technical and excusable failures to pay exactly on time, the chancery courts began to intervene with equitable relief. Initially, borrowers were permitted to make late payments if they could show that tardiness had been caused by fraud, duress, misrepresentation or accident.

§ 101.09(a)(4) Equitable Relief: A Right of Redemption for Borrowers.

By the 17th century, about the time borrowers were beginning to retain possession of their mortgaged property, courts recognized a right in the borrower to tender full payment within a reasonable time after the due date. This right to redeem originating from principles of equity came to be called the equity of redemption and came to be recognized as an inherent equitable estate in land. So, in summary, during the seventeenth century mortgages in England came to consist of a loan from the mortgagee, a conveyance of legal title from the mortgagor to the mortgagee, and retention by the mortgagor of an equitable title consisting of the right of possession and the right of redemption should the loan go into default. This is a description of the "title theory" of mortgages in England, because the mortgagee obtains title. Because this theory was prevailing during the American colonial era, American states initially incorporated the "title theory" into their own jurisprudence. Even when the mortgagor remained in possession, American courts recognized legal title in the mortgagee.

§ 101.09(a)(5) Equitable Relief for Lenders: Right to Foreclose the Right of Redemption--Strict Foreclosure.

Lenders, meanwhile, were frustrated by the equitable right of redemption and sought for some way to more clearly define and limit the extent of this right. Equity courts came to recognize and enforce the lender's right to bring closure to the right of redemption, so that it didn't last indefinitely. If, some time after the payment due date and redemption still had not occurred, at the lender's request, a court of equity could order payment of the debt, interest and costs within a fixed period of time; if that payment was not forthcoming in the allotted time, the right of redemption was considered extinguished, or foreclosed. This procedure still exists in some American jurisdictions today under some circumstances, and it is called strict foreclosure. It offers a right to redeem the property by paying off the outstanding debt, but does not include a foreclosure sale. Thus it "forecloses" the equity or right of redemption without a so-called foreclosure sale.

§ 101.09(a)(6) More Equitable Relief for Borrowers: The Right to a Foreclosure Sale.

But strict foreclosure could still be harsh for mortgagors, so equity stepped in once again. Equity had already recognized a right of redemption in mortgagors, and equity had recognized in mortgagees a right to put limits on the right of redemption. Now equity courts in America insisted that, in most instances, the right of redemption could be foreclosed *only* by a public sale of the mortgaged property, rather than by forfeiture of the land to the mortgagee, as under strict foreclosure. Only when the mortgaged land was successfully conveyed following a public sale could the right of redemption be considered extinguished or foreclosed, which, of course, is why such a sale is commonly called a foreclosure sale.

§ 101.09(a)(7) More Relief for Borrowers: Statutory Redemption.

Now American mortgage law had in place the two great equitable protections for borrowers: the right of redemption, and the right to insist on a public sale of the property as a requirement to "foreclose" the right of redemption. Some states have taken redemption a step further, and by statute have added another redemption period AFTER the foreclosure sale.

§ 101.09(a)(8) Change from "Title Theory" to "Lien Theory."

At the same time, the fundamental nature of mortgages was changing in American law. The basic assumption of the "title" theory, that legal title was in the mortgagee until the debt was paid or the mortgage foreclosed, was giving way to the "lien" theory, recognizing in the mortgagee not title but only a security interest in the mortgaged land. Under the title theory, the mortgagees have at least a theoretical right to possession even before foreclosure, but under the lien theory mortgagees have no right of possession until there has been a valid foreclosure. Today only eight states and the District of Columbia hold to the title theory and even these accept the notion that the mortgagee holds title for security purposes only.

§ 101.09(b) More Recent Mortgage History: The Great Depression. [Go To Main]

The subprime mortgage crisis and associated stresses in the entire finance system are inevitably compared with the profound crises of the Great Depression. Mortgage foreclosures were a significant feature of the Depression's financial disasters. However, it is worth noting that mortgage lending and mortgage defaults and mortgage foreclosures of the Depression era only faintly resembled today's mortgages. In the years leading up to the financial crash and the Depression, it was common for residential mortgages to require somewhat manageable payments for a few years and then a substantial balloon payment, under the assumption that the mortgagor in the meantime could have either gathered enough resources to make the balloon payment or could refinance at current market interest rates. Local mortgage lenders were generally not able to make many long-term loans at fixed interest rates (and that is still true today), so the balloon payment system enabled lenders to recapture and recycle their lending capital into new mortgage loans. Understandably, defaults and foreclosures skyrocketed in times of massive job loss and slumping economic activity generally during the Depression. Some remedial state legislation from that time, including especially anti-deficiency judgment legislation, still exists in many states.

§ 101.09(c) Modern Mortgages and the "American Dream." D.C. Code Ann. §§ 2-2603 to 2-2614

Mortgage loan availability is widely viewed as a key part of the "American dream," the aspiration held by many to actually own or be buying their own homes, and not to be lifelong renters and tenants. The main feature of mortgage loan practice that enables the substantial majority of Americans to reasonably aspire to this "dream", even when they don't possess large lump sums of cash to spend on housing, is the long-term loan with level or "amortized" payments of principal and interest, secured by a mortgage or trust deed. Given enough time over the life of the loan, most people can make the monthly payments if that's what they choose to do.

§ 101.09(c)(1) Rise of the "Secondary Market."

Most of our local financial institutions would not have the resources to make many such loans without swiftly depleting their lendable assets. However, if a local lending institution, after originating a mortgage, could sell or "assign" the mortgage to another institution with deeper resources, the local lender could continue its business of originating local mortgages. And so the Federal National Mortgage Association (now widely referred to as Fannie Mae) was organized in 1938 to purchase residential and other mortgages from originating local lenders. Now, after several organizational transformations Fannie Mae and its companion institution Freddie Mac, are "government-sponsored enterprises" primarily engaged in purchasing residential mortgages originated by local lenders. To obtain the capital required to make these purchases, these entities issue publicly traded stock, issue debt instruments (that is, bonds and notes) that at least appear to have the backing of the U.S. government, and issue mortgage-related securities.

These entities have played a profoundly important role in creating the so-called "secondary market" in mortgages. It is

this "secondary market" that has made massive amounts of capital available for long-term mortgage lending, extending access to the American dream to millions.

Another characteristic of modern American mortgages is that many fortunes are made in the mortgage lending industry, not only through the revenues of the mortgage loans themselves, but also through the fees generated by the processes of originating and servicing the mortgages. This revenue opportunity has combined with the pressure to expand the capital assets available for mortgage lending and the social appeal of widening access to the American dream to create massive pressures leading to the subprime mortgage and related financial crises.

§ 101.09(c)(2) Sources of Capital for the "Secondary Market."

Other than through Fannie Mae and Freddie Mac, the most common sources for the money to buy mortgages from their originators, that is, for the secondary mortgage market, comes most commonly from the following sources:

(1) The individual mortgage is sold to an investor institution. The purchaser has the right to collect the payments and to foreclose in case of default.

(2) The mortgagee may use one or more mortgages as collateral for a loan. If the original mortgage goes into default, the second lender can deem itself to be the holder of the mortgage loan, can demand that mortgage payments be made directly to it, and can foreclose the mortgage or sue on the original note.

Both of these methods attracted to the mortgage markets capital from investors who were interested directly in mortgages as investments.

(3) The third source of capital for the secondary market came from investors who had no particular interest in mortgages as mortgages, but were interested in investing in securities, including securities based on mortgages. This third source of capital is generated by a pool of mortgages being assembled and pledged as collateral, not for loans, but for securities issued by the entity that does the pooling. That entity could be the original mortgagee or an assignee of the original mortgagee. While these securities are outstanding, the mortgages and accompanying promissory notes are often held by a trustee or other custodian. An independent servicing agent is engaged to manage the mortgages backing the securities, and this may include collecting monthly payments of principal and interest, monitoring defaults, and even pursuing foreclosures if necessary.

The structuring of these mortgage-backed securities has become increasingly diverse, complicated and sophisticated, and is sometimes not well-understood even by the large institutional investors who are the main customers. Nevertheless, this method of generating investment capital has attained enormous significance, because it has attracted major investors (and huge additional amounts of capital) who would otherwise not be interested in and active in the secondary mortgage market.

The following statistics emphasize the impact of the secondary mortgage market, recalling that Fannie Mae and Freddie Mac have been mainly responsible for creating and stimulating the secondary mortgage market. A recent survey revealed that in 2006 Fannie Mae held or had outstanding mortgage-backed securities representing 23% of all U.S. residential mortgage debt. Fannie Mae and Freddie Mac together held or had outstanding mortgage-backed securities representing 17% of ALL U.S. mortgage debt, residential or commercial.

§ 101.09(c)(3) Origins of the "Subprime" Mortgage Crisis.

As more capital has become available, one result has been more pressure to originate new mortgages. This pressure has led to making mortgage loans to persons who would not qualify under traditional guidelines. Those who could qualify under traditional guidelines are generally referred to as "prime" borrowers. Those who could not qualify under

traditional guidelines are referred to as "subprime" borrowers.

Several factors contributed to subprime borrowers becoming eligible for mortgage loans. One of the most important of these factors was changes in government laws and regulations that both enabled subprime lending to occur and made it more attractive to lenders and borrowers alike. In 1980, state-imposed caps on interest rates were pre-empted by federal legislation.[2] Beginning in 1982, lenders were permitted to offer adjustable rate mortgages. [3] In 1986 , the Tax Reform Act retained residential mortgage loans as the only consumer loans whose interest payments were tax deductible.

Federal deregulation permitted lenders to charge a risk premium to less creditworthy borrowers in the form of higher interest rates and fees. Equally importantly, deregulation allowed lenders to market new and more complex types of mortgage products, including adjustable rate mortgages and loans with balloon payments and negative amortization, which expanded the pool of eligible borrowers and helped lenders control for interest-rate risk.[4]

§ 101.09(c)(4) Characteristics of "Subprime Borrowers."

More statistics provide some context for subprime lending. About 75% of the 43 million first mortgages in the U.S. have been issued to "prime borrowers." "Subprime borrowers" have 13-14% of these first mortgages. The typical characteristics of these "subprime borrowers" are weak credit histories from delinquent payments, previous judgments, bankruptcies or other chargeoffs; low credit scores; high debt burden ratios; and high loan-to-value ratios. The balance of 11-12% of first mortgages have been issued to borrowers who may have good credit but have risks in their record, such as high debt-to-income ratios or inability to fully document their income.

A "subprime" loan issued to a "subprime" borrower will usually have higher origination costs, higher closing costs, and of course higher interest rates. It may have a low introductory interest rate that soon changes to a permanent and higher adjustable rate. It may have prepayment penalties. In short, a "subprime" loan and mortgage to a "subprime" borrower imposes the harshest terms on those with the least ability to meet those terms.

§ 101.09(c)(5) Predatory Lenders Who Pursue "Subprime Borrowers."

This situation has attracted an inordinate amount of predatory lending practices. Predatory lending practices can and do occur in the prime mortgage market, but are less likely to occur in that setting. Prime borrowers are more sophisticated and more likely to shop for the best loan terms, while prime lenders are more likely to be subject to federal and state regulation and oversight.[5] Subprime borrowers offer a "much more fertile ground for predatory lending practices": difficulty in obtaining financing in the past may cause subprime borrowers to underestimate their creditworthiness and accept the first terms offered without shopping around; they may have fewer options available to them because they have been traditionally underserved by financial institutions; they may have less awareness of options. Subprime lenders are less likely to be subject to governmental oversight. At least two-thirds of subprime mortgages are not subject to the oversight and reporting provisions of the most important regulatory act, the Community Reinvestment Act.

§ 101.09(c)(6) Prevalence of Predatory Lending in Minority Communities.

These factors have led to a dramatic increase of subprime lending in some minority communities. In these communities, subprime lending has made the American dream available to many who could not have obtained a mortgage a few years earlier, often because of discrimination, redlining and more restrictive lender estimates of perceived risk. In 2006, homeownership in America reached an all-time high of 69%, with much of the recent growth in poor communities and minority communities.

On the positive side for these communities, subprime lending has meant enlarged access to credit and some satisfaction of a pent up demand. This is borne out by a few more statistics. In 2005, more than 50% of all mortgages issued to

African-American borrowers were subprime; 40% of mortgages issued to Hispanic families were subprime. The disproportionate number of foreclosures among subprime mortgages will undoubtedly eventually mean a disproportionate number of foreclosures among minority borrowers.

One reason for this is that for many subprime mortgage brokers and mortgage originators, reward came come from the number of mortgages arranged and originated. "They worked hard to make as many deals as possible, as quickly as possible, regardless of the borrower's ability to meet the demands of the mortgage."[6] Subprime lending has also brought out the worst in many subprime borrowers, who have been accurately described as "utterly reckless" in their financial practices.[7]

§ 101.09(d) The Collapse. [Go To Main]

In 2006, approximately 20% of all new mortgages were subprime, and 25% of mortgage securitizations were back by subprimortgages. And a disproportionate number of these were originated in minority communities. How did this structure collapse?

"With the weakening of the home mortgage market, the drive to continue to issue mortgage-backed securities led many lenders to loosen their underwriting criteria and write riskier loans."[8] The result has been rising defaults, bankrupt lenders, devalued securities and nervous markets. Here are some of the causes:

1. Mortgage brokers and loan originators in the subprime market were typically much more sophisticated than the borrowers. The borrowers may not have realized how unfavorable certain terms were, that they could have bargained over some terms, or that they could have shopped around. Borrowers may have been too optimistic about their ability to refinance in difficult times, because real estate values were continuing to rise. Subprime brokers and lenders may have exploited borrowers' lack of sophistication.

2. Subprime brokers and lenders, and mortgage brokers and lenders generally, have functioned in a system that leads to faulty loans and imposes little accountability. These brokers and lenders are compensated according to the number of loans closed. Non-bank (and therefore non- or less-regulated) lenders made 50% of subprime loans in 2006. Mortgage brokers now have "unclear" loyalties. They bring the parties together but have no fiduciary duties to the borrowers; thus, they need have no concern about the soundness and viability of the mortgages, once the mortgages are successfully signed. According to one study, 50% of subprime loans involved a broker; only 28% of prime loans involved a broker. Another study showed that 64% of loans to African-Americans involved a broker; only 38% of loans to whites involved a broker.[9]

3. Before the financial crisis, if subprime borrowers did become aware of their unfavorable terms, they were often able to refinance under more favorable terms, because their property values were rising. Refinancing in strong real estate markets also helped avoid defaults. The strong real estate markets also prompted a continuing lending frenzy, which was further fueled by lowered underwriting criteria. This continuing stream of mortgages and refinances generated more fees for brokers and originators. "The interest of the brokers and originators is to enter into as many mortgages as possible and get them into the market as securities as soon as quickly as possible ... With an advantage in information, no accountability and little risk, brokers and originators in the subprime market were able to engage in aggressive [originating and packaging], leaving borrowers and holders of securities with no recourse and [eventually] devalued assets."[10]

4. More recent securitization agreements for mortgage-backed securities require originators to take back loans in early default. Originators are undercapitalized for such buybacks, and often go into bankruptcy when the number of defaulted loans is too heavy. A very large number of subprime originators have filed for bankruptcy or gone out of business.

5. If an originator cannot be forced to buy back a securitized loan in early default, the investors face difficulties in handling the default and taking steps to avoid foreclosure. The servicer is often not permitted to deviate from the strict terms of the securitized loans and thus is restricted in workout options for avoiding default.

6. In 2006, home prices and real property values generally stopped rising, then flattened and then fell dramatically in most areas. Interest rates rose. Higher interest rates and other more onerous loan terms commenced for many subprime borrowers. Defaults rose dramatically. Defaults hurt both those who had invested directly in mortgages, and those who invested indirectly through mortgage-backed securities. With mortgage-backed securities comprising such a large part of great institutional investing, great financial houses were threatened with collapse.[11] Some collapsed, and some had to be "rescued." All had to review their asset valuations, leading to a widespread halt of lending activity.

§ 101.09(e) The Persistence of Mortgage Fraud. [Go To Main]

Another unfortunate side effect of the subprime lending crisis has been a boom in mortgage rescue fraud and associated activities. Here are a few typical scenarios:

> Mortgage Rescue Fraud: The prelude to this scam is a landowner/borrower who becomes delinquent in mortgage or property tax payments, so that a foreclosure sale or tax sale threatens the owner with loss of title to the property. The scammer appears as a "rescuer," offering to buy the property to prevent the sale. The rescuing scammer pays the delinquency and a discounted purchase price on the property, and leases the property back to the former owner, who often fails to realize that he or she is now a tenant and not an owner. If rent payments under the lease become delinquent, eviction follows (with no rights or possibilities of redemption). Alternatively, the rescuing scammer lends the owner enough money to pay the delinquencies, receiving a lien in return. If foreclosure threatens again, the scammer, now holding a lien, is able to obtain the property through exercise of redemption rights.
>
> Unnecessary Financing Fraud: In this type of scam, the landowner is induced to refinance and use the cash for some purpose, which may or may not be especially urgent. The benefit for the lender or broker is to collect the fees and costs associated with the lending transaction. If the owner/borrower has poor credit, then even higher interest rates, loan origination fees and closing costs will be assessed.
>
> Predatory Lending Generally: This covers a wide range of schemes. A common form is bait and switch: the borrower is led to believe that the loan is a conventional, market-rate interest loan with ordinary closing costs. At the closing, papers for a much different loan have been prepared. Changes may include a short term adjustable interest rate, a higher interest rate, prepayment penalties, and numerous added and sometimes exorbitant fees. The fact that all of this may be contrary to federal and state law never comes to the attention of the ordinary borrower.

Other common practices under the general heading of predatory lending are

> Loan flipping, which consists of frequent refinancing loans, with excessive fees charged with each loan transaction.
>
> Excessive fees generally, which may include all fees not justified on economic grounds (that is, not justified what the services are really worth); financing of points; fees and penalties for pre-payment; financing credit insurance; extraordinary balloon payments; and lending amounts based on the borrower's total assets rather than on income and ability to pay.

Senior citizen fraud by undue influence. Senior citizens are particularly susceptible to persons seeking to induce a refinancing of the senior's property, which often has significant equity, and someone else is then able to use the borrowed money for personal purposes. The senior citizen homeowner may not be a willing or aware participant, but is induced to sign documents or is victimized by someone with power of attorney.

§ 101.09(f) Mortgage Fraud and Predatory Lending Legislation Among the States. Idaho Code § 30-1437

The web site for the National Conference of State Legislatures has a helpful chart of current state laws on predatory lending.[12] This information should be of interest to ordinary citizens as well as to lawyers and legislators. At this web site one will find entries for about 35 states and the District of Columbia which have enacted some form of predatory lending laws. This chart, in addition to giving the state statutory citations, also indicates whether the legislation addresses any of six critical issues: whether loan flipping is banned; whether negative amortization (payments too low to reduce the balance owing) is banned; whether pre-payment penalties are banned; whether financing or credit insurance is banned; whether some form of consumer credit counseling is required; and whether debt-to-income requirements or limits are imposed.[13]

§ 101.09(f)(1) Federal Pre-Emption.

Some stir among the state legislatures has been caused by the U.S. Supreme Court's decision in the case of Watters v. Wachovia Bank, N.A., issued on April 17, 2007.[14] The Court held that the mortgage business of a national bank, including its state-chartered mortgage company subsidiary, was not subject to the "licensing, reporting, and visitorial regimes of the several states," but rather is subject only to regulation by the federal Office of the Comptroller of the Currency. A wide range of federal legislation attempts to address problems of predatory lending. Among these are the Truth in Lending Act, the Home Ownership Equity Protection Act, the Equal Credit Opportunity Act, and the Federal Trade Commission Act.[15]

§ 101.09(f)(2) Important Issues in the State Legislation.

The main difficulty with state predatory lending legislation is the fine-tuning required to make sure the targeted bad actors are hit, but that the entire lending industry is not unduly regulated or even suppressed. The most vulnerable homeowners, and those disproportionately affected by predatory practices, are elderly, minority and low-income owners. State legislation may attempt to target those who prey on these vulnerable populations, or may consist of much broader regulations imposed on the entire lending community. This broad approach may permit victims to sue all parties connected with the transactions in any way, including lenders, trusts that issue securitized loans, and even investors in the securities backed by those loans, all of whom may be innocent of any actual fraud. This broader legislative approach may therefore produce the unintended consequence of inhibiting the flow of credit altogether, but especially to high risk or credit-impaired borrowers. The reduction in predatory lending infractions may come at the cost of many legitimate loans that are not made. The broader legislative approach is often characterized by unlimited assignee liability and vague compliance procedures, which may discourage mortgage lenders from those markets. Also, because of the *Watters* decision, this type of state legislation may eventually be pre-empted with respect to national banks, national savings associations and their respective state operating subsidiaries.

Other experts have concluded that some well-intended reform legislation can go too far. "Ironically, the Office of the Comptroller of the Currency (OCC) has stated that there exists substantial empirical evidence that certain 'anti-predatory statutes can impede the flow of mortgage credit, especially to low income and higher-risk borrowers, and that any reduction in predatory abuses resulting from these measures is probably achieved at the expense of many legitimate loans.' "[16]

Here are samples of issues faced in individual states:

Arizona

Arizona was a state without predatory lending legislation but did consider proposed legislation in the 2007 state legislative session. This state, like so many others, has been plagued by mortgage fraud. Here are a couple of examples from Phoenix. One investment company executive was convicted of taking money from investors to buy pre-foreclosure houses, and then failing to return the money when he didn't go through with the purchases. He is serving a five-year prison term. This same person is also named as a co-conspirator with five others in an indictment issued in March, 2007. These five persons consisted of a former title insurance escrow officer, two former bank loan officers, and two former housing counselors for the disadvantaged.

According to the indictment, these people sought out owners who were in default on FHA mortgages, and offered to buy the houses. Through HUD's pre-foreclosure program, these struggling homeowners would be helped in structuring a deal to have the properties appraised and then sold for as much as possible in the current market. The federal agency, which insured the mortgages, would then pick up the difference. The indicted defendants allegedly inserted themselves into the pre-foreclosure counseling process (that is, they posed as legitimate government officials), submitting documents to HUD making it appear that the houses were worth less than they actually were worth and then purchasing the houses for the deflated prices. The defendants would then sell the houses for much more money, leaving HUD to satisfy the mortgages. This is a sample of the kind of conduct Arizona would hope to address with its predatory lending legislation.

Illinois

Overbreadth has been at issue in Illinois. Illinois has recognized predatory lending as a major problem. Here are comments of a Chicago title company senior executive on the nature and scope of the problem in Illinois:

> The fraud may extend beyond the borrower to the end lenders. The media is replete with examples of first level lenders or brokers inflating borrowers' income statements, appraisals of land and suggesting higher sales prices with payments back after closing to both buyers and sellers, most of which may be categorized as mortgage fraud. The difference is often in perspective: a consumer sees predatory lending; a lender sees mortgage fraud.
>
> The opportunities for illegal gain with relatively low risk are so great that the "eastern European mafia" and Chicago street gangs have joined this activity. These activities have been documented by stories in *The Chicago Tribune* in November, 2005 and the *Chicago Sun-Times* and other media last year.
>
> The damage caused by these activities extends beyond the initial victims to the communities as a whole. When the foreclosures are over, often the buildings are abandoned. They are taken over by vagrants or used by street gangs for drug, weapon and other illegal activities. Many have burned, with the municipality having to bulldoze the remainder. The streets in those neighborhoods become unsafe. Property values decline. There is even a measurable decline in tax revenues due to the phenomenon, as assessed values for taxes decline.[17]

Illinois has enacted both a predatory lending act and a mortgage rescue fraud act. The High Risk Home Loan Act was enacted in 2003. One negative impact of that law was to diminish the number of high-risk loans being offered and closed. Another law required criminal and credit background checks and an exam for "loan originators." Twenty-nine thousand persons applied to be loan originators during the initial registration period, but 40% of those failed the exam and 800 failed to pass the background checks.

In 2006 the Illinois state legislature passed the Predatory Lending Database Pilot Program Act. Under this act, in the areas designated for the pilot program, essentially the southwest quarter of the city of Chicago, brokers were required to enter information about the prospective transaction into a database. If the numbers so indicated, the borrowers would be required to undergo mortgage counseling, for a standard fee of $300, to be paid by the broker. Closing agents would then ensure compliance with this and other procedures before being permitted by the computer to actually complete the transaction. For various reasons, the process was so cumbersome and the benefits so invisible that housing sales and the associated lending activity dropped by nearly 50% in the first few months the pilot program was in effect. In February, 2007, the governor of Illinois suspended the pilot program.

Illinois' Mortgage Rescue Fraud Act, as is typical of other states, exempts most lenders, lawyers and real estate brokers. There is no exemption for family members, who could get trapped into liability for noncompliance through innocent and well-intended efforts to help a relative in financial trouble.

New Jersey and Pennsylvania

One expert compared the respective predatory lending legislation in the neighboring states of Pennsylvania and New Jersey from the perspective of collateral damage to lending activity generally. Here is his assessment:

> The federal Home Ownership and Equity Protection Act (HOEPA) of 1994 ... classifies mortgage loans with relatively high interest rates and fees as potentially predatory, and imposes on them a wide range of consumer protections. Conduct also associated with predatory lending includes orally contradicting written disclosures within the loan document, balloon payments, loan flipping, unnecessary credit insurance, and making loans the lender knows cannot reasonably be paid back.
>
> However, not all of these practices necessarily equate to predatory lending on their face. Predatory lending can only occur where a customer is actually taken advantage of by a lender or mortgage broker, because a loan transaction which takes advantage of one consumer may actually be beneficial to another, depending upon that consumer's current situation and, more importantly, that consumer's knowledge of his or her options. This distinction is fundamental to a comprehensive understanding of the differences between Pennsylvania and New Jersey's anti-predatory lending laws, because while the Pennsylvania Act requires that a "lender purposefully engage in a pattern or practice of material violations," to be subject to civil liability, the New Jersey Act imposes strict liability without reference to the circumstances or context in which the loan is made."[18]

Indiana

Indiana is a state plagued with a relatively high number of foreclosures. Indiana excuses new homebuyers from property tax liability for one year, intending thereby to reduce defaults and foreclosures. Here are some features of Indiana's mortgage rescue fraud legislation:

Establishes notice requirements regarding foreclosures on real property.

Provides that a homeowner may rescind: (1) contracts with foreclosure consultants; and (2) foreclosure reconveyance agreements.

Provides that a homeowner may rescind a foreclosure reconveyance agreement at any time before midnight of the seventh business day after the homeowner's transfer of the interest in the real property that is the subject of the agreement.

Requires a homeowner who rescinds: (1) a contract with a foreclosure consultant; or (2) a foreclosure conveyance agreement; to repay certain amounts advanced in connection with the contract or the agreement not later than 30 days after the date of rescission.

Prohibits foreclosure consultants and foreclosure purchasers from certain actions.

Requires foreclosure purchasers to: (1) ensure that title to real property is reconveyed to the homeowner in a timely manner if reconveyance is required under a foreclosure reconveyance agreement; or (2) pay the homeowner an amount equal to 66% of the net proceeds from any resale of the property, if the property is sold within 18 months of entering into the agreement.

Requires a foreclosure purchaser to make a detailed accounting of the basis for the amount of payment made to the homeowner if the real property is resold within 18 months.

Provides that a violation of the statute concerning mortgage rescue protection fraud is a deceptive act that is actionable by the attorney general. Allows a homeowner to bring an action for damages for a violation of the mortgage rescue protection fraud laws.

Allows a court to award treble damages for a willful or knowing violation of the mortgage rescue protection fraud laws.

Requires the Indiana housing and community development authority to maintain a list of nonprofit organizations that offer counseling or advice to homeowners in foreclosure or loan defaults.

Excludes certain banks, trust companies, governmental entities, attorneys, and other persons from the law.

Utah

Utah's legislation in the area of predatory lending is called the "Utah High Cost Home Loan Act."[19] This is a rather brief batch of legislative provisions, but it contains quite a number of anomalies and surprises.

Extensive definitions attempt more precisely to limit the scope of which transactions, persons and institutions are impacted by this legislation. In particular, the legislation applies to any mortgage transaction fitting the definition of a "high cost mortgage."

A "high cost mortgage" is a mortgage that meets any one of several definitions. (1) It can be a borrower credit transaction that is a first mortgage on the borrower's principal dwelling and whose interest is more than 8% higher than treasury securities at a referenced point in time. (2) It can be a junior or subordinate mortgage on the principal dwelling that is more than 10% higher than the applicable treasury securities rate. (3) It can be a transaction whose total points and fees will exceed 8% of the total loan amount or $400, subject to consumer price indexing. These three items seem clearly related to the business of regulating high-cost mortgages. The fourth way to identify a high-cost mortgage does not: any loan made by or originated through a person licensed to conduct residential mortgage loans is swept into the definition of a high-cost loan.

Following the definitions, the Act lists several types of conduct that, in connection with high-cost mortgages, are prohibited or regulated in some way.

1. Prepayment penalties are not completely prohibited, but are limited in their timing and amount. A prepayment penalty for a high cost mortgage is prohibited if the mortgage is paid off by a loan from the same lender or an affiliate of the same lender that made the loan being paid off.[20]

2. Negative amortization (a schedule of payments that are too small to actually reduce the overall indebtedness) is prohibited.[21]

3. Financing points and fees may not exceed 8% of the total loan amount, unless certain additional disclosures are made, the language of those disclosures being stated verbatim in the statute.[22]

4. Single premium credit life insurance is prohibited.[23]

5. Encouraging default is prohibited (a provision made applicable to all loans, whether or not defined as high-cost home loans).[24]

For violation of any of these provisions, the Act specifies no penalties or other consequences. One is forced to conclude under these circumstances that the main consequence of a violation is the unenforceability of any provisions in mortgage transactions that are in violation of these statutory prohibitions. A possible additional consequence is a challenge to violators' licensure under the Residential Mortgage Practices Act.[25]

In addition to these prohibitions, the act imposes several affirmative duties in connection with high-cost loans. One duty relates to an arbitration clause, if any is included, which must meet the standards in the Utah Arbitration Act.[26] Failure to meet this requirement invalidates the arbitration clause.

Another affirmative duty is to fill in all "lines, figures, forms, and blanks that regulate, govern, control, and authorize a mortgage ... before the documents are signed."[27] Again, no penalties are mentioned for violation of this provision, but presumably any borrower who had been induced to sign a mortgage document in blank would potentially have a cause of action for rescission.

Lenders are also required to provide copies of all documents,[28] and to give notice of all relevant available consumer information to borrowers.[29] No penalties are mentioned for failure to meet these requirements. On the contrary, the act declares that failures to meet those disclosure requirements or the disclosure requirements that ameliorate restrictions on financing points and fees "does not affect the enforceability of the loan or any of its terms."[30] Presumably, if such failures were part of a pattern of deceit or other misconduct in a high-cost mortgage transaction, that would lend weight to a plaintiff's claims for rescission or damages.

One issue relevant to state legislation in this area is whether the laws impose strict liability for violations. Predatory lending legislation in other jurisdictions that may be viewed as overly broad often imposes such liability without negligence, so that some legitimate lending activity is discouraged or even prohibited. In the case of the Utah High Cost Home Loan Act, no provision seems to limit violators to those who intend harm or who are negligent, so in this sense the Act targets conduct regardless of the associated intent or consequences. However, the Act also does not describe or impose any kind of liability, penalty or consequence for violations, so one could hardly say that this is an act based on strict liability. It may be strict, but there is no liability. By way of constructive contrast, the Indiana legislation prescribes specific consequences for any violations.

Under these circumstances, probably the main practical reasons for lenders and brokers to observe the commands of the Utah High Cost Home Loan Act are that its requirements are inherently fair and to forestall borrower challenges to the validity of the transactions.

CHAPTER 102 MECHANICS' LIENS 1

12-102 Thompson on Real Property, Thomas Editions § 102.01

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 102.01 Definition and Function.

§ 102.01(a) Background.

§ 102.01(a)(1) Definitions.

A *mechanics' lien* is a security interest created by state statute "for the purpose of securing priority of payment of the price or value of work performed and materials furnished in erecting, improving, or repairing a building or other structure, and as such attaches to the land as well as buildings and improvements erected thereon." n2 Thus, mechanics' liens provide contractors, subcontractors, laborers and material suppliers a lien on property they improve as a means of collecting money they are owed for having contributed to the improvement. An *improvement* is a "valuable addition made to property ... or an amelioration in its condition, amounting to more than mere repairs or replacement, costing labor or capital, and intended to enhance its value, beauty or utility." n3

These days the term "mechanic" refers to car repairers, but in colonial times it referred to any manual worker or artisan, and included all skilled construction workers such as carpenters and masons. n4 Statutes define who is eligible to claim a mechanics' lien. n5 Although most states allow contractors other than the prime contractor to attach a mechanics' lien, other states protect the homeowner by giving only the prime contractor the right to attach such a lien. n6 Statutes often purport to protect "contractors." Although you may be able to recite good working definitions of terms such as "contractor" and "subcontractor," never assume that you know what those words mean in a particular mechanics' lien statute. For example, the Pennsylvania mechanics' lien statute defines a "contractor" to include under some circumstances materialmen, architects and engineers. n7 On the other hand, Florida's definition of "contractor" expressly excludes materialmen. n8

Two jurisdictions restrict lien rights to two tiers: (1) the prime contractor and (2) those contracting with the prime contractor. Other states extend protection to three or four tiers, or to all providers of goods and services. The Uniform Construction Lien Act would protect all subcontractors, but only those material suppliers who can prove their materials were intended for the particular work of improvement may attain a mechanics' lien. n9

§ 102.01(a)(2) History.

Reconstructing California's Mechanics' Lien Laws n10

Mechanics' lien laws form an integral part of American jurisprudence, and are literally tied to the development of this country. In 1791, this nation's first mechanics' lien law was enacted by the Maryland General Assembly as a means to facilitate the construction of the new capital city of Washington. n11 Several sister states followed suit by enacting their own mechanics' lien laws. n12 Presently, all fifty states, including the District of Columbia and Puerto Rico, have enacted some form of mechanics' lien statutes. n13

[Mechanics' lien laws are usually creatures of statute, but some are enshrined in state constitutions. n14]

Although there appears to be no direct evidence as to the specific cause which gave rise to the system of mechanics' lien laws enacted throughout the United States, n15 several theories have been advanced to explain their origin. For example, it has been suggested that mechanics' lien laws owe their existence, at least in part, to the analogous provisions of early maritime law which granted a lien against a ship to seamen who furnished material or supplied labor to the vessel. n16 Some believe that mechanics' lien laws developed as an outgrowth of the common law lien granted to artificers who increased the value of chattels committed to their possession; n17 while still others contend that mechanics' lien laws took their shape from civil law, which has long recognized a lien right in the builder. n18 Most legal theorists seem to agree that mechanics' lien laws, as a whole, were adopted out of a desire to build up a young and growing nation, and to induce the aid of laborers, who were often poorly able to sustain losses incident to business, and were particularly liable for the frauds of the dishonest. n19

Finally, it may be inferred that mechanics, at least initially, were given priority treatment because of this newly emerging nation's desire to build up cities, coupled with the capital shortages this country faced during the latter part of the 18th century, and continuing into the 19th century. n20 Thus, without the assistance of a strong private banking system, n21 it is likely that the government and private developers primarily relied upon mechanics for credit.

§ 102.01(b) Function.

The mechanics' lien can best be described as a form of security for improvements made to the liened property. n22 Like a trust deed, judgment lien or attachment lien, a mechanics' lien is an interest in property held to secure the payment of an obligation. The obligation arises when a property owner fails to pay the mechanic for the improvements made according to their contract. The unpaid laborer or materialman obtains security against the property to ensure payment through a mechanics' lien. Suppliers with no lien rights, or who fail to perfect their rights under state law, still possess the right to sue on their contracts as unsecured creditors. n23

Mechanics' liens provide contractors, subcontractors and material suppliers an effective means of collecting money they are owed. n24

A mechanics' lien is foreclosed by a court-ordered sale of the property after the court determines the validity and amount of the mechanics' claim and its lien priority. The mechanic is paid from the sale proceeds.

The right to record and foreclose a mechanics' lien affects the vital interests of owners, contractors, subcontractors, architects, engineers, material suppliers, lenders, subdividers, developers and title companies.

§ 102.01(c) The Risk for Developers and Construction Lenders.

The risk for developers and construction lenders of a mechanics' lien proving superior to their interests in the property is significant. That is why developers and lenders usually insist the general contractor must keep the property free of liens and supply owners and lenders with a list of all potential mechanics' lienors and satisfactory evidence that they have been paid, along with signed lien waivers. The construction lender is particularly concerned because if the priority of

the mechanics' liens relates back to a date before the construction loan was recorded, it could be superior to the construction lender's lien. n25

§ 102.01(d) Rationale.

The classic rationale behind mechanics' lien laws is the theory of unjust enrichment. n26 Laborers and materialmen are deemed worthy of lien protection since they increased the value of the property by supplying labor and materials in good faith. A landowner whose property has been improved at her request should not be able to enjoy the benefit of this improvement without paying for it; hence, it is only fair that the property stand as security for the debt incurred because of the improvement. n27 A landowner who does not pay those who enhance the value of her property should fare no better than a tenant who would be evicted for not paying rent or a defaulting car buyer who would lose her car if she stopped making payments. Accordingly, a property owner who does not pay the improver of her property risks incurring a mechanics' lien on the property and, with it, subsequent foreclosure on that lien.

"In so far as the acts only give a lien in favor of a contractor who has a direct contract with the owner (prime contractor), the laws are not particularly unique." n28 In one significant respect, mechanics' lien laws are an anomaly. They extend lien rights to those with whom the property owner had no dealings, such as subcontractors and material suppliers.

Generally, a seller of goods or services not paid by the buyer has no claim against subsequent purchasers of those goods or services. In fact, an unpaid seller has a claim against goods still in the hands of the buyer only if the buyer agrees to give the seller a security interest in the goods. n29

Mechanics' liens are "a kind of boot-strap finance ... almost a subsidy, almost a kind of government credit to encourage the building and improvement of land." n30 These laws encourage contractors, subcontractors and material suppliers to provide their work and materials on credit to owners and developers. Material suppliers and contractors finance a "work of improvement" by deferring payment and extending credit to owners, contractors and subcontractors. They rely on mechanics' liens on the improved property to secure payment instead of looking exclusively to the creditworthiness of those with whom they contract.

Mechanics' liens also "protect subcontractors from the possible financial instability of their general contractors by imposing upon property owners a limited duty to ensure that subcontractors are paid." n31 This policy encourages owners and lenders to oversee the use of construction funds and construction loan proceeds, to secure lien releases and issue joint checks payable to the ultimate supplier or subcontractor. Sometimes, however, the owner or lender ends up paying for the same service twice since under many state statutes the owner is responsible for making payment on the mechanics' lien even though she may have already disbursed payment to the contractor, and never contracted directly with the liening subcontractor. n32

> [I]n many cases, the law protects not against a windfall to an owner as much as against the dishonesty or insolvency of the prime contractor whom the owner selects to coordinate construction activity on the project. Thus, if not in original formulation, then at least in present application, mechanics' lien legislation is a response to the hazardous nature of the business and the perilous financial position in which many construction companies all too often find themselves. n33

Opponents of mechanics' lien laws see no reason to justify the creation of statutory liens. The late Professor Allison Dunham, in analyzing why Colorado's Mechanics' Lien Laws weren't repealed observed: "[T]he lumber yards could give good credit and sell their accounts receivable if they could assure the bank that the accounts receivable were secured by mechanics' liens." n34 Perhaps creditors should be more cautious and not be able to rely on mechanics' liens to secure payment. Often, the practical value of a mechanics' lien depends on how well conceived and efficient the project is, what stage of completion it reaches before the owner defaults, and how the market views the project at the

date of foreclosure. These are imponderables which make mechanics' liens a second-best substitute for responsible credit policies.

The lien laws not only secure the unpaid claimant, they also protect the entire construction industry, one of the most bankrupt-prone of all endeavors, from the domino effect of a contractor's nonpayment. A major contractor who goes unpaid may be unable to pay the framing contractor who in turn, may be unable to pay the material supplier who extended lumber on credit. If the job is big enough, and the contractor, subcontractors and material suppliers vulnerable enough, a developer's bankruptcy could lead to severe financial stress for many others.

> Labor and materials contractors are in a particularly vulnerable position. Their credit risks are not as diffused as those of other creditors. They extend a bigger block of credit, they have more riding on one transaction, and they have more people vitally dependent upon eventual payment. They have much more to lose in the event of default. There must be some procedure for the interim protection of contractors in this situation. A contractor must have some protection against subsequent bona fide purchasers between the time he completes the work and the time he gets a judgment. n35

§ 102.01(e) Mechanics' Lien Is for the Value of the Work.

The mechanics' lien is generally only good for work done or materials supplied which are incorporated into a building. n36 A bill for personnel training, for instance, or for shipping chemicals or beverages to a building would not be lienable. n37

The unpaid lienor is entitled to the contract price except when the value of the work is less than the contract price. A freely entered, negotiated contract price is good evidence of the value of the work to the owner. n38 The lien can never exceed the "reasonable value" of the work or materials on the day the lien is filed. n39

In some states laborers or material suppliers without contracts are able to lien property on the basis of quantum meruit. n40

Quantum meruit is an equitable action based on a contract implied in law which requires: (1) a benefit conferred upon the defendant by the plaintiff; (2) an appreciation or knowledge of the benefit by the defendant; and (3) the acceptance or retention by the defendant of the benefit under such circumstances as to make it inequitable for the defendant to retain the benefit without payment of its value. n41

Mechanics' lienors do not get to lien for all the damages they could collect in a contract action. Excluded from their lien claims are "delay, acceleration and impact damages, attorneys' fees, and certain types of profit and overhead." n42 The purpose of mechanics' liens is to "secure reimbursement for services and materials actually contributed to a construction site, not to facilitate recovery of consequential damages ... ." n43

§ 102.01(f) Mechanics' Lien Laws Reverse the Doctrine of Accession and Can Result in Owners Forfeiting the Value of Their Land.

Sellers of appliances have the option of repossessing any chattel sold on credit. Car repairers can keep the car until the owner pays the repair bill. Personal property is removable and not subject to mechanics' liens unless so attached to the site as to have become a fixture n44 Thus, a mechanics' lien does not reach the homeowner's automobile parked in the garage or her piano in the living room. If the improver can remove the improvement from the land with no damage to either the improvement or the land, the improver is allowed to do so. n45 But those who damage the improvements or the land have no right to reclaim their materials because, under the ancient "law of accession," personal property affixed to the land belongs to the property's owner. n46

Although mechanics' lien laws prevent the manifest unfairness of unpaid contractors enriching a landowner, these laws sometimes create a countervailing inequity. In most states, the owner of the site risks losing the value of the land in a mechanics' lien foreclosure sale even though some of that value was there before the mechanics' lienor came along.

Theoretically, if the site is worth more than the improvements on it, that value should result in a foreclosure sale price greater than the mechanics' lien. If the project was halted before completion, though, potential bidders may be reluctant to assume the risks of an already failed project. In a few states, the inequity of a site owner forfeiting site value to a mechanics' lienor is avoided by allowing the lienor to assert priority only up to the value of the improvement, not to the value of the land. n47 Under these statutes, the court may determine the value of the site and set that sum aside from the mechanics' lien foreclosure sale proceeds for the benefit of the landowner. In most other states no such set-aside takes place. The owner of the site may forfeit pure site value in a mechanics' lien foreclosure action. However, when the improvement is located on a vast tract of land, the lien may not attach to the entire site but only to "so much as may be required for the convenient use and occupation thereof" n48 or "only that part of the surrounding tract that is considered reasonably necessary to the economical intended use of the building." n49

COMPUTER-ASSISTED RESEARCH

LEXIS: law w/2 accession w/30 mechanic! lien!

§ 102.01(g) Constitutionality of Mechanics' Lien Laws.

Mechanics' liens have been challenged as violations of federal and state constitutional due process.

The constitutional challenge to the mechanics' lien law is based on the fact that the lienor can cloud the owner's title by commencing work and recording a lien which involves no more than filing a piece of paper at the local recording office. The owner has no right to know about the recordation beforehand in order to launch a speedy court challenge to expunge the lien if the owner deems the underlying claim to have been invalid.

Mechanics' liens could attach at any of eight times under most mechanics' lien laws. The first opportunity an owner has to challenge the lien in court is when the lienor initiates a lawsuit to foreclose the lien. This occurs long after the lien "attaches" by law in most states.

T1: When O and K enter their contract.

T2: When K begins buying materials, spending money or incurring other expenditures in reliance on the contract (such as by turning away other work).

T3: When K goes to O's property and commences work.

T4: When K tells O he reserves the right to file a mechanics' lien if O does not pay on time (preliminary notice).

T5: When K completes the work.

T6: When K records a mechanics' lien.

T7: When K files a lawsuit to foreclose the lien, serving and naming O as defendant.

T8: When K wins the lawsuit.

Most unsecured judgment creditors can only perfect a lien on the debtor's assets at T8. A purchaser under a

purchase-and-sale agreement or an installment contract vendor, because they have an interest in the security property that predates the breach, get the benefit of T7 attachments. Only mechanics' lienors are given a T3 attachment date despite the fact that the first judicial hearing on the validity of the lien occurs at T7.

In California, for example, a foreclosing mechanics' lienor must record a notice of *lis pendens*. The property owner under the *lis pendens* statute may bring an action to expunge. In an expungement suit, the *lienor* has the burden of establishing the "probable validity" of the lien. The mechanics' lienor who fails to establish the probable validity of the lien runs substantial risk of having to pay the property owner's legal fees. n50 One exception, mentioned earlier, is in Maryland, the birthplace of mechanics' liens in the U.S. The Maryland Supreme Court struck down that portion of Maryland's mechanics' lien law purporting to create a lien relating back to the visible commencement of the project. Under the Maryland court's constitutional guidance, mechanics' liens in that state relate back no further than the time "the claimant prevails either in a suit to enforce the claimed lien or in some other appropriate proceeding providing notice and a hearing (i.e., a declaratory judgment action)." n51 That is T8.

Courts in other states see no problem in the T3 or T6 attachment dates. Courts explaining the conclusion that the mechanics' lien laws raise no insurmountable due process barrier usually start with the following factors, taken from U.S. Supreme Court opinions, for determining the constitutionality of prejudgment attachment statutes:

(1) Is there a "state action," making the *14th Amendment* applicable?

(2) What private interest is affected? Is a "significant property interest" affected?

(3) Do the procedures authorizing the lien risk an "erroneous deprivation" of a property right? Would additional safeguards have "probable value" in avoiding the risk of erroneous deprivation?

(4) Does the party seeking the prejudgment attachment have an ancillary interest in the property?

Here is how state courts apply these factors to the mechanics' lien law situation:

(1) State action is universally held to be present in the mechanics' lien situation. State laws authorize the creation and recordation of mechanics' liens. There is nothing startling here since the lien is purely a statutory (or state constitutional) creation.

(2) State courts differ on whether a "significant property interest" is disturbed by the recordation of a mechanics' lien. Some courts see the deprivation as sufficient to merit close evaluation of the constitutional challenge n52 because a mechanics' lien clouds the property owner's title, impairs the owner's ability to sell or mortgage, and taints her credit rating. The lien could even place her in technical default of an existing mortgage if the mortgage has an insecurity clause, n53 or in default of a construction loan agreement if the owner is required to keep the property lien free.

A number of courts have dismissed constitutional "due process" challenges to mechanics' liens, seeing mechanics' liens as involving only minimal deprivations of property. The deprivation is said to be minimal because the owner continues to enjoy the use, possession and right to sell despite the lien. n54

(3) The risk of an erroneous deprivation comes because the lien claimant can attach, repossess or lien property without even so much as an affidavit and complaint justifying the deprivation, reviewed *ex parte* by a judge. If the lien claimant has to post a bond, the risk of erroneous deprivation is reduced. n55

(4) Courts are more tolerant of prejudgment attachment when the attaching party has an ancillary interest in the property. One example is when the vendor of goods is under an installment sale contract. n56 The U.S. Supreme Court upheld prejudgment attachment laws triggered by *ex parte*, judge-reviewed affidavits when the attaching party was an

installment contract vendor but not when the party seeking to garnish the debtor's wages was an unsecured general creditor. n57

The bottom line is that even in states where courts see the deprivation resulting from the recordation of the lien as significant, mechanics' lien laws have survived constitutional challenges in state courts more often than not. However, the one statute the U.S. Supreme Court upheld most recently, the Connecticut statute, permitted prejudgment attachments of real property only when a claimant submits an affidavit of probable cause to a judge, including information showing a likelihood the claimant will prevail. n58 No prior notice and hearing was provided but post-attachment notice was required and the debtor was given an opportunity for a post-attachment hearing.

Most mechanics' lien laws do not require the lienor to submit an affidavit of probable cause to a judge showing the likelihood the claimant will prevail. No prompt post-attachment notice is required, and there is no statutory opportunity for a post-attachment hearing. n59

State courts upholding mechanics' lien laws point to the strict time limits in which liens must be filed or lost and the time frame in which, after filing, the lien claimant must initiate a foreclosure action or lose the lien. n60 Owners are forewarned that their state's law may require contractors and subcontractors to provide in their agreements a prominent warning in oversize type which clearly states that failure to pay may lead to a mechanics' lien against the project. n61 Statutory preliminary notice requirements also impose on those intending to preserve their lien rights a duty to notify owners of that intent shortly after commencing work on the site.

Mechanics' lien statutes offer a variety of ways owners and lenders can protect themselves against a lien's impact. Owners can usually have the lien released entirely by providing a bond. They may also petition for injunctive relief. n62 Finally, mortgage lenders, the main contenders for priority over mechanics' liens, may obtain title insurance that they, in fact, possess a lien free of such liens.

(n10)Footnote 11. Act of the General Assembly of Maryland, c.45, § 10 (1791). The first mechanics' lien law was said to be enacted at the urging of Thomas Jefferson and James Madison. *See Barry Properties v. Fick Bros. Roofing Co., 353 A.2d 222, 224 (Md. Ct. App. 1976)* ; *Freeform Pools v. Strawbridge, 179 A.2d 683, 685, n.1 (Md. App. 1962)* .

(n11)Footnote 12. *See* Henry Farnam, Chapters In The History Of Social Legislation In The United States To 1860 155 (Carnegie Institute of Washington 1938) (tracing the geographical spread of mechanics' lien laws in the United States).

(n12)Footnote 13. *See* Comment, *The Constitutional Validity of Mechanics' Liens Under Due Process Clause , 55 B.U. L. Rev. 263, 268, n.31 (1975).*

(n13)Footnote 14. California's mechanics' lien law was added to the California Constitution in 1879: "Mechanics, persons furnishing materials, artisans, and laborers of every class, shall have a lien upon the property upon which they have bestowed labor or furnished material for the value of such labor done and material furnished." Cal. Const. art. XIV, § 3 (1992). In carrying out the constitutional mandate, the legislature can't deny, destroy, or hamper the exercise of lien rights, *Hammond Lumber Co. v. Moore, 286 P. 504 (Cal. App. 1930)* , but it does have the power to prescribe reasonable requirements for enforcement, *Hughes Bros. v. Hoover, 3 Cal. App. 145 (Cal. Ct. App. 1906)*, including the requirement that the claimant file a written claim in a prescribed manner. *Wm. R. Clarke Corp. v. Safeco Ins. Co. of America, 938 P.2d 372 (Cal. 1997)* ("Pay if paid" provision in construction subcontract, whereby payment by owner to general contractor was condition precedent to general contractor's obligation to pay subcontractor for work subcontractor performed, was unenforceable as contrary to public policy, as provision effected an impermissible indirect waiver or forfeiture of subcontractor's constitutionally protected mechanics' lien rights in event of nonpayment by owner.); *Capitol Steel Fabricators, Inc. v. Mega Constr. Co., Inc., 58 Cal. App. 4th 1049 (1997)* (Pay when paid clause of school public works construction subcontract which unambiguously deferred subcontractor's payment until there had been transfer of moneys from school district to contractor violated public policy by effecting impermissible indirect waiver or forfeiture of subcontractor's constitutionally protected mechanics' lien rights in event of nonpayment by property owner, and, thus, was not enforceable.); *Koudmani v. Ogle Enters., Inc., 47 Cal. App. 4th 1650 (1996)* (Section of California Constitution conferring on laborers and materialmen a right to assert mechanics' liens for value of labor and material provided in improvement of real property gave such laborers and materialmen only an inchoate right to a lien, which was meaningless unless it was exercised by recording claim of lien.).

(n20)Footnote 21. *See* Arthur Nussbaum, A History Of The Dollar, Revolution And Reorganization 46-52 (1957) (although private banks were erected in the 1780s, it wasn't until 1791 that a bank was created so as to be accessible to the public at large, and to serve community needs.).

(n21)Footnote 22. *See e.g., Haz-Mat Response, Inc. v. Certified Waste Servs., Ltd., 910 P.2d 839 (Kan. 1996)* (stating that Kansas' mechanics' lien statute was "for the purpose of providing effective security to any persons furnishing labor, equipment, material, or supplies used or consumed for the improvement of real property under a contract with the owner"). For comment *see* Julian Johnson, *Debtor-Creditor: When is an Improvement not an Improvement? Interpretation of the Kansas Mechanics' Lien Statute, 36 Washburn L.J. 499 (1997).*

(n22)Footnote 23. *AABCO Sheet Metal Co., Inc. v. Lincoln Center For Performing Arts, Inc., 663 N.Y.S.2d 490 (N.Y.Sup. 1997) aff'd, AABCO Sheet Metal Co. v. Lincoln Ctr. for Performing Arts, Inc., 249 A.D.2d 39 (N.Y. App. Div. 1998)* (Primary purpose underlying enactment of Lien Law, which makes property owner or general contractor a trustee for the benefit of unpaid subcontractors and materialmen, is to ensure that laborers and materialmen are paid); *Bee Spring Lumber Co. v. Pucossi, 943 S.W.2d 622 (Ky. 1997)* (Purpose of mechanics' and materialmen's lien statute was to provide suppliers and laborers of building materials some financial security in collecting their contract price by allowing real property to be encumbered for amount of debt); *Duraflex Sales & Serv. Corp. v. W.H.E. Mech. Contractors, 110 F.3d 927 (2d Cir. 1997)* (Goal of Connecticut mechanics' lien statute is to provide remedy in form of security for contractor's labor and materials); *Canron Corp. v. City of New York, 674 N.E.2d 1117 (N.Y. 1996)* (Primary purpose of New York Lien Law is to ensure that those who have directly expended labor and materials to improve real property, or public improvement, at direction of owner or general contractor receive payment for work actually performed); *In re Mueller, 215 B.R. 1018* (8th Cir. BAP (Minn.) 1998) (under Minnesota law a lien does not constitute an interest in land).

(n23)Footnote 24. *Anthony Julian Railroad Construction Co., Inc. v. Hay Ellen Drive Associates, 717 A.2d 294 (Conn. App. 1998)* (property execution is not the proper remedy for foreclosing a mechanics' lien).

(n24)Footnote 25. Ronald J. Mann, *The First Shall Be Last: A Contextual Argument for Abandoning Temporal Rules of Lien Priority, 75 Tex. L. Rev. 11 (Nov. 1996);* Marjorie Ramseyer Bardwell, What Title Insurance Does Cover--The Big Print, 416 PLI/Real 161, 168 (Nov. 1996) (lack of priority of the lien of the insured mortgage over any statutory lien for services, labor or material); Michael W. Homer & David J. Burns, *Utah Construction Law: Recovery for Nonpayment, 9 Utah B.J. 8 (May 1996)* (Should "the commencement to do work or furnish materials on the ground for the structure or improvement" occur before a lending institution records its mortgage or deed of trust, all the mechanics' liens have priority over the lender. This is true even if the deed of trust or mortgage was executed prior to the commencement of work but "was unrecorded at the time the building, structure or improvement was commenced, work begun, or first material furnished on the ground."); Lester M. Bliwise, *Mortgage Lending Documentation* 418 PLI/REAL 9, 39 (May 1997) (How could lenders protect themselves--if Borrower fails to complete the Project when and as required by the Loan Agreement or if, at any time, the Project is subject to any Mechanics' Lien, then Guarantor shall fully indemnify Lender); Oscar H. Beasley, *Highlights of Residential and Commercial Coverage for Lenders and Owners; Exhibits,* 416 PLI/REAL 191, 222 (Nov. 1996) (Mechanics' lien); *Duraflex Sales & Serv. Corp. v. W.H.E. Mech. Contractors, 110 F.3d 927 (2d Cir. 1997)* (Under Connecticut law, as predicted by federal Court of Appeals, priority of intermediate mechanics' lien would be neither impaired nor improved by partial subordination of first mortgage lien in favor of third mortgage lienholder); *Eyster v. S.A. Birnbaum Contracting, Inc., 662 N.E.2d 201 (Ind. App. 1996)* (Date on which mortgage is recorded is dispositive for determining its priority with respect to a mechanics' lien). *But see, In re* 455 CPW Assocs., 192 B.R. 85 (Bankr. S.D.N.Y. 1996) (Purchase money mortgages are exempt from operation of New York Lien Law provided that mortgage is recorded prior to filing of lien and that instrument of

conveyance contains trust fund covenant); *Old Colony Ventures I, Inc. v. SMWNPF Holdings, Inc., 924 F. Supp. 1076 (D.Kan. 1996)* (Although original mortgage which secured future advances to project owner and was filed before contractor's work begun had priority over contractor's mechanics' lien, mechanics' lien had priority over advances made pursuant to modification increasing the loan-limit of mortgage); *Ohio Farmers Ins. Co. v. Commercial Ctr. Contrs. Corp., 676 N.E.2d 928 (Ohio App. 1996)* (Surety's mechanics' lien on shopping center did not have priority over lender's mortgage lien, which was recorded before the filing of the mechanics' lien); *Wade v. Farnsworth, 917 P.2d 967 (N.M. App. 1996)* (Statute preventing attachment of materialmen liens or subcontractor liens if property owner pays "all and any" of contract amount to general contractor before liens are filed requires that owner pay all amounts still owing under original contract and any valid modifications to contract; partial payment to contractor is not sufficient to discharge liens that are subsequently imposed on property); *Ohio Farmers Ins. Co. v. Commercial Ctr. Contrs. Corp., 676 N.E.2d 928 (Ohio App. 1996) , appeal dismissed, Ohio Farmers Ins. Co. v. Commercial Ctr. Contr. Corp., 77 Ohio St. 3d 1473 (1996)* .

(n25)Footnote 26. "Ancient authority enunciates the purpose of the mechanics' lien: to prevent unjust enrichment of a property owner at the expense of a laborer or material supplier." *Industrial Asphalt v. Garrett Corp., 226 Cal. Rptr. 17, 19 (Cal. App. 1986)* . However, unjust enrichment and mechanics' liens are two separate remedies. Unjust enrichment results in an implied-in-fact contract in which the improver, who did not have a contractual relationship with the owner, lender, or contractor, may be able to recover in *quantum meruit* if the other party was unjustly enriched. A mechanics' lien is a statutory remedy granted when the owner contracts for an improvement in which the mechanic performs services or supplies goods, but does not pay for the improvement. *Ayotte Bros. Constr. Co. v. Finney, 680 A.2d 330 (Conn. App. 1996)* (Evidence established that owner-lessor whose lease contemplated construction of building in connection with lessee's business was unjustly enriched as result of improvements that subcontractor made on property, notwithstanding owner's contention that option to purchase clause in lease prevented her from being unjustly enriched; even if lessee exercised option, owner would be benefitted because sale price would reflect subcontractor's work that enhanced property's value); *DCB Constr. Co., Inc. v. Central City Dev. Co., 940 P.2d 958 (Colo. App. 1996)* (Claim based on "contract implied in law," or "unjust enrichment," is not based upon any contract, as such; obligation arises not from consent of parties, as in case of contracts which are express or implied in fact, but from law of natural, immutable justice and equity); *EFCO Corp. v. U.W. Marx, Inc., 124 F.3d 394 (2d Cir. 1997)* (Under New York law, principle that landowner is not liable to subcontractor for work performed on owner's property in furtherance of subcontract in absence of agreement to pay general contractor's debt or circumstances giving rise to such obligation is equally applicable when parties are primary contractor and second-tier subcontractor rather than landowner and subcontractor). H. Hugh McConnell, *Distinguishing Quantum Meruit and Unjust Enrichment in the Construction Setting, 71 Fla. B.J. 88 (March 1997)* (One should not look to recover in quantum meruit unless there have been direct dealings between the parties that create the basis for the contract to be implied "in fact." In contrast, unjust enrichment is a legal fiction described as "an obligation imposed by law to do justice even though it is clear that no promise was ever made or intended."). *But see,* Annotation, *Discharge of Mortgage and Taking Back of New Mortgage as Affecting Lien Intervening Between Old and New Mortgages, 43 A.L.R.5th 519 (1996)* (The intervening lienholder would be unjustly enriched if given the priority position.); *DCB Constr. Co. v. Cent. City Dev. Co., 940 P.2d 958 (Colo. App. 1996) , aff'd, DCB Constr. Co. v. Cent. City Dev. Co., 965 P.2d 115 (Colo. 1998)* .

(n26)Footnote 27. "The purpose of the Mechanics' Liens Act is to protect those who in good faith furnish labor or materials for construction of buildings or public improvements. It balances the owner's benefit of its bargain with the subcontractor's right to be paid for the labor and materials he or she furnishes in good faith." *Premier Elec. Constr. Co. v. American Bank of Chicago, 658 N.E.2d 877, 883 (Ill. App. 1995)* .Mark Sauer, *Ohio's New and Improved Mechanics' Lien Statutes: In Pursuit of Legitimacy, 22 Ohion.U. L. Rev. 895 (1996)* (The legislature must *balance* the application of the law in regards to bankers, homeowners, contractors, subcontractors, laborers and materialmen against the support of the public. Thus, mechanics' lien law will be more effective if the involved parties feel that their interests are being properly protected and that they can receive justice. Legitimacy is achieved through both procedure and result. While adherence to the proper procedure will certainly give a person the impression that he is being treated fairly, the law must also strive to reach a just result.). *Struebing Constr. Co., Inc. v. Golub-Lake Shore Place Corp., 666 N.E.2d 846 (Ill.*

App. 1996) (Mechanics' Lien Act attempts to balance rights and duties of owners, subcontractors, and materialmen.) *See also, Alliance Steel, Inc. v. Piercy, 660 N.E.2d 1341 (Ill.App. 1996)* .

(n34)Footnote 35. *Cook v. Carlson, 364 F. Supp. 24, 29 (D.S.D. 1973)* .John W. Fisher, II, *The Scope of Title Examination in West Virginia: Can Reasonable Minds Differ? 98 W. Va. L. Rev. 449 (Winter 1996)* (Once the lien attaches to the property under *Section 38-2-17 of W. Va. Code*, the lien can be perfected *against subsequent purchasers* and is valid against subsequent deeds of trust and other liens arising after that date); *Sullivan v. Buckland Meadow*

Assocs., 1996 Conn. Super LEXIS 2094 (No. Cva2 512365, Aug. 12, 1996) (Where the vendor has improved real estate and the purchaser has consented to and cooperated in the improvements pursuant to an executory contract of sale, the lien of a materialman for materials furnished the vendor is binding on both the vendor and the purchaser, notwithstanding the fact that the purchaser received and recorded the deed before the lien was filed for record and recorded); *Owen Lumber & Millwork, Inc. v. National Equity Corp., 940 S.W.2d 66 (Tenn. App. 1996)* (Where supplier of construction materials for new house properly filed notice of materialmen's lien within 90-day period, general contractor's conveyance of house within 90 days of completion did not extinguish materialmen's lien, even though warranty deed from general contractor to purchasers had been recorded before supplier's notice of lien was filed; purchasers knew that they were purchasing new construction and that vendor was not only property owner but builder as well, and neither purchasers nor deed of trust holder availed themselves of statute establishing protection from unregistered liens); *F. Scott Jay & Co., Inc. v. Vargo, 685 A.2d 799 (Md. App. 1996)* (Owner need only allege that it is bona fide purchaser for value to claim benefit of exemption in statute providing that land or building thereon cannot be subject to mechanics' lien if, prior to establishment of lien, legal title was granted to bona fide purchaser for value. It is mechanics' lien claimant's burden to show that owner is not bona fide purchaser for value, for purposes of bona fide purchaser exemption, and owner need offer no evidence of his status except in response to evidence first offered by claimant tending to show that owner is not bona fide purchaser for value); *See also, IA Constr. Corp. v. Carney, 672 A.2d 650 (Md. 1996)* (statute providing that, upon mortgage foreclosure sale, all liens and encumbrances on such property must be satisfied in accordance with their priority, recognizes extinguishment of junior mechanics' lien upon foreclosure of senior mortgage to same extent as junior judgment lien would be extinguished upon foreclosure of senior mortgage); *Delmont Mech. Servs., Inc. v. Kenver Corp., 677 A.2d 1241 (Pa. Super. 1996)* (General contractor was not owner or reputed owner of property for purposes of mechanics' lien law and, thus, subcontractor who listed general contractor as owner of property on lien claim failed to comply with mechanics' lien law section requiring lien claim to state name of owner or reputed owner even though first contract between parties incorrectly stated that general contractor was owner of property where general contractor never had ownership interest in property and second contract between parties included correct name of property owner. As a result, the subcontractor was not allowed to claim against the subsequent bona fide purchaser of the property); *Skillstaff of Colorado, Inc. v. Centex Real Estate Corp., 973 P.2d 674 (Colo. App. 1998)* (the agency that provided temporary employees to a subcontractor, which failed to pay the agency, was not entitled to assert a mechanics' lien).

(n35)Footnote 36. *John Holmes Construction, Inc. v. R.A. McKell Excavating, Inc., 131 P.3d 199 (Utah 2006)* (infrastructure improvements to a residential lot are not improvements to a residence that would qualify for a mechanics' lien). Lienable improvements have included: providing concrete for sewer and water laterals, engineering and surveying services to obtain municipal approval, and disposal of contaminated soil at a landfill. *See Riverwood Park, Inc. v. Central Ready-Mixed Concrete, Inc., 536 N.W.2d 722 (Wis. App. 1995)* ; *Charles H. Sells, Inc. v. Chance Hills Joint Venture, 622 N.Y.S.2d 422 (N.Y. Sup. Ct. 1995)* ; *Midwest Envtl. Consulting & Remediation Servs., Inc. v. People's Bank of Bloomington, 620 N.E.2d 469 (Ill. App. 1993)* .Juliann Johnson, *Debtor-Creditor: When is an Improvement Not an Improvement? Interpretation of the Kansas Mechanics' Lien Statute* [*Haz-Mat Response, Inc. v. Certified Waste Services Ltd., 910 P.2d 839 (Kan. 1996)] , 36 Washburn L.J. 499 (Summer 1997);* Mark Sauer, *Ohio's New and Improved Mechanics' Lien Statutes: In Pursuit of Legitimacy, 22 Ohio N.U. L. Rev. 895, 900 (1996)* (*Ohio Revised Code section 1311.011(B)* subjects mechanics' liens to certain conditions. That subsection had applied to liens for "work done." It now reads "labor or work performed or materials furnished."). *Thompson and Peck, Inc. v. Division Drywall, Inc., 696 A.2d 326 (Conn. 1997)* (Unpaid workers' compensation insurance premiums owed by subcontractor were not "materials" or "services" under mechanics' lien statute, since such premiums had not enhanced the property in some physical manner, laid groundwork for physical enhancement of the property, or played essential part in scheme of physical improvement of the property); *Moore & Moore Gen. Contractors, Inc. v. Basepoint, Inc., 485 S.E.2d 131 (Va. 1997)* (Mechanics' lien was valid where seller furnished cabinets for building project and cabinets were delivered, accepted, installed, and added value to structure, and fact that cabinets were removed before memorandum was filed was irrelevant); *Rotarius v. Edwards, 936 P.2d 401 (Or. App. 1997)* (Rock supplier who delivered substitute fill material that had been authorized by property owners' agent and was used in construction project had valid construction lien, even though material was subsequently removed and made available to supplier to reclaim; statute did not require

material to become part of completed project for lien to be valid); *Robert Plan Corp. v. Greiner-Maltz Co., Inc., 655 N.Y.S.2d 648 (N.Y. App. 1997)* (Statutory definition of "improvement," for purposes of mechanics' liens arising from services for improvement of real property, which included real estate brokerage services to obtain lessee for nonresidential property, did not encompass services allegedly performed by lessee's brokerage firm in locating property for lessee to lease); *L.J. Keefe Co., Inc. v. Chicago & Northwestern Transp. Co., 678 N.E.2d 41 (Ill. App. 1997)* (In determining whether furnishing materials in construction of land constitutes "improvement," for purposes of Mechanics' Lien Act, relevant inquiry is whether work performed has enhanced value of land to be charged with lien); *Randall Stanley Architects, Inc. v. All Saints Community Corp., 555 N.W.2d 802 (S.D. 1996)* (Equitable theory of quasi contract or unjust enrichment did not apply to create implied contract between property owner and architect, so that architect had no basis for mechanics' lien against property, where nonprofit corporation, which had signed contract to buy the property, contracted with architect to provide design services for that property, nonprofit failed to pay architect for its services, nonprofit was unable to obtain financing to buy the property, and, pursuant to terms of arrangement with architect, architect furnished its services gratuitously); *Roofing & Sheet Metal Supply Co. of Tulsa, Inc. v. Golzar-Nejad Khalil, Inc., 925 P.2d 55 (Okla. 1996)* (Materialman that, as result of contractor's diversion of materials delivered to construction site, dropped off more materials at site than were ever incorporated in roof repair project was not entitled to lien against property); *Printz Servs. Corp., v. Main Elec., Ltd., 949 P.2d 77 (Colo. App. 1997)* (Mechanics' liens could not attach for preliminary architectural work performed on construction project at contractor's request before contractor's agreement with property owner came into force and, thus, deed of trust recorded after architectural work was completed had priority over mechanics' liens; liens did not relate back to date work was first commenced by architect, even though prime contract with owner was eventually signed and it contained provision for payment of architect); *Lyons Sav. v. Gash Assocs., 665 N.E.2d 326 (Ill. App. 1996)* (Mechanics' lien claimant's remedial cleaning of grease, oil, and debris left behind by other lien claimants who performed renovations to building was part of improvement to property and thus lienable); *TPST Soil Recyclers of Washington, Inc. v. W. F. Anderson Construction, Inc., 957 P.2d 265 (Wash. App. 1998)* (disposal of contaminated soil from property is not an improvement qualifying for relief through a mechanics' lien); *Coleman v. Sterling Castings Corp., 224 B.R. 85 (N.D. Ind. 1998)* (employee could not use mechanics' lien to make a claim for wages and various benefits); *Printz Servs. Corp. v. Main Elec., Ltd., 949 P.2d 77 (Colo. App. 1997) , aff'd in part, rev'd in part, Main Elec., Ltd. v. Printz Servs. Corp., 980 P.2d 522 (Colo. 1999)* ; *Coleman v. Sterling Castings Corp., 224 B.R. 85 (N.D. Ind. 1998) , aff'd, In re Bluffton Casting Corp., 186 F.3d 857 (7th Cir. Ind. 1999)* ; *Payless Cashways, Inc. v. Payless Cashways, 230 B.R. 120 (8th Cir. 1999) , aff'd, Amtech Lighting Servs. v. Payless Cashways, Inc., 203 F.3d 1081 (8th Cir. 2000)* .

Briefing 1 (Allen et al., Fall 1991). *See, e.g., Royster Constr. Co. v. Urban W. Communities, 47 Cal. Rptr. 2d 684 (Cal. App. 1995)* (holding that attorney's fees are not recoverable because such fees did not contribute to the reasonable value of the improvement); *Lambert v. Super. Ct., 279 Cal. Rptr. 32, 36 (Cal. App. 1991)* (finding that delay and interest damages were not part of the lien even though the contract described them as extra work). However, the California legislature has allowed the recovery of plaintiff's attorney's fees for the perfections of stop notices. *See infra* § 102.05. *Zalay v. Ace Cabinets of Clearwater, Inc., 700 So. 2d 15 (Fla. App. 1997)* (Construction lien is not intended to preclude lien for lienors' costs and attorney fees in lien foreclosure action); *Johnson v. Blankenship, 679 N.E.2d 505 (Ind. App. 1997)* (Award of $20,500 in attorney fees to worker who recovered $5,775 in action against building owner to enforce mechanics' lien, was supported by complexity and length of case, and finding that worker had performed contracted-for repair work in workmanlike manner); *Amnesia Int'l, Inc. v. Sunhouse Int'l, Inc., 675 So. 2d 707 (Fla. App. 1996)* (Contractor who was prevailing party on lien claim was entitled to attorneys' fees and costs pursuant to construction lien statute); *First Gen. Servs. v. Perkins, 918 P.2d 480 (Utah App. 1996)* (Where claims

asserted by plaintiff and defendant with respect to mechanics' lien are sufficiently interrelated such that counterclaims would, if successful, defeat lienholder's principal claim, or, if lien is asserted through counterclaim, successful prosecution of principal claim will defeat lien claim, successful party is entitled to attorney fees regardless of whether that party was seeking to enforce lien or to defend against it); *Utilities Constr. Co., Inc. v. Wilson, 468 S.E.2d 1 (S.C. App. 1996)* (In action to foreclose mechanics' lien, although owner of property did not request attorney fees in her answer, electrical contractor was not prejudiced as contractor had notice of potential award of attorney fees given mandatory language of mechanics' lien statutes); *Turner v. Mountain Eng'g & Constr., Inc., 915 P.2d 799 (Mont. 1996)* (Mortgagee was entitled to award of attorney fees under construction lien statute for expenses incurred in successfully defending lien foreclosure action by construction lien creditors who performed work on mortgaged property, where mortgagee was not only attempting to determine priority of his mortgages and foreclose on them, he was also defending against construction lienholders' foreclosure suits); *Haz-Mat Response, Inc. v. Certified Waste Servs. Ltd., 910 P.2d 839 (Kan. 1996)* (Hazardous waste removal was not lienable, that is, not subject to mechanics' lien, as it was part of maintenance program that was necessary in normal course of owner's business, and evidence failed, as a matter of law, to demonstrate that the removal was "improvement of real property" within meaning of mechanics' lien statute; removal was not part of overall plan to improve property, would not necessarily enhance value of property, would presumably allow business to continue as it had before, and there was no evidence that removal would adapt property for new or further purposes); *Lyons Sav. v. Gash Assocs., 665 N.E.2d 326 (Ill. App. 1996)* (Mechanics' lien claimant's remedial cleaning of grease, oil, and debris left behind by other lien claimants who performed renovations to building was part of improvement to property and thus lienable. However, mechanics' lien claimant's charge for scrubbing tile and grout on walls and floor ceramic tile and sealing grout for 18 washrooms was for nonlienable maintenance, given lack of evidence that work was necessitated by mess of renovation left by other lien claimants, and therefore claimant's priority over mortgage recorded before contract for work performed was made was properly reduced by amount of charge); *Vernon Hills III Ltd. P'ship v. St. Paul Fire & Marine Ins. Co., 678 N.E.2d 374 (Ill. App. 1997)* (*Delay:* Failure of lienholder to commence suit within 30 days of receipt of written notice of demand to sue, made pursuant to Mechanics' Lien Act, operates to forfeit and remove mechanics' lien); *Columbia Sav. Ass'n, F.A. v. McPheeters, 911 P.2d 187 (Kan. App. 1996)* (Given mechanics' lienholder's failure to take affirmative steps to foreclose or defend lien within statutory period, it did not have meritorious defense to bank's action so as to justify permitting it to file answer out of time); *Johnson v. Blankenship, 679 N.E.2d 505 (Ind. Ct. App. 1997) , aff'd, Johnson v. Blankenship, 688 N.E.2d 1250 (Ind. 1997)* ; *Artsmith Development Group, Inc. v. Updegraff, 868 A.2d 495 (Pa. Ventura Corp., 568 S.W.2d 769, 774 (Mo. 1978)* ; *Pentecostal Church of God v. Bruce-Rogers Co., 599 S.W.2d 702, 703 (Ark. 1980)* ; *In re Thomas Cary, Inc., 412 F. Supp. 667, 671 (E.D. Va. 1976)* ; *B & P Dev. v. Walker, 420 F. Supp. 704, 705 (W.D. Pa. 1976) . See also Cook v. Carlson, 364 F. Supp. 24, 27 (D.S.D. 1973)* .

(n54)Footnote 55. John W. Maupin & W. Dudley McCarter, *Public Works Projects, 52 J. Mo. B. 94, 95* (March/April 1996) (The Missouri public works bond statute, like the mechanics' lien statute, is liberally construed to provide protection for those who furnish work and labor for the project.).

(n55)Footnote 56. *Compare Shaumyan v. O'Neill, 987 F.2d 122 (2d Cir. 1993)* with *Connecticut v. Doehr, 501 U.S. 1 (1991)* . In *Shaumyan*, Connecticut's prejudgment attachment statue was upheld when invoked by a home

improver. In *Doehr*, the U.S. Supreme Court saw the issues in a tort suit as far more complicated than those in a simple home improvement contract. Consequently, the chance in an ex parte proceeding of an erroneous property deprivation was seen as greater.

(n56)Footnote 57. *See, e.g., Mitchell v. W.T. Grant Co., 416 U.S. 600 (1974)* (upholding Georgia's prejudgment attachment law when invoked by a conditional seller trying to attach sold but unpaid goods under a law much like Connecticut's, except the Georgia creditor was required to post a bond).

(n57)Footnote 58. *Conn. Gen. Stat. § 52-278(e)(a)(1)*.

(n58)Footnote 59. The home improver in *Shaumyan* had installed storm windows in a Yale professor's house. *Id.* The professor did not think the windows did the job they were supposed to do. The improver agreed to put in new windows on a time and materials basis, foregoing profit and overhead. The professor refused to pay the final bill. The improver took advantage of Connecticut's prejudgment attachment statute. This was the very statute the U.S. Supreme Court struck down in *Doehr*. *Id.* In that case, the litigant was claiming $75,000 in damages as a result of losing a fist fight. Yet the Second Circuit Court of Appeals upheld the improver's claim under the state Contract Lien Law, citing as support the fact that the improver could have enjoyed even better rights under the state mechanics' lien law.

(n59)Footnote 60. *Hanley v. Kajak, 661 So. 2d 1248 (Fla. App. 1995)* (Commencement of action against subcontractor for discharge of lien did not result in waiver of statutory requirement that subcontractor file contractor's final affidavit as condition precedent to maintenance of lien foreclosure action).

(n60)Footnote 61. *See, e.g., Cal. Civ. Code § 3098*; *Mich. Comp. Laws § 570.1108a*.

(n61)Footnote 62. *See PDS Eng'g & Constr., Inc. v. Double RS, 627 A.2d 959 (Conn. Super. 1992)* (upholding Connecticut's mechanics' lien law against constitutional due process challenge by mortgagee because the statute allows release of the lien by posting a bond, and when the mechanics' lien has been released by bond, the principal or surety may apply to superior court to have the claim underlying the lien declared invalid or reduced).

CHAPTER 102 MECHANICS' LIENS 1

12-102 Thompson on Real Property, Thomas Editions § 102.02

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 102.02 Some Inequities of the Mechanics' Lien Laws and How States Have Attempted to Alleviate Them.

[Go To Supp]

§ 102.02(a) The Double Liability Problem.

§ 102.02(a)(1) An Owner May Have to Pay Twice for the Same Work.

Potential injustice inherently exists in the mechanics' lien laws because an owner, or prime contractor who is required by law to protect the owner's property from mechanics' lien claims, may be required to pay twice for the same work or materials in order to protect the property from foreclosure or a mechanics' lien cloud on title. n63 For example, suppose O hires K to build a house for $250,000, which K completes. O pays K the $250,000, then K goes bankrupt before paying everyone on the job. The unpaid subcontractors and material suppliers record $50,000 worth of mechanics' liens against the property. In order for O to keep the property from being sold to satisfy the mechanics' liens, O is forced to pay off the $50,000 worth of claims. This results in O paying $300,000 for the house instead of the $250,000 she agreed to pay.

Courts unsympathetic to the owners' plight have declared that one purpose of mechanics' lien statutes is "to give security to a materialman whose materials have enhanced the value of an owner's property and to give him preference over an owner" when the materialman has not been paid for supplies or services rendered. n64 Since a mechanics' lien only results in instances in which the property owner consented to the improvement, n65 the owner is free to select his or her own contractor. Therefore, the owner is "in a position to protect himself or herself and all parties concerned before any risks are assumed by anyone by making arrangements that will insure the payment of such lienable debts as may be incurred by the contractor selected to do the work." n66

On the other hand, a variation of the argument may be turned against the liening subcontractor or supplier. Had the lienor checked out the credit of the prime contractor or insisted on payment in advance, the lienor would not have needed the lien. In fact, subcontractors are often better positioned than homeowners to make sound judgments about the creditworthiness of the contractors with whom they deal. Not surprisingly, many states have revised their lien laws to protect homeowners from double liability. n67

§ 102.02(a)(2) Liability.

In a very few states, New York n68 and Maine n69 among them, recovery by a subcontractor or material supplier is limited to the amount owed and unpaid to the original contractor. The subcontractor is treated as an equitable subrogee of the contractor and can only claim payment out of the amount, if any, due and unpaid from the owner to the general contractor. n70 If no money is due the contractor, there is no fund upon which the subcontractor's lien may attach, n71 and the subcontractor may not look to the owner of the premises for satisfaction n72 unless the owner is personally liable by direct contract. n73

In most states (including California) owners can be liable to unpaid subcontractors even after paying their general contractors in full. They have various ways to protect themselves against the risk of double liability.

§ 102.02(a)(2)(i) Bonds.

The owner may require the contractor to furnish a labor and material ("payment") bond. This guarantees that the contractor will pay for all the work and materials used in the project. Otherwise, the owner has the right to call upon the bonding company to pay for and remove any mechanics' lien claims that may arise against the property.

Bonding is standard for major contractors working on multi-million-dollar contracts where the costs of bonding can be readily absorbed. These contractors are financially capable of offering bonding companies the collateral, letters of credit or other assurances needed to obtain the bonds. On the other hand, public works programs geared to encourage bidding from minority contractors need to waive bonding requirements or find ways to help these and other smaller firms meet them.

Bonding is needed most when it is least likely to be available. Small and undercapitalized contractors do modest-sized jobs for individual property owners on tight budgets. In these situations, few contractors have the credit necessary to get a bond. The costs of such bonds as are available will be prohibitive to the owner and the contractor.

§ 102.02(a)(2)(ii) Waivers and Releases. n74

An owner may require the contractor to obtain signed mechanics' lien releases from all subcontractors and material suppliers who work on the project. n75 A release is a lien waiver. There are four types: (a) absolute, (b) unconditional, (c) conditional, limited or partial, and (d) subordination. A valid *absolute release* waives all rights under the lien laws, whether or not the contractor, subcontractor or supplier has been paid. n76 Consideration is generally required for a lien waiver to be valid, although this is not always so. n77 Not surprisingly, many states outlaw blanket waivers extracted by owners or general contractors in advance as a condition to doing business. n78

What is the point of the statutory lien if any subcontractor or material supplier is required to waive it in order to get work?

Under an *unconditional release*, the contractor signs a statement that the contractor is receiving a check for final payment and that, after the check has been paid by the bank, all of the contractor's liens are released. n79 This typically takes place at the conclusion of the job. In California, a warning must appear in big type in the unconditional release which states:

> NOTICE: THIS DOCUMENT WAIVES RIGHTS UNCONDITIONALLY AND STATES THAT YOU HAVE BEEN PAID FOR GIVING UP THOSE RIGHTS. THIS DOCUMENT IS ENFORCEABLE AGAINST YOU. IF YOU SIGN IT, EVEN IF YOU HAVE NOT BEEN PAID. IF YOU HAVE NOT BEEN PAID, USE A CONDITIONAL RELEASE FORM. n80

Some states require unconditional and conditional releases to conform to certain language. n81

A *limited* or *unconditional release* provides that the lien is waived only for work done or materials furnished through a specified date. n82 Lenders try to avoid situations where contractors or subcontractors sign releases before they are paid by issuing joint checks n83 payable to the general contractor or owner and the subcontractor, hoping the subcontractor will not endorse the check until he is paid.

A *subordination waiver* preserves the mechanics' lien, but subordinates it to the lien of the construction mortgage or other named secured creditors. n84 A subordination waiver may be valid if a third party relies on it even if the waiver would not otherwise be valid. n85 Where absolute waivers are void it is not clear if subordination agreements are also invalid. This may be similar to the situation where a land seller signs an otherwise unenforceable subordination agreement. While the buyer may not be able to enforce the agreement, a lender who relies on the agreement may be able to do so. n86

§ 102.02(a)(2)(iii) Joint Checks.

The owner may issue checks made payable jointly to the contractor and to the various subcontractors to whom payment is due. Again, if an unpaid subcontractor signs a check, repudiation is allowed by some courts and not by others. n87

Lien releases and joint checks are standard construction industry practice even though they don't offer 100% protection for the owner or construction lender.

§ 102.02(a)(2)(iv) Recordation of Bonded Contract.

In California, before commencement of the work, an owner may file a copy of the prime contract in the County Recorder's office and record a payment bond for not less than 50% of the contract price. n88 The payment bond guarantees payment of all mechanics' lien claims and effectively protects the owner from paying more than the contract price. This procedure offers the best protection for the owner, but is the least often used because few owners know about it and, in any event, bonding is a costly and bureaucratic exercise for the novice. n89

§ 102.02(a)(2)(v) Retainage.

An owner holds back some portion of the contract price to make sure the contractor has paid the subcontractors and material suppliers. n90 This sum is called retainage. It is held until the mechanics' lien filing period has expired. In California, owners can file a notice of completion when a job is done, and all but the general contractor have 30 days after that to file their liens. General contractors have 60 days. In between these two periods the owner should have been able to verify whether any liens were filed, and to pay out the retainage to the general contractor. In Texas the withholding of retainage is mandated by statute. n91

§ 102.02(b) Secret Liens.

"Secret mechanics' liens" can prove to be a serious inequity to owners, contractors, and construction lenders. n92 "Secret liens" arise when subcontractors file liens on a site for work which the owner (and maybe even the general contractors) never knew about. Suppose O has a prime contract with K for the construction of a house. K enters into a subcontract with S to do the framing and S contracts with L to buy the lumber. Neither O nor K knows where S gets the materials. After S completes S's part of the job, S bills K in full, assuring him that all materials used in the job have been paid for. K pays S in full and O reimburses K, but S then declares bankruptcy without paying L. Therefore, 29 days after the notice of completion, L records a mechanics' lien on the property since L was never paid for the lumber supplied to the job. Both O and K have a theoretical right to require S to pay L, but this is of no use since S had declared bankruptcy. Therefore, O will either have to pay L's mechanics' lien claim in order to free the property or else impose responsibility on K. The problem is that L had the right to record a mechanics' lien but neither O nor K was able to find out about that right until it was too late for them to protect their interests.

Under these facts, K would usually be held responsible since most prime contracts and state statutes require the prime contractor to keep the property free of mechanics' liens. To protect O's interest, O will generally withhold final payment to K until 35 days after the notice of completion is filed, thereby insuring that K will end up paying off the claim.

LEXIS: secret w/2 mechanic! w/2 lien!

§ 102.02(b)(1) Preventing "Secret" Liens: The Preliminary Notice.

Many states require potential lienors to notify site owners and construction lenders that if unpaid, they could lien the property. n93

A preliminary notice contains:

(1) a general description of the work, equipment or materials furnished, or to be furnished;

(2) name and address of the potential claimant;

(3) name of the person who ordered or contracted for the work, equipment, or material;

(4) description of the job site sufficient for identification; and

(5) a statement in boldface type that if bills are not paid in full for labor, services, equipment or materials furnished, or to be furnished, the improved property may be subject to mechanics' liens, and that the owner may wish to protect itself by requiring mechanics' lien releases before making full payment to the contractor. If there is a construction lender, the claimant must also furnish the construction lender with an estimate of the total price of the work, and equipment or materials to be furnished to the project. n94

The purpose of the preliminary notice requirement is to enable owners, contractors, and construction lenders to identify potential mechanics' lien claimants early enough in the project to ensure that every potential claimant is paid for the work, equipment or materials provided. n95

§ 102.02(b)(2) Who Must Get Notice.

State statutes prescribe who is entitled to notice and those statutes have to be satisfied for the lien to be valid when it is eventually filed. n96 The owner must always be notified unless the potential lienor has contracted directly with the owner. n97 In California, a preliminary notice must be given to the owner, the original contractor, and the construction lender if there is one. n98 If the claimant is dealing directly with the owner/builder, notice does not have to be sent to the owner; just to the construction lender if there is one. The notice must be served by hand delivery, registered or certified mail; n99 this requirement has been strictly construed. n100 A proof of service affidavit is required to demonstrate proper service; n101 courts have consistently held that oral preliminary notices are not sufficient to comply with the statutory preliminary notice requirement. n102

One court held the preliminary 20-day notice enforceable against the owner even though it was not given to the prime contractor. The court opined that the person who needed to receive the notice (the owner) received it, while the person who already knew the claimant's identity (the prime contractor) did not need to receive the notice. n103 The notice to the owner would not, however, have affected the rights of the construction lender who was not notified. Nonetheless, an argument can be made that the statutory requirement for a preliminary notice isn't satisfied by the owner's knowledge

that the contractor exists and is on the job, or by the contractor's knowledge that a sub exists because the sub dealt with the contractor directly.

James Acret, the dean of California's mechanics' lien law bar, contends that a subcontractor should have to notify the contractor because the contractor will be responsible for ensuring that all potential lienors are paid and will probably have a check-off system for making payments and procuring lien releases--based on securing releases from all those subcontractors who served preliminary notices. Should a subcontractor fail to mail that notice to the contractor, the subcontractor's potential claim may slip through the safety net for making sure everyone on the job has been paid and has released their mechanics' lien claims.

In any event, potential lienors should always serve the owner, contractor and lender with a preliminary notice, and not rely on any cases forgiving a lienor from serving the notice.

Even a general contractor must meet the same requirements as a subcontractor and material supplier and give preliminary notice when: (1) dealing with someone other than the owner such, as a lessee, architect, or other general contractor; or (2) contracting for only a portion of the job.

COMPUTER-ASSISTED RESEARCH

LEXIS: noti! w/30 mechanic! w/5 lien!

§ 102.02(b)(3) Effect of Late Notice.

The mechanics' lien claimant may give notice at any point during the job. However, mechanics' lien rights are lost for any work or material furnished outside the statutory notice period. n104

§ 102.02(b)(4) Recording of Preliminary Notice.

Very few states require the preliminary notice to be recorded. By recording, the potential lien claimant clouds the owner's title early in the construction process. This upsets owners, antagonizes general contractors, alarms construction lenders, and in most cases proves to be a totally unnecessary precaution because mechanics and material suppliers are usually paid on time. The few statutes which require the recordation of the preliminary notice force the potential claimant to an unpleasant choice: record and risk the ill will that follows or waive lien rights. n105

In California a mechanic has the option of filing the preliminary notice with the county recorder who places it in a separate index of preliminary notices. n106 The preliminary notice isn't treated as an interest in land. It isn't recorded in the grantor-grantee index. The county recorder mails notification when a notice of completion or notice of cessation has been recorded. Failure of the county recorder to mail the notification does not affect the period within which a claim of lien is required to be recorded.

§ 102.02(b)(5) Protecting the Bona Fide Purchaser.

Too many homebuyers never realized when they smelled the fresh paint and admired the newly installed kitchen cabinets that soon after the close of escrow laborers and suppliers would file mechanics' liens and those liens would relate back to the day work first began. The extensive remodeling job made the house more alluring. The buyer already paid for the improvements once in the form of an increased purchase price. Only by waiting out the full lien filing period, and checking the property constantly to make sure the lien filing date is not being tolled by additional work, can homebuyers safely rely on the record title being lien free.

One place where homebuyers do not have to worry about the risk of secret mechanics' liens is in Maryland. As a

constitutional matter, the Maryland courts hold that liens relate back no further than the day a lien claimant secures a judgment for the underlying claim. This means that, even for work done before or during the executory period, new owners are not liable for uncontracted-for work. Such buyers take title free of any mechanics' liens that were not reduced to judgment before closing. n107

The homebuyer could try to get title insurance protection against mechanics' liens, but purchasers can seldom find title insurers willing to insure them against such liens. A Florida statute requires that title insurers cover purchasers against mechanics' liens when sellers provide affidavits that there are no unpaid mechanics. n108 This is easier in Florida because all mechanics' liens relate back to the recordation of the underlying construction contract. Except for that provision, the state legislature would be requiring title insurers to assume a substantial risk for off-record defects. Due to the Florida recordation requirement for construction contracts and its relation-back rule, the Florida title insurer covering purchasers against mechanics' liens is covering a defect of records and can therefore assess the type of indemnity it should require of the owner before assuming the risk.

FOOTNOTES:

(n1)Footnote 63. Some states have enacted legislation in an attempt to limit the instances in which an owner will be required to pay twice for the same work. For example, Michigan statutes have specified a series of notice and other requirements to inform the owner of the identity of the subcontractors. If a subcontractor fails to follow the notice requirements, he may lose his right to a mechanics' lien.

(n2)Footnote 64. *Bee Spring Lumber Co. v. Pucossi, 943 S.W.2d 622 (Ky. 1997)* (When the owner had paid portion of contract price to the general contractor and when the general contracted later failed to complete the contract and failed to pay subcontractors or suppliers for the work or materials furnished, the legislature did not intend to protect those owners who have the opportunity of owning a vacation or second home in addition to their primary residence by allowing a dollar-for-dollar credit against the lien properly filed by the subcontractors or the suppliers); *Wade v. Farnsworth, 917 P.2d 967 (N.M. App. 1996)* (Statute preventing attachment of materialmen liens or subcontractor liens if property owner pays "all and any" of contract amount to general contractor before liens are filed requires that owner pay all amounts still owing under original contract and any valid modifications to contract. Partial payment to contractor is not sufficient to discharge liens that are subsequently imposed on property, and therefore the statute provides a protection to materialmen and subcontractors even at the expense of requiring owners to make double payment); *Better Roofing Materials Co. v. Sztukouski, 183 S.W.2d 400 (Mo. App. 1944)* .

(n3)Footnote 65. Consent may be express or implied by "the owner's execution of the prime contract." Lawrence Ponoroff, *Construction Claims in Bankruptcy: Making the Best of a Bad Situation, 11 Bankr. Dev. J. 343, 403 n. 19* (1994-95).

(n4)Footnote 66. *Better Roofing, 183 S.W.2d at 404* ; *Construction One, Inc. v. Shore Thing, Inc., 2003 Ohio App. LEXIS 1290* (No. 81135, Jan. 23, 2003) (mechanics lien was not valid against the interest of the lessor).

(n5)Footnote 67. *See* Marion W. Benfield, Jr., *The Uniform Construction Lien Act: What, Whither, and Why, 27 Wake Forest L. Rev. 527, 541 (1992).*

(n6)Footnote 68. N.Y. Lien Law § 4 ("If labor is performed for, or materials furnished to, a contractor or subcontractor for an improvement, the lien shall not be for a sum greater than the sum earned and unpaid on the contract at the time of filing the notice of lien, and any sum subsequently earned thereon. In no case shall the owner be liable to pay by reason of all liens created pursuant to this article a sum greater than the value or agreed price of the labor or materials remaining unpaid, at the time of filing notice of such liens ... .").

(n7)Footnote 69. *See Pond Cove Millwork Co. v. Steeves, 598 A.2d 1181 (Me. 1991)* (homeowners entitled to invoke the double payment defense because subcontractors could not establish there was a balance due on the contract when the homeowners received notice of the mechanics' liens).

(n8)Footnote 70. *Tibbetts Contr'g Corp. v. O & E Contr'g Co., 206 N.E.2d 340 (N.Y. 1965)* .

(n10)Footnote 72. *Wyncoop v. People, 153 N.Y.S.2d 836 (App. Div. 1956) , aff'd, 150 N.E.2d 771 (N.Y. 1958)* .

(n11)Footnote 73. *Hutton Bros. v. Gordon, 23 N.Y.S. 770 (1893)* .

(n12)Footnote 74. The author is grateful to Dan Cavana for research done on waivers and releases when he was a student at the University of Southern California Law Center in Spring of 1995.

(n13)Footnote 75. *Snydergeneral Corp. v. Lee Parcel 6 Assocs. Ltd. Partnership, 681 A.2d 1008 (Conn. App. 1996)* (Agreement between subcontractor and general contractor, under which subcontractor waived and relinquished right to any and all liens or claim of liens, clearly and unambiguously waived subcontractor's rights to assert mechanics' lien against debtor's real property).

(n14)Footnote 76. *See, e.g., Walker & Laberge Co., Inc. v. First Nat'l Bank, 146 S.E.2d 239 (Va. 1966)* . In Illinois, the courts had allowed owners and general contractors to specifically enforce contractual waivers of mechanics' lien rights in construction contracts. Construction contract provisions were enforceable, absent proof of fraud, that "no contractor or subcontractor shall have the right to assert any mechanics' liens or materialmen's liens against title" to the property being improved. *Ridgeview Constr. Co., Inc. v. American Nat'l Bank and Trust Co., 628 N.E.2d 1060 (Ill. App. 1993)* . The Illinois legislature got rid of lien waiver enforcement through the Mechanics' Lien Act, *770 ILCS 60/1.1* (formerly cited as Ill. Rev. Stat. ch. 82, para. 1.1). That provision declared "an agreement to waive" a mechanics' lien "in anticipation of and in consideration for the awarding of a contract or subcontract ... against public policy and unenforceable." *R. W. Dunteman Company, v. C/G Enterprises, Inc., 692 N.E.2d 306 (Ill. 1998)* (statute voiding lien waivers as against public policy is not unconstitutionally vague).

(n15)Footnote 77. *See, e.g.,* Robert Kratovil & Harry Q. Rhode, *Mechanics' Lien Waivers and the Requirement of Consideration, 14 DePaul L. Rev. 243 (1965)* (criticizing the general requirement that there be consideration); *Greensburg Dep. Bank v. GGC-Goff Motors, 851 S.W.2d 476, 478 (Ky. 1993)* (holding that a waiver requires consideration unless a third party detrimentally relies on the waiver, in which case the waiver may be implied); *Walker & Laberge Co., Inc. v. First Nat'l Bank, 146 S.E.2d 239 (Va. 1966)* (stating that waivers require consideration). But see *William Aupperle & Sons, Inc. v. First Nat'l Bank & Trust, 329 N.E.2d 458, 462 (Ill. App. Ct. 1975)* (holding that when a waiver pertains only to one of several remedies, and does not modify other remedies, the waiver is valid even if consideration is lacking); *Landvatter Ready Mix, Inc. v. Buckey, 963 S.W.2d 298 (Mo. App. E.D. 1997)* (For waiver of mechanics' lien to be valid, it must be supported by consideration or must induce party receiving waiver to detrimentally change its position in reliance upon waiver); *McCartin McAuliffe Mechanical Contractor, Inc. v. Midwest Gas Storage, Inc., 685 N.E.2d 165, 173 (Ind. App. 1997)* (Mechanics' liens can be waived but the waiver should be supported by consideration in order to be effective).

(n16)Footnote 78. *See, e.g., Cal. Civ. Code § 3264(a)* and *(b)*; *N.Y. Lien Law § 34* (waivers are against public policy and unenforceable unless delivered with or after payment, although agreements to subordinate or release after a lien notice is filed may be valid); Mich. Stat. Ann. § 26.315(155) (waivers as part of a contract for improvements are invalid); *MCK Building Associates, Inc. v. St. Lawrence University, 754 N.Y.S.2d 397 (2003)* (the fact that the subcontractor executed lien waivers did not preclude recovery in quantum meruit for wrongful termination of the subcontract).

(n17)Footnote 79. *Cal. Civ. Code § 3262(3)*; *Tharp v. Keeter/Schaefer Investments, L.P., 943 S.W.2d 811 (Mo. App. 1997)* (As between subcontractor and owner, lien waivers executed by subcontractor waived the right to mechanics' lien for only amounts shown on waivers, not for retainage shown on each invoice, though owner did not make "side letter" acknowledging that it had not made full payment, where each lien waiver showed only amount of payment received, and it was evident that owner understood that consideration recited in each lien waiver was only 90%

of amount owed.).

(n18)Footnote 80. *Cal. Civ. Code § 3262(3)* and *(4)*.

(n19)Footnote 81. California requires specific language that is in the statute. *12 U.S.C. § 1735-5* and *12 U.S.C. § 1735-5.* Michigan requires that the forms in the statute be substantially used. Mich. Stat. Ann. § 26.316(15).

(n20)Footnote 82. *See, e.g., Cal. Civ. Code § 3262(1)* and *(2)*. Conditional releases in California are not good to cover "any [amounts] retained before or after the release date; extras furnished before the release date for which payment has not been received; extras or items furnished under a written change order which has been fully executed by the parties prior to the release date are covered by this release unless specifically reserved by the claimant in this release." Contractors, subcontractors and suppliers need to be sure they aren't owed anything up to the release date when the release purports to cover labor and materials furnished up to the release date. *See Halbert's Lumber, Inc. v. Lucky Stores, Inc., 8 Cal. Rptr. 2d 298 (Cal. App. 1992)* . A lumber company signed a release good for material furnished "through May 19, 1986 only." On May 15, the lumber had been delivered to the job site but the supplier had not yet sent a bill for that lumber. After the supplier sent the bill, it was not paid. The lumber company tried to enforce its mechanics' lien rights but found itself estopped by its own release. The court ruled against the lumber supplier and stated, "A release is intended to be a release, not a glorified receipt." *Id. at 299* . Potential lienors in states other than California who supply "extras" need to exercise similar caution. They will lose their lien claims if they sign conditional releases for work on materials furnished through a certain date, and extras were provided before that date for which they had not yet been paid. *J.A. Jones Constr. Co. v. Super. Ct., 33 Cal. Rptr. 2d 206 (Cal. App. 1994)* . After the Jones case, potential lienors in California are protected by statute as long as the lien release specifically excludes extras. In Florida, a right to claim of lien may not be waived in advance and may be waived only to the extent of labor, services, or materials furnished as of the date of release, or furnished though a certain date. *Fla. Stat. Ann. § 713.20(2)*. *Terry Matthews, Inc. v. C & L Contracting, Inc., 959 F. Supp. 1434 (W.D. Okla. 1997)* (Under Oklahoma law, subcontractor's execution of final release and waiver of lien agreement with general contractor did not prevent subcontractor from establishing validity of its lien and its substantive right to recover from contractor for extra work and materials furnished by subcontractor after execution date of release and waiver of lien agreement).

(n21)Footnote 83. *See supra* § 102.02(a)(2)(iii).

(n22)Footnote 84. *See, e.g., Greensburg Dep. Bank v. GGC-Goff Motors, 851 S.W.2d 476 (Ky. 1993)* .

(n23)Footnote 85. Courts in Kentucky will find an implied subordination waiver if a third party detrimentally relied on an otherwise invalid waiver. *Id. See also* Ellen L. Sostman & Duncan J. Forsyth, *Mechanics' Lien Waivers in Connecticut: The Myths and the Realities, 63 Conn. B.J. 195, 201 (1989).*

(n24)Footnote 86. *See, e.g., Schneider v. Ampliflo Corp., 196 Cal. Rptr. 172 (Cal. App. 1983)* .

(n25)Footnote 87. Arizona holds that when a materialman endorses a check, he "will be deemed to have been paid the money due him, up to the amount of the joint check as long as there is no other agreement between the owner or general contractor and the materialman as to the allocation of the proceeds." *Brown Wholesale Elec. Co. v. Beztak of Scottsdale, Inc., 788 P.2d 73, 76 (Ariz. 1990)* . *Roofing & Sheet Metal Supply Co. of Tulsa, Inc. v. Golzar-Nejad Khalil, Inc., 925 P.2d 55 (Okla. 1996)* (Materialman that, as result of contractor's diversion of materials delivered to construction site, dropped off more materials at site than were ever incorporated in roof repair project was not entitled to lien against property in question, where property owner's payment pursuant to *joint check* before contractor's diversions were discovered was more than sufficient to pay for such materials as were actually used in repair project; property owner could treat materialman's deliveries as if they were made pursuant to single contract, and was not subject to any materialman's lien claim simply because materials were delivered after property owner's payment for materials that were incorporated in roof).

(n26)Footnote 88. Cal. Civ. Code § 3235. *Kruzel v. Leeds Bldg. Prods., Inc., 470 S.E.2d 882 (Ga. 1996)* (At all

times after materialmen filed their claims of lien, owner of real property had unilateral option to post bond and discharge liens).

(n27)Footnote 89. *Id.* §§ 3161, 3162. This procedure also frees construction funds from any possible stop notice claim.

(n28)Footnote 90. *Western Landscape Constr. v. Bank of Am. Nat'l Trust & Sav. Ass'n, 58 Cal. App. 4th 57 (Cal. App. 1997)* (Lien and stop notice waiver form, signed by subcontractors upon receiving progress payments from construction loan lender, specifying that it did not "cover any retention," did not extinguish right of subcontractor to receive as retention the sums owed to subcontractor for work done which were withheld pursuant to contract until completion of all work); *Zalay v. Ace Cabinets of Clearwater, Inc., 700 So. 2d 15 (Fla. App. 1997)* (Construction lien statute, providing that property owner who has properly retained all sums required to be retained, and who has made no improper payments, will be liable to unpaid subcontractors and materialmen only to extent of retainage, is intended to define extent of lien); Property owners' right to set off against retainage, for costs of settling mechanics' liens and of remedying deficiencies in general contractor's performance, had priority over and reduced amounts available for payment to subcontractors and materialmen who had issued notices of personal liability (PLN) pursuant to Indiana PLN statute. *Poindexter Excavating, Inc. v. Downey, 198 B.R. 292 (S.D. Ind. 1996) , aff'd, In re Pearson Constr. Co., 234 F.3d 1273 (7th Cir. 2000)* .

(n29)Footnote 91. Texas law requires the owner of real property on which a contractor is making improvements to retain 10% of the contract price of the improvements or, if there is no contract price, 10% of the reasonable value of the completed work, until 30 days after the contractor's work is completed. Tex. Prop. Code Ann. § 53.101. The mechanics' lien claimant has a lien on the "retainage" if the claimant sends the owner proper notice of the unpaid claim and files a proper lien affidavit within 30 days after completion of the project. *General Air Conditioning Co. v. Third Ward Church of Christ, 426 S.W.2d 541 (Tex. 1968)* (where subcontractor entitled to lien of up to 10% of contract price, even though lien not filed within 30 days after completion).

(n30)Footnote 92. *In re Badger Lines, Inc., 590 N.W.2d 270 (Wis. 1999)* (secret liens are not favored by the courts); *See also, In re Badger Lines, Inc., 199 B.R. 934 (Bkrtcy. E.D. Wis. 1996)* ("Secret" or self-perfecting liens should be the exception.), *rev'd, In re Badger Lines, Inc., 202 F.3d 945 (7th Cir. Wis. 2000)* .

(n31)Footnote 93. *Time when notice is required:* before or during furnishing any labor or material, New Hampshire; before any labor or material is furnished, where the building contract and specifications are not recorded (they usually are recorded), New Jersey; 10 days' notice of amount of labor or material to be furnished before labor or material is furnished, Arkansas; 10 days after furnishing of labor or materials, Oregon; 20 days after furnishing labor or materials, except general laborers, Nevada; within 45 days after furnishing labor or materials if no direct contract with owner, Florida; 60 days after furnishing labor or materials, Connecticut, Indiana, and Washington; 10 days after furnishing labor or material if contract is directly with owner, otherwise 60 days, Wisconsin; 90 days after furnishing labor or material if no direct contract with owner, Massachusetts; if alteration or repair, before furnishing last labor or material, if new work or substantial alteration, 90 days after furnishing last labor or material, Pennsylvania; 120 days after furnishing labor or materials, Rhode Island; 30 days after completion of building, District of Columbia; 10 days before filing lien statement, Colorado.

In Iowa, the contractor who intends to use subcontractors is required by statute to warn the property owner that the subcontractors "may enforce a lien upon the improved property if they are not paid ... even if the parties have no direct contractual relationship with the owner." Iowa Code § 572.13(2). The warning leaves the owner the burden of figuring out who the subcontractors are. *Tadir Air, Inc. v. FGH Realty, Inc., 746 N.Y.S.2d 160 (2002)* (dismissal of the mechanics lien foreclosure action occurred when the defendant was not properly served); *Northeast Restoration Corp. v. K & J Construction Co., 757 N.Y.S.2d 542 (2003)* (a defective notice of lien rendered the lien invalid); *Murdock Construction Management, Inc. v. Eastern Star Missionary Baptist Church, Inc., 766 N.E.2d 759 (Ind. App. 2002)* (a construction manage who provided only supervisory services was not considered a laborer who was entitled to a

mechanics lien).

(n32)Footnote 94. Cal. Civ. Code § 3097(c)(1); Ariz. Rev. Stat. Ann. § 33.992.01; Ohio Rev. Code Ann. § 1311.04.

(n33)Footnote 95. *Griess & Ginder Drywall, Inc. v. Moran, 561 N.W.2d 815 (Iowa 1997)* (Statutory advance notice of lien did not excuse late filing. Purpose behind advance lien notice provisions is to protect homeowners from secret liens arising after owner has paid contractor; implicit in this purpose is notion that homeowners are generally unfamiliar with contractor's use of subcontractors and owner's direct lien responsibility to subcontractors).

(n34)Footnote 96. *See* Annotation, *Sufficiency of Designation of Owner in Notice, Claim, or Statement of Mechanics' Lien, 48 A.L.R.2d 153 (1973); Kerth v. Lake Ozark Construction Industries, Inc., 225 B.R. 686 (E.D. Mo. 1998)* (contractor failed to plead that notice had been given).

(n35)Footnote 97. A lessor may be deemed in a "direct contract" with a tenant's contractor if the lessor knows the tenant has hired a contractor, is allowed by statute to file a notice of non-responsibility to free the lessor's interest in the property from the lien of the tenant's contractor, and fails to file the notice. *See Arthur Gensler, Jr. & Assocs. v. Garry Barrett, Inc., 499 P.2d 503 (Cal. 1972) . See also Dondren v. KK Complex, Ltd., 800 P.2d 719 (Nev. 1990) . Gauzy Excavating & Grading Co. v. Kersten Homes, Inc., 934 S.W.2d 303 (Mo. 1996)* (Statutory mechanics' lien notice is designed to warn inexperienced property owners of danger to them which lurks in mechanics' lien statute); *FCC Constr., Inc. v. Casino Creek Holdings, Ltd., 916 P.2d 1196 (Colo. App. 1996)* (General contractor's statement of mechanics' lien that failed to name each subcontractor and did not list amounts owed to each subcontractor complied with statute requiring notice of lien to include amount due and name of person who furnished material or performed labor and, thus, lien was valid where property owner dealt directly with general contractor and general contractor hired subcontractors); *Pezzuco Construction, Inc. v. Melrose Associates, 764 A.2d 174 (R.I. 2001)* (mechanics' lien lost for failure to fulfill lis pendens filing requirement); *Texas Wood Mill Cabinets, Inc. v. Butter, 117 S.W.3d 98 (Tex. App. 2003)* (purchasers had constructive notice of mechanics' lien).

(n37)Footnote 99. *Id.* § 3097(f). *Morse Bros., Inc. v. Kemp Constr., Inc., 935 P.2d 464 (Or. App. 1997)* (Subcontractor effected delivery of its notice of right to lien on principals of real estate development business when it mailed notice via certified mail, postal carrier delivered notice to correct address despite subcontractor's use of business' old address, and receptionist for company with which business shared offices signed return receipt, as agent for business, even though receptionist did not recall receiving notice and principals claimed they never received notice).

(n38)Footnote 100. *Romak Iron Works v. Prudential Ins. Co. of Am., 163 Cal. Rptr. 869 (Cal. App. 1980)* .

(n39)Footnote 101. Cal. Civ. Code § 3097.1.

(n40)Footnote 102. *Windsor Mills v. Richard B. Smith, Inc., 77 Cal. Rptr. 300 (Cal. App. 1969)* ; *Kim v. JF Enters., 50 Cal. Rptr. 2d 141 (1996)* ; *Gauzy Excavating & Grading Co. v. Kersten Homes, Inc., 934 S.W.2d 303 (Mo. 1996)* (Original contractor must provide notice in writing and notice that comports with words used in mechanics' lien notice statute before filing valid mechanics' lien); *Garage Doors of Indianapolis, Inc. v. Morton, 682 N.E.2d 1296 (Ind. App. 1997)* (When materialman agrees to supply materials and services to contractor rather than to owners of real estate, materialman must furnish written notice to owners of his intention to hold lien as condition precedent to holding mechanics' lien). *But see, Vugterveen Sys., Inc. v. Olde Millpond Corp., 560 N.W.2d 43 (Mich. 1997)* (Conversation between real property owner and drywall subcontractor fulfilled notice-of-furnishing requirement of Construction Lien Act, as conversation supplied all necessary information to owner, including identity of subcontractor, work to be performed, and property to be improved; accordingly, owner could not assert defense to subcontractor's construction lien based on failure to provide notice of furnishing).

(n41)Footnote 103. *Industrial Asphalt, Inc. v. Garrett Corp., 226 Cal. Rptr. 17 (Cal. App. 1986)* . But see *Barr Lumber Co., Inc. v. Old Ivy Homebldrs., Inc., 40 Cal. Rptr. 2d 717, 720 (Cal. App. 1995)* (holding that the procedures for naming parties must be strictly followed and, therefore, notice to the general partner was insufficient notice to lien the assets of the limited partnership). The notice to the owner would not, however, have affected the rights of the construction lender who was not notified. Nonetheless, an argument can be made that the statutory requirement for the contractor to receive a preliminary notice is not satisfied by the owner's knowledge that the subcontractor exists and is on the job.

(n42)Footnote 104. *Jim Morgan Elec. Co. v. Smith, 684 N.E.2d 121 (Ohio Com. Pl. 1996)* (Having made no attempt to determine whether notice of commencement had been filed until after it completed work on project, subcontractor could not raise any technical omission in notice of commencement filed by property owner to excuse its own failure, as prerequisite to preserving its mechanics' lien, to file a notice of furnishing within 21 days after it first performed work on project; subcontractor could not have relied on any such omission).

(n43)Footnote 105. *Eyster v. S.A. Birnbaum Contracting, Inc., 662 N.E.2d 201 (Ind. App. 1996)* .

(n44)Footnote 106. Cal. Civ. Code § 3097(o)(1).

(n45)Footnote 107. *See York Roofing, Inc. v. Adcock, 634 A.2d 39 (Md. 1993)* (holding that tenant was a bona fide purchaser and therefore was free of all mechanics' liens which were not established before equitable title passed despite knowledge by the tenant that subcontractors had not been paid).

(n46)Footnote 108. Const. art. XIX, § 13 states: "If at closing the seller signs an affidavit swearing that no improvements have been made to the property within the past 90 days for which payment has not been made in full, the title policy may not except from coverage any lien or right to lien for services, labor, or material furnished which is imposed by law and not shown by the public record."

CHAPTER 102 MECHANICS' LIENS 1

12-102 Thompson on Real Property, Thomas Editions § 102.03

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 102.03 The Mechanics of the Mechanics' Lien Law.

[Go To Supp]

§ 102.03(a) Who May Secure a Mechanics' Lien? The Range of Answers Among the Several States.

Mechanics' lien statutes give liens against the real estate being improved to persons who supply services (including labor) and materials for the improvement. In about half the states, any person who supplies services or materials is allowed a lien, no matter how far removed the person is from the owner. Other states limit those who can secure a lien to two tiers (prime contractor, subcontractor), three tiers (prime contractor, subcontractor, subcontractor) or four tiers. A few others allow a lien of two tiers plus all materialmen and laborers, and one gives a lien to all who contract with licensed contractors n109

§ 102.03(b) Who May Secure a Mechanics' Lien in California?

In California, a party is entitled to the benefits of the Mechanics' Lien Law if: (1) the party contributes to a work of improvement, (2) at the request of the owner, the owner's actual agent, or the owner's *statutory agent*. Every contractor, subcontractor, architect, builder, or other person having charge of all or any portion of the job, is a *statutory agent* of the owner for purposes of the Mechanics' Lien Law. n110

It has been held that material suppliers who furnish materials to other materialmen are not entitled to mechanics' liens, under the rationale that the material suppliers were not dealing with the owner, the owner's actual agent, or the owner's statutory agent, and therefore were not entitled to lien on the property. n111 Since persons who supply materials to an owner's statutory agent have mechanics' lien rights while persons who supply materials to a material supplier do not, it is critical and often difficult to determine whether a party is a statutory agent or a materialman. Courts have addressed this issue in the context of a material supplier supplying materials to a person who is arguably either a material supplier or a subcontractor (statutory agent).

In analyzing this question, one court has held that the essential feature that distinguishes a subcontractor from a material supplier is that subcontractors construct a definite, substantial part of the work of improvement in accordance with plans and specifications. n112 The distinction between a subcontractor and a material supplier depends on whether the materials furnished are standard items produced from designs already in existence, or items that must be specially

designed and fabricated for the specific construction project. n113 Materials available off the shelf cause the provider to be labelled a material supplier. The material suppliers would *not* be entitled to mechanics' lien rights. n114

Another line of cases has addressed the mechanics' lien rights of engineers and architects on projects that were never built. State courts have divided on whether engineers and architects are entitled to mechanics' liens. Even where they are, they may have nothing to lien if the project they design or engineer is never commenced. n115 On the other hand, the plans and specifications alone can enhance the value of a site if they are used to secure entitlements, construction financing or a sale. California courts granted lien rights to architects and engineers of unbuilt projects, n116 but the legislature substituted a new statute, a Design Professionals Lien, n117 which is more restrictive. n118

State legislatures have extended lien protection to gardeners, n119 interior designers, n120 and land surveyors. n121

Generally, lien laws require contractors and subcontractors to be licensed in order to claim a lien. n122

§ 102.03(c) Contents and Effect of a Mechanics' Lien.

A mechanics' lien is a one page document that must be signed and verified (sworn to) by the claimant. The document must contain:

(1) description of the work done or materials furnished; n123

(2) description of the property where the work was done;

(3) name of the owner, or reputed owner, of the property; n124

(4) name of the person who hired the claimant; and

(5) statement of the balance due. n125

The filing and recording of a mechanics' lien at the county recorder's office places the world on constructive notice of the claim against the property. The mechanics' lien becomes a *cloud* or *encumbrance* on the property's title, making it difficult for the owner to sell, lease, or borrow against the property. Title companies issuing "first lien" protection to lenders whose mortgages are obviously subordinate to mechanics' liens often do so only by extracting promises of indemnity from the developer, owner or general contractor. They are tempted by developers who look financially solid and promise big title insurance premiums. n126

While the construction job is in progress, the title to the job site is clouded regardless of whether any mechanics' liens have been recorded, since everyone who has contributed to the job has the *right* to record a mechanics' lien which would take priority over any interest the landowner could convey.

§ 102.03(d) Time Limits for Filing and Recording the Lien and Foreclosure Action.

In accordance with the policy of the law against clouds on title, there are specific statutory time restrictions associated with the filing and recording of a mechanics' lien and the related foreclosure lawsuit. n127

State statutes require the suit to be reduced to judgment within a certain time after the claim of lien was first filed--or the lien will be lost. n128

Methods of shortening the mechanics' lien filing period vary from state to state.

In California, the time for filing may be shortened if the owner files and records a *notice of completion* n129 or *notice of cessation*. n130 There are specific rules and procedures applicable to each which must be complied with in order to gain their benefits.

In Florida, mechanics' lien claimants may record a notice of lien at any time during construction and up to 90 days after final work is completed. n131 Florida doesn't have a procedure to shorten this filing period. After the recording of the claim of lien, the claim must be served on the owner within 15 days or else become voidable. Once the claim of lien is recorded and notice to the owner has been served within the required time period, the claimant has one year to commence an action in the proper court to enforce the lien. n132 The right of action to enforce the claim of lien is extinguished one year after the claim of lien is recorded. The owner may shorten this one-year period to 60 days by recording a *Notice of Contest of Lien*. n133 Once a mechanics' lien is recorded within the statutory period, the lien claimant has another period of time to file a lawsuit to *foreclose* on the lien. n134 Because mechanics' liens do impair the liquidity of owners, the statutes must be observed meticulously, or the lien right is lost. n135

§ 102.03(e) Foreclosure Suit Must Be Diligently Prosecuted.

To further the policy of the law against clouds on title, courts have made it clear that even if a lien claimant files the foreclosure suit within the statutory period, the claimant must still diligently prosecute it to trial. The strategy of delaying prosecution, in order to keep the property tied up and thereby gain leverage in coercing the owner to pay off the claim, may be risky. One court ordered dismissal of a plaintiff's complaint because the plaintiff, after filing suit within the 90-day period, failed to serve a copy of the summons and complaint on the defendant for four months. n136 The foreclosure action must be brought "in a proper court" which has been held to be the court in the county where the land is located. n137

§ 102.03(f) Lis Pendens.

Immediately after filing a foreclosure action, in many states the lienor needs to record a notice of lis pendens in order to give constructive notice of the pending foreclosure suit to anyone who might purchase or otherwise deal with the property. The effect of recording a notice of lis pendens is to subject all subsequent dealings with the property to the outcome of the foreclosure suit. In some states the recordation of the mechanics' lien is itself sufficient to put all subsequent purchasers on notice and no lis pendens filing is required. n138

§ 102.03(g) Clearing Up the Cloud: The Release Decree.

Many states give the owner ways to remove the cloud of a mechanics' lien from the property's title. n139 New York has statutorily prescribed three ways an owner can extinguish a mechanics' lien and obtain title clear of it: (a) obtaining a release decree against the claimant; n140 (2) filing a motion to discharge for failure to foreclose or prosecute within the statutory period; n141 and (3) filing a bond to take the place of the property as security on the claim. n142

Similarly, in California, an owner can post a *release bond* for one and one-half times the amount of the mechanics' lien claim, executed by a corporate surety company, guaranteeing payment of any sum which the claimant recovers plus the costs of the suit. When the release bond is recorded, the cause of action to foreclose the mechanics' lien is terminated and the owner is entitled to dismissal of the action. The effect is to substitute the liability of the bonding company for a lien on the real property as security for payment of the mechanics' lien claim. n143

§ 102.03(h) Slander of Title/Malicious Prosecution.

The recording of a mechanics' lien claim is absolutely privileged and therefore cannot be the basis of an action for slander of title. n144 But a claimant who records a tardy claim of mechanics' lien risks an action for malicious prosecution. n145

Tarte, 719 A.2d 1158 (Conn. 1998)* ; *In re Payless Cashways, Inc., 230 B.R. 120 (8th Cir. 1999) , aff'd, Amtech Lighting Servs. v. Payless Cashways, Inc., 203 F.3d 1081 (8th Cir. 2000)* .

(n6)Footnote 114. *Piping Specialties Co. v. Kentile, Inc., 40 Cal. Rptr. 537 (Cal. App. 1964)* . To the extent that Cal. Civ. Code § 3110 and these cases have the effect of limiting the California constitutional guarantee of mechanics' liens to materialmen, they may be in violation of the constitutional mandate.

(n7)Footnote 115. *See, e.g., Anthony & Assocs. v. Muller, 598 A.2d 1378 (R.I. 1991)* (Engineering and architectural firms could not bring action under mechanics' lien law for payment of preconstruction services when property owner never commenced construction. Their appropriate remedy was in contract.).

(n8)Footnote 116. *Nolte v. Smith, 11 Cal. Rptr. 261 (Cal. App. 1961)* ; *McDonald v. Filice, 60 Cal. Rptr. 832 (Cal. App. 1967)* ; *In re Morrell, 42 B.R. 973 (Bankr. N.D. Cal. 1984) . See also Design Assocs. v. Welch, 36 Cal. Rptr. 341 (Cal. App. 1964)* (denying lien where work failed to benefit property and approval to proceed was not given).

(n9)Footnote 117. Cal. Civ. Code §§ 3081.1 to 3081.10.

(n10)Footnote 118. On unbuilt projects, certified architects, registered professional engineers, and licensed land surveyors who furnish services based on a written contract with a landowner can lien the land if the project is never commenced, as long as: (1) the constructing landowner still owns the property at the time the lien is recorded; (2) a building permit was issued for the project; (3) the design professional records her lien no later than 90 days after she knows or has reason to know the project isn't going to be commenced; (4) 10 days before recording the lien, she gives the landowner notice, by registered or certified mail, of her intention to record it. The lien can't take priority over a construction loan deed of trust. If the project is commenced, the design professional's right becomes the same as any other mechanics' lien claimant. To the extent the statute denies enforcement of a lien the California Constitution

sanctions, the statute is unconstitutional. *Parsons et al. v. Kern County Employees Ret. Ass'n, 7 Cal. Rptr. 2d 456 (Cal. Ct. App. 1992)* .

(n11)Footnote 119. N.Y. Lien Law § 3.

(n12)Footnote 120. Fla. Stat. Ann. §§ 713.01(14)(f), 713.03.

(n13)Footnote 121. Cal. Civ. Code § 3110.

(n14)Footnote 122. *See, e.g.*, Fla. Stat. Ann. § 713.02. *See also In re Branson Mill, Inc., 120 B.R. 1006 (Bankr. W.D. Mo. 1990)* (architects who were registered out of state could not lien in a state where they were not registered). *But see Cassell Bldg. Corp. v. Rice, 46 Pa. D. & C. 3d 98 (1986)* . *Fla. Stat. Ann. § 713.02* ("no lien shall exist in favor of any contractor, subcontractor, or sub-subcontractor unless such contractor, subcontractor, or sub-subcontractor is licensed as a contractor pursuant to the laws of the jurisdiction within which he is doing business").

(n15)Footnote 123. *Bale v. Barnhart, 798 N.E.2d 750 (Ill. App. 2003)* (lien failed to accurately identify the contract and thus did not satisfy statutory requirements).

(n16)Footnote 124. A mechanics' lien was held invalid when the lien identified the previous owners, not the present ones with whom the mechanic had contracted. "The state of the title of the Property was a matter of record and Boots [the contractor] could have named David Weis [present owner] as a defendant and failed to do so." *In re David Weis Wholesale Jewelers, Inc., 138 B.R. 503, 504 (Bankr. W.D. Pa. 1992)* .

(n17)Footnote 125. Cal. Civ. Code § 3084. Upon recordation of the document, California requires the county recorder, within 10 days, to notify the property owner by mail of the lien. Even if the owner does not receive notice from the county recorder, the lien will still retain its force, effect and priority. Cal. Gov't Code § 27297.5. *Andy Stricker, P. E., v. Taylor, 975 P.2d 930 (Or. App. 1999)* (no recovery beyond contract price allowed); *Basic Modular Facilities, Inc. v. Ehsanipour, 83 Cal. Rptr. 2d 462 (1999)* (excessive mechanics' lien reduced to proper amount); *Structure and Design, Unlimited, Inc. v. Contemporary Concepts Building and Design, Inc., 151 S.W.3d 904 (Mo. App. 2004)* (lien unenforceable because it did not contain a true and just account).

(n18)Footnote 126. *W. P. Barber Lumber Co. v. Celania, 674 N.W.2d 62 (Iowa 2004)* (judgment of foreclosure on a mechanics' lien did not render owner personally liable to lien claimant).

(n19)Footnote 127. Generally, a California mechanics' lien claimant has 90 days after the completion of the work of improvement to record her mechanics' lien. Cal. Civ. Code § 3115. The 90-day time period begins to run from the completion of the work as a whole, in contrast to the completion of the claimant's portion of the job. This is based on the theory that a potential lien claimant can always find out when the 90-day period starts to run by going to the job and observing whether the job has been finished. Regardless, the lien claimant is not required to wait until the job is finished to record the mechanics' lien. The claimant can record it at any time after finishing the claimant's part of the job up until 90 days after the entire work of improvement is completed. *Century Superior Gunite, Inc. v. Rodriguez, 173 Cal. Rptr. 661 (Cal. App. 1961)* . The claimant must provide the owner written notice that a claim of lien has been filed. For a detailed discussion of California's mechanics' lien laws, *see* Craig Penner Bronstein, *Trivial(?) Imperfections: The California Mechanics' Lien Recording Statutes, 27 Loy. L.A. L. Rev. 735 (1994). Marple v. Sorg, 646 N.Y.S.2d 543 (1996)* ; *Controlled Demolition, Inc. v. F.A. Wilhelm Constr. Co., Inc., 84 F.3d 263 (7th Cir. 1996)* (Under Indiana law, no requirement exists that, in order to issue Notice to Commence Suit to holder of mechanics' lien which will start 30-day period in which suit must be filed in order to avoid having lien declared null and void, issuer itself must have recordable interest in property); *Koudmani v. Ogle Enters., Inc., 47 Cal. App. 4th 1650 (1996)* (Section of California Constitution conferring on laborers and materialmen a right to assert mechanics' liens for value of labor and material provided in improvement of real property gave such laborers and materialmen only an inchoate right to a lien, which was meaningless unless it was exercised by recording claim of lien); *Mansion Supply Co. v. Bapat, 679 A.2d 1249 (N.J. Super. Ct. Law Div. 1996)* , *rev'd, Mansion Supply Co., Inc. v. Bapat, 702 A.2d 509 (N.J. Super. 1997)* ; *Jim Morgan*

Elec. Co. v. Smith, 684 N.E.2d 117 (Ohio 1996) (Where subcontractor failed to file its notice of furnishing to protect its lien rights until approximately 48 days after it last performed work on project, none of subcontractor's work was covered by the notice); *United Sav. Ass'n of Texas, F.S.B. v. Jim Carpenter Co., 475 S.E.2d 788 (Va. 1996)* (Ninety-day period for perfecting mechanics' lien begins to run, as against materialman who furnishes materials under a single, continuous contract, from date last item was delivered); *Metromont Materials Corp. v. Cargill, Inc., 473 S.E.2d 498 (Ga. App. 1996)* (failure to file required statutory notice in first lien action precluded later claim); *Precision Walls, Inc. v. Crampton, 196 B.R. 299 (Bankr. E.D.N.C. 1996)* (Under North Carolina mechanics' lien statute, subcontractor was not entitled to secured creditor status for preference purposes based on its contention that it could have perfected its liens had it not received payments); *Riddle v. Newton Crane Serv., Inc., 661 N.E.2d 6 (Ind. App. 1996)* (Filing of notice of intention to hold mechanics' lien by subcontractor is timely if lien is filed within 60 days of date when last work is done by subcontractor); *Pierson D. Construction, Inc. v. Yudell, 863 So. 2d 413 (Fla. App. 2003)* (failure to deliver a contractor's affidavit within 60 days of notice of contest of lien precluded contract or from foreclosing on the lien); *John Holmes Construction, Inc. v. R.A. McKell Excavating, Inc., 101 P.3d 833 (Utah App. 2004)* (the subcontractor had 90 days from the time the labor was furnished in which to file the mechanics' lien).

(n20)Footnote 128. *See, e.g.*, Pa. Stat. Ann. tit. 49, § 1701(d) (Supp. 1992) (five years). Crowded court dockets are no defense. *Brann & Stuart Co. v. Consolidated Sun Ray, Inc., 253 A.2d 105* (Pa.) , *cert. denied, 396 U.S. 840 (1969)* ; Cal. Civ. Code § 3147 (suit must be brought to trial within two years after it is filed); Fla. Stat. Ann. §§ 713.21(3), 713.22(1) (claimants must sue within one year of the date on which the claim was recorded); N.Y. Lien Law § 17 (action to foreclose lien must be brought within one year after notice of the lien has been filed). *But see Mansion Supply Co., Inc. v. Bapat, 679 A.2d 1249 (N.J. Super. 1996)* (Materialman on home construction project, which had filed demand for arbitration in accordance with statutory requirements, had up to 40 additional days to file contractor's lien claim, depending upon when arbitrator reached his decision, and was not bound by 90-day time limit generally applicable, under New Jersey construction lien law, to all contractors other than those performing work on residential construction contracts); *Carey v. Maynard, 603 S.E.2d 515 (Ga. App. 2004)* (the lien was unenforceable because of the lienholder's failure to comply with the statutory notice requirements).

(n21)Footnote 129. Cal. Civ. Code § 3117. After a notice of completion is properly recorded, subcontractors and suppliers have 30 days and original contractors have 60 days to record mechanics' liens, rather than the usual 90 days.

A notice of completion is a document, verified and recorded by the owner, that describes the property, names the prime contractor, and specifies what date the work of improvement was completed. The notice of completion must be recorded within the 10-day window after the job is completed. If it is recorded before completion of the job or 10 days after completion, the notice of completion is ineffective and all mechanics' lien claimants have 90 days from actual completion to record mechanics' liens. *Munger & Munger v. McBratney, 280 P.2d 232 (Cal. App. 1955)* .

When a work of improvement consists of separate residential units, the owner may record a notice of completion as each unit is finished. Therefore, a subdivider may record separate notices of completion covering each house as it is finished, rather than waiting until the entire subdivision is completed. Cal. Civ. Code § 3131. However, it has been held that an apartment house type condominium project is a single project requiring one notice of completion at the end of the entire job. *E.D. McGillicuddy Constr. Co. v. Knoll Recreation Ass'n, 107 Cal. Rptr. 899 (Cal. App. 1973)* .

A developer or subdivider may enter into separate original contracts for the various phases of her project, like grading, framing, plumbing concrete work, etc. If so, the developer is said to be "subbing everything out." Under the terminology of the Mechanics' Lien Law, each of these contracts is a "separate original contract." Accordingly, the developer may record a notice of completion within 10 days after the completion of each separate original contract and the 60-day mechanics' lien period will commence running from the recording of each such notice for persons filing claims under that contract. Cal. Civ. Code § 3117 (Deering 1992). This effectively gives a developer who subcontracts out most of the work an advantage over an owner who employs a prime contractor, so far as cutting off mechanics' liens is concerned. Howard S. Wright Construction Co. v. BBIC Investors, LLC, *38 Cal. Rptr. 3d 769 (2006)* (recording period

for mechanics' lien begins when work is complete, that is, performed, excused or otherwise discharged).

(n22)Footnote 130. If work on a project stops for a continuous period of 60 days, the mechanics' lien period starts to run automatically and every claimant must record a mechanics' lien within 90 days thereafter. Cal. Civ. Code § 3086(c). An owner may shorten this period by filing a *notice of cessation*. Cal. Civ. Code § 3116. It may be recorded any time after work on a project has been stopped and has the same effect on the filing period as a *notice of completion*. The notice of cessation is valid for 30 days and must be signed and verified by the owner, state the date when the cessation occurred, and describe the property. Cal. Civ. Code § 3092.

(n32)Footnote 140. N.Y. Lien Law, art. 2, § 19(1).

(n33)Footnote 141. *Id.* §§ 19(2), 21(2).

(n34)Footnote 142. *Id.* § 19(4).

(n35)Footnote 143. If the plaintiff does not bring suit to foreclose on the lien within 90 days after its recording,

Cal. Civ. Code § 3154 provides another method of clearing title. After the 90-day period, the property owner is entitled to file a petition in the proper court for a *release decree* which effectively removes the cloud from the title. Section 3154 has been held to release the property *from the lien* itself, thereby extinguishing the lien rather than simply releasing the claim of lien. *Maris Mgt. Corp. v. Assured Drywall & Textures, 199 Cal. Rptr. 309, 312 (Cal. App. 1984)* . This is important since it effectively nullifies the former practice of recording successive claims of lien.

Before the adoption of Cal. Civ. Code § 3154 in 1979, if a claimant's mechanics' lien was void because a foreclosure suit had not been filed with 90 days after the lien was recorded, the claimant could always record a new claim of mechanics' lien, provided it was done within the applicable statutory time period (e.g., 90 days after the work of improvement was completed or 30 days after the notice of completion was recorded, if applicable). Under Cal. Civ. Code § 3154, the re-recording is now barred. *Koudmani v. Ogle Enters., Inc., 47 Cal. App. 4th 1650 (Cal. App. 1996)* (Contractor's inchoate right to mechanics' lien against property does not become actual lien encumbering property until claim of lien is recorded).

(n36)Footnote 144. Cal. Civ. Code § 47; *Frank Pisano & Assocs. v. Taggart, 105 Cal. Rptr. 414 (Cal. App. 1972)* .

(n37)Footnote 145. *Sanguinetti & Arnaiz Dev. Co. v. A. Teichert & Sons, 230 Cal. Rptr. 7 (Cal. App. 1986)* (not officially published). *Brown v. Simonis, 205 B.R. 939 (Bankr. S.D. Calif. 1997)* .

CHAPTER 102 MECHANICS' LIENS 1

12-102 Thompson on Real Property, Thomas Editions § 102.04

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 102.04 Priorities.

[Go To Supp]

§ 102.04(a) Defined.

Every lien against real property, whether a mechanics' lien, an attachment lien, or a lien created by a deed of trust, has a specific priority. Liens of higher priority are satisfied in full before liens of lower priority are paid. This hierarchy of priorities is determined by state statute. The statutory scheme as between mechanics' lienholders and mortgagees is intended to protect prior mortgagees from losing their seniority. n146

§ 102.04(b) Parity of Liens Among Mechanics.

All mechanics' liens on the same work of improvement are afforded *equal* priority. If there is not enough money to satisfy all of the mechanics' liens, satisfaction will be pro rata among all the mechanics' lienholders. For example, assume a foundation contractor and a painting contractor have mechanics' liens of $5,000 and $10,000 respectively. Both liens are foreclosed on and the sale produces $9,000. The $9,000 will be distributed pro rata to the two claimants, with the foundation and painting contractors getting $3,000 and $6,000 respectively.

§ 102.04(c) Priorities Impacting the "Relation Back to Visible Commencement" Rule.

In thirty states, including California, mechanics' liens enjoy priority over any encumbrance that attaches after the work of improvement was commenced. n147 For example, suppose O borrows money from L to build a house and gives L a trust deed on the property as security, which L immediately records. Five days later, O hires K to build the house and K begins construction. Under these facts, L's trust deed would have priority over K's mechanics' lien claim since it was recorded before K began construction on the project. Now assume O gives L a trust deed and then hires K who begins to pour the foundation. Later, L records the trust deed. Assuming K did not actually know about the existence of the trust deed when K started work, K's mechanics' lien claim would have priority over the trust deed. Further, in most states the liens of all applicable subcontractors and suppliers would "prime" the trust deed lien since all mechanics' liens share the same priority and take their priority from the commencement of construction, regardless of when they were filed. n148

What makes this even more critical is the fact that the practical utility of a mechanics' lien as a security device often

depends on whether the mechanics' lien has priority over the construction loan deed of trust. For example, suppose O, a builder, wants to buy a piece of land and build apartments. O finds a suitable parcel owned by S, who agrees to sell the land for $200,000; $50,000 down and $150,000 in the form of a promissory note secured by a subordinated second trust deed. O takes the plans and the land purchase agreement to L, a lending institution, and obtains a commitment for a $1,000,000 construction loan. At the close of escrow, O is the owner of the property, which is subject to a first trust deed of $1,000,000 and a second trust deed of $150,000. Building commences and halfway through the project, O becomes unable to pay the persons who have worked on the project. At this point, L has disbursed $500,000 of the construction loan, the building is half completed, 10 contractors and material suppliers have recorded mechanics' liens totaling $200,000, and the property has a value, in its partially completed state, of $500,000.

If the mechanics' liens do not have priority over the trust deeds, the claimants must look to the "equity" in the property to satisfy their claims. Here, L's first trust deed secures the $500,000 distributed during construction, plus construction loan interest, and S's second trust deed is $150,000. Accordingly, there is no equity and the mechanics' liens (as well as the second trust deed) are practically worthless. But if the mechanics' liens had priority over the first and second trust deeds, they would be of great value, because property worth $500,000 would be available to satisfy their claims, which amount to only $200,000. Thus, the foreclosure value of a mechanics' lien usually depends on whether it has priority over the construction deed of trust and any other trust deeds that may be secured by the property.

Further, if the trust deed is determined to have priority over the mechanics' lien claims, the liens are wiped out, or "eliminated," by a non-judicial foreclosure sale. The trust deed holder (or buyer at sale) will take title free of the lien claims. If the mechanics' lien claims are determined to have priority over the trust deed, the buyer at the public auction takes the property free of the trust deed. The proceeds of the sale are divided among the mechanics' lien claimants, and any surplus goes to the trust deed holder.

Lenders want their trust deeds to have first priority over all other encumbrances and therefore seek to obtain a title insurance policy to insure first priority. Before writing a policy, title insurance companies inspect the premises to make certain that no work of improvement has begun. They generally refuse to insure priority of a first trust deed if an inspection of the premises reveals that materials or equipment have been brought to the site, foundation stakes have been set, test holes dug, brush removed, the water meter set, demolition started, or foundations excavated.

The all-or-none outcomes in most mechanics' lien/construction lender priority disputes aren't inevitable in Indiana where a Solomon-esque equitable apportionment rule applies. n149

§ 102.04(d) Defining "Commencement of Work of Improvement."

In the states where the mechanics' lien relates back to the commencement of the work of improvement n150 or site improvement work, n151 it is critical to understand what constitutes "commencement" of a work of improvement. One court has defined it as work or labor on the ground, the effects of which are apparent and easily seen by everybody, such as digging of foundations. n152

This visible commencement requirement serves a dual function. First, it provides the reasonable person with notice that construction has commenced. Second, it provides notice of the particular work of improvement to which the lien is to attach.

The visible commencement requirement presents a problem of definition. It requires an inspection of the site and a personal judgment. Does the staking, measuring, fencing, and digging of test holes on the property constitute

"commencement"? How about clearing, grading, filling or demolition? Or excavation and foundation work? Or delivery of materials to the site?

A review of the cases on what counts as "visible commencement" shows the vagaries of the requirement. Excavation work for the foundation has been held to constitute the commencement of a work of improvement. n153 On the other hand, the mere preparation of the land for the construction of a building has generally been held insufficient. n154 Installing temporary fencing "solely for security and liability purposes" has been held not to "improve the property." n155 Further, the work must be the start of the same improvement for which the lien is claimed. n156 In one case, the court held that moving a steam shovel to the site, digging a test hole, and driving stakes to outline the building did not constitute the commencement of construction. Therefore, the mortgage recorded after the above work commenced was superior to the mechanics' liens. The court explained that the work must be such as would inform an ordinary person that the erection of a building upon the land had started, which this activity did not. n157 In another case, wrecking an existing building and removing it did not constitute an actual and visible beginning of the improvement. n158 However, other cases have recognized that destroying an old building may constitute commencement. n159

One court held that the delivery of the first item of materials to the building site constituted commencement. n160 Other courts have taken the position that placing materials on the site does not constitute commencement. n161

LEXIS: commenc! w/2 work w/2 improvement! w/30 mechanic! lien!

§ 102.04(e) State Priority Rules.

"Visible commencement" is the "relation back" point under most states' mechanics' lien laws. n162 The second most popular time in which mechanics' liens fasten to the property is the date each lienor first furnishes materials or labor to the job. The difficulties of determining the commencement of such individual services or supplies is surely greater than determining the beginning of the entire work of improvement which, as we have seen, can be quite problematic anyway. There is also the possibility that an intervening mortgage will divide the lien claimants into prior and subsequent groups, creating a conflict with mechanics' lien statutes which provide for equal priority among all mechanics' lien claimants. n163

Texas mechanics' liens attach to the improved property at the earliest of three events: (1) the visible commencement of construction of improvements on the site; (2) the delivery of visible material to the relevant site; or (3) the recordation of a written construction contract or sworn affidavit evidencing an oral construction contract. n164 All liens arising on the job "relate back" to the earliest of these three events.

In states which don't allow liens to *relate back* to visible commencement, construction lenders are given a decisive edge in priority disputes with mechanics. In Rhode Island, a mechanics' lien attaches only when the notice of intention to lien is filed. n165 In New York and Vermont, the priority of the lien is determined by the date the lien is actually filed. n166 In Florida and Nebraska a mechanics' lien attaches only when specific notices are recorded. n167

Under Florida's most recently enacted law, the owner/developer must *record* a notice of commencement before the improvement is commenced and post a *Notice of Commencement*. n168 The improvement must be commenced within 90 days thereafter. n169 If a person supplies labor or materials to a construction site in Florida without verifying that the owner has recorded a notice of commencement, the person is at risk of having no effective mechanics' lien rights. In Florida, a construction lender can search the public records to see if there are potential prior lienors before "signing off" on its construction loan and recording its mortgage or deed of trust. The lender doesn't have to guess whether "commencement" has yet begun.

Condominium projects raise special problems under mechanics' lien laws. In a condominium, each unit or apartment is individually owned. The condo owners each retain an undivided interest in common areas serving all the owners (party walls, stairwells, hallways, recreation areas). The owners delegate management to a board which often employs a professional management company to oversee day to day maintenance and repairs. Suppose the landscaping company isn't paid for its work. Does it have a lien against all of the units for the entire bill, or must it apportion the lien among the individual unit owners?

State condominium statutes typically mandate apportionment at the time of foreclosure but not at the time the lien is filed. There is a good reason for this. In the case of condo projects under construction, the declaration of condominium and the accompanying condo map dividing the project into individual units may not be recorded until the project is completed. Therefore, at the time the mechanic has to file a lien or lose it, no individual units may exist, just a project under construction which has not yet been subdivided into legal individual units. If the declaration of condominium and the condo map is filed before the lien is foreclosed, the mechanic may then become obliged by state law to apportion the lien among the individual units. n170

Whether grading is enough to trigger "visible commencement" is often a close call. In California, special rules apply to the mechanics' lien rights of furnishers of "site improvements," defined by statute to include the demolition or removal of improvements, trees, vegetation, the drilling of test holes, grading, filling, street and sidewalk work, and sewer and public utility work. n171 California gives priority to a mechanics' lien for site work over any construction loan, no matter when recorded. n172 There is one exception to this priority--mechanics' liens for site work are not given priority if the loan proceeds are left in the control of the lender under an agreement with the borrower to apply the proceeds to the payment of claims for work done on the job and to withhold any disbursements to the borrower until the lender has received satisfactory evidence that all mechanics' liens have been paid and the time for filing has expired. n173

If site work is contracted for separately, it is deemed to be a separate work of improvement and the commencement of the site work does not constitute commencement of the rest of the project. n174 Suppose O contracts with G to grade O's land. After G finishes his work, O borrows $200,000 from L, secured by a first trust deed which L immediately records. O then contracts with K to build a house on the land. K is unpaid so he records a mechanics' lien on the property. In this situation, the trust deed would have priority over K's mechanics' lien, even though the grading was started before the trust deed was recorded, because the grading was a separate contract and therefore did not constitute the commencement of the house. G's lien, of course, would be superior to L's deed of trust. n175

§ 102.04(f) Optional and Obligatory Advances; Summary of the Law Governing the Priorities of an Intervening Lienor and a Prior Mortgagee's Future Advances. n176

Almost always, construction loan disbursements are "future advances." The lender advances funds as construction progresses, either in stages according to progress or on vouchers from subcontractors and material suppliers.

Even if a deed of trust is recorded before the commencement of construction, it may lose priority for *optional* future advances. On the other hand, the trust deed will continue to secure priority for *obligatory* future advances. A future advance is optional if the lender had no contractual obligation to make it.

Construction advances are usually considered obligatory since most construction loan agreements give the borrower the right to demand disbursements if certain conditions are satisfied. n177 However, if a lender disburses funds when it does not have to, those disbursements may be labeled "optional." n178

Some loans give the lender enormous discretion, providing for advances "at such times and in such amounts as the lender shall determine" and only if "in the judgment of the lender" all the work done to that point has been "good and workmanlike." This sort of discretionary language was cited by one court in characterizing all disbursements under it as optional. n179

Other standard construction loan provisions make future advances potentially optional. The construction loan agreement may give the lender the right to stop funding if the project is over budget, or if mechanics' liens have been filed on the security property. Most construction loans require that, at all times, sufficient funds remain with the lender to complete the project. Most construction loans provide that the developer's failure to pay any laborer or material supplier on the project, *for any reason*, constitutes a default under the loan agreement. On default the lender may refuse to make future disbursements, so a lender who continues to advance funds after a purely technical default could be said to be making optional advances.

The construction lender could lose its lien priority for future advances even though without those funds the project would have come to a grinding halt and the mechanics' lienors would have lost everything as the construction lender foreclosed. For this reason some courts hold that obligatory advances remain obligatory even though there may be nullified conditions precedent to the lender's obligation to disburse funds. As long as the sums are to be advanced in a definite and particular manner, these courts are willing to classify all such disbursements as obligatory despite the lender having elected to overlook the borrower's failure to satisfy the conditions precedent. n180

§ 102.04(g) Only the Sum of the Optional Advance Is Subordinated to the Lien of the Intervening Lienor.

A lender who makes an optional advance to the owner after a mechanics' lien right has arisen against the property loses its lien priority even under a prior recorded deed of trust, but only up to the amount of the optional payment. n181

For example, suppose O borrows $200,000 from L, secured by a trust deed on Blackacre. The trust deed gives L the right to lend an additional $10,000 to O, which will automatically become secured by the existing trust deed. After the trust deed is recorded, O hires K to remodel the house. K performs the remodeling job, is unpaid, and records a mechanics' lien. One week later, O borrows an additional $10,000 from L and gives L a promissory note which provides that the additional advance is secured by the original trust deed. In this scenario, L would have priority as to the $200,000, but the additional advance of $10,000 would be junior to the mechanics' lien claims.

§ 102.04(h) Intervening Lienor Must Give Prior Lienor Notice to Prime Future Advances.

A mortgagee loses priority for optional advances only to those intervening liens of which he had notice at the time he made the advance. But the law is far from clear about what counts as notice. n182 A construction lender may be put on "imputed" or implied actual notice by the fact that the lender is funding the construction. Lenders must realize that mechanics' liens often attach to property under construction. In states which require potential lienors to serve preliminary notice of a mechanics' reservation of the right to perfect a lien, the construction lender who received such notice knows there is the possibility of a lien being filed later. Generally, lenders are not bound by constructive notice of liens recorded after they record their deeds of trust or mortgages. Otherwise, lenders would have to make title searches before each constructive advance or risk losing priority to intervening lienors. It is more efficient for the intervening lienor actually to notify the holder of prior recorded interests. The prudent intervening lienor would order a title search anyway before advancing funds. In this respect, the intervening lienor is like a late-arriving party guest; she is expected to call attention to her late arrival on the scene by ringing the doorbell and not to wait outside on the off-chance that the host will pop out looking for her.

§ 102.04(i) Statutory Attempts to Abolish or Modify the Optional/Obligatory Distinction.

Many states have tackled the optional/obligatory problem by statute, prodded by construction and equity lenders.

Some states redefined notice to mean only actual written notice delivered to the mortgagee. The intervening lienor only gets a lien better than the prior mortgagee's lien for future advances if that prior mortgagee had actual written notice of the intervening lienor's intention to make a loan. States with this type of law include Alaska, Maine, Nebraska, North

Dakota, Ohio, Rhode Island, Tennessee, Vermont, and West Virginia.

In a few states the term "obligatory" has been redefined so that if a lender makes a commitment to fund a borrower but has the right to discontinue funding on the borrower's default, and decides not to invoke that right, the lender's lien priority for future advances is protected anyway. Originally drawn from *U.C.C. § 9-105(i)(k)*, this refinement of the concept of obligatory has been enacted in Illinois, North Carolina, Ohio and Rhode Island. As long as the sums are to be advanced in a definite and particular manner, these courts are willing to classify all such disbursements as obligatory despite the lender having elected to overlook the borrower's failure to satisfy one or more precedent conditions. n183 In these states a construction lender can continue funding a project in default and rest assured that its future advances will have the same lien priority as its original mortgage.

A number of states have eliminated the optional/obligatory distinction entirely. These are Hawaii, Idaho, Kansas, Kentucky, Maryland, New Hampshire, New Jersey, New Mexico, New York, South Carolina, South Dakota, and Washington. Even in these states though, courts must decide when modifications of the original construction loan agreement are so substantial as to treat the modification as a new contract and move back the lender's lien priority. n184

About a dozen states attempt to make sure that in liberalizing their future advance laws they aren't cutting off the borrower's chance to find decent junior secured financing. The borrower is allowed to serve a "cut off" notice on the senior mortgagee which freezes advances at their current levels. When the senior mortgagee gets that cut-off notice from the borrower, it knows its future advances could be subordinated to the lien of an intervening creditor. Thereafter, subsequent lenders can safely take junior mortgages on the property without worrying about the lien priority of senior mortgagees for advances made after the cut-off date. Under most of these statutes the junior lienor is still subject to the accrual of interest on the senior loan, the senior's costs of enforcement and foreclosure, and any advances the senior might make to protect the security property.

Some statutory cut-off notice provisions make advances made after receipt of the notice unsecured. (Alaska, Florida, Maine, Missouri, Nebraska, Nevada, North Carolina, Ohio, and Rhode Island.)

Some statutory cut-off notice provisions allow the senior lender a security interest, but one subordinated to the lien of the intervening creditor. (Montana, Virginia, Tennessee.)

Construction loans are not subject to a cut-off notice in Missouri, Ohio, and Tennessee. The construction lender's advances are subject to a good faith requirement by courts in other states.

§ 102.04(j) How the Abolition of the Optional/Obligatory Distinction Works in Florida.

By statute, Florida is among the states which eliminated the distinction between optional and obligatory advances. n185 The priority of all future advances accrues as if they were made on the date the mortgage was first executed, even if no funds had been disbursed up to that date. The advances are secured only up to the total principal amount of indebtedness specified in the mortgage plus interest and negative amortization. But advances a lender makes for taxes, insurance, or under a construction loan agreement "to enable completion of the contemplated improvement ... are secured by the mortgage ... even though the mortgage ... does not provide for future advances, or the advances ... cause the total indebtedness to exceed the face amount stated in the instrument." n186

Arguably, the Florida law actually helps some unpaid contractors, subcontractors, and suppliers. In states which adhere to the optional/obligatory distinction, a lender risks losing its lien priority after the borrower has committed even the slightest breach of the construction loan agreement. By foreclosing at once, the lender preserves its lien priority for funds later advanced to complete the project. But this can harm the borrower and the borrower's creditors because the lender's foreclosure often wipes out all mechanics' liens junior to it. Foreclosure also means delay, which will probably cause a decline in the value of the project due to vandalism and attrition. Moreover, start-up costs can be significant

following foreclosure. So even though everyone is hurt by foreclosure, including the foreclosing lender and the unpaid mechanics, lenders foreclose to avoid being hung out to dry on the: optional/obligatory distinction. n187

§ 102.04(k) California Partially Eliminated the Optional/Obligatory Distinction.

California lawmakers went part way towards freeing construction lenders of the incentive, created by the optional/obligatory distinction, to foreclose at the first sign of trouble. But only part way.

In California, optional advances have priority over mechanics' liens if the advances themselves are used either for payment of mechanics' liens on the job or for payment of the costs of the work of improvement. n188 For the lender, this limitation is doubly burdensome. The lender must make sure "optional" funds actually get into the right hands to protect its lien priority for those funds. More problematical, the lender can't use "optional" funds to reimburse itself for construction loan interest or loan administration fees. Only advances made up to the amount of the lender's original obligatory commitment, as shown by the trust deed, are given this special priority. Any advances beyond that would lose priority to the mechanics' liens.

> [This law] makes foreclosure the remedy of choice for lenders confronted with a breach of a construction loan agreement. Negotiation and workouts are not viable alternatives because no advance after a breach can be legally compelled; therefore, as an optional advance, lenders must ensure that recorded mechanics' liens are paid first and thereafter ensure that all further advances are used to pay for the costs of construction.
>
> * * *
>
> If the lender is the successful bidder at the foreclosure sale, it will take the property free of all junior--including mechanics'--liens, complete the project using the same funds that it would have been willing to advance to the borrower (if not for Section 3136), and sell the now-completed project with some hope that it will not only recoup the original loan amount plus accrued interest, but that it may turn a profit. If the lender is the unsuccessful bidder at the foreclosure sale, the lender will be paid off in full, and the successful bidder will take the property free of all liens. In either event, this legislative scheme virtually guarantees greater losses to junior lienholders because their liens become more frequently foreclosed by the First Lien than if the construction lender were permitted to make optional advances to pay for the costs of construction and enhance the value of the security held by all lienholders. n189

§ 102.04(l) Protecting the Owner's Equity Against the Claims of a Tenant's Mechanics and Material Suppliers.

NOTICE OF NON-RESPONSIBILITY, James Acret, California Construction Law Manual (4th ed., Shepard's/McGraw-Hill, 1990) at 247-251:

> Improvements Not Ordered by Owner
>
> Suppose O rents its house to T. Without O's knowledge, T contracts with K to paint the house. After the job is finished, K records a mechanics' lien and promptly files suit against both T and O to foreclose the lien. O did not know the house was being painted, and never heard of K until the complaint was served.
>
> The fundamental purpose of the Mechanics' Lien Law is to prevent the owner from being unjustly enriched at the expense of the contractor. [Citation omitted] But it would not be fair to hold O responsible for work he did not ask for and knew nothing about. n190
>
> Suppose T signs a lease with O under which T agrees to have the house painted once a year. T hires

K to paint the house, and K liens the job. This situation is different, because O inserted a provision in the lease that required T to get the painting done. Under these circumstances, should O have his property improved while K goes unpaid?

Suppose K paints O's house at the request of T. O knew nothing about the contract until O saw K working on the job. Should O now be able to sit back, knowing its property is being improved, and not warn K that he denies liability for any mechanics' lien claim?

In theory, strangers to landowners should not be able to impose liability for mechanics' liens on the interests of landowners. But if the improvement is made at the request of the landowner or agent, or at the instigation of the landowner, or if the landowner learns of the work and does not object to the improvement, the interest of the owner is subject to mechanics' lien claims.

California Civil Code § 3094 states that where work is done with the knowledge of the owner, the interest of the owner is subject to mechanics' lien claims unless the owner posts a *notice of non-responsibility* on the property and records a copy at the county recorder's office. The notice must be signed and verified by the owner or agent, and contain a description of the property. n191

Effect of Notice of Non-responsibility

The effect of the notice of non-responsibility, when properly posted and recorded, is to relieve the owner's interest from liability for mechanics' lien claims. But if the owner finds out about the actual performance of construction work and does not post and record the notice, its interest is subject to mechanics' liens. The idea is to let contractors and suppliers know exactly where they stand.

The timing of the notice is important. Like a notice of completion, if a notice of non-responsibility is posted and recorded prematurely, it is invalid. If it is posted and recorded too late, it is invalid. In order to be effective, it must be neither too soon, nor too late, but just right. To be just right, the notice must be posted and recorded within 10 days after the owner "shall have obtained knowledge" of the work. This means knowledge of actual construction, not merely knowledge of plans to construct. There must have been an actual commencement of work on the ground, the effects of which are apparent and easily seen by everyone, such as beginning to dig a foundation.

Suppose O signs a lease with T, its tenant, by the terms of which T must remodel and improve a theater building on O's land. The plans and specifications for the remodel job must be presented to and approved by O. T starts the improvements under the lease, and O immediately posts and records a notice of non-responsibility. Later, T defaults on the lease and O takes possession of the property. Meanwhile, K has recorded a mechanics' lien claim.

That was the situation in *Ott Hardware Co. v. Yost, 159 P.2d 663 (Cal. 1945)* . The court held that the notice of non-responsibility was ineffective. Where a landowner enters into a lease which requires that improvements be made, the owner is actually participating in the improvement project. Under these circumstances, it would not be fair for the owner to pay nothing, and have the property improved at the expense of contractors and suppliers.

The court found a notice of non-responsibility ineffective in *Los Banos Gravel Co. v. Freemen, 130 Cal. Rptr. 180 (Cal. 1976)* , where it labeled the lessors "participating owners." The lease prepared by the owner required the tenant to commence construction of a service station and restaurant within 120 days and surrender the premises at the end of the three-year lease in as good a condition as reasonable use and wear would permit. The owner received as rent a percentage of sales in addition to a minimum monthly payment. The court concluded these factors worked to make the lessors participating owners with the lessee in construction of the improvements.

The result was different, however, in *Baker v. Hubbard, 161 Cal. Rptr. 551 (Cal. 1980)* , where the owner of a 50-year-old building entered into a five-year lease which prohibited the tenant from making any alterations to the premises without the written consent of the owner. Without the owner's knowledge, the tenant undertook to improve the property. The owner first learned of the tenant's activities by observing construction materials on the property. The same day, the owner purchased a Wolcott Notice of Non-responsibility form, prepared it, posted it, and recorded a copy. The form did not contain a space for verification, and neither the posted nor the recorded notice was verified as required by *Cal. Civil Code § 3094*.

In a mechanics' lien foreclosure action, the court held that the notice of non-responsibility was valid despite the lack of verification, as the only purpose of a verification is to assure good faith. Because no prejudice arose from the lack of verification, the notice of non-responsibility was valid. Therefore, the lien was foreclosed only to the extent of the tenant's leasehold interest.

Many states have no provision for the lessor to post and record a notice of non-responsibility. Some state mechanics' lien laws subject the lessor to the tenant's mechanics' liens for "knowingly permitting" the work to be done." n192

In most states without a notice-of-nonresponsibility law, a lessor's interest in real property can't be subjected to a mechanics' lien for work contracted for by a tenant, n193 unless the lessor has actually consented to be liable for the work, n194 benefitted substantially from it, n195 or impliedly consented because the tenant was bound by its lease to undertake the improvements. n196

There must be some other evidence that the lessee was acting as the agent of the lessor in making improvements to the leased premises, however, mere acquiescence or inactive consent by the lessor of the leased premises to the improvements by the lessee is not sufficient to constitute a finding of agency between the lessor and lessee for the purpose of asserting a mechanics' lien against the property interest of the lessor. n197

The lessor's interest might be subject to a lien for improvements ordered by the tenant if the lessor required the work as a condition of the lease, reserved prior approval of the lessor's plans and specs, or supervised the work actively and substantially as the leasehold improvements were installed. Participation could also take the form of the lessor sharing leasehold profits likely to be augmented by the improvement, or the lessor having the right to recapture title to the improvements at the end of the lease where the lease term is shorter than the useful life of the improvements. In all these situations, the lessor risks becoming a "participating owner" subject to liens arising from the tenant's improvements. The unpaid mechanics could file suit against the lessor as a participating owner, under a theory of quasi-contract or unjust enrichment, subject to the lessor's no-privity-of-contract defense. n198 With imminent exposure, lessors are smart to "select a responsible lessee, and then provide careful administration and oversight to make sure that the lessee pays all obligations arising from renovation." n199

(n30)Footnote 175. The owner/builder who is capable of acting as its own general contractor and "subcontractors" everything may be able to treat the work of each subcontractors as a separate work of improvement under some state mechanics' lien statutes. The owner/builder can also shorten the lien filing period under some statutes by filing a separate notice of completion for each contract.

(n31)Footnote 176. This is a summary of Reporters' Note to Restatement (Third) of Property--Security (Mortgages) § 2.3 (Tent. Draft No. 1, 1991).

(n32)Footnote 177. *See, e.g., Swinerton & Walberg Co. v. Union Bank, 101 Cal. Rptr. 665 (Cal. App. 1972)*

(finding that general contractor was entitled to an equitable lien against undisbursed construction loan funds); *Raymond Int'l, Inc. v. Realbanc, Inc., 260 N.W.2d 484 (Neb. 1977)* (holding lien priority of construction mortgage begins when recorded even though advances are made as building progresses); *Strouss v. Simmons, 657 P.2d 1004, 1015-16 (Haw. 1982)* (finding that advancements made for the maintenance and protection of the property have the same priority as underlying construction mortgage, but interest on the amounts disbursed by the construction mortgagee did not retain priority).

(n33)Footnote 178. If there is a dispute as to whether the construction advances are obligatory or optional, the court may look solely to the controlling documents to determine the nature of the advances. For example, in *Home Lumber Company v. Kopfmann Homes, Inc.*, the bank did not lose lien priority merely because it disbursed money without full compliance with the loan agreement conditions since the agreement classified the advances as obligatory. *535 N.W.2d 302, 304-6 (Minn. 1995)* . *Lennar Northeast Partners v. Buice, 49 Cal. App. 4th 1576 (1996)* (When deed of trust secures optional future advances, priority of security for future advances is determined by circumstances when advances are made; if at that time senior lender has notice of other liens, other liens have priority).

(n35)Footnote 180. Alvin L. Arnold & Marshall E. Tracht, *Construction Lending: Waiver of Conditions Does Not Render Advances Optional*, 25 Real Est. L. Rep. 7 (Jan. 1996). *Schalmo Bldrs., Inc. v. Malz, 629 N.E.2d 52 (Ohio 1993)* .

(n36)Footnote 181. *W.P. Fuller & Co. v. McClure, 191 P. 1027 (Cal. App. 1920)* .

(n37)Footnote 182. *Powder Mtn. Painting v. Peregrine Joint Venture, 899 P.2d 279, 281 (Colo. App. 1994)* (holding the mechanics' lien junior to an unrecorded deed of trust since the mechanic had "inquiry notice" of the deed of trust in knowing that the lienor financed the project and held a continuing interest in the property).

(n38)Footnote 183. *Schalmo Bldrs., Inc. v. Malz, 629 N.E.2d 52 (Ohio App. 1993)* . Lender was obligated to advance funds as construction of the buildings progressed and, although such "advancements were conditioned upon the owners' compliance with certain procedures, they were undoubtedly to be advanced in a definite sum and in a particular manner" and, hence, obligatory. *Id. at 55* . Ronald J. Mann, *The First Shall Be Last: A Contextual Argument for Abandoning Temporal Rules of Lien Priority, 75 Tex. L. Rev. 11, 24 (Nov. 1996)* (First-in-Time Priority in Context: Construction Contracting).

(n39)Footnote 184. Section 22 of New York's Mechanics' Lien Law requires a building loan agreement to be recorded, along with any subsequent modifications. New York courts have had to decide what modifications are truly prejudicial to the interests of mechanics' lienors justifying the subordination of the lender's loan to theirs and what modifications don't prejudice mechanics' lienors' rights so greatly as to justify placing them ahead of the construction lender. *See In re Lynch III Props. Corp., 125 B.R. 857 (Bankr. E.D.N.Y. 1991)* .

(n40)Footnote 185. Fla. Stat. Ann. § 697.04; Ford, *Future Advance Financing in Florida, 63 Fla. B.J. 27 (1989).*

(n41)Footnote 186. Fla. Stat. Ann. § 697.04(1)(b). However, if a senior lienor promises a junior it won't make future advances and does, this statute won't give the senior lienor a lien priority for those advances it promised the junior lienor it wouldn't make. *NCNB Nat'l Bank of Florida, N.A. v. Barnett Bank of Tampa, N.A., 560 So. 2d 360 (Fla. Dist. Ct. App. 1990)* . Nor does a senior lienor obtain priority for future advances used to pay off an unrelated civil suit not "necessary for the protection of the security of or title" of the mortgaged property. *United States v. First Nat'l Bank of Crestview, 513 So. 2d 179 (Fla. Dist. Ct. App. 1987)* .

(n42)Footnote 187. *See, e.g., Yost-Linn Lumber Co. v. Williams, 9 P.2d 324 (Cal. App. 1932)* . The loan agreement gave the lender the option of halting all funding if work stopped for 30 days. The lender elected to complete the project without foreclosing. A mechanics' lienor was made prior to the lender's lien to the extent of funds disbursed from the

construction loan after the developer abandoned and the lender took over.

(n43)Footnote 188. Cal. Civ. Code § 3136.

(n44)Footnote 189. Gene Berk, Lien-Tos: Half-Finished Buildings and the Priority of Construction Liens (original paper on file with author, final version printed at *32 Santa Clara L. Rev. 315, 334 (1992)).*

(n45)Footnote 190. Mechanics' liens attach to the work of improvement "if at the commencement of the work or of the furnishing of the materials ... the land belonged to the person who caused such work of improvement to be constructed, but if such person owned less than a fee simple estate ... then only his interest ... is subject to such lien." *Cal. Civ. Code § 3128*. If O leases property to T, and T orders a work of improvement from K, K has the right to lien T's leasehold but not O's fee. That is as it should be since K's work would, in most cases, only enhance the value of T's leasehold. T has no incentive to contract for improvements with value that survives past the end of T's lease term. However, if such work is obligated by the owner to the tenant the landlord may be forced to pay. *See A & W. Electrical Contractors, 576 N.W.2d 112 (Iowa 1998)* .

(n46)Footnote 191. Other states have similar laws. Colo. Rev. Stat. § 38.22-105. A landlord failing to notify the lessee's mechanic may be held to acquiesce in the mechanic's work. *A- 1 Plumbing & Heating Co. v. Thirteenth Street Corp., 616 P.2d 141 (Colo. 1980)* . A discussion of the landlord's liability for work contracted by the tenant appears in Harry D. Miller & Marvin B. Starr, California Real Estate § 26.16 (2d ed. 1990). Mark Sauer, *Ohio's New and Improved Mechanics' Lien Statutes: In Pursuit of Legitimacy, 22 Ohio N. U. L. Rev. 895, 912 (1996);* Annotation, *Landlord's Liability to Third Party for Repairs Authorized by Tenant, 46 A.L.R.5th 1 (1997)* (Complaint, averring that notice of nonresponsibility not given, Section 7(a).); *Miller v. Ogden, 935 P.2d 1205 (Or. 1997)* (lienor seeking to assert construction lien on property was required to establish that owner had knowledge of improvement made upon property prior to completion of construction project and failed to post notice of nonliability as to improvement within three days.); *DCB Constr. Co. v. Cent. City Dev. Co., 940 P.2d 958 (Colo. Ct. App. 1996) , aff'd, DCB Constr. Co. v. Cent. City Dev. Co., 965 P.2d 115 (Colo. 1998)* . (the Lessor gave actual notice to DCB, the contractor, before any work commenced that it would not be liable for any work performed. DCB performed its work placing sole reliance upon the lessee and upon its financial condition. The fact that such reliance was apparently misplaced, and DCB hads not received the consideration promised by the lessee, dids not render the lessor's retention of any benefits bestowed inequitable).

(n47)Footnote 192. *Miller v. Reed, 302 N.E.2d 131 (Ill. App. 1973)* ; Ill. Rev. Stat. ch. 82, para. 1 (*see now* 770 ILCS 60/1).

(n48)Footnote 193. *Roman v. Zuppardo, 407 So. 2d 65 (La. 1981)* ; *Interiors Contr'g, Inc. v. Navalco, 648 P.2d 1382 (Utah 1982)* .

(n49)Footnote 194. *Newton Assocs. v. Northeast Structures, Inc., 546 A.2d 310 (Conn. 1988)* .

(n50)Footnote 195. *Fischback & Moore, Inc. v. Presteel Corp., 398 A.2d 397 (Me. 1979)* (lease granted tenant the right to make the improvements and granted tenant an option to purchase at a price higher than that the landlord had just paid for the property).

An instructive landlord liability case is *Lake Forest, Inc. v. Cirlot Co., 466 So. 2d 61 (La. Ct. App. 1985)* . Lake Forest granted Favret Construction the exclusive right to operate a sand pit for 20 months, paying Lake Forest a percentage of the selling price of the materials removed from the pit. The lease prohibited recordation. Favret subcontracted to fill the pit with water every 30 days and alter the slopes. Favret's subcontractors didn't know Favret was a lessee of Lake Forest. When Favret didn't pay the subcontractors, they filed mechanics' liens on the lessor's interest in the land. The court held Lake Forest's land subject to the subcontractors' liens because Lake Forest shared profits and thus benefitted directly from improvements to the sand pit and the subcontractors had no way to know of Favret's position as lessee because the

lease wasn't recorded.

CHAPTER 102 MECHANICS' LIENS 1

12-102 Thompson on Real Property, Thomas Editions § 102.05

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 102.05 Stop Notices.

Stop notice rights are praised by mechanics' lien claimants and dreaded by construction lenders, construction loan fund holders, and owners. The recording of a stop notice creates a duty on the construction lender to withhold from the borrower, in quasi-trust, undisbursed construction funds in the amount of the mechanics' lien claim. The effect is similar to the levy of a writ of attachment on a bank account and effectively ties up the money until a court can decide who is entitled to be paid. A stop notice against the owner does the same thing, freezing undisbursed construction funds in the owner's hands.

In those states with a stop notice remedy (California and Washington among them) anybody who is entitled to mechanics' lien rights is also entitled to utilize the stop notice.

The following illustrates how valuable stop notice rights can be for a mechanics' lien claimant. Suppose O, a builder, purchased land for $350,000. O paid a $200,000 cash downpayment and the seller took back a purchase money second trust deed for $150,000. Next, O obtained a construction loan for $500,000, which was secured by a first trust deed. All deeds of trust were recorded before any construction commenced. Halfway through construction, O abandoned the project, using some of the construction funds to purchase a Rolls Royce. By that point, the construction lender had disbursed $250,000 of the $500,000 construction loan and the market value of the partially completed house was $400,000. Unpaid subcontractors and material suppliers recorded mechanics' liens of $200,000 against the property.

Since the market value of the property ($400,000) equals the amount of the first and second trust deed ($250,000 + $150,000), the inferior mechanics' liens are practically worthless; however, the mechanics' lien claimants may still get paid if they exercise stop notice rights against the construction fund.

In our example, the lender is still holding $250,000 in undisbursed funds. The mechanics' lien claimants can assert their stop notice rights to recover their $200,000 claim from the undisbursed $250,000 balance of the construction loan fund. If they follow the requisite procedures (which include bonding in many of the states with stop notice laws, including California) the end result will be a judgment ordering the construction lender to pay the stop notice claimant out of the undisbursed balance of the construction loan funds. In this example, the claimants could get paid 100% on the dollar by asserting their stop notice rights, whereas they would have gotten nothing by asserting their mechanics' lien rights.

A subcontractor could submit a large, disputed claim to stop further disbursements of construction funds, forcing the project to a halt and coercing the developer to settle the dispute quickly in order to keep the project alive and on track. For this reason one commentator has argued for the creation of a summary proceeding so that stop notice claims "could be quickly adjudicated." n200 Stop notice laws have been upheld against challenges that they violate the procedural due process rights of borrowers and lenders. n201

The construction lender's idea about how much money is in a construction loan account may not be the same as the courts'. The lender deducts interest and fees "off the top." Courts may insist that stop notice claims take priority over these disbursements. n202 A court could order a lender to "top up" a depleted construction loan fund by restoring the interest and fees it had earlier removed.

Other states have enacted variations on the stop notice theme. In Texas, if a subcontractor or material supplier gives the owner notice of an unpaid claim, this triggers a mechanism which "traps" any funds in the hands of the owner. n203 Once the owner receives proper notice, she should immediately withhold payments otherwise due to the original contractor in the amount necessary to pay the claim for which she received the notice. n204 Although the withholding of funds is discretionary, n205 if the owner has received the required notice and the subcontractor successfully secures a lien, the owner is liable and her property is subject to a lien for any money paid to the original contractor after the owner was authorized to withhold funds. However, the owner is not liable for any amounts paid to the original contractor before she was properly notified to withhold funds. n206

LEXIS: stop notice! w/30 mechanic! lien!

§ 102.05(a) Contents of a Stop Notice.

A stop notice, like a mechanics' lien, is a simple document that must contain seven things:

(1) The name of the claimant.

(2) A notice that the claimant has furnished, or agreed to furnish, work or materials to the project.

(3) A description of the kind of work or materials furnished.

(4) The name of the person who ordered the work or materials.

(5) The total value of all the work or materials agreed to be furnished.

(6) The value of the work and materials already furnished.

(7) A verification. n207

Stop notices usually include the following, although they are not required:

(1) A description of the job site.

(2) The balance due.

(3) A demand that the construction lender hold back enough money from the construction loan funds to

satisfy the demand of the claimant.

A stop notice may be delivered personally or by registered or certified mail. To be effective, a stop notice must be accompanied by a bond that is one and one-quarter times the amount of the claim, protecting the owner, contractor, and fund holder against all damages sustained as a result of the stop notice. n208

§ 102.05(b) Time Limits and Procedure.

Like California mechanics' liens, a preliminary 20-day notice is required. The notice must be given within 20 days after the claimant first furnishes work or materials to the job site. Similarly, if the claimant does not give the notice within the first 20 days, the claimant loses the stop notice rights for all work performed or material furnished more than 20 days before the notice was given. On public works, if the claimant fails to give the preliminary notice within 20 days, all stop notice rights are lost on the job. n209

To be valid, a stop notice must be filed before the expiration of the mechanics' lien period and may be filed before payment is due. n210 Like a mechanics' lien, a stop notice expires unless suit is filed before the expiration of the statute of limitations period. Suit must be filed no later than 90 days after the expiration of the mechanics' lien period and no earlier than 10 days after the service of the stop notice. n211 This differs from the statute of limitation on the filing of a mechanics' lien suit. The latter runs 90 days from the *recording* of the mechanics' lien while the former runs from the *expiration* of the time within which the mechanics' lien could be recorded.

CHAPTER 102 MECHANICS' LIENS 1

12-102 Thompson on Real Property, Thomas Editions § 102.06

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 102.06 Equitable Liens.

§ 102.06(a) In General.

When a construction lender retains funds under a construction loan agreement on a failed project, subcontractors and contractors have sometimes been able to establish an equitable lien to those funds. The rationale for the lien is that the lender, upon foreclosing, receives the benefit of the subcontractor's or contractor's performance and thus enjoys an enhanced security value for its note. The lender should not get the benefit of work and materials not yet paid for. Of course, if the lender had disbursed funds to the owner to pay the subcontractors, and the owner had diverted the money, the construction lender may not have been unjustly enriched. It paid once for the work the subcontractor had done and, if unpaid subcontractors were allowed equitable liens, it may result in the lender having to pay a second time. n212

For a while, California courts actively impressed unspent construction funds with equitable liens in favor of mechanics who had failed to perfect their statutory mechanics' liens or stop-notice rights. n213 Perhaps courts felt the lender should have done more to prevent the diversion of construction loan disbursements in the first place. The California legislature put an end to equitable liens by making statutory rights, the mechanics' lien and stop-notice laws the exclusive remedies for "all persons furnishing labor, services, equipment, or materials unless they had a direct contract with the lender." n214

Some state courts honor equitable liens. n215 A Florida lender foreclosed on condo units, obtained title at its own foreclosure sale, and was sued by an unpaid contractor. The lender could not claim it had already paid the contractor because the sum due the contractor had never been disbursed from the loan fund. Since the contractor's efforts had enhanced the value of the lender's security, and the lender still had the funds that had originally been earmarked for payment to the contractor, the court granted the contractor an equitable lien on the completed condo project and ordered the lender to pay the contractor. n216

An equitable lien could leave the lender short of funds to complete a project. For example, if the owner diverts funds and depletes the construction loan account before the project is finished, the construction lender will be forced to foreclose and come up with additional funds to complete the work. In this situation, seldom will the lender have been unjustly enriched by the contribution made by an unpaid subcontractor. Both the subcontractor and the lender are

victims of the developer's hanky panky. For this reason, courts in Florida, n217 Arizona n218 and the Fourth Circuit U.S. Court of Appeals n219 have denied contractors equitable lien priority over a construction loan when the mortgagee forecloses on an *incomplete* project, unless the lender committed fraud or induced contractors to forego protecting their legal interests.

COMPUTER-ASSISTED RESEARCH

LEXIS: equitable lien! w/30 construction

§ 102.06(b) Title Insurance Protection Against Mechanics' Liens for the Construction Lender.

Statutes in thirteen states absolutely prohibit title insurers from insuring mortgage lenders' legal priority over mechanics' liens under any circumstances. n220 In states where title insurers may insure lenders against mechanics' liens, insurers make every effort to except and exclude all known liens that are superior to the lender's security interest. Construction lenders' title policies exclude from coverage any lien or encumbrance 'not known to the Company, not recorded in public records at the date of policy and any statutory lien for services, labor or materials ... which is contracted for and commenced subsequent to date of policy. n221 When specific liens appear of record, they are listed and excepted from coverage in Schedule B.

Construction lenders may be able to purchase a special endorsement to cover known, existing mechanics' liens and the removal of the above exception. The construction lender might also purchase a special endorsement insuring obligatory future advances, funds the lender had a "legal obligation to disburse contained in a written agreement." n222

When an insurer is taking a risk by insuring against known or potential mechanics' liens, the prudent title insurer will want to limit its exposure as much as possible. It will seek to institute a system for obtaining copies of timely lien waivers and possibly an indemnity from the developer. The insurer will inspect to make sure no work was commenced before the mortgage loan is recorded, and will document that with photos taken immediately before the mortgage is recorded. The insurer will also seek agreements from potential mechanics' lien claimants to subordinate their lien rights to the construction mortgage. Lastly, the insurer will condition its liability on a continuation search of the property's title to make sure no liens have been recorded before each advance is made. The insurer may also want an affidavit from the insured that it has not received any notice of adverse claims and that the loan is not in default as each advance is made. n223

Even when a title insurer agrees to cover a construction lender against mechanics' liens, there are certain defenses to coverage in the form policy. The 2006 ALTA Loan Policy 14 insures the construction lender's lien priority over mechanics' liens subject to various exclusions. One exclusion is for: "Defects, liens, encumbrances, adverse claims or other matters ... created, suffered, assumed or agreed to by the insured claimant."

Suppose a lender stops disbursing funds on a construction loan because it is "out of balance." This means the lender has determined that the money left in the loan fund is not sufficient to complete the job. The lender stops funding or threatens to stop funding, hoping the borrower will personally fund the next few phases of the construction to the point where the money left in the loan account will finish the job. If the borrower does not come up with the cash, the lender has the right to declare the loan in default, assuming it was supposed to remain "in balance." Suppose the loan was never adequate to pay the full costs of construction and the lender knows it. The borrower halts the project when the lender stops disbursing funds. Then when mechanics and suppliers are not paid, they cease working and file liens instead.

Are those liens covered under the Construction Loan Policy 7(b)? Or are they excluded because they were "created, suffered, assumed or agreed to" by the construction lender? Excluded, held the courts in *Bankers Trust Co. v. Transamerica Title Ins.* n224 and *Brown v. St. Paul Title Ins. Corp.* n225 Covered, held the Sixth Circuit in *American*

Sav. & Loan Ass'n v. Lawyers' Title Ins. Corp. n226

CHAPTER 102 MECHANICS' LIENS 1

12-102 Thompson on Real Property, Thomas Editions § 102.07

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 102.07 Conclusion.

We can see that state legislatures are trying to use mechanics' lien laws to balance the rights of unpaid laborers or material suppliers against the clouds on title such liens can create.

Only certain classes of claimants are protected under each state's mechanics' lien law. Some state laws also limit the claimants who can claim liens by trade. If the owner didn't contract directly with the claimant, statutes delineate those whose contracts can lawfully result in the owner's property being subjected to a lien. The claimant must prove that the work or materials went into the liened property.

Generally, mechanics' liens relate back to the same starting date so that foundation diggers aren't inevitably given better claims than roofers. In most states, that date is "visible on-site commencement."

This subjective standard has been replaced in a few states by more objective events, like the filing of a notice of commencement, the recordation of the lien, the filing of the foreclosure action, or obtaining a favorable judgement in the foreclosure action.

Potential mechanics' lienors are usually required to serve notice of their claims on those who may *not* know of them, to avoid "secret" liens. A few states require these "preliminary notices" be recorded. Most states don't require preliminary notices to be recorded, probably on the assumption that if all goes well and everyone is paid, there would be no reason to alarm lenders, cloud owners' titles, and clutter public records prematurely.

Most states do require mechanics' lien claimants who haven't been paid promptly to record their claims of liens within specified, strictly construed time limits. The time for recording is long enough so that the claimant has good reason to be apprehensive about payment before having to record the lien.

All mechanics' lienors are given specified times within which to initiate lawsuits to foreclose on their liens. They must also prosecute their cases expeditiously or risk losing their liens. But even if they lose their lien rights, they still possess common law causes of action for payment, based on their contracts.

Statutes generally give owners a chance to free their property from liens, once recorded, through bonds, release decrees, or other devices. In Maryland, mechanics' liens take priority only when the lienor wins a judgement on the underlying claim. The efficacy of mechanics' lien releases or joint checks, signed by a claimant in duress who hasn't actually been paid, varies from state to state and case to case. But they are universally used as the owner's first line of defense against mechanics' liens.

Construction lenders rely on title insurance for protection against mechanics' liens in states where title insurers aren't prohibited by law from writing such policies. That reliance is sometimes misplaced because mechanics' lien endorsements come with carefully worded exceptions to coverage.

The first step in perfecting or defending a mechanics' lien is to know the current version of your state mechanics' lien law "inside and out." n227

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS

13-103 Thompson on Real Property, Thomas Editions § 103.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 103.01 Introduction to the Chapter.

This chapter describes how federal and state governments affect certain real estate transactions through securities laws and regulations. The chapter identifies those real estate transactions that are subject to securities laws and regulations and then describes in some detail the usual processes required for compliance with those laws and regulations. The most significant of these requirements are imposed by federal law. States have similar and complementary laws and regulations and also impose licensing requirements on those who regularly deal in securities, including securities affecting real estate transactions.

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS

13-103 Thompson on Real Property, Thomas Editions § 103.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 103.02 Brief History of Federal Securities Regulation.

The Transportation Act of 1920 contained provisions for the first permanent federal regulation of securities. n1 That act regulated securities by requiring railroad common carriers to obtain authorization from the Interstate Commerce Commission before issuing their own securities or accepting obligations with respect to securities from any other entity. Because the main objective of the act was to insure adequate rail transportation service, achieving investor protection through securities regulation was only one of several ways to accomplish that objective. n2

In March, 1933, President Franklin D. Roosevelt called for legislation to regulate securities as part of a broader program to restore the nation's financial health. Congress reacted swiftly, and the Securities Act of 1933 became effective in May, 1933. n3 The act reflected a policy decision favoring greater disclosure over heavier direct regulation, and to implement this policy required use of registration statements and prospectuses as prerequisites to offering securities to the public. Under the act, material misrepresentations or omissions in the disclosures required during the registration process or in prospectuses could result in civil liabilities and criminal penalties. The focus of the 1933 securities legislation was the initial distribution or offering of securities in the stream of interstate commerce. As for subsequent trading of such securities, the main regulation was left to the 1934 Securities Exchange Act. n4

Specifically, the Securities Exchange Act of 1934 sought to generate more and better information on behalf of and from those who traded in securities, to regulate the securities markets, and to prevent and remedy fraud in securities trading. To accomplish this, the 1934 Act required stock exchanges to register with the Securities Exchange Commission (SEC), and the SEC was empowered to regulate certain practices of the stock exchanges, as well as to require current information from companies issuing securities, and to enforce margin rules. As the act has been amended in subsequent years, its regulatory reach has extended to a broader group of issuing companies, to associations of securities broker-dealers, to takeover bids, and to processes for clearance and settlement.

The depression decade of the 1930's saw enactment of other major securities acts following the basic acts of 1933 and 1934. These subsequent securities acts included the Public Utilities Holding Company Act of 1935, the Trust Indenture Act of 1939, the Investment Company Act of 1940, and the Investment Advisers Act of 1940. Since that decade there has been virtually no major securities legislation except for the Securities Investors Protection Act of 1970 and portions of the Bankruptcy Reform Act of 1978.

The objective of the Public Utilities Holding Company Act of 1935 n5 was to reform several of the worst accounting and securities manipulation practices in the public utilities companies. By this act, a scheme of direct regulatory intervention was introduced into the public utilities sector; this intervention was a more heavy-handed approach than the less onerous disclosure schemes featured in the earlier securities acts.

The next securities regulation act was the 1939 Trust Indenture Act, n6 which incorporated both regulatory and disclosure approaches. This act requires the appointment of independent trustees to protect the rights of those who purchase securities issued under trust indentures. These securities are often bonds or other debt securities issued by a pension trust or a trust created as security for a bond issue, and they may be issued only under indentures approved or qualified by the SEC; as part of the process of becoming so qualified, the issuers must meet disclosure requirements which are similar to those in other SEC registration procedures.

The regulatory approach, as opposed to the disclosure approach, was also a part of the Investment Company Act of 1940. n7 This act regulated investment companies, which, as defined in the act, are securities issuers that are engaged primarily in the business of investing, reinvesting or trading in securities. Investment companies are also issuers that are in the business of issuing face-amount securities of the installment type or acquiring investment securities having a value of more than 40% of the acquirer's total assets. n8 Following amendments under the Investment Company Amendments Act of 1970 n9 and the Small Business Investment Incentive Act of 1980, n10 the present Investment Company Act seeks to correct abuses in sales practices, to regulate investment advisers' fees, to enable greater shareholder participation in management, to strengthen capital structures, and to improve the quality of available accounting information.

The Investment Advisers Act was also promulgated in 1940. This act requires investment advisers to register with the SEC and identifies certain fraudulent and deceptive practices which are made illegal under the act. n11

The Securities Investor Protection Act of 1970 is intended to provide protection against broker insolvency. n12 To accomplish this, brokers and dealers must pay annual assessments for an investor protection fund, which fund is also backed by the federal government.

Of concurrent authority with the federal regulation of securities and of those who deal in securities are similar securities regulations in each of the states, commonly under the heading "blue sky laws." The major federal enactments recognize the concurrent jurisdiction and usefulness of state regulation, specifically preserving "all other rights and remedies that may exist at law or in equity." n13 Common law rights of action under state law have been recognized in cases involving the federal securities laws and those common law rights are preserved unless explicitly rejected. n14

The Private Securities Litigation Reform Act of 1995, intended to reduce abusive litigation and coercive settlements, imposed new regulations and requirements on private plaintiff class actions. n15

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS

13-103 Thompson on Real Property, Thomas Editions § 103.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 103.03 Real Estate Transactions Subject to Federal Securities Regulation.

§ 103.03(a) Definitions of Securities in Various Real Estate Transactions.

It is important to identify those real estate transactions that involve securities subject to federal or state regulation, but what constitutes a security in a normal financial context might not constitute a security in the context of a real estate transaction. Therefore, the objective of this section is to identify those types of real estate transactions that are likely to involve or generate securities subject to federal or state regulation. Even if it is determined that certain real estate transactions and their securities instruments are subject to such regulation, it may also be ultimately determined that broad exemptions in those federal and state acts apply in the context of real estate transactions and may diminish or even eliminate the need for following the normal registration or other procedures that are part of securities regulation.

The extremely broad definition of "security" in the federal securities acts was intended to encompass the instruments then known to be securities and also to anticipate instruments that might be devised in the future that could also function as securities. A "security" is defined in the 1933 Securities Act as follows:

> The term "security" means any note, stock, treasury stock, bond, debenture, evidence of indebtedness, certificate of interest or participation in any profit-sharing agreement, collateral-trust certificate, preorganization certificate or subscription, transferable share, investment contract, voting-trust certificate, certificate of deposit for a security, fractional undivided interest in oil, gas, or other mineral rights, any put, call, straddle, option or privilege on any security, certificate of deposit, or group or index of securities (including any interest therein or based on the value thereof), or any put, call, straddle, option, or privilege entered into on a national securities exchange relating to foreign currency, or, in general, any interest or instrument commonly known as a "security", or any certificate of interest or participation in, temporary or interim certificate for, receipt for, guarantee of, or warrant or right to subscribe to or purchase, any of the foregoing. n16

In the 1934 Securities Exchange Act is another definition of "security," which differs from the 1933 act definition somewhat in its structure but as a definition is quite equivalent in its coverage:

> The term "security" means any note, stock, treasury stock, bond, debenture, certificate of interest or participation in any profit-sharing agreement or in any oil, gas, or other mineral royalty or lease, any collateral-trust certificate, preorganization certificate or subscription, transferable share, investment contract, voting-trust certificate, certificate of deposit, for a security, any put, call, straddle, option, or privilege on any security, certificate of deposit, or group or index of securities (including any interest therein or based on the value thereof), or any put, call, straddle, option, or privilege entered into on a national securities exchange relating to foreign currency, or in general, any instrument commonly known as a "security"; or any certificate of interest or participation in, temporary or interim certificate for, receipt for, or warrant or right to subscribe to or purchase, any of the foregoing; but shall not include currency or any note, draft, bill of exchange, or banker's acceptance which has a maturity at the time of issuance of not exceeding nine months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited. n17

The U.S. Supreme Court has attempted to minimize the technical differences in wording between the two definitions and has "repeatedly ruled that the definitions ... are virtually identical and will be treated as such in our decisions dealing with the scope of the term." n18

These definitions in some cases go too far and in some cases not far enough. The types of securities listed in the definitions are neither exhaustive nor can they be taken too literally. For instance, not every note is a security. In recognition of this, the preface to both of the securities definitions declares that the listed examples in the definitions apply only in the context of when they are "used in this chapter," and they do not apply if "the context otherwise requires--." n19 With this warning, therefore, it is possible that a particular instrument is not a security even if it fits into one of the types listed in the definitions; or an instrument may be a security even if it does not appear in the listed types of definitions.

More essential to characterizing an instrument or a transaction as a security is the economic substance of the instrument or transaction. No comprehensive definition of the substantive economic characteristics commonly found in a security are given in the federal securities acts, but in examining the judicial interpretations of the various types of securities listed in the definitions, certain characteristics emerge as especially important.

The extended discussion of particular types of securities in the following pages focuses on those types of securities most likely to appear in real estate transactions. These include notes; evidences of indebtedness; stock; oil, gas and other mineral rights; investment contracts; interests in trusts; and equipment trust certificates.

§ 103.03(a)(1) Notes.

Although the federal securities definitions make reference to "any note" as being a security, obviously some types of notes, such as a personal note given as part of a consumer credit transaction, are not treated as securities for purposes of federal securities regulation. n20 Determining which kinds of notes *are* considered securities has occupied much judicial attention. The U.S. Supreme Court decision in *Reves v. Ernst & Young* n21 made an attempt to resolve that question with a four-part test. According to *Reves*, a note is considered a security if it meets each of the four criteria described in the opinion:

1. A note is likely to be considered a security

> if the seller's purpose is to raise money for the general use of a business enterprise or to finance substantial investments and the buyer is interested primarily in the profit the note is expected to generate... n22

The note is probably not a security if it

> is exchanged to facilitate the purchase and sale of a minor asset or consumer good, to correct for the seller's cash-flow difficulties, or to advance some other commercial or consumer purpose ... n23

2. The note is probably a security if the court, in examining the plan for distributing the notes, determines that there is "common trading [in the notes] for speculation or investment." n24

3. A note will probably be considered a security if the public perception of the note is that it is a security. It was significant that the notes in the *Reves* case were advertised as "investments."

4. If "some other factor such as the existence of another regulatory scheme significantly reduces the risk of the instrument, thereby rendering application of the Securities Acts unnecessary," n25 the note will probably not be considered a security subject to federal regulation.

One scholar has pointed out that the criteria are essentially the same as the criteria in *SEC v. W.J. Howey Co.*, n26 a decision the *Reves* court explicitly rejected. n27

§ 103.03(a)(2) Evidences of Indebtedness.

According to the 1933 Securities Act, but not to the 1934 Securities Exchange Act, "any evidence of indebtedness" is included in the definition of a security. As declared by one court, an evidence of indebtedness includes "all contractual obligations to pay in the future for consideration presently received"; n28 as a definition of a security, however, this description is a bit too broad. For instance, a promissory note could be an evidence of indebtedness, just as it could be a note within the definition of the preceding section, but it is probably not the type of interest intended to come under the coverage of the definition of evidence of indebtedness as a security. More likely the term "evidence of indebtedness" refers to instruments such as loan commitments and guarantees n29 and investment certificates. n30 Most loan commitments, however, are obtained from lenders in the ordinary course of business and do not fall under the definition of "evidence of indebtedness" as a security. n31 An evidence of indebtedness that is considered a security subject to federal regulation probably meets the same criteria as for notes in the preceding section.

Because of judicial decisions, the absence of "evidence of indebtedness" from the section of securities definitions in the 1934 Securities Exchange Act probably is not significant. In a decision under the 1934 Act, the U.S. Supreme Court held that a bank certificate of deposit was not a security, but did not rely on the absence of the "evidence of indebtedness" wording from the 1934 Act's definition in reaching its decision. n32 However, several years earlier, a lower federal court had held an open-account loan to be not a security under the 1934 Act, precisely because the "evidence of indebtedness" wording was not in the Act. n33

§ 103.03(a)(3) Stock.

The federal definition of a security includes "any" stock, but not all shares corresponding to interests in an enterprise or entity are considered stock for securities regulation purposes. To be a security within the federal definitions, the stock must be part of an arrangement involving

> an investment of money in a common enterprise with profits to come solely from the efforts of others ... The touchstone is the presence of an investment in a common venture premised on a reasonable expectation of profits to be derived from the entrepreneurial or managerial efforts of others ... By contrast, when a purchaser is motivated by a desire to use or consume the item purchased--to occupy the land or to develop it themselves--... the securities laws do not apply. n34

§ 103.03(a)(4) Oil, Gas and Other Mineral Rights.

Securities regulation may be imposed on "any ... fractional undivided interest in oil, gas, or other mineral rights ... ." n35 Such fractional undivided interests may arise when exploration and production companies, in seeking access to oil, gas and other mineral resources, obtain leasehold interests from owners of the land that they consider most promising. These leaseholds are for the mineral rights only and are given in return for consideration composed of cash, periodic rental payments, and fractional shares, or royalty interests, of the value of minerals actually produced from the leased land. If the lessor, as consideration for the lease, actually obtains an interest in the value of production, that interest is almost always a fractional share of the entire royalty, with the balance of the fraction being held by the lessee, and that is also a fractional share.

Even though the definition of a security includes a "fractional interest," it has been held that the royalty interest held by a landowner/lessor is not a fractional interest, despite the fact that such an interest is itself a fraction of the entire royalty. Only if the royalty right held by the lessor is further divided for sale to others is a "fractional interest" created that is a security subject to federal regulation. Without being so divided, the lessor's royalty right is considered a mere leasehold interest that was not intended for regulation as a security. n36 Sometimes the lessor's royalty interest is not divided, but is repackaged and sold to the public in ways that subject it to securities regulation under some other portion of the definition. For example, a security is formed if royalty rights are offered in the form of contracts for delivery of the mineral production or its value, n37 or if the royalty rights are conveyed to a trustee, who then issues participating trust certificates for beneficial interests in the royalties. n38 Offerings of mineral rights may be considered securities under investment contract criteria. n39

It is perhaps in consideration of these variants that the 1934 Act defines mineral rights as securities in terms even more broad than those of the 1933 Act, referring to "any ... certificate of interest or participation in any profit-sharing agreement or in any oil, gas, or other mineral royalty or lease." n40 This wording is broad enough that the issue of whether a landowner's royalty interest remains whole or has become fractional may be avoided.

§ 103.03(a)(5) Investment Contracts.

"[A]ny ... investment contract" is included in the definitions of a security found in both the 1933 and the 1934 Acts. A judicial definition of investment contract was delivered in a U.S. Supreme Court case involving an offering of units of a citrus grove development, combined with a contract for managing the property and distributing the proceeds to investors. The Court directly addressed the definition of investment contract by declaring that

> an investment contract for purposes of the Securities Act means a contract, transaction or scheme whereby a person invests his money in a common enterprise and is led to expect profits solely from the efforts of the promoter or a third party, it being immaterial whether the shares in the enterprise are evidenced by formal certificates or by nominal interests in the physical assets employed in the enterprise. n41

Before this case, holdings in other courts had treated the various segments of such schemes as separate transactions, one for the sale and the other for the management of real property. This position was rejected in the *Howey* case, whose holding took into account the overall effect of the land sales contract, warranty deed and service contract, concluding that all of these elements in combination constituted an investment contract.

The definition of investment contract in *Howey* has been subsequently refined in other cases, and now it is not required that the consideration for the investment contract consist only of money; n42 a variety of concepts of "common enterprise" have arisen; n43 the profits that are expected by the investors may consist either of income earnings or of capital appreciation; n44 and it is only required that expected profits come "significantly" from the efforts of others, rather than "solely" from the efforts of others. n45 Even under this expanded definition, a mere real estate investment which may possibly produce profit from general increases of land values in the area does not render the investment a

security under the definition of investment contract. Only if the project relies on the efforts of others to develop or manage the property would the scheme include the additional elements required for such an investment to be treated as a security. n46

It is, of course, common for the sale of real or personal property to be coupled with retention and management of the property by the seller, and if that is the case the arrangement is treated as an investment contract or some other form of security. Such schemes that have involved real property have included cemetery plots, n47 orchards and vineyards, n48 other farm land, n49 and mortgage servicing plans. n50 Some of these arrangements have been conducted under the partnership form of business organization. If such a partnership entity is a limited partnership, with limited partners being the passive investors, most likely the investment will be considered a security, especially if the interests are transferable and are offered to the public. n51 However, if some responsibility for managing the enterprise has been delegated to the limited partners, quite likely the arrangement will not be found to be a security. n52

No security is at issue when the transaction consists only of the sale of real property, without management or other agreements attached; the arrangement is still not a security even when the property is transferred in the form of shares, such as stock in a cooperative or in some condominium arrangement. n53 Among those arrangements, however, resort condominiums or time-share properties that are sold with emphasis on profits to be expected from the units being rented out during certain times of the year will be treated as securities. n54 Even the sale of an undeveloped lot will be treated as a security if the sale is clearly for investment rather than for the buyer's use, and if the promotion heavily emphasizes the economic inducements. n55

§ 103.03(a)(6) Interests in Trusts.

Interests in trusts are subject to federal securities regulation, but only in a very narrow sense. Trusts are not even directly mentioned in the federal securities definitions, but in the 1933 Act's definition of a person, a trust is included. n56 In this context trusts are subject to securities regulation only "where the interest or interests of the beneficiary or beneficiaries are evidenced by a security." n57 Thus, federal securities regulation is limited to Massachusetts or business trusts, a form of business organization used when property is conveyed to a trustee who manages it on behalf of beneficiaries, and the interests of the beneficiaries are evidenced by transferable certificates. Therefore, the interests in real estate investment trusts are considered securities, n58 and interests in other forms of real estate enterprises which have the purpose of holding interests in real estate for investment purposes are also considered securities. These forms of enterprise include syndicates, partnerships, joint ventures and other incorporated or unincorporated issuers of securities. n59

§ 103.03(a)(7) Equipment Trust Certificates.

One of the ways in which securities regulation is applied is by identifying certain issuers that are subject to such regulation. An issuer of an equipment trust certificate is subject to federal securities regulation, an issuer meaning "the person by whom the equipment or property is or is to be used." n60 In one important respect the treatment of equipment trust certificates as securities touches upon real estate transactions: a conveyance of land and buildings to a trustee who then issues a long-term lease to the grantor and further issues certificates of shares in the trustee/lessor's interest in equipment to beneficiaries, is considered a security. n61

§ 103.03(b) Real Estate Securities and Transactions Subject to Federal Securities Regulation.

In the preceding sections are discussions of certain instruments that can be considered as securities subject to federal regulation when involved in real estate transactions. From those sections it may be perceived that certain common forms of business organization that are used for acquiring and holding real estate investments are typically subject to federal securities regulation. These forms of business organization or activity include real estate investment trusts (in which parties pool capital in a trust that is formed to invest in real estate), real estate syndications (which is a more general

term for any organization in which members pool funds to invest in real estate), n62 partnerships (which are entities in which participants pool their funds and sometimes their efforts for real estate investments, agreeing to function in various roles such as a general partner or a limited partner), and joint ventures, a general term for enterprises in which participants pool their resources for a single business enterprise without forming either a partnership or a corporation, and in which they have equal rights and duties).

Also apparent from the preceding sections is the perspective that certain types of real estate activities and real estate instruments are subject to securities regulation. These activities or instruments include activities in which a loan is given in return for a note or some other evidence of indebtedness, and the surrounding circumstances reinforce the suggestion that the loan is actually an investment rather than a lending transaction; shares of stock representing an investment in a common enterprise which is based on the investor's expectation of profits resulting from the efforts of others, rather than shares representing interest in real property which is to be used or occupied by the shareholders; any activities in which fractional shares of landowner mineral royalty interests are transferred to others; investment contracts whose provisions call for profits to be realized not only from appreciation in property value but also from agreements by issuers to retain possession of the realty and to develop or manage property; and certain sale/lease-back arrangements by which a trust is a lessor of equipment and issues certificates of interest to the trust beneficiaries.

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS

13-103 Thompson on Real Property, Thomas Editions § 103.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 103.04 How to Comply with Federal Securities Regulation Requirements for Real Estate Transactions.

The federal government's method of securities regulation is to present to potential securities investors full disclosure of accurate information related to the investment. With such full and accurate information, an investor who is also attempting to assess market forces is theoretically able to make more sound investment decisions. In addition to promoting and facilitating full and accurate disclosure, the various federal securities regulations also attempt to prevent or at least make more difficult the kinds of fraudulent conduct which have traditionally occurred in the processes of offering and selling securities. The rather straightforward method for achieving both of these purposes is to require that those who offer securities register the securities with the Securities and Exchange Commission, and, in the course of registration, to submit the information necessary to inform investors and put them in a better position to avoid being victimized by fraudulent conduct. In certain typical situations where avoiding fraudulent conduct or obtaining the full information seems less important for investor protection, broad exemptions from the registration and other securities requirements have developed, which exemptions apply either to particular types of securities or to particular types of securities transactions. Even where an exemption exists, however, some other less onerous filing and information requirements may be imposed and, in any event, the prohibitions against fraud still apply in full force. All of these provisions that apply to securities generally also apply fully to securities that emerge from various real estate transactions. In the sections to follow, various compliance requirements and exemptions provisions are described as they apply to securities generally, and those also apply fully to securities connected with real estate transactions.

§ 103.04(a) Registration of Securities in Real Estate Transactions.

§ 103.04(a)(1) When Registration Is Required.

Once an instrument has been identified as a security according to the various statutory definitions discussed in the preceding paragraphs, as interpreted by various cases, then usually the issuer of that security must go through a process of registration before issuance may occur. Any security that is to be offered or sold through interstate commerce or mail, and which is not otherwise exempt, must be registered. Moreover, any security *may* be registered even if it is not *required* to be registered. n63

The constitutional basis for the 1933 Securities Act is the federal government's power to regulate interstate commerce, and the 1933 Act prohibits using means of interstate commerce, communication, transportation, or the mails to sell,

offer to sell, carry, buy, or offer to buy any security, or even to carry a prospectus relating to a security, unless certain registration requirements have been met. n64 Some of those restrictions are lifted when a registration statement is filed; other restrictions are removed when the filed registration statement becomes effective. Stated in another way, it is unlawful to use interstate means in selling or transporting a security, unless a registration statement for the security is in effect. n65 It is unlawful to use interstate means for transporting a prospectus relating to a security or for transporting a security for sale or delivery after sale, unless that security is accompanied by a prospectus and the prospectus contains certain information required in the registration process. n66 It is unlawful to use interstate means for offering to sell or buy a security, with a prospectus or by some other means, unless a registration statement has been filed and the filing is not at the time subject to a refusal order or a stop order. n67

§ 103.04(a)(2) The Process of Registration: Filing.

To register a security an issuer must file a registration statement in triplicate; one of the three copies must be signed by the

> issuer, its principal executive officer or officers, its principal financial officer, its comptroller or principal accounting officer, and the majority of its board of directors or persons performing similar functions. n68

When the registration statement and the required fee are received by the SEC, the registration statement is deemed filed: n69 the registration fee is an amount equal to 10th of one percent of the maximum proposed offering price of the securities, and not less than $100. n70

Once a registration statement has been filed, it is open to public inspection and copying. n71 After the filing of the registration statement has occurred, issuers may make offers to sell securities, but these offers may be made only by writing and by proper prospectus.

§ 103.04(a)(3) Determination of the Date of Effectiveness.

Once the filing date of the registration statement has been established, the next important date is the effective date. A registration statement (or an amendment to a filed registration statement) becomes effective on the twentieth day after filing, unless the SEC has agreed to an earlier effective date, n72 or has delayed the effective date because of problems with the statement or amendment. n73 From and after the effective date of the registration statement, sales may be made when the sale transaction is accompanied by a proper prospectus. n74

§ 103.04(a)(4) Summary of Information Required for Securities Filings.

The registration statement is in essence a statement of certain required information, and the basic information requirements are described in Schedule A of *15 U.S.C. § 77aa;* if a security issued by a foreign government or one of its political subdivisions is to be registered, the registration statement must meet the information requirements set out in Schedule B of *15 U.S.C. § 77aa.* n75

Schedule A is reproduced in Appendix 1 of this chapter. The main categories of the information required under Schedule A are summarized as follows:

> a. names and addresses of the issuers and all principal parties associated with or having an interest in the issuer;
>
> b. a description of the issuer's business organization and activities and financial structure, including copies of such fundamental instruments as corporate articles and bylaws, trust instruments and partnership agreements;

c. a description of the securities to be offered, including proposed uses for the funds raised, compensation of principal officers, and commissions and other expenses related to the offering;

d. a description of the issuer's contracts and transactions that are not in the ordinary course of business; and

e. a current balance sheet and a current profit and loss statement for the issuer and for any business to be acquired with proceeds from the offering.

§ 103.04(a)(5) Summaries of Forms Most Frequently Used in Securities Filings for Real Estate Transactions.

Because various types of securities or the transactions in which they are used can be substantively quite different, the SEC has promulgated several different registration forms for use with certain types of securities or with transactions in which securities are a part. Those different forms each indicate which items of the Schedule A requirements described above are needed for that particular transaction or security. A list of the registration statement forms currently in use is found in Appendix 2.

Three of those specialized forms relate to real estate transactions and are summarized below to give a general understanding of the scope and depth of information required to register securities connected with real estate transactions. The first form thus described is Form S-1, which is the general form of registration statement; this form is reproduced in Appendix 3. The other form is Form S-11, which is for securities of certain real estate companies; this form is reproduced in Appendix 4. Form S-18, formerly used for securities whose offering price is $7,500,000 or less, was rescinded in 1992. One other specialized form, Form S-10 for registering oil and gas interests or rights, was rescinded in 1982.

§ 103.04(a)(5)(i) Summary of Form S-1, Registration Statement Under the Securities Act of 1933.

Form S-1 is the general registration form used for most transactions and is used if none of the specialized forms are appropriate. The instructions for Form S-1 combine the instructions from two extensive regulations, Regulation C (which contains the general requirements for registration statements) n76 and Regulation S-K (which contains requirements relating to the non-financial portions of registration statements). n77 The provisions of Regulation C are reproduced in Appendix 5 and those of Regulation S-K are contained in *17 C.F.R. Sections 229.10 to .915*.

In part I of Form S-1 the registrant is required to provide the types of information which should appear in the prospectus that is prepared as part of the securities offering. The detailed information requirements for part I are found in various provisions of Regulation S-K, as noted in the parenthetical statements below, and those requirements may be summarized as follows:

a. information for the covers of the prospectus (Reg. S-K Items 501 and 502);

b. information on risk factors connected with the offering (Reg. S-K Item 503);

c. how the proceeds will be used (Reg. S-K Item 504);

d. determining the offering price (Reg. S-K Item 505);

e. dilution by insider purchasing (Reg. S-K Item 506);

f. selling by security holders (Reg. S-K Item 507);

g. the plan of distribution (Reg. S-K Item 508);

h. characteristics of securities being registered (Reg. S-K Item 202);

i. interests held by named experts and counsel (Reg. S-K Item 509);

j. information about the issuer (Reg. S-K Items 101-201, 301-404, 510); and

k. the SEC position on indemnification for Securities Act liabilities (Reg. S-K Item 510).

In Part II of Form S-1 the applicant must provide types of information other than the information that would be required in the prospectus. The details of these requirements are found in various provisions of Regulation S-K, are noted in the parenthetical statements below, and may be summarized as follows:

a. other expenses of issuance and distribution (Reg. S-K Item 511);

b. provisions for indemnifying officers and directors (Reg. S-K Item 702);

c. details of recent sales of unregistered securities (Reg. S-K Item 701);

d. exhibit and financial statement schedules (Reg. S-K Item 601); and

e. a description of the undertakings (Reg. S-K Item 512).

The format, handling and other procedural rules for registration statements generally, including for registrations using Form S-1, are found in Regulation C.

§ 103.04(a)(5)(ii) Summary of Form S-11, for Registration Under the Securities Act of Securities of Certain Real Estate Companies.

One who wishes to register securities that are issued by a real estate investment trust would use Form S-11. Form S-11 would also be used by any other issuer

> whose business is primarily that of acquiring and holding for investment real estate or interests in real estate or interests in other issuers whose business is primarily that of acquiring and holding real estate or interests in real estate for investment. n78

Form S-11 and the general requirements of the 1933 Act are usually not applicable to an investment company that is covered by the Investment Company Act of 1940.

In Part I of Form S-11, the applicant must provide the types of information that are required to appear in the prospectus which is prepared as part of the offering. Details of those requirements are found in various provisions of Regulation S-K and are summarized as follows:

a. information for the covers of the prospectus (Reg. S-K Items 501 and 502);

b. information on the risk factors and earnings ratio (Reg. S-K Item 503);

c. determining the offering price (Reg. S-K Item 505);

d. dilution by insider purchasing (Reg. S-K Item 506);

e. selling by security holders (Reg. S-K Item 507);

f. the plan of distribution (Reg. S-K Item 508);

g. how the proceeds will be used (Reg. S-K Item 504);

h. selected financial data (Reg. S-K Item 301);

i. management's discussion and analysis of the issuer's financial condition and the results of operations (Reg. S-K Item 303);

j. information about the registrant;

k. the registrant's policies with respect to certain debt and securities transactions;

l. the investment policies of the registrant in real estate or real estate interests, in real estate mortgages, in securities of or interests in persons primarily engaged in real estate activities, and in investments in other securities;

m. descriptions of real properties held or to be acquired by registrant;

n. certain operating data pertaining to registrant's real properties;

o. tax treatment of registrant and its security holders;

p. market price of and dividends on the registrant's common equity and related stockholder matters (Reg. S-K Item 201);

q. description of registrant's securities (Reg. S-K Item 202);

r. description of pending legal proceedings involving registrant (Reg. S-K Item 103);

s. security ownership held by management and certain beneficial owners (Reg. S-K Item 403);

t. directors and officers (Reg. S-K Item 401);

u. executive compensation (Reg. S-K Item 402);

v. description of certain insider transactions and relationships (Reg. S-K Item 404);

w. information about the selection, management and custody of the registrant's investments;

x. the registrant's policies with respect to certain insider transactions or activities;

y. limitations of insider liability;

z. financial statements and information (Reg. S-K Items 302 and 304); and

aa. the interests of the named experts and counsel (Reg. S-K Items 302 and 304).

In Part II of Form S-11, the applicant must provide information other than the information that should appear in the prospectus. Details of those requirements are found in various provisions of Regulation S-K and may be summarized as follows:

a. other expenses of issuance and distribution (Reg. S-K Item 511);

b. sales to special parties;

c. recent sales of unregistered securities (Reg. S-K Item 701);

d. provisions for indemnifying officers and directors (Reg. S-K Item 702);

e. how the proceeds from the stock being registered are to be treated;

f. financial statements and exhibits (Reg. S-K Item 601); and

g. undertakings (Reg. S-K Item 512).

Instructions for the format, handling and other procedural rules for this registration statement are drawn from Regulation C and are incorporated into the instructions for this form.

§ 103.04(a)(6) Procedures for Filing; Summary of Post-Filing Requirements.

In addition to the substantive information requirements contained in the instructions for the various registrations statements, additional procedural requirements are imposed by Regulation C. By way of example, the basic requirements of registration statements specify that the statement must be filed in triplicate; n79 at the same time Regulation C requires an additional ten copies to be filed with the Commission for use in the examination process. n80

When the document preparation is complete, then the registration material and the appropriate fee are received by the SEC and the date of this receipt is designated as the filing date. n81 Usually the registration materials are deposited with or sent to the principal office of the SEC in Washington, D.C., n82 but in some cases it is possible to file the materials in a different location. For instance, the registration statement for securities to be offered at a competitive bidding may be filed at any regional or branch office of the SEC. n83

It is very important to determine the precise filing date, because usually the "effective date" of the filing is entirely dependent upon the filing date. In most registrations, the effective date of the registration occurs exactly twenty days after the filing date. The filing date is also important because it is the time at which an issuer may begin the offering processes, n84 and the effective date is important because that marks the time at which an issuer may begin sales and deliveries. n85 The effective dates that routinely arise exactly twenty days after the filing date have been defined as beginning at the expiration of nineteen 24-hour periods following 5:30 p.m. Eastern Time on the date of filing. n86 For applicants using specialized registration forms, occasionally the time of the effective date differs from the usual twenty-day period. For instance, when an applicant uses Form S-8, which is to be used for securities offered to employees under an employee benefit plan, registrations are effective automatically and immediately upon filing. n87

Other circumstances may arise which delay the effective date beyond the period of twenty days after the filing date. When the SEC determines that the registration materials are inaccurate or deficient in some respect, it may issue an order that delays the effective date until those deficiencies have been corrected as required by the order. n88 Before it

issues such an order, the SEC gives notice by personal service to the registrant within ten days of the filing date, and the notice must state that the registrant has opportunity for a hearing within ten days after service. n89 When the applicant amends the registration as required, the SEC then issues a statement or declaration to that effect, and the registration statement, as amended, becomes effective upon the original effective date or upon the date of the declaration, whichever is later. n90

Occasionally, an applicant will submit an amendment to a registration statement without waiting for an SEC notice. Such an amendment is deemed filed when it is actually received by the SEC. n91 The filing of an amendment, either upon the applicant's own initiative or upon SEC order, alters the effective date in one of two ways. If the amendment is filed before the basic registration statement has reached its effective date, the basic registration statement is considered as having been filed on the date when the amendment was filed, and the effective date for the amended registration statement then normally occurs twenty days after the amended filing date. n92 If the amendment is filed after the basic registration statement has already reached its effective date, the amended registration statement is assigned an effective date as determined by the SEC, "having due regard to the public interest and the protection of investors." n93

An applicant may also request that the SEC accelerate the effective date of a registration statement, and in considering such requests the SEC invokes the same standard of due regard to the public interest and protection of investors. n94 It is also possible for an applicant to file an amendment for the express purpose of delaying the effective date of a registration statement. For such an amendment, a filing date is assigned as necessary to achieve the desired delay in the effective date of the registration statement. n95

In addition to the process by which the SEC issues an order resulting in an amendment to registration materials, the SEC may also issue a stop order suspending the effectiveness of the registration statement, any time it finds an omission or misstatement of material fact in the registration materials. n96 It should be remembered that in none of these SEC actions, whether delaying or stopping a registration or permitting a registration to go on to effective date, is the SEC issuing judgments about the merits of the securities, and it must be especially emphasized that acceptance of a filing is not an approval or endorsement of the securities by the SEC. n97

One further post-registration procedural requirement is imposed on issuers. After a registration is accepted and sales have taken place, most issuers must file with the SEC four copies of Form SR, Report of Sales of Securities and Use of Proceeds Therefrom, at the end of the first three-month period following the effective date and every six months thereafter, until the proceeds from the offering have been used or the offering itself has come to a conclusion. n98

§ 103.04(a)(7) Registration Exemptions and Alternative Offering Procedures for Real Estate Transactions.

§ 103.04(a)(7)(i) Overview of Securities Exemptions.

Even if the arrangements of a particular real estate transaction fit the definition of a security, and even if it is determined that the security is subject to the securities regulation provisions of federal or state law, it is still possible that complete compliance with those provisions is not required because of exemptions that may apply. Exemptions may apply either to types of securities or to types of transactions. Of the several types of securities that are exempted from federal registration requirements, most are not of the types that would be involved in real estate transactions. However, among the statutorily exempted securities that could be found in real estate transactions are "certificates issued by a receiver or by a trustee or debtor in possession in a case under Title 11, with approval of the court"; n99 securities exchanged by an issuer exclusively among its existing security holders (except under Title 11); n100 securities exchanged for securities for claims or for property interests (or partly for cash, which exchanges typically take place in reorganizations), if the statutory fairness requirements are met; n101 and securities offered or sold only to persons residing within a single state or territory, and sold by an issuer that is resident in or incorporated and doing business in that particular jurisdiction, which is the so-called intrastate issues exemption. n102 The statutory exemption provisions are found in *15 U.S.C. § 77c*.

The statutory exemptions for certain types of securities exist side by side with certain regulatory exemptions resulting from the statutory authority given to the SEC to prescribe by regulation certain other exemptions for small issues and issues of limited character. In exercise of this regulatory authority, the SEC has fashioned some exemptions that do relate to real estate transactions, including exemptions for qualified issues amounting to no more than $1,500,000; for fractional undivided interests in oil or gas rights that do not exceed $250,000; and for shares of stock offered or sold in the so-called private offerings.

The statutory and regulatory exemptions for securities described in the preceding paragraphs must also be considered in connection with statutory and regulatory exemptions for certain securities transactions. Among the exempt transactions are several that likely pertain to real estate transactions, including transactions by a person who is not an issuer, certain private offerings, large sales of real estate mortgage notes, and sales to accredited investors.

When securities are under any form statutory exemptions, whether the exemption relates to specific securities or to transactions, the issuer does not need to submit information to the SEC and the prospectus or other offering literature may have form and content as chosen by the issuer. n103 If, on the other hand, the exemption is a regulatory rather than a statutory exemption, then the issuer must observe any auxiliary or additional requirements or substitute requirements imposed by the regulation. n104

In the following paragraphs the principal securities exemptions and transactions exemptions that may pertain to real estate transactions are discussed.

§ 103.04(a)(7)(ii) Intrastate Issues as Exempted Securities.

The Securities Act of 1933 is generally not applied to issues that are offered or sold to residents in a single state or territory, if the issuer is a person resident or doing business or is a corporation doing business in that state or territory. n105 This exemption is a statutory exemption and is described in the statutory language as an exemption for securities based on the statute. In practice, the exemption ostensibly for securities is treated as an exemption for transactions, because what is being exempted is the manner of offering and selling the securities rather than the securities themselves. Also there is a regulatory counterpart to this statutory exemption, found in Rule 147, under which the SEC attempts to provide some objective criteria for determining eligibility for the statutory exemption. n106 However, the statutory exemption may stand on its own and if the issuer does not meet the specific criteria for eligibility found in the regulations of Rule 147, the issuer may still qualify directly under the terms of the statute. n107 An example of how the regulation's requirements go beyond the statute is the explicit and objective standard in Rule 147 that an issuer must have derived at least 80% of its gross revenues from the state or territory in which it seeks to place its intrastate issue under the exemption. n108 As already stated, if an issuer does not meet the 80% standard, it may still qualify for the intrastate exemption directly under the terms of the statute. Rule 147 also requires that resales be deferred until nine months after the initial offering closes, n109 and that in the written materials describing the offer, the resale limitation must be disclosed. n110 Rule 147 is available from the SEC on the Internet at http://www.sec.gov.

§ 103.04(a)(7)(iii) Small Issues as Exempted Securities (Regulation A).

Another statutory exemption pertaining to securities is the SEC authority to exempt from registration certain offerings that are so small in value or otherwise limited in character that the need for protection of investors and the public generally does not require invoking registration provisions. n111 The statutory limit for this exemption is for offerings that do not exceed $5,000,000 in value.

The SEC has also promulgated regulations explaining the details of this exemption, known as Regulation A, n112 and under this regulation, despite the $5,000,000 statutory ceiling, the small issue exemption is extended only to issues of not more than $1,500,000 in value. n113 Regulation A is available from the SEC on the Internet at http://www.sec.gov.

An issuer who has its principal place of business operations in the U.S. or Canada is eligible for exemption under Regulation A. n114 The exemption may not be available if the principals or underwriters of the issuer have had their securities-related conduct questioned during the recent past under proceedings that are still pending or that were resolved unfavorably. n115 When an offering seeks to invoke the exemption of Regulation A, a statement based on Form 1-A must be prepared and submitted. n116 Form 1-A is available from the SEC on the Internet at http://www.sec.gov. That statement must usually be filed in the SEC regional office in the region where the issuer conducts its principal business operations. n117 That offering statement should also include the offering circular (copies of which are also to be provided to offerees or purchasers,) and the content of that offering circular as it pertains to offers and sales is also prescribed by regulation. n118 This exemption is an example of a statutory exemption that is rather severely altered by regulation, and, even if the exemption applies, there are additional filing requirements imposed by regulation. Reports of sales under this exemption must be submitted within 30 days after the end of each six-month period following the date of the original offering. n119

§ 103.04(a)(7)(iv) Certain Fractional Oil and Gas Issues as Exempted Securities (Regulation B).

Another exemption that may apply to real estate transactions is for certain fractional undivided interests in oil and gas rights offered for less than $250,000. n120 This exemption is described in Regulation B, and Regulation B is available from the SEC on the Internet at http://www.sec.gov.

The fractional undivided interests in oil and gas rights to which this exemption may apply include landowners' royalty interests, overriding royalty interests, working interests, participating interests, and certain oil and gas payments, such as rights to participate in the proceeds from the sale of oil and gas. n121 This exemption is not available to an offeror if the offeror or one of its principals has committed securities violations or other similar misconduct during the past several years. n122

Although this exemption excuses the offeror from meeting the standard securities requirements, the regulation imposes alternative requirements. For instance, at least ten days before the offering begins, the offeror must file with the SEC four copies of an offering sheet that contains certain information required in the regulation. The required information is contained on one of four schedules and the schedule to be used is determined by the type of interest being offered. n123 The appropriate offering sheet must be in the hands of the offeree before an offer may be made and at least 48 hours before a sale may be made. n124 Not more than 15 days after an offering sheet has expired, the offeror must file a report on Form 1-G (Report of Sales of Oil or Gas Interests Pursuant to Regulation B); n125 and not more than three months after the conclusion of the offering, the offeror must file with the SEC and send to securities purchasers a report on Form 3-G (Report of Results of Offering). n126 Form 3-G is available from the SEC on the Internet at http://www.sec.gov.

§ 103.04(a)(7)(v) Transactions by a Non-Issuer as Exempted Transactions.

When securities transactions are conducted by a non-issuer, a statutory exemption is available, n127 but an accompanying regulation, Rule 144, n128 sets out additional criteria and standards for determining if the exemption is available. Where the basic statutory exemption extends to "transactions by any person other than an issuer, underwriter, or dealer," but such transactions are not normally part of a securities distribution, Rule 144 imposes conditions designed to insure that those who invoke the exemption are not underwriters engaged in a distribution. The text of Rule 144 is available from the SEC on the Internet at http://www.sec.gov.

Rule 144 is not exclusive and does not limit the availability of any other applicable exemption. n129 If an offeror does not meet the qualifications of Rule 144, some other regulatory or even statutory exemption may be available.

Because the exemptions under Rule 144 usually pertain to transactions conducted by a non-issuer, the exemption may be conditioned upon making adequate disclosure about the issuer. One way in which adequate disclosure occurs is if the issuer is subject to the reporting requirements imposed by the 1934 Securities Exchange Act, and has been so for at least 90 days prior to the transaction to be exempted. Normally, the Rule 144 public disclosure standards are met by the Securities Exchange Act reporting requirements. n130 For issuers, Rule 144 may be satisfied if the offeror has made available to the public certain information equivalent to that specified in Rule 15c2-11(a)(5). n131 The provisions of Rule 15c2-11 is available from the SEC on the Internet at http://www.sec.gov.

For the exemption based on Rule 144, several important restrictions are in effect. For instance, under this exemption, the securities to be sold must have been held for at least two years before sale; n132 Rule 144 imposes various limitations on the amount of securities that may be sold during any three-month period; n133 and Rule 144 also imposes limitations on the manner of sale. n134 The offeror also must file an additional form if the sales as proposed during any three-month period are in excess of either 500 shares or an aggregate sale price of $10,000. Form 144 (Notice of Proposed Sale of Securities Pursuant to Rule 144) n135 is available from the SEC on the Internet at http://www.sec.gov.

§ 103.04(a)(7)(vi) Private Offerings as Exempted Transactions (Regulation D).

An important statutory exemption for transactions is found in the language of the 1933 Securities Act stating that the act "shall not apply to ... transactions by an issuer not involving any public offering." n136 The SEC has taken a rather narrow view of this exemption, permitting it to apply to banks in their lending activities and to larger institutional purchasers of securities and to small groups of related persons in business ventures. But if the exemption is sought for transactions involving speculative securities offered to uninformed and unrelated persons, the SEC believes that the exemption will not serve the public policies of the securities statutes. Therefore, the private offering exemption would not apply when a company offers shares of its stock to certain "key" employees. n137

Even though this exemption is a statutory exemption, the SEC has again promulgated regulations to accompany the statute, which regulations are more detailed and specific in defining how to qualify for and apply the exemption. The principal regulation accompanying this statutory exemption for private offerings is Regulation D, which is available from the SEC on the Internet at http://www.sec.gov. n138 Under the terms of Regulation D, the exemption for private offerings applies to issuers only and is an exemption for transactions rather than for securities. n139

In Regulation D are found general rules applied to all of the types of exemptions authorized under Regulation D (which general requirements are contained in Rule 502), n140 and Regulation D also has specific rules for different types of private offering exemptions. A common question is whether separate sales are a part of the same offering. In an offering consisting of separate sales, it must be determined whether integration rules apply so that the eligibility of the entire

offering can be determined. n141 Regulation D also has rules determining whether particular purchasers are entitled to receive information about the securities before they make the purchase. No such requirement is applied to sales to certain sophisticated investors, but the requirement of prior information must be met for certain other investors. n142 In general, for an offering governed by the provisions of Regulation D, it is not permissible to advertise for or recruit purchasers from among the general public. n143

Sales that do occur under the exemption of Regulation D are usually considered restricted, which means that those securities may be resold only after certain time and registration requirements have been met. n144 As with other exempt offerings, a post-offering reporting requirement is imposed; within 15 days after the first sale, an issuer must file with the SEC a completed Form D (Notice of Sales of Securities Pursuant to Regulation D or Section 4(6)). The provisions of Form D is available from the SEC on the Internet at http://www.sec.gov.

One of the important specific exemptions under Regulation D is found in Rule 504, n145 which rule eliminates registration requirements for offerings of $1,000,000 or less. Another important exemption is in Rule 505, which exempts offerings of up to $5,000,000 if not more than 35 investors are participating in the offering. n146 Even this restriction of the number of the purchasers is removed, under the exemption described in Rule 506, if all the purchasers are either accredited investors or are otherwise experienced and knowledgeable in finance and business matters. n147

Any of these exemptions in Regulation D can apply to real estate transactions. For example, an undivided equity interest in a land syndication or a participation interest in a real estate joint venture may qualify as a private offering, but only if the issuers comply fully with the applicable information and disclosure requirements. n148 An intrastate issue exemption has also been applied to a partnership interest in a real estate syndicate which was formed to complete the purchase and lease back of a motel. n149

§ 103.04(a)(7)(vii) Large Sales of Real Estate Mortgage Notes as Exempted Transactions.

One exemption that applies exclusively to real estate transactions is the statutory exemption for large sales of real estate mortgage notes. n150 This extremely detailed exemption was added to the Securities Act in 1975 and, because of its detail, no further elaboration has been provided through additional rules or regulations. The exemption applies to promissory notes secured by first liens on real estate with structures, and to "participation interests in such notes." n151 If the notes are originated by a federally supervised or state supervised financial institution, then no sale may be for less than $250,000, the purchase price must be paid in cash not more than 60 days after the time of sale, and each purchaser must buy for its own account only, in order for the exemption to apply. n152 Notes originated by a federally approved mortgagee are subject to the same restrictions and also may be sold to a qualified lending institution or insurance company. n153 These parties may also enter into non-assignable contracts to buy or sell such notes, and, if the contract will be completed within two years, such transactions are also exempt. If the restrictions as to qualified purchasers and sellers and as to minimum value of purchases are observed, certain resales of these notes are also permitted under this exemption.

§ 103.04(a)(7)(viii) Sales to Accredited Investors as Exempted Transactions.

A new exemption for offers or sales to accredited investors was added in 1980 by the Small Business Issuers' Simplification Act. n154 This statutory exemption has no accompanying rules or regulations, although the statute does require the issuer to file "such notice with the Commission as the Commission shall prescribe." n155 Of particular interest in this statutory exemption is a legislative definition of "accredited investor," which refers to several kinds of institutional investors and to

> any person who, on the basis of such factors as financial sophistication, net worth, knowledge and experience in financial matters, or amount of assets under management qualifies as an accredited investor under rules and regulations which the Commission shall prescribe. n156

It is also required under this exemption that the offering not exceed $5,000,000 in value and that there be no advertising or public solicitation in connection with the transaction. n157

§ 103.04(b) Penalties for Violations of Registration Requirements.

§ 103.04(b)(1) False Registration Statements.

A registration statement is materially false if it omits a material fact or contains an untrue statement of a material fact, and any person whose acquisition of a security is affected by such false information has a cause of action against various parties responsible for the false registration statement. Such defendants are jointly and severally liable and include any persons who signed the statement, directors or partners of the issuer (either present or named with consent as future directors or partners), and underwriters. To some of these parties certain defenses are available that invoke the defendant's good faith and reasonable belief in the truth of the contents of the statements. n158 However, these defenses based on good faith are not available to the issuer. Actions brought for such claims must be commenced within one year after the omission or untrue statement is discovered or should have been discovered, but in no event more than three years after the public offering occurred. n159

Damages, will vary according to whether the original purchaser still holds the security or has transferred it, but the damages may not exceed the original public offering price of the security plus appropriate costs and fees. n160

§ 103.04(b)(2) Violations in Registration and Prospectus Procedures; Penalties for False Prospectus Contents and False Communications.

Apart from the consequences of making offerings with false registration statements, civil liability can result from offering or selling a security in violation of any of the Securities Act requirements for registration and for the prospectus. n161 Liability can also result from engaging in such offering or selling of a security when using any interstate means of transportation or communication. n162 In those actions, only the party who actually offers or sells a security is liable to the purchaser, and, if the purchaser knew that the items were false and misleading, or knew that the defendant did not know that, the defendant will escape liability.

If the successful plaintiff in such an action still owns the security, the measure of damages is the purchase price plus interest, less income received. n163

If the legal action is based upon such false communications and false prospectus contents, it must be commenced within one year after the omission or untrue statement was discovered or should have been discovered, but in no event more than three years after the public offering was conducted. n164 Actions based on registration and prospectus violations must be brought within one year after the violation occurs and, if discovery is delayed, in no event more than three years after the sale. n165

§ 103.04(b)(3) Summary of the Anti-Fraud Provisions.

Making offerings of securities that are subject to the requirements of federal regulations is often expensive and time consuming, and issuers and offerors often make great efforts to fit within one of the exemptions. Even then, alternative reporting requirements are often imposed by the exemptions. Whether securities being offered are fully subject to regulation or are exempt from some of the requirements, certain restrictions imposed by federal law apply in every case, inasmuch as all securities offerings under the jurisdiction of federal securities regulation must comply with the anti-fraud provisions of the securities acts. n166

In general, these anti-fraud provisions prohibit any person or entity connected with the offer or sale of securities from using any means or instruments to defraud, from obtaining money or property by misrepresenting or omitting statements of material fact, or from engaging in any activity that operates as a fraud or deceit, especially if the mails or other means of interstate commerce or communication are used. n167 The anti-fraud provisions also impose requirements on those who endorse securities for consideration, principally that the endorsers must disclose the fact and the amount of consideration they receive for their endorsements. n168

Noted below are summary descriptions of illegal activities in connection with securities that have commonly been held to violate the anti-fraud provisions:

a. churning or artificially stimulating activity in accounts to create the impression of an active market; n169

b. cross-trading for profit between customer accounts by a broker which does not disclose its true capacity; n170

c. selling stock in a fictitious corporation; n171

d. delivering forged imitations of genuine bonds; n172

e. use of advantageous inside information; n173

f. receiving kickbacks on sales induced by failure to disclose; n174

g. excessive or unfair mark-ups and mark-downs; n175

h. manipulating market price through artificial stimulation of apparent market activity; n176

i. making purported payments to purported investors to create the impression of return on investments; n177

j. selling unregistered securities as part of a public offering; n178

k. operating as issuers corporations whose purpose is to promote pyramid sales and multi-level distributorship plans, in which recruitment rather than sales is the function; n179

l. use of misleading sales literature; n180

m. depriving the issuer of part of the proceeds from sales of the offering; n181

n. inadequate supervision of salesmen or others involved in the offering; n182 and

o. withholding shares from the public offering in order to make private sales. n183

Also prohibited by the anti-fraud provisions of the securities acts are certain failures to disclose material items of information. Examples of material matters whose non-disclosure has been held fraudulent include insolvency of the broker, n184 financial information about the issuer, n185 accurate information about the market history of the stock, n186 information about a merger involving the issuer, n187 purchaser charges, n188 seller's profits or commissions, n189 authorship of published materials, n190 changes in investment advice, n191 and failure to disclose that sales were

short sales (in which the seller does not yet actually own or possess the securities at the time of sale). n192

Even a party not directly participating in fraudulent conduct can still be held liable or guilty for various forms of conduct which are deemed to be aiding and abetting the fraudulent conduct. Aiding and abetting was established when it was shown that the fraud that was committed by the primary party was known of by the alleged aider and abetter, who also gave substantial assistance to the commission of the fraud. n193 Sometimes attorneys and accountants who advise issuers are charged as aiders and abetters. n194

By way of summary, it can be said that fraud as an element in offering or selling any security is prohibited by statute whenever the mails or interstate transportation or communication are used. The statute prohibits the persons from using "any device, scheme, or artifice to defraud," from obtaining "money or property by means of any untrue statement of a material fact or any omission to state a material fact," or from engaging "in any transaction, practice, or course of business which operates or would operate as a fraud or deceit upon the purchaser." n195

As mentioned before, the anti-fraud provisions apply to all securities under federal jurisdiction, including those that are exempted, n196 and they also apply to the transactional exemptions. n197

Enforcement of the anti-fraud provisions is typically accomplished by the SEC, which usually seeks either injunctive measures or refers the matter to the Attorney General for criminal prosecution. n198 The federal anti-fraud provisions make no specific reference to a private right of action and federal courts continue to be divided over whether a private right of action should be implied in the federal law. n199

Likewise, there is no indication in the statute whether a private right of action to enforce anti-fraud provisions applies in state courts, which are given concurrent jurisdiction over enforcement actions under the 1933 Securities Act. n200

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS

13-103 Thompson on Real Property, Thomas Editions § 103.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 103.05 Federal Regulation of Broker-Dealers in Real Estate Transactions.

§ 103.05(a) Definitions of Securities Brokers and Dealers.

In addition to regulation of securities and securities transactions and issuers of securities, much attention in the federal securities regulation scheme has focused on brokers and dealers, who usually are the parties offering and selling the securities to the general public. Regulation of securities at point of sale is believed to be very effective in eliminating much potential misconduct from securities transactions.

In the context of federal securities regulation, a broker means "any person engaged in the business of effecting transactions in securities for the account of others, but does not include a bank." n201 The closely related concept of dealer

> means any person engaged in the business of buying and selling securities for his own account, through a broker or otherwise, but does not include a bank, or any person insofar as he buys or sells securities for his own account, either individually or in some fiduciary capacity, but not as part of a regular business. n202

§ 103.05(b) Securities Brokers and Dealers Who Are Subject to Federal Securities Registration Requirements.

When brokers and dealers are determined to be subject to federal jurisdiction, the basic requirement they must meet is to be registered according to the provisions of the 1934 Securities Exchange Act. This requirement applies to all brokers and dealers which are not natural persons; or who are natural persons not associated with a broker or dealer which is not a natural person (unless the natural person broker or dealer deals exclusively in intrastate commerce and does not use any facility of a national securities exchange); and who use the mails or any means or instrumentality of interstate commerce "to effect any transactions in, or to induce or attempt to induce the purchase or sale of, any security" (except exempt securities, commercial paper, bankers' acceptances, or commercial bills). n203

Some brokers and dealers are exempt from registration requirements because they are conducting business entirely within a state or in connection with certain banking instruments, but the SEC has also created other exemptions by rule

or order. n204 Under this rulemaking authority of the SEC, brokers and dealers enjoy exemptions for transactions in corporate shares that represent ownership in corporate apartment developments, n205 for transactions involving certain foreign brokers and dealers, n206 for transactions involving foreign underwriters participating in certain foreign distributions of American securities, n207 for transactions in variable annuities of insurance companies, n208 and for certain transactions by certain non-bank lenders under Small Business Administration approval, if the lender does not engage in transactions for its own account; n209 brokers and dealers also enjoy a limited exemption for a natural person who is a member of a national securities exchange, extending for 45 days after termination of the person's association with a registered broker or dealer. n210

§ 103.05(c) Summary of Federal Registration Requirements for Securities Brokers and Dealers.

§ 103.05(c)(1) How to Apply for Registration.

At the federal level, a broker or dealer registers by filing with the SEC an application on Form BD, which is available from the SEC on the Internet at http://www.sec.gov. n211 Form BD requires that information be provided about the organizational and financial relationships and background of the broker or dealer. The regulation governing this registration further requires that

> Every broker or dealer who files an application for registration on Form BD ... shall file with such application, in duplicate original, a statement of financial condition as of a date within 30 days of the date in which such statement is filed ... n212

In the statement of financial condition, the instructions for which is available from the SEC on the Internet at http://www.sec.gov, the applicant is required to disclose the nature and amount of assets and liabilities and net worth of the applicant, a computation of the applicant's aggregate indebtedness and net capital, which computation shall comply with the requirements pertaining to the applicant's business or national securities exchange. n213

Within 45 days after submission of the application, the SEC must act, n214 and upon SEC action the application will either be granted or will become the subject of further administrative proceedings to determine whether it should be denied. The applicant is given notice and opportunity for hearing in connection with these proceedings. Any proceedings for denial must be concluded within 120 days from when the application was submitted. n215

Occasionally a broker or dealer will apply to register another broker or dealer which is yet to be formed or organized and is to be a successor to the applicant, or in fact a successor will have already been formed or organized shortly after the application is submitted. If the SEC grants the application of the initial registrant, but in the meantime, a successor has been created, the successor may accept the original registration as its own any time within 45 days after the application was granted. n216 If that occurs, then the successor must file its own follow-up application on Form BD within 30 days after becoming the successor, and then the SEC may take up to an additional 45 days to act on the application from the successor. Under some circumstances, when an unregistered broker-dealer succeeds a registered broker-dealer and then files a Form BD, the later application will be deemed filed by the predecessor. n217 In that case, the original registration could remain in effect for a successor for up to 75 days. n218

If the successor-applicant is a fiduciary such as an executor, a trustee in bankruptcy, or a receiver, that fiduciary has 30 days after beginning the fiduciary duties in which to file a Form BD with the required fiduciary information. n219

§ 103.05(c)(2) Conduct That May Lead to Denial, Suspension or Revocation of Applications and Registrations.

A broker-dealer application for registration can be denied on the same grounds that the registration itself can be denied, n220 and those prohibitions also apply to "persons associated" with the broker or dealer. Those associated persons are statutorily defined as follows:

> the term "person associated with a broker or dealer" or "associated person of a broker or dealer" means any partner, officer, director, or branch manager of such broker or dealer (or any person occupying a similar status or performing similar functions), any person directly or indirectly controlling, controlled by, or under common control with such broker or dealer, or any employee of such broker or dealer, except that any person associated with a broker or dealer whose functions are solely clerical or ministerial shall not be included in the meaning of such term for purposes of section 78o(b) of this title (other than paragraph (6) thereof). n221

Of course, it is statutorily prohibited to engage in activities as a broker or dealer without being registered. n222 It is also prohibited wilfully to make a false or misleading statement in an application for registration. The SEC can deny an application for registration or revoke the registration itself when it discovers such false and misleading statements. Revocations have been considered or issued for misleading statements about the location of the applicant's principal office, n223 about whether the applicant engaged in prior sales in a prohibited capacity, n224 about a prior broker-dealer relationship and conducting transactions while insolvent, n225 about a listing of capital, n226 about a balance sheet, n227 and about prior violations of restrictions on aggregate indebtedness. n228

Revocations in other cases have been issued for failure to disclose. Failures to disclose resulting in revocation or denials of registration have included failures to disclose change of address, n229 a connection with another firm, n230 a control person, n231 registrant's majority stockholder as a beneficial owner, n232 a felony conviction, n233 an injunction, n234 and a prior broker-dealer relationship. n235

Revocations have also occurred for the following types of misconduct: artificially depressing and otherwise manipulating the price of a security or the market; n236 conducting boiler-room operations; n237 converting customer funds and securities; n238 failure to carry out a customer order; n239 failure to file annual reports of financial condition; n240 felony conviction of one of the registrant's controlling persons; n241 fraudulent conduct in offering and selling securities; n242 fraudulent intent to distribute securities; n243 issuing a false offering circular; n244 making false entries in books and records; n245 making an improper inducement to purchase; n246 misapplying sales proceeds; n247 misrepresentations in making sales; n248 not disclosing client costs; n249 not disclosing market control; n250 paying operating expenses with client funds; n251 previous SEC restrictions and conditions not met; n252 record-keeping violations; n253 selling registrant's own stock improperly; n254 selling unregistered securities; n255 and violating capital requirements. n256

Registration suspensions or denials have been issued for the following offenses: failure to control employees' unlawful activities; n257 failure to file an address change; n258 failure to file an annual report; n259 failure to notify the SEC of a license suspension by the state; n260 and selling unregistered securities. n261

§ 103.05(d) Rules for Brokers and Dealers to Ensure Financial Responsibility and Customer Protection.

In addition to the prohibitions against broker-dealer conduct involving deceit, other regulations attempt to insure the financial reliability of brokers and dealers, again as a means of protection for investors. Thus the SEC imposes certain rules regarding financial responsibility and customer protection, which rules apply to brokers and dealers who use the mail or some other instrumentality in interstate commerce in offering and selling securities. n262 These rules, which are very technical, impose requirements relating to net capital, n263 the conditions under which a broker or dealer may use a customer's free credit balance, n264 and certain other standards for customer protection, including physical control of securities and maintenance of reserves when using customer funds. n265 These rules are available from the SEC on the Internet at http://www.sec.gov.

§ 103.05(e) Standards of Conduct for Securities Brokers and Dealers.

Brokers and dealers are also subject to the prohibitions contained in the 1934 Securities Exchange Act, which require them to refrain from offering or selling securities "by means of any manipulative, deceptive, or other fraudulent device or contrivance," n266 or from engaging "in any fraudulent, deceptive, or manipulative act or practice," or from making any fictitious quotation. n267

The regulations issued in connection with these statutory prohibitions describe several practices deemed to be "manipulative, deceptive, or other fraudulent device or contrivance." These prohibited practices include any act which operates as a fraud or deceit upon any person, untrue and omitted statements of material fact, misrepresentations as to the merits of a security implied by broker-dealer registration, failure to disclose issuer control of a broker-dealer, failure to disclose a broker-dealer's interest in the distribution, excessive purchases from discretionary accounts, representations that sales are at "market" prices without substantiating grounds or information, and use of pro forma balance sheets. n268

Other fraudulent practices are identified in Commission rules, and these include hypothecation of customers' securities under certain circumstances, accepting a sale price for securities without prompt transmission of the consideration, not making certain disclosures when extending credit in connection with a securities transaction, and distributing securities without complying with prospectus requirements. n269 Other rules prohibit fictitious quotes n270 and certain sales practices for low-priced securities. n271

§ 103.05(f) Rules for Transactions in Penny Stocks.

The Penny Stock Reform Act of 1990 prohibits brokers and dealers from using the mails or other means of interstate commerce for offering or selling penny stock unless they have complied with the requirements of the Act. The requirements, to be supplemented by regulation, went into effect on April 15, 1992. n272

§ 103.05(g) The Requirement of Securities Association Membership.

Even after the procedures and burdens of registration are met, a broker or dealer must comply with substantial reporting requirements and is also required either to become a member of a registered securities association or to conduct business solely on a national securities exchange of which it is a member. n273 The National Association of Securities Dealers, Inc. (NASD) is the only securities association which has been registered by the SEC.

If a broker or dealer wishes to join the NASD, the applicant must first send to the NASD district office where the broker or dealer has its principal place of business:

(1) a copy of its current submission to the Securities and Exchange Commission pursuant to Rule 15b1-2(c) under the Securities Exchange Act of 1934;

(2) its most recent trial balance, balance sheet, supporting schedules and computation of net capital;

(3) a copy of its written supervisory procedures;

(4) a list of all officers, directors, general partners, employees and other persons who will be associated with it at the time of admission to membership;

(5) a description of business activities in which it intends to engage; and

(6) such other relevant information and documents as may be requested by the District Office. n274

After the information has been submitted, a representative of the applicant must appear in a "pre-membership interview," where the following points will be covered:

(1) the nature, adequacy, source and permanence of applicant's capital and its arrangements for additional capital should a business need arise;

(2) the applicant's proposed recordkeeping system;

(3) the applicant's proposed internal procedures, including compliance procedures;

(4) the applicant's familiarity with applicable NASD rules and federal securities laws;

(5) the applicant's capability to properly conduct the type of business intended in view of the:

A. number, experience and qualifications of the persons to be associated with it at the time of its admission to membership;

B. its planned facilities;

C. arrangements, if any, with banks, clearing corporations and others, to assist it in the conduct of its securities business;

D. supervisory personnel, methods and procedures; and

(6) other factors relevant to the scope and operation of its business. n275

After the interview, the district office has 30 days to notify the applicant whether the application has been granted, denied, or granted subject to restrictions or modifications. If the applicant is dissatisfied, a review can be conducted by the district committee, if a request is made within fifteen days after notification of the determination from the district office. At this review the applicant may appear and present evidence and the review committee's determination shall be made "within a reasonable time." n276

A further review is available if the district committee determination is not acceptable to the applicant, and this review is conducted by the Board of Governors if the applicant so requests within fifteen days after being notified of the committee's determination. The Board of Governors also is required to issue its determination within a reasonable time. n277

The determination from the Board of Governors is subject to review by the Securities and Exchange Commission upon request by the applicant. n278 Each of these review proceedings is an independent review and is not bound to any extent by any of the preceding actions.

As part of the membership application process for the broker or dealer, certain persons within the brokership or dealership are required to be registered. Among these persons are all of the broker's or dealer's principals, n279 all representatives, n280 and all assistant representatives for order processing. n281 Each of these persons must pass a qualification examination which is appropriate to the duties and category of registration for such person.

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS

13-103 Thompson on Real Property, Thomas Editions § 103.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 103.06 The Complementary Relationship of Federal and State Securities Regulation of Real Estate Transactions.

At the federal level, the major attempt to correct abuses in the quality of securities offered and sold throughout the country was embodied in the 1933 Securities Act, which imposed various disclosure and registration requirements in securities issues. The Securities Exchange Act of 1934, on the other hand, attempted to correct abuses in the securities distribution process by imposing registration and qualification requirements on parties who were involved in offering or selling securities.

The respective requirements of the 1933 and 1934 federal securities acts impact independently. Thus instruments may need to be registered as securities under the 1933 Act, and the broker-dealers who distribute those interests may also need to be registered under the 1934 Act. Or a securities issue that is exempt from registration under the 1933 Act may nevertheless need to be distributed by broker-dealers who are required to be registered under the 1934 Act. Together the basic federal securities laws are intended to enhance the integrity of the offering and the integrity of the distribution process.

Most states also adhere to this view, requiring--in addition to registration of securities issues--the registration of broker-dealers, as well as of persons who function as salespersons or agents for broker-dealers. n282 All states impose some regulation of securities activities through their so-called "blue sky" laws, and federal legislators have refrained from pre-empting the securities regulation field for federal regulation alone. Certainly the intrastate exemption for securities offered and sold solely within a single jurisdiction is at least partially justified on the assumption that such offerings are subject to statute regulation. Another example of federal accommodation of state regulation is the federal recognition of concurrent state court jurisdiction over Securities Act enforcement actions. n283 State law influence may also be seen in those cases "borrowing" state blue sky law limitation of actions periods to apply in federal securities law enforcement cases. n284

The combined effect of federal and state regulation of the securities distribution processes is to enhance the reliability and fairness of securities distribution in the following ways:

1. Persons who play a role in the distribution process should be registered and found to be qualified.

2. Standards of suitability are established for prospective investors.

3. Restrictions are imposed on how long an offer can be outstanding, how investment commitments may be made, and how payments may be made.

4. Limits are established for imposing and administering the offering expenses and marketing fees.

5. Impermissible marketing techniques are identified.

6. Certain reports, to both investors and regulatory officials, are required.

FOOTNOTES:

(n1)Footnote 282. Section 201(a) of the *Uniform Securities Act* requires that broker-dealers and sales representatives be licensed or exempted from licensing, and Section 201(b) prohibits a broker-dealer from employing a salesperson who is not licensed or not exempt. *State v. 7040 Colonial Road Associates Co., 671 N.Y.S.2d 938 (1998)* (state attorney general action against a cooperative corporation which had offered real estate securities for sale); *State v. Metz, 671 N.Y.S.2d 79 (1998)* (action to enjoin sponsors from selling real estate securities in connection with sponsorship of cooperative apartment complexes).

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS

13-103 Thompson on Real Property, Thomas Editions § 103.07

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 103.07 State Regulation of Securities Broker-Dealers in Real Estate Transactions.

The activities of states in regulating securities and those who distribute them fall with particular force in real estate transactions. Added to the substantial federal registration requirements for broker-dealers are separate sets of broker-dealer registration requirements in each of the states. Broker-dealers who engage in securities transactions are subject to these diverse regulations, and one type of real estate transaction--the real estate "syndicate" or "syndication"--has been peculiarly susceptible to the jurisdiction of state and federal securities regulation. In the remainder of this section, the concept of syndicates will be explained and their characteristics as securities clarified. In the following section will be found summaries of state licensing and registration requirements for securities broker-dealers, including those whose securities activities extend to real estate transactions, such as syndications.

§ 103.07(a) "Syndicate" and "Syndication" Defined.

The terms "syndicate" and "syndication" have achieved such broad and common usage that modern writers on the subject seem to not bother to define them. Yet the very breadth of the terms makes it difficult for the novice to comprehend the precise concepts embodied in the words. In its most basic and simplistic sense, a syndicate is a group, and a syndication is the activity undertaken by the group, an activity which for purposes of this chapter is a real estate investment. The terms "syndicate" and "syndication" are, however, used interchangeably, so that the definition is stated by one author as follows:

> A syndication is, most simply, a group form of investment. This group has been assembled to make and operate a specific business enterprise. The most common form of group real estate investment is the limited partnership. Ownership interests in limited partnerships are considered to be securities. Securities must be registered pursuant to Section 5(a) of the Securities Act of 1933 unless an exemption from registration is available. n285

While a syndicate may be formed for many purposes other than real estate investments, in fact, almost all syndications are real estate syndications. The real estate syndication has been specifically defined as "a direct participation investment in an entity organized to engage in the acquisition, development and/or management and sale of real estate." n286 Embodied in this definitional statement are several unique characteristics of real estate syndicates and syndications:

1. They are "direct participation" investments, and the syndicate (although not the individual investors) frequently participates actively in the development and management of the property. The direct control over the investment is an attractive feature of a syndication.

2. Investment benefits--cash flow, equity accrual, and tax advantages, if any--accrue directly to the syndicate participants, rather than being subject to the rather more fickle fluctuations of the securities markets.

3. The group aspect of the syndicate both opens a wider range of investments to the combined invested assets and permits the risk to be spread among a larger number of investors.

4. Even though the syndicate is active in managing the investment, the individual investors are passive limited partners, needing no special expertise or other resources in order to realize a return on their investment. This division of responsibility is a key to understanding the appeal of the real estate syndicate:

> Real estate syndication represents the combination of the capital of the passive investors and the entrepreneurial contributions and managerial skills of the promoter. The latter, usually in the role of the general partner in a limited partnership, performs the entrepreneurial function of bringing together the many elements necessary to make a real estate deal. He orchestrates the regulatory issues, the tax factors, the financial questions, the economic forces, the managerial problems, the legal considerations, the money sources. The syndicator packages the investment and his is a multi-faceted task whose responsibilities are continuing and changing over time. He makes available to investors a collection of professional talent that few could afford on an individual basis. n287

The appeal of the limited partnership form for real estate syndicates thus lies in its limited liability for the limited partner investors, direct "flow-through" tax benefits, and centralized professional management.

A distinction may be drawn between private and public syndications. The private syndicate is a limited partnership with a relatively small group of affluent investors whose investments are obtained under private offering rules, rather than the more complex public offering rules. The public syndicate raises money from a larger number of small investors through fully regulated public offerings.

COMPUTER-ASSISTED RESEARCH

LEXIS: syndicat! w/5 real estate w/30 securit!

§ 103.07(b) Real Estate Investment Syndications as Securities.

Investments in real estate syndications are almost always considered securities under both federal and state securities laws. This does not mean that all syndications investments are regulated in the same way by securities laws, but it does mean that they are within regulatory jurisdiction. Under the 1933 Federal Securities Act,

> The term security means any note, ... evidence of indebtedness, certificate of interest or participation in any profit-sharing agreement, ... preorganization certificate or subscription, transferable share, investment contract, ... or, in general, any interest or instrument commonly known as a "security", or any certificate of interest in or participation in, temporary or interim certificate for, receipt for, guarantee of, or warrant or right to subscribe to or purchase, any of the foregoing. n288

The definition of a security in the various states is essentially the same, because most states have adopted a version of the Uniform Securities Act, which defines a security with the same language as the federal act. n289

Thus, the typical real estate syndication in which "the non-promoting co-venturers [i.e., investors who are limited partners] are simply furnishing money, with the hope of profiting from the skill with which the syndicator puts their money to use," n290 is clearly a security under federal n291 and state law.

The determination that investors' interests in real estate syndications are securities is of enormous legal importance. It means that the full range of regulatory apparatus is invoked for many ventures, and those ventures that do not come under the various disclosure and registration requirements enjoy that circumstance only because they have qualified for one or more exemptions created under securities law. n292 Moreover, an intriguing interplay between federal and state securities laws has emerged, so that in certain situations federal regulation is relaxed if state regulation is vigorous.

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS

13-103 Thompson on Real Property, Thomas Editions § 103.08

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 103.08 Summary of State Registration and Licensing Requirements for Securities Brokers and Dealers.

In this section is provided a summary of each state's licensing and registration requirements applicable to brokers, dealers and associated persons under that state's "blue sky" securities regulation laws. Of course, these requirements apply to any broker-dealers who are participating in real estate transactions, including syndications, that are deemed to be securities under state law and regulation. This information is shown in a somewhat uniform format for each state.

§ 103.08(a) Alabama.

Dealers and salespersons must register.

Principals must register upon dealer registration.

The term of registrations is one year ending December 31.

An examination is required.

Fees: $200 for a dealer; $50 for an agent.

Statutory reference: Ala. Code § 8-6-3.

§ 103.08(b) Alaska.

Broker-dealers and agents must register.

An examination is required unless the applicant is exempt.

As established by regulation.

Statutory reference: Alaska Stat. §§ 45.55.030 to .060.

§ 103.08(c) Arizona.

Dealers and salespersons must register.

The term of registration is one year.

An examination may be required of prospective dealers and salespersons.

Fees: $300 for dealer; $40 for salespersons.

Statutory reference: Ariz. Rev. Stat. Ann. §§ 44-1941 to-1981.

§ 103.08(d) Arkansas.

Broker-dealers and agents must register.

The term of registration is one year.

An examination is required unless the applicant is exempt.

$ 300 for broker-dealers; $75 for agent.

Statutory reference: Ark. Stat. Ann. §§ 23-42-301 to-308.

§ 103.08(e) California.

Broker-dealers and agents must be licensed.

The term of the license is one year.

An examination is required.

Fees: $300 for broker-dealers, plus the broker-dealer's share of costs and expenses, based on the number of the broker-dealers' agents and offices.

CHAPTER 103 FEDERAL AND STATE SECURITIES REGULATION OF REAL ESTATE TRANSACTIONS
§ 103.09 Appendices.
Appendix 1 Schedule A of 15 U.S.C. § 77aa.

13-1 Thompson on Real Property, Thomas Editions 77aa

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 77aa Schedule of information required in registration statement

SCHEDULE A

(1) The name under which the issuer is doing or intends to do business;

(2) the name of the state or other sovereign power under which the issuer is organized;

(3) the location of the issuer's principal business office, and, if the issuer is a foreign or territorial person, the name and address of its agent in the United States authorized to receive notice;

(4) the names and addresses of the directors or persons performing similar functions, and the chief executive, financial and accounting officers, chosen or to be chosen if the issuer be a corporation, association, trust, or other entity; of all partners, if the issuer be a partnership; and of the issuer, if the issuer be an individual; and of the promoters in the case of a business to be formed, or formed within two years prior to the filing of the registration statement;

(5) the names and addresses of the underwriters;

(6) the names and addresses of all persons, if any, owning of record or beneficially, if known, more than 10 per centum of any class of stock of the issuer, or more than 10 per centum in the aggregate of the outstanding stock of the issuer as of a date within twenty days prior to the filing of the registration statement;

(7) the amount of securities of the issuer held by any person specified in paragraphs (4), (5) and (6) of this schedule, as of a date within twenty days prior to the filing of the registration statement, and, if possible, as of one year prior thereto, and the amount of the securities, for which the registration statement is filed, to which such persons have indicated their intention to subscribe;

(8) the general character of the business actually transacted or to be transacted by the issuer;

(9) a statement of the capitalization of the issuer, including the authorized and outstanding amounts of its capital stock

and the proportion thereof paid up, the number and classes of shares in which such capital stock is divided, par value thereof, or if it has no par value, the stated or assigned value thereof, a description of the respective voting rights, preferences, conversion and exchange rights, rights to dividends, profits, or capital of each class, with respect to each other class, including the retirement and liquidation rights or values thereof;

(10) a statement of the securities, if any, covered by options outstanding or to be created in connection with the security to be offered, together with the names and addresses of all persons, if any, to be allotted more than 10 per centum in the aggregate of such options;

(11) the amount of capital stock of each class issued or included in the shares of stock to be offered;

(12) the amount of the funded debt outstanding and to be created by the security to be offered, with a brief description of the date, maturity, and character of such debt, rate of interest, character of amortization provisions, and the security, if any, therefor. If substitution of any security is permissible, a summarized statement of the conditions under which such substitution is permitted. If substitution is permissible without notice, a specific statement to that effect;

(13) the specific purposes in detail and the approximate amounts to be devoted to such purposes, so far as determinable, for which the security to be offered is to supply funds, and if the funds are to be raised in part from other sources, the amounts thereof and the sources thereof, shall be stated;

(14) the remuneration, paid or estimated to be paid, by the issuer or its predecessor, directly or indirectly, during the put year and ensuing year to (a) the directors or persons performing similar functions, and (b) its officers and other persons, naming them wherever such remuneration exceeded $25,000 during any such year;

(15) the estimated net proceeds to be derived from the security to be offered;

(16) the price at which it is proposed that the security shall be offered to the public, or the method by which such price is computed, and any variation therefrom at which any portion of such security is proposed to be offered to any persons or classes of persons, other than the underwriters, naming them or specifying the class. A variation in price may be proposed prior to the date of the public offering of the security, but the Commission shall immediately be notified of such variation;

(17) all commissions or discounts paid or to be paid, directly or indirectly, by the issuer to the underwriters in respect of the sale of the security to be offered. Commissions shall include all cash, securities, contracts, or anything else of value, paid, to be set aside, disposed of, or understandings with or for the benefit of any other persons in which any underwriter is interested, made, in connection with the sale of such security. A commission paid or to be paid in connection with the sale of such security by a person in which the issuer has an interest or which is controlled or directed by, or under common control with, the issuer shall be deemed to have been paid by the issuer. Where any such commission is paid the amount of such commission paid to each underwriter shall be stated;

(18) the amount or estimated amounts, itemized in reasonable detail, of expenses, other than commissions specified in paragraph (17) of this schedule, incurred or borne by or for the account of the issuer in connection with the sale of the security to be offered or properly chargeable thereto, including legal, engineering, certification, authentication, and other charges;

(19) the net proceeds derived from any security sold by the issuer during the two years preceding the filing of the registration statement, the price at which such security was offered to the public, and the names of the principal underwriters of such security;

(20) any amount paid within two years preceding the filing of the registration statement or intended to be paid to any

promoter and the consideration for any such payment;

(21) the names and addresses of the vendors and the purchase price of any property, or good will, acquired or to be acquired, not in the ordinary course of business, which is to be defrayed in whole or in part from the proceeds of the security to be offered, the amount of any commission payable to any person in connection with such acquisition, and the name or names of such person or persons, together with any expense incurred or to be incurred in connection with such acquisition, including the cost of borrowing money to finance such acquisition;

(22) full particulars of the nature and extent of the interest, if any, of every director, principal executive officer, and of every stockholder holding more than 10 per centum of any class of stock or more than 10 per centum in the aggregate of the stock of the issuer, in any property acquired, not in the ordinary course of business of the issuer, within two years preceding the filing of the registration statement or proposed to be acquired at such date;

(23) the names and addresses of counsel who have passed on the legality of the issue;

(24) dates of and parties to, and the general effect concisely stated of every material contract made, not in the ordinary course of business, which contract is to be executed in whole or in part at or after the filing of the registration statement or which contract has been made not more than two years before such filing. Any management contract or contract providing for special bonuses or profit-sharing arrangements, and every material patent or contract for a material patent right, and every contract by or with a public utility company or an affiliate thereof, providing for the giving or receiving of technical or financial advice or service (if such contract may involve a charge to any party thereto at a rate in excess of $2,500 per year in cash or securities or anything else of value), shall be deemed a material contract;

(25) a balance sheet as of a date not more than ninety days prior to the date of the filing of the registration statement showing all of the assets of the issuer, the nature and cost thereof, whenever determinable, in such detail and in such form as the Commission shall prescribe (with intangible items segregated), including any loan in excess of $20,000 to any officer, director, stockholder or person directly or indirectly controlling or controlled by the issuer, or person under direct or indirect common control with the issuer. All the liabilities of the issuer in such detail and such form as the Commission shall prescribe, including surplus of the issuer showing how and from what sources such surplus was created, all as of a date not more than ninety days prior to the filing of the registration statement. If such statement be not certified by an independent public or certified accountant, in addition to the balance sheet required to be submitted under this schedule, a similar detailed balance sheet of the assets and liabilities of the issuer, certified by an independent public or certified accountant, of a date not more than one year prior to the filing of the registration statement, shall be submitted;

(26) a profit and loss statement of the issuer showing earnings and income, the nature and source thereof, and the expenses and fixed charges in such detail and such form as the Commission shall prescribe for the latest fiscal year for which such statement is available and for the two preceding fiscal years, year by year, or, if such issuer has been in actual business for less than three years, then for such time as the issuer has been in actual business, year by year. If the date of the filing of the registration statement is more than six months after the close of the last fiscal year, a statement from such closing date to the latest practicable date. Such statement shall show what the practice of the issuer has been during the three years or lesser period as to the character of the charges, dividends or other distributions made against its various surplus accounts, and as to depreciation, depletion, and maintenance charges, in such detail and form as the Commission shall prescribe, and if stock dividends or avails from the sale of rights have been credited to income, they shall be shown separately with a statement of the basis upon which the credit is computed. Such statement shall also differentiate between any recurring and nonrecurring income and between any investment and operating income. Such statement shall be certified by an independent public or certified accountant;

(27) If the proceeds, or any part of the proceeds, of the security to be issued is to be applied directly or indirectly to the purchase of any business, a profit and loss statement of such business certified by an independent public or certified

accountant, meeting the requirements of paragraph (26) of this schedule, for the three preceding fiscal years, together with a balance sheet, similarly certified, of such business, meeting the requirements of paragraph (25) of this schedule of a date not more than ninety days prior to the filing of the registration statement or at the date such business was acquired by the issuer if the business was acquired by the issuer more than ninety days prior to the filing of the registration statement;

(28) a copy of any agreement or agreements (or, if identical agreements are used, the forms thereof) made with any underwriter, including all contracts and agreements referred to in paragraph (17) of this schedule;

(29) a copy of the opinion or opinions of counsel in respect to the legality of the issue, with a translation of such opinion, when necessary, into the English language;

(30) a copy of all material contracts referred to in paragraph (24) of this schedule, but no disclosure shall be required of any portion of any such contract if the Commission determines that disclosure of such portion would impair the value of the contract and would not be necessary for the protection of the investors;

(31) unless previously filed and registered under the provisions of this subchapter, and brought up to date, (a) a copy of its articles of incorporation, with all amendments thereof and of its existing bylaws or instruments corresponding thereto, whatever the name, if the issuer be a corporation; (b) copy of all instruments by which the trust is created or declared, if the issuer is a trust; (c) a copy of its articles of partnership or association and all other papers pertaining to its organization, if the issuer is a partnership, unincorporated association, joint-stock company, or any other form of organization; and

(32) a copy of the underlying agreements or indentures affecting any stock, bonds, or debentures offered or to be offered.

In case of certificates of deposit, voting trust certificates, collateral trust certificates, certificates of interest or shares in unincorporated investment trusts, equipment trust certificates, interim or other receipts for certificates, and like securities, the Commission shall establish rules and regulations requiring the submission of information of a like character applicable to such cases, together with such other information as it may deem appropriate and necessary regarding the character, financial or otherwise, of the actual issuer of the securities and/or the person performing the acts and assuming the duties of depositor or manager.

CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.01

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.01 Note Formalities.

§ 104.01(a) The Difference Between the Note and the Deed of Trust.

Few first-time homebuyers can afford Polonius' captious advice, "Neither a borrower nor a lender be." They buy their homes on credit, signing promissory notes (I.O.U.s) in the process. However, by themselves, these promises to repay don't offer lenders sufficient assurance of repayment, especially for the considerable sums needed to buy a house. Borrowers could easily overcommit themselves later with additional borrowings, lose their jobs, or just become careless in paying on their I.O.U.s. So lenders almost always insist that buyers pledge their newly-bought homes as security for their loan. In this case, the financing document which secures the collateral is known as a mortgage. Other types of security interests include deeds of trust, ground leases, and installment land contracts.

There are several differences between notes and security instruments. The former is a promise to repay a debt and evidences that money was loaned to the borrower, while the latter pledges specific property that the lender can seize and sell to repay the underlying debt if the borrower reneges on his promise to pay.

Another difference is that "the obligation is more important than the security." n2 Valid notes can exist unsecured. Banks customarily lend money without demanding collateral or other security. That's what credit card financing is. On the other hand, the validity and enforceability of a security interest depends entirely on the existence of an underlying, outstanding obligation. No obligation, no mortgage.

The primacy of the obligation is evidenced in many legal rules. Inconsistencies between the note and the mortgage are resolved in favor of the note's provisions. n3 When a lender assigns a note, the purchaser of the note also gets the mortgage along with it, even if the lender hadn't meant to transfer the mortgage. n4 If a mortgage lender assigns a mortgage without assigning the underlying note, the assignee cannot foreclose the mortgage. n5 If the originating lender sells the loan first to A and then to B but delivers the note to lender A and only a copy of the note to lender B, A's interest is superior to B's. A prevails even though B knows nothing of A's interest and A doesn't record the assignment of the mortgage until after B records its assignment. The law of negotiable instruments, and not the recording acts, determines the outcome. A wins because A has possession of the note. n6

Once the debt is repaid, the lender is absolutely bound to release the security instrument. If a lender or trustee fails to execute a reconveyance or satisfaction on demand when the debt is paid, he can be held liable for any damage the buyer suffers as a result--including lost sales or financing opportunities. n7

§ 104.01(b) Contents of the Note and the Deed of Trust.

Provisions regarding repayment of the debt appear in the note, such as: (1) the amount of the loan principal, (2) the rate of interest, (3) the term to maturity (length of time you have to repay the debt), (4) whether the borrower can pay early (prepayment), (5) the penalty for making payments late, and so on. Provisions about preservation of the security property appear in the deed of trust, such as the pledgor's promises to maintain the property in good condition, keep it adequately insured for the benefit of the lender, and pay all property taxes and special assessments when due to avoid liens.

Some provisions surface both in the note and the deed of trust. One such provision is a "due-on-sale" clause which gives the lender the option of declaring all debt immediately due if the borrower sells the property without the lender's prior approval of the buyer. n8 These clauses are included in notes because a sale could affect the lender's exposure on the debt if the new buyer takes over payments on the debt and is a poor credit risk. They are included in security instruments because a sale could also affect the value of the security property if the new borrower is a property destroyer, or lets property tax and insurance bills slide.

§ 104.01(c) Secured Promises Need Not Be for Money.

Say your neighbor promises to let you share her new tennis court if you waive your rights under the local zoning code to a five-foot separation between where her court begins and your lot line ends. Could your right to use the court be secured by a deed of trust on it? What if your law firm's new landlord promises to pay your rent on the lease you're abandoning in order to move into his building. Can the landlord's obligation be secured by a mortgage on the new building? (Assuming these mortgages are valid, why might you prefer them to an easement to use the tennis court or a promise by your landlord to pay rent on your former space?)

Most secured obligations are for the repayment of money, but a mortgage can be valid even if it doesn't secure an obligation to repay money. It can secure the "performance of an act," n9 such as a promise by the mortgagor to furnish water and sewer facilities, n10 to build a driveway, n11 to construct an apartment house, n12 to use property for church purposes, n13 or to supply the property owner with food, shelter, and "the necessities of life" for the rest of her days. n14 To be mortgageable, though, these promises must be "readily translatable into money, albeit without precision." n15

There are two reasons that mortgage obligations must be readily reducible to cash. One is simply to facilitate a court-ordered assessment of damages.

The second is more complicated. Defaulting mortgagors are protected against forfeitures of the "equity" value in their properties. They owe their lenders a repayment of debt, plus interest and costs. But no more. Once the lender forecloses and pockets a sum sufficient to pay off the loan, any surplus from the foreclosure sale belongs to the property owner. To determine the surplus, an estimate has to be made of the value of the debtor's performance. The creditor's right to foreclose becomes problematic if the obligation lacks liquidity. n16 That is why smart creditors stipulate liquidated damages for the performance of promises not already reduced to a dollar amount.

§ 104.01(d) Oral Promises to Make Loans.

The English Statute of Frauds requires that certain types of contracts be written in order to be enforceable, among which are contracts for interests in land. But what about promises to make loans secured by a mortgage or deed of trust? Are

they promises regarding an "interest in land?" The borrower's promise to convey to the lender a security interest in real property definitely involves an "interest in land" and needs written confirmation to satisfy the Statute of Frauds. n17 But the lender's loan commitment is a promise to lend money. Nonetheless, some courts have thought the Statute of Frauds applies to both. n18 Even the lender's promise contemplates a security interest. Other courts have been receptive to plaintiff borrowers and granted damages for the lender's breach of an oral promise to make a loan even though the borrower's promise to convey a mortgage was unenforceable because it was also oral only. These cases hold the lender's promise not within the Statute of Frauds. n19

In reality, the lender will almost always require the borrower to sign a note evidencing the loan well before the lender actually advances funds. Some lenders give borrowers written and enforceable loan commitments, by which they obligate themselves to make the loan. Loan commitments are more readily available to commercial borrowers than to homebuyers.

Many loans are not subject to the Statute of Frauds, so lenders have convinced the legislatures of 35 states to adopt some form of the American Banker's Association's model statute requiring that credit agreements be written in order to be enforceable. n20 However, these statutes do not apply to real estate mortgages and other security agreements.

CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.02

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.02 How Much to Borrow.

§ 104.02(a) Underwriting Standards; Qualifying the Borrower.

Every prudent lender is trying to unearth answers to the big question: Will the borrower be able and willing to repay the debt on schedule? Mortgage lenders refer to the four "Cs" of underwriting: collateral, capacity, character, capital.

Collateral is the value of the security property.

Capacity is the borrower's income. Lenders commonly utilize two ratios to aid them in determining whether a buyer is a good credit risk. n21 One is the ratio of a borrower's income to her fixed installment debt (car loans, credit card balances, student loans), called a "total debt ratio" (TDR). The TDR includes mortgage payments. If the lender's cutoff was 38%, a borrower whose income was $100,000 would not be given a loan if her total debts exceeded $38,000 a year.

This concern may be warranted since research conducted by a high-volume insurer of low downpayment home loans indicates that borrowers with ratios higher than 33% and total debt ratios in excess of 38% have a 60% higher delinquency rate than standard borrowers. n22

The second ratio is the borrower's net income to the borrower's total housing costs (the mortgage repayment, taxes, insurance and, perhaps, maintenance). Presently, ratios higher than 32% are worrisome to most mortgage lenders.

The formulas and ratios change from time to time, with richer households generally paying smaller shares of their net income for housing than poorer ones. U.S. households actually spend between 15 and 40% of their income for housing.

Character is the borrower's past credit history, including bankruptcies or foreclosures. Even though a loan applicant may not have huge credit card or personal debts before buying a house, the borrower could always go on a binge after getting the mortgage. On the other hand, behavior is usually patterned so credit histories are taken as reliable indicators of creditworthiness.

Capital is cash or liquid assets at the borrower's disposal to make the down payment and tough out a temporary health

set back or job loss. Thus, net worth is taken into account and is defined as the total of the borrower's assets minus liabilities.

All in all, the mortgage underwriter will need the following mass of data to process a loan:

- ID numbers for savings and checking accounts;
- signed forms authorizing institutions to release account information so the borrower's claimed assets can be verified;
- account numbers for money market funds;
- credit card balances;
- loan documents on outstanding debt;
- retirement fund verifications;
- a list of assets and outstanding mortgages or other liens against them;
- the borrower's last two years' tax returns;
- verifications of employment;
- appraisals of property that the borrower owns;
- a credit report;
- written explanations for any blemishes in the applicant's credit history.

With increased computerization, this costly and annoying process is streamlined.

§ 104.02(a)(1) Pre-approved Mortgages.

Some prospective homebuyers want to enter the marketplace armed with more than a vague idea of their borrowing ability. They seek commitments by lenders or mortgage brokers to make a loan of a certain amount, contingent on the appraised value of the property selected. Not many lenders issue these commitments, which are also known as "pre-approved" mortgages.

On the other hand, obtaining advance commitments isn't necessarily in the borrowers' best interests. They must pay an up-front fee for them, and one-third of the pre-approved mortgages are never used because the borrowers find better loans elsewhere. But in a tight housing market when values are rising swiftly, borrowers with a financing commitment have an edge when bidding against buyers who insist on "financing contingency" loopholes in any contract they sign. n23

Some borrowers just meet with a friendly loan officer at a bank or mortgage broker before commencing their house search, disclose their financial situation, and obtain the loan officer's informal estimate of how much money they could expect to borrow.

§ 104.02(a)(2) Filing False Loan Applications.

"Where fraudulent loan applications were once an immeasurably tiny portion of total loans, they now account for between 4% and 10% of all applications taken nationwide." n24

Lenders aren't universally cautious in their underwriting standards--the procedures they use to qualify borrowers. Lately, in a rush to cut expenses and increase business volume, lenders have employed loan brokers on a pure commission basis. No loan means no commission for the broker. Although this incentive system rewards efficient brokers, it also encourages reckless underwriting practices. Sometimes, commission-dependent brokers are tempted to encourage borrowers to misstate the facts: "Forget about the alimony, automobile, and student loan payments," they may urge. "It will only slow down the approval." Striving to be competitive, lenders only compound the problem by offering loan applicants quick approvals. They churn out speedy reviews of a loan applications by not bothering to closely verify what the applicant reports. These loans are sometimes called "E-Z qualifiers." Loan brokers can often get questionable applicants qualified when they know that the borrower's application won't be thoroughly scrutinized. n25

Don't fall into the trap. Filing false statements on bank loan documents is a federal offense. n26 The U.S. Government can seize your house if you bought it with proceeds from a loan you got by making false statements in your loan application, and your lender is F.D.I.C.-insured. n27 The legal standard for forfeiture is similar to that required for a search warrant, probable cause. Anthony Paul Feher lost his house at 4031/2 Skyline Drive, La Habra Heights, California, because he claimed to have been employed at Action Garage Door 1984-86 and the owner of the company declared Mr. Feher had never been employed there. n28

The Case of Mr. Jones: n29 Real Estate Fraud
and Lending as Underwriting Practices in Laguna Beach

by Diane D. Stalder

Mr. Jones was a fairly competent and successful licensed real estate broker. In the early 1980s, however, Mr. Jones fell on hard times as interest rates rose above 20% and, according to Mr. Jones, you couldn't give real estate away.

Jones decided to take matters into his own hands and create deals, even without a buyer. He established the Irvine Corporation, which he advertised as a relocation service for people whose jobs caused them to move into and out of homes in the Orange County area. The fact that the sellers would immediately move out of the area helped Jones in several ways. They were anxious to sell their homes in a bad market and it would be much more difficult for them to check him out.

Jones advertised to find sellers in this position, saying that he had buyers from out-of-town looking for homes. He said that he was a broker and would broker the deal. Jones actually became the broker *and* the buyer by assuming a number of false identities. Jones would offer the legitimate sellers a very reasonable (good) price for their home with two conditions:

1. Sellers accept 90% of the price from a bank loan and the other 10% on what Jones termed a 2nd Trust Deed, which was actually a promissory note from the buyer. No money down.

2. Sellers pay the points on the loan and commission to Jones, usually 6% of the purchase price. Jones obtained the loan from the bank (at the historically high rates of interest), paid the sellers 90% of the purchase price, and collected the commission and points. Sellers left town with the assurance that the buyers would be paying off the balance.

Jones did this for some 29 properties, all private homes, assuming seven different identities and

acting as buyer and broker in the process. At times, his wife or a friend would appear as the buyer.

Jones would take over each property and then lease it out, again for a reasonable price. He pocketed the rent money. Jones never made any interest or principal payments on the bank loans. He was hoping interest rates would go down and property prices would rise. He would then be able to refinance and sell to legitimate buyers, pay back the banks and make a profit. Rates did not fall quickly enough.

It wasn't long before banks foreclosed and, discovering that the buyers did not really exist, uncovered Jones's scam. Jones was arrested. Jones was convicted on mail and real estate fraud and received five years. *18 U.S.C. §§ 1341, 1342*. He was ordered to pay $210,000 in restitution upon release. Jones escaped from Lompoc after 13 months of service. Eighteen months later, he was apprehended as a fugitive and returned to incarceration at Terminal Island, where he got an additional 60 days for escape, and another eight months of parole time denied. He will spend over forty months in prison.

In calculating his parole, the fraud offense was rated according to the amount of loans, which added up to some $4 million, even though the lenders' actual loss was under $500,000. The significant "real loss" was the default of the promissory notes to the sellers for 10% and the approximately $40,000 the banks claimed they forfeited, mostly in administrative costs. Since houses were so difficult to sell at the time, with interest rates approaching 20%, sellers wouldn't have agreed to take back notes if they could have sold for cash instead. The 10% represented, for most sellers, a calculated gamble, one where the dice were loaded against them, as it turns out.

Jones's monetary gains were the commissions and rents he collected totalling less than $150,000. The parole commission seemed fixated on the $4 million figure and had a hard time understanding "where the money went." Most of it went, of course, to the sellers. Jones is convinced he did his sellers a service and that morally he is not particularly culpable, although he realizes the false identities and escape were not bright moves. He really blames the whole affair on bad market conditions at the time and still probably thinks about the money he lost out on and the prison term he could have avoided "had the market taken an upswing in time...."

For prospective borrowers, there is a message here about lender underwriting standards. Lenders may not be as meticulous when they originate loans as they become once a default occurs. But the penalties for "fudging" the loan application can put borrowers behind bars.

Penalties can also involve professionals--lawyers, accountants, appraisers--having their licenses suspended or revoked.

§ 104.02(b) How Much Is Enough: Leverage and the Down Payment.

Should you borrow as much as a lender is willing to lend, or should you accumulate a larger down payment before jumping into home ownership? n30 Borrowing money is known as "leveraging" because it magnifies the effect of gains and losses that come from investing with the use of borrowed funds.

The advantage of leveraging to the max is that you enhance your financial return if the value of the property increases at a rate greater than your after-tax cost of borrowing. This is known as "positive leverage." Conversely, if values lag, your losses will be even larger because you leveraged yourself. This is known as "negative leverage."

Cautious homebuyers worry about another aspect of "leveraging"--whether they can comfortably shoulder their debt in the event of a temporary wage loss. Statistically, default and foreclosure rates are the highest when borrowers only make small down payments.

LEVERAGE DEFINED **n31**

[Leverage is the relationship between net operating income (NOI) and debt service (D/S). Net operating income is gross income minus all expenses except debt service. Expenses include taxes, insurance, and maintenance. Debt service is principal plus interest. When NOI > D/S, leverage is positive. When D/S < NOI, leverage is negative.]

To explain how leverage works, let us start with an investor who buys a $10 million apartment house that yields $1,500,000 after expenses. On an all-cash purchase, he will earn a 15 percent cash yield on his investment. Suppose instead that he borrows to make the purchase: first, $5,000,000, then $9,000,000. If the mortgages bear 12 percent interest, and if the annual debt service (that is, the combined amount of interest and principal reduction) is designed to pay off the mortgages in 25 years, the cash flow and cash yield appear below:

(a) *$5,000,000 mortgage, $5,000,000 cash down payment*
Cash flow before debt service.....$1,500,000
Less debt service..... $633,000
Cash flow after debt service.....$867,000
Cash yield on $5,000,000 down payment.....17.34%

(b) *$9,000,000 mortgage, $1,000,000 cash down payment*
Cash flow before debt service.....$1,500,000
Less debt service..... $1,139,400
Cash flow after debt service.....$360,600
Cash yield on $1,000,000 down payment.....36.06%

If we were to continue to project cash yield based on ever-shrinking down payments, the investment return would approach infinity. And by placing elsewhere the cash that mortgaging replaces, the investor can expand and diversify his holdings.

[The easiest way to appreciate the impact of leverage is to imagine the investor is able to put the original $10 million into one project all cash, two projects with 50% down, or 10 projects at $1,000,000 each.]

It is useful to understand how leverage can bring a geometric increase in investment return. Note that it depends upon the investor turning a profit on the borrowed funds; this, in turn, depends upon a favorable spread between the "points" (points equal percentage) of debt service and the "free and clear" rate of return on the investment. To illustrate this principle with the $5,000,000 mortgage:

(1) Free and clear return (at 15%)
on $5,000,000 of borrowed funds.....$750,000

(2) Debt service (at 12.66 points)
on $5,000,000 mortgage.....$633,000

(3) Profit on the borrowed funds
(1 minus 2).....$117,000

(4) Profit on the equity or down

payment funds.....$750,000

(5) Overall cash flows (3 plus 4).....$867,000

Thus our investor has enhanced his rate of return by adding to the regular 15 percent yield that his down payment generates, the $117,000 profit on the borrowed moneys. By increasing the spread between free-and-clear return and debt service costs, or by increasing the ratio of borrowed to equity capital, the investor will improve his leverage advantage. To test your understanding, repeat this calculation for a $9,000,000 mortgage.

It follows, inevitably, that leverage will produce negative results if the assumptions above are reversed and the mortgage debt service costs exceed the free-and-clear rate of investment return. Suppose, in our example, that the free-and-clear return on an all-cash investment is only $1,300,000 (13 percent) and that the investor can only obtain a 15-year mortgage on any moneys that he borrows. If we assume the same 12 percent interest rate, the annual debt service for each $1,000,000 of mortgage comes to $144,600 (14.46 points). We now have an unfavorable spread between the "points" of debt service and the "free and clear" rate of investment return. The impact on cash yield, assuming a $5,000,000 mortgage, appears below:

$5,000,000 mortgage, $5,000,000 cash down payment

Cash flow before debt service.....$1,300,000

Less debt service.....$723,000

Cash flow after debt service.....$577,000

Cash yield on $5,000,000 down payment.....11.54%

And, as the borrowed funds increase, the disadvantage grows geometrically. You might work out the figures for a $6,000,000 mortgage, a $7,000,000 mortgage, etc.

With medicine, one dose may be restorative, five doses fatal. So, too, with leverage. If it is too great, it may ruin. The investor (and the lender) gamble that operating income will be enough to carry the debt. In the first example, where $5,000,000 was borrowed, $867,000 was left after debt service; when $9,000,000 was borrowed, only $360,000 remained. These amounts, $867,000 and $360,000, are the margin of solvency. If the margin disappears (rentals down, expenses up), the investor faces the uninviting options of finding cash elsewhere or defaulting on his loan, unless he is able to refinance the debt so as to reduce or postpone the debt service requirements. Needless to say, the slimmer the margin of solvency, the shakier the investment. History records more than one real estate empire that was leveraged into oblivion.

Note:

(1) The False Promise of Positive Leverage Analysis. Rents may sink below projected levels. Expenses may float far above gross income. But D/S remains stubbornly at the level promised in the note. The false promise of positive leverage analysis is that despite present NOI exceeding D/S by comfortable margins, it may not always. The more highly leveraged the project, the greater the chance that the debtor will lose the project if what begins as a positive relationship of NOI to D/S turns negative.

(2) Cash Flow vs. Net Return as Measures of Leverage. The above analysis rests on "cash in" and "cash out" as the basis for determining whether taking on debt is a good idea or a bad one. On the expense side, the authors include payments of both principal *and* interest--not interest alone. Some investors exclude

repayments of principal in their "cost of funds" calculation, regarding principal repayments as a build-up of equity and not part of the price of borrowed funds.

On the earnings side, the authors count only net income (rent minus taxes, insurance, and maintenance). They exclude unrealized appreciation, even if the property's value is taking off. This is understandable, since what goes up can come down and investors with appreciating property don't actually pocket their profits until they sell or refinance. Nonetheless, some methods for calculating returns on real estate (or other) investments take into account property appreciation. Also, investors who don't plan to sell quickly may be able to borrow against appreciated value.

One danger of including unrealized appreciation is that investors may wind up borrowing heavily and happily in deals that produce negative cash flows. They think that they are leveraging positively because they have a positive sum after subtracting interest costs from net annual returns (income after expenses + appreciation). The fallacy of this calculus is readily seen when unrealized appreciation disappears in a real estate market downturn.

Among the people who used this errant method of calculating investment returns were many southern California homebuyers in 1987 and 1988. Who could have faulted them in 1988, when house prices rose 30% while interest rates fluctuated between 9.5-10.5%? Unfortunately, in 1989, home prices remained steady in some places and declined as much as 10% in others. Buyers who were paying interest rates of 10-11% experienced the pitfalls of negative leverage. By 1992, some California home prices had plummeted 20-33% from their 1989 highs, the dangers of negative leverage became ever more apparent, and the rate of foreclosures increased.

The owners of highly leveraged commercial properties suffered too, as office and shopping center rents plunged below the owners' "break even" line. Owners were forced to dig into their own pockets to meet mortgage payments or lose their properties through foreclosure.

§ 104.02(c) Where Homebuyers Go for Financing. n32

There are several types of lending institutions which fund mortgage loans. Among them are: mortgage brokers, mortgage bankers, savings banks, commercial banks and consumer finance lenders.

Originations of Residential Mortgages by Type of Lender (1990) n33

Mortgage Brokers. Mortgage brokers don't lend money. Rather, they help borrowers get loans by locating lenders and "packaging" applications so that loans can be processed quickly. Once the borrower has been approved and the funds disbursed, the mortgage broker's job is done. Mortgage brokers earn their money by charging part of the loan origination fee as commission, and by charging application and other service fees.

The major drawback with using mortgage brokers is that they have no control over the funding of the loan or the loan terms. Lenders are free to change the loan terms at any time before the loan closes and can also delay the loan by requesting for additional information. The advantage to using mortgage brokers is that they have quick and efficient access to a vast number of lenders. With so many lenders to choose from, chances are the borrower will get better loan terms than he could on his own.

Mortgage bankers borrow money from lenders to make their own loans. Because they are in a position to place billions of dollars of impound accounts with commercial banks at low interest rates, they enjoy the benefit of open lines of credit at bargain rates. Mortgage bankers then package and sell groups of their loans to investors in the secondary market. Unlike mortgage brokers, mortgage bankers also service mortgages for the investors and handle defaults on payments.

Mortgage bankers have four sources of income:

(1) Loan origination fees, usually one percent of the loan amount, paid by the borrower;

(2) The difference between what they pay for bank credit and what they earn in interest on mortgages held during 30-90 days before selling them in the secondary market;

(3) The sale premium they earn when interest rates fall during the 30-90 days they are holding for sale the loans they have originated;

(4) Servicing fees, ranging from 25 to 50 basic points % to % of loan principal, plus late fees and prepayment penalties. The loan servicer usually pockets late charges and prepayment fees. These are seldom passed along to the mortgage purchaser.

They then package and sell groups of their loans to investors in the secondary market. Unlike mortgage brokers, mortgage bankers also service mortgages for the investors and handle defaults on payments. They make their money by charging loan origination fees to borrowers and servicing fees to investors. They also make money on the spread between the interest rates accepted by their borrowers and the rates specified by their investors.

Mortgage banks differ from banks in that they are not chartered by either the state or federal governments. Some states do regulate mortgage banks, but they are not members of the Federal Reserve System. The accounts of their investors, unlike bank depositors, aren't insured by the Federal Deposit Insurance Corporation (F.D.I.C.). Mortgage bankers are often called "noninstitutional" or "nonregulated" lenders. Except for minimal state regulation, the only real "requirements" placed upon them are by their investors and insurers who specify limits on mortgage sizes, ratios, lending areas and types of loans.

Consumer Finance Lenders. Consumer finance lenders make credit card loans, auto loans, home equity loans, and purchase money loans, among others.

Life Insurance Companies. Life insurance companies often work with mortgage brokers who find loans for them. In 1950, life insurance companies held about 19% of all single-family mortgages, especially F.H.A.-insured loans, and were content with the moderate yields and great safety of these loans. Competition for yields forced them to cut down their home mortgage lending so that they accounted for less than 2% of all home loans originated in 1990. Chasing higher yields, they invested in commercial real estate and are now experiencing the inevitable corollary between risk and return.

Savings and Loans (now called Savings Banks). Savings and loan institutions pool the savings of individuals for investment in residential mortgages. They hold more mortgage debts and originate more mortgages than any other institutions. In fact, over 80% of S&L assets are held in one- to four-family mortgage loans and 30-40% of all residential mortgages are originated by S.&L.'s.

Originally, S.&.L.s only financed homes within their local lending area.

Recently, savings banks have also participated in the secondary market as both buyers and sellers. Some have even formed mortgage banking subsidiaries to originate loans for sale in the secondary market.

Savings banks must be chartered either by a state or by the federal government. If they are federal institutions, they must also meet certain federal lending standards promulgated by the Federal Savings and Loan Insurance Corporation and the Federal Home Loan Bank Board. Because the F.S.L.I.C. and the

F.H.L.B.B. have been dissolved, lending standards are now enforced by the F.D.I.C.

In the 1980s, regulators encouraged savings associations to try to increase their yields by investing in acquisition and development loans to homebuilders, construction loans for all types of projects, including office buildings, shopping centers and resorts, and "joint ventures" with developers. Some of these projects failed to sell or rent at the prices which savings association underwriters had anticipated.

Because savings associations were capitalized very thinly, losses on portfolio loans meant insolvency in some instances.

Congress created the Resolution Trust Corporation to "resolve" these troubled institutions through liquidation, merger with stronger institutions or acquisition by investors who could improve management and provide more capital. Furthermore, federal regulations have increased the capital requirements for savings and commercial banks. The amount of capital an institution must retain depends on how risky its loan portfolio is. Regulators require less capital to support portfolios of residential mortgage loans than portfolios of commercial properties or construction loans.

Commercial Banks. Commercial banks also accumulate funds and reloan them, but they generally use shorter-term, time- and demand-deposit accounts to fund their loans. Historically, commercial banks preferred short-term loans, especially construction loans. Now they are becoming significant lenders for single-family home loans and participate actively in the secondary mortgage markets, sometimes organizing mortgage pools of loans they originate.

Some commercial bank holding companies own mortgage banks. Commercial banks loan mortgage bankers money to originate loans and then are paid back when the mortgage bankers sell those loans in the secondary market. Commercial banks are also the largest income-property lenders, and the largest lenders for construction loans.

Commercial banks are chartered by either a state or the federal government. All federally-chartered and some state-chartered banks belong to the Federal Reserve System. Congress has given the Federal Reserve some authority to regulate all banks. All state and federally chartered banks insured by the FDIC are subject to its rules.

§ 104.02(d) Is There Mortgage Broker or Lender Liability for Aggressive Loans? Fiduciary Duty Contrasted with Duty to Counsel.

If your lender is overly optimistic about your future earnings prospects and the buoyancy of local property markets and allows you to borrow far more than you can repay and maybe more than the property is worth, do you have a possible defense to nonpayment?

Court opinions are divided on whether lenders generally owe borrowers a fiduciary duty. n34 Such a duty is created when one person undertakes to act "primarily for another's benefit...". n35 From a distance, in the lender-borrower relationship one seems to be on one's own, which is why banks are not usually thought to owe depositors or borrowers a fiduciary duty. n36 However, special circumstances could create a fiduciary duty for the lender. n37 For instance, a bank could hold itself out as an advisor and evolve a connection with a customer, inducing the customer to believe that the lender had the customer's best interests in mind and not its own:

> ... a bank whose officer strongly suggests that a borrower buy a particular enterprise or property would run a high risk of owing a fiduciary responsibility to that borrower, particularly if the borrower had dealt with the bank for a long time and trusted the officer. n38 In one case, a widow was advised by her banker to sell her ranch to repay the $200,000 she owed the bank--a bank she had dealt with for 24

> years and had often received financial advice from. A bank vice-president who assisted her with the sale had entered a partnership agreement with the ranch purchasers a few days before the sale. The court held that the bank owed the widow a fiduciary duty which was breached when the vice-president failed to disclose his interest in the transaction. n39 As a result, the widow was allowed to rescind the sale.

One author has made the case that the lender becoming the borrower's fiduciary arises far more commonly than cases like the widow's would imply. Whenever the relationship transcends the bargained-for attributes of an arm's length contract and becomes one of trust as the borrower comes to rely on the lender, often to the lender's pecuniary benefit the lender is often characterized as a fiduciary. The borrower's claim to damages for breach of that relationship depends on whether the borrower can show "a causal link between the lender's breach of its corresponding fiduciary duty." If so, all that remains is to measure damage. n40

However, the fiduciary characterization is more likely to materialize after a loan agreement is concluded than while lender and borrower are negotiating loan terms. The "contract" model usually describes accurately the loan origination relationship. Once the loan is entered, the lender then processes the loan, services it, and reviews requests for forbearance or extensions. During these stages of the lender-borrower relationship (processing, servicing, recasting), a fiduciary situation may evolve.

In comparison to whatever obligation banks owe their borrowers, do mortgage brokers owe their borrowers more? Mortgage brokers aren't lenders; rather, they are the borrower's agent and are paid to find the best lending source for the borrower. So courts have sometimes imposed an additional duty on mortgage brokers--not a fiduciary duty, but a duty of disclosure.

In one case, two pensioners used the services of a mortgage broker who aided them in obtaining a loan that required a $400 monthly payment when the borrowers' total monthly income, all from social security, was $500. The court gave this instruction to the jury:

> As a fiduciary, First Alliance Mortgage Company had a duty to disclose in writing and orally explain the material facts of the transaction to the [borrowers]. In addition, *it had a duty to counsel* and to draw to the attention of the Rogers' unfavorable material terms of the loans. n41

The loan was for $28,500. The jury found for the plaintiffs in the sum of $1 million. On appeal, the case was remanded for retrial on the issue of punitive damages. n42

Counsel for the borrowers had relied on *Wyatt v. Union Mortgage* n43 for the proposition that:

> ... the mortgage broker's obligation to make disclosure extends beyond bare written disclosure of the terms of a transaction to duties of oral disclosure and counseling regarding the unfavorable material term of the loan. It does not mean that [the lender] had a duty to decide for the [borrowers] whether or not the loan should be taken.

What, exactly, is meant by a "duty of oral disclosure *and counseling*"? Is it enough for the mortgage broker to explain the terms of the loan or must he also offer advice to the borrower on whether the loan is a good one and whether the borrower will be able to repay, given her income and other obligations? Mortgage brokers hope disclosure will suffice. Borrowers sometimes expect more, especially when they rely on mortgage brokers or lenders for advice.

(n8)Footnote 28. United States v. 4031/ 2 Skyline Dr., 797 F. Supp. 796 (C.D. Cal. 1992) . In this case, the loan was not in default and the lender did not initiate the seizure. This was an "easy-qualifier" loan with a 25% down payment so the lender didn't verify employment. The case is not being appealed. The Robert Bruss Cal. Real Est. L. Newsl., January 1993, at 1. The proceedings were in rem, civil. There is an innocent owner exception to civil forfeiture under the law, but Mr. Feher did not plead it. *See generally* Gregory Pulles et al., FIRREA: A Legislative History and Section-by-Section Analysis 1424-26 (1992).

(n9)Footnote 29. Name changed for privacy purposes.

(n10)Footnote 30. Or should you keep your downpayment and pledge assets as collateral for the downpayment? With a pledged asset mortgage, the lender accepts assets, typically certificates of deposit (C.D.s), equivalent to the amount of the downpayment as collateral for the mortgage. The interest on the pledged C.D.s continues to accrue to the owner during the pledge period. When the mortgagor achieves the agreed-upon minimum equity in the property, the lender releases its interest in the collateral. Although the borrower may pay a slightly higher interest rate for this variation of a zero-down loan, the borrower has the advantage of earning interest on the collateral, whereas no interest is earned on the traditional cash downpayment. Kenneth R. Harney, *More Lenders Now OK Collateral in Place of a Down Payment*, Los Angeles Times, Feb. 18, 1996, at K4.

CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.03

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.03 The Rate of Interest and Monthly Payment Levels.

§ 104.03(a) The Effect of Interest Rates on Potential Homebuyers.

Lenders and borrowers see interest rates from different angles. Interest is income to the lender; without it, there can be no profits. Repayment of principal alone would leave the lender in a hole since the lender's cost of doing business is roughly 2-4% per annum for each dollar of loans processed and serviced. ("Service" means to collect monthly payments, monitor defaults and, if necessary, foreclose.)

Most homebuyers are sensitive to interest rates. That is why home sales can be dramatically affected by interest rate levels. Nonetheless, even at times when rates reached historic highs (the late 1970s), home prices climbed rapidly and buyers just kept coming, while in 1990-91 with rates at historic lows--below 10%--home sales were sluggish.

Professor Jack C. Harris offers this explanation:

> Buyers off-set the rate of interest against their expectations of inflation, after-tax mortgage costs, and annual appreciation in home prices. Buyers who believe interest rates could get lower and house prices might fall still further stay out of the market even when rates are historically low. Buyer who believe interest rates driven by inflation are going to rise and house prices are also likely to go up, are likely to buy even when rate are at historic highs. n44

So, although interest rates are important, their effect is also hedged by buyer expectations about both money and housing market futures.

§ 104.03(b) "Affordability": The Factors That Determine Monthly Payment Levels.

Besides interest rates, borrowers are also concerned about "affordability," as measured by monthly payment levels. The borrower's ability to pay depends on the down payment and the monthly costs of the mortgage, not just the nominal after-tax rate of interest. The monthly payment is a composite of: (1) the amount borrowed, (2) the arrangements for the repayment of principal, (3) the maturity or length of the loan, and (4) the interest rate. Only a formula which accounts for all four variables can adequately show how the monthly payment is derived.

The monthly payment level will depend in part on how the principal amount borrowed is to be repaid. One option (now prohibited by statute in many states) allows the borrower to defer making any principal repayments until the end of the term. This was common in the U.S. until the Great Depression. Up to that time, lenders had allowed borrowers to refinance when the loan expired, but the credit crunch of the Depression left many lenders squeezed for cash. They couldn't afford to refinance, so borrowers defaulted in record numbers when lenders called in their loans. There was nowhere borrowers could turn for refinancing.

If the loan principal isn't amortized (paid off) during the term of the loan, the big final payment is called a balloon payment. A "balloon" is a lump-sum repayment of principal to make up for principal deferred during the life of the loan. The advantage of the balloon is that, to the extent the principal repayment is deferred, monthly payments are lower. The drawback is that the balloon, when it descends, can crush the borrower, causing foreclosure and loss of the property. Optimistic borrowers often expect to refinance their loans as balloons float their way. They are depending on money being available on terms they can afford in the distant future. They are also taking a big risk--predicting the weather is a lot easier than guessing which way the winds of mortgage finance will blow.

Nearly all home loans provide for self-amortization during the loan term so that all the principal will have been repaid at the end of the term.

> The more typical form of self-amortizing mortgage involves *level payment* debt service, that is, equal (usually monthly) debt service installments. Given this objective, the calculation of the (monthly) installment derives from a formula with three variables: original principal balance, the length of the loan, and the rate of interest. Tables that aid in the computation are readily available, for example, from banks and mortgage brokers.
>
> You should be aware of the changing relationship between interest and principal in the level payment mortgage; with each installment the interest component gets smaller while the amortization grows. Take, for example, a $50,000, 12 percent, 30-year mortgage, carrying monthly debt service of $514.50. Each installment of debt service goes first toward the payment of interest on the unpaid loan; whatever sum remains goes then into principal reduction. Allocation of interest and principal for the first three months and the final month appears in Table 2-8.
>
> Notice also, how slowly amortization proceeds via the level payment mortgage. Table 2-9 shows the percent of unpaid debt remaining at 5-year intervals on this hypothetical loan.
>
> The usual alternative to a *level payment* self-amortizing mortgage is the so-called *constant amortization* (declining payment) loan, which one sees more often in investment situations. This method of amortization requires equal amounts of principal reduction in each installment. Again using the example of a $50,000, 12 percent, 30-year mortgage, the schedule of debt service appears in Table 2-10.
>
> Over the thirty years, if the hypothetical mortgages go to term, the level payment mortgage will be far more costly. Why is that? n45

Monthly Level Payments (Dollars) to Amortize $1000 Various Amortization Periods and Interest Rates

Term in Years					
14.0	15.53	13.32	12.44	12.04	11.85
13.0	14.93	12.65	11.72	11.28	11.06

--	--	--	--	--
360	140.27	1.39	138.88	0

The combination of interest and principal repayment, stated as a percentage of the total loan obligation, is called the *constant*. For instance, if your interest rate is 10% but your monthly payments are 11.5% of the amount borrowed, your constant would be 11.5%. The extra 1.5% above the interest rate isn't an error on the part of your lender; it is explained by the fact that you are repaying some principal each month, in addition to interest. Most homebuyers are less concerned about the interest rate than the constant the total amount of the monthly payment.

If repayment of principal was the same each month and the interest rate was fixed, then monthly payments would decline to reflect the fact that as the principal was being progressively repaid, the interest on the unpaid balance was being reduced proportionately. With *constant amortization of principal* there is no uniform *constant* monthly payment. No two monthly payments are the same. Most first-time buyers would hate this because their biggest mortgage payment burdens would occur early in the borrowing cycle, when they can least afford them.

§ 104.03(c) Fixed vs. Adjustable Rate Mortgages (F.R.M.s vs. A.R.M.s).

§ 104.03(c)(1) The Rationale for A.R.M.s.

Conceptually, the nominal or contract rate of interest can be divided into two separate parts. One part is the "real" rate of interest. The other part accounts for the fact that the underlying value of the principal is subject to inflation. Without

this second component of interest, the lender would get back in *real* dollars less than he loaned, even if the debt was fully repaid in *nominal* dollars.

Lenders making fixed-rate loans have no choice but to estimate what the inflation rate will be over the life of the loan, which can be especially difficult for long-term obligations. The lender must build the inflation assumption into the rate. If the lender has guessed too low a number, it loses. For long-term obligations, this loss can be significant. On the other hand, if the lender over-estimates the rate of inflation and interest rates fall below the contracted fixed rate, borrowers will prepay their loans in order to refinance at the lower rates

Complicating the fixed-rate lender's dilemma is the fact that they must compete in open markets where their competitors may have made guesses different from theirs about future inflation. Since most institutional lenders are highly leveraged and must pay their savers competitive yields, they don't enjoy the luxury of staying out of the market when they believe that current interest rates underestimate future inflation risks.

As a vivid example of the risks of making fixed-rate loans, consider what happened in the early 1980s. Fixed mortgage interest rates on long-term mortgage loans written in the 1960s and early 1970s were lower than the rates of inflation in the 1978-82 period. Borrowers were delighted to repay deflated debts, but lenders got caught in the squeeze between the rising costs of funds (rates on deposits) and low yielding, long-term fixed-rate mortgage loans. Many institutions have yet to recover.

In response, Congress enacted a law in 1982 authorizing all lenders to make residential mortgage loans at fluctuating interest rates. n46 These loans are called adjustable rate loans (A.R.M.s). An adjustable rate loan removes the lender's guesswork about inflation by tying the rate to an index which will ride with inflation. As inflation and market competition for savings push up the rates lenders must pay to keep deposits, mortgage borrowers with ARMs absorb these increases in the form of higher mortgage interest rates.

Borrowers also benefit from adjustable rate loans because they generally carry initial contract rates of interest well below those of equivalent fixed-rate loans. The lower starting rates of interest allow many first-time homebuyers to qualify for the loan they need, whereas they would have been priced out of the fixed-rate loan market. In addition, some lenders lure borrowers by offering special first-year rates on A.R.M.s well below current fixed-rate loans. These are called "teaser" rates. There has been some regulatory pressure to limit these teaser rates because they can fool inattentive borrowers into underestimating how high their payments will rise as soon as the "teaser" period ends, usually in six months or a year. n47 Also, some bank regulators are insisting that banks consider only the permanent rate, and not the "teaser" rate, when qualifying borrowers.

§ 104.03(c)(2) Truth-in-Lending.

The Federal Consumer Protection Act of 1968 (Truth-in-Lending) n48 imposes special disclosure obligations on lenders originating ARMS, in addition to the mandatory loan disclosures of amount financed, finance charges and the borrower's three-day right to cancel. n49 Implementation of Truth-in-Lending is entrusted to the Federal Reserve Board through a regulation known as Regulation Z, which was revised in 1980 by the Truth-in-Lending Simplification Act.

The error tolerance in finance charge disclosures has been increased by the Truth in Lending Amendments of 1995. n50 Home mortgage lenders will be protected from excessive penalties and liability for small technical and calculation errors in the finance charge and annual percentage rate disclosures. The disclosure on a home equity loan is treated as accurate if it does not vary from the actual finance charge by $100 (the prior limit was $10). A variance that equals 1/2 to 1 percent of the loan amount on a non-purchase money mortgage is allowed; up to 1 percent on refinance loans.

The impetus for this legislation was the 1994 Eleventh Circuit ruling in *Rodash v. AIB Mortgage Co.*, in which rescission of a home equity mortgage was upheld because the lender failed to "clearly and conspicuously disclose" the

borrower's three-day right to cancel and erroneously included $226 in charges and tax in the amount financed instead of the finance charge. n51 After the *Rodash* ruling, numerous class action and individual lawsuits were subsequently filed by borrowers attempting to get out of their loan obligations on the basis of the TILA violations with rescission penalties. Retroactive lender relief is provided for *Rodas*-based class actions that were still pending certification on January 1, 1995, and individual actions filed after June 1, 1995.

The Home Ownership and Equity Protection Act of 1994 has expanded Truth-in-Lending to include high-interest "home improvement and remodeling" loans. n52 Additional disclosure requirements and restrictions have been added for "high-rate" home equity and mortgage refinance loans, whether used for home improvement or general purposes, that are secured by a principal dwelling. Home equity lines of credit and principal residence purchase loans are exempt.

A loan is "high rate" if the APR exceeds the yield on Treasury securities by more than 10% or the borrower's total points and fees exceed the greater of 8% of the loan or $400. n53 Credit cannot be extended without a determination of the borrower's ability to repay the loan. n54 Negative amortization is prohibited. n55 Loans of five years or less must be fully amortized because balloon payments are not allowed. n56 Prepayment penalties are generally prohibited and the rate of interest after default may not be increased. n57

§ 104.03(c)(3) Computing the Rate; Choosing the Index.

Adjustable rate obligations are computed by adding the indexed rate, say, the six-month or one-year Treasury bill, to a margin, between 2-3% usually. The combined total is the interest rate the borrower pays. (Index + margin = interest rate.) n58

The chosen index must be regularly published on a recognized financial instrument. The borrower's interest rate is revised from time to time as the chosen index moves up or down with inflation. Since the index chosen will never be zero and may itself incorporate a premium above the rate of inflation, the lender receives that inflation-proof "kicker" as an additional "real" return above the margin.

There are several indexes to which variable rates are keyed. They don't move identically, a factor borrowers rarely consider, but should in choosing a loan. n59

Each lender has its favorite index. Some lenders feel comfortable with indexes based on the cost of funds from depositors, the Office of Thrift Supervision (O.T.S.) n60 or the Federal Reserve System. Because these indices reflect the lenders' cost of funds, they offer the lender protection against a mismatch between income and expenses.

Many key institutional investors care only about the spread between mortgage yields and the other investments available to them measured against U.S. Treasury obligations. So "T-bill" rates are also sometimes used as the base rate against which "adjustables" are played. Short-term (three and six months) "T-bill" rates are more volatile than one year "T-bill" rates, and all "T-bill" rates are more volatile than the "cost of funds" indices.

As capital flows have become global, an international measure, L.I.B.O.R., is frequently seen in U.S. mortgages. L.I.B.O.R. stands for the London Interbank Offered Rates. n61

> The push for L.I.B.O.R. mortgages comes mainly from foreign banks and thrifts that buy mortgages in bulk. L L.I.B.O.R. is the benchmark interest rate at which many of these institutions raise money, so they are eager to have L.I.B.O.R.-linked assets on the other side of the balance sheets, too. n62

While "T-bill" rates are sometimes vulnerable to domestic policy manipulation, L.I.B.O.R. is relatively free of government interference because the U.K. keeps its hands off private bank transactions in non-U.K. currency.

A.R.M.s must state an adjustment period between one rate change and the next. A loan with an annual adjustment is called a one-year A.R.M. Lenders using the one-year Treasury bill rate as an index usually adjust the interest rate annually.

Borrowers have a harder time figuring out their liability on adjustable-rate loans than they do on fixed-rate loans. So do lenders.

> Federal regulators have growing concerns that savings and loans may be erroneously overcharging many holders of adjustable-rate mortgages and have asked all thrifts to check their method of calculating the payments.
>
> Private consultants said the over-charges in most cases aren't huge in the range of $500 to $1,000 over the life of the loan but one consultant estimated in testimony on Capitol Hill that the total amount thrifts owe customers could be $8 billion to $15 billion. n63

§ 104.03(d) "Caps" on Adjustables.

At first, borrowers weren't receptive to adjustable rates because they could envision those indexes taking off and leaving them in the dust, with no way to keep up their monthly payments. The challenge of luring borrowers into accepting adjustable rate mortgages was met by placing "caps" or limits on how variable the rate would be. n64 The use of "caps" is so widespread now that an American Bar Association committee guide to homebuying advises: "If an adjustable rate mortgage does not contain rate caps, you should not accept that mortgage." n65

The three types of adjustable rate caps are: (1) payment, (2) annual, and (3) life-of-loan. "Annual" and "life-of-loan" caps are usually ceilings on the chargeable rate of interest. The borrower pays the full allowable rate up to the cap limit. The "payment" cap pertains to the combined principal and interest due, assuring the concerned borrower that next month's payment will never exceed this month's by more than a fixed percentage.

Annual caps restrict the amount by which the *interest* rate levied in any subsequent year can exceed the *rate* that existed in the first (or base) year. A 2-point cap means that if the rate in year one was 9%, the rate in the following year can't be greater than 11%, even if the underlying index increased by more than 2%. The borrower under an annual cap can't be liable for a rate greater than what the lender is able to charge in that year. The unpaid obligation is just carried forward to future years. For instance, if the index actually rises by 3 points to 12% in year two, the 3rd point can be carried forward into the next year in a loan with a 2-point annual cap.

Anticipating the possibility that cumulative liability under annual caps could eventually drive rates beyond the borrower's reach, life-of-loan caps guarantee that the interest rate won't ever surpass a certain figure. A 5% life-of-loan cap on a loan that began at 10% ensures that the interest rate will never exceed 15%.

A loan with a cap on monthly payments but no life-of-loan or annual cap on interest can result in "negative amortization." "Negative amortization" means that the borrower's debt may be growing over time, not shrinking, as it would with each payment on a fixed-rate loan.

The following provides an example of negative amortization: Suppose you take out a 30-year, $150,000 ARM with a starting rate of 9% and a payment cap of 7.5%. Your monthly payments for principal and interest would start at about $1,207.

One year later, rates have increased to 13%, which would make the monthly amount due about $1,664. But your payment cap of 7.5% means that your monthly payment can't be more than $1,298, which is $366 short of the amount due.

What happens to this deficiency? Even though you don't have to pay it now, don't think that you are getting off easy. The lender simply adds it to the outstanding balance of your loan, meaning that you'd owe *more* money, not less, with each passing month.

Negative amortization isn't too bad if your property value is increasing quickly or if you are getting big pay increases. In these cases, your equity is growing at a much faster rate than your loan balance is rising. Moreover, there are some benefits to loans that have the potential of negative amortization.

Most of these loans have lower introductory rates that make mortgages easier to get. The borrower's income can support more debt because the beginning payments will be relatively low. Also, most lenders allow their borrowers to pay a little bit extra each month to avoid negative amortization. Therefore, these loans offer more flexibility than fixed-rate loans, which require a fixed monthly payment. n66

Of course, the very life-of-loan or annual interest cap that assures borrowers that they aren't getting in over their heads also defines the boundary above which the lender is no longer able to match its cost of deposits with the interest charged to borrowers.

Still, lenders are at least partially benefitted by "caps" on the borrower's obligations. When rates are adjusted upward with no limits, borrowers tend to default if their personal incomes don't track interest rates very well. Defaults mean losses to the lender, not only of interest, but sometimes of principal as well. So, while a "cap" does leave the lender open to the risk of wild interest rate fluctuations above the cap, it also helps lenders avoid the deadly default rates that "uncapped" loans could trigger. Even with caps, defaults on adjustable rate loans are higher than on fixed-rate loans. n67

Choosing between Fixed and Adjustable-rate Mortgages

Lower initial rates	Borrower may be financially strapped when the full rate kicks in
If rates decline, the borrower's goes down automatically without refinancing	If interest rates arise, A.R.M. rates go up too
A.R.M.s are easier to assume whereas fixed-rate loans are generally not assumable	Traditionally, home buyers don't want A.R.M.s
Loan points and fees are usually lower than for fixed-rate loans	Points and fees are deductible in the year they are paid by homebuyer
Some A.R.M.s allow conversion to fixed rates sometime in the future	Some fixed-rate loans allow later conversion to an A.R.M.
"Caps" limit how much loan payments can increase in any year or over the life of the loan	Caps can lead to negative amortization

§ 104.03(e) Note Fixed for Five Years, Adjustable Thereafter.

Some loan programs combine fixed and variable rates in different combinations. In the loan excerpted below, the rate is fixed for the first five years and then switches to an adjustable rate with caps.

1. BORROWER'S PROMISE TO PAY

In return for a loan that I have received, I promise to pay U.S. $558,400.00, plus interest, to the order of the Lender. The Lender is California Federal Bank, a Federal Savings Bank.

I understand that the Lender may transfer this Note. The Lender or anyone who takes this Note by transfer and who is entitled to receive payments under this Note is called the "Note Holder."

2. INTEREST

Interest shall be charged on unpaid principal beginning on the date I receive principal and continuing until the full amount of principal has been paid. I will pay interest initially at a yearly interest rate of 10.250%. The interest rate I pay shall be changed in accordance with Section 4 of this Note. n68

The interest rate required by Section 2 and Section 4 of this Note is the rate I will pay both before and after any default described in Section 8.2 of this Note.

3. PAYMENTS

3.1 Time and Place of Payments

I will pay principal and interest by making payments every month.

I will make my monthly payments on the first day of each month beginning on November 01, 1990. I will make these payments every month until I have paid all of the principal and interest and any other charges described below that I may owe under this Note. My monthly payments shall be applied first to interest and other charges then due and the remainder to principal. If, on October 01, 2020, I still owe amounts under this Note, I will pay those amounts in full on that date, which is called the "Maturity Date."

I will make monthly payments at Lender's principal office, any of Lender's branches, or at any other location that the Note Holder may designate.

3.2 Initial Amount of My Monthly Payments

The initial amount of each of my monthly payments shall be U.S. $5,003.84. This amount may change.

4. INTEREST RATE CHANGES

4.1 Change Dates

My interest rate may change on the first day of October, 1995, and on the first day of the month every 1 month(s) thereafter. Each date on which my interest rate could change is called a "Change Date."

4.2 The Index

Any changes of the interest shall be based upon an index. The "Index" is

"Monthly weighted average cost of funds for the 11th District Savings Institutions," as computed monthly by the Federal Home Loan Bank of San Francisco and made available in their information bulletin "Monthly Weighted Average Cost of Funds for the 11th District Savings & Loans."

The Index figure which is used to calculate the interest rate is called the "Index Value." If the Index is no longer available, the Note Holder will choose a new index that is based upon comparable information. The Note Holder will give me notice of this choice.

4.3 Calculation of Interest Rate Changes

On or before each Change Date, the Note Holder will calculate my new interest by adding 2.500% to the most recent Index Value available as of the date 15 days before the Change Date. The Note Holder will then round the result of this addition to the nearest one-eighth of one percentage point (0.125%). Subject to the limits stated in Section 4.4 of this Note, this rounded amount shall be my new interest rate until the next Change Date.

4.4 Limitations on Interest Rate Changes

THE SECTIONS BELOW WHICH APPLY TO MY LOAN ARE: (C), (D).

(c) My interest rate shall never be greater than 13.950% as long as I do not sell or transfer the property which is subject to the Security Instrument described in Section 12. After any sale or transfer of that property, the interest rate shall never be greater than 13.950% or an interest rate that is more than 3.7000% greater than the interest rate at the time of such sale or transfer (whichever is higher).

(d) In no event shall my interest rate be less than 7.0000%.

5. MONTHLY PAYMENT CHANGES

THE SECTIONS BELOW WHICH APPLY TO MY LOAN ARE:

5.1, 5.2, 5.3, 5.4.

5.1 Payment Change Dates

My monthly payment may change beginning on the first day of November, 1995, and on that day every 12 month(s) thereafter. Each of these dates is called a "Payment Change Date." I will pay the amount of my new monthly payment each month beginning on each Payment Change Date.

5.2 Calculation of Monthly Payment Changes

Before each Payment Change Date, the Note Holder will calculate the amount of the monthly payment that would be sufficient to repay the unpaid principal that I am expected to owe at the Payment Change Date in full on the maturity date in substantially equal installments at the interest rate effective during the month preceding the Payment Change Date. The result of this calculation is called the "Full Payment." Unless Section 5.3 below requires me to pay a different amount, my new monthly payment will be in the amount of the Full Payment.

5.3 Limitations on Monthly Payment Changes

Any increase or decrease in my monthly payment, calculated as described in Section 5.2 of this Note, shall be limited to an amount that is no more than 7.5000% of the amount of my monthly payment immediately before such increase or decrease, except on the 6th Payment Change Date and on each succeeding 5th Payment Change Date thereafter. On those Change Dates, I will begin paying the Full Payment as my monthly payment until my monthly payment changes again. I also will begin paying the Full Payment as my monthly payment on the final Payment Change Date.

5.4 Additions to My Unpaid Principal

My monthly payment, as required by this Section 5, could be less than the amount of the interest portion of the Full Payment. If so, each month that my monthly payment is less than the interest portion, the Note Holder will subtract the amount of my monthly payment from the amount of the interest portion and will add the difference to my unpaid principal. The Note Holder also will add on the amount of this

difference to my unpaid principal each month. The interest rate on the interest added to principal will be the rate required by Section 4 of the Note.

7. EXTENSION AND DECREASE OF TERM

If at any Change Date my monthly payment is to be increased, the notice I receive will show what extension of the term of this Note, if any, would result in Amortization at a monthly payment substantially the same as that I am then paying. I will have an option to extend the term as shown in that notice. I may exercise that option by giving notice to the Note Holder of my intent to do so, on a form which Note Holder provides, within the time the Note Holder states in the Notice. In no event, however, shall the total term of this Note exceed 480 months. At any time that I have extended the term of this Note, my monthly payment will not be decreased. On any Change Date on which my payment amount is subject to change, if the calculation of a monthly payment described in Section 5 of this Note would result in a decrease in my monthly payment, the Note Holder will reduce the term of this Note to the term at which the unchanged monthly payment would result in Amortization. When my monthly payment is an amount which would result in Amortization over a term ending at the Maturity Date, future monthly payments will be changed as described in Section 5 of this Note.

9. BORROWER'S RIGHT TO PREPAY

I have the right to make payments of principal at any time before they are due. A payment of principal only is known as "Prepayment." When I make a Prepayment, I will tell the Note Holder in writing that I am doing so. I may make a full Prepayment or Partial Prepayments without paying any Prepayment charge. The Note Holder will use all of my Prepayments to reduce the amount of principal that I owe under this Note. If I make a partial Prepayment, there will be no changes in the due dates or in the amount of my monthly payment unless the Note Holder agrees in writing to those changes. My partial Prepayment may reduce the amount of my monthly payments after the first monthly payment change in accordance with Section 5.1 of this Note following my partial Prepayment. However, any reduction due to my partial Prepayment may be offset by an interest rate increase.

THIS NOTE CONTAINS PROVISIONS FOR INTEREST RATE CHANGES WITHOUT CORRESPONDING PAYMENT CHANGES AND MAY ALLOW DEFERRED INTEREST TO BE ADDED TO MY UNPAID PRINCIPAL. THE PRINCIPAL AMOUNT I MUST REPAY COULD BE GREATER THAN THE AMOUNT ORIGINALLY BORROWED. THIS IS SOMETIMES CALLED "NEGATIVE AMORTIZATION."

§ 104.03(f) Usury Laws.

§ 104.03(f)(1) History and Policy.

Legal limits on the amount of interest a lender may charge are on the statute books in all states but two, Massachusetts and New Hampshire. The antecedents of these laws, repugnant to free market principles, can be traced to the Old Testament, n69 the New Testament (St. Luke 6:35), n70 the writings of Plato and Aristotle, ancient Roman law (Tacitus, The Annals, Book VI, ch. 16), and Eighteenth Century English Law *(12 Annals 2*, ch. 16 (1713)).

In the course of its history the concept of usury has covered a variety of meanings. Originally it referred to all returns derived from the lending of capital and carried no moral opprobrium. With the growing condemnation of the financial abuses of the moneylenders the term came to be confined to credit transactions carrying excessive charges and thus acquired a distinct ethical connotation. In the Middle Ages all direct payments for loans were deemed usurious and condemned as sinful. In modern times the term was again narrowed down and now it refers only to excessive loan charges, while the

> payment of moderate rates is covered by the more neutral term interest...
>
> The ethical nature of the concept of usury renders it impossible to formulate permanent and definite criteria of what constitutes a usurious transaction. As long as freedom of contract remains the corner stone of economic organization, it is not the economist but the legislator who must decide at what point a voluntary economic transaction constitutes an abuse of economic freedom and thus an act of usury. n71

Like all forms of price control, usury laws have their defenders who want to shield hapless consumers from overreaching lenders, and critics who argue that these laws force the least creditworthy borrowers into the arms of the most lawless lenders. In a classic analysis of U.S. usury laws, Professor Marion Benfield concluded that usury laws, as applied to home mortgage loans, only worked to disadvantage consumers and housing producers. n72 When market interest rates, buoyed by inflation, floated above usury ceilings, mortgage lenders either withdrew, risked making loans at illegal rates, or invented ways around the usury limits that courts would not interfere with. These evasive devices always cost borrowers a premium to cover the transaction cost. n73

§ 104.03(f)(2) An Example of a Usury Law.

As a specific example, here is a California usury law enacted by popular initiative in 1919, and amended by voter initiative in 1976. n74 CALIFORNIA CONSTITUTION,
ARTICLE XV. USURY § 1.Interest rates

Section 1. The rate of interest upon the loan or forbearance of any money, goods, or things in action, or on accounts after demand, shall be 7 percent per annum but it shall be competent for the parties to any loan or forbearance of any money, goods or things in action to contract in writing for a rate of interest:

(1) For any loan or forbearance of any money, goods, or things in action, if the money, goods, or things in action are for use primarily for personal, family, or household purposes, at a rate not exceeding 10 percent per annum; provided, however, that any loan or forbearance of any money, goods or things in action the proceeds of which are used primarily for the purchase, construction or improvement of real property shall not be deemed to be a use primarily for personal, family or household purposes; or

(2) For any loan or forbearance of any money, goods, or things in action for any use other than specified in paragraph (1), at a rate not exceeding the higher of (a) 10 percent per annum or (b) 5 percent per annum plus the rate prevailing on the 25th day of the month preceding the earlier of (i) the date of execution of the contract to make the loan or forbearance, or (ii) the date of making the loan or forbearance established by the Federal Reserve Bank of San Francisco on advances to member banks under Sections 13 and 13a of the Federal Reserve Act as now in effect or hereafter from time to time amended (or if there is no such single determinable rate of advances, the closest counterpart of such rate as shall be designated by the Superintendent of Banks of the State of California unless some other person or agency is delegated such authority by the Legislature).

No person, association, copartnership or corporation shall by charging any fee, bonus, commission, discount or other compensation receive from a borrower more than the interest authorized by this section upon any loan or forbearance of any money, goods or things in action.

However, none of the above restrictions shall apply to any obligations of, loans made by, or forbearances of, any building and loan association ... or to any corporation ... or any credit unions ... or any duly licensed pawnbroker or personal property broker, or any loans made or arranged by any person licensed as a real estate broker by the State of

California and secured in whole or in part by liens on real property, or any bank ... or any nonprofit cooperative association ... or credit from any federal intermediate credit bank ... or to any successor in interest to any loan or forebearance exempted under this article... The Legislature may from time to time prescribe the maximum rate per annum of, or provide for the supervision, or the filing of a schedule of, or in any manner fix, regulate or limit, the fees, bonuses, commissions, discounts or other compensation which all or any of the said exempted classes of persons may charge or receive from a borrower in connection with any loan or forbearance of any money, goods or things in action.

The rate of interest upon a judgment rendered in any court of this state shall be set by the Legislature at not more than 10 percent per annum. Such rate may be variable and based upon interest rates charged by federal agencies or economic indicators, or both.

In the absence of the setting of such rate by the Legislature, the rate of interest on any judgment rendered in any court of the state shall be 7 percent per annum.

The provisions of this section shall supersede all provisions of this Constitution and laws enacted thereunder in conflict therewith.

§ 104.03(f)(3) The Federal Preemption of State Usury Laws.

Federal law, namely the Depository Institutions Deregulation and Monetary Control Act of 1980, n75 preempts state usury laws, at first only as to certain loans those secured by first liens on residential real estate, and made by certain "federally related" lenders. It was later expanded to cover state-chartered residential lenders and most residential mortgages. n76 There is no requirement that the borrower live in the house or that the funds be used to purchase it.

The law was a comprehensive banking regulation overhaul. It permitted banks to pay interest on checking accounts and liberalized savings association investment rules. Before that, regulated lenders were only allowed to pay interest on time or savings accounts. This had given savings associations an edge in competing with banks for savings dollars. Also, other intermediaries were offering money-market-based investments to savers, threatening both banks and savings associations with liquidity problems.

Congress saw that banks and S.& L.s (now called savings banks) would have to pay savers more in order to retain deposits, and could do so only if their revenues from interest charges rose to cover the increased cost of deposits. State usury ceilings would break the chain of rising interest rates necessitated by the then-rampant inflation. Hence, the Act. It was aimed at helping savings associations and banks survive in the early 1980s when double-digit inflation was driving many of them into the ground.

Excluded from the federal usury preemption are second mortgages, commercial loans n77 (other than those secured by first liens on residential real estate) and loans made by institutions not defined in the act as "federally related." All commercial and savings banks and credit unions insured by the federal government are "federally related." Pension funds, non-banking corporations, and individual lenders are not.

The federal preemption only protects lenders on loans made after December 22, 1979. Moreover, states had the option of reinstating their usury laws, by statute or vote of the people, if they did so within 3 years. Fifteen states and Puerto Rico did. n78 Twelve of these jurisdictions permit any rate of interest as long as it is disclosed. n79

§ 104.03(f)(4) The Four Elements Necessary to Establish Usury Under State Law.

For a loan to be usurious, four elements must be present. It must be: (a) a loan; (b) made above the legal interest limit; (c) with intent to violate the law; (d) of funds absolutely, not contingently repayable.

§ 104.03(f)(4)(i) What Is a Loan: Distinguishing "Sales" from "Loans."

Usury laws limit the rate of interest on loans, but these laws don't attempt to set limits on rents or sales prices. This tempts lenders desiring rates of interest above the usury ceiling to avoid labelling the loan as a loan. Sometimes the lender "buys" the security property from the borrower, allows the borrower to lease it back and at the end of the lease term to exercise an option to repurchase the property. The lease payments and option price substitute for interest. The "lender" pegs the option at a price so far below the property's true value, the "borrower" is sure to exercise it.

The Equitable Mortgage. Leases and contracts are forms often used to disguise what are really secured loans in order to evade usury laws because usury laws don't apply to sales prices or rents. Just because the parties to a transaction call their deal a sale and leaseback, or a sale with a lease and option to purchase, doesn't mean that courts are bound to that characterization. Courts can be persuaded to reclassify a transaction and call it a mortgage when they have been convinced it was really a security interest disguised as something else.

When courts re-classify a transaction as a mortgage loan, the resulting legal estate or interest is called an *equitable* mortgage. An equitable mortgage is a transaction in some other form that one of the parties can persuade a court to recast as if it had been a mortgage all along.

> A mortgage can be equitable because either the form of transfer does not create a lien--rather, it creates less (as, for example, where a contract of sale is executed) or creates more (as, for example, where a deed, absolute on its fee, is used)--or because the alleged mortgagor has himself only an equitable interest in the property. n80

The Typical Loan Disguised as a Sale Transaction. Many attempts to evade usury laws by disguising loans as sales take this form: the owner, who is really the borrower, sells property worth $75,000 to the lender at a discounted price of $50,000. The owner/borrower retains the right to repurchase the property at the end of one year for $70,000. Courts have had little trouble piercing these veiled sales to unfurl the underlying loan. In effect, the "lender" has loaned the owner $50,000, secured by property worth $75,000, for an interest charge of $20,000 (70,000--50,000). n81

There is a special irony in the loan-disguised-as-a-sale. Many early mortgage loans took this form. The borrower deeded property to the lender on the condition that the borrower could regain title by repaying the debt on its due date. If a borrower was even a day late, he lost the security property. It was precisely to prevent such forfeitures of title that English equity courts gave borrowers time extensions before allowing lenders to close out (foreclose) the borrower's title. The right to pay late was called the "equity" of redemption because it was courts of equity which first bestowed this redemption right on borrowers. So the loan-disguised-as-a-sale has an ancient lineage. Originally deployed to deprive the borrower of her equity of redemption, it is widely used in attempts to evade usury laws.

The Sale Accompanied by a True Purchase Money Loan. One class of creditors has been excused from observing usury limits because the loan element was lacking: sellers of homes or goods who take back credit for part of the purchase price. When the seller of goods or a house takes back an I.O.U., the seller is "forbearing" to collect the full purchase price. Technically, the seller is making a loan to the buyer. It makes little difference to the buyer to be making periodic payments to the seller instead of a third-party lender.

Yet, in the nineteenth century, courts started protecting sellers against usury claims. They reasoned that the seller's primary intent was not to make a loan, but rather to make a sale. The loan was "incidental" to the seller's main objective. Courts also saw no point in subjecting sellers to usury laws which they could easily evade by jacking up the price of a credit sale proportionately. These transactions have been regarded as:

> [n]ot a subterfuge devised to conceal what was in fact a loan ... the sale of one's own property is not a loan whatever by the terms or conditions of the purchase... He [the owner] may offer to sell at a designated price for cash or at a much higher price on credit, and a credit sale will not constitute usury

> however great the difference between the two prices, unless the buying and selling was a mere pretense. n82

We can only guess why courts never regarded the premium a seller might charge for goods bought on credit as a form of disguised interest. n83 Professor Benfield suggests that this is just another example of how the judiciary sanctioned legitimate, arm's-length transactions, despite the usury laws.

The seller later may modify the loan, perhaps agreeing to defer payment in exchange for a higher interest rate. If the court regards the change as a modification, the seller preserves the "purchase money" status of the loan. n84 If the court sees the change as having created a new loan, the new loan lacks "purchase money" status and the lender becomes susceptible to usury sanctions if the interest rate exceeds usury limits. n85 The new loan could be usurious even though the original loan being purchase money was exempted from usury laws by federal preemption and common law. Consider the case of the good-hearted seller who answers her buyer's plea for reduced monthly payments by knocking down the interest on a purchase money loan from 12% to 11%, in a state where 10% is the usury cap. When she magnanimously consents to enter a refinancing at 11%, she could inadvertently fall into the usury trap. Courts eager to avoid tripping up the generous seller, classify the transaction as a modification and hold the modified reduced rate not usurious. In this way, they to avoid producing "a somewhat absurd and clearly inequitable result." n86 To facilitate this result, the seller should document the change as a modification and never cancel the old note to substitute a new one in its place.

The absurdity of the "new loan"/"modification" distinction can be seen by this example: Suppose purchase money borrowers fall behind in their payments. The loan is overdue. The borrowers want to extend the loan maturity date because they can't repay the loan on time. The seller agrees to extend the maturity date of the loan, in exchange for an increase in the interest rate from 10% to 15% (a rate above the usury ceiling, but comparable to market rates at the time). The lender could refuse, insist the overburdened borrower pay on time, let the borrower default, and then foreclose. The purchase money lender would purchase the security property at foreclosure. Then the lender could resell the home subject to a new 15% loan. This loan would clearly be "purchase money." As such, it would enjoy an automatic usury exemption. But if the lender had simply substituted a new loan for the old one and saved the borrower the costs and distress of foreclosure, the substituted loan would probably have been usurious. Some courts have thought this anomaly absurd. "If the parties could lawfully avoid the usury laws indirectly by going through the foregoing convoluted process, there should be no reason why they should not be able to do so *directly*." n87

Distinguishing a Joint Venture from a Loan. If L advances funds to B for investment on the understanding that L is to receive half the profits, the fact that the anticipated profit level could yield L a return far above 10% doesn't necessarily mean L has committed usury. For usury laws to apply, the transaction needs to be a loan, not a joint venture or partnership. The criteria distinguishing a loan from a joint venture include: whether B is unconditionally obligated to repay L; whether repayment is entirely contingent on the venture's generating profits; whether L and B share losses as well as gains; and whether L and B share responsibility for making investment decisions.

Selling the Loan. Another important "sale or loan" question arises when the original lender sells the loan. Suppose a bank, having made a loan of $1,000 at 10%, sells the note to an investor for $500. The result is that the investor who bought the note is collecting interest at a rate greater than 10%-20% in this case.

These transactions aren't regarded as usurious; they are "sales" of notes in the secondary mortgage market. The borrower is paying only the legal rate of interest on the $1,000 actually borrowed. It is the originating lender who loses $500 by selling the loan at a discount. Usury laws are dedicated to protecting borrowers, not lenders, from "excessive" charges. n88

A deviously clever lender, seizing upon the distinction between originating a loan and buying an existing loan, might try to disguise an origination as a sale. The lender would do this by setting up a "straw" lender who would make the loan

and immediately sell it to the "true" and "usurious" lender at a deep discount. The borrower *who receives only the discounted sum* has a good claim of usury against the "straw." The borrower can reach the true lender only by proving that the straw was acting for the lender all along. n89

It is sometimes difficult to tell whether an originating lender is selling a loan or just borrowing against it. If the primary lender merely borrows money from a secondary lender, pledging the deeds of trust obtained from the borrowers as collateral for the loan, the lender might be subject to usury limits. In one example of an obvious sale, Lender 1 sells a loan or group of loans to Lender 2 for a fixed sum. This transaction would not fall under the ambit of usury laws. But suppose Lender 1 guarantees Lender 2 against losses, retains the right to service the loans and even enjoys a right to repurchase them. Suppose as well that Lender 2 only paid 70-80% of the loans' fair market value. This "sale" may well be recharacterized as a "loan." Furthermore, not only might it be usurious, if Lender 1 went bankrupt, Lender 2 could be classified a general, unsecured creditor, not the owner of the loans. n90

§ 104.03(f)(4)(ii) What Is "Interest"? n91

In determining whether a particular payment is "interest" for usury purposes, courts are not as concerned about what the borrower pays, as they are with what the lender receives as a charge for the use of money. But an informed borrower who is comparative shopping for a loan will consider the total costs of the loan. To the borrower, it doesn't matter whether the money paid is classified as "interest" or just "fees." Instead of waiting for the loan closing documents to see what the loan finally costs, she will ask in advance about all the charges she will have to pay to close the loan, which may include more than just the face amount of interest on the note and origination fees such as points and discounts.

(1) *Lender Fees*: Lenders charge fees for originating loans, committing themselves to make a loan at a fixed future date, getting appraisals, credit reports, surveys, and title insurance, administering loan escrows, preparing mortgages, recording and processing loans, and paying for underwriters' fees and legal work (possibly on the high side, since lawyers know their clients are passing these costs along to borrowers who desperately want the loans and probably won't question the fees). n92 Fees are not treated as interest if they are charges for something other than the use of money, especially if the fee is paid to a third party--lawyer, appraiser, or escrow agent. n93

Here is one law professor's critique of the general rule that fees aren't counted as interest for usury purposes:

> The common-law rule was that closing costs paid out immediately to third parties (e.g., survey fees, title charges, and taxes) are not includable as interest because they are not compensation to the lender. Although some of the charges are incurred at the lender's insistence, courts reasoned that it is ultimately in the borrower's self-interest to be certain of boundaries and the title's validity. This theory fails to justify not allocating at least part of those lender-required fees to the interest rate; nor is it persuasive when applied to payments for property appraisal, credit checks, and attorney review of loan agreements. The benefit of these latter tasks inures almost entirely to the lender. Despite these objections, state legislatures ratified the common law when they drafted detailed usury law definitions of interest after 1966.
>
> Under the common law, charges that the lender retains to pay for its own performance of loan-related services are also not interest, as long as these charges are "reasonable." Because courts rarely found lender charges unreasonable, this rule effectively excluded lender-retained closing costs from classification as interest. Nevertheless, this rule was followed by legislative codifications in the 1960's and 1970's. n94

(2) *Points and Discounts*: What about "points" and discounts from the amount borrowed? "Points" refer to the percentage of the loaned amount which the borrower pays the lender for the loan. "Discounts" are deductions from the face amount of the loan. A loan of $100,000 at two points costs the borrower $2,000. A loan discounted by two points

will net the borrower $98,000, although her repayment will be calculated as if she had received the full $100,000.

For usury purposes, courts treat "points" and discounts as interest if they are paid by the *buyer*. n95 They are then amortized over the estimated or actual life of the loan when making usury calculations. "Seller-paid points were not often challenged because homebuyers were not aware that they were paid. When they were challenged, they posed difficult questions." n96

Incidentally, a lender's preference for "point" v. "interest" income depends quite a lot on federal tax and accounting practice. Lenders whose stock is actively traded on securities markets are eager for "income now" to boost their current reported earnings and thus push up the value of their stock. When conventional accounting practice allowed lenders to count points as earnings in the year the loan was made, they got as many "points" "up front" as they could. Current accounting practice requires that points and "original issue" discounts be amortized over the life of the loan. Most loans are paid before maturity. Since "points" are amortized over the stated life of the loan and are not recognizable as income sooner than the stated maturity unless the loan is prepaid, income from point-taking or discount-charging is understated. As a reult, you will see ads offering "no-point" loans. When loans are prepaid before maturity, the lender can then count as income the revenue from points or discounts not already booked.

Sometimes lenders charge borrowers a commitment fee in exchange for the lender's promise to make a loan at a later date. The lender's commitment letter gives the borrower the option of taking the loan or not. Is the commitment fee "interest" for usury calculations?

The common-law authorities generally agreed that bona fide commitment

fees are not interest because the fee is not paid for the use of money, but only for the option of later using it. In the integrated home sale and loan transaction, however, this "option" is almost always exercised, as the homebuyers will use most or all of the precommitted mortgage money. After 1966, a few states did redefine interest to include mortgage commitment fees under some circumstances. n97

(3) *Late Charges and Prepayment Penalties*: Late charges and prepayment penalties are legitimate costs of doing business and are deductible as interest paid by the borrower if otherwise qualified under the Internal Revenue Code. n98 They are also taxable income for lenders. But they aren't interest for usury calculations because the borrower has the option of avoiding the charges by paying on the scheduled due date. n99

Similarly, even though borrowers may deduct interest on purchase money loans made by sellers and the sellers are taxed on the income they receive from the loan, the loans are treated as part of a sale and thus escape the usury net. Moreover, sellers who take back notes for part of the purchase price and charge interest at less than 9% risk having some of the principal recharacterized as interest for federal income tax purposes. n100

§ 104.03(f)(4)(iii) Intent.

"Intent" to make a usurious loan is a question of fact, not law. n101 That means the trial court's determination will usually be upheld. "A review of the plethora of decisions involving the issue of usury indicates a great deal of apparent inconsistency. Different cases with similar facts reach opposite conclusions." n102 An unspoken premise is that usury laws are intended to penalize lenders for exploiting the necessitous and unwary. So the comparative sophistication of the parties matters. Once a court decides to treat a transaction as a usurious loan, the element of intent is readily overcome. Lenders are presumed to know the law. Usually, all the borrower needs to prove is that the lender voluntarily and consciously accepted interest at more than the legal maximum.

The "intent" element gives courts a chance to uphold deals that seem reasonable, even though they could be analyzed as disguised, usurious loans. Say a film or TV producer runs short of cash and promises a financial angel the right to buy

stock in the production company or project at a favorable price, with a repurchase option or even a repurchase obligation. The investor's return on the cash put up might exceed the usury limit, but the risks of film production are great, the investor's return was justified by the risk, and the borrower initiated the deal and even suggested using purchase options to skirt the usury laws. Later, the borrower invokes the usury law and seeks treble damages. California courts, in several cases like this, have found no "intent" to commit usury and have enforced the deals as agreed upon. n103

In other situations, California courts found the requisite intent where the lender contracted for "disguised" interest in sums that seemed excessive in light of the risk. In one case, the plaintiff owned 182 acres that it was trying to develop for a golf course (120 acres) and some houses (62 acres). A teamsters union pension fund had agreed to lend $500,000 to finance the project in two years, but couldn't advance the funds before that time. The plaintiff ran short of cash while developing the golf course and tried to borrow against the teamster loan commitment.

The defendants agreed to loan $500,000 at 91/2%, ostensibly. But in reality, the defendant-lender wanted 10% on top of that, so the plaintiff-borrower was persuaded to grant the defendant an option to buy the residential acreage (62 acres) at $3,000 per acre--a price well below its market value. As part of the deal, the defendant gave the plaintiff a reciprocal option to repurchase the 62 acres and thereby erase the lender's bargain deal. Under the option, the plaintiffs could repurchase the land at $800 per acre in the first year of the loan, $1,600 in the second, $3,200 in the third, $4,000 in the fourth, and $4,800 in the fifth year, but not until the $500,000 had been repaid.

The plaintiff breached, but won a judgment that the loan terms were usurious. He didn't have to pay interest on the $500,000 note, and got back the interest he had already paid.

The defendant-lender appealed and lost. At trial, it came out that the lender and developer had agreed to a 91/2% loan with 10 "points." The lender felt that he couldn't make a decent profit on any less of a return than that. The repurchase option had been set to yield about $50,000 per year ($800 x 62 acres) to the lender, in addition to its fixed 91/2% return. Thus, lender received an effective return of nearly 20% per year. The court found the evidence sufficient to show usurious intent. n104

§ 104.03(f)(4)(iv) "Absolutely, Not Contingently, Repayable."

This criterion denotes the difference between equity and debt. The classic formulation appears in the *Restatement of Contracts* § 527 (1932). It excepts any repayment obligation from usury, "... if the repayment promised on failure of the condition to occur is materially less than the amount of the loan or debt with the highest permissible interest...." Comment a:

> If the probability of the occurrence of the contingency on which the diminished payment is promised is remote, or if the diminution should the contingency occur is slight as compared with the possible profit to be obtained if the contingency does not occur, the transaction is presumedly usurious.

Hence, the contingent interest feature escapes usury on the Restatement's terms if: (1) the borrower's promise to pay is conditional, (2) the portion of the repayment at a fixed rate is "materially" below the usury ceiling, (3) the contingency that could cause the lender to lose the right to the interest above the usury limit is more than remote, and (4) the lender's loss if the contingency failed would be more than "slight."

Bondholders and mortgagees are usually guaranteed repayments in the sense that the borrower promises repayment absolutely. By contrast, shareholders have no right to dividends; these are discretionary or "contingent" and depend entirely on profits and corporate practice. In fact, you might have to sell your stock at a loss. Therefore, equity interests with no guarantee of repayment do not count as loans.

Contingent yields on loans are also exempt.

> It is the general rule that a loan in consideration of a share of profits, income, or earnings, in lieu of, in addition to, interest, is not usurious, in the absence of certainty that the arrangement would produce a return in excess of the legal rate of interest, *even though the principal is to be repaid in any event.* [Emphasis added] n105

Consider three cases:

(1) A creditor is promised a full return of principal at the highest legal rate of interest *plus* a share in the debtors' profits. This deal oversteps the Restatement's bounds of the "contingency" rule. First, the creditor gets the highest legal rate of interest no matter what happens. Any debtor profit--a dime's worth--will push the creditor's yield over the usury limit line. Second, there is only a slight chance that the enterprise will never make a profit. Why would anyone invest if they thought otherwise?

(2) A lender agrees to forego *any* fixed and definite return in exchange for a percentage of net (i.e., after expenses) profit. Even if that percentage eventually yields the lender a sum greatly exceeding the usury limit, the lender isn't violating usury laws. The lender isn't receiving any interest, you might say, or, alternately, all of the return is totally contingent because none of it is absolutely repayable. n106

(3) The debtor guarantees the lender a partial return of principal and a very high interest rate--but lower than the usury limit--plus an equity "kicker" based on the debtor's profit. This case is a close one. The contingency exemption might or might not save the lender. You can see the determining factors by reviewing the first two examples.

§ 104.03(f)(5) Exempt Lenders.

Many types of lenders are exempt from usury laws, either by federal or state law. Most lenders, including banks, are exempt from state usury laws under the Depository Institutions Deregulation and Monetary Control Act of 1980, n107 but not all lenders are covered by the federal preemption. For instance, pension funds do not enjoy the benefit of the preemption. Moreover, if a nonexempt lender arranges a loan through a bank which is exempt, this won't protect the nonexempt lender from otherwise being subject to a state's usury law.

Equally significant, the federal law only applies to lenders whose loans are "secured by a first lien on residential real property." n108 On loans secured by commercial property or home equity loans, lenders are still potentially subject to state usury laws. California, Connecticut, Colorado and Delaware exempt banks. Savings banks are exempt in California, Colorado, Connecticut, Florida, Illinois, Louisiana, Minnesota, Ohio, South Dakota, and West Virginia. n109

To see how subtle some lender exemptions are, consider the real estate broker's exception in California. Loans made or "arranged" by real estate brokers are exempt under Article XV of the California Constitution. To *make* a loan, the broker must actually be supplying the loan funds. To *arrange* a loan, the broker must act as an intermediary and collect fees for arranging the loan, in order for the lender to rest assured that the transaction will be exempt from usury laws.

In *Jones v. Kallman*, n110 a loan qualified for exemption because it was "arranged" by a licensed real estate broker, even though the broker had only "minimal participation" in arranging it. The court held that some "compensation" to the broker would be necessary to exempt the loan from the state usury law. "Points" were paid to a partner of the broker, who put a portion of the points into the partnership business, thereby "compensating" the broker. n111

This is an important case since many real estate brokers facilitate the closing of deals by seeking financing for their clients. Under *Jones*, real estate brokers can now claim exemptions as "arrangers" and cite fees received as proof of it.

Any California lender working with a real estate broker can provide funding under the broker's "arranging" exemption, and probably be free of usury constraints.

§ 104.03(f)(6) The Corporate Borrower Exemption.

The usury laws in about thirty states exempt corporate borrowers. n112 In other states, usury rate limits for corporate borrowers are above those for noncorporate borrowers.

> The corporate exception statutes fix differing qualifications for the exemption. Many of them provide blanket corporate exemptions, but in some states there are special limitations. In New York, for example, the exemption does not apply to a corporation whose principal asset is a one- or two-family dwelling if it was organized within 6 months prior to the execution of any notes or security instruments issued in connection with the loan. The Washington statute makes a corporate borrower subject to the usury law on obligations on which an individual is also liable.
>
> There has been a split of authority as to whether the exemption statutes apply to a corporation organized specially for the purpose of taking advantage of them. In New York it is permissible to form a corporation for the express purpose of avoiding the usury laws, and the same result has been reached in Maryland and Illinois on an estoppel theory.
>
> On the other hand, New Jersey has taken a very hard line, holding that the defense of usury is available where a corporation is formed in an attempt to avoid the usury statutes. In 1956, the New Jersey Supreme Court suspended from practice for a year a lawyer who had arranged an incorporation for the purpose of avoiding the usury statute. Florida also has decisions inferring that general usury statutes apply where the incorporation is for the sole purpose of avoiding them. Even in New York, there are limits to the corporate exemption rule. In a case where the husband and wife, owners of a small incorporated retail hardware business, borrowed money through the corporation for the purpose of making a down payment on a home they were purchasing, the court held that the corporate exemption did not apply.
>
> The effect of the corporate usury exemption, in spite of the cases holding that it cannot be used for the sole purpose of avoiding the usury statutes and in spite of exclusions from the corporation exceptions like those in New York and Washington, is to provide a vehicle by which borrowers for a business purpose can escape the general usury laws. Incorporation may be inconvenient and may increase the total cost of the loan, but the incorporation method can be and is used to provide financing which would not otherwise be available. n113

§ 104.03(f)(7) Penalties.

State usury laws vary hugely in their penalties for breach. Some work a forfeiture of principal and interest. n114 Others relieve the debtor of the obligation to pay any interest at all. n115 Some disallow only the collection of that amount of interest which exceeds the usury limit and impose no other penalty. n116 Some laws discharge the borrower from paying any interest, allow the borrower to offset interest paid against the principal due, and provide damages for treble the amount of excess interest actually paid. n117 Willful usury is a felony in some states, punishable by up to five years in state prison, n118 and a misdemeanor in nearly a dozen others. n119 There are relatively short statutes of limitations, though.

Lenders retain the right to foreclose on a deed of trust even if the underlying note was usurious; however, the debt may be reduced because of the usury violation.

§ 104.03(f)(8) Savings Clauses.

Some lenders try to limit their usury damage exposure by using savings clauses. Usury savings clauses are designed to negate the intent element, i.e., that the lender voluntarily and consciously accepted interest exceeding the legal maximum. They reduce charges to legal limits, with no refunds for past overcharges. However, courts have found loans usurious, notwithstanding the inclusion of such clauses. n120

Whether the inclusion of a usury savings clause negates per se a lender's intent to charge usurious interest was the subject of a recent decision of the Florida Supreme Court in Jersey Palm-Gross, Inc. v. Paper. n121 The plaintiff real estate partnership, faced with a purchase money loan that was almost due, urgently needed a $200,000 bridge loan for construction of an office building. The defendant real estate developer declined their offer of an equity partner interest upon investment of $200,000, but agreed to an 18-month loan of $200,000 at 15% interest (total interest of $45,000). Shortly before closing, the defendant insisted on a 15% equity interest as additional consideration. The equity interest, valued at $90,000, effectively raised the interest rate to 45%. The legal interest limit in Florida is 25%, with forfeiture of the principal as a penalty for usury. n122When the developer sued the borrowers for repayment of the loan that was in default, the borrowers defended on the basis that the loan was an unenforceable debt because it was usurious. The developer appealed the trial court's order of forfeiture, arguing that the court had failed to consider a usury savings clause in the promissory note when the issue of intent was determined.

The Supreme Court approved and adopted the appellate ruling that a usury savings clause was only "one factor to be considered in the overall determination of whether the lender intended to exact a usurious interest rate. Such a standard strikes a balance between the legislative policy of protecting borrowers from overreaching creditors and the need to preserve otherwise good faith, albeit complex, transactions which may inadvertently exact an unlawful interest rate." n123 Holding that a usury savings clause cannot by itself preclude a usury finding, the court reasoned that a contrary holding would permit a lender to circumvent the usury laws by merely including a disclaimer of usurious intent in a contract with a clearly usurious interest rate.

Borrowers have no right to waive their protection under the usury law. So savings clauses aren't exculpatory per se. A "savings" clause did rescue the lender in *Arneill Ranch v. Petit.* n124 California's usury law provides for floating rates capped at 5% above the Federal Reserve Bank, San Francisco, discount rate. The rate in *Arneill Ranch* was tied to prime, and below the usury ceiling on the day the loan was entered. The prime rate increased faster than the discount rate and the lender found itself with a loan earning interest above the usury ceiling. The court invoked a savings clause in the note to justify its conclusion that the lender hadn't intended to make a usurious loan.

A lender also successfully invoked a savings clause in a more doubtful situation in *In re Dominquez.* n125 The maximum allowable rate under the usury law at the time of the loan was 16.5%. The contract interest rate was 17% and thus above the usury ceiling on the day the note was written. Nonetheless, the court invoked the savings clause as evidence the lender lacked intent to make a usurious loan.

§ 104.03(f)(9) Choice of Laws.

Suppose a lender doing business in New York agrees to lend money to a California corporation for a development project in California. The loan is executed and funds are disbursed and repaid in New York. The loan agreement specifies that New York law is to govern the transaction.

The borrower defaults and the lender sues in California. The borrower contends that California law should apply, under which corporations enjoy the protection of the usury law. In New York, they don't. Which state's usury law will the courts apply to the contract?

The governing standard is the *Restatement (Second) of Conflict of Laws* § 203 (1971):

> The validity of a contract will be sustained against the charge of usury if it provides for a rate of interest that is permissible in a state to which the contract has a substantial relationship and is not greatly in excess of the rate permitted by the general usury law of the state of the otherwise applicable law...

"Substantial relationship" is defined as a "normal and natural relationship to the contract and the parties." Comment C, § 203.

Many cases on conflict of laws and usury have ruled that states do not have such an overwhelming public policy concern in its usury laws as to override the contracting parties' decision to choose the law of another state, as long as there was some nexus between the parties, the transaction and the other state. n126

In this case, California courts will honor the New York choice-of-law agreement. They see support for their view that the state doesn't have an uncompromising public policy preference for its own usury laws, because the law itself exempts most institutional lenders. Further, California was one of those states that elected *not* to opt out of the federal usury preemption statute. Therefore, we shouldn't expect California courts to set aside a "choice of law" provision merely because it frees the lender from California's usury law.

Nonetheless, the parties still must demonstrate that their contract has a reasonable relationship to the state whose law they have chosen. Practically, this means that usury disputes concerning contracts with choice of law provisions can't be readily resolved on the pleadings. An evidentiary trial is usually going to be necessary. n127

One way a lender might avoid the ordeal of an evidentiary trial is to add a choice-of-jurisdiction provision to its documentation, requiring that the case be tried in a state which is more friendly to the parties' choice of law rules. n128

(n6)Footnote 49. *Beach v. Ocwen Fed. Bank, 523 U.S. 410 (U.S. 1998)* (The borrowers obtained a load in 1986. In 1991 they stopped making mortgage payments, and in 1992 the lender commenced a foreclosure action. The borrowers hoped to rescind the mortgage based on the lender's violation fo the Truth in Lending Act (TILA). The Supreme Court held that the TILA allows borrowers to sue for damages within 1 year of closing, and allows borrowers to allege damages in defense even if the 1-year time period has expired. However, borrowers cannot ask for rescission fo the mortgage after the 3-year time period regardless of their procedural posture in the litigation. The 3-year time period is not a statue of limitation. The 3-year time limit on rescission is based on the very clear Congressional intent that borrowers should not be able to rescind based on TILA after 3 years have passed since closing.); *Green Tree*

Acceptance, Inc. v. Anderson, 981 P.2d 804 (Okla. Ap. 1999) (The lender brought suit to foreclose a mortgage. The borrower claimed he did not understand the nature of the transaction and the legal implications of mortgaging his house. Borrowers was allowed to counter-claim seeking damages under the Truth in Lending Act and asserting that he was never told of his rights to rescind); *Berkeley Federal Bank & Trust v. Siegel, 669 N.Y.S.2d 334 (N. Y. App. Div 1998)* (The lender commenced foreclosure proceedings and the borrower asserted TILA and demanded rescission. The court determined that the foreclosure proceeding could continue, if the borrower failed to tender the loan principal in a timely manner); *Truth in Lending-Recession, Consumer Remedies and Creditor Defenses in closed-End Transactions, 19 U. Tol. L. Rev. 491,* (1988).

(n14)Footnote 57. *15 U.S.C. § 1639(c), (d).*

(n15)Footnote 58. Some researchers have suggested that the margin depends on how tight the caps are on the loan, the length of the rate adjustment frequency, the type of index used, the contract rate, the loan size, the up-front fees, and the call for prepayment and other options (*e.g.,* "due-on-sale" features). *See, e.g.,* Jarjisu Sa-aadu & Clemon F. Sirmans, *The Pricing of Adjustable Rate Mortgage Contracts,* 2 J. Real Est. Fin. & Econ. 253 (1989); *Bastin v. First Indiana Bank, 694 N.E.2d 740 (Ind. App. 1998)* (Borrower had taken an adjustable rate mortgage and sued the lender claiming that the lender had improperly calculated the interest rate. The rate was to be based on the average rate of 6 month U.S. Treasury bills and could be adjusted every 6 months. The lender initially obtained the rate information from the Federal Reserve Board statistical report and later began obtaining the rates from the Wall Street Journal. The borrower argued that in a period of increasing rates, the one week timing difference between the publication of the rates from the 2 sources hurt the borrower. The court held that the lender was required to use the Federal Reserve Board statistical report); *Hubbard v. Fidelity Federal Bank, 91 F.3d 75 (9th Cir. 1996)* (The lender was supposed to send notice of the annual payment adjustment between 30 and 45 days before the payment adjustment took place. The lender began to send the notices 65 days before the change and the borrower alleged that the lender was therefore improperly calculating the interest rate. The borrowers were allowed a breach of contract claim, but it was limited by the statute of limitations); *Circle Mortg. Corp. v. Kline, 645 So.2d 75 (Fla. Dist. Ct. App. 1994)* (The borrower claimed diminution in the value of his loan caused by the lender's breach in failing to execute new documents that stated the interest rate for his adjustable rate mortgage. The court held that the damages would be too speculative considering the borrower had not sold his home, and there was evidence that the loan wouldn't lose much value if it were refinanced).

(n16)Footnote 59. Several articles have been written on how consumers can compare fixed vs. adjustable rates. James Alm & James R. CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.04

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.04 The Length of the Term: Is Shorter Better?

Mortgage loans are typically long-term; twenty- to thirty-year lengths are common. For the borrower, the trade-off in the length of the loan is apparent: lower monthly payments vs. greater interest payments over the life of the loan.

The borrower's monthly payment burden can be eased by detaching the loan's due date from the amortization of principal schedule. In Canada, for instance, most home loans are amortized as if they had been written for 25 years, yet all the principal becomes due and payable every five years. Canadian lenders allow refinancing every five years as a matter of course, but at prevailing market rates. If they didn't, borrowers would face big balloon payments. Here is an example of the borrower's trade-off:

Monthly Mortgage Payments n129

> Suppose Mr. Matthews buys a home for $106,250. He puts down $21,250 in cash and gets a 30-year, fixed-rate mortgage for $85,000 at 10 percent interest--in other words, a "conventional" loan at market rates and terms. Monthly payments for principal and interest total $745.94.
>
> At the end of 30 years, Matthews has made 360 mortgage payments and spent a total of $268,537. Of the money paid to the lender, $85,000 was principal and $183,537 was interest--an amount substantially greater than the apparent acquisition price of the property.
>
> But a 30-year loan is not the only way to organize a mortgage. Within the bounds of a 10 percent interest rate, Matthews--or you or I--could easily cut the interest bill for an $85,000 loan by $100,000--or more. Suppose, for example, that Matthews decides to increase his mortgage payment by $5.09 a day--not an unreasonable expense in the context of a $100,000 home or an era when a good hamburger costs five dollars anyway. Let's look at what happens:
>
> -- Monthly payments rise to $898.73.
>
> -- The debt to the lender is reduced at a far faster rate than would have been possible with payments of $745.94 per month.

-- Because principal payments have been increased, the length of the loan is shortened from 360 months to 187 months. In other words, the loan term is now 15.58 years rather than 30 years.

-- Interest costs are slashed by just over $100,000.

(See Table 1).

Loan size	$85,000	$85,000
Interest rate	10 percent	10 percent
Monthly payment	$745.94	$898.73
Extra monthly cost	None	$152.79
Number of payments	360	187
Potential interest cost	$183,536.90	$83,062.37
Potential cash saving	None	$100,474.53

Ask yourself: If you were Matthews, would you set aside $38.20 a week--hardly the cost of a meal for two at many restaurants--to cut your mortgage bill by $100,000? Is it worth spending $152.79 a month to knock out almost 15 years of mortgage payments?

Raising monthly mortgage payments is only one path to lower financing costs.

Many homeowners with 30-year fixed rate mortgages are refinancing them with 15-year fixed rate loans. n130

For the lender the 30-year vs. 15-year amortization trade-off is also complicated. Longer loan terms give the lenders more interest over the life of the loan, but shorter loan maturities give lenders the chance to reevaluate the credit risk periodically and to refinance if they are satisfied with it or cash out if they aren't. Shorter maturities also enable lenders to re-lend prepaid funds at prevailing market rates.

Some borrowers justify the higher cumulative interest they pay on longer term loans because: (1) they don't plan to hold the property for anywhere near as long as the loan maturity; (2) they itemize their deductions and consider the *after*-tax costs of mortgage interest; and (3) they are discounting the absolute amounts to present value. n131

Another reason why borrowers may not be too concerned about paying more cumulative interest is that stretching payments over a longer period of time lowers the loan's monthly payments. Cash-strapped borrowers can more easily qualify for loans and wealthier buyers get bigger loans for nicer houses. Reducing the monthly payment by just $37 could lower the annual income needed to qualify for a loan by more than $1,200. n132 In high-cost areas where larger loans are needed, the savings can have an even more dramatic impact.

CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.05

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.05 Prepayment.

§ 104.05(a) Why Borrowers Prepay.

Once a borrower has carefully chosen a loan of ideal length why would such a borrower ever have a change of heart and want to pay it off before maturity?

§ 104.05(a)(1) Refinancing for Lower Rates, to Cash Out, to Reduce Risks, to Simplify Their Lives.

The borrower may want to refinance to take advantage of lower market rates of interest or convert the rising equity value into cash by increasing the size of her loan. Homeowners also pay off debts ahead of maturity either because they want to decrease the amount of risk in their lives by reducing their leverage (debt/equity ratios), or because they don't want to be bothered by having to keep track of monthly payments.

§ 104.05(a)(2) Tax-Motivated Refinancing.

Some refinancings are tax-motivated. Before 1986, all interest payments were deductible, whether on home loans, car loans, or unsecured borrowings. Since then, only *consumers* can deduct only interest on home loans. Rather complex rules circumscribe the interest deductions allowed on funds borrowed for use in a trade, business or passive investment activity, to acquire investment property or to produce portfolio income. n133 As interest deductions for personal consumption were being phased out, tax-conscious homeowners shifted as much of their borrowing as they could to home loans. For some, this meant borrowing on the "equity" by taking out a new junior loan. For others, it meant refinancing by paying off present loans and obtaining newer, larger ones.

Congress tried to limit homeowners converting non-deductible interest to deductible by refinancing their mortgages. Congress "capped" the deductibility of home mortgage and home equity interest payments. n134 No tax-motivated homeowner refinances without first checking with an accountant to determine the extent to which interest on the refinanced loan will be deductible under present (and ever-changing) rules.

A second category of tax-motivated refinancing occurs as a borrower's loan repayments shift from being mostly deductible interest in the early years of the loan to mostly non-deductible repayments of principal in the later years.

n135 Refinancing, say, a 30-year loan in the 20th year of its life, restores the borrower's ability to benefit from the mortgage interest deduction.

§ 104.05(a)(3) Sale-Triggered Refinancing.

Many prepayments are triggered when homeowners sell. Their lenders may "call" their loans or their buyers may insist that the old loans be paid off because they are paying all cash, or because they want a new and bigger loan, a more favorable interest rate, a lender they like better, or a fixed instead of an adjustable rate.

§ 104.05(a)(4) Default-Induced Refinancing.

Prepayments may also be forced on borrowers if they default. Should the lender foreclose, the mortgage will be prepaid out of foreclosure sale proceeds.

§ 104.05(b) Why Lenders Care About Prepayments.

Lender attitudes about prepayment vary.

§ 104.05(b)(1) Protecting Portfolio Matches.

Pension funds and insurance companies generally disfavor prepayment. They often hold long-term mortgages in their portfolios to match accrual on long-term obligations and prepayments could upset this balance.

§ 104.05(b)(2) Minimizing the Interest Risk.

Some lenders which raise their capital in short-term money markets welcome prepayments. The shorter loan maturities prevent them from getting squeezed between rising short-term costs of funds and declining long-term mortgage rates.

Some lenders are indifferent to prepayment because they have hedged their interest rate risks by selling their loans immediately after originating them.

§ 104.05(b)(3) Minimizing the Credit Risk.

Prepayments can be heaven-sent for lenders who have made risky loans on thin borrower equities. They are joyful to greet returning principal they weren't sure they would ever see again.

§ 104.05(b)(4) Estimating the Premiums and Discounts Attributable to Interest Rate Fluctuations.

To see the connection between interest rate fluctuations and the right to prepay, consider this example: in January, 1990, a borrower gets a 30-year $150,000 mortgage loan, with a fixed interest rate at 12%, the going rate at the time. Monthly payment: $1,542.92. Two years later, interest rates have fallen to 10%. What is the then-present value of the right to receive payments under this 2-year-old loan? The principal balance will have been reduced to $148,842.42, but the loan will be worth $173,760--only if the borrower can't prepay. A 12% loan sells for a premium in a 10% market. Conversely, if rates rose to 14%, the loan would be worth $129,566.08, a discount of $19,276.34.

§ 104.05(b)(5) Keeping the Premium and Avoiding the Discount Caused by Rate Fluctuations.

Some lenders don't like prepayment because they want to lock in rates on mortgages to prevent cost-conscious borrowers from refinancing when long-term rates fall.

§ 104.05(b)(6) Speculating On High-Risk Loans Being Prepaid at Full Face Value.

Prepayments are a boon to certain loan investors who bought the loans at a discount, hoping that they would later be paid off at full face value. Say a trust deed investor buys a loan in default on a rundown but well-located property. He gets a deep discount for the loan because it is in default. Later, a developer comes along to buy and rehab the property; however, he needs to refinance in order to obtain the necessary construction funds. To do so, the developer must clear the record of the outstanding mortgage debt by paying it off at par. The loan purchaser then pockets a whopping gain equal to the discount at which he bought the loan.

§ 104.05(b)(7) Prepayment: The Secondary Market Challenge.

Unpredictable prepayments can pose a serious risk to individual and institutional investors who buy mortgage loans in the secondary market. These mortgage buyers are eager to pocket the margins above Treasury yields that government-insured (F.H.A., V.A.) loans offer when packaged into bonds issued by the Federal National Mortgage Association and other similar institutions.

Prepayment privileges are analogous to a bond issuer's right to call the obligation and prepay it before the scheduled maturity date. When such a right exists, it puts the investor on notice not to rely on the premium yield because it can be lost if the entire investment is suddenly repaid.

A stockbroker quoted in the Wall Street Journal explained it very well when he said that the biggest problem for mortgage investors is: "[Y]ou don't know when you're going to get paid." n136 The frequency of prepayments fluctuates with changes in the economy, interest rates, and the housing market. Purchasers of mortgage-backed securities are particularly worried when rates go down and prepayments speed up; this scenario is exactly the opposite of what the mortgage holder wants. One analyst figures that bullish investors expecting a steady stream of income over, say, seven years at today's prepayment rates, could find their investment paid off in as little as 21/2 years if interest fell just 1.5%. n137 They would find the mortgage game a losing one since mortgage bonds would "shorten up" just when they wanted them to stay long. "Similarly, if rates rose substantially, prepayments would slow down, so the mortgage security would transform itself into a very long-term bond just when it was best to do the opposite." n138

Prepayment patterns are so important that guessing them right can bring instant riches while guessing them wrong can bring ruin. Therefore, trying to predict prepayment patterns has become a major enterprise for academic researchers. None have been hugely successful to date, even though reams of pages have been filled with mathematical models attempting to do the trick.

Michael Lewis, in *Liar's Poker*, n139 an account of life at Salomon Brothers, describes how the firm tried to guess which homeowners "with 4, 6 and 8 percent home mortgages were irrationally insisting on paying down their home loans when the prevailing mortgage rate was 16 percent." To analysts at Salomon "The American homeowner became ... a sort of laboratory rat. The researchers charted how previously sedentary homeowners jumped and started in response to the shock of changes in the rate of interest." n140 Once researchers were satisfied that one group of homeowners was more likely than another to pay off low-interest loans, Salomon would buy them--at steep discounts, of course, and reap windfall gains when they were paid in full.

§ 104.05(c) Prepayment: A Right or a Privilege.

In its simplest form, a prepayment penalty is a fee that a borrower is contractually obligated to pay if he or she chooses to pay off a debt prior to its scheduled retirement date. n141

Few mortgage notes omit references to prepayment. They either allow it (with or without an accompanying fee), or prohibit it (typically, for a period of years shorter than the stated maturity of the loan). The simplest way of the note signaling that the maker has a right to prepay is for the promise to pay a specified sum to be followed by the words "or more." The maker who has the option of paying a specified sum "or more" may discharge the note by prepayment. n142

Prepayment prohibitions are typically referred to as "lock-in" clauses, graphic enough. What about when the note omits reference to prepayment privileges? Does the law presume that the borrower has the right to prepay in the absence of a note clause barring it? Here is the surprising answer:

> Contrary to what is probably pervasive popular belief, a mortgagee has a common law right to refuse an early tender or "prepayment" of principal or interest. This rule is derived from the classic case of Brown v. Cole, 14 L.J. (N.S.) Ch. 167, Chancery, 1845, where the court stated that if mortgagors "were allowed to pay off their mortgage money any time after the execution of the mortgage, it might be attended with extreme inconvenience to mortgagees, who generally advance their money as an investment." n143

Certainly the right to prepay is worth something to the borrower. It also makes a loan less valuable to a lender than if the borrower were locked in. One researcher recently estimated the value of prepayment at 1.4% per year per dollar of loan. A borrower for whom prepayment without penalty is important can shop for a form that allows it. Since form notes invariably treat the issue explicitly, there isn't much current litigation on whether prepayment is a right or a privilege. When the promissory note or mortgage is silent on the issue, many jurisdictions follow the common law. In *Patterson v. Tirollo*, the New Hampshire Supreme Court reaffirmed state laws on negotiable instruments, holding that absent an express prepayment right in the promissory note, a mortgagor has no legal right to pay a debt in advance of the maturity date.

However, several courts and one state legislature now allow homeowners a right to prepay unless the note expressly disallows it. For example, the Pennsylvania Supreme Court in *Mahoney v. Furches* held that a rebuttable presumption of a prepayment right exists where the mortgage note is silent. The court reasoned promotion of the policy against restraints on alienation outweighed the policy of protecting a mortgagee's investment interest from anticipation.

The legislatures of California n144 and New Mexico n145 have given homebuyers more than the benefit of a default rule. Here is the California statute:

> ... where the original principal obligation is a loan for residential property of four units or less, the borrower under any note or evidence of indebtedness secured by a deed of trust or mortgage or any other lien on real property shall be entitled to prepay the whole or any part of the balance due, together with accrued interest, at any time. n146

California's statute doesn't apply to buyers of *commercial* property or apartments of more than four units. n147 Presumably, their greater ability to negotiate specific loan conditions leaves them with less need of legislative protection in their dealings with lenders.

The California legislature could have chosen a less intrusive route by reversing the common-law presumption against prepayment. It could have put the drafting burden on lenders by legislating, as Florida and Indiana have done, that borrowers have the right to prepay, absent express language in the note to the contrary. n148 This might have been sensible since lenders are in a better position than borrowers to appreciate that silence on prepayment doesn't imply acquiescence. Under a presumption-only rule, lenders could block prepayment simply by spelling out in their mortgage or deed of trust forms, "the borrower has no right to pay off this loan early." The California legislature went further, giving owner-occupiers of one-to-four unit residential property the absolute right to prepay without penalty after five years. Before then, the lender may charge no more than six months interest on the amount prepaid which exceeds 20% of the original principal amount. n149 California also bars charges on prepayments which occur after rate increases in variable rate mortgages. n150

The legislature did carve out an exception for noncommercial sellers taking back purchase money loans where

prepayment could trigger dire tax consequences. n151 These lenders can lawfully prohibit prepayment, but only in the year of sale.

State and national banks may impose prepayment penalties on adjustable-rate mortgage loans, n152 and federally chartered savings banks may impose prepayment penalties on fixed and adjustable rate mortgage loans. n153 These rights must be reserved by contract. However, the U.S. Department of Housing and Urban Development (HUD), which regulates all FHA-insured and VA-guaranteed home mortgages, allows mortgagors to prepay at any time without penalty. n154 These are home loan and apartment loan programs.

§ 104.05(c)(1) Involuntary Prepayment.

A prepayment provision is usually invoked by the lender when the mortgagee takes voluntary action to pay the principal balance on the mortgage in advance of the maturity date. But, what if the mortgage indebtedness is paid prior to term through an involuntary action such as a condemnation proceeding to take the encumbered property by eminent domain? Can the lender enforce the prepayment provision?

Some jurisdictions consider prepayment provisions to be applicable only to a voluntary decision by the borrower to prepay the mortgage. In *Jala Corp. v. Berkeley Sav. & Loan Ass'n*, a New Jersey appellate court held that a prepayment provision that was silent on condemnation only contemplated a voluntary exercise by the mortgagor of the right to prepay, not an involuntary exercise of the right by reason of a taking in eminent domain. An Ohio district court quoted *Jala* extensively in holding that absent an express agreement, a mortgagor who sold the encumbered property under direct threat of condemnation was not liable for payment of the prepayment penalty. The trial court in a New York case held that an express provision for payment of a prepayment penalty in the event of condemnation would be enforceable when apportioning a condemnation award

The lesson here is clear. A well-drafted prepayment provision should include an express provision that the parties to the agreement have contemplated the possibility of condemnation and agreed that the prepayment penalty is payable in the event of condemnation of the encumbered property by eminent domain.

§ 104.05(d) Prepayment Charges: Is the Sky the Limit?

§ 104.05(d)(1) The Six Months' Interest Charge.

Notes often allow prepayment for a price. The overwhelming majority of prepayment fees in home mortgages allow the borrower to prepay up to 20% of the principal in any one year, above which the lender may levy a charge of six months unpaid interest on the prepaid balance. n155

§ 104.05(d)(2) Legislative and Regulatory Curbs on Prepayment Fees.

Many states prohibit or limit entirely prepayment fees in residential mortgages. n156 Prepayment fees in Veterans Administration (V.A.) guaranteed or Federal Housing Administration (F.H.A.) insured loans are prohibited and these loans may be prepaid at any time. n157 The Federal National Mortgage Association (F.N.M.A.) and the Federal Home Loan Mortgage Corporation (F.H.L.M.C.) do not enforce prepayment clauses in the home mortgages they own.

§ 104.05(d)(3) What Are the Lender's Actual Damages When a Loan Is Prepaid?

The Cost of Replacing the Funds. When their prepayments are challenged, in court and out, articulate lenders assert that it costs something to replace an old loan with a new one. They should be able to charge the prepaying borrower the costs of finding and making a new loan.

Consumer advocates regard this claim as preposterous, a "double" tax, because lenders are well compensated for

refinancing costs by the fees they charge the new borrower. The old borrower pays the cost of the reconveyance. The cost of originating the new loan is assessed against new borrowers in the form of processing fees, document preparation charges, appraisal and credit checking fees, loan escrow fees, and origination fees. Any borrower who has actually paid these charges and fees can readily attest that lenders have overlooked nothing in making sure that all their expenses are reimbursed.

Loss of Interest on Prepaid Funds Between the Time the Old Loan Is Paid and a New Loan Is Made. Lenders also contend that they lose interest during the time it takes to reloan prepaid monies.

Consumer advocates rejoin, "In the dark ages before mass lending and computerized fund placement systems, this may have been true. But today money in vast quantities can be shifted around the globe with the punch of a key. Within a matter of hours, a day or two if the lender is badly managed, redeposited funds are back in play."

The Lender Needs Protection Against the Borrower Prepaying When Rates Fall. One argument supporting prepayment charges relates to interest rate fluctuations. When rates rise, borrowers clutch their below-market loans like umbrellas in a downpour. When rates fall, they drop them fast. n158 Lenders take a drubbing come rain or shine in the money market, and prepayment charges are their only protection against getting washed out.

In response, prepayment fee opponents contend that: (1) interest rate fluctuations are part of what the lender already charges the borrower in setting rates; (2) at most, this rationale would only justify prepayment penalties when borrowers repay loans whose rates are above current market rates. Lenders don't need protection when borrowers repay loans whose rates are lower than prevailing market rates because they are actually getting a windfall; (3) the prepayment penalty commonly assessed in residential loans--six months interest on the amount prepaid which exceeds 20% of the original balance--bears no connection to the lender's interest rate loss when loans with above-market rates are prepaid.

When the borrower voluntarily sells and pockets a substantial capital gain to boot, many courts are sympathetic to lenders, and condone their skimming off just a little of the cream that the borrower might never have enjoyed but for the initial loan. Lenders count on most long-term mortgage loans being prepaid before maturity, 7-11 years for most 30-year loans, and expect fees from prepayments.

Many bankruptcy courts have been unsympathetic to prepayment fees. Borrowers selling on the eve of, or during bankruptcy, aren't going home with full pockets. Giving secured lenders prepayment fee gravy can mean depriving hungry unsecured creditors of anything.

§ 104.05(d)(4) The Legal Challenge to Prepayment Penalties.

One of the leading challenges to prepayment penalties was brought by Mr. Lazzareschi. He thought he had a good case when he took San Francisco Savings and Loan Association to court in 1967. They wouldn't allow him to prepay a $300,000 loan on property used for commercial purposes at 5% in a 9% market unless he paid them $9,130.32 as a prepayment charge. n159 "They should thank me, not penalize me," was the thrust of his argument in *Lazzareschi Investment Co. v. San Francisco Federal Savings and Loan Association*, "They will be able to reloan this $300,000 at a rate higher than they are getting on it right now."

Mr. Lazzareschi's legal argument had three parts:

(a) *Is a Prepayment Fee a Penalty?* In real estate contracts, California courts let sellers pocket only so much of a breaching buyer's downpayment as absolutely necessary to cover the seller's actual loss from the breach. Lazzareschi didn't see why lenders shouldn't likewise get their hands slapped for trying to squeeze more from prepaying borrowers than the prepayment really cost the lender. If individual sellers aren't allowed to recover unless they experience an actual loss, why should lenders be?

The court answered: prepayment isn't a breach because it is the borrower's voluntary choice. The court in *Lazzareschi* held, as most courts do, that the fee wasn't a penalty because it was the borrower who elected to prepay. The prepayment privilege was exercisable solely at the borrower's discretion. It is like an option contract. The prepayment fee is what the borrower pays for exercising the option to prepay. Option fees aren't ever regarded as "penalties." A sensible borrower who isn't profiting from the exercise of the option won't exercise it. So prepayment fees shouldn't be treated as if they were penalties for breach.

(b) *Should Prepayment Provisions Be Tested Against Rules Concerning Liquidated Damages*? If they were, they would probably be unenforceable. First, money damages are always easy to estimate in prepayment cases. The lender's actual loss is readily calculable. It is the present value of the differential between the contract rate and the market rate at the date of prepayment, multiplied by the repaid principal. Furthermore, the price loans bring in the secondary market can be used to determine "market value at date of breach."

Moreover, the customary penalty of six months' interest on the unpaid principal balance above 20% bears no reasonable relationship to the lender's probable loss.

In a rising market the lender has no loss. It can relend the funds at a mark-up above what the prepaying borrower had contracted to pay. In a falling market, six months' interest would give the lender too much or too little depending on the gap between the contract rate and the market rate at date of breach. Anyway, that is the borrower's case against prepayment penalties as invalid liquidated damages.

Many courts, including California's, reject the application of liquidated damages criteria to prepayments. Liquidated damages rules only apply when a contract has been breached. A borrower exercising a prepayment privilege isn't breaching the contract at all. The borrower is electing an alternate route to performance of the contract. The prepayment fee isn't meant to be an estimate of the lender's damage in the event of a breach of contract--like a late payment penalty, for instance. Rather, it is the price for the borrower deciding to go with an alternate performance.

The theory of "voluntary alternate performance" fails, of course, when the prepayment is triggered by the mortgaged property being taken by eminent domain, destroyed by a casualty, or when the lender exercises its option to accelerate upon default or a change in ownership.

Some bankruptcy courts have rejected the "voluntary alternate performance" theory. Since at common law borrowers have no right to prepay, a prepayment is a breach of the contract to borrow money for a fixed time. "[T]he charge is a liquidated damage provision inserted to compensate the lender for the breach of early payment, and is not part of an alternative performance." n160 Bankruptcy courts may regard prepayments resulting from reorganizations as involuntary, and may therefore be prepared to characterize prepayment fees as penalties for breach.

(c) *Usury*. Add the six months prepaid interest to the face interest on the loan, and it will sometimes add up to more than the state statutory interest rate maximum under usury laws. Should prepayments be regarded as "interest," and subjected to usury limits? n161

Most institutional lenders are exempt from state usury limits by federal law. But even if they weren't, the *Lazzareschi* court explained that the fee isn't a charge for the use of money. It is a charge for NOT using the money. n162

Nonetheless, the court in *Lazzareschi* acknowledged that some prepayment penalties could be so high as to bump into the ceiling of "unconscionability." The six months' interest fee wasn't held unreasonable or unconscionable in *Lazzareschi* because it was exactly the sum allowed at the time by the Federal Home Loan Bank Board in all residential loans subject to its jurisdiction (virtually all savings associations in the U.S.) until 1984. Currently, savings banks are free to contract for any rate. n163

§ 104.05(d)(5) Impact of Prepayment Fee on Sellers.

Sellers are well advised to calculate the dent a prepayment charge will make in their net sale proceeds before committing themselves to a fixed selling price. To save the prepayment fee, some sellers shift this cost to the buyer by contract. Buyers who have to pay the prepayment fee may try harder to assume the existing loan and think twice before electing to refinance.

§ 104.05(d)(6) Yield Maintenance Fees.

Commercial prepayment fees are often computed on the basis of "yield maintenance." This is the sum which, if invested at prevailing market rates, will give the lender its bargained rate of return. The formula should be constructed to take into account the unpaid balance of the loan, accrued interest, and the original loan term. n164 Here is a typical "yield maintenance" provision for a fixed-rate mortgage:

> The "Note Prepayment Fee" shall be (i) the present value of all remaining payments of principal and interest, discounted at the Treasury Rate, less (ii) the amount of principal being prepaid, but shall not be less than zero. The "Treasury Rate" shall be the annualized yield on securities issued by the United States Treasury having a maturity equal to the remaining term of the Loan, as quoted in Federal Reserve Statistical Release H. 15 (519) under the heading "U.S. Government Securities--Treasury Constant Maturities" for the date most nearly two weeks before the prepayment date (or a comparable rate if this rate is no longer published), adjusted to reflect a monthly payment interval. If the above rate is not available for a term equal to the remaining term of the loan, the Treasury Rate shall be determined by interpolating between the yields on securities of the next longer and the next shorter maturity. n165

This sort of yield maintenance provision has been enforced in non-bankruptcy situations, but has been set aside in several bankruptcy cases as an "unreasonable fee, cost or charge...." n166 One court faulted a yield maintenance clause that had failed to credit the borrower by discounting to present value and also because it used the market rate for U.S. Treasury notes instead of the market rate for first mortgages due on the day that the loan would have been repaid. n167 The reason the Treasury note rate gives the mortgage lender too much is that the mortgage lender will be able to loan prepaid funds at a premium above the Treasury note rate. Under the yield maintenance formula the prepaying borrower receives no credit for that premium. "It would have been permissible for the parties to have chosen an index rate such as that for U.S. Treasury notes that differs from the market for long term first mortgages, provided that some appropriate adjustment to bring this note up to the first mortgage rate was included." The same note was also faulted for containing no discount for present value. The prepayment fee provision had one more flaw; it had a floor, obligating the borrower to pay 1% of the prepaid principal, even if the yield maintenance clause produced a zero net to the lender. The lender defended this as a way of recouping the costs it had incurred in originating the loan. The court rejected the argument because the lender had given the borrower no credit against transaction costs for the time the loan had been in effect. Also, the sum in the case ($150,000) exceeded any reasonable cost imputed to loan origination. Another bankruptcy court went further; the loan was prepaid at a time when interest rates were higher than the contract rate. Since the lender could have invested the loan proceeds at a higher rate, the bankruptcy court decided to credit the borrower with this windfall. n168 Lazzareschi would have been delighted, but lenders' counsel aren't pleased by these results. n169

A yield maintenance fee provision that would protect the lender's expectations of return and protect the borrower by discounting the loss to present value and eliminating fixed percentage premiums might use the following calculation to determine the prepayment fee:

> Multiply the outstanding principal balance which is being prepaid by the difference between the interest rate then in effect on the note and the Reference Rate (defined as U.S. Treasury Notes, market rate on conventional first mortgages, etc.), on a monthly basis, to arrive at a Monthly Payment Differential. The present value would reflect the number of scheduled monthly payments foregone as a

result of the prepayment, the size of the Monthly Payment Differential, and the Reference Rate, by discounting an annuity (using the standard formula for the present value of an annuity) equal to the Monthly Payment Differential for the number of months remaining, to an interest rate equal to the Reference Rate. n170

§ 104.05(d)(7) Are Partial Payments Allocated to the Final Payments Due on the Loan or to Current Payments?

Say a borrower has lots of cash in December and January, so the borrower makes six months of loan payments in advance. In February and March, the borrower runs short of cash. May the lender foreclose or must it allocate the early payments to cover the February and March deficits? Courts differ in their answers.

One California court held that the borrower was out of luck because the prepayments are applied to the last payment due, n171 but a Texas court found *for* the borrower and required the lender to apply the prepaid sums to current payments. n172

§ 104.05(d)(8) Lender Who Mistakenly or Inadvertently Waives a Prepayment Fee Can't Recover It Later from the Borrower.

In 1988 the borrowers borrowed $7,060,000 at 10.25% on a loan due in 1995. A year later, they wanted to refinance when rates fell to 9%. But their note called for a prepayment fee. It would have come to $653,998.74 at that time. They called their loan servicer to ask what fee it would charge if they refinanced elsewhere to take advantage of falling rates. "Nada," they were told. So they refinanced and paid off the old loan. Fifteen months later, the lender discovered its mistake and went after the borrowers for the big prepayment fee.

"Get outta here," the appellate court told the lender. (The court's actual words were the judicial equivalent: "Under the circumstances, recovery by CalFed would be inequitable.") Recovery would be inequitable because: (1) the lender benefits by having the loan fully paid off 5.5 years earlier than its stated maturity, (2) the borrowers would not have refinanced to save less than $90,000 a year for 5.5 years if they had known they would have to pay $653,998.74 for the privilege; (3) the mistake was all the lender's, not the borrower's fault. n173

§ 104.05(d)(9) Who Benefits and Who Pays When a Form Mortgage Gives the Borrower the Right to Prepay Without Penalty?

Prepayment is a matter of right in the M.A. form note. Under such a note, the borrower, in effect, enjoys the benefit of the right to prepay without a penalty. This is like a call provision in a bond or stock where the debtor can compel the holder of the note to sell at a prearranged price the original contact price in the case of mortgage loans. The lender or the purchaser of a loan in the secondary mortgage market assumes the risk of prepayment. The risk is that the debtor will compel the lender to sell the note and mortgage at its full face value precisely when it is actually more valuable when the face interest rate is above current market rates, so that the market value of the note is greater than its original contract price. This risk has a price. Lenders who originate or trade in residential mortgages exact that price in the form of higher interest rates than they would accept on mortgage notes where the borrower assumes the prepayment risk by agreeing to pay a steep fee for the right to prepay.

Not all borrowers would place the same value on the right to prepay, given a choice, when the loan is first entered. If all borrowers were given no choice but to accept loans with prepayment provisions, homeowners who didn't expect to pay off mortgages early would be asked to subsidize those who did expect to prepay. Among the most likely to refinance are high-income borrowers with greater liquidity and big equities in their houses. They are in a better position to refinance when interest rates fall than minority and low-income borrowers. They have an easier time finding mortgage money when they desire it. They can offer refinancing lenders safer loans because they have larger equities in their houses.

They are more likely to sell and to refinance in connection with a sale as they "trade up" to more expensive houses, or as they relocate for better jobs. Low-income households are less mobile, n174 less likely to find lucrative employment elsewhere, and have a harder time refinancing.

There is an exception to this rule. Defaulting borrowers automatically trigger an involuntary prepayment when the lender is forced to take back the property through foreclosure. Low-income borrowers are at greater risk of default since they possess thinner cash reserves to cover expenses in times of personal crisis job loss or protracted illness.

What low-income borrowers need who have limited funds for down payments is the chance to buy default insurance instead of paying higher mortgage interest rates for prepayment insurance they are not likely to use.

For this reason, two researchers concluded: "The rules of the mortgage market, with the near-total ban on prepayment penalties, amounts to more than just a subsidy of the wealthier borrowers by the poorer; it is one of the reasons that restrict poor people from getting a mortgage in the first place." n175

They argue that low-income households would be better off putting the money they saved by agreeing to prepayment penalties towards default insurance. By purchasing extra default insurance, they would make their loans less risky, and more attractive, to lenders. Many low-income borrowers who don't qualify for loans with automatic prepayment rights but also have no borrower-purchased default insurance would qualify if only they could take that portion of the interest rate presently going to cover the lender's prepayment risk and apply it to the purchase of default insurance.

Professor Chinoy and Isaac F. Megbolugbe, the Director of Housing Research at M.A., divide the mortgage market into four groups:

> (1) Low-income borrowers are disproportionately attracted to mortgages insured by the FHA or guaranteed by the VA. VA and FHA loan principal ceilings are lower; loans are capped at the median sales price in the county. These loans also carry low down payment requirements (3% of the first $25,000, 5% of the typical average, with closing costs financeable). Therefore, government-backed loans are more attractive than other types of loans to the low-to moderate-income buyer. Almost half of African-American and Hispanic borrowers finance through the FHA and VA programs. Under these loans, the default risk is insured by mortgage insurance funded by the borrower and paid into a fund called Mutual Mortgage Insurance. Shortfalls are covered by the full faith and credit of the U.S. Treasury, in other words, federal taxpayers. The default insurance premium ranges from 3.8 to 6.5% of the present value of the loan balance.
>
> (2) Many savings banks and other lenders sell their mortgages to M.A. or F.H.L.M.C.government-sponsored, privately owned institutions. They promulgate form mortgages and will only buy mortgages conforming to those form instruments. Lenders originating loans with lower than 80% loan-to-equity ratios must lay off part of the default risk by having the borrower purchase private mortgage insurance.
>
> (3) Private firms unregulated have created secondary market vehicles, buying loans from mortgage brokers and other originators and selling them in pools to investors. Units of Prudential, General Motors, General Electric, Chase Manhattan and Citicorp are among them.
>
> (4) Finally, there are lenders who originate loans to hold in their own portfolios.

The point is that each group uses a form that treats default risk and prepayment risk uniformly throughout its portfolio. Borrowers aren't presented a choice of trading more default protection for less prepayment protection or vice versa. Mortgages are sold like cars with few options. Everyone has to buy a sunroof in some dealerships. No one can get one

at any price from other manufacturers. There is no chance of trading off a sunroof for a more powerful engine or antilock brakes. This forces cross-subsidies to buyers who like the features that come with the standardized package from those who would have preferred to pay less and live without these features.

The point is that each group uses a form that treats default risk and prepayment risk uniformly throughout its portfolio. Borrowers aren't presented a choice of trading more default protection for less prepayment protection or vice versa. Mortgages are sold like cars with few options. Everyone has to buy a sunroof in some dealerships. No one can get one at any price from other manufacturers. There is no chance of trading off a sunroof for a more powerful engine or antilock brakes. This forces cross-subsidies to buyers who like the features that come with the standardized package from those who would have preferred to pay less and live without these features.

§ 104.05(d)(10) The New Generation of Prepayment Charges.

Some lenders are offering borrowers loans with prepayment penalties but not the draconian six months' interest of yesteryear which penalized the borrower for prepaying anytime a sum often greatly in excess of the lender's actuarial loss due to prepayments, with no benefit to the borrower who agreed to it. Under one of the new generation of prepayment penalties, the borrower has the choice of agreeing to pay a charge of 2% of the outstanding loan amount for prepaying in the first three years of the loan. In exchange, the lender reduces the interest rate or closing costs by a sum comfortably exceeding the 2%. The trade-off is extremely attractive to borrowers pretty confident they won't be prepaying in the first three years. n176 Borrowers not interested in the trade-off are given mortgages prepayable without penalty, but pay a higher interest rate for it.

§ 104.05(d)(11) Impact of Prepayment Fee on Sellers.

Sellers are well-advised to calculate the dent a prepayment charge will make in their net sale proceeds before committing themselves to a fixed selling price. To save the prepayment fee, some sellers shift this cost to the buyer by contract. Buyers who have to pay the prepayment fee may try harder to assume the existing loan and think twice before electing to finance.

FOOTNOTES:
(n1)Footnote 133. *26 U.S.C. §§ 163,* 469.

(n2)Footnote 134. There is a $1,000,000 cap on acquisition indebtedness. Debt incurred in a refinancing is acquisition indebtedness up to the balance of the acquisition debt just prior to the refinancing. For example, say a homeowner takes out a $200,000 loan to buy a house. The homeowner pays the loan down to $180,000 and refinances. The homeowner can deduct mortgage interest on the refinancing only up to $180,000. But the homeowner will probably be able to treat the sum above $180,000 as a "home equity" loan and deduct up to $100,000 of it. U.C.A. 63.

(n3)Footnote 135. In the early stages of repayment, most of the debt service goes towards paying interest on the loan. As the loan nears maturity, most of the principal has been repaid, so that the interest portion of the debt service becomes minimal; most of the debt service goes towards principal repayment. Because only interest is tax-deductible, a borrower starts to lose this deduction as the loan matures.

(n17)Footnote 149. *Cal. Civ. Code § 2954.9(b)*.

(n18)Footnote 150. *Cal. Civ. Code § 1916.5(a)(5)*.

(n19)Footnote 151. A vendor who desires installment sale reporting of gain under § 453 of the Internal Revenue Code could lose the benefit of that provision if the purchaser-borrower prepaid. The installment sale provisions allow sellers to match their gains for tax purposes with their actual receipt of payment, instead of having to pay up on the paper profit in the year of sale. Case and statutory law is sympathetic to these vendor-lenders. *See, e.g., Williams v. Fassler, 167 Cal. Rptr. 545, 549 (1980)* , which upheld a prepayment penalty of 50% as valid, "if the penalty is reasonably related to the obligee's anticipated risk of incurring increased tax liability upon the occurrence of the prepayment."

California allows a seller taking back a loan secured by a deed of trust to prohibit prepayment during the calendar year in which the sale and loan take place, as long as the seller does not take back four or more such deeds of trust during such calendar year. *Cal. Civ. Code § 2954.9(a)(3)*. However, the legislature hasn't directly addressed the question of whether a seller wanting more than a one-year deferral of capital gains taxes on the sale can reserve the right to a prepayment penalty equal to his accelerated tax liability if the borrower prepays.

CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.06

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.06 Late Payments.

Most notes, secured or unsecured, levy a "late payment" charge. They have two purposes: (1) to prod borrowers into making timely payments, and (2) to reimburse lenders for the costs of cajoling the tardy, and the loss of earnings on the late payment. The charge could be a fixed dollar amount, a percentage of the late installment, or a percentage of the unpaid balance of the entire debt.

§ 104.06(a) Legal Theories: Usury and Liquidated Damage Analysis.

In a handful of court fights, challengers have argued that late charges are a form of additional interest and so should be kept within usury limits, or that late charges are a penalty for partial breach and should be evaluated against liquidated damage standards. n177

Courts have generally rejected the usury analysis because the purchaser can avoid the charge by paying on time. Moreover, the severe penalties that accompany usury infractions also steer courts away from the usury route. n178 On the other hand, Louisiana courts view late charges as additional interest for the lender's extending the credit. n179

The liquidated damage characterization has a larger judicial following, although some courts reject it because they perceive late charges, like prepayment fees, as a contract or option for an alternate performance. n180

Some would argue that lenders don't need liquidated damage clauses for late payments. Actual damages should suffice because the lender's loss can be readily estimated when the breach occurs by determining the earnings foregone and the costs of collection.

In a leading case on the topic, *Garrett v. Coast and Southern Federal Savings Loan Association*, n181 the California Supreme Court held that a charge of two percent of *the entire principal balance of the debt* was invalid as a penalty. The lender was only damaged by being deprived of payment actually past due. Because only a portion of the principal debt was past due, a late charge could not lawfully be a function of the balance of the entire debt. To be valid, the court held that the late payment charge had to be a function of the amount of money overdue or a fixed dollar sum based on the lender's actual cost of collection. This analysis is widely followed.

§ 104.06(b) Statutory Limits.

Many states have enacted legal limits on late charges. n182 The limit for F.H.A. and V.A. loans is 4%. n183 Federal regulators have preempted state late charge rules for federally chartered savings banks. n184 The Federal Housing Administration has done the same for federally insured or guaranteed mortgages. n185

§ 104.06(c) Stay of Foreclosure During Late Charge "Grace" Period.

Most loans provide a grace period--10 or 15 days--before the late payment penalty accrues. n186 An unintended consequence of the grace period may be that the lender is barred from foreclosing on a chronically late borrower as long as the borrower brings the debt current within the late payment "grace" period. n187

Justice Johnson, J., defended this result in *Baypoint Mtg. Corp. v. Crest Premium Real Estate Invs. Retirement Trust* n188:

> One of the most important functions of the law is to maintain a proper balance between creditor and debtor. To this end, it attempts to match the creditor's remedy to the debtor's default. Major defaults justify drastic remedies; minor defaults only warrant lesser remedies. Thus, where the debtor is unable or unwilling to pay at all the creditor is entitled to recapture the security the debtor gave for the loan. By threatening this ultimate loss the creditor often succeeds in pressuring the recalcitrant debtor into coming up with the money to pay the debt after all. If not, the creditor is at least made whole or as nearly whole as he can be by return of the property the debtor put up to secure the loan.
>
> In this case, appellant Crest Premium asks this court to sanction the use of this same drastic remedy to deal with a minor and common failure of debtors--making installment payments a few days after the initial "due date." This is the functional equivalent of employing a blunderbuss to kill a gnat. Indeed, the loan papers in this case afforded the creditor a remedy more in keeping with the nature of the debtor's offense--a 10 percent "late payment fee" which is imposed after 10 days' delay when the gnat at least could be said to have turned into a fly.
>
> Great mischief could be visited on creditor-debtor relations in California were we to accept Crest Premium's invitation. To allow creditors to impose foreclosure--and its attendant expenses--whenever a debtor is a few days late in a monthly payment would open up thousands or perhaps millions of California homeowners and other debtors to an extraordinary additional financial burden. Moreover, the threat of such a severe penalty would place undue pressure on debtors, thus destroying the important but delicate balance between creditors and debtors.

§ 104.06(d) Acceleration on Default.

Mortgage notes provide that in the event of default the entire debt becomes due and payable. This is called acceleration. Without an acceleration clause, the lender would have to file a separate foreclosure suit each month the borrower missed a payment.

While "equity abhors forfeiture and penalties," an acceleration of debt on a mortgage is regarded as neither a forfeiture nor a penalty. n189 The borrower got the loan proceeds. Acceleration is the first logical step in the lender's reaching the security property for repayment.

> An action to foreclose a mortgage is equitable in nature... In a suit of equitable cognizance to foreclose a real estate mortgage the trial court may refuse foreclosure where there has been a technical default due to a mistake or mere venial inattention and of no damage to the mortgage security or prejudice to the mortgagee. n190

Courts have stayed acceleration when the borrower was one day late in making a payment because time had not been declared to be of the essence in the note or deed of trust, n191 the lender had consistently accepted late payments on a debt amply secured, n192 or the lender had accepted payments by mail and a mailed check was never received, but the mortgagor cut a new check within a week of being notified of the default. n193

On the other hand, there are states in which lenders are allowed to accelerate even against borrowers ready to pay up, whose nonpayment or partial payment was due to an honest mistake or a clerical error. The leading case strictly enforcing an acceleration clause against a borrower ready to cure the default is *Graf v. Hope Bldg. Corp.* n194 A clerk cut a check $401.87 short of the required $6,121.56 payment. As soon as the error was caught, the lender was informed. But it never demanded the correct payment. Instead, it waited until the grace period expired and initiated foreclosure. The opinion provided an impassioned dissent by Justice Cardozo:

> When an advantage is unconscionable depends upon the circumstances. It is not unconscionable generally to insist that payment shall be made according to the letter of a contract. It may be unconscionable to insist upon adherence to the letter where the default is limited to a trifling balance, where the failure to pay the balance is the product of mistake, and where the mortgagee indicates by his conduct that he appreciates the mistake and has attempted by silence and inaction to turn it to his own advantage. n195

Despite Justice Cardozo's words often cited outside New York to justify stays of acceleration, strict enforcement of acceleration clauses is the law in New York to this day. n196 The *Graf* rule does *not* apply in New York to payments made late but within the grace period, payments lost in the mail, or where the lender had waived tardiness.

§ 104.06(e) "Arrears" vs. Advance Payment Schedules.

Notes secured by mortgages or deeds of trust often call for payments to fall due monthly "in arrears" at the end of the month during which the obligation accrued. This is quite a pleasant surprise to former tenants who almost always had been required to pay rent monthly in advance. The present value of the deferral over a 30-year lease equals one month's interest. Some mortgages, though, do call for payment in advance, just like leases, and others for payment in the middle of the month.

FOOTNOTES:

(n1)Footnote 177. *In re Brunswick Apartments of Trumbull County, Ltd., 169 F.3d 333 (6th Cir. 1999)* (The language of the promissory note which allowed the lender to assess a 5% penalty on each late installment payment did not authorize the lender to assess a 5% penalty on the final balloon payment).

(n2)Footnote 178. Grant S. Nelson & Dale A. Whitman, Real Estate Finance Law 443-47 (5th ed. 2007).

(n3)Footnote 179. Federal courts have decided late charges are interest, at the behest of out-of-state lenders seeking courts to rule that federal law preempting "interest rates" also preempted state limitations on late charges. *Greenwood Trust Co. v. Massachusetts, 971 F.2d 818 (1st Cir. 1992)* ; *Hill v. Chemical Bank, 799 F. Supp. 948 (D. Minn. 1992)* . "While in those cases, it was consumers in states with good consumer protection laws who lost, the precedent is a double-edged sword which may on other occasions support a borrower's argument that late fees are interest." National Consumer Law Center, Usury and Consumer Regulations 69 (1993 Cum. Supp).

(n4)Footnote 180. *Id.*

(n5)Footnote 181. *511 P.2d 1197 (Cal. 1973)* . In 1978, the California legislature revised RSA 2000 to change from establishing presumptive invalidity of liquidated damages clauses to establishing presumptive validity of liquidated damages clauses.

(n6)Footnote 182. Regulated rates typically range from 2% to 6% of the overdue sum. *See, e.g.,* U.C.C. 2.5925, 1974 (setting a 5% late charge maximum); RSA 2000, art. 1 (4% of payment past due, disclosed in advance to borrower); Or. Rev. Stat., tit. 9, ch. 86 (not to exceed 5% of delinquent sum, if reserved by contract, and 15 days overdue); Va. Code Ann., tit. 6.1, ch. 7.3 (not to exceed 5% of sum overdue, free of acceleration, if reserved in contract with borrower, made later than 7 days after due date); RSA 2000, art. 17 (secondary mortgage loans not to exceed 5% of payment overdue made 15 or more days later); Mass. Gen. Laws Ann. Part II, tit. 1, ch. 38 (3% of sum overdue, if more than 15 days late, applies only to residential mortgage loans, 14 dwelling units).

In California, the late payment fee on a mortgage or trust deed secured by an owner-occupied, single-family dwelling is 6% of the installment due or $5, whichever is greater. A payment is not late until ten days after the due date of the installment. The borrower has to occupy the property within 90 days of signing the deed of trust or mortgage.

If the security property is anything but a single-family, owner-occupied dwelling, the late payment fee is 10% of the installment due or $5, whichever is greater. On a balloon payment loan, the late charge is measured by the largest single monthly installment previously due, other than the balloon payment, multiplied by the sum of one plus the number of months occurring since the late payment charge began to accrue. RSA 2000. Bus. & Prof. Code § 10242.5(a) and (c).

CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.07

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.07 Difference Between "Assuming" and Taking "Subject to."

§ 104.07(a) When the Distinction Matters.

A buyer may elect to finance a home purchase by arranging a new loan or by keeping the existing loan in place. The buyer's rights will depend on whether the seller's note is assumable and whether it has a due-on-sale clause accelerating the total unpaid balance of the debt if the seller transfers the property without the lender's prior consent. If the buyer decides to keep the existing loan in place, the buyer can either assume it or take subject to it. Here is the difference.

A new buyer takes *subject to the deed of trust* if the deed of trust was duly recorded, or if the buyer actually knows about it and hasn't arranged for the seller to pay it off at closing. A new buyer *assumes the note* if the buyer agrees personally to repay the balance of the debt due.

The difference between a purchaser taking "subject to" the deed of trust and "assuming" the note becomes significant only when the debt exceeds the value of the security property. A buyer taking "subject to" the deed of trust risks losing the property through foreclosure if the debt goes into default. An *assuming* grantee is at an even greater risk. Not only does the assuming grantee risk foreclosure on default but, in addition, will be personally liable to cover any deficiency between the debt and what the foreclosure sale yields.

§ 104.07(b) Protecting the "Subject to" Buyer.

A buyer who plans to keep the existing financing in place needs to condition the obligation to purchase on the lender allowing the buyer to assume or take subject to the loan. The buyer needs to confirm the principal and interest due and whether the loan is in good standing. If tax and insurance impound accounts exist, they should be verified and prorated on closing. n197

§ 104.07(c) How the Buyer Becomes an Assuming Grantee.

Typically, L, the lender, has reserved the right to approve A's successors (A being the original borrower). As a condition of loan transfer approval, L will insist that B (the new buyer) sign an agreement personally *promising to repay* the balance of the debt. n198 By signing that agreement, B will become an "assuming grantee."

The formalities necessary for the buyer to become an assuming grantee vary from state to state. In most states, including New York and California, the agreement to assume must be in writing. New York also requires that the amount assumed be stated and that the writing be signed and acknowledged at the time of the conveyance. n199 In California, the assumption agreement must be in writing signed by the assuming grantee or appear in the conveyance itself (which is not signed, ordinarily, by the grantee). n200

Pennsylvania treats a conveyance subject to a mortgage as the buyer's implied assumption of the debt. But only the seller--not the lender--can sue on the implied assumption. n201

Parol evidence is admissible to establish that an assumption was truly intended. Some courts require that the evidence be "clear and convincing." n202

Suppose, though, that the buyer never promises the *lender* to pay off the old debt but does promise the *seller* to pay it off. Can the lender sue the buyer directly on the promise the buyer made to the seller if the buyer doesn't pay? Yes, on several theories. The most common theory is that the lender is a third-party beneficiary of the buyer's promise to the seller. n203 Another theory is that the buyer's assumption promise is an asset of the seller's that the lender can reach with the aid of equity, an equitable assets theory advanced by Professor Williston. n204 Other concepts have been invoked to justify giving the lender standing to sue the buyer directly. n205 Although the practical consequences of each theory vary, n206 the point is that the lender can sue the buyer on a promise the seller made to the lender to pay the debt. Some states have statutory limits barring lenders from claiming deficiency judgments against buyers. But, in the absence of these statutes, the issue of personal liability casts a shadow that few informed buyers or sellers would overlook in the overbuilt, default-riddled era of the early 1990s.

§ 104.07(d) Effect on Seller of Buyer Assuming or Taking Subject to the Existing Loan.

Does the seller care whether the buyer meticulously continues payments to the lender once the deal closes? Isn't the seller out of the picture when the buyer moves into the house and starts paying the mortgage? Not necessarily.

Once the seller signs a promissory note to a lender, the seller can't cut the ties to the lender by later contracting to sell the property. When a grantee assumes the existing mortgage, the grantee becomes the primary obligor for the debt. The land is the primary fund for repayment, then the grantee, but the grantor remains as the lender's surety for the grantee. n207

If the lender recovers against the original seller, the seller may seek reimbursement from her buyer if the buyer had assumed the debt. Even if the buyer only took "subject to" the debt but the lender recovers against the seller, almost all states allow the seller to stand in the lender's shoes and *foreclose* to secure reimbursement. n208 This right is called subrogation. Only in Arizona has the seller's right of subrogation been denied when the buyer took "subject to" the existing mortgage. n209

The lender can excuse the original borrower from liability on the note by entering what is called a novation agreement, or a release, and thereby accept the buyer as the sole obligor on the debt. F.H.A.-approved lenders have been instructed to prepare such releases when a homeowner sells to a creditworthy purchaser who executes an agreement to assume and pay the mortgage debt. n210 Fees can be charged for the releases. n211

The lender may inadvertently release the seller by altering the terms of the underlying obligation in ways that increase the seller's exposure. That certainly would be true if the lender and buyer agreed to raise the interest rate or increase the principal without the seller's consent. n212 It would also be true if the lender released all or part of the security property from the lien of the mortgage. Courts have differed on whether the grantor would be totally discharged n213 or discharged only to the extent of the value of the property released. n214

States differ on whether extending the date for principal repayment discharges a surety (which is what the seller becomes). The majority rule is that the seller is discharged if the extension was made without his consent. n215 In some states, the seller remains liable despite the time extension, to the extent of the difference between the unpaid debt and the value of the property on the day the debt was originally due. n216 The reasoning for this rule is that the seller is no worse off for the extension and might be better off if the buyer eventually pays up. n217

The case for releasing the seller is certainly compelling when the value of the security property drops like a stone during the extension period and the lender wants the seller to cover the deficiency gap. n218 When the value hasn't declined though, the seller's case for release seems less convincing. The Uniform Commercial Code, which governs negotiable notes, allows a surety to get off the hook when the lender grants a time extension or a material modification, but only to the extent the extension or modification results in the surety recovering less from the primary debtor. n219

Lenders try to seal off all of the original obligor's escape routes. In a typical deed of trust form, you will find a clause stating that the lender can grant a later owner a time extension or other modification without releasing "the liability of the original Borrower or Borrower's successor in interest." At least one court has held that this language will allow the lender to extend the time for payment without discharging the seller (the original obligor). n220 But it isn't explicit enough to keep the seller on the hook if the lender also raises the interest rate on the debt. n221

Provisions in the note may oblige an assuming grantee to "keep all of the promises made in this note." Also, the original borrower may waive the right to insist that the note holder demand payment first from the new buyer (presentment), and the right to notice if the new buyer has missed payments (notice of dishonor).

CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.08

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.08 Restrictions on the Borrower's Right to Assign or Borrow.n222

§ 104.08(a) Due-on-Sale.

§ 104.08(a)(1) The Difference Between Due-on-Sale Clauses and Prohibitions Against Sale.

The borrower remains the owner of the security property even though it is encumbered. A mortgagor or trustor can sell her equity freely and without the lender's consent. The doctrine barring "restraints on alienation" would not allow lenders to restrict the borrower's *right to sell*.

Technically, the rights of the mortgagee are not impaired by the borrower selling her equity. n223 After the sale, the original mortgagor remains liable on the debt (unless discharged by the lender), the new owner either takes subject to the lender's security interest or assumes it, and the lien remains as good against the property as it ever was.

Lenders may nonetheless use "due-on-sale" clauses to restrict indirectly the borrower's right to sell. n224 A "due-on-sale" clause gives the lender the option of declaring all of the unpaid debt immediately due and payable if the borrower sells the security property without the lender's prior consent. In other words, before selling the security property, the borrower would have to pay off the loan, unless the lender were willing to keep the loan in place for the new buyer.

§ 104.08(a)(2) Why Homeowners Don't Like Due-on-Sale Clauses.

Homeowners prefer having the option of passing along their existing loans to their buyers, especially if the loans are at below-market rates.

Tempers flared over the "due-on-sale" issue in the late 1970s and early 1980s, when inflation drove mortgage rates close to 20%. Homeowners with 7-10% fixed-rate loans desperately wanted to pass those loans onto their buyers as an added incentive. Many homeowners would then take back a junior purchase money loan, if necessary, to make the deal work. But lenders were equally determined to call in as many of those deeply below-market loans as they could. The rate of inflation exceeded the nominal rate of interest on many of these loans so that *real* rates of interest were negative. No wonder borrowers wanted to pass these loans along and lenders wanted to call them in.

§ 104.08(a)(3) The Legal Battle Congress Resolved in Favor of Lenders.

About a dozen state courts and legislatures were extremely friendly to the borrowers and insisted, through case law or statutes, that buyers be allowed to assume existing loans if they proved creditworthy and the transfer wouldn't result in an impairment of the lender's security. n225

Congress came down hard on the side of the lenders, whose deposits it was insuring for billions, and preempted the field. It enacted the Garn-St. Germain Act, under which lenders are entitled to enforce due-on-sale clauses with certain modest limitations, described later. n226

The federal law applies to every "loan, mortgage, advance, or credit sale secured by a lien on real property." Every secured lender is protected by the act.

§ 104.08(a)(4) Why Lenders Use Due-on-Sale Clauses.

Lenders use due-on-sale clauses for four reasons: (1) to make sure that the new borrower is a good credit risk, (2) to reappraise the security property to see if it is still valuable enough to justify keeping the debt in place, (3) to bring the loan interest rate and its terms in line with prevailing market rates and terms, and (4) to reduce the volume of real estate loans in their portfolios.

The third objective is so important that due-on-sale clauses are far more likely to be found in fixed rate than in adjustable rate loans. Most adjustables are "freely assumable." n227

§ 104.08(a)(5) Why Due-on-Sale Clauses Are Optional, Not Automatic.

Well drafted "due-on-sale" clauses avoid accelerating loans *automatically* when the mortgagor sells for three reasons: (1) lenders want to forestall clever borrowers from selling and later trying to avoid prepayment penalties by claiming that the loan was called as a result of the "due-on-sale" provision; (2) lenders often allow assumption. They are happy with the new buyer and the loan (adjusted to the prevailing market rates); and (3) the federal law protecting all lenders against state interference with the enforcement of due-on-sale clauses was written to apply only to optional acceleration clauses. n228

§ 104.08(a)(6) Congressional Limits on Lenders' Rights to Invoke Due-on-Sale Clauses in Residential Transactions.

The act does place some limits on the situations in which home mortgage lenders (those secured by "less than five dwelling units") are free to invoke their due-on-sale clauses. The limits described below do not apply to lenders on commercial property--anything other than properties secured by less than five dwelling units. Here is the statutory list of transactions in which home mortgage lenders are prohibited from deploying due-on-sale clauses:

> (1) the creation of a lien or other encumbrance subordinate to the lender's security instrument which does not relate to a transfer of rights of occupancy in the property; n229
>
> (2) the creation of a purchase money security interest for household appliances;
>
> (3) a transfer by devise, descent, or operation of law on the death of a joint tenant or tenant by the entirety;
>
> (4) the granting of a leasehold interest of three years or less not containing an option to purchase;

(5) a transfer to a relative resulting from the death of a borrower;

(6) a transfer where the spouse or children of the borrower become an owner of the property;

(7) a transfer resulting from a decree of a dissolution of marriage, legal separation agreement, or from an incidental property settlement agreement, by which the spouse of the borrower becomes an owner of the property;

(8) a transfer into an inter vivos trust in which the borrower is and remains a beneficiary and which does not relate to a transfer of rights of occupancy in the property; or

(9) any other transfer or disposition described in regulations prescribed by the Federal Home Loan Bank Board. n230

Congress passed a law "encouraging" lenders utilizing "due-on-sale" powers "to permit an assumption of a real property loan at the existing contract rate or at a rate which is at or below the average between the contract and market rate ... and nothing in this section shall be interpreted to prohibit any such assumption." n231 The statute only encourages, it doesn't require, lenders to give assuming borrowers a rate break. Presumably, though, homebuyers will seldom be interested in assuming a loan at rates above current market.

§ 104.08(a)(7) States Could Opt Out of the Federal Rule Favoring Due-on-Sale Clauses but Only as Applied to State Chartered Lenders.

The federal law gave states the option of applying their own rules to due-on-sale clauses appearing in the mortgages of *state-chartered and regulated* lending institutions. Maine, n232 Massachusetts, n233 New York, n234 South Carolina, n235 and Wisconsin n236 exercised their option. In these states, due-on-sale clauses are enforceable if they are written by a federally chartered lender, but they might not be if the loan is written by a state-chartered lender. State law must be consulted to determine their enforceability in those five states.

§ 104.08(b) Due-on-Encumbrance: Restrictions on the Borrower's Right to Further Borrowing.

A due-on-encumbrance clause gives the lender the right to declare the entire unpaid balance of the debt due and payable if the borrower takes out another loan secured by the same property without the lender's consent.

§ 104.08(b)(1) Why Senior Lenders Sometimes Benefit from Borrower's Obtaining Second Mortgages.

Why should a senior lender care if a borrower takes on junior debt? The presence of other potential payors should calm the senior creditor. The junior lender becomes a second potential source of repayment for the senior. If the senior's debt isn't paid on time and it forecloses, the junior lien will be erased if there isn't enough money from the sale to pay them all. Thus, juniors have an incentive to forestall foreclosure sales by doing their best to make sure that the debtor doesn't default, even if this means personally making payments the borrower skips.

A senior lender won't lose its lien priority to a junior creditor unless the senior later decides to modify its loan terms in a way that jeopardizes the junior's security interest without the junior's consent.

One advisor counsels purchasers of junior liens:

> If you are a junior lien holder, a letter should be written to the senior lender advising him of your address and telephone number and that you are also a lender on the property. Assure him that you recognize your responsibility to protect senior lenders, and state your willingness to step in to cover any defaults. Such a letter, coupled with a request that you be notified of any default, often goes a long way

> toward encouraging the senior's goodwill.
>
> Attaining the senior's goodwill can be valuable if the borrower defaults in his obligations: Unless the senior is agreeable to some other arrangement, the borrower's failure to keep up his payments will ordinarily compel you to step in and cover senior defaults. Furthermore, unless you've given the senior appropriate notice ... an uncooperative senior may not bother informing you of a default in his loan until he gets around to commencing foreclosure--after as much as a year's past due payments have accumulated. And unless the senior is obliging enough to coordinate his efforts with you, the borrower's filing bankruptcy will trigger independent legal action by the senior, the cost of which may be deducted from your security. n237

Senior creditors know that junior lienors are another potential source of repayment but they defend due-on-encumbrance clauses anyway.

§ 104.08(b)(2) Why Lenders Don't Like to See Borrowers Encumber Property Too Much.

They point out that borrowers can stretch themselves too thin through subsequent borrowing. If a borrower has little or no cash in a project, the borrower may be tempted to make riskier moves. If things go badly, the lender gets stuck with the downside loss. If things go well, the borrower keeps the gravy above the loan amount. Lenders like to know the borrower has something to lose if things go badly. As one scholar puts it: "In the extreme case in which the value of the firm equals the value of outstanding debt, the firm has nothing to lose and everything to gain by adopting a 'shoot the moon' strategy." n238 Furthermore, once a project is heavily mortgaged, the borrower may decide not to invest in it even if the investment would be profitable because too much of the yield will go to pay off loans.

Lenders also fear that commercial developers, especially, would lose any incentive to "mind the store" if they were free to mortgage away all their equity. They would direct their personal attention and talents to projects in which they had substantial equities, and not to projects "owned" by their lenders. Finally, there is compelling evidence that borrowers are much more likely to default on properties with no equities or negative equities, than on properties in which they have substantial equity.

§ 104.08(b)(3) Why Homeowners Need Home Equity Loans.

For homeowners, a due-on-encumbrance clause can work a great hardship. Many homeowners have no substantial assets except the equity values in their houses. They may need to borrow for health emergencies and tuition, or just to stay solvent. Forcing them to get their home mortgage lender's approval before taking on junior debt might result in compromising their access to a home equity loan which could be their best source of ready cash in an emergency.

A due-on-encumbrance clause doesn't prohibit the debtor from borrowing more. It only stops her from encumbering property which is already secured. The borrower can still obtain unsecured loans, and these can burden a borrower even more since unsecured financing is quite costly.

§ 104.08(b)(4) The Congressional Word on Due-on-Encumbrance Clauses.

Congress voted to protect homeowners by prohibiting due-on-encumbrance clauses in home loans. Lenders are thus barred from calling in loans merely because their borrowers pledged their house to secure a home equity loan. (An "equity" loan is any loan secured by whatever value the debtor still has in the property after at least one secured debt.)

In contrast, Congress didn't prohibit lenders from pulling the plug on commercial developers who borrow against already encumbered property. In these situations, state law governs. Where state courts find due-on-encumbrance clauses to be "unreasonable restraints on alienation" or otherwise objectionable, such clauses are unenforceable.

§ 104.08(b)(5) Possible State Court Responses to Commercial Lenders' Due-on-Encumbrance Clause Enforcement Practices.

Consider the circumstances under which a state court might grant or deny a lender the right to enforce a due-on-encumbrance clause:

Case One: the lender makes a first mortgage loan of $100,000 when the security property was worth $150,000. Its value is now $300,000. The borrower wants to borrow a second $100,000. The lender will refinance the existing loan but only at a rate much higher than the borrower is currently paying, and greater than what other lenders are charging for a second or "home equity" loan. If the borrower goes elsewhere for junior funding the lender threatens to call the senior loan, especially if its interest rate is below market.

The lender in this case can be said to be engaging in opportunistic behavior. The borrower will certainly contend that the lender is attempting to obtain a benefit not contemplated by the initial agreement at the borrower's expense. The lender will rejoin that it contemplated using this clause as a way to call loans in a rising market.

Case Two: The senior lender makes the same loan but this time, the borrower's financial situation has deteriorated and the value of the security property is now $125,000. The borrower seeks another $25,000 in secured debt. n239

Here, the borrower's claim that the lender is engaging in opportunistic behavior is unpersuasive. The senior lender's fears of loss are justifiable. If the lender believes that enforcing the due-on-encumbrance clause will help preserve the security interest it had bargained for, it is easy to see why courts might agree and allow the lender to call the loan if the borrower infringes on a due-on-encumbrance provision.

§ 104.08(b)(6) Drafting and Interpreting "Due-on" Clauses.

Even in those circumstances where a senior lienor could enforce a due-on-encumbrance clause, the lender still needs to have reserved that right in its note and mortgage. Suppose the loan only contains a "due-on-sale" clause but makes no mention of "encumbrances?" The mortgage prohibits the "sale or transfer of all or any part of the property or any interest in it." Does this encompass a "mortgage or further encumbrance?" The answer is not obvious. n240

Lenders can argue that a "sale" includes an encumbrance since the very point of any security instrument is to give the lender the *right to sell* the property in the event of default.

Borrowers can respond that ambiguities are read against the drafter, which is generally the lender. So, if the lender had meant to prohibit further secured borrowing, it should have said so plain and clear. Thoughtful drafting keeps these types of disputes at a minimum.

If a Senior Lienor Doesn't Accelerate When the Borrower Incurs Junior Encumbrances, Is the Senior Lienor Barred from Accelerating When the Junior Lien Is Foreclosed?

The statutory exception barring home mortgage lenders from invoking due-on-sale or due-on-encumbrance clauses expressly allows lenders to accelerate when those devices are accompanied by transfers of rights to occupancy in the property.

A junior lien results in a change in the right to occupy the property only on foreclosure when the original borrower is displaced by the purchaser at the foreclosure sale. Despite this, at least two courts have held that even on foreclosure, the lender may not accelerate. The statutory "change of occupancy" language only applies at "the creation of a lien." It makes no explicit provision for lien foreclosures. "... [t]he lender should reasonably anticipate that the borrower could default and the second lien could be foreclosed upon." n241

Fewer than one loan in a hundred results in foreclosure. So, arguably, it would be wrong to require the senior lienor to act as if every borrower who takes out a home equity loan is headed down the road of default.

When the lender forecloses on the junior lien, some courts have held that the senior lienor should not have to live with the purchaser at foreclosure anymore than it would have been obliged to accept any other substitute owner. Congress must not have intended that result when it enacted the "occupancy transfer" exception.

"Foreclosure of the second mortgage ... transfer title, all incidents of ownership, and occupancy to third parties with whom the first mortgage holder has not dealt." n242

A dissenting judge in the above case observed:

> The effect of the majority's ruling will be to limit the availability and increase the cost of equity loans, since secondary lenders must now face a new threat to their security in the event of a foreclosure. Such a ruling harms the homeowner, contradicts the deed of trust at issue, and is inconsistent with our law. n243

§ 104.08(c) The Double Whammy: Prepayment Penalties Coupled with Due-on-Sale or Due-on-Encumbrance Clauses.

A borrower who is desperately eager to sell her house and equally anxious to avoid paying a prepayment penalty needs to find a buyer willing to take title subject to the loan in place. Her efforts can be thwarted by a lender who refuses to accept the buyer and, instead, invokes a due-on-sale clause, calling the loan and demanding a prepayment fee.

Some courts see nothing wrong with a lender including both prepayment penalty and due-on-sale clauses in the same mortgage, as long as they aren't invoked concurrently. A court which sanctioned the use of both those clauses in the same loan explained it this way:

> The two provisions, rather than working contemporaneously, are used as economic complements to one another. While the *due-on-sale clause* enables a lender to require early payment of lower than market interest rate loans, the *prepayment penalty* is used to discourage refinancing by the borrower when market interest rates fall below the rate on the borrower's existing loan. The two provisions, therefore, are used by lenders to achieve different goals. Both are at least arguably necessary to protect a lender's long term loan portfolio. n244

Still, if the lender enforces both a steep prepayment fee and a due-on-sale clause at the same time, he puts the borrower in a tight bind. Suppose a young lawyer buys a house for $300,000, putting $60,000 down. Later, she learns that her firm is going out of business and that her services will no longer be needed. She finds a job in a city 200 miles away and decides to sell her house. Her mortgage of $240,000 calls for a prepayment penalty of six months' interest. The interest rate is 10%, fixed, and the loan is fully amortized over a 25-year term.

She lists her house for $325,000. Her best offer is $320,000. After paying a 6% brokerage commission, title and closing costs, she would be left with just enough to pay off the loan and start looking again for a comparable house where she found her new job.

But what about the prepayment penalty of nearly $12,000? Her "equity" would be reduced from $60,000 to $48,000 if she had to pay it. So instead, she shifts the prepayment fee obligation to her buyer in the purchase-and-sale contract. (Note that if the buyer decides to take subject to the existing loan, no one will have to pay the $12,000. This gives her buyers a powerful incentive--$12,000 worth--to think twice before objecting to keeping the loan in place).

What if the lender should turn down the buyer? The lender might reject the buyer because of his credit history or because interest rates have risen and the lender wants a higher rate of interest. The seller will be able to avoid the prepayment penalty only by finding a better qualified buyer or a buyer willing to pay the higher interest rate.

Maybe the lender is exercising the due-on-sale clause in hopes of getting paid off because it wants to have less money invested in real estate mortgages. Perhaps its regulators have increased the lender's capital requirements and the lender is calling real estate loans like crazy to firm-up its liquidity picture. Under these circumstances, prepayment will be unavoidable if the seller still needs to sell. Will the seller be liable for the prepayment fee if the prepayment was involuntary?

The borrower may see no reason why she should have to pay a penalty for prepayment. Her only choice is to pay off the old loan or forfeit the right to sell her house. Conversely, lenders see no reason why they shouldn't collect prepayment penalties even when the buyer was willing to keep the loan in place but the lender wasn't. After all, the borrower needn't have sold. Further, if prepayment penalties weren't due on these occasions, a borrower could avoid them by threatening a sale and daring the lender to invoke the clause. The borrower could then claim that the acceleration was involuntary and that the lender's right to levy a prepayment fee was forfeited.

The borrower has the edge when the prepayment clause doesn't expressly apply to both involuntary and voluntary accelerations. In these cases, courts are likely to hold that the prepayment clause was only intended to be applied for voluntary prepayments. n245 Nowadays though, most prepayment penalty clauses are written to come into play whether the loan is paid off voluntarily or not, and even when prepayment follows the lender's rejection of a proffered potential buyer.

In some states, these clauses are enforced as written. n246 Some state legislatures n247 and courts n248 prohibit prepayment penalties when the prepayment results from lenders accelerating debts under a due-on-sale clause on owner-occupied residences.

The Federal Home Loan Bank Board, under its authority to promulgate regulations under the Garn-St. Germain Act, prohibits prepayment penalties if a lender "exercises a due-on-sale clause by written notice." n249

§ 104.08(d) "Lock-ins" and Due-on-Sale Clauses.

The lender's simultaneous enforcement of "lock-in" *and* due-on-sale clauses can also frustrate a borrower's efforts to sell the security property. Many commercial loans contain "lock-in" clauses, barring prepayment for a period of years--usually five to seven. n250

Suppose the owner of an office building or shopping center wants to sell, but the loan agreement has "lock-in" and "due-on-sale" clauses. The lender refuses to allow the prospective borrower to assume the loan and threatens foreclosure if the owner sells without consent.

"All right, we'll refinance," says the owner.

"No, you can't for five years," replies the lender.

Proceeding with the sale without securing the lender's approval is dangerous, unless the buyer has enough cash to repay the old loan when it is called; new lenders won't be easy to find once a notice of default has been filed.

The practical result is that the borrower can't sell during the "lock-in" period. Prospective buyers can't get the lender's approval to assume the existing loan, and the seller can't pay off the old loan because of the lock-in.

Borrowers have sometimes petitioned for court relief from this "double whammy." n251 In one decided case the borrower lost, although the court acknowledged that there could be "special circumstances" justifying relief. Obviously, commercial borrowers can't count on courts to release them from their loan agreements if they tie themselves up this way.

(n7)Footnote 228. Presumably, the act would not protect lenders inserting increased-interest-on-transfer clauses in their loans, allowing assumptions, but at higher rates. However, lenders wouldn't need federal protection against state courts if they were using increased interest clauses. The doctrine most cited by state courts to strike down due-on-sale clauses was that those clauses unduly restrained the borrowers' right to aliennate mortgaged property. Increased-interest clauses probably wouldn't run afoul of state court "restraint" rules as long as the rate didn't exceed market rates at the time.

(n8)Footnote 229. The transactions to which due-on-sale clauses can apply include: sales of the property by installment sale contract, long-term leases with options, or other devices in which junior financing is made, usually by the vendor, to facilitate a disguised sale.

A borrower who sells and takes back a purchase money loan invites the lender's accelerating under a due-on-sale clause. Sometimes borrowers attempt to evade these provisions by entering long-term installment sale contracts. They remain the primary obligor on the existing mortgage loan. The new buyer enters a contract of sale and takes possession. The buyer makes payments on the contract sufficient to enable the seller to pay the existing debt. When the buyer has paid enough to establish an equity of her own in the property, most installment sale contracts allow the buyer to obtain a deed and a purchase money mortgage.

Is the installment sale contract a sale or transfer sufficient to justify the lender accelerating under a due-on-sale clause? Or must the lender wait until the contract is executed and the property deeded? Courts are divided. In one sense, the acceleration can be seen as unjustified because the seller, the original borrower, remains the legal owner. The federal exemption for junior financing doesn't apply "to a transfer of rights of occupancy in the property." Installment contracts usually involve a change in possession.

The typical due-on-sale clause explicitly anticipates and precludes the use of an installment sale contract as a way to evade acceleration on sale: "If all or any part of the Property OR ANY INTEREST IN IT IS SOLD OR TRANSFERRED... ." The sale under a contract certainly counts as the transfer of an interest in the property. *See New*

(n29)Footnote 250. In *Trident Ctr. v. Connecticut Gen. Life Ins. Co., 847 F.2d 564 (9th Cir. 1988)* , the note provided that the borrower was prohibited from prepaying the $56,500,000 loan for the first 12 years of its 15-year maturity. The note also gave the lender the right to accelerate if the borrower defaulted, and in that event to charge a 10% prepayment fee. The borrower wanted to prepay in order to refinance at lower rates, and argued that the 10% prepayment fee-on-default-and-acceleration gave the borrower an implicit option to escape the 12-year lock-in and to prepay early by paying the 10% penalty. The court observed that the loan documents "squarely address the precise issue that is the subject of this dispute; to all who read English, they appear to resolve the issue fully and conclusively." Nonetheless, the court allowed the borrower the chance to introduce "extrinsic evidence of possible ambiguity," applying California law.

CHAPTER 104 THE PROMISSORY NOTE IN REAL ESTATE TRANSACTIONS 1

13-104 Thompson on Real Property, Thomas Editions § 104.09

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.09 Tailoring Note Provisions to Lender's Risks.

Most institutional mortgage lenders (savings and commercial banks, credit unions) are "go betweens," collecting money from savers and passing it along to borrowers.

Broadly speaking, the green goods business contains two discernible sources of risk: an interest and a credit risk. Loan applicants who appreciate the type of risk a lender has in mind may be in a better position to satisfy the lender's needs for documentation and other assurances. Lenders who appreciate the distinction between credit and interest risk should be able to draft more coherent loan provisions and apply existing provisions sensibly.

§ 104.09(a) Interest Risk.

The interest risk is that fluctuations in interest rates will devalue a lender's loans without a corresponding decrease in its obligations. It is similar to the risk faced by any retailer whose profits depend on the spread between her cost of goods plus overhead and her sales prices. The lender's stock-in-trade are "green goods"--savings and checking accounts and funds borrowed from other sources. It sells money for a price--and earns interest and fee income. When the interest rates paid to savers plus the cost of making mortgage loans exceed what borrowers are paying in interest, the intermediary is in big trouble.

Lenders seek to avoid this risk (a) by indexing mortgage rates to savings costs so that the rates paid to savers are matched with the rates charged to borrowers; (b) by shifting the risk to others by selling their mortgage loans on origination and pocketing fees on the sale; and (c) purchasing various financial instruments to hedge against interest rate fluctuations.

§ 104.09(b) Credit Risk.

The credit risk is that the debt won't be paid. There are two types of credit risks: security and collection. The security aspect is simply that the value of the security property on foreclosure may not be sufficient to pay off the debt. That is why loans are seldom made for more than 90% of the value of the security property, and are often considerably less. The bigger the cushion between the loan and the value of the security property, the less the security risk. Moreover, as property values are expected to fluctuate over the life of a loan, amortization of principal is essential in minimizing

security risks. With each repayment of principal, the effective loan-to-value ratio declines. n252

The second aspect of the credit risk deals with collecting from the borrower. Prospective borrowers whose income and wealth are not ample enough to support their debt service are supposed to be ferreted out by credit checks and minimum ratios of income to debt service, but it isn't easy to predict when calamity will strike a region or a family. When borrowers default, lenders often ascribe it to an "improper regard for obligations," but for borrowers of modest means, defaults aren't necessarily a voluntary choice. Usually, these borrowers get caught short of cash by job layoffs or illness before they have had time to build up any equity in their homes.

The credit risk refers to the repayment of both principal and interest on the debt. Some students approaching the rather theoretical dichotomy between credit and interest risk wrongly confuse the phrase "interest risk" with whether the borrower will make timely payments of interest. That is part of the credit risk. Of course, all payments of principal and interest, whether timely or late, give the lender the opportunity to relend the funds at prevailing market rates. In this sense, the line between credit and interest risk may seem blurry. But on relending the funds, the lender still must face the challenge of placing them with creditworthy borrowers and on terms that will keep the lender from getting caught in an interest squeeze. Therefore, whether the borrower will make timely payments really falls under credit risk.

Both the "security" and "collection" aspects of the credit risk are exacerbated in markets where property values are declining rapidly. "Security" declines because loan-to-value ratios deteriorate when values slip away. "Collection" problems ensue when some borrowers decide to abandon their houses and their loans because they realize that their repayments of principal are not producing equity value.

Sometimes, in attempting to avoid one type of risk, lenders inadvertently expose themselves to the other. Consider the consequences of the lender's turning to adjustable rate loans in order to reduce their interest risk.

Two factors influence a lender's credit risk. The ratio of the monthly loan payment to the borrower's income and the ratio of the loan debt to the value of the house. On a fixed-rate loan, as long as the borrower's nominal income doesn't decrease, her payment/income level never deteriorates over the life of the loan. With each monthly payment, a little more of the principal debt is repaid. As long as the house doesn't lose its value, the lender's loan-to-value ratio gets better each month.

With an adjustable rate loan, it is quite possible for the debt service to outpace the borrower's income. The "caps" on the loan which ease the monthly payment burden may also create negative amortization, causing the loan balance actually to increase over time. If the value of the house doesn't rise proportionately, the lender's loan-to-value ratio on an adjustable loan can easily increase over time. Thus, the lender's credit risk may run amok as it attempts to curb its interest risk--to the dismay of federal agencies that pushed banks into adjustable rate lending.

> In a superficially conceived effort to reduce the deposit-insurance subsidy to interest-volatility risk, deposit insurers have encouraged thrifts to make ARMs [adjustable rate mortgages] instead of FRMs [fixed rate mortgages]... They failed to adjust mortgage-insurance premiums and house-appraisal and mortgagor-qualification practices to take account of the distinctly greater dangers of default that are occasioned by the built-in graduated *payment shock* dictated by sharp first-year interest-rate buy downs and by the possibilities of negative amortization and downward trends in the future price of housing. n253

§ 104.09(c) Why Most Savers Are Oblivious to the Riskiness of Savings and Commercial Bank Portfolios.

Most bank *savers* are oblivious either to interest or credit risks for the simple reason that their bank accounts are insured by instrumentalities of the federal government. For them, an account of up to $100,000 is as good as a U.S. Treasury note. Given so lush a source of capital at such favorable rates, it is no wonder that many savings associations failed as a

result of unwise investments. (What would you be tempted to do if you could borrow for your fantasy investments with the federal government assuring your creditors against loss?!)

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 104.10 Secondary Markets and Negotiability.

§ 104.10(a) The Secondary Market: Why Mortgage Notes Are Sold. n254

Mortgage payments constitute one of the largest monthly cash flows in the U.S. However, most mortgagors neither realize nor care about the complexity of the mortgage-trading business. They send their monthly payments to a loan servicer and try to forget about the whole ordeal until next month's payment falls due.

Mortgagors may not realize that their loan payments probably don't wind up in their lender's hands; more than half of all home mortgages are sold into the "secondary" mortgage market by the lenders who originated them. Federal law does require that lenders alert their borrowers that their loans might be sold, but the significance of this disclosure is probably lost on most borrowers. n255

On the other side of the secondary mortgage market are mortgage investors. They buy and sell mortgages and other loans. Mortgages are often pooled so that cross-country or even international investors may wind up owning a piece of the same mortgage pool. The process is called "securitization" because the ultimate investor ends up owning a security--an undivided interest in a large number of mortgages--rather than owning individual mortgages. Although the mortgage trading business didn't start until the 1970s, in 1991 the secondary mortgage market contained over $1.2 trillion worth of mortgages.

The yields on mortgage-backed securities are about one percentage point higher than on government bonds. Mortgage-backed securities usually have triple-A ratings, which make them favored investments among insurance companies and pension funds. They get those ratings because the underlying mortgage loans are government insured, government guaranteed, privately insured, or because the security instrument itself is guaranteed by a solvent quasi-governmental agency or by a solvent and respected private firm.

Mortgage-backed bonds are more secure than individual mortgage loans originated by any one local lender, because by "pooling" loans the risk of default is spread among thousands of borrowers in different parts of the country. n256 A recession in one part of the country won't hit lenders there nearly as hard if they had sold local loans and bought into pools of loans originated throughout the country.

Savings banks and other institutions which make loans can (1) keep them, (2) sell them, or (3) use them as collateral and borrow against them.

Mortgage originators like savings and commercial banks have become comfortable selling their mortgage loans. They free themselves of possible risks from interest rate fluctuations. They leverage their capital in order to make more loans. By selling the loans they originate, they multiply the total amount they can invest in loans. The income they earn from the process of originating loans is based on the volume of new lending they are able to do. Quite often, the originating lenders continue to service the loans and earn fees for servicing loans. That is why mortgagors may not realize that their loan has been sold; the originating lender continues to collect monthly payments. n257

Originating lenders don't get to pass all the credit risk to the mortgage purchaser because they are usually required to buy back bad loans and replace them with good ones, and to coinsure losses from the loans they sell. Also, it is always possible for a well managed savings bank to sell good mortgages it originated and unintentionally to buy into a portfolio of poorly secured mortgages.

Here is how the "secondary" mortgage market works. First, the lender makes the loan.

Second, the originating lender sells the loan to an entity like the Federal Home Loan Mortgage Corporation ("Freddie Mac" or "F.H.L.M.C."), the Federal National Mortgage Company ("Fannie Mae" or F.N.M.A.), the Government National Mortgage Association ("Ginnie Mae" or G.N.M.A.), or a private investment banking or securities firm. These institutions buy vast amounts of home loans from savings banks and other lenders.

Freddie Mac was created by Congress in 1970 to promote the growth of the secondary market for conventional home mortgages. n258 The funds generated by the sale of mortgage-backed securities are its primary source of money for mortgage purchases. Both Freddie Mac and Fannie Mae are private corporations with statutory authority to purchase mortgages that meet their eligibility requirements. Ginnie Mae is a federal agency that issues government-guaranteed securities backed by FHA, VA, and Farmers Home Administration ("FmHA") mortgages.

Usually, an institution will line up investors before beginning to create a pool, for fear of being stuck with millions, if not billions, of dollars in unwanted mortgages. Typical investors might include a savings bank seeking to hedge against rising interest rates and insurance companies looking for safer yields higher than they could get from government bonds.

Large institutions don't have to sell their loans to get their cash out of them. They can securitize pools of their own loans. In 1977, Bank of America became the first private institution to do that. n259

Third, the issuing institution may enhance the credit of the pool by guaranteeing its repayment or pledging to add other assets to the pool if some of the mortgages go into default. The secondary market maker may insist that the originating lender promise to buy back loans in default or assume some or all of the loss. It may also elect to deal only in loans insured by the F.H.A., guaranteed by the V.A., or insured by private mortgage insurers.

Fourth, the issuer resells interests in the mortgages in standardized pools, enabling investors to buy mortgages in multimillion-dollar batches without having to laboriously scrutinize each mortgage.

Fifth, the issuers make a secondary market in these securities by trading in them for their own or their clients' accounts.

The first mortgage pools were "pass-throughs." The buyer in a pass-through takes an undivided interest in the underlying mortgages. An investor in a pass-through is exposed to the full prepayment risk. The risk is that mortgagors will prepay when rates fall (called contraction risk) and slow down their prepayments when rates rise (called the

extension risk).

In 1983, the Federal Home Loan Mortgage Corporation (F.H.L.M.C.) offered a new type of security called a collateralized mortgage obligation (C.M.O.). In a C.M.O., the issuer retains title to the mortgages and pledges to make payments to holders of participation certificates in the mortgage pool. The payment schedule can be quite different than what the participation certificate holder would have received in a direct pass-through. For one thing, some investors didn't want monthly mortgage payments even though most mortgages are paid monthly. The C.M.O. issuer is able to provide payments quarterly, annually, or on whatever schedule the investor prefers.

The evolution of C.M.O.s was limited only by the creativity of securities brokers and the preferences of potential investors. For instance, a $100 million mortgage pool might consist of four groups of certificates called tranches, with average lives of 3, 7, 10 and 20 years, respectively. The 3-year tranche might receive a variable yield tied to a financial index, while the 20-year tranche might receive a fixed 8% yield.

In the earliest C.M.O.s, all principal repayments on the underlying mortgages were pledged to a group of certificate holders who got back their entire investment before any principal repayments went to investors in the second group. n260

Later, C.M.O.s allowed the prepayment risk to be split up and specifically apportioned among the tranches. The holders of the 3-year tranche might get the first prepayments, the holders of the 7-year the next. Often there will be a category of bonds that pay no interest until they mature or are called. (These are called zero coupon bonds because they don't have any interest coupons the bondholder can clip and cash in.) The zero coupon bondholders get fully repaid out of the mortgage principal when all the holders of the other tranches are fully paid. Bonds in tranches are sold to investors whose financial needs are met by a particular tranche.

When a commercial bank organizes a mortgage pool it might prefer to sell its mortgage loans to the pool rather than pledging them as *collateral* because the sale reduces the banks asset and capital requirements. These are called pay-throughs.

Most of these mortgage pools are REMICs--real estate mortgage investment conduits. A REMIC is a creature of the tax code. n261 It is treated as a pass-through entity, which means that the REMIC itself is exempt from taxation and all of its income is allocated and taxed to the REMIC holders. n262

The secondary mortgage market creates liquidity for mortgage originators and mortgage investors. Liquidity has brought investors into the mortgage market, investors who would otherwise have bought government securities or corporate bonds. By increasing the supply of mortgage capital, the secondary mortgage market has reduced home mortgage interest rates.

The benefit to borrowers can be measured by looking at the spread between Treasury bills and home mortgages of the same maturity before the secondary market existed (say, 1963) and the rate spread today. In 1963, there was a spread of 200 basis points (two percentage points) between the 30-year T-bill and 30-year mortgage rates. Today, that spread is around 100 basis points. n263

Liquidity and volatility seem to go hand-in-hand, causing mortgage rates to become extremely sensitive to changes in the credit markets. If a Dutch pension fund can buy a share of a Des Moines home mortgage, the underlying interest rate available to Des Moines homebuyers is going to be sensitive to global interest rates, which the Dutch pension fund will see as alternatives to its buying a share in a mortgage pool.

§ 104.10(b) Negotiability.

§ 104.10(b)(1) The Implications of Negotiability.

A note can be negotiable or non-negotiable, but this has nothing to do with whether the lender can sell (or assign) the note. Notes and mortgages are presumed saleable absent explicit language to the contrary.

This may strike borrowers as unfair because their right to assign their mortgage debt is usually hemmed in by a due-on-sale clause. Yet, the lender's right to sell the loan isn't subject to the borrower's prior approval. The crucial difference between the debtor's and creditor's positions is that the creditor is assigning the *right* to receive money. The debtor is assigning the *obligation* to pay back a loan. Most creditors legitimately question a substitution of one debtor for another while few debtors care who pockets their monthly payments.

"Negotiability" means that the note can pass from the original creditor to a "holder in due course" free of certain defenses the debtor may have had against the original creditor. "To take free of a mortgagor's defenses, the assignee must win on both issues. He must both hold a negotiable note and be a holder in due course." n264 The theory is that negotiable notes are like money and should be freely transferable; loan purchasers shouldn't have to worry about the possible invalidity of the paper.

The lost defenses are "personal" ones, not "real." The "real" ones survive the note being negotiated.

The Uniform Commercial Code lists some of the "real" defenses. n265 They include, among others, infancy, duress, illegality of the transaction, and "fraud that induced the obligor to sign the instrument with neither knowledge nor reasonable opportunity to learn of its character or its essential terms." n266 Among the "personal" defenses: The original lender never actually made its promised loan or the debtor actually paid off the loan before her lender sold the note. The buyer of a negotiable note takes free of all "personal" defenses.

The distinction between "real" and "personal" defenses parallels the difference between contracts that are voidable and those that are void. A void contract is really no contract at all--because of a forgery, for instance, or some other defense amounting to illegality or a lack of mutual assent to form a contract. A voidable contract is one which a party can elect to invalidate because, say, she was induced to sign it by a misrepresentation or because of a failure of consideration--the original creditor never disbursed all the loan funds the debtor is now being sued to repay.

In almost all states *the holder in due course* of a negotiable note secured by a mortgage takes the mortgage as well as the note free from defenses that the mortgagor would have had against the original mortgagee. n267 Lenders have generally carried the day in establishing legal protection for mortgages identical to that of the note. If the note is negotiable, so is the accompanying mortgage.

You can see how the consequences of negotiability can be harsh to the borrower. If the borrower never got the loan proceeds, or paid off the loan after the lender had sold the note to a "holder in due course," the borrower would still be liable for the face amount of the note. Moreover, generally speaking, the mortgage "follows" the note so the present holder of the note can foreclose if the borrower doesn't pay. n268 Like bankruptcy and limited liability for corporations, negotiability sacrifices a few deceived innocents for the sake of the many in the marketplace.

In the case of home loans, the benefits of negotiability can be measurable. Two authors compared the price of adjustable rate loans in Chicago, where they are held to be non-negotiable, with comparable adjustable rate loans in the District of Columbia, where they are legally negotiable. They found that the Chicago rates were higher and attributed the differential to the non-negotiability feature, concluding that borrowers are best served, too, by negotiability. n269

What can borrowers do to protect themselves? They could insist on seeing the note before making each payment and demand its return after making their final payment. Individual lenders might be able to comply with this request, but institutional lenders probably wouldn't. They often store notes in remote locations and don't record each payment on the

back of the note as they did in days of yore. Because borrowers usually pay by check or by authorized bank account withdrawal, any borrower who asked to see the note each month would be regarded as an extremely odd duck.

Lenders sometimes ask borrowers to sign duplicate notes because they "lost" the original. Borrowers should be wary of these requests. The lender could sell the note to someone who didn't realize it was a duplicate and the borrower could end up having to pay the same debt twice if the original note was never destroyed.

Mortgage purchasers can protect themselves against unknown infirmities between the mortgagor and the original mortgagee by obtaining a statement signed by the mortgagor stating that he has no defenses to the enforcement of the mortgage. This document is variously called a *waiver of defenses, estoppel certificate, no set-off certificate,* or *declaration of no defenses*. n270 A certificate offers better protection than the holder-in-due-course doctrine because it protects the mortgage purchaser against both real and personal defenses.

An estoppel certificate signed by the maker of the note doesn't protect the note purchaser against defenses or claims belonging to third parties. But the purchaser of the note may prevail against some third party claims if he has no notice of them and the note is non-negotiable for reasons other than the way it was negotiated. n271

§ 104.10(b)(2) The U.C.C. Requirements for Negotiability.

To be negotiable, the U.C.C. requires that the note: (1) contain an unconditional promise to pay a fixed amount of money and no other promise by the maker; (2) be payable on demand or at a definite time; (3) be payable to order or to the bearer at the time it is issued or first comes into possession of a holder; and (4) be for a fixed amount of money. n272

§ 104.10(b)(2)(i) Unconditional Promise to Pay.

(i) Incorporating Non-Pecuniary Obligations of the Mortgagor Into the Note Jeopardizes Its Negotiability. The condition requiring an unconditional promise to pay money and no other promise would arguably be violated if the provisions of the deed of trust regarding property maintenance, covenants against illegal uses, and the like were incorporated into the note. But by statute the negotiability of the note isn't jeopardized by a "promise or power to maintain or protect collateral." n273 Negotiability would, however, be destroyed by language that "the debtor hereby grants a security interest in the property." n274 These promises involve acts other than paying money. Hence, lenders who expect to sell their notes and want them to be negotiable are careful not to incorporate by reference the terms of the deed of trust into the note. n275 The farthest they may go and still claim negotiability is to refer to the existence of the accompanying deed of trust. n276

(ii) Adjustable Rate Notes Were Often Held Non-Negotiable Under U.C.C. Language Requiring Notes to be for a Fixed Amount of Money, but Court Opinions, Revised U.C.C. Provisions, and State Statutes Are Reinstating Their Negotiability. A section of the U.C.C. had conditioned negotiability on instruments bearing a "sum certain." n277 A U.C.C. comment specified that the "sum certain" had to be capable of being determined from "the instrument itself without reference to any outside source." n278 Early cases in the 1980s successfully challenged adjustable rates as non-negotiable. These court opinions held that adjustable loans were not for a "sum certain" because the rate of interest couldn't be determined by reading the face of the note. n279

Later courts, particularly in 1991 and 1992, realized that the overriding purposes of the U.C.C., predictability and flexibility to address new commercial realities, were being thwarted by this literal reading of the "sum certain" standard. n280 Nearly half of all mortgage loans are adjustable, and the literal reading of the U.C.C. was resulting in their being declared non-negotiable. The idea of the U.C.C. was for commercial law to track changing commercial realities, not to throw roadblocks in the way. Judges became persuaded to read the "sum certain" phrase not as requiring mathematical certainty but commercial certainty. Anyone signing an adjustable-rate loan can calculate the sum due, even if the note

itself doesn't specify a fixed rate. Lenders tell borrowers anyway, when the rate changes. By 1993, eight state courts had decided the issue, five for and three against negotiability. n281

To assure the negotiability of adjustable-rate loans in the future, almost all states have enacted statutes making them negotiable. Most of these statutes are based on a revised U.C.C. provision deleting the "sum certain" language, and substituting a "fixed amount of money" standard which applies only to the loan principle. n282 Any interest rate fixed or adjustable is sufficient. Some statutes sanction as negotiable any loan calling for "a stated rate of interest" if the rate is readily ascertainable by a publicly available index or its equivalent. n283

A number of states adopted statutory language one commentator has described as "relatively unique." n284

§ 104.10(b)(2)(ii) Negotiation vs. Assignment.

The condition "payable to order or bearer" focuses on the process by which the note is transferred. If an instrument is payable to order it is negotiated by delivery with any necessary endorsement. If payable to bearer it may be negotiated by delivery. n285 "Notes secured by mortgages are nearly always in order rather than bearer form. Hence, both endorsement and delivery are essential elements in the negotiation." n286

The requisite process of negotiation is violated if the note purchaser takes as an "assignee." One who obtains a payment on *the order of* the original payee *isn't bound* by the terms of the original transaction. n287 A contract assignee assumes all the rights and obligations of her assignor. n288 Those rights and obligations include the very defenses that the "holder in due course" hopes to shed.

§ 104.10(b)(3) "Holder in Due Course" (H.D.C.) Defined.

Only holders in due course enjoy the benefits of negotiability. To be a "holder in due course," a person must be a holder n289 of a negotiable instrument "who takes the instrument (a) for value; (b) in good faith; and (c) without notice that it is overdue or has been dishonored or of any defense against or claim to it on the part of any person." n290 The "holder in due course" is another way of describing a bona fide purchaser.

§ 104.10(b)(3)(i) For Value.

Many notes and mortgages especially junior liens, are sold at deep discounts. Does the purchaser of a note who pays only a fraction of its face value automatically find himself outside the protected circle of H.D.C.s? Absolutely not, if the price he paid reflected the credit or interest risk inherent in the transaction. Very deep discounts have been allowed in certain cases ($7,000 for an $11,064 note, for instance). n291

§ 104.10(b)(3)(ii) Good Faith.

Sometimes the purchaser of a note has been so "closely connected" to the originator that borrowers were allowed to raise defenses against the note purchaser that they had against the originating lender. Most of these cases concern home improvement scams where a smooth talking salesman persuades an unsophisticated homeowner to sign a contract for, say, wood or aluminum siding, along with a mortgage and note, all at an exorbitant price. The work is never done or badly done, and the note is swiftly negotiated to a cooperating lender. Where the note-purchasing lender drafts the seller's forms, approves the seller's procedures in advance, checks the debtor's credit, buys all or most of the seller's paper, and there is common or related ownership and management, the lender has sometimes lost the benefit of its H.D.C. status. n292

§ 104.10(b)(3)(iii) Notice.

What counts as "notice" is illustrated by *U.C.C. § 3-304*. For instance, the purchaser of a note has notice that something

is wrong if the purchaser knows that it is overdue, that the obligation is void, or that it has already been paid. Notice here is measured by a subjective standard (what the purchaser knew or probably knew) and not by an objective standard (what the purchaser should have known). Although *U.C.C. § 1-201(25)* does inculpate the purchaser of a note who has "reason to know" something is amiss, most courts accept that as long as the purchaser doesn't have actual notice of the debtor's defenses against the original creditor, she takes free of them. The debtor's only action would be against the original lender if the note had been partly or fully paid, and negotiated to a purchaser without notice of the payment. n293

§ 104.10(b)(4) The Importance of Possession of a Note.

A borrower who appreciates what "negotiability" means will demand that the note be handed over in exchange for the final payment. Anticipating this, responsible lenders store notes carefully.

Here is how one investor in second deeds of trust puts it:

> Possession of the original of the note carries with it a presumption of ownership, regardless of whether the bearer is the note's named owner. Without the original note, your position in any nonjudicial foreclosure or litigation will be made more difficult. For that reason, the original of the note should be kept in a safe deposit box or similarly secure location.
>
> Other documents are important, but they don't need as careful safekeeping [as the note]. Deeds of trust, assignments, and other recorded papers can all be duplicated from records maintained by the county recorder, and the copies will be considered admissible as evidence in court when certified by the county recorder. Replacement title policies and escrow papers can be obtained from their places of origin; missing insurance policies and appraisals are major inconveniences when lost, but their absence is seldom fatal. A missing or lost note, however, can be more than an inconvenience.
>
> Before safekeeping the original note, make a photocopy, front and back, for your current files. The photocopy will save digging out the original note should a question arise (as almost invariably it does) concerning its exact wording. And if the original is somehow destroyed or misplaced, a photocopy showing all the original note's signatures will save you much inconvenience later, should foreclosure be necessary. n294

The priority of a promissory note secured by a mortgage, a transaction that creates an interest in real estate, is established by recordation in the county real estate records and governed by the recording act statute of the jurisdiction. However, an assignment of a promissory note to a third party to secure an obligation owed to the third party, even if secured by a mortgage or other collateral, creates a security interest in the obligor's note, not the underlying collateral. Therefore, perfection of an assigned promissory note is governed by *U.C.C. 9-304*, which requires possession of "goods, instruments, money, negotiable documents or chattel paper" to perfect the holder's interest. n295

Consider the investors in *In re* Sprint Mortgage Bankers Corp. who loaned money to a mortgage broker in return for assignment of the notes and mortgages given to the mortgage broker by borrowers. n296 The lenders never took possession of the notes because they assumed that recordation of promissory notes secured by real estate mortgages would be sufficient to perfect their interests and secure their lien priority.When the mortgage broker filed Chapter 7 bankruptcy, a New York appellate court upheld the bankruptcy court's determination that the unperfected notes were a part of the debtor's estate and the lenders were unsecured creditors with interests subordinate to the bankruptcy trustee. The court noted that although *U.C.C. 9-104* states that Article 9 generally does not apply to the transfer of an interest in or lien on real estate, the interest created in this transaction was a security interest in an instrument to which Article 9 would control, not the recording act statute. This case further demonstrates the importance of possession of a promissory note.

§ 104.10(b)(5) Does the Borrower Have a Right to Notice of Sale or Assignment of Note? n297

Suppose D, the debtor, prepays the note and L, the lender, writes out a receipt verifying the prepayment. But L had previously sold the note to H and no one told D that L had done so. In fact, H didn't learn about the prepayment until he initiated collection proceedings against D on the due date. Is D liable to H anyway, or does H lose out for not having notified D before purchasing the note from L? If H had notified D of its intent to purchase or had requested an estoppel certificate from D, H might have found out L's little secret, i.e., that the debt had already been paid off.

In most states, purchasers of negotiable notes don't need to notify the mortgagors that they are the new owners. Moreover, if the mortgagors continue to make payments to the original mortgagees, they cannot claim credit for those payments on the underlying debt.

If the note is negotiable, the note purchaser can force the debtor to pay off the note a second time. The debtor's only recourse would be against the original lender. This is a cheerless prospect, especially if the creditor is in bankruptcy.

The only way to protect themselves from paying twice is to demand production of the note and obtain endorsement of each payment thereon. There is no practical way to do this when the lenders are institutional. Two leading experts conclude: "The law should be changed to make payment to the assignor binding until notice of the assignment has been given." n298

The rule that the H.D.C. of a negotiable note has no obligation to notify the mortgagor has also been soundly criticized for its "great potential for mischief and unfairness, since it produces far different results than most lay mortgagors would expect." n299

When the note is *non-negotiable*, the borrower won't be liable twice for repayments she makes to the original creditor, until she has actually been notified that the note has been assigned. The general law of contracts protects the obligor if the obligator has received no notice that the debt has been assigned and doesn't know that it has. The obligator can continue paying the original lender with impunity and will be credited with all the payments made to the original lender until the obligator learns that the note has been sold.

The note purchaser who is required to notify the mortgagor of an assignment must do so personally. He can't just record the assignment. The reason is obvious: mortgagors should not have to search the public records every time they need to make a payment. n300 Moreover, it doesn't take a heroic effort for the assignee to mail personal notice to the mortgagor. Purchasers of the property from the mortgagor, though, are held responsible for recorded assignments. n301 They would have come across them anyway in searching title before they bought the property.

§ 104.10(b)(6) Why the Lack of Notice When a Note Is Sold Doesn't Result in Massive Losses to Borrowers.

§ 104.10(b)(6)(i) Many Loans Continue to Be Serviced by the Originating Lender.

Mortgage buyers often contract to have the originating lender continue servicing the loan. "Servicing" includes collecting monthly payments from the borrower and remitting them to the new owner of the note, keeping tax and insurance impound accounts, paying the borrower's property tax and insurance premiums when they come due, pursuing delinquent borrowers and foreclosing if instructed by the note holders.

Servicing fees are usually paid as a percentage of the principal debt. The servicer also keeps the "float" on the impound accounts which is the interest rate it can earn on those accumulated payments less what it pays borrowers on them.

§ 104.10(b)(6)(ii) Federal Law Requires Both the Old and New Servicing Agent to Inform the Borrower of the Change.

Federal law requires lenders to inform prospective borrowers what the institution's servicing policies are. n302 With an actual transfer of servicing, the law prescribes that the old servicer let the borrower know the change is about to happen, fifteen days ahead of time. Then, the new servicer is supposed to notify the borrower the switch has happened, fifteen days afterwards.

§ 104.10(b)(6)(iii) The New Owner of the Note May Be Estopped from Disclaiming Responsibility for Payments the Debtor Makes to the New Owner's Servicing Agent.

The market for servicing rights has grown rapidly because there are enormous economies of scale in the business. This means that a local lender may be induced to sell its servicing right to a large, remote institution. "Mix ups"--loan payments not properly credited or lost--are common when loan servicers change.

Once the purchaser of a note authorizes it to be serviced by the originating lender or some other institution, the note purchaser, as principal, bears responsibility for the misdeeds of its agents.

If the purchaser of the note changes servicing agents without informing the borrower, it may be estopped from denying the validity of payments the borrower made to the old servicer. The "course of dealing" has misled the borrower into believing that the servicing agent originally designated is still legally empowered to collect payments.

If the servicing agent absconds with the borrower's money, the loss would probably have to be borne by the principal, not the mortgagor.

§ 104.10(b)(6)(iv) The New Holder of the Note May Not Have Perfected Its Status as a Holder in Due Course.

Sometimes the loan originator doesn't actually sell its loans. It pledges them as collateral in order to obtain financing for its operations. Mortgage bankers often work this way. They borrow on lines of credit from commercial banks, originate loans with those borrowed funds, and eventually sell the loans in the secondary market. Between the time they originate a loan and find a buyer for it, they may pledge the loans they originate to the commercial bank, usually for periods of six to eight weeks.

The mortgage banker seldom actually endorses the notes over to the commercial banks. Sometimes the mortgage broker even retains possession of the documents. Even if the bank obtains possession, it may not be treated as the purchaser of the notes but rather as the originator's creditor. Without an endorsement, delivery, or intent to purchase, the commercial bank is not protected as a holder-in-due-course.

§ 104.10(b)(6)(v) Lenders Do Usually Notify Borrowers Where They Are Supposed to Send Their Payments When Servicing Agents Are Changed.

Borrowers are usually notified when their servicing agents change. Lenders want borrowers to mail their payments to the right place. They don't relish being forced to invoke "negotiability" claims in order to get paid. Each time a new servicing agent takes over, borrowers usually can expect to receive notice of it.

§ 104.10(b)(6)(vi) The Phony Notice Scam.

Reliance on this process has led to "loan servicing scams." Con artists write official-seeming requests to borrowers, directing loan payments to their own post office boxes, which are often out of town. Smart borrowers, on receiving a notice, ask for verification signed by an officer of the old loan servicer. They also insist that the new loan servicer provide an 800-number, payment coupons, and an authorization-to-receive-payment letter signed by a corporate officer.

The Uniform Consumer Credit Code obliterates the H.D.C. doctrine by providing that a seller "may not take a negotiable instrument other than a check ... as evidence of the obligation of the consumer." n303 When a merchant or contractor takes back the consumer's note for payment, the transaction is called a consumer credit sale. Purchasers of consumer paper resulting from consumer credit sales under to the U.C.C.C. are responsible for overseeing their vendor's business operations, at the risk of going to court against dissatisfied consumers carrying valid defenses to payment. They can't claim H.D.C. status.

A truly shifty and well-advised seller could try to side-step this statutory assault on the H.D.C. doctrine by separating the sale from the loan. The seller could form an independent financing corporation to make loans to consumers (consumer loans). The consumers would borrow first and buy later. The financing corporation would sell the consumers' notes, maybe even before the consumers had used the loan proceeds to buy whatever the seller was palming off. The purchasers of the note would be holders in due course from a lender, and not a seller. Hence, they would not be subject to U.C.C.C.'s injunction against sellers taking anything but checks as negotiable instruments from consumers. n304

To catch these clever sellers, the U.C.C.C. listed various connections between sellers and lenders that would disqualify lenders from claiming H.D.C. status when the paper they were buying was consumer loans: the lender knew what the seller was up to, the lender was related to the seller, the seller guaranteed the loan, the lender supplied the seller with contract documents, the loan was conditioned on the consumer's making the particular purchase, and the lender knew about earlier complaints from the seller's customers. n305

The U.C.C.C. is limited in application. It only protects individual debtors, not organizations, and only for purchases serving a personal, family, household or agricultural purpose. n306 The U.C.C.C. doesn't apply to most mortgages because they are given to secure the repayment of money and not to secure purchase contracts for goods or services. The U.C.C.C. would apply when a homeowner gives a home improvement contractor a note and mortgage to secure payment of the contract. The Code does not apply if the debt is secured by a mortgage and the interest rate is 12% or lower. n307 If the sale involves goods or services such as home improvements, and not an interest in land, the Code only applies if the amount financed does not exceed $25,000 adjusted according to changes in the Consumer Price Index. n308

§ 104.10(b)(6)(vii) Servicer Liability for Truth-in-Lending Violations.

Servicers of loans purchased by the Federal Home Loan Mortgage Corporation (F.H.L.M.C.) are required to accept a conveyance of the mortgage loan. The servicer reconveys the loan to Freddie Mac, while retaining the right to service the loan. At least one district court held that this momentary possession of legal title made the servicer an assignee of the lender who could be held liable for Truth in Lending Act (T.I.L.A.) violations committed by the original mortgagee. n309 The T.I.L.A. Amendments of 1995 clarified that a loan servicer will not be treated as an assignee if legal title is held merely for administrative convenience and the loan servicer is not or was not the mortgagee. n310

§ 104.10(b)(6)(viii) Electronic Promissory Notes: The Wave of the Future?

The promissory note would become a part of cyberspace if the Uniform Commercial Code (U.C.C.) were amended to permit the use of electronic promissory notes in addition to the traditional paper-based promissory notes. Article 3-104 of the U.C.C. requires a writing for a negotiable instrument. But, commentators James A. Newell and Michael R. Gordon have concluded that processing, recording, and storing promissory notes via electronic media would streamline the mortgage servicing and origination processes and increase profitability through the substantial reduction of the servicing costs associated with creating, handling, transporting and storing paper promissory notes. n311

Considering the voluminous increase in the sale of mortgages into the secondary market, the cost savings could be significant. In 1993, mortgage lenders originated 1.01 trillion dollars in mortgages. n312 As part of this mortgage process, the mortgage industry creates millions of promissory notes.

Although this idea is novel, the shift from paper-based documents to electronic records is a growing trend in commercial transactions. Letters of credit, federal income tax returns and other traditionally paper-based documents now have electronic analogs. Most of the mortgages purchased by the Federal Home Loan Mortgage Corporation ("Freddie Mac") are pooled electronically for the issuance of participation certificates (mortgage-backed securities), which are in turn "issued" as an electronic "book entry" in the computerized records of a Federal Reserve Bank.

The hypothetical model posed by Newell and Gordon envisions an electronic promissory note that is generated as part of an electronic mortgage origination. If the mortgage is sold in the secondary market, the promissory note could be electronically transferred to a depository entity, such as a clearing corporation, that would maintain records of ownership, administer the transfer of notes, and perform other storage and negotiation duties. Signatures and endorsements for negotiation and transfer of holder-in-due-course status could be affixed electronically, using identification and security codes unique to the endorser. Delivery could be effected through electronic transmission of the note to the depository entity, which would hold the note as custodian for the note-holder.

Although possession of a promissory note is important for recognition and enforcement of the holder's ownership rights, the language in the U.C.C. with respect to physical possession and paper writings could be revised to recognize an electronic counterpart, such as a paper reproduction of the original electronic note certified by the depository entity. As the commentators put it:

> Furthermore, the Code [U.C.C.] will need to recognize that the most important attributes of a promissory note, whether paper-based or electronic-based, are the rights possessed by the holder, i.e., the contract rights and the holder-in-due-course status. For a holder, the continued legal recognition of these rights is far more important than the means by which the rights are set down and preserved. An electronic promissory note, which can be negotiated, notwithstanding the fact that the note is not represented by a paper-based memorial, should be a permissible alternative under the law of commerce. n313

(n10)Footnote 263. *See* The Wall Street Journal, Sept. 28, 1992, at C15, col. 2. The spread between C.M.O.s and U.S. Treasuries on that day ranged from 90 (20-year seasoned issues) to 115 (2-year new issues).

(n11)Footnote 264. D. Barlow Burke, Jr., Real Estate Transactions 263 (1993), citing *First Maryland Fin. Serv's Corp. v. District Realty Title Ins. Corp., 548 A.2d 787 (D.C. App. 1988)* (note, negotiable, holder not in due course).

(n12)Footnote 265. *U.C.C. § 3-305(a)*. Ann M. Burkhart, *Restatement of Mortgages Symposium: Third Party Defenses to Mortgages, 1998 BYU L. Rev. 1003.*

(n13)Footnote 266. *U.C.C. § 3-305(a)(1)*. The "real/personal" or "void/voidable" distinction lends to inventive legal arguments. In one case, an *unlicensed* contractor did some work. The work may have been paid for by a note and second trust deed on which the borrower defaulted. The court held that the borrower's default would be excused if the borrower could prove that the note was payment for the construction work. The note would then have been illegal (void), ruled the court, because under state law, unlicensed contractors can't sue to enforce contracts for which a license is required. *Wilson v. Steele, 259 Cal. Rptr. 851 (1989)* .

(n14)Footnote 267. A few states have reversed or modified the H.D.C. doctrine. *See* Grant S. Nelson & Dale A. Whitman, Real Estate Finance Law § 5.30, at 421 n.1 (5th ed. 2007).

(n15)Footnote 268. *But see, Johnson v. Howe, 223 N.W. 148 (Minn. 1929)* . The mortgagor can continue paying the mortgagee after the mortgagee has been assigned until the mortgagor receives actual notice of the assignment. The H.D.C. of the negotiable note may have a suit against the original maker despite failure to notify her of the assignment, but can't foreclose the mortgage if the debt has been repaid once.

(n19)Footnote 272. *U.C.C. 3-104* is codified in *Cal. Com. Code § 3104*:

> Form of Negotiable Instruments; "Draft"; "Check"; "Certificate of Deposit"; "Note." (1) Any writing to be a negotiable instrument within this division must:
>
> (a) Be signed by the maker or drawer; and
>
> (b) Contain an unconditional promise or order to pay a sum certain in money and no other promise, order, obligation or power given by the maker or drawer except as authorized by this division; and
>
> (c) Be payable on demand or at a definite time; and
>
> (d) Be payable to order or to bearer.
>
> (2) A writing which complies with the requirements of this section is

(a) A "draft" ("bill of exchange") if it is an order;

(b) A "check" if it is a draft drawn on a bank and payable on demand;

(c) A "certificate of deposit" if it is an acknowledgement by a bank of receipt of money with an engagement to repay it;

(d) A "note" if it is a promise other than a certificate of deposit.

(3) As used in other divisions of this code, and as the context may require, the terms "draft," "check," "certificate of deposit" and "note" may refer to instruments which are not negotiable within this division as well as to instruments which are so negotiable.

(n20)Footnote 273. *U.C.C. 3-104*. is codified in *Cal. Com. Code 3104*: Form of Negotiable Instruments; "Draft"; "Check"; "Certificate of Deposit"; "Note." (1) Any writing to be a negotiable instrument within this division must: (a) Be signed by the maker or drawer; and (b) Contain an unconditional promise or order to pay a sum certain in money and no other promise, order, obligation or power given by the maker or drawer except as authorized by this division; and (c) Be payable on demand or at a definite time; and(d) Be payable to order or to bearer. (2) A writing which complies with the requirements of this section is (a) A "draft" ("bill of exchange") if it is an order; (b) A "check" if it is a draft drawn on a bank and payable on demand; (c) A "certificate of deposit" if it is an acknowledgement by a bank of receipt of money with an engagement to repay it; (d) A "note" if it is a promise other than a certificate of deposit. (3) As used in other divisions of this code, and as the context may require, the terms "draft," "check," "certificate of deposit" and "note" may refer to instruments which are not negotiable within this division as well as to instruments which are so negotiable.

CHAPTER 105 ALTERNATIVE DISPUTE RESOLUTION IN REAL PROPERTY MATTERS

13-105 Thompson on Real Property, Thomas Editions § 105.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 105.01 Introduction.

This chapter provides a general survey description of various methods of Alternative Dispute Resolution (ADR) and how they may be applied to real property matters. The ADR methods discussed here represent ADR in its fullest sense, which includes techniques for avoiding litigation entirely as well as processes that accelerate or shorten the litigation process. Some techniques, such as negotiation and compromise, apply in both contexts.

In real property matters, resort to the courts for dispute resolution is inexplicable and unsatisfactory to many who have experienced firsthand the frustrating delays, expenses and occasional inconsistencies of such litigation; thus, there is great and growing fervor behind the quest for alternative means of dispute resolution. This seems especially apparent when the property values at issue have not been large nor the legal issues complex.

It should be remembered, however, that access to the courts is a fundamental right and should not lightly be restricted. Therefore, state and federal legislation has arisen to encourage rather than mandate certain types of alternative dispute resolution. Such legislation may restrict or limit access to the courts in some circumstances, but usually will not foreclose it entirely. The impact of such ADR legislation is noted in the chapter.

CHAPTER 105 ALTERNATIVE DISPUTE RESOLUTION IN REAL PROPERTY MATTERS

13-105 Thompson on Real Property, Thomas Editions § 105.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 105.02 Devices for Settling Claims or Shortening Litigation.

§ 105.02(a) In General.

All types of disputes, whether or not related to real property, may be resolved by one or more of the techniques discussed in this section. An infinite variety of factors may motivate a party to enter into an accord or a compromise, for example, but certainly chief among them is the desire to obtain some benefit from a claim while avoiding the time and expense of even ordinary, not to mention protracted, litigation. The mutuality of benefits derived from these arrangements depends heavily on the attorneys' skills as negotiators.

§ 105.02(b) Mini-Trial.

To conduct a mini-trial, the parties select a qualified person to function as a private judge. Then, a short trial of issues in dispute is carried out before the judge. The trial, however, is not intended to be binding; its main purpose is to permit the parties to present the strengths of their respective cases, expose them to adversarial questioning and a thoughtful judicial response, and then attempt to reach a settlement after those views have been aired and evaluated. The usual context for the mini-trial is a dispute between corporations, and the trial is attended by corporate officers who have authority to conclude settlement agreements. Negotiations between those persons toward settlement following the mini-trial may be aided by comments from the "judge," who--while remaining impartial--may be invited to explain a judge's views of how the parties' positions will fare in the courts. The mini-trial is thus a form of structured negotiation that could even shift into a form of mediation. n1

One variant of the mini-trial is the mini-arbitration, a proceeding in which the parties conduct the "trial" before an arbitrator and then accept the arbitrator's decision as binding. n2

COMPUTER-ASSISTED RESEARCH

LEXIS: mini-trial w/50 property

§ 105.02(c) Summary Jury Trial.

Another variant of the mini-trial is the summary jury trial, in which the parties present their cases before a jury of lay persons rather than before a group of corporate executives. The case presentations are oral arguments and summations only, with no examination of witnesses. The "jury" then renders a verdict, which is usually advisory only. After the presentations, the lawyers may question the "jurors," and, armed with such additional insights into the strengths and weaknesses of their positions, may enter into a settlement conference with the judge. n3

The mini-trial and the summary jury trial are most useful in cases involving complex issues between wealthy parties. In the real property context, it is possible that litigation involving title to large tracts of land or major nuisance or mineral claims could be of such proportions as to benefit from the somewhat elaborate and expensive "dry run" represented by the mini-trial and summary jury trial methods.

COMPUTER-ASSISTED RESEARCH

LEXIS: summary w/1 jury w/1 trial w/50 property

§ 105.02(d) Accord and Satisfaction.

If one party's conduct results in harm to another party, with a claim or cause of action based thereon, the offending party may offer to satisfy the claim with some substitute performance or consideration. This offer is the accord. n4 If the proffered accord is accepted, the performance of what was offered as the accord is the satisfaction. n5 When the accord is followed by the satisfaction, it bars the original claim. n6

COMPUTER-ASSISTED RESEARCH

LEXIS: accord w/1 satisfaction w/50 property

§ 105.02(e) Compromise and Settlement.

The process of compromise and settlement both resembles accord and satisfaction and differs from it. As with accord and satisfaction, a compromise is the offer to tender an alternative performance in response to a disputed claim, and the settlement is the actual performance of the proffered compromise. n7 However, a compromise is valid and enforceable even before settlement occurs, n8 whereas, the accord is not effective to bar the original claim, until the satisfaction occurs. n9 Furthermore, while the accord and satisfaction may relate to any claim, even undisputed or liquidated, n10 a compromise and settlement may pertain only to disputed claims. Also, an accord or satisfaction applies only to claims relating to the person or personal property, n11 whereas, a compromise and settlement may apply to all types of claims, including conflicting claims to real property. n12

COMPUTER-ASSISTED RESEARCH

LEXIS: compromise w/1 settlement w/50 property

§ 105.02(f) Novation and Release.

A novation and a release can result either from an accord and satisfaction or from a compromise and settlement. If either the accord or the compromise is accepted as a substitute promised performance, the original obligation of performance is extinguished and a novation results. n13 If the compromise or accord relinquishes a claim or discharge of performance, it may be termed a release.

CHAPTER 105 ALTERNATIVE DISPUTE RESOLUTION IN REAL PROPERTY MATTERS

13-105 Thompson on Real Property, Thomas Editions § 105.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 105.03 Arbitration.

§ 105.03(a) Arbitration Defined and Distinguished.

Arbitration is a nonjudicial process of investigating and resolving matters in dispute between parties. n14 Parties who resort to arbitration generally expect it to be more efficient, less expensive and less formal than litigation. n15 Like litigation, arbitration functions as both a fact-finding process, and a process for resolving the matters in dispute, and for determining an award for the prevailing party. Both the factual and remedial determinations resulting from an arbitration process are binding on the parties and are not intended merely to be submitted to a court for judicial approval. Judicial intervention in the arbitration process is appropriate only when difficulties in enforcement arise or when claims of impropriety in the arbitration proceedings are pressed.

§ 105.03(b) The Common Law of Arbitration.

Although arbitration usually takes place because parties have agreed to arbitrate and today is subject to much statutory regulation, a common law of arbitration nevertheless exists. The common law of arbitration will not recognize a right of one party to force another to arbitrate a dispute, even under a prior agreement. n16 This means that private arbitration agreements are revocable at will by either party.

Once the parties enter arbitration, by their common consent, several principles of the common law of arbitration are applicable:

(1) no right of jury trial and no right to resort to a court for instruction in the law is recognized;

(2) the arbitrator is not required to explain reasons for the award; and

(3) only limited judicial review of the award is permitted. n17

COMPUTER-ASSISTED RESEARCH

LEXIS: arbitration w/30 common law

§ 105.03(c) Statutory Modification of Arbitration Law.

State arbitration statutes began to appear in the early decades of the 20th century and made private arbitration agreements specifically enforceable by either party. n18 In some states the statutory provisions did not make major changes in the common law of arbitration, but simply supplemented the common law. n19 Other state statutes, beginning with New York's arbitration act in 1921, n20 made significant changes in the common law of arbitration, but did not abolish it. n21 Comprehensive arbitration statutes in yet other states have completely abrogated the common law of arbitration in their jurisdictions. n22

In 1956, the National Conference of Commissioners on Uniform State Laws issued a revised Uniform Arbitration Act, modeled after the New York act, which had also been followed in several other states. This uniform act has now been adopted in 28 states and the District of Columbia, and substantially similar legislation has been enacted in 14 additional states.

The constitutionality of some state arbitration statutes has been challenged by arguments that the statutes deprive parties of property without due process of law, n23 or improperly extend judicial powers to private persons, n24 and impair contract obligations. n25 All the statutes have withstood such attacks.

§ 105.03(d) Requirements, Scope and Effect of Arbitration Agreements.

Under common law, agreements to submit present or future disputes to arbitration may be either oral or written. n26 However, common law also requires that such a submission agreement be in writing if the eventual arbitration award will achieve what the parties could do only in writing, such as determine the title to land. n27 In those states where the submission agreement is governed by statute rather than the common law, such agreements almost always must be in writing, and this requirement is strictly enforced. n28 In jurisdictions where common law and statutory arbitration co-exist and the parties do not specify which set of rules they choose to follow, the choice of rules will be inferred from the parties' conduct. n29

If agreements or contract clauses require parties to arbitrate future disputes, those agreements or clauses may, without more formalization, suffice as submission agreements if they apply to all such future disputes. n30 However, under some state arbitration statutes, such agreements do not actually achieve the submission of a dispute to arbitrations, but may be the basis for compelling a submission. n31

Submission agreements must contain provisions that identify the issues or matters subject to arbitration, confer jurisdiction over the parties, and empower the arbitrator to resolve the dispute. If the content of submission agreements is defined by statute, the parties must strictly comply with the statutory requirements, because those requirements are usually held to be jurisdictional. n32

Some submission agreements are self-executing, so that parties may proceed directly to the arbitration process; other agreements may contain only the commitment to arbitrate, and still require the appointment of arbitrators and submission of the matter to those appointees before further proceedings can take place. n33

It is also possible for the parties to submit to arbitration a matter already in litigation. Under common law n34 and under some arbitration statutes, such a submission terminates the litigation and the jurisdiction of the court. n35 Under other statutes, the litigation is merely stayed pending the outcome of the arbitration. n36

In a related issue, it has been held that merely entering into an agreement to submit a matter for arbitration, without actually undertaking the arbitration process, will not stop the running of the statute of limitations. n37 However, a party to the submission agreement may be estopped from asserting the statute of limitations as a defense if the arbitration agreement was the cause for delaying subsequent litigation. n38

COMPUTER-ASSISTED RESEARCH

LEXIS: arbitration w/5 agreement! w/30 require! or scope! or effect!

§ 105.03(e) The Arbitration Award.

§ 105.03(e)(1) Technical Requirements.

The decision of an arbitrator or of arbitrators is called the award. Unless otherwise required by statute or by the parties' agreement, the award need only express the result of the arbitration, without supporting rationale. n39 Many of the state arbitration statutes also require the award to be in writing and to be signed by the arbitrators n40 and, in some instances, even acknowledged. n41

According to the common law of arbitration, unless the parties have agreed to accept a decision by a majority of the arbitrators, the award must be based on a unanimous decision of the arbitrators. n42 Under most arbitration statutes a decision supported by a simple majority of the arbitrators suffices for a valid award. n43

The arbitration award should consider and dispose of all the issues required to be resolved by the submission agreement. n44 Also, the award must not deal with issues outside the terms of the submission agreement, n45 and an award on such matters is void. n46

Arbitrators are required to be fair and just in their decisions, n47 but they are not required to follow rules of common law, unless that is required by the terms of the submission agreement or by statute. n48

COMPUTER-ASSISTED RESEARCH

LEXIS: arbitration w/5 award! w/30 require!

§ 105.03(e)(2) Enforcement of the Award.

Under common law an arbitration award is not self-enforcing. n49 Therefore, a party seeking enforcement of an arbitration award against a recalcitrant party must bring a judicial action on contract; the contract theory is appropriate, because the award is subsumed into the submission agreement. n50 Under statutory arbitration, unless common law remedies are also available, the statutory procedure for enforcement should be followed. n51

The plaintiff in an enforcement action can establish a *prima facie* case by presenting evidence showing a valid award regular on its face; thereafter, the burden is on the defendant to impeach the award. n52

COMPUTER-ASSISTED RESEARCH

LEXIS: arbitration w/5 award! w/30 enforc!

§ 105.03(e)(3) Impeachment or Vacation of the Award.

To discredit or invalidate an arbitration award is referred to as impeachment. In general, at common law, arbitration awards will be impeached or set aside only if the arbitrators lacked jurisdiction, the arbitrators exceeded their authority, or if the arbitrators' conduct was tainted by fraud, gross negligence, or other serious misbehavior. n53 An award will be impeached for a mistake of law only if the arbitrators were required to follow substantive law in determining the award. n54

If an arbitration award is to be vacated, it must be under one or more provisions of the applicable arbitration statute. Arbitration statutes generally list the grounds for vacating an award as they are found in the Uniform Arbitration Act:

procurement [of the award] by corruption, fraud or other undue means;

evident partiality by an arbitrator;

exceeding of powers by arbitrators;

refusal by arbitrators to postpone hearings or hear evidence so as to substantially prejudice the rights of a party;

absence of a valid arbitration agreement or technical defects in the conduct of the proceedings. n55

An arbitration award can also be set aside for a material mistake that clearly appears on the face of the award, such as an arithmetic mistake. n56 Also, an arbitrator's mistake that will cause the award to operate in a way they did not intend can be a ground for setting aside the award. n57

COMPUTER-ASSISTED RESEARCH

LEXIS: arbitration w/5 award! w/30 impeach! or vacat!

§ 105.03(f) Compulsory Arbitration.

In some jurisdictions, as a matter of course, civil claims below a certain amount are submitted by the court to an arbitration panel, or even to a single arbitrator. If a party disagrees with the result of the arbitration under those circumstances, a trial de novo may be held. However, if the new trial does not produce a more favorable result for the party requesting the trial, that party must pay costs to the other party and will be denied interest from the time of the award. Statutes that impose "compulsory arbitration" or that afford the parties no choice or alternative with respect to arbitration have generally been held unconstitutional, because they deprive parties of the right to trial by jury; n58 however, if a statutory "compulsory arbitration" requirement is coupled with the right of appeal or the right to an original trial after arbitration, even with certain financial risks attached, such statutes have been upheld. n59

COMPUTER-ASSISTED RESEARCH

LEXIS: compulsory w/2 arbitration

§ 105.03(g) Real Property Issues Amenable to Arbitration.

Subject to any limitations imposed by an applicable arbitration statute, parties generally may have real property disputes submitted to and determined by arbitration. n60 An arbitration award cannot actually convey title (although it can authorize a conveyance), n61 or determine such issues as whether a river bank has been formed by accretion or avulsion, n62 but it can settle a boundary dispute. n63

A party to a real property dispute has slightly different remedies under arbitration than under ordinary litigation. A real property disputant may seek to enforce the performance of the arbitration agreement itself. Under common law arbitration, the remedy for breach of an agreement to arbitrate is only an action for breach of contract to recover whatever damages can be proved from the breach. n64 In contrast to other real property actions, specific performance will not be granted, n65 unless arbitration of certain issues was a condition precedent to commencing court action on a larger matter. n66 If the arbitration agreement is under authority of a state statute rather than common law, the performance of the agreement is usually enforceable by either specific performance or an action for damages. n67

COMPUTER-ASSISTED RESEARCH

LEXIS: arbitration w/30 real w/1 property

§ 105.03(h) Evaluation of Arbitration as an Alternative to Litigation.

As is evident from the statutory and case law that has grown up around the concept of arbitration, an arbitration proceeding can be complex, protracted, and often subject to major litigation after the arbitration proceeding. In the view of some, arbitration is potentially so cumbersome and expensive that, as a method of alternative dispute resolution, it has lost some appeal. n68 However, arbitration enjoys great and growing popularity for some kinds of cases, almost to the point of being the exclusive dispute resolution method. n69

(n8)Footnote 21. *Wark & Co. v. Twelfth & Sansom Corp., 107 A.2d 856 (Pa. 1954)* ; *Britex Waste Co. v. Nathan Schwab & Sons, 12 A.2d 473 (Pa. Super. 1940)* .

(n9)Footnote 22. *Kelso-Burnett Co. v. Zeus Dev. Corp., 437 N.E.2d 26 (Ill. App. 1982)* ; *Crofoot v. Blair Holdings Corp., 260 P.2d 156 (Cal. App. 1953)* ; Hedges v. Carrigan, *11 Cal. Rptr. 3d 787 (2004)* (United States Arbitration Act preempted compliance with certain conditions precedent in the arbitration clause of a real estate contract); *Murphy v. Murphy, 2004 Tex. App. LEXIS 1420* (No. 2 02 449 CV, Feb. 12, 2004) (an agreement for the sale of two properties in

Colorado was held to affect interstate commerce, so the Federal Arbitration Act and not the Texas arbitration law applied).

(n10)Footnote 23. *Wenger v. Finley, 541 N.E.2d 1220 (Ill. App. 1989)* ; *Finsilver, Still & Moss v. Goldberg, Maas & Co., 171 N.E. 579 (N.Y. 1930)* .

(n11)Footnote 24. *Moss v. Department of Mental Health, 406 N.W.2d 203 (Mich. App. 1987)* ; *Snyder v. Superior Court of Amador County, 74 P.2d 782 (Cal. App. 1930)* .

(n12)Footnote 25. *Conejo Valley Unified Sch. Dist. v. William Blurock & Partners, Inc., 169 Cal. Rptr. 102 (1980)* ; *Berkovitz v. Arbib & Houlberg, Inc., 130 N.E. 288 (N.Y. 1921)* .

(n13)Footnote 26. *Wetzel v. Sullivan, King & Sabom, P.C., 745 S.W.2d 78 (Tex. App. 1988)* ; *Lilley v. Tuttle, 117 P. 896 (Colo. 1911)* ; *Red Springs Presbyterian Church v. Terminix Co. of N.C., 458 S.E.2d 270 (N.C. App. 1995)* (The parties' signature on the contract established a valid agreement to arbitrate a dispute).

(n14)Footnote 27. *Id.*

(n15)Footnote 28. *Apex Realty, Inc. v. Schick Realty, Inc., 577 A.2d 534* (N.J. Eq.) , *appeal denied, 604 A.2d 597 (N.J. 1990)* ; *Application of Downer Corp., 304 P.2d 756 (Cal. App. 1956)* ; *Marcus & Millichap Real Estate Inv. Brokerage Co. v. Hock Inv. Co., 80 Cal. Rptr.2d 147 (Cal. App. 1998)* (sellers did not initial arbitration clause in purchase agreement, so there was no agreement to arbitrate); *Rhode v. E & T Invs., Inc., 6 F. Supp. 2d 1322 (M.D. Ala. 1998)* (statute precludes arbitration of express/written warranty claims by buyer of manufactured home, referring to Magnuson Moss Warranty Federal Trade Commission Improvement Act, 101 *et seq., 15 U.S.C. § 2301 et seq.*); *C & L Enterprises, Inc. v. Citizen Band Potawatomi Indian Tribe of Oklahoma, 532 U.S. 411 (2001)* (arbitration provisions in a contract constituted a waiver of the tribe's sovereign immunity against lawsuits to enforce the arbitration award).

(n16)Footnote 29. *Brennan v. General Acc., Fire & Life Assur. Corp., 574 A.2d 580 (Pa. 1990)* ; *Pick Indus., Inc. v. Gebhard-Berghammer, Inc., 56 N.W.2d 97 (Wis. 1953)* ; *Bank v. International Bus. Mach. Corp., 915 F. Supp. 491 (D. Mass. 1996)* , *rev'd by, 99 F.3d 46 (1st Cir. 1996)* (partner opposing mortgage purchase by partnership was not required to submit issue to arbitration); *Insignia Homes, Inc. v. Hinden, 675 So. 2d 673 (Fla. App. 1996)* ; *Louise Gardens of Encino Homeowners' Association, Inc. v. Truck Insurance Exchange, Inc., 98 Cal. Rptr. 2d 378 (2000)* (agreement subject to statutory contractual arbitration law).

(n17)Footnote 30. *Stein v. Drake, 254 P.2d 613 (Cal. App. 1953)* ; *Ex parte Napier, 723 So. 2d 49 (Ala. 1998)* (unsuccessful challenge of unconscionability to arbitration clause related to purchase of mobile home, although purchasers were in their seventies and had never completed high school); *Williams v. Aetna Fin. Co., 700 N.E.2d 859 (Ohio 1998)* (arbitration clause held unconscionable and unenforceable because lender and home repair pitchman conspired to defraud purchaser); *Green Tree Agency, Inc. v. White, 719 So. 2d 1179 (Ala. 1998)* (no duty to disclose that installment contract contains arbitration clause covering future disputes); *Rogers v. Peinado, 101 Cal. Rptr. 2d 817 (2000)* (arbitration clause in contract barred one party from maintaining an action for malicious prosecution against the other party); *Halloran v. Buccheiri, 2003 Ohio App. LEXIS 5047* (No. 82745, Oct. 23, 2003) (an arbitration provision in an agreement between owners and an architect did not apply to the architect's subsequent services as a subcontractor); *Lemmon v. Lincoln Property Co. 307 F. Supp. 2d 1352* (M.D. Fla, 2004) (Arbitration agreement containing all inclusive language is enforceable if it is not vague, even if it contains claims under civil right acts); Wolschlager v. Fidelity Nat. Title Ins. Co., *4 Cal. Rptr. 3d 179 (Cal. App. 2003)* (incorporation of an arbitration clause into a contract through the incorporation of a document is valid if the incorporation is clear, unequivocal, and easily accessible).

(n18)Footnote 31. *Newburger v. Lubell, 177 N.E. 424 (N.Y. 1931)* ; *In re Smith, 276 N.Y.S. 221 (1934)* ; *Scheele v. Justices of the Supreme Court of the State of Arizona, 257 F.3d 1082 (9th Cir. 2001)* (requirements of arbitration rules do not constitute a taking); *Fradella v. Seaberry, 952 So. 2d 195 (Miss. App. 2006)* (an arbitration provision requiring to submit claims against the realtor to arbitration was not supported by consideration).

(n19)Footnote 32. *Commercial Factors Corp. v. Kurtzman Bros., 280 P.2d 146 (Cal. App. 1955)* ; *Hill v. National Auction Group, Inc., 873 So. 2d 244 (Ala. App. 2003)* (in an arbitration provision in a listing agreement between owner and auctioneer, a bidder was not subject to the provision as a third party beneficiary).

(n20)Footnote 33. *Turner Constr. Co. v. H & S Forming of S. Florida, Inc., 567 So. 2d 1036 (Fla. App. 1990)* ; *Crofoot v. Blair Holdings Corp., 260 P.2d 156 (Cal. App. 1953)* ; *Ellis Constr., Inc. v. Vieux Carre Resort Properties, L.L.C., 934 So. 2d 206 (La. App. 2006)* (arbitration right preserved by preliminary injunction); *Abel Homes at Maranja Villas, LLC v. Hernandez, 960 So. 2d 891 (Fla. App. 2007)* (right to arbitration waived by failure to submit timely demand for arbitration).

(n21)Footnote 34. *Pick Indus., Inc. v. Gebhard-Berghammer, Inc., 56 N.W.2d 97 (Wis. 1953) . But see Laur & Mack Contracting Co. Inc. v. Di Cienzo, 651 N.Y.S. 2d 831 (1996)* .

(n22)Footnote 35. *Crofoot v. Blair Holdings Corp., 260 P.2d 156 (Cal. App. 1953)* ; *Ross Brothers Construction Co., Inc. v. International Steel Services, Inc., 383 F.3d 867 (7th Cir. 2002)* (arbitration clause was valid so district court was required to transfer the affected claim to arbitration).

(n23)Footnote 36. *Mountain Plains Constructors, Inc. v. Torrez, 785 P.2d 928 (Colo. 1990)* ; *Carpenter v. Bloomer, 148 A.2d 497 (N.J. Super. 1959)* ; *Sheller v. Frank's Nursery & Crafts, Inc., 957 F. Supp. 150 (N.D. Ill. 1997)* (Prior agreement to arbitrate was upheld, case stayed pending arbitration); *Cecala v. Moore, 982 F. Supp. 609 (N.D. Ill. 1997)* (Suit for violation of Residential Real Property Disclosure Act stayed pending arbitration according to provision in realty sales agreement).

(n24)Footnote 37. *Dresser v. Bindi, 271 Cal. Rptr. 137 (1990)* ; *Hornblower v. George Washington Univ., 31 App. D.C. 64 (1908)* .

(n25)Footnote 38. *Martin v. Potashnick, 217 S.W.2d 379 (Mo. 1949)* .

(n26)Footnote 39. *Apex Realty, Inc. v. Schick Realty, Inc., 577 A.2d 534* (N.J. Eq.) , *appeal denied, 604 A.2d 59 (N.J. 1990)* ; *Bryson v. Higdon, 21 S.E.2d 836 (N.C. 1942)* ; *Bradfordt Co. v. Hallmark Bldrs., Inc., 205 B.R. 971 (Bankr. M.D. Fla. 1996)* .

(n27)Footnote 40. *Griffith Co. v. San Diego College for Women, 289 P.2d 476 (Cal. 1955)* .

(n28)Footnote 41. *Griffith Co. v. San Diego College for Women, 289 P.2d 476 (Cal. 1955)* ; *Sandford Laundry v. Simon, 35 N.E.2d 182 (N.Y. 1941)* .

(n29)Footnote 42. *Twait v. Farmers Mutual Hail Ins. Co., 91 N.W.2d 575 (Iowa 1958)* .

(n30)Footnote 43. *Travelers Indem. Co. v. Walton, 384 So. 2d 939 (Fla. App. 1980)* ; *Clinton Water Ass'n v. Farmers Constr. Co., 254 S.E.2d 692 (W. Va. 1979)* .

(n31)Footnote 44. *Johnston v. Johnston, 554 N.Y.S.2d 851 (1990)* ; *Mercury Oil Refining Co. v. Oil Workers Inter'l Union, 187 F.2d 980 (10th Cir. 1951) , disapproved on other grounds, Textile Workers Union v. Lincoln Mills of Ala., 353 U.S. 448 (1957)* ; *Mehler v. The Terminix International Company L.P., 205 F.3d 44 (2nd Cir. 2000)* (to be covered by the arbitration clause of the contract, the suit need only arise out of or relate to the contract); *Cold Mountain Builders, Inc. v. Lewis, 746 A.2d 921 (Maine 2000)* (arbitrator acted within the range of his discretion); *Sweatt v. International Development Corporation, 531 S.E.2d 192 (Ga. App. 2000)* (arbitrator exceeded authority); *Pacific Development, L.C. v. Orton, 23 P.3d 1035 (Utah 2001)* (arbitrator exceeded authority). *Nobles v. Rural Community Insurance Services, 303 F. Supp. 2d 1292 (M.D. Ala. 2004)* (an arbitration decision concerning insurability of land estopped the insurer from re litigating that issue).

(n32)Footnote 45. *Daley v. City of Hartford, 574 A.2d 194 (Conn. 1990) , cert. denied, 498 U.S. 982 (1991)* ; *Carr v. Kalamazoo Vegetable Parchment Co., 92 N.W.2d 295 (Mich. 1958)* .

(n33)Footnote 46. *Lynch v. Three Ponds Co., 656 P.2d 51 (Colo. App. 1982)* ; *Niles-Bement-Pond Co. v. Amalgamated Local 405, I. U., U. A., A. & A., 97 A.2d 898 (Conn. 1953)* .

(n34)Footnote 47. *Jacob v. Pacific Export Lumber Co., 297 P. 848 (Or. 1931)* ; *Gerdetz v. Central Or. Irrig. Co., 163 P. 980 (Or. 1917)* .

(n35)Footnote 48. *Johnston v. Johnston, 554 N.Y.S.2d 851 (1990)* ; *Morganti, Inc. v. Boehringer Ingelheim Pharmaceuticals, Inc., 563 A.2d 1055 (Conn. App. 1989)* ; *Zelle v. Chicago & N.W.R. Co., 65 N.W.2d 583 (Minn. 1954)* ; *Park Construction Co. v. Independent Sch. Dist. No. 32, Carver County, 11 N.W.2d 649 (Minn. 1943)* .

(n36)Footnote 49. *Weber v. Lynch, 375 A.2d 1278 (Pa. 1977)* ; *Kennecott Utah Copper v. Becker, 195 F.3d 1201 (10th Cir. 1999)* .

(n37)Footnote 50. *Richardson v. Harris, 818 P.2d 1209 (Nev. 1991)* ; *Lewiston-Auburn Shoeworkers Protective Ass'n v. Federal Shoe, Inc., 114 A.2d 248 (Me. 1955)* ; *Machu Pichu, Ltd. v. Massan Shipping Ind., 1997 U.S. Dist. LEXIS 20299* (E.D. La.) ; *Lee County v. Fort Myers Airways, Inc., 688 So. 2d 389 (Fla. App. 1997)* ; *Sylvester v. Abdalla, 903 P.2d 410 (Or. App. 1995)* (attorney fees awarded for successful resistance to exception to arbitrator's award); *Busconi v. Dighello, 668 A.2d 716 (Conn. App. 1995) , cert. denied, 670 A.2d 3321 (Conn. 1996)* (lien foreclosure action based on federal court's judgment confirming arbitration award); *Spearhead Constr. Corp. v. Bianco, 665 A.2d 86 (Conn. App. 1995) , appeal denied, 667 A.2d 554 (Conn. 1995)* (enforcement of arbitration judgment); *Zelvin v. JEM Builders, Inc., 942 A.2d 455 (Conn. App. 2008)* (application by vendors to vacate or modify the award; vendors failed to show that arbitrators manifestly disregarded the law in awarding money damages.).

(n38)Footnote 51. *Wm. C. Blanchard Co. v. Beach Concrete Co., Inc., 297 A.2d 587 (N.J. Super. 1972)* ; *Carpenter v. North River Ins. Co., 436 S.W.2d 549 (Tex. Civ. App. 1968)* .

(n39)Footnote 52. *Mork v. Eureka-Security Fire & Marine Ins. Co., 42 N.W.2d 33 (Minn. 1950)* .

(n40)Footnote 53. *Board of Educ. of Bremen Community High Sch. Dist. No. 228, Cook County v. Bremen Dist. No. 228 Joint Faculty Ass'n, 449 N.E.2d 960 (Ill. App. 1983) , aff'd in part, rev'd in part, 461 N.E.2d 406 (Ill. 1984)* ; *Coleman Co. v. International Union, United Auto., Aircraft and Agr. Implement Workers of Am., 317 P.2d 831 (Kan. 1957)* ; *Durkin v. Cigna Property & Casualty, 986 F. Supp. 1356 (D. Kan. 1997)* (motion to vacate denied because arbitrator held not to have exceeded his authority); *Cacheris v. Mayer Homes, Inc., 969 S.W.2d 876 (Mo. App. 1998)* (vacation of award only under limited circumstances, referring to V.A.M.S. 435.405); *Floyd Co. Bd. of Educ. v. EUA Cogenex Corp., 1999 U.S. App. Lexis 29692 (6th Cir. 1999)* ; *Conmac Corporation v. Southern Diversified Development, Inc., 539 S.E.2d 532 (Ga. App. 2000)* (arbitration panel overstepped its authority in modifying an award); *Sweatt v. International Development Corporation, 531 S.E.2d 192 (Ga. App. 2000)* (arbitrator exceeded authority in the content of the award).

(n41)Footnote 54. *Holman v. Trans World Airlines, 737 F. Supp. 527 (E.D. Mo. 1989)* ; *Board of Educ. of Bremen Community High Sch. Dist. No. 228, Cook County v. Bremen Dist. No. 228 Joint Faculty Ass'n, 449 N.E.2d 960 (Ill. App. 1983) , aff'd in part, rev'd in part, 461 N.E.2d 406 (Ill. 1984)* ; *Moshonov v. Walsh, 94 Cal. Rptr. 2d 597 (2000)* (arbitrator's decision to not award attorney's fees was final and not subject to judicial review).

(n42)Footnote 55. Uniform Arbitration Act § 12. *Metrobuild Associates, Inc. v. Nahoum, 857 N.Y.S.2d 564 (2008)* (trial court exceeded its authority in vacating arbitration award). *Wittich v. Wittich, 948 So. 2d 195 (La. App. 2006)* (party not entitled to have arbitration award vacated); *Birkey Design Group, Inc. v. Egle Nursing Home, Inc., 687 A.2d 256 (Md. App. 1997)* ; *Chen v. Chen, 688 A.2d 636 (N.J. Super. 1997)* ; *Labenski v. Kraizberg, 651 N.Y.S.2d 62 (1996)* ; *Zackiva Communications Corp. v. Milberg Weiss Bershad Spechrie & Lerach, 636 N.Y.S.2d 768 (1996)* (no ground for

vacating arbitration award), *abrogated by, 666 N.Y.S.2d 985 (1997)* (only regarding discovery issue); *Hill v. Cloud, 648 So. 2d 1383 (La. App. 1995)* (no grounds for vacating arbitration award); *Gobegic Medical Care Facility v. AFSCME Local 992, AFL CIO, 531 N.W.2d 728* (Mich. App.) (arbitrator's decision vacated because it was contrary to public policy), *app. denied, 549 N.W.2d 560 (Mich. 1995)* ; *Americrete, Inc. v. West Alabama Lime Co., 758 So. 2d 415 (Miss. 2000)* (the court in affirming the award has a duty to issue its reasoning and thus must make findings of fact and conclusions of law when requested); *Zelvin v. JEM Builders, Inc., 942 A.2d 455 (Conn. App. 2008)* (application by vendors to vacate or modify the award; vendors failed to show that arbitrators manifestly disregarded the law in awarding money damages); *Board of Managers of 225 East 57th Street Condominium v. Campaniello Real Estate, 837 N.Y.S.2d 644 (2007)* (arbitration award vacated because the arbitrator exceeded her authority in determining powers of real estate company).

(n43)Footnote 56. *Hough v. Osswald, 556 N.E.2d 765* (Ill. App.) , *appeal denied, 561 N.E.2d 692 (Ill. 1990)* ; *Stradinger v. City of Whitewater, 277 N.W.2d 827 (Wis. 1979)* ; *Joint School Dist. No. 10, City of Jefferson v. Jefferson Educ. Ass'n, 253 N.W.2d 536 (Wis. 1977)* ; *Trafalgar House Const., Inc. v. MSL Enters., Inc., 494 S.E.2d 613 (N.C. App. 1998)* (referring to Construction Industry Arbitration Rules of American Arbitration Association (CIAR) as being consistent with state law, G.S. § 567.149(a)(3)); *Connecticut Valley Sanitary Waste Disposal, Inc. v. Zielinski, 763 N.E.2d 1080 (Mass. 2002)* (arbitration award could not be modified based on the receipt of additional evidence).

(n44)Footnote 57. *Hoboken Manufacturers' R.R. Co. v. Hoboken R.R. Warehouse & Steamship Connecting Co., 27 A.2d 150 (N.J. Ch. 1942) , aff'd, 31 A.2d 801 (N.J. App. 1943)* ; *Standard Constr. Co. v. Hoeschler, 14 N.W.2d 12 (Wis. 1944)* .

(n45)Footnote 58. *Brooklyn Caledonian Hosp. v. Cintron, 557 N.Y.S.2d 842 (1990)* ; *United Farm Workers Nat'l Union v. Babbitt, 449 F. Supp. 449 (D. Ariz. 1978)* ; *Attorney General v. Johnson, 385 A.2d 57 (Md. 1978)* ; *Hays County Appraisal Dist. v. Mayo Kirby Springs, Inc., 903 S.W.2d 394 (Tex. App. 1995)* (statute requiring binding arbitration held unconstitutional), *aff'd on appeal after remand, 1997 Tex. App. LEXIS 5876* (No. 03 97 00029 CV, Nov. 13, 1997, Tex. App.) (unpublished); *Government of Virgin Islands v. 0.459 Acres of Land, 886 F. Supp. 2 (D. V.I. 1995)* (joint stipulation to enter binding arbitration was an enforceable contract), *rev'd on other grounds by, 75 F.3d 860 (3rd. Cir. 1996)* .

(n46)Footnote 59. *American Universal Ins. Co. v. DelGreco, 530 A.2d 171 (Conn. 1987)* ; *A. Fred Miller, Att'ys at Law, P.C. v. Purvis, 921 P.2d 610 (Alaska 1996)* (compulsory arbitration over attorney's fees upheld using an "arbitrary and capricious standard" of review); *Shimko v. Lobe, 706 N.E.2d 354 (Ohio App. 1997)* (compulsory Arbitration upheld due to safeguards, including limited review before the Court of Common Pleas); *Kedzior v. CDC Dev., 704 N.E.2d 54 (Ohio App. 1997)* ; *Desiderio v. NASD, 1999 U.S. App. Lexis 23269 (2d Cir. 1999)* ; Segal v. Silberstein, *67 Cal. Rptr. 3d 426 (2007)* (arbitration required by parties' business operating agreements).

(n47)Footnote 60. *Cox v. Heuseman, 97 S.E. 778 (Va. 1919)* ; *Garrison v. Palmas Del Mar Homeowners Ass'n, Inc., 538 F. Supp. 2d 468* (D. Puerto Rico) (a claim of right to make repairs to property was subject to arbitration). *JPMorgan Chase Bank v. Reibestein, 824 N.Y.S.2d 259 (2006)* (landlord's breach of contract claim was arbitrable); *Harris v. Green Tree Fin., 1997 U.S. Dist. LEXIS 20792* (E.D. Pa.) (motion to compel arbitration denied due to unconscionability), *rev'd and remanded by 183 F.3d 173 (3d Cir. 1999)* ; *Baker v. Conoco Pipeline Co., 280 F. Supp. 2d 1285* (N.D. Okla. 2003 (an arbitration provision in an easement "touched and concerned" the land).

(n48)Footnote 61. *Vail v. American Way Homes, Inc., 435 A.2d 993 (Conn. 1980)* ; *Fore v. Berry, 78 S.E. 706 (S.C. 1913)* ; *Kedzior v. CDC Dev., 704 N.E.2d 54 (Ohio App. 1997)* (Court held lower court erred in referring case to arbitration because the statute indicated arbitrators had no jurisdiction to decide a title claim for real property).

(n49)Footnote 62. *State v. Loy, 299 N.W. 908 (N.D. 1941)* .

(n50)Footnote 63. *Fehrman v. Bissell Lumber Co., 204 N.W. 482* (Wis.) , *rehearing denied, 205 N.W. 905 (Wis.*

1925) .

(n51)Footnote 64. *Thompson v. Phillips Pipe Line Co., 438 P.2d 146 (Kan. 1968)* ; *Goerke Kirch Co. v. Goerke Kirch Holding Co., 176 A. 902 (N.J. App. 1935)* .

(n52)Footnote 65. *Gamble v. Sukut, 302 P.2d 553 (Or. 1956)* ; *Office & Professional Employees Int'l Union v. Brownsville Gen. Hosp., 186 F.3d 326 (3d Cir. 1999)* .

(n53)Footnote 66. *Palmer v. Clark, 106 Mass. 373 (1871)* .

(n54)Footnote 67. *Amalgamated Ass'n of S.E.R.M.C.E. v. Pittsburgh Ry. Co., 142 A.2d 734* (Pa.) , *cert. denied, 358 U.S. 882 (1958)* .

(n55)Footnote 68. Roger Borovoy, *Recent Developments in Alternative Forms of Dispute Resolutions (ADR), 100 F.R.D. 499 (1983). But see Board of Managers of Courtyards at Woodlands Condo. Ass'n v. IKO Chicago, Inc., 697 N.E.2d 727, 732 (Ill. 1998)* ("It is a well established principle that arbitration is a favored alternative to litigation by state, federal and common law because it is a speedy, informal, and relatively inexpensive procedure for resolving controversies arising out of commercial transactions."); *Cole v. Hiller, 715 So. 2d 451 (La. App. 1998)* (strong public policy favoring arbitration as alternative to litigation).

(n56)Footnote 69. *Rosenberg v. Merrill Lynch, Pierce, Fenner & Smith, Inc., 170 F.3d 1 (1st Cir. 1999)* .

CHAPTER 105 ALTERNATIVE DISPUTE RESOLUTION IN REAL PROPERTY MATTERS

13-105 Thompson on Real Property, Thomas Editions § 105.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 105.04 Conciliation.

Conciliation facilitates communication between the parties by an emphasis on ensuring that the parties fully and correctly understand each other's positions and motivations by whatever sequence of conferences and consultations best accomplishes that. n70 By contrast with mediation, discussed below, conciliation lacks mediation's more formal structure of joint and separate meetings with the parties.

If a statute directs a party to attempt conciliation, n71 and conciliation is defined as the attempt to reach a reasonable, voluntary, and mutual understanding, what constitutes fulfillment of the statutory duty often depends on the intransigence of the other party. n72

CHAPTER 105 ALTERNATIVE DISPUTE RESOLUTION IN REAL PROPERTY MATTERS

13-105 Thompson on Real Property, Thomas Editions § 105.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 105.05 Negotiation and Mediation.

Negotiation is the process whereby parties confer for the purpose of agreeing to go forward in a matter or to settle a dispute. It may be appropriately undertaken at any stage in the legal relations of parties, from the beginning to post-trial matters. n73 Parties rely on negotiation either to prevent a dispute from arising by anticipating and reaching agreement on issues of potential conflict, or to reach a settlement or accommodation after the issues have come into conflict. As a mechanism for dispute resolution, it is an alternative to litigation.

Sometimes, negotiations may be assisted by mediation, a process by which a neutral party helps the negotiating parties identify issues and possible solutions. n74 Normally, the mediator has no independent authority and serves only the functions assigned by agreement of the parties. While mediation may seem inhibited by this requirement of voluntary participation by the parties, it retains a significant advantage over negotiation as a dispute resolution device, in that the parties retain control over every aspect of the dispute. n75 The usual sequence for mediation is for the mediator to meet with all parties together and then separately with each party. n76

CHAPTER 105 ALTERNATIVE DISPUTE RESOLUTION IN REAL PROPERTY MATTERS

13-105 Thompson on Real Property, Thomas Editions § 105.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 105.06 Consensual References; Factfinders.

Some states have adopted statutes authorizing consensual references, known colloquially as "rent-a-judge." Under such statutes, the parties agree to hire a retired judge or other qualified person to conduct a private but complete trial of their dispute. After hearing the dispute, the private judge reaches a decision and the ruling has the same force as a court judgment. n77

The obvious advantages of this procedure are the ability to choose a qualified--even an expert--person to try the case, better control over the timing of hearing and trial schedules, flexibility of procedures, confidentiality, and efficiency.

Under a wide variety of statutes, most states permit limited issues of fact or law to be referred to third parties. n78 In most of these states, however, the private judge's determinations are not accorded the weight of a regular verdict or judgment.

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 105.07 Ombudsman.

An ombudsman performs functions very similar to those of a conciliator or mediator, but usually in the context of a dispute between a private person and a governmental agency. n79 The ombudsman may have a specific commission from the agency or legislature to deal with complaints from the public. Certain powers of investigation may also be conferred on the ombudsman, including powers to subpoena, and to obtain and examine records and other information. An ombudsman's proposed solutions are not binding, but often are influential or persuasive in dealing with the affected government agency. n80

CHAPTER 106AT PROPERTY LAW IN AUSTRIA 1

13-106AT Thompson on Real Property, Thomas Editions § 106AT.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106AT.01 History of Property Law in Austria.

§ 106AT.01(a) Austrian Peoples in Prehistory.

The earliest known inhabitants in the area of modern Austria were the so-called Danubian Groups of wanderers. These groups gathered in villages consisting of clusters of pile-dwellings near the lakes found abundantly in the Alps. Hunters and other food collectors ventured from the villages up into the mountains, but it was not until the late Bronze and Iron Ages that people started making the mountain areas their homes.

During the middle of the Bronze Age tribes of Celts invaded and dominated the area until Roman armies entered in 15 B.C. n2 The Romans occupied the territory south of the Danube river and built many cities and roads, the remains of which can still be found in Austria today. When Roman rule collapsed in A.D. 476, many wandering tribes of Germans, Asians and Hungarians entered and passed through Austria.

§ 106AT.01(b) Austrian Peoples in Historic Times.

By the sixth century A.D., the Donau Plateau and the foothills of the Alps were inhabited by Bavarians who probably immigrated from the east. Simultaneously, great movements of Slavic peoples were taking place throughout the land that is now modern Austria and Germany. Late in the eighth century A.D., Austria came under the rule of Charlemagne, but when his death led to the breakup of the Frankish empire, invaders once again asserted themselves, especially the Magyars of Hungary in the early 900's.

The Magyars were conquered by Germany's Otto I in 955, and Austria would remain under the rule of German monarchs for the next several centuries. In 976 Otto I gave control of the Austrian lands to Leopold I, a member of the Babenburg family. The Babenburgs ruled until King Ottokar of Bohemia gained control of the Babenburg duchies. In 1273 Rudolf I, a member of the Habsburg family, was elected the Holy Roman Emperor by the princes of Germany, and though the Habsburg family control would wax and wane through many years, they remained in power until the First World War.

§ 106AT.01(c) Early Austrian Land Law.

Bavarian land law prevailed in Austria until late in the fourteenth century. Under this essentially feudal system, private property rights held by ordinary people were extremely limited, and most land was used on a communal basis. For example, groups of small villages (Dorfgemeinden) used the surrounding grazing fields and forests collectively. Also, inhabitants shared the responsibility for building and maintaining the wells, roads, and bridges.

Even into the eighteenth century, only a few freeholders existed in a land system that was still dominated by a landed aristocracy:

> Except for a few freeholders (*Freisassen*), whose number was always insignificant, the country was divided into thousands of domains (*Herrschaften*) in which the lord performed all the functions of a sovereign. As a rule there were several villages in such a district, communities which in the main governed only themselves, subject to "custom, privileges, and the provincial constitution." n3
>
> [L]andowners [lords] allocated fields to the peasants. Depending on whether land was located within the village community or on the lord's demesne, the fields were called rustic (*rustikal*) or domestic (*domestikal*) ... Both rustic and domestic fields could either be bought by the peasant or held in usufruct only. But even where a purchase had taken place, the lord retained overlordship (*Obereigentum*) and reversionary right (*Heimfallsrecht*)... n4

Throughout this time, the serfdom that persisted was theoretically mitigated by rules permitting peasants to buy their way out of their feudal obligations.

CHAPTER 106AT PROPERTY LAW IN AUSTRIA 1

13-106AT Thompson on Real Property, Thomas Editions § 106AT.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106AT.02 The First Austrian Civil Code.

Under the Empress Maria Theresa and the influence of Enlightenment philosophies, the development of the first Austrian civil code commenced. The code was to promote the notion that all persons should be permitted to hold and enjoy property, that laws should be stable and certain, and applied consistently throughout the state, and enforced uniformly in the courts.

Austria's first civil code drew heavily from Roman law and from natural law principles popular during the Age of Enlightenment. The first draft of this code was rejected by the Empress because of its excessive length and lack of clarity. Further drafts were then produced during the reigns of Joseph II and Leopold II. Finally, under Francis II a legislative board was set up to complete the drafting process, and in 1811 the Austrian Civil Code (Allgemeines Burgerliches Gesetzbuch fur die Deutschen Erblander, or ABGB) was enacted. n5

For the most part, this civil code remains in force today.

FOOTNOTES:
(n1)Footnote 5. The ABGB came into force on January 1, 1812.

CHAPTER 106AT PROPERTY LAW IN AUSTRIA 1

13-106AT Thompson on Real Property, Thomas Editions § 106AT.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106AT.03 The Present Austrian Civil Code.

§ 106AT.03(a) Modern Validity of the Civil Code.

The Austrian Civil Code has remained in force despite changes of Austrian government during the twentieth century. When Austria's constitution was enacted in 1920, it provided for promulgation of laws outside the constitution through publication of those laws in the Federal Statutes Gazette (BGBL). The ABGB remained in force even during World War II, despite the *Anschluss,* when Austria became part of Germany. After World War II, the Allied powers permitted Austrians to establish a democratic government, n6 and the government re-enacted the constitution and the ABGB in 1947. The constitution also guarantees the right of ownership of property free from the intervention of government. n7

§ 106AT.03(b) The Structure of the Austrian Civil Code.

The ABGB (Civil Code of Austria) is divided into an introductory section and three parts. In the introduction the code is declared applicable to all persons, whether individual or corporate. The first part of the ABGB is known as the "rights of persons" and includes the law of marriage, the rights between parents and children, and the law concerning guardianship and curatorship.

The second part of the ABGB is the law of property, divided into two subdivisions, real property rights and personal property rights. Although the majority of real property rights are in fact found in the section which bears its title, many of the rights necessary to conduct a real estate transaction are found throughout the code and ancillary law. Under the sections for personal property rights are found most provisions of general contract and probate laws.

The third part of the ABGB covers rights which are common to the first two parts, such as provisions for sureties and guaranties, and the laws of obligations and provision covering prescription and adverse possession.

§ 106AT.03(c) Interpretation of the Civil Code.

Under the civil code the principle of plain meaning governs:

> No other interpretation shall be attributed to a particular provision of the law than that which is

apparent from the plain meaning of the language employed and from the clear intent of the legislator. n8

Neither the concept of case law jurisprudence nor the principle of stare decisis are officially recognized under the ABGB:

> If a case can be decided neither from the language nor from the natural sense of the law, similar situations which are determined by reference to the laws and the purpose of related provisions must be taken into consideration. Should the case still remain doubtful, then it must be decided upon the carefully collected and well-considered circumstances in accordance with the natural principles of justice. n9
>
> The decisions issued in individual cases and the opinions handed down by the courts in particular litigations never have the force of law; they cannot be extended to other cases or to other persons. n10

Since the courts are only to render justice in light of the law as promulgated by the legislature, no equitable power exists. Generally, laws which are enacted by the legislature do not have a retroactive effect, unless the legislature explicitly directs a law to affect pending litigation. n11

CHAPTER 106AT PROPERTY LAW IN AUSTRIA 1

13-106AT Thompson on Real Property, Thomas Editions § 106AT.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106AT.04 Real Property Rights Under the Civil Code.

§ 106AT.04(a) Ownership and Possession of Property.

Austrian law draws a distinction between rights in rem and obligatory rights, a distinction which is based on Roman law. Therefore, the rights which are said to affect the land (in rem) are found in the second part of the code under real rights, whereas the rights concerning property as between persons are found in the other two sections of the code. The code makes a sharp distinction between movable and immovable property.

Rights in property are said to belong to a person without regard to any other certain persons. n12 The ABGB defines real property rights as possession, ownership, pledge, easement, and inheritance. n13 Immovable property is "possessed by setting foot upon, bordering, fencing in, marking or working therein." n14

An owner who has taken possession of property may protect it by use of suitable force. n15 If an owner believes that the construction of a new building on adjacent land will harm the owner's land, the owner may obtain an injunction, and the court is required under the code to act as fast as is expedient. n16 Other rights protected under the code include rights of ancient lights, right of way, access to waterways and highways, and the right to pasture. n17

Under the code, acquisition of property can occur not only by ordinary conveyance, but also through accretion n18 or through operation of law. n19

§ 106AT.04(b) Transfer of Real Property.

Real property is obtained by acquisition of title through the legally prescribed manner of acquisition. n20 In order to transfer land, the seller must have a certified deed of title entered into the land register. If there is only an agreement to sell land, it is enforceable as to the parties involved, but does not impart notice to the world. The ABGB contains a specific provision for an earnest money agreement, which is similar to that commonly used in the United States. n21 Once the deed has been entered into the land register, the document itself is immaterial as to proof of ownership. Therefore, title searches are unknown in Austria.

Land can be transferred only through delivery and acceptance. n22 The delivery of property can be accomplished

through a conveyance (commonly referred to as declaration) that shows the name of the acceptor. n23 The conveyance or declaration must then be entered into the land register, which entry is termed intabulation. n24 The instrument to be entered must conform to all applicable legal requirements, such as the requirement that it be notarized. n25 Included in the instrument must be the exact designation of the transferor, the acceptor, the description of the real estate to be transferred, the legal basis of the transfer, the place and date of the instrument in question, and the transferor's express declaration of consent to intabulation (entry in the register) of the acceptor as owner of the property. n26

All encumbrances recorded in the land register are transferred with the property and remain in force. n27 Transfers of land in rural areas are subject to local government control.

§ 106AT.04(c) Co-Ownership of Real Property.

Co-ownership is recognized under the ABGB; however, the different forms of concurrent ownership have not been codified, but are left to the contracting or transacting parties to decide and describe in detail the form of ownership they desire. This description will be entered into the land registry, and thereby will become official as to all disputes. Concurrent ownership can be created by contract, law, will, or declaration. n28

§ 106AT.04(d) Interests in the Land of Another.

Easements can be created by contract and must be entered into the land registry to be enforceable. n29 Mortgages on lands are created by having the mortgagee's name and the sum due entered into the land register. n30 The entry is made by presenting a mortgage deed bearing the mortgagor's signature, execution of judgment, or similar instrument. n31 Priority between mortgages is based on first in time. Default by the mortgagor can result in a forced sale, with any surplus going to the mortgagor. Mortgage interests are assignable under most circumstances. n32

§ 106AT.04(e) Prescription and Adverse Possession.

Under the original ABGB, acquisition of land rights through prescription and adverse possession was possible. However, under the present land registry law, no real property rights may be obtained through adverse possession or prescription. The ABGB still recognizes adverse possession of personal property.

§ 106AT.04(f) Foreign Ownership of Real Property in Austria.

Aliens have essentially the same property rights as Austrian citizens. n33 Also recognized as "persons" who can have rights under Austrian law are foreign governments, foreign corporations, and agricultural organizations. n34 An additional requirement imposed on foreign ownership of land, however, is that it must be registered with the real estate transactions office (*Grundverkehrsbeh/Uorde*), and that office must issue a permit before the transaction may take place. Local government subdivisions in Austria may also impose their own requirements for the transfers of land interests when foreigners are involved.

CHAPTER 106AT PROPERTY LAW IN AUSTRIA 1

13-106AT Thompson on Real Property, Thomas Editions § 106AT.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106AT.05 The Land Registry Law.

§ 106AT.05(a) History of the Land Register.

Some form of land register has existed throughout much of Austria's history. The need for uniformity in tax collection procedures led to the earliest form of land registers. In conveyancing, land registers were not used during early medieval times, because the parties simply conducted land transfers between themselves, usually by means of a symbolic exchange before witnesses. In later medieval times a formal transfer (*Auflassung*) before a court, effected through a form of deed or acknowledgement, became common. Beginning in the twelfth century, larger cities developed their own conveyancing and mandatory registration procedures; often the *Auflassung* was combined with an official entry into a register (*Eintragung*). The reception of Roman law threatened, but did not replace, the Germanic tradition as to registration.

In 1871 a national land registry law (*Grundbuchgesetz or GBG*) was promulgated. However, amendments to and commentary on the 1871 law introduced so much complication that a total revision was promulgated in 1955.

§ 106AT.05(b) The Modern Land Register. n35

The purpose of the land registry law is to make real property ownership and transfer precise and predictable. The registry gives notice to potential purchasers and creditors, and the state uses the registry for assessing taxes.

The land registry is divided into the main book (*Hauptbuch*) and a deed collection (*Urkundensammlung*). In order to be effectual, all transfers, conveyances, servitudes, and encumbrances must be entered into the main book. n36 Deeds can be entered into the deed collection. The categories of information entered into the main book are strictly limited, but anything that appears on the deed or conveying instrument can be entered into the deed collection. In a conveyancing dispute over facts outside the main book, information from the deed collection may be used. If entries in the main book and deed collection are in conflict, the main book entries are controlling.

Land registry records are maintained for all real estate within Austrian territory, are kept at the district courts, and are freely accessible to the general public. The good faith purchaser is protected against matters not entered in the land register and of which the purchaser has no knowledge. Where multiple good faith conveyances of the same land occur,

the party making the earlier entry in the registry will prevail. n37 The losing party in those circumstances will have an action in contract against the seller. Separate registers for railroads and mining claims are maintained.

The main book of the land register is divided into a property status section (*Gutbestandblatt*), an ownership section (*Eigentumsblatt*), and an encumbrance section (*Lastenblatt*). In the property status section, land parcels are listed according to an assigned number and type, such as residential or agricultural. Certain servitudes are also listed in this section. In the ownership section is information concerning the type of ownership the present possessor has, how the land was conveyed to the present owner, and from whom the property was conveyed. If the transaction is a lease, the terms of the lease will also be entered. The encumbrance section of the main book lists all encumbrances on the land, including rights such as reversionary interests and mortgages.

§ 106AT.05(c) Notarization of the Transfer.

Before any transaction, encumbrance, or mortgage can be entered into the land register, the documents effecting the transactions must be notarized. A notary public is appointed by the government and functions for life or until the appointment is revoked. Although the notary public is appointed for a specific judicial district, notarial functions can be performed anywhere in Austria.

CHAPTER 106AT PROPERTY LAW IN AUSTRIA 1

13-106AT Thompson on Real Property, Thomas Editions § 106AT.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106AT.06 Property Laws Outside the Civil Code.

§ 106AT.06(a) Landlord/Tenant Law.

Under Austrian law, the lease between a landlord and a tenant is completely obligatory and is considered a matter of contract law; the landlord is the creditor and the tenant is the debtor. Because the landlord/tenant relationship is obligatory, the landlord has a lien on the tenant's chattels.

Landlord/tenant relationships fall into one of two types:

> If the tenant can use the premises without further work, the law speaks about *Miete*. The most basic and familiar example is the *Miete* of an apartment. If, however, the tenant must do some work to obtain the benefit from the premises for which he pays rent, the legal expression is *Pacht*. This distinction is one of substance because, in certain respects, the mutual rights between landlord and tenant are different if the relation is that of *Miete* rather than that of *Pacht*. n38

Both *Miete* and *Pacht* are based upon a contract, and under the law they come together under the heading of *Bestandvertrag* (Contract of Granting). Austrian landlord/tenant law can be found under the *Mietgesetz* (MG or Lease Law). n39 The first sections of the lease law identify those agreements that are subject to the law. n40 The lease law regulates the rent rates and lists variances and exemptions to the general rules. Under the lease law the lessee is required to return the leased space to the lessor in the same condition as when it was let, subject to reasonable wear and tear. n41

The assignability of the lease agreement may be restrained or prohibited by the lease agreement, but the lessor may still be required to show good cause for refusal. n42 The lease law explicitly prohibits the landlord from terminating the lease except for "important reasons," such as non-payment of rent. n43 As in most American jurisdictions, the landlord must follow specific procedures to evict a tenant.

The lease law assigns rights and protections to both the lessor and the lessee. For instance, the law imposes a warranty of habitability and lessor duties to pay all taxes on the property, make repairs that are needed, and provide for the essentials of water, light, heat, and sanitation. n44

Slightly different legal relationships arise in the land lease law n45 and the small-garden law. n46 The land lease law is very similar to the *Mietgesetz* , except that it applies only to unimproved land. The small-garden law has become significant in regulating the massive checkerboards of small leased garden plots found abundantly around large European cities. The law applies to gardens larger than 120 square meters and smaller than 650 square meters and contains restrictions on the terms of the lease contracts for such areas.

§ 106AT.06(b) Property Rights Between Husband and Wife.

Complete or partial community property is available to couples who make and have notarized an appropriate contractual agreement. n47 Without such an agreement, if a spouse is simply added to the land register as an owner, in the event of divorce, he or she receives one half the value of the property if it is sold. n48

§ 106AT.06(c) Taxes on Real Property.

§ 106AT.06(c)(1) Land Transfer Tax (*Grunderwerbsteuer*). n49

Usually a real property transfer is subject to a 3.5% tax on either the sale price or the determined value of the property. Exemptions apply to certain donative and probate transfers.

§ 106AT.06(c)(2) Property Tax (*Verm/Uogenssteuer*). n50

For Austrian residents a property tax of about 1% is assessed against all holdings, whether in Austria or abroad. For non-resident Austrians or for resident aliens, the tax is assessed only against holdings in Austria.

§ 106AT.06(c)(3) Land Tax (*Grundsteuer*). n51

This tax is levied by the municipality and varies throughout the country. The tax is paid by the owner of the property.

§ 106AT.06(c)(4) Land Value Tax (*Bodenwertabgabe*). n52

This is an annual tax of 1% assessed on unused parcels of land that are worth more than 200,000 Austrian schillings.

FOOTNOTES:

(n1)Footnote 38. Paul L. Baeck & Hans Kapfer, The General Civil Code of Austria 212 (1972). An example of a *Miete* is a lease for a room, while a lease of a going business would be a *Pacht*.

CHAPTER 106BR PROPERTY LAW IN BRAZIL

13-106BR Thompson on Real Property, Thomas Editions § 106BR.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Bringham Young University

§ 106BR.01 History of Property Law in Brazil.

§ 106BR.01(a) Discovery and Colonization.

Competition between Portuguese and Spanish explorers in the fifteenth century led to the Treaty of Tordesillas, adopted on June 7, 1494, which limited Spanish rights to territory more than 1,110 miles west of the Cape Verde Islands. Thus confirmed in its rights to explore Africa and the sea routes to India, Portugal sent a fleet under Pedro Alvares Cabral, who was driven far off course and touched the Brazilian coast on April 22, 1500. Cabral claimed the land for Portugal and sent a report to the king.

Portugal granted a brazilwood concession in 1503, and in 1530 sent a fleet to drive out the French and set up settlements and an administrative system. Forced to rely on private interests for colonizing, Portugal in 1533 divided the Brazilian coastline into 15 parallel strips, extending inland as far as the then-uncertain demarcation established by the Treaty of Tordesillas. These huge land grants varied in their north-south dimensions from 90 to 360 miles wide, and were granted as semi-feudal captaincies to twelve private persons, who agreed to colonize, develop and defend their grants. As financial ventures, most of the captaincies eventually failed, but they did succeed in planting permanent colonies on the coast. Further exploration and colonization pushed Brazil's boundaries in all directions and, in the west, well beyond the line of the Tordesillas Treaty.

The proprietary, or donatory, system proved inadequate to the tasks of colonization. The aristocrats received their lands under essentially feudal rights and obligations, including judicial rights, but had inadequate resources to administer their holdings. Consequently, the king established control over the entire colony by establishing a central colonial administration beginning in 1549. The hereditary rights and privileges of the captains were eventually absorbed by royal governors, and new captaincies under the new governance arrangements were created.

When Spain and Portugal united, between 1580 and 1640, the combined parent government pursued a single colonial policy, which was tightly controlled by the central government and its colonial governors and agents. This control was much diminished in the more remote areas, where huge private landholdings were administered as private feudal holdings following the traditions of the early captains. Indeed, because of these feudal origins, a type of feudalism still dominates landholding in the Brazilian backcountry.

In 1736 a reform of colonial governance created a ministry that framed laws for the entire country and appointed and supervised governors. All remaining hereditory captaincies were abolished.

§ 106BR.01(b) Achieving Independence and Stability.

The notion of independence for Brazil first arose in the late 18th century, and a revolution in Portugal in 1820 gave it decisive impetus. In an essentially peaceful transition, prince Dom Pedro remained in Brazil when his father King John returned to Portugual from Brazilian exile. When the Portuguese Cortes sought to impose the old restrictive controls over Brazil, Dom Pedro was formally proclaimed constitutional emperor of Brazil in 1822. Military leaders revolted in 1889 and established a republic.

In the disorder that spread all over Latin America in the first half of the nineteenth century, following the emergence of independent republics from the former colonies, policies of land distribution planted the seeds of present and future social disorder. The republics distributed huge grants of land to politically prominent persons, resulting in very large estates held by very few persons, and-because of primogeniture, debt, slavery and peonage-the vast majority of the agrarian population in perpetual economic oppression. A property-owning middle class, such as was so vital to prosperity in the northern American nations, simply did not arise.

In more modern times, the Brazilian government has tried several methods of effecting land reform, most importantly taxation of idle land and of the large plantations. These efforts have yielded only modest results.

The first of several modern Brazilian constitutions was promulgated in 1946. In 1985, after periods of military rule, civilians began governing Brazil as a federal republic.

§ 106BR.01(c) Historical Foundation of Property Rights.

The early colonizing nobles who received the colonial captaincies were awarded title to the land by means of a "donation letter." The property interest thus granted was perpetual and inheritable. Donees were obligated to promote population growth in the territory, defense, good utilization of the natural resources and propagation of the catholic faith. To the humbler colonists the captains gave unproductive land called "Sesmarias," so they can found villages with local administration, including a judicial system. These colonists were exempted from certain taxes.

The captaincies ("Capitanias") or donatory system fell into decline as the captains failed to find adequate resources to carry out their responsibilities, and the captaincies were eventually turned back to royal control. Thereafter the king sought to establish more centralized control over the entire colony.

CHAPTER 106BR PROPERTY LAW IN BRAZIL

13-106BR Thompson on Real Property, Thomas Editions § 106BR.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Bringham Young University

§ 106BR.02 Basic Principles of the Brazilian Property Law.

§ 106BR.02(a) Types of Interests in Real Property.

§ 106BR.02(a)(1) Immovable and Movable Property.

In Brazil, the term *bens imoveis* means immovable property. Under the Brazilian Civil Code (BCC) property is considered either immovable or movable property; property includes intellectual property (which is considered movable). Under article XX of the BCC, immovable property cannot be moved to another place without destroying its substance. On the other hand, movable property can be moved to another place and maintain its substance without damage. This classification is similar to the common-law distinction between real and personal property. Under article 674 of the BCC, property rights arise through emphyteusis, servitude, usufruct, use, habitation, chattel mortgage, antichresis and mortgage, all described in the following paragraphs.

§ 106BR.02(a)(2) Rights that Arise or May Be Created.

§ 106BR.02(a)(2)(i) Emphyteusis.

As stated in article 678 of the BCC, emphyteusis is an interest in the real property in which the owner of a non-productive parcel of land can sell rights in the land to another, who pays an annual rent to the seller. Under a contract of emphyteusis, while the seller lives, the grantee is required to pay rent.

§ 106BR.02(a)(2)(ii) Servitudes.

According to article 695 of the BCC, servitudes are restrictions imposed on the use of the land, often by governments or utilities companies seeking to acquire rights. A common example would be an electric power company acquiring servitudes upon lands in order to place its cables. Governments acquire servitudes to construct and improve water systems, railroads, highways and streets. Various types of uses maintained for ten to fifteen years may give rise to a prescriptive right in the servitude use. According to the Public Registration Act (Law No. 6.015 of Dec. 13, 1973), servitudes much be registered.

As any other real property right, servitudes must be registered in the Official Notary as prescribed by the Public Registration Act (law No. 6.015 of December 31, 1973).

§ 106BR.02(a)(2)(iii) Usufruct.

When a landowner separates rights of enjoyment from the other rights associated with ownership of real property, a usufruct arises. A usufruct right can be separated and transferred to another without the property owner losing the other rights that have been retained.

As stated in article 713 of the BCC, the person who receives the land has the right to enjoy its facilities and fruits. One who receives a right of usufruct may retain and enjoy and own the produce of the land for the period of that right. At the end of the usufruct period, the holder of that right must return the property in essentially the same condition in which it was received, natural deterioration and wear and tear excepted. Usufructs are transferable.

The usufruct is often granted for the period of the recipient's life. It is common for parents while living to divide the property among their children, reserving for themselves the usufruct during their lives and avoiding disputes among heirs after their death.

§ 106BR.02(a)(2)(iv) Use.

Use is similar to the usufruct, except that the use was intended to help a person and the person's family with property rights that would provide for their personal necessities, usually without rent or other payment, as described under Habitation, below. Article 745 of the BCC establishes that the rules regarding usufruct are applicable to the use. The use is today rare because its function is fulfilled by the usufruct.

§ 106BR.02(a)(2)(v) Habitation.

The habitation is a variant of the use in which a person receives land for a family dwelling and has no obligation to pay rent to the landowner. Article 748 of the BCC sets forth that rules governing the usufruct are applicable to the habitation. As with the use generally, this property right is today not common.

§ 106BR.02(a)(2)(vi) Mortgage.

A mortgage is a property right by which the owner gives to the creditor a security interest in the immovable property. Under the BCC mortgages may be either voluntary or legal. The voluntary mortgage is entered into voluntarily by the debtor in favor of the creditor. The legal mortgage, under article 827 of the BCC, is imposed by a court in favor of a party with an interest in the property, such as a divorced former spouse, children of parents in the process of divorce, and a governmental entity with a claim for property taxes.

As with any other interest over immovable property, the mortgage must be registered under the Public Registration Act (Law No. 6.015 of December 31, 1973) as either a voluntary or a legal mortgage.

The creditor under a legal mortgage has two options to recover payment of the debt. One option is to wait until someone buys the property at a public auction. If there are no buyers, the other option is to take the property itself. Of course, in the case of deficiences, where the value of the property is not enough to cover the debt, the creditor may seek further recovery in the debtor's other property.

The sale of the property at a public auction is not the only way a debtor may be freed from the obligation. According to article 849 of the BCC, the mortgage also is extinguished by destruction of the property, by the retiring of the obligation, by the creditor forgiving the debt, and by the statute of limitations.

Mortgages created prior to 1997 are governed by prior law, according to which the borrower holds legal title to the property. Mortgages created after 1997 are governed by Law 9514, whereby a trustee holds title with fiduciary duty to the borrower. The law was changed to avoid judicial foreclosure, which could last as long as seven years. Under the new law, lenders can foreclose in six months to one year. Operations under the new law drastically reduce the cost of mortgages to financial institutions.

§ 106BR.02(b) Acquiring and Securing Real Property Rights.

§ 106BR.02(b)(1). Registration of the Transfer Title in the Official Notary.

The real property interests can be transferred only by registering the title with an Official Notary. Movable (or personal) property interests are transferred by actual or symbolic delivery to the transferee (*traditio*). The BCC, under articles 531 through 535, establishes the basic requirements and what kind of acts are subject to registration in the Official Notary. In addition, the Public Registration Act gives a detailed description of the process itself.

Under articles 531 and 532 of the BCC are provisions governing registration of titles regarding a real property interest created by act *inter vivos* and *causa mortis*, by judicial decisions in division (partition) actions and by *inventarios e partilhas*.

Among the *inter vivos* acts is the sale contract; no special form is required for a valid contract to sell a property interest. The contract may be a private or public instrument, but both have to be registered in order to transfer the property. The greatest advantage of the public instrument over the private is that the former only can be invalidated under severe conditions and substantial proof. The private instrument, if not signed by two witnesses, who confer an execution power to it, can be easily avoided.

See John C. Martin, "Bringing Dead Capital to Life: International Mandates for Land Titling in Brazil, *31 B.C. Int'l & Comp. L. Rev. 121-136 (2008).*

§ 106BR.02(b)(2). Accession.

Under article 530, II of the BCC, property may be acquired by accession, which is the incorporation of movable property into immovable property, by either natural or artificial forces. According to article 536 of the BCC, accession can occur in five different ways: island formation, *aluviao, avulsao, abandono do alveo* and construction of facilities and plantation.

The first four ways of accession are no longer regulated by the BCC. Their provisions are stipulated in the Water Code (Law No. 23.643 of July 10, 1934), which brings together all laws regulating riparian and prior appropriate rights over water and over land contiguous to waters.

§ 106BR.02(b)(3). Prescription.

The property obtained by prescription is property a person occupies or uses without interruption over a period of time as prescribed by law, after which the person is considered the owner of the property or property right.

Prescription is governed by articles 550 through 553 of the BCC and many other laws, including some Constitutional provisions.

Prescription of land is normally accomplished after the passage of twenty years without interruption and opposition. Under the "Statute of the City" enacted in 2001, an individual or family may obtain title to urban land of up to 250 square meters upon meeting certain conditions. They must use the property as their residence for five years without interruption or opposition, and they must not own any other land. A person may gain title to urban land through this

means only once. (Sec. V Art. 10 of statute)

To obtain title to rural land by this means, the family or individual must still reside on the land for five years without interruption or opposition, but they must also make the land productive in some way. The land can be up to 50 hectares (about 125 acres) in size. The limitation to one use of usurpation per person does not apply to rural land, nor does the requirement that the individual not own any other land. A shorter period may apply in special circumstances, such as five years for acquiring rights to up to 300 square meters of land in towns. Also it is necessary to bring an action to declare the possessor the legitimate owner of the land and the decision of this action is registered with the Official Notary.

Article 183, Section 3 of the Brazilian Constitution prohibits the prescription of public lands.

§ 106BR.02(b)(4). Succession.

Succession means transmitting property from a deceased person to the person's spouse and descendents.

Until the Brazilian Constitution of 1988, there was a difference between legitimate and illegitimate children, but after the Constitution of 1988, there can be no distinction among the children, who are all considered legitimate under the law.

Before 1988, there was also difficulty in dealing with a couple who had formed a union without marriage. Under the old laws, unmarried women suffered severe prejudice regarding the division of the assets because frequently the men who lived with them were married and had many children. Even if an unmarried woman decided to litigate in court to obtain part of the assets, conservative courts did not recognize her rights. Since 1988, some of that problem has been alleviated, but some laws still favor the married woman over the unmarried woman living with the married man.

As yet, no marital and property rights have been conferred on a survivor companion from a homosexual union.

Normally, the surviving spouse is entitled to receive 50% of all assets of the *de cujus*, and the other 50% of the assets has to be divided among the descendants in equal parts. This partition of the property is made only after all debts are paid. If the assets are insufficient to pay all debts, the creditors of the deceased person cannot sue the spouse or descendants for the debts.

It is necessary for a judicial decision to affirm the distribution of assets in order for those interests to be registered. When the survivors agree with the manner of the distribution of the assets, the judicial decree is easy to obtain, but when there is disagreement about division, the court, according to its best judgment, has to determine the distribution. All of these matters can be settled by testament, but use of testaments is not yet widespread in Brazil.

CHAPTER 106BR PROPERTY LAW IN BRAZIL

13-106BR Thompson on Real Property, Thomas Editions § 106BR.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Bringham Young University

§ 106BR.03 Landlord/Tenant Law.

The relationship between landlords and tenants of urban property is regulated under the Lease Act (Law No. 8.245 of October 18, 1991). Other laws regulate leases of rural properties, hotels, apartment-hotels, and commercial property.

As with any contract under Brazilian Law, the contract of lease has to have, according to article 82 of the BCC, a capable agent to sign the contract, a lawful and possible object, and--if required by the law--the prescribed form.

§ 106BR.03(a) Formation of a Lease Contract.

The lease contract is formed between landlord and tenant with the simple manifestation of willingness to enter into the contract. No specific form is required, and the contract may be either oral or in writing. The contract must include information concerning the property covered by the lease and the consideration to be paid.

§ 106BR.03(b) Duties, Responsibilities and Liabilities of the Lessee.

The lessee is responsible to conserve the lease property and to pay the lease consideration in the amount and due time accorded. The lessee also has the duty to permit the landlord to inspect the lease property.

§ 106BR.03(c) Responsibilities of the Landlord.

The landlord has the responsibility to permit the lessee to use the lease property without opposition and ensure that the property is safe.

CHAPTER 106BR PROPERTY LAW IN BRAZIL

13-106BR Thompson on Real Property, Thomas Editions § 106BR.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Bringham Young University

§ 106BR.04 Taxation.

Real property transfer taxes may be imposed on property transactions. This tax is a state tax, regulated entirely by each individual state. Under these state laws any acquisition of property or of a property right is taxed at a rate which varies from 0.5% to 4%. The tax is to be paid by the party acquiring the property or property right.

Property taxes are assessed by municipality. Taxes are different for urban and rural land. Each municipality with a population of 20,000 or more must create a master plan with an urban zone boundary (*delimitacao da zona urbana*), separating the urban land from the rural. For urban property tax purposes, land is assessed according to the value of the land plus the value of the building, not taking into account income derived from tenants or other sources.

For rural property tax, only the value of the land itself is assessed, and the value of any buildings is ignored.

CHAPTER 106BR PROPERTY LAW IN BRAZIL

13-106BR Thompson on Real Property, Thomas Editions § 106BR.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Bringham Young University

§ 106BR.05 Land Use Law.

The government has a duty to expropriate rural property that is not performing its social function. Two types of rural land that cannot be expropriated: small and medium sized rural property, if the owner does not own any other property; and productive property. If the government expropriates rural land and grants that land to a private party, that party cannot sell or lease the land to another party for a period of ten years.

For urban land, the municipal government can penalize landowners of unbuilt, unused, or underused land. The Brazilian Constitution mandates that all municipalities of over 20,000 people must have a master plan. To avoid the designation of "underused," land must be used according to the municipality's master plan. Penalties for landowners of unbuilt, unused, or underused land include compulsory subdivision or construction, increased property taxes (to a maximum of 15% of the value of the property), or expropriation. Expropriation is a last resort and can be used by the municipality only seven years after giving notice to the landowner.

Municipalities retain the right to expropriate urban or rural land for public need.

CHAPTER 106CA PROPERTY LAW IN CANADA

13-106CA Thompson on Real Property, Thomas Editions § 106CA.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CA.01 Brief History of Canada.

§ 106CA.01(a) Prehistory of Human Occupation in Canada.

Canada's prehistory of human occupation, it is believed, commenced upon the receding of the last ice age, between 15,000 and 7,000 years ago. The peoples who thinly inhabited the land all across Canada were unspecialized in culture, relying for subsistence on hunting, gathering and fishing. About 4,000 years ago the ancestors of people now generally known as Eskimos migrated into the Arctic coastlands. Cultural and economic advances and differentiation among these native peoples had occurred by the time Europeans first began arriving to explore and settle.

§ 106CA.01(b) Historical Human Occupation in Canada.

Norse Viking settlements appeared on Canada's east coast about 1,000, A.D., but were eventually abandoned, and to some extent forgotten. Europeans searching for rich fishing waters probably produced contact with the eastern coastline of Canada in the mid-1400's, and John Cabot's exploratory visits began in 1497. In 1534 and 1535, Jacques Cartier sailed deep into the St. Lawrence estuary and claimed a vast area for France. In 1583, an English expedition asserted a claim in Newfoundland. French exploration under Champlain extended deep into the interior beginning in 1615.

§ 106CA.01(c) Establishing British Dominance in Canada.

When the War of Spanish Succession ended under the Treaty of Utrecht in 1713, the British by the treaty terms were able to take control of vast areas of Canada, including Nova Scotia, Newfoundland and Hudson's Bay. A few years later a series of conflicts broke out between British and French interests in Canada, and the Treaty of Paris in 1763 conferred on the British control over virtually all of French Canada. Quebec was governed under British law from 1763 to 1774, and then thereafter was permitted its own governing officials and to apply French civil law.

§ 106CA.01(d) Beginning of Canadian Independence.

With the Constitutional Act of 1791, England gave Canada a representative parliamentary government, that was nevertheless criticized for a too strong executive and a lack of democracy. The English and French colonies experienced a series of conflicts, and the various Canadian colonies were legislatively united in 1840. Further study and reform

produced a confederation known as the Dominion of Canada in 1867. The terms of the dominion were embodied in the British North America Act, also laying the foundation for the current constitution, through the Constitution Act of 1867 and the Constitution Act of 1982. The 1982 act also formalized a bringing "home" of the Canadian Constitution, so that amendments were not subject to the approval of the British monarch. This removed the last traces of colonial control.

CHAPTER 106CA PROPERTY LAW IN CANADA

13-106CA Thompson on Real Property, Thomas Editions § 106CA.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CA.02 Canada's Two Legal Systems.

Most of Canada is under a common law system, both a general common law and a common law in each province with slight local differences. This is a result of the colonies having "received" the English common law at different dates, and then having independently developed their common law and legislation from the reception date on.

In the province of Quebec, the civil law governs private law. This civil law is based on the Napoleonic Code, which was drawn from the Code of Justinian issued in the late stages of the Roman Empire. General Canadian public law, including constitutional and criminal law prevail in Quebec as elsewhere in Canada. General Canadian law also prevails in those subject areas that were assigned by constitution to the federal government, such as bankruptcy and negotiable instruments.

Substantive law in Quebec is found in the Civil Code of Quebec, which was first published in 1866, and was updated in 1994.

CHAPTER 106CA PROPERTY LAW IN CANADA

13-106CA Thompson on Real Property, Thomas Editions § 106CA.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CA.03 Division of Power Under the Constitution.

The Canadian Constitution divides legislative power between the federal government and the provinces. The subject areas under this division are known as "heads of power." Thirty heads of power are assigned exclusively to the federal government under Section 91 of the Constitution Act. Section 92 assigns 15 heads of power, including property and civil rights in the province. n1

During the 19th century, Canadian provinces and territories enacted married women's property acts, permitting married women to hold title to property independent of their husbands. In the 20th century, hold married couples' residences in joint tenancy became common. Rules of primogeniture disappeared throughout the country. Beginning with Alberta and Saskatchewan in the early 20th century, the common-law provinces enacted so-called testators' family maintenance or dependants' relief legislation, permitting a will to be set aside if insufficient provision was made for surviving spouse and dependants. A rule of fairness also prevails in dividing marital assets upon dissolution of the marriage.

Recording of land documents differs somewhat among the provinces. A deed registration system, in which land titles are established a chain of predecessors in title, is used in the Atlantic provinces and southern Ontario. The four western provinces and northern Ontario use a land titles or Torrens system, with only the validity of the immediately preceding title at issue.

CHAPTER 106CA PROPERTY LAW IN CANADA

13-106CA Thompson on Real Property, Thomas Editions § 106CA.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CA.04 Property Law in the Provinces.

As ordained in the Constitution, property law is largely left to provincial legislation and decisions. Below are brief discussions of property law in Alberta, as representative of a typical common-law province, and property law in Quebec, the singular and important example of property law in a civil law province.

§ 106CA.04(a) Property Law in a Common Law Province: Alberta.

§ 106CA.04(a)(1) Estates in Land.

Canadian law generally recognizes the estates of fee simple and life estate. Fee tail has been abolished everywhere but Manitoba. n2 A conveyance is presumed to convey a fee simple interest. Tenancy by the entirety is not recognized, but is considered joint tenancy. n3 The Rule in Shelley's Case does not apply, because it is not compatible the Torrens system of title registration. Condominium ownership in Alberta is governed by legislation. n4

Rights of dower, n5 except with respect to homestead rights, n6 and curtesy are abolished in Alberta; n7 a surviving spouse obtains a life estate in the real and personal property of the decedent spouse. n8

Adverse possession may occur, and is based on a ten-year period of occupancy, with tacking permitted. n9

When land is held in concurrent tenancy, such as joint tenancy or tenancy in common, any co-owner may apply to the court for a partition order. n10

The common law rule against perpetuities is in force, except as governed by the Perpetuities Act. n11

§ 106CA.04(a)(2) Leasehold Estates.

The usual common law rules regarding landlords and tenants are in effect, except as modified by several statutory enactments. n12 The statute of frauds requires that leases for more than three years should be in writing, subject to the usual exceptions to the statute.

§ 106CA.04(a)(3) Descent and Distribution.

Descent and distribution of decedents' estates are governed by rules found in the Intestate Succession Act.

§ 106CA.04(a)(4). Mortgages.

Mortgages may be the forms of common law mortgage, equitable mortgage, or, most commonly, the statutory mortgage, described as a registered charge against lands in statutory form under the Land Titles System. The mortgagor remains in possession and retains the title. n13 The Land Titles Act provides various standard forms.

§ 106CA.04(a)(5) Taxation.

Various levels and entities of local government are authorized to impose land taxes. n14

§ 106CA.04(a)(6) Environment.

The provincial minister of the Environment has broad powers under the Environmental Protection and Enhancement Act. n15

All mines, minerals and public lands in the province belong to the provincial government, except those already alienated or leased. The Environmental Protection and Enhancement Act may require may require remediation of land used in mining, exploring or similar activities, with a standard that the land must be returneed to equivalent land capability.

§ 106CA.04(b) Property Law in the Civil Law Province of Quebec.

§ 106CA.04(b)(1) Estates and Ownership Rights in Land.

Land in Quebec is held by an owner in "free tenure," or as independently of the government as possible. The basic provisions of property law pertaining to individual persons are contained in the Quebec Civil Code. The Code embodies the two basic principles that there is a right of private ownership in land that land should be able to circulate freely. Legislation other than the code regulates public interests in land.

Under the Quebec civil law, property is considered immoveable or movable. Immoveable property consists of land, appurtenance, and rights in land. Rights in land generally are subject to recording in the land titles registration system. Rights of ownership can be ownership itself, a right in the land consisting of some prerogative or privilege, and a creditor's right to take and sell the property in satisfaction of a debt.

Ownership is considered unitary, so most forms of joint ownership are not recognized, with exceptions for condominiums n16 and some types of ownership by married persons. Less than full rights of ownership can be rights of usufruct (possessing and using the property of another for a specific period) and emphyteusis, essentially a long-term lease in land (usually 10-100 years). n17 Quebec law also recognizes "real servitudes," whereby one owner of land has rights of use or control in the land of another. n18 Creditors' rights are known as privileges or "hypothec," essentially equivalent to a mortgage in a common-law jurisdiction.

The equivalent of adverse possession in Quebec is called acquisitive prescription. The possession of immovable property must be peaceful, continuous, public and unequivocal for a period of ten years. n19

Under some circumstances, land may be held in undivided co-ownership, which is similar to concurrent tenancies in common-law jurisdictions. n20

The customary civil law rules regarding perpetuities are in effect in Quebec. n21 Private or social trusts may be perpetual. The duration of personal trusts is limited to two ranks of beneficiaries of fruits and revenues and one rank of capital beneficiaries whose eligibility to receive comes into existence within 100 years of the trust's creation.

§ 106CA.04(b)(2). Leasehold Estates.

The Civil Code of Quebec contains detailed rules for all leases, and additional rules for leases of dwellings. n22

§ 106CA.04(b)(3) Descent and Distribution.

The Civil Code of Quebec governs the intestate succession n23 and testate succession. n24

§ 106CA.04(b)(4) Hypothecs on Immovables (similar to Mortgages).

Hypothecs on immovables are similar to mortgages in common-law jurisdictions, and are governed in detail by the Civil Code of Quebec. n25

§ 106CA.04(b)(5) Taxation.

Various levels and entities of local government are authorized to impose land taxes under authority of the Revised Statutes of Quebec. n26

§ 106CA.04(b)(6) Environment.

Protection of the environment is governed by the provisions of the Environment Quality Act. n27 Mining rights in the public land are administered under by the Minister of Natural Resources under provisions of the Mining Act. n28 Additional regulating provisions are in the Quebec Mining Companies Act n29 and the Mining Duties Act. n30

CHAPTER 106CH PROPERTY LAW IN SWITZERLAND

13-106CH Thompson on Real Property, Thomas Editions § 106CH.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CH.01 History of Property Law in Switzerland.

§ 106CH.01(a) Swiss Peoples in Prehistory.

Human habitation of the area that is now modern Switzerland goes back at least as far as the most recent ice age. Primitive peoples were forced to live in higher elevations because of glaciers in the valleys, and archaeological and anthropological evidence reveals groups of such prehistoric people living in caves. n1 As the glaciers receded, some of the people moved to the valleys and richly forested areas, often founding small communities on the shores of lakes.

In the centuries before the dominance of Rome, numerous tribes wandered into and out of Switzerland, but the most important of these were tribes of Celts. Around 400 B.C. many groups of Celts are known to have crossed the Alps and settled in Switzerland. It is uncertain when the Celts and Romans first encountered each other in Switzerland, but by 15 B.C., Rome had completed its military occupation of Switzerland. n2

Following the breakup of the Roman Empire, inhabitants of Switzerland experienced incursions from many wandering tribes, including tribes from Italy and Germany, and some of these settled to become part of the ethnic base for the Swiss people. Beginning in the sixth century A.D., and for three centuries thereafter, most of Swiss territory was included in the domains of Frankish rulers, and thereafter numerous small principalities in Switzerland owed allegiance to the Kingdom of Burgundy or the Holy Roman Empire.

The Swiss Confederation, which continues in governance to this day, arose first in 1291, when the peoples of three valleys, the Uri, Schwyz, and Unterwalden, declared an alliance of states independent of local and foreign lords. This alliance, which styled itself the "Ewiges Bundnis," or eternal alliance, was successful in turning back the assaults of the unhappy overlords and kings, usually by means of battles in which Swiss peasant soldiery triumphed over the medieval military aristocracy.

Although Swiss communities were theoretically independent, in fact the Swiss people shared fully in Europe's feudal history:

> Freemen who were landless offered their services to a powerful neighbor in return for shelter, support, and protection. Known to the Romans as a *patrocinium*, this practice survived through the

> Middle Ages. An adverse result was the loss of status as a freeman and reduction to that of serf.
>
> If he were a small landowner and poor, living in fear of losing all to his oppressors, he could surrender his land to a powerful neighbor -- usually a noble, able to resist any and all marauders and, because of his political, social, and military prestige, virtually immune from oppression by others. Transfer of ownership of one's land under this arrangement was originally not irrevocable. The title was transferred for a stated number of years or a lifetime. In return, the donor gained protection from the lord to whom he became a vassal. Use of land continued to be his and he was freed of the hazards and obligations that stemmed from ownership. The arrangement was known as *precarium* tenure. n3

As was typical throughout medieval Europe, members of the aristocracy and higher officials of the church became great feudal landholders. Even during the hegemony of feudalism, more regions of Switzerland joined the confederation that had been founded late in the thirteenth century. These regions were known then and now as cantons, and between the sixteenth and early nineteenth centuries the total number of confederated cantons rose to thirteen. Although technically subject to the rule of the Holy Roman Emperor, the cantons in reality functioned as nearly autonomous states. With the Peace of Westphalia in 1648, following the Thirty Years' War, the major European powers accepted the confederation as independent of any foreign ruler.

In early 1798, Napoleon conquered most of Switzerland and founded the Helvetica Republic. With Napolean's fall Switzerland regained its independence and, in 1815, reconstituted the federation under the Congress of Vienna. Switzerland's neutrality was guaranteed through the Second Peace of Paris in the same year.

Until 1848 the cantons maintained their unity as they had ever done, through multilateral agreements and treaties concluded by individual cantons. In 1848 the governments of the cantons attempted to create a new constitution modeled roughly after the United States Constitution. This constitution was rewritten in 1874, and this 1874 version remains in force today.

§ 106CH.01(b) Development of a Civil Code and Code of Obligations.

The basic law of Switzerland has roots in both Roman and Germanic law. The Germanic legal tradition can be traced back to a series of so-called "Barbarian Laws" compiled in Europe's Dark Ages beginning in the fifth and sixth centuries A.D.

Early in the fifth century A.D., the Germanic tribes of Visigoths, Burgundians and Franks, who had been mercenaries of Rome, established their independence from the Empire and introduced Germanic legal customs and institutions into Gaul and surrounding areas. Written codes of laws began to appear, often containing separate provisions for the Germanic inhabitants and for the Roman citizens living in the tribal territories.

The Visigothic laws, and more particularly the Code of Euric, are believed to have directly or indirectly influenced most Germanic law codes thereafter. The Code of Euric, from circa A.D. 476, shows some Roman influence. The Lex Romana Visigothorum was promulgated by the Visigothic king Alaric II in A.D. 506 to govern Romans living in Visigothic territories. This collection is also known as the Breviarium Alaricianum (Breviary of Alaric). The Leges Visigothorum is a collection of laws that had been issued by Euric's successors, applying to both Gothic and Hispano-Roman subjects. The collection was promulgated in A.D. 654, and replaced the Lex Romana Visigothorum.

Euric's code seems to have been the immediate source for the early codes of both the Salian Franks n4 and the Burgundians, n5 and the Bavarian n6 and Lombard n7 codes also show Visigothic influence. Another early Frankish code, the Lex Ribuaria, n8 was based on the Salian code, and it in turn influenced the codes of the continental Angles and Saxons of the Carolingian Age.

The best known of these early Germanic codes--indeed the oldest Germanic code that is completely preserved--is the Lex Salica, which has been described as "primarily a penal law ... concerned with the redress of crimes (murder, theft, mutilation, exploitation of women) by monetary means." n9 The Lex Salica and the other early codes consist of both individual "statutes" and precedential judicial sentences ("Weisthuemer"), but they do not refer to most customs of daily living, such as occupancy of land, personal property, commercial dealings, inheritance, family relationships, and class privilege. The only references to land law in the Lex Salica are provisions requiring money payment for damage to agricultural fields, n10 blocking the way of another, n11 and improper fencing and enclosing. n12

Several of these Germanic law codes specifically influenced the Swiss:

> The most widely used of the Germanic codes were the Leges Alemannorum--first the Pactus Alemannorum of about 580 which was, in effect, agreed to by the inhabitants, and then the Lex Alemannorum of about 720, a more formal collection of laws. Of secondary influence were the later Frankish codes, the Lex Burgundium of about 500 and the Lex Romana Curiensis of about 750. These collections of Germanic law prevailed throughout the Alpine regions except in the west, where the Romansch population continued to apply a version of Roman law along with Germanic law. n13

During this period, the cantons were varied in which laws they accepted and applied. Even after Napolean's invasion and occupation had introduced the Swiss to outside influences and to the attractions of codification, the cantons continued to act independently in determining which laws or codes to adopt. Some cantons looked to the French Code Civil, while others modeled their codes after Austrian laws, and yet others made a fresh start.

With the adoption of the constitution, and its revision in 1874, one of the exclusive powers granted to the federal government under the Constitution of 1874 was the administration of the law of obligations. The Swiss Code of Obligations was enacted in 1881. The Swiss Civil Code, prepared by the renowned legal scholar Eugen Huber, was enacted in 1907, went into force in 1912, and incorporated the Code of Obligations as part 5. The Code of Obligations retains its own unique numbering system.

CHAPTER 106CH PROPERTY LAW IN SWITZERLAND

13-106CH Thompson on Real Property, Thomas Editions § 106CH.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CH.02 The Fundamental Law of Modern Switzerland.

Modern Switzerland is a republican federation consisting of 26 cantons and half-cantons governed by a federal constitution. n14 In order to amend the constitution a majority of the popular vote of a majority of cantons must assent. Half cantons have less representation than full cantons in the legislature.

All the cantons are equally autonomous. Each canton has a republican government consisting of executive, legislative, and judicial branches. In their judicial branches, the justices of the supreme court are elected by the legislature and have a tenure only as long as the legislature permits.

Federal law is superior to cantonal law. n15 As in the Tenth Amendment of the U.S. Constitution, any power not enumerated by the Swiss Federal Constitution is left to the cantons. n16 Generally, newer laws prevail over conflicting prior laws. There is no established judicial rule of stare decisis, but prior decisions, especially those of the Swiss equivalent of the Supreme Court, n17 are given much weight. In resolving conflicts between laws, usually the more specific law governs a general law. The constitutional Court, whose primary purpose is to interpret the constitution, issues decisions which are binding throughout Switzerland.

For the most part, the laws which regulate property are the federal constitution, the Civil Code, and the Code of Obligations. For matters not covered by any of those sources, a judge will look to customary law. n18 The judges in Switzerland also rely heavily on the writings of legal scholars in reaching decision on matters that lie outside the Codes. Occasionally, the Swiss High Court announces decisions that impact on fundamental property rights. These may be in cases concerning zoning restrictions and expropriation under the federal constitution, as well as on matters governed by customary law. For example, an owner of a private forest must care for the timber, and because the total number of trees in Switzerland may not be diminished, must either receive permission to fell trees or must plant replacement trees. n19

§ 106CH.02(a) The General Structure of the Civil Code.

The Civil Code consists of four parts and the Code of Obligations. The four parts of the code are (1) the Law of Persons, (2) Family Law, (3) Inheritance Law, and (4) the Law of Property (Sachenrecht).

§ 106CH.02(b) Multilingual Interpretations of the Civil Code.

All the laws of Switzerland are issued in all three official languages. n20 In considering a case based on the Civil Code the court must first decide which translation best reflects the legislative intent. Theoretically, all three official language versions are authentic and should have equal force at law, but sometimes the court prefers a language version other than the language in which the text of the law was originally drafted and enacted.

FOOTNOTES:

(n1)Footnote 14. The Federal Constitution of Switzerland came into force on May 29, 1874.

(n2)Footnote 15. Federal Constitution, art. 6, § 2.

(n3)Footnote 16. Cost. Fed. art. 3. Although very similar to the United States version, the cantons have in fact retained more significant areas of potential legislative activity.

(n4)Footnote 17. The Swiss Supreme Court and many of the cantons' highest courts publish many of their decisions.

CHAPTER 106CH PROPERTY LAW IN SWITZERLAND

13-106CH Thompson on Real Property, Thomas Editions § 106CH.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CH.03 Real Property Rights Under the Civil Code.

§ 106CH.03(a) Ownership and Possession of Property.

Rights in the ownership of property are recognized under the federal constitution, and private property cannot be abolished. n21 If private land is taken by the government, compensation is required. n22 These broad rights have recently come under restriction; agricultural land may not be resold for a period of ten years, and non-agricultural land may not be resold for a period of five years. n23

Under the Civil Code, ownership of property includes the right to use and dispose of the land. n24 Enjoyment of these rights, however, may not interfere with another's use and enjoyment of land. Actual freedom of use is also restricted by zoning laws and by license requirements for the construction of improvements on land. The exact zoning requirements are left to each canton. However, the federal government has imposed a duty upon every canton to establish some sort of zoning regulation and administration.

§ 106CH.03(b) Transfer of Real Property.

Laws governing the transfer of land are found in both the Code of Obligations and the Civil Code. The original conveyance is governed by the Code of Obligations, n25 and the subsequent transfer of land and entry of the transaction into the land register are covered by the Civil Code. Swiss law distinguishes between the sale of land and the transfer of land.

The sale of land is accomplished through a contract of sale, and the contract provisions must conform to strict rules. The price and description of the land must be specific, so the transaction can be entered into the land register with the utmost accuracy. The contract must be notarized, again as an aid to the authenticity and accuracy of the land register. n26 Real property transfers are not complete until the notarized deed is entered in the land register.

All sales contracts, including those for real property, include implied warranties. One implied warranty assures that the item to be sold is fit for the particular purpose for which it is sold. Seller representations in connection with the transaction are considered express, and enforceable warranties. n27 The seller also warrants that the measurements which are in the contract, and which will subsequently be entered into the land register, are correct. n28 A five-year

statute of limitations applies to claims of defects. The Code of Obligations also provides that risk of loss shifts to the buyer when the buyer takes possession. n29

Earnest money is also known under Swiss law. Under the Civil Code, earnest money is considered a source of evidence that the contract has been entered into. If the contract is not fulfilled by the buyer, the seller must refund the money. If the money is to be forfeited by the buyer in the event of failure to purchase, then the contract of sale must explicitly declare the earnest money as subject to forfeiture and also the circumstances under which forfeiture may occur.

Interests in real property can also be acquired through a judgment or inheritance. In the case of a judgment, an order would be issued to have the land register amended. If acquisition occurs by inheritance, the new owner announced in the will must request that the land register be amended.

§ 106CH.03(c) Co-Ownership of Real Property.

Under the Civil Code common ownership (Miteigentum/copropriete) is available. n30 The division of the interests can be in any form desired by the parties, as long as it can be entered into the land register, and the concurrent interests must be entered into the land register to be effective. Property can also be owned in a community of ownership under a partnership or other structure. n31 Co-ownership may also occur in condominium form, n32 and is considered a form of quasi-ownership under the Civil Code. Such interests are fully recognized and alienable under the laws governing the land register.

The law of the canton, (which can vary widely) in which the property is located, determines how the common areas must be administered.

§ 106CH.03(d) Interests in the Land of Another.

One may obtain an interest in the land of another through the acquisition of a mortgage (Grundpfandverschreibung, Hypotheque) or mortgage note (Schuldbrief, Cedules hypothecaires), the difference being that mortgage notes are negotiable instruments issued in the name of the bearer. n33 The debt which the mortgage secures may be present, future, or contingent.

In order to be valid and effective, both types of mortgage interests must be entered into the land register. In order to be entered, the real estate interests must be described with specificity and the amount of the mortgage must be stated in Swiss francs.

In most cases, any encumbrance upon the property must be entered into the land register to be binding upon a subsequent purchaser.

Servitudes can either run with the land or be applicable only as between specific persons. Also on this point, specificity is required in the land register entry.

§ 106CH.03(e) Prescription and Adverse Possession.

Prescription and adverse possession of personal property are possible under Swiss law. However, because the land register imparts notice to all the world, prescription and adverse possession do not apply to real property interests.

§ 106CH.03(f) Rules Relating to Perpetuities.

A testator may designate the party to receive a reversionary interest when an interest less than full ownership is to be transferred upon death, but this is the limit of the power of testamentary disposition of land. A usufruct interest in favor of an entity may not endure for more than 100 years.

§ 106CH.03(g) Foreign Ownership of Swiss Land.

Any investment in real estate in Switzerland by an alien requires that the purchaser have a license. n34 In order to obtain a license to own property, the alien individual or business entity must follow both the federal and cantonal requirements for the license. No restrictions apply to aliens who have lived in Switzerland for at least ten years. n35

Vacation homes, apartments, and condominiums may only be purchased inside certain areas, and the number which may be sold to aliens is subject to quotas under federal supervision and allotted yearly to the cantons. An alien who does not follow the laws concerning acquisition by aliens will not only be prohibited from ever owning real property in Switzerland, but may be subject to criminal prosecution, which may include a fine, imprisonment, or both.

§ 106CH.03(h) The Land Register Law.

Similar to many countries with roots in Germanic law, the real property law of Switzerland protects the good faith acquisition of land. The Civil Code states that the purchaser in good faith should be able to exercise confidence in the entries of the Land Register. n36 Nevertheless, an entry in the land register is only valid if the underlying transaction is legal. n37

The land register is a collection of survey maps divided into parcels. Only one half of the country has been surveyed, and therefore in the unsurveyed portions cantonal and customary law govern. The land register is technically open to all, but because of the propensity of foreign governments to use Switzerland for investment, mainly due to its banking secrecy laws, there is now a bureaucracy which must be confronted in order to see the land register.

§ 106CH.03(i) Notarization of the Transfer.

All contracts for the sale of property must be properly notarized in order to be valid and effective. Notaries are subject to strict regulation administered by the cantons. Therefore, a notary's authority only extends to the boundaries of the canton in which the notary resides.

CHAPTER 106CH PROPERTY LAW IN SWITZERLAND

13-106CH Thompson on Real Property, Thomas Editions § 106CH.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CH.04 Real Property Rights Under the Code of Obligations: Landlord/Tenant Law.

Landlord/tenant law in Switzerland is strictly a contractual matter and thus the law covering leases is found in the Code of Obligations. n38 However, this area of the law has also received much legislative attention, by both federal and cantonal legislatures, mostly in matters of lessee rights and rent control. The tenant is protected in the habitability of the premises, as well as in the procedures the landlord must follow in order to evict the tenant. The cantonal laws covering rent control are typically very restrictive.

The Code of Obligations also ensures that unless otherwise stipulated there is an implied right to sublease. Lessees wishing to ensure their continued occupancy even after sale by the landlord can have such an agreement entered into the land register.

CHAPTER 106CH PROPERTY LAW IN SWITZERLAND

13-106CH Thompson on Real Property, Thomas Editions § 106CH.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CH.05 Other Swiss Real Property Laws.

§ 106CH.05(a) Property Rights Between Husband and Wife.

Spouses are free to arrange their property interests by contract in any way they please. In the event they do not have a legally binding contract, then Civil Code provisions apply. All property and income received by either spouse become part of the community property; n39 property that one spouse owned prior to marriage or received after dissolution of the marriage is not community property. Also, property that is solely for the use of one spouse part of the community property. n40 Upon dissolution of the marriage, that property which constitutes the community property is divided in half for distribution to the former spouses.

§ 106CH.05(b) Taxes on Real Property.

§ 106CH.05(b)(1) Land Transfer Tax.

A land transfer tax is levied by each canton and therefore varies. A two percent tax on the purchase price or market value of the real property transferred would be typical.

§ 106CH.05(b)(2) Property Tax.

Some cantons also levy a property tax similar to that found in most states in the United States.

CHAPTER 106CL PROPERTY LAW IN CHILE

13-106CL Thompson on Real Property, Thomas Editions § 106CL.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CL.01 Brief History of Property Law in Chile.

The area now known as Chile was taken over by Spanish *conquistadores* beginning in 1535, and Santiago, the present capital, was founded by Pedro de Valdivia in 1541. The feudal system of 16th century Spain was then transplanted to Chile. Under that feudal system, succession by primogeniture prevailed, so younger brothers frequently sought their fortunes in the New World campaigns of conquest. If they were successful and became landowners, they usually organized their estates with a town at the center and the natives as the peasant work force:

> This system became known as the *encomienda* system under which the settlers who came after the *conquistadors* obtained land grants from the Crown. These estates often included one or more Indian communities whose inhabitants were legally "commended," or entrusted, by the Crown to the Protection of the Spanish landowner. The Amerindians were forced to work a specified number of days each week and to perform other tasks on the estate, while the landowner was required to "civilize" the Indians and convert them to Christianity. n1

After 1542, the duration of the *encomienda* was by law limited to three generations of landowners. In addition to the *encomienda*, land was distributed by inheritance, as a military prize, by grant from the Crown, and by assignment upon the founding or enlarging of a village or town.

During the colonial era, some of Spain's land management practices were adopted by the colonies, but not all. When registers of mortgages were mandated for Spain in 1539 and again in 1713, this system was not accepted in the New World colonies. A different mortgage registration scheme of 1768 was accepted by the governing colonial council in 1768.

In modern times, land reform has been the main theme of Chilean property law. A conservative land reform scheme was enacted in 1962, but it directly affected only a small portion of the land. A new land reform effort between 1964 and 1969 similarly fell far short of its projected extent. After 1970, frustration with the slow pace of reform and worsening economy led to some land seizures by peasants, which seizures were not resisted by the government.

CHAPTER 106CL PROPERTY LAW IN CHILE

13-106CL Thompson on Real Property, Thomas Editions § 106CL.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CL.02 Forms of Property Ownership.

§ 106CL.02(a) Generally.

The Chilean Constitution guarantees all persons equal rights, including the right to property. n2 Therefore, at the constitutional level there are no restrictions on the ownership of property. This even applies to foreigners, who may own property in Chile virtually without restriction. Owners may not have their property taken by public authority except for the public good. n3 Concurrent ownership is recognized, and tenants in common may dispose of their shares without the consent of the other tenants in common. n4

§ 106CL.02(b) Prescription.

Real property interests may be obtained by prescription, after a time (usually five years for real property and two years for personal property) of uninterrupted possession for the required period of time. Prescription does not run against a recorded title, unless the prescriptive title is also recorded. The prescriptive period is suspended during periods of legal disability (including against married women) and as between spouses. Real property interests can also be acquired by extraordinary prescription, based on uninterrupted possession for ten years; in such case no title need be shown and there is no suspension on behalf of incapacitated persons.

§ 106CL.02(c) Community Property.

Generally, all property acquired during the marriage becomes part of the community, except gifts of real property, which remain part of the recipient's estate.

§ 106CL.02(d) Mortgages.

In general, mortgages may be placed only on real property and real estate rights. Personal property such as machinery, pictures, and statuary may be included in mortgages on realty when the personal property forms a part of the realty. Agrarian pledges may cover animals and their products, machinery and tools, seeds, crops, fruits, and lumber. Such pledges must appear in a public instrument and be recorded in a special registry in the office of the real property registrar.

§ 106CL.02(e) Mines and Minerals.

The state is considered the owner of all mineral and fossil substances, even if private parties own the surface rights. Private persons may obtain concessions to extract the mineral resources in accordance with the mining code. Such concessions are transferable, mortgageable and irrevocable and are regulated by the same civil laws that regulate real estate and fixed assets. Taxes on mineral concessions are assessed at an annual rate per hectare. If the tax is not paid, the concession is offered at public auction, at which each bidder must deposit the amount of unpaid tax. The owner of the mining concession is not allowed to bid, but may avoid the sale by paying double the amount of tax. Any such sale does not include the mining buildings and accessories, unless the former owner fails to remove them within one year.

CHAPTER 106CL PROPERTY LAW IN CHILE

13-106CL Thompson on Real Property, Thomas Editions § 106CL.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CL.03 Real Property Transactions.

Transfers of rights in immovable property are not perfected or effective until such writing is properly recorded or filed for record in a public registry. Trusts as known in common law jurisdictions are not known in Chilean law, but the freedom of contract that exists in Chile makes it possible to structure real property relationships substantially similar to those of a trust.

§ 106CL.03(a) Deeds.

All transfers of title to real estate must be by public instrument and must contain a true statement of the consideration involved. The tax on the transfer must be paid at the time the document is executed before the notary, or, if executed in a foreign country, at the time it is authenticated in Chile. Deeds must be recorded in the registries of property. Both grantor and grantee must sign the deed and both must therefore be present before the notary at the same time. An absent party must be represented by an attorney in fact. The original deed, if executed in Chile, must remain in the files of the Chilean notary who gives to either party a certified copy, which has the effect of an original in courts of law. If the deed is executed abroad, it must be authenticated by a Chilean consul or diplomatic agent.

§ 106CL.03(b) Sales of Real Property.

In sales of real property, the seller usually is obligated to deliver title and provide warranty of title; n5 the buyer is required to pay the price and to register the transaction. n6

Sales of real property must be recorded. In the absence of an agreement to the contrary, the vendor warrants the thing sold and the title thereto; and in any case the vendor is liable for hidden defects in the thing sold if known to the vendor and not called to the buyer's attention. In private sales of real property rescission may be asked within four years by the vendor, if it is found that the price received is less than one-half the just value of the property, and by the buyer if the value is less than one-half the price paid. A sales contract between spouses not permanently divorced and between father or mother and children is void. n7

§ 106CL.03(c) Real Property Records.

The following documents must be recorded in the registry of properties:

documents conveying or declaring the ownership of real estate and real rights;

documents constituting, conveying, modifying or renouncing rights of usufruct, mortgage and certain other rights in real estate; and

judgments declaring the ownership of real property or the definitive possession of the property of absent persons.

Other documents relating to real property or real property rights, such as leases or attachments, may be recorded so as to constitute notice to third parties.

In Chile, recordation is necessary to acquire, modify, transfer, or extinguish rights in immovable property. n8 Documents filed for record are checked for external formalities and checked against previously recorded instruments affecting the same property. n9 Recorders must also verify that the person who appears as vendor or mortgagor in the filed document has the power to grant that particular interest according to previous recordings. The recorder must check the appropriate entry indicating the source from which the grantor received title. If the grantor is not the prior recorded grantee, the document is denied the privilege of recordation until the irregularity is cleared up. n10

A recorder in Chile is law trained, n11 and may be personally liable for errors in recording and for issuing an erroneous certification of registry. n12

§ 106CL.03(d) Registration.

The basic priority principle for Chilean and all Latin American registry systems is that priority goes to the first to record, regardless of when the deed is executed and possession is delivered to the purchaser. n13

Real property interests, including easements, leases and deeds, must be registered if they are to be perfected. n14 These interests are registered in the land register, kept by the *Conservador* of Real Property, and transferred by registration. But entries in the land register do not create rights, since neither the validity and efficacy of the registered rights nor the factual description of the real property are warranted. Registration of ownership merely proves and guarantees possession. Legislation dealing with registration of title to real estate contains a comprehensive set of requirements for the entries of the land records, and recorders are given the authority to suspend or refuse the recordation of instruments that do not comply with those statutory provisions.

CHAPTER 106CN PROPERTY LAW IN THE PEOPLE'S REPUBLIC OF CHINA

13-106CN Thompson on Real Property, Thomas Editions § 106CN.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CN.01 History.

Before the collapse of the last Chinese Empire in 1911, every acre of land in China was held by the Emperor. The Emperor himself was the sole owner of the land in the true sense of the word. In order to achieve effective control of the land, the Emperor usually divided the land into districts, provinces or prefectures and granted them to his immediate relatives and warriors as awards; those grantees usually held immediately by the Emperor in socage or military service. The grantees then assigned the rights to use the land, and delegated the duties to render military, pecuniary, agricultural and construction services to loyal followers. Assignments and delegations took place at every level until they reached the level of actual possession, held by so-called landlords and villein tenants. This system was kept alive for hundreds and even thousands of years, more by the political administration than by any form of legislation. Governors and ministers served both administrative and judicial functions. Occasionally, the Emperor would send a roving commissioner to hear some complaints; however, land issues were seldom encountered because so little protection was accorded villein rights.

Between the years of 1911 and 1949, China witnessed dramatic changes in land ownership. The Emperor abdicated, and many people declared absolute ownership of the land in their possession. However, soon the warlords began taking the place of the Emperor in their local regions. For mutual support and benefit, the warlords let the claimants draft claims and deeds. No more than two copies were allowed to be executed, one held by the claimant and one by the warlords. The warlords were committed to providing the villeins with security and stability, while in return the villein claimants, subordinated themselves and agreed to render military and pecuniary services. These widely varied arrangements prevailed until Jiang Qieshek secured full power nationwide, when the management of land became uniform again. Jiang's government relied on taxes as the major source of revenue, so for the first time in Chinese history people could obtain fee simple absolute in land without subordinating their vested interest to various overlords. Conveyance of land through land sale contract, execution of deed and probate of wills was no longer a novelty.

When Mao Zedong came to power in 1949, he started a land-ownership revolution from the bottom of the social hierarchy. Only the people who were actually farming the land could claim ownership or an interest in the land. n1 However, before this reform had proceeded very far, political considerations took over; landholders were made to surrender their ownership to the nearest municipal authority that had centralized management and control. n2 Farmers still farmed the land, but their return was based upon the hours they worked on the farm and on their involvement in

political activities more than on their legal interest in the land. When there was a big harvest, they surrendered most of it to the government. The community then made a distribution of the rest to all its members. During years of natural disasters, the community could apply on behalf of its people for relief and even some government aid. The whole system was built upon the theory that every parcel of land as well as all the natural resources belonged to the public or a community as a whole. It was assumed that the government could better judge the people's needs, and that it was more appropriate to let the government hold the wealth and distribute or redistribute it as it saw fit. As people lost their incentive to take care of the land much waste occurred.

More recently, Deng Xiaoping moved the landholding arrangements back toward self-governance and more private ownership. The land itself is still state-owned, but farmers have been given the right to exclusive use of the parcels of land assigned to them. Transfer or conveyance of land is in reality an assignment of the right to use land.

In contrast to holdings of farmland, the history of residential ownership in China did not go through so many changes. Even during the time of Mao, people from the country were allowed to build their own houses within certain zones. They paid a nominal fee every year of occupancy. Failure to pay the fee could result in forfeiture of the dwelling to the state or reconveyance to the community. However, since the fee was very nominal, defaults rarely occurred.

Some political considerations interfered with residential landholding. During the late 1980s and early 1990s, the government would send people to confiscate or tear down the house if the householders violated the one-child family planning policy and there were no other effective means to punish or deter them. In cities where most of the houses and apartment buildings are built and owned by the state or factories or institutions, tenants are more or less tenants for life.

As part of the outcome of the first Opium War, China ceded Hong Kong island to the British by the Treaty of Nanking in 1842; additional territory was ceded in 1860 and 1898, with the British interest being characterized as a 99-year lease. Accordingly, in 1997 Hong Kong was turned over to the People's Republic of China, which committed to keeping Hong Kong law essentially unchanged for several decades. Hong Kong law is an amalgam of old Chinese law and custom, the English common law system as modified by the Hong Kong legislature, and the Basic Law imposed by the communist Chinese government after the handover, which Basic Law leaves most aspects of Hong Kong law and economy unchanged.

FOOTNOTES:

(n1)Footnote 1. Land Ownership Reformation Law, enacted in 1950, and the Constitutional Law, passed in 1954, enabled farmers to claim full and absolute ownership of land. They were allowed to sell, rent or put a lien on their land. Huang, Frank Xianfeng. "The Path of Clarity: Development of Property Rights in China." *17 Colum. J. Asian L. 191 (Spring 2004).*

(n2)Footnote 2. The Draft of Amendment of the Rules and Regulations Concerning the Work of the People's Community in the Countryside explicitly authorized state ownership and collective community ownership of land. Private ownership of land was eliminated from the constitution. The draft was published in September 1962.

CHAPTER 106CN PROPERTY LAW IN THE PEOPLE'S REPUBLIC OF CHINA

13-106CN Thompson on Real Property, Thomas Editions § 106CN.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CN.02 Types of Real Property Interests.

§ 106CN.02(a) Real Property Interests Under the Constitution.

According to the latest Constitution of the People's Republic of China enacted during the Fifth National Conference of the National People's Congress held in 1982, all of the land in the cities is owned by the state:

> Except for the land that is owned by the state in pursuit of specific regulations, all of the land in the country and the outskirts of the cities is owned collectively by communities.

The land used for building houses and for the assigned family agricultural plots is owned collectively by communities.

By use of eminent domain power the state may take over any land in the public interest.

No institution or individual is allowed to intrude on and occupy land or engage in sale, renting or any other form of land transfer in violation of law.

Every institution or individual must use the land reasonably: n3

Except for those stipulated by law to be owned collectively by communities, all of the mineral resources, waters, forests, mountains ridges, prairies, uncultivated land, sea banks and other natural resources are owned by the state, that is, owned by the people as a whole.

No institution or individual is allowed to usurp any means to encroach upon or damage the natural resources. n4

§ 106CN.02(b) Real Property Interests Under Recent Legislation and Regulations.

Until 2007, several documents have regulated real property interests in China. These will probably now be affected, to one degree or another, by a new basic property law, part of the Chinese Civil Code, enacted by the National People's Congress in March, 2007, and effective October 1, 2007. The new law contains 247 articles and decrees that "the property of the state, the collective, the individual and other obligees is protected by law, and no units or individuals

may infringe upon it." Thus, both state property and individual property are to be given equal protection under Chinese law; this is seen as an improvement in protections for private property. The law prohibits various forms of illegal possession, looting, sharing, withholding, and destroying state property, and adds to agricultural lands protections from seizure. When property owned by collectives, whether agricultural or residential, is subject to compulsory takings, compensation must be paid.

About ten other important documents regulate real property interests held by persons or institutions. According to the Rules Regarding the Management of Land, the right to use the land owned by the state or collectively by communities may be transferred with compensation. n5

This "does not include subterranean resources, trovers buried and found underneath the land or public utilities." n6

Qualified "companies, corporations or any other forms of organizations and individuals residing inside or outside the territory of the People's Republic of China, may acquire the right to use of the land for land development, utilization and management if they apply in accordance with the other articles of this regulation." n7

"The tenants who acquired the right to use of the land, may transfer, assign or incur a lien on the right, or use it for any other economic activities during the terms of their contract with the state." n8

"Maximum terms for special use of land:

(1) 70 years for residential uses;

(2) 50 years for industrial uses;

(3) 50 years for the use of or for education, science and technology, culture, health and sports;

(4) 40 years for the use of commercial, tourist and recreational activities;

(5) 50 years for comprehensive or any other unlisted types of uses." n9

"Every institution and individual engaging in the actual use of the land is under an obligation to maintain the land in a sound condition and commit it to reasonable uses." n10 These rights are essentially to be continued under the new basic property law, under the loosely translated title of right of use in land for construction. This is considered analogous to a civil law usufructory right, rather than as a form of ownership. Under the new law, as under the prior law, these rights are subject to termination for failure to complete the construction, and generally may be renewed upon expiration. n11 The new law provides for basic protection of lawfully created property rights. n12

The prior Chinese law is described as loosely recognizing easements and other rules governing relationships of adjoining and nearby landowners.

"The right of easement, interests in water, drainage, interests in air and sunlight of neighboring real estate owners or real estate interest claimers are decided upon the principle of fairness and promotion of production and maintenance. People who commit nuisance or waste that causes damages to their neighbors must be enjoined and pay for the damages." n13 The new basic law of property straightforwardly defines an easement interest. n14

§ 106CN.02(c) Real Property Interests in Houses.

In the General Provisions of the Civil Law of the People's Republic of China, houses are classified as personal property. People may obtain full and absolute ownership of them. n15

A person may transfer ownership of houses by will. In case a person dies intestate or fails to dispose of property properly, the property will descend to the decedent's heirs or escheat to the state.

People residing in cities and townships may apply for permission to build or expand their own houses, within certain zoning restrictions, provided that they have genuine housing needs and have obtained approval from either their work unit or the local residential committee. The construction must not take more than 20 square meters for each legitimate resident. Thus the size of permissible construction is dependent upon the number of people in the household. Within a month after the construction is completed, the applicant may submit the construction permission and construction drafts for review and verification and obtain a certificate of ownership from officials concerned. n16

The policies and rules with regard to house construction and ownership in the countryside have been comparatively consistent. It is easier to apply for a parcel of land to build a house for oneself and would-be-married children. There is no limit of 20 square meters per person. The amount of land one can get depends on the area one resides in as well as the density of the population of one's community. Thus, in general, the communities have more latitude in deciding the amount of land they want to use for residential construction.

CHAPTER 106CN PROPERTY LAW IN THE PEOPLE'S REPUBLIC OF CHINA

13-106CN Thompson on Real Property, Thomas Editions § 106CN.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CN.03 Creation, Transfer, and Termination of Real Property Interests.

§ 106CN.03(a) In Cities and Townships.

"There are three ways the state may use to transfer possession and the use of land:

(1) negotiation;

(2) bidding;

(3) auction." n17

"Full amount of the contract price must be paid within 60 days after the land use sales contract ... is signed. The state may declare rescission of the contract and request compensation for damages if the purchaser fails to pay within the time limit or to pay in full." n18

"If the state fails to provide the land offered under the contract, the purchaser may rescind the contract and request for pecuniary damages." n19

"After paying off the full contract price, the purchaser may register with qualified government agencies and obtain a certificate of right to use the land." n20

"Before a purchaser may change his committed use of the land, he must first get approval from the government agencies, sign his signature on the amended contract and register for the new use of land." n21

An assignment contract should be executed before a party transfers the right to use the land for compensation, exchange or as a gift. All of the rights and obligations specified in the original contract are assumed to be transferred to the transferee. Failure of a transferee to adhere to the original terms and committed uses will result in the forfeiture of the assignment. The fixtures attached to the land transfer with the right to use the land. Registration of the change of title is required before a party may claim full ownership. If the assignment contract price is much lower than the market price,

the state has the first right of refusal. n22

A lease contract should be executed before a holder of the right to use the land leases the land. The lessee should commit to the same terms and obligations as under the original sales contract. n23

A lien or a mortgage may be placed upon a holder's right to use the land. All parties involved should sign the contract. In case an obligor fails to honor all the obligations and declares dissolution or bankruptcy, the obligee may become a holder of the right to use the land. Registration is required for the change of title. n24

The right to use the land automatically terminates upon the expiration of provisions of the sales contract. Fixtures attached to the land escheat to the state without compensation. Certificate of the right to use the land must be returned to the agencies. In case a holder applies to extend or renew the contract, a new contract must be signed, the contract price must be paid and registration be made again. n25

The right to use land may be revoked and a certificate may be cancelled if a holder falls into the following categories:

(1) the institution is dissolved or moved;

(2) without approval from the original grantor, the holder lets the land sit idle for 2 consecutive years;

(3) the holder fails to adhere to the approved uses;

(4) the public roads, railroads, airports or mines are declared to be abandoned. n26

§ 106CN.03(b) In the Countryside.

The transfer of the right to use land in the countryside is similar to the transfer of land in cities and townships. Rights and obligations are stipulated, contracts are signed and reconveyance is subject to tight scrutiny. However, as the land in the countryside is generally owned collectively by communities, and it is more often than not used for agricultural, fishing and mining purposes, it is much easier to procure an extension or a renewal of the original contract. n27

Disputes over the ownership and right to use of land are heard and settled by the people's government at various levels. n28

§ 106CN.03(c) Registration and Conveyance of Real Property Interests in Houses.

House owners must register with the local housing and management committee and obtain a certificate of ownership or title after investigation and verification are completed. The same administrative procedures occur when there is a transfer of title or the present condition of the house is changed. n29

Sales of privately owned houses are closed in the office of the local housing and management committee. The seller must produce a certificate of title and personal identification card, while the buyer must submit a testimonial paper proving intent to purchase the described house. An officer then cancels the certificate of title held by the seller and issues a new one for the buyer. n30

An owner-lessor who sells the house while there is an outstanding lease contract must notify the lessee 3 months before completion of the sale and the lessee has the first right of refusal to purchase the house. n31

A lease contract must be executed and filed with the local housing and management committee. No deposit is allowed to be taken. Assignment of a lease contract must be accepted by the lessor. The obligation of maintenance is on the

lessor. n32

A sales contract is invalid if the seller has no title to the house. It may also be void if the seller fails to acquire consent from other joint tenants or tenants in common. However, the sale will be valid if the buyer is a bona fide purchaser for value and the joint tenants or tenants in common have knowledge of the sale and fail to raise objections in a timely manner to the sale. n33 With most Chinese urban housing units in the form of apartments in multi unit buildings, it is important that the new basic property law defines the occupants' interests. The unit owner has exclusive ownership of the unit and a form of common ownership of the non exclusive areas, which are left largely undefined. n34 Governance by a type of owners' associations is provided for in the new law, with control shared by local government and the owners. n35 Meanwhile, rural property rights have not been integrated fully into the new Chinese property law. n36

CHAPTER 106CN PROPERTY LAW IN THE PEOPLE'S REPUBLIC OF CHINA

13-106CN Thompson on Real Property, Thomas Editions § 106CN.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106CN.04 Restrictions on Ownership of Property by Foreigners.

Foreign investors may obtain the right to use land in the same way as most of the Chinese do, except for two additional restrictions:

(1) The foreign investors must incorporate in China or they may join with a Chinese corporation through joint venture;

(2) the foreign investors must engage in comprehensive development or cultivation of the land, and their proposals or feasibility studies are subject to approval and review of related government agencies. n37

Foreigners may acquire full ownership of houses in China as may other Chinese. They, however, have to abide by the strict recording and registration rules. In case transfer of title and production of documents are made in a foreign country, related documents must be notarized by the foreign ministry or its diplomatic corps and authenticated by the Chinese diplomatic corps. n38

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.01 Germanic Peoples in Prehistory.

During the first two millennia, B.C., peoples of Germanic culture were concentrated in the area between the estuaries of the Weser and Oder rivers. A change in climate, about 800 B.C., forced Germanic tribes southward into Celtic territory and eastward into the area between the Oder and Vistula rivers. Persisting population pressures forced Germanic tribes into further conflicts with the Celts, culminating, in the 3rd century B.C., in complete victory for the Germanic tribes occupying the area known now as central and eastern Germany.

By this time the Germanic tribes consisted of three main groups: the northern group eventually became the Norwegians, Danes and Swedes; the eastern group, occupying lands between the Oder and Vistula rivers, emerged as the Goths, Vandals, Burgundians, and Lombards; and the western group consisted of tribes inhabiting the areas of Jutland, Schleswig-Holstein and north central Germany. As the Romans advanced along the Rhine during the 2nd century B.C., some of the western tribes became partially Romanized or at least exposed to Roman culture.

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.02 Germanic Landholding Customs According to Roman Observers.

As a result of his military activity in western Europe during the 1st century B.C., Julius Caesar recorded a few observations about the Germanic tribes he encountered. The Germanic people appeared to rely mostly on flocks and herds as their form of wealth. They held their flocks and herds privately, while their land was held in communal ownership. Differences in wealth between individual German families were not large, and such differences were inhibited by the practice of reallocating parcels of land to different kindreds or clans annually. n2

By the time the Roman Tacitus recorded his information about early Germanic tribes, early in the 2nd century A.D., some changes in the land customs had occurred, or else the customs were different from the Germanic peoples described by Julius Caesar. n3 The amounts and locations of the annual land distributions were influenced by social standing, and were made to individual persons rather than to kindred groups. Wealth disparities widened as certain persons were able to accumulate wealth faster. It has been hypothesized that this change occurred after the Germanic tribes were exposed to Roman goods and the Roman monetary system, which stimulated their desire for private property; the land allocation system was then modified to favor private holdings and production. n4

Seven of the 46 chapters in Tacitus' Germania describe the laws and legal customs of ancient Germans, with the comment on landholding as follows:

> Land proportioned to the number of inhabitants is occupied by the whole community in turn, and afterwards divided among them according to rank. A wide expanse of plains makes the partition easy. They till fresh fields every year, and they have still more land than enough; with the richness and extent of their soil, they do not laboriously exert themselves in planting orchards, inclosing meadows, and watering gardens. n5

While landholding appears to have been regulated, there is no indication that any system of estates in land was recognized.

On succession, Tacitus reported the following:

> ...[E]very man's own children are his heirs and successors, and there are no wills. Should there be no

> issue, the next in succession to the property are his brothers and his uncles on either side. The more relatives he has, the more numerous his connections, the more honoured is his old age; nor are there any advantages in childlessness. n6

Although Tacitus did not mention what sort of property was subject to succession, presumably heirs inherited only items of personal property.

FOOTNOTES:

(n1)Footnote 2. Julius Caesar, De Bello Gallico 6.22.

(n2)Footnote 3. The Roman Tacitus is the single best source of information on ancient Germanic social and legal customs, but some consider his credibility compromised by his manifest anti-Roman and pro-German moralizing. Also, it is unlikely that he ever directly observed any Germans in their native habitat. *See* Cornelius Tacitus, De Originie et Situ Germanorum xix (John G. C. Anderson ed. 1938) (editor's introduction).

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.03 The *Leges Barbarorum*, or Barbarian Laws, of the Germanic Peoples.

As the Roman Empire disintegrated and surrendered its western provinces to Germanic invaders, an official collection of imperial statutes gathered under Theodosius II, the Theodosian Code, was issued by consent of the emperor Valentinian III in A.D. 438. This code may have influenced various Germanic rulers who issued their own law codes in the decades that followed. These collections of laws exhibit varying degrees of influence from Roman and Christian sources, and some were intended to apply different legal rules to Germanic and Roman people living in the same area. These laws of the barbarians, or *Leges Barbarorum* , are summarized below.

The Visigothic laws, and more particularly the Code of Euric, are believed to have directly or indirectly influenced most Germanic law codes thereafter. The Code of Euric, from ca. A.D. 476, shows some Roman influence. The *Lex Romana Visigothorum* was promulgated by the Visigothic king Alaric II in A.D. 506, to govern Romans living in Visigothic territories. This collection is also known as the *Breviarium Alaricianum* (Breviary of Alaric). The *Leges Visigothorum* is a collection of laws that had been issued by Euric's successors, applying to both Gothic and Hispano-Roman subjects. The collection was promulgated in A.D. 654, and replaced the *Lex Romana Visigothorum*.

Euric's code seems to have been the immediate source for the early codes of both the Salian Franks n7 and the Burgundians, n8 and the Bavarian n9 and Lombard n10 codes also show Visigothic influence. Another early Frankish code, the *Lex Ribuaria* , n11 was based on the Salian Code, and it in turn influenced the codes of the continental Angles and Saxons of the Carolingian age.

The best known of these early Germanic codes--indeed the oldest Germanic code that is completely preserved--is the *Lex Salica* , which has been described as "primarily a penal law...concerned with the redress of crimes (murder, theft, mutilation, exploitation of women) by monetary means." n12 The *Lex Salica* and the other early codes consist of both individual "statutes" and precedential judicial sentences ("*Weisthuemer*"), but they do not refer to most customs of daily living, such as occupancy of land, personal property, commercial dealings, inheritance, family relationships, and class privilege. The only references to land law in the *Lex Salica* are provisions requiring money payment for damage to agricultural fields, n13 blocking the way of another, n14 and improper fencing and enclosing. n15

FOOTNOTES:

(n1)Footnote 7. The Code of the Salian Franks, or Lex Salica, is attributed to Clovis, 481-511, A.D.

(n2)Footnote 8. The Burgundian Code was compiled between 483 and 532, A.D. The Lex Romana Burgundionum was issued ca. A.D. 500, for application to Roman citizens living in the Burgundian kingdom.

(n3)Footnote 9. The Lex Baiuvariorum is dated from about A.D. 744-748.

(n4)Footnote 10. The Leges Langobardorum was promulgated between A.D. 643 and A.D. 755.

(n5)Footnote 11. The Lex Ribuaria is believed to have been promulgated after A.D. 596, for the Ripuarian or western Franks.

(n6)Footnote 12. Laws of the Alamans and Bavarians 19 (Theodore John Rivers trans. 1977).

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.04 The Empire of Charles the Great and the Growth of Feudalism.

For most Europeans, little changed as rule passed from the Merovingian to the Carolingian dynasty. As emperor, Charles the Great followed the Frankish custom under which he considered property and revenues of the empire as his family property. Compensation to his principal supporters, servants and counselors was paid by gifts of land, usually with requirements of military service attached. However, upon the death of Charlemagne, Germanic society suffered a relapse:

> The decades that followed Charles's death witnessed the rapid disintegration of the Empire he had created. Empire and papacy alike became immersed in an abyss of anarchy and barbaric lawlessness. The governing principles of society were the law of force on the one hand and the need for protection on the other. In the course of the ninth century the State lost all contact with the urban tradition and became completely agrarian. The life of the feudal nobility was spent in warfare and private feuds. From their strongholds the feudal lords terrorized peaceful villagers and passing travelers. n16

Despite the lawlessness of the aristocracy, the disintegration of a strong monarchy meant that the people could turn only to local feudal lords for protection; thus society became increasingly feudalized in the 9th century A.D. Land grants under such circumstances became increasingly hereditary, and through subinfeudation a hierarchy of vassalage eventually developed. These feudal landholding arrangements, either on lands of the monarch or of a member of the aristocracy, have been described as follows:

> The land was divided into estates which were self-sufficient units...In the center of each estate was located the Maierhof, surrounded by the huts of the peasants, each of whom had a small strip of land attached to his dwelling...Part of the arable land that surrounded the village was set aside for the exclusive use of the king or lord. What remained was parceled out among the peasant tenants. The fields were divided into three parts (three-fallow system, *Dreifelderwirtschaft*), one of which was used for the planting of the summer crop, the second for the winter crop, while the third part would lie fallow... The cultivation of the fields was a communal and coDEperative enterprise, although each peasant harvested the crop from his own strips of land.
>
> ...The lord gave the peasant protection, furnished the land, built a mill and a village church, and

> administered justice in the territory that he had learned to consider his own, either by inheritance or by special grant. The peasant in turn, enjoyed the security that went with the hereditary right to the possession of his strip of land, he took his share of the agricultural produce, and returned the privileges extended to him by making certain payments and rendering certain services to the lord, exactments whose extent and nature were determined by custom. Theoretically still a serf, the peasant of the Carolingian period had actually become a tenant, and although still unfree, this peasant tenant, being exempt from the burden of military and court service, was envied by many a small freeholder. n17

In post-Carolingian Europe, eventually a dynasty of Saxon monarchs, beginning in A.D. 919, ruled over a smaller empire consisting mostly of German territory. Once order was restored and population growth resumed, additional land was sought through conquest and colonization of territory among Slavs and Hungarians to the east and southeast, and later into the north. For many of the peasants, answering a plea for colonists in the east meant becoming a free tenant. The general disappearance of serfdom resulted from a shift of economic conditions.

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.05 Introduction of Roman Law During the Middle Ages.

During the Middle Ages, re-discovery of the documents of classical civilization, including descriptions of Roman law, was influential in German legal history. As the central power of the German-based Holy Roman Empire declined, and that of individual principalities increased, there was no common system of German courts or private law. Exposure to principles of Roman law led in 1495 to the *Reichskam-mergerichtsordnung* adopting, or receiving, Roman law as the basis of decisions in imperial courts, in the absence or aid of local laws. Germanic local laws had by this time also assumed some written form in the *Sachsenspiegel* (1221-1227) and the *Schwabenspiegel* (1275). Subsequent city laws, such as in Nuremberg and Frankfurt, were modified to include elements of the received Roman law.

1 Abbreviations occurring in this chapter include: GG for Grundgesetz (Basic Law or Constitution), BGB for *B/Uurgerliches Gesetzbuch* (Civil Code of FRG); BGBl for *Bundesgesetzblatt* (Federal Statutes Gazette); FRG for former Federal Republic of Germany; GDR for former German Democratic Republic; RGBl for *Reichsgesetzblatt* (Precursor of the BGBl).

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.06 The Movement Toward Codification and Enactment of the Civil Code (BGB).

Impetus toward codification grew slowly, and culminated only in codes for certain areas, such as Bavaria in 1756 and the Prussian states in 1794. The Napoleanic rule in German territory was too brief to produce a legal code, and the political reaction thereafter delayed comprehensive codification until German unification under Bismarck's leadership. Commercial law had been unified in the German states as early as 1848 and 1861 and certain imperial laws on courts, procedure and bankruptcy had become effective in 1879. Finally, on January 1, 1900, a comprehensive code of private law went into effect in the form of the Civil Code, or *B/Uurgerliches Gesetzbuch* .

1 Abbreviations occurring in this chapter include: GG for Grundgesetz (Basic Law or Constitution), BGB for *B/Uurgerliches Gesetzbuch* (Civil Code of FRG); BGBl for *Bundesgesetzblatt* (Federal Statutes Gazette); FRG for former Federal Republic of Germany; GDR for former German Democratic Republic; RGBl for *Reichsgesetzblatt* (Precursor of the BGBl).

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.07

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.07 Sources of Property Law After Promulgation of the Civil Code (BGB).

§ 106DE.07(a) The Continuing Validity of the BGB.

The *B/Uurgerliches Gesetzbuch* or Civil Code (hereafter referred to by its familiar designation BGB) has remained essentially in effect since its promulgation, through World War I, the Weimar Republic, the National Socialist era and World War II, the creation of the Federal Republic of Germany and adoption of its *Grundgesetz*, Basic Law, and now in a unified Germany.

Upon the creation of the modern German state after World War II, the *Grundgesetz*, or Basic Law, which would be viewed by an American as Germany's constitution, was promulgated. The *Grundgesetz* protects the ownership and inheritability of land holdings:

> (1) Property and the right of inheritance are guaranteed. Their content and limits shall be determined by the laws.
>
> (2) Property imposes duties. Its use should also serve the public weal. n18

Other legal protections of property rights previously in force in Germany are adopted by the *Grundgesetz* to the extent they were not in conflict with the *Grundgesetz*:

> (1) Law in force before the first meeting of the *Bundestag* shall remain in force in so far as it does not conflict with this Basic Law. n19

Thus the BGB remains in force after adoption of the *Grundgesetz* . With the reunification of the Federal Republic and the German Democratic Republic, or the absorption of the latter by the former, the BGB has been given even wider application.

The judiciary n20 also plays a limited role in fashioning German property law. If an issue before a court is not governed by a statutory provision or available interpretation, the court may provide the interpretation, often derived by analogy

from other areas of the law. The courts are guided by the principles in the Swiss Civil Code, which direct the judge in such a situation to rely on customary law or on a rule that the judge would enact if in the position of a legislator. n21

§ 106DE.07(b) Organization of the BGB Property Law Provisions.

The BGB consists of five books, including the introductory general part (*Allgemeiner Teil*), the law of obligations, the law of things (property), family law and the law of succession. In the law of property, a major distinction is drawn between movable and immovable property.

Almost all German land law is contained within the BGB. Some supplemental legal regulation is found in a few ancillary laws and in the Ordinance on the Land Register. Although federal law controls most aspects of property law, the regional and municipal governments (*Kreisen*) administer this law and control local zoning ordinances and pre-emption rights.

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.08

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.08 Property Law Under the BGB.

§ 106DE.08(a) Types of Property Interests.

§ 106DE.08(a)(1) Ownership.

Among the basic rights enumerated in the *Grundgesetz* are guarantees of the rights of property and inheritance n22 and the inviolability of the home. n23 The concept of ownership is set forth in the BGB:

> The owner of a thing may, in so far as the law or the rights of third parties permit, deal with the thing as he pleases and exclude others from interfering with it in any way. n24

Thus defined, ownership most closely resembles the fee simple absolute interest known in American property law. As stated in the BGB, German ownership interests are explicitly subject to the requirements that ownership activities be legal and not interfere with the rights of third parties.

The kinds of ownership rights or interests one can create in property are limited to those types of rights or interests specifically authorized by law. Only authorized interests may be recorded, and, with certain exceptions, only recorded interests are valid and enforceable. The exceptions are interests that arise out of the law of obligations, security titles and inchoate ownership. Also, occasionally, social developments create pressure to recognize new property interests, which may be authorized by laws other than the original BGB. For instance, a landowner may now allow another to build on the owner's land, n25 and ownership rights in one floor of a multi-level building may be granted. n26

German law makes no distinction between legal and equitable or beneficial ownership of property, and for the most part does not recognize less than absolute interests, such as future interests. By way of exception, recognition is accorded leasehold interests with statutory limits. Owners have the right to press a legal claim against any party that acts adversely to the owner's interests n27 and to demand possession from a wrongful possessor. n28 Under the BGB, an owner has a claim against any other party who acts adversely to the owner's interest. n29 Likewise, the owner can demand possession from a wrongful possessor. n30

Only ownership in defined things is recognized. Thus, one cannot convey "all the land that I own"; a specific

description would be necessary for an effective conveyance.

German law recognizes both joint ownership (*Bruchteilgemein-schaft*) and tenancy in common (*Gesamthandsgesellschaft*). To be valid and effective, such coDEwnership must be entered with specificity into the land register. n31

Under Article IX the American-German Treaty of Friendship of 1954, reciprocal rights to acquire, hold, and dispose of real and personal property are guaranteed to German and American citizens. Foreigners who own property in Germany are protected against uncompensated taking by the government.

§ 106DE.08(a)(2) Possession.

Possession is not recognized as a right, but as a factual circumstance that may give rise to rights:

> Possession is regarded not as a right in itself, but as physical relation to a thing, namely the exercise of factual control over it, and is protected by the BGB against invasion and infringement by third parties, regardless of the possessor's title. n32

The importance accorded possession under German property law means that even a possessor who is not the owner may have certain direct rights of action, such as the right of a tenant to take action directly against one who disturbs the tenant's possession, rather than acting through the landlord.

§ 106DE.08(a)(3) Interests in the Land of Another.

The BGB recognizes certain interests that one may hold in the land of another, including servitudes, n33 encumbrances, n34 and personal servitudes. n35 Among the recognized servitudes are profits, *usufrucht*, n36 licenses, and rights of way. Recognized encumbrances include restrictive building covenants, easements, and mortgages.

German law recognizes security interests in land (real or land securities (*Realkredit*), under the *Grundpfandrechte*) as arising from mortgages (*Hypothek*) n37 and rent obligations (*Grundschuld*). n38 The beneficiary under any real security may seek a remedy against the burdened land, usually by means of a forced auction which is regulated by statute: n39

> Mortgage and rent charge differ in that the validity of mortgage depends on the legal status of the secured debt, while rent charge does not, but the two forms have grown so alike that in practice they are virtually interchangeable. n40

§ 106DE.08(a)(4) Protection of Property Interests.

Under German law, the owner of property has an absolute right to exclude all others from the property, as long as the owner remains within the legal limits of other applicable laws. Self-help in the protection of real property is an absolute right which remains available to the modern German property owner. However, self-help may only be applied when the owner has been dispossessed. n41 Many actions in tort exist for the protection of rights of ownership. n42 The owner is constrained by reasonableness and applicable regulation under public, planning, and environmental laws.

§ 106DE.08(b) Acquisition and Delivery of Property.

Ownership of land can only be acquired through a contract of sale n43 and an obligation under the principle of abstraction. In principle, the contract of sale and the obligation, or *Auflassung*, are seen as strictly separate, or abstracted. This distinction has generated many artificial complications and now most real property transfers combine everything into one document.

§ 106DE.08(b)(1) The Principle of Abstraction.

Somewhat similar to the earnest money agreement, a real property transaction under German law is achieved by means of a contract and then a subsequent performance:

> The principle of abstraction, which has been known to cause problems even to German students, lays down that, while contract and transfer are connected in the sense that the latter is performance of the former and that the former constitutes a justification or causa for the latter, they are nevertheless to be treated as separate or abstract even though they often constitute a single unit in legal reality. n44

§ 106DE.08(b)(2) The Contract of Sale.

The contract for the sale of land must be notarized. n45 If the documents memorializing the sale are an offer and acceptance, then both documents must be notarized. However, in the event that a notary is not utilized, the sale will become binding when it is entered into the land register.

§ 106DE.08(b)(3) Transfer (*Auflassung*).

The transfer, or obligation, as it is often termed, consists of the actual performance of the contract of sale, the payment of monies and the entry of new ownership in the land register. Pursuant to the BGB, the transfer (*Auflassung*) must be declared in the presence of both parties. n46 If an agent represents a party, the agent must be authenticated or certified. n47 Where the transfer occurs as a result of a judgment of a court, the parties' presence is not necessary. Although the transfer is distinct from the contract, in common practice a single document constitutes both a contract of sale and a transfer. Unless the transaction in question comes under one of several exemptions, a tax on the transaction will be applicable. The transaction will not be binding until entered into the land registry. n48

§ 106DE.08(b)(4) Notarization of the Contract and the Transfer.

Regardless of what kind of transaction occurs, the transfer must be notarized. n49 If the land is improved, or is land available for development, then under the Federal Building Law n50 local authorities may have a public right of pre-emption, and a declaration of intent not to exercise pre-emption rights must be made before the transfer can take place. For agricultural and forest land, a similar process must be followed under the Law of Dealings on Land. n51

§ 106DE.08(b)(5) Prescription and Adverse Possession.

While acquisition of movable property by prescription is possible under the BGB, n52 no acquisition of real property interests through adverse possession or prescription can occur because of the requirement that every interest in land must be recorded.

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.09

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.09 The Ordinance on the Land Register.

The land register was established as an aid to certainty in matters of land ownership. n53 Absolute rights as to defined things are made public, and clearly ascertainable to the public at large, through the registration system. Land registration is especially significant because so-called equitable remedies are not recognized by German courts. The local municipal court has jurisdiction over all the land in its district.

§ 106DE.09(a) Land Register Requirements.

Only those dispositions of land which have either been entered or cancelled are eligible for recording in the land register. Either entry or cancellation can be altered by a judgment of the court or by consent of all parties. No entry is necessary for rights which transfer by operation of law, such as the law of succession, although the successor is advised to apply for correction of the register.

The Land Registry is not a register of deeds; in fact, deeds do not exist under German law. It is a register of titles showing the current legal disposition of real property. The land register reflects rights which affect the described property directly, but not necessarily matters which affect only the owner, such as personal judgments. Public charges or obligations of the owner are not entered.

The land register is divided into three sections. Part I is a register of the current owner of the property and lists in an abbreviated form encumbrances which may be on the land. Part II lists in detail the information concerning the encumbrances. Part III lists security interests which affect the land. By analysis of all three parts of the land register, the prospective purchaser or creditor can see a complete picture of the current status of the property in question. All supposed encumbrances or security interests in property which are not registered property are afforded no legal significance. In the event that a creditor finds that a security interest is improperly recorded, the creditor has a cause of action to require the debtor owner to correct the mistake. But if the land has been sold or otherwise conveyed, the offended creditor has only a cause of action for unjust enrichment against the debtor.

§ 106DE.09(b) Priority Under the Land Register.

Priority under the land register is usually given by the date of entry, subject to modification by agreement of the parties.

§ 106DE.09(c) Bona Fide Purchasers.

German property law is especially sensitive to the protection of the principle of good faith. Thus one who takes possession without knowledge of extenuating rights takes that property with absolute rights, free of any encumbrances. n54 Only that knowledge which can come through the Land Register is imputed to the purchaser.

If one loses property due to the negligence or fraud of another, the remedy rests on the rules of unjust enrichment. n55 The harmed party never has recourse against the person who acted in reliance on the land register without notice.

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.10

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.10 Ancillary Real Property Laws.

While the BGB addresses most of the issues associated with absolute ownership of land, it has little provision for other real property interests. Such provisions have been added by so-called ancillary legislation, which has also become an integral part of German property law.

§ 106DE.10(a) Heritable Building Rights Law (*Erbbaurecht*).

Building rights under German law are constrained by rigid zoning laws which direct where and how any building may be constructed. Under the BGB only the absolute owner of real property was allowed to build upon it. This changed as modern commercial and social pressures led to the promulgation of the Heritable Building Rights Law. n56 This law permits a heritable building right to be held by one other than the owner for periods of up to 99 years, although most such interests are for shorter periods. The owner receives an annual payment during the life of the right. Upon expiration of the period, the land reverts to the owner, who then must pay for the improvements. During the term of the heritable building right, the holder of the right is considered the owner.

§ 106DE.10(b) The Law of Home Ownership. n57

This enactment made possible the ownership of a single story of a building. n58 The possessors of such rights are considered special owners of their respective floors or apartments, as coDEwners of the entire parcel of land, and as co-responsible for common areas of the building. Such a form of real property ownership is used widely in modern Germany as a means of making property interests available to persons otherwise unable to afford absolute ownership.

§ 106DE.10(c) Obligatory Rights Relating to Land.

The BGB does not direct its attention to the creation of obligatory rights as they pertain to land. However, through analogy from other areas of the law, scholars and the judicial system have been able to identify certain principles which are made applicable to interests in land.

Under the legal rules relating to suretyship, identical to those found in American jurisprudence, a valid written surety instrument obligates the surety to the extent of all the surety's assets, including real property interests. n59

Under the BGB, when a person purchases property on credit, the vendor retains all ownership until the purchase price has been paid in full. n60 Many purchasers, however, want some recognition and protection of property rights before they have paid the sum in full. German law now recognizes inchoate ownership. n61 "It is treated as a real right of an independent variety, 'like ownership, only less.'" n62

§ 106DE.10(d) Homesteads.

Homesteads can be created under German law n63 when land is expropriated and granted to a person by one of the states (*Laender*), municipalities, or certain private or public corporations. Such a real property holding is entered into the Land Register; however the possessor is restricted in alienation and security rights.

§ 106DE.10(e) Property Rights of Married Couples.

Although women are guaranteed rights equal to those of men under the German Basic Law, n64 additional equal rights legislation has also been enacted. n65 Property acquired by a married couple is considered within the "community of acquisition," similar to American community property. n66 Married persons' property rights are governed by Book Four of the BGB, dealing with *Familienrecht* (the law of families).

§ 106DE.10(f) Landlord/Tenant Law.

The basic provisions governing the relationship of landlords and tenants are found in Book Two of the BGB on contract law. The tenant is guaranteed possession and quiet enjoyment, and has a right of action against either the landlord or the disturbing tenant if the quiet enjoyment is disturbed. n67 The tenant in possession has the rights of ownership associated with possession; most remedies for the breach of such rights are found in German tort law. Although the BGB is silent as to rights and responsibilities in common areas, local ordinances provide some remedies for tenants. The landlord/tenant contract is usually standardized (*Deutscher Einheitsmietvertrag*), and some local governments have made the use of this contract form mandatory.

§ 106DE.10(g) Taxes on Real Property.

All real property holdings are taxable under the capital tax that is assessed against all assets (*Vermogenssteuer*). The percentage of tax is different for corporations and individuals, and many exceptions apply. A separate real property tax may be levied based upon special value (*Einheitswert*).

A tax of up to 7 percent may be levied when land is transferred if none of a host of exceptions apply, and this tax must be paid before the transfer may be recorded in The Land Registry. A capital gains tax may also be applicable to the transfer of real property, if the transaction is not part of the vendor's normal business and the transfer is viewed as speculative.

CHAPTER 106DE PROPERTY LAW IN GERMANY 1

13-106DE Thompson on Real Property, Thomas Editions § 106DE.11

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DE.11 Effects of Reunification on German Property Law.

On October 3, 1990, the Federal Republic of Germany (FRG) and the German Democratic Republic (GDR) were unified as one country. Under Article 23 of the Basic Law n68 all of the GDR came under the Basic Law of the Federal Republic of Germany, and hence under the BGB as of the date of accession. The Unification Treaty restated the applicability of these laws and also included stipulations for reprivations and restitution of confiscated property.

The legal systems of the FRG and the GDR could not have been more different prior to reunification. While the Federal Republic's laws found their origin in the civil and Germanic law traditions surrounded by a capitalistic society, the German Democratic system was centrally located within a confining communist system. Only personal use of real property was possible in the East, not ownership. Property in the GDR was classified as coDEperative property, people's property, and property of citizens' social organizations. The state exercised great rights of pre-emption, offering only symbolic compensation for acts of confiscation.

§ 106DE.11(a) The Current Status of Reprivation and Restitution.

The Unification Treaty provides that confiscated properties are to be returned upon demand. In the event that such a return is impossible, then compensation is required under the Basic Law. In practical terms, much of the property confiscated has been put to public use and will be judged impossible to return.

Millions of Germans will be affected by the resolution of these problems, and it will probably take several decades to resolve them. Under the Unification Treaty, confiscations which occurred between 1945 and 1949 are not to be returned to the prior owner. Instead, parliament will arrive at a compensation which is expected to be far below true market value, thus generating even more controversy.

§ 106DE.11(b) The Activities of the *Treuhandanstalt*.

The reorganization and privatization of properties within the GDR began under the communist government on July 1, 1990. The administration of this program has now fallen fully upon the government of the reunified FRG, which relies on its *Treuhandanstalt* (trustee administration) to conduct affairs much like the government bodies that have dealt with the American savings and loan association liquidations.

The difficulties of the *Treuhand* administration have combined with the problems of restitution for confiscated properties to somewhat hinder the assimilation of the new federal states of the East into the mainstream of German economic life. The consequence of all this turmoil for real property ownership is that as long as the contested title is expressed upon The Land Register, the alienation of these properties will be restricted, since prospective buyers will be aware of potential future complications.

FOOTNOTES:
(n1)Footnote 68. GG art. 23 states in pertinent part: "[T]his Basic Law shall apply in the territory of the Laender of [twelve named Laender]. In other parts of Germany it shall be put into force on their accession."

1 Abbreviations occurring in this chapter include: GG for Grundgesetz (Basic Law or Constitution), BGB for *B/Uurgerliches Gesetzbuch* (Civil Code of FRG); BGBl for *Bundesgesetzblatt* (Federal Statutes Gazette); FRG for former Federal Republic of Germany; GDR for former German Democratic Republic; RGBl for *Reichsgesetzblatt* (Precursor of the BGBl).

CHAPTER 106DK PROPERTY LAW IN DENMARK

13-106DK Thompson on Real Property, Thomas Editions § 106DK.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DK.01 Brief History of Danish Law.

§ 106DK.01(a) Customary Law in Denmark.

Denmark, like the other Scandinavian countries, differs from other European nations in that its legal system does not rest upon a foundation of Roman law. n1 Thus, comprehensive legal codes, such as those promulgated by France and Germany, are not a part of Danish law and jurisprudence. Nor has Denmark followed the pattern of the United Kingdom and the United States in developing an extensive common law based on judicial decisions. Instead, much of Danish Law is based on custom. In this respect Denmark falls somewhere between Sweden, which gives less weight to custom than Denmark, and Norway, whose jurisprudence relies even more on custom. n2

The heavy reliance on customary law in Denmark has produced a jurisprudence that is especially national in character. The outside influences that most affect the Danish legal system are those from Sweden and Norway, along with some English and American developments.

§ 106DK.01(b) Provincial Laws.

The oldest known sources of Danish written law are the so-called provincial laws of the 12th and 13th centuries. n3 During this period the distinct but similar customary laws of the three areas known as Zealand, Scania and Jutland were reduced to writing. These provincial laws revealed an agricultural economy in a social structure based on kinship, but gradually adjusting to the presence of a powerful church and king. A passage from the preamble of the Jutland provincial law opens with the simplistic declaration that "The law shall be honest and just, bearable in accordance with the customs of the country...." n4 In addition to invoking the customary law, the provincial laws also enjoined loyalty to the monarch.

The Jutland code, one of the sets of provincial laws, was drafted in 1240. Together with the "Laws of Thord" it was ratified in 1326 by the Danish king and the Council of State and made the law of all of Denmark. By this time the Jutland code contained some canon law. n5

During the late 13th century, the Danish monarchy grew weaker, leading to the issuance in 1282 of the "recheche," a document similar in significance to the British Magna Carta of 1215. The "recheche" further limited royal prerogatives

by requiring that an annual assembly be called to debate the state of the realm. n6 When the Protestant Reformation reached Denmark, with its ideology that public authority rested on a divine foundation, the power of the monarchy grew relatively stronger, and the canon law element in Danish law receded. Royal legislation increased, so that by the mid-16th century, Denmark even attempted to promulgate a code. n7

§ 106DK.01(c) The Danish Code.

The conditions for the Danish Code had emerged by 1660, when the Danish monarchy had gained the support of the clergy and the middle class, and had become an absolute monarchy. This "divine-right" absolutism was given a constitutional foundation by the Royal Act of 1665. Thereafter, in 1683, a legal code, published as the *Danish Code of King Christian V* , abolished all previous royal statutes and provincial laws; however, the provisions of the Danish Code itself were largely drawn from the provincial laws, although some Roman law concepts were added in the 18th century, and some German legal theory notions entered into the Code in the 19th century. In general, however, the Code was not based on any coherent notion of legal theory, and contained jurisprudential inconsistencies. n8 The Code has since been supplanted in piecemeal fashion by legislation and today can no longer be considered the foundation of Danish law. n9

§ 106DK.01(d) Emergence of Legal Theory in Denmark.

The possibility for indigenous development of legal theory in Denmark arose with the founding of the University of Copenhagen in 1479, but a formal legal examination was not introduced until 1736. Passing the examination did not become a qualification for a judgeship or higher level public administration position until 1821.

At first, the Danish legal education curriculum was based on natural law and Roman law, and Danish law was sometimes included beginning late in the 16th century. This approach to Danish jurisprudence was greatly altered early in the 19th century by the work of the great Danish legal scientist Anders Sandoe Orsted. He favored a historical approach to the law that removed natural law as an authoritative source. Orsted's activities as a drafter of legislation and as a legal philosopher were influenced somewhat by foreign law; he combined his familiarity with foreign law, foreign judicial practice, and a comprehensive knowledge of Danish law to create a system of Danish law which was much more coherent than those previously known. Orsted was instrumental in turning away a proposal to replace the Danish Code, because he feared suddenly abrogating law developed through centuries on the basis of people's characteristics, their customs and familiar conditions.

Orsted did not produce a comprehensive and systematic exposition of Danish law, but he laid the intellectual foundation for Danish legal scientists to do so in later years.

§ 106DK.01(e) Danish Law in the 19th and 20th Centuries.

A parliamentary form of government was established in Denmark by the Danish Constitution of June 5, 1849, and various items of comprehensive legislation followed. Also, in the mid-1800's, the idea of a Nordic federation gained support and eventually led to a number of laws adopted uniformly by Denmark, Sweden and Norway. These acts covered such topics as sales of goods, contracts, commissions, commercial agency, commercial travellers, hiring, purchasing, insurance contracts, promissory notes, marriage, property ownership relations of spouses, and capacity and guardianship. The progress of common legislation was optimistically summarized a generation ago:

> In the field of family law there are greater differences between the various Nordic acts than in the field of the law of property and contracts, although it has been possible to demonstrate uniformity in the principles of family legislation at least until recent years.
>
> Nordic legal cooperation has also resulted in provisions regarding the implementation of bankruptcy, etc.

Nordic legal cooperation is still being continued, and in the field of civil law, it has resulted, in later years, in new rules on marriage as well as in legislation on adoption, succession, one's right to one's name, and a number of acts regarding intellectual property, such as acts on copyright, trade marks, and patents. A proposal regarding common Nordic rules on extinction and vindication of personal property is still under debate, but does not appear likely to be adopted. A proposal regarding legislation in the field of torts has been adopted in Norway, Sweden, and Finland, but not yet in Denmark. n10

CHAPTER 106DK PROPERTY LAW IN DENMARK

13-106DK Thompson on Real Property, Thomas Editions § 106DK.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106DK.02 Danish Real Property Law.

§ 106DK.02(a) General Principles.

As in other continental European legal systems, Danish law is divided into the law of things and the law of claims. The law of things deals with rights of disposal in such things as real property, personal property, uses and easements. The law of claims covers transfer of rights and specific contractual rights such as tenancy. Mortgages and pledges are an entirely separate branch of jurisprudence. Property rights are protected by the Danish Constitution:

> The right of property shall be inviolable. No person shall be ordered to surrender his property except where required by the public interest. It can be done only as provided by statute and against full compensation. n11
>
> Where the public interest requires that a person surrenders his personal or real property for public use, he should be fully compensated by the treasury. n12

The property rights thus protected include all private proprietary rights, including uses, mortgages and claims. n13 The somewhat absolute wording of the constitutional provisions is, in practice, mitigated by the levy of taxes and by "general limitations" on property rights which subject them to various types of governmental regulation. Such limitations appeared even in the 19th century, by means of laws such as the Nature Preservation Act, the Town Planning Act and the Building Regulation Act. A 20th century example is the 1949 Agricultural Holdings Act. The most severe regulatory limitations have resulted from urban planning in the 20th century.

§ 106DK.02(a)(1) Impact of Urbanization.

The small size of Denmark and the density of its population have resulted in elaborate regulatory schemes governing land use. n14 Generally, no construction can be started without prior approval from municipal authority, except for some farm houses. Permission is again required before the finished buildings may then be used. Detailed regulations apply to such areas as sewage, insulation, and water, as well as various aspects of town planning. Easements may not be created without local council approval. n15 In relations between adjoining landowners, although regulatory legislation

has an impact, rights and duties are still defined principally by judicial decisions. n16

§ 106DK.02(a)(2) Impact of Environmental Regulation.

Private property rights in Denmark have also been significantly affected by environmental regulation. The Nature Conservation Act and the Environmental Protection Act form the core of the Danish conservation efforts. The Nature Conservation Act is intended to protect the landscape, waterways, lakes, and forests, while the Environmental Protection Act deals with noxious emissions and general protection of the ecological structure. Certain activities which pose an environmental threat are identified by the environmental ministry, and anyone proposing to conduct such an activity must obtain prior ministry approval. Approval, once granted, is usually secure from revocation, but the whole process tends to encourage voluntary compliance.

Subsurface rights are subject to an unusual legal arrangement, as a result of environmental concerns. Subsurface mineral resources that can usefully be extracted, but were not discovered until after February 23, 1932, are owned by the state. Commercially exploitable resources identified prior to that date were subject to private ownership. The result of this ownership is that the government owns most of the oil and natural gas reserves.

Even as to those resources subject to private ownership, limitations are imposed. Prior government authorization is required prior to extraction, and restoration of the site is required when extraction is completed. n17

§ 106DK.02(b) Transfers of Real Property Interests.

The Danish law governing transfers of real property is preoccupied with the rights of third parties, or, viewed another way, with protecting the rights of the parties to the transfer from challenges by third parties. Most Danish real property transfers are transfers by agreement or transfers of execution by levying creditors.

§ 106DK.02(b)(1) Transfers by Agreement and Registration.

Transfers of real property may be based on contract or a money claim entitling the creditor to levy execution. The transfer can be made only by one rightfully entitled to dispose of the property. The most important aspect of real property transfers lies in the registration requirements. n18

Under Denmark's land registration system, all parcels of land are registered and entered as numbered parcels on charts maintained by the Minister of Agriculture. All information pertaining to any individual parcel of land is kept together. The system of recording or registering is considered a judicial function and is administered at the local level, where each "county" maintains a land registry. Difficulties in registration, including a refusal by the local official to perform a registration, may be pursued in the courts.

A right in real estate must be registered in order to enjoy legal protection. n19 An unregistered right is extinguished when the holder of a competing right registers the right in good faith. Good faith means that the holder is unaware of unregistered rights and this ignorance is not due to gross negligence. It is not required that value have been given to acquire the right; a right that is obtained by gift and registered enjoys the full protection of registration. Only rights derived from rights already registered can be registered. If one acquires a right based on a right not previously registered, protection can be obtained only by registering both transfers.

Under Danish registration procedure, upon receipt of the real property transfer document from an applicant, which document must include the applicant's name and address, it is entered in an "application book." Application entries are made chronologically, and legal rights related to application are determined by the date the application is received and entered by the Land Registry. Entries will be accepted only if the document is properly signed and a copy is attached.

Property interests are sometimes not subject to extinguishment by non-registration, such as when the competing right is based on forgery, false certification, incapacity or violent duress. In these circumstances, the holder of the conflicting interest will not succeed even if acting in good faith; however, the state awards the good faith holder an indemnity.

Some rights do not require registration, such as leases, n20 assignments of registered mortgages, taxes or rates levied on real property and prescriptive rights acquired before the Land Registration Act in 1927 (provided that their prescriptive period of twenty years had lapsed prior to that date).

§ 106DK.02(b)(2) Transfers by Prescription.

Property interests may be acquired by prescription following possession for twenty years. The statutory foundation for prescription is in the 1683 Danish Code of King Christian V. n21 When real property interests were transferred by oral ceremonies at periodic meetings among community elders, the passing away and failing memories of such witnesses gave rise to the rules of prescription as a means of providing protection for old titles. Fulfillment of the twenty-year requirement must be proven by the user; it is not necessary to prove that the use or occupancy was adverse to the owner's interest; however, the use must have been visible or otherwise apparent.

§ 106DK.02(b)(3) Transfers by Inheritance.

Although some transfers of property at death are achieved by operation of legislation and by will, most transfers are by intestate succession. This is the most common practice in Denmark. n22 Intestate succession is regulated by the Inheritance Act. Adopted and illegitimate children generally enjoy the same rights as natural and legitimate issue.

The will in Danish law is one of the few documents which is subject to rules of form. n23 A testator must be 18 years old or married, and the document must be in writing and must be signed or confirmed before either a notary public or two witnesses.

§ 106DK.02(b)(4) Regulations on the Sale of Real Property.

With a few exceptions, undivided property can usually be sold without restriction. Among the exceptions is a rule that no single person can acquire more than two farms other than by marriage or inheritance. Also, a farm can only be purchased by a natural person who lives on the premises and farms as a principal activity. Foreigners seeking to acquire Danish real estate must first obtain permission from the Ministry of Justice, subject to current European Community law. n24 In some circumstances, principally in areas zoned for urban development and when lots of over 6,000 square meters are being offered, the real estate must be first offered to the public before it can be sold privately. For land in some recreational areas, the public, rather than the designated purchaser, has the right to enter into the purchase contract.

§ 106DK.02(c) Landlord and Tenant Law.

Traditionally, apartments could only be rented, and not owned. However, in recent years apartment ownership has become possible. Protection for renters in the form of restrictions on rights of termination by the landlord, and rent controls, have been in place since the 1930's.

§ 106DK.02(d) Ownership of Danish Land by Foreigners.

Subject to current requirements of the European Community, foreigners must obtain permission from the Ministry of Justice before they can acquire real estate in Denmark. For the purpose of this requirement, a foreigner is a non-resident of Denmark.

CHAPTER 106EG PROPERTY LAW IN EGYPT

13-106EG Thompson on Real Property, Thomas Editions § 106EG.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106EG.01 History.

§ 106EG.01(a) Traditional Islamic Roots.

"The development of the law of real property in Egypt is essentially a development from a traditional law, mostly Islamic in character, to a modern law, mostly defined in Western terms, but still retaining some of the characteristics of the traditional system." n1 This characterization of property law in Egypt also reflects contemporary Egyptian life, where Islamic tradition is intertwined with the Western practices.

The traditional Islamic system of land tenure is a product of the classical Islamic law known as "the *Shari'a*," as well as administrative or "*qanun* law." n2

> [Although] Muslim jurists did not develop a cohesive theory of property rights, they did develop certain basic principles. According to the classical jurists, a thing in order to be owned must have the following attributes: it must have some value; must be capable of ownership; and its use must be permitted. n3

Islamic law dictated which things were not qualified to be owned. n4

Scattered throughout the *Shari'a*, especially in the sections dealing with contracts, acquisition of property, and state revenue, are various statements of principles which, when brought together, sketch an outline system of land tenure:

> According to this system land holdings are basically of three types: holdings of private property held in full ownership, holdings of *waqf* lands, i.e. lands held in perpetuity with the income devoted for the upkeep of a charity or the family of the constitutor of the *waqf* and holdings of state-owned lands with various conditions of tenure. n5

The first two types mentioned above were dealt with extensively in the *Shari'a*; however, the third category, though arguably the most important in terms of revenue and production, was dealt with only passingly. As a result, the state regulated state-owned lands through the *qanun* or administrative law. n6

> The *Shari'a* was regarded by all, including the jurists, as a divinely ordained code of morality designed to shape a virtuous community on earth and prepare human beings for the hereafter. To enforce it was the responsibility, indeed the raison d'etre, of the state, and to transgress against it a sin as much as a crime. n7

§ 106EG.01(b) Original Types of Land Tenure Contemplated by the Shari'a.

§ 106EG.01(b)(1) Taxable Private Holdings.

In early Islamic centuries classification of real property was not based on ownership rights as much as on the amount of tax the state could obtain, based on the amount of revenue generated by the land. n8 Lands were classified as either *ushri* or *kharaji*, depending on the type of tax paid.

The *ushri* (tithe) was a religious tax paid by the absolute owner of cultivated land as part of almsgiving (*zakat*). Usually, the tax amounted to approximately one-tenth of the produce of the land. n9 The *ushri* landholder acquired this status by converting to Islam, if the landholder was a member of an Arabian tribe or if the land was included as spoils of war acquired by the invading Moslem soldiers.

The *kharaj* was the tax levied on the non-Muslim landholders. It is not known if these lands were held in *mulk* (full ownership); however, the tax came to be viewed as a rent or tribute. n10 The tax levied on the *kharaj* holder could be as high as one-half of the produce. n11

§ 106EG.01(b)(2) State-Owned Holdings.

Lands that were neither *ushri* or *kharaj* were part of the state domain. The state held the lands in full ownership and was clearly the proprietor. When conquered by the state, these lands were conveyed or conceded as an *iqta'tamlik* (a concession of full ownership) or an *iqta'istighlal* (a concession of the right to use property, with title remaining vested in the state). The latter form in later centuries became the "feudal system" of the Islamic empire. *Mawat* or "dead lands" were those lands deemed to be ownerless and uncultivated (normally stretches of desert); however, jurists held that ownership of *mawat* lands was nevertheless vested in the state. n12

§ 106EG.01(b)(3) *Waqf* Landholdings.

Waqf lands were in a class of their own, because of their unique characteristics of inalienability and perpetuity of title. n13 "The title (*raqabah*) was immobilized forever and the usufruct was to be used for the support of a charitable organization or a family (with a reversion to charity in the case of extinction of the family)." n14

Waqf lands were not to be leased for long periods of time, and because of this restriction, improvement on the land was deterred rather than encouraged. In the centuries that followed, however, legal devices were created to circumvent the restriction and bring about long-term leases. These leases in Egypt were most commonly known as "*ijaratayn*, *hikr* or *khuluw*." n15

Contrary to the laws established in the *Shari'a*, "in later centuries the state allowed the holders of its concessions to constitute their interests in *waqf*." The *Shari'a* permits only *mulk* lands to become *waqf*. Holders of concessions did not have title to dedicate in perpetuity and as such their *waqfs* were termed "untrue" or "unsound." n16

Kharaji lands were later assimilated into the state domain category, where the state gradually succeeded to possession of those lands possibly through escheat or confiscation, but more likely by the introduction of tax farming and assignments of the land to pay state debts. Subsequently, a feudal system was established where the *kharaji* lands were assigned to the "feudal lords." n17

§ 106EG.01(c) Pre-19th Century Historical Developments.

The feudal system was in full force by the time the Mamluks came to power in the thirteenth century. Under the Mamluk system,

> all state-domain lands held by private individuals were subject to the disposition of the state. Also, just as *kharaji* lands had been assimilated into the state domain, much former *mulk* land and even *waqf* land, was taken over by the state and regulated as state domain under *qanun* law. n18

These lands were then distributed to mainly military fief holders as concessions and the state allowed a form of *waqf* (*rizqah ahbasiyah*) on the usufruct of these state lands. n19

The Ottomans ruled over Egypt beginning in 1517, adding their own modifications to the feudal system of land tenure. Changes included abolishing the Mamluk fiefs and re-establishing tax farms from the land that had reverted to state domain. The tax farmers were given the right to collect taxes from the *kharaj* and retain the portion over that which they were required to pay the state. n20 The tax-farmers were granted land for their personal use, and eventually they acquired rights to the land similar to those of the fiefs in Mamluk times. n21 "Those rights included a life interest in the tax farm with the power to alienate, mortgage, or lease that interest," and their children were given priority to succeed to the rights at the death of the tax-farmer. The tax-farmers were even granted certain justiciable powers over the peasants working on their land. n22 In theory these lands were state lands, although their form of land tenure was different.

This system of land tenure continued into the nineteenth century, at which time there were three forms of property holdings: private property (*mulk*), *waqfs* and state lands. The *mulk* lands were limited to the urban areas and agricultural lands were almost entirely state-held lands (directly through the royal domain or through state farms). However, private property holdings and state lands became more and more difficult to distinguish, because of the expanding property rights of state landholders. n23

§ 106EG.01(d) Influences from the 19th Century to the Modern Civil Code.

§ 106EG.01(d)(1) Muhammad Ali to Ismali.

Muhammad Ali was appointed governor in 1805 by the ruling Ottoman Empire. When he came to power, his main objective in the area of land tenure was to reassert the diminished state rights in state land. Immediately tax-farms were abolished and replaced with a burdensome direct tax system, within which even the lands granted to tax-farmers for their private use were subject to tax. Former tax exempt lands such as the *rizqah ahbasiyah* were made subject to the tax and other property holdings were confiscated, leaving former landholders with only a life estate. "By destroying the privileged position of the nobility, Muhammad Ali laid the ground for the later development of extensive private property holdings by the peasantry." n24

In 1829 Muhammed Ali began redistribution of the land by granting uncultivated land (not included in the cadaster). n25 These lands eventually became indistinguishable from private property and by the mid-1800's under Said private property holdings were significantly increased. n26

Three important decrees followed that increased individual interests in property. First, the Decree of Ismail (1863-79) allowed *kharaj* landholders to dispose of property at will, previously allowed only with *mulk* lands. Second, the Muqabalh Law of 1871 allowed *kharaj* owners to purchase the fee simple ownership of their land. Third, the Decree of 1896 finally abolished all distinctions between *kharaj* and *mulk* lands, declaring both as "lands of full ownership." n27

§ 106EG.01(d)(2) Ottoman Charter of 1841.

The Ottoman Charter of 1841 gave Egypt the right to enact its own land law, rather than adhere to Ottoman law. As a

result of the Charter, Egypt never adopted the Ottoman Land Law of 1858 or the Majallah, the Ottoman Civil Code. n28

§ 106EG.01(d)(3) Mixed and National Courts.

The Mixed Courts were created in 1876 "to protect foreign interests and the promulgation of the Mixed Civil Code to be used in those courts, based on the Napoleonic Code." n29 The National Courts were created in 1882 to protect and promulgate the National Civil Code and national interests. n30 Both were based on the Napoleonic Code, probably a remnant of the 1798 Napoleonic invasion.

However, there still remained a considerable amount of Islamic law, because of the unique nature of Egyptian land tenure, which could not be covered by a non-Islamic code. In 1889 Mixed Courts were ordered to apply all Egyptian laws pertaining to lands, embankments and canals. The *Shari'a* Courts, however, still had jurisdiction over all matters involving the *waqf*. n31

Among the codes' greatest contributions to Egyptian property law was organization, "by clearly defining property rights and means of acquiring and disposing of those rights." Another contribution was the distinction between the private and public domain of state-owned lands, which later under the 1948 council of the state proved to be important. n32

CHAPTER 106EG PROPERTY LAW IN EGYPT

13-106EG Thompson on Real Property, Thomas Editions § 106EG.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106EG.02 The New Civil Code.

§ 106EG.02(a) Introduction.

On October 15, 1949, the new civil code was adopted. n33 This new Egyptian Civil Code was drafted by an Egyptian jurist and a French jurist and superseded all previous codes. The new civil code is a combination of the *Shari'a*, the old codes, jurisprudence from Egyptian courts, and a variety of modern civil codes from twenty European, Asian, African and American nations.

> Fortunately for the drafters of the Code, there had been so much consolidation of real property laws in previous reform measures that their work consisted primarily of revising the law relating to only one form of land tenure, private ownership. State lands and *waqf* lands, the two other categories of land holdings, were regulated by provisions of the Code in a manner consistent with other provisions of civil law. The later abolition of the family *waqf* and the restrictions on land ownership effected after the Revolution of 1952 affected property rights, but for the most part the provisions of the Civil Code continue in force today. n34

§ 106EG.02(b) Aspects of Real Property.

§ 106EG.02(b)(1) Ownership of Real Property.

§ 106EG.02(b)(1)(i) Rights of Ownership.

Article 802 of the new Civil Code defines ownership as the exclusive right to use, enjoy and dispose of a thing. n35 When adopting the Code, the Senate required that the whole Code be consistent with the "social function" doctrine of ownership, although this is not made explicit in the Code. This means that an owner is protected in rights ownership, as long as those rights do not conflict with a public interest or with a worthy special interest. n36

Article 803 provides that ownership of land "includes that which lies above and below the surface of the land to the extent that it can be beneficially used by the owner." n37 However, the state may use the airspace and the land below the surface as a matter of public interest, if that use does not damage the property. An owner can be deprived of

property only as prescribed by law and with restitution. n38

§ 106EG.02(b)(1)(ii) Restrictions on Ownership.

The first restriction on ownership is a general prohibition against abuse of rights. n39 Article 807 states:

(1) The owner must not exercise his rights in an excessive manner detrimental to his neighbor's property.

(2) The neighbor has no right of action against his neighbor for the usual unavoidable inconveniences from neighborhood, but he may claim the suppression of such inconveniences if they exceed the usual limits, taking in consideration ... custom, the nature of properties, their respective situations and the use for which they are intended.

Two other restrictions are embodied in the principles of ancient lights and privacy, which are particularly important in Islamic countries, and rules on the free alienability of land. n40 As to ancient lights and privacy, Article 819 does not allow a neighbor to have a direct view into his neighbor's property unless the view is of a distance of more than one meter (barring a prescriptive right, in which case the neighbor cannot build within one meter distance). If it is not a direct view, then the view must be of a distance of at least half a meter. A light shaft must be built above the normal height of a person and must be for only air and light and not for a view into a neighbor's property (Article 821).

As to alienability, it may be restricted if a contract or will contains a clause stipulating the inalienability of property, but such a clause will only be valid if based on a legitimate reason and limited to a reasonable duration. n41 Legitimate reason is deemed to mean the protection of a lawful interest of a party to the will or contract and a reasonable duration is the duration of the life of any of the parties. n42

§ 106EG.02(b)(1)(iii) Joint Ownership.

Article 825 of the Civil Code defines joint ownership as follows: "When two or more persons are owners of the same thing, but their respective shares are not divided, they are co-owners and, in the absence of proof to the contrary, their shares are deemed equal."

The joint owner has rights limited to the share, although the right may affect the entire property. The joint owner has rights of use of the entire property and of its fruits, but is limited by the rights of the other joint owners.

Article 826 provides that the joint owner may alienate the share as long as it does not cause damage to the other joint owners.

Special types of joint ownership include obligatory joint ownership, family joint ownership, and joint ownership of stories in a building. Obligatory joint ownership is when "the co-owners of a property held in common cannot demand its partition if it follows from the use to which the property is intended that it should always remain in common (Article 850)."

Family joint ownership was derived from Swiss and Italian law. This joint ownership may be created through an agreement limited to fifteen years, with flexibility as to withdrawal of any of the co-owners with six months notice. The purpose of such a joint ownership is to limit it to family members who may have a common interest in property. n43

Islamic law is the major contributor to the law governing joint ownership in stories of a building.

> The Code delineates the parts of a building which are owned in common under a joint ownership agreement and stipulates the rights of the co-owners in the jointly-owned premises. The Code outlines the obligation of the owner of a lower story to make repairs of the lower story to prevent higher stories from falling (Art. 859). In the case of the building falling the owner of the lower story is bound to rebuild his story, and the Code provides remedies for his failing to do so (Art. 860). n44

§ 106EG.02(b)(2) Acquisition of Real Property.

§ 106EG.02(b)(2)(i) Appropriation.

Article 874 of the Code states:

If ... an Egyptian cultivates or plants uncultivated land or builds thereon, he becomes forthwith owner of the part cultivated, planted, or built on, even without the authority of the state, but he loses his ownership by non-use for five consecutive years during the first fifteen years following his acquisition of ownership.

A 1958 amendment limited the reclamation areas and a 1964 amendment imposed a requirement of state authority. Under the Land Reform Act, some of the *mawat* lands that could be irrigated through subterranean waters were sold rather than acquired through improvement. These lands were subject to several conditions.

§ 106EG.02(b)(2)(ii) Succession.

The laws of inheritance in the Code are completely governed by the *Shari'a*. All outstanding debts must be settled prior to any distribution to heirs. n45 In practice, this means that:

> (1) the property is subject to the real rights of the estate's creditors, which are akin to the rights of a mortgage;
>
> (2) the heirs may dispose of the property if they register their rights of inheritance with the proper government bureau, but such disposal is subject to the rights of creditors; and
>
> (3) the registration of the rights of the creditors renders those rights effective as against third parties. n46

§ 106EG.02(b)(2)(iii) Accession.

Accession is the joining of two distinct properties without an agreement between the owners. n47 This occurs when an owner of land acquires materials that are not part of the land, but to remove them would cause serious damage. The owner who acquires by accession must pay the value of the materials plus indemnification, if indemnity is due (Art. 923). If a landowner in good faith builds accidently on a neighbor's land, a court may rule for the transfer of that land to the builder as long as adequate compensation is paid (Art. 928). n48

Accession by natural forces, such as shifting of river banks, usually does not change ownership. n49

§ 106EG.02(b)(2)(iv) Contract.

Transfer of property by contract is the most common type of transfer, other than by inheritance. n50

> While the code stipulates that ownership of movables and immovables may be transferred by contract (Art. 932), it also provides that real rights over immovable property, including ownership, are not transferred between parties or as regards third parties unless the law regulating the publication of real rights (*al shahr alaqari*) is observed (Art. 934). n51

Ownership is considered to have been transferred at the time of contract only if the registration has already occurred. n52 Registration has been traditionally filed under the names of the parties; however, a 1964 law creates a system of registration based on plots of land, with implementation depending on a new cadastral survey.

§ 106EG.02(b)(2)(v) Preemption.

Article 935 defines preemption as "one's right to substitute himself in place of the purchaser in certain sales of immovable property, subject to certain conditions." The Civil Code's provisions of preemption are based on a combination of the two different laws in the Mixed and National Codes. The preemption doctrine was retained in the new Civil Code, despite great opposition, because it was considered historically significant. n53 However, the doctrine was severely restricted. n54

§ 106EG.02(b)(2)(vi) Possession.

The new Civil Code attempted to define possession, but it was defeated by the senate and therefore there is no definition of possession in the Code. Possession includes acquisition, transfer, and loss. There is no adverse possession. n55

Possession can be transferred in two ways: (1) By the effect of law, as with an heir and; (2) as a means of disposal, such as contract or bequest. n56 "Possession ceases when the possessor abandons actual control over the right or when he loses it any other way." n57

§ 106EG.02(b)(3) Types of Interests in Real Property.

§ 106EG.02(b)(3)(i) Usufruct.

The Egyptian Code does not define usufruct. The right of usufruct is a real right for the use and exploitation of a thing that belongs to another. n58 Usufruct is a right attached to the land and terminates at the death of the usufructuary. n59 "In Egypt, ... ownership of a right of usufruct is uncommon because the right does not arise by operation of law between spouses or between parents and children and only rarely does a person give a right of usufruct to another by contract or will." n60 Article 985 of the Civil Code provides that "... a usufruct may be bequeathed to successive persons only if they are alive at the time of the bequest ... [and may include] a child en ventre."

Article 993 provides that if the usufruct terminates before the harvest period, because of an expired term or the death of the usufructuary, the period is extended to ripening of the crops.

Articles 987-995 provide for extinction of the right as a result of non-use over a period of fifteen years; they also regulate the uses of the property, the liability of the usufructuary for normal expenses, and repairs to maintain the property.

§ 106EG.02(b)(3)(ii) *Hikr.*

"*Hikr* is a lease whose duration is longer than that of an ordinary lease and creates a right in the lessor." n61 Egypt has recognized long leases on *waqf* property for modest rents. The lessee can exploit the land and repair it extensively in exchange for the rent paid. n62

The Code relies on Islamic law to establish the rules regulating *hikrs*. Article 999 limits the duration of the *hikrs* to sixty years. Article 1012 established that all *hikrs* must be on lands recognized as *waqfs*. Article 936(d) provides for the extinction of the *hikr* through preemption either by the holder of the *hikr* or the owner of the property. Article 1000 provides that a "... *hikr* can only be concluded with the permission of a judge upon a showing of expediency." Article 1001 provides that "... the grantee of a *hikr*, having a real interest, may dispose of it and transmit it by inheritance."

Article 1002 establishes that improvements made on the *hikr* belong to the grantee. Article 1004 provides that a *hikr* cannot be concluded for less than the rent given for similar lands. Finally, Article 1011 establishes that if the *hikr* is not used in thirty-three years it reverts to the status of a *waqf*.

Two types of *hikr* are recognized: (1) "two rents" (*ijaratayn*) and (2) *khuluw al-intifa*. Under the first, the *hikr* is paid under two rents. The first rent is a lump sum for the value of the building and the second is an annual payment related to the value of the land. The second type of *hikr* is "a contract by which a *waqf* leases property for an indefinite period of time for a fixed rent." n63 *Hikrs* have little significance in the modern era, especially after a 1952 law abolishing *waqfs* .

§ 106EG.02(b)(3)(iii) Servitudes.

Article 1015 of the Egyptian Civil Code defines servitude "as a right which limits a property owner's enjoyment of his land and which exists for the benefit of land belonging to another person." Servitudes contain three elements: the dominant tenement, the servient tenement and the benefit which the servient tenement provides for the dominant tenement. n64

Servitudes survive transfers, are transmitted to the dominant owner, and continue to burden the servient tenement. According to Article 1015 of the Civil Code a servitude may be imposed upon state property, provided that it is not incompatible with the use for which such property is intended. n65

Servitudes are created by contract or prescription, when there is a discernible object indicating the existence of the servitude. If the servitude is not apparent or visible, it cannot be obtained through a prescription. According to the Civil Code, a prescription may also be created by specification (*takhsis*) of the original owner of the land. n66 "A specification is created when the owner of two separate properties places a visible marker between the two properties, thereby creating a dominant-servient relationship between them, which would indicate the existence of a servitude if the two properties belonged to different owners." n67

Extinction of a servitude occurs after fifteen years of non-use, unless created for the benefit of a *waqf,* in which case the period is thirty-three years. A servitude may also end if it is no longer useful or its burden is disproportionately greater than its benefit. However, if the burden outweighs the benefit, compensation may be required for the forfeiture of the servitude. n68

§ 106EG.02(b)(4) Real Securities.

§ 106EG.02(b)(4)(i) Mortgage.

The Code defines mortgage as "... a contract by which a creditor acquires a real right over an immovable pledged to the payment of his debt, by which he obtains preference over ordinary creditors and secured creditors following a rank to proceeds from a sale of the immovable. A right to the proceeds from a sale of the immovable obtains to the creditor even if the debtor has sold the pledged property to a third person." n69

According to Article 1041, a mortgage is indivisible, and if the heirs inherit mortgaged property, it continues to be mortgaged for the entire outstanding debt. Article 1031 requires that the mortgage only be constituted through a *rasmi* (authentic or official document). A mortgage ranks solely from the date of its registration, regardless of whether it secures a conditional, future or contingent debt.

§ 106EG.02(b)(4)(ii) Judgment Charge.

A judgment charge, which differs from a mortgage in its mode of acquisition, may, if obtained in good faith by a creditor, be imposed on immovable property of the debtor as security for a claim. If the debtor dies, a creditor cannot obtain a judgment charge. n70

§ 106EG.02(b)(4)(iii) Pledge.

Article 1096 of the Egyptian Civil Code defines the pledge as "... a contract by which a person undertakes, as security for his debt or the debt of a third person, to give possession of property (or a real right in property) to a creditor or a person chosen by both parties to take possession in place of the creditor." Possession is retained until the debt is paid; however, in the event of default the right or pledge may be sold to satisfy the debt.

§ 106EG.02(b)(4)(iv) Privileged Right.

Article 1130 of the Egyptian Civil Code defines the privileged right as a preference accorded to a particular right because of its quality. The commentary of the Code explains that it is the right itself which is privileged, and not the creditor holding the right, and that law determines which rights are to be privileged, as well as how privileged rights are to be ranked.

Three reasons for according preferences are: (1) expenses incurred for the common good by a creditor benefit all creditors and should therefore have preference (legal proceedings for the sale and preservation of property are privileged against that property); (2) a public policy argument that taxes and duties are privileged, only preempted by legal proceedings; (3) movables for their repair and preservation are secured by a privileged right against the movable. n71

> The general rules relating to privileges are similar to those governing pledges and mortgages. A privilege cannot exist against a good-faith holder of a movable (Art. 1133). A privileged right against immovable property is subject to the same rules as mortgages, to the extent that such rules are compatible with that type of privilege right (Art. 1134). Finally, privileges are extinguished by the operation of the same rules which extinguish mortgages and pledges (Art. 1136). n72

§ 106EG.02(b)(5) Leases.

§ 106EG.02(b)(5)(i) Introduction.

General provisions of the Civil Code deal with the elements of a lease, the effects of a lease, the assignment of a lease and sublease, the termination of a lease and the death or insolvency of the lessee. n73 The Code places responsibility on the lessor to enable the lessee to enjoy the leased property.

> The principal obligations of the lessor to the lessee under the new code are the obligations to: (1) deliver the leased property and its accessories, (2) maintain the leased property in the same state it was at the time of delivery, (3) abstain from doing anything which may disturb the lessee in his enjoyment of the leased property and warrant against any disturbance or damage based on a lawful claim by any other lessee or any successor in title of the lessor, and (4) warrant against all defects which prevent or appreciably diminish the enjoyment of all property (Arts. 564, 567, 571, 576). n74

§ 106EG.02(b)(5)(ii) Agricultural Leases.

The Code addresses agricultural leases; however, they have since been modified and supplemented by the provisions in the Agrarian Reform Law of 1952. The Civil Code deals with cattle and agricultural fixtures on the land, defines the agricultural year, establishes use and maintenance of a land's fertility, prevents the lessee from destroying crop or seed, protects the lessee's right to harvest, and requires the lessee to allow the succeeding lessee to prepare the land for sowing.

The Reform Act established rent ceilings, the length of time a lease could run (which was later extended), and required that valid leases be in writing. The Reform Act also limited agricultural leases only to those who worked the land

themselves.

§ 106EG.02(b)(5)(iii) Waqf Lease.

The *waqf* lease, prior to the new Civil Code, was always placed under Islamic courts' jurisdiction and never categorized with normal leases, except under the National Code. Articles 628-634 of the Civil Code adopted provisions from Islamic law to protect the *waqf* lease. According to the Code:

> The *nazir* (guardian) of the *waqf* property has the right to let property, but a beneficiary of a *waqf* has no such right unless the constitutor of the *waqf* specifically grants it to him or unless the *nazir* or a judge authorizes him to exercise it. ... The *nazir*, with certain exceptions, may not lease *waqf* property for more than three years, and leases of *waqf* property made for grossly inadequate consideration are invalid. n75

§ 106EG.02(b)(6) Landlord/Tenant Law.

In the past, landlord/tenant law had been governed by a lease contract with no restrictions. With practically the entire population living on about three percent of the total land of Egypt, population density and congestion have forced more clear-cut regulation of landlord/tenant law. The state has also stepped in on this previously "free relationship between owners and tenants," because of the need to keep social balance and political stability in a country where much recent change has keenly affected the housing market. n76

In recent years there has been a migration to Cairo, raising demand for housing and at the same time increasing rents ten to fifteen times within three years. n77 Previous laws controlling rents had left investors and landlords bitter, and many now sell their separate units (*tamlik*) in the free market even before construction is complete. n78 In 1977, the government tried to limit the sale of *tamlik* in order to increase the availability of rental flats, but investors found ways to avoid the restricting law. n79 As a result there has been an increase of "informal housing" and of the practice of paying "key money" n80 to obtain a rent-controlled flat. n81

(n20)Footnote 52. *Id. at 255.*

(n21)Footnote 53. *Id.*

(n22)Footnote 54. The right of preemption may be exercised by the following, listed in preferential order: (1) the bare owner; (2) the co-owner in common; (3) the usufructuary; (4) in the case of a *hikr*; (5) the neighboring owner in some cases, as when a servitude exists, buildings are upon the land, or if the land is on both sides of the property and at least half the value of the land has been sold.

A person may not exercise a preemptive right if: (1) the sale is by public auction; (2) the sale is made to relatives; (3) the property sold is for religious purposes or to be annexed to property already for that purpose.

The Code requires that the preemptor notify both the purchaser and the vendor of intentions to preempt (Arts. 940-491), notify within a strict time limit (Art. 943), and deposit the full sale price of the property with the court of the district in which the property is situated, prior to any action towards preemption (Art. 942).

CHAPTER 106EG PROPERTY LAW IN EGYPT

13-106EG Thompson on Real Property, Thomas Editions § 106EG.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106EG.03 Recent Changes in Egyptian Property Law.

§ 106EG.03(a) Agricultural Reforms.

Many changes occurred under Nasser's "revolutionary regime"; among them were:

> those relative to the reclamation of land, the ownership of land formed by the action of water, the abolition of private *waqfs* and the placing of lands of charitable *waqfs* and of the private domain of the state beyond the pale of acquisitive prescription, and the virtual elimination of *hikr*. All these changes were predicated upon the Agrarian Reform Law of 1952 (no. 178) and the philosophy on which it was based. n82

The Agrarian Reform Law brought about sweeping land ownership reform and targeted large landowners by limiting the amount of land a person could own to 200 acres. Gradually, this ownership area has been expanded. The Agrarian Reform Law also limited the minimum period of leases to three years, although this, too, was later extended. Leases were required to be in writing. n83

§ 106EG.03(b) Foreign Ownership of Land.

Nasser's Administration attacked foreign ownership of Egyptian land, either by severely restricting or banning it outright. n84 In 1963, land owned by foreigners was expropriated. However, when Sadat came to power, a policy of allowing foreigners to own land was re-introduced. "He promised repatriation and guaranteed both foreign and domestic investors that their properties would not be expropriated. Sadat has also given $10 million in compensation to Americans whose holdings were confiscated by Nasser in 1961." n85

However, the move towards allowing foreigners to own property has been slow. In 1978, foreigners were not allowed to own property worth more than 1,000 Egyptian pounds. This is a sore subject, particularly with non-Egyptian Arabs who would like to purchase land in Egypt. n86

CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions § 106ES.01

§ 106ES.01 Civil Code and Regional Systems *("Regimenes Forales")*

[Go To Supp]

The legal system of real property in Spain is the result of a long and rich history based on Roman law, which constitutes the core of the Spanish legal tradition. Law on the Peninsula evolved with the Visigothic invasion at the beginning of the 5th century. This resulted in the entry of Germanic law which coexisted with the law of Hispanic people. The legal unification and territorial application of a sole legal system took place with the promulgation in the 7th century of the *Liber Judiciorum.* In the 13th century this was translated and adapted in Castile, where it was known as *Fuero Juzgo*. The importance of Muslim rule from the 8th century over large parts of the Peninsula and the long period of reconquest, which ended with the taking of Granada in 1492 must also be noted. During this period many kingdoms were set up. These kingdoms were unified under a sole crown with the marriage of Isabella of Castile and Ferdinand of Aragon. However the legal institutions of each kingdom did not disappear as a result of the unification of the kingdoms. In some cases, and as a result of subsequent historic events, the regional systems were recognized and maintained as a privilege for the services rendered to the nation.

Given this history anyone who comes into contact for the first time with the Spanish legal system should not be surprised that different private legal systems coexist. Real property law is not only ruled by the Civil Code and other State legislation, but many regions have their own law in this matter, particularly Aragon, the Balearic Islands, Catalonia, Galicia, the Basque Country and Navarre.

§ 106ES.01(a) Constitution of 1978

The Constitution of 1978 created a new territorial organization system. Spain is currently divided in 17 autonomous regions (*Comunidades Autonomas)* and 2 autonomous cities, and each one has its own parliament, executive government and judicial authority that has jurisdiction over matters arising in its territory.

Therefore the promulgation of the Constitution and the subsequent development of the so called State of Autonomous Communities, with the passing of the relevant Statutes of Autonomy (*Estatutos de Autonomia)* by each autonomous

region, resulted in the creation of the different regional legal systems. When considering this structure one must bear in mind that "the main principle of their relationship with State law is not the principle of normative hierarchy, or of succession in time, but the principle of competence in matters, in accordance with the Constitution and the Statutes" (Lacruz Berdejo and others, *"Elementos de Derecho Civil--I Parte General, Vol. I" Ed. Dykinson* (Madrid, 2008).

Given the nature of this work, we shall limit our presentation on Spanish real property rights to the common law, based on the Civil Code and other State regulations.

CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions § 106ES.02

§ 106ES.02 Rights *In Rem*

[Go To Supp]

§ 106ES.02(a) Concept and Classification

The definition and classification of rights *in rem* has been and still is the object of doctrinal discussion. The classic distinction between rights *in rem* and credit rights or rights *in personam* is still commonly used as starting point.

Rights *in rem* are defined as the domination or power of men over things. This domination, or ownership, is protected by the legal system, in principle *erga omnes*. Rights *in rem* can be total or limited. The latter can be classified as enjoyment rights *in rem* (usufruct, easement, use and habitation, emphyteutic, ground rents and surface rights), acquisition rights *in rem* (option, pre-emption and redemption) and guaranty rights *in rem* (mortgage, pledge and *antichresis*).

Ownership is defined in the Civil Code as the right to enjoy and dispose of a thing, without greater limitations than those set forth in the laws. The Code also provides that the owner shall have an action against the holder and the possessor of the property to reclaim it (art. 348 CC).

Limited rights *in rem* involve other people's things, and grant to their holders limited rights and actions to prevent third parties from disturbing the exercise of their right or not recognizing it.

§ 106ES.02(b) Acquisition of Rights *In Rem*

Art. 609 of the Civil Code sets forth that "ownership is acquired by occupancy. Ownership and other rights over property are acquired by law, by gift, by testate and intestate succession, and as a result of certain contracts by tradition. They may also be acquired by prescription."

The list of the Civil Code has been criticized but it may be useful to define the different ways to acquire rights *in rem*:

> (a) Occupancy: property capable of appropriation without an owner, such as game or wild fish, hidden treasure and abandoned movable things are acquired by occupation (art. 610 CC). Therefore occupancy can be used to acquire ownership, not limited rights *in rem*, of movable property, by taking control of a thing with the intent of acquiring it for oneself.

(b) Discovery of a hidden treasure: a hidden treasure is defined as the hidden and ignored deposit of money, jewellery or other precious objects, when it is unknown who they legitimately belong to (art. 352 CC). Hidden treasure shall belong to the owner of the land on which it is found. However, when the discovery happens by chance on another's property, or on State property, half shall correspond to the discoverer. If the objects discovered should be of interest to science or art, the State may acquire them for their fair value. Payment shall be distributed in accordance with the above provisions (art. 351 CC).

(c) Finding: a person who finds a movable thing, which is not a treasure, must return it to its owner. If the owner is unknown, he must immediately consign it with the mayor of the municipality where it was found. The mayor shall publish the finding on two consecutive Sundays. If the owner does not appear within two years counting from the second publication, the thing found or its value shall be awarded to the person who found it. If the owner should appear in time, he shall be obliged to pay, as an award to the person who found it, approximately 5% of the value of the thing (art. 615 and 616 CC)

(d) Accession: ownership of the property shall, pursuant to the right of accession, entitle the owner to everything produced thereby, or naturally or artificially joined or incorporated thereto (art. 353 CC).

(e) Gift: a gift is an intentional liberality whereby a person gratuitously disposes of a thing in favor of another person, who accepts it (art. 618 CC).

(f) Succession (arts. 657 to 1087 CC): succession takes place pursuant to the will of a person expressed in a testament--testamentary succession--and, where intestate, by operation of law--legal succession--. A person who succeeds pursuant to universal title is a heir, and a person who succeeds pursuant to specific title is a legatee.

(g) Prescription (arts. 1930 to 1975 CC): ownership of movable property prescribes after three years of uninterrupted good faith possession, or six years without any other condition. Ownership and other rights *in rem* over real property prescribe after ten years' possession for persons resident in Spain, and twenty for those persons that are not residing in Spain, in good faith and with just title. Ownership and other rights in rem over real property also prescribe as a result of thirty years of uninterrupted possession, without requiring any title or good faith, and without distinction between residents and non-residents, save in case of some easements (art. 1959 CC).

(h) Delivery (arts. 1095, 1462 to 1464 CC): the effect of transfer takes place when in the operation of an agreement between the parties, the *tradens* delivers the property with the intent to transfer ownership. Therefore the Spanish system follows the theory of title and manner: the purchaser by means of the agreement or title acquires a credit against the vendor, the right to request the delivery of the thing or right. The acquisition of ownership or a right *in rem* takes place only upon delivery (manner).

CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions § 106ES.03

§ 106ES.03 Limited Rights *In Rem*

[Go To Supp]

§ 106ES.03(a) Usufruct

Usufruct entitles one to enjoy another's property with the obligation to preserve its form and substance, unless otherwise authorized by the deed pursuant to which it was created, or the law (art. 467 CC).

Usufruct is created by law (for example, usufruct rights of the surviving spouse set forth in the CC), by the will of individuals expressed in acts *inter vivos* or in a last will and testament and by prescription (art. 468 CC).

§ 106ES.03(b) Use and Habitation

Use entitles a person to receive from among the natural, industrial or economic products resulting from a thing belonging to another, those which are sufficient for the needs of the holder of the right and his family, even if the latter should increase in size. Habitation entitles a person to occupy in another's house the necessary rooms for himself and the persons in his family (art. 524 CC). These rights are regulated by the title establishing them, and subsidiarily by the CC.

§ 106ES.03(c) Easement

An easement is an encumbrance imposed on real property for the benefit of another property belonging to a different owner. The real property in whose favor the easement is constituted is called a dominant tenement; the property subject to it is the servient tenement (art. 530 CC). Easements may also be established for the benefit of one or several persons or a community to whom the encumbered property does not belong (art. 531 CC).

The CC sets forth a classification of the different kinds of easements, distinguishing the following ones:

- continuous or discontinuous, depending on the use.

- apparent or non-apparent, depending on whether they present external signs or indications of their existence. (art. 532 CC).

- positive or negative. A positive easement is that which imposes on the owner of the servient tenement the obligation to allow something to be done or to do it himself, and a negative easement is that which forbids the owner of the servient tenement from doing something which would be lawful if the easement did not exist (art. 533 CC).

- Legal or voluntary, depending on whether the easement is established by law or by the will of the owners.

§ 106ES.03(d) Ground Rents (*Censos*)

A ground rent is constituted when certain real properties are earmarked for the payment of an annual rent or annuity as remuneration for a capital sum received in cash, or for the full or limited ownership transferred in respect of the same properties (art. 1604 CC).

This is, as mentioned above, a limited right *in rem* on real property which is subject to the encumbrance of paying a rent or annuity. If the owner or person in possession fails to pay, the real property given as a guaranty may be disposed of in order to collect the payment with the proceeds of the sale.

§ 106ES.03(e) Emphyteutic Ground Rents

The ground rent is emphyteutic where one person assigns in favor of the other useful ownership of a property, and reserves for himself legal ownership and the right to receive from the emphyteutic lessee an annual pension due to his ownership (art. 1605 CC). The emphyteutic lessee has a right to the produce of the property and any accessions thereof, and shall have the same rights as the owner to any treasures and mines discovered on the property constituting the subject matter of the emphyteutic ground rent (art. 1632 CC). Another distinctive feature is that the emphyteutic lessee may dispose of the emphyteutic property and any accessions *inter vivos* and by last will and testament, except for the rights of the direct owner and subject to the other provisions of the CC.

§ 106ES.03(f) Surface

This right is mentioned but not regulated in the CC. It is defined in the Land Act (Royal Legislative Decree 2/2008, of June 20) as a right *in rem*. The right permits the surface lessee to build constructions and buildings on the slope, projection and subsoil of property of another. The lessee keeps the temporal ownership of the constructions and buildings built. This right may also be granted on constructions or buildings already built or on dwellings, premises or privative elements of constructions or buildings.

For the surface right to be duly incorporated it must be granted in a public deed, and registered in the Property Registry.

The public deed must state the duration of the surface right. The right may not exceed ninety nine years.

The surface right may only be granted by the owner of the land.

The surface right may be subject to consideration. If it is for consideration, it may be payment of a lump sum or a periodic canon, or the allocation of dwellings or premises or lease rights in favor of the owner of the land, or a combination of some of the above. This is notwithstanding the total reversion of the buildings at the end of the term agreed to upon constitution of the surface right.

§ 106ES.03(g) Option

An option is the right that the owner of a thing grants to a third party in order to acquire it, paying the agreed price and any other stipulated amounts (DIEZ-PICAZO y GULLON, *Sistema de Derecho Civil*, vol. III, Ed. Tecnos). The option

agreement may be for consideration or not.

To become effective vis-a-vis third parties the option must be registered in the Property Registry. Art. 14 of the Mortgage Regulation provides that option to purchase agreements or express covenants or stipulations expressly determining this in any other contract subject to registration, may be registered as long as, in addition to the usual requirements for registration, they meet the following requirements:

1. Express agreement between the parties regarding registration.

2. Stipulated price for the acquisition of the property and price agreed for the granting of the option, if any.

3. Term for the exercise of the option, which shall not exceed four years.

Options in leases or other contracts may have a duration greater than 4 years, but shall only be effective between the parties and not vis-a-vis third parties. Unless otherwise agreed to between the parties an option expires upon tacit or legal extension of the lease agreement.

§ 106ES.03(h) Pre-emption and Redemption

Pre-emption entitles the rights holder to acquire a thing before a third party for the same price that the latter would be willing to pay.

Redemption entitles the holder thereof to acquire a thing that has been sold, for the same price paid by the third party under the same conditions set forth in the acquisition agreement.

There are pre-emption and redemption rights established by law (for example, the right of the lessee to acquire the leased property in case of sale--art. 25 Urban Lease Act--) but they can also be agreed between the parties.

§ 106ES.03(i) Mortgage

A mortgage directly and immediately subjects the property it encumbers, no matter who its possessor is, to the performance of the obligation it was created to secure (art. 1876 CC). Therefore it is a right *in rem* of guaranty, which grants a right to compel the sale of the mortgaged property, and use the resulting price as consideration for the principal obligation that has been secured.

The constitution of a mortgage requires the granting of a public deed and registration in the Property Registry.

Depending on their origin, mortgages can be classified as legal or voluntary. Voluntary mortgages are those agreed between the parties or imposed by the owner of the secured properties, and may only be constituted by those who are able to freely dispose of them or, if they may not, they are authorized by the laws to constitute a mortgage (art. 138 of the Mortgage Law). Legal mortgages are those expressly established by law. This legal provision means that the persons in favor of whom the law grants a legal mortgage have the sole right to request the incorporation of a special mortgage that is sufficient enough to guarantee their right (art. 158 ML).

The general rule is that a mortgage may be constituted to secure any kind of obligation and shall not alter the unlimited personal liability of the debtor set forth under art. 1911 CC (art. 105 ML). However, the public deed of incorporation of the voluntary mortgage may establish that the secured obligation is only covered by the mortgaged properties. If that happens the liability of the debtor and the action of the creditor, by virtue of the mortgage, are limited to the amount of the mortgaged properties, and shall not affect the remaining properties of the debtor (art. 140 ML). In practice and

unlike what happens in other countries, the application of the covenant of limitation of liability to the mortgaged properties is not usual. Therefore, in the context of a general fall of real estate prices, it is not surprising that the sale value of the mortgaged real property is less than the secured debt, and therefore the execution of the mortgage does not release the debtor, who shall continue to be personally liable with all its present and future properties for the unpaid part of the debt.

§ 106ES.03(j) Pledge

There are two kinds of pledge depending on whether the thing subject to pledge is delivered to the creditor, a third party or not.

A pledge with a change in possession, regulated in the CC, is a right *in rem* guaranty, which grants the right to dispose of the thing pledged and use the resulting amount to pay the credit. Pledge contracts may secure all kinds of obligations, and all movable things which are subject to trade may be pledged, provided that they are capable of being possessed. The correct constitution of a pledge requires, in addition to an agreement by common consent, giving possession of the thing to the creditor or to a third party. No pledge shall be effective against a third party unless the certainty of its date is set forth in a public instrument.

A pledge without change of possession is regulated under the law of Movable Mortgage and Pledge without Displacement (law of December 16, 1954), which establishes a *numerus clausus* of the things capable of being pledged: agricultural fruits, crops, forest products, animals, certain machines, tools and the products from agricultural and farming exploitations, stored merchandises and raw materials and paintings, sculptures, pieces of china, books and any other thing of artistic or historic value. Credits and other rights corresponding to the holders of agreements, licenses, administrative concessions or grants may be subject to pledge without change in possession as long as the law or the relevant constitutive title authorizes their sale to a third party. Credit rights, even future credits, may be subject to pledge without change in possession as long as they are not represented by securities and are not considered as financial instruments for purposes of Royal Decree-law 5/2005, of March 11, of Urgent Reforms to boost Productivity and improve Public Contracting. To be effectively constituted they shall be registered in the Registry of Movable Goods.

§ 106ES.03(k) *Antichresis*

Pursuant to *antichresis* the creditor acquires the right to receive the economic benefits of real property belonging to the debtor. The receipts are allocated first to any interest, if due, and subsequently to the principal (art. 1881 CC).

The creditor is obliged to pay any taxes and charges that the property may be subject to, and the necessary expenses for the conservation and repair of the property. He may deduct any amounts spent from the economic benefits produced. If the debtor does not pay the debt in time, the creditor may claim, according to the Civil Procedure Law, the payment of the debt or the sale of the property.

§ 106ES.03(l) Time-sharing

Law 42/1998, of December 15, which regulates time-sharing rights in real property used for tourism and tax rules, meant not only the transposition of Directive 94/47/CE, but also the development of a broader internal regulation. The aim was to regulate a new legal concept which was remarkably on the increase in a booming Spanish tourism sector. A new time-sharing right *in rem* was created, which could also be configured as a variant of a seasonal lease.

By virtue of time-sharing right in real property one is entitled to enjoy, exclusively, during a specific period each year, an accommodation capable of being used independently and which has the appropriate furniture for this purpose, and complementary services.

The yearly period of use may never be less than seven days in a row. The duration of this right may be from three to fifty years.

This right must be granted in a public deed and registered in the Property Registry. The law establishes a minimum content for the agreement (art. 9).

The acquirer of time-sharing rights has a term of ten days from the signature of the agreement to desist at his own discretion without any cost. He may also terminate the agreement within three months if the latter does not contain any of the references or documents required by law, or if the acquirer has not been sufficiently informed. The mentioned terms are also important because any advance payment by the acquirer to the transferor before expiry of these terms is forbidden.

CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions § 106ES.04

§ 106ES.04 Lease

[Go To Supp]

Leases are regulated by Law 49/2003, of November 26, regarding Rustic Lease and law 29/1994, of November 24, regarding Urban Lease.

Subsidarily they are addressed in the Spanish Civil Code (Book IV, Title VI, Chapters I and II--articles 1542 to 1582).

§ 106ES.04(a) Rustic Lease

Law 49/2003 covers lease agreements on properties to be used for agricultural, ranching and forestry purposes. A specific type of exploitation of a property can also be the object of a lease agreement, as long as the parties expressly state this and attach an inventory to the agreement. It is possible to simultaneously have leases for different types of exploitation of the same property.

Under Law 49/2003 both property and exploitation lease agreements incorporate the right of agricultural production and other rights inherent in the leased property or exploitation.

§ 106ES.04(b) Urban Lease

Law 29/1994 covers lease agreements on urban properties and distinguishes two kinds of urban leases:

-- Housing lease:

Housing leases are lease agreements on habitable properties to be used as permanent housing by the lessee. It also applies to furniture, store rooms, parking places or any other places leased as an accessory to the property.

Legal dispositions regarding housing leases are aimed at protecting the lessee. Therefore any clause contained in the agreement which modifies the legal dispositions against the interests of the lessee is

considered null and void.

The duration of housing leases is negotiated between the parties. However, if the duration of the agreement is less than five years, then it is automatically extended for further one year terms up to a minimum duration of five years. The lessee has the option to terminate the lease with 30 days notice.

By law the lessee must provide a rental deposit equal to, at least, one month's rent. It is common practice for a lessor to request a rental deposit that is higher or even to ask for a bank guaranty.

-- Lease for a use other than housing:

These are lease agreements on properties that are for purposes other than the one described above. It includes seasonal lease agreements and lease of properties to be used for industrial, commercial, professional, recreational, cultural or educational purposes.

The duration of leases for a use other than housing can be freely agreed between the parties.

The lessee must provide a rental deposit equal, at least, to two monthly rental payments. It is common practice for lessors to request a rental deposit of more than that required by law or to ask for a bank guaranty.

When a business or professional activity is carried out at the leased property, the lessee may sublease the property or assign the lease agreement without the lessor's consent. Unless otherwise agreed by the parties, the lessor is entitled to a ten per cent increase in the rent if there is a partial sublease, and a twenty per cent increase if there is an assignment of the agreement or total sublease of the property. Changes in the person of the lessee as a consequence of merger, transformation or spin-off of the lessee company are not considered as an assignment, but unless otherwise agreed by the parties, the lessor shall be entitled to the rent increase mentioned above.

Unless otherwise agreed between the parties, upon termination of a lease agreement for a property which has served for the previous five years as the site where sales to the public are made, the lessee shall be entitled to compensation from the lessor, as long as the lessee has communicated four months in advance of the termination date its intention not to extend the agreement for at least five more years and for a market rent.

CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions § 106ES.05

§ 106ES.05 Tax

[Go To Supp]

We address below the taxes on the different legal transactions involving real property, and the ownership of rights *in rem*. There are distinctions between investment in properties, the term when ownership thereof is held and, finally, the transfer of properties. However in view of the limited and synthetic nature of this presentation, we shall not discuss the enormous variations on taxes, particularly indirect taxes, established for particular situations and circumstances.

§ 106ES.05(a) Acquisition of Real Properties

Upon acquisition of a property for consideration, whether monetary or in kind, the purchaser is subject to one of the following indirect taxes, which are exclusive of each other. These are applicable whether the purchaser has its tax residence in Spain or not.

If the seller is a businessman or a professional and the property is new, Value Added Tax (VAT) is applicable. VAT taxes the entire building process, from the beginning until the end, in one go and at the moment of transfer by the developer. Further transfers are VAT-free but subject to Transfer Tax and Stamp Duty (*Impuesto sobre Transmisiones Patrimoniales y Actos Juridicos Documentados-ITPyAJD*). The general rule is for the seller to charge VAT to the purchaser. From July 1, 2010, the applicable VAT is 8% of the value of the property in case of housings, and 18% in case of business premises.

When the transfer is subject to *ITPyAJD*, and has been for consideration, it is generally subject to a tax rate of 7 to 8 % of the value of the property (the automous regions, the Basque Country and Navarre, may modify it).

On the other hand if the transfer is granted in a public deed, which is normally the case, in addition to VAT and ITPyAJD it is also subject to a Documented Legal Acts tax at a rate of 0,5 % of the value of the property, unless the autonomous regions, the Basque Country or Navarre have ruled otherwise.

Finally, with respect to an acquisition by inheritance or donation of a property, the person receiving the property is subject to the Inheritance and Donation Tax, with a progressive tax rate depending on the value of the acquired

property. In these cases no indirect tax is applicable.

§ 106ES.05(b) Ownership of Real Properties

Any person or entity who is the owner of a property, either rustic or urban, is subject to a local tax (from the town hall where the property is located) which accrues yearly. This Real Estate Tax (*Impuesto sobre Bienes Immuebles-IBI*) is paid by residents and non-residents in Spain, at a rate of 1% of the so called property value, which is determined by town halls and updated every year.

In addition to *IBI* if the owner of a property is a legal person non-resident in Spain that does not carry out economic activities in Spain, it shall be subject to another yearly tax, the Special Tax on Real Properties of Non Resident Entities (*Gravamen Especial sobre Bienes Inmuebles de Entidades No Residentes*), which amounts to 3% of the property value.

Income obtained, if any, from real properties, for example, due to a lease to a third party, shall be subject to the Income Tax *(Impuesto sobre la Renta de las Personas Fisicas-IRPF)*, Company Tax (*Impuesto sobre Sociedades-IS*) or Income Tax for Non Residents *(Impuesto sobre la Renta de No Residentes-IRNR)*.

Furthermore rents obtained from real properties in the scope of an economic activity may be subject, in some cases, to the Tax on Commercial and Professional Activities (*Impuesto sobre Actividades Economicas-IAE*), a local tax.

§ 106ES.05(c) Transfer of Real Properties

In the realm of direct taxes, the capital gain resulting from the sale of a property, if any, due to the difference between purchase value and sale value is subject to the *IRPF*, *IS* or *IRNR*. Regarding *IRPF* the capital gain is subject to a fixed rate of 19% (up to 6.000 [Euro]) and 21% for the excess.

If *IS* is applicable, the capital gain is usually subject to the general rate of 30%, unless the property is subject to the economic activity carried out by the entity and the transfer value is invested again in the acquisition of other elements corresponding to the relevant activity. In this case the tax would be reduced to 18%.

When applying the *IRNR* there is a distinction depending on whether the property is subject or not to a permanent establishment in Spain. If it is, the tax shall be the same as the tax under the *IS*. If it is a non-resident without a permanent establishment, the capital gain is subject to a fixed rate of 19%. Furthermore in these cases the purchaser of the property is obliged to withhold and pay to the Public Treasury 3% of the price agreed, as payment on account of *IRNR* corresponding to the non-resident.

Finally, with the transfer of urban properties a local tax is also accrued, the so called "Local Capital Gains Tax" (*Plusvalia Municipal*), which taxes the increase in the value of the land where the property is located from the date of its purchase to the date of its transfer.

Supp. To CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions Supp. to § 106ES.01

Supp. to § 106ES.01 Civil Code and Regional Systems ("Regimenes Forales")

[Go To Main]

The legal system of real property in Spain is the result of a long and rich history based on Roman law, which constitutes the core of the Spanish legal tradition. Law on the Peninsula evolved with the Visigothic invasion at the beginning of the 5th century. This resulted in the entry of Germanic law which coexisted with the law of Hispanic people. The legal unification and territorial application of a sole legal system took place with the promulgation in the 7th century of the *Liber Judiciorum.* In the 13th century this was translated and adapted in Castile, where it was known as *Fuero Juzgo*. The importance of Muslim rule from the 8th century over large parts of the Peninsula and the long period of reconquest, which ended with the taking of Granada in 1492 must also be noted. During this period many kingdoms were set up. These kingdoms were unified under a single crown with the marriage of Isabella of Castile and Ferdinand of Aragon. However the legal institutions of each kingdom did not disappear as a result of the unification of the kingdoms. In some cases, and as a result of subsequent historic events, the regional systems were recognized and maintained as a privilege for the services rendered to the nation.

Given this history anyone who comes into contact for the first time with the Spanish legal system should not be surprised that different private legal systems coexist. Real property law is not only ruled by the Civil Code (CC) and other State legislation, but many regions have their own law in this matter, particularly Aragon, the Balearic Islands, Catalonia, Galicia, the Basque Country and Navarre.

§ 106ES.01(a) Constitution of 1978 [Go To Main]

The Constitution of 1978 created a new territorial organization system. Spain is currently divided into 17 autonomous regions (*Comunidades Autonomas)* and 2 autonomous cities, and each one has its own parliament, executive government and judicial authority with jurisdiction over matters arising in the territory.

Therefore the promulgation of the Constitution and the subsequent development of the so-called State of Autonomous Communities, with the passing of the relevant Statutes of Autonomy (*Estatutos de Autonomia)* by each autonomous region, has resulted in the creation of the different regional legal systems. When considering this structure one must bear in mind that "the main principle of their relationship with State law is not the principle of normative hierarchy, or

of succession in time, but the principle of competence in matters, in accordance with the Constitution and the Statutes" (Lacruz Berdejo and others, *"Elementos de Derecho Civil--I Parte General, Vol. I" Ed. Dykinson* (Madrid, 2008).

This chapter presents Spanish real property rights on issues important to the common law, based on the Civil Code and other State regulations.

Supp. To CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions Supp. to § 106ES.02

Supp. to § 106ES.02 Rights In Rem

[Go To Main]

§ 106ES.02(a) Concept and Classification [Go To Main]

The classic distinction between rights *in rem* and credit rights or rights *in personam* is still commonly used as starting point.

Rights *in rem* are defined as the domination or power of men over things. This domination, or ownership, is protected by the legal system, in principle *erga omnes*. Rights *in rem* can be total or limited. The latter can be classified as enjoyment rights *in rem* (usufruct, easement, use and habitation, emphyteutic, ground rents and surface rights), acquisition rights *in rem* (option, pre-emption and redemption) and guaranty rights *in rem* (mortgage, pledge and *antichresis*).

Ownership is defined in the Civil Code as the right to enjoy and dispose of a thing, without greater limitations than those set forth in the laws. The Code also provides that the owner shall have an action against the holder and the possessor of the property to reclaim it (art. 348 CC).

Limited rights *in rem* involve other people's things, and grant to their holders limited rights and actions to prevent third parties from disturbing the exercise of their right or not recognizing it.

§ 106ES.02(b) Acquisition of Rights *In Rem* [Go To Main]

Art. 609 of the Civil Code sets forth that "ownership is acquired by occupancy. Ownership and other rights over property are acquired by law, by gift, by testate and intestate succession, and as a result of certain contracts by tradition. They may also be acquired by prescription."

This list of the Civil Code has been criticized but it may be useful to define the different ways to acquire rights *in rem*:

(a) **Occupancy**: property rights capable of appropriation without an owner, such as game or wild fish, hidden treasure and abandoned movable things, are acquired by occupation (art. 610 CC). Therefore occupancy can be used to acquire ownership, not limited rights *in rem*, of movable property, by taking control of a thing with the intent of acquiring it for oneself.

(b) **Discovery of a hidden treasure**: a hidden treasure is defined as the hidden and ignored deposit of money, jewelry or other precious objects, when it is unknown who they legitimately belong to (art. 352 CC). Hidden treasure shall belong to the owner of the land on which it is found. However, when the discovery happens by chance on another's property, or on State property, half shall belong to the discoverer. If the objects discovered should be of interest to science or art, the State may acquire them for their fair value. Payment shall be distributed in accordance with the above provisions (art. 351 CC).

(c) **Finding**: a person who finds a movable thing that is not a treasure must return it to its owner. If the owner is unknown, he must immediately consign it with the mayor of the municipality where it was found. The mayor shall publish the finding on two consecutive Sundays. If the owner does not appear within two years counting from the second publication, the thing found or its value shall be awarded to the person who found it. If the owner should appear in time, he shall be obliged to pay, as an award to the person who found it, approximately 5% of the value of the thing (art. 615 and 616 CC).

(d) **Accession**: ownership of the property shall, pursuant to the right of accession, entitle the owner to everything produced thereby, or naturally or artificially joined or incorporated thereto (art. 353 CC).

(e) **Gift:** a gift is an intentional liberality whereby a person gratuitously disposes of a thing in favor of another person, who accepts it (art. 618 CC).

(f) **Succession** (arts. 657 to 1087 CC): succession takes place pursuant to the will of a person expressed in a testament--testamentary succession--and, where intestate, by operation of law--legal succession. A person who succeeds pursuant to universal title is an heir, and a person who succeeds pursuant to specific title is a legatee.

(g) **Prescription** (arts. 1930 to 1975 CC): ownership of movable property prescribes after three years of uninterrupted good faith possession, or six years without any other condition. Ownership and other rights *in rem* over real property prescribe after ten years' possession for persons resident in Spain, and twenty for those persons not residing in Spain, in good faith and with just title. Ownership and other rights in rem over real property also prescribe as a result of thirty years of uninterrupted possession, without requiring any title or good faith, and without distinction between residents and non-residents, save in case of some easements (art. 1959 CC).

(h) **Delivery** (arts. 1095, 1462 to 1464 CC): the effect of transfer takes place when in the operation of an agreement between the parties, the *tradens* delivers the property with the intent to transfer ownership. Therefore the Spanish system follows the theory of title and manner: the purchaser by means of the agreement or title acquires a credit against the vendor, the right to request the delivery of the thing or right. The acquisition of ownership or a right *in rem* takes place only upon delivery (manner).

Supp. To CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions Supp. to § 106ES.03

Supp. to § 106ES.03 Limited Rights In Rem

[Go To Main]

§ 106ES.03(a) Usufruct [Go To Main]

Usufruct entitles one to enjoy another's property with the obligation to preserve its form and substance, unless otherwise authorized by the deed pursuant to which it was created, or the law (art. 467 CC).

Usufruct is created by law (for example, usufruct rights of the surviving spouse set forth in the CC), by the will of individuals expressed in acts *inter vivos*, or in a last will and testament and by prescription (art. 468 CC).

§ 106ES.03(b) Use and Habitation [Go To Main]

Use entitles a person to receive from among the natural, industrial or economic products resulting from a thing belonging to another, those resources that are sufficient for the needs of the holder of the right and his family, even if the latter should increase in size. Habitation entitles a person to occupy in another's house the necessary rooms for himself and the persons in his family (art. 524 CC). These rights are regulated by the title establishing them, and subsidiarily by the CC.

§ 106ES.03(c) Easement [Go To Main]

An easement is an encumbrance imposed on real property for the benefit of another property belonging to a different owner. The real property in whose favor the easement is constituted is called a dominant tenement; the property subject to it is the servient tenement (art. 530 CC). Easements may also be established for the benefit of one or several persons or a community to whom the encumbered property does not belong (art. 531 CC).

The CC sets forth the following classification of easements:

- continuous or discontinuous, depending on the use.

- apparent or non-apparent, depending on whether they present external signs or indications of their existence. (art. 532 CC).

- positive or negative. A positive easement is that which imposes on the owner of the servient tenement the obligation to allow something to be done or to do it himself, and a negative easement is that which forbids the owner of the servient tenement from doing something which would be lawful if the easement did not exist (art. 533 CC).

- Legal or voluntary, depending on whether the easement is established by law or by the will of the owners.

§ 106ES.03(d) Ground Rents (*Censos*) [Go To Main]

A ground rent is constituted when certain real properties are earmarked for the payment of an annual rent or annuity as remuneration for a capital sum received in cash, or for the full or limited ownership transferred in respect of the same properties (art. 1604 CC).

This is, as mentioned above, a limited right *in rem* on real property which is subject to the encumbrance of paying a rent or annuity. If the owner or person in possession fails to pay, the real property given as a guaranty may be disposed of in order to collect the payment with the proceeds of the sale.

§ 106ES.03(e) Emphyteutic Ground Rents [Go To Main]

The ground rent is emphyteutic where one person assigns in favor of the other useful ownership of a property, and reserves for himself legal ownership and the right to receive from the emphyteutic lessee an annual pension due to his ownership (art. 1605 CC). The emphyteutic lessee has a right to the produce of the property and any accessions thereof, and shall have the same rights as the owner to any treasures and mines discovered on the property constituting the subject matter of the emphyteutic ground rent (art. 1632 CC). Another distinctive feature is that the emphyteutic lessee may dispose of the emphyteutic property and any accessions *inter vivos* and by last will and testament, except for the rights of the direct owner and subject to the other provisions of the CC.

§ 106ES.03(f) Surface [Go To Main]

This right is mentioned but not regulated in the CC. It is defined in the Land Act (Royal Legislative Decree 2/2008, of June 20) as a right *in rem*. The right permits the surface lessee to build structures on the slope, projection and subsoil of property of another. The lessee keeps the temporal ownership of the structures built. This right may also be granted on structures already built or on dwellings, premises or privative elements of structures.

For the surface right to be duly incorporated it must be granted in a public deed, and registered in the Property Registry.

The public deed must state the duration of the surface right. The right may not exceed ninety nine years.

The surface right may only be granted by the owner of the land.

The surface right may be subject to consideration. If it is for consideration, it may be payment of a lump sum or a periodic amount, or the allocation of dwellings or premises or lease rights in favor of the owner of the land, or a combination of some of the above. This is notwithstanding the total reversion of the buildings at the end of the term agreed to upon constitution of the surface right.

§ 106ES.03(g) Option [Go To Main]

An option is the right that the owner of a thing grants to a third party in order to acquire it, paying the agreed price and any other stipulated amounts (DIEZ-PICAZO y GULLON, *Sistema de Derecho Civil*, vol. III, Ed. Tecnos). The option agreement may be for consideration or not.

To become effective vis-a-vis third parties the option must be registered in the Property Registry. Art. 14 of the Mortgage Regulation provides that options to purchase agreements or express covenants or stipulations expressly determining this in any other contract subject to registration, may be registered as long as, in addition to the usual requirements for registration, they meet the following requirements:

1. Express agreement between the parties regarding registration.

2. Stipulated price for the acquisition of the property and price agreed for the granting of the option, if any.

3. Term for the exercise of the option, which shall not exceed four years.

Options in leases or other contracts may have a duration greater than 4 years, but shall only be effective between the parties and not vis-a-vis third parties. Unless otherwise agreed to between the parties an option expires upon tacit or legal extension of the lease agreement.

§ 106ES.03(h) Pre-emption and Redemption [Go To Main]

Pre-emption entitles the rights holder to acquire a thing before a third party for the same price that the latter would be willing to pay.

Redemption entitles the holder thereof to acquire a thing that has been sold, for the same price paid by the third party under the same conditions set forth in the acquisition agreement.

Pre-emption and redemption rights may be established by law (for example, the right of the lessee to acquire the leased property in case of sale--art. 25 Urban Lease Act), but they can also be agreed between the parties.

§ 106ES.03(i) Mortgage [Go To Main]

A mortgage directly and immediately subjects the property it encumbers, no matter who its possessor is, to the performance of the obligation it was created to secure (art. 1876 CC). Therefore it is a right *in rem* of guaranty, which grants a right to compel the sale of the mortgaged property, and use the resulting price as consideration for the principal

obligation that has been secured.

The constitution of a mortgage requires the granting of a public deed and registration in the Property Registry.

Depending on their origin, mortgages can be classified as legal or voluntary. Voluntary mortgages are those agreed between the parties or imposed by the owner of the secured properties, and may only be constituted by those who are able to freely dispose of them or, if they may not, they are authorized by the laws to constitute a mortgage (art. 138 of the Mortgage Law). Legal mortgages are those expressly established by law. This legal provision means that the persons in favor of whom the law grants a legal mortgage have the sole right to request the incorporation of a special mortgage that is sufficient enough to guarantee their right (art. 158 ML).

The general rule is that a mortgage may be constituted to secure any kind of obligation and shall not alter the unlimited personal liability of the debtor set forth under art. 1911 CC (art. 105 ML). However, the public deed of incorporation of the voluntary mortgage may establish that the secured obligation is only covered by the mortgaged properties. If that happens the liability of the debtor and the action of the creditor, by virtue of the mortgage, are limited to the amount of the mortgaged properties, and shall not affect the remaining properties of the debtor (art. 140 ML). In practice and unlike what happens in other countries, the application of the covenant of limitation of liability to the mortgaged properties is not usual. Therefore, in the context of a general fall of real estate prices, it is not surprising that the sale value of the mortgaged real property is less than the secured debt, and therefore the execution of the mortgage does not release the debtor, who shall continue to be personally liable with all its present and future properties for the unpaid part of the debt.

§ 106ES.03(j) Pledge [Go To Main]

There are two kinds of pledge depending on whether the thing subject to pledge is delivered to the creditor, a third party or not.

A pledge with a change in possession, regulated in the CC, is a right *in rem* guaranty, which grants the right to dispose of the thing pledged and use the resulting amount to pay the credit. Pledge contracts may secure all kinds of obligations, and all movable things that are subject to trade may be pledged, provided that they are capable of being possessed. The correct constitution of a pledge requires, in addition to an agreement by common consent, giving possession of the thing to the creditor or to a third party. No pledge shall be effective against a third party unless the certainty of its date is set forth in a public instrument.

A pledge without change of possession is regulated under the law of Movable Mortgage and Pledge without Displacement (law of December 16, 1954), which establishes a *numerus clausus* of the things capable of being pledged: agricultural fruits, crops, forest products, animals, certain machines, tools and the products from agricultural and farming exploitations, stored merchandises and raw materials and paintings, sculptures, pieces of china, books and any other thing of artistic or historic value. Credits and other rights corresponding to the holders of agreements, licenses, administrative concessions or grants may be subject to pledge without change in possession as long as the law or the relevant constitutive title authorizes their sale to a third party. Credit rights, even future credits, may be subject to pledge without change in possession as long as they are not represented by securities and are not considered as financial instruments for purposes of Royal Decree-law 5/2005, of March 11, of Urgent Reforms to boost Productivity and improve Public Contracting. To be effectively constituted they shall be registered in the Registry of Movable Goods.

§ 106ES.03(k) *Antichresis* [Go To Main]

Pursuant to *antichresis* the creditor acquires the right to receive the economic benefits of real property belonging to the debtor. The receipts are allocated first to any interest, if due, and subsequently to the principal (art. 1881 CC).

The creditor is obliged to pay any taxes and charges that the property may be subject to, and the necessary expenses for the conservation and repair of the property. He may deduct any amounts spent from the economic benefits produced. If the debtor does not pay the debt in time, the creditor may claim, according to the Civil Procedure Law, the payment of the debt or the sale of the property.

§ 106ES.03(l) Time-Sharing [Go To Main]

Law 42/1998, of December 15, which regulates time-sharing rights in real property used for tourism and tax rules, meant not only the transposition of Directive 94/47/CE, but also the development of a broader internal regulation. The aim was to regulate a new legal concept which was remarkably on the increase in a booming Spanish tourism sector. A new time-sharing right *in rem* was created, which could also be configured as a variant of a seasonal lease.

By virtue of a time-sharing right in real property one is entitled to enjoy, exclusively, during a specific period each year, an accommodation capable of being used independently and which has the appropriate furniture for this purpose, and complementary services.

The yearly period of use may never be less than seven days in a row. The duration of this right may be from three to fifty years.

This right must be granted in a public deed and registered in the Property Registry. The law establishes a minimum content for the agreement (art. 9).

The acquirer of time-sharing rights has a term of ten days from the signature of the agreement to desist at his own discretion without any cost. He may also terminate the agreement within three months if the latter does not contain any of the references or documents required by law, or if the acquirer has not been sufficiently informed. The mentioned terms are also important because any advance payment by the acquirer to the transferor before expiry of these terms is forbidden.

Supp. To CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions Supp. to § 106ES.04

Supp. to § 106ES.04 Lease

[Go To Main]

Leases are regulated by Law 49/2003, of November 26, regarding Rustic Lease and law 29/1994, of November 24, regarding Urban Lease.

Subsidarily they are addressed in the Spanish Civil Code (Book IV, Title VI, Chapters I and II--articles 1542 to 1582).

§ 106ES.04(a) Rustic Lease [Go To Main]

Law 49/2003 covers lease agreements on properties to be used for agricultural, ranching and forestry purposes. A specific type of exploitation of a property can also be the object of a lease agreement, as long as the parties expressly state this and attach an inventory to the agreement. It is possible to simultaneously have leases for different types of exploitation of the same property.

Under Law 49/2003 both property and exploitation lease agreements incorporate the right of agricultural production and other rights inherent in the leased property or exploitation.

§ 106ES.04(b) Urban Lease [Go To Main]

Law 29/1994 covers lease agreements on urban properties and distinguishes two kinds of urban leases:

-- Housing lease:

Housing leases are lease agreements on habitable properties to be used as permanent housing by the lessee. It also applies to furniture, store rooms, parking places or any other places leased as an accessory to the property.

Legal dispositions regarding housing leases are aimed at protecting the lessee. Therefore any clause contained in the agreement which modifies the legal dispositions against the interests of the lessee is considered null and void.

The duration of housing leases is negotiated between the parties. However, if the duration of the agreement is less than five years, then it is automatically extended for further one year terms up to a minimum duration of five years. The lessee has the option to terminate the lease with 30 days notice.

By law the lessee must provide a rental deposit equal to at least one month's rent. It is common practice for a lessor to request a rental deposit that is higher or even to ask for a bank guaranty.

-- Lease for a use other than housing:

Lease agreements on properties for purposes other than the one described above include seasonal lease agreements and lease of properties to be used for industrial, commercial, professional, recreational, cultural or educational purposes.

The duration of leases for a use other than housing can be freely agreed between the parties.

The lessee must provide a rental deposit equal to at least two monthly rental payments. It is common practice for lessors to request a rental deposit of more than that required by law or to ask for a bank guaranty.

When a business or professional activity is carried out at the leased property, the lessee may sublease the property or assign the lease agreement without the lessor's consent. Unless otherwise agreed by the parties, the lessor is entitled to a ten per cent increase in the rent if there is a partial sublease, and a twenty per cent increase if there is an assignment of the agreement or total sublease of the property. Changes in the person of the lessee as a consequence of merger, transformation or spin-off of the lessee company are not considered as an assignment, but unless otherwise agreed by the parties, the lessor shall be entitled to the rent increase mentioned above.

Unless otherwise agreed between the parties, upon termination of a lease agreement for a property which has served for the previous five years as the site where sales to the public are made, the lessee shall be entitled to compensation from the lessor, as long as the lessee has communicated four months in advance of the termination date its intention not to extend the agreement for at least five more years and for a market rent.

Supp. To CHAPTER 106ES PROPERTY LAW IN SPAIN

13-106ES Thompson on Real Property, Thomas Editions Supp. to § 106ES.05

Supp. to § 106ES.05 Tax

Bill of Rights

This section addresses below the taxes on the different legal transactions involving real property, and on the ownership of rights *in rem*. There are distinctions between investment in properties, the term when ownership thereof is held and, finally, the transfer of properties. This brief section does not discuss the enormous variations in taxes, particularly indirect taxes, established for particular situations and circumstances.

§ 106ES.05(a) Acquisition of Real Properties Art. 59, Constitution

Upon acquisition of a property for consideration, whether monetary or in kind, the purchaser is subject to one of the following indirect taxes, which are exclusive of each other. These are applicable whether the purchaser has its tax residence in Spain or not.

If the seller is a businessperson or a professional and the property is new, Value Added Tax (VAT) is applicable. VAT taxes the entire building process, from the beginning until the end, at one time which is at the moment of transfer by the developer. Further transfers are VAT-free but subject to Transfer Tax and Stamp Duty (*Impuesto sobre Transmisiones Patrimoniales y Actos Juridicos Documentados-ITPyAJD*). The general rule is for the seller to charge VAT to the purchaser. From July 1, 2010, the applicable VAT is 8% of the value of the property in case of housings, and 18% in case of business premises.

When the transfer is subject to *ITPyAJD*, and has been for consideration, it is generally subject to a tax rate of 7 to 8 % of the value of the property (the automous regions, the Basque Country and Navarre, may modify it).

On the other hand if the transfer is granted in a public deed, which is normally the case, in addition to VAT it is also subject to a Documented Legal Acts tax at a rate of 0.5 % of the value of the property, unless the autonomous regions, the Basque Country or Navarre have ruled otherwise.

Finally, with respect to an acquisition by inheritance or donation of a property, the person receiving the property is subject to the Inheritance and Donation Tax, with a progressive tax rate depending on the value of the acquired

property. In these cases no indirect tax is applicable.

§ 106ES.05(b) Ownership of Real Properties [Go To Main]

Any person or entity who is the owner of a property, either rural or urban, is subject to a local tax (from the town hall where the property is located) which accrues yearly. This Real Estate Tax (*Impuesto sobre Bienes Immuebles-IBI*) is paid by residents and non-residents in Spain, at a rate of approximately 1% of the so-called property value, which is determined by town halls and updated every year.

In addition to *IBI* if the owner of a property is a legal person non-resident in Spain that does not carry out economic activities in Spain, it shall be subject to another yearly tax, the Special Tax on Real Properties of Non Resident Entities (*Gravamen Especial sobre Bienes Inmuebles de Entidades No Residentes*), which amounts to 3% of the property value.

Any income obtained from real properties, for example, due to a lease to a third party, shall be subject to the Income Tax *(Impuesto sobre la Renta de las Personas Fisicas-IRPF)*, Company Tax (*Impuesto sobre Sociedades-IS*) or Income Tax for Non Residents *(Impuesto sobre la Renta de No Residentes-IRNR)*.

Furthermore rents obtained from real properties used in an economic activity may be subject, in some cases, to the Tax on Commercial and Professional Activities (*Impuesto sobre Actividades Economicas-IAE*), a local tax.

§ 106ES.05(c) Transfer of Real Properties [Go To Main]

In the realm of direct taxes, the capital gain resulting from the sale of a property, if any, due to the difference between purchase value and sale value is subject to the *IRPF*, *IS* or *IRNR*. Regarding *IRPF* the capital gain is subject to a fixed rate of 19% (up to 6.000 [Euro]) and 21% for the excess.

If *IS* is applicable, the capital gain is usually subject to the general rate of 30%, unless the property is subject to the economic activity carried out by the entity and the transfer value is invested again in the acquisition of other elements corresponding to the relevant activity. In this case the tax would be reduced to 18%.

When applying the *IRNR* there is a distinction depending on whether the property is subject or not to a permanent establishment in Spain. If the owner is, the tax shall be the same as the tax under the *IS*. If it is a non-resident without a permanent establishment, the capital gain is subject to a fixed rate of 19%. Furthermore in these cases the purchaser of the property is obliged to withhold and pay to the Public Treasury 3% of the price agreed, as payment on account of *IRNR* corresponding to the non-resident.

Finally, with the transfer of urban properties a local tax also accrues, the so called "Local Capital Gains Tax" (*Plusvalia Municipal*), which taxes the increase in the value of the land where the property is located from the date of its purchase to the date of its transfer.

CHAPTER 106EU PROPERTY LAWS IN THE EUROPEAN UNION AND THEIR IMPACT ON MEMBER STATES

13-106EU Thompson on Real Property, Thomas Editions § 106EU.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Bringham Young University

§ 106EU.01 The Structure and Governance of the European Union.

In 1951, six European countries signed the Treaty of Paris and thereby formed the European Coal & Steel Community (ECSC). n2 This treaty sought to create a common market for raw materials that are often used to make weapons. The theory was that a common community would be less likely to go to war with itself. The success of this treaty led to the Treaty of Rome in 1957. n3 With this document the European Economic Community (EEC) was born and remains the basis of the European Union (EU). In 1987, the Treaty of Rome was amended by the Single European Act which created more economic and social uniformity among the Member States. n4 The most significant treaty for the establishment of the EU as central governing entity was the Maastricht Treaty on European Union, signed in 1993. n5 Here, the Treaty of Rome was furthered amended to advance the economic purposes of the European community and clarify certain points of conflict.

In 1997, the EU again convened to sign another amendment to the Treaty on European Union. n6 This was done to prepare the EU economic changes, provision for threats to security and public health and crime. n7 The Treaty of Amsterdam directed the EU to have another conference where further changes would be made to the Treaty on European Union. In 2001, the Treaty on European Union was again amended in Nice to prepare for enlargement of the EU. n8 It included changes in voting structures and increased cooperation among the member states. To this date no further treaties have been signed by the Member States. However, in May of 2004 ten new Member States were admitted into the EU.

The four essential organs that make up the EU are the European Council of Ministers (Council), the European Commission (Commission), the European Parliament (EP) and the European Court of Justice (ECJ). Each of these organs works in cooperation with the others in order to achieve the goals set out in the Treaties on the European Union.

The Council consists of representatives from governments of the Member States, and has the primary legislative power within the EU. Its acts are binding upon the Member States. The four different types of legislation that the Council can enact are Regulations, Directives, Decisions and Recommendation or Opinions. The Regulations are directly operative within each of the Member States and do not require any further legislation by them. The Directives are binding objectives given to the Member States but allow each Member State the freedom to implement the measures according

to national policies. Decisions are binding upon those to whom they are addressed. Finally, Recommendation or Opinions are persuasive ideas but are not binding. Council Presidents are in office for six months at a time and the presidency rotates among the Member States. The powers of the Council are checked by the Commission who has the sole power to initiate legislation. n9

The Commission is the executive organ of the EU, with primary responsibility to propose legislative measures, ensure that legislation is followed, and prosecute when proper legislative procedures are not followed. It consists of twenty commissioners from each of the Member States. These commissioners are appointed for five years by common agreement among the Member States. The Commission is able to act quickly because there are limited checks on its authority; however, it is not accountable to the people. n10 Instead, accountability rests on the European Parliament (EP).

With 626 members, the EP represents the entire populace of the Member States of the EU. It is designed to express the political sentiments of the various constituencies throughout Europe. Representatives or MEPs are elected directly by the people and serve five-year terms. EP has the power to censure the Commission, and has a limited veto power over legislation. In the latest version of the Treaty on the European Union the EP was given what is called "co-decision procedure." This basically requires legislation to pass through the EP before it can be made into EU law. n11 For the EU to ultimately enforce all of the laws that could potentially be created by all of these organizations it is necessary to have a supreme court that settles disputes concerning the treaties and legislative materials of the EU.

That court is the European Court of Justice (ECJ), which is the ultimate authority for resolving legal disputes within the realm of EU law. n12 It handles legal actions against both EU institutions and Member States. Its fifteen judges serve six-year terms. Article 177 of the Treaty on the European Union (Treaty) details its jurisdiction and competency. Decisions from the ECJ include interpretations of the Treaty on the validity of EU institutions and resolution of disputes of law that implicate the Treaty. n13 In addition to the ECJ there is a lower level court called the Court of First Instances with limited jurisdiction. These decisions may be appealed to the ECJ. Additionally, the Advocate General can deliver opinions concerning legal issues, which opinions are not binding upon the parties.

The main aim of the EU was once the unification of a common market but recently it has become more concerned with social affairs, equality and fundamental humans rights. These fields of law have traditionally been left to the Member States but more and more the EU is treading into areas such as property law and creating EU common law.

In addition to the organization that has become known as the European Union, another group is the Council of Europe, presently consisting of 45 member nations.

CHAPTER 106EU PROPERTY LAWS IN THE EUROPEAN UNION AND THEIR IMPACT ON MEMBER STATES

13-106EU Thompson on Real Property, Thomas Editions § 106EU.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Bringham Young University

§ 106EU.02 The Council of Europe and Property Law.

"European Community" is a term that includes the European Union and the member countries of the Council of Europe. Therefore the property laws and regulations within the European Community include Treaties of the EU, Regulations from the EU, case law from the ECJ, as well as Treaties of the CoE and case law from the ECHR.

The most significant legal document within the Council of Europe is the Convention for the Protection of Human Rights and Fundamental Freedoms. n14 As the name implies, fundamental freedoms and human rights are protected by governments who are signatories to this document. With regard to property, Protocol 1, Article 1 of the Convention provides: n15

> **Protection of property**
>
> Every natural or legal person is entitled to the peaceful enjoyment of his possessions. No one shall be deprived of his possessions except in the public interest and subject to the conditions provided for by law and by the general principles of international law.
>
> The preceding provisions shall not, however, in any way impair the right of a State to enforce such laws as it deems necessary to control the use of property in accordance with the general interest or to secure the payment of taxes or other contributions or penalties. n16

The objective of this article has been clarified in the following statement: "By recognizing that everyone has the right to the peaceful enjoyment of his possessions, Article 1 (P1-1) is in substance guaranteeing the right of property. This is the clear impression left by the words 'possessions' and 'use of property.' " n17 The terms "right to property" and "right of property" were used to describe the subject matter of draft documents that were forerunners to this article. n18 Another policy behind this article is to guard against arbitrary confiscation of property. n19 Three distinct rules are embodied in the Article:

The first rule, in the first sentence of the first paragraph, states, "every...person is entitled to the peaceful enjoyment of

his possession." n20 This is a general rule that "enunciates the principle of the peaceful enjoyment of property." n21 The second rule, in the second sentence of the first paragraph, states, "[n]o one shall be deprived of his possessions," subject to certain conditions. n22 This rule covers deprivation of possessions unless there is sufficient justification based on the stated conditions. n23 The third rule, found in the second paragraph, "recognizes that the States are entitled, among other things, to control the use of property in accordance with the general interest, by enforcing such laws as they deem necessary for th[at] purpose." n24 The three rules are interwoven. n25

The ECHR follows a two-step analysis in determining whether a Member State has violated these rules. n26 This analysis first determines whether there is an interference with a property right and then whether this interference was justified; if the interference is not justified then a violation has occurred. n27

According to the first step in the analysis, n28 an interference occurs when national laws, permits, or decrees significantly reduce the possibility of property use or the very substance of its ownership. n29 If a right to property becomes "precarious and defeasible" then an interference has occurred. n30 In the case of *Sporrong and Lonnroth v. Sweden*, n31 the government issued expropriation permits on properties in a section of Stockholm in order to prepare for the construction of a highway outlet from the city center. n32 Later the government issued prohibitions on construction for these same properties, which kept the owners from building and even selling their land for market value. n33 The ECHR found that this amounted to an interference under the first test of P1-1. Similarly, in France there is a law requiring landowners to join an association which will allow the general public to use their land to hunt. n34 Landowners who wished to exclude hunters from their land were denied this property right and brought a P1-1 claim in the ECHR. n35 The court found that the right to exclude is a fundamental property right. n36 Therefore, the French hunting law was found to be an interference under P1-1. In another case, the British government seized some coins that were illegally imported into England. n37 Here the ECHR found that by seizing the coins an interference with a property right had occurred, however, the court quickly moved to the second prong in order to determine whether this interference constituted a violation of the P1-1 rules. n38

Once an interference has been identified then one must ask whether the interference is justified. An interference is justified if it achieves "a 'fair balance' between the demands of the general interest of the community and the requirements of the protection of the individual's fundamental rights." n39 Whether a "fair balance" has been achieved depends upon two factors: the legitimacy of the interference's aim and the proportionality between the aim sought and means employed. n40 In testing for a fair balance the court recognizes that the Member States enjoy a wide "margin of appreciation" in choosing which policies will best suit their needs. n41

A legitimate aim is one which confers a direct benefit on the general public interest. n42 In *James v. the United Kingdom*, landowners brought a P1-1 claim against the government because of a law which compelled the landowners to sell their land to long-term leaseholders who met certain requirements. n43 The law was enacted in order to reform real property laws that lead to social injustices. n44 The court found that since the legislation promoted the public interest and enhanced social justice within the community it was a legitimate aim. n45 In *Chassgnou v. France*, the court also found that the hunting law served the legitimate purpose of regulating hunting and encouraging rational management of wildlife. n46 In sum, a legitimate aim can be reached by any bona fide social, economic or political policies that seek to benefit the public interest. n47

Finally, there must be "a reasonable relationship of proportionality between the means employed and the aim sought to be realized." n48 In *Sporrong*, this proportionality was expressed as a balancing test. n49 The balance is between the property owner's right to "peaceful enjoyment" and the public interests. n50 When the burden on the property owner is proportional to the benefit enjoyed by the public then a fair balance has been reached. n51 In *Chassagnou*, the hunting law "upset the fair balance" between the property owners' rights and the general public's interests because the property owners were compelled to allow hunters onto their property allegedly without a significant benefit to the general public, since other hunting lands were available. n52 In *Sporrong*, the court found that the expropriation permits and prohibitions on construction on useful land were out of balance with the rights of the property owners since no actual

benefit ever inured to the general public and no measures were taken to remedy the situation. n53

The objective of Article 1 of Protocol 1 is to protect property owners from arbitrary interference with their property and to enable full enjoyment of the property. n54 These goals are often achieved through legal reforms that come about because of the decisions rendered by the ECHR. Member States are given a wide margin of discretion, or appreciation, to determine what is in their public's best interest. However, often the means employed by the Member States infringe upon guaranteed property rights. n55 In these cases the Community law intrudes into areas traditionally left to the competency of the Member States.

The policy behind the Convention is to unify Europe along the lines of fundamental human rights. By agreeing to a single standard, which is the Convention, the Member States are able to gradually discard those property laws which do not conform and thus achieve greater unity until each one has substantially similar property laws.

CHAPTER 106EU PROPERTY LAWS IN THE EUROPEAN UNION AND THEIR IMPACT ON MEMBER STATES

13-106EU Thompson on Real Property, Thomas Editions § 106EU.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Bringham Young University

§ 106EU.03 The European Union and Property Law.

§ 106EU.03(a) Principal Property Laws and Regulations of the European Union.

The most important legal document in the EU is the Treaty on European Union (Treaty) with its various amendments and revisions. This is the document that gives life to the EU through a complex organization of institutions, Foreign Ministers, Commissioners, Members of Parliament and a "Supreme" court (aka. The European Court of Justice). As set forth in the Maastricht Treaty, the objectives of the EU are to promote economic and social progress, achieve sustainable development, strengthen and protect the rights of citizens of the Member States, develop the Union into an area of security and freedom and create a common market. n56 In order to achieve these objectives the Council of Ministers has legislative power to enact regulations which Member States incorporate into their domestic laws. n57 Often these regulations impact the property laws of the Member States. n58 In addition, the Treaty provides in Article 6 that

> The Union is founded on the principles of liberty, democracy, respect for human rights and fundamental freedoms, and the rule of law, principles which are common to the Member States.
>
> The Union shall respect fundamental rights, as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms signed in Rome on 4 November 1950 and as they result from the constitutional traditions common to the Member States, as general principles of Community law. n59

Embodied in Article 6 are the guarantees found in the Convention such as the right to "peaceful enjoyment" of one's property and possessions. n60 The legislative regulations produced by the Council must take into account these fundamental Community policies toward property. To secure this fundamental right to property the European Court of Justice (ECJ) hears cases where the Council Regulations come into conflict with the Convention and thereby create common property law in the European Community.

§ 106EU.03(b) Property Case Law of the European Court of Justice.

"In all Member States, numerous legislative measures have given concrete expression to [the] social function of the right to property. Thus in all the Member States there is legislation on agriculture and forestry, water supply, protection of the environment and town and country planning." n61 These national measures restrict the use of property and infringe upon the full use of property, but do so for the public interest without creating a disproportionate burden on any one individual.

The fundamental rights analysis concerns whether Council Regulations are violations of property rights. Member States incorporate Council Regulations into their domestic laws, domestic laws among the Member States become more similar and unified, and thus help achieve the goal of the EU. The ECJ decides whether these laws are valid according to the Convention for countries which are members of the CoE and according both Convention and Treaty for countries who are members of the EU.

In the case of *Hauer v. Land Rheinland-Pfalz*, the plaintiff had applied for a permit allowing her to plant a vineyard on her property. n62 The application was denied under German law due to the unsuitability of the land. The plaintiff appealed the decision. While the appeal was pending, the Community through the Council adopted Regulation No. 1162/76 which prohibits Member States from issuing new vineyard permits for a period of three years. n63 The purpose of the Regulation was to re-establish a market for wine and stop overproduction within the Member States. n64 The court of appeals in Germany held that the land was suitable for a vineyard; however, it could not grant the planting permits due to the prohibition in Regulation No. 1162/76. Therefore, this case was brought to the ECJ in order to decide whether the Council Regulation infringed upon fundamental property rights and property rights guaranteed by the German Constitution. n65

The court first pointed out that there was no deprivation of property under Protocol 1, Article 1 of the Convention. n66 However, the court did find an interference with a property due to the control which the regulation imposed on the landowner's right to plant. n67 The court determined that the interference was justified as a remedy for overproduction of wine. Since the aim focused on a benefit to the public, and no one party was disproportionately burdened, the Regulation was justified. n68 It is interesting to note that in this case the German government was ready to issue a planting permit to the plaintiff but because of the Council Regulation was unable to do so. n69

In the case of *Wachauf v. Bundesamt fur Ernaehrung und Forstwirtschaft*, n70 Council Regulation 857/84 n71 dealing with milk production quotas was called into question. The aim of the regulation was to curb growth of milk production by fixing quotas, or reference quantities, on individual holdings and attaching a levy when milk quotas are exceeded. n72 The plaintiff was a tenant farmer, who through his own labors, had earned the rights to produce milk based on the reference quantities set forth in the regulation. Upon the expiration of the lease, the tenant sought compensation because he was going to definitively cease to produce milk and therefore give up his property rights. n73 The court made it clear that the property right of milk production is a right that runs with the land. n74 However, the court stated "that the Community legislature intended that at the end of the lease the reference quantity should in principle return to the lessor who retakes possession of the holding, subject, however, to the Member States' power to allocate all or part of the reference quantity to the departing lessee." n75 This rule could have the effect of precluding the lessee from benefiting from the system of compensation inherent in the regulation because the lessor can refuse to consent to compensation. n76

The court declared that it would be unacceptable for a farmer who has earned production rights to lose those unused rights upon the expiration of the lease. n77 Therefore the court stated that "community rules which, upon the expiry of the lease, had the effect of depriving the lessee, without compensation, of the fruits of his labor and of his investments in the tenanted holding would be incompatible with the requirements of the protection of fundamental rights in the Community legal order." n78 And these requirements also bind the Member States "when they implement Community rules, the Member States must, as far as possible, apply those rules in accordance with those requirements." n79

The Council Regulation was upheld because the Member States had a sufficient margin of appreciation to allow for

compensation to lessee like the plaintiff and therefore, it did not infringe upon those protected fundamental property rights. n80 However, in order to conform to this holding the Member States would have to alter their domestic property laws in a way that would provide compensation to or otherwise protect the property right of tenant farmers in the future. n81 Along these same lines other cases have held that "it cannot be left to the national authorities and courts to determine the substantive content of [] fundamental [property] right[s]. It is possible and to be expected that they should have a certain discretion with regard to the detailed formulation of the rules to protect the interests of tenants but it must ultimately be the Court of Justice which lays down the limits on that discretion, a not altogether easy task."

Again, it is clear that the EU has taken steps to unify the European Community by outlining the goals that each Member State should accomplish in the area of property law. On the other hand there are only two areas in which the ECJ may truly intrude into national legislation: "first, where the national legislation implements Community rules, and secondly, but more indirectly, in cases where a Treaty provision derogating from the principle of freedom of movement is relied on by a Member State in order to justify a restriction on freedom of movement stemming from that Member State's legislation." n82

The EU institutions and their courts must be careful to allow Member States to resolve concerns of fundamental rights, mainly because each one knows better what their citizens' needs are. n83 The institutions of the EU are set up in order to achieve greater economic unity and secure common freedoms but not to legislate in areas of law traditionally left to the Member States. This is a very delicate and fine line, walked by both the Member States and the EU.

CHAPTER 106FR PROPERTY LAW IN FRANCE

13-106FR Thompson on Real Property, Thomas Editions § 106FR.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106FR.01 History of Property Law in France.

§ 106FR.01(a) Introduction.

The historical development of French property flows from two distinct cultural streams. One stream, issuing from the south, is the sophisticated written law introduced by the Romans. The other stream emanated from the north with the vigorous and varied customary law of the Celtic and Germanic peoples. The migrations of the latter inevitably confronted the conquering advances of the former to give French law its vitality. French law has also been influenced by canon law, especially as applied by specialized courts during the Middle Ages. n1

§ 106FR.01(b) Landholding Before the Romans.

When Julius Caesar invaded Gaul in the 1st century B.C., he found a land without specific boundaries, occupied in large part by nomadic Celtic tribes. These tribes travelled and settled where they pleased in the land and sometimes they resumed migrations even before beginning true settlements. Caesar describes land distribution and landholding customs among some of the Celtic tribes that he encountered:

> None of them [members of the tribe] possesses any settled amount of land of his own; and none of them has any enclosed fields; but each year the chiefs and the magistrates distribute the land to the families and to the male relatives ... The following year they are compelled to trade places. n2

Tacitus, another contemporary Roman observer, describing Germanic customs of the same era, told of an "en bloc" ownership by the Germanic community, the extent of which was determined by the number of cultivators. He also described a system of repartition and crop rotation among the members of the community, based at least partially on social rank. n3

As to other landholding customs among the Gauls, they were probably similar to those of contemporary British Celts, to some of whom they were related and with whom they communicated often. Where farming was practiced, the most common pattern for the British Celts was the cultivation of small rectangular fields marked off by low banks of earth or rocks or some similarly conspicuous boundary. Such land, along with grazing land, was held by family groups, so that clusters of fields would have been worked by farmers connected through blood ties. The rights to use these fields would

quite likely have been passed on to kinship descendants. n4

§ 106FR.01(c) Landholding During and After Roman Rule.

After Gaul became a province of Rome, its lands were considered as belonging to the Roman people or to the Emperor. Although varied landholding arrangements were introduced, a typical form of ownership was a lease to a private persons under a revocable tenure known as a *precarium* in consideration of the payment of tax. n5 Roman concepts of land were disseminated throughout Gaul through distribution of land to discharged legionary veterans and through the growth of Roman cities and commerce.

The eventual enfeeblement of Roman public authority in Gaul strengthened the power of the great private landholding proprietors. Pressure from invading barbarians and weakened imperial military forces required the fortifying of many towns and prompted great landholders to set themselves as feudal lords in the 5th century A.D. These magnates became independent of local public authorities such as municipal magistrates and maintained private militias and their own tribunals; they exercised authority over the inhabitants of their estates and collected the equivalent of taxes from them. n6

Early in the 5th century A.D., the Germanic tribes of Visigoths, Burgundians and Franks, who had been mercenaries of Rome, established their independence from the Empire and introduced Germanic legal customs and institutions into Gaul. Written codes of laws began to appear, often containing separate provisions for the Germanic inhabitants and for the Roman citizens living in the tribal territories.

The Visigothic laws, and more particularly the Code of Euric, are believed to have directly or indirectly influenced most Germanic law codes thereafter. The Code of Euric, from ca. A.D. 476, shows some Roman influence. The Lex Romana Visigothorum was promulgated by the Visigothic King Alaric II in A.D. 506, to govern Romans living in Visigothic territories. This collection is also known as the Breviarium Alaricianum (Breviary of Alaric). The Leges Visigothorum is a collection of laws that had been issued by Euric's successors, applying to both Gothic and Hispano-Roman subjects. The collection was promulgated in A.D. 654, and replaced the Lex Romana Visigothorum.

Euric's code seems to have been the immediate source for the early codes of both the Salian Franks n7 and the Burgundians, n8 and the Bavarian n9 and Lombard n10 codes also show Visigothic influence. Another early Frankish code, the Lex Ribuaria, n11 was based on the Salian code, and it in turn influenced the codes of the continental Angles and Saxons of the Carolingian Age.

The best known of these early Germanic codes--indeed the oldest Germanic code that is completely preserved--is the Lex Salica, which as been described as "primarily a penal law ... concerned with the redress of crimes (murder, theft, mutilation, exploitation of women) by monetary means." n12 The Lex Salica and the other early codes consist of both individual "statutes" and precedential judicial sentences ("Weisthuemer"), but they do not refer to most customs of daily living, such as occupancy of land, personal property, commercial dealings, inheritance, family relationships, and class privilege. The only references to land law in the Lex Salica are provisions requiring money payment for damage to agricultural fields, n13 blocking the way of another, n14 and improper fencing and enclosing. n15

Under these Germanic tribal rulers, what had been Roman public lands passed to the Germanic chieftains, who kept part and distributed the rest to their principal followers. Some tribes established themselves as guests on the lands of wealthy Romans, at first sharing only the revenue and produce of the lands, but later claiming a share of ownership and title. n16

§ 106FR.01(d) The Emergence of Feudalism.

During these Dark Ages, when the Merovingian Dynasty passed from the scene and the Carolingian Dynasty emerged, the evolution of landholding patterns into forms of feudalism continued uninterrupted. For most people in France, these

feudal arrangements only gradually emerged and changed in response to changes in social conditions. In the 9th century A.D., the emperor Charles the Great followed the Frankish custom under which he considered property and revenues of the empire as his family property. Compensation to his principal supporters, servants and counselors was paid by gifts of land, usually with requirements of military service attached. However, upon the death of Charlemagne, Germanic society suffered a relapse:

> The decades that followed Charles's death witnessed the rapid disintegration of the Empire he had created. Empire and papacy alike became immersed in an abyss of anarchy and barbaric lawlessness. The governing principles of society were the law of force on the one hand and the need for protection on the other. In the course of the ninth century the State lost all contact with the urban tradition and became completely agrarian. The life of the feudal nobility was spent in warfare and private feuds. From their strongholds the feudal lords terrorized peaceful villagers and passing travelers. n17

Despite the lawlessness of the aristocracy, the disintegration of a strong monarchy meant that the people could turn only to local feudal lords for protection; thus society became increasingly feudalized in the 9th century A.D. Land grants under such circumstances became increasingly hereditary and through subinfeudation a hierarchy of vassalage eventually developed. These feudal landholding arrangements, either on lands of the monarch or of a member of the aristocracy, have been described as follows:

> The land was divided into estates which were self-sufficient units ... In the center of each estate was located the lord's domain, surrounded by the huts of the peasants, each of whom had a small strip of land attached to his dwelling ... Part of the arable land that surrounded the village was set aside for the exclusive use of the king or lord. What remained was parceled out among the peasant tenants. The fields were divided into three parts, one of which was used for the planting of the summer crop, the second for the winter crop, while the third part would lie fallow... The cultivation of the fields was a communal and co-operative enterprise, although each peasant harvested the crop from his own strips of land.
>
> * * *
>
> The lord gave the peasant protection, furnished the land, built a mill and a village church, and administered justice in the territory that he had learned to consider his own, either by inheritance or by special grant. The peasant in turn, enjoyed the security that went with the hereditary right to the possession of his strip of land, he took his share of the agricultural produce, and returned the privileges extended to him by making certain payments and rendering certain services to the lord, exactments whose extent and nature were determined by custom. Theoretically still a serf, the peasant of the Carolingian period had actually become a tenant, and although still unfree, this peasant tenant, being exempt from the burden of military and court service, was envied by many a small freeholder. n18

The great domains of the Frankish period were divided into farms, with a portion reserved for the owner, and the rest granted to tributary cultivators, who had to pay quit-rents to the lord and perform various duties on the lord's land. The uncultivated lands, such as pastures and woods, were left for common use by all the cultivators of the domain. n19

In summary, during the feudal era in France the property relationships to be found on a typical great domain consisted of:

> 1. The lord's manor and land which he kept to be worked by slaves, servants and tenants.
>
> 2. Lands held subject to servile tenures by "coloni," "lites," and slaves. The "coloni" were perhaps less bound to the soil than the slaves, but their burdens were quite heavy. Those burdens included dues (among which were taxes collected by hearth or head, field rent paid in kind, fees for the use of property belonging to the lord, and supplies or money for the army) and services (plowing and manual labor on

the lord's domain). n20

3. Lands held by free tenure or by a tenure at will, subject to quit rents, annual rents, and similar compulsory dues. The tenancy at will (precaire) was used especially in the case of lands belonging to the Church. The folk law seems to have merged the Roman "precarium" with the Roman lease, fusing the two into a Frankish institution. The "precaire" was sometimes revocable, sometimes temporary in duration, sometimes for life, and sometimes perpetual and hereditary. Regardless of the durations of such "precarious" tenure, the tenant or grantee owed an annual charge in money or in kind to the grantor; this was sometimes a rent charge, and at other times was purely nominal. n21

4. Benefices or lands held by tenure in exchange for military service to the grantor. The benefices eventually became hereditary and were thus transformed into fiefs.

The "precaire" and the "benefice" differed in that the precaire was economic in character and the benefice was political. n22

The alod, or freehold, was land held in free and full ownership and was therefore outside the feudal system. n23 It was not subject to feudal dues, nor charges for its dues, nor transmission fees. Under French feudalism, the alod was partially absorbed into the system as a form of landholding similar to a fief or copyhold, especially if the holder of the alod needed the protection of the seignior, or lord. In parts of France still governed by custom, all land was presumed to be non-allodial fief or copyhold until shown otherwise; in other parts land was considered allodial unless shown otherwise. The seigniors, who still had the right to administer justice even on allodial land, took advantage of the confusion and began treating some allodial lands as fiefs. n24 The Edict of August 1692 abolished the noble freehold while leaving the villein alod undisturbed, but even by 1789 the question of rights over the alod was still not resolved. n25

As the French monarchy grew stronger, the king eventually claimed universal lordship over any land not owned by the seigniors. This resulted in fees being owed to the king in case of sale or alienation.

In the north of France, a system of social organization and landholding known as the Germanic March arose. The Germanic March consisted of the village (including dwellings with their yards and gardens), arable lands divided into parcels available for private ownership, and common areas open to use by all inhabitants. n26 This arrangement began to break down in the 15th century, and during the 16th and 17th centuries, the lords frequently used violence or the invention of false titles to secure the rights in the commons, wasteland and unoccupied areas in these communities. A typical tactic would be to press a false claim of community indebtedness, which claim would be withdrawn if the commons areas would be sold to the claimant at bargain prices. n27

§ 106FR.01(e) The Influence of Canon Law.

Through canon law the Church in France sought to reduce violence by removing the right or practice of violent self-help. Under canon law, if a party sought to take possession by force from a third party who was withholding the property, the attacker forfeited all rights to that property. n28 In place of self-help through force, legal actions for possession were introduced.

§ 106FR.01(f) Conflict Between Monarchy and Aristocracy over Rights of Commons.

In the 16th and 17th centuries, the monarchy and the aristocracy, with the peasants caught in between, found themselves feuding over rights of commons. The nobles regarded rights of commons as having been created by the lords, because they arose at a time when the peasants were incapable of land ownership. Therefore, rights of commons, having been created by the lords, could also be modified by the lords.

Based on this rationale, the lords began exercising triage, or confiscation of one-third of the commons areas. Triage was exercised in the 17th century by the Lords, who claimed that while they had abandoned ownership to the inhabitants, they had not abandoned use. Up to one-third of such common areas as had been earlier surrendered without rent or quit-rent reserved could be taken back by the lord, who nevertheless had to leave enough to meet the needs of the local populace. Alternatively in the 18th century, lords exercised the so-called right of restriction, by which they took up to two-thirds of the commons area, with the one-third being left to the people, in which full ownership was acknowledged.

The monarchy and its supporters, on the other hand, maintained that rights of commons had existed before feudalism, that the lands therefore belonged to the monarch, and that the lords had received their fiefs only on the condition that they preserved for the people the commons rights. n29

§ 106FR.01(g) The Impact of the French Revolution.

Claims to the commons by both the aristocracy and the monarchy were abolished under the law introduced during the French Revolution. The Declaration of April 13-20, 1791, stated that: "the right ... of appropriating waste and abandoned or barren and devastated lands, uncultivated or unoccupied possessions, desert lands, common passageways and waste lands for public pastures shall no longer exist for the benefit of the former lords." Triage was abolished, and communes were able to gain back some of the lands they had lost to seignorial encroachments. The revolutionaries also tried to change the right of commons into private ownership, but had to call an end to this program because of the abuses and inequities that resulted. n30

The domains of the crown, of the clergy, and of the emigres (nobles who had fled the fury of the revolutionaries) passed into the hands of small proprietors. The revolutionaries reestablished ownership according to principles of Roman property law and put into the channels of trade the property of the clergy and of the crown. n31

Napoleon promulgated the Napoleonic Civil Code of 1804, and the legislation contained in that code is still today the basis of French civil law. Book II and Book III of the code deal with things and the different modes of ownership and the different ways of acquiring ownership. The Napoleonic Codes transformed and modernized French law through the synthesis of the diverse influences of Roman law, customary law, canon law, revolutionary ideology, legislation from the monarchy and the personal ideas of Napoleon.

There has not been a revision of the Code since its inception; however, the Constitution of 4 October 1958 confers on the legislature jurisdiction over all matters concerning succession and gifts. It also lets the legislature define the fundamental principles of ownership and of real rights and obligations; the details of these matters are left to government regulations.

CHAPTER 106FR PROPERTY LAW IN FRANCE

13-106FR Thompson on Real Property, Thomas Editions § 106FR.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106FR.02 Acquisition of Real Property.

§ 106FR.02(a) The Nature of Real Property.

French law distinguishes between two types of property: movables (roughly equivalent to personal property) and immovables (roughly equivalent to real property). According to the French Civil Code, property is immovable by its nature or by its purpose or because of the object to which it is attached. n32 Thus, objects furnished by the landowner (even including seed and animals employed in cultivation) to the tenant farmer or sharecropper for the use and development of the land are immovables by purpose as are such movables affixed by plaster, lime or cement. n33 Usufruct (rights of enjoyment) of immovables, servitudes or easements, and causes of action to recover immovables are all considered immovables, n34 as are real property mortgages and certain other liens.

§ 106FR.02(b) How Real Property Is Acquired.

§ 106FR.02(b)(1) Accession.

Accession refers to land or property which is joined with and incorporated into real property. n35 For example, by means of accession pavement constructed by the German army during the Second World War was found to be part of the property held by a private landowner, who has thus been held responsible for damage caused to a third party by the pavement's collapse. n36 The same principle of accession also applies to land acquired through acts of nature, such as alluvial lands.

§ 106FR.02(b)(2) Succession.

Succession is the passage of property from the decedent to the survivors, without regard to the nature or the origin of the property. n37 In France, children inherit from their ascendants (ancestors) without regard to gender or primogeniture, or whether they are the issue of different marriages. They also inherit in equal portions and per capita, when they are all of the first degree and inheriting in their own right; they inherit per stirpes, when some or all of them are taking by representation. n38 If the decedent leaves no posterity, and has no brother or sister, the succession is divided in half between the ascendants on the mother's side and those on the father's side. The closest relative on a particular side receives the entire half assigned to his or her part of the family. n39 In this the French law both resembles and differs

from the 6 Uniform Probate Code6 found in several American states, which provides for equal distribution on both sides of the family, but allows for distribution by representation on each side. n40 The illegitimate child has the same rights as a legitimate child under French law, and is entitled to inherit as if he or she were legitimate, as are the child's ascendants. n41

§ 106FR.02(b)(3) Prescription.

Prescription is the acquisition of title by adverse possession. In order to prescribe, possession must be continuous and uninterrupted, peaceful, public, unequivocal, and under a claim of ownership. For prescription to be awarded, judges must find that possession included material acts characteristic of such possession. In these cases, the judges themselves have the authority to decide whether or not an act is characteristic of possession. n42

Peaceful possession includes a lack of physical or moral violence, during both the inception and duration of the possession. n43 The limitation period for prescription is 30 years, unless the adverse possessor has apparent title and acts in good faith, in which case the period is reduced. Good faith is always presumed; according to Article 2268 of the Civil Code, the person alleging bad faith must prove it. If there is no showing of bad faith, the limitation period is reduced to 10 years, if the true owner lives in the jurisdiction of the Court of Appeals where the land is situated, and 20 years if the owner lives in another jurisdiction. n44 Possession periods may be tacked. n45

§ 106FR.02(b)(4) Contract.

Every creation or transfer of a real property interest by contract must be by notarial act registered upon the Register of Real Estate Mortgages. This includes deeds of sale, deeds of gift, contracts creating rights of usufruct or servitudes, long term leases, attachment liens, and contracts creating or dissolving tenancy in common and condominiums.

§ 106FR.02(b)(5) Sale.

A sale is final between parties as soon as agreement is reached as to the thing and the price, even if delivery has not yet taken place or the price has not been paid. n46 Under French law, a promise of sale is equivalent to a sale when the parties agree as to property and price. n47 However, a promise to sell real estate is void if not stated in a notarized writing or private act registered at the tax registry office within ten days after acceptance by the buyer. If the promise to sell was made with payment of a deposit, either party may withdraw, but must pay a penalty. If the withdrawing party is the party that made the deposit, that party forfeits the deposit upon withdrawing; if the withdrawing party is the party that received the deposit, that party must return double the amount of the deposit upon withdrawal. n48

Sellers of property must set forth clearly the obligation they are assuming. An obscure or ambiguous statement will be construed against the seller. n49 A seller's two main obligations are to deliver and warrant the property being sold. n50 The delivery obligation is fulfilled when the seller hands over the keys of the building or delivers the documents of title to the buyer. n51 The seller also warrants the peaceful enjoyment of the property and the absence of hidden faults or latent defects. n52 The parties may, by contract, add to or subtract from this legal obligation. n53 However, sellers may not escape liability for problems caused by themselves. n54 If the purchaser is dispossessed through a breach of warranty, the seller must refund the purchase price, reimburse any income the purchaser had to turn over to the dispossessing party and expenses incurred by both the buyer and the dispossessor, and must pay any other damages as well as contract costs. This warranty also applies to anyone to whom the buyer subsequently sells the property. n55

The buyer's main obligation is to deliver the price agreed upon. n56

CHAPTER 106FR PROPERTY LAW IN FRANCE

13-106FR Thompson on Real Property, Thomas Editions § 106FR.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106FR.03 Types of Interests in Real Property.

§ 106FR.03(a) Ownership.

Ownership under French law is defined by Article 544 of the Civil Code as the right to enjoy and dispose of things in the most absolute manner, provided the use is not prohibited by statute or regulation. Ownership of the soil carries with it ownership of what is above and beneath it. Thus, the owner may excavate as much as desired, and draw from the earth all the products beneath the property, unless prohibited in some manner by law or regulation relating to mines, or by police laws and regulation. The owner is also entitled to build and construct whatever desired, as long as some aspect of that activity is not prohibited by the exceptions contained in the Title of Servitudes or Burdens on Land. n57

§ 106FR.03(b) Usufruct.

Usufruct is the right to enjoy property owned by another, in the same way an owner would, but on the condition of preserving the substance of the property. n58 It is analogous to a life estate in that it gives the right to a person to use and enjoy the property while another remains vested with the underlying title. The usufruct may be created either by operation of law or by gift or sale. n59 Unless exempted by the instrument creating the usufruct, the usufructuary (one who benefits from the usufruct) must often give security to ensure that the rights will be enjoyed prudently, without damage to the property. n60 However, the usufructuary takes things as they are, and is required to prepare an inventory of the movables and a description of the immovables before entering into their enjoyment. n61 The usufructuary is obligated only to maintain the property. All major repairs, unless arising from lack of maintenance, are chargeable to the owner, n62 but neither the owner nor the usufructuary is required to rebuild structures deteriorating from old age. The usufructuary may enjoy the fruits of existing mines on the property, but may not open up new mines, and is not entitled to keep any treasure found on the property. n63

The usufruct may be extinguished through the death of the usufructuary, the expiration of the time for which it was granted, the consolidation in the same person of the rights of ownership and usufruct, the non-use of the usufruct for thirty years, or the total loss of the property that the estate was based on. n64 A usufruct may also end because the usufructuary abuses the property through neglect or damage. n65 This particular feature of the usufruct indicates that in France, as well as in the United States, waste actions can be maintained in order to preserve the rights of the reversionary owner of the property. France, however, allows creditors of the usufructuary to intervene in litigation, to

protect their rights, and to offer to repair the damage and give security for the future preservation of the property. Depending on the seriousness of the circumstances, judges may either extinguish the usufruct completely, or permit the owner to reenter the property under condition of paying the usufructuary (or assigns) a fixed sum until the time when the usufruct would have terminated. n66

§ 106FR.03(c) Servitudes.

Servitudes are burdens imposed upon one property for the use and benefit of a property belonging to another owner. n67 These burdens are both prohibitory and prescriptive: French law seems to have incorporated the American concepts of easements, real covenants and equitable servitudes, as well as zoning and preventive nuisance law, into its laws governing servitudes. French servitudes, generally, arise from the natural location of the premises, or from obligations imposed by law, or from agreements between the owners. n68 An example of a servitude arising from the location of the properties occurs when one of the properties is situated on higher ground than the other: the owner of the lower ground cannot build an obstruction that will prevent naturally occurring run-off water from passing through the lower property; conversely, the owner of the higher property cannot use the property in a way that exacerbates the effects of run-off on the lower property. n69 This example is similar to regulation of land use by nuisance law in the United States.

Servitudes established by law must have some public, community or private benefit. n70 Typical of these are servitudes to facilitate the construction or repair of roads and other public or community works. n71 An interesting example of a servitude established by law is the right of property owners in cities to require neighbors to participate in the construction and repair of fences separating houses, yards and gardens. n72 Likewise, all property owners are required to build roofs in such a manner that rain water can only drain on the owner's property or on public property; the water may not be directed to the neighbor's property. n73 An owner of landlocked land is entitled to a right-of-way, but must pay an indemnity proportionate to the damage caused by use of the neighbor's property. n74

According to Article 686 of the Civil Code, landowners may establish whatever servitudes they desire on their land, or in favor of their land; however, these servitudes run with the land and may not be based on a mere personal promise to another. In a recent case it was held that a doctor could not sell property while reserving the right to object to the creation of another medical office in the building he was selling, because the covenant did not relate to the building itself. n75

Continuous and open (apparent from visible exterior works) servitudes are acquired by document of title or by possession for 30 years. n76 Continuous but hidden servitudes and intermittent servitudes may only be established by documents of title. n77 However, witnesses or presumptions may serve to present needed additional evidence if the instrument of title alone is somehow insufficient to establish proof of the servitude. n78 The establishment of a servitude presumes the grant of everything necessary for its use; thus, a servitude to draw water from the well of another necessarily implies a right of way to the well. n79

§ 106FR.03(d) Tenancy in Common.

Tenancy in common exists when several persons are concurrent owners of a specific tract, usually obtained simultaneously by succession or gift. Each tenant in common is entitled to use and enjoy the object of the tenancy, as long as use is for normal purposes and in a manner compatible with the rights of the other tenants. If one of the tenants uses the property exclusively, that tenant must pay consideration to the other tenants. n80

Administration and disposition of the common tenancy requires the consent of all of the tenants, but they may delegate to one or several of them general administrative powers. Special authority is required for actions that do not relate to the normal administration of the tenancy, as well as the renewing and the cancellation of leases. n81 However, if a tenant acts without the consent of co-tenants in selling part of the property, the sale will still be valid. n82 Revenues from the

common tenancy go to its increase, absent an agreement to divide them. Each tenant has a right to these benefits and makes good the losses incurred through the tenancy in proportion to the tenant's respective interest in it. n83 Each tenant is also entitled to an annual share of the revenues, less expenses. n84

Article 815 of the Civil Code provides that any tenant may ask for partition at any time, unless either contract or law prevents it. For example, if a tenant requests it, a tribunal may delay partition for up to two years, if the immediate partition would diminish the value of the asset. Interestingly, French law protects farming families by preventing the partition of farmland at the death of the landowner under certain conditions; the spouse (if she is a co-owner) or minor children can actually request the delay of partition for a maximum of five years. This delay may be renewed until the spouse dies or the youngest child reaches the age of majority. n85 An agreement not to partition may not exceed five years in duration, although it is renewable at the end of the five-year period. n86

The concept of joint tenancy, as it is known in the United States, does not exist under French law.

§ 106FR.03(e) Condominium.

Ownership of condominium shares, in French law, gives the right to use the property and, at dissolution, to receive a predetermined part of the company's real estate holding.

§ 106FR.03(f) Mortgage.

A mortgage is a right over immovables encumbered for the performance of an obligation, which right follows those immovables into whatever hands they pass. n87 Mortgages are either legal, judicial or conventional; they exist solely in those cases and forms authorized by law. n88 Such cases, however, include only immovable property and immovable accessories which are in commerce, as well as their usufruct. n89

A legal mortgage is created by law. By way of examples, legal mortgages can arise in the following circumstances, creating rights in the parties indicated:

Spouses, over the property owned by the other spouse;

Minors, or adults under guardianship, over the property of the guardian or the legal administrator;

The State and local and regional governments of France, over the property of some administrators.

A judicial mortgage, on the other hand, arises in favor of a person who obtains a judgment, such as by means of a debt, or of back taxes, for instance (similar to a judgment lien in the United States).

The conventional mortgage, other than the legal or judicial mortgage, may be granted only by one who has the capacity to alienate the property. The possibility of rescission, if any, and any conditions upon the ownership are handed down with the mortgage. n90 A husband cannot, for example, mortgage the family dwelling without the consent of his spouse; although his obligation remains the same, the mortgage is simply not valid. Article 215 of the Civil Code states that the spouse who did not consent to the mortgage has the right to demand its annulment.

In the past the conventional mortgage was bound by very strict procedural rules. It could only be granted by an instrument executed in authentic form in the presence of two notaries, or before a notary and two witnesses. This requirement has since been repealed, but a valid mortgage still requires a description of the specific nature and location of the immovables encumbered; such provisions may not be supplied later to cure a defect in the instrument. n91 Furthermore, and perhaps with the same goal of protecting the mortgagor against imprudence, after-acquired property may not be mortgaged. However, if a debtor does not own sufficient property to secure the debt, the debtor may consent that particular items of subsequently acquired property items be specifically encumbered upon their acquisition. n92

Article 2134 of the Civil Code governs the priorities among creditors and mortgagors:

> As among the creditors, a mortgage, whether legal, judicial or conventional, ranks only from the date of inscription by the creditor in the mortgage register in the form and manner prescribed by law ...
>
> The order of priority among creditors with liens or mortgages and the holders of negotiable liens, insofar as the latter encumber property deemed to be immovable, is determined by the dates when the respective documents of title were published ...

The French statute governing recording is thus the equivalent of a race statute: whoever records first, wins.

CHAPTER 106FR PROPERTY LAW IN FRANCE

13-106FR Thompson on Real Property, Thomas Editions § 106FR.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106FR.04 Landlord/Tenant Law.

§ 106FR.04(a) Formation of a Lease Contract.

Under French law, a lease may be either written or oral. However, rules for oral leases applied to rural land differ from the rules applied to leases of houses. n93 A person leasing in France would be well-advised in any case to prepare the lease in writing, because if an oral lease has not been fully performed and one of the parties denies its existence, proof from witnesses may not be received at all. n94 If the dispute concerns price, the rule of "buyer beware" applies. The lessor's evidence will be presumed correct, unless the lessee demands an appraisal by experts; if the appraisal exceeds the price the lessee declared, then the lessee is also liable for the expense of the experts.

§ 106FR.04(b) Duties, Responsibilities and Liabilities of the Lessee.

A lessee has an obligation to furnish the dwelling with enough furniture; otherwise the lessee may be evicted at the landlord's discretion, unless the lessee gives to the lessor adequate security for the rent. n95 The lessee must use the property as a good administrator would n96 and for the purpose for which it was intended. n97 The lessee is also required to pay rent. In case of a dispute as to the amount of rent, the lessee must still pay rent, unless a court judgment intervenes in the lessee's favor. n98

Article 1754 of the Civil Code designates the specific repairs for which the tenant is responsible (unless a contrary clause is part of the contract):

> To fireplaces, back-plates, sides and tops of mantelpieces;
>
> To replastering the base of walls of apartments and other places of abode to the height of one meter;
>
> To panes of glass, unless they have been broken by hail or other extraordinary accidents ...
>
> To doors, casements, windows, partitions or shutters of shops, hinges, bolts and locks.

The main concern seems to be with ordinary wear-and-tear where it occurs most frequently, such as at the bottom of the

walls, and with the prevention of fires and break-ins. The next section of the Civil Code states that none of these repairs are even chargeable to the tenant if they are needed only because of decay or "act of God." n99 Furthermore, if the tenant must make repairs that the landlord should have made, the tenant may deduct those repair expenses from rent. n100

In case of fire, the tenant is automatically assumed to be responsible and liable, unless the tenant can prove either that the fire was an "act of God," or occurred because of some other circumstance beyond the control of the tenant, or was communicated from an adjoining house. n101

§ 106FR.04(c) Responsibilities of the Landlord.

The landlord is obligated to deliver the premises in good repair and to maintain them in good repair for the duration of the lease (with the exceptions mentioned above). n102 Under the covenant of quiet enjoyment, the landlord is also responsible for hidden defects, but only if these actually prevent the use of the premises and were unknown to the renter at the time the lease was signed. n103 This implied covenant of quiet enjoyment also prohibits renting the premises to another party or materially modifying the premises. n104

§ 106FR.04(d) Government Intervention in the Rental Market.

Since 1948, the French government has rather heavily regulated the rental market in the heavily populated and rapidly expanding population areas. Among the protections now afforded some renters in those areas are rent ceilings, as well as assurance that as long as they fulfill their obligations under the rent contract (especially paying rent) they may not be ejected at the expiration of the rent contract. Renters may be displaced at the end of a contract if the owner has decided to build or has decided to inhabit the premises. However, even in these cases, requirements of notice and justification by the landlord are sometimes imposed.

CHAPTER 106GB PROPERTY LAW IN GREAT BRITAIN (ENGLAND AND WALES)

13-106GB Thompson on Real Property, Thomas Editions § 106GB.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106GB.01 History.

Various forms of property ownership were recognized among the inhabitants of the British Isles well before the earliest manifestations of the present legal system began to form. Whoever the earliest prehistoric inhabitants of Britain were, they had been subsumed within the waves of Celtic invaders who had arrived in the later centuries of the pre-Christian era. By the time of Julius Caesar's first reconnaissance probe on the British Isles in 55 B.C., the earlier Celtic peoples were living in what archaeologists describe as a Late Bronze Age civilization, and the more recent Celtic invaders had introduced Iron Age characteristics. In their relationship to the land, it has been said that Britain's

> people lived either in isolated farms or in hut-villages, situated for the most part on the gravel of river-banks or the light upland soils such as the chalk downs or oolite plateaux, which by that time had been to a great extent cleared of their native scrub; each settlement was surrounded by small fields, tilled either with a foot plough...or else at best with a light ox-drawn plough which scratched the soil without turning the sod; the dead were burnt and their ashes, preserved in urns, buried in regular cemeteries. Thus the land was inhabited by a stable and industrious peasant population, living by agriculture and the keeping of live stock, augmented no doubt by hunting and fishing. n1

The most recently arrived Celtic invaders, specifically the Belgae, also followed the practice of marking the boundaries of the territories under their dominance by means of a continuous rampart and ditch. n2

Caesar followed his reconnaissance with an invasion the following year, in 54 B.C., but the conquest was not completed and Romans then became preoccupied with events closer to Rome. Not until the reign of Claudius, in A.D. 43, did the Romans return and, by conquest, gain the better part of Britain. Even this wholesale political change did not alter the Celtic customs of landholding, except in the few urban areas that became so thoroughly romanized that Roman law was applied, especially as between Roman citizens. For a few, the rise of Roman Britain meant that isolated farms became villas, and substantial farm houses replaced Iron Age dwellings, n3 but for perhaps 85% of the British population "their pre-Roman lifestyles survived into and through the Roman occupation." n4

With the increase of barbarian aggressions throughout the Roman Empire in the 5th century A.D., the Roman legions were withdrawn from Britain. The Romano-Britons eventually succumbed to the persistent attacks and invasions from

Angles, Saxons and Jutes, crossing over from north Germany and the Danish peninsula.

These Germanic invaders had different land-holding customs. From earliest times, as agriculture became more prominent among them, chieftains had made distributions of land annually to kindred groups. Eventually, the distributions were made to individuals, some of whom began to accumulate wealth. These customs underwent substantial change when the invasions of Britain enabled whole tribes to leave their Germanic homelands and settle anew:

> The passage of time and opportunities for conquest produced quite different land distribution practices among the early Anglo-Saxons in Britain. Land freshly conquered or pioneered by Anglo-Saxon settlers was divided by lot, with a number of tracts kept in reserve as commons or as defensive buffers. Holdings assigned to individual warriors who became settlers were permanent, not subject to the annual reallocations practiced by their ancestors... Apart from contributing to physical survival, holding an individual portion of land was a prerequisite for sharing in the use and product of the commons, for voting in public assemblies, and for going to court. Ownership of land therefore signified both freedom and franchise. n5

As kingship developed among the Anglo-Saxons in Britain, the kings took over large tracts of subjugated land, granting substantial portions to their chief warrior companions. Most of such land was actually worked by peasants, and most of the land was eventually impressed with obligations of military service, bridge construction, fortress maintenance, taxation and other labor projects. When land was conveyed, the grantee held only for life, unless special permission was obtained to pass the holding to a descendant. Written documents called charters came into use for granting lands to the church, so that such land came to be called "bookland." Those who held bookland often had rights of alienation or devise, but other granted lands, called "laenland" or "loan land," could be alienated or inherited only with the lord's permission or charter. The large tracts of land not held as bookland or loan land were held as "folk land," a term of uncertain meaning, but probably subject to certain customary rights based on occupancy.

As the watershed event of the Norman Conquest neared, probably most Anglo-Saxon land was occupied under some sort of manorial economy. Within the manorial system typical over much of England, the lord of the manor held the land, but it was actually worked and occupied by peasants who owed services and rents to the lord, and in addition were in some form of personal servitude to the lord, in return for rights to occupy and till their plots of land. Personally free peasant farmers were more numerous in the eastern and northern areas of England, where Viking invaders of the ninth and tenth centuries A.D., had been most dominant.

After the Norman Conquest, which commenced in A.D. 1066, the landholding arrangements among the peasants were left intact, but most English lands changed lords. Within two decades after the Conquest began, the 4,000-5,000 English lords who held land before the Conquest had been replaced by 1,400-1,500 Norman lords. The Norman feudal customs, those customs establishing the conditions under which land was held, began to replace their English counterparts, creating greater emphasis on the military obligations of chief tenants and bringing about greater uniformity in the landholding practices overall. Inheritability, the most important attribute of property, had become widely recognized by the beginning of the twelfth century.

Along with inheritability, other important property rights, such as alienability and devisability, achieved increasing acceptance during the Middle Ages. The persistent impulse on the part of some to render land freely alienable so its inherent market value could be realized, was countered by others who sought to limit the ability of descendants to transfer away portions of great family holdings. Various forms of landholding, called estates in land, were recognized by the courts, but then often came to be restricted or even abolished by royal decree or statute. The various kinds of estates, with their individual attributes or incidents, together formed a complex and highly technical system of property rights.

Once the legal rules governing those property interests formed and stabilized, the rules tended to become rigid, resulting in occasional injustices for property owners whose situations had not been anticipated by the rules. For such, the monarch was prepared to dispense individual justice, but not necessarily in conformance with the "common law" rules, the rules emanating from the law common to all of England. These alternative rules came to be known as equity, because their purpose was to do justice and equity in cases not covered adequately by common law rules. Thus equity decrees produced a second set of property rules, parallel to and often in concurrent jurisdiction with common law rules, which rules further complicated property rights in England.

Because land was considered the ultimate form of wealth, the most affluent and ambitious persons in England sought to accumulate as much as possible with the broadest incidents or rights. Property holding was closely associated with social status, so that not only the size of landholdings, but also the type of ownership--the particular kind of estate by which one held property--correlated closely with one's social class. Persons who were not bound in some way to the land under a manorial economy were considered free, and the property interests they typically held were called freeholds. Conversely, the peasants or serfs typically owed such heavy duties of labor service and farm produce to their feudal lords, that they were considered not free to leave the land, and the forms of property holding typical for this class were labeled as non-freeholds or unfree tenures. Medieval serfs usually held land by arrangements akin to the modern leasehold, a right to occupy the land for a period of time in consideration of services or produce paid to the landlord. These property interests, or tenures, retain even in England today the labels of freehold or unfree, even though the social status distinctions are no longer relevant.

As England emerged from feudalism, the feudal obligations of military service or other kinds of service given in return for landholding also became irrelevant. Eventually the legal and equitable rules were adjusted to enable landholders more easily to obtain the money value of property by conveying various kinds of interests in the property, practices that were less acceptable in a feudal society which relied on well-known landholders to loyally perform their service obligations. Yet some of the old elements of property law with feudal origins and complexities lingered on, only reluctantly responsive to changes in economy and society.

To boldly achieve a system of general property law fit for modern society, the English Parliament culminated an extensive period of law reform by enactment of the Property Acts of 1925, consisting of several statutory components: the unrepealed portions of earlier reform acts, especially of the Law of Property Act of 1922 n6 and the Law of Property (Amendment) Act of 1924; n7 the Settled Land Act of 1925; n8 the Trustee Act of 1925; n9 the Law of Property Act of 1925; n10 the Land Registration Act of 1925; n11 the Land Charges Act of 1925; n12 and the Administration of Estates Act of 1925. n13 Since 1925, specific areas of property law have also been subject to reform statutes, including, among others, the Perpetuities and Accumulations Act, n14 the Law of Property (Joint Tenants) Act, n15 the Matrimonial Homes Act, n16 the Leasehold Reform Act, n17 another Law of Property Act, n18 the Charging Orders Act, n19 and the Limitation Act. n20 Particularly during the twentieth century, English land law reforms have been characterized by increasing governmental regulation to achieve public benefits or protections at the expense of purely private interests in land.

CHAPTER 106GB PROPERTY LAW IN GREAT BRITAIN (ENGLAND AND WALES)

13-106GB Thompson on Real Property, Thomas Editions § 106GB.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106GB.02 Types of Real Property Interests.

§ 106GB.02(a) Legal Estates in Real Property.

As a result of the 1925 property acts, English law recognizes only two types of legal estates, an estate being an interest in land of defined duration. n21 These estates recognized in law are the fee simple absolute in possession and the term of years absolute. Apart from these estates and the legal property interests described in § 106GB.02(b) *infra*, all other estates, interests, and charges relating to land are treated as equitable interests.

§ 106GB.02(a)(1) Fee Simple Absolute in Possession.

The fee simple absolute is the form of land ownership with the maximum cognizable interests associated with land ownership, and the ownership is potentially infinite in duration; as an "in possession" interest, the fee simple absolute is a presently possessory interest rather than an interest that will become possessory at some time in the future.

§ 106GB.02(a)(2) Term of Years Absolute.

The term of years absolute means any right to possess land for a period of fixed and certain duration, even for less than a year, and can include periodic tenancies. It need not be a presently possessory interest, and can be created to commence at some time in the future less than 21 years from the time the lease was created.

§ 106GB.02(a)(3) Concurrent Ownership of Legal Estates.

If a conveyance is made to multiple tenants in common directly or to multiple trustees, the number of concurrent owners is limited to four. n22 The limitation of concurrent ownership to four owners is not so explicit as to joint tenants, but is so treated under English law. n23

§ 106GB.02(b) Legal Interests in the Land of Another.

English law also recognizes five types of legal estates that constitute interests in the land of another.

§ 106GB.02(b)(1) Easement, Right, or Privilege in Land, Equivalent in Duration to a Legal Estate.

Easements, rights or privileges in land equivalent in duration to a legal estate, include the right to use the land of another in a certain way, or to prevent a certain use of the land of another, or to take something from the land of another, typically called easements and profits. They are considered legal interests if their specified duration is similar to one of the two legal estates, either perpetual or limited to a fixed and certain time.

§ 106GB.02(b)(2) A Rentcharge in Possession Imposed on Land, Either Perpetual or for a Term of Years Absolute.

A rentcharge is a right to periodic payment of a sum of money imposed as a burden on land. For a rentcharge to be a legal interest, the party obligated to pay must be in possession of the property, even if the charge itself commences at a future date; further, the duration of the rentcharge must be a duration similar to one of the two legal estates, either perpetual or limited to a fixed and certain time. Since 1977, severe restrictions have been placed on the creation of new rentcharges.

§ 106GB.02(b)(3) A Charge by Way of Legal Mortgage.

The legal mortgage is created either by conveying a term of years absolute subject to being defeated by redemption, or by a deed creating a charge by way of legal mortgage. This is an interest in land, given as security for the repayment of a debt, and which is extinguished upon full repayment. If default occurs, the mortgagee has certain rights in the land which may be employed to obtain satisfaction of the debt.

§ 106GB.02(b)(4) Charges on Land That Are not Created by an Instrument.

These encumbrances consist of obligations similar to the now abolished land taxes and tithe rentcharges. Land taxes were abolished in 1963 and tithe rentcharges were abolished in 1936. The charges considered to be legal interests consist of periodic payments burdening the land by operation of law.

§ 106GB.02(b)(5) A Right of Entry Connected with a Term of Years Absolute or with a Rentcharge.

A typical right of entry considered to be a legal interest is the landlord's right to enter premises under a legal term of years absolute if the tenant fails to pay the rent or observe other covenants of the term.

§ 106GB.02(c) Equitable Interests in Land.

All interests in land other than those described above are considered equitable interests. This means, for instance, that a life estate or a fee tail is no longer a legal estate, but can exist within the framework of a trust. So if the legal estate in fee simple is vested in a trustee, then the beneficial or equitable interests defined by the trust instrument can take the form of a life estate or a fee tail or numerous variants of those interests. Other interests that are no longer legal in nature but are still recognized as equitable interests are restrictive covenants and other interests under trust.

The basic distinction between legal and equitable interests is that a purchaser who buys property without notice of an adverse legal right is bound by the right (so the present holder is protected), while a purchaser who buys without notice of an equitable interest takes free of the equitable interest (so the present holder is not protected from a bona fide purchaser). The important changes in property law made in 1925 were intended to reduce the number of legal estates and interests and thus protect purchasers, and also to protect holders of equitable interests.

Holders of equitable interests are protected by the ability to register their interests of a commercial (economic) nature under the Land Charges Act of 1925. Registration of the equitable interest confers notice on all, and any potential purchaser is bound by such notice. Indeed, if no registration of the equitable interest has occurred, the purchaser is not

bound even if actual notice has occurred by some other means. Certain equitable interests not specifically covered by the Land Charges Act are still subject to the old doctrine of constructive notice. Apart from equitable interests registrable under the Land Charges Act, only the now severely limited legal estates and legal interests in the land of another can be registered for title purposes under the Land Registration Act of 1925.

§ 106GB.02(d) Land Ownership by Aliens.

Since 1914 aliens have been permitted generally to hold and acquire land in the same ways as British citizens. n24

CHAPTER 106GB PROPERTY LAW IN GREAT BRITAIN (ENGLAND AND WALES)

13-106GB Thompson on Real Property, Thomas Editions § 106GB.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106GB.03 Conveyancing.

Closely connected with the procedures for conveying real property are the legal rules for registering land titles and for conducting transactions in unregistered land titles. By the term registration is meant a system of certified titles guaranteed by the government, which replaces the routine of making a separate investigation of the state of the title each time a transaction occurs involving that title. In other words, an examination of the register is substituted for the search that traditionally involves review of the abstract of the deed and of encumbrances on the title, and inspection of the property. It is estimated that about 75% of current conveyancing activity in England and Wales concerns registered land. Whether land is registered or unregistered, conveyances usually begin with preliminary negotiations and inquiries, the creation of a draft contract, and the execution of a formal contract, and culminates with carrying out the terms of the contract by exchange of consideration and title documents on the completion day agreed upon by the parties.

In this section, the basic outline of the registration law is described, followed by a summary of contract procedure for the sale of land, and descriptions of conveyancing procedure after the contract is executed for registered and unregistered title, respectively.

§ 106GB.03(a) Creation of a Contract.

In the typical case where a fee simple interest is being sold for money, the parties will enter into a contract before the transaction actually occurs. Even before entering into the contract, the purchaser should conduct a preliminary examination of title and inspection of the property. If items seem to be not entirely in order, a form called Inquiries before Contract will be prepared to note such items and then sent to the vendor. A search of local land charges (public encumbrances) should be made, and an inquiry of the pertinent local authority is made by a standard form to learn of encumbrances that are not registrable. These contract procedures are typical whether the land to be conveyed is registered or unregistered.

§ 106GB.03(b) Registration of Land.

Some areas of England and Wales have been designated as compulsory areas, within which registration of title is required if the proposed conveyance results from the sale of a fee simple or from the creation or assignment of certain leases. For other transactions in the compulsory areas, registration is optional. The constantly expanding compulsory

areas are concentrated in urban regions, so that they now cover about half the area and three-fourths the population of England and Wales. Outside the compulsory areas, applications to register now will not be accepted in all but a limited class of cases and where certain public housing units are sold to tenants. In a conveyance of registered land, the legal interest does not pass to the purchaser until the purchaser is registered as the new proprietor of the title.

§ 106GB.03(c) Registration of Land Charges.

The Land Charges Act of 1925 and its successor, the Land Charges Act of 1972, greatly increased the types of rights that can be registered and thus protected against purchasers without notice. If an interest is properly registered, the registration constitutes notice to all persons for all purposes. The types of interests entitled to be registered are land charges (generally, equitable interests that are of value because of their effect on another's land), n25 pending actions (both an ordinary *lis pendens* and actions in bankruptcy), n26 writs and orders affecting land, n27 and deeds of arrangement (similar to receiverships). n28 The land charges category is the most comprehensive type of registrable interest. This consists of charges (that is, interests or encumbrances) imposed on land by statute; certain legal mortgages; an obligation owed to a tenant for life or statutory owner for discharging death duties or other liabilities; general equitable charges (such as an unpaid vendor's lien); a contract to convey or create a legal estate (including purchase options and pre-emptive rights); death duties, restrictive covenants, and certain equitable easements; certain annuities; and a spouse's right to enter and occupy a house owned by the other spouse.

§ 106GB.03(d) Conveyance of Registered Title.

When parties have entered into a contract for the sale of registered land, the vendor gives the purchaser authorization to make a search of the Land Register, which is otherwise not open to public inspection. n29 The vendor also provides copies or abstracts of documents noted on the register, such as those that impose encumbrances on the land. If any unfavorable or unexpected entries appear in the register, the parties conduct a process of inquiries or "requisitions" and responses to achieve satisfaction of the contract terms. If this process is completed successfully, the purchaser fills in a draft transfer form, with any appropriate special clauses, and sends the form to the vendor for approval. Upon approval, a clean copy is prepared by the purchaser and sent to the vendor for execution. A few days before the day fixed for completion or closing, another search, called an official search, of the register is conducted to learn of any new entries. Following the official search, a priority period begins, now 30 days, within which the register is closed to certain new entries and the transaction must be completed: n30

> Before expiry of the priority period afforded by the official search certificate, [the purchaser] will attend upon [the vendor] to receive the duly executed transfer and the land certificate in return for [the purchaser's] banker's draft for the moneys due under [the vendor's] completion statement. Unlike the unregistered land position, the legal title does not pass until [the purchaser] has lodged his application to register the transfer with the appropriate District Land Registry, and [the purchaser] must ensure that this is done before expiry of the priority period afforded by the official search certificate. n31

§ 106GB.03(e) Conveyance of Unregistered Title.

When parties have entered into a contract for the conveyance of unregistered title, the vendor delivers to the purchaser an abstract of title. The abstract begins with a document in the chain of title that constitutes a good "root of title," which is now required to be only 15 years old or more, n32 and summarizes the documents and events that have affected the title subsequent to the root of title. n33 For encumbrances or transactions subsequent to the root of title, the Land Charges Register must be searched. As an alternative to the abstract, an epitome may be prepared, which summarizes the essential facts in the chain of title and provides photocopies of the supporting documents.

If the abstract or epitome raises questions on the part of the purchaser, further information may be requested of the vendor by a series of written questions or requirements for corrective action called "requisitions on title." The vendor answers the requisitions and the parties go through further requisitions and answers until appropriate and mutually

satisfactory terms for the transaction are worked out.

The purchaser then prepares a draft conveyance (deed) n34 on a standard form and sends the form to the vendor for approval. When any amendments by either party are included and approved, a new, formal copy is prepared by the purchaser and sent to the vendor for signature. The parties then determine a day for completion or closing, and shortly before then the purchaser conducts an official search of the land charges register. A search certificate is issued, which begins the priority period, within which new entries of certain interests are subordinated or "postponed," until the expiration of 30 working days. The completion should occur before the priority period expires.

At the completion, the vendor delivers the title deeds n35 and the signed conveyance to the purchaser, n36 who pays the purchase price. A completion statement will have been previously prepared to show the exact amount due after apportioning rates (taxes) and other charges to the date of completion. The purchaser would thereafter typically submit an application to register the conveyance with the Land Registry.

CHAPTER 106IN PROPERTY LAW IN INDIA

13-106IN Thompson on Real Property, Thomas Editions § 106IN.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106IN.01 Brief History of India.

§ 106IN.01(a) Prehistory of India.

The earliest written documents from what is present-day India date from approximately 1500, B.C. All information about India prior to that time, therefore, shall be treated in this chapter as the prehistory of India.

Such evidence of India's prehistory shows that from as early as 30,000 through 4,000, B.C., hunter-gatherer peoples living in Stone Age conditions inhabited parts of India. n1 By 7000, B.C., pastoral and agricultural communities had come into existence. The earliest known civilization in India is called the Harappan civilization, named for some of its ruins first discovered in a place called Haripah in northwest India. The origin of this culture is unknown; the time of its entry into India, if indeed it was not indigenous to India, is unknown. Scholars believe the cultural had acquired some urban characteristics by 2600, B.C. n2 "Harrapan cities were trading and craft production centers, set within the mixed economies--farming, herding, hunting and gathering--of the wider Indus region and dependent on these surrounding economies for food and raw materials ... . Workshops in larger Harrapan towns and sometimes even whole settlements existed for the craft production of traded items." n3 Some of these cities and smaller settlements may have been planned communities. n4 This society was contemporary with nearby Mesopotamian and Egyptian societies, but, in contrast, apparently had no written texts, monuments or large statues.

§ 106IN.01(b) The Early History of India.

By 1800, B.C., the Harappan civilization had mysteriously disappeared, its communities either abandoned or occupied by peoples with a different culture. A few generations after this disappearance, peoples now referred to as Indo-Aryans gradually migrated from areas of modern Iran and Afghanistan into the Punjab region of northwest India. With its Reg-Veda and numerous other ancient hymns, and its Sanskrit language, this nomadic, pastoral and warrior Aryan culture achieved a distinct identity. n5 Even though much of Sanskrit writing remains unintelliglble, it still marks the beginning of India's historical period. With iron-age technology, by the early centuries of the post-Christian era this "Sanskrit-based Aryan culture in which competing Hindu, Buddhist, and Jaina religions vied for dominance had spread its cultural hegemony through all settled regions of the subcontinent." n6 This led to a second Indian urbanization that developed from 600 to 300, B.C.

In this period, population grew and cities emerged, both in the plains and along trade routes. It was a time of vigorous religious development and "volatile and competitive" political life. n7 By 327, A.D., armies of Alexander the Great had penetrated into Indian territory, and after his death in 323, A.D., a Seleucid dynasty founded by one of his generals continued in power for about a century. Elsewhere in India, one of the greatest emperors, Ashoka, reigned from c. 268-233, B.C., and created an enormous empire, judging from his widespread edicts inscribed in rocks and pillars. Trade between the Roman empire and the eastern and western coasts of India continued between the first century, B.C., and the seventh century, A.D. A series of regional tributary political systems was stabilized during the so-called Gupta dynasty, c. 320-550, A.D. "By the seventh century elites who identified with a Sanskrit-based, Aryan culture dominated atll regions of the Indian subcontinent." n8

In the seventh century, A.D., Islamic armies invaded India and in various degrees maintained a dominance in India until the 18th century. During the 16th and 17th centuries, the Portuguese, Dutch, English and French established trade with India and engaged in a variety of conflicts and struggles to maintain and expand those trading interests. During the middle of the 18th century the French and English trading companies engaged in open warfare for control of the Indian trade, with the English emerging supreme. The ruling British East India Company came under governmental regulation beginning with a series of laws in 1773, and by 1833 the company controlled most of India. Indeed, England's "Charter Act of 1833 abolished the East India Company's commercial functions, opening all of Asia to private trade and ending the company's existence as a commercial body. It left the company's government structures in place, however, as a bureaucratic shell through which Parliament would continue to govern India." n9 In 1858, after having survived serious native revolts, the British abolished the East India Company and placed India directly under the rule of the British Crown. Queen Victoria became empress of India in 1876. One-third of India was ruled by almost 600 "Princely States" under British supervision.

A nationalist movement for Indian independence from England was led by Mohandas Gandhi from 1920 to 1948. In 1947, India became independent from Great Britain, and a Dominion of the Commonwealth, and east and west Pakistan were partitioned from India. India became a republic in 1950.

CHAPTER 106IN PROPERTY LAW IN INDIA

13-106IN Thompson on Real Property, Thomas Editions § 106IN.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106IN.02 Governmental and Legal Foundations for Property Law in Modern India.

A new Indian Constitution, one of the longest and most detailed written constitutions in the world, became law in 1950. The Constitution's preamble guaranteed to all citizens the rights of justice, liberty, equality and fraternity. It created the Republic of India as a national government, which was also a federation of regional state governments. "The union government is divided into three distinct, but not entirely separate, branches: the executive, legislative, and judicial. The executive leadership is drawn from and is responsible to the legislative body. The Constitution provides for a judiciary that is free from executive or legislative interference in its deliberations." n10

Statutes, customary law and case law are also sources of law in India. The statutes are enacted by the national Parliament, by state legislatures and by union territory legislatures. Despite this federal diversity, the India court system is a "single integrated system of courts to administer both the union and the state laws." n11

Fundamental rights in India are defined in Articles 12-35 of the Constitution. Originally Article 9(1) included the fundamental rights to acquire, hold and dispose of property among those fundamental rights, but that particular provision fell victim to a lengthy controversy over judicial review in India. n12 The controversy centered on *Article 31 of the Constitution*, providing that no person could be deprived of property except by authority of law and only for compensation. These provisions as written interfered with Indian attempts at land reform.

Land reform in India long remained at the "level predetermined by the British Indian Tenancy Acts," n13 which secured rights of peasants holding directly from their landlords. Many of the rural poor were unprotected.

> Of course, there were ceilings on landholdings imposed by legislation and there was the prohibition of subletting of land. But in the absence of a proper record of rights, breaches of the law were hard to prove and this type of legislation remained a mere eyewash. n14

Resistance to land reform ultimately rested on the constitutional guarantees of property rights, and the Indian courts accepted these arguments. This led to constitutional amendments severely limiting the courts' powers of judicial review, including judicial review rights over even constitutional amendments. After many constitutional amendments, many judicial decisions, and significant political upheavals, judicial review over whether even constitutional amendments

conformed to the basic structure of the constitution was mostly restored, but property rights were removed from the category of fundamental rights and now is classed as an ordinary right.

Now the Constitution of India simply regulates the government's acquisition or extinguishment of estate or rights therein, n15 and proclaims, "No person shall be deprived of his property save by authority of law." n16 Articles 294-296 deal, respectively, with "Succession to property, assets, rights, liabilities and obligations in certain cases," "Succession to property, assets, rights, liabilities and obligations in other cases," and "Property accruing by escheat or lapse or as *Bona Vacantia*."

Under Article 39(b), the government is directed to ensure "that the ownership and control of the material resources of the community are so distributed as best to subserve the common good."

CHAPTER 106IN PROPERTY LAW IN INDIA

13-106IN Thompson on Real Property, Thomas Editions § 106IN.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106IN.03 Basic Indian Property Law.

Basic Indian property law is extensively a product of statutory enactment. The principal laws and rules on selected property topics are described below.

§ 106IN.03(a) Estates in Land.

Under India property law, the term immovable property includes essentially all that is meant by real property in English law. Despite this civil law terminology, Indian property law still rests on a foundation of English law, including the estates of fee simple and life estate well-recognized in English law.

§ 106IN.03(b) Concurrent Estates.

The concurrent estates of tenancy in common and joint tenancy are recognized in India. The tenancy in common is presumed if the nature of the concurrent estate is not specified.

§ 106IN.03(c) Leaseholds.

A registered instrument is required for a lease of immoveable property for a term exceeding one year or for a year-to-year term. Leases for other terms can be created by oral agreement and transfer of possession. Permission of tax authorities may be required for leases above a certain value.

§ 106IN.03(d) Gifts.

All gifts of immoveable property must be made by registered instrument.

§ 106IN.03(e) Succession.

Among the significant property topics regulated by major statutory enactments are several succession statutes. The Indian Succession Act of 1952 governs intestate succession for Parsis (professing the Zoroastrian religion), Indian Christians, Jews and others. The Hindu Succession Act of 1956 governs intestate succession among Hindus. Muslim

succession, testate and intestate, is governed by Sunni and Shia doctrines. n17

§ 106IN.03(f) Wills.

As mentioned above, a variety of statutory and customary approaches to testate and intestate succession are set forth in several Indian succession laws, mostly corresponding to one's professed religion. The Indian Succession Act of 1925 governs wills, and these laws as they relate to formalities are closely patterned after the English model.

§ 106IN.03(g) Real Estate Transactions.

Real property in India is generally included in the statutory references to immoveable property. The Transfer of Property Act governs conveyances of property to living persons, such term including a company, association or body of individuals, whether or not incorporated. Actual conveyances of immoveable property interest over a certain value can be made only by registered instrument; other transfers can be made by delivery. Real estate contracts do not create interests in the property.

These rules also apply to mortgages. In certain large cities, equitable mortgages on immoveable property are created by the debtor delivering documents of title to the creditor for the purposes of securing the loan.

Other transactions involving the conduct of the parties or operation of law, but not delivery of title documents, where property is made security for payment of money, are called legal charges.

The Industrial Policy (1991) invites and regulates foreign investment, including foreign direct investment in virtually all sectors.

§ 106IN.03(h) Special Rules.

Conveyances of immoveable property to charitable trusts, or of agricultural property to one who will not use the property for agriculture require prior approval from appropriate government officials. Also, agricultural lands are subject to laws limiting the amount of such land that may be held.

§ 106IN.03(i) Title Registration.

The Indian Registration Act governs registration of documents of transfer. No registration should occur unless the proper authorities have certified that arrangements have been made to satisfy all existing liabilities relating to the property.

§ 106IN.03(j) Stamps.

Transactional documents must bear the appropriate stamps, as determined by federal and state law and according to varying rates, under authority of the Indian Stamp Act of 1899. Stamp duty is to be paid on all documents that are registered, and averages 12-13%, a relatively high rate. Efforts to avoid registration are often intended to avoid paying the stamp tax.

§ 106IN.03(k) Taxation.

§ 106IN.03(k)(1) Estate Tax.

The estate tax was abolished in India with respect to deaths occurring after March 16, 1985. Income tax is subject to special rules and rates for residential rental income (house property).

§ 106IN.03(k)(2) Wealth Tax.

The Wealth Tax Act of 1957 imposed an annual tax, similar to a property tax, on 1% of the value of various kinds of property above a certain value, including buildings and appurtenant lands used for residential or commercial purposes, urban land, and land held for investment.

§ 106IN.03(l) Environmental Regulation.

Environmental regulation and protection in India is a vast subject with an enormous amount of statutory detail. It suffices, for purposes of this chapter, to list below the principal governing statutes, to illustrate the scope and diversity of environmental regulation: n18

The Atomic Energy Act of 1962

The Delegated Legislation Provisions Act (Amendment, 2004) (delegating much regulation authority to the states)

The Environmental Protection Act of 1986

The Factories Act of 1948

The Forest Conservation Act of 1980

The Indian Forest Act of 1927

The Insecticides Act of 1968

The National Environment Policy 2004

The National Environment Tribunal Act (1995)

The Public Liability Insurance Act (1991) (relating to hazardous materials)

The Water Prevention and Control of Pollution Act of 1974

The Water Prevention and Control of Pollution Cess Act of 1977

The Wildlife Protection Act of 1974

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.01

§ 106IT.01 Constitutional Foundation to Private Property in Italy

[Go To Supp]

When, at the outset of the postwar reconstruction in the 1940s, the Assembly of Constitutional Framers had to establish the foundations of the newly born Italian Republic, the regulation of property was one of the most heated issues brought to the fore of public debate. The Constitutional Assembly, which was elected in the aftermath of a controversial referendum that decided to abolish the monarchy and opted for a republican form of state, was the clear expression of a divide in the society. The Assembly was comprising three major constituencies: a strong communist and socialist party, a strong christian-democratic party and a significant liberal party. Each of the three constituencies had a firmly held ideological view on the functions and the regulation that property should have. A liberal tradition had been enshrined in the 1848 Albertine Constitution, which at article 29 provided: *"All properties without exceptions are inviolable. Nonetheless, when the public interest legally ascertained requires it, it might be required to cede all or part of them for a fair indemnity"*. Marxists stressed the need for a reform toward collectivization of property and at half ground, Catholics leaned toward a functional view of property as a means to grant dignity and personal development. To compromise, the framers found a formula that would allow any possible actual future application: from a neo-capitalistic economy to collectivization and echoing the roman tradition of Gaius (*res publicae sunt aut privatae*, Inst., II, par.10) they provided at *Article 42 Const.*: *"Property is public and private. Economic assets belong to the State, local authorities or citizens. Private Property is recognized and granted by the law which sets the ways by means of which it might be acquired, enjoyed and its limitations in order to assure the social function of it and to made it accessible to everyone. In cases set by the law and for an indemnity, private property may be expropriated for general interest."*

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.02

§ 106IT.02 Property and the 1942 Italian Civil Code

article 136 (3) of the Constitution

Italian civil code (ICC) is heavily indebted to the roman tradition and to the legislative technique of the Code Napoleon, from which it drew the most important norms on property. The Civil Code's framers preferred the technique of wide legal definitions and general concepts given by the Code Napoleon which constituted the most important model from which they took inspiration. The Civil Code comprises six books and property is regulated by the third book (from Article 810 to Article 1171), which is divided into nine different subdivisions or "titles". The third book gives a complete regulation of property: it defines what assets might be objects of property and the different kinds of real property rights and interests in the land of others, it provides norms about confining properties, it regulates co-ownership and condominiums, it defines possession and ownership and sets rules on claims and protection of possession and ownership.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.03

§ 106IT.03 Property and the 1942 Civil Code Basic Principles of the Italian Property Law

[Go To Supp]

In Italy, assets are divided into movable (*"beni mobili"*) and immovable property (*"beni immobili"*), a distinction similar to the common-law concepts of personal and real property. Under article 812 of the civil code, the ground, the natural resources, the watercourses, the trees and the buildings or other constructions and in general what is naturally incorporated to the ground are immovable property. All other goods are movable property. Natural energy is considered a movable property.

An important subset of movable property is composed by registered movable property (*"beni mobili registrati"*): vehicles and boats are among registered movable property, because they must be registered in special public registry. Even if such assets are not incorporated in the ground, they are subject to rules on transferability that are similar to those set for immovable property.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.04

§ 106IT.04 State Property in Italy

[Go To Supp]

Under the civil code, the shore, the beaches, the ports, the rivers, the torrents, the lakes and other public waters so defined by special laws as well as buildings and constructions made for national defense are state property ("*demanio pubblico*"). Also, roads, highways, railways, airports, aqueducts, buildings that are recognized by special laws as of historical interest are State property. State property cannot be sold or be the object of individual property rights and is protected and regulated by the State. Except for State property, property rights on movable or immovable property can arise through transfer from a previous legitimate owner (derivative constitution of right) or through prescription, occupation, or acquisition.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.06

§ 106IT.06 Occupation and Invention

Constitution, Art. 9

By occupation a property interest on movables that do not belong to anybody (*res nullius*) may be acquired. Two conditions are necessary for occupation to be effective: one has to (1) take possession of the immovable (2) with the intention of becoming the owner of the occupied movable. Immovables cannot be effectively occupied because immovables that do not belong to anybody are considered to belong to the State. Under the civil code, movables that do not belong to anybody are: chattels that have been abandoned with the intention of losing the property interest, the catch from fishing. Traditionally wild animals had been considered as if they were not owned by anyone (*"res nullius"*), but a strict regulation of hunting has excluded wild animals (*"ferae naturae"*) from the goods of which one can obtain property by taking possession on it.

Different from movables that do not belong to anybody are movables that have been lost. If someone finds a movable that has been lost (*"invention"*), she has to return the lost item to the owner if she knows him or, if not, she has to deliver the lost movable to the relevant office of the local authority where the good has been found. Once one year has passed and the owner has not claimed the lost movable, the finder becomes the owner of the lost item. If the lost movable is claimed, the finder has the right to an indemnity equal to a tenth of the value of the movable. Also, treasures found in the soil may be acquired through invention if they are found by the owner of the soil. If the treasure is found by someone other than the owner of the soil, the finder has to share fifty percent of the value of the treasure with the owner of the soil. However, treasures that have historical, archeological or artistic value belong to the State.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.07

§ 106IT.07 Accession

[Go To Supp]

A traditional principle provides that property on the most important good may entail property on something that is ancillary to it. Through accession, a movable that is incorporated to an immovable may become part of the immovable. For example, if somebody realizes a building on a soil of which he is the owner, he becomes the owner of the building as long as it is embedded in the soil. Under the civil code, when somebody, who acts in good faith, realizes a building on the land of another, the latter has the right at his option to pay the cost of the works or to pay the increase in value that the land has gained because of the new building. The owner of the land will be entitled to obtain the demolition of the new building at the builder's cost only if the builder was in bad faith and has realized the building while he was aware that the land belonged to somebody else. Accession may occur also between two immovables: for example when an upstream piece of land is dragged by a river and join a downstream piece of land.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.08

§ 106IT.08 Union, Commingling and Specification

[Go To Supp]

Union (*"unione"*) or commingling (*"commistione"*) occurs when two movables are united or commingled in order to form a different object. In this case, the finished product belongs to the owner of the most important of the commingled properties. If the components of the new object are of equal importance and they cannot be easily separated, the owners of the components become co-owners of the new object. Specification (*"specificazione"*) occurs when somebody uses raw material that belongs to somebody else to realize a new finished product: it is the case of the sculptor who uses somebody's else marble. The sculptor becomes the owner of the raw material but he has to pay a fair price for the material he used. Like in anglo-american case law, the civil code provides a test similar to the *"disproportionate value"* test if the raw material one used is far more valuable than the finished product. In this event, as it happens in the case of a goldsmith who uses somebody's else gold, the owner of the raw material becomes owner of the finished product but he has to compensate the labor costs.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.09

§ 106IT.09 Possession

[Go To Supp]

The Italian civil code provides protection not only to property rights but also to possession. A traditional definition draws the line between possession and property in that while the former is a "matter of fact", the latter is a "matter of law". Under article 1140 c.c., possession is the power exercised on something in a way that appears to correspond to the exercise of the right of ownership: like in Anglo-American property law, one may generally be said to have possession on something if he has dominion and control over it. Therefore, the difference between title and possession is the same between being the owner and behaving like the owner. According to a latin tradition, possession requires the intention of being the owner (*"animus possidendi"*): therefore if someone holds something on the basis of a contract that recognizes that sombody else owns the good, she will not possess the good. In other words, when the possessor is not the owner himself, possession must be inconsistent with owner's rights and without the owner's consent: holding an article with the owner's consent gives rise to a bailment ("*detenzione"*).

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.10

§ 106IT.10 *Bona fide* Purchaser of Movables and Valid Transfer Of Property Interest

[Go To Supp]

Personal property may be acquired through possession: a general rule is usually condensed in the motto "possession counts as title" (*"possesso vale titolo"*). This is a strikingly different approach from what most Anglo-American jurisdictions do with reference to *bona fide* purchasers. In these jurisdictions, "a seller cannot convey better title than that which he holds". The rule "possession counts as title" aims at making trade and transfer of movables easy and safe. Under article 1153 of the civil code, if somebody receives a movable from somebody who is not the actual owner, he acquires nonetheless the ownership of the movable if he was in good faith when he took possession of the good and obtained it through a formally valid title. The acquisition of the property right interest of the *bona fide* purchaser does not depend on the status or qualification of the seller, who could indifferently be a layperson or a merchant.

Thompson on Real Property, Thomas Editions

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.11

§ 106IT.11 Acquiring and Securing Real Property Rights

[Go To Supp]

Under Italian law, real property interests can be transferred from a previous owner to another owner only by a contract in writing or by a public instrument made by a notary public, who has to follow certain forms provided by law ("Atto pubblico").

Italy has a recording system ("registri immobiliari") that allows to deal with conflicting claims on the same parcel and differently from what is for example the Autrian system, its recording system has a personal basis. Therefore the search for title has to be done not on the land parcel but rather on the chain of persons who owned the land. In Italy, there is also a public register that is based on parcels of land, the cadaster ("Catasto"): however it has mainly tax purposes. To be recorded in the recording system, the contract has to be notarized by a public notary.

In the Italian recording system, not only real property interests but also claims on property are registered. Italy has realized what is generally called a "pure race statute": the subsequent purchaser that records before the earlier purchaser is protected whether or not he has actual notice of the earlier conveyance. However, in the event the subsequent purchaser had actual notice of the previous sale, the previous purchaser will be able to claim damages against the seller and the subsequent purchaser.

With reference to real property, a seller cannot convey better title than that which he holds: therefore if somebody buys from a previous owner whose title was invalid, the owner with a valid title might claim his title against the subsequent purchaser who bears the risk of being evicted ("evizione"). However, such strict rule is softened for the subsequent bona fide purchaser who bought on the basis of a formally valid title that has been registered in the recording system. If the above-mentioned condition occurs, the civil code provide a statute of limitations of five years after which the subsequent owner cannot be evicted.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.12

§ 106IT.12 Adverse Possession or Acquisitive Prescription (*"Usucapione"*)

[Go To Supp]

The principle "possession counts as title" does not apply in relation to real property, with reference of which the rule "a seller cannot convey better title than that which he holds" applies. However, real property might be acquired through the joint occurrence of possession and the passage of time. It may happen that real property be possessed by somebody who has not a valid title. If such a situation drags on for a significant stretch of time, the possessor ends up acquiring a valid title. It has no relevance whether or not the possessor is in good faith, even though such aspect might affect the length required to acquire a valid title.

Like in most Anglo-American jurisdictions, in order to result in prescription, possession has to be open (notorious and visible), exclusive, actual and continuous. If possession has been gained by the use of force or violence, the term for prescription starts running once the violence has ended or the possession has become visible and notorious.

As we said, the length of time for acquiring a valid title on a real property varies. To acquire a valid title on real property, possession has to be continuously held for twenty years. However, if the purchaser of the real property was in good faith and bought the real property from a non-owner on the basis of a formally valid title that has been filed with the land registry, he will acquire a valid title in ten years. The possessor or a registered movable will have to hold the property for three years.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.13

§ 106IT.13 Other Interests in Real Property

[Go To Supp]

In Italy, as discussed above, the regulation of property is indebted more to the roman tradition than to feudalism: this has created a legal framework and an economic structure where unrestricted property is the rule and minor interests in real property are the exceptions. To use concepts that derive from a common-law background, fee simples (an unrestricted and endless right to a land or real estate, save the application of zoning rules) are the most common status of property rights. However, the civil code provides a regulation of six minor interests (or estate) other than property. Minor interests usually coexist and limit the unrestricted use of an estate.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.14

§ 106IT.14 Emphyteusis

[Go To Supp]

Among minor interests, emphyteusis is the largest in content: once it used to be very common because it was a way for noblemen to obtain a rent from unused lands, but it has now declined in use, even because it has not been favored by the parliament who has introduced rules to redeem the property of lands subject to emhyteusis (law n. 607 of 1966 and 1138 of 1970).

As stated in article 958 of the ICC, emphyteusis is a perpetual interest in the real property and if a limitation in duration is provided for, emphyteusis has to last at least twenty years. Emphyteusis can be transferred by contract (*inter vivos*) or it can be bequeathed (*mortis causa*).

The holder of a emphyteusis, the emphyteuta, has the same rights to enjoy of the estate of an owner subject to two duties: (1) he has to improve the estate and (2) he has to pay periodic rent. Even if it is an interest more common in countryside, emphyteusis can be agreed on any kind of real estate.

The emphyteuta may redeem the property on the land paying an amount equal to the value of fifteen years of capitalized rent. On the other hand, if the emphyteuta does not comply to his duties to improve the land or paying the rent, the owner can judicially obtain the re-assignment of the property.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.15

§ 106IT.15 Servitudes

[Go To Supp]

According to article 1027 of the ICC, servitudes are burdens imposed on the use of the land, to the advantage of an adjoining land. Even though servitudes are born mostly to regulate adjoining lands, they have been used to allow passage of aqueducts, electric system, railroads and other public utility's network on somebody's else land. Usually the latter are imposed by a public authority with a decision that has the same value of a judgement.

The content of servitudes is heterogeneous. By servitude, a right to pass through a land or a right to draw water from a land to the benefit of another land may be obtained. Servitudes may also have a negative content whereas the owner of a land burdened by a servitude may be prevented from building over a certain height if this impedes the view of an adjoining land that enjoys a view-servitude.

They may arise voluntarily by a contract signed between the owners of two adjoining lands. However, if someone owns a land that is surrounded by other lands that prevent him to access a public road from his parcel, he may obtain a judicial decision that gives rise to a servitude on one adjoining land.

Servitudes, like other minor real interests, may be acquired or lost by adverse possession if the servitude is used (or non used) for twenty years.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.16

§ 106IT.16 Usufruct

Bill of Rights

When a landowner separates rights of enjoyment, which are given to a life tenant, from the other rights associated with ownership of real property, a usufruct arises. The usufruct is usually given for the duration of tenant's life, if it is granted to a company it cannot exceed thirty years.

In common law, the most similar estate to usufruct is life estate (or estate for years). An usufruct right can be separated and transferred to another without the property owner losing the other rights that have been retained (he remains what is called a *"naked owner" "nudo proprietario"* as he owns a *"naked property" "nuda proprieta"*). However, the life tenant must respect the economic destination of the asset he holds in usufruct.

As stated in article 981 of the Italian Civil code, the life tenant has the right to enjoy its facilities and fruits. Fruits include both natural produce (if the usufruct is on a cultivated land) or rents if the estate is rented out.

Costs for maintaining the estate are divided between the life tenant and the owner: all extraordinary costs for repairs are born by the naked owner whereas the costs for ordinary repairs are born by the life tenant. The former pays all taxes related to property and the latter pays the taxes related to income from the use of the land.

At the end of the usufruct period, the life tenant must return the property in essentially the same condition in which it was received, natural deterioration and wear and tear excepted. Usufructs are transferable. Usufruct usually arises voluntarily from a contract or a will, but the civil code provides for a mandatory usufruct given to the parents on the assets owned by a minor.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.17

§ 106IT.17 Use and Habitation

Bill of Rights

Use is similar to the usufruct, except that the use gives a tenant the right to enjoy fruits of an estate as long as they are necessary to fulfill a person's and the person's family needs. The habitation is a variant of the use in which a person receives land or a real estate for a family dwelling and has no obligation to pay rent to the landowner. Article 1026 of the Italian civil code establishes that the rules regarding usufruct are applicable to the use and the habitation. Nowadays, these property rights are not common because usufruct is usually used instead.

CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions § 106IT.18

§ 106IT.18 Surface Rights

Bill of Rights

The right of surface gives the holder the right to build and own a building on (or under) somebody else's soil. The surface agreed by contract suspends the occurrence of accession. The right of surface might be perpetual or established for years. If its duration is limited, once it expires the accession rules make the building become property of the soil's owner. The surface interest may end by prescription if the building is not realized within 20 years from the beginning of the right.

Under the Italian Civil Code, except for State property, property rights interests can be acquired in nine different ways: seven of them are defined as "original acquisitions of interests" because the resulting interest do not derive from the property of a previous owner. Original acquisition of rights are: occupation, invention, accession, specification, union, commingling, prescription. Two of them are defined derivative acquisition of rights and they are: transfer by contract and succession.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.06

Supp. to § 106IT.06 Occupation and Invention

[Go To Main]

By occupation a property interest in movables that do not belong to anybody (*res nullius*) may be acquired. Two conditions are necessary for occupation to be effective: one has to (1) take possession of the immovable (2) with the intention of becoming the owner of the occupied movable. Immovables cannot be effectively occupied because immovables that do not belong to anybody are considered to belong to the State. Under the civil code, movables that do not belong to anybody are: chattels that have been abandoned with the intention of losing the property interest and the catch from fishing. Traditionally wild animals had been considered as if they were not owned by anyone (*"res nullius"*), but a strict regulation of hunting has excluded wild animals (*"ferae naturae"*) from the goods of which one can obtain property by taking possession on it.

Different from movables that do not belong to anybody are movables that have been lost. If someone finds a movable that has been lost (*"invention"*), the finder must return the lost item to the owner if known or, if not, the finder must deliver the lost movable to the relevant office of the local authority where the good has been found. Once one year has passed and the owner has not claimed the lost movable, the finder becomes the owner of the lost item. If the lost movable is claimed, the finder has the right to an indemnity equal to a tenth of the value of the movable. Also, treasures found in the soil may be acquired through invention if they are found by the owner of the soil. If the treasure is found by someone other than the owner of the soil, the finder has to share fifty percent of the value of the treasure with the owner of the soil. However, treasures that have historical, archeological or artistic value belong to the State.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.07

Supp. to § 106IT.07 Accession

[Go To Main]

A traditional principle provides that property in the most important good may include property on something that is ancillary to it. Through accession, a movable that is incorporated into an immovable may become part of the immovable. For example, if somebody discovers a building on soil of which he is the owner, he becomes the owner of the building as long as it is embedded in the soil. Under the Civil Code, when somebody, who acts in good faith, discovers a building on the land of another, the latter has the right at his option to pay the cost of the works or to pay the increase in value that the land has gained because of the new building. The owner of the land will be entitled to obtain the demolition of the new building at the builder's cost only if the builder acted in bad faith and has constructed the building while he was aware that the land belonged to somebody else. Accession may occur also between two immovables: for example when an upstream piece of land is dragged by a river and joins a downstream piece of land.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.08

Supp. to § 106IT.08 Union, Commingling and Specification

[Go To Main]

Union (*"unione"*) or commingling (*"commistione"*) occurs when two movables are united or commingled in order to form a different object. In this case, the finished product belongs to the owner of the most important of the commingled properties. If the components of the new object are of equal importance and they cannot be easily separated, the owners of the components become co-owners of the new object. Specification (*"specificazione"*) occurs when somebody uses raw material that belongs to somebody else to create a new finished product: it is the case of the sculptor who uses somebody's else marble. The sculptor becomes the owner of the raw material but he has to pay a fair price for the material he used. As in Anglo-American case law, the Civil Code provides a test similar to the *"disproportionate value"* test if the raw material one used is far more valuable than the finished product. In this event, as it happens in the case of a goldsmith who uses somebody's else gold, the owner of the raw material becomes owner of the finished product but he has to compensate the labor costs.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.09

Supp. to § 106IT.09 Possession

[Go To Main]

The Italian Civil Code provides protection not only for property rights but also for possession. A traditional definition draws the line between possession and property in that while the former is a "matter of fact," the latter is a "matter of law." Under Article 1140 C.C., possession is the power exercised on something in a way that appears to correspond to the exercise of the right of ownership: as in Anglo-American property law, one may generally be said to have possession of something if he has dominion and control over it. Therefore, the difference between title and possession is the same as between being the owner and behaving like the owner. According to a Latin tradition, possession requires the intention of being the owner (*"animus possidendi"*): therefore if someone holds something on the basis of a contract that recognizes that somebody else owns the good, she will not possess the good. In other words, when the possessor is not the owner himself, possession must be inconsistent with owner's rights and without the owner's consent: holding an article with the owner's consent gives rise to a bailment ("*detenzione"*).

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.10

Supp. to § 106IT.10 Bona fide Purchaser of Movables and Valid Transfer of Property Interest

[Go To Main]

Personal property may be acquired through possession: a general rule is usually condensed in the motto "possession counts as title" (*"possesso vale titolo"*). This is a strikingly different approach from what most Anglo-American jurisdictions do with reference to *bona fide* purchasers. In these jurisdictions, "a seller cannot convey better title than that which he holds." The rule "possession counts as title" aims at making trade and transfer of movables easy and safe. Under Article 1153 of the Civil Code, if somebody receives a movable from somebody who is not the actual owner, he acquires nonetheless the ownership of the movable if he was in good faith when he took possession of the good and obtained it through a formally valid title. The acquisition of the property right interest of the *bona fide* purchaser does not depend on the status or qualification of the seller, who could be a layperson or a merchant.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.11

Supp. to § 106IT.11 Acquiring and Securing Real Property Rights

[Go To Main]

Under Italian law, real property interests can be transferred from a previous owner to another owner only by a contract in writing or by a public instrument made by a notary public, who has to follow certain forms provided by law ("Atto pubblico").

Italy has a recording system ("registri immobiliari") that is able to deal with conflicting claims on the same parcel and differently from what is for example the Autrian system: its recording system has a personal basis. Therefore the search for title has to be done not on the land parcel but rather on the chain of persons who owned the land. In Italy, there is also a public register that is based on parcels of land, the cadaster ("Catasto"): however it has mainly tax purposes. To be recorded in the recording system, the contract has to be notarized by a public notary.

In the Italian recording system, not only real property interests but also claims on property are registered. Italy has adopted what is generally called a "pure race statute": the subsequent purchaser that records before the earlier purchaser is protected whether or not he has actual notice of the earlier conveyance. However, in the event the subsequent purchaser had actual notice of the previous sale, the previous purchaser will be able to claim damages against the seller and the subsequent purchaser.

With reference to real property, a seller cannot convey better title than that which he holds; therefore if somebody buys from a previous owner whose title was invalid, the owner with a valid title might claim his title against the subsequent purchaser who bears the risk of being evicted ("evizione"). However, this strict rule is softened for the subsequent bona fide purchaser who bought on the basis of a formerly valid title that has been registered in the recording system. If the above-mentioned condition occurs, the Civil Code provides a statute of limitations of five years after which the subsequent owner cannot be evicted.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.12

Supp. to § 106IT.12 Adverse Possession or Acquisitive Prescription ("Usucapione")

[Go To Main]

The principle "possession counts as title" does not apply in relation to real property, when the rule that "a seller cannot convey better title than that which he holds" applies. However, real property might be acquired through the joint occurrence of possession and the passage of time. It may happen that real property is possessed by somebody who does not have a valid title. If such a situation continues uninterrupted for a sufficient period of time, the possessor ends up acquiring a valid title. Whether the possessor is in good faith is not relevant, even though good faith status might affect the length of time required to acquire a valid title.

As in most Anglo-American jurisdictions, in order to result in prescription, possession has to be open (notorious and visible), exclusive, actual and continuous. If possession has been gained by the use of force or violence, the term for prescription starts running once the violence has ended or the possession has become visible and notorious.

As stated above, the length of time for acquiring a valid title on real property varies. To acquire a valid title on real property, possession has to be continuously held for twenty years. However, if the purchaser of the real property acted in good faith and bought the real property from a non-owner on the basis of a formerly valid title that has been filed with the land registry, he will acquire a valid title in ten years. The possessor or a registered movable will have to hold the property for three years.

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.13

Supp. to § 106IT.13 Other Interests in Real Property

[Go To Main]

In Italy, as discussed above, the regulation of property is indebted more to the Roman tradition than to feudalism; this has created a legal framework and an economic structure where unrestricted property is the rule and minor interests in real property are the exceptions. To use concepts that derive from a common-law background, the fee simple (an unrestricted and endless right to a land or real estate, save the application of zoning rules) is the most common form of property rights. However, the Civil Code provides a regulation of six minor interests (or estate) other than property. Minor interests usually coexist and limit the unrestricted use of an estate.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.14

Supp. to § 106IT.14 Emphyteusis

[Go To Main]

Among minor interests, emphyteusis is the largest in scope: once it used to be very common because it was a way for noblemen to obtain a rent from unused lands, but it has now declined in use, because it has not been favored by the parliament who has introduced rules to redeem the property of lands subject to emhyteusis (law n. 607 of 1966 and 1138 of 1970).

As stated in Article 958 of the ICC, emphyteusis is a perpetual interest in the real property and if a limitation in duration is provided for, emphyteusis has to last at least twenty years. Emphyteusis can be transferred by contract (*inter vivos*) or it can be bequeathed (*mortis causa*).

The holder of a emphyteusis, the emphyteuta, has the same rights to enjoy of the estate of an owner subject to two duties: (1) he has to improve the estate and (2) he has to pay periodic rent. Even though it is an interest more common in the countryside, emphyteusis can be agreed on any kind of real estate.

The emphyteuta may redeem the property on the land by paying an amount equal to the value of fifteen years of capitalized rent. On the other hand, if the emphyteuta does not comply with his duties to improve the land or pay the rent, the owner can judicially obtain the re-assignment of the property.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.15

Supp. to § 106IT.15 Servitudes

[Go To Main]

According to Article 1027 of the ICC, servitudes are burdens imposed on the use of the land, to the advantage of an adjoining land. Even though servitudes are created mostly to regulate adjoining lands, they have been used to allow passage of aqueducts, electric system, railroads and other public utilities on somebody's else land. Usually the latter are imposed by a public authority with a decision that has the same value of a judgement.

The content of servitudes is heterogeneous. By servitude, a right to pass through a land or a right to draw water from a land to the benefit of another land may be obtained. Servitudes may also have a negative content whereby the owner of a land burdened by a servitude may be prevented from building over a certain height if this impedes the view of an adjoining land that enjoys a view-servitude.

They may arise voluntarily by a contract signed between the owners of two adjoining lands. However, if someone owns land that is surrounded by other lands that prevent access a public road from his parcel, he may obtain a judicial decision that gives rise to a servitude on adjoining land.

Servitudes, like other minor real interests, may be acquired or lost by adverse possession if the servitude is used (or not used) for twenty years.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.16

Supp. to § 106IT.16 Usufruct

[Go To Main]

When a landowner separates rights of enjoyment, which are given to a life tenant, from the other rights associated with ownership of real property, a usufruct arises. The usufruct is usually given for the duration of a tenant's life; if it is granted to a company it cannot exceed thirty years.

In common law, the most similar estate to usufruct is life estate (or estate for years). A usufruct right can be separated and transferred to another without the property owner losing the other rights that have been retained (he remains what is called a *"naked owner" "nudo proprietario"* as he owns a *"naked property" "nuda proprieta"*). However, the life tenant must preserve the economic value of the asset he holds in usufruct.

As stated in Article 981 of the Italian Civil Code, the life tenant has the right to enjoy its facilities and fruits. Fruits include both natural produce (if the usufruct is on cultivated land) or rents if the estate is rented out.

Costs for maintaining the estate are divided between the life tenant and the owner: all extraordinary costs for repairs are borne by the naked owner whereas the costs for ordinary repairs are borne by the life tenant. The former pays all taxes related to property and the latter pays the taxes related to income from the use of the land.

At the end of the usufruct period, the life tenant must return the property in essentially the same condition in which it was received, natural deterioration and wear and tear excepted. Usufructs are transferable. Usufruct usually arises voluntarily from a contract or a will, but the Civil Code provides for a mandatory usufruct given to the parents on the assets owned by their minor child.

Supp. To CHAPTER 106IT PROPERTY LAW IN ITALY

13-106IT Thompson on Real Property, Thomas Editions Supp. to § 106IT.17

Supp. to § 106IT.17 Use and Habitation

[Go To Main]

Use is similar to the usufruct, except that the use gives a tenant the right to enjoy fruits of an estate as long as they are necessary to fulfill the tenant's personal and family needs. The habitation is a variant of the use in which a person receives land or real estate for a family dwelling and has no obligation to pay rent to the landowner. Article 1026 of the Italian Civil Code establishes that the rules regarding usufruct are applicable to the use and the habitation. Nowadays, these property rights are not common because usufruct is usually used instead.

CHAPTER 106JP PROPERTY LAW IN JAPAN

13-106JP Thompson on Real Property, Thomas Editions § 106JP.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106JP.01 Brief History of Japanese Property Law.

Before the 7th century A.D., Japanese law was unwritten and dealt mostly with rituals of ancestor worship and the relationships of clans and families. Only in some of the laws now governing the imperial household may be found any remnants of this prehistoric law.

When Chinese influence reached Japan by way of Korea during the 7th century, the accompanying priests helped create a new moral structure in Japan. This same moral structure still forms the basis of Japanese social ethics. The result of this new influence for development of law was the Taiho Code of A.D. 701, which was based on Chinese law. The Taiho Code did not draw a clear line between morality and law or between private law and public law -- its aim was to preserve moral order and harmony in human relationships. In this code much attention was given to the form of government, the hierarchy of offices, and the discipline of officials and subjects. Most of the legal rules, therefore, would be described today as "public law." The few rules of private law dealt mostly with family and succession matters. Some family regulations were in the nature of public law, because order in the family was considered essential to harmonious world order.

With the weakening of central authority, a feudal system developed in the 12th century and persisted until the 19th century. During the feudal period, the government was ruled by a succession of military houses and the old, formal Chinese laws were modified to fit feudal conditions, and later to accommodate the military government that was controlled by a single dynasty for the final three hundred years of the period. Separate sets of laws and traditions governed the Imperial Court, warriors, commoners, and outcasts. The ownership of land was at first restricted to the warrior classes, but merchants gradually overcame this handicap and gained a substantial economic position. Law, for the most part, consisted of private instructions and regulations for officials, and were rarely or only partially publicized.

In 1868 the ruling Tokugawa family was overthrown by opposition clans, which then established government controls in the Emperor Meiji. This was followed by the re-establishment of a strong central government, the abolition of the feudal regime, and the abandonment of the policy of isolation which had secluded Japan from the rest of the world for three hundred years.

Meanwhile, a second wave of foreign influence had commenced with the coming of the "black ships" under the

American Commodore Perry in 1853. This resulted in opening the country to trade and shipping and the adoption of Western technology. New laws were adopted to accommodate a society changing from agricultural and feudal to industrial and commercial. New laws enabled Japan to obtain better trade treaties and also reduce foreign extra-territorial privileges.

The new laws were based, principally, on the continental European legal system. The commercial code, the bankruptcy law and the code of civil procedure were derived from the counterpart German codes; the criminal code and the code of criminal procedure were influenced by their French counterparts.

The first Japanese Civil Code compilation commission was formed in 1875, but the entire Civil Code was not enacted until 1898. The delay was caused by uncertainty about how to frame laws dealing satisfactorily with family and succession. Eventually a two-part code was adopted, one part containing the general provisions based mostly on continental European law, and the other with provisions on family and succession, drawn largely from traditional law and custom. This two-part code was still in force when Western occupation commenced at the end of World War II.

With the inception of that occupation, law in Japan came under increased influence of Anglo-Saxon legal ideas. The revision of the Civil Code in 1947, under the direction of occupation authorities, essentially completed the transition of Japanese civil law to European law.

The new post-war constitution included principles regarding marriage and family, which thus once again became matters of public law. The adoption of this new constitution on January 1, 1948, also hastened the revision of the Civil Code, which was already underway. The new Civil Code was created by a committee consisting of ministerial officials, judges, scholars, lawyers, journalists, and representatives of both houses of the Diet. Women were also included on the committee. This committee worked with occupation lawyers to articulate reforms that were carried out under the military occupation. With the exception of one article, the revision of the Civil Code dealt almost exclusively with family law, Books 4 and 5 of the old civil code. The property laws of Book 2 were generally not the subject of revision.

CHAPTER 106JP PROPERTY LAW IN JAPAN

13-106JP Thompson on Real Property, Thomas Editions § 106JP.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106JP.02 Property Interests Recognized in Japan.

§ 106JP.02(a) General Concepts.

Land and things fixed to land are considered immovables. Things are considered fixed to the land if they are closely attached, such as buildings and fixtures, or form a body with the land, such as water and minerals. Rights in real property are known as real rights. Real rights may be created by intention of the parties coupled with delivery or registration. n1

§ 106JP.02(b) Possessory Rights.

Japanese law distinguishes between:

legal possession and natural possession;

possession by just title and possession by unjust title;

possession in good faith and possession in bad faith;

defective possession and non-defective possession;

faulty possession and faultless possession; and

continuous possession and non-continuous possession.

Possessory rights are acquired by holding things with the intention of so doing on one's own account, n2 or are acquired through a representative. n3

§ 106JP.02(c) Ownership.

"An owner has the right of freely using, receiving profits of, and disposing of the thing owned within the restrictions of laws and ordinances." n4 "The ownership of land, within the restrictions of laws and ordinances, extends above and

under the surface." n5

§ 106JP.02(c)(1) Civil Code Provisions Relating to Various Aspects of Land Ownership.

§ 106JP.02(c)(1)(i) Limits on Ownership of Buildings.

1. When several persons each own a portion of a building divided into parts, the parts in common use of the building and its accessories are presumed to be jointly owned by them.

2. The expenses of repairing and other charges for the parts in common use are shared proportionately according to the value of the portion owned by each. n6

§ 106JP.02(c)(1)(ii) Restrictions Between Adjacent Owners.

§ 106JP.02(c)(1)(ii)(a) Right of Using Adjacent Land.

a. The owner of land can demand the use of adjacent land within the limits necessary for constructing or repairing fences and walls or buildings on or near the boundary, but cannot enter the dwelling house of an adjacent owner unless with the latter's consent.

b. In the case of the preceding paragraph, the adjacent owner who has sustained damages, can claim compensation. n7

§ 106JP.02(c)(1)(ii)(b) Right of Thoroughfare.

a. When a piece of land is surrounded by other land and so has no passage to the public road, the owner of such land may pass over the surrounding land in order to reach the public road.

b. The same applies when there is no outward passage except by pond, marsh, river, canal, or sea or ocean, or when there is a considerable difference in height between the land and the public road on account of a cliff or bank. n8

c. In the case of the preceding article the place and method of passage must be so chosen as to meet the needs of the person who is entitled to the right of passage and yet cause as little damage as possible to the surrounding land. The person who has the right of passage may construct a road when it is necessary. n9

d. The person who is entitled to the right of passage must pay just compensation for any injury caused to the land passed over, but the compensation can be paid annually. n10

e. When in consequence of partition, a plot of land comes into being which has no passage to the public road, the owner of such piece of land may pass to the public road only through the piece of land owned by the other co-partitioners. In this case the owner need not pay any compensation.

f. The provisions of the preceding paragraph apply correspondingly when the owner of a piece of land has assigned a part thereof. n11

§ 106JP.02(c)(1)(ii)(c) Rights with Respect to Running Water.

a. The owner of land cannot prevent water from naturally flowing in from adjacent land. n12

b. When the course of water is obstructed upon a lower piece of land by accident, the owner of the higher land may, at the owner, own expense, construct works necessary for its drainage.

c. The owner of the lower piece of land is under no obligation to facilitate the outflow of water. n13

d. When works relating to a water course constructed "A" piece of land for collecting, draining, or conducting water, cause or may cause damage to "B" piece of land, the owner of "B" can cause the owner of "A" to make repairs or drain off the water or construct preventative works if necessary. n14

e. In the case of the preceding two articles, when there is a special custom with regard to the incidence of expenses, such custom is followed. n15

f. The owner of land cannot construct roofs or other structures which cause rain water to fall directly upon adjacent land. n16

g. The owner of the bed of a canal or other water course cannot change the course of water or the width of the bed when the land on the opposite shore belongs to another person.

h. When the land on both shores belongs to the owner of the bed of the watercourse, the owner can change the course of water or the width, but the water must be restored to its natural course at its lower mouth. n17

i. The owner of higher land may conduct water through lower land for the purpose of draining land under water (marsh land) or of discharging superfluous water in household, agricultural or industrial use until it reaches a public highway, a public stream, or a drain, but the owner must so select the place and method as to cause the least possible damage to the lower land. n18

§ 106JP.02(c)(1)(ii)(d) Right of Using Adjacent Works.

a. The owner of land can, for the purpose of conducting the water on the land, use the works constructed by the owner of a higher parcel of land.

b. In the case of the preceding paragraph, a person who uses the works of another person must bear the expenses of their construction and preservation in proportion to the benefit derived therefrom. n19

§ 106JP.02(c)(1)(ii)(e) Right of Using the Opposite Shore.

The owner of the bed of a watercourse may, when it is necessary to construct a dam, rest the dam on the opposite shore, but must pay compensation for any damages which may arise in consequence. The owner of the opposite shore who owns apart of the bed of water may use the dam but must bear a share of the expenses in accordance with the provisions of the preceding article. n20

§ 106JP.02(c)(1)(ii)(f) Territorial Boundary Rights.

a. The owner of land may, by sharing expenses with the owner of the adjacent land, construct a thing indicating the boundary, notwithstanding the non-consent of the other party. n21

b. The expenses of constructing and preserving the boundary marks are to be borne in equal shares by adjacent owners, but the expenses of measurement (survey) are to be borne in shares proportionate to the extent of the area of each parcel of land. n22

§ 106JP.02(c)(1)(ii)(g) Rights of Fencing.

a. When two buildings belonging to different owners are separated by unoccupied land, either owner can construct a fence on the boundary line at the common expense of both owners.

b. When the parties concerned cannot come to an agreement, the fence of the preceding article shall be wood or bamboo and six feet in height [so as to avoid an unreasonably expensive material used in construction]. n23

c. The expenses of constructing and preserving the fence are to be borne in equal shares by the adjacent owners. n24

d. One of the adjacent owners may construct a fence of a better material or of a greater height than fixed in paragraph 2 of article 225, but must bear the consequent increase of expense. n25

e. When there is a custom differing from the provisions of the preceding three articles, such custom is to be followed. n26

§ 106JP.02(c)(1)(ii)(h) Rights of Mutual Ownership.

a. The boundary marks, fences, walls and ditches constructed on the boundary line are presumed to belong in common to the adjacent owners. n27

b. The provisions of the preceding article do not apply to a wall which stands on a boundary line and which forms a part of one of the buildings.

c. The same rule applies to that part of the wall between two buildings of unequal height which rises above (overtops) the lower building, but this does not apply to walls built for the prevention of fire. n28

§ 106JP.02(c)(1)(ii)(i) Right of Improving Fences and Walls.

a. One of the adjacent owners may increase the height of the wall jointly owned, notwithstanding the non-consent of the other owner; but if the wall cannot support the strain of the superstructure that owner must strengthen or re-construct the wall and pay the entire expense. The additional part of the wall increased in height in accordance with the preceding paragraph is exclusively owned by the person who has constructed it. n29

b. In case of the preceding article, the adjacent owner who has suffered damage can demand compensation. n30

§ 106JP.02(c)(1)(ii)(j) Right of Cutting Trees.

When the branches of trees and bamboos on adjacent land encroach over the boundary line, the owner of such trees and bamboos can be required to top off the branches. When the roots of trees and bamboos on adjacent land encroach across the boundary line they can be cut off. n31

§ 106JP.02(c)(1)(ii)(k) Restrictions Relating to Works on Boundary Lines.

a. In constructing a building, a distance of at least eighteen inches must be left from the boundary line.

b. When any person is about to construct a building contrary to the provisions of the preceding

paragraph, the owner of the adjacent land may require the person to abandon or modify the construction; but after one year has elapsed from the commencement of the construction, or after the building is finished, only compensation for damages can be demanded. n32

c. Any person who constructs at a distance of less than three feet from the boundary line a window or a veranda which overlooks the grounds of another person must attach a screen thereto.

d. The distance of the preceding paragraph is measured from that point of the window or veranda which is nearest to the adjacent land in a straight line to the boundary line. n33

e. When there are customs different from the provisions above such customs are to be followed. n34

f. In digging a well, a cistern, a cesspool, or a receptacle for manure, a distance of at least six feet must be left from the boundary line and in digging a pond, a cellar or a water-closet vault, at least three feet.

g. In laying waterpipes under ground or digging ditches, a distance of at least one half of its depth must be left from the boundary line, but it need not exceed three feet. n35

h. When the works of the preceding article are made in the neighborhood of a boundary line, necessary precautions must be taken in order to prevent the collapse of earth and sand or the infiltration of water or filthy liquids. n36

§ 106JP.02(c)(2) Acquisition of Ownership.

Ownerless immovables belong to the state, n37 but the owner of an immovable acquires the ownership of a thing that has been attached to the immovable property as its accessory, "but this does not affect the right of another person who has attached the thing by virtue of a title." n38 Ownership rights in both movables and immovables may be acquired by prescription, possession, partition, transfer and succession.

§ 106JP.02(c)(3) Concurrent Ownership.

Japanese law recognizes a form of concurrent ownership called "co-proprietorship," which can arise from contract, succession, legacy, marital relationship, or accident (such as confusion of property). The principal Civil Code rules relating to the rights of co-owners are as follows:

§ 106JP.02(c)(3)(i) Ownership by a Joint Owner.

Each joint owner may use, in proportion that owner's share, the whole of the common property. [The common object must be so used as not to interfere with the joint use of the other participants.] n39

§ 106JP.02(c)(3)(ii) Presumption of the Shares of Joint Owners.

In case of doubt, the shares of the different joint owners are presumed to be equal. n40

§ 106JP.02(c)(3)(iii) Alteration of Common Property.

None of the joint owners may make any alteration to the common property without the consent of the other joint owners. n41

§ 106JP.02(c)(3)(iv) Management and Preservation of Common Property.

Matters relating to the management of common property are, except in the case of the preceding article, decided by a vote of the majority, each joint owner having the number of votes proportionate to the value of such owner's share, but acts of preservation may be done by either of the joint owners. n42

§ 106JP.02(c)(3)(v) Expenses of Management of Common Property.

a. Each joint owner is bound to pay the expenses of management and the other charges of the common property in proportion to such owner's share.

b. If the obligations of the preceding paragraph are not performed within one year, the other joint owners can acquire the share of the party in default upon payment of suitable compensation. n43

§ 106JP.02(c)(3)(vi) Obligations Among Joint Owners.

An obligation which one of the joint owners possesses with regard to the common property against another joint owner may also be exercised against the latter's singular successor. n44

§ 106JP.02(c)(3)(vii) Effect of Joint Ownership.

When one of the joint owners renounces such owner's share or dies without an heir, the share reverts to the other joint owners. n45

§ 106JP.02(c)(3)(viii) Partition of Common Property.

a. Each joint owner can at any time demand the partition of the common property, but a contract may be concluded not to partition it for a period not exceeding five years.

b. Such contract can be renewed, but the renewal time must not exceed five years. n46

c. This does not apply to common property mentioned in Articles 208 [where building is owned in parts] and 209 [in cases of boundary marks and other common property constructed on the boundary line]. n47

§ 106JP.02(c)(3)(ix) Commonage and Iriai-ken.

Commonage is a type of customary rural servitude by which the inhabitants of certain villages have rights to cut grass and timber and to conduct water into their fields, and to use a forest or plain in common. *Iriai-ken* is a form of joint ownership based on the customs of each locality. Japanese law permits persons with rights of commonage or *iriai-ken* to obtain partition of their separate portions under some circumstances. n48

§ 106JP.02(d) Superficies.

Superficies is the right to use the land of another for support of things--such as structures, trees, and bamboos--which the user, called the superficiary, owns. n49 It is considered a real right, a highly valuable right in rem, similar to a lease, and with some features of ownership. It is enforceable against third persons. Superficies is similar to the German heritable building right. In case the period of time for duration of a superficies has not been fixed by the act of creation, the superficiary can at any time renounce the right, if there is no special custom. But when a rent is to be paid, either one years previous notice must be given or rent for one year paid, in order to renounce. n50 Upon termination of the superficies, the superficiary can remove the structures or trees and bamboos upon restoring the land to its original state. However, if the landowner gives notice of intent to purchase them and offers to pay their current value, the superficiary may not unreasonably refuse the offer. n51

§ 106JP.02(e) *Emphyteusis.*

Emphyteusis is common among Japanese peasants and is a kind of permanent tenancy. With a duration of 20 to 50 years, n52 it enables poor farmers to rent the land of others and gain a livelihood by farming. An *emphyteusis* is a real right by which the land of another person can be used in consideration of paying a rent and is exercised for the purpose of agriculture or stock-farming. n53

An *emphyteuta* has the right of possessing the land, and may transfer the right, unless prohibited by the act of creation, or in violation of the right of the landowner. n54 An *emphyteuta* owns the fruits produced on the land at their separation.

An *emphyteuta* must maintain the land in its original state and cannot make alterations to the land that cause permanent damage. n55 The *emphyteuta's* obligation to pay rent is so firm that no rebate is possible even after damage to the land or loss of farming revenue caused by irresistible force. n56 Bankruptcy or two years delinquency in rent payment can cause termination of the *emphyteusis*. n57

§ 106JP.02(f) Servitudes.

A servitude is a real right, to use the land of another person for the benefit of one's own land. n58 Servitudes are distinguished as pertaining to arable land and building land, as positive and negative, as continuous and discontinuous, and as apparent (visible) and non-apparent. Servitudes may be acquired by prescription. n59 If a servitude involves use of structures on the servient land, the servient land owner may also use the structures, if there is no interference with the servitude use. n60

§ 106JP.02(g) Preferential Rights.

"A preferential right is a special right of obtaining performance in preference to all others, which right is given by the law to holders of certain obligations for their protection." n61

"1. A preferential right may be exercised against money or other things which the debtor receives in consequence of the sale, letting, extinction, or damage of its subject; but the privileged creditor must seize (attach) the money or other thing previous to the payment or delivery thereof. 2. The same applies with regard to considerations for real rights created by the debtor in the subject of the preferential right." n62 The holder of the preferential right may exercise the right against the whole thing retained until performance of the whole of the obligation. n63

A general preferential right is one by virtue of which any movable or immovable property among properties of the debtor may be seized and the performance of the obligation obtained therefrom. n64 The preferential right for hiring or letting of immovables exists in the movables of the hirer with regard to the rent of the immovables and other obligations of the hirer arising from the relation of hiring. n65

A preferential right in immovables arises with regard to expenses for the preservation of immovables, for work done upon immovables, and for the purchase price and accrued interest for immovables. n66 Preferential rights also exist for obligations of leases of land, for assigned or sublet leases, in liquidations of leased property, and for money received as security for rent. n67

§ 106JP.02(h) Liens.

"1. A lien is a right which the possessor of a thing has of retaining such thing until the performance of the obligation is obtained when the possessor has an obligation in the possessor's favor arising on account of the thing possessed. 2. The conditions of a lien are that: a. A thing belonging to another person be possessed; b. that possession has not been

obtained by an illegal act; c. that the obligation is one which arises on account of the thing possessed; d. that the performance of the obligation is due. 3. The lien-holder may exercise the right against the whole thing retained until performance of the whole of the obligation." n68

A lien-holder may reap the fruits of the thing retained and appropriate them to the performance of the obligation in preference to other creditors. n69

The debtor may demand the extinction of the lien upon depositing appropriate security. n70

§ 106JP.02(i) Pledges.

A pledge is a class of credit against things. A pledgee/creditor has the right of possessing the thing received from the debtor or a third person as security for an obligation and subsequently of obtaining the performance of the obligation out of the thing, by selling the thing or demanding the sale by auction, in preference to the creditors. n71 Pledge is not a real right which has independent and separate existence like ownership, superficies or *emphyteusis*, but is an accessory real right which exists for the purpose of securing the obligation which is its principal; therefore, when there is no principal obligation there is no pledge which secures it, and when the principal obligation is extinguished the accessory pledge is likewise extinguished. Pledge differs from mortgage in that the pledgee must possess the thing which has been received as a security from the debtor or a third person, and the pledgor or creator therefore cannot, be allowed to possess the thing pledged.

§ 106JP.02(j) Mortgages.

A mortgage is an accessory real right in an immovable that is in the possession of another person. The mortgage is indivisible and has a preferential right and the right of pursuit. A mortgage has no effect on the rights of third persons unless it is registered. A superficies and an *emphyteusis* can also be made the subject of a mortgage, although most leases cannot be mortgaged. n72

CHAPTER 106JP PROPERTY LAW IN JAPAN

13-106JP Thompson on Real Property, Thomas Editions § 106JP.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106JP.03 Restrictions on Ownership of Property by Foreigners.

Foreigners and foreign corporations may acquire, possess, and sell land in Japan, as a general rule. The Alien Land Law of Japan provides that Japan may apply reciprocal restrictions if the home country of the alien restricts land ownership by Japanese nationals; but the Japanese-American Treaty of Friendship, Commerce, and Navigation provides for mutual "national treatment" of Japanese nationals in the United States and United States nationals in Japan.

13-106JP Thompson on Real Property, Thomas Editions § 106JP.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106JP.04 Land Tax.

Japan imposes a recordation tax on land sales at the rate of 5% of the value listed in the fixed assets register. A stamp tax is also imposed on documents used to evidence the establishment, transfer, or change of a property right. Fixed assets are appraised by a city appraiser and the appraised value is listed in the land register, building register, or supplemental building register. On this appraisal is based a fixed assets tax of 1.4% annually, payable in four installments, with an exemption of Y20,000 for land and Y30,000 for houses. Ownership for the purposes of this tax is determined on the 1st day of each year. There is also a city tax, which varies as to city. In Tokyo, the city tax is 0.1% of the appraised value. One who acquires an interest in an immovable must report the transaction for tax purposes, or be subject to a penalty for failure to report. The tax applies to the purchase, new construction, addition, remodelling, or gift of immovable property. In the case of an acquisition, the tax is 3% of the value as listed in the fixed assets register. Transactions under Y10,000 for land, or Y100,000 for new construction of a building, or Y50,000 for purchase of a building, are exempted from this tax. For additions or remodeling, the tax is 3% of the increased value, amounts under Y100,000 being exempted. If one buys land for construction of a dwelling and within one year builds a new dwelling upon that land, the price of the land is taxed at 3% of the value over Y600,000.

The land tax is levied on and collected from the persons who are registered in the Land Register as owners at the commencement of the period when the tax becomes due. In cases where the land is subject to a pledge of any duration or a superficies exceeding 100 years, the tax is levied on any person registered as pledgee or superficiary in the Land Register. Foreigners are taxed for land the same way as Japanese landowners.

CHAPTER 106KE PROPERTY LAW IN KENYA

13-106KE Thompson on Real Property, Thomas Editions § 106KE.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KE.01 Historical Background: From Colonial to Independent Status.

Although the British entered East Africa in the area that is now Kenya about the middle of the 19th century, Germany was the first to take official colonial action, by declaring the region a protectorate in 1885. In 1886, England and Germany entered into an agreement permitting England to annex from the protectorate an area including modern Kenya. A second agreement in 1890 more clearly defined the boundaries of the respective territories. Thereafter England assigned certain administrative duties to the Imperial British East Africa Company, but in 1895 declared a protectorate directly over East Africa. In 1920, the British annexed Kenya as a colony, known as the Colony and Protectorate of Kenya. n1

British administration of Kenya as a colony gradually moved Kenya toward independence. Following a constitutional conference and a new constitution, general elections were held in 1963, the same year Kenya was granted powers of internal self-government. On December 12, 1963, the country officially became a member of the Commonwealth of Nations, and on December 12, 1964, Kenya became a Republic with a president as head of state. n2 This progression from a colony to an independent nation has had profound effect on the land law of Kenya.

CHAPTER 106KE PROPERTY LAW IN KENYA

13-106KE Thompson on Real Property, Thomas Editions § 106KE.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KE.02 Historical Development of Land Law in Kenya.

Land law in Kenya is diverse and complex, clearly the product of the area's history as a land of native settlement and foreign colonization:

> The Land Law of Kenya is a history of its development from customary law to modern statute law. But, this development and the advent of independence has brought its problems. There are in Kenya, two systems of substantive law, three systems of conveyancing and five systems of registration... There are, in fact, twenty-nine statutes to say nothing of subsidiary legislation, embracing the subject of land law in Kenya, either specifically applied or of general application. The substance of the Land Law of Kenya is bulky and complex and finding its whereabouts more difficult still. n3

In a very general sense, customary law governs the land relationships among the native Africans, while modern statutory law governs land relationships among those who came as colonists. This section will discuss the substance of customary law and its present state. This will be followed by a history of modern statutory law.

§ 106KE.02(a) Customary Land Law.

§ 106KE.02(a)(1) General Summary of Customary Land Law.

Within the native lands, the substantive land law is based on customary law and varies from tribe to tribe. However, some generalizations may be made. Land in east Africa was traditionally held communally, controlled either by the clan or by the elders of the clan. According to the native perspective, the clan did not actually "own" the land; rather, God owned the land, and the elders were designated trustees to administer and manage the land for the benefit of the clan.

§ 106KE.02(a)(1)(i) Land Rights Among the Bantu.

In practice, the enjoyment of land rights among the Bantu was typical:

> The basis of Bantu land tenure was that the individual had inheritable rights as a *user* of his arable

> lands; but with regard to grazing lands, forest, and salt licks, he shared with the clan or tribe the beneficial use of such natural sources or wealth that had come into the possession of the tribe either by conquest or by original occupation. This does not imply individual ownership of fields, nor individual rights to misuse land. Ownership, insofar as there was such a concept, was usually vested in the ancestor spirits who played a very real part in the life of the African and who symbolized his community past, present, and future. Every clan member had the right to claim support from the clan land, either through the "shifting agriculture" based on individual shambas, or among pastoral tribes through the unrestricted individual right to run stock on what was regarded as communal land; but this right was more a preemptive, possessory right than one of property. Sale was normally unthinkable, if not forbidden. n4

§ 106KE.02(a)(1)(ii) Land Rights Among the Gikuyu.

Even though most landholding under customary law was communal, n5 some tribes did recognize forms of individual ownership of land. For example, some land of the Gikuyu tribe could be held by an individual tribe member

> for an indefinite period, under a developed and workable customary law. He had the following rights therein or therefrom. He could lease it to another, the rental given by the *mohoi* or *mothami* (tenant) to his landlord being a gourd of beer whenever he brewed it, and the performance of certain small services; he could sell or mortgage the land or the trees which grew on it; when he died, the land passed in accordance with the customary law of succession; he might evict trespassers, or grant an easement to his neighbor so that he might pass, with or without cattle, across his land; he could define the boundaries by setting fixed markers, such as a line of trees or lillies... The methods by which the Mugikuyu became a proprietor of land were four, viz., by hunting right, sale, inheritance and exchange. n6

If the member decided to sell the land, the clan had the first option to purchase. Despite these customs, large portions of Gikuyu land were not subject to individual ownership rights. n7

§ 106KE.02(a)(1)(iii) Land Rights Among the Gusii.

Customary law of the tribes has also changed with the times, as illustrated by the Gusii of western Kenya. Initially, the Gusii had no controllers or spokesmen to manage their affairs at the tribal level. The father or grandfather of each family was the central authority. The tribe maintained coherence through a mutual loyalty or solidarity based on the notion that tribal members were all descended from a common ancestor. n8 The Gusii were constantly to more productive lands, and land was readily available. Consequently, no central authority was needed for allotment of the land. Customs for land distribution and management developed as required with each relocation; when conflicts arose between clans, the Gusii clans would fight among themselves for control of land, according to recognized Gusii customs.

These patterns changed as good lands became scarce. Beginning in the 1920's, Gusii families, traditionally located on scattered plots, had to consolidate their holdings and defend against encroachments by other tribes. n9 Clans were no longer able to expand into unclaimed land, but had to look within their own traditional territories to meet their land needs.

After the period of consolidation, individual land rights came to be recognized when a structure was built on the land. If a hut were constructed, for instance, the land immediately surrounding it would be claimed as an individual holding. To expand the individual holdings, a family member would be sent to build another hut nearby. Through this process, legal and social concepts of estate ownership had developed by the late 1940's. n10 Within ten years after the consolidation of landholdings had occurred, the Gusii territory had been divided into estates with recognized boundaries. Enforcement of these boundaries was primarily according to the strength of each group.

Within the clan's landholdings lived dwellers, those who had settled in clan territory, but did not belong to the clan by way of descent. Among the dwellers, land could never be permanently alienated, but use rights could be temporarily transferred. In order to obtain rights to build on the land, the dweller would have to obtain permission through some distant relative. If land were available and permission obtained, the dweller could have rights in land on much the same basis as could a regular clan member. n11

As illustrated by the Gusii, many tribes in Kenya introduced individual ownership of land between the 1920's and the 1950's, but were forced to rely on their customary law, rather than on the statutory law that was by then available and applicable to non-tribal lands. This resort to uncoordinated development of customary law has led to chaos in Kenyan land law by customary right.

In summary, the Gusii people developed lines of segmentation that were drawn around patrimonial and territorial interests. This was based on the principle that every corporate group of lineage type, every family, and every individual was entitled to portions that were ideally all equal, scaled to average needs. Enforcement of these lines was primarily by fighting and a rudimentary legal process. n12

§ 106KE.02(b) British Colonial Approach to Land Law.

§ 106KE.02(b)(1) For Native Lands.

British colonial policy required that the native inhabitants manage their land under one system of law, i.e., their own customary law, and that the European settlers abide by the rules of a separate system. At bottom the separation enabled the European settlers, who were conspicuously in the minority, to retain power over colonial affairs by ostensibly constitutional and legal means. n13 While Africans tried to work out landholding under a maze of varied and fluid customary rules, British land rights were governed by statutory law resembling the common law in England. The British also determined that the best way to preserve native land rights was to create reserves or special areas for natives, where they could remain isolated and insulated from the effects of European settlement. n14 Within those areas, however, the colonial government offered little protection for native land rights.

The earliest colonial legislation regarding native land in Kenya was the Crown Lands Ordinance of 1902, which allowed the Commissioner to grant leases of Crown lands consisting in part of native lands or villages, so long as the natives were not in actual occupation. n15 This act was repealed in 1915 and replaced by the Government Lands Act, which was intended to promote European settlement in the Kenyan highlands and to maintain racial segregation. The Act gave the colonial government the power to vest in the Crown any Crown lands n16 reserved for the benefit of an African tribe, thus making the Africans, in effect, tenants at will of the colonial government. As to lands held under customary law, the natives had to claim rights of protection from the government, and tribes could not assert rights of ownership or alienate land. n17

The Native Lands Trust Ordinance enacted in 1930 enlarged the protection of native land rights by setting aside certain areas of state land as permanent reserves for the benefit of the African tribes. n18 However, the protection of native land rights became somewhat illusory because of provisions allowing incursions into African areas for certain public purposes, such as exploiting gold discoveries, which began in 1933. n19

Another attempt at improving protection for native land rights was the Native Lands Trust Ordinance Act of 1938. This act and other legislation were intended to prevent interference with native land rights from the Kenya legislature. Even though heavily amended, the basic provisions of this Act remain in effect today as the Trust Land Act. n20 Even this legislation, however, did little to recognize and preserve African land claims under customary law, n21 and to the contrary, formally extinguished all native rights in lands outside the boundaries of the native areas. n22

In 1959, the colonial government enacted legislation allowing for the registration of consolidated tribal land designated

as "special areas," and for the acquisition of individual native titles to these lands. This new legislation was the Native Lands Registration Ordinance of 1959, soon renamed the Land Registration (Special Areas) Act. This act has since been repealed and its provisions re-enacted in both the Registered Land Act, which covers registration matters, and the Land Adjudication Act, which includes the land adjudication and consolidation provisions. n23

The result of these provisions was that natives were able to register land. Under the provisions of the Land Adjudication Act, original titles to land were obtained through the process of land consolidation, or converting several fragmented pieces of native land into a contiguous, unified holding, which improves the productivity of the land. When land was ready for consolidation, the rights of each individual tribal member were determined according to customary law, and the consolidated holding was then registered in the name of the new owner. Former owners of portions of the consolidated parcel were compensated by an allocation of an equivalent parcel of other land, to which they obtained legal title. n24

§ 106KE.02(b)(2) For Non-Native Lands.

The basic territorial land law for non-Africans was the Indian Transfer of Property Act of 1882, along with local ordinances. Based on the contemporary English common law of real property, the act provided for freehold estates and individual leaseholds in areas specifically set aside for European occupation. n25 These basic legal rules are still in effect, and in matters not covered by the act, rules of English law are applicable. In addition to the Indian Transfer of Property Act, provisions of the Indian Transfer of Property Act also apply. Together, these acts govern all transactions in land not governed by customary law, and land registered under the Registered Land Act. n26

Other statutes and regulations provide additional detailed legal rules for European land rights in Kenya:

Rights to parcels of land in private occupation were first recognized by the East Africa Land Regulations of 1897, under which certificates of occupancy for terms of twenty-one years were issued in respect of such rights. By virtue of the East Africa (Land Acquisition) Order, 1901, the Government received its authority to alienate parcels of land. The East Africa Land Regulations of 1897 had in fact replaced the land regulation of the Imperial East Africa Company, which had published them in 1897. The regulations of 1897 in their turn were repealed by the Crown Lands Ordinance 1902. n27

The Crown Lands Ordinance of 1902 provided for alienation of land by way of sales of freehold; purchasers were required to mark their land. The Government Lands Act of 1915 repealed the Crown Lands Ordinance and introduced a system for registration of deeds, provided authority for the Commissioner to execute conveyances for the occupation of Crown lands on behalf of the Governor, and allowed for disposal of state land within townships. The act also allowed the Commissioner of Lands to grant leases of town plots for any term not exceeding ninety-nine years, and leases on agricultural lands for up to 999 years. n28

Along with the Government Lands Act, the Registration of Documents Act, passed in 1897, instituted a country-wide system for registration of deeds. n29 Also, the Land Titles Act of 1908 provided for adjudicating claims and for registering titles. n30 Under the Land Titles Act, a claimant may be awarded a certificate of title from the Recorder of Titles. This certificate is conclusive evidence against all persons (including the government) that the person is the owner of the land. However, once a certificate of ownership is given by the Recorder of Titles, it must be registered or else it is void.

The Registration of Titles Act of 1920 ended the applicability of Land Titles Act provisions for lands coming within the jurisdiction of the Registration of Titles Act. This act also permitted or required transfer of titles from registers created under the Government Lands Act, the Land Titles Act and the Registration of Documents Act, whereupon those registers would close. n31

Apart from titles registered under the Registered Land Act, most land titles in Kenya are registered under the Registration of Titles Act. Registration under the Government Lands Act has been almost eliminated by this act, but since conversion under this act is voluntary, some titles remain in the old registry. n32

The Registered Land Act of 1963 was intended to unify land law in Kenya and eventually all registrations are to be under this Act. n33

The 1963 Act uses predominantly English terms to describe customary interests in land and makes accommodation for certain features of customary law. For aspects of land law not covered by the Act, English law is used. n34

When it became effective, the 1963 Act automatically applied to all land to which the Land Registration (Special Areas) Act had applied, which was generally all land in the former special areas which had been consolidated and in the settlement scheme areas. As for the areas to which the Government Lands Act, the Registration of Titles Act and the Land Titles Act now apply, the 1963 Act will eventually apply to these areas on a district by district basis. n35 Also, as land is consolidated under the Land Adjudication Act, and titles consolidated or other land are given to persons affected by the consolidations, those title registrations are also recorded under the 1963 Act. n36

The effect of registration under the 1963 Registered Land Act is to establish one of two forms of estate or interest in land, modeled after the English 1925 Law of Property Act. n37 The system is a registration of title, and registration, rather than possession of the deed, proves title.

CHAPTER 106KE PROPERTY LAW IN KENYA

13-106KE Thompson on Real Property, Thomas Editions § 106KE.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KE.03 Summary of Current Statutory Land Law in Kenya.

The welter of various tribal customary law for land is matched by a swarm of statutes and regulations, many of which are intended to expand or contract in their applicability over a period of time:

> All the land in Kenya is divided into two categories: (a) Special Areas, basically Trust Land (including the old Native Land Units) and private freehold, totaling 50,000 square miles of territory; and (b) Crown Lands, that is, special reserves, alienated and unalienated land, and private freehold, constituting the remaining 174,000 square miles of territory.
>
> The Special Areas are governed by two laws: (a) the Trust Land Act (formerly the Native Lands Trust Ordinance, 1939), which defines the Special Areas and provides for agricultural and township plot leases of up to thirty-three years...; and (b) the Land Registration (Special Areas) Act which was enacted as the Native Lands Registration Ordinance No. 27 of 1959, and which provides for the ascertainment of rights and interests in land, the consolidation of land holdings, and the registration of land titles in these areas. In addition, it provides for the control over subsequent transactions involving such land through the Land Control (Special Areas) Regulations, 1961, which replaced the Land Control (Native Lands) Ordinance No. 28 of 1959.
>
> The Crown Lands are governed principally by three laws. First, the Crown Lands Act, which provides for 999-year leases for agricultural land... The English form of conveyancing was introduced to Kenya through its predecessor, the Crown Lands Ordinance, 1915. The second law governing the Crown Lands is the Registration of Titles Act, which was enacted in 1919 and which has provided a Torrens-type title registration system for all land outside the Special Areas. The third law governing Crown Lands is the Land Titles Act which was enacted in 1908 and which provides for the certification and registration of titles or interests in immovable property within certain prescribed coastal areas.
>
> * * *
>
> The Registered Land Act No. 25 of 1963 came into force on August 16, 1963. The provisions of this act... are intended to obliterate the distinction between Special Areas and Crown Lands by providing a

single system of land-titled registration and land transfer. This system will gradually be extended to cover all land previously covered by other laws. n38

The Registered Land Act of 1963 repeals the Indian Transfer of Property Act of 1882 and has superseded part of the Land Registration (Special Areas) Act. What was left of the latter act was renamed the Land Adjudication Act, and it allows for converting African interests into freehold statutory estates, which then can be registered.

Thus, in the Special Areas, tenures and interests under customary law are being investigated and recorded (after consolidation and adjudication) under the Land Adjudication Act, and then registered under the Registered Land Act. Crown Land is also registered and subject to the conveyancing provisions set forth in the Registered Land Act. n39

CHAPTER 106KE PROPERTY LAW IN KENYA

13-106KE Thompson on Real Property, Thomas Editions § 106KE.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KE.04 Types of Real Property Interests.

The Kenya property statutes use the word "proprietorship" rather that the word "ownership." Under the Registration of Titles Act, the word "proprietor" means a person or corporation registered under the Act as the owner of land or as a lessee from the government. Under the Registered Land Act, "proprietor" is defined as: (a) in relation to land or a lease, the person named in the register as the proprietor thereof; and (b) in relation to a charge of land or a lease, the person named in the register of the land or lease as the person in whose favor the charge is made.

§ 106KE.04(a) Freehold Estates.

Under the Registered Land Act of 1963, the registration of a person as the proprietor of land vests in that person the absolute ownership of that land. n40 Some concern had been raised, because the now repealed Land Registration (Special Areas) Act declared that the effect of registration of the freehold estate was to vest the fee simple, and the use of that term has special connotations in England. However, the Registered Land Act of 1963 refers to absolute ownership rather than fee simple. Other statutes still refer to the so-called "fee simple" estate; these include, for instance, the Land Titles Act, n41 the Government Lands Act, n42 and the Registration of Titles Act. n43

Under the Registered Land Act of 1963, the proprietor with an absolute ownership obtains rights that cannot be defeated except as provided by the Act, and the land is held free from all other interests and claims. n44

§ 106KE.04(b) Leasehold Estates.

Under the Registered Land Act of 1963, a proprietor of land may lease the land to any person for a definite term, or for the life of the lessor or of the lessee or for a period which, though indefinite, may be determined by the lessor or the lessee. n45 The act also allows for periodic tenancies, but they may not be registered. n46

Any lease for a period exceeding two years or for the life of the lessor or the lessee must be registered and must be in the prescribed form. n47 The Act also allows a lease to be made for a period to commence on a future date, not being later than twenty-one years from the date on which the lease is executed, if it is registered. A lease to commence more than twenty-one years in the future, or upon the fulfillment of a condition that may occur more than twenty-one years in the future, is void. n48

Leases from the government to private persons are not provided for under the Government Lands Act but are authorized under the Indian Transfer of Property Act. This Act also provides statutory forms for registration of written leases which are for a period exceeding one year.

The Registration of Titles Act contains a provision for the creation of a lease for a term exceeding twelve months by presenting for registration a lease in the prescribed form. n49 Such a lease must be registered to be valid, but a lease for a term not exceeding twelve months is valid even if not registered. n50

§ 106KE.04(c) Concurrent Ownership.

The Registered Land Act of 1963 provides for concurrent ownership and partition, both for joint proprietors and proprietors in common. These are recognized as forms of legal, but not equitable, ownership. Co-ownership is limited to five proprietors unless otherwise permitted by the Minister. n51

No joint proprietor is entitled to any separate share in the land, and dispositions of the land may be made only by all joint proprietors. When one joint proprietor dies, that interest vests in the surviving proprietor or proprietors jointly. Severance of the joint proprietorship is accomplished by completing the correct form and registering the joint proprietors as proprietors in common. n52

Each proprietor in common is entitled to an undivided share in the whole, and on the death of a proprietor in common, the decedent's share is administered as part of the decedent's estate. A proprietor in common may not deal with the undivided share in favor of any person other than another proprietor in common, except with the consent of the remaining proprietors. Such consent may not unreasonably be withheld. n53 Partition of land owned in common may be made by any one or more of the proprietors, or any person in whose favor an order has been made for an undivided share in the land. n54

§ 106KE.04(d) Interests in the Land of Another.

The Kenyan statutory law on easements, profits, licenses and restrictive agreements has been summarized as follows:

No provision is made in respect of easements, *profits-a-prendre*, licenses, and restrictive covenants in the Government Lands Act, Land Titles Act, Registration of Titles Act or the Indian Transfer of Property Act. Questions concerning the said rights arise not infrequently and it is difficult to comprehend why this important aspect of rights in land was not included in the said enactments. The framers of the Registered Land Act were aware of the shortcoming in the law and thought fit to make provision in respect of the said rights in the act as these are matters which are best covered by registration. n55

§ 106KE.04(d)(1) Easements.

An easement is defined as the right attached to a parcel of land which allows the proprietor of the parcel either to use the land of another in a particular manner or to restrict its use to a particular extent, but does not include a profit. n56 The proprietor of land or of a lease may grant an easement over the land to the proprietor or lessee of other land for the benefit of that other land by an instrument in the prescribed form, or by a grant or reservation in either an instrument of transfer or in a lease. n57

§ 106KE.04(d)(2) Profits.

A profit is defined as the right to go on the land of another and take a particular substance from that land, whether of the soil or the products of the soil. n58 A profit may be granted by the proprietor of land or of a lease by an instrument in the prescribed form. The instrument must indicate whether it is to be enjoyed in gross or as appurtenant to other land,

and whether it is to be enjoyed by the grantee exclusively or in common with the grantor. To complete the grant, it must be registered as an encumbrance, and the instrument must be filed. n59

§ 106KE.04(d)(3) Licenses.

A license is not qualified for registration under the Act, but a licensee's interest may still be protected by lodging a caution. n60

§ 106KE.04(d)(4) Restrictive Agreements.

Any restrictive agreement must be registered to be binding on the proprietor of the land burdened by it or on a subsequent acquirer of the land. A restrictive agreement is an agreement by which one proprietor agrees to restrict construction or other use and enjoyment of the land for the benefit of the proprietor of other land. When the agreement is contained in an instrument other than a charge or a lease, the Registrar notes the restrictive agreement in the encumbrances section of the register. n61 The restrictive agreement is also effective as to successors in title. Racially restrictive agreements are void. n62

§ 106KE.04(d)(5) Mortgages.

Although mortgages are governed by the Government Lands Act and charges are governed by the Registration of Titles Act, various substantive elements of mortgage law are still found in the 1882 Indian Transfer of Property Act. Under the Government Lands Act, a mortgage or charge must be created by an instrument in writing and registered. n63 The act also recognizes equitable mortgages by deposit of documents of title in Forms A and B of the Schedule to the Act.

The Registration of Titles Act provides for statutory charges when land is intended to be charged or made security in favor of any person by having the proprietor or lessee execute a statutory form, which must then be registered. n64 When registered, the property is subject to the same security and to the same powers and remedies on the part of the chargee as if it were under legal mortgage. n65 The Act also allows for a charge to be created by deposit of documents of title to land, and evidenced by a prescribed instrument. n66

Under the Registered Land Act, a proprietor may charge the land, lease or charge to secure the payment of an existing or future or contingent debt or other money or money's worth or the fulfillment of a condition by an instrument in the prescribed form. n67 The form must specify the date for repayment, and if no date is specified it shall be deemed to be repayable three months after service of demand in writing by the chargee. The charge is completed by registration as an encumbrance. The charge does not operate as a transfer, but has effect only as security. n68 The Act also lists the agreements implied in a charge.

Charged land may be redeemed after paying the principal and interest on the date specified in the charge. The charged land nay be redeemed before this time by paying the interest on the principle secured up to that date. If payment is late, the land may still be redeemed by giving three month's notice or paying three months' interest in lieu thereof. n69 The act makes no provision for the creation of an equitable mortgage or charge by deposit of title deed. Thus, it appears that equitable charges and mortgages cannot be created.

CHAPTER 106KE PROPERTY LAW IN KENYA

13-106KE Thompson on Real Property, Thomas Editions § 106KE.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KE.05 How Land Ownership Originates.

Ownership of land in east Africa arises in two ways: the first is through an initial allotment from the state; the second and more common way is through inheritance by which the heir claims the land under customary law. To gain recognition of ownership from the state, the land must be entered on the register. Thus, the person will submit evidence of the claim of ownership to the state, which may accept or reject the claim. If accepted, the land is entered or "brought on" to the register and the claimant is registered as proprietor. Normally, a freehold estate is granted. n70

§ 106KE.05(a) Registration.

Two systems of land registration prevail in Kenya, one for registration of deeds and one for registration of titles. Under the system for registration of deeds, the deed or other document dealing with land rather than the title is registered. If a purchaser wants to insure that the proprietor has good root of title, a search should be made through all the recorded documents concerning the land. Such a search protects a purchaser only against unregistered documents, but it does not reveal whether any of the registered conveyances or assignments are valid, because the documents are not inspected when received. Thus the search does not guarantee title.

In Kenya, a system of deed registration was introduced by the East African Registration Regulations in 1901 and is now known as the Registration of Documents Act. It provides that all documents conferring or extinguishing any right, title or interest shall be registered. n71 Such a document is to be filed for registration within two months of the transaction and must describe the land. n72 The system now has nearly been superseded by the registration of title system. n73

The registration of title system title is assured by the state, which is responsible for maintaining a compiled register which is conclusive evidence of title. Conveyancing is facilitated by eliminating the need to investigate the title to a good root and the need to examine documents to establish their validity. n74

Registration of title is governed by several statutes in Kenya. When land is registered under the Registered Land Act, the person named as proprietor of land is declared the absolute and indefeasible owner. The title is then indefeasible, subject only to overriding interests stated in the Act. Although older statutes in Kenya, such as the Government Lands Act and the Registration of Titles Act, also provide for registration of titles, the Registered Land Act is intended to unify

all of these provisions in one statute for the future.

§ 106KE.05(b) Conveyancing.

§ 106KE.05(b)(1) Under the Government Lands Act.

Under the Government Lands Act, no evidence of sale or other transfer *inter vivos* of land is receivable in a civil court, unless the sale or transfer is effected by an instrument in writing that has been properly registered. n75 No statutory form of transfer is prescribed by the Act; however, any proprietor of either the fee or the lease may transfer the interest to another through the use of a deed in accordance with the English form of conveyancing, executed by both the transferor and transferee. The deed follows the pattern of private conveyancing by reciting first the root of the title and then subsequent changes in ownership.

§ 106KE.05(b)(2) Under the Registration of Titles Act.

Under the Registration of Titles Act, a proprietor is defined as a person or corporation registered under the Act as the owner of land or a lessee from the government. n76 A proprietor is issued land through a grant which is defined as any conveyance, agreement for sale, lease or license for a period exceeding three years, made by and on behalf of the government, and includes a certificate of title: n77

> The certificate of title issued by the registrar to any purchaser of land upon a transfer or transmission by the proprietor thereof shall be taken by all courts as conclusive evidence that the person named therein as proprietor of the land is the absolute and indefeasible owner thereof, subject to the encumbrances, easements, restrictions and conditions contained therein or endorsed thereon, and the title of such proprietor shall not be subject to challenge, except on the ground of fraud or misrepresentation to which he is proved to be party. n78

The word "land" also includes an estate for a term of years.

Transfers of land or rights of way or other easements are also provided for by having the registered proprietor execute a statutory form. The form describes the land, refers to the grant or certificate of title, and contains an accurate statement of the land and easement, or the easement, intended to be transferred or created, and a memorandum of all leases, charges and other encumbrances to which the land may be subject, and of all rights-of-way, easements and privileges intended to be transferred. n79 Statutory forms are also provided for transfer of land and leases. The effective words of transfer are "hereby transfer all my right, title and interest in the said piece of land." n80 A transferor may also transfer only part of the land by issuing a certificate of title for only the transferred part.

§ 106KE.05(b)(3) Under the Registered Land Act.

Under the Registered Land Act, a proprietor is defined as follows: in relation to land or a lease, the person named in the register as the proprietor thereof; and in relation to a charge of land or of a lease, the person named in the register of the land or lease as the person in whose favor the charge is made. n81

The nature of a proprietor's title is either absolute (freehold) or leasehold, but the Act does not use the word freehold. If absolute, the proprietor may apply for and receive a land certificate, and, if a leasehold, a certificate of lease may be granted if the estate is for a period exceeding twenty-five years.

A proprietor may transfer the land, lease or charge to any person, with or without consideration, by an instrument in the prescribed form. Registration of the transferee as proprietor of the land, lease or charge and filing the instrument completes the transfer. n82 A transfer may not be expressed to take effect on the happening of an event or the fulfillment of any condition. n83

Land may also be transferred subject to a charge or to a lease. n84

13-106KE Thompson on Real Property, Thomas Editions § 106KE.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KE.06 Taxation of Real Property.

Some property is subject to local taxation, but the amounts are not a significant portion of a person's overall tax burden. Before 1985, a capital gains tax could be levied on the sale of a private residence if the seller had not lived in the house continuously for at least three years prior to the transfer; however, the capital gains tax was suspended in June 1985.

CHAPTER 106KE PROPERTY LAW IN KENYA

13-106KE Thompson on Real Property, Thomas Editions § 106KE.07

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KE.07 Ownership of Real Property by Foreigners.

The legal status of aliens is governed by the Kenya Constitution and by various statutes. The principal pertinent laws are the Kenyan Citizenship Act of 1963, the Immigration Act of 1967, and the Aliens Restriction Act of 1973. These laws affect aliens in matters of citizenship, immigration and property ownership. n85

In Kenya's 1979 Constitution an alien is defined in Arts. 87-98 as any person who is not a citizen of Kenya either by birth or naturalization. Article 75 of the Constitution guarantees the right to own property without interference from the Kenyan government, but for aliens, this guarentee is subject to certain restrictions in the statutes and as described in the following comment:

Section 3 of the Alien Restriction Act of 1973 empowers the Minister responsible for internal security to impose an order or other restriction prohibiting aliens from engaging in any activity he specifies. These orders, however, are to be imposed only when there is a state of war between Kenya and another country, during a state of emergency, and when there is an actual or perceived imminent danger to the welfare of the country. The Foreign Investment Protection Act of 1964, however, protects alien businesses and enterprises from government compulsory acquisition, unless such compulsory expropriation is for state purposes carried out under Article 75 of the Kenyan Constitution. In case of compulsory acquisition by the state, the alien is entitled to full and prompt compensation as required by this article of the Kenyan Constitution.

Under the Land Control Act of 1967 all transactions in land are void unless carried out with the consent of the Land Control Board of the area. Section 9 of this law therefore provides that:

In deciding whether to grant or refuse consent in respect of a controlled transaction, the Land Control Board shall... refuse consent in any case in which the land or share is to be disposed of by way of sale, transfer, lease, exchange or partition to a person who is not a citizen of Kenya...

The President of Kenya, however, can exempt any land transaction or any person from all the provisions of this law via publication of a notice in the government gazette. Aliens may also benefit from § 3 of the Government Lands Act of 1915, which enables the President of Kenya to alienate land for any purpose. n86

CHAPTER 106KR PROPERTY LAW IN SOUTH KOREA

13-106KR Thompson on Real Property, Thomas Editions § 106KR.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KR.01 Brief History of the Republic of Korea.

Tungusic people from central Asia, a branch of the Mongoloid race, may have begun inhabiting the Korean peninsula between 10,000 and 5,000 years ago. Various legends tell of Tungusic people invading from China. When a military figure named Wiman took control of northwestern Korea in 194, B.C., Korea's recorded history began. Chinese invaders conquered that area in 108, B.C. A Korean ruler emerged in another part of the peninsula in about 100, A.D., and Koreans took over the Chinese-dominated areas in 313, A.D.

Thereafter, various kingdoms and federations rose and fell for several centuries throughout the peninsula. In 1392, A.D., the Yi dynasty established a dominance that lasted until the Japanese annexed Korea in 1910.

Japanese power over Korea resulted directly from Japan's victory over Russia in the Russo-Japanese War of 1904-1905. Japan ordered the Korean army to be disbanded in 1907 and then annexed Korea to Japan in 1910. From then until World War II, various nationalist groups sought to oppose the Japanese hegemony, but could not unite their efforts.

Although the Soviet Union had agreed to a four-power trusteeship over Korea when World War II ended, it reneged and the result was that Japanese forces surrendered to Americans south of the 38th parallel of north latitude, and to the Russians north of the 38th parallel. Soon thereafter, all Japanese in Korea returned to Japan. The Soviets blocked and obstructed all attempts at uniting the two Koreas. A U.N.-supervised election took place in the south on May 10, 1948, and the new Republic of Korea National Assembly promulgated a democratic constitution on July 17, 1948. On August 15, 1948, American military commanders transferred sovereign authority to the Koreans, who inaugurated Syngman Rhee as president.

On June 25, 1950, north Korean armies launched a massive military invasion of south Korea, in an attempt to unify the two Koreas by force. The Korean War ended by armistice and the establishment of a demilitarized zone neat the 38th parallel in July, 1953.

During the ensuing decades turbulent relations with the north and fractious internal politics have led to various governmental changes and seemingly not impeded remarkable economic growth. The First Republic founded in 1948 has now evolved into the current Sixth Republic.

CHAPTER 106KR PROPERTY LAW IN SOUTH KOREA

13-106KR Thompson on Real Property, Thomas Editions § 106KR.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KR.02 Governmental and Legal Foundations for Property Law in Modern Korea.

In April, 1948, the U.S. military governors in Korea promulgated the "Ordinance of the Rights of the Korean People," containing many rights similar to the American *Bill of Rights*, including a prohibition of deprivation of property without due process of law. Some of these probably influenced the 1948 Constitution. That Constitution "largely lost its relevance" with the outbreak of the Korean War. n1 Following the war and the unsettled domestic political situation, the Constitution was amended several times and with some fundamental substantive changes resulting. Two articles of the current Constitution relate directly to property rights. Article 16 declares, "All citizens shall be free from intrusion into their place of residence. In case of search or seizure in a residence, a warrant issued by a judge upon request of a prosecutor shall be presented." Article 23 addresses property rights:

> (1) The right of property of all citizens shall be guaranteed. The contents and limitations thereof shall be determined by statute.
>
> (2) The exercise of property rights shall conform to the public welfare.
>
> (3) Expropriation, use or restriction of private property from public necessity and compensation therefor shall be governed by statute. In such a case, just compensation shall be paid.

In Article 59, "Types and rates of taxes shall be determined by statute."

"Most of the substantive law in the Republic of Korea is contained in the Civil Code, originally promulgated in 1958. The Civil Code is divided into five 'books'... Book II, 'Real Rights,' deal with property, ... and Book V, 'Succession,' covers succession in family headship as well as succession to property." n2

CHAPTER 106KR PROPERTY LAW IN SOUTH KOREA

13-106KR Thompson on Real Property, Thomas Editions § 106KR.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106KR.03 Basic South Korean Property Law.

§ 106KR.03(a) Estates in Land.

The Civil Code provides for the following forms of ownership: n3

Ownership (fee simple)

Possession, superior to parties without rights

Superficies, which are rights in another's land while owning structures or trees on that land

Easements

Deposit lease (the right to use and take profits from the land of another)

Commonage, based on old customs of use of a forest or plain in common. n4

§ 106KR.03(a)(1) Adverse Possession.

A person may obtain ownership through adverse possession by possessing real property peacefully and openly, with intent to own, for 20 years or more, and by making registration thereof. n5

§ 106KR.03(a)(2) Condominium Ownership.

Separate ownership of individual units in a multiple-unit structure is recognized. Unit owners have tenancies in common interests in common areas. n6

§ 106KR.03(a)(3) Concurrent Estates.

Tenancy in common with the usual incidents is recognized by the Korean Civil Code. n7

§ 106KR.03(b) Leaseholds.

A lease is not considered a property right. n8 A lease can be recorded only with the consent of the owner. One who holds a recorded building on leased land can maintain that lease against persons who acquire title to the land. n9

§ 106KR.03(c) Foreign Ownership of Land.

Foreigners are not permitted to buy land, and face some difficulties in attempting to purchase a house. A foreign company with foreign investments may own property and land necessary for the performance of its business activities, if approved by the Economic Planning Board. Under the Alien Land Act, enterprises with 50 percent or more foreign equity ownership are required to obtain approval from the Minister of Home Affairs for ownership of land except for land designated by the Government for special purposes. n10

§ 106KR.03(d) Gifts.

Property acquired by gift is subject to a gift tax. The gift tax in Korea is payable by residents who acquire property by gift and by nonresidents who acquire Korean property by gift. Rates range from 10% to 50%. n11

§ 106KR.03(e) Succession.

The rules of descent and distribution for real property are set forth in the Civil Code. n12 Korea does not recognize dower or curtesy rights.

§ 106KR.03(f) Wills.

Persons 17 years of age and older may make valid wills, n13 and the Civil Code provides forms and formalities for various kinds of wills. n14

§ 106KR.03(g) Real Estate Transactions.

Transfer of real property is accomplished by agreement of the parties and upon registration. n15 Registration is required for creation or transfer of real rights in immovable property, including ownership, superficies, servitudes, deposit leases, and mortgages.

Korea has no statute of frauds, but does require a writing for such items as wills and articles of incorporation. n16

Two types of security liens recognized in the Civil Code are the possessory lien and the mortgage. n17 A mortgage is defined in the Civil Code as an encumbrance on a specific item of property whereby the creditor obtains a preferential position in order to satisfy the obligation out of proceeds realized from the sale of the property; the encumbrance occurs without transferring ownership or possession. n18 Priority among multiple mortgages on the same property is determined by the order of registration. n19 No lien rights similar to mechanics' liens are recognized.

§ 106KR.03(h) Title Registration.

As mentioned above, registration is required for creation or transfer of real rights in immovable property, including ownership, superficies, servitudes, deposit leases, and mortgages.

§ 106KR.03(i) Stamps.

A stamp tax is one of the national taxes that may be imposed by national legislation.

§ 106KR.03(j) Taxation.

"Types and rates of taxes shall be determined by statute." n20 National taxes in Korea are imposed by the national legislature, and local taxes are imposed by local authorities.Korean national law provides for income, value added, gift and inheritance taxes, among others. n21 Local taxes that may relate to real property include acquisition tax, registration, inhabitant tax, property tax, composite land tax, city planning tax, community facility tax, area development tax, among others.

Inheritance tax in Korea is payable by residents who acquire property by inheritance and by nonresidents who acquire Korean property by inheritance. Rates range from 10% to 50%. n22

§ 106KR.03(k) Environmental Regulation.

Korea has numerous laws to regulate and protect the environment. Included among them are the following:

Basic Environmental Policy Act and Its Enforcement Decree

Act on Environment, Traffic and Disaster, etc. Impact Assessment

Liability for Environment Improvement Expenses Act

Environment Dispute Mediation Act

Natural Environment Preservation Act

Noise and Vibration Regulation Act

Water Environment Preservation Act

Noxious Chemical Substance Control Act

Atmospheric Environment Preservation Act

Odor Prevention and Sea Pollution Prevent Act and Its Enforcement Decree

Wastes Management Act

Soil Environment Preservation Act

Drinking Water Control Act

Law Relating to Transboundary Movements of Waste and Its Disposal

Indoor Air Quality Control in Public Facilities Act

Act Relating to Promotion of Economy and Reutilization of Resources

CHAPTER 106KZ PROPERTY LAW OF THE REPUBLIC OF KAZAKHSTAN

13-106KZ Thompson on Real Property, Thomas Editions § 106KZ.01

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.01 Overview of Real Property Law in Kazakhstan.

During the Soviet period, land in the Republic of Kazakhstan [RK] belonged unconditionally to the State. n1 The State exercised sole ownership of land during the first years of Kazakhstan's independence, following the Soviet Union's disintegration. The 1993 Constitution provided that land, its soil, water, flora and fauna, and other natural resources are owned *exclusively* by the State. n2 The 1993 Constitution, however, marginally relaxed the state's control: it allowed non-state actors to possess land on behalf of the State in certain instances. n3 The 1995 Constitution further relaxed the State's hold on land: it eliminated the word "exclusively" from the clause on State ownership of land, and added a sentence providing that the land "may also be privately owned under the terms and conditions set forth in the law." n4

On January 24, 2001, the RK adopted the Law on Land (the "Land Law"). The main features of the Land Law included: (1) the establishment of limits on the size of land plots granted to private parties, (2) introduction of restrictions applying to foreigners, and (3) reduction of the duration of long-term land use from 99 years to 49 years.

On June 20, 2003, the new Land Code, predicated upon the legal status of the Land Law, was adopted ("Land Code"). Under the Land Code, the sale and leasing of buildings by and to private commercial entities is permitted, and is generally free from excessive State regulation. n5 The State's participation in private transactions involving land and buildings primarily is limited to title registration n6 and levying of taxes. n7

Under the Land Code, an owner may (1) possess, (2) use, and (3) alienate (sell, and otherwise dispose of) its land plot. n8 The owners of buildings [improved property] on the land enjoy rights identical to the owner of the land under the Civil Code. n9 The right to own the land arises from: (1) a grant, (2) transfer or (3) inheritance, including succession resulting from a legal entity's reorganization. n10

CHAPTER 106KZ PROPERTY LAW OF THE REPUBLIC OF KAZAKHSTAN

13-106KZ Thompson on Real Property, Thomas Editions § 106KZ.02

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.02 Forms of Ownership of Real Property.

Under Kazakhstan law, the term "real estate" (or, as it is commonly called "immovable property") includes, *inter alia*, land and buildings. The law treats land and buildings as separate objects of real property. The mechanisms for acquiring ownership rights to such objects are summarized below.

§ 106KZ.02(a) Buildings.

Generally, buildings or other structures located on land may be bought, inherited, bartered, or received as gifts. Any transfer of ownership rights necessitates State registration. An owner of a building under construction cannot transfer the unfinished building as immovable property before it has been registered with the pertinent State authority. The unfinished building, however, may be transferred as movable [personal] property instead. Such a transfer does not require State registration.

From a practical standpoint, transfers of real property involve the risk of a third party's challenge, based on, for instance, the seller's voidable title. The "good faith purchaser" provisions of the Civil Code n11 provide some protection against this risk. Generally, pursuant to such provisions, a purchaser will (subject to certain exceptions) qualify as a *bona fide* purchaser of the object of purchase so long as that purchaser neither knew nor should have known that the seller's rights to the property were not properly acquired. Purchasers of real estate also may obtain title insurance to protect themselves from potential future claims of third parties.

§ 106KZ.02(b) Land Plots.

Under the Land Code, a land plot can be held under: (a) private or State ownership; n12 (b) a right for temporary land use (lease) for consideration; n13 (c) a right of permanent land use; n14 (d) a right of temporary free of charge land use; n15 (e) a right of secondary land use (sublease); n16 and, (f) service land allotment (the right of temporary land use of a plot of land granted by the State to certain categories of civil servants free of charge). n17 In addition, third parties may enjoy easement rights over a land plot under a right of limited use of another's land plot (servitude). n18

Under the Civil Code, n19 any items of material value found underneath the soil (treasure) shall be divided equally

between the land owner and the individual who found them unless agreed upon otherwise. If the land owner did not consent to his land being excavated in search of hidden treasure, then any such treasure found belongs solely to the land owner. n20 If the items constituting the "discovered treasure" also have historic and cultural value, they are transferred to the State while the finder and owner of land are entitled to monetary remuneration in the amount of fifty percent of the value of the discovered items. n21

§ 106KZ.02(b)(1) Land Occupied by Buildings.

Under the Land Code, the holder of title to a building is also entitled to ownership or lease of the land plot occupied by such building, n22 except for specific cases envisaged by the RK Land Code. Therefore, if a buyer has acquired title to a building located on a State-owned land plot, such buyer shall have the exclusive right to lease or purchase such underlying land from the State owner. Any privately owned land plot containing improved real property may be sold to a third party only as an indivisible whole constituting the land and improved property (unless the building is owned by such third party).

CHAPTER 106KZ PROPERTY LAW OF THE REPUBLIC OF KAZAKHSTAN

13-106KZ Thompson on Real Property, Thomas Editions § 106KZ.03

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.03 Title, Registration and Insurance.

§ 106KZ.03(a) Technical inspection.

Surveying of a land plot by an authorized governmental agency is a prerequisite for any real estate transaction. Once the land plot survey is completed, the land plot is recorded in the State Legal Cadastre and is assigned a cadastre serial number. n23

Completed buildings are also subject to technical inspection. Immediately following the commissioning of the building by the relevant authority, the owner arranges, at its own expense, for preparation of a "technical passport," that is, governmental approval of the completed works, of the building by the technical inventory authorities. Buildings must have technical passports as a prerequisite for title to the completed building being registered.

§ 106KZ.03(b) State Registration.

Under RK law, State registration is required to transfer title to a purchaser of real estate, (a land plot and/or improved property), and to transfer the underlying agreement. n24 Title is conveyed from the seller to the purchaser upon State registration.

A lease/sublease and/or easement concluded for a period of one year or more, and mortgage agreements in relation to real estate, are subject to state registration. An agreement for a lease, mortgage or easement is deemed concluded only upon State registration and is deemed null and void in the absence of such registration. n25 Title to real property, as well as any encumbrance (lease or mortgage), is registered in the State Legal Cadastre maintained by the Kazakhstan Ministry of Justice and its territorial (local) offices.

Real estate may be the subject of a sale or lease/mortgage agreement, only if the seller's/lessor's rights have been previously registered in the State Legal Cadastre. State registration is certified by a special registration endorsement on the document indicating the substance of the transaction (for example, a sale-purchase agreement, lease agreement, or mortgage agreement).

CHAPTER 106KZ PROPERTY LAW OF THE REPUBLIC OF KAZAKHSTAN

13-106KZ Thompson on Real Property, Thomas Editions § 106KZ.04

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.04 Forms of Leases And Restrictions on Basic Terms.

Lease rights to real estate are acquired by virtue of a written real estate lease agreement. The parties are free to establish any term of lease, though the right to temporary land use for consideration may either be short-term (up to 5 years) or long-term (from 5 to 49 years). n26 Therefore, when the State acts as a landlord, the duration of the lease cannot exceed 49 years. In instances where land is in private ownership, there is no limitation as to the duration of the lease.

A valid lease agreement must be executed as a single document signed by the authorized representatives of the parties, and include certain material terms with respect to the real property in question. For example, a lease agreement must provide information with respect to the identity, exact location, type of permitted use and cadastre number of the property and the rent amount payable under the lease. Notarization of real property lease agreements is not required. A lease agreement of a building concluded for a period one year or more is subject to State registration n27 and is considered valid only from the moment of registration.

§ 106KZ.04(a) Land Leases.

Both the Civil Code n28 and the Land Code n29 govern land leases. Some of the Codes' provisions on landlord-tenant law are mandatory and the parties may not modify those rules in their agreement. Such mandatory provisions usually concern unilateral termination rights of landlords under State land lease contracts, maximum lease terms and currency requirements.

§ 106KZ.04(a)(1) Termination.

A lease may be terminated prior to its stated term upon the occurrence of circumstances specifically provided for in the lease agreement. If the lease term is not specified, either party may terminate the lease upon three months' prior notice, unless another period is stipulated in the lease agreement. n30 In accordance with applicable law, a lease agreement may be terminated by the court upon a claim of either party in the event of a material breach of the other party's obligations. Extra-judicial unilateral termination is possible only if specifically stipulated in the lease agreement.

§ 106KZ.04(a)(2) Renewability.

Under general rules governing leases, all tenants have a right of first refusal to renew the lease agreement, unless the agreement provides otherwise. n31 Furthermore, owners of real estate situated on a plot of land are entitled by statute to rights of use to the land on which such real estate is located. n32

§ 106KZ.04(a)(3) Assignment, Sublease and Mortgage.

Unless otherwise provided by the land lease agreement, an assignment, sublease or mortgage of rights and obligations under land leases with State authorities does not require the prior consent of the other party. The sublease of a land plot (or its part) shall be based on a sublease contract and is subject to notification to the relevant authority at the place of the land plot location. n33

§ 106KZ.04(b) Commercial Leases.

The legal framework regulating commercial leases in the RK stipulates a number of mandatory provisions of law that cannot be varied by contract. Some of the more important mandatory rules are discussed below.

§ 106KZ.04(b)(1) Recovery of Operating Expenses; Taxes.

The lease agreement determines operating costs chargeable to tenants. Each taxpayer, however, is obliged to pay its own taxes. n34 This provision is usually interpreted by the tax authorities so as to include not only the physical act of paying the tax, but also bearing of the tax burden. Expenses in connection with current repairs, made by the tenant with a view to preserve and maintain the real estate object and not compensated by the landlord according to the contract of lease, shall be deducted from the tax base.

§ 106KZ.04(b)(2) Remedies in the Event of Breach.

The landlord may terminate the lease through judicial proceedings in the event of a tenant's breach of the lease agreement, only if the landlord has served a prior "cure" notice to the tenant and given the tenant a reasonable time to cure the breach. n35 The lease agreement may not waive the landlord's statutory right. Likewise, the tenant may terminate the lease through judicial proceedings in the event of the landlord's breach of certain duties described in the Civil Code (*e.g.* to undertake a major maintenance of the leased property). n36 Notably, the tenant is not obliged to serve a "cure" notice upon the landlord, and thus the latter is not provided with any grace period to cure the breach.

In case of early termination that accords with the lease agreement, damages are payable if stipulated in the lease agreement. Should a lease agreement be terminated by a court decision due to the material breach of a party, the claimant may be awarded damages for breach of contract. The law requires the non-defaulting party to mitigate its damages in order to have a valid claim for compensation of lost profit from the other party. n37

§ 106KZ.04(b)(3) Casualty/Condemnation.

The landlord is responsible for any defects in the leased property which prevent the tenant, in part or in full, from using the leased property. n38 Arguably, a casualty or condemnation affecting the leased premises could be construed as a "defect" in the lease property. In the event of such defects, the tenant has an option at law to:

(a) demand that the landlord cure those defects at no cost to the tenant;

(b) reduce the rent accordingly;

(c) withhold the amount of expenses incurred in curing the defects from the rent, upon advance notice to the landlord; or

(d) demand early termination of the lease. n39

If the landlord has been notified by the tenant of the tenant's claim or its intention to cure the defects of the leased property at the landlord's expense, then the landlord has an option either to substitute promptly another similar property free from defects for the leased property, or to cure the defects itself at its cost. n40 The tenant is free to accept or reject the substitute offered by the landlord. The law does not identify what would be a "similar (or analogous) property". Such substitute presumably must be capable of performing similar functions or achieving similar results as the original leased property would have performed or achieved had it been free from defects. Given that the acceptance of the substitute is the tenant's right, it follows that it is the tenant who determines the "similarity" of the substitute, and its suitability for his needs. If the rent is insufficient to cover the tenant's damages resulting from defects in the leased property, the tenant has a claim against the landlord for that part of the damages not covered by rent. n41

§ 106KZ.04(b)(4) Ownership of Tenant's Improvements.

The law distinguishes between two types of improvements: detachable and non-detachable. Non-detachable improvements are those that may not be detached without damage to the property. Any detachable improvements the tenant makes at his own expense remain his property, unless otherwise provided in the lease agreement. n42 The tenant's non-detachable improvements are made at its own expense, and with the prior consent of the landlord, shall remain on the premises upon termination of the lease, but the tenant shall be entitled to compensation for the value of the improvements made, unless the lease agreement stipulates otherwise. n43 The value of improvements is established at the date of termination. If the tenant makes non-detachable improvements without the landlord's consent, the landlord is under no obligation to pay any compensation to the tenant. n44

§ 106KZ.04(b)(5) Tenant's Right to Sublease.

A tenant may transfer his rights and obligations under the lease agreement to a third party, or pledge his lease rights, or contribute the lease rights to the charter capital of a company, but in each case only with the landlord's prior consent. n45 In all the aforementioned cases, other than transfer of lease, the tenant remains primarily liable to the landlord under the lease agreement.

CHAPTER 106KZ PROPERTY LAW OF THE REPUBLIC OF KAZAKHSTAN

13-106KZ Thompson on Real Property, Thomas Editions § 106KZ.05

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.05 Mortgage of Real Estate, Enforceability and Foreclosure.

§ 106KZ.05(a) Mortgage Agreements.

The mortgage of real estate is widely used in the RK to secure loans. The main law governing mortgages is the Law "On Mortgages of Immovable Property" ("Mortgage Law") enacted in December 1995.

A mortgage agreement enters into force as of the date of its State registration, and it is not necessary to notarize the mortgage agreement. n46 Registration of creditor's rights as a mortgagee provides protection against the debtor's disposing of the mortgaged assets in bad faith without the creditor's knowledge.

§ 106KZ.05(b) Validity and Enforceability of Mortgages.

§ 106KZ.05(b)(1) Enforceability of Mortgages, Existence of Non-Contractual Mortgages.

In the vast majority of cases, a mortgage over real estate arises as a result of a mortgage contract. In some instances, however, a non-contractual mortgage (pledge) can be created automatically as a matter of law. Examples of situations where this may arise are as follows:

(a) if a recipient of an annuity transfers a land plot or some other immovable property to the payee of the annuity, the payments are automatically secured by pledge rights to the property;

(b) unless otherwise provided by law or agreement, if the owner of a land plot mortgages it, the mortgage will extend to all buildings belonging to the mortgagor, located or being developed on the applicable land plot;

The above mortgages do not require the consent of the mortgagor, who is usually a debtor under a claim to be secured. The law requires that such non-contractual mortgages be registered simultaneously with the debtor's title.

§ 106KZ.05(b)(2) Priority of claims.

Mandatory rules govern priority among creditors upon the distribution of proceeds from foreclosure (sale of mortgaged real estate). The following claims have priority over those secured by a contractual mortgage:

- enforcement costs;

- personal injury claims;

- salary and severance pay claims, and other labor and personal service-related claims;

Since this order of priority results from mandatory legal rules, lenders cannot contractually improve their position of priority (seniority) with the borrower.

§ 106KZ.05(c) Enforcement and Foreclosure Mechanism.

§ 106KZ.05(c)(1) Who May Foreclose and Which Remedies May Be Exercised.

A mortgage creditor may act to foreclose on the mortgage. If a debtor is insolvent, any creditor may file a bankruptcy petition that potentially may lead to bankruptcy foreclosure proceedings.

§ 106KZ.05(c)(2) Bankruptcy vs. Enforcement of Mortgage.

Enforcement mechanisms are regulated by the Civil Code (for collection proceedings) and the Law "On Bankruptcy" dated January 21, 1997 No. 67-I (for enforcement through bankruptcy proceedings). The creditor holding rights under a mortgage may elect either to foreclose on the mortgage or to file a bankruptcy petition against the debtor (other circumstances permitting). Since it is impossible to conduct collection proceedings and bankruptcy proceedings simultaneously, a creditor must choose between the two types of proceedings.

In collection proceedings, and so long as the debtor is solvent, the mortgage creditor obtains the proceeds of the sale of the mortgaged asset in the first place provided that there are no other creditors pursuing their claims through collection proceedings. If, however, there are multiple creditors (and, therefore, more than one 'enforcement writ') and the assets are insufficient to meet all creditors' claims, the proceeds are distributed in the following order:

- enforcement costs;

- personal injury claims;

- copyright claims;

- claims secured by mortgage;

- tax and fiscal claims;

- all other claims.

Lower ranking claims are satisfied only after higher ranking claims have been reimbursed in full. In the event that the funds are insufficient to reimburse all of the equally ranking creditors, then the funds are distributed pro rata to the size of their claims. The same principle applies to bankruptcy proceedings.

However, if during collection proceedings and before relevant assets are ordered to be sold, a bankruptcy proceeding

with respect to the debtor is initiated, the collection proceeding is suspended (akin to an automatic stay). The mortgage creditor would have a similar third ranking priority in both types of proceedings. As a result, even if the collection proceeding is suspended because of the bankruptcy proceeding, the mortgage creditor may participate in the bankruptcy proceeding. The creditor secured by mortgage must file his claim in bankruptcy proceeding no later than two months following the moment that the notice of bankruptcy proceeding is published.

Bankruptcy proceedings usually involve several creditors. Therefore, they are routinely regulated, and thus likely to take more time, as opposed to collection proceedings.

Under RK law, parties may not agree that real property becomes the property of the mortgage creditor in case of default by the creditor, that is, for example, in case of insolvency of the creditor.

§ 106KZ.05(c)(3) Non-Judicial Foreclosure.

Non-judicial foreclosure over real estate is possible if such option is clearly envisaged in the mortgage agreement. Non-judicial foreclosure is prohibited when: (i) the mortgage agreement requires third party consent; (ii) mortgaged property has significant historical, artistic, or other cultural value for society, or (iii) the mortgaged property is real estate that is common property, and one of the proprietors does not give written approval for the settlement of the pledgeholder's (pledgee's) claims

§ 106KZ.05(c)(4) Requirements For Exercising Remedies; Enforcement Timeframe; Sensitivities and Restrictions.

The procedure for enforcing creditors' rights in collection proceedings is the same regardless of whether the claims are secured or unsecured: only the priority of the creditors to the proceeds collected is different.

Collection proceedings generally entail the following steps:

- obtaining an enforceable decision;

- obtaining a writ of enforcement;

- instructing the court bailiff to take a specified collection measure and payment of his fees;

- the court bailiff's execution of the requested collection measure and notification to the debtor;

- collection.

Remedies are not restricted to monetary damages. For example, in the event of a payment default, a creditor may enforce a termination clause permitting acceleration of the loan.

CHAPTER 106KZ PROPERTY LAW OF THE REPUBLIC OF KAZAKHSTAN

13-106KZ Thompson on Real Property, Thomas Editions § 106KZ.06

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.06 Zoning.

Zoning designation of a land plot is important. If the purchased land is intended to be used for purposes other than its existing zoning designation, the buyer must change such designation to adapt it to the intended purposes. Zoning designation is changed upon application to the local municipality, provided that such change does not contravene the zoning regulations effective within a given municipality.

Under the Law on Architectural, Town Planning and Construction Activity in the RK (the "Town Planning Law") dated July 16, 2001, urban territories are divided into various zones with appropriate construction rules for different zones.

13-106KZ Thompson on Real Property, Thomas Editions § 106KZ.07

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.07 Eminent Domain.

Articles 84-88 of the Land Code regulate the area of eminent domain. Article 84 of the Land Code states that a land plot may be (1) judicially taken from the owner (2) for the State's purposes (3) if there is no other means for satisfying the State's needs, (4) provided that the owner of the land plot is compensated appropriately. The state may request the landlord to sell his property only when public interest is involved: the construction of roads, defense needs, building of new neighborhoods and districts and etc. n47

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.08 Restrictions on Foreign Ownership.

Foreign individuals or legal entities cannot hold *a right of permanent land use* of a land plot. A "foreign" legal entity under RK law is an entity incorporated under the laws of a foreign country that derives its formal existence from that foreign incorporation. Accordingly, a foreign company establishing a wholly owned Kazakh subsidiary, such as a Limited Liability Partnership or a Joint Stock Company, is exempt from the restriction prohibiting foreign ownership of land and entitled to hold a right of permanent land use of a land plot.

Therefore, foreign legal entities that have established a wholly owned company in the RK are permitted to *own and lease land* in Kazakhstan. They also may enter into construction (including reconstruction) contracts and utilities agreements. However, foreign legal entities may not own land plots intended for agricultural purposes and forestry. These restrictions do not apply to Kazakhstan legal entities with foreign capital.

In addition, a foreign individual that obtains the status of a permanent resident of the RK may purchase land and improved property primarily for the purpose of individual residence. A foreign individual, with or without permanent residence, cannot own agricultural or forestry land. However, the State may impose restrictions on the duration and use of that property.

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.09 Taxes.

The following chart summarizes the two types of taxes directly affecting owners of real estate:

Type of tax	*Tax base*	*Tax rate*
Property tax (for individuals)	An average annual residual value of real property calculated through a certain formula	Rate varies depending on the value of real property
Property tax (for legal entities)	An average annual residual value of real property or related immovable property according to accounting data	Legal entities pay property tax at the rate of 1.5 percent of the tax base.
Land Tax	Area of the land plot	Rate varies depending on the category, designation, and quality of land, *e.g.* rate of tax on land in Almaty that is not occupied by housing facilities is KZT 28.95 per square meter. The land occupied by housing facilities is taxed at the rate of KZT 0.96 per square meter.

CHAPTER 106KZ PROPERTY LAW OF THE REPUBLIC OF KAZAKHSTAN

13-106KZ Thompson on Real Property, Thomas Editions § 106KZ.10

AUTHOR: John JA Burke Professor of Law, Faculty of Law, Kazakhstan Institute of Management, Economics and Strategic ResearchRoman Nurpeissov Associate, Salans Almaty, Kazakhstan

§ 106KZ.10 Ownership of Subsoil Use Rights.

1. The Republic of Kazakhstan has significant oil and gas reserves, as well as major deposits of minerals, including but not limited to, uranium, gold, zinc, copper, lead, coal, nickel, and aluminum bauxite. The extractive industries account for approximately 60% of exports and constitute the main applications of foreign direct investment. The legislative base for subsoil use is critical to rights of ownership and use of resources below the ground surface. The legal framework is the Law of the Republic of Kazakhstan as of January 27, 1996 No 2828 on Subsoil and Subsoil Use them (amended and supplemented as of 07/07/2006) [The Subsoil Law]. n48

2. The Constitution of the Republic of Kazakhstan provides in Section I, Article 6(3) that the State owns all land and all natural resources. n49 Secondary legislation hence establishes private ownership of land and natural resources and allocates the right of ownership over subsoil use, with the State retaining substantial authority over grants of concession. Special regulations apply to private ownership of subsoil intended to meet governmental needs in strategic and scarce types of mineral raw materials; to ensure national security, preserve environment, and protect population; or conserve subsoil portions to save mineral stocks for the future generations.

3. The term "Subsoil" is defined as "part of the earth's crust underneath the topsoil, or in the case of its absence, underneath the earth's surface and the bottom of seas, lakes, rivers and other reservoirs which extends up to the depths accessible for performing subsoil use operations with account of scientific and technological advance". n50 The term "subsoil use right" is, "a right to possess and use subsoil within the contractual territory which is granted to subsoil users in accordance with this Law". n51

4. A "subsoil user" is an individual or juridical entity [domestic or foreign] that acquires a right to perform operations upon the subsoil, for personal or commercial purposes. Subsoil use rights comprise the right to possess and the right to use the subsoil within the terms of a State grant. Article 10 of the Subsoil Law delineates subsoil use rights by providing that "The right to use subsoil shall be granted to perform the following operations":

1. Governmental geological research of subsoil;

2. Exploration;

3. Extraction;

4. Combined exploration and extraction; or

5. Construction and/or maintaining of underground facilities not related to exploration and/or extraction.

Subsoil use holders are divided into two classes: (1) holders of a permanent right to use the land and its subsoil, including the right of alienability, and (2) holders of a temporary right to use the land and its subsoil. n52

5. Subsoil use rights arise from allocation by the State, transfer from another subsoil user, or succession in title [*e.g.*, company holding subsoil use right is reorganized or acquired in a merger]. n53 With certain exceptions for "bargain-based contracts", a holder acquires subsoil use rights by entering into a contract with the competent State authority, that is, the Ministry of Energy and Mineral Resources [MEMR]. n54 The MEMR conducts open or restricted tenders advertised in the mass media regarding acquisition of rights in a subsoil plot. n55 The winner of the tender selected by the Tender Board is obliged to enter into a contract with the MEMR. n56

6. The MEMR uses standardized contracts for granting ownership of the right governing subsoil use: (1) product separation contracts, (2) concession contracts, and (3) work or service contracts. n57 The State and the contractor establish terms by mutual consent provided they are consistent with the laws of Kazakhstan. Major contractual issues are: taxation, forfeit for failure to observe contractual norms, compliance with Kazakhstan content [*e.g.*, requirement to retain Kazakhstan labor and formula to set wages], the conditions of exploration and extraction, duration of the contract, and its territorial scope. n58 The MEMR monitors compliance of the holder with its contract obligations. In the event of contractual violation, the MEMR has the competence to require correction of the violation. n59 In the event the holder fails to correct the contractual violation, the MEMR has the authority to invalidate the contract under the terms of the Subsoil Law. n60

7. Subsoil users have the following statutory rights: n61

1. Independence to exercise subsoil rights based on the contract;

2. Use the products of activity, including mineral raw materials;

3. Construct necessary industrial and social facilities on the allocated territory and, by agreement, to use common facilities or telecommunications on or outside the contractual territory;

4. Negotiate prolongation of the contract within the framework of Kazakhstan law;

5. Hire subcontractors;

6. Transfer wholly or partially rights of ownership in subsoil use to another party provided the transfer is consistent with the Law on Subsoil and subsoil use; and

7. Terminate activities by conforming to Kazakhstan legislation

Excepting for the State pre-emptive right, the rights of the subsoil user are protected under the law and are insulated from the retroactive application of subsequent legislation. n62

8. Subsoil users are obliged by the Subsoil Law: (1) to protect the environment, human life and health, (2) to exploit the

subsoil efficiently, (3) to preserve natural landscapes and geomorphic structures, (4) to avoid risks capable of leading to soil degradation, and (5) to maintain the natural state of waters. n63 Subsoil users also must apply rational and complex measures to effectuate the contract. n64 Violations of mandatory rules subject the subsoil user to liability established by Kazakhstan law. n65

9. The State retains a pre-emptive right in the event of any intended alienation by a subsoil user of its license, participation rights in the subsoil user, or transfer of its rights to an entity that influences its decision-making. n66 The pre-emptive right shall not be exercised on terms less favorable than those offered by competing purchasers. The purpose of the pre-emptive right is to block shareholders' pre-emptive rights and to prevent off-shore transactions designed to dispose of subsoil use rights in Kazakhstan. n67

10. In addition, the State retains the right to require a subsoil user to renegotiate the terms of its contract when the State deems that the deposit is of "strategic importance", and that its use constitutes a "material alteration" to Kazakhstan's economic interests or a threat to its national security. n68 Refusal to renegotiate may result in suspension or termination of the contract.

11. Disputes are settled according to the dispute settlement provisions of the contract. Article 71-1 requires parties to enter into negotiations to settle a dispute prior to proceeding to litigation or international arbitration.

CHAPTER 106MX PROPERTY LAW IN MEXICO

13-106MX Thompson on Real Property, Thomas Editions § 106MX.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106MX.01 History of Property Law in Mexico.

The region of Mexico was inhabited perhaps as long as 15,000 to 20,000 years ago. It seems likely that even 10,000 years ago a wetter climate supported more abundant vegetation and animal life than at present. Even larger animals, such as mammoths, elephants, buffalos, antelopes and horses were able to sustain themselves. The earliest people may have immigrated along with and hunted some of the larger animals. The people who inhabited this area apparently lived in groups with a certain hierarchy and order.

Between 7,000 and 5,000 B.C., the inhabitants of the Mexican central plateau changed their hunting-based economy into a mixed farming and hunting society. Findings from 3,000 B.C. show widespread domestication of animals such as the peacock, *escuincle* (mutt), turkey, and Chihuahua dogs.

This economic pattern was broken in about 2,000 B.C., when maize made its appearance and became the most important food of these ancient settlers. Maize also led to the refining of the textile industry, ceramics, the decorative use of feathers, and other arts as well as the developing of certain sports. With these refined products came specialization, exchange of products, and the rise of non-agricultural classes, such as nobles, priests, merchants, sculptors, and other artisans.

The position of the upper classes was strengthened as warfare yielded slaves, who then made possible the creation of the great architectural monuments left by the Maya, Mixtec, Aztec, Zapotec, Toltec, and Chichemecas civilizations.

Although these great civilizations of ancient Mexico developed out of the surplus created by the prevailing maize agriculture, the primitive agricultural techniques exhausted the soil and forced the people to migrate, leaving fields and cities behind.

The evidence of these ancient cultures shows irrigation systems, religious rituals, and elaborate cities and markets.

The Olmec civilization flourished between the 9th and the 1st centuries B.C., in the area of the Mexican Gulf coast. Thereafter, it decayed and passed many of its features on to the Teotihuacan civilization. The Aztec civilization appeared around the 4th century and came to the Mexican valley from the Yucatan peninsula. The Aztecs transformed

their aristocratic government to a monarchy.

As the Aztec empire developed, their real property was governed by public rather than private law. Some land was owned by the monarch as personal property and other lands were used to support the monarch's military leaders for the duration of their services. Some lands held by these noble followers were held for life only and were inalienable. n1

The Aztecs were divided into clans called *Calpullis*, and families of a clan held land as tenants in common. The tenancy vested if the family remained on the land for two years. The Aztec clan also held lands for community, religious, military, certain public purposes, and for the king's purposes. Some of these lands were used to pay taxes and for other public expenses.

By the time Montezuma II began ruling in 1502, the Aztec empire was in decline:

> The spirit of this emperor was weakened, for he believed in assorted bad omens. His enormous empire, comprising perhaps as many as ten million people, was too large for the means of communication available at the time; it lacked the coherence that can only be based in common ideals; and it was generally hated by its subject tribes. Hence, a mere handful of some four hundred and fifty Spaniards were able to conquer where their limited number made it at first appear improbable. n2

With Cortez's conquest of Mexico in 1520, two great cultural streams converged, the Aztec and the Hispanic. The Hispanic current carried its law, which was *Castilian*, and applied that law to its Latin American empire. New Spain became a new kingdom of the empire. Soon after the Conquest, Indian affairs were handled through a Council of Indies similar to the Council of Castile. However, the supreme power remained in Spain, the economic interests of the New Spain were subordinated to those of her European sovereign, and European Spaniards were privileged relative to New World Spaniards.

The property law of New Spain also reflected the shifting legal currents in Spain and Europe. Very early in New Spain's colonial history, large dynastic landholdings emerged as the *conquistadores* were given huge land grants for the services they had rendered. Economic disparities with the natives were further exacerbated as the Indians were usually required to render services to the governing class. Spaniards' holdings were increased as they purchased or seized adjacent lands. n3

The Spanish Roman Church also became a large landholder, and so, in the 19th century became a target of reform. In the *Leyes de Reforma* of Benito Juarez it was decreed that "anyone, especially the tenant of a church property, could buy it for a very small price by making a claim or *denuncia*. The claim was necessary since many farms or houses were in the names of priests but were, in fact, Church property." n4

The reform was mostly ineffective, because the peasants did not have any money to buy lands; or their religious beliefs prevented them from buying church lands. On the other hand, the wealthy class did buy, very cheaply, most of the Church's real property. The result of the reform laws, then, was to impoverish the church and threaten many of its charitable activities on behalf of the landless poor.

Strengthening of large landholders continued under Porfirio Diaz. Many enormous *Latifundios* (large tracts of privately owned lands) were granted, not to Mexican peasants, but to foreign companies or individuals who would hopefully promote progress. Sometimes corrupt politicians took lands intended for support of the Indians. Many prominent persons took "advantage of the political climate that favored landholders, merchants, and investors to the detriment of the general population." n5

Such injustices fomented deep discontent among the peasants. Civil unrest eventually resulted in a new constitution in 1917. This constitution not only opened the way for land reform, but also dealt with another abuse, the aggressive

acquisition and use of Mexican real property by foreign governments.

The 1917 constitution solved this problem because Mexican law forbade foreigners to own any real estate in Mexico. A non-Mexican seeking to acquire land the acquirer's had to agree not to seek the protection of his or her government. Article 27 of the Constitution proclaims that original ownership of the land and water belongs to the Mexican nation and that dominion over these lands can be conveyed to private individuals. Also, the Mexican nation has the right to limit ownership of private property to protect public interest and to make a just and fair distribution.

The constitution divided and distributed many *Latifundios* to small landowners and peasants. Small landholdings were given protection, and takings for public needs were to fairly compensated.

Now, only Mexicans by birth or naturalization may freely acquire property over lands or waters or obtain concessions to exploit mines. Religious orders and churches of any faith are not allowed to own any type of property in Mexico. Social services or welfare institutions, businesses, or corporations can own only the real estate needed for their purposes. Foreigners cannot buy land within 50 kilometers of the seashore (31 miles) or 100 kilometers (62.5 miles) of the borders with other countries.

Mexico also exerts sovereignty over its natural resources:

> All waters and territorial seas belong to the nation, as do all minerals, salts, ore deposits, natural gas, and petroleum. With respect to all this, the dominion of the nation is inalienable, but the federal government may grant concessions to exploit them to individuals or Mexican corporations that fulfill all the requirements of the law. n6

CHAPTER 106MX PROPERTY LAW IN MEXICO

13-106MX Thompson on Real Property, Thomas Editions § 106MX.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106MX.02 Types of Property Interests.

Real property rights under Mexican law include the traditional Roman components of ownership, the *jus disponendi*, the *fructus*, and the *usus*. The *jus disponendi* is the right to dispose of the property by gift, sale, will, or even destruction. The *fructus* is the right to the fruits or income of the property, such as rent, interest, dividends, and crops from land. The *Usus* is the right to enjoy and use the property. These attributes collectively constitute ownership and cannot be separated. However, ownership may be shared. n7

Under the Mexican Civil Code, the following items are considered real property:

a. Land the buildings attached to it;

b. Plants and trees, so long as these are attached to the ground, and their attached fruits;

c. Everything that is permanently attached to real property;

d. Statues, paintings and reliefs which are permanently affixed to buildings;

e. Pigeon houses, beehives, fish ponds or similar breeding places, when they are part of the farm;

f. Machinery, storage vessels, tools or utensils intended by the owner of the farm for its operation, directly and exclusively;

g. Fertilizers intended for the cultivation of a farm, which are on the land where they are to be used, as well as the seed necessary for the cultivation of the farm;

h. The electrical appliances and accessories attached to the ground or to the buildings on the land, unless there is an agreement to the contrary;

i. Springs, ponds, cisterns and water courses;

j. Breeding stock and work animals;

k. Dams and irrigation works, as well as piers;

l. Rights *in rem* in real property are also considered to be real property;

m. Rolling stock of railroads, telephone and telegraph lines and fixed radio-telegraph stations. n8

Property rights are secured by the constitution n9 and civil code. n10 Private property may be taken by the government only for public purposes and only with compensation. Property exhibiting characteristics of national culture may be so taken.

In addition to sale, gift and exchange, property may be acquired by adverse possession, either after five years if in good faith, or after 10 years, if in bad faith. n11

§ 106MX.02(a) The Usufruct.

A *usufruct* can be created by contract or by operation of law, and it is a temporary right to the use of and fruits of the property. Both the *usus* and *fructus* are temporarily assigned to the *usufructuary* who also has the power to alienate the *usufruct* to another within some limitations. A limited form of *usufruct* is recognized in the right to use a habitation; this is limited to the temporary use of dwelling, is not alienable, and is analogous both in concept and in social function to the common law life estate and widow's interest. n12

§ 106MX.02(b) Servitudes.

The servitude corresponds to the common law easement. A servitude is a burden on the servient tenement and runs with

the land, as does an easement under the common law. The servitude is commonly used for drainage, canals, aqueducts, pipelines, rights of way, and utility lines. n13

§ 106MX.02(c) Security Interests.

The chattel mortgage is not recognized, but the ordinary mortgage is very common in Mexico. Livestock, farm machinery, crops, and other agricultural items may be covered by the mortgage lien as fixtures. Other special provisions exist for maritime shipping and commercial aviation. A mortgage may be conveyed in favor of a third party by endorsing the negotiable instrument, without notice to the mortgagor. The security interests of mortgages include the natural accessions to the mortgaged property, improvements made by the owner, movable objects permanently incorporated into the property by the owner, new buildings built by the owner, and additions to mortgaged buildings. n14

In Mexico it is necessary to distinguish between the civil pledge and the commercial pledge. Under the commercial pledge, the creditor or third party must be given actual possession of the property. Under the civil pledge, constructive possession suffices.

The conditional sale contract is another common security in Mexico, either as a sale subject to rescission (*venta sujeta a clausula rescisoria*), or a sale with title reserved (*venta con reserva de dominio*). The trust (*fideicomiso*) is used for complicated land development transactions. The lender or principal creditor in such a transaction is prohibited from acting as trustee. To secure the interest of a foreign lender with a trust requires a permit from the central bank.

13-106MX Thompson on Real Property, Thomas Editions § 106MX.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106MX.04 Transfer of Ownership.

The voluntary transfer of land in Mexico may be accomplished by sale, donation or devise. Involuntary transfers are achieved by judicial orders, by inheritance, and by prescription. Transactions are required to be formalized through a notary and by recordation in the public registry (*registro publico*). n16

CHAPTER 106MX PROPERTY LAW IN MEXICO

13-106MX Thompson on Real Property, Thomas Editions § 106MX.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106MX.05 The Recording System.

Under Mexico's recording system, an instrument which creates, extinguishes, modifies, or otherwise affects rights *in rem* in inmovables may be recorded. The documents recorded are documents executed by a notary, by judges, and by administrative judges. This recording law is based on the principles of publicity, legality, specification, priority, and sequence. n17

§ 106MX.05(a) Publicity.

If an instrument transfers an interest to another party, then it is normally effective even if it is not recorded. But to be effective against third parties, the instrument needs to be properly recorded. In Mexico a person is not considered a third party if he or she has notice of the transaction or did not act in good faith.

§ 106MX.05(b) Legality.

The registrar may refuse to record any type of document which is not legally valid. For example, the registry determines from the records whether the grantor has the power to convey the property, whether the parties to the instrument have the legal capacity to act, whether the instrument complies with external formalities, and whether the property is properly defined.

§ 106MX.05(c) Specification.

Specification means that the conveyance has be specific as to the nature of the obligation, type of ownership, amount of lien, and individual parcels.

§ 106MX.05(d) Priority.

Priority is the familiar "first in time, first in right." The first instrument to be recorded will prevail against other conveyances. If a registrar refuses to record an instrument because of invalidity, the registrar must nevertheless enter a preventive inscription on the record to preserve the priority of the instrument, in case it should later be determined that the instrument is recordable.

§ 106MX.05(e) Sequence.

A party seeking to record an instrument must indicate the source of the grantor's title. This requirement links the instrument chronologically to show the source of each grantor's interest. However, the Mexican Supreme Court has interpreted this law to mean that when two parties are asserting ownership based upon a record title, the first to be recorded (principle of priority) does not necessarily prevail. Rather, the chain of title must be traced back to the earliest recording from a common grantor or, if no common grantor appears, then the priority principle applies.

CHAPTER 106MX PROPERTY LAW IN MEXICO

13-106MX Thompson on Real Property, Thomas Editions § 106MX.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106MX.06 Wills and Intestate Succession.

Property may be devised through either of two types of wills, ordinary and special wills. Ordinary wills are classified as public open, public closed, and holographic wills. Public open wills are executed before the notary and three witnesses with the full panoply of formalities--signatures, readings aloud, certification, and the enrollment in the notary's records. Public closed wills are privately executed. A public closed will is signed by the executor, sealed in an envelope, and presented to the notary. The notary certifies then the will before witnesses and testators, makes an entry of protocol, and gives the will to the testator. A holographic will is a will written entirely by the hand of the testator. Formalities such as sealing wax and fingerprints are required. This type of will must be deposited in the general archives of the notarial office to be effective. Special wills include private, military, maritime, and foreign wills. Upon intestate succession the title to property vests immediately in the heirs, each of whom has the right to partition or to purchase other heirs' shares. n18

CHAPTER 106MX PROPERTY LAW IN MEXICO

13-106MX Thompson on Real Property, Thomas Editions § 106MX.07

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106MX.07 Leases.

Under Mexican leases, the lessor is the sole "owner," and the lessee does not acquire a property interest in the premises. Residential leases may not exceed ten years, commercial leases are limited to 15 years, and industrial leases are limited to 20 years. Low income property leases may be extended indefinitely. Leases with rent above a certain amount must be in writing and leases for rural property must be in the form of public documents. Leasehold rights may not be transferred without the consent of the lessor. n19

CHAPTER 106PH PROPERTY LAW IN THE PHILIPPINES

13-106PH Thompson on Real Property, Thomas Editions § 106PH.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106PH.01 Brief History of the Philippines.

§ 106PH.01(a) Prehistory of the Philippines.

Fossils of early humans in the Philippines resemble specimens also found in Java and China. Most Filipinos are descended from people who came from Taiwan or people who migrated along the peninsulas of southeast Asia and through the islands of Indonesia. The first immigrants by sea probably came about 11,000 B.C. Various subsequent migrating groups introduced a series of advancing levels of economy and culture. Both prehistoric and historic migrations have produced a fantastic variety of ethnic groups in the Philippines, with at least 45 distinct ethnic groups. Speakers of Cebuano and Tagalog are the two largest language groups. These two groups, considered the Filipino language, are with English, the official languages of the Philippines.

§ 106PH.01(b) The Early History of the Philippines.

Filipinos for centuries lived in independent communities under customary, unwritten rules or laws. Researches have found evidence of at least two written law codes, dating from the 13th and 15th centuries, A.D. The customary laws dealt with property rights, among many other subjects. n1

When Ferdinand Magellan landed in the Philippines in 1521, even though he was killed there, the way was opened for introduction of Spanish rule over the Filipino archipelago. From that time until Philippine independence in 1898, Spanish laws and codes prevailed in the Philippines.

§ 106PH.01(c) Summary of Modern Filipino Legal History.

Later in that same year, in December, 1898, the Treaty of Paris terminating the Spanish-American War provided for Spain to cede the Philippines to the United States. "Upon the establishment of American sovereignty, the political laws of the Philippines were totally abrogated and Spanish laws, customs and rights of property inconsistent with the U.S. Constitution and with American principles and institutions were superseded." n2

The Americans established a Commonwealth government intended to prepare for Philippine independence, and the Filipinos adopted their own Constitution in 1935. Later that year they elected their first executive and legislative

officials.

From December, 1941, when the Japanese invaded the Philippines to open World War II there, until 1944, the Japanese occupied the Philippines and even produced a constitution in 1943. A Commonwealth government in exile returned to power in 1945, and the Philippine Republic was inaugurated on July 4, 1946. Filipinos ratified a new Constitution in 1973.

The new Constitution introduced a parliamentary system with merged executive and legislative powers. The prime minister became the chief executive and the president became head of state, a largely symbolic and ceremonial office. However, by a series of parliamentary maneuvers and constitutional amendments, this system was never implemented. Instead, it was changed into a modified presidential/parliamentary system. The president declared the inauguration of the Fourth Republic in 1981. The electorate ratified a new Constitution on Feb. 2, 1987. It establishes three branches of government and a *bill of rights* similar to those in the United States.

CHAPTER 106PH PROPERTY LAW IN THE PHILIPPINES

13-106PH Thompson on Real Property, Thomas Editions § 106PH.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106PH.02 Governmental and Legal Foundations for Property Law in the Modern Philippines.

The Constitution of 1986 contains basic provisions protecting property rights. "No person shall be deprived of life, liberty, or property without due process of law, nor shall any person be denied the equal protection of the law." n3 "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures of whatever nature and for any purpose shall be inviolable ... ." n4 "The liberty of abode and of changing the same within the limits prescribed by law shall not be impaired except upon lawful order of the court." n5 "Private property shall not be taken for public use without just compensation." n6

Contemporary Filipino law is drawn partly from Spanish law and partly from the law of the United States, thus being a mixed civil law and common law system. Many Codes modeled on civil law codes are in effect, as are statutes modeled on U.S. statutes. U.S. case law is cited and considered persuasive.

Of the 26 codes in force today, the codes relating to property are the Civil Code, the Code of Agrarian Reforms, the National Building Code, the Forestry Reform Code, the Real Property Tax Code, the Water Code, and the Philippine Environment Code.

The Civil Code, adopted in 1950, replaced the Spanish Civil Code of 1889. Two of its four books are Property and Different Modes of Acquiring Ownership. The Code of Agrarian Reforms embodies the basic land reform rules and has been controversial.

CHAPTER 106PH PROPERTY LAW IN THE PHILIPPINES

13-106PH Thompson on Real Property, Thomas Editions § 106PH.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106PH.03 Basic Filipino Property Law.

Property described as immovable property in Philippine law is similar to real property in a common law system, although the concept of immovable property is broader. n7 The principal laws and rules on selected property topics are briefly described below.

§ 106PH.03(a) Estates in Land.

Under Philippine property law, the term immovable property includes much of what is meant by real property in a common law system. Immovables include, among other things: lands, buildings, roads and structures of all kinds attached to the soil; trees, plants, and growing fruits while they are attached to the land; everything fixed or attached to an immovable; and "contracts for public works, and servitudes and other real rights over immovable property." n8 This covers essentially all that is meant by real property in Anglo-American common law.

The Civil Code declares that "Ownership may be exercised over things and rights." n9 The enumerated ownership rights include:

Right to enjoy and dispose of a thing, including a right of action to recover it. n10

Right to exclude. n11

Right to enclose or fence. n12

The owner may not use the thing "in such a manner as to injure the rights of a third person," n13 may not prohibit interference that is "necessary to avert an imminent danger and ... threatened danger ... ." n14 "No person shall be deprived of his property except by competent authority and for public use and always upon payment of just compensation." n15

"The owner of a parcel of land is the owner of its surface and of everything under it ... ." n16 "Hidden treasure belongs to the owner of the land, building, or other property on which it is found." n17

The owner of property also owns the natural fruits, the industrial fruits and the civil fruits, e.g., rents. n18

"Whatever is built, planted or sown on the land of another and the improvements or repairs made thereon, belong to the owner of the land," n19 subject to exceptions specified in the code. n20

One who holds a legal or equitable title to or interest in the real property may bring a quiet title action. n21 Dower and curtesy interests are not recognized.

Another form of the property right traditional in civil law jurisdictions is the usufruct. In the Philippines, "Usufruct gives a right to enjoy the property of another with the obligation of preserving its form and substance, unless the title constituting it or the law otherwise provides." n22 Servitudes are covered in Articles 613-693 and nuisance in Articles 694-707 of the Civil Code.

Philippine law also recognizes the concept of the family home: "The family home is the dwelling house where a person and his family reside, and the land on which it is situated. If constituted as herein provided, the family home shall be exempt from execution, forced sale or attachment, except as provided in Articles 232 and 243." n23

§ 106PH.03(b) Foreign Ownership of Land.

Under the general rule, only Filipino citizens, or entities owned at least 60% by Filipinos, are entitled to acquire land in the Philippines. Numerous exceptions relating to married couples and dual citizens and other special circumstances also apply. n24 Foreign nationals and corporation may enter into long-term leases, for up to 50 years, renewable for up to 25 years.

§ 106PH.03(c) Concurrent Estates.

The Civil Code recognizes and regulates co-ownership. n25 The Code makes detailed provisions for rights of partition, and does not recognize a right of survivorship. Specific co-ownership provisions are made for owners of different stories of a house. n26

§ 106PH.03(d) Leaseholds.

Leases of terms for one year or longer are required to be in writing, subject to exceptions. Leases of things for more than 99 years are not valid. n27 Leases may be recorded in the Registry of Property, n28 and if unrecorded, are not binding on third persons. n29 A lessee does not have a right to assign without the lessor's consent, n30 but does have a right to sublet with the lessor's consent, unless the lease agreement provides otherwise. n31 The Civil Code contains detailed provision for regulation of leaseholds. n32

§ 106PH.03(e) Succession.

Detailed rules of succession are provided in the Civil Code n33 and also in Art. 190 of Executive Order 209. Intestate succession is covered by Arts. 960 to 1014 of the Civil Code.

§ 106PH.03(f) Wills.

The Civil Code also governs formalities and other requirements for wills. n34 Persons under 18 are not authorized to make a will. n35 Wills must be in writing and executed in a language or dialect known to the testator. n36

§ 106PH.03(g) Real Estate Transactions.

A contract of mortgage may be applied to immovables and alienable real rights in connection with immovables. n37 "In addition to the requisites stated in Article 2085, it is indispensable, in order that a mortgage may be validly constituted, that the document in which it appears be recorded in the Registry of Property. If the instrument is not recorded, the mortgage is nevertheless binding between the parties." n38

"The form, extent and consequences of a mortgage, both as to its constitution, modification and extinguishment, and as to other matters not included in this Chapter, shall be governed by the provisions of the Mortgage Law and of the Land Registration Law." n39

By contract of antichresis, a creditor acquires the right to receive the fruits of an immovable of his debtor, and to apply them to the payment of the interest, if owing, and thereafter to the principal of the debt. n40

§ 106PH.03(h) Special Rules.

"Mining claims and rights and other matters concerning minerals and mineral lands are governed by special laws. n41

§ 106PH.03(i) Title Registration.

"The Registry of Property has for its object the inscription or annotation of acts and contracts relating to ownership and other rights over immovable property." n42 "For determining what titles are subject to inscription or annotation, as well as the form, effects, and cancellation of inscriptions and annotations, the manner of keeping the books in the Registry, and the value of the entries contained in special books, the provisions of the Mortgage Law, the Land Registration Act, and other special laws shall govern." n43 The Philippine registration system is a Torrens system.

§ 106PH.03(j) Stamps.

Document stamp taxes are required for documents, instruments, loan agreements, acceptances, assignments, sales and transfers of obligations. n44

§ 106PH.03(k) Taxation.

§ 106PH.03(k)(1) Estate Tax.

A graduated estate tax is imposed nationwide, payable within six months of the decedent's death, when the estate tax returns are due. n45

§ 106PH.03(k)(2) Property Tax.

Real estate taxes are also imposed, with different rates from region to region and city to city. n46

§ 106PH.03(l) Environmental Regulation.

The Department of Environment and Natural Resources is the chief government agency responsible for protecting, conserving, managing, developing and exploring the environment and natural resources. The principal laws enacted or decreed for these purposes are:

National Pollution Control Decree of 1976 n47

Prevention, Control and Abatement of Air Pollution Decree n48

Marine and Pollution Decree of 1976 n49

Environmental Impact Statement System n50

Toxic Substances and Hazardous and Nuclear Waste Control Act of 1990 n51

National Integrated Protected Areas Systems Act n52

Philippine Clean Air Act of 1999 n53

Ecological Solid Waste Management Act of 2000 n54

CHAPTER 106PL PROPERTY LAW IN POLAND

13-106PL Thompson on Real Property, Thomas Editions § 106PL.01

AUTHOR: C. David DeBenedetti DeBenedetti Majewski Szczesniak Kancelaria Prawnicza Sp. K. Saski Crescent, ul. Krolewska 16 00-103 Warsaw Poland

§ 106PL.01 Historical Background of Polish Property Law.

§ 106PL.01(a) Property Law in the Middle Ages.

The Polish legal system in the Middle Ages was based on a feudal monarchy (*patrimonium*), which was characterized by the belief that the country was the private property of its monarch.

In the Middle Ages in Poland, there were four classes of people who varied in their rights and obligations: peasants, middle class, knighthood/nobility and clergy.

In most cases, the right to property was granted to nobility and clergy by the monarch. In addition, the land was acquired by virtue of acquisitive prescription, acquisition of land belonging to no-one, or transfer of ownership. The transfer of ownership required the presence of a clerk from a local court, transferor and transferee, the neighbors and other witnesses. The transfer of ownership had to be registered in the land books, otherwise it was null and void.

In the Middle Ages in Poland, the ownership of real property depended on membership in a particular social class. The largest and also the poorest social group--the peasants--did not own property, but were obliged to perform many duties as a result of their serfdom.

§ 106PL.01(b) Property Law in the 19th Century.

§ 106PL.01(b)(1) Partitions Times (1795-1918).

In 1795, Poland disappeared from the political map of Europe when its territory was divided between Russia, Prussia and Austro-Hungary. Before it regained independence, the former Polish lands were governed by three separate legal systems. The most important legal acts regulating the civil relationships were: volume X of the Rules of the Russian Empire (*Zwod Praw Cesarstwa Rosyjskiego*) of 1832, the Prussian BGB of 1896 and the Austrian ABGB of 1811.

On the annexed territories, property law was regulated by some statutes *e.g.*, the statute on the privileges and mortgages (1818, 1825). Following the introduction of this statute, the land and mortgage register became an important tool in

establishing the existence of mortgages securing the repayment of loans. Land and mortgage registers became widely respected and had a significant impact on economic relations.

§ 106PL.01(b)(2) Napoleonic Era-Temporary Reemergence of Poland.

In 1807, the Kingdom of Warsaw was established, although it was under the domination of Napoleonic France.

By virtue of the constitution of the Kingdom of Warsaw, Napoleon's Civil Code of 1804 was introduced into the territory of the Kingdom of Warsaw. Napoleon's Civil Code was based on the principles of Roman and natural law and provided for the distinction of main property rights (such as ownership, usufruct, easement) and dependent property rights (pledge, mortgage), as well as between ownership and possession. According to Napoleon's Civil Code, the transfer of ownership did not require the transfer of possession, and acquisitive prescription required at least 10 years of uninterrupted possession.

§ 106PL.01(c) Regaining Independence in the First Half of the 20th Century.

Initially, after Poland regained independence in 1918, the legislation of the three annexing countries (i.e., the laws of Russia, Germany, and Austro-Hungary) applied.

In 1919, a codification committee was appointed and began work on the unification of the main areas of law, including civil law and civil procedure. Fundamental legal principles were agreed upon: ownership was considered as the center of the legal system and the inviolability of ownership was recognized by the Constitution, although some exceptions were allowed. Expropriation was accepted only for high social usefulness, for consideration and only in accordance with law.

Since 1933, the transfer of ownership of real property must be accomplished by means of a notarial deed.

§ 106PL.01(c)(1) World War II.

During World War II, Poland was first divided between Nazi Germany and the USSR. Further, Western Poland was annexed directly into the Third Reich and became subject to German law. The area under German control not annexed directly into the Third Reich became subject to the so-called General Government /Generalne Gubernatorstwo/ (GG). In practice, the law in the GG was adopted almost exclusively by the General Governor. Polish law, which applied earlier, was preserved only to a minor extent.

In the areas annexed by the USSR, Soviet authorities introduced "revolutionary social and legal order," which was based on liquidation of private ownership, forced expropriation of landowners and nationalization of industry, banks and mines.

§ 106PL.01(c)(2) Polish People's Republic (PRL).

§ 106PL.01(c)(2)(i) Influence of Soviet Union.

In the period between the end of the World War II and the first free elections in 1989, Poland was strongly influenced by the law and philosophy of the Soviet Union.

§ 106PL.01(c)(2)(ii) Expropriation and Nationalization.

Political and ideological premises caused the post-war authorities to specifically regulate the legal status of the properties located within the area of Warsaw. In compliance with the provisions of the decree of October 26, 1945 on Ownership and Usufruct of Land within the Area of Warsaw (Journal of Laws No. 50, item 279, as amended;

hereinafter the Decree), the title to all land within the area of the capital city was transferred to the capital city of Warsaw, while the existing owners were granted rights to hold land in perpetual tenancy.

Pursuant to the Act of January 3, 1946 on the Takeover of the Fundamental Sectors of the National Economy by the State, the Peoples Republic of Poland acquired the ownership (without compensation or for minor compensation) of, *inter alia*, industrial, mining, communications, banking and insurance enterprises.

§ 106PL.01(c)(2)(iii) Civil Code 1964.

The Civil Code was adopted in 1964, above all, due to the need to unify Polish civil law and modernize existing provisions. Before the effective date of the Civil Code, civil-law relations were governed by a number of rather inconsistent legal acts.

The adopted Civil Code referred to, for instance, so-called socialist ownership, which was vested in the state and social organizations of working people. The state property could not be acquired by acquisitive prescription. For ideological and political reasons, the title to land or other state-owned properties could not be transferred to private individuals.

CHAPTER 106PL PROPERTY LAW IN POLAND

13-106PL Thompson on Real Property, Thomas Editions § 106PL.02

AUTHOR: C. David DeBenedetti DeBenedetti Majewski Szczesniak Kancelaria Prawnicza Sp. K. Saski Crescent, ul. Krolewska 16 00-103 Warsaw Poland

§ 106PL.02 Current Laws Regarding Real Property in Poland.

The first open elections which took place in 1989 led to a series of reforms, which culminated in Poland joining the European Union in 2004, but in fact, this process of reform has still been occurring to date.

Real property law in Poland is governed by several legal acts, and is best described by starting with the most fundamental issues (right to own private property), then basic principles (right to transfer property), and finally particular provisions (zoning, development, etc.) Such fundamental principles are stipulated in the Constitution, n2 basic principles are addressed in the Polish Civil Code, n3 and several other legal acts n4 provide the many detailed provisions.

§ 106PL.02(a) The Constitution of the Republic of Poland.

The Polish Constitution is the supreme law of the country, and provisions regarding real property are contained in the key chapters n5 of the Constitution. Those chapters also deal with the protection of the democratic system of elections and civil rights. The most important principles refer to the protection by the state of the right to ownership and inheritance. n6 According to the Polish Constitution, the right of ownership can be restricted only by a law passed by the Parliament, and only insofar as it does not violate the nature/essence of the ownership right itself. n7 In the Constitution, the term property right has broad meaning, referring both to movables and immovables. Under the Constitution, expropriation n8 can be conducted legally, only if it serves public purpose and for fair compensation.

§ 106PL.02(a)(1) Civil Code.

The Polish Civil Code regulates basic terms and concepts regarding property law, such as ownership, n9 co-ownership, n10 movable and immovable property, and protection of ownership rights. These are mandatory provisions of the Civil Code and cannot be regulated otherwise in any contract between particular parties.

§ 106PL.02(a)(2) Property Laws Not Contained in the Civil Code.

In addition to the provisions of the Civil Code, there are detailed statutory regulations referring to the right to a

cooperative flat, the land and mortgage register, and construction law, to name a few.

Private International Law determines the law that governs international personal and property relations within the scope of civil, family, and labor law. n11 According to its provisions, the law chosen by the parties, provided that this law is connected with the obligations, may govern the contractual relations of these parties. n12 However, the legal status of real estate and any rights or obligations related thereto, shall be governed by the law of the state in which that real estate is located. n13

Regarding taxation and tax residence, as an example, according to the Treaty on the Avoidance of Double Taxation executed between Poland and the United States of America, n14 if any person sells, exchanges a real property, or performs any other transaction with relation to that property, which is situated on the territory of the other party of the agreement, n15 the income such party obtains from that transaction is subject to taxation in both the country where such person has place of residence or registered office and in the country where the real estate is located. n16 Thus, the sale of property in Poland is subject to tax in Poland and the jurisdiction of Polish law.

§ 106PL.02(b) Real Property Under the Civil Code.

§ 106PL.02(b)(1) Co-Ownership of Real Property.

The Polish Civil Code provides for two types of co-ownership: n17 joint co-ownership and fractional co-ownership. As opposed to fractional ownership, joint co-ownership n18 is combined with certain legal relationships (marital joint co-ownership, civil law partnership). Fractional co-ownership means that at least two persons have fractional proprietary rights in one property. In the case of fractional co-ownership, each of the co-owners is entitled to dispose of his/her/its right. n19 However, in order to dispose of the co-owned property as well as to perform acts beyond the ordinary management of that property (including encumbering it with a mortgage, extensive renovation), the consent of all co-owners is required. n20

In certain cases it is difficult to obtain the consent from all of the co-owners for particular action. The Polish Civil Code provides that in such cases the co-owners having at least 50% of the shares in the property are entitled to apply to the court for such consent. n21

§ 106PL.02(b)(2) Ownership and Possession.

Ownership is the fullest legal form of the use of a property under Polish law. The owner may, within the limits specified by statutory law and the principles of community life and to the exclusion of other persons, use a property in accordance with the socio-economic purpose of his right. n22 In particular, the owner may derive benefits and other income from that property and dispose of that property. n23

The term "Land ownership" includes not only the proprietary rights to the surface, but also to the space above and below that surface. n24

Polish law provides for some limitation of an owner's rights. For instance, the owner of a property, in exercise of his right, should abstain from acts that would excessively disturb the use of neighboring properties. n25 Although the owner has the right to build on his/her/its land, he/she/it should not carry out construction works in a manner threatening the neighboring properties with a loss of subjacent or lateral support. n26

The Polish Civil Code distinguishes between ownership and possession. n27 Contrary to ownership, possession is not a legal but factual status, *i.e.*, the possessor is a factual holder of the property (although the possessor may have a legal title to the property, *e.g.*, lease or usufruct agreement). n28 Nevertheless, both possession n29 and ownership n30 are legally protected.

§ 106PL.02(b)(3) Transfer of Ownership.

In Poland, there are 3 ways of obtaining legal title to the property: acquisition, inheritance and acquisitive prescription (hostile possession).

The purchase of real property is governed by special rules. A sale agreement relating to the property must be executed in the form of a notarial deed. n31 In practice, usually preliminary sale agreements are executed. n32 The Polish Civil Code does not stipulate the form of preliminary sale agreements but the buyer's interest is best secured if such preliminary sale agreement is also executed in the form of a notarial deed. In such case, if the seller refuses to execute the final sale agreement, the buyer may demand the issuance of a court decision (forcing specific performance). n33

Prior to the purchase of real property, the buyer should verify the entries and annotations in the land and mortgage register in order to make sure that the seller is the owner of that property and that there are no encumbrances on it.

The Polish Civil Code stipulates that inheritance shall be governed by the applicable legal provisions on inheritance which are in force at the moment of the death of the decedent. n34 In Poland there are two ways of inheriting: by virtue of a testament n35 or by virtue of statutory provisions. n36 Special provisions apply to the inheritance of agricultural land, depending on the date of the death of the decedent. n37

Acquisitive prescription (hostile possession) means acquisition of ownership by extended possession and it is a legal tool that provides for the possibility of eliminating the discrepancies between the actual situation and the legal status of ownership. According to the Polish Civil Code, a possessor of a real estate who is not an owner (or co-owner) shall acquire the ownership of that real estate if he/she/it possesses that real estate uninterruptedly for at least 20 years as an autonomous possessor in good faith. n38 If the possessor is acting in bad faith, the uninterrupted possession of the real estate must last for at least 30 years before the possessor acquires the right of ownership. n39

§ 106PL.02(b)(4) Limited Property Rights.

Contrary to the right of ownership, limited property rights ensure only limited rights towards a property. The catalogue of such rights is listed in the Polish Civil Code. n40 All limited property rights, except for a Pledge, n41 may be established over a real estate. The economic purpose of the establishment of limited property rights may be various: mortgage and pledges are used as a security for claims (mostly credits), whereas the right to a cooperative flat is established for residential purposes. Usufruct may constitute a basis for production activity or ensure usage of real estate for particular periods during the year (timesharing is a form of usufruct).

Limited property rights are established by an agreement, n42 court decision, administrative decision, or acquisitive prescription.

Limited property rights, with a few exceptions, may be transferred from one party to another.

§ 106PL.02(b)(4)(i) Usufruct.

According to the Polish Civil Code, usufruct is a legal form of using another party's property in a way similar to its owner. n43 The user is entitled to use a property and take profit from it. Usufruct is non-transferable. n44

Timesharing n45 is one of the forms of the usufruct. Timesharing is created by an agreement between an entrepreneur and a natural person for at least a 3-year period. Timesharing enables use of a specified apartment or house of another in a particular period of each calendar year in exchange for payment.

§ 106PL.02(b)(4)(ii) Easement.

An easement is a limited property right encumbering one's property on behalf of the owner of another real estate or a specific person. n46 As a result, the performance of the rights of the owner of the encumbered real estate is limited (in most cases due to the fact that the owner of the dominant real estate is entitled to use the encumbered property within the designated scope). n47

An easement is established by virtue of an agreement between the owner of the property, which is to be encumbered, and the beneficiary of the easement, or by the virtue of a court verdict, administrative decision or as a result of acquisitive prescription. n48

Among various easements, the Polish Civil Code provides for the transmission easement n49 (sluzebnosc przesylu). The transmission easement enables the transmission companies to use someone else's property in order to maintain the transmission facilities (electricity transmission lines, gas pipelines, water connections).

§ 106PL.02(b)(4)(iii) Mortgage.

In Poland a mortgage is a key form used in order to secure cash receivables. A mortgage can only be established over real estate. n50 Detailed stipulations governing mortgage are included in the Land and Mortgage Register and Mortgages Act.

In Poland mortgages may be established in an agreement (voluntary mortgage) n51 or by a court decision (forced mortgage or judicial mortgage). n52 Contrary to a voluntary mortgage, which in practice is used to secure bank credit, forced mortgage is established without the approval of the owner, and sometimes against the owner's will. Mortgage becomes valid, binding and enforceable security upon final registration by an appropriate court in the relevant land and mortgage register. n53

§ 106PL.02(b)(4)(iv) Perpetual Usufruct.

Land owned by the State Treasury or local community or their subsidiaries which is located within the administrative borders of towns, or lands situated outside these borders but included in the master plan of a town and designated to serve its economic needs, may be let for perpetual usufruct n54 to natural and legal persons for 99 years. n55 In exceptional circumstances, the perpetual usufruct may be created for a period not shorter than 40 years. Perpetual usufruct is established against payment. n56

The perpetual usufructuary is obliged to exercise his/her/its rights in accordance with the agreement on perpetual usufruct. n57 The agreement on perpetual usufruct provides, inter alia, for designated usage of the property, permitted constructions, method of calculating the value of any buildings erected by a perpetual usufructuary and the fee for perpetual usufruct. n58

According to the Polish Civil Code, the perpetual usufructuary is the owner of any buildings and other structures located on the land which is the subject of perpetual usufruct. n59 However, upon the termination of perpetual usufruct, the ownership of these buildings is transferred to the owner of the land for a consideration specified in the agreement on perpetual usufruct. n60

A contract for perpetual usufruct shall be concluded in the form of a notarial deed. The transfer of perpetual usufruct also requires a notarial deed. n61

§ 106PL.02(c) Land and Mortgage Register.

The land and mortgage register is an official register kept in the district courts n62 which defines the legal status of a

particular real estate. n63 In Poland, the land and mortgage registers include the description of a real estate and ownership thereof, entries of limited property rights and claims of third persons. n64

The main purpose of the land and mortgage register is to ensure safety of transfer of ownership. The registration of entry in the land and mortgage registers has its legal consequences: it is deemed that the right disclosed in the land and mortgage registers is registered in accordance with the actual legal status, n65 and a right deleted from the land and mortgage register does not exist. n66

The principle of priority provides that the rights registered in the land and mortgage registers have priority over those which have not been registered. n67 Moreover, the priority of limited property rights registered in the land and mortgage registers depends on the date of the registration (the sooner, the higher priority). n68

§ 106PL.02(d) Lease and Tenancy (*Dzierzawa*).

§ 106PL.02(d)(1) Basic Principles of Lease and Tenancy.

Under Polish law, there are two agreements allowing use of another's property in consideration for payment of rent: lease and tenancy.

Under a lease agreement the lessor undertakes to give the lessee a *res* for a specified or unspecified period of time, whereas the lessee undertakes to pay the lessor the agreed rent. n69 Under a tenancy agreement, the lessee is not only entitled to use the property, but also to benefit from it. n70 Therefore, the most common subject of the lease is a residential or office space, whereas a farm, agricultural land, plant or enterprise are the typical subject of tenancy agreements.

§ 106PL.02(d)(1)(i) Lease Between Entrepreneurs.

According to the Polish Civil Code, n71 a lease agreement concluded by entrepreneurs n72 for a period exceeding 30 years, will, upon the lapse of 30 years, be considered as if it was concluded for an indefinite period of time, and therefore be easily terminated by virtue of a termination notice.

§ 106PL.02(d)(1)(ii) Eviction.

If any person occupies the real property without any legal title (*e.g.*, the lease agreement expired or was terminated as a result of lessee's failure to pay the rent), the owner may demand the eviction of such person. n73 Eviction is performed by a court bailiff n74 according to special procedure. Currently, no eviction can be performed, if no substitute premises are provided for the evicted person. In case of entrepreneurs, eviction procedure is regulated in the Polish Civil Code. n75 There is no requirement for providing substitute premises for an evicted entrepreneur.

§ 106PL.02(e) Foreign Ownership of Real Property in Poland.

§ 106PL.02(e)(1) Limited Acquisition of Real Property By Foreigners.

The acquisition of real property by foreigners is regulated by the Act on the Acquisition of Real Estates by Foreign Persons. n76 Foreigners n77 must first obtain permission of the Minister of Interior and Administration, to purchase property or shares in a commercial company with a registered office in Poland, which is the owner or a holder of a perpetual usufruct of property in Poland. n78

§ 106PL.02(e)(2) Permits.

Permission by the Minister of Interior and Administration is granted in the form of an administrative decision, only if

there is no probability of a threat to the defense or national security or interruption to public order. n79 Upon applying for permission, a foreigner must prove his/her/its link to the Republic of Poland. Circumstances confirming a foreigner's contact with the Republic of Poland may include, n80 in particular: possessing Polish nationality or Polish origin; celebrating marriage with a citizen of the Republic of Poland; possessing a permit to reside for a definite time or to settle; possessing membership of a managing body of entrepreneurs previously mentioned; conducting business of agricultural activities on the territory of the Republic of Poland in compliance with the provisions of Polish legislation.

Since Poland's accession to the European Union (May 1, 2004) the above mentioned rules do not apply to foreigners from the territory of the European Economic Area. n81 However, there are some exceptions. For instance, the purchasing of agricultural real property by foreigners from the territory of the European Economic Area requires a permit within 12 years following the accession of Poland to the European Union. n82 Finally, it is not necessary to receive the permission from the Minister of Internal Affairs and Administration for acquisition of a separate living accommodation within the meaning of the Act on the Ownership of Premises. n83

§ 106PL.02(f) Investing in Real Property in Poland.

§ 106PL.02(f)(1) Local Spatial Development Plan.

The Local Spatial Development Plan is a fundamental act passed by the local commune n84 in order to establish the functions of the land and planned investments. n85 A Local Spatial Development Plan includes mandatory principles of sustainable territorial and economic development, functional zoning and indication of areas for housing and other direct investments; general proposals for technical infrastructure systems; the location of main roads and other technical networks; and the most important preservation areas due to their economic, natural, and cultural value. n86

Local Spatial Development Plans do not cover the whole territory of Poland. If such a plan has been adopted for the property to be developed, the design and construction works must be performed in strict compliance with the terms and conditions set out in the plan. n87 If there is no Local Spatial Development Plan for the area where the investment is planned (which happens frequently), Zoning Decisions must be obtained. n88

§ 106PL.02(f)(2) Zoning Decisions.

If no Local Spatial Development Plan has been adopted for the particular area, it is necessary to obtain a zoning decision to proceed with the investment/construction works.

A zoning decision is an administrative decision granted by the village administrator, mayor or president of a city n89 (depending on the size of the commune) upon a request of any person (there are no objections to issue this decision to a number of different applicants at the same time). n90

A zoning decision specifies the type of allowed investment, parameters of such investment and the site including the whole infrastructure. n91 Moreover, a zoning decision provides for the following steps, opinions, agreements and conditions that must be fulfilled by the investor (*e.g.*, the permission for cutting down trees, agreement with the conservation officer). n92

§ 106PL.02(f)(3) Building Permit.

In Poland, most construction works can begin only upon the issuance of a final building permit. n93 In some cases the mere notification of the envisaged construction works is sufficient (this applies to some small construction works and renovations). n94

A building permit is a decision issued by a local mayor (president of a town) n95 in an administrative procedure to which the investor and the owners of the properties located within the planned investment's interference zone are

parties. The building permit authorizes the commencement or continuation of a specified building or performance of particular construction works other than the construction of an object. A building permit expires if the construction works are not initiated within 3 years or a break in the works exceeds 3 years. n96

§ 106PL.02(f)(3)(i) Permit To Use Constructed Premises.

This permit is an administrative decision allowing for the use of a building and is issued by a local construction supervision inspector after the performance of an inspection of that building. n97 Inspection is performed in order to establish whether the construction was carried out in compliance with the construction designs and other construction law regulations such as fire risks, sanitary and environmental issues. n98

§ 106PL.02(g) Taxes and Fees on Real Property.

§ 106PL.02(g)(1) Civil Law Transactions Tax (Known as "PCC").

The tax on civil law transactions is imposed on the contracts of sale or exchange of things and property rights. n99 This tax applies to transactions of sale of the property, perpetual usufruct, and the co-operative members' right to an apartment. In transaction of sale a buyer is obliged to pay the tax. n100 The tax base and rate differ depending on the type of contract concluded. For instance, in the case of a contract of sale the tax base is the market value of the property and the tax rate amounts to 2% of this value. n101 The tax is payable within 14 days of the date of the execution of the contract at the bank account of the relevant tax office. n102

§ 106PL.02(g)(2) Value Added Tax.

In some cases, the sale of real estate may be subject to Value Added Tax (VAT). The obligation to pay VAT depends on the identity of the seller, the frequency of real estate sales and the parameters of the property.

There are huge differences between VAT and civil transaction tax: if VAT is paid in conjunction with a particular transaction, no civil transaction tax is due.

§ 106PL.02(g)(3) Perpetual Usufruct Fee.

By virtue of contract, the perpetual usufructuary is obliged to pay an initial fee amounting to 25% of the value of the land and an annual fee of 0.3%-3% of the estimated value of the land, depending on the purpose of the perpetual usufruct. n103 The fee may be lowered by a competent body in some specific cases, for instance in relation to some non-profit organizations or cultural and educational associations.

§ 106PL.02(g)(4) Property Tax.

Property tax in Poland is one of the local taxes n104 and is collected by the village administrator, mayor or president of a city (depending on the size of the commune). n105 It is paid annually by the owner of property or perpetual usufructuary n106 in the amount that depends on the size of the property. n107 The tax is calculated regardless of the property's market value. Each commune council specifies by resolution the rate of the property tax for estates situated within its boundaries. n108 However, the tax rate cannot exceed the limit set in the statute. n109

§ 106PL.02(g)(5) Fee for the Exclusion from Agricultural Production.

Under Polish law, n110 construction works cannot be commenced n111 on arable land comprising organic or forest land other than that owned by the State Treasury, without the consent of the Minister of the Agriculture or Minister of the Environment, expressed in the form of an administrative decision. n112 The consent for the exclusion of the land from agricultural production entails the payment of one-off and annual fees, n113 the value of which depends on the

type of soil. n114

CHAPTER 106RO REAL PROPERTY LAW IN ROMANIA

13-106RO Thompson on Real Property, Thomas Editions § 106RO.01

AUTHOR: Nicholas Hammond Hammond, Bogaru & Associates Romania

§ 106RO.01 History of Property Law in Romania.

§ 106RO.01(a) Property in the Era of Geto Dacians; Property in Dacia When It Was A Roman Province.

The presence and stability of Geto Dacians on the Romanian territory since the second millennium B.C. has been mentioned by historical sources.

During the existence of the Geto Dacian state (until year 106 A.D.) there are mentioned two types of property, and these referred to the private lands of the aristocracy and the lands of the territorial community of the free peasants who possessed the land as a collective, a form of commonly held property. However, they exercised individual rights of possession over the arable land.

With the extension of slave-owning relationships, disparity of wealth and great private property developed. n1

The collective property of the territorial community in the main referred not only to the land but also to slaves and cattle. The land of the community was divided within lots and was given to individuals or families for their use for a period of one (1) year. In the following year the parcels of land were redistributed within the community by the drawing of lots.

Therefore, in the Geto-Dacian State Era within the territorial community the land was collectively possessed but there existed signs that private property was developing.

When Dacia became a Roman province, after the military confrontations between the Dacians and Romans between 85 and 106 A.D. there were at the same time two forms of property: a) provincial/rustic property and b) the Roman property called the "proprietate quiritara".

Ownership over the provincial property was exercised by the free local residents from the province.

According to an ancient rule the conquered land became the property of the Roman state known as the "ager publicus," but in reality the land ownership was retained by the local population.

The councillors of those times considered that the locals from the provinces had a right of possession and usufruct over the land. When a provincial local died, the land could be transferred to his heirs. Also, the land could be transferred between living persons by simple transfer.

§ 106RO.01(b) Property Ownership During the Medieval Period.

The Medieval Era refers to the period of the Romanian history between the ancient era of Dacia and the modern era.

Land played an important role in the Medieval Era for the agricultural communities, as agriculture was the main work of such communities.

In order to work the land the communities had a common ownership right over the land that they worked on and this was referred to as the "joint property domain." For this purpose the community's members had a common right of use over the entire joint property domain. Sometimes, with the community's approval, parts of the joint property domain could be individually and personally used under the supervision and control of the community.

The ground from where there was extracted silver, gold or iron ores was considered to be under common ownership.

Property in Medieval Era referred to a personal ownership over the land based on an individual's work for the maintenance and development of land, which represented part of the joint property domain.

The first parcels of land to be detached from the joint property domain were the parcels of land on which a community's members has established their house and the yard.

The same process happened with fields by delimitation plots of land and which in this way were permanently distributed to the respective families.

§ 106RO.01(c) Changes to the Old Norms During Early Feudalism.

The period of Early Feudalism corresponded with the period where in the Carpathians region during the tenth to thirteenth Century there were formed the so called "countries" as political state organizations.

Although the maintenance of the territorial communities during the earlier feudalism was determined by the old juridical norms which were observed, there could be created new norms and old ones could be modified.

Due to the development of agricultural tools and the extension of agricultural land there can be identified a development of private property. Many of the lands were valued by the families who were trying to take these properties out of the common regime.

Therefore instead of the norm which prohibited a member of the community from transferring any part of the territory of the community there emerged a norm which permitted the transfer of a land to the relatives of the transferor and the other members of the community had preference right to buy the land.

§ 106RO.01(d) Property Ownership During the Era of "Moldova and Tara Romaneasca".

In Moldova and Tara Romaneasca the feudal society reached maturity with full state independency. Although there was Ottoman domination, the "law of the country" represented the main juridical source.

A main characteristic of the developed feudalism was the existence of more types of property ownership as follows:

a. *The great feudal property* was formed when the territorial community started to disappear.

b. *The property of the territorial community* started to have new characteristics similar to private property and consisting of the local household and agricultural lots. The forests, the pastures and waters remained the property of the state.

c. *The property of the free peasants*, which consisted of their household, the agricultural land that they worked, tools and cattle. This type of property disappeared as it was taken by the feudal owner.

d. *The property of the craftsmen*, which was exercised by them over their workshops and their work tools.

e. *The property of the slaves*, referring to their shelters.

CHAPTER 106RO REAL PROPERTY LAW IN ROMANIA

13-106RO Thompson on Real Property, Thomas Editions § 106RO.02

AUTHOR: Nicholas Hammond Hammond, Bogaru & Associates Romania

§ 106RO.02 Property Legislation Before the Communist Era.

§ 106RO.02(a) Agrarian Reform Under the Romanian rule of Alexandru Ioan Cuza.

During the revolution of 1848 and during and after the Unification of the Romanian countries from 24th January 1859, the peasants acquired the right to receive ownership over the lands that they were using and occupying.

On 14th August 1846 the Land Law n2 was adopted, according to which "The villagers are and remain the landlords of the lands they have already possessed in a surface established according to this law".

After adoption of the Land Law, most of the lands became the property of the peasants who occupied such lands depending of their economic status, and depending on the number of cattle they owned.

As a result of this law the peasants obtained recognition of rights over the lands by converting their right of use over the land to ownership over the same land.

§ 106RO.01(b) The First Romanian Civil Code.

Under Alexandru Ioan Cuza and considering that the previous existing civil norms at that time were no longer applicable with respect to their content and form, the first Romanian Civil Code came into force on 1st December 1865. The Romanian Civil Code was inspired by the provisions of the French Civil Code adopted during Napoleonic period.

Although there have been several attempts to modify the Code during the years 1940, 1971 and 2004 the Romanian Civil Code adopted under Alexandru Ioan Cuza has remained substantially unmodified.

A chapter regarding property was allocated in the Romanian Civil Code and special attention was given to the main attributes of the property. The Code also mentioned the differences between the various forms of the possession of goods.

The first Romanian Civil Code stipulated provisions with regard to the goods that husband brought within the marriage, the principle of the freedom for a husband to choose between the separation of goods regime, the community of goods

and the dowry regime. n3

The Code provided that the property could be transferred by deeds concluded between persons or by inheritance.

§ 106RO.01(c) The Romanian Constitution in 1866.

When the reign of Alexandru Ioan Cuza ended and the German prince Carol de Hohenzollern--Sigmaringen became the successor to the Romanian throne, the country created a fundamental law.

In July 1866 the First Constitution of Romania was adopted. This fundamental law was structured on eight titles with chapters and sections. Under this fundamental law, property was declared sacred and inviolable.

After the extension of the national territory of Romania in 1918 a new constitution was adopted on 29th March 1923.

During the Communist period the Constitution of 1923 was modified in 1948, 1952 and 1965. After the revolution in 1989 a new constitution was adopted in 1991 and the current constitution was subsequently adopted.

The current Constitution of Romania came into force on 29th October 2003 and it was adopted on the basis of a national referendum.

According to the current Constitution of Romania private property is guaranteed and protected by law.

CHAPTER 106RO REAL PROPERTY LAW IN ROMANIA

13-106RO Thompson on Real Property, Thomas Editions § 106RO.03

AUTHOR: Nicholas Hammond Hammond, Bogaru & Associates Romania

§ 106RO.03 Land/Property Holding During the Communist Era.

The appointment of Government of Petru Groza on 6th March 1945 represented the installation of the communism regime in Romania.

Beginning March 23, 1945, the Land Reform law expropriated agricultural lands with a surface bigger than fifty hectares. In total one million four hundred sixty eight thousand nine hundred forty six hectares were expropriated, of which one million one hundred and nine thousand five hundred sixty two hectares were distributed to the families of peasants.

The land reform in 1945 aimed to abolish the great landed properties and families. According to the Land Law 187 dated 1945 regarding the application of the land reform, all the expropriated properties became the property of the state without payment of any compensation.

The major principles of land ownership and property were set forth in the Romanian Constitution from 1952 issued under the Communists as follows:

Article 6: "The foundation of the socialist social economic formation is the socialist property over the production resources and which have the form of either the state property (joint property of the people), or in the form of the cooperative-collectivist property (the property of the collective agricultural households or the property of the cooperative organizations)"

Article 8: "The land in the Republic Romania belongs to those who work".

Article 9: "... The peasants, members of the collective households have a personal use of the plot of land besides their house and personal household on that land ... -in accordance with the collective agricultural household".

Article 12: "The private property right of the citizens of the Republic Romania over their incomes and savings arising out of their work, incomes over the house and the auxiliary household, over the objects of domestic and personal use as well as the right of inheritance over the citizens' private property are to be protected by law."

CHAPTER 106RO REAL PROPERTY LAW IN ROMANIA

13-106RO Thompson on Real Property, Thomas Editions § 106RO.04

AUTHOR: Nicholas Hammond Hammond, Bogaru & Associates Romania

§ 106RO.04 Legal Remedies in Relation To Property Against the Abuses Committed in the Communist Era.

During and after the communist period when expropriations and confiscation of properties by the state were specific to that regime, the Romanian legislation referred to laws as a means of acquisition and reacquisition of property.

Land Law 18 dated 1991 is one example of the applicable post communist property legislation in Romania by which there "is established the private property right over the lands that are in the patrimony of the agricultural cooperatives by reconstitution or constitution of the property right." n4

Land Law 18 refers to and is applicable to those persons who brought land to the agricultural cooperatives. Also subject to this law are the persons from whom the land was taken in any way by the Communist regime and the heirs of such persons.

Law 10 dated 2001 establishes the juridical regime for buildings abusively taken over by the state between 6th March 1945 and 22nd December 1989, the communist era. This law provided the legal conditions for the restitution of such buildings to those entitled to receive them either in kind or through compensation.

Currently in Romanian there are thousands of applications and pending court trials based on these two laws.

CHAPTER 106RO REAL PROPERTY LAW IN ROMANIA

13-106RO Thompson on Real Property, Thomas Editions § 106RO.05

AUTHOR: Nicholas Hammond Hammond, Bogaru & Associates Romania

§ 106RO.05 Private Ownership Rights.

The Romanian Civil Code defines at article 480 the ownership right as "the right that entitles someone to exclusively enjoy and dispose of an asset, within the limits determined by law." The ownership right comprises three attributes: possession, use and disposal.

Currently, n5 the Parliament is adopting a new Civil Code, but until the date when it enters into force (this being subject to a further regulation) the provisions of the current Civil Code on property rights remains fully applicable.

§ 106RO.05(a) The Legal Limitations on the Rights of Ownership.

The legal limitations on ownership rights are to be seen in relation to: a) the exercise by the state of the disposal of state assets (assets of public interest or use are not subject to private disposal); b) the relationship of neighborhood properties (i.e. there are specific obligations that have to be respected by the owners of adjoining properties); c) the use of the subsoil of land for works of general interest (the state public authority may use the subsoil of any real estate property, provided that the owner of the property is indemnified against all damages or prejudices caused to the soil).

Private property is protected equally by law, irrespective of the holder. All possessions and belongings acquired by legal means can not be confiscated; the ownership is presumed to have been acquired under legal conditions.

According to *article 44 of the Constitution* "no property can be expropriated unless there is a cause of public interest and after payment of compensation."

§ 106RO.05(b) The Acquisition of Lands By Foreign Citizens.

The acquisition of lands by foreign citizens is regulated by the Law 312/2005. n6

The citizen of an EU member state, stateless citizens domiciled in a member state or in Romania, as well as the legal persons incorporated in accordance with the legislation of an EU member state, may acquire the ownership right over land for second homes under the same conditions established for Romanian legal and natural persons.

Foreign citizens, stateless citizens and legal persons of a third state may acquire ownership over lands under the conditions provided by the international treaties, based on reciprocity.

Foreign citizens, stateless citizens and legal persons of a third state can not acquire ownership over lands in conditions more favorable than the ones applicable to a citizen of a member state and to a legal person incorporated according to the legislation of a member state.

FOOTNOTES:

CHAPTER 106RO REAL PROPERTY LAW IN ROMANIA

13-106RO Thompson on Real Property, Thomas Editions § 106RO.06

AUTHOR: Nicholas Hammond Hammond, Bogaru & Associates Romania

§ 106RO.06 Public Ownership Rights.

The public ownership right is the ownership right of the State or its territorial administrative units over the assets that, by their nature or by an express legal provision, are deemed to be of public use and utility. Under *article 136 (3) of the Constitution* the following assets are made the exclusive object of public ownership: any resources of the subsoil, the national air space, the ways of communication, the waters with potential use as suppliers of energy, the beaches, the territorial sea, and the natural resources of the economic zone and the continental shelf.

§ 106RO.06(a) The Public Administration Right.

Public property assets may be entrusted by administrative acts to autonomous administrative bodies as well as to central and local entities. These entities are entitled to have their own patrimony, to accomplish their own objectives and to participate in all matters in accordance with their legal capacity. An important qualification is that the holders of such administrative rights do not have the right of disposal over the goods and assets entrusted to them.

§ 106RO.06(b) The Concession of Public Property.

A concession granted by an authority holding public property assets is by way of a concession contract in which an authority or public institution (the "Grantor") transfers to another person (the "Grantee") for a determined period not exceeding forty nine (49) years, the right and the obligation to carry on an activity or public service of national/local interest, on its own risk and responsibility and to pay the agreed royalty.

The Grantor may be a ministry or other specialized institutions of public administration. The Grantee may be any legal or natural person, irrespective of citizenship or nationality, except for a public legal person.

The procedure to grant the concession contract is provided by Government Emergency Ordinance no. 54/2006 n7 regarding the regime of the concession contracts for the public assets, and by the Government Emergency Ordinance no. 34/2006 n8 regarding the assignment of the public procurement contracts, of the public works and services concession contracts. Such procedure can be by auction or by direct negotiation. The principles governing these procedures refer to transparency, equal treatment, non-discrimination and free competition. The main criterion of assigning the contract is the price, but there are also other elements to be considered, such as the economic and financial capacity of the Grantee,

environmental protection, and specific conditions given the nature of the asset that is subject of the concession.

The holder of a concession right does not have a right of disposal over the asset which is the object of a concession contract.

§ 106RO.06(c) The Renting of Public Property.

The renting contract will contain clauses referring to the exploitation of the specific assets. The renting is always perfected following a public auction as mentioned by article 15 of the Law 213/1998. n9

CHAPTER 106RO REAL PROPERTY LAW IN ROMANIA

13-106RO Thompson on Real Property, Thomas Editions § 106RO.07

AUTHOR: Nicholas Hammond Hammond, Bogaru & Associates Romania

§ 106RO.07 The Forms of Property Rights.

As a general rule the right over property is unconditional and unequivocal and can belong to one or more owners. The ownership of an asset or a number of assets may be vested in several owners.

There are cases when a property right can be acquired through a contract concluded in breach of the conditions of capacity required by law for a valid transfer (i.e. conclusion of a contract by a party who is under a disability which is subsequently confirmed).

§ 106RO.07(a) Conditional Ownership Provided By the Will of the Parties.

A property may be transferred by a contract, conditional upon the non-occurrence of an event so that if the event occurs then the transfer is not effective. The property right transferred under such condition is characterized by the fact it is uncertain. If the condition occurs the transferee will return the asset to the transferor. If the condition is not accomplished, the right of the transferee of ownership is retroactively included in the transferee's patrimony.

§ 106RO.07(b) Conditional Ownership by Law.

The Civil Code makes specific references to transfers which are revocable in certain circumstances proscribed by law.

Any donation concluded between spouses is revocable. The donor spouse is entitled to revoke the donation at any time without justification and the property right transferred to the donee spouse is uncertain depending on the decision of the donor spouse.

Other examples are gifts (deemed as current donations, with insignificant economic value) by persons having no direct relatives at the moment the gift is transmitted and which are likely to be revoked by law if the donor will have direct descendents.

§ 106RO.07(c) Voidable Ownership.

If a property right is acquired by a voidable contract the ownership right is voidable at the option of the purchaser

within three years from the date of signing the contract. The contract can be confirmed by the person who is entitled to invoke the void nature of the contract. Such confirmation may be express or implied within the legal time limits. By the express or implied act the property right of the acquirer is retroactively consolidated.

§ 106RO.07(d) Common Ownership.

Common ownership exists when one or more persons exercise simultaneously the ownership rights over an asset or group of assets.

§ 106RO.07(d)(1) Temporary co-ownership.

Normally, temporary co-ownership arises as a consequence of a succession, when a decedent leaves several heirs, each of whom is entitled to a share of the assets or rights in the estate. Temporary co-ownership may also result from the agreement of the parties or from co-possession.

Co-owners do not have an exclusive right over a specific asset. Each co-owner is entitled to use of the asset on the condition that the right of the other co-owners is not violated and the nature of the asset is not affected. The legal acts relating to the asset require the agreement of all the co-owners. In exceptional cases a co-owner can act without the consent of the other co-owners if it can be shown that the act was necessary for the preservation of the asset.

Temporary co-ownership is terminated by the division of the assets according to law. Also a co-owner can become an exclusive owner by purchase, succession or by other legal means.

§ 106RO.07(d)(2) Perpetual/Forced Co-Ownership.

Imposed co-ownership affects goods that by their nature or designation are to be used by several parties. The goods constituting such co-ownership are ancillary goods and rights.

The Civil Code mentions the following cases of such co-ownership: co-ownership over the common parts of the buildings with flats designed as dwellings, co-ownership over the things necessary for the use of two adjoining premises, co-ownership over common divisions and enclosures (partition walls, fences), co-ownership over the things deemed as family goods (documents, pictures or paintings).

§ 106RO.07(d)(3) Joint Ownership.

Joint ownership pertains to an asset that belongs to all joint-owners; there is no allocated part of the asset.

The Civil Code regulates the joint ownership of spouses. All goods acquired by the spouses during their marriage are deemed as goods in joint ownership, even if the property contract indicated only one spouse, the purchase was carried out using the assets of one spouse only, or the good may have been acquired during the period when the spouses were separated. Spouses cannot conclude conventions by which the joint ownership due to marriage is circumvented.

There is a presumption that the spouse who exercises ownership rights over the common assets is considered to have the consent of the other spouse and that he/she is mandated to represent the other. This relates even to business assets. Joint ownership ceases once the marriage is terminated.

§ 106RO.08 Acquisition of Property.

§ 106RO.08(a) Acquisition by Law.

The Civil Code makes reference to the acquisition of property rights by an individual by donation or gift, a purchaser for value in good faith (Article 485), co-ownership (article 597 and 598); and rights of ownership acquired by adverse possession(art 1909).

§ 106RO.08(b) Acquisition by Order of a Judge.

The ownership property can arise as a result of a judge's order confirming such right. In practice, there have been orders in matters such as the expropriation of land for public utility, or in cases where the signature of one of the parties to a transfer contract is required, the parties previously undertaking such an obligation by a pre-sale agreement.

§ 106RO.08(c) Acquisition by Contract.

In contracts for the transfer of rights in or over property, the transfer arises at the moment both parties agree and sign the contract, even if the actual possession of the asset does not occur immediately, such as where the payment of the price is not paid immediately. In order for there to be a transfer of ownership by simple agreement several conditions must be accomplished. The asset must be the property of the transferor; the asset must exist at the moment of signature; the asset must be defined; and there is no provision in law or contract that postpones the transfer of ownership to a subsequent date.

By Law 247/2006 n10 lands with or without buildings can only be transferred or acquired by either sale or gift by a document executed in authenticated form. In other cases the contract is void.

§ 106RO.08(d) Acquisition by Administrative Contract.

The administrative deed is as legal contract and conveys real rights such as property rights.

The following administrative acts create or transmit real rights: a) the decisions of the local commissions by the

application of Law no. 18/1991 (Land Law) by the reconstruction constitution of private ownership rights over agricultural or forest lands; b) orders issued by a prefect by which are reconstructed or constituted the private ownership over agricultural lands in accordance with Law no. 18/1991; c) decisions of the Government or public administrative authorities regarding administration right over public assets by autonomous administrations, central and local entities.

§ 106RO.08(e) Acquisition by Delivery.

The Civil Code article 644 refers to the delivery of goods, as distinct from real estate, as a means of the acquisition of property. Such cases are for example a gift or the handing over of bearer bonds where the property right is transferred at the moment the bond is handed over.

§ 106RO.08(f) Acquisition by Incorporation.

Ownership rights may be acquired by the incorporation of good into another good by either natural force (i.e. formation of an island) or artificial force (i.e. constructions, plantations).

§ 106RO.08(g) Acquisition by Succession.

By succession, the patrimony of a deceased person is transmitted to his/her heirs. Heirs are persons who survived the deceased and who have the capacity to inherit. The civil code stipulates two types of succession: legal and testamentary succession.

§ 106RO.08(h) Acquisition by Prescription.

Prescription is a way of acquiring the property by exercising possession over real estate for the period of time provided by law. This period of time is thirty (30) years when the possessor does not hold a property contract and ten (10) years when the possessor holds a contract and the act of possession is made in good faith. Assets which are public property are not subject to prescription. In respect of the movables, these are acquired by the simple act of good-faith possession, no time limit being imposed.

§ 106RO.09 The Cadastre and Real Estate Publicity.

On the basis of the Law 7/1996 n11 there are organized the cadastre and real estate publicity offices (Land Registry). Their responsibility is to register the cadastral documentation and the claims related to the land book registration.

The land book registrations have a limited role-to make the rights registered known to third parties. The rights that are acquired take effect at the date the respective contract is concluded, the land book registration recording such rights.

The real estate publicity office by its representatives will issue to the rightful person (who lodged a claim in this respect) the resolution of land book registration and the land book excerpt of information.

The registration is not a guarantee of title.

CHAPTER 106RU PROPERTY LAW IN RUSSIA

13-106RU Thompson on Real Property, Thomas Editions § 106RU.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106RU.01 Historical Background of Russian Land Law

§ 106RU.01(a) From Serfdom to Emerging Democracy.

Russia was one of the last great nations to emerge from medieval patterns of landholding. This is indicated by the well-known fact that serfdom in Russia was not formally and legally abolished until 1861, and, of course, the transition to more modern types of property ownership required much time thereafter. In Russia of 1861, over 20 million of the 60 million Russians lived in a form of serfdom, working the land but not owning it, and subject to numerous other personal restrictions and impositions from the approximately 100,000 owners of the land they occupied. The legislation abolishing serfdom also conferred on the liberated serfs rights to purchase the land from the landowners. These owners, however, typically overvalued the land sold, and the sale transactions often left the former serfs heavily in debt or in some other form of economic bondage little different from their former status as serfs. n1

Land rights of the owning class were also uncertain during this period, with confiscations frequently occurring. n2

Thus, the land law reforms begun in the 1860s were largely ineffective, and those millions who had been poor, landless, and in some form of subjugation to wealthy landowners were still so when the communist revolution occurred in 1917.

§ 106RU.01(b) Russian Land Law and Landholding During the Communist Era.

Surprisingly, in the early years of Lenin's rule following the communist takeover of Russia in 1917, some forms of private land ownership were tolerated. When the Second All-Russia Congress of Soviets decreed the state as owner of all land and income-producing assets, it was applied to lands owned by the Tsar, the nobility and the church, while lands owned by peasants were exempted. The Second All-Russia Congress of Soviets issued a decree that established the state as owner of all land and income-producing assets. n3 This decree socialized all of the land that belonged to the Tsar, the nobility and the Church while exempting the land owned by the peasants. n4 Even most of this land came under state control following Lenin's nationalization initiative beginning in 1922. n5 This initiative was legitimized in the 1924 Soviet Constitution authorizing the state "to establish general principles of exploitation and use of the earth, as well as those of the sub-soil, the forests, and the waters of the territories of the Union." n6 The decree of 1922 and the 1924 Constitution established the legal regime of state-owned land, but in fact most land remained at the time in private ownership, especially in provincial areas not yet fully affected by the communist revolution.

Toleration of land in private ownership swiftly ended when Lenin died in 1924 and Josef Stalin seized control of the state. n7 Stalin had become party General Secretary in 1922 and, after consolidating his power upon Lenin's death, imposed a draconian collectivization program in the early 1930s. Under this program, the state acted, often with violence, to seize both land and assets of the landowning peasants, called Kulaks, creating large, collective agricultural operations, and integrating agriculture into nationwide economic planning. n8 The process evicted and dispossessed over five million Kulaks from their villages and caused the deaths of up to 11 million peasants in the resulting famine. n9 Collectivization was basically complete by the mid-1930s and resulted in most agricultural lands coming under actual state ownership and control. n10

§ 106RU.01(c) Characteristics of Landholding During the Communist Era.

Legal regulation of Soviet landholding emerged and evolved only gradually, impeded by the recovery from the ravages of World War II and the preoccupation with the Cold War. Use rights in land were granted to state organizations, collectives and to individual citizens. The 1968 Fundamentals of Legislation of the USSR and the Union Republics declares the principle of state ownership of land, methods for distributing land, types of land tenure, and the rights and duties of land users. n11 The *Fundamentals* also set forth provisions for a strict zoning of land into three categories: agricultural land n12, land in urban areas or other populated localities, n13 land of industry, including non-agricultural land, n14 state forests, n15 state waters, n16 and state reserve land. n17

The general principles for land ownership set forth in Section I may be briefly described as follows:

Article 7: Provides for land use by "collective farms, state farms and other agricultural government, co-operative and non-government enterprises, organizations and institutions; industrial transport and other non-agricultural government, co-operative and non-government enterprises, organizations and institutions; citizens of the USSR."

Article 8: Allots land to these entities free of charge.

Article 9: Authorizes land tenure either for a specified term or for unlimited time. Land allotted to collective farms is assigned permanently or for an unlimited time. Other land can be granted for a short term of up to three years or a long term of between three and ten years. The term can be extended if required for production.

Article 11: Limits a user's right to uses compatible with the designated type of land. Land uses includes building a dwelling and other structures, planting crops and trees, using meadows and pastures, using common minerals, peat and water resources. A right to be compensated for losses to the land is also established. Duties imposed on the land user include a duty to not interfere with neighbor's use of his land. The restoration of allotments of land used in strip mining or any other activity that changes the land must be accomplished during the course of work, or if this is impossible, within one year of completion. The restoration must return the lands to "a condition making them suitable for agriculture, forestries or fisheries" in accordance with the designated type of land.

Article 13: Declares the responsibility for improving soil and protecting land from erosion is shared equally between the land users and the government.

Articles 14 and 15: Describes how permanent or temporary tenure may be terminated for a variety of reasons. In the cases of organizations, enterprises, and institutions the termination may occur if the plot is no longer needed by the organization or if the organization becomes defunct. The tenure of a citizen may be voluntarily released or be terminated when all members of the family move to another location or all members of the family die. (If a citizen attempts to sell, mortgage or otherwise transfer ownership of the land, the person may be stripped of tenure. Additionally, failure to fulfill duties outlined in the law will also result in confiscation of the land. n18 Tenure for both organizations and persons can be terminated at the expiration of the term, because of state need, or the non-development

of the plot of land for 2 years.

Articles 18 and 19: Although the land is state owned, a compensation system is in effect for damages or losses caused by the withdrawal of a plot of land for state use, not caused by the user's conduct. If the plot is non-agricultural and is withdrawn, the compensation would be paid by the enterprise or organization that was subsequently allotted the plot of land. If the land withdrawn is agricultural, the organization would be required to additionally compensate for loss of agricultural production. As we will see later, this concept has carried on to modern Russian law.

§ 106RU.01(c)(1) Regulation of Agricultural Land.

The following articles of Section II of the 1968 *Fundamentals of Legislation* pertain to regulation of agricultural land:

Article 23: Collective farms, government organizations, and citizens can be granted agricultural land for unlimited (permanent) use while other enterprises are limited to temporary use. Users of agricultural land have duties imposed upon them in addition to those outlined in Article 11 of Section I. Land users are required to employ the most efficient methods of farming. They were also required to develop irrigation systems, ensure proper drainage and to treat soils with "lime and gypsum."

Articles 24-26: Members of collectives and select other groups are allowed to hold small "household" plots of land for their family use. These plots are allotted first to the collective and then doled out to the households in the collective for their use. The members of collectives are entitled to these plots while workers on state farms and other organizations do not necessarily have such a right. The possession of a plot of land is retained when the user is called to active military service, begins a course of study, or holds an elective office.

§ 106RU.01(c)(2) Regulation of Lands of Populated Localities.

Section III of the *Fundamentals of Legislation* governs all land within the boundaries of cities, townships, and populated rural locations. Control and planning regarding this land is delegated to the Union Republics with the exception of "land used by railway, water, air and pipe-line transport and by the mining industry. ..." n19 Land within the city limits that is used by collectives is exempt from the planning process and is allotted to the collective permanently. n20

CHAPTER 106RU PROPERTY LAW IN RUSSIA

13-106RU Thompson on Real Property, Thomas Editions § 106RU.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106RU.02 Land Legislation of the Post-Soviet Era.

The demise of the government of the Soviet Union did not signal an immediate and total change in land rights. Commentators have noted that, in this period of transition from state control of land to a freer market system, change has been slow and every reform has been contested. The politicians elected to the Duma and to local offices are often the same people who held power under the communist system, and they typically resist the transition to private land ownership. n21 Nevertheless, the period has seen rapid changes in property law, many changes introduced by legislation and executive decrees, as described below.

§ 106RU.02(a) The Land Reform Law of 1990.

This was the first of legislative reforms of land law in the post-Soviet era and provides for private ownership of land. n22 This reform, however, did not establish a market for land and the state remained the only entity that could buy land from citizens. n23 Additional restrictions on the alienability of land were also included in the law. n24

§ 106RU.02(b) The Law on Peasant Holding.

This law directed the reorganization of the state collective farms into a form of private enterprise. n25 Members of the collectives also gained an interest in land. The interest could be an ownership interest or the newly created life-long inheritable possession or a right of permanent use. These interests in land were not alienable because the law still did not provide a market structure for the exchange of land. n26

§ 106RU.02(c) Land Code of 1991.

This code represents a comprehensive attempt to update Russian property law, and it sets forth many details about incidents of land ownership. The Code zones land according to its purpose and use, and establishes standards for the sale of land, the payment of the price of land, and leasing. It restricts ownership of different types of land to certain types of land interests; foreign entities are limited to long-term leases. n27

§ 106RU.02(d) 1993 Constitution of the Russian Federation.

The 1993 Constitution's main effect on property law is to integrate and reconcile the old and new property laws. Article 9 declares the basic regulatory scheme for land in Russia:

(1) Land and other natural resources shall be utilized and protected in the Russian Federation as the basis of life and activity of the people living in the corresponding territories

(2) Land and other natural resources may be in private, state, municipal, and other forms of ownership.

This Constitution also provides for private ownership and alienation of land. n28

§ 106RU.02(e) Civil Code of 1994.

This code effectively replaces the patchwork of legislation that preceded it with a homogeneous body of law. In combining the laws of the former Soviet Union with the laws passed since its fall, it creates a consistent body of law. n29

CHAPTER 106RU PROPERTY LAW IN RUSSIA

13-106RU Thompson on Real Property, Thomas Editions § 106RU.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 106RU.03 Current Laws Regarding Property in Russia.

Land law in Russia today is governed by the 1993 Constitution, the Land Code of the Russian Federation, n30 and several Presidential Decrees. The 1993 Constitution states in article 9 that "recognition and equal protection shall be given to private, state, municipal, and other forms of ownership." n31 More specifically, the Constitution states that "[land] and other natural resources may be in private, state, municipal and other forms of ownership." n32 The Civil Code of the Russian Federation establishes the alienability of land n33 and the rights of citizens and judicial persons to own land. The several modes of possession established by the constitution are discussed in the Land Code, and include State, n34 Federal, n35 Regional, n36 and Municipal. n37 The reforms set forth in the Land Code apply only to urban and dacha (country home) properties, but not to agricultural and forestry land.

§ 106RU.03(a) Acquisition of Property.

Property rights may be acquired by finding, manufacture, purchase, acquisitive prescription (adverse possession), and inheritance. n38 The finders concept is codified in Article 227 of the Civil Code. The finder of an item must return the item to the owner, if the owner is known. Otherwise the finder must report the find to the police or to other local government authority. The owner may recover for loss or damage to the found item only if the loss or damage occurred intentionally or due to gross negligence.

§ 106RU.03(a)(1) Finding.

The regulations for establishing ownership in the finder are set out in Article 228. The statute of limitations is six months, after which the finder may claim ownership. If the finder declines to take ownership of the found item, the ownership is vested in the municipality in which it was found.

Buried or concealed treasure is governed by Article 233. The ownership of the treasure is vested in equal shares in the finder and the owner of the land on which it was found. If the finder, without permission, was present on the land or digging the treasure vests entirely in the owner of the land. If the treasure is of historical or cultural value the item is subject to transfer to the state. The finder and landowner are entitled to 50% of the value of the treasure in equal shares, unless the finder was unauthorized, in which case the owner receives the entire 50% share.

The Civil Code includes language establishing finders rules for neglected animals, n39 articles that have no owner, n40 and abandoned property. n41

§ 106RU.03(a)(2) Manufacture or Construction.

If a person creates goods from material of which the person had legal ownership, the ownership of the newly created item is vested in the person. n42 The construction of immovable property on land owned by the builder does not immediately vest ownership in the builder, but rather vests when the property is registered with the state. If a person builds immovable property on land owned by another, ownership does not vest in the builder. n43 The arbitrary building is subject to demolition at the expense of the builder and the builder holds no rights to make any transaction relating to the property. Arbitrary structures include those built without government authorization or in violation of code. If the arbitrary structure is built on the land of another, the builder may keep the property and gain ownership rights if the builder acquires title to the property on which it was built.

§ 106RU.03(a)(3) Conversion.

If a person converts materials owned by another to a new manufactured product, the ownership of that new product rests in the owner of the materials from which it was made. n44 The owner of the materials must compensate the converter for the value of the conversion, unless the conversion was made in bad faith; n45 in case of bad faith, the owner of the materials has a right to the materials and an award of damages for any losses sustained. n46

§ 106RU.03(a)(4) Acquisitive Prescription.

This is ownership acquired similarly to adverse possession in common law jurisdictions. The statute of limitations established in the Civil Code is 15 years for immovable property and 5 years for other property. n47 Property must be held in good faith, openly, and uninterruptedly. n48 Ownership does not vest until the acquirer registers the immovable property with the State after 15 years of possession. The possessor has the right to protect the property against all claimants except the actual owner. A prescriptive possessor may join the possessory times of successive possessors if there was no break in possession.

§ 106RU.03(b) Termination of Property Rights.

§ 106RU.03(b)(1) Renunciation of Right of Ownership (Abandonment).

An owner of property may renounce his status as owner and effectively abandon the property. n49 Intent need not be declared, but may be manifest by specific actions that indicate an intent to abandon the property. Abandonment does not relieve the owner of duties, such as paying taxes and responsibility for condition of the land, until the property is acquired by another.

§ 106RU.03(b)(2) Confiscation.

The Civil Code allows for the confiscation of property as punishment or sanction for the commission of certain crimes or other breaches of the law. n50 The government is not required to pay any compensation for the taking. The criminal code lists the violations of law that allow for the confiscation of property.

§ 106RU.03(b)(3) Withdrawal of Land (Eminent Domain).

The right of the government to withdraw a plot of land for public use is similar to the doctrine of eminent domain as understood in the United States. The government entity seeking must show in court that the purpose for which the plot is withdrawn cannot be achieved without the withdrawal. n51 The land must be purchased by the state in order to compensate the property owner. In similar action, the government can requisition property during natural disasters and

other extraordinary circumstances. n52 In these cases, the government must compensate the owner for the property or for the use of the property. The owner may also sue for the return of the property at the end of the situation that gave rise to the taking if the property. The owner may contest the award received for use of the property in court if unsatisfied with the amount provided.

§ 106RU.03(b)(4) Levying Execution on the Property for the Owner's Obligations.

In the event a landowner is unable to meet debt obligations, a creditor may sue in court for property owned by the debtor to satisfy the debt. n53

§ 106RU.03(c) Types of Ownership Entities.

§ 106RU.03(c)(1) Common Ownership.

Russian law recognizes only two types of concurrent ownership. Participatory ownership is roughly analogous to a tenancy in common under Anglo-American law. n54 Joint ownership is similar to a joint tenancy. n55 The Civil Code also recognizes a mode of concurrent ownership known as the (Farmer's) Economy, a type of unincorporated cooperative farm. n56

§ 106RU.03(c)(1)(i) Participatory Ownership.

Property held in participatory ownership is held in equal shares or as determined by agreement of the parties and, if not established by agreement. n57 If one participant contributes to the property financially, that participant's share of the property is increased an equivalent amount. n58 If the improvement is divisible and not attached to the property, ownership of the improvement vests in the improving participant. n59 Participants are required to contribute to any taxes, upkeep or maintenance of the property in order to maintain their participatory share. n60 Participants may transfer their shares, n61 but other participants have a right of first refusal, n62 unless the share is subject to levying execution. n63 Participants may partition their property, either by agreement or by court action. n64

§ 106RU.03(c)(1)(ii) Joint Ownership.

The rules for joint ownership are basically the same as those of participatory ownership. n65 The property is held in common with equal rights to use and all of the owners may transact business related to the property without the consent of the other parties. Division or partition of the property requires a determination of the participatory share each owner possesses. No right of survivorship is recognized: if one joint owner dies, a determination will be made to set the participatory share of the deceased. This participatory share is then available as part of decedent's estate to be passed on to heirs. n66

§ 106RU.03(c)(1)(iii) Peasant (Or Farmer's) Economy.

This type of ownership is the successor to the collective farm and the Peasant Land Holding, and allows for members of a collective farm to hold their land, livestock, equipment, and other assets in joint ownership. n67 Because the assets are held in joint ownership, the shares of the participants are presumptively equal. n68 This form also provides for the produce of the farm to be common property of the entire group, subject to division by agreement. n69 A single person withdrawing from the group cannot force the partition of the whole economy, but rather is given a monetary award. n70 The Code also provides for a cooperative formed on the base of a peasant economy. n71

§ 106RU.03(c)(2) Marital Property.

Under Russian marital property law, all property acquired by spouses during marriage is presumptively held in joint ownership. n72 Property that a spouse owned before the marriage remains in individual ownership, unless the property

is improved or otherwise significantly increased in value with marital assets, in which case the property is converted into marital property. n73 The improvements must be significant in nature for this to have effect. n74 Foreclosure on obligations entered into separately by one spouse can reach the participatory share of the property that the spouse would have been entitled to if the joint property was partitioned under article 252 of the Civil Code. n75 Upon the death of one spouse, the deceased spouse's participatory share is then eligible to be inherited by that spouse's heirs. n76

Upon dissolution of the marriage, property that is considered joint property may be divided by agreement of the spouses or, failing in this, by the courts. n77 If the division is to be made in court, the spouses' participatory shares are presumptively equal unless otherwise provided for in contract. n78 Besides property owned by the spouses before marriage, any property obtained after separation and cessation of conjugal relations, property acquired exclusively for children, and personal use items obtained during the marriage are exempted from division. n79

Judges, when dividing marital property, are allowed to vary from the presumptively equal concept in cases when an unequal division would better serve the interests of the children involved. If one spouse squandered marital assets to the detriment of the family, he or she may find be assigned a smaller share of the property. Tied to the participatory share of common property assigned to each spouse, common debt is distributed in proportion to the participatory share assigned. n80

The Russian Family Code sets forth a complex system of spousal support, n81 child support, n82 parental support, n83 and other familial support. n84 The law spells out in fairly specific detail who owes what support to whom; however, the judges exercise discretion in determining specific amounts, usually based on the financial and family situations of the payer and the recipient. n85

§ 106RU.03(d) Types of Ownership Interests.

Current Russian Property law recognizes five types of ownership interests in land: ownership, inheritable life-long possession, permanent use, lease, and easement. The Land Code defines five different terms in relation to interests in land:

Owners of plots of land--possess plots of land under a right of ownership.

Users of land--possess and use plots of land by the right of permanent (infinite) use or by the right of free use for a term.

Tenants--possess and use state owned plots of land by a right of lifetime inheritable possession.

Lessees of plots of land--possess and use private or state owned plots of land under a lease or sub-lease.

Holders of Easements--possess a limited right to use another's plot of land. n86

§ 106RU.03(d)(1) Ownership.

Ownership is the most full form of property ownership recognized in Russia today. This form of ownership was firmly established by the Constitution of the Russian Federation in 1993. n87 The constitution provided that a citizen may alienate an interest in land to another without using the state as an intermediary. n88 The citizen may also create interests in land in another in the form of a lease n89 or mortgage on the land.

Land ownership includes rights to the surface, water located within the boundaries of the plot, forests located on the plot, rights to the airspace above the plot and rights to everything located under the plot. n90 Exercise of these rights is subject to the all other laws of use and zoning and must not infringe on the rights of other land owners. n91

Owners of land have the right to build on their land, subject to the designation assigned to that land. n92 Unless provided for in contract or law, the landowner acquires ownership of the immovable property. Ownership in property built on the owner's land also automatically vests in the owner. n93

§ 106RU.03(d)(1)(i) Inheritable Life Long Possession.

Inheritable life long possession is an interest in land that is no longer possible to acquire under the current code. n94 Those who held such interests at the time the law was enacted are allowed to retain those interests but rights of alienability are limited. Tenants possess full use rights, including the right to build on the land and to rent the land to another, but the only method for transferring the property is through inheritance. n95 Citizens are allowed to convert their life-long inheritable use into a clear title to the property once without additional cost. n96

§ 106RU.03(d)(1)(ii) Permanent Use.

The right of permanent use may arise in one of two ways; either the right is granted from a state agency that is authorized to grant plots of land in such a way n97 or it arises when an individual, who does not own the land, owns a building situated on that land. n98 Those whose interest is in an entire plot of land may only act within the limits of the law and of the act that granted him the use of the land. Unless otherwise provided for, the user of land may use the land according to that act to build or install immovable property on the premises. Users of land may only grant fixed-term use of the land to others and may not collect compensation for this use. n99 If a legal entity is reorganized the right of permanent land use is passed to the new legal entity. n100

Owners of immovable property situated on land that they do not own gain a right of permanent use to the land on which the building or other immovable property is located. n101 If ownership to the immovable property is transferred the right of permanent use is transferred with it. If the land user loses the right to permanent use, the rights of the owner of the immovable property may be determined in an agreement with the owner of the land. Absent an agreement, the issue may be decided in court. The decision of the court can fall into one of three categories. First, the owner may demand the immovable property be removed and the land restored to its previous state. Second, if the building cannot be demolished for reasons of law or the building clearly is valued more than the land on which it stands, the court can allow the owner of the building to acquire the land or the landowner to acquire the building. Third, the court may stipulate conditions on which the land is to be used. n102

§ 106RU.03(d)(1)(iii) Lease.

Leases are the least restricted interests in land, in terms of who may possess the interest. Foreign citizens and legal entities are allowed to hold leases as long as the property does not have a state interest and is not of historical importance. n103 Those who own the buildings located on a plot of land are given a preferential right to lease or acquire the land. n104 A lessee also has a preferential right to a new lease at the expiration of the term of the lessee's lease. n105 If the land is to be leased from a private individual, the terms of the lease are set out in contract and the price is negotiated between the parties. If the lease is from the state, the amount of payment for the lease is figured by a set formula. n106

The lessee is allowed to sublease the property to another without consent, if notice is given to the owner. This right may be altered by contract. n107 The code does not provide for the lease to be assigned or all rights and duties of the lease transferred.

§ 106RU.03(d)(1)(iv) Easements.

The Land Code authorizes creation of both public and private easements. n108 The owner of the encumbered property may demand compensation from the easement holder for the use. n109

A public easement is described as a "legal act of a ... government body in the cases when it is required for ensuring interests of the state, local government or local public without plots of land being taken." n110 The following situations give rise to public easements: right of way; use for public utilities; use in drainage works; use of water; passage of cattle; hunting, fishing, and gather plants; prospecting and research; and free access to a coastline. n111

The easement imposed must be the least burdensome for the plot of land to which it attaches and may be either permanent or temporary. n112 If the easement makes use of the land by the landowner impossible, a court may require the governmental easement holder to purchase the land or to grant another plot of land of commensurate value. If the inconvenience caused by the public easement is significant, but not so severe to make use of the land impossible, then the landowner may seek payment for the loss of use. n113 As with all interests in land, an easement is subject to state registration. n114

§ 106RU.03(e) Land Registration.

Transactions relating to real property are registered with the government. In Russia, all interests in land and immovable property are subject to mandatory state registration, to include ownership rights, leases and subleases greater than one year, mortgages and trusts. n115 Because private ownership of land is relatively new, the registration requirement is also new. Only interests obtained after the registration law was passed in 2001 are required to be registered. n116 Property interests in Russia are assigned a unique number in a national system of registration. n117

The responsibility to ensure clear title through a records search is greatly simplified by the centralized registration system. Instead of an attorney or title search agent filing through the county records or even compiling their own set of land records, all that is required to obtain an extract showing the title to the land is to present an identity card to the Single State Register of Rights. n118 One weakness of this system is that the registration law has been in effect less than a decade.

§ 106RU.03(f) Zoning.

The zoning system in the Russian Federation is similar to that of the former Soviet Union, including virtually the same categories. n119 The zoning system is more comprehensive and restrictive than zoning laws in the United States. Zoning of Russian property also deals with the alienability of certain types of property. n120

CHAPTER 106ZA PROPERTY LAW IN SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions § 106ZA.01

AUTHOR: David John Vlcek Deneys Reitz Inc 3 Pencarrow Crescent, Pencarrow Park, La Lucia Ridge, 4051, South Africa

§ 106ZA.01 History of Property Law in South Africa

[Go To Supp]

§ 106ZA.01(a) Colonization

Prior to the arrival of the Colonialists from Europe, the majority of the indigenous inhabitants of South Africa were nomadic and did not recognize the concept of individual land ownership. The area of land governed by the tribe was owned or vested in the monarch that governed the tribe; alternatively, in the tribe itself.

In 1652, the Dutch East India Company established a settlement at the Cape under Jan van Riebeeck. With their arrival, a very simple system of registration of land began. This early land registration was based on a *placaat* of Charles V of Holland, which was passed in 1529. The *placaat* provided that every sale of immovable property was to occur in the presence of a Judge. A further Dutch edict of 1650 provided that written registers should be kept of all such transactions.

An early issue that arose in the Cape was the fact that there were no Judges present before whom such transactions could take place. As a solution, two members of the *Politieke Raad* were appointed so that deeds could be executed. Title Deeds were executed and registered in this manner until 1828, after which a Registrar of Deeds was formally appointed due to the establishment of a Supreme Court. The office of Registrar of Deeds was established in terms of Ordinance 39 of 1828.

In 1828, the Registrar of Deeds had the additional task of being the Registrar of slaves.

As settlers arrived at the Cape from Europe, they were granted land so that the development of the land could commence and communities could be established. These transfers were called "Grants" and were referred to as such because they described the very first time that a portion of property was transferred to and owned by an individual.

Prior to 1882, no formal land registers were maintained. Grants and Deeds of Transfer were simply numbered and placed in chronological order. Registers recording the history of each portion of land and a system of numbering portions of land for identification purposes did not exist. In addition, there was no Index or Register kept of the owners

of the various portions of land. This made ascertaining the identity of the owner of a specific portion of land an incredibly arduous task.

Prior to 1844, Grants and Deeds were drafted by Government officials. In 1844, Advocates were authorized to do so.

In 1859, due to intensifying public dissatisfaction as a result of delays in the Deeds Office at Cape Town, the Government appointed a committee to investigate possible alternative methods of registration and transfer of land. The committee recommended that land registers should be created in which the Grant and subsequent registration history of each portion of land could be recorded. Sadly, only farm registers were opened and portions of land were never properly identified.

Land was not granted to the indigenous people. During this period, land was taken from the indigenous tribes that inhabited the Cape, and as expansion continued inland, this trend continued. This conduct caused great tension between the colonizers and the local tribes, such as the Xhosa and Zulu, which escalated and resulted in well-documented bloodshed.

The discovery of diamonds in the Northern Cape in 1867 and gold in the Witwatersrand area in 1886 changed South Africa forever and resulted in both an economic and population boom in the respective areas.

There was also conflict between the Dutch and British settlers, who initially arrived at the Cape in 1795. This led to the first Anglo-Boer war in 1880, and a second in 1899.

§ 106ZA.01(b) The Union of South Africa

On May 31, 1910, the Union of South Africa was established. Four colonies existed in South Africa at the time; namely, the Cape, Natal, the Orange Free State and the Transvaal. The Union was a self-governing authority within the British empire, and negotiations excluded the majority black population and deprived them of more of their land. This led to the formation of the African National Congress (ANC) in 1912.

The Black Land Act 27 of 1913, together with the Natives (Urban Areas) Act 21 of 1923 limited black land ownership to existing tribal territories--a result of which was the calculated separation of the races.

The Union Statute, Act 13 of 1918 was the first legislation passed governing the registration of deeds and the transfer of immovable property within the Union. The Union Statute was repealed and replaced by the Deeds Registries Act 47 of 1937.

This Act sets out the procedure and requirements of acquiring rights to land. The main purpose of the Deeds Registries Act is to regulate administrative aspects of the registration of land and to provide owners with protection and security.

The Deeds Registries Act is a combination and codification of the principles of the transfer of land ownership and the administration thereof in South Africa. The Deeds Registries Act is primarily concerned with the transfer and registration of real rights to immovable property.

§ 106ZA.01(c) The Apartheid Era

The National Party (NP) came into power in 1948 when they were successful in the national election. Shortly thereafter, the National Party enacted the policy of separate development of the races, otherwise known as "Apartheid." Apartheid became official government policy.

Under Apartheid, black people were severely restricted to certain occupations, paid far lower wages than other citizens

for similar work, and could not vote. Only white people could vote or run for public office. People of Asian-Indian descent and those of mixed race also had very limited political rights.

In 1950, the government promulgated legislation providing for the creation of Bantu nations or "Bantustans." The Group Areas Act 41 of 1950 resulted in the physical separation of the races by creating different residential areas for each of the different race groups, as prescribed by the Act.

This led to "forced removals" of entire communities in circumstances where they were living in the "wrong" areas. The Group Areas Act further prevented black people from purchasing, owning, or leasing property in areas designated for other race groups.

Due to the ongoing oppression, the black majority began to rise up and protest. On March 21, 1960, sixty-nine black protestors were killed by police and government officials at Sharpeville.

South Africa left the commonwealth in 1961 and became a Republic.

In 1964, the Rivonia Trials were held and Nelson Mandela, Walter Sisulu and other ANC activists were sentenced to life imprisonment for Treason due to their opposition to Apartheid.

In 1976, approximately six hundred people were killed in anti-Apartheid protests. During 1977, the United Nations Security Council imposed a mandatory arms embargo against South Africa. On October 19, 1977, several political organisations, including the ANC, and various newspapers, were banned.

During June 1988, approximately two million black South African workers staged a huge strike in defiance of Apartheid laws. Due to ever-increasing national and international pressure, the then President, P W Botha, resigned on August 14, 1989 and was replaced by F W De Klerk.

In 1990, the government lifted its ban on the ANC, PAC and other various political parties. On February 11, 1990, Nelson Mandela was released from prison after serving twenty-seven years.

In 1993, negotiations took place between the relevant role players, in terms of which basic principles for a new democratic Constitution were agreed. During 1993, an interim Constitution was promulgated providing for non-racial, multi-party democracy, the creation and implementation of a *Bill of Rights* and the end of Apartheid. During 1993, the Interim Constitution came into effect and paved the way for the creation of the Final Constitution.

In April 1994, South Africa held its first non-racial democratic elections, as a result of which Nelson Mandela was inaugurated as the country's first democratically elected President.

§ 106ZA.01(d) Democracy Begins

§ 106ZA.01(d)(1) Constitution Invalidates Race-Related Property Restrictions

On February 4, 1997, South Africa's Final Constitution came into effect. The Constitution of the Republic of South Africa, Act 108 of 1996, is the supreme law of the Republic of South Africa, and any law or conduct inconsistent with it is therefore invalid. The *Bill of Rights* contained in Chapter 2 thereof is the cornerstone of democracy in South Africa.

It enshrines the rights of all people in the country and affirms the democratic values of human dignity, equality and freedom.

Section 25(1) of the Final Constitution states that "no one may be deprived of property except in terms of law of general

application, and no law may permit arbitrary deprivation of property." Subsection (5) goes on to say that "the state must take reasonable legislative and other measures, within its available resources, to foster conditions which enable citizens to gain access to land on an equitable basis."

Section 25 read with sections 8(1) and 39(2) of the Final Constitution envisages the development of South African property law in terms of the spirit, purport and object of the *Bill of Rights*.

Section 2 of the Final Constitution has ensured that all of the discriminatory Apartheid laws which are in obvious conflict with Constitutional principles, are now invalid and have been repealed. To this extent, all references to "race" have been removed from all documents registered in the Deeds Registries and every South African citizen, regardless of their race, is free to own, purchase and lease property within the Republic.

§ 106ZA.01(d)(2) Constitution Provides for Land Redistribution

Under the new Constitutional dispensation, the previously disadvantaged majority black population who were deprived of their land and forcibly removed from their homes are now afforded the opportunity of regaining the land under what is referred to as "land redistribution."

CHAPTER 106ZA PROPERTY LAW IN SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions § 106ZA.02

AUTHOR: David John Vlcek Deneys Reitz Inc 3 Pencarrow Crescent, Pencarrow Park, La Lucia Ridge, 4051, South Africa

§ 106ZA.02 An Introduction to South African Property Law

[Go To Supp]

§ 106ZA.02(a) The South African Land Registration System

South Africa's legal system is comprised of both common law and civil law--civil law in the form of legislation and the rules and regulations that inform and give content to the legislation. South African common law is uncodified and is comprised of case law that is influenced by English and Roman-Dutch law, depending on the specific area concerned.

South African property law is primarily based on the ancient principles of Roman law, but some traces of Germanic law can also be identified. Accordingly, many of the rights that one has in and to property in South African law are based on ancient Roman law principles that have survived the test of time and are still widely applicable throughout Europe.

South Africa has one of the most comprehensive and secure land registration systems in the world. Every portion of land in South Africa has been measured and surveyed by a trained and educated land surveyor. The property is then plotted and depicted on a diagram or a general plan which is kept in the Surveyor General's office for the area where the property is situated.

As a result, whenever an individual needs to ascertain the particulars of a specific portion of land, they can simply conduct a search at the Surveyor General's office on that property. The diagram will reflect the boundary lines, size and rights that are registered over or in favor of that portion of land. The deeds registry will not permit a portion of land to be transferred to another individual if a diagram or general plan does not exist for that portion of land.

The South African land registration system is a fantastic one for many reasons. An individual can virtually always ascertain the identity of the owner of a specific portion of land. In certain countries, ownership of property is not always noted in public registers and cannot always be verified.

Every portion of land is then registered in a deeds registry. The deeds registry or deeds office is a public office, state owned and controlled, and its records and the documents kept there are open for inspection by the public. Thus, any individual can inspect the details of a property or its owner.

Whenever a portion of land is transferred, hypothecated, alienated, or granted, a certified copy of the diagram, mentioned above, together with the deed recording the details of the property and the reason for the transfer or hypothecation, is executed and registered at the deeds registry. Once it is executed, the seal and signature of the Registrar of Deeds is placed thereon and it is filed for record purposes at the particular deeds registry.

The financial institutions that grant loans to purchasers to purchase land register bonds over the land in order to record and secure their real rights in and to the said property. This hypothecation is also recorded and registered in the deeds registry and the deed pertaining to the portion of land is endorsed in order to reflect the hypothecation.

The land cannot be transferred or disposed of unless the bond has either been cancelled or the owner has obtained the financial institution's consent to register a further bond over that portion of land. A bond cannot be cancelled unless the bond holder has provided its written consent, in the prescribed form, to do so.

The documents necessary for the transfer, hypothecation, and alienation of land are prepared and drafted by a conveyancer. A conveyancer is an admitted attorney who has passed a practical examination in the law and practice of conveyancing and who has been admitted as a conveyancer by the High Court of South Africa. The conveyancer will appear in the Deeds Registry in order to execute the deeds in the presence of the registrar of deeds.

§ 106ZA.02(b) The Deeds Registry

There are nine Deeds Registries in South Africa. They are located in Pretoria, Johannesburg, Bloemfontein, Pietermaritzburg, Cape Town, Vryburg, King Williams Town, Nelspruit and Kimberley.

Each Deeds Registry has a very specific jurisdiction with regards to the position of the land that is to be registered and recorded in it. The person in charge of each Deeds Registry is called the Registrar of Deeds.

The Chief Registrar of Deeds is based in Pretoria and it is the duty of the Chief Registrar of Deeds to ensure uniformity in the procedures and practices of the Deeds Registries and to maintain very high standards for the deeds.

To ensure that the standards do not drop, controllers and examiners are employed by every Deeds Registry to examine and inspect every deed submitted for registration. If a deed does not comply with the requirements of the Deeds Registries Act 47 of 1937, it is rejected and cannot be registered.

CHAPTER 106ZA PROPERTY LAW IN SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions § 106ZA.03

AUTHOR: David John Vlcek Deneys Reitz Inc 3 Pencarrow Crescent, Pencarrow Park, La Lucia Ridge, 4051, South Africa

§ 106ZA.03 Immovable and Movable Property Defined

[Go To Supp]

The word "land" is often used as a synonym for immovable property. However, the definition of what comprises immovable property, as set out in section 102 of the Deeds Registries Act 47 of 1937, is wider than simply referring to "land."

Section 102 defines immovable property to include, *inter alia*, land, any registered long lease (a lease for ten years or more), a registered right of leasehold, and a registered right of initial ownership.

Generally speaking, immovable property is land and everything that has acceded to the land by either natural or other (man-made) means and cannot be detached from the land without being materially damaged, altered, or having its very nature completely altered.

The importance of being able to define something as immovable property is that ownership and rights in and to the property can be registered in a Deeds Registry and can be mortgaged by means of a mortgage bond. This provides the owner, lessee, mortgagee, or mortgagor with greater security.

Movable property is property that can be readily moved and relocated from one place to another. Movable property can be attached to immovable property and still remain movable property.

CHAPTER 106ZA PROPERTY LAW IN SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions § 106ZA.04

AUTHOR: David John Vlcek Deneys Reitz Inc 3 Pencarrow Crescent, Pencarrow Park, La Lucia Ridge, 4051, South Africa

§ 106ZA.04 Acquiring and Securing Real Property Rights

[Go To Supp]

§ 106ZA.04(a) Real Rights to Property

A real right is an absolute right. Real rights are primarily rights that a person has in and to a thing. The thing, or object of the right, is bound to the person. In the case of *Denel (Pty) Ltd v Cape Explosive Works Limited* 1999 (2) SA 419 (T), at page 433J , the court described a real right as "a direct power or absolute control over a thing."

In South African property law, there are various categories and examples of real rights to property. Individuals can have a real right in and to their own property as well as the property of another. When one enjoys a real right with respect to a thing that is not owned by them, this is referred to as a limited real right.

A real right is a claim or a right that an individual has to a thing against the public at large. Therefore, the holder of a real right can enforce that right against the public at large. For example, ownership is a real right and it offers complete control, by the owner, over that thing.

Section 102 of the Deeds Registries Act 47 of 1937 defines a real right as "including any right which becomes a real right upon registration." South African law does not have a closed list of real rights and new real rights in and to property can develop.

§ 106ZA.04(b) Securing Real Property Rights

One secures and protects a real right by registering the right in the Deeds Office. In terms of section 3(1) of the Deeds Registries Act 47 of 1937, the Registrar of Deeds has a duty to register specific real rights as set out in that section.

In the case of *Denel (Pty) Ltd v Cape Explosive Works Limited* 1999 (2) SA 419 (T), at page 438B , the court confirmed that when a real right is established by way of registration of the right in the Deeds Registry, it is "maintainable against the whole world."

§ 106ZA.04(c) Acquiring Real Property Rights

In South African property law there is a distinction between original and derivative acquisition of real rights. The original acquisition of a real right is a unilateral act carried out by the person who acquires that real right. The real right is newly created and is not obtained from a predecessor. The real right is thus free from any limitation. Prior to the unilateral action taking place, the real right did not exist. The best example of this would be expropriation by the government.

The derivative acquisition of a real right is a bilateral transaction between the person who is the holder of the real right and the person who wishes to acquire the real right. The person acquiring the real right acquires the right with all of the limitations and blemishes that the real right is subject to. A good example of such a transaction is the purchase and sale of land by way of a written agreement of sale.

CHAPTER 106ZA PROPERTY LAW IN SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions § 106ZA.05

AUTHOR: David John Vlcek Deneys Reitz Inc 3 Pencarrow Crescent, Pencarrow Park, La Lucia Ridge, 4051, South Africa

§ 106ZA.05 Real Rights in Property

[Go To Supp]

§ 106ZA.05(a) Ownership

Private ownership is universally a highly valued and protected real right. Notwithstanding the inherent quandary of accepting one definition for the concept of ownership, in South African property law, ownership is the real right that potentially confers the most complete or comprehensive control over a thing, which means that the right of ownership entitles owners to do with their property as they see fit, subject to the limitations imposed by public and private law. n1

In the case of *Gien v Gien* 1979 (2) SA 1113 (T) at page 1120 , the court defined ownership as:

> *"The right of ownership is the most comprehensive real right that a person can have in respect of a thing. The point of departure is that a person can, in respect of immovable property, do with and on his property as he pleases. This apparently unfettered freedom is however, a half-truth. The absolute power of an owner is limited by the restrictions imposed thereon by the law."*

Ownership of immovable property can be derived via a grant, private treaty or sale, prescription or expropriation. Ownership is unlimited in duration and is an independent real right as it is not dependant on or derived from any other right.

Ownership of immovable property in South Africa is effected by way of entering into and concluding a written agreement of sale in terms of the provisions of the Alienation of Land Act 68 of 1981.

A conveyancer then drafts a deed of transfer and transfers the property from the seller to the purchaser by executing and registering the deed in the Deeds Registry. The deed of transfer constitutes the purchaser's title deed to the property. Ownership passes to the purchaser upon registration of transfer.

§ 106ZA.05(b) Servitudes

Servitudes are limited real rights in immovable property that are registered and recorded in the Deeds Registry. A servitude entitles the holder thereof to either:

1. The undisturbed use and enjoyment of another person's property; or

2. To demand that another person refrain and desist from exercising certain rights that they have stemming from their right of ownership with respect to their property.

In *Dreyer v Letterstedt's Executors* (1865) 5 Searle 88 at page 99, the court defined a servitude as "a real right to an advantage out of the property of another."

It is the direct relationship of the real right of servitude between the holder thereof and the property over which they hold the servitude that distinguishes it from a personal contractual right with the owner of the property over which they enjoy the servitude.

South African law distinguishes between two different types of servitudes, namely personal and praedial servitudes. A praedial servitude is a servitude between two pieces of land. The servitude is created in favor of the dominant tenement property over the servient tenement property. The servitude confers a real right on the dominant tenement property and creates a burden on the servient tenement property.

The owner of the dominant tenement property is entitled to enforce the servitude over the servient tenement property. The servitude exists with the property and thus transfers from owner to owner and continues to exist despite the property being transferred to a new owner.

A personal servitude is a servitude created in favour of a specific individual to whom it provides the right to the undisturbed use and enjoyment of another's property.

The personal nature of the servitude means that it is not transferable and ceases to exist when the individual in whose favor it was created, dies. Good examples common personal servitudes are *usufructs, usus* and *habitatio*.

Servitudes can be created by the state government by way of a grant over state land, agreement between individuals and owners of land, statute or prescription.

One can also approach the High Court of South Africa to enforce or create a servitude. The court order granted by the High Court will either bring the servitude into existence or compel compliance with an existing servitude.

§ 106ZA.05(c) Mortgage Bonds

A mortgage bond is a form of hypothecation of immovable property which confers a limited real right to an individual or entity over the property of another with the object of securing payment of a debt or performance of an obligation. n2

Traditionally, a mortgage bond is a bilateral written agreement concluded between a debtor (traditionally the owner of the property) and a creditor (traditionally a financial institution, such as a bank) in terms of which the creditor obtains a real right over the immovable property of the debtor as security for the fulfilment of the debtor's obligations in terms of the agreement.

A mortgage bond is classified as real security in that if the debtor is unable to meet the obligations in terms of the agreement (*i.e.*: fails to repay the debt), the creditor can demand that the immovable property, being the asset bonded as security, be sold and that the proceeds of the sale are used to satisfy the claim.

A mortgage bond is a written instrument that is signed by both the creditor and the debtor. It is then registered by a conveyancer in a Deeds Registry. A mortgage bond is cancelled by registering and executing a deed, in the prescribed form, in a Deeds Registry. A mortgage bond can only be cancelled with the consent of the creditor.

§ 106ZA.05(d) Lease

A lease is a bilateral agreement whereby one person or other entity agrees to provide another with the temporary, undisturbed, use and enjoyment of property in return for the payment of rental.

In terms of the provisions of the Formalities with respect to Leases of Land Act, 18 of 1969, a long lease is a lease for a period of no less than ten years, for the length of the natural life of the lessee, or is renewable from time to time at the behest of the lessee indefinitely, which periods, when added together, constitute a period not less than ten years.

In terms of section 1(2)(a) of the Formalities in respect of Leases of Land Act, 18 of 1969, a long lease is not valid for a period of greater than ten years unless it has been registered in the deeds registry against the title deed of the leased property.

The title deed of the leased property will then be endorsed with an annotation reflecting the fact that a long lease has been entered into in relation to that property. The long lease, once registered, provides the lessee with a limited real right in and to the leased property.

CHAPTER 106ZA PROPERTY LAW IN SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions § 106ZA.06

AUTHOR: David John Vlcek Deneys Reitz Inc 3 Pencarrow Crescent, Pencarrow Park, La Lucia Ridge, 4051, South Africa

§ 106ZA.06 Sectional Title and Shareblock Ownership

[Go To Supp]

In Roman law, the principle of *superficies solo cedit* provides that an individual who owns land also owns all of the buildings that are situated on the land. There is no differentiation between the land and the immovable structures situated thereon. In terms of the Deeds Registries Act 47 of 1937, land is transferred without any reference to the buildings or structures thereon. This means that prior to legislative enactments, it was impossible for an individual to be the owner of a defined portion of a piece of land or part of a building. With residential property becoming increasingly expensive and rare, the need for apartment blocks to be built and sold was becoming great.

The South African legislature created what is now commonly referred to as "sectional ownership," or the ownership of a part of a portion of land or a building. On September 17, 1986, the Sectional Titles Act 95 of 1986 was promulgated. This new Act replaced the earlier 1971 Sectional Titles Act. The new Act was heavily based on the Strata Titles Act 17 of 1961 of New South Wales, Australia.

The Sectional Titles Act 95 of 1986 created a new type or class of property defined as a "unit." The unit can be owned by an individual. The unit comprises of a part of the building or "section" and an undivided share in the common parts of the building or land known as the "common property."

Being the owner of a sectional title unit also means that the individual will automatically become a member of an association of sectional owners. The entire sectional scheme is governed by the association which is called a Body Corporate.

Another form of collective ownership and an alternative to Sectional Title ownership is Share Block ownership. In terms of the Share Blocks Control Act, 59 of 1980, a single entity referred to as a Share Block company, either owns or controls an immovable property. Members of the Share Block company acquire personal rights of occupation of specific parts of the property based on their membership in the Share block company.

One becomes a member in the Share Block company by purchasing shares in the company and this in turn provides the company with share capital enabling the company to either purchase property or construct additional structures. The purchase of a share in the Share Block company provides the holder of the share with the right to use and occupy a specific portion of the immovable property.

CHAPTER 106ZA PROPERTY LAW IN SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions § 106ZA.07

AUTHOR: David John Vlcek Deneys Reitz Inc 3 Pencarrow Crescent, Pencarrow Park, La Lucia Ridge, 4051, South Africa

§ 106ZA.07 Taxation

[Go To Supp]

The primary form of taxation on the acquisition of immovable property in South Africa is prescribed by the Transfer Duty Act, 40 of 1949. In terms of the Transfer Duty Act, 40 of 1949, transfer duty is payable on the acquisition of immovable property, on the transfer of real rights and on the cancellation of real rights. Transfer duty is a form of government tax and is payable prior to registration taking place in the Deeds Registry. It is payable to the South African Revenue Service.

The amount of transfer duty payable is calculated as a percentage of the total consideration paid for the property. Depending on the purchase price of the property, transfer duty varies between 0% and 8% for individuals, and 10% for juristic persons.

In certain limited cases, Value Added Tax (VAT) can be raised on the sale of immovable property. The obligation to pay VAT largely depends on the nature and identity of the seller. VAT is charged at the rate of 14% of the purchase price of the property. VAT is a form of government tax and is payable to the South African Revenue Service.

When selling an immovable property that is not your principle residential property, and if the property is sold for over one million rand more than it was purchased for, Capital Gains Tax might be levied by the South African Revenue Service on the consideration received by the seller from the purchaser.

Supp. To CHAPTER 106ZA PROPERTY LAW IN THE REPUBLIC OF SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions Supp. to § 106ZA.01

Supp. to § 106ZA.01 History of Property Law in South Africa

[Go To Main]

§ 106ZA.01(a) Colonization [Go To Main]

Prior to the arrival of the Colonialists from Europe, the majority of the indigenous inhabitants of South Africa were nomadic and did not recognize the concept of individual land ownership. The area of land governed by the tribe was owned or vested in the monarch that governed the tribe; alternatively, in the tribe itself.

In 1652, the Dutch East India Company established a settlement at the Cape under Jan van Riebeeck. With their arrival, a very simple system of registration of land began. This early land registration was based on a *placaat* of Charles V of Holland, which was passed in 1529. The *placaat* provided that every sale of immovable property was to occur in the presence of a Judge. A Dutch edict of 1650 also provided that written registers should be kept of all such transactions.

An early issue that arose in the Cape was that there were no Judges present before whom such transactions could take place. As a solution, two members of the *Politieke Raad* were appointed so that deeds could be executed. Title Deeds were executed and registered in this manner until 1828, after which a Registrar of Deeds was formally appointed due to the establishment of a Supreme Court. The office of Registrar of Deeds was established in terms of Ordinance 39 of 1828.

In 1828, the Registrar of Deeds had the additional task of being the Registrar of slaves.

As settlers arrived at the Cape from Europe, they were granted land so that the development of the land could commence and communities could be established. These transfers were called "Grants" and were referred to as such because they described the very first time that a portion of land was transferred to and owned by an individual from the state.

Prior to 1882, no formal land registers were maintained. Grants and Deeds of Transfer were simply numbered and placed in chronological order. Registers recording the history of each portion of land and a system of numbering portions of land for identification purposes did not exist. In addition, there was no Index or Register kept of the owners of the various portions of land. This made ascertaining the identity of the owner of a specific portion of land an

incredibly arduous task.

Prior to 1844, Grants and Deeds were drafted by Government officials. In 1844, Advocates were authorized to do so.

In 1859, due to intensifying public dissatisfaction as a result of delays in the Deeds Office at Cape Town, the Government appointed a committee to investigate possible alternative methods of registration and transfer of land. The committee recommended that land registers should be created in which the Grant and subsequent registration history of each portion of land could be recorded. Sadly, only farm registers were opened and portions of land were never properly identified.

Land was not granted to the indigenous people. During this period, land was taken from the indigenous tribes that inhabited the Cape, and as expansion continued inland, this trend continued. This conduct caused great tension between the colonizers and the local tribes, such as the Xhosa and Zulu, which escalated and resulted in well-documented bloodshed.

The discovery of diamonds in the Northern Cape in 1867 and gold in the Witwatersrand area in 1886 changed South Africa forever and resulted in both an economic and population boom in the respective areas.

There was also conflict between the Dutch and British settlers, who initially arrived at the Cape in 1795. This led to the first Anglo-Boer war in 1880, and a second in 1899.

§ 106ZA.01(b) The Union of South Africa [Go To Main]

On May 31, 1910, the Union of South Africa was established. Four colonies existed in South Africa at the time; namely, the Cape, Natal, the Orange Free State and the Transvaal. The Union was a self-governing authority within the British empire, and negotiations excluded the majority black population and deprived them of more of their land. This led to the formation of the African National Congress (ANC) in 1912.

The Black Land Act 27 of 1913, together with the Natives (Urban Areas) Act 21 of 1923 limited black land ownership to existing tribal territories--a result of which was the calculated separation of the races.

The Union Statute, Act 13 of 1918 was the first legislation passed governing the registration of deeds and the transfer of immovable property within the Union. The Union Statute was repealed and replaced by the Deeds Registries Act 47 of 1937.

This Act sets out the procedure and requirements for acquiring rights to land. The main purpose of the Deeds Registries Act is to regulate administrative aspects of the registration of land and to provide owners with protection and security.

The Deeds Registries Act is a combination and codification of the principles of the transfer of land ownership and the administration thereof in South Africa. The Deeds Registries Act is primarily concerned with the transfer and registration of real rights to immovable property.

§ 106ZA.01(c) The Apartheid Era [Go To Main]

The National Party (NP) came into power in 1948 when they were successful in the national election. Shortly thereafter, the National Party enacted the policy of separate development of the races, otherwise known as "Apartheid." Apartheid became official government policy.

Under Apartheid, black people were severely restricted to certain occupations, paid far lower wages than other citizens for similar work, and could not vote. Only white people could vote or run for public office. People of Asian-Indian descent and those of mixed race also had very limited political rights.

In 1950, the government promulgated legislation providing for the creation of Bantu nations or "Bantustans." The Group Areas Act 41 of 1950 resulted in the physical separation of the races by creating different residential areas for each of the different race groups, as prescribed by the Act.

This led to "forced removals" of entire communities in circumstances where they were living in the "wrong" areas. The Group Areas Act further prevented black people from purchasing, owning, or leasing property in areas designated for other race groups.

Due to the ongoing oppression, the black majority began to rise up and protest. On March 21, 1960, sixty-nine black protestors were killed by police and government officials at Sharpeville.

South Africa left the commonwealth in 1961 and became a Republic.

In 1964, the Rivonia Trials were held and Nelson Mandela, Walter Sisulu and other ANC activists were sentenced to life imprisonment for Treason due to their opposition to Apartheid.

In 1976, approximately six hundred people were killed in anti-Apartheid protests. During 1977, the United Nations Security Council imposed a mandatory arms embargo against South Africa. On October 19, 1977, several political organizations, including the ANC, and various newspapers, were banned.

During June 1988, approximately two million black South African workers staged a huge strike in defiance of Apartheid laws. Due to ever-increasing national and international pressure, the then President, P W Botha, resigned on August 14, 1989 and was replaced by F W De Klerk.

In 1990, the government lifted its ban on the ANC, PAC and other various political parties. On February 11, 1990, Nelson Mandela was released from prison after serving twenty-seven years.

In 1993, negotiations took place between the relevant role players, in terms of which basic principles for a new democratic Constitution were agreed. During 1993, an interim Constitution was promulgated providing for non-racial, multi-party democracy, the creation and implementation of a Bill of Rights and the end of Apartheid. During 1993, the Interim Constitution came into effect and paved the way for the creation of the Final Constitution.

In April 1994, South Africa held its first non-racial democratic elections, as a result of which Nelson Mandela was inaugurated as the country's first democratically elected President.

§ 106ZA.01(d) Democracy Begins [Go To Main]

§ 106ZA.01(d)(1) Constitution Invalidates Race-Related Property Restrictions

On February 4, 1997, South Africa's Final Constitution came into effect. The Constitution of the Republic of South Africa, Act 108 of 1996, is the supreme law of the Republic of South Africa, and any law or conduct inconsistent with it is therefore invalid. The Bill of Rights contained in Chapter 2 thereof is the cornerstone of democracy in South Africa.

It enshrines the rights of all people in the country and affirms the democratic values of human dignity, equality and

freedom.

Section 25(1) of the Final Constitution states that "no one may be deprived of property except in terms of law of general application, and no law may permit arbitrary deprivation of property." Subsection (5) goes on to say that "the state must take reasonable legislative and other measures, within its available resources, to foster conditions which enable citizens to gain access to land on an equitable basis."

Section 25 read with sections 8(1) and 39(2) of the Final Constitution envisages the development of South African property law in terms of the spirit, purport and object of the Bill of Rights.

Section 2 of the Final Constitution has ensured that all of the discriminatory Apartheid laws that are in obvious conflict with Constitutional principles, are now invalid and have been repealed. To this extent, all references to "race" have been removed from all documents registered in the Deeds Registries and every South African citizen, regardless of their race, is free to own, purchase and lease property within the Republic.

§ 106ZA.01(d)(2) Constitution Provides for Land Redistribution

Under the new Constitutional dispensation, the previously disadvantaged majority black population who were deprived of their land and forcibly removed from their homes are now afforded the opportunity of regaining the land under what is referred to as "land redistribution."

Supp. to § 106ZA.02 An Introduction to South African Property Law

[Go To Main]

§ 106ZA.02(a) The South African Land Registration System [Go To Main]

South Africa's legal system is comprised of both common law and civil law--civil law in the form of legislation and the rules and regulations that inform and give content to the legislation. South African common law is uncodified and is comprised of case law that is influenced by English and Roman-Dutch law, depending on the specific area concerned.

South African property law is primarily based on the ancient principles of Roman law, but some traces of Germanic law can also be identified. Accordingly, many of the rights that one has in and to property in South African law are based on ancient Roman law principles that have survived the test of time and are still widely applicable throughout Europe.

South Africa has one of the most comprehensive and secure land registration systems in the world. Every portion of land in South Africa has been measured and surveyed by a trained and educated land surveyor. The property is then plotted and depicted on a diagram or a general plan which is kept in the Surveyor General's office for the area where the property is situated.

As a result, whenever an individual needs to ascertain the particulars of a specific portion of land, they can simply conduct a search at the Surveyor General's office on that property. The diagram will reflect the boundary lines, size and rights that are registered over or in favor of that portion of land. The deeds registry will not permit a portion of land to be transferred to another individual if a diagram or general plan does not exist for that portion of land.

Under the South African land registration system a person can virtually always ascertain the identity of the owner of a specific portion of land.

Every portion of land is registered in a deeds registry. The deeds registry or deeds office is a public office, state owned and controlled, and its records and the documents kept there are open for inspection by the public. Thus, any individual can inspect the details of a property or its owner.

Whenever a portion of land is transferred, hypothecated, alienated, or granted, a certified copy of the diagram,

mentioned above, together with the deed recording the details of the property and the reason for the transfer or hypothecation, is executed and registered at the deeds registry. Once it is executed, the seal and signature of the Registrar of Deeds is placed thereon and it is filed for record purposes at the particular deeds registry.

The financial institutions that grant loans to purchasers to purchase land register bonds over the land in order to record and secure their real rights in and to the said property. This hypothecation is also recorded and registered in the deeds registry and the deed pertaining to the portion of land is endorsed in order to reflect the hypothecation.

The land cannot be transferred or disposed of unless the bond has either been cancelled or the owner has obtained the financial institution's consent to register a further bond over that portion of land. A bond cannot be cancelled unless the bond holder has provided its written consent, in the prescribed form, to do so.

The documents necessary for the transfer, hypothecation, and alienation of land are prepared and drafted by a conveyancer. A conveyancer is an admitted attorney who has passed a practical examination in the law and practice of conveyancing and who has been admitted as a conveyancer by the High Court of South Africa. The conveyancer will appear in the Deeds Registry in order to execute the deeds in the presence of the registrar of deeds.

§ 106ZA.02(b) The Deeds Registry [Go To Main]

There are nine Deeds Registries in South Africa. They are located in Pretoria, Johannesburg, Bloemfontein, Pietermaritzburg, Cape Town, Vryburg, King Williams Town, Nelspruit and Kimberley.

Each Deeds Registry has a very specific jurisdiction with regards to the position of the land that is to be registered and recorded in it. The person in charge of each Deeds Registry is called the Registrar of Deeds.

The Chief Registrar of Deeds is based in Pretoria and it is the duty of the Chief Registrar of Deeds to ensure uniformity in the procedures and practices of the Deeds Registries and to maintain very high standards for the deeds.

To ensure that the standards do not drop, controllers and examiners are employed by every Deeds Registry to examine and inspect every deed submitted for registration. If a deed does not comply with the requirements of the Deeds Registries Act 47 of 1937, it is rejected and cannot be registered.

Supp. To CHAPTER 106ZA PROPERTY LAW IN THE REPUBLIC OF SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions Supp. to § 106ZA.03

Supp. to § 106ZA.03 Immovable and Movable Property Defined

[Go To Main]

The word "land" is often used as a synonym for immovable property. However, the definition of what comprises immovable property, as set out in section 102 of the Deeds Registries Act 47 of 1937, is wider than simply referring to "land."

Section 102 defines immovable property to include, *inter alia*, land, any registered long lease (a lease for ten years or more), a registered right of leasehold, and a registered right of initial ownership.

Generally speaking, immovable property is land and everything that has acceded to the land by either natural or other (man-made) means and cannot be detached from the land without being materially damaged, altered, or having its very nature completely altered.

The importance of being able to define something as immovable property is that ownership and rights in and to the property can be registered in a Deeds Registry and can be mortgaged by means of a mortgage bond. This provides the owner, lessee, mortgagee, or mortgagor with greater security.

Movable property is property that can be readily moved and relocated from one place to another. Movable property can be attached to immovable property and still remain movable property.

Supp. To CHAPTER 106ZA PROPERTY LAW IN THE REPUBLIC OF SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions Supp. to § 106ZA.04

Supp. to § 106ZA.04 Acquiring and Securing Real Property Rights

[Go To Main]

§ 106ZA.04(a) Real Rights to Property [Go To Main]

A real right is an absolute right. Real rights are primarily rights that a person has in and to a thing. The thing, or object of the right, is bound to the person. In the case of *Denel (Pty) Ltd v Cape Explosive Works Limited* 1999 (2) SA 419 (T), at page 433J , the court described a real right as "a direct power or absolute control over a thing."

In South African property law, there are various categories and examples of real rights to property. Individuals can have a real right in and to their own property as well as the property of another. When one enjoys a real right with respect to a thing that one does not own, this is referred to as a limited real right.

A real right is a claim or a right that an individual has to a thing against the public at large. Therefore, the holder of a real right can enforce that right against the public at large. For example, ownership is a real right and it offers complete control, by the owner, over that thing.

Section 102 of the Deeds Registries Act 47 of 1937 defines a real right as "including any right which becomes a real right upon registration." South African law does not have a closed list of real rights and new real rights in and to property can develop.

§ 106ZA.04(b) Securing Real Property Rights [Go To Main]

One secures and protects a real right by registering the right in the Deeds Office. In terms of section 3(1) of the Deeds Registries Act 47 of 1937, the Registrar of Deeds has a duty to register specific real rights as set out in that section.

In the case of *Denel (Pty) Ltd v Cape Explosive Works Limited* 1999 (2) SA 419 (T), at page 438B , the court confirmed that when a real right is established by way of registration of the right in the Deeds Registry, it is "maintainable against the whole world."

§ 106ZA.04(c) Acquiring Real Property Rights [Go To Main]

In South African property law there is a distinction between original and derivative acquisition of real rights. The original acquisition of a real right is a unilateral act carried out by the person who acquires that real right. The real right is newly created and is not obtained from a predecessor. The real right is thus free from any limitation. Prior to the unilateral action taking place, the real right did not exist. The best example of this would be expropriation by the government.

The derivative acquisition of a real right is a bilateral transaction between the person who is the holder of the real right and the person who wishes to acquire the real right. The person acquiring the real right acquires the right with all of the limitations and blemishes that the real right is subject to. A good example of such a transaction is the purchase and sale of land by way of a written agreement of sale.

Supp. To CHAPTER 106ZA PROPERTY LAW IN THE REPUBLIC OF SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions Supp. to § 106ZA.05

Supp. to § 106ZA.05 Real Rights in Property

[Go To Main]

§ 106ZA.05(a) Ownership [Go To Main]

Private ownership is universally a highly valued and protected real right. South African property law, ownership is the real right that potentially confers the most complete or comprehensive control over a thing, which means that the right of ownership entitles owners to do with their property as they see fit, subject to the limitations imposed by public and private law. n1

In the case of *Gien v Gien* 1979 (2) SA 1113 (T) at page 1120 , the court defined ownership as:

> *"The right of ownership is the most comprehensive real right that a person can have in respect of a thing. The point of departure is that a person can, in respect of immovable property, do with and on his property as he pleases. This apparently unfettered freedom is however, a half-truth. The absolute power of an owner is limited by the restrictions imposed thereon by the law."*

Ownership of immovable property can be derived via a grant, private treaty or sale, prescription or expropriation. Ownership is unlimited in duration and is an independent real right as it is not dependant on or derived from any other right.

Ownership of immovable property in South Africa is effected by way of entering into and concluding a written agreement of sale in terms of the provisions of the Alienation of Land Act 68 of 1981.

A conveyancer then drafts a deed of transfer and transfers the property from the seller to the purchaser by executing and registering the deed in the Deeds Registry. The deed of transfer constitutes the purchaser's title deed to the property. Ownership passes to the purchaser upon registration of transfer.

§ 106ZA.05(b) Servitudes [Go To Main]

Servitudes are limited real rights in immovable property that are registered and recorded in the Deeds Registry. A servitude entitles the holder thereof to either:

1. The undisturbed use and enjoyment of another person's property; or

2. To demand that another person refrain and desist from exercising certain rights that they have stemming from their right of ownership with respect to their property.

In *Dreyer v Letterstedt's Executors* (1865) 5 Searle 88 at page 99, the court defined a servitude as "a real right to an advantage out of the property of another."

It is the direct relationship of the real right of servitude between the holder thereof and the property over which they hold the servitude that distinguishes it from a personal contractual right with the owner of the property over which they enjoy the servitude.

South African law distinguishes between two different types of servitudes, namely personal and praedial servitudes. A praedial servitude is a servitude between two pieces of land. The servitude is created in favor of the dominant tenement property over the servient tenement property. The servitude confers a real right on the dominant tenement property and creates a burden on the servient tenement property.

The owner of the dominant tenement property is entitled to enforce the servitude over the servient tenement property. The servitude exists with the property and thus transfers from owner to owner and continues to exist despite the property being transferred to a new owner.

A personal servitude is a servitude created in favour of a specific individual to whom it provides the right to the undisturbed use and enjoyment of another's property.

The personal nature of the servitude means that it is not transferable and ceases to exist when the individual in whose favor it was created, dies. Good examples common personal servitudes are *usufructs, usus* and *habitatio*.

Servitudes can be created by the state government by way of a grant over state land, agreement between individuals and owners of land, statute or prescription.

One can also approach the High Court of South Africa to enforce or create a servitude. The court order granted by the High Court will either bring the servitude into existence or compel compliance with an existing servitude.

§ 106ZA.05(c) Mortgage Bonds [Go To Main]

A mortgage bond is a form of hypothecation of immovable property which confers a limited real right to an individual or entity over the property of another with the object of securing payment of a debt or performance of an obligation. n2

Traditionally, a mortgage bond is a bilateral written agreement concluded between a debtor (traditionally the owner of the property) and a creditor (traditionally a financial institution, such as a bank) in terms of which the creditor obtains a real right over the immovable property of the debtor as security for the fulfilment of the debtor's obligations in terms of the agreement.

A mortgage bond is classified as real security in that if the debtor is unable to meet the obligations in terms of the agreement (*i.e.*: fails to repay the debt), the creditor can demand that the immovable property, being the asset bonded as security, be sold and that the proceeds of the sale are used to satisfy the claim.

A mortgage bond is a written instrument that is signed by both the creditor and the debtor. It is then registered by a conveyancer in a Deeds Registry. A mortgage bond is cancelled by registering and executing a deed, in the prescribed form, in a Deeds Registry. A mortgage bond can only be cancelled with the consent of the creditor.

§ 106ZA.05(d) Lease [Go To Main]

A lease is a bilateral agreement whereby one person or other entity agrees to provide another with the temporary, undisturbed, use and enjoyment of property in return for the payment of rental.

In terms of the provisions of the Formalities with respect to Leases of Land Act, 18 of 1969, a long lease is a lease for a period of no less than ten years, for the length of the natural life of the lessee, or is renewable from time to time at the behest of the lessee indefinitely, which periods, when added together, constitute a period not less than ten years.

In terms of section 1(2)(a) of the Formalities in respect of Leases of Land Act, 18 of 1969, a long lease is not valid for a period of greater than ten years unless it has been registered in the deeds registry against the title deed of the leased property.

The title deed of the leased property will then be endorsed with an annotation reflecting the fact that a long lease has been entered into in relation to that property. The long lease, once registered, provides the lessee with a limited real right in and to the leased property.

Supp. To CHAPTER 106ZA PROPERTY LAW IN THE REPUBLIC OF SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions Supp. to § 106ZA.06

Supp. to § 106ZA.06 Sectional Title and Shareblock Ownership

[Go To Main]

In Roman law, the principle of *superficies solo cedit* provides that an individual who owns land also owns all of the buildings that are situated on the land. There is no differentiation between the land and the immovable structures situated thereon. In terms of the Deeds Registries Act 47 of 1937, land is transferred without any reference to the buildings or structures thereon. This means that prior to legislative enactments, it was impossible for an individual to be the owner of a defined portion of a piece of land or part of a building. With residential property becoming increasingly expensive and rare, the need for apartment blocks to be built and sold was becoming great.

The South African legislature created what is now commonly referred to as "sectional ownership," or the ownership a part of a portion of land or a building. On September 17, 1986, the Sectional Titles Act 95 of 1986 was promulgated. This new Act replaced the earlier 1971 Sectional Titles Act. The new Act was heavily based on the Strata Titles Act 17 of 1961 of New South Wales, Australia.

The Sectional Titles Act 95 of 1986 created a new type or class of property defined as a "unit." The unit can be owned by an individual. The unit comprises of a part of the building or "section" and an undivided share in the common parts of the building or land known as the "common property."

Being the owner of a sectional title unit also means that the individual will automatically become a member of an association of sectional owners. The entire sectional scheme is governed by the association which is called a Body Corporate.

Another form of collective ownership and an alternative to Sectional Title ownership is Share Block ownership. In terms of the Share Blocks Control Act, 59 of 1980, a single entity referred to as a Share Block company either owns or controls an immovable property. Members of the Share Block company acquire personal rights of occupation of specific parts of the property based on their membership in the Share block company.

One becomes a member in the Share Block company by purchasing shares in the company and this in turn provides the company with share capital enabling the company to either purchase property or construct additional structures. The purchase of a share in the Share Block company provides the holder of the share with the right to use and occupy a

specific portion of the immovable property.

Supp. To CHAPTER 106ZA PROPERTY LAW IN THE REPUBLIC OF SOUTH AFRICA

13-106ZA Thompson on Real Property, Thomas Editions Supp. to § 106ZA.07

Supp. to § 106ZA.07 Taxation

[Go To Main]

The primary form of taxation on the acquisition of immovable property in South Africa is prescribed by the Transfer Duty Act, 40 of 1949. In terms of the Transfer Duty Act, 40 of 1949, transfer duty is payable on the acquisition of immovable property, on the transfer of real rights and on the cancellation of real rights. Transfer duty is a form of government tax and is payable prior to registration taking place in the Deeds Registry. It is payable to the South African Revenue Service.

The amount of transfer duty payable is calculated as a percentage of the total consideration paid for the property. Depending on the purchase price of the property, transfer duty varies between 0% and 8% for individuals, and 10% for juristic persons.

In certain limited cases, Value Added Tax (VAT) can be imposed on the sale of immovable property. The obligation to pay VAT largely depends on the nature and identity of the seller. VAT is charged at the rate of 14% of the purchase price of the property. VAT is a form of government tax and is payable to the South African Revenue Service.

When selling an immovable property that is not one's principle residential property, and if the property is sold for over one million rand more than it was purchased for, Capital Gains Tax might be levied by the South African Revenue Service on the consideration received by the seller from the purchaser.

Special Tax Alert: Housing Assistance Act of 2008

1-SA0010b Thompson on Real Property, Thomas Editions

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

Overview

On July 30, 2008, the President signed into law the ***American Housing Rescue and Foreclosure Prevention Act of 2008***, n1 designed to help the housing market and reform lending practices. Included in that Act is the ***Housing Assistance Tax Act of 2008***, n2 which provides some tax breaks for new home buyers and current home owners, as well as brings changes to the **REIT rules**, the **low-income housing tax credit**, the **tax-exempt bond requirements**, **and other technical tax changes**. This Alert will summarize the more significant tax changes in the *Housing Assistance Tax Act*, **including the changes to the exclusion of gain on sale of a principal residence.**

Special Tax Alert: Housing Assistance Act of 2008

1-SA0010b Thompson on Real Property, Thomas Editions § STA.01

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.01 Credit for First-Time Home Buyers

The *Housing Assistance Tax Act* provides for a refundable tax credit equal to the lesser of $7,500 ($3,750 for married individuals filing separately) or 10 percent of the purchase price of a principal residence. n3 The credit is allowed for the tax year in which the taxpayer purchases the home. The credit phases out for taxpayers with modified adjusted gross income between $75,000 and $95,000 ($150,000 to $170,000 for joint returns), n4 and is not available for purchases from a related party. n5 A taxpayer is considered a first-time home buyer if the individual (and the individual's spouse) had no ownership interest in a principal residence during the three-year period prior to the date of purchase of the home. n6 However, a taxpayer will not be entitled to the credit if (1) the taxpayer was entitled to the Washington D.C. homebuyer credit for any prior year; n7 (2) the taxpayer's home financing is from tax-exempt mortgage revenue bonds; n8 (3) the taxpayer is a non-resident alien; n9 or (4) the taxpayer disposes of the residence (or it ceases to be the taxpayer's principal residence) before the close of the tax year for which the credit otherwise would be allowable. n10

The credit is recaptured ratably, with no interest charge, over 15 years, beginning in the second taxable year after the year in which the home is purchased. n11 Thus, the credit is more like an interest-free loan from the government to the taxpayer. For example, if the taxpayer purchases the home in 2008, and a $7,500 credit is allowable on the 2008 return, annual repayments of $500 per year for 15 years [$7,500 / 15 years, or 6 2/3 percent of the credit] begin with the 2010 return. If the taxpayer sells the home (or ceases to use the property as a principal residence), prior to complete repayment of the credit, any remaining repayment amount is due on the tax return for the year in which the home is sold (or is no longer used as a principal residence). n12 There are exceptions to this recapture payment upon certain events, such as death, certain involuntary conversions, transfers between spouses or incident to divorce, and where gain on sale does not exceed the recapture amount. n13

The provision applies to a principal residence purchased by the taxpayer on or after April 9, 2008 and before July 1, 2009. n14 In addition, a taxpayer purchasing a home during the eligible period in 2009 can elect to treat the purchase as if it occurred on December 31, 2008 for purposes of taking the credit on their 2008 return. n15

Special Tax Alert: Housing Assistance Act of 2008

1-SA0010b Thompson on Real Property, Thomas Editions § STA.02

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.02 Property Tax Deduction for Non-Itemizers

The *Housing Assistance Tax Act* creates a new standard deduction for state and local real property taxes. n16 Prior to this Act, a taxpayer had to itemize deductions, rather than take a standard deduction, in order to deduct property taxes. Note that the standard deduction for the 2008 tax year is $ 5,450 for unmarried taxpayers and $10,900 for joint returns. n17 Thus, taxpayers would itemize their deductions when the total of all itemized deductions exceeded these amounts.

The *Housing Assistance Tax Act* allows a "real property tax deduction" for non-itemizers in addition to the standard deduction amount indicated above. n18 Taxpayers can deduct up to $500 for single taxpayers ($1,000 for joint returns) for real property taxes paid. n19

The usefulness of this provision is quite limited. The deduction is currently available only for the 2008 tax year. n20 In addition, most taxpayers with a home mortgage will have enough itemized deductions from home mortgage interest and property taxes to justify itemizing their deductions rather than taking the standard deduction.

Thus, this new provision will mainly benefit those homeowners who have no mortgage on their home. Moreover, unlike the first-time home buyers' credit discussed above, which is a refundable tax credit, the property tax is a deduction, meaning that the actual economic benefit to the taxpayer depends on the taxpayer's tax bracket. For example, a $1,000 property tax deduction to a couple in the 15 percent tax bracket is only equal to a $150 savings.

Special Tax Alert: Housing Assistance Act of 2008

1-SA0010b Thompson on Real Property, Thomas Editions § STA.03

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.03 Changes to Exclusion of Gain on Sale of Principal Residence

Under current law, homeowners may exclude gain on the sale of their principal residence, provided certain conditions are met. n21 These rules allow the exclusion of $250,000 of gain on the sale of a principal residence ($500,000 for joint returns), provided the taxpayer both owned and used the residence as his or her principal residence for two out of the five years preceding the sale. Although vacation or rental properties do not qualify for the gain exclusion because they are not the "principal residence" of the taxpayer, taxpayers could move into a second residence and convert it to their principal residence for two years, and thus qualify for the gain exclusion. Prior to the *Housing Assistance Tax Act*, all appreciation in such a property was eligible for gain exclusion, provided the dwelling had been used as a principal residence for at least two years.

The new provision enacted by the *Housing Assistance Tax Act* provides that gain allocated to periods of nonqualified use are not eligible for the I.R.C. Section 121 exclusion. n22 The "nonqualified use" is the period that the dwelling was not used by the taxpayer or the taxpayer's spouse as a principal residence. Thus, the new requirement requires the recognition of gain from sale in an amount equal to the portion of time the house was not used as a principal residence compared to the total period the taxpayer owned the property. The balance of the gain on sale remains eligible for the $250,000/$500,000 exclusion.

This new provision applies only to sales or exchanges after 2008. n23 In addition, periods before 2009 are not considered "nonqualified use," regardless of their actual use. n24 Thus, this tax planning opportunity has not been shut down retroactively.

For example, assume a taxpayer buys a property on January 1, 2009, for $400,000, and uses it as a rental property for two years, claiming depreciation deductions of $20,000. On January 1, 2011, the taxpayer converts the property to his principal residence. On January 1, 2013, the taxpayer moves out, and on January 1, 2014, the taxpayer sells the property for $700,000. $20,000 of the gain, attributable to prior depreciation deductions, is not eligible for the exclusion under I.R.C. § 121 (both prior to and after the *Housing Assistance Tax Act* changes). n25 Of the remaining $300,000 of gain, 40% of the gain (2 years of rental divided by five years of ownership), or $120,000, is allocated to nonqualified use and is not eligible for the gain exclusion under I.R.C. § 121. Since the remaining gain of $180,000 is less than the maximum

of $250,000 that can be excluded by a single taxpayer, the $180,000 of gain is excluded from income. n26

Special Tax Alert: Housing Assistance Act of 2008

1-SA0010b Thompson on Real Property, Thomas Editions § STA.04

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.04 Changes to REIT Rules

The *Housing Assistance Tax Act* made several changes to the technical requirements of Real Estate Investment Trusts ("REITs"). Specifically:

- Foreign currency gain recognized under I.R.C. § 987 or § 988 can be excluded solely for the computation of the REIT's 75% and 95% income tests. n27 The excluded amounts are excluded from both the numerator and the denominator in the income test calculations. n28

- The percentage of the value of REIT assets that can be held in securities of a taxable REIT subsidiary is increased from 20% to 25%. n29

- The prohibited transaction safe harbor for dealer sales is changed by reducing the holding period from four years to two years. n30 In addition, the sales test of the prohibited transaction safe harbor rules is changed from 10% of the aggregate bases of the REIT assets to either 10% of aggregate bases or 10% of the fair market value of the assets. n31

- The Act expands the taxable REIT subsidiary exception for hotel, motel, and other transient facilities so that it also applies to health care facilities. Thus, a taxable REIT subsidiary is permitted to rent a health care facility from its parent REIT and hire an independent contractor to operate the facility. The rents paid to the REIT parent will be qualifying rental income for purposes of the 75% and 95% income tests. n32

- The changes to the REIT provisions are generally effective for tax years beginning after the date of enactment. However, the rules treating certain foreign currency gain as excluded income for purposes of the income test apply to income recognized after the date of enactment, and the provisions relating to the prohibited transactions tax safe harbor apply to sales made after the date of enactment. n33

Special Tax Alert: Housing Assistance Act of 2008

1-SA0010b Thompson on Real Property, Thomas Editions § STA.05

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.05 Low Income Housing Tax Credit Changes

The *Housing Assistance Tax Act* also liberalized certain aspects of the low-income housing tax credit.

- The low-income housing credit provided in I.R.C. § 42 may be claimed over a ten-year period by owners of certain residential rental properties that are occupied by tenants having incomes under specified levels. However, the low-income housing credit is allowable only if the owner of the qualified building receives a housing credit allocation from the State or local housing credit agency. The aggregate credit authority provided annually to each state for 2008 is $2.00 per resident, with a minimum amount allowed for small population states. The *Housing Assistance Tax Act* increases from $2.00 per resident to $2.20 per resident the allocation authority provided annually to each state for calendar years 2008 and 2009, and increases the minimum cap for small population states by 10% for those years. n34

- The calculation of the annual low-income housing credit amount is designed to produce a credit equal to 70% of the building's qualified basis over the 10-year period of the credit (for non-Federally subsidized construction). The credit percentage for each year is adjusted monthly by the I.R.S. based on the Applicable Federal Rate. Because interest rates have been so low, the actual percentage for this credit had been about 7.8 percent annually. The *Housing Assistance Tax Act* provides a temporary applicable percentage of nine percent for newly-constructed non-Federally subsidized buildings placed in service after the date of enactment and before December 31, 2013. n35

- If a portion of the eligible basis of a low-income building is Federally-subsidized, the building is ineligible for the 70% credit and instead may be eligible for the 30% credit. The *Housing Assistance Tax Act* changes the definition of Federal subsidy for these purposes to include only obligations the interest on which is exempt from tax under I.R.C. § 103. The definition of Federal subsidy used to include Federal loans if the interest rate was less than the Applicable Federal Rate. Thus, effective for buildings placed in service after the date of enactment, additional buildings may become eligible for the 70% credit. n36

- A higher credit amount (91% instead of the 70% credit, and 39% instead of the 30% credit) is currently allowed for buildings located in certain high-cost areas. The *Housing Assistance Tax Act* adds an additional type of building eligible for the higher credit amount: any building designated by the state housing credit agency as requiring the enhanced credit in order for such building to be financially feasible. n37

In addition, certain other technical changes were made to the low-income housing credit, such as:

- Increasing the amount that must be spent on rehabilitation expenditures in order to qualify those amounts for a low-income housing credit; n38

- Increasing the amount of the building that may be used for community service facilities; n39

- Modifying the basis reduction rule for federal grants that are received during the compliance period; n40

- Modifying the definition of "related party" for purposes of the prohibition on purchasing a qualifying building from a related party; n41

- Modifying the exceptions to the rule requiring a period of at least ten years between the date of an eligible building's acquisition and the date it was placed in service; n42

- Eliminating the present-law prohibition against providing the low-income housing credit to buildings receiving moderate rehabilitation assistance under section 8(e)(2) of the United States Housing Act of 1937; n43

- Modifying the carryover allocation rule, which allows an allocation of the low-income housing credit after the close of the calendar year in which the building is placed in service; n44

- Eliminating the bond-posting requirement upon a change in ownership of the building, to avoid recapture of the credit, and replacing it with an extended statute of limitations; n45

- Adding two additional criteria that a State must use in its allocation of credits among potential low-income housing projects: (1) the energy efficiency of the project, and (2) the historic nature of the project; n46

- Adding an additional exception to the general rule that student housing is not eligible for the low-income housing credit in the case of a student who was previously under the care and placement responsibility of a foster care program; n47

- Modifying the measurement of an area's median gross income, for qualification for low-income housing, for projects in certain rules areas; n48

- Clarifying the rule that units in a qualified low-income housing project must be available for use by the general public; n49

- Excluding, in certain circumstances, military basic housing allowances in determining a tenant's low-income eligibility; n50 and

- Excluding, in certain circumstances, military basic housing allowances in determining a tenant's

low-income eligibility; and

- Conforming the tax-exempt bond rules to the low-income housing credit rules in several respects (the "next available unit rule," the rules applicable to full-time students, and the rules concerning single room occupancy units). n51

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.06 Changes Related to Tax-Exempt Housing Bonds

The *Housing Assistance Tax Act* has made several changes to temporarily liberalize the rules regarding tax-exempt housing bonds. The Act authorizes an additional $11 billion of volume cap for 2008 for the purpose of issuing qualified mortgage bonds or private activity bonds for qualified residential rental projects. n52 The mortgage bonds issued under the new volume cap may be used to finance either new mortgages or qualified subprime loans. The *Housing Assistance Tax Act* also creates an exception to the "new" mortgage requirement for qualified mortgage bonds by authorizing the use of such bonds to refinance a qualified subprime loan. n53 Furthermore, bonds guaranteed by Federal Home Loan Banks are now eligible for treatment as tax-exempt bonds. n54 Also, the first-time home buyer requirement for qualified tax-exempt mortgage bonds is waived for residences located in Presidentially declared disaster areas. n55

§ STA.07 Repeal of AMT Limitations on Tax-Exempt Housing Bonds, Low Income Housing Credit, and Rehabilitation Credit

In determining alternative minimum tax ("AMT"), a taxpayer's taxable income is modified to take into account certain preference items. n56 The *Housing Assistance Tax Act* modifies these preference items by providing that tax-exempt interest on (i) certain exempt facility bonds used to provide qualified residential rental projects, (ii) qualified mortgage bonds, and (iii) qualified veterans' mortgage bonds, is not an item of tax preference. n57 In addition, the Act allows the low-income housing tax credit and the rehabilitation credit to offset AMT liability. n58

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.08 Modifications to Gulf Opportunity Zone Incentives

Under current law, a taxpayer who suffers a casualty loss can deduct that loss, subject to certain limitations, in the year in which the loss occurred, or, if a disaster loss was in a Presidentially-declared disaster area, the deduction can be taken in the year prior to the disaster. n59 Any subsequent reimbursements of those losses are generally taken into income when received. The *Housing Assistance Tax Act* contains a provision allowing taxpayers who claimed a casualty loss to a principal residence resulting from Hurricanes Katrina, Rita, or Wilma, and who receive a grant as reimbursement in a subsequent year, to elect to file an amended return for the taxable year in which the deduction was taken, rather than taking the reimbursement amount into income in the taxable year received. The time for filing the amended return is three years after the original due date for filing the tax return or one year after the date of enactment of the *Housing Assistance Tax Act*. Any underpayment of tax resulting from the reduction or elimination of the casualty loss deduction is not subject to any interest or penalty if the tax is paid not later than one year after the filing of the amended return. n60

In addition, the *Housing Assistance Tax Act* removes the deadline of January 1, 2008, for the commencement of construction for self-constructed Gulf Opportunity Zone extension property which qualifies for additional first-year depreciation. However, the placed-in-service date of December 31, 2010, and the progress expenditure date of January 1, 2010 are not modified. n61

1-SA0010b Thompson on Real Property, Thomas Editions § STA.09

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.09 Miscellaneous Items

- The *Housing Assistance Tax Act* increases from 35% to 50% the percentage of the property that may be leased to a tax-exempt entity in a disqualified lease without requiring allocation of rehabilitation expenditures under the rehabilitation credit. n62

- In order to avoid withholding on the disposition of a U.S. real property interest by a foreign person, a transferor can issue an affidavit to the transferee of the property, indicating that the transferor is not a foreign person. n63 The *Housing Assistance Tax Act* provides an alternate procedure: in lieu of furnishing a non-foreign affidavit to the transferee, a transferor may furnish such affidavit to a qualified substitute. n64

- Corporations otherwise eligible for bonus depreciation under I.R.C. § 168(k) may elect to claim additional research or minimum tax credits in lieu of claiming depreciation under I.R.C. § 168(k) for eligible qualified property placed in service after March 31, 2008. n65

Special Tax Alert: Housing Assistance Act of 2008

1-SA0010b Thompson on Real Property, Thomas Editions § STA.10

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA.10 Revenue Offsets

The nearly $15 billion cost of the *Housing Assistance Tax Act* is offset by the following provisions:

- **Modification of Principal Residence Gain Exclusion.** As discussed above, I.R.C. § 121, excluding gain from the sale of a principal residence, is modified to eliminate gain exclusion due to periods of nonqualified use. n66

- **Increased Information Reporting.** The *Housing Assistance Tax Act* n67 adds I.R.C. § 6050W, effective for returns for calendar years beginning December 31, 2010, which requires an information return for reporting payments made in settlement of payment card and third-party payment transactions. Thus, under this provision, a bank that enrolls a business to accept credit cards and contracts with the business to make payment on credit card transactions is required to report to the I.R.S. the business's gross credit card transactions for each calendar year. The bank is also required to provide a copy of the information report to the business.

- **Delay in Application of Worldwide Allocation of Interest.** In order to determine its taxable income from foreign sources, a taxpayer must allocate and apportion deductions between items of U.S.-source and foreign-source gross income. The American Jobs Creation Act of 2004 modified the rules for allocating interest expense, effective for taxable years beginning after December 31, 2008. The *Housing Assistance Tax Act* delays the effective date of the worldwide interest allocation rules for two years, until taxable years beginning after December 31, 2010. n68

- **Timing of Corporate Estimated Taxes.** The *Housing Assistance Tax Act* makes two changes to the corporate estimated tax payment rules. First, for corporations with assets of at least $1 billion, the payments due in July, August, and September, 2013, are increased by 16.75 percentage points of the payment otherwise due, and the next required payment is reduced accordingly. However, the similar provision in the Tax Increase Prevention and Reconciliation Act of 2005, scheduled for the July, August, and September 2012 payments, is repealed and the general rule applies (such corporations are required to

make quarterly estimated tax payments based on their income tax liability). n69

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

STA2.00 Overview

On October 3, 2008, as a stabilizer to the troubled economy, the President signed into law H.R. 1424, n1 which includes the Emergency Economic Stabilization Act of 2008 (Division A of H.R. 1424), the Energy Improvement and Extension Act of 2008 (Division B of H.R. 1424), and the Tax Extenders and Alternative Minimum Tax Relief Act of 2008 (Division C of H.R. 1424). This legislation authorizes the Federal government to purchase and insure certain types of troubled assets, as well as provides tax incentives for energy production and conservation, extends expiring tax provisions, and provides certain individual income tax relief. Specifically related to real estate, H.R. 1424 extends an expiring tax provision allowing non-itemizers a standard deduction for real property taxes, provides additional tax relief related to federally declared disasters, extends the exclusion on home mortgage debt relief, provides more favorable depreciation for certain assets, and extends the deduction for environmental remediation costs.

STA2.01 Property Tax Deduction for Non-Itemizers

The Housing Assistance Tax Act of 2008, n2 which was enacted on July 30, 2008, created a new standard deduction for state and local real property taxes. n3 Prior to that Act, a taxpayer had to itemize deductions, rather than take a standard deduction, in order to deduct property taxes. The Housing Assistance Tax Act created a "real property tax deduction" for non-itemizers in addition to the standard deduction amount. n4 Under this provision, taxpayers can deduct up to $500 for single taxpayers ($1,000 for joint returns) for real property taxes paid. n5 However, as originally enacted, the deduction was only available for the 2008 tax year. n6 H.R. 1424 extends the provision to include the 2009 tax year also. n7

FOOTNOTES:

STA2.02 Losses Attributable to Federally Declared Disasters

H.R. 1424 makes several tax changes to benefit taxpayers victimized by disasters.

Changes to Casualty Loss Deduction:

Internal Revenue Code § 165 allows an individual to deduct personal casualty losses. However, these deductions are currently limited for personal (non-business) casualty losses in several respects. Prior to H.R. 1424, an individual could deduct a personal casualty loss only to the extent that the loss exceeds $100 from each casualty. n8 For taxable years beginning after December 31, 2008, H.R. 1424 raises this limit to $500, n9 but the limit returns to $100 for taxable years beginning after December 31, 2009.

In addition, I.R.C. § 165 generally allows a deduction for aggregate net casualty and theft losses only to the extent that they exceed 10% of a taxpayer's adjusted gross income (AGI) for the year. n10 H.R. 1424 waives the 10% of AGI limit for losses attributable to a federally declared disaster n11 occurring after December 31, 2007, and before January 1, 2010. n12

Increase in Standard Deduction by Disaster Casualty Loss:

Prior to H.R. 1424, taxpayers had to itemize deductions in order to deduct casualty losses. H.R. 1424 adds a "disaster loss deduction" as a component of the standard deduction. n13 This disaster loss deduction is the net casualty loss attributable to a federally declared disaster occurring before January 1, 2010. This provision will benefit taxpayers with a disaster loss whose other itemized deductions are less than their standard deduction.

Expensing of Qualified Disaster Expenses:

H.R. 1424 adds new I.R.C. § 198A, which provides for expensing of certain qualified disaster expenses. Under this new

Code section, a taxpayer may elect to treat any "qualified disaster expense" as a deductible expense for the year in which it is paid or incurred. The expenses covered by this provision include expenses incurred in connection with a trade or business or business-related property for the repair of such property, or the removal of debris from, or demolition of structures on, real property damaged or destroyed as a result of a federally declared disaster. n14 This provision allows a current deduction for expenses that might otherwise have to be capitalized. n15 This provision applies to federally declared disasters occurring after December 31, 2007 and before January 1, 2010.

Net Operating Losses Attributable to Federally Declared Disasters:

H.R. 1424 provides a special five-year carryback period for net operating losses to the extent the NOL is created by a federally declared disaster. n16 The normal carryback period is two years, or three years for certain casualty losses. n17 This provision applies to losses arising in tax years beginning after December 31, 2007 in connection with disasters declared after that date, and only with respect to disasters occurring before January 1, 2010. n18

Temporary Relief Provisions for Midwestern Disaster Area and Hurricane Ike:

H.R. 1424 includes a number of temporary tax relief provisions for victims of severe storms, tornados, and flooding in the states of Arkansas, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, and Wisconsin. These provisions apply to federally declared disasters between May 20 and August 1, 2008. n19 In addition, temporary tax-exempt bond financing and low-income housing tax relief was provided for areas damaged by Hurricane Ike. n20

FOOTNOTES:
(n1)Footnote 8. I.R.C. § 165(h)(1).

(n2)Footnote 9. H.R. 1424, Division C Section 706(c).

(n3)Footnote 10. I.R.C. § 165(h)(2).

(n4)Footnote 11. A "federally declared disaster" is any disaster subsequently determined by the President to warrant assistance by the Federal government under the Robert T. Stafford Disaster Relief and Emergency Assistance Act. *See* H.R.1424, Division C Section 706(a), substituting "federally declared disaster" for "Presidentially declared disaster" several places in the Code.

(n5)Footnote 12. H.R. 1424, Division C Section 706(a), adding I.R.C. § 165(h)(3). For purposes of applying the 10% of AGI limit to other personal casualty losses, losses deductible under this provision are disregarded. Thus the provision has the effect of treating disaster losses attributable to federally declared disasters as a deduction separate from all other casualty and theft losses.

STA2.03 Extension of Gain Exclusion Resulting from Debt Discharge on Home Mortgages

The Mortgage Forgiveness Debt Relief Act of 2007, which was enacted on December 20, 2007 n21 gave relief to taxpayers in foreclosure by amending I.R.C. §108 to exclude from a taxpayer's gross income any discharge of debt on a qualified principal residence. Many taxpayers facing a foreclosure of their home may have debt relief in the amount of the difference between the adjusted issue price of the debt being cancelled and the amount used to satisfy the debt (typically the value of the property), which amount is income under I.R.C. § 108 unless certain exceptions apply. n22 Homeowners may also have relief of indebtedness income from a modification of their current loan, including changes to a loan's adjustable interest rate provisions. n23

The Mortgage Forgiveness Debt Relief Act of 2007 excluded from the gross income of a taxpayer any discharge of indebtedness income by reason of a discharge, in whole or in part, of "qualified principal residence indebtedness." n24 Qualified principal residence indebtedness means up to $2 million of acquisition indebtedness n25 with respect to a taxpayer's principal residence. n26

As originally enacted, this relief from discharge of indebtedness income on qualified principal residence debt was available only for three years, on debt discharged beginning January 1, 2007 and ending on December 31, 2009. n27 H.R 1424 has extended this provision for three additional years, for discharges of debt on or after January 1, 2010 and before January 1, 2013. n28

FOOTNOTES:
(n1)Footnote 21. P.L. 110-142, § 2.

(n2)Footnote 22. I.R.C. §§ 108(a)(1)(A) - (D).

(n3)Footnote 23. *See* Treas. Reg. § 1.1001-3.

(n4)Footnote 24. I.R.C. § 108(h)(2).

(n5)Footnote 25. Acquisition indebtedness is defined in I.R.C. § 163(h)(3)(B) as any indebtedness incurred in

acquiring, constructing, or substantially improving any qualified residence of the taxpayer, for purposes of the home mortgage interest deduction of I.R.C. § 163(h), provided the debt is secured by the residence. Acquisition indebtedness will also include debt resulting from the refinancing of the original acquisition indebtedness, up to the amount of the refinanced debt, but not necessarily home equity loans.

(n6)Footnote 26. Principal residence has the same meaning for this purpose as under I.R.C. § 121. I.R.C. § 108(h)(5). Note that the taxpayer can have only one principal residence. Thus, this exclusion will not apply to vacation or second homes, even though the taxpayer may be able to deduct the mortgage interest on the second home under I.R.C. § 163(h).

(n7)Footnote 27. I.R.C. § 108(a)(1)(E).

STA2.04 Fifteen Year Straight Line Depreciation Extended for Certain Real Estate Improvements

Generally the cost of non-residential real property must be depreciated over a 39-year recovery period. n29 However, certain qualified leasehold improvements and qualified restaurant improvements can be depreciated over a 15-year recovery period. n30 That 15-year recovery treatment was available for qualified leasehold or restaurant improvements that were placed in service prior to January 1, 2008. H.R. 1424 has extended this provision to qualified leasehold or restaurant improvements placed in service prior to January 1, 2010. n31 In addition, the definition of qualified restaurant property for this purpose is expanded to include new construction. n32 Prior to this change, qualified restaurant property included improvements to a building but not the building itself.

H.R. 1424 adds another category of 15-year property, and provides that qualified retail improvements that are placed in service after December 31, 2008 and prior to January 1, 2010 can be depreciated over 15 years. n33 Qualified retail improvement property for this purpose is defined as any improvement to an interior portion of a non-residential building if the portion is open to the general public and used in the retail trade or business of selling tangible personal property to the general public, and the improvement is placed in service more than three years after the building was placed in service. The covered improvements do not include expenditures attributable to the enlargement of the building, any elevator or escalator, any structural component benefiting a common area, or the internal structural framework of the building. n34

In addition, H.R. 1424 allows machinery or equipment used in a farming business to be depreciated over a 5-year period, where the original use of the property begins with the taxpayer after December 31, 2008, and the property is placed in service before January 1, 2010. Certain types of property are excluded from this category. n35

STA2.05 Deduction of Environmental Clean-Up Costs

Under I.R.C. § 198, a taxpayer may elect to currently deduct certain environmental clean-up costs -- the expenses of remedying environmental contamination -- that would otherwise have to be capitalized. However, this election expired for expenses paid or incurred after December 31, 2007. H.R. 1424 extends this provision for expenses paid or incurred on or before December 31, 2009. n36

STA3.00 Overview

On February 17, 2009, President Obama signed into law H.R. 1, n1 the American Recovery and Reinvestment Act of 2009, of which Title 1 Division B is the American Recovery and Reinvestment Tax Act of 2009 (the "2009 Recovery Act"). While generally aimed at creating jobs and providing economic relief to stimulate the economy, the 2009 Recovery Act is a combination of government spending programs and tax cuts. This special tax alert discusses several changes affecting real estate, including amendments to the first-time homebuyer's credit, a liberalization to the S corporation built-in gains rules, and changes impacting the low-income housing tax credit.

STA3.01 Changes to First-Time Homebuyer's Credit

In hopes of spurring the housing industry, the 2009 Recovery Act enhances the first-time homebuyer's credit. n2 A refundable credit for first-time homebuyers equal to the lesser of $7,500 ($3,750 for married individuals filing separately) or 10 percent of the purchase price of a principal residence was added by the Housing Assistance Tax Act of 2008 (the "2008 Act"). n3 The 2009 Recovery Act increases the maximum amount of the credit to $8,000 ($4,000 for married individuals filing separately). (As provided in the Housing Assistance Tax Act, the credit phases out for taxpayers with modified adjusted gross income between $75,000 and $95,000 ($150,000 to $170,000 for joint returns, n4 and is not available for purchases from a related party). n5

This credit originally applied to principal residences purchased on or after April 9, 2008 and before July 1, 2009. The 2009 Recovery Act has extended the credit to apply to principal residences purchased before December 1, 2009. In addition, prior to the 2009 Recovery Act, a taxpayer could elect to treat a residence purchased in 2009 (and before July 1) as if it occurred on December 31, 2008 for purposes of taking the credit on the taxpayer's 2008 return. This election is still available for homes purchased prior to the December 1, 2009 date.

As originally enacted, the homebuyer's credit had to be recaptured ratably, with no interest charge, over 15 years, beginning in the second taxable year after the year in which the home was purchased. n6 Thus, the credit was more like an interest-free loan from the government to the taxpayer. For example, if the taxpayer purchased the home in 2008, and a $7,500 credit was allowable on the 2008 return, annual repayments of $500 per year for 15 years [$7,500 / 15 years, or 6 2/3 percent of the credit] began with the 2010 return. However, to make home buying more attractive, the 2009 Recovery Act waives this recapture rule for home purchases made in 2009 (prior to the December 1, 2009 deadline). n7

For principal residences purchased in 2008, if the taxpayer sells the home (or ceases to use the property as a principal residence), prior to complete recapture of the credit, any remaining recapture amount is due on the tax return for the year in which the home is sold (or is no longer used as a principal residence). n8 There are exceptions to this recapture payment upon certain events, such as death, certain involuntary conversions, transfers between spouses or incident to divorce, and where gain on sale does not exceed the recapture amount. n9

The 2009 Recovery Act has liberalized this recapture rule also, and provides that for a principal residence purchased after December 31, 2008 and before December 1, 2009, this recapture rule will apply only if the taxpayer sells the home (or ceases to use the property as a principal residence), during the 36-month period beginning on the date of the purchase of that residence by the taxpayer. n10

As originally enacted, the *I.R.C. § 36* homebuyer's credit did not apply if the taxpayer was entitled to the Washington, D.C. homebuyer's credit. For residences purchased after December 31, 2008 and prior to December 1, 2009, the 2009 Recovery Act allows qualifying taxpayers to take the more generous credit under *I.R.C. § 36*, but denies them the D.C. credit. n11

If a purchase of a residence was financed with the proceeds of qualified mortgage revenue bonds, it was originally not eligible for the homebuyer's credit. The 2009 Recovery Act eliminated that restriction, so that the purchase of a home may now be financed with qualified mortgage revenue bonds. n12

STA3.02 S Corp Built-in-Gain Provisions Liberalized

The *Housing Assistance Tax Act* allows a "real property tax deduction" for non-itemizers in addition to the standard deduction amount indicated above. n18 Taxpayers can deduct up to $500 for single taxpayers ($1,000 for joint returns) for real property taxes paid. n19

S corporations are taxed as flow-through entities, similar to partnerships, with the S corporation itself generally not subject to tax. n13 However, if a corporation that was formerly a C corporation elects to be taxed as an S corporation, the net appreciation in its assets at the time the S election became effective ("net built-in gain") is subject to a corporate level tax, if that built-in gain is recognized within 10 years of becoming an S corporation. n14 This results in two levels of tax on the disposition of former C corporation assets, since the S corporation shareholders also report on their personal returns their share of S corporation income. n15 Any built-in gains recognized during this 10-year period by the S corporation are taxed at the highest corporate tax rate, currently 35%. n16

The 2009 Recovery Act has reduced the 10-year recognition period, presumably to stimulate sales of assets, or to reduce the tax burden on S corporations forced to sell assets. Under the new law, for S corporation tax years beginning in 2009 and 2010, the 10-year recognition period is reduced to seven years. Thus, for 2009 and 2010, no corporate-level tax is imposed on the net recognized built-in gain of an S corporation if the seventh tax year in the recognition period preceded such year. n17 This amendment applies to taxable years beginning after December 31, 2008. n18

For example, if a corporation made an S election that was effective January 1, 2002, the built-in gain rules would cease to apply to any built-in gains recognized in 2009, since seven tax years preceded 2009. Such a corporation could sell assets in 2009 or 2010 with one level of taxation on the built-in gain, which otherwise would have been subject to two-levels of taxation.

Special Tax Alert: American Recovery and Reinvestment Act of 2009: Changes Affecting Real Estate *

1-ch0015sa3 Thompson on Real Property, Thomas Editions STA3.03

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

STA3.03 Changes Impacting the Low-Income Housing Tax Credit

The low-income housing credit n19 is a tax credit available for owners of certain low-income housing buildings. A fixed amount of credits is provided annually to each state, and the State or local housing credit agency allocates credits to owners of qualified low-income housing properties. n20

Due to the economic downtown, potential investors, with reduced taxable income, are less attracted to low-income housing tax credits. In order to give States added flexibility and encourage the building of low-income housing, the Treasury will allow States to elect to receive a grant to a State's housing credit agency, up to a certain maximum amount based on the State's credit allocation. n21 The State's low-income housing credit limit for 2009 is reduced by the amount of the grant.

A State housing credit agency receiving this grant must use the grant to make subawards to finance the construction, or acquisition and rehabilitation, of qualified low-income buildings. n22 Any building receiving grant money from a subaward is required to satisfy the low-income housing credit rules. Any grant funds not used to make subawards before January 1, 2011 must be returned to the Secretary of the Treasury. n23

Grants under this program will not be taxable income to the recipient, and will not reduce the tax basis of a qualified low-income building. n24

FOOTNOTES:
(n1)Footnote 19. *See I.R.C. § 42*.

(n2)Footnote 20. The credit authority provided to each State for calendar year 2009 is $2.30 per resident, with a minimum annual cap of $2,665,000 for certain small population states. *Rev. STA3.04 Pass-Through of Tax Credit Bond Credits by RICS and REITS

Holders of certain tax credit bonds receive a tax credit in lieu of interest. The credit is treated as interest that is includible in gross income. n25 A regulated investment company ("RIC") which holds qualified tax credit bonds n26 may pass-through those credits to its shareholders. n27 Prior to the 2009 Recovery Act, the Secretary had not prescribed procedures for the pass-through of the credit to RIC shareholders.

Under the 2009 Recovery Act, a RIC can make an election to pass-through credits on tax credit bonds, n28 with future Treasury guidance to prescribe rules concerning the time and manner of making the election and methods for determining a shareholder's proportionate share of the credits. n29 An electing RIC may not itself take any of the credit, and must report the interest income with an offsetting dividends paid deduction. Each RIC shareholder is required to include a share of the credits as interest, and is allowed a proportional share of the credits. n30 A qualified tax credit bond for this purpose, with respect to RICs, will now also include a build America bond, as defined in *I.R.C. § 54AA(d)*, and any other bond for which a tax credit is allowable. n31

With respect to real estate investment trusts ("REITs") holding qualified tax credit bonds, the REIT is likewise allowed to pass through the credits (together with the income that relates to the credits) to the REIT beneficiaries (shareholders). n32

FOOTNOTES:
(n1)Footnote 25. *I.R.C. § 54A(f)*.

(n2)Footnote 26. The following bonds are qualified tax credit bonds: qualified forestry conservation bonds, new clean renewable energy bonds, qualified energy conservation bonds, a qualified zone academy bonds, and qualified school construction bonds. *See I.R.C. § 54A(d)(1)*.

STA3.05 Changes to Residential Energy Efficient Property Credit

Prior to the 2009 Recovery Act, a 10% tax credit was available for the purchase of qualified energy efficiency improvements to a taxpayer's principal residence. n33 Qualified improvements included insulation materials, exterior windows and doors, certain roofing, as well as the purchase of specific energy efficient heating or cooling equipment. This credit was available for property improvements made after December 31, 2005 and before January 1, 2008, with a maximum $500 credit allowable to a taxpayer with respect to the same dwelling for all taxable years. Thus, the credit expired for calendar year 2008.

The 2009 Recovery Act reinstates the non-business energy credit of *I.R.C. § 25C* for expenditures made and property placed in service during 2009 or 2010. n34 In addition, the 2009 Recovery Act increased the credit amount to 30% with a maximum credit of $1,500. n35

STA3.06 Alternative Minimum Tax Changes

The 2009 Recovery Act made several changes to the Alternative Minimum Tax ("AMT"), including:

- Increasing the AMT exemption amounts for 2009 to $70,950 (up from $69,950 in 2008) for married couples filing jointly, n36 and to $46,700 (up from $46,200 in 2008) for unmarried taxpayers. n37

- Providing that tax-exempt interest on private activity bonds issued in 2009 and 2010 will no longer be a tax preference item for AMT purposes, meaning the interest will be exempt for AMT purposes also. n38

- Allowing personal credits to offset AMT through 2009. n39

STA3.07 Depreciation Provisions

Although not generally applicable to real property, the 2009 Recovery Act made several changes to the depreciation and expensing rules for tangible personal property assets, including

- Extending the bonus depreciation rules of *I.R.C. § 168(k)*; n40

- Extending through 2009 the increased amount ($250,000) that can be expensed under *I.R.C. § 179*. n41

STA3.08 Expanded Net Operating Loss Carryback for Small Businesses

A business net operating loss ("NOL") can generally be carried back two years and forward 20 years. n42 The 2009 Recovery Act provides that an eligible small business may elect a three-, four-, or five-year carryback period for 2008 NOLs. n43 This temporary extension of the NOL carryback period allows taxpayers who experienced economic downturns to use more of those losses to obtain refunds of income taxes from prior years.

STA3.09 Qualified Small Business Stock Gain Exclusion

Prior to changes made by the 2009 Recovery Act, noncorporate taxpayers could exclude 50% of the gain recognized on the sale or exchange of "qualified small business stock" that was acquired at original issue and held for more than five years. n44 Under the 2009 Recovery Act, the percentage exclusion for qualified small business stock is increased to 75% for stock issued after February 17, 2009 and before January 1, 2011. n45

SPECIAL TAX CREDIT ALERT ON THE WORKER, HOMEOWNERSHIP, AND BUSINESS ASSISTANCE ACT OF 2009: EXTENSION OF AND CHANGES TO THE FIRST-TIME HOMEBUYER'S CREDIT 1

1-SA Tax-2 Thompson on Real Property, Thomas Editions § STA1.01

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA1.01 Extension of Tax Credit

Viewed as an important measure to continued economic recovery, **the tax credit has now been extended to residences purchased before May 1, 2010**.Tax-2_and_@_STA1.01)_and_footnotes(n1);.vk n4 In addition, taxpayers who enter into a binding written contract before May 1, 2010, to close on the purchase of a principal residence before July 1, 2010 may also still be eligible for the credit.Tax-2_and_@_STA1.01)_and_footnotes(n2);.vk n5

In addition to extending the time during which the first-time homebuyer's credit is available, H.R. 3548 also extended the credit to taxpayers who are not "first-time" homebuyers. *I.R.C. § 36(c)(6)* now allows "**long-time residents**" -- those taxpayers who have owned and used the same residence as their principal residence for any 5-consecutive-year period during the prior 8-year period -- to take the credit on the purchase of a new residence.Tax-2_and_@_STA1.01)_and_footnotes(n3);.vk n6 However, the maximum credit allowed for these "long-term residents" is only $6,500.Tax-2_and_@_STA1.01)_and_footnotes(n4);.vk n7

The new legislation will also make the credit available to **higher-income taxpayers**. Prior to the enactment of H.R. 3548, the homebuyer's credit was phased out for taxpayers with modified adjusted gross income between $75,000 and $95,000 ($150,000 to $170,000 for joint returns). The phase-out now starts at $125,000, rather than $75,000 (and $ 225,000 for joint returns).Tax-2_and_@_STA1.01)_and_footnotes(n5);.vk n8

SPECIAL TAX CREDIT ALERT ON THE WORKER, HOMEOWNERSHIP, AND BUSINESS ASSISTANCE ACT OF 2009: EXTENSION OF AND CHANGES TO THE FIRST-TIME HOMEBUYER'S CREDIT 1

1-SA Tax-2 Thompson on Real Property, Thomas Editions § STA2.02

AUTHOR: By Patricia Hughes Mills, J.D., L.L.M. Professor of Clinical Accounting University of Southern California's Leventhal School of Accounting

§ STA2.02 Limitations to Tax Credit

H.R. 3548 does, however, add new limitations.

New Cap on Home Price

For purchases after the date of enactment (November 6, 2009), the credit cannot be claimed on the purchase of a residence if its purchase price exceeds **$800,000**.Tax-2_and_@_STA1.02)_and_footnotes(n1);.vk n9

Anti-Abuse Provisions

Several new anti-abuse provisions were added.

- In order to be eligible for the homebuyer's credit, the taxpayer must now **be at least 18 years old**,Tax-2_and_@_STA1.02)_and_footnotes(n2);.vk n10 and not be claimed as a dependent by another taxpayer for the year of purchase.Tax-2_and_@_STA1.02)_and_footnotes(n3);.vk n11

- Moreover, the taxpayer must attach a **properly executed copy of the settlement statement** used to complete the purchase in order to take the credit.Tax-2_and_@_STA1.02)_and_footnotes(n4);.vk n12

- The homebuyer's credit is not available if the residence is purchased from a **related party**, and H.R. 3548 has expanded the definition of related party to include relatives of the taxpayer's spouse.Tax-2_and_@_STA1.02)_and_footnotes(n5);.vk n13
