§ 46.02(a) In General. [Go To Main]

Add:

In re Laurel Hill Paper Co., 393 B.R. 372 (M.D. N.C. 2008) (subjective intent considered in determining whether an item is a fixture; paper making machine and pulp preparation and deinking equipment were not fixtures).

§ 46.02(b)(1) The Physical Annexation Requirement.

Add:

Harris County Flood Control Dist. v. Roberts (252 S.W.3d 667 (Tex. App. 2008) (billboard sign structure was a fixture); *Milnes v. Milnes, 175 P.3d 1164 (Wyo. 2008)* (manufactured home was a fixture); *Sun Life Assur. Co. of Canada v. Schrock Rd. Mkts., Inc., 883 N.E.2d 1107 (Ohio App. 2008)* (door sensors/openers and rooftop units were not fixtures).

Add:

Copple Construction, L.L.C. v. Columbia National Insurance Company, 776 N.W.2d 503 (Neb. 2009) (a tarp was considered a fixture for the purpose of a loss under an insurance policy).

Add:

High Concrete Technology, LLC v. Korolath of New England, Inc., 665 F. Supp. 2d 883 (S.D. Ohio 2009) (plastic shims installed in construction projects did not become fixtures upon installation).

§ 46.02(b)(2) Adaptation to the Use of the Real Estate.

Add:

Harris County Flood Control Dist. v. Roberts, 252 S.W.3d 667 (Tex. App. 2008) (billboard sign structure was a fixture); *Milnes v. Milnes, 175 P.3d 1164 (Wyo. 2008)* (manufactured home was a fixture).

Add:

City of Englewood v. Miami Valley Lighting, L.L.C., 911 N.E.2d 913 (Ohio App. 2009) (a street lighting system was not a fixture, even though there was a high degree of attachment, because they were intended to be removed if the provider's contract was not renewed).

§ 46.02(b)(3) The Intent of the Annexor.

Add:

Sun Life Assur. Co. v. Canada v. Schrock Rd. Mkts. Inc., 883 N.E.2d 1107 (Ohio App. 2008) (door sensors and openers were not fixtures under a lease provision that items attached to property by tenant remained property of the tenant); *Freeman v. Barrs, 237 S.W.3d 285 (Mo. App. 2007)* (cattle scale was a fixture and was included in the sale of the underlying land).

Add:

City of Englewood v. Miami Valley Lighting, L.L.C., 911 N.E.2d 913 (Ohio App. 2009) (a street lighting system was not a fixture, even though there was a high degree of attachment, because they were intended to be removed if the provider's contract was not renewed).

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.01

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.01 Introduction.

Every nation desires to have a sufficient land base to meet its perceived national needs. Indeed, the history of many nations, including ours, is largely the history of its struggle to acquire, control and occupy the space perceived as necessary to sustain the quality of life commonly sought in that nation. That struggle is ongoing. Some land will always be needed for the production of food and fiber. Other land will be needed for residential occupancy or for industrial uses. Some land will be needed for recreational use and some for defense purposes. Much land will be dedicated to transportation or power production and so forth. Since the same land cannot always be used for more than one use at a time, all of these various uses must compete with each other for space. The availability of land for agricultural purposes has been and will always be a significant issue as national and local public policy regarding the use of the land is developed.

In our nation, we have historically taken the position that it is the patterns of use rather than the exercise of individual choices that predominantly determine whether the particular public interest objectives of having enough land available for such purposes as food production, defense, residential and commercial use may be efficiently accomplished. Nevertheless, great deference is typically given to the role of individual choice in the process of determining those basic patterns of land use and which specific parcels may be used for which particular purposes to meet those national and local needs. These rights of choice are generally protected within the *law of property* in our system and are regarded as highly valued rights of the landowner. Because of the significant concern to the public at large that such choices be made wisely and collectively meet national land use needs, the nature, extent and content of those rights may be limited from time to time in order to achieve the greater public interest.

Thus, historically, our system generally has preferred to influence patterns of use rather than mandate particular choices. To a considerable extent this has focused regulatory efforts specifically on the individual land use choice decision only to the extent necessary to achieve the desirable pattern. Thus, limitations in the individual rights are generally avoided, if possible, but are most likely to arise when the nature of the right is considered to be in conflict with the larger public purposes and interest in use patterns.

Reconciling the public need for desirable patterns with our legal system's predilection for unrestricted individual land use choice has always been a difficult matter. Whether a particular landowner gets to decide if a certain parcel of land is

used for particular purposes is an intriguing issue and a difficult legal question that consumes much time and energy in our legal system. The issue of control over the land use decision making reflects our concerns with several dimensions of agriculture and cannot be understood without some reference to both the social and legal context of agriculture. The ultimate concern of this chapter is the extent to which governments at both the federal and state or local levels have the power to control land use decision making and the extent to which an individual landowner may be compelled to dedicate a particular parcel of land to a particular use in order to create a particular pattern of use.

There has been a growing national concern in recent years that the trend in agriculture toward fewer and larger farms may jeopardize the long-term ability of our farmers to adequately feed and clothe the nation. It has been recently announced that the number of farms in the United States has now dropped below 2 million. According to the Census Bureau, there are now 1.925 million farms, which is the lowest number since 1850. The trend toward fewer but larger farms has been going on for most of this century. The national highpoint in terms of numbers of farms occurred in 1935 when there were 6.8 million farms. n1

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.02

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.02 The Social Context of Agriculture.

Agriculture is generally and broadly thought to comprise the production of food, fiber and certain fuels such as gasohol, and the related activities of those who participate in the production, processing, storage or marketing of agricultural commodities. As such, although there are relatively few individual farmers, n2 the agricultural sector of the economy is enormous and constitutes one of the most significant features of our nation.

The law, of course, has a considerable interest in the activities of this sector. In some respects, this has resulted in the creation of a regulatory framework that is rarely, if at all, exceeded elsewhere. n3

Although no area of the law can be completely understood separate from its cultural and social context, this is particularly the case with regard to agriculture. First, most people in this country know little about agriculture, even though they are, at most, probably not more than a generation or two removed from the farm. n4 This has given rise to much misunderstanding regarding the needs and practices of the farm sector which, on occasion, has become the basis for particular, albeit arguably inappropriate, legal responses. n5

Second, as a nation, we have become essentially an urban oriented and dominated society. Even in rural areas, the non-farm rural typically outnumber the farm-rural by an eight-to-one (or more) margin. This quite clearly has had the effect of lodging control over most of the legal policy making and decision making that occurs with respect to agriculture in the hands of urban interests which, in the perception of many farmers, may tend to be more interested in the production of abundant but cheap supplies of food and fiber than they are in the stability or long-term viability of the agricultural sector. This has given rise to an interesting ambivalence toward agriculture that at once suggests both a need to protect and a need to regulate.

Finally, one must note the social role of farming. Although farming is certainly an economic enterprise, it is also a social institution, a way of life and even an attitude toward the universe. n6 One might argue, for example, that farming, at some level, may actually represent the key to national social well-being. n7 Similarly, one might note the strong national psychological needs associated with ownership and self-sufficiency that are expressed in the family farm concept of land tenure. n8

This social and cultural background has generated an interesting and unique relationship between the law and agriculture that probably doesn't have a counterpart anywhere else in our society.

FOOTNOTES:
(n1)Footnote 2. U.S.D.A. estimates that there are approximately 2 million farmers in the United States today. For a discussion of the U.S.D.A. measurement criteria, *see* James Wadley, *Small Farms: The USDA, Rural Communities and Urban Pressures, 21 Washburn L.J. 478 (1982).*

(n2)Footnote 3. *See Cuismano v. Block, 652 F.2d 11025 (5th Cir. 1982)* where the court observed that the business of marketing perishable agricultural commodities was so pervasively regulated that there could be no reasonable expectation of privacy that would shield someone who was subject to the federal record-keeping requirements from the risks of unannounced and warrantless searches and seizures.

(n3)Footnote 4. The average American takes his food and fiber supply very much for granted. He gives little, if any thought to the process by which foods and fibers make their seemingly miraculous appearance in supermarkets and boutiques. When some thought is given to the human element in the production of these items, the 'farmer' is vaguely and inconsistently conceived of as a cross between a noble visionary worthy of residence on the banks of Walden Pond and a country bumpkin growing fat on government subsidies. This popular view ... is patently false but nonetheless revealing of the ill-defined role and self-image of those who produce America's unequalled quantities of food and fiber.

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.03

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.03 The Legal Context of Agriculture.

[Go To Supp]

The law tends to relate to agriculture in one of three ways. n9 First, the law may apply to agricultural enterprise in the same fashion as it applies to any other enterprise. Thus, contracts involving agriculture operate on the same principles as do other kinds of contracts, without any particular distinction resulting from the fact that agriculture is involved. Similarly, it matters little to the law of torts that it may be a farmer who assaults another or who is assaulted. In either case, the incident may be considered actionable within tort law, without any additional consideration for the fact that agriculture is somehow involved. This body of law operates on the assumption that agriculture is no different from any other enterprise insofar as the law is concerned.

Second, there is a vast body of law that is specifically designed to address agricultural problems. This body of law has little or no application elsewhere and usually owes its existence to the perception that agriculture is indeed different from other kinds of enterprises. For example, federal market orders, n10 which may be imposed upon handlers without their consent under certain circumstances, may determine the amount of a particular product that those handlers may lawfully distribute into the marketplace at any particular point in time. Reparation orders, which are conceptually the equivalent of a civil judgment in an administrative proceeding, protect producers of perishable agricultural commodities n11 and certain livestock growers. n12 These, of course, are somewhat unique to agricultural situations. Other examples, while operating on the basis of legal principles that are not unique to agriculture, are nonetheless part of a body of law that has no application to anything else. These include such specialized regulations as the federal price support program for feed and foodgrains; n13 the use of Payment-in-Kind-Certificates as money in lieu of cash to satisfy government payment obligations; n14 sodbuster and swampbuster regulations; n15 and the conservation reserve program. n16 Collectively, this body of law is highly specialized and specifically focused on agriculture.

Third, there is a significant number of situations in which agriculture is considered sufficiently different from other enterprises that general legal rules are deemed inappropriate. As a general rule, these areas are not collectively or individually the subject of specialized rules but rather have come about in response to the need for exceptions to the general rules in order to accommodate the perceived differences in agriculture. n17 Since these are "carved out" for particular situations, their existence and scope typically will vary widely from jurisdiction to jurisdiction n18 (unless the

exception is federal in nature). n19 For example, in many states, farmers are excluded from workers' compensation laws. n20 Similarly, farm products may be treated differently under Article 9 of the Uniform Commercial Codes (UCC); n21 a farmer may not be considered a merchant under Article 2 of the UCC; n22 farm taxpayers may be given elections or treatment not available to others, etc. n23

These different responses of the law certainly suggest that the law not only has a keen, but a varied, interest in agriculture. Those who deal with this area of the law must be well versed in not only the general law but also the specialized and the exceptional law.

It should be understood that the focus of this chapter is upon how agricultural land is regulated and managed. Obviously, there is much more than that involved within the general topic of government's relation to agriculture, regardless of the level of government that is considered. Notwithstanding the narrowness of the focus of this chapter, from time to time, cases or decisions pertaining to other concerns are pertinent to dealing with governmental actions regarding land. For example, in the case of *Kirby Produce Company v. U.S.D.A., 256 F. 3d. 830 (D.C. 2001),* the court addressed the extent to which Federal agency decisionmaking could be considered arbitrary or capricious. When matters involving governmental agencies are appealed to the courts, the courts are required to uphold the decisions of the Judicial Officer unless the Court finds that the decision was arbitrary, capricious, an abuse of discretion, not in accordance with law or unsupported by substantial evidence. In this case, the officer's decision was based on an arbitrary and capricious conclusion that the merchant, by requesting a continuance of the hearing, had admitted that it could not make a payment, as required by statute, within the time frame required by the statute.

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.04

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.04 The Law and Agricultural Land Generally.

The law approaches agricultural land in the much same fashion as it approaches agriculture as an enterprise. That is, in some instances, general law will apply. In others, there may be exceptions to those rules that must be dealt with. Finally, in certain circumstances, there may be a specialized body of rules that applies only to agricultural land. For example, the sale of agricultural land will typically be subject to the same rules that apply to the sale of any other real property (general law). The land may be valued for tax purposes quite differently from other properties, however (exceptional law). Finally, how the land is actually used may be conditioned upon the presence or absence of an approved conservation plan mandated by federal price support legislation (specialized law). Although this chapter is not organized around these differences in how the law reacts to agricultural land, one is well advised to be aware of them as particular situations are addressed.

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.05

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.05 Definitions.

[Go To Supp]

§ 47.05(a) In General.

An understanding of a few basic terms appears useful in order to appreciate how the law deals with agricultural land. How "agriculture" or "agricultural land" is defined for purposes of statutes and ordinances will generally be a critical issue in determining what permissible uses may be made of the land. n24 These and other terms such as farming, farmers and farmland may be given specialized definitions. In many instances, agriculture and agricultural land will be considered the terms of art whereas farmers, farming and farmland tend to be a part of common parlance. It must be noted, however, that on occasion, even these terms will have particular legal significance. n25 Certainly the list of terms identified here is not exhaustive.

One of the major difficulties that must be addressed with respect to law and agriculture is the variety of definitions that are found for these terms in the many cases and statutes. These vary from those that focus on the production of specifically defined products to those that consider agriculture to be any enterprise that involves the tillage of the soil. Even within the same jurisdiction, the terms may have a variety of meanings, depending upon the purpose associated with their use. n26 Nevertheless, the definitions may determine whether a particular situation is subject to certain rules or qualifies for an available exemption. Although one might suspect that law, as it relates to "agriculture," covers "farming" done by a "farmer" on "agricultural land," the specificity of the various definitions might not produce such a neat, convenient statement of coverage.

Finally, it should be noted that in many cases the terms will be used without any specific definition. In such a case, a court may have to determine the common meanings of the terms and the extent to which they were intended to be used. n27 Typically, where no specific definition is included in the ordinance or statute, courts have tended to give the terms "farming" and "agriculture" their usual and generally accepted meaning. n28

Agriculture is often thought of as involving the raising of livestock. However, what constitutes "livestock" is often uncertain or may vary from statute to statute. For example, Kan. Stat. Ann. § 47-1001, Kan. Stat. Ann. § 65-6a18, and Kan. Stat. Ann. § 47-607 were amended to include "rarities" (ostriches, emus, etc.) within the definition of "livestock." This undoubtedly reflects a growing interest in raising such animals for food or fiber and may call into question some

local animal control ordinances that presently deal with such animals as "exotics" or as pets. An example of such an ordinance is that of the City of Topeka which generally makes it unlawful to keep "cattle, sheep, goats, or other food producing animals" in the city on the ground that they are "livestock." (§ 8-101 *et seq).* The ordinance prohibits "ostriches, emus, rheas, and cassowaries" under its more recently enacted "exotic or captive wild animals" provisions (§ 8-9). It is interesting to note that despite the prohibition against "livestock" in § 8-101, the "exotic pets" part of the ordinance, § 8-9, specifically permits the keeping of "domestic hoofstock." The issue of how to reconcile pet and livestock provisions of the ordinance came up in a case involving a citation issued against a person who allegedly kept a Vietnamese Potbellied Pig in violation of the "livestock" provisions of the statute. The person claimed that the pig was being kept lawfully as a pet under the "domestic hoofstock" provisions of § 8-9. The city preferred to dismiss the case rather than risk a judicial determination that the livestock provisions of the ordinance had been implicitly repealed by the more recent adoption of the section expressly permitting the keeping of domestic hoofstock as pets. "Domestic hoofstock" is not defined in the ordinance. n29 In a 1994 case involving a farm program contract, a farmer argued that the term "producer" was too vague to support a conviction for violating *15 U.S.C. § 714m*(a), which makes it a crime to cause others to represent that they were producers in Commodity Credit Corporation contracts. The farmer argued that differences in the definition of "producer" as used in the farm program regulations, in the farm program contract and as used in testimony in the prosecution demonstrated that the term was fatally vague. The court rejected that argument n30 without resolving the definitional dispute, holding that the individuals involved did not satisfy any of the definitions used. In an Attorney General opinion regarding whether swine finishing facilities constituted "farming" under the Kansas statute restricting the ability of certain corporations to own farmland in the state, the Attorney General ruled that finishing facilities were commercial feedlots and therefore not engaged in farming as defined in *Kan. Stat. Ann.* § 17-5903(h). The opinion cited as authority, T-Bone Feeders, Inc. v. Martin, n31 held that there was a distinction between a commercial feedlot and farming. The commercial feedlot was a specialized agri-business that was engaged in an agricultural endeavor but not engaged in farming. n32

§ 47.05(b) Agriculture.

"Agriculture" tends to be broadly defined in most jurisdictions in terms of the general activities, such as the growing of crops, raising of livestock and the processing and marketing associated therewith. Where a specific definition has been developed, the purpose to be served generally dictates the content of the definition. For example, at one point in time, Kansas narrowly defined agriculture for purposes of its statutes restricting corporate ownership of farmland to include only the "planting, raising, harvesting or gathering of wheat, corn, grain sorghums, barley, oats, rye or potatoes or the milking of cows for dairy purposes." n33 Noticeably excluded from this definition are such things as the raising of sugar beets, alfalfa, hay and native grass pasture, timber, livestock, including cattle, sheep, hogs, poultry and fish, and the raising of fruits, nuts and vegetables (except potatoes), fur-bearing animals and nursery plants. This definition was changed in response to a court decision n34 in which that definition was challenged as arbitrary. The legislature repealed the statute and replaced the definition of agriculture with one which does not define agriculture at all but does define "farming" quite broadly to include "the cultivation of land for the production of agricultural crops, the raising of poultry, the production of eggs, the production of milk, the production of fruit or other horticultural crops, grazing of and the production of livestock." n35 Still specifically excluded are such activities as "the production of timber, forest products, nursery products or sod." Similarly, farming does not include "a contract to provide spraying, harvesting or other farm services." n36

It may be necessary to determine whether a particular activity is included within a broad definition of *agriculture*. Where the definition itself is silent as to a particular activity, the following factors tend to be given significant consideration:

a. The product of the enterprise

b. The resources used in the process

c. The economic organization

d. The technical methods of production

e. The role of the "operator"

f. The relationship between the operator and the resources used in the organization of the enterprise.

In some instances, presumptions may be indulged. For example, for purposes of the Federal Fair Labor Standards Act, n37 "agriculture" is defined as "farming in all its branches" as well as "any practices ... performed by a farmer on a farm or as an incident or in conjunction with such farming operations." n38 This was construed n39 to create a two alternative test for agriculture: (1) some things would be considered agricultural *per se* based on the primary definition of agriculture and (2) some things would be deemed agriculture *as a matter of fact* based upon whether they were performed by a farmer in conjunction with a farming operation. In the former category would fit such activities as the cultivation and tillage of the soil, dairying, the production, cultivation, growing and harvesting of crops, the raising of bees, livestock, fur-bearing animals and poultry. n40 In the latter category are such things as preparation for market, delivery to the market or delivery to storage *provided the activity is done by a farmer or on a farm in conjunction with or as an incident to* farming. n41 In this situation, no matter how closely connected a practice might be to a farming operation, if the activity is not agricultural per se, it will not be presumed to qualify as agricultural unless the other alternative definition is satisfied.

The construction of definitions of "agriculture" or "agricultural" tend to be somewhat broader than definitions of "farming." n42 Under these definitions, courts tend to focus on what is *customary and normal* in agricultural enterprise unless a more specific ordinance definition is applicable. n43

In a 1994 case in Kansas, the Court of Appeals held that a dog kennel was not an agricultural operation so as to be exempt from zoning regulations. The court found that the raising of greyhounds did not constitute the raising of livestock under any definition in the Kansas statutes and hence would not be considered to be an agricultural activity. n44 Agriculture has been defined to include the growing or raising of horticultural and agricultural crops, hay, poultry and livestock for commercial purposes. n45 The Attorney General in Kansas has ruled that swine finishing facilities do not constitute "farming" under the Kansas statute restricting the ability of certain corporations to own farmland in the state. The opinion cited as authority, T-Bone Feeders, Inc. v. Martin, n46 held that there was a distinction between a commercial feedlot and farming. The commercial feedlot was a specialized agri-business that was engaged in an agricultural endeavor but not engaged in farming. n47

§ 47.05(c) Agricultural Land.

In contrast to the specificity with which "agriculture" is defined, "agricultural land" is generally very simply defined as land that is "available" or "suitable" or "actually used" for agricultural purposes. n48

This definition may be construed broadly or narrowly. Broad definitions are likely to be found where agricultural land is considered to be synonymous with open space or rural areas. n49 Narrow or specific definitions are possibly more likely where the concern is with particular practices that might occur on the land or with particular parcels of land. n50 As a result, it is somewhat difficult to predict whether a particular parcel of land will be considered agricultural or not. Where the activity is susceptible of various classifications, the decision tends to be made on the basis of whether the agricultural activity is the "principal" or "dominant" activity that occurs on the land. n51 Even so, curious decisions sometimes result. For example, a cattle lease without any evidence of actual cattle grazing was sufficient in one case to deny an "agricultural land" classification to an uncultivated, overgrown parcel of land. n52 In contrast, active cattle grazing has been held sufficient to allow the land to be considered agricultural despite considerable preparatory activities to engage in mining on the same parcel. n53

In some jurisdictions, land may be considered to be agricultural in nature either on the basis of the land's potential for such a use or upon the intentions of the landowner in making such a use. The difficulty with any definition that does not depend upon any actual, present use, is that of showing the true potential of the land for agricultural purposes. Where such potential can be shown, the lands may be treated as agricultural even though no agricultural activity takes place. This is often the case under zoning or subdivision regulations that tend to equate "undeveloped" with "agricultural" lands.

Jurisdictions which have attempted to define agricultural use on the basis of the landowner's intent are similarly problematic. Since these definitions typically require that a "bona fide" agricultural use be made before particular benefits may be claimed, n54 it is necessary to somewhat subjectively qualify the intent of the landowner, which is usually a difficult task. Some courts have responded to this by considering the good faith of the landowner despite the lack of objective criteria that might establish that the land is used for agricultural purposes. n55

In jurisdictions where tax statutes give a preference to agricultural use, determining whether land is actually being used for agricultural purposes has been a particular problem. This is because a developer may wish to acquire land some time in advance of the actual development and then hold that in some kind of "agricultural use" until that future development date in order to avoid the increases in land taxes that may result from development. Such tax savings may be substantial where the land is valued according to its "use" value as opposed to its "fair market value." In a Kansas case, n56 the Court of Appeals construed broadly the statutory definition of "agricultural land" and rejected arguments that the intent of the land owner was relevant to the determination of whether the land was actually being used for agricultural purposes. In this case, the land was located within the city limits, was completely enclosed by a fence and was exclusively seeded to fescue and cut periodically as hay. There were no farm or rural homesites associated with the land. The local appraiser had classified the land as "vacant" and had taxed it accordingly. The board of tax appeals found that the land was devoted to agricultural use. It found that there was no requirement that the land owner make a profit from the land, and it did not matter what the surrounding landowners did with their land. Further, it did not matter what the landowner eventually intended to do with the land. The County argued that the statutory phrase "devoted to agriculture" required a serious and good faith undertaking of agricultural activity and precluded any temporary agricultural activity that was designed to avoid tax liability. The Court of Appeals upheld the board of tax appeals.

The issue of whether land qualifies as agricultural may be the predicate to claiming particular benefits under the law. This is critical, for example, where the land may be valued at a different rate if it is "agricultural land" or where the liability of the landowner may be different because the land is devoted to agriculture. In one case, n57 a church argued that its "vacant" land should be considered to be "agricultural land" for purposes of a state statute that shielded the landowner from liability for harm suffered by recreational users of agricultural land. The court held that the legislature had deliberately narrowed the definition of land to which the protection of the statute applied and ruled against the church.

§ 47.05(d) Farming.

In some ordinances and statutes, the term "farming" will be used instead of the term "agriculture." In most cases, this term will be strictly defined to mean only the raising of crops or animals. Such a construction may exclude related commercial, industrial or residential enterprises from being considered a part of farming. n58 A common definition of "farm" is a parcel of land of a fixed number of acres which is used primarily to raise or produce agricultural products. This definition may include the customary or essential buildings such as barns, storage facilities, and equipment sheds which accompany such activities. n59 In fact, at least one jurisdiction has held that such a structure cannot be prohibited from an area merely because it is possibly detrimental to the neighborhood when it is included within the definition of "agriculture" or "farming." n60

Farming is not necessarily synonymous with agriculture, nor may it be synonymous with ranching. n61 For example,

farming may be used to distinguish horticulture from the raising of livestock as in the notion that farmers are not ranchers. n62 It might also be considered a narrow subset of agriculture, as where those who raise timber or process farm products are sometimes not considered to be farmers even though they arguably are engaged in agriculture.

Farming may also be considered as requiring active participation in the agricultural operation. One court, for example, held that a corporation was not engaged in farming because, although it held an interest in the land, it had leased the land to the individual who actually farmed the land and since the lease was a cash rent lease, the corporation was not involved in any of the daily decision making that was necessary to run the operation. n63 In a similar fashion, for federal income and certain estate tax purposes, an individual taxpayer must "materially participate" in the operation before claiming the status of being a farmer. n64

§ 47.05(e) Farmer.

The definition of a farmer is one of considerable variation. A farmer may simply be "one who earns his living by farming." n65 A farmer may also be much less or even much more. For example, at the federal level, the Treasury Department generally limits "farmer" status to those that receive a particular portion (such as two-thirds) of their income from a farming (though farming is not defined in the Internal Revenue Code). n66 Similarly, the Justice Department has taken the position that "the bearing of the risk of loss of the agricultural product distinguishes farmers from non-farmers..." n67 Finally, in the Fifth Circuit decision n68 which was affirmed in *United States v. National Broiler Marketing Association*, n69 the judge held that "whatever else farming may mean, an irreducible minimum must be either husbandry of animals or crops or farm ownership." n70

Under federal price support laws, n71 farmers may be limited in the amount of particular payments they may receive. n72 Under current regulations, each farmer may receive only $50,000. n73 On the other hand, there may be more than one "farmer" per farm and as a result, each farm may receive more than the minimum amount. To be considered a "farmer" for payment purposes, one has to fit the definition of a "person."

According to the current regulations, n74 one is a "person" if one is "an individual, joint stock company, corporation, association, trust, estate, or other legal entity." In addition, one must: n75

1) have a separate and distinct interest in the land or the crop involved;

2) exercise separate responsibility for each interest; and

3) be responsible for the cost of farming related to such interest.

This generally means that one is actively engaged in the production of agricultural products, though one is not required to do all the work, provide all of the capital, assume all of the risk, etc. Farmers have sometimes considered the possibility of restructuring the farm operation to increase the number of "persons" involved and thereby increase the amount of payments to which they may be entitled. Indeed, the law permits some changes that will have the effect of increasing the number of "persons" entitled to payments so long as the changes are bona fide and substantive. n76 A substantive change includes a substantial increase or decrease in the size of the farm by purchase or sale or lease or a substantial increase or decrease in the size of the allotment by purchase, sale or lease, a change from a cash lease to a share lease and vice versa, and so forth. n77 The determination of one's status as a "person" and any changes thereto is made by the county committee of the Agricultural Stabilization and Conservation Service (A.S.C.S).. The 10th Circuit considered whether a change in the nature of a farm partnership could constitute a bona fide and substantial change. n78

§ 47.05(f) Farmland.

Definitions of farmland tend to parallel those of agricultural land and will often be used interchangeably with

agricultural land. Such definitions may be narrow n79 or broad or may not distinguish at all between agricultural land and farmland. n80 The United States Department of Agriculture's Soil Conservation Service uses soil type and other characteristics to distinguish "prime farmland" from other kinds of farmland. Prime farmland tends to be defined as land that has the best combination of physical and chemical characteristics for producing food, feed, forage, fiber, and oilseed crops, and is also available for those uses. Like definitions of agricultural land, it may not be necessary to make an actual farming use of the land in order to qualify as farmland. Further, farming activities which do not constitute the dominant or primary use of the land may not be sufficient to bring the land within the jurisdiction's particular definition of farmland.

FOOTNOTES:

(n1)Footnote 24. For further discussion of agricultural definitions in a land use context, *see* Annotation, *Construction and Application of Terms "Agricultural", "Farm" or the Like in Zoning Regulations, 97 A.L.R.2d 702 (1964).*

(n2)Footnote 25. *See, e.g.*, Kan. Stat. Ann. § 2-3203 which grants protection against nuisance actions to certain agricultural activities conducted on *farmland*. Kan. Stat. Ann. § 2-116-118 authorizes the creation of *farmers'* institutes within the several counties of the state.

(n3)Footnote 26. For example, for purposes of the Kansas statute dealing with the protection of farmland and agricultural activities from nuisance liability, "agricultural" is defined as "the growing or raising of horticultural and agricultural crops, hay, poultry and livestock, and livestock, poultry and dairy products for *commercial purposes*." (emphasis added.) In contrast, in the same jurisdiction, a statute dealing with development of land near water impoundments defines "agriculture" in terms of activities that involve the use of the land for "growing crops or pasture and functions related thereto, and the feeding of livestock by *a resident on the land*." (emphasis added.)

(n4)Footnote 27. For example, although the planning and zoning statutes exempt "land used for agricultural purposes" and "the erection and maintenance of buildings" on agricultural land "for such purposes," the statute does not define what constitutes an agricultural purpose. *See* Kan. Stat. Ann. § 12-758.

(n5)Footnote 28. *Fidler v. Zoning Bd. of Adj. of Upper Macungie Twp., 182 A.2d 692 (Pa. 1962):*

"Since the township ordinance failed to define 'agriculture' or 'agricultural' the term must be interpreted and applied in accordance with its usual and generally accepted meaning."

In *Town of Lincoln v. Murphy, 49 N.E.2d 453 (Mass. 1943),* the court gave these guidelines for interpreting the term "farm":

> We need not pause to discuss the different shades of meaning the word has acquired under the statutes involved in these decisions for we are of the opinion that, in the instant case, the word should be given its usual and commonly understood significance. There is nothing in either by-law indicating that any special or peculiar meaning was intended.

When the issue is the meaning of the term in authorizing legislation, it may be necessary to consider definitions found in other portions of the statutes. It is interesting how many different ways "agriculture" may be defined in a particular jurisdiction to reflect subtle differences in statutory purposes. For example, the Kansas Farm Corporation statute, Kan. Stat. Ann. § 17-5903(g), defines farming as:

the *cultivation of land* for the production of agricultural crops; the raising of poultry, the production of fruit or other horticultural crops, grazing or the production of livestock. Farming *does not* include a contract to provide spraying, harvesting or other farm services. (emphasis added)

The Kansas Cooperative Marketing statute, Kan. Stat. Ann. § 17-1600 *et seq.* provides in 17-1602(a): "(a) The term 'agricultural products' shall include horticultural, viticultural, forestry, dairy, livestock, poultry, bee, and farm and ranch products." The Kansas Farm Nuisance Law, Kan. Stat. Ann. § 2-3201 *et seq.* defines agricultural activity in § 2-3203: "(a) 'Agricultural activity' means the growing or raising of horticultural and agricultural crops, hay, poultry and livestock, and livestock, poultry and dairy products for *commercial* purposes." (emphasis added)

The statute regulating development around water impoundments, Kan. Stat. Ann. § 65-185(d), defines "agricultural use" as: "... use for growing crops or pasture and functions related thereto, and the feeding of livestock by a *resident on the land*." (emphasis added)

Care should be taken, of course, to insure that when other statutes are relied upon for definition purposes, the term is not be taken out of context.

(n6)Footnote 29. For an interesting case in which a domestic pig was considered to be a "pet" rather than "livestock" under a zoning ordinance that prohibited "livestock," *see Foster Village Community Ass'n v. Hess, 667 P.2d 850 (Haw. App. 1983).*

(n7)Footnote 30. *United States v. Huntsman, 17 F.3d 1136* (8th Cir., 1994); *United States v. Huntsman, 595 F.2d 1429* (8th Cir)., *cert. denied, 113 S. Ct. 201 (1992).*

(n8)Footnote 31. *236 Kan. 641 (1985).*

(n9)Footnote 32. Att'y Gen. Op. 97-72 (Sept. 15, 1997). In contrast, in two cases in Iowa, the courts have eliminated such a distinction. In *Thompson v. Hancock County, 539 N.W.2d 181 (Iowa 1995),* and *Keuhl v. Cass County, 555 N.W.2d 686* (Iowa, 1996), the Iowa Supreme Court determined that large commercial hog facilities were engaged in agriculture for purposes of zoning laws. In so doing, the court overturned the long-standing precedent, *Farmegg Prods., Inc. v. Humboldt County, 190 N.W.2d 454 (Iowa 1971).* The rule in Iowa had been that agricultural use was to be defined in terms of "traditional" activities.

(n10)Footnote 33. Kan. Stat. Ann. § 17-5901 (now repealed).

(n11)Footnote 34. Kansas v. E.I. Du Pont de Nemours, 80 Civil 893 (Shawnee County, Kan., 18 Feb. 1981).

(n12)Footnote 35. Kan. Stat. Ann. § 17-5903(h).

(n13)Footnote 36. Kan. Stat. Ann. § 17-5903(h).

(n14)Footnote 37. *29 U.S.C. §§ 201*-219.

(n15)Footnote 38. 29 C.F.R. § 780.107.

(n16)Footnote 39. *Farmers Reservoir & Irrig. Co. v. McComb, 227 U.S. 755 (1949).*

(n17)Footnote 40. *See* 29 C.F.R. §§ 780.110-780.129.

See Palmer v. Board of Equalization, Eagle County 957 P.2d 348 (Colo. App. 1998) (grazing of pleasure horses not agricultural use for tax purposes).

See also Marzullo v. Kahl, 738 A. 2d 169 (Md. 2001), holding that the business of breeding, raising and selling snakes and reptiles was not a farming activity and therefore not permitted in an area zoned for resource conservation and watershed protection. In *Vlasic Farms Inc. v. Pennsylvania Labor Relations Board, 777 A.2d 80 (Pa. 2001),* the court found that mushroom workers did not come within the agricultural laborer exclusion of the Pennsylvania Labor

Relations Act. In contrast, in *Simons v. Longbranch Farms, Inc, 547 S.E.2d 500 (App. S.C. 2001),* the court found that a minor who operated a forklift without proper instruction, supervision and safety features was an agricultural employee for purposes of the Workers Compensation Act in a wrongful death action.

In *Williamson v. McCall, 19 P.3d. 766 (Id. 2001),* the court held that basically unused land from which timber had been sporadically harvested was not considered agricultural land for purposes of separating the land from city limits. Apparently the excavation of a pond to supply water to a turf farm was considered sufficiently agricultural in nature in *Town of North Kingston v. Albert, 767 A. 2d 659 (R.I. 2001),* to justify holding that dust therefrom fell within a section of the Right to Farm law that specifically exempted dust created during plowing or cultivation operations from becoming either private or public nuisances.

(n21)Footnote 44. *See Weber v. Franklin County Comm'rs, 20 Kan. App. 2d 152 (1994).*

(n22)Footnote 45. *See Weber v. Franklin County Comm'rs, 20 Kan. App. 2d 152 (1994).*

(n23)Footnote 46. *236 Kan. 641 (1985).*

(n24)Footnote 47. Att'y Gen.Op 97-72 (Sept. 15, 1997). The Iowa Supreme Court eliminated the distinction between traditional and commercial agriculture. In *Thompson v. Hancock County, 539 N.W.2d 181 (Iowa 1995),* and *Keuhl v. Cass County, 555 N.W.2d 686* (Iowa, 1996), the Iowa Supreme Court determined that large commercial hog facilities were engaged in agriculture for purposes of zoning laws. In so doing, the court overturned the long-standing precedent, *Farmegg Prods., Inc. v. Humboldt County, 190 N.W.2d 454 (Iowa 1971).* The rule in Iowa had been that agricultural use was to be defined in terms of "traditional" activities.

(n25)Footnote 48. *See, e.g.*, Kan. Stat. Ann. § 17-5903(g): ' "Agricultural land' means land suitable for use in farming."

In *Stewart v. Washington State Boundary Review Board for King County, 996 P. 2d 1087 (Wash. App. 2000),* the court held that the Board did not have the authority to determine whether the County's designation of the property as "Agricultural" was correct. In *Thares v. Brown County Bd. of Equalization, 616 N.W. 2d 380 (S.D. 2000),* the court ruled that it was proper to define property as nonagricultural for tax purposes if the property had nonagricultural income that exceeded 150 percent of its agricultural income value. In *Brandon Charter Township v. Tippett, 616 N.W. 2d 243 (Mich. App. 2000),* the court upheld an exemption under the zoning ordinance which prohibited the parking and storing of commercial equipment within a rural estate district. Here, the owner of the equipment used it on his property to perform farming operations outside the township. In *Riggs v. Douglas County, 1 P. 3d 1042 (Or. App. 2000),* the court construed and upheld a definition of "agricultural land" that included land that could be considered part of a "farm unit." The court held that land is considered to be part of a "farm unit" if it is under common ownership, is adjacent to or intermingled with lands in specified agricultural capability classes. That land is in a farm unit is presumed to be agriculture but the determination is subject to factual rebuttal. For further discussion, see Bower, J. *Hogs and their Keepers: Rethinking Local Power on the Iowa Country Side, 4 Great Plains Nat. Resources J. 261 (2000).*

(n26)Footnote 49. *See Boehm v. Burleigh County, 130 N.W.2d 170 (N.D. 1964)* holding that all unplatted land and land outside the city limits was agricultural land. *See also Eisensimmer v. Bell, 32 N.W.2d 891 (N.D. 1948)* holding that the term agricultural land was used as a generic term merely to distinguish rural from urban property.

(n27)Footnote 50. "Agricultural lands" are lands currently used to produce agricultural commodities, including forest products, or lands that have the potential for such production. These lands have a favorable combination of soil quality, growing season, moisture supply, size and accessibility.

(n28)Footnote 51. *See, e.g., Baker Maritime Co. v. Perkins, 493 So. 2d 494 (Fla. App. 1986)* where the court held that a 1,057 acre mining site was an "incidental" to the primary agricultural use.

(n29)Footnote 52. *Markham v. June Rose, 495 So. 2d 865 (Fla. App. 1986).*

(n30)Footnote 53. *Ridgewood Phosphate Corp. v. Perchance, 487 So. 2d 40 (Fla. App. 1986).*

(n31)Footnote 54. *See, e.g.*, Fla. Stat. Ann. § 193.461 which identifies the following as the objective criteria to determine whether the agricultural use is bona fide: 1) the length of time the land has been so used; 2) the continuity of the use; 3) the relation of the land size to the use; 4) whether the land has been managed according to acceptable agricultural practices; 5) the ownership status of the freehold and non-freehold interests in the land; 6) the presence of dwellings on the land. By statute, an appraiser may also consider "any factor" that from time to time becomes applicable. *See Greenwood v. Oates, 251 So. 2d. 665 (Fla. 1971)* for a detailed list of such factors.

(n32)Footnote 55. *See Straughn v. K & K Land Mgt., Inc., 347 So. 2d 724 (Fla. App. 1977), aff'd, Roden v. K & K Land Mgt., Inc., 368 So. 2d 588 (Fla. 1978).*

(n33)Footnote 56. *Board of County Comm'rs v. Smith, 857 P.2d 1386 (Kan. App. 1993).*

See also In the matter of the *Appeal of Briarfield Farms, 555 S.E.2d 621 (N.C. 2001).* In *Wagner v. Wagner, 259 B.R. 694 (8th Cir. 2001),* the court held that mortgaged land qualified as "agricultural land" for purposes of the homestead exemption statute.

See M. Chertok, *Federal Regulation of Wetlands,* SF 97 ALI-ABA 1149 (2001).

(n34)Footnote 57. *Tijerina v. Cornelius Christian Church, 539 P.2d 634 (Or. 1975).*

(n35)Footnote 58. In *Blauvelt v. Board of Leavenworth County Comm'rs, 605 P.2d 132 (Kan. 1980),* the court held that the farm dwelling constituted an agricultural purpose and therefore was exempt, under Kansas law, from zoning restrictions altogether. The Kansas statute, Kan. Stat. Ann. § 19-2929 provides: No regulations shall apply to the use of land for agricultural purposes nor for the erection or maintenance of buildings thereon as long as such buildings are used for strictly agricultural purposes. *See also* Kan. Stat. Ann. §§ 19-2921, 19-2908, 12-715b.

What constitutes agricultural use is not defined in any of the zoning statutes though Kan. Stat. Ann. § 19-2960, dealing with zoning districts and classifications in counties designated as "urban" counties was adopted in 1984 to provide that:

no zoning regulations shall apply to the use of land for agricultural purposes nor for the erection or maintenance of agricultural buildings as long as such agricultural buildings are used for agricultural purposes and no other. *Dwellings, garages and other similar accessory buildings shall not be considered as agricultural buildings. All buildings, including agricultural buildings, may be regulated as to setback requirements from public roads so as to protect the future use and improvement of such roads.* [emphasis added]

See also State v. Scherer, 721 P.2d 743 (Kan. 1986).

(n36)Footnote 59. In *Lincoln v. Murphy, 49 N.E.2d 453 (Mass. 1943),* the court stated:

> One of the chief characteristics of a farm ordinarily is the use of the land for the production of crops by the cultivation of the soil, but farming activities are not confined to the tilling of the land and the harvesting of crops. Land may be utilized for grazing by livestock, or in raising hay for cows for the production of milk and other dairy products. A part of the land may be profitably employed in the raising of poultry and the sale of chickens and eggs. There may be an orchard upon the premises which would yield enough fruit to warrant the expenditure of labor in caring for the trees and collecting and marketing the fruit. What branches of these farming operations will be undertaken will depend upon whether they can be conducted at a profit, and that, in turn, depends upon the size of the farm, the nature of the soil, its capacity to produce sufficient crops to pay for their cultivation, the demand for different kinds of farm products, the availability of the markets, the practice of good husbandry, and other factors that must be considered in determining what use should be made of the land.

In *Moulton v. Building Inspector of Milton, 43 N.E.2d 662 (Mass. 1942),* the court stated:

> The question to be decided is therefore simply whether the new silo represents what would commonly be understood and regarded as an agricultural use of land. It is difficult to think of the ordinary silo apart from agriculture. A silo is a structure or vat for the storage of fodder harvested from the field and for its conversion into ensilage to be used as food for livestock. It is a part of the regular equipment of most farms that support any considerable amount of stock and is an important instrument in the ordinary process of industry. Confusion seems to us to have crept into this case because of the extraordinary scattering of the Manning's landholdings. According to the findings, however, all their parcels wherever situated, are employed in a single enterprise, and that enterprise is an agricultural one. If all their lands were joined in one tract it would immediately become apparent that they were operating a dairy farm not essentially different from a multitude of dairy farms. The tilling of the soil, the raising and storing of forage crops, and the feeding of them to cattle to produce milk constitute essentially an agricultural operation. Dictionary definitions of agriculture include stockraising and dairying.

The court also noted that:

> [t]he character of the use of the silo as being agricultural or otherwise is in no way affected by the concentration or dispersion of the parcels of land upon which the fodder is grown or by their nearness or distance, or by the fact that no cultivation takes place in the immediate vicinity of the silo. It follows that the use of lot 43 for the silo was permissible under the by-law.

43 N.E.2d 662, 664-665 (Mass. 1942).

(n37)Footnote 60. *Moulton v. Building Inspector of Milton, 42 N.E.2d 662 (Mass. 1942).* In this case, the issue was whether a new silo represented an agricultural use of the land. The court stated:

> We are not to seek for any particular, abstruse, or constricted signification. These words include all uses of land that in common speech and acceptation would be described as agricultural, no matter how injurious they may be to a neighborhood of homes. The test is whether the use is agricultural and not whether it is detrimental. Nor are we here concerned with the qualification as to selling only produce raised on the premises, since nothing at all is sold at the new silo. If the selling on the adjoining Thatcher

> Farm of some vegetables raised elsewhere could be thought material in this connection, that was protected as a use existing when the by-law went into effect, and the existence of the silo does not extend such use. And we cannot interpret the words 'selling only produce raised on the premises' as requiring the actual raising of a crop on every piece of land in a farm.

(n38)Footnote 61. *But see* Ga. Code Ann. § 41-1-7 (1982):

No *agricultural or farming* operation, place, establishment, or facility or any of its appurtenances, or the operation thereof, shall be or shall become a nuisance, either public or private, as a result of changed conditions in or around the locality of such *agricultural or farming* operation, place, establishment, or facility if such *agricultural or farming* operation, place, establishment, or facility has been in operation for one year or more. (emphasis added)

In *R.L. Hexum & Associates, Inc. v. Rochester Township, Bd. of Supervisors, 609 N.W. 2d 271 (Minn. 2000),* the court held that zoning law, rather than the state's statute relating to corporate and partnership farming, governed a dispute as to whether the operation constituted a farm under the zoning ordinance. Here the court upheld the board's conclusion that the activity was "similar to" what happened on a farm and was therefore reasonable. What constitutes a "family farmer" for purposes of Chapter 12 of the Bankruptcy code is discussed in *In re In re Koppes, 2000 Bankr. LEXIS 1898* (Bankr, N.D. Iowa, 2000). In this case, debtors were denied access to Chapter 12 because they were not "engaged in a farming operation" and failed to receive at least 50 percent of their income from farming activities. For further discussion, see Bower, J. *Hogs and their Keepers: Rethinking Local Power on the Iowa Country Side, 4 Great Plains Nat. Resources J. 261 (2000).*

(n50)Footnote 73. *7 U.S.C. § 1308.*

(n51)Footnote 74. 7 C.F.R. § 795.3.

(n52)Footnote 75. 7 C.F.R. § 795.3.

(n53)Footnote 76. 7 C.F.R. § 795.14 provides that "a person may exercise his or her right heretofore existing under law, to divide, sell, transfer, rent, or lease his or her property if such division, sale, transfer, rental arrangement, or lease is legally binding as between the parties thereto ... . Any change in farming operations that would otherwise serve to increase the number of persons for application of payment limitations must be bona fide and substantive."

(n54)Footnote 77. 7 C.F.R. § 795.14.

(n55)Footnote 78. *Val Farms v. Espy, 29 F.3d 1470 (10th Cir. 1994).* In that case, the farmer claimed that the dissolution of a limited partner that had served as a general partner in an agricultural partnership was such a change. In this case, it resulted in an increase in the total number of general partners which, in turn, entitled the farm entity to an increase in the number of "persons" entitled to receive deficiency payments under the price support program. The court held that this change was not a bona fide and substantive change in the farming operation since it did not change the manner in which the farming operation was conducted. The nature of the change was to subdivide one general partner (the limited partner) into a higher number of general partners.

(n56)Footnote 79. *See, e.g.*, Kan. Stat. Ann. § 17-5903(g).

(n57)Footnote 80. *See, e.g.*, Patrick Rohan, *Agricultural Zoning*, 3 Zoning and Land Use Cont. (1978): "Farmland" is "a piece of land consisting of a fixed number of acres which is used primarily to raise or produce agricultural products, and the customary buildings which accompany them." *See also* Comment, *Preservation of Florida's Agricultural Resources Through Land Use Planning, 27 U. Fla. L. Rev. 130,* which quotes the United States Census definition for farming thusly: "all land contained within the physical boundaries of a farm including cropland, woodland and pasture." In *Brandon Charter Township v. Tippett, 616 N.W. 2d 243 (Mich. App. 2000),* the court upheld an exemption under the zoning ordinance which prohibited the parking and storing of commercial equipment within a rural estate district. The owner of the equipment used it on his property to perform farming operations outside the township. The court held that the township had no authority to regulate farming activities outside its jurisdiction.

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.06

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.06 Agriculture as a Commercial Activity.

[Go To Supp]

§ 47.06(a) In General.

Land use law may classify and treat agricultural uses and commercial uses differently. Zoning restrictions, for example, commonly designate areas as "commercial" that are not particularly intended for agricultural use. Thus, it may make a great deal of difference for purposes of land use regulation whether agriculture is considered to be a commercial activity as opposed to merely the husbandry of animals or the cultivation of the soil. This is a difficult, but often unstated, problem with definitions of agriculture. n81

In a 1994 case in Kansas, it was held that a dog kennel was not an agricultural operation so as to be exempt from zoning regulations. The court found that the raising of greyhounds did not constitute the raising of livestock under any definition in the Kansas statutes and, hence, would not be considered to be an agricultural activity. n82 The Iowa Supreme Court eliminated the distinction between commercial and traditional methods of agriculture in reference to exceptions to zoning laws. n83

§ 47.06(b) Agriculture as Non-Commercial Use.

Even though agriculture is indisputably an economic enterprise, as a general rule, agriculture will not be considered to be a commercial activity for most types of land use regulation that operate on the basis of traditional use classifications. This is the case for several reasons.

First, most land use regulations have a built in "development" bias that tends to treat agricultural land as essentially undeveloped land and commercial land as highly developed land. This is clearly seen in the propensity to view agricultural land as "open space" in many zoning ordinances.

Second, although an agricultural operation is normally conducted as a form of commercial enterprise, it has become very commonplace to find that small to mid-sized farming operations (which constitute the largest group of farms) are not conducted as the primary occupation of the farmer. n84 This is largely because a farm of that size is typically not economically capable of completely supporting the farmer and the farmer's family. As such, it is generally not

considered to be of the same category as more traditional businesses which are operated as the primary occupation of the proprietor.

Finally, agricultural land is susceptible of more changes in use than most other kinds of land use because the agricultural use does not tend to make many irreparable alterations in the land itself. Thus it may logically be considered a residual developmental base rather than a terminal developmental activity.

§ 47.06(c) Agriculture as Commercial Use.

Many land use statutes and ordinances do appear to take the position that "farming" may be sufficiently "commercial" that it should not coexist with more "preferred" kinds of uses, such as residential uses. In these ordinances, whether something is perceived as "agricultural" as opposed to "commercial" is a question of size or nature of the activity in relation to the general character of the area. n85 In these situations "agriculture" is typically perceived as a low to moderate density use by nature that involves some arguable "agricultural activity" and is located in a "countryside" area. More intensive activity, even of a similar nature, will often be considered "commercial" in these areas. n86

Some courts have considered large farming operations to be "agricultural" rather than "commercial" despite their size or intensity on the ground that agriculture is a particular kind of commercial enterprise that has been singled out for treatment different from that accorded other commercial activities. n87 This appears most often to be the case where the agricultural activity involves the confined raising of livestock.

In a 1995 products liability case, the court considered whether a turf farm was traditional agriculture or a commercial activity. In Ward v. Northwest Texas Farmers Coop Elevator, n88 the court dealt with a claim that the elevator coop should be liable for harm caused by the application of too much of a particular pesticide by an independent contractor. The allegation in specific was that the coop should be responsible because its labeling of the pesticide failed to comport with federal and state requirements and that should constitute negligence per se. The court held that the labeling requirements were different if the pesticide was to be applied in the course of a commercial operation than if they were to be used in any other context. Here, the turf farm was considered to be a commercial operation and that the labeling standards for such as required by both the federal and the state statutes were not violated. In another pesticide application case, the court suggested an alternate rationale for finding that the operation may be commercial in nature rather than a traditional agricultural one. In Fender v. Adams Exterminators, Inc., n89 the court dealt with a claim for harm caused by the misapplication of the pesticide. In this case, the court characterized the claim as one of "professional malpractice" and dismissed for failure to file, contemporaneously with the petition, an expert affidavit. Although this case did not involve an agricultural operation, to the extent that the farmer applicator is licensed by the state and is facing potential liability for the misapplication of the pesticide, he may be considered a "professional" by virtue of the single fact that he has been licensed by the state. This would facilitate the argument that he should be treated more like a commercial venture than like historical agriculture. In a 1994 case in Kansas, it was argued that a dog kennel should be considered to be an agricultural operation so as to be exempt from zoning regulations. The court found that the raising of greyhounds did not constitute the raising of livestock under any definition in the Kansas statutes and, hence, would not be considered to be an agricultural activity. n90 A building inspector was denied a building permit to renovate a barn on an existing farm for slaughtering animals because such an activity allegedly violated zoning laws. The landowner brought action to the Land Court and prevailed. The appellate court affirmed in Modern Continental Construction Co. v. Building Inspector of Natick, n91 reasoning that slaughtering animals raised on the premises constituted "agricultural use" and is not subject to regulation as a commercial enterprise. The court pointed out that an activity that is reasonably or necessarily related to an existing agricultural use is itself agricultural in nature, even if it would be a commercial activity if it were removed from the agricultural setting. In another case, a county determined that fourteen acres of land should be re-classified for purposes of property taxes. The land had been used for growing alfalfa since the 1930s, but was not sufficient to support the owners. According to Minnesota law, land that has no identifiable use or is vacant shall be assessed according to the land's most valuable use. In this case the land was re-classified from agricultural to vacant and commercial land, thereby denying the owners any favorable tax

arrangement. However, the Tax Court found that the land satisfied the quantitative test of the Minnesota statute, requiring agricultural land to be a minimum of ten acres of contiguous land, and that the growing, cutting, and sale of the vegetation constituted agricultural use of land. Hence, the land should be classified as agricultural land, and should be given the favorable tax treatment. n92

§ 47.06(d) Classification Issues.

The problem of whether agricultural land should be considered commercial seems most significant in situations where there is a strong need to regulate a particular kind of agricultural activity or when it is necessary to address the issue of external impacts on neighboring lands from the activity itself. If the activity is considered to be commercial in nature rather than agricultural, it might be subjected to more intensive regulation because of the exceptional status agriculture holds in some jurisdictions. Agriculture is sometimes exempted from the normal rules but commercial activity is generally not so treated. n93 A number of factors used by the courts may be identified where such a classification is necessary.

§ 47.06(e) Classification: Size of the Operation.

The need to regulate is frequently argued when one of two conditions occur: (1) the farming operation is so big that its impacts beyond its boundaries (often in the form of odor or dust) become a concern to other residents (who often are not involved in agricultural activities themselves); or (2) it is too small to be a profitable enterprise in its own right (such as the keeping of a horse or two for recreational use) so that it may be considered a "hobby" that is perceived as sufficiently out of place for the particular neighborhood by enough neighbors that complaints are generated.

In these situations, it seems that in the minds of many non-agricultural landowners in the neighborhood, what should be tolerated as "agriculture" is the middle-sized operation that is typically not conducted as a full-time enterprise nor on a scale that can affect the status of the area as scenic or open space. This approach seems to be grounded on nothing more than the popular perception that the countryside should be attractive and aesthetically pleasing to visit, or, if one actually lives there, it should be fraught with bucolic serenity and nostalgic picturesqueness else it becomes overrun with the evils attendant to intensive agriculture, such as animals on the loose, dust and odors in the air, herbicides and pesticides in the air and water and large equipment on the roads.

In 1935, there were approximately 6.8 million farms in the United States. That number has now dwindled to less than 2 million. n94 Nevertheless, farming still accounts for 2.3 percent of all jobs, approximately 9 million, and produces 1.4 percent of the gross domestic product. n95 This is being done, however, by increasingly larger farms. Trade magazine lists of large farms suggest that the largest farms dominate the agricultural sector. n96 The largest 400 farms, for example, represent only .002% of the nation's two million farms yet account for approximately 15% of the total farm income. n97 Tyson Foods is listed as the largest farm with $1.7 billion in sales of agricultural products. ConAgra is second with $1.45 billion. (ConAgra is reported by Forbes to have total sales of $18.7 billion but much of that does not come from the sale of agricultural products). What is more significant, in terms of classifying farms as agricultural as opposed to commercial, is that among the smaller farms, off-farm employment tends to be a more important source of income to farmers than farm income. It has been reported that only half (56%) of U.S. farm operators now claim farming as their major occupation. Most of the income of an average farmer now comes from off-farm wages and salaries. n98

§ 47.06(f) Classification: General Character of the Area.

Some ordinances deal with the issue from the perspective of the general character of the area alone. This is particularly the case where the area is seen as not suitable or desirable for most other, particularly residential, activities. "Agriculture" and any use of an arguably "agricultural "nature will be considered "agriculture" rather than "commercial" regardless of its size or intensity essentially because it is not inconsistent with the character of the area. In these areas,

large-scale commercial agriculture will normally not be considered "commercial" uses, perhaps so as not to attract "true" commercial activities to the area. n99

Under this view, the use is considered "agriculture" rather than "commerce" primarily because it does not adversely impact on the value of the area for other protected uses, such as residential use, or adversely affect the area as scenic, open space. Where this is the case, the designation actually attempts to avoid characterizing the area as one suitable for what might be considered "commercial agriculture." Unfortunately, in many of these cases, agricultural operations are likely to end up with incompatible neighbors such as heavy industry. n100

On the other hand, if the area is not considered suitable for commercial activity of any type, any kind or level of agriculture may be characterized as "commercial" despite its "agricultural" nature in order to exclude it.

§ 47.06(g) Classification: Off-Farm Impacts.

If the activity, albeit agricultural in nature, is too intense for the area, it will most likely be considered "commercial" and not permitted or be closely regulated. n101 This is most likely when the "off-farm" impacts generate nuisance-type complaints from established non-agricultural uses. In these cases, courts sometimes strain to find ways to deal with the activity as if it were not agricultural in nature. n102

FOOTNOTES:

(n1)Footnote 81. For a general discussion regarding the construction and application of terms such as "agriculture," "agricultural," "farm," or "farming" in zoning regulations and statutes, *see 38 A.L.R. 5th 357 (1996).*

(n2)Footnote 82. *See Weber v. Franklin County Comm'rs, 20 Kan. App. 2d 152 (1994).*

(n3)Footnote 83. In *Thompson v. Hancock County, 539 N.W.2d 181 (Iowa 1995),* and *Keuhl v. Cass County, 555 N.W.2d 686* (Iowa, 1996), the Iowa Supreme Court determined that large commercial hog facilities were engaged in "agriculture" for purposes of zoning laws notwithstanding the size of the operations. In so doing, the court overturned the long-standing precedent, *Farmegg Prods., Inc. v. Humboldt County, 190 N.W.2d 454 (Iowa 1971).* The rule in Iowa had been that agricultural use was to be defined in terms of "traditional" activities.

(n4)Footnote 84. *See* James Wadley, *Small Farms: The USDA, Rural Communities and Urban Pressures, 21 Washburn L.J. 478, 490-491 (1982);* James Wadley, *The Future of Government Regulation of Agriculture: Biting the Hand that Feeds Us? 3 N. Ill. U. L. Rev. 299, 317-318 (1983).*

See also, Palmer v. Board of Equalization, Eagle County 957 P.2d 348 (Colo. App. 1998) (grazing of pleasure horses not agricultural use for tax purposes).

(n5)Footnote 85. *See, e.g., Town of Mount Pleasant v. Van Tassell, 166 N.Y.S.2d 458 (N.Y. 1957),* which held that a piggery was not farming since farming was

> the act or business of cultivating and using the land and the soil thereof for production of crops for the use of man and animals and incidental purposes. Incidental purposes may include animal husbandry, stock raising or dairying. But the raising of pigs or other animals as a business, with their confinement all or most if the time in buildings or pens occupying a small part of a large tract of land, with the raising thereof not being incidental to the use of the tract for agricultural purposes, is not farming.

(n6)Footnote 86. *Town of Mount Pleasant v. Van Tassell, 166 N.Y.S.2d 458 (N.Y. 1957).*

In *Coope v. Zoning Board of Appeals, 2000 Conn. Super. LEXIS 3264* (Conn. Super. Dec. 1, 2000), the court upheld a

determination that a pheasant breeding facility was "farm use." The appeal was from the reversal of an earlier determination that the activity constituted a "commercial animal farm," which was to be treated as a commercial activity under the zoning ordinances.For further discussion, see Bower, J. *Hogs and their Keepers: Rethinking Local Power on the Iowa Country Side, 4 Great Plains Nat. Resources J. 261 (2000).*

(n7)Footnote 87. In *Cumberland Farms of Conn., Inc. v. Zoning Bd. of Appeals, 267 N.E.2d 906 (Mass. 1971),* the court, after reviewing legislative history of amendments to the State statute, concluded that the legislature had intended the term "agriculture" to have broad meaning. It therefore held that an expansion of a dairy did not cease to be agricultural because of commercial impacts associated with the expansion.

(n8)Footnote 88. *909 S.W.2d 143 (Tex. App. 1995).*

(n9)Footnote 89. *460 S.E.2d 528 (Ga. App. 1995).*

(n10)Footnote 90. *See Weber v. Franklin County Comm'rs, 20 Kan. App. 2d 152 (1994). See also* In the matter of the *Appeal of Briarfield Farms, 555 S.E 2d 621 (N.C. 2001).*

(n11)Footnote 91. *674 N.E.2d 247 (Mass. App. 1997).*

(n12)Footnote 92. *Thorfinnson v. Hennepin, No. TC-23450, 1996 Minn. Tax LEXIS 54* (Minn. Tax); for a general discussion regarding exemptions for agricultural activities from business taxes and fees, *see 38 A.L.R.4th 1074 (1985).*

(n13)Footnote 93. For example, agricultural use is exempted from zoning regulation under Kan. Stat. Ann. § 19-1960:

No zoning regulation shall apply to the use of land for agricultural purposes nor for the erection and maintenance of agricultural buildings so long as such agricultural buildings are uses for agricultural purposes and no other. Dwellings, garages and other similar accessory buildings shall not be considered as agricultural buildings. All buildings, including agricultural buildings, may be regulated as to setback requirements from public roads so as to protect the future use and improvement of such roads.

The same activity might be subject to land use regulation if the activity was considered to be commercial. See *Field v. Anderson Cattle Co., 396 P.2d 276.* (Kan. 1964).

(n14)Footnote 94. *News Briefs*, Doane's Agric. Rep., Nov. 11, 1994, at 1.

(n15)Footnote 95. *Farm Broadcasters Letter*, United States Dep't of Agric., June 17, 1994, at 2.

(n16)Footnote 96. Successful Farming magazine, 1716 Locust St., Des Moines, Iowa, has generated a list of what it considers the largest 400 farms in the United States. In order to be on that list, the farm had to produce at least $10 million in farm income.

(n17)Footnote 97. *400 Farms*, Successful Farming, April 1992, at 20.

(n18)Footnote 98. *News Briefs*, Doane's Agric. Rep., Nov. 11, 1994, at 1.

This suggests that these farms will normally not be considered "commercial" operations because of the traditional view that agriculture is not conducted on the same scale as big businesses.

(n19)Footnote 99. *See, e.g., Fidler v. Zoning Bd. of Adj. of Upper Macungie Twp., 182 A.2d 692 (Pa. 1962)* upholding the use as a turkey farm as "agricultural" rather than "commercial." The court said that "[t]he use contemplated is definitely 'commercial.' Whether or not it is 'agricultural' as well, is the perplexing problem."

See also Field v. Anderson Cattle Co., 396 P.2d 276 (Kan. 1964), holding that two feedlots for cattle and sheep located within 700 feet of the city limits were "agricultural" uses rather than "commercial" uses.

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.07

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.07 Agricultural Land Availability.

[Go To Supp]

§ 47.07(a) In General.

If agricultural use is broadly defined, in terms of size, most of the private land in this country is presently available for and is being used for agricultural purposes. On the other hand, in terms of value, agricultural land is typically worth less, per acre, for agricultural uses than it would be for most other kinds of uses that could be made of the same land. This poses problems for agricultural interests since the land base of the nation is physically limited and there is much competition in many places between agricultural uses and non-agricultural uses for the same space. n103

Land is clearly a *sine qua non* for most kinds of agricultural activities. Agriculture is a "space intensive" type of land use and cannot survive without access to large "undeveloped" areas. Large, open fields, for example, are necessary for both the cultivation of crops and the grazing of livestock. Even intensive, concentrated operations, such as feed lots or nurseries, tend to require surrounding areas to shield, isolate or buffer the particular agricultural operation from surrounding uses. Finally, agriculture as an industry requires what might be described as a "critical mass" of land in similar uses in a particular area in order to sustain the multitude of support uses, such as feed mills, implement dealers, transportation terminals and so forth, that are necessary to a viable community of activity. In this sense, an adequate agricultural land base is necessary for a stable food and fiber production base for the nation.

Thus, the question whether the land is available and will be protected for agriculture or some other use is an important question.

There has been a concern in some jurisdictions that land that is truly suitable for agricultural purposes not be used for other uses. In *King County v. Central Puget Sound Growth Management Hearings Board, 14 P. 3d 133 (Wash. 2000),* the court dealt with a proposal to designate an area for active recreational use as athletic fields within an area that had been designated as agriculture in the growth management plan. The Board granted the request, which was upheld on appeal to the Superior Court. The Supreme Court reversed, holding that the proposal was inconsistent with the Growth Management Plan in that the areas designated did not have poor soil nor were they otherwise unsuitable for agricultural purposes. The court did suggest that the designation could have been effective had it been undertaken under the Growth Management Act's "innovative zoning techniques" provision had it been adopted to protect and conserve farm land.

§ 47.07(b) Agricultural Land and Land Development.

Land is typically considered as "undeveloped" or "developed" for purposes of dealing with land use regulation. In our system, land seems to be considered to be "developed" when it is devoted to uses or activities which make irreversible changes in the land or irrevocably alter its availability for other uses. As a result, land used for housing or commercial use is considered to be developed. In contrast, land that is reasonably available for a multitude of alternative uses is generally considered to be "undeveloped." Farmland, woodlands and open space areas are therefor generally seen as "undeveloped."

There appears to be an informal hierarchy in which "developed" lands are given a higher and more protected status than are "undeveloped" lands. It appears that such lands are regarded as more valuable economically and are perhaps even considered to represent the "highest and best use" to which land may be put. This hierarchy influences land use patterns by rewarding shifts in use from lower, or less valuable, uses to higher, more valuable, uses. As a result, there is an inclination for agricultural land to ultimately shift to non-agricultural uses.

There is undoubtedly a perception that is held by many that agricultural land may and should be considered a resource for the process of more intense or "higher" land development. Indeed, over time, there has been a pattern of shifting agricultural land to the economically more valuable uses to meet the needs of urban growth and expansion. This has generated some fear that the nation may eventually run out of prime farmland for agricultural purposes and some concern that agricultural uses are inherently at a competitive disadvantage when faced with the prospect of use for non-agricultural purposes.

§ 47.07(c) The Agricultural Land Use Dilemma.

Since the same land that is used for agricultural uses may well also be important for significant non-agricultural uses as well, there seems to be constant pressure in the land use laws of various jurisdictions to "keep the land available" for non-agricultural development purposes or to "upgrade the use of the land to a more developed use." This land may be also viewed as the logical repository for non-agricultural uses, such as cement plants, heavy industry, sand and gravel operations and the like that are considered to be incompatible with "more respectable" development. Finally, agricultural land may be required to adequately satisfy important cultural, psychological and aesthetic needs such as recreation and open space. It may even be the location of historic sites or the habitat for endangered species of fauna and flora. As a result, agricultural land is typically viewed as a major source of land for "development" purposes such as housing, shopping centers, industrial and manufacturing facilities, schools, water impoundments and so forth and as a place where other important social amenities may be secured. All of these alternative use possibilities compete with agricultural use for the right to occupy the particular space. As a result, the question of availability of land for agricultural use is significantly colored by the manner in which the law reacts to and adjusts this competition.

The difficult dilemma for the system is how to keep land in agriculture and available for other uses without interfering with the role and value that land plays regarding both agricultural and non-agricultural lands and uses. This problem is often addressed in purely economic terms as a conflict between the need for high-density economic development and the need for low-density agricultural and open space land use. The dilemma is much more complicated than that.

Farmers, as a group, tend to feel a need to control the decision as to how the land should be used in order to effectively manage agricultural land and often claim the right to do so as a fundamental right associated with land ownership. n104 It, therefore, might be more appropriate to view the land use dilemma as a conflict between the need to maximize individual private ownership opportunities and the need to insure that private ownership itself is meaningful on the one hand and the need to mandate socially necessary land use patterns and public benefits on the other. This is by far a more difficult dilemma to deal with as it forces the legal system to come to grips with two fundamentally opposed concepts: the sanctity of individual ownership and the necessity of public control without regard to ownership. Unfortunately, rural and urban interests tend to polarize around these opposing concepts. Nevertheless, recognizing this as the ultimate

focus of the dilemma may serve to assist in developing regulatory approaches that are acceptable to both interests. It may be useful to consider, however, how urban and agricultural interests may differ on this issue.

§ 47.07(d) General Social Concerns Regarding Agricultural Land Use.

It is difficult to deal effectively with the problem of regulating agricultural land use without noting that some, if not most, of the resulting agricultural land use regulations are likely to be received with less than lukewarm enthusiasm by the farmers themselves. Several explanations may be offered for this phenomenon. These concern the objectives that are typically pursued in the course of regulating agricultural land.

It may make one a little uncomfortable to observe that there is significant polarization in our society between urban and rural interests as that relates to primary aspects of land use decision making. Nevertheless, it must be recognized that the interests and viewpoints of the urban sector and those of the rural sector may be quite divergent and in many cases, are very deeply held. As the nation becomes increasingly urbanized, there is a serious risk that the interests of the dominant sector will completely ignore those of the other.

It must be recognized that many of the objectives that are sought to be achieved through the regulation of agricultural land use are essentially urban in nature. These include the maintenance of an adequate agricultural base which will ensure satisfaction of projected societal food and fiber needs, the preservation of open space and other environmental amenities for our cities and the encouragement of efficient, orderly and fiscally sound urban development.

This is not entirely surprising since there seems to be an unstated assumption in most efforts to regulate agricultural land use that the issue is essentially one of urban land use planning. That is, the primary critical concern is to promote development of the urban fringe area in ways that minimize the harmful consequences of urban sprawl, leap frog development patterns and buckshot urbanization. n105 This tends to cast the issue as a resolution of conflict between the need for economic growth and development in the community and the need to save a low density, low economic value use of land. In fact, most urban opposition to these efforts appears to result from the fear that controlling growth will result in preventing growth. As a result, even though the issue may be posed in terms of regulating or not regulating agricultural use of land, it is more often discussed in terms of which lands should be open to continued urban growth development and expansion. This approach cannot help but communicate to the agricultural interests that their concerns are secondary to the more pressing economic question of urban community development.

Much agricultural land use regulation fails to consider some social aspects of farming that influence the land use decision but which have nothing to do with the more common regulatory purposes involved. For example, because of the nature of farming as an industry, farmers often have nothing to fall back on to take care of their retirement needs beyond the sale of their farmlands, and many farmers in the fringe areas have been consciously planning for that disposition for years. To be deprived of that opportunity is not only frustrating, it often leaves them with no viable retirement options.

Similarly, farmers often may perceive the efforts to regulate agricultural land use, even when done for ostensibly agricultural purposes, as interfering with what they consider to be their basic right to make their own land use decisions. This issue of whether control over the land use decision should be vested in an urban oriented decision-making body is particularly troublesome from the farmer's perspective because the ability to determine what is done with the land may be one of the few aspects of farming that the farmers feel they have any significant measure of control over. n106

Perhaps less significantly, in many efforts to regulate agricultural land use, proponents of keeping the land available for agricultural use frankly tend to argue from the urban interest side that protection of farmland is "required" in order to maintain open space, keep recreational areas proximate to the cities, achieve an aesthetically pleasing ambience around residential areas, eliminate environmental degradation that may result from uncontrolled development, and to secure ownership opportunities for urban escapees that might give them a measure of independence and self-sufficiency. Often

omitted from such debate is any concern that erosion of the farmland base may jeopardize the critical mass required for a viable agricultural industry and an adequate support sector, and that a large agricultural land area may be necessary to secure to smaller communities the economic and social benefits that flow from a viable local agricultural industry. All of this serves to generate a legislative history that the regulations were adopted to serve other than agricultural interests and concerns.

§ 47.07(e) Divergent Urban and Rural Viewpoints Regarding How Agricultural Land Use Should Be Regulated. n107

While any generalization is difficult, it is sometimes difficult to determine which of two competing explanations better describes the typical urban view of what is rural--condescension or nostalgia. Each undoubtedly has shaped the urban view of how rural land, including agricultural land should be used.

To many within the urban sector, "rural" is simply a place. Indeed, for some statistical and governmental reporting purposes, "rural" may be technically described as the area outside of metropolitan areas of a particular size. In this sense, "rural" is the 20th century sociologist's and demographer's term to describe the countryside and all the small towns and isolated villages and all of the scattered houses and farmsteads that dot our land from coast to coast in terms of land use density. Although the term "rural" is supposedly content-neutral, when an effort is made to describe what this "rural" looks like, technical accuracy gives way to nostalgia, with images straight out of a Normal Rockwell or Andrew Wyeth painting, of "unpaved dusty lanes and cane-bottom rocking chairs, of purple-flowering wisteria and white magnolias, clear-water swimming holes and Sunday chicken dinners around a large kitchen table, long puffed rows of summer cotton, roasting ears and cane-pole catfishing in pine-shadowed ponds, lightning bug nights and barefoot days." n108 Such a "rural" area, of course, is a myth in that, for most urban and suburban people, it is only a memory or it is something seen as one was passing through. It is not that such places don't exist, it's that the only politically significant group that lives there is for the most part composed of urban refugees. The typical urban dweller no longer understands how it is to live there and can only wish or remember.

To others, "rural" may be a somewhat esoteric concept. In an increasingly urbanized society, "rural" is sometimes considered the antithesis of large scale "development" and as such encompass the large expanse of "undeveloped" America. This "rural" area may be conceptualized as a place to escape to and indeed escapism appears to dictate the images: the woods, the rolling expanse of farmland and the clustered enclaves of human habitation known as small towns; "open space" where nature is unsullied by human activity and where humankind can commune with one's innermost aspirations and escape the stress and turmoil of urban living; space on a grandiose scale and ripe and unspoiled, laden with potential. This kind of "rural" area may be the dream of what the entire country should look like -- if it can be kept unspoiled; a place where life is lived at a slower pace, where there is less stress. Again, for most people, this is a mythical place but one that has considerable attraction if one wants to be a "tourist."

Rural is also considered by many in the urban sector to be an attitude. In this context, "rural" is most often used as a condescending social pejorative, a view that rural folk are less adept at dealing with the intricacies of modern life; n109 simple, uncultured -- "redneck" -- but certainly not urbane, or sophisticated. Rural is also seen as low-key, laid-back, not driven. Rural, in this sense, is a place to escape from, not to.

In contrast, it is quite impossible to accurately describe what it is like to be truly rural to someone who has not lived there for a protracted length of time. Even those that have actually moved to rural areas to escape the problems and stress of the city will find that it is hard to give up transplanted urban expectations, and therefore those rural residents will have a distorted view of things. n110

There is considerable disparity between the popular urban and the rural viewpoints regarding the concept of land ownership and the role land plays in rural areas. The urban mindset will probably always have a difficult time fully and accurately comprehending the significance of land ownership and control to the rural farm or ranch owner. This is so for

a variety of reasons. First, in ways that almost defy description, there is an inseparable relationship between owning a "thing" such as the land and the "way of life" that ownership makes possible that is not found at all in urban areas. n111 This relationship forges a unique "connectedness" to the land that governs much of the decision making which occurs regarding land use. Second, the space the land occupies tends to be perceived as serving a wholly different function in rural areas than it does in urban areas. In urban areas, space separates whereas in rural areas, space unites. n112 Finally, the land with all its abilities and disabilities often becomes the primary variable that governs the success of the enterprise in ways that the urban dweller does not contend with but which indelibly shape the rural mindset.

The rural view of "rural" as an attitude is markedly different from the typical urban view. The attitude is one of confidence, of independence and interdependence, of self-sufficiency and of making do with less than what the cutting edge of technology might offer. n113 Most in this country perhaps wish to ignore this view of rural and tend to opt for the more derogatory view since, although it might be said to be the embodiment of the "American Dream," it is the social antithesis to the reality of the hustle and bustle of modern economic, cultural and political life (from which most cannot escape though they may wish to do so). Here, perhaps sadly, since it cannot be said to describe the rest of the country, the image is one of effective socialization, of cooperation and oneness. n114

Because of the close connection between attitude and behavior, the ability to control how the land is used underwrites the attitude of self-sufficiency and independence. Effective use of the land insures the continuation of a way of life. The ability to enjoy and occupy land is a vital variable relating to the quality of that life. n115

The rural view of "rural" will and must contain a spatial dimension that is significantly tied to and cannot be separated from the fundamental connotation of the term. "Rural" simply cannot be defined without some feeling or reference to the interrelation between mankind and space. Indeed, the need for space and the ability to enjoy that spatial component of "ruralness" is inextricably linked in the minds of many in rural areas to well-being itself.

It is also impossible to accurately describe farming or ranching without any reference to the land. At the very least, the land is where these activities occur. At best, the land is a supporting, but selfish partner in the venture. Despite popular opinion to the contrary, there is little room in the rural mind for romance in describing the significance of land to the farmer or rancher and, indeed, even the activities which occur on the land do not merit particular exaltation. Animal operations generate flies and odors, farming generates dust and noise, and nature itself can be very harsh. Crops and animals die. Seasons come and go. Yet the land remains as perhaps the only constant in a fragile enterprise. Nevertheless, it is a fact of rural life that land with all its vagaries is something that must be accepted before much else associated with farm or ranch life can go on.

There appears to be a stronger correlation between property ownership and social behavior in rural areas than in urban areas. This is perhaps due to traditional views regarding property. It might also be attributable to the stronger feelings of independence and self-sufficiency that seem more prevalent in rural areas than in urban areas which would seem to suggest that it matters more whether one has the ability to control particular facets of land use. n116

The rural view of land use planning law, even as it may affect the use of agricultural land is that it is essentially an urban oriented institution, designed to accommodate the growth, development and expansion needs of cities. Few would deny that urbanization involves intensive use of the land, and that as cities grow, that intensive use of land will tend to move outward from the center of the cities. Further, since cities in this nation have demonstrated an historical propensity for low density settlement, much of the extension outward from the cities themselves into the surrounding countryside will consume enormous amounts of land. This intrusion into the countryside is perhaps excused on such diverse grounds as the need of people for a place to live or in the need to keep heavy industrial development away from where people live. In this context, the rural mindset tends to view the planning process as operating on the assumption that rural and especially agricultural lands represent essentially "undeveloped" lands and are therefore a "resource" for those interested in more intensive land development.

There appears to be a strong sentiment among farm and ranch landowners that they are losing control over the land use decision itself, which they see as being subtly shifted to and exercised by and on behalf of urban-oriented interests. The rural farm and ranch landowners appear troubled, for example, that the rationale for much land use and environmental control seemingly is the necessity to effectively "rescue" the rural land that is affected by such regulations from the consequences of harmful rural oriented uses and practices and to keep rural areas pure and unspoiled essentially for urban purposes. n117 This is perceived as giving those who develop and implement those programs the power to essentially dictate particular land use practices. Even if one concedes the necessity for some public restriction on land use, such as to prevent one landowner from using the land in a way that may cause harm to another landowner, the farm and ranch landowner may wonder to what extent non-rural interests should have the power to make the determinations regarding which kinds of harm should be proscribed.

The serious problem this view of land use regulation poses from the perspective of the farm or ranch landowner is that most restrictions or regulations will be perceived as not being in their best interest and therefore not particularly acceptable. This, of course, calls into question the credibility and legitimacy of the laws themselves. n118

FOOTNOTES:

(n1)Footnote 103. *See, e.g. Murphy v. Spokane County, 2001 Wash. App. LEXIS 410 (Wash. App. 2001)* dealing with the classification of land that had never been used as agricultural property but which was nevertheless in a general agricultural use zone; *Merritt v. City of Pleasanton, 107 Cal. Rptr 2d. 675 (Cal. App. 2001)* dealing with the extent to which zoning must be consistent with the city's general plan; *Mount Olive Complex v. Township of Mount Olive, 774 A. 2d 704 (N. J. Super. 2001)* dealing with lot size and the issue of affordable housing.

In *Township of Franklin v. Hollander, 769 A. 2d 427 (N.J. Super. 2001),* the court held that the Right to Farm Act preempted municipal land use authority over operations.

For further discussion, see J. Nolon, *Local Land Use Controls that Achieve Smart Growth, 31 ELR 11025 (2001).*

(n3)Footnote 105. *See generally*, William Ellingson, *Differential Assessment and Local Government Controls to Preserve Agricultural Land, 20 S.D. L. Rev. 549, 550 (1975).*

(n4)Footnote 106. There appears to be an implicit assumption in many of these regulatory efforts that if only the land can be maintained for agricultural use, there will readily and always be farmers there to farm it. Such an assumption is naive at best and frankly dangerous at worst. If too much public control is asserted over the agricultural land use decisions, it may be discovered that farmers are not willing to stay on the land even if it remains in agriculture; they simply may not be willing to farm under those conditions. If the individual farmers do not foresee a future that will meet their needs as well as those of the city, the only way to keep the land in farming may be to turn it over to corporate or other entities. This may further exacerbate the existing rural ownership problem and may have some effect on national food concerns as well.

(n5)Footnote 107. The following section is adapted from the author's work which appears as *Lucas and Environmental Land Use Controls in Rural Areas: Whose Land Is It Anyway? 19 Wm. Mitchell L. Rev. 331 (1993)* and, as such, represents the author's views and not necessarily those of the publisher of this work.

> America has a great secret.
>
> It's called rural America. In popular American culture, this vast, forgotten expanse is the home of hayseeds, hicks, and rednecks -- a place to be from, not a place to live. "Some people are embarrassed by overalls and the town band playing in a small park," says [Roger] Welch. "Rural life has been the butt of jokes. If in a movie you wanted to say this person is a dumb bumpkin, you said he was from Iowa, Kansas, Nebraska, or South Dakota." Or Mississippi, or Alabama, or Georgia.

Rural America is not some great cultural desert[.] The technology associated with modern farming is quantum leaps past the understanding a factory worker must have about his craft. The quilts and the cooking are real. The humor is sharp and often telling. The art is living, not artificial pieces hung on a museum wall.

(n8)Footnote 110. *See, e.g.*, Trebilock, *Rural Hot Spots ... Cold Spots*, Country J. (June 1987) at 32; *America's Small Town Boom*, Newsweek (July 6, 1981) at 26.

(n9)Footnote 111. Regardless of the debate about whether farming or ranching constituted a "way of life" or a business for public policy purposes, see James Wadley, *Small Farms: The USDA, Rural Communities and Urban Pressures, 21 Washburn L.J. 478 (1982).* It is undisputable that the business of farming or ranching requires a lifestyle that differs markedly from the lifestyles of any urban counterpart.

See Zeigler, K., *Who Will Teach Our Farmers: Learning the Value of Mentor Programs from State & Private Programs. 5 Drake J. Agric. L. 279 (2000);* Frug, Gerald E., *Euphemism and a Policy Strategy 30 Envtl. L. Rep. 11189 (2000).*

(n10)Footnote 112. *See, e.g.*, Gretel Erlich, *The West of True Myth, in* Ranching Traditions (Ryan ed. 1989) at p. 50: "In the West, it is our solitude that unites us. The farther apart we are in miles, the closer we feel."

(n11)Footnote 113. Describing life on the contemporary Western ranch, one prominent writer noted that life there

> is a democratizing process. So much in American life has had a corrupting influence on or requirements for social order. Traditionally, ranch life... [has] stood for the achievements of man and nature, man and animal, not the machine... . [What is] instructive to us? Though we all feel a sadness that no uncharted land is left, no true wilderness, we've learned from the good and bad experiences ... the meaning of freedom, heroism, wildness, and something about the process of civilization. It's not the myths that are wrong, but our versions of reality. From the open space still surrounding us, we learn spiritual equivalents: that personal liberation is a kind of psychic space that represents clear-headedness and the ability to act without fraudulence, ... that heroism isn't power play but an act of submission -- a communion of the human and the natural. [It] reminds us to behave, to be disciplined, to be good neighbors; it teaches us the basics of compassion. From the inclemencies of weather we learn humor and humility, how to be coresidents, not conquerors, in the world.

Gretel Ehrlich, *The West of True Myth in* Ranching Traditions 50-51, 58 (Ryan ed. 1989).

(n12)Footnote 114. Teresa Jordan, author of the award-winning video production, *Cowgirls: Women of the American West*, wrote the following about the effective socialization which occurs among children on farms and ranches:

Ranch children as young as eight or nine often do their jobs alone. Although they start out with instructions, the nature of the work means that they frequently need to revise their plans. On a roundup, for instance, riders fan out over a pasture to gather the herd. A child may be asked to ride the far east ridge and push whatever cattle she finds toward the corral. With luck, everyone riding the pasture will arrive with their cattle at the corral at the same time. But she rides the east ridge and doesn't see anything. She wonders if she should leave the ridge and try and help someone else, or should she stick with the original plan. Or she finds a hole in the fence and sees fifty pair in the neighbor's pasture. If she rides after them, she will get to the corral later than anyone else. If she doesn't, someone will have to come back for them later. Many young ranch kids I know talk about these moments of uncertainty with dread. But they make some sort of decision, and they act on it. If they live in a supportive family where the fact that they made a decision is applauded even when the outcome isn't perfect, they grow into decisive and confident adults.

Children who grow up in agriculture have a chance, from an early age, to learn skills and gain recognition for them. Ranch work requires such aptitudes as horse training, sheep shearing, roping, and harness repair, not to mention knowledge of veterinary medicine, auto mechanics, plumbing, electricity, irrigation, carpentry, and bookkeeping. As a child gravitates toward those areas that interest him and masters them, he earns that most coveted of designations -- he makes a good hand. Organizations like High School Rodeo, 4-H, and Future Farmers of America add further reward for those skills, which are not only personally satisfying but intimately involved with the family's welfare.

All this sounds like a lot of responsibility from a young age, and it is. But with that responsibility comes an independence, a freedom and mobility... .

If the cattle industry offers no greater guarantee of golden childhood than city life, it at least has the potential to provide fundamentally different familial relationships. A ranch provides an almost preindustrial structure to family. Home and workplace are one and the same. Not all rural families work together: some wives work in town; some husbands work for wages at a nearby coal mine or neighboring ranch while wives take care of the home place; some kids, for a variety of reasons, don't participate at all, but when a ranch is a shared endeavor, real partnership is possible.

Teresa Jordan, *Ranch Family in* Ranching Traditions 103-105, 106 (Ryan ed. 1989).

(n13)Footnote 115. As a contemporary writer observed, land and the ability to enjoy the land are very losely linked to well-being in rural areas.

Yes, there are state-of-the-art computers, compact discs, VCRs -- technological toys and marvels -- but I can live without them. I cannot live, however, without the land.

Give me masses of live oaks, and the wind in their leaves like a messenger from the gods -- the branches lifting and bending like old men nodding at the timeless receipt of timeless news. Give me the stretches of ranchland grass; give me fence line weeds and small yellow flowers.

Give me cattle that stand and chew during midday heat and then, as shadows lengthen, head out to graze. Give me the sky -- the whole uninterrupted sweep and glare of it -- and beneath it, on a rise of ground, a windmill. Let me stand beside it and drink a cup of well water at sundown. Let the bullbats begin to swoop down toward the water troughs; let me sit for awhile after dark; let me sleep with moonlight in the doorway and katydids pulsing in the trees; and then let me begin another state-of-the-art day in the Texas Hill Country.

Elroy Bode, in *Our South in Words and Pictures*, 25 Southern Living 74 (Jan. 1990).

(n14)Footnote 116. Loren Kruse, editor of Successful Farming Magazine, reported that there is a "strong relationship between emotional depression and stressed financial conditions among farmers" and a "growing perception of a two-tiered society." He also reported that the "farm crisis is not past tense at all for many families in rural America" and, indeed, economically, there are actually now "two rural Americas."

> One rural America includes those who are financially secure and believe things are generally in good shape. The other rural America includes those who range from financially struggling to absolute poverty (25% of all rural children live in economic poverty)... .
>
> There is a weight of guilt on many farmers who came through the 1980s largely unscathed by financial scars. It is one reason financially successful farmers may have great difficulty visiting a farmer in financial stress. The successful farmers often believe their own secure financial condition is a reminder of hurt to those in trouble. Thus, many troubled farmers and farm families are still "isolated" by their neighbors, just as they were during the worst of the farm crisis... .

Loren Kruse, *Across the Editor's Desk*, Successful Farming 1 (Sept. 1990).

(n15)Footnote 117. It is easy to suggest that the situation may be one of ineffective communication, in which the urban sector has not clearly articulated the reasons for the controls. It is also easy to argue that it may be that the urban sector has not asked for rural input nor has the rural sector done a very good job in making its position known. To the extent any of that is so, the matter may be remedied. On the other hand, the rural farm and ranch landowner attitude appears to be that the land is theirs and as a result, the non-rural sector has no business dictating how it is used. That attitude will not be easy to change simply by further or better communication. It is easy to imagine the rural response to the rejoinder that "the land is actually not that of the farm or ranch landowner; rather those parties are stewards of the land for society." Rebellion is likely. Likewise, the assertion that what is going on doesn't actually constitute "telling anyone what can or can't be done with their own land" most assuredly will fall on deaf ears because their experience has told them otherwise.

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.08

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.08 Factors Affecting Governmental Regulation of Agricultural Land.

[Go To Supp]

§ 47.08(a) In General.

Historically, the law has given great deference to the role of individual choice in the process of determining which parcels may be used for which particular purposes to meet national needs. A number of particular factors seem relevant to the land use decision making process as it affects how individuals choose to use agricultural land as well as the bases upon which governments may choose to regulate agricultural land.

§ 47.08(b) The Need for Desirable Land Use Patterns.

For the most part, regulation of land use is designed to promote or maintain desirable land use patterns rather than to restrict the exercise of individual choices as to how land is used. To a considerable extent, this has focused regulatory efforts specifically on the individual land use choice decision only to the extent necessary to achieve the desirable pattern. Thus, limitations upon individual rights are generally avoided, if possible, but are most likely to arise when the nature of the right is considered to be in conflict with the larger public purposes and interest in use patterns.

Reconciling the public need for desirable patterns with our legal system's predilection for unrestricted individual land use choice has always been a difficult matter and whether a particular landowner gets to decide if a certain parcel of land gets used for particular purposes is an intriguing issue and a difficult legal question that consumes much time and energy in our legal system.

The law generally recognizes that considerable control may be exercised by the public authority over the overall distribution of land use patterns within the jurisdiction. n119 While it may not be possible to eliminate entirely particular uses that may be deemed undesirable, significant control over the location of uses and the density or intensity of such uses seems to be clearly and legitimately within the scope of police power regulation.

Control may be either direct or indirect. Zoning, for example, directly deals with the question of use location by designating where within the jurisdiction particular uses may lawfully occur. Growth management planning, on the other hand, indirectly influences patterns by regulating how and at what rate municipalities or towns grow and develop.

The control over use patterns will often be somewhat subtle. A particular jurisdiction may exercise considerable control over the actual distribution of particular land uses within the jurisdiction simply by *determining* and *designating* which uses are appropriate for particular areas. For example, designating a particular area as appropriate for residential use may bring tremendous pressure upon nonconforming uses, such as agricultural uses, to ultimately leave the area.

Where an existing or proposed use is considered undesirable, or the consequences thereof threaten the health or safety interests of the jurisdiction, pressure may be more direct in that the offending use may be enjoined or special permission be required to continue or to make the use.

§ 47.08(c) Role of Cultural Attitudes Toward Land Use.

Cultural attitudes regarding the relationship between man and the land play an important role in shaping how the law deals with agricultural land since the legitimacy of the law is directly dependent upon its correspondence to the popular weal. Relevant cultural attitudes are derived in part from our cultural heritage and, in this case, become reflected in our notions of private property and governmental responsibility.

The history of how our country was settled has had a considerable impact on cultural attitudes toward land development, occupation or density of use and the role government should play in the land use decision making process. For example, as settlers moved west, the notion that our country contained seemingly endless amounts of land shaped our views that land should be reduced to the control and dominion of the settlers who would then enjoy a species of ownership sovereignty over the land. n120 This appears to have given rise to an attitudinal predilection in our culture that emphasizes the independence of the landowner and sanctity of private ownership and the desirability of large units of open space. As a result, there is an identifiable cultural attitude that tends to shun high density development and appears to express a very deeply seated desire to "control one's own space," a need to have lots of "elbow room" and a propensity to simply "go over the next hill to escape (rather than solve) one's problems." This attitude has also helped shape agricultural land use patterns through its relatively strong pro-individualist cultural notion, and its emphasis on the cultural and psychological need for space.

Remnants of this cultural attitude remain in large measure in what is often considered to be the typical rural view of property ownership: that the landowner should be largely immune from governmental supervision and that any exercise of governmental authority over the development process represents an unacceptable intrusion into the realm of private property rights.

The farmland owners as a general group appear to consider the right to determine how their land is used not only to be among their property ownership rights but also to be a fairly absolute right. n121

The fact that this view is not always that taken by the law itself explains much of the friction between the rural landowners and the typically more urban oriented official land use decision making bodies of a jurisdiction. The law of property appears to have evolved considerably in the direction of granting governmental bodies the authority to restrict substantially the private rights of individuals. Early in our legal history, it was recognized that the use of one's property should not cause unreasonable harm to another's ability to use and enjoy land. n122 This doctrine, generally referred to as the law of nuisance, has been justified on the ground that such a rule is necessary in order to maintain public order. In most cases, the determination of whether a particular use is a nuisance turns on a "balancing of equities" in which a court seeks to determine "how much inconvenience and disturbance a land owner must endure as an incident of modern life." n123 While the importance of the law of nuisance has been diminished somewhat in recent years as greater authority over land use decision making has been exercised by legislative bodies throughout the country, the underlying principle, that one's authority to use one's own land may be adjusted to reflect or accommodate another's interest in other land, is still very much at the heart of broadened public control over land use. It is under the guise of this type of concern than our system asserts an interest in and control over land use activities that have adverse consequences on

lands beyond the property itself.

This has given rise to a cultural attitude toward property rights within the urban sector that is somewhat opposed to the traditional rural view of land ownership. This is the view that all landowners are duty bound to act as careful and prudent stewards in how their privately owned land is or should be used. This position seems to subsume at least a minimal socially imposed limitation on the property rights of private land owners. n124

As our national land needs have changed, particularly in response to growing public appreciation of the consequences of environmental land abuse, the law appears to have become more sensitive to the long-term consequences of land misuse, particularly with respect to industrial and rural land and it has become increasingly evident that the law more closely reflects the urban rather than the rural cultural attitude. Particularly at the local government control level, the public interest tends to be defined in ways which require some sensitivity from landowners with regard to the external impacts of individual land use decisions. Further, there is a growing sense in the law that posits that landowners may properly be required to act in particular pro-social ways regarding the use of land in order to protect the present and intergenerational public interest in the land.

This shifting in cultural attitudes toward an individual's right to use land and the corresponding power of government to regulate has generated a conflict, in a cultural sense, between the urban and rural attitudes as to how rural land use decisions should be made. This conflict helps explain much of the tension and resistance present on the rural side when jurisdictions seriously begin to consider land use planning programs that affect agricultural land. The conflict in attitudes also directly pits the traditional rural landowners' view that they should fairly absolutely control the decision as to how the land should be used against the urban and to some extent, legal, view that it is proper to supervise the manner and the extent to which private land uses choices are made. This conflict juxtaposes the need for individual independence and control over the land against the public interest of having landowners collectively make decisions that serve larger societal needs and objectives and is a matter that is far from being conclusively resolved. Finally, land developers often look to rural land for large sites for their development purposes. The cultural attitude if this group toward land ownership and the role of governmental regulation tends to approximate that of the traditional rural resident. This, in turn, has led to legal conflicts between would-be land developers and urban-oriented decision making bodies that may get played out in ways that may affect land use activities in rural areas although the groups in conflict really have no other cultural connection with those areas.

Clearly, agricultural use of land is the single largest particular use of land in the United States. Nevertheless, because agriculture requires so much land, areas are often judged as "agricultural" or not based upon the presence of agricultural land use patterns. As a result, many states will be considered "agricultural" states even though agriculture as an economic enterprise actually contributes a relatively small part of the total state economy. For example, Kansas is commonly considered an agricultural state by the rest of the nation. As a matter of fact, agriculture contributes only 3.7% of the total state income. Agricultural services contribute an additional 0.5%. In contrast, services contribute 22%, government 17.6%, manufacturing 19.1%, retail trade 9.6%, transportation and utilities 8.4%, wholesale trade 7.1%, finance, insurance and real estate 5.5%, and construction 5.4%. The only industry that is outranked by agriculture is mining, which contributes 1.1%. n125 Nevertheless, much political decision making tends to occur within the state as if agriculture were the major industry. n126

§ 47.08(d) Conservation and Resource Preservation.

One of the major factors driving increased governmental regulation of land use decision making involves the conservation and preservation of natural resources. We have reached a point in the evolution of the concepts of property and ownership where the law appears to be giving substantial consideration to some of the more significant intergenerational consequences of land use and abuse. The most notable example of this, perhaps, is seen in the area of soil and natural resources conservation. n127 Various kinds of governmental control measures have been utilized here. It has been a long-standing practice of the law, for example, to condition governmental entitlements upon the

occurrence of certain land-protecting practices, or to directly influence landowners to engage in activities of this type by public participation in the cost of such efforts. n128 Alternatively, a jurisdiction may mandate certain management practices regarding the land that are designed io insure that the land is protected n129

In a similar vein, the susceptibility of particular lands to harm resulting from certain kinds of uses is starting to be formally recognized as requiring attention in land use decision making. Environmentally sensitive or fragile lands have particularly merited this type of attention. Laws have been enacted that protect wetlands and the habitat lands of endangered or threatened species of plants and animals. n130 Further, major federal projects significantly affecting the environment must make a particularized assessment of adverse environmental impacts before land or other resources can be irretrievably committed to such projects. n131 In some states as well, permission to develop even private land may be conditioned upon the presence or absence of adverse environmental consequences.

Several cases suggest an additional strategy in the effort to protect natural resources. In the case of environmental harm, there has been an interest in collecting monetary damages from those who are responsible, particularly where the harm is to natural resources owned by the public. Exxon agreed to pay the United States and the State of Alaska $900 million to compensate for damage to the natural resources of Prince William Sound. n132 This is money in addition to any owed for the cleanup or as a result of tort liability for nuisance or negligence and appears to represent a trend in environmental litigation cases. n133

Recent changes in the Internal Revenue Code may encourage a greater use of conservation easements as a means by which fragile farmland may be protected. I.R.C. § 170 now treats "qualified conservation contributions" as charitable contributions for which the donor is allowed to take a deduction for income tax purposes. For further discussion, see Richardson, *Maximizing Tax Benefits to Farmers and Ranchers Implementing Conservation and Environmental Plans, 48 Okla.L. Rev. 449 (1995).*

Similarly, Section 508 of the Taxpayer Relief Act allows the executor of the estate of a farm decedent dying after Dec. 31, 1997, to exclude from the decedent's gross estate up to 40% of the value of land subject to qualified conservation easements. I.R.C. § 2301(c). For further discussion, see Bowman, *New Tax Laws Could Aid Land Trusts,* Richmond Times Dispatch, pp B1, B4, (Sept 9, 1997). To qualify, the land must be located in or within 25 miles of a metropolitan area, or in or within 25 miles of a national park or wilderness area, or in or within 10 miles of an Urban National Forest. The land must also have been owned by the decedent or a member of the decedent's family for the three years preceding decedent's death. Finally, an easement must have been granted by the decedent or a member of decedent's family. This easement may be granted post-mortem so long as it is done no later than the date of election. The election is irrevocable and is made on the estate tax return.

§ 47.08(e) Environmental Concerns.

A growing area of the law that relates significantly to land use is that of environmental law which has as its objective the two great concerns of protecting man and nature. To a considerable extent, these concerns are inseparable and defy compartmentalization but it might be suggested that environmental law embraces such diverse concerns as pollution, conservation, energy and population control. Much has been written about the environmental impacts of farming. n134

Legislative enactments largely at the federal level have become the primary basis for recognizing and protecting environmentally related values and interests. While many of these statutes have been enacted to deal with particular environmental problems such as air and water quality and problems of hazardous and toxic waste, n135 it is possible to identify an emerging environmental perspective that may be brought to bear on the formulation of public policy regarding both the human and the natural environment. This perspective is influenced by values and ideas drawn from such diverse sources as biology, economics, engineering and psychology and recognizes a significant interrelationship between the physical state of the environment and quality of life. This, in turn, has focused attention on the issue of how land is used as a factor regarding the protection of environmental values. The effect of linking land management to such

traditional environmental concerns as conservation and natural resources protection has given rise to a branch of land use control law that is somewhat loosely labeled environmental land use law.

In Chandis Securities Co. v. City of Dana Point, n136 the plaintiff/landowner argued that the city electorate's rejection by referendum of a land development plan, approved by the city council, amounted to an unconstitutional taking of the land. The Trial Court disagreed and granted a summary judgment for the defendant. On appeal, the Court of Appeals cited the Planning and Zoning Law, enacted to further California's "goals and policies directed to land use, population growth and distribution, development, open space, resource preservation and utilization, air and water quality, and other related physical, social and economic development factors." n137 This law requires the adoption of a general long-term plan for and by each city regarding the physical growth and development of the area. The referendum is part of the adoption of such plans, and the council cannot not reject the electorate's votes. The court held that judicial review of the electorate is limited to whether their decision was arbitrary or capricious. Hence, the Trial Court's summary judgment was affirmed.

The primary object of environmental land use law is to help structure how a jurisdiction approaches the issues involved in effective land use management so that it is consistent with protection of the several environmental values likely implicated in the course of land use decision making. As such, private property rights must inevitably be balanced against the larger social environmental interests and concerns of the jurisdiction. Striking a workable balance is not always an easy task but necessarily calls into focus both concerns over how land is used and the external consequences of land use practices. The Court may more clearly define the powers of government over landowners' uses of their property that have potentially adverse environmental impacts. The federal Court of Claims has ruled n138 that provisions of market orders that required that a portion of the crop for a given year must be placed in a reserve for disposition in a non-competitive market such as school lunch programs, charities or animal feeds did not deprive the farmers of any property interest because the farmers had failed to show that they had a proprietary right to dispose of their crop free of regulatory controls.

In contrast, the United States Supreme Court n139 held that a city had exceeded its authority when it required the landowner to dedicate a portion of her property to greenway purposes as a precondition to receiving city permission to redevelop her property. The court held that the city must show an "essential nexus" between the legitimate public interest and the permit condition and then satisfy that the interest taken from the landowner was "roughly proportional" to the benefit to be achieved. This, the court said, required that the city make some sort of individualized determination that the required dedication was related both in nature and extent to the impact of the proposed development.

In a third "takings" case, n140 it was held that the denial of a permit to dredge and fill areas designated as wetlands deprived the landowner of a property interest in that land where the effect of the denial was to render that land useless for any economically viable purpose. The court held that it was proper to look at the impact of the denial of the application on the specific land that was the object of the application to determine whether the denial deprived the landowner of *all* use of the property rather than to look to the entire tract of land owned by the landowner. In this case, the landowner owned approximately 250 acres but the permit application was for only 12.5 acres.

The Second Circuit has held that the spreading of liquid manure from a dairy farm may constitute a "point source" of pollution for purposes of the Clean Water Act. n141 In this case, the dairy operation was classified as a "concentrated animal feeding operation" and as such was therefore considered to be a point source of pollution -- primarily because run-off from the areas where the fertilizer was applied was collected to a single point at which it ran off into a stream. The court noted that the vehicles used to apply the manure could, themselves, be classified as point sources. As a general rule, if a source of pollution is identified as a "point source," it is subject to the permit provisions of the statute. In contrast, if the source is considered to be a "non-point source," it is generally subjected to regulation only through appropriate management practices. Thus, this case is significant to the agricultural sector in that it characterizes an activity, diffused surface run-off, that generally would be considered to be a non-point source of pollution, as a point source. This suggests that where it is possible to specifically identify the source of particular agricultural pollutants, the

permit provisions of the statute may be invoked. This decision reversed a decision at the District Court level that had held that there was insufficient evidence to establish the existence of a "point source" of pollution. n142

In a somewhat similar case, the Ohio Court of Appeals considered whether the application of septic tank contents to farmland can be prohibited as waste under township regulations. The court held that the use of such material as fertilizer is "well-recognized" and commonplace and therefore could not be prohibited under the ordinance. n143

In a Massachusetts case, n144 the court held that a razed chicken coop constituted a solid waste disposal facility. "Facility" was defined in the Mass. General Laws, Ch. 111, § 150A as a "dumping ground for Refuse." The court rejected the farmer's argument that the refuse was simply debris from an on-site farming operation. Finally, in a case that is of peripheral interest to agriculture, the United States Supreme Court has ruled that even though a municipal waste treatment facility is exempted from stringent hazardous waste regulations by virtue of the so-called "household waste" exception, the resulting ash may still be hazardous and therefore subject to stringent regulation. n145 Although the case involves the extent to which "resource recovery facilities" are subject to particular hazardous waste management regulations, and therefore has no direct application to agriculture, the rationale of the decision bears watching, given the high level of public interest in farm chemicals. The decision turns upon an important distinction between the status of the facility and the status of the product generated and might serve as the basis in the future for an argument that even though agricultural operations are normally not considered to be "generators," "processors" or "transporters" under federal toxic or hazardous waste statutes, the end product of the handling of hazardous chemicals on the farm may well be the disposition of a hazardous material and subject particular activities to regulation where there is presently an understood exemption.

Farmers and ranchers in 20 states have been authorized to participate in U.S.D.A.'s Wetland Reserve Program. Under the program, the farmers and ranchers could sell permanent easements to U.S.D.A.'s Agricultural Stabilization and Conservation Service to restore cropland. Seventy-five thousand acres would be chosen from the 590,000 acres offered on the basis of their ability to produce the highest environmental benefits in the most cost-effective manner. n146

In a Fifth Circuit case, n147 the Court upheld the power of the Farmer's Home Administration (FmHA) to impose wetland conservation easements on lands that are repurchased from FmHA by the former owners who have lost the lands to FmHA through foreclosure. The court also upheld the designation of the lands as "wetlands" and the inclusion of "wetland buffer areas" within the easements. The easements were imposed under authority of an Executive Order, No. 11990, issued by President Carter pursuant to the National Environmental Policy Act of 1969 which generally required federal agencies to "take action to minimize the destruction, loss or degradation of wetlands." n148 One of the arguments in the case was that Congress had not codified FmHA's authority to impose the easements. The court held that Congress had no need to do that since the Executive Order obligated the agency to take that action. n149

It should also be noted that U.S.D.A. has taken an expanded view of its responsibility to provide the farm sector with information designed to assist farmers in reducing the public health and environmental risks associated with the use of farm chemicals. U.S.D.A. and E.P.A. signed a Memorandum of Understanding on August 15, 1994, committing the two agencies to providing the agricultural community with improved pest management techniques and tools that are designed to reduce health and environmental risks. The agreement establishes a joint process to identify where pest management control alternatives are limited. In those areas, U.S.D.A. would increase research and technology transfer efforts to develop new materials. E.P.A. would then expedite the approval and registration process to ensure that these alternatives are available for field use as quickly as possible. n150

The 9th Circuit has upheld the requirement that the government impose a conservation easement to protect wetlands on all land sold from the inventory of the Farmer's Home Administration (FmHA). In National Wildlife Federation v. Espy, n151 the land was conveyed by a quitclaim deed to a bank which held a senior lien. FmHA argued that the conveyance failed to trigger the easement requirement since it had, through the quitclaim deed, "abandoned" the property. The court held otherwise and a subsequent sale of the property without the easement was to be voided unless the purchasers took

title in good faith and without notice of FmHA's obligation to create the easement.

There has been an interest in collecting monetary damages from those who are responsible for causing harm to the environment, particularly where the harm is to natural resources owned by the public. For example, Exxon agreed to pay the United States and the State of Alaska $900 million to compensate for damage to the natural resources of Prince William Sound. n152 This is money in addition to any owed for the cleanup or as a result of tort liability for nuisance or negligence and appears to represent a trend in environmental litigation cases. n153

A number of cases have dealt with the problem of converting wetlands to some form of agricultural activity. Under provisions of the 1985 federal farm program, a farmer loses eligibility for federal price support payments if land that was formerly considered wetlands is converted to agricultural production. In Von Eye v. United States, n154 the farmer wanted to continue to drain wetlands on his farm but not lose program eligibility. Plaintiff had commenced the conversion of the wetlands prior to the effective date of the 1985 farm bill and it had been ruled by the National Appeals Division (NAD) that the wetlands fell within the "commenced conversion" provisions of the statute. Problems began when the farmer experienced problems with a township-owned culvert and he replaced it with a bigger one that was set lower into the ground. The result was to drain more wetlands than had been previously converted. The Soil Conservation Service notified the farmer that the culvert caused a conversion of wetlands in violation of the statute. Plaintiff sued to obtain permission to complete the project and to remain eligible for the program benefits. The court ruled that his approved conversion ended in 1986 and 1987 and that the present activity constituted an unauthorized new activity that could not relate back to before the effective date of the 1985 Farm Bill.

In United States v. Johansen, n155 the U.S. Fish and Wildlife Service (USFWS) claimed three wildlife-protection easements that covered 102 acres. Recent years with higher-than-normal precipitation had expanded the land claimed to more than 200 acres and the landowner wanted to drain the area back to its former size. The USFWS refused to define the boundaries of the easements and plaintiffs proceeded to drain water off areas they believed to be outside the easements. USFWS filed charges of illegal drainage and claimed the easements gave them the full 200 acres. The court held that only the potholes that existed at the time of the easement conveyance were covered by the easements and criticized the government for refusing the request to define the easements and then prosecuting the landowner for making his own determination.

In Gunn v. U.S.D.A., n156 the court considered the extent to which "farmed wetland" provisions of the 1985 Farm Bill allowed the maintenance of conditions or improvement of the land for crop production purposes. Here, the landowner, in 1992, replaced a tile drain that had been installed in 1906 by the county conservation district with an open ditch. The court found that the conversion did not commence until after the effective date of the statute and therefore constituted an illegal conversion notwithstanding that the farmer had been farming that land continuously for 85 years.

The court, in United States v. Reaves, n157 held that a five-year statute of limitations applicable to wetland violations of § 404 of the Clean Water Act *(33 U.S.C. § 1344)* did not apply to a civil enforcement action brought by the U.S. Army Corps of Engineers more than 13 years after the claimed violation. The rationale of the court was that the discharge of dredged or fill material into wetlands constituted an ongoing violation so long as the fill remained. n158

In two cases involving the definition of "discharge of dredged material," the Circuit Court for the District of Columbia has invalidated an Environmental Protection Agency and U.S. Army Corps of Engineers rule that included within the definition material that is characterized as "incidental fallback material." This is material that inadvertently falls back into the water as a result of activities such as ditching and land clearing. The rule was the result of the settlement of the case in *North Carolina Nat'l Wildlife Fed'n v. Tulloch*. n159 The rule has been popularly called the *Tulloch* rule and was alleged to have the effect of requiring a permit under § 404 of the Clean Water Act *(33 U.S.C. 1344)* any time land disturbing activities occur near water because incidental fallback is almost always associated with such activities. The court held that the rule exceeded the agencies' statutory authority in *American Mining Congress v. United States Army Corps of Engineers*. n160 Subsequently, the court refused to limit its injunction against the enforcement of the rule only

to the plaintiffs in the litigation. n161

The fourth in a series of cases dealing with damages from the underground storage of salt water has been decided with farmers getting a judgment of more than $1 million dollars. The farmers won the previous three suits as well, collecting more than $19 million in the first case. The problem concerns the storage of salt water from brine wells that allegedly escaped to pollute the aquifer, making the water unusable for irrigation. The defendant company was using salt caverns for storage. n162

§ 47.08(f) Taxation and Fiscal Policy.

The need to generate money to support governmental activity has given rise to broad taxing authority at all levels of government. This ability to generate income has also been used for other purposes and, as a matter of fact, it has helped shape the approach taken by many jurisdictions on the issue of control over land use decision making. Since the manner in which land is valued can affect and be affected by the use to which the land is put, tax policy can be used to encourage shifts in use patterns or to maintain existing patterns. n163 For example, land that is valued on the basis of its actual use will likely be taxed less where agriculture is the use of land at issue than it will if the basis for taxation is fair market value and the land has considerable potential for development. n164 In the former case, the valuation policy may encourage the land owner to keep the land in agricultural use in order to minimize taxes whereas in the latter, the landowner may be encouraged to convert the land to a use that reflects the taxes levied. Similar outcomes may be encouraged by policies that vary the tax rate to reflect the kind of use occurring on the land.

According to Kansas law, some personal property tax liens take priority over all other claims against the property. In High Plains Oil, Ltd. v. National City Bank of Cleveland, n165 the court held that priority did not apply to proceeds from the partition of an oil and gas lease. Thus, the court held that a judgment in favor of the county for unpaid taxes was superior to the interest of a secured creditor in the proceeds of the sale.

The Kansas Supreme Court held, in In re Kaul, n166 that Indian lands generally were not subject to ad valorem taxation but that the specific determination must be made in reference to particular treaties. The county had taken the position that all land within the Potawatomi Indian Reservation and owned in fee by an enrolled member of the tribe was subject to taxation. The Board of Tax Appeals (BOTA) disagreed and held that the state had no authority to tax at all since the lands were not considered to be part of the state. The Supreme Court disagreed with both the county and BOTA. It interpreted the act admitting Kansas to the Union and the 1854 Organic act as generally excluding the land unless Congress specifically included them or they were included by Treaty. It therefore remanded the case for that determination. n167

§ 47.08(g) Family Farms and Farm Economics.

Agriculture is a significant part of our nation's economic picture. Agricultural land use is the single largest use of land in the country. A large measure of public resources is committed at the national level to insure that agriculture as an industry remains stable and viable. This insures that agricultural concerns will always be a part of the national regulatory agenda. Agriculture is also vital to local economies throughout the country. In these areas, agricultural issues also play a significant role in regulatory policy formulation.

Economists have suggested that, due to the concept of critical mass, the economic viability of a particular farming operation is inextricably connected to the viability of other similar operations in the immediate area. This suggests that the welfare of agriculture in the aggregate as well as the welfare of individual farmers is an important part of the land regulation picture.

It is therefore beyond dispute that land must be available for agricultural use both from a local and from a national perspective for agriculture to remain healthy as an industry and for it to meet the food and fiber needs of the country.

Farming as an industry is practically polarized between a small group of large farms that produce most of the food and fiber consumed in the country and a numerically large group of relatively unproductive small farms. n168 The small farms, of course, appear to be the most vulnerable to shifts in the economic climate of the nation and seem to be the group most seriously affected by competition from non-farm interests for the land for non-farm uses.

Some believe there is probably little risk that the country will run out of food as a result of any economic demise of the large or the small farms. The large farms generally are strong enough to compete effectively and survive; the small farms contribute relatively little to the nation's food and fiber picture. Although it may be hard to economically justify the small farms, they do serve a vital social function in that they appear to be the expression of deeply held national values regarding land tenure and the opportunity for individual self-sufficiency and appear to be inseparably connected to the question of rural community well-being. Others favor some national commitment to the small farm as the preferred farm land tenure regime. n169

§ 47.08(h) Farm Economics: The Role of Small Farms.

The small farm does not make particular economic sense. Most small farms do not produce enough income to entirely support the farmer and the farmer's family. Most such farmers therefore depend upon non-farm employment for most of their livelihood. This shift to non-farm income is a relatively recent phenomenon, however. Most such farmers therefore have not worked off the farm long enough to have a significant retirement package through their off-farm jobs. Further, most of these farmers are nearing retirement age and tend to see their land as a significant asset in their retirement planning. They therefore must be seen as wearing several hats: that of the farmer, that of the non-farm employee (who may be dependent upon the presence of farming for that particular non-farm job) and that of the would-be developer or subdivider who would like to convert the land to a non-farm use in order to comfortably retire.

On the other hand, the small farm occupies a position of significant cultural and social importance. n170 This role stems from the position the concept of the "family farm" occupies in general property law as the epitome of farm land tenure. It is analogically equivalent to the idea of single-family residential use in the hierarchy of land use planning. Since the time of Thomas Jefferson, the family farm has been regarded as the ideal land tenure for American farming. Even though the definition has been modified in recent years, n171 and plays a somewhat less significant role in federal farm policy development, the family farm is still regarded as the American farming ideal and still exerts an important influence on the law as it relates to agriculture. n172

§ 47.08(i) Farm Economics: Link Between Small Farms and Community Welfare.

There are few detailed economic or sociologic studies of the impact of small farms on rural quality of life. n173 The studies that do exist are generally consistent on the point that the welfare of the predominantly rural areas appears to be directly linked to what is happening in the agricultural sector and that as the number of farms declines, predictable consequences result throughout the community. n174 The most direct impact is probably on local non-farming businesses n175 and the non-farm employment sector n176 which suffer because they exist primarily to serve and service the farm sector. n177 Next, there appears to be an identifiable change in the quality of life. This is followed by changes in the availability of community services which affect such basic socializing institutions as schools, churches, and newspapers. Similarly affected are such community amenities as parks and playgrounds. At about this point, there seems to be an exit migration of professionals such as dentists, doctors and lawyers, who leave and move to larger cities or seek to serve a more regional clientele. n178 Dry goods establishments then tend to close or must compete on a regional basis. All of this stimulates an "increase in the level of differentiation in social organization of the regional community and of the larger society but a decrease in the differentiation, particularly as regards public services, in the restricted original community." n179

It has been reported that in the last 30 years, seven out of every 10 people engaged in farming have left agriculture. This

exodus has significantly affected rural America in many respects. It has forced the consolidation of business and social institutions that served the rural communities where these former farmers once lived. Schools, shopping centers, churches and so forth have tended to become regional. Social patterns and the level of political participation as well as the character of political institutions have been affected. n180

The most recent reorganization of the United States Department of Agriculture was criticized as not being sensitive to the needs of small farms, particularly with regard to their financial needs. The reorganization plan has eliminated the Farmer's Home Administration (FmHA) which was a "lender of last resort" for farmers, typically in the small to mid-size range. n181

§ 47.08(j) Farm Economics: Family Farms and Land Use Planning.

The small, or family farm, problem is difficult from a land use planning perspective. On the one hand, the use of the land for family farm purposes is hard to justify economically if there is much competition for the land for other purposes. Small farms simply do not produce much of the total national need for food and fiber. On the other hand, too much erosion of the family farm land base of a rural community may have significant adverse economic impacts on the community itself. The social value of the family farm, however, has been difficult to clearly articulate in terms that the land use legal structure can respond to. It has been, therefore, and probably will continue to be, difficult to justify keeping major areas of land in agricultural albeit economically unproductive uses largely on the ground that they are socially important. The dilemma is difficult: to seek to keep the land in farming may fly in the face of the economics of the land use decision and in the face of the about-to-retire farmer; to let the land move into a non-farm use may be detrimental to the social and economic welfare of the entire community.

§ 47.08(k) Other Variables.

Many of the particular land use regulatory techniques that are often employed to manage agricultural land, even those that are specifically designed to insure that the land remain available for agricultural use, are not always very popular with the agricultural landowners. There are various reasons for this. In many cases, the farmland owners simply decide that the economic gain to be derived from converting the land to non-agricultural use will be greater than that which will result from leaving the land in agriculture. In other cases, the regulatory approaches are resisted on political or cultural grounds. n182 In some cases, there may be dissatisfaction with the programs that reflects the reluctance of the land owner to relinquish control over the land use decision making process to what are perceived to be urban dominated decision making bodies. A number of factors may be identified that influence these attitudes of resistance that may not be readily apparent to land use planners and decision makers.

§ 47.08(l) Variables: The Ownership Factor.

Sstudies have suggested that ownership of land has a more direct bearing on community land use patterns and growth than do either land use regulations or market decisions. n183 Even well-conceived beneficial land use or environmental control regulations may be rejected by those who are in fact the actual beneficiaries simply because they are inconsistent with pre-established patterns or because they do not comport with the owners' basic interests. n184 This appears to be the case for at least two significant reasons.

First, there appears to be a deep human need and desire to possess property that constitutes an extremely powerful emotional impulse and political tradition and which causes land owners to resist regulation unless the regulation is considered absolutely necessary. n185 Agricultural landowners may therefore see landownership as part of the cultural heritage of self-determination and not simply as a tool for achieving economic success. These landowners tend to consider whether particular land use control programs are in their interest based on their impact on the issue of independence and self-sufficiency rather than on the economic significance of the programs.

Second, land has historically been considered to be a particularly effective social weapon by which its possessors protect their own economic, political and other interests -- largely at the expense of the landless or less landed. n186 Many agricultural landowners thus see themselves as vulnerable to those with control over the land and see landownership as perhaps one of the few remaining opportunities to have economic power over others.

§ 47.08(m) Variables: Psychological Values of Independence and Self-Reliance.

In a society that becomes more and more complex with each passing day, most of us find that we are also becoming increasingly dependent upon or servient to others for what we have and what we are able to do. Indeed, there may be little left, in many cases, about our lifestyle that we can truly control. For many, the opportunity to own land represents perhaps the last opportunity to be independent and self-sufficient (or at least go through the motions of such, for whatever psychological benefits that may yield). This psychological need to own and therefore control land is a powerful force, not always recognized by the law, that motivates many individual land use decisions. n187 To the extent to which the law does not support this perceived value, alienation and frustration with the system may result.

§ 47.08(n) Variables: The Role of Single Large Ownership Changes.

Policy decisions that are insensitive to the psychological and cultural importance of land ownership may result in concentrated ownership patterns that may become established before anything meaningful or popularly acceptable can be done about them. n188 This is because a comparatively small number of transactions between large outside landed interests can quickly overwhelm local governments and permanently change community land use patterns for the worse despite the best efforts of the communities.

This is often hidden from view because a decision by an individual farmer to convert the land to non-farm use typically does always immediately result in the sale of lots of individual parcels, one at a time, to new individual owners. Instead, the land may be sold to others, who, as investors, will then "develop" the land over a period of time and, in the process, subdivide it. This type of disposition and development of large tracts of land may overwhelm the local jurisdictions because the decision to sell and to convert occurs far in advance of the actual ultimate non-agricultural use. For example, it has been reported that the explosive urbanization of the Pasco County area of Florida, north of Tampa, resulted largely from the sale of a single large ranch. n189 The same may be said about the development of the Irvine ranch in Orange County, California. n190

FOOTNOTES:

(n1)Footnote 119. *Village of Euclid v. Ambler Realty Co, 272 U.S. 365 (1926).*

(n2)Footnote 120. *See* The World of the American Indian (Billard ed. 1974):

> In the contrast between red man and white, perhaps no concepts so differed as those concerning ownership of land. Western settlers felt little guilt about taking the soil from "savages who never worked it." But to the indian the earth was for the use of all and belonged to none. He could no more sell the land, said the Shawnee chief Tecumseh, than he could the sea or the air he breathed. But in the clash of cultures in a changing world, not always was the Indian able to sustain old concepts and honored traditions.

Id. at 16.

(n3)Footnote 121. Private property interests in land are frequently described as analogous to sticks in a bundle of sticks. This accurately suggests that the concept that ownership is actually comprised of a multiplicity of specific rights, such as the right to use, the right to enjoy, the right to develop, the right to sell and so forth. Unfortunately, in the typical discussion of such a bundle, there is much vagueness as to the precise identity of particular "sticks" and it is generally

not noted that many, if not most of them, have "strings attached" that represent some authority on the part of external parties or the state to control how the particular stick is used.

With respect to land use, the "sticks" of most concern are those that represent the rights to use the land, to dispose of the land and to profit from the development potential of the land. All of these sticks may now be significantly controlled by public authority or by interests granted to other private parties. Of concern to us here is the extent to which the public authority is likely to exercise its power to control the exercise of the particular rights.

The farmland owner seems to generally ascribe to a more conservative view of these sticks than has just been described. This is largely because of the connection between land and wealth. Indeed, land has been recognized as a primary source of wealth and those who own land are perceived to have somewhat greater opportunities to generate some kinds of wealth than others. An investment in land may be substantial and as a result, there may be great interest in the protection accorded by the legal system to that investment. The expectation of value and wealth associated with the investment in property has frequently been encouraged and protection has been justified on the rationale that such investments actually advance social well being in addition to providing financial rewards to the landowners. Indeed, the presence of "investment backed expectations" has long been identified as a constraint upon the exercise of restrictive governmental authority over private land use decision making. To the extent that such investments serve a vital public function, they may be protected, even as part of the property right itself. On the other hand, where the investment has negative public impacts, the right to make such an investment may not be protected.

(n4)Footnote 122. This is based on the old Latin maxim *sic utere tuo ut alienum non laedas* (use your own property in such a manner as not to injure that of another). *See also Village of Euclid v. Ambler Realty Co., 272 U.S. 365 (1926).*

(n5)Footnote 123. John Cribbett, Principles of the Law of Property 292 (1962). "It is clear that the urban dweller cannot expect the peace and quiet of the countryside and if he prefers the advantages of community living he must experience some of the inconvenience." *Id.*

(n6)Footnote 124. *Consider Keystone Bituminous Coal Ass'n v. DeBenedictis, 480 U.S. 470 (1978)* which involved essentially the same factual problem as the earlier Pennsylvania Coal Co. case but in which, in direct contrast to the earlier case, the court upheld the state statute that compelled the company to leave sufficient coal underground to support the surface. The distinguishing factor between the cases appears to be that in the latter case, the court considered the public interest to dominate and the private landowner was under a duty to manage the property so that the public interest could be achieved.

L. 7 (1996);* Neil Hamilton, *Plowing New Ground: Emerging Issues in a Changing Agriculture, 2 Drake J. Agric. L. 181 (1997);* Comment, *The Acquisition, Abandonment, and Preservation of Rail Corridors in North Carolina: A Historical Review and Contemporary Analysis, 75 N.C. L. Rev. 1989 (1997);* Wright, *Private Rights and Public Ways: Property Disputes and Rails-to-trails in Indiana, 30 Ind. L. Rev. 723 (1997).*

(n9)Footnote 127. *Consider Just v. Marinette Co., 201 N.W.2d 761 (Wis. 1972)* where the jurisdiction denied permission to develop partly on the following rationale.: Is the ownership of a parcel of land so absolute that man can change its nature to suit any purpose? ... An owner of land has no absolute and unlimited right to change the essential natural character of his land so as to use it for a purpose for which it is unsuited in its natural state and which injures the rights of others... The changing of wetlands and swamps to the damage of the general public by upsetting the natural environment and the natural relationship is not a reasonable use of that land which is protected from police power regulation ...at 17-18, of *Wis. 2d, 201 N.W.2d at 768*

The decision in *Just v. Marinette Co., 201 N.W.2d 761 (Wis. 1972),* was followed by the court in *Zealy v. City of Waukesha, 548 N.W.2d 528 (Wis. 1996).* In another case, the United States Forest Service (USFS) adopted a ten-year plan in 1988, pursuant to the National Forest Management Act (The Act), under which 7.5 million board feet of timber would be cut each year from an area of 130,000 acres in Ohio. The timbering technique utilized for eighty percent of the harvest would be "even-aged" management, with the intention of regenerating trees of essentially the same age. However, the even-aged management would involve removing all trees in areas extending from fifteen to thirty acres. The Sierra Club opposed the plan, and appealed a summary judgment granted the USFS. The Act resulted from congressional concerns over USFS's cleancutting practices and that, if left unregulated, the USFS regarded the national forests as monocultural tree farms. The Act provides that even-aged cleancutting may only take place if "such cuts are carried out in a manner consistent with the protection of soil, watershed, fish, wildlife, recreation, and esthetic resources, and the regeneration of the timber resource." *16 U.S.C. § 1604*(g) (3) (F) (v). In this case, the Court of Appeals held that the ten-year plan violated The Act, and remanded the case to the *District Court. The Sierra Club v. Thomas, 105 F.3d 248 (6th Cir. 1997).*

The Water Bank Act, *16 U.S.C. § 1301* (1988) says that "it is in the public interest to preserve, restore, and improve the wetlands of the Nation, and thereby to conserve the surface waters, to preserve and improve habitat for migratory waterfowl and other wildlife resources, to reduce run-off, soil and wind erosion, and to contribute to flood control, to contribute to improved water quality and reduce stream sedimentation, to contribute to improved subsurface moisture, to reduce acres of new land coming into production and to retire lands now in agricultural production, to enhance the natural beauty of the landscape, and to promote comprehensive and total water management planning."

Native American Treaties and Regulations for purposes of conservation and resource preservation:

> In several cases Native Americans maintain that their usufructuary rights under a treaty with the U.S. government are violated when states attempt to conserve and preserve land and resources through regulations. In *Mille Lacs Band of Chippewa Indians v. State of Minnesota, 952 F. Supp. 1362 (D. Minn. 1997),* the District Court quoted the court in So happy v. *State of Oregon, 302 F. Supp. at 899 (D. Or. 1969),* which relied on the decisions in *Puyallup Tribe v. Department of Game, 391 U.S. 392 (1968)* and *Tulee v. Washington, 315 U.S. 681 (1942),* where the United States Supreme Court held that a "state has the authority to regulate fishing by non-Indians to achieve a wide variety of management conservation objectives, but that as to regulating the federal right of Indians to take fish at their usual and accustomed places it does not have the same latitude in prescribing the management objectives and the regulatory means of achieving them.'"

(n10)Footnote 128. *See, e.g.,* Title XII -- Conservation, Food Security Act of 1985, Pub. L. 99-198, *99 Stat. 1354,* codified in various sections of § 7 U.S.C., which requires that farmers of highly erodible land establish an approved conservation plan as a prerequisite to receiving various price supports and other government entitlements. *See also* Linda Malone, A Historical Essay on the Conservation Provisions of the 1985 Farm Bill: Sodbusting, Swampbusting, and the Conservation Reserve, *34 Kan. Wilson, 133 F.3d 251 (4th Cir. 1997)* where the court held that the regulation definition of "waters of the United States" as used in the Clean Water Act exceeded Congressional authorization and was therefore invalid. The regulations purported to reach any dredging or filling activity in waters whose degradation "could affect" interstate commerce. The court viewed this as a limitless view, far more expansive than the standard announced in *United States v. Lopez, 514 U.S. 549, 115 S. Ct. 1624 (1995).* The court found that the waters subject to the regulation neither had a substantial effect on interstate commerce nor any sort of nexus with navigable or even interstate water.

Washburn L.J. 478 (1982).

Trade magazine lists of large farms suggest that the largest farms dominate the agricultural sector. Successful Farming magazine, 1716 Locust St., Des Moines, Iowa, has generated a list of what it considers the largest 400 farms in the United States. In order to be on that list, the farm had to produce at least $10 million in farm income. These 400 farms represent only .002% of the nation's two million farms yet account for approximately 15% of the total farm income. *See, e.g., 400 Farms*, Successful Farming, April 1992, at 20. Tyson Foods is listed as the largest farm with $1.7 billion in sales of agricultural products. ConAgra is second with $1.45 billion. (ConAgra is reported by Forbes to have total sales of $18.7 billion but much of that does not come from the sale of agricultural products).

(n53)Footnote 171. *See* James Wadley, *Small Farms: The USDA, Rural Communities and Urban Pressures, 21 Washburn L.J. 478 (1982).* Thomas Jefferson suggested that three basic assumptions were implicit in the family farm concept: 1) that the farmer was basically a subsistence operator; 2) that he did his own work and made his own managerial decisions; and 3) that he owned his land in fee simple. *Id. p. 481.* It is obviously no longer necessary that a farm be self-contained and non-commercial to qualify as a family farm according to current definitions.

U.S.D.A. has taken the position that:

> The essential characteristics of a family farm are not to be found in the kind of tenure, or in the size of sales, acreage or capital investment, but in the degree to which productive effort and its reward are vested in the family.

The family farm is a primary agricultural business in which the operator is a risk-taking manager, who with his family does most of the farmwork and performs most of the managerial activities.

See Staff of Senate Comm. On Agriculture, Nutrition and Forestry, 96thCong. 2d Sess., Changes in the Family Farm Concept, Farm Structure: A historical Perspective on Change in the Number and Size of Farms (Comm. Print 1980).

(n57)Footnote 175. It is estimated that for every 5 farms that go out of business, one non-farm business ceases. James Wadley, *The Future of Government Regulation of Agriculture: Biting the Hand that Feeds Us? 3 N. Ill. U. L. Rev. 299 (1983).*

(n58)Footnote 176. *Id.*

(n59)Footnote 177. These losses occur because the farm sector, even though numerically smaller than other rural sectors, serves as the primary reason for the existence of many rural communities, which exist primarily to support the agricultural activities of the farm sector. A viable farming industry requires ready and economically attractive access to a minimum amount of supporting industries such as feed mills, transportation terminals, fertilizer outlets and farm equipment dealers. If the farmer has to travel too far for these services or inputs, the cost may be prohibitive. If that minimum quantum of services isn't available, the farming operation becomes more difficult and eventually may go out of business. On the other hand, for a feed mill or implement dealer to maintain a viable operation, a minimum service area is required which can be depended upon to generate a regular and adequate amount of business. If that minimum service area isn't there, the business will either fold or relocate. Thus, farming operations create a need for the supporting industries which often supply the bulk of rural non-farm jobs in the area.

For a discussion of the extent to which a farm wife may be deemed to have an ownership interest in the farm based upon her contribution to the operation of the farm, *see* Susan Schneider, *The Property Rights of Farm Wives: Who Owns the Family Farm, In Depth*, 12 Agric. Law Update Nov. 1994, at 4.

> Many instances of the land weapon being employed to harm the landless and the less landed, sometimes unintentionally, sometimes not, could be cited. These cases occur even when ownership appears to be more dispersed than it was in Rock Springs or Pasco County. The second-homes boom of the late 1960s and early 1970s, which damaged many of the rural communities it hit, is an example. So is the long-term rise of agribusiness and the resulting decline of the family farm. The sustained constriction of public access to coasts and shorelines is a particularly poignant example.

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.09

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.09 Governmental Authority to Regulate Agricultural Land Use.

[Go To Supp]

Government at all levels is generally considered to have the legal authority to control or limit individual land use decisions where such decisions are likely to harm the general public. This has enabled jurisdictions to limit and supervise land use decision making where the exercise of the private right is likely to result in land use patterns that are inconsistent with the larger public needs. The impact of such governmental control on private land use decision making has been extensive and significant. The legitimacy of such efforts to control particular decisions has been a much litigated matter.

§ 47.09(a) Police Power.

Most land use control laws and efforts to regulate the external impacts of land use are justified under the authority of the police power, which has been construed rather broadly to generally support a significant measure of public control over private land use decisions and activities. n191

The "police power," or the power of government to promote and protect the general welfare of the community, is considered to be an inherent power of government and the chief constitutional source of the state's power to regulate private land use. The traditionally enumerated powers embraced by the police power include the ability to protect the health, safety, morals and general welfare of the community. n192 Most courts appear to consider these several particular purposes as synonymous with the need to protect the general public interest. The exercise of the police power is limited in that it may not invade personal or property rights unnecessarily or unreasonably; it must not deny due process or equal protection of law; it must not impair obligations of contracts; it must be consistent with the general laws of the state; it must not discriminate unreasonably, arbitrarily or capriciously; and it must not constitute an unlawful delegation of legislative, executive or administrative authority.

The variety of particular interests subsumed within the notion of "public interest" assures that governments at all levels have an extensive interest in and considerable authority to deal with the adverse consequences of an individual's land use activities. This may result in an effort to mandate corrective action or to actually transfer a measure of the control over the land use decision to the public decision-making body. Whether such power may lawfully be exercised depends

upon the nature of the land, the nature and extent of the particular land uses involved, the nature of the public interest that is likely to be affected and the nature of the consequences that may result from particular land use choices.

§ 47.09(b) Social Order and Nuisance.

Historically, our system has taken the view that the use of one's property should not cause unreasonable harm to another's ability to use and enjoy land. n193 This doctrine, generally referred to as the law of nuisance, has been justified on the ground that such a rule is necessary in order to maintain public order. In most cases, the determination of whether a particular use is a nuisance turns on a "balancing of equities" in which a court seeks to determine "how much inconvenience and disturbance a land owner must endure as an incident of modern life." n194 While the importance of the law of nuisance has been diminished somewhat in recent years as greater authority over land use decision making has been exercised by legislative bodies throughout the country, the underlying principle, that one's authority to use one's own land may be adjusted to reflect or accommodate another's interest in other land, is still very much at the heart of broadened public control over land use. Further, it is under the guise of this type of concern that our system asserts an interest in and control over land use activities that have adverse consequences on lands beyond the property itself.

In a Kansas Attorney General Opinion, the question of whether corporate ownership of farmland was detrimental to the public welfare was addressed. By statute, most corporations are barred from owning an interest, directly or indirectly, in farmland. Amendments have given counties the option of permitting dairy and swine corporations to locate within the county. The issue before the Attorney General was whether the county could rescind such a grant of permission and, if the county did so, whether it would constitute a "taking" of a property interest from the corporation. The Attorney General found that the state may exercise its police power to totally prohibit persons from engaging in occupations or businesses that are detrimental to the public welfare. n195

§ 47.09(c) Power of Eminent Domain.

Under the federal n196 and most state constitutions, governmental bodies will be considered to have the power to take private property for public purposes. This power is subject to two important limitations: the property must be taken for a *public purpose* and *just compensation* must be paid. A discussion of this power is beyond the scope of this chapter and is dealt with elsewhere in this treatise. n197 It should be noted that the power of eminent domain differs significantly from the police power in that when the power of eminent domain is exercised, compensation must be paid whereas in the case of the exercise of the police power, no compensation is required. n198

§ 47.09(d) "Takings."

Property has long received the special attention of the law because of its connection to wealth. Indeed, land has been recognized as a primary source of wealth and those who own land are perceived to have somewhat greater opportunities to generate some kinds of wealth than others. An investment in land may be substantial and as a result, there may be great interest in the protection accorded by the legal system to that investment. The expectation of value and wealth associated with the investment in property has frequently been encouraged and protection has been justified on the rationale that such investments actually advance social well-being in addition to providing financial rewards to the landowners. Indeed, the presence of "investment backed expectations" has long been identified as a constraint upon the exercise of restrictive governmental authority over private land use decision making. To the extent that such investments serve a vital public function, they may be protected, even as part of the property right itself. On the other hand, where the investment has negative public impacts, the right to make such an investment may not be protected.

The interrelationship between private rights and public authority is generally adjusted through the use of the "takings" doctrine. It has been held that when public authority goes "too far" in the direction of restricting private rights, the law will consider that those rights have been taken by the public authority and the private right holder who has lost the

rights will therefore be entitled to just compensation. n199 Of course, the great difficulty with the doctrine is determining when the exercise of public authority has gone "too far." The Supreme Court has taken the position that there is no "'set formula' for determining when 'justice and fairness' require that economic injuries caused by public action be compensated by the government rather than remain disproportionately concentrated on a few persons." n200 Factors which seem to influence the determination include such matters as the extent to which the regulation (1) interferes with recognized property rights, (2) interferes with investment-backed expectations, (3) causes economic injury, (4) promotes historical, traditional or legitimate public policies and interests, (5) results in a permanent physical invasion of the property, or (6) causes the private right holder to bear a disproportionate burden in supplying a public benefit. n201

Several recent cases have been considered of interest to farmers concerned about the extent of governmental power over land use. The Federal Court of Claims has ruled n202 that provisions of market orders that required that a portion of the crop for a given year must be placed in a reserve for disposition if a non-competitive market such as school lunch programs, charities or animal feeds did not deprive the farmers of any property interest because the farmers had failed to show that they had a proprietary right to dispose of their crop free of regulatory controls.

In contrast, n203 the United States Supreme Court held that the City had exceeded its authority when it required the landowner to dedicate a portion of her property to greenway purposes as a precondition to receiving City permission to redevelop her property. The court held that the City must show an "essential nexus" between the legitimate public interest and the permit condition and then satisfy that the interest taken from the landowner was "roughly proportional" to the benefit to be achieved. This, the court said, required that the city make some sort of individualized determination that the required dedication was related both in nature and extent to the impact of the proposed development.

In another case, n204 the court held that the denial of a permit to dredge and fill areas designated as wetlands constituted a "taking" because it deprived the landowner of a property interest in that land where the effect of the denial was to render that land useless for any economically viable purpose. The court held that it was proper to look at the impact of the denial of the application on the specific land that was the object of the application to determine whether the denial deprived the landowner of *all* use of the property rather than to look to the entire tract of land owned by the landowner. In this case, the landowner owned approximately 250 acres but the permit application was for only 12.5 acres, which, because of the denial of the permit, could not be used for any meaningful economic activity.

The law of "takings" has been a fruitful one for commentators. For further discussion, there are many articles one may wish to consult. n205

The question whether a "taking" occurred as the result of changes in county ordinances affecting corporate swine farming has been addressed in an opinion by the Kansas Attorney General. By statute, most corporations are barred from owning an interest, directly or indirectly, in farmland. Amendments have given counties the option of permitting dairy and swine corporations to locate within the county. The question at issue was whether a county could rescind such a grant of permission and, if the county did so, whether it would constitute a "taking" of a property interest from the corporation. The Attorney General found that the state may exercise its police power to totally prohibit persons from engaging in occupations or businesses that are detrimental to the public welfare. Citing Mugler v. Kansas, n206 the Attorney General found that the adoption of the restrictions against corporations was well within the bounds of law and that "there was no vested right in carrying on a business that was legislatively declared detrimental to the public, and that the property owner was not entitled to compensation or a stay on the law's application." n207 Accordingly, the rescission of permission would not necessarily result in a "taking" of property even where the corporation had begun activities within the county. Specifically, the county was not required to "grandfather in" those operations since, but for the permission of the county, their existence was considered detrimental to the public welfare. n208

In Kim v. City of New York, n209 the court found there was no taking when the city enforced an obligation of a property owner to maintain lateral support of public highways. In this case, the city had changed the "legal grade" of the

roadway in 1978, prior to the purchase of the property by the plaintiff. Nothing was done to change the actual grade of the road until 1990 when the city raised the road by 5 feet and placed side fill on 2400 square feet of plaintiff's property. The court, with a strong dissent, found no taking on the ground that the common law obligation to maintain lateral support of public highways was the prevailing rule of the state at the time the property owners acquired the land. Any "taking" would have occurred at the time the legal grade was changed and the right to seek compensation would have belonged to a predecessor in interest rather than the plaintiff. The court considered the impact of the grade change to have been reflected in a reduction in price that the plaintiff should have enjoyed when the land was purchased. n210

Several cases have explored the impact of existing environmental regulations as takings. In Gazza v. N.Y.S. Dep't of Environmental Conservation, n211 the court held that where a parcel is already subject to state environmental regulations at the time of its purchase, the state's decision not to grant a variance to those restrictions does not constitute a "taking."

In Basile v. Town of Southampton, n212 the court held that when the parcel is already subject to environmental regulations and the state subsequently condemns the parcel, the compensation due to the owner is equal to the value of the land subject to the restrictions. In Matter of Anello v. Bd. Of Zoning Appeals, n213 the court held that where the landowner was denied a variance to the land use regulations that were enacted prior to the acquisition of the property, the original enactment of those regulations will not be considered a "taking."

In Suitum v. Tahoe Regional Planning Agency, n214 the Court dealt with a claim that the denial of permission to develop the property constituted a taking. The Regional Authority argued that the landowner was entitled to valuable "Transferable Development Rights" (TDR's) and until those were exercised, it could not be determined whether there was an "taking" of property in violation of constitutional protections. The Court held that the matter was ripe for determination notwithstanding that she had not attempted to sell her TDR's and remanded the case for a "takings" determination. The Court argued that the issues associated with the taking claim and uncertainty of the value of the TDR's were susceptible of resolution. The agency had made a final determination because it had found that her land lies entirely within the zone in which development is not permitted. Any uncertainty as to the value of the TDR's was considered a simple issue of market determinations which courts routinely make. As a result, the matter was remanded. n215

§ 47.09(e) Specific Regulatory Objectives: Control Over the Geographical Distribution on Land Use Patterns.

As our system has come to recognize greater authority to intervene in what historically might have been viewed as private land use decisions in order to promote particular public interests, it has become possible to identify a number of objectives that are typically sought as this control tends to be exercised.

The law generally recognizes that considerable control may be exercised by the public authority over the overall distribution of land use patterns within the jurisdiction. n216 While it may not be possible to eliminate entirely particular uses that may be deemed undesirable, significant control over the location of uses and the density or intensity of such uses seems to be clearly and legitimately within the scope of police power regulation.

Control over land use patterns may be either direct or indirect. Zoning and subdivision control laws, for example, deal directly with the question of use location by carving the jurisdiction into use districts and then determining which uses may lawfully occur in each particular district. Comprehensive land use plans similarly address the issue of overall or area-wide use distribution and density. Growth management planning indirectly influences patterns by regulating how and at what rate municipalities or towns grow and develop. Sign control ordinances and architectural design review ordinances similarly can indirectly influence land use patterns as a result of their focus on the aesthetic character of a jurisdiction. Likewise, historic preservation acts and ordinances more directly influence use patterns as a result of their purpose to maintain socially significant historic areas or structures.

The control over land use patterns can also be somewhat subtle. A particular jurisdiction may exercise considerable control over the actual distribution of particular land uses within the jurisdiction simply by determining and designating which uses are appropriate for particular areas. For example, if a specific use, such as residential use, is designated as appropriate for a particular area, tremendous pressure may be brought to bear upon nonconforming uses, such as agricultural uses, to ultimately leave the area. Pressure results from the diminished likelihood that new farms will be created in the area in the future. Pressure also results from limitations on the extent to which the existing farms can expand or change. Finally pressure comes from the fact that some farmers will decide to change uses that become the preferred use for the area (residential land uses), which will put economic pressure on the remaining farms to likewise change to more protected uses. Within a period of time, it is quite likely that the use pattern of the area will conform to the use designation -- without the need to mandate that any particular land owner specifically alter how the land is used!

Efforts to control land use patterns tend be more direct where the offending existing use or the proposed use is considered undesirable, or the consequences thereof threaten the health or safety interests of the jurisdiction. In these situations, it is common to either directly enjoin the undesirable use or to require that special permission be secured in order to commence or continue the use.

§ 47.09(f) Specific Regulatory Objectives: Protection of Particular Uses.

While all different kinds of land uses may be considered important and enrich our quality of life in their own unique ways, from time to time there has been great fascination with certain particular uses. Single family residential uses, for example, have long been considered the "highest" use under most traditional zoning schemes. These uses are given developmental priority under such schemes and tend to be sheltered in their particular zoning districts from uses that are considered incompatible. Likewise, unspoiled wilderness areas have become a national treasure and are guarded from the adverse consequences of popular use and enjoyment. n217 Similarly, historic districts have been created in a number of cities and have become a mecca of sorts to those who want to explore first hand their historic roots and heritage. n218

The long-term availability of land for farming use is perhaps one of the more surprising land use issues that has captured national attention. Serious concern has been expressed that this kind of land use has been adversely pressured by incompatible urban uses nearly to a point of threatening our national welfare. While this may be disputed as a matter of fact, a tremendous number of jurisdictions have adopted a very large variety of land use planning or control measures that are intended to address the problem of farmland conversion. n219 These approaches vary from designating particular areas of the jurisdiction as set aside exclusively for agricultural use to allowing the public decision-making body to acquire from the landowner the right to develop the property. Even at the federal level, the consideration of the adverse impacts on farmland use has become an important part of federal land use planning and decision making. n220 Many of these efforts are discussed below in more detail.

§ 47.09(g) Specific Regulatory Objectives: Prevention of Harmful Uses.

Historically, the law of nuisance has allowed a landowner to enjoin others from using their land in ways that harmed the landowner in the use and enjoyment of land. n221 The notion of public nuisance extends this concept to protect the public at large. n222 It is usually not disputed that government has the power to prevent the harmful use of the land but it was somewhat unsettled until recently whether it must pay compensation if it does. n223 Prior to the decision in *Lucas v. South Carolina Coastal Council*, n224 it was argued that if the harm resulted from a nuisance, compensation need not be paid. This view found support in a line of Supreme Court decisions. n225 Standing in opposition was the possibly more expansive view found in Justice Brennan's observation in a footnote in *Penn Central Transportation Co. v. New York* n226 that the validity of the regulation depended more on the reasonableness of the relation between the policy and the public benefits to be derived than it did on the "noxious quality of the prohibited uses." The court in *Lucas* clearly rejected the argument that governments may avoid the need to compensate simply because the regulated

use constitutes a nuisance.

There are still several unanswered questions are at the core of this debate. Can a particular use cause harm to the public without, at the same time, constituting a nuisance? If harm is required, and is defined as broader than nuisance, what kind of "harm" is required and how much "harm" must there be? Must the public pay for every benefit it receives from particularly ordained land uses that do not cause nuisance-type harms if they result in some restriction or limitation on the use of the land? Reason would suggest the need for some flexibility in the law here on behalf of government which would suggest that in perhaps more cases than not, government will be permitted to regulate nuisances without the burden of just compensation. Likewise, the growing sense that ownership serves a social as well as a private function suggests that governmental power may generally be exercised in pro-social ways. n227

§ 47.09(h) Impacts on Agricultural Land.

The effect of considerable governmental authority over land use decision making has the potential for an extensive and varied impact upon individual landowners. Agriculture may be both the beneficiary and the object of much of this regulation -- largely because of external consequences of particular land use activities such as the farming of environmentally sensitive lands or the confined raising of animals. Some of these specific impacts will be discussed in more detail below in this chapter.

Although government has a right and responsibility to intervene in private land use decision making, in a real and practical sense, the intrusion into the private right is most intense where the harm to the public interest is perceived to be the greatest. Agricultural land use therefore tends to be largely unaffected except where environmental or intergenerational values are involved (such as with conservation or resource preservation issues) or where food and fiber production activities raise concerns relative to the health, safety or welfare of the community at large.

Doubtless, some regulatory authority may be directed toward controlling the availability of agricultural land for alternative uses. A jurisdiction may effectively influence or control individual land use decisions simply by confining the exercise of the right to a specific choice array that is incorporated into its land use regulation program. This may confine agricultural uses to particular geographic areas within the jurisdiction and may have the effect of eliminating entirely the opportunity to make an undesirable land use choice as well as the effect of encouraging choices which the system approves.

Other regulation may range from officially encouraging or actually permitting a particular desired use, on the one hand, to limiting its extent or intensity or to explicitly prohibiting it altogether on the other. This may be the case, for example, where the agricultural land owner proposed to locate a concentrated animal feeding lot near land used for residential purposes.

In some cases, jurisdictional control over land use may actually enhance the use opportunities of particular landowners. This may be done by protecting particular use choices with which the landowner may be in agreement, such as the designation of the area as an agricultural use district. Conversely, if the contemplated use is inconsistent with existing or contemplated patterns, the extent of governmental control recognized in our system may be sufficient to prevent the proposed use from being established. This would occur, perhaps, where an individual wishes to keep horses for recreational use within a residential area against the wishes of the neighbors.

The police power is generally considered sufficient to prevent the establishment of uses that cause harm to others or to enjoin uses which interfere unreasonably with the use and enjoyment of property by others. n228 This may be the case where the farmland is heavily sprayed by aerial application of pesticides and there is a significant risk that the spray will drift over non-agricultural lands or will cause harm to other agricultural lands. On the other hand, because the system still limits the extent to which private property rights may be "taken" to secure a public benefit, existing uses which are considered undesirable but are otherwise not harmful to the public health, safety, welfare or morals of the community

may be protected. This may allow for the continuation of long-standing agricultural uses that are no longer compatible with the rest of the neighborhood but are not of a particularly offensive nature. Nevertheless, it still may be possible to impose limits on the extent to which the uses may change in nature or intensity or to require that the uses be terminated after a reasonable amortization period. n229

The ability to control also includes the ability to supervise and, in many cases, government will be able administratively to affect the manner in which the use is undertaken or the conditions under which the use occurs. For example, before particular uses, such as concentrated animal feeding operations, may be undertaken, it may be necessary to secure specific permission from the jurisdiction to undertake the use. Similarly, it may be necessary to demonstrate compliance with particular use criteria, such as the existence of an approved conservation plan, before the use may be started.

It may also be that while the use itself is not prohibited or regulated, the landowner may be held accountable for the adverse consequences of the use. This is the case, for example, as a result of federal hazardous waste statutes which impose upon the landowner the liability for costs associated with remedial actions taken to correct damage or threatened damage to the environment. n230

§ 47.09(i) Agricultural Land as the Environmental Battleground.

One of the notable developments in the history of this nation is that it has become a highly urbanized society. While farmers and ranchers own and use the bulk of the nation's private land, they have clearly become a political and cultural minority. Given the "one man-one vote" rule of political representation, the position of farmers and ranchers today is such that their only meaningful opportunity to influence policy decision making tends to be confined largely to lobbying, rather than to any effective representational process. Few would question that in our republican form of government, the wishes of the majority and the concerns of society as a whole should dominate. Few would also question the need of the majority to be sensitive to the needs of minorities and not act in an oppressive fashion. Unfortunately, there appears to be a growing concern among farm and ranch landowners that the relationship between them and the urban majority is becoming more custodial than cooperative, and that the urban interests are pursuing an agenda regarding the use of rural land that is designed to shape rural land use patterns and activity to fit an urban vision of what the countryside should be and be like. n231

Much has been written regarding the impacts of agricultural land use upon environmental concerns. n232

This view seems to be giving rise to a feeling that government itself has assumed a discernible urban orientation that is insensitive to their interests and concerns. n233 With respect to the growing national concern over the environment, this orientation seems to suggest a significant shifting of control over individual land use decisions and practices away from the farm and ranch landowner to urban dominated or controlled public decision making bodies. The consequences of such a shift, they complain, is that they are being deprived of some of the most meaningful attributes of property ownership itself.

Most of the recent concern regarding environmental issues and land use seems to be focused on the impact of land use activity on environmentally sensitive lands. Rural lands are a logical target for such concerns for a variety of reasons. First, urban conversion pressures are likely to change the land from "natural" to a more intensive use, and therefore to a use that is perceived as more environmentally degrading. Second, a number of particular agricultural land use practices, such as the application of pesticides or herbicides or simply the plowing of the land for crop production are seen as likely to cause irreparable damage to natural resources such as the water or wetlands. Finally, since lands which are used for agricultural purposes tend to be seen as having been less corrupted by environmentally threatening activity, they tend to be perceived as being closer to their natural state and as such, the most susceptible of protection and more likely to be "saved" from future harm if properly regulated. All of these factors appear to persuade many agricultural landowners that their lands are the primary target of such regulations.

It would generally not seem to be the case that agricultural landowners disagree with the objectives of most of the current efforts to restrict land use for purposes of environmental protection. The problem with both environmental and land use regulations for the most part seems to turn on a question of the particular values that drive the regulations. Both land use regulation and environmental controls tend to be areas of the law which are driven by values which are not universally shared. While it is possible to point to a number of specific health or safety threats associated with environmentally sensitive land use practices, the ultimate objectives of a particular regulatory approach may be nothing more than a concern with aesthetics or perhaps social convenience. Many agricultural landowners, like any other minority, fear that the values that underwrite regulatory approaches will be the values of the majority rather than their own.

There also appears to be a widespread perception that most restrictions of either an environmental or land use nature operate on the assumption that it is entirely socially and culturally acceptable for urban interests to shape rural areas essentially to fit the urban vision of what they should be like without regard to the wishes or needs of the rural farm and ranch land owners. Because of concerns with environmental issues and with the need to make sure societal interests in land use patterns are achieved, agricultural landowners increasingly have been expressing concern that since their lands tend to be the ones that can be regulated with the least amount of hassle from other urban concerns, the focus of most environmental and land use programs will be on rural lands.

In some respects, this viewpoint has a ring of truth to it. The current controversy over "wetlands" reveals that concern is almost exclusively focused on rural areas. Likewise, the soil and water conservation efforts of the nation have historically been targeted toward rural areas.

Many on the urban side would argue that such an approach makes eminent good sense since rural lands are not yet "developed" and they are therefore more amenable to sound management if it is imposed now. Similarly, many would argue that rural lands tend to be "unspoiled," they can be shielded from the harmful consequences of developmental activity only if they are properly managed now.

It is unlikely that rural, and particularly agricultural areas will cease to be the primary targets for land use restriction that is primarily designed to protect against environmental harms. It is also unlikely that agricultural landowners will cease to perceive these regulations as unwarranted intrusions and as further evidence of urban domination of the land use planning and control agenda. It is also unlikely that the law will be particularly sympathetic to the concerns of the agricultural landowners.

In the case of Board of Health of Wrentham v. Hagopian, n234 a Massachusetts Appeals Court held that razed chicken coops constituted a solid waste disposal site, under Mass. Gen. L. ch. 111, § 150A, as a "facility." In this case, the farmer had demolished two four-story chicken coops on his land but had not removed approximately 900 cubic yards of the waste.

In a similar vein, the court in Concerned Area Residents for the Environment v. Southview Farm, n235 considered a liquid manure spreading operation within the meaning of a "point source" of pollution under the Clean Water Act. n236 The manure was applied through a center pivot irrigation system, a hard hose that could spray manure 150 feet, and conventional manure spreaders pulled by tractors. The problem was that manure was entering streams as runoff from the fields.

A concern in Kansas has been the impact of the Kansas Air Quality Control Act n237 on open burning of pasturelands. Historically, farmers and ranchers have burned the prairie as a means of establishing new grass stands for their cattle and to recycle plant nutrients. Indeed, courts in that jurisdiction have long recognized that farmers have the right to conduct open burning on their premises for agricultural purposes. n238 Under the Kansas Air Quality Control Act, the Secretary of the Kansas Department of Health and Environment (K.D.H.E.) promulgated regulations that prohibit the open burning of wastes or any item for the purpose of salvage or the burning of vegetation, structures or other

combustible materials. n239 The regulations exempt agricultural burning for crop management purposes from the general proscription against open burning, though there are important restrictions regarding the time of day and of the year in which a particular parcel may be burned, and prohibit burning on cloudy or foggy days. n240 The validity of these regulations was challenged and upheld in an administrative proceeding. n241 Where burning may cause harm to others, courts have long held that the standard of care to which the farmer must adhere is that of reasonable care under all the circumstances. n242 Some tax changes seem designed to reward farmers and ranchers for making some decisions regarding conservation activities on their land, particularly where that is undertaken through conservation easements. I.R.C. § 170 now treats "qualified conservation contributions" as charitable contributions for which the donor is allowed to take a deduction for income tax purposes. n243 Similarly, Section 508 of the Taxpayer Relief Act allows the executor of the estate of a farm decedent dying after Dec. 31, 1997, to exclude from the decedent's gross estate up to 40% of the value of land subject to qualified conservation easements. n244 Despite the increase in measures adopted to protect the environment, there seems to be some reluctance on the part of courts to consider these laws as modifying the law of nuisance. In Superior Farm Management, L.L.C. v. Montgomery, n245 the court held the proposed hog breeding operation to be a nuisance. It was argued that the interest of those adversely affected had been properly addressed in the environmental laws of the jurisdiction. The court responded by noting that "such laws do not attempt to alter general rules of law with regard to private nuisances and will not aid or impede a private individual in an action to enjoin a nuisance." n246 The rationale for this view is that "to constitute a nuisance, it is not necessary that the noxious trade or business should endanger the health of the neighborhood. It is sufficient if it produces that which is offensive to the senses and which renders the enjoyment of life and property uncomfortable." n247

(n7)Footnote 197. *See* ch. 80, *infra*.

(n8)Footnote 198. *See Candlestick Props., Inc. v. San Francisco Bay Conserv. & Dev. Comm'n, 89 Cal. Rptr. 897 (1970):*

Under the power of eminent domain property cannot be taken for public use without just compensation. However, under the police power property is not taken for use by the public; its use by private persons is regulated or prohibited where necessary for the public welfare.

For further discussion, *see* Joan L. McGregor, *Property Rights and Environmental Protection: Is This Land Made for You and Me?, 31 Ariz. St. L.J. 391 (1999);* Michael A. Heller, *The Boundaries of Private Property, 108 Yale L.J. 1163 (1999);* Virginia Albrecht, *Regulatory Takings and Wetlands: What are the Constitutional Limits?* "Inverse Condemnation and Related Government Liability," SB14 ALI-ABA 531 (Oct. 17, 1996); Virginia Albrecht, *Regulatory Takings Issues in the Context of Federal Wetlands, Endangered Species, and Surface Mining Regulation,* "Inverse Condemnation and Related Government Liability," C997 ALI-ABA 307 (May 5, 1995).

See also Centre Lime and Stone Co., Inc. v. Spring Township Board of Supervisors, 798 A.2d 1291 (Pa. Commw. 2001) dealing with the exclusion of quarrying from a county.

See In the interest of *Forrester, 773 A.2d 219 (Pa. Commw. 2001),* where the court held that protected farmland could be condemned for purposes of granting an easement to a landlocked landowner. In *Hallauer v. Spectrum Properties, 18 P. 3d 540 (Wash. 2001),* the court held that the standard of proof to support the condemnation of an easement to transport water for a beneficial use is not as high as that required for the condemnation of an easement of necessity.

Evidence of environmental contamination and remediation costs was held relevant to the determination of compensation in *Northeast Ct. Economic Alliance, Inc. v. ATC Partnership, 776 A. 2d 1068 (Conn. 2001).* Valuation was also an issue in *United States v. Certain Land Situated in the City of Detroit, 148 F. Supp. 2d 863 (E.D. Mich. 2001).* The specific question was the extent to which governmental discretionary power over how the property was used could bear on valuation of the property. The court rejected an argument that the fact that only certain properties could be used in the way this particular property was being used enhanced its value and avoided normal valuation.

L.A. L. Rev. 1221 (2001).*

(n9)Footnote 199. *Pennsylvania Coal Co. v. Mahon, 260 U.S. 349 (1922).*

In January, 2000, the Seventh Circuit decided a case that has tremendous significance regarding the liability of the federal government for "takings" of property under federal farm programs. In *United States v. Dierckman, 201 F.3d 915 (2000),* the court considered a challenge to an overpayment determination by the Department of Agriculture. It was claimed that the regulation of certain activity affecting wetlands violated the landowner's due process rights because the land to be regulated did not fall within the scope of interstate commerce. The Court held that the Food Security Act was not enacted under the auspices of the Commerce Clause of the Constitution but rather under the spending power. It held that the government is therefore not limited by the enumeration of Congressional powers in Article 1, Section 8 of the Constitution. As a result, the government may engage in indirect regulation of matters that would not fall within the scope of interstate commerce.

See also Bradshaw v. United States, 47 Ct. Cl. 549 (2000), holding that neither the grazing permit nor the historical grazing preferences constituted property under the Fifth Amendment. Likewise, the failure of the government to prevent feral horses from causing damage to the ranch and forage did not result in a taking.

For further discussion, see Centner, T., *Anti-Nuisance Legislation: Can the Derogation of Common Law Nuisance be a Taking? 30 Envtl. L. Rep. 10253 (2000);* Kendall, Douglas T. *Preserving South Carolina's Beaches: The Role of*

L. 1185 (July 1994);* David Callies, *The Quiet Revolution Revisited: A Quarter Century of Progress,* 26 Urb. Law., Spring 1994, at 197; James Wickersham, *The Quiet Revolution Continues: Emerging New Model for State Growth Management Statutes, 18 Harv. Envtl. L. Rev. 345 (1994);* Joan L. McGregor, *Property Rights and Environmental Protection: Is This Land Made for You and Me?, 31 Ariz. ST. L.J. 391 (1999);* Michael A. Heller *The Boundaries of Private Property, 108 Yale L.J. 1163 (1999);* Peabody, Payson R., *Will the 104th Congress Revolutionize Fifth Amendment Takings Law? An analysis of the Private Property Protection Act of 1995,* 5 FEDCBJ 1999 (1995); Virginia Albrecht, *Regulatory Takings and Wetlands: What are the Constitutional Limits? "Inverse Condemnation and Related Government Liability,"* SB14 ALI-ABA 531 (Oct. 17, 1996); Virginia Albrecht, *Regulatory Takings Issues in the Context of Federal Wetlands, Endangered Species, and Surface Mining Regulation, "Inverse Condemnation and Related Government Liability,"* C997 ALI-ABA 307 (May 5, 1995).

In *Palazzolo v. Rhode Island, 121 S. Ct. 248 (2001),* the United States Supreme Court held that the fact that the land was acquired after the effective date of the regulations at issue did not bar regulatory taking claims. In contrast, the court in the State of California, in *County of San Luis Obispo v. Superior Court, 108 Cal. Rptr, 2d 753 (Cal. App. 2001),* held that after a deed of trust divested a landowner of any interest in the property and a foreclosure sale purchaser settled the dispute with the county, the landowner was held to be without standing to challenge the regulations as causing a taking.

In *Klump v. United States, 50 Fed. Cl. 268 (2001),* the court rejected a taking claim regarding water rights that were enjoyed by the cattle rancher. The rights were deemed lost when the grazing rights were cancelled. The Government petitioned the State to transfer the water rights to it. The Court held that there could be no taking if the government was not acting in its sovereign capacity. Here the Government merely petitioned as an adverse title claimant rather than acting in any sovereign capacity.

In *MC Associates v. Town of Cape Elizabeth, 773 A. 2d 439 (Me. 2001),* the court held that state and federal takings claims do not need to be brought in separate proceedings. Nevertheless, the plaintiff failed to prove that the wetlands at issue were buildable before the enactment of the ordinance in question.

For a discussion of the taking question regarding wetland matters, see S. Mattox, *Regulatory Obstacles to Development and Redevelopment of Wetlands and other Essential Issues,* SG029 ALI-ABA 853 (2001). For a discussion of taking issues generally, see L. Cohen, *Historical Preservation and the Force of Law,* SG040 ALI-ABA 621 (2002). *See also R & Y, Inc. v. Municipality of Anchorage, 34 P.3d 289 (Ala. 2001),* holding that the requirement of a setback in order to protect wetlands did not constitute a taking.

See also Maritrans Inc. United States, 51 Fed. Cl. 277 (2001), addressing the issue of categorical takings; *Animas Valley Sand and Gravel, Inc. v. Board of County Commissioners of the County of La Plata, 38 P.3d 59 (Colo. 2001),* dealing with the extent to which a taking can occur despite some retained economically viable use; *Centre Lime and Stone Co., Inc. v. Spring Township Board of Supervisors, 798 A.2d 1291 (Pa. Commw. 2001),* dealing with the exclusion of quarrying from a county. In *Laguna Gatuna, Inc. v. United States, 2001 U.S. Claims LEXIS 175 (Fed. Cl. 2001),* the court held that an Environmental Protection Order requiring the land owner to cease using a dry lake bed for the disposal of oil field brine constituted a taking of a property interest held by a lessee.

In *Schroder v. Bush, 263 F.3d 1169 (10th Cir. 2001),* the court rejected a claim that the failure of the government to maintain favorable market conditions constituted a taking. Rather, this was held to be a nonjusticiable political question.

A challenge to a minimum lot size zoning ordinance was upheld in *Pheasant Bridge Corporation v. Township of Warren, 777 A. 2d 334,* (N.J. 2001), although the court refused to find a taking during the interval in which the ordinance was being successfully challenged.

In *Daniels Cablevision, Inc, v. San Elijo Ranch, Inc, 158 F. Supp. 2d 1178 (S.D Cal. 2001)* the court held that there was no right of access under the Cable Television Act apart from that which was available under formal dedications. Thus, the company could not lay cable in a utility trench without paying for the privilege. However, the extension to leased property of a rule prohibiting restrictions on direct-to-home satellite broadcasts did not constitute a taking.

Perron, *When Tribal Treaty Fishing Rights Become A Mere Opportunity to Dip One's Net into the Water and Pull it Out Empty: The Case for Money Damages When Treaty -Reserved Fish Habitat is Degraded, 25 Wm & Mary Envtl. L & Pol'y Rev. 783 (2001);* S. Eagle, *Just Compensation for Permanent Takings of Temporal Interests,* 10 Fed. Cir. B. L. 485 (2001).

For a case involving local authority to designate land as wetland, held not to constitute a taking, *see Bode v. Minnesota Department of Natural Resources, 594 N.W. 2d 257 (Minn. 1999).*

Landowners' ability to sue federal and state defendants may be limited by the doctrine of sovereign immunity. In *Michigan Peat v. United States Environmental Protection Agency, 175 F.3d 422 (6th Cir. 1999),* the state and its department of environmental quality were held entitled to Eleventh Amendment immunity in a suit involving the conditions of a proposed discharge permit for the plaintiff's peat mining operation.

In *Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency, 34 F. Supp. 2d 1226 (D. Nev. 1999),* the court found that an ordinance that temporarily prohibited most construction and a resolution that temporarily suspended all permit approvals deprived land owners of all economically viable uses of the land. On the other hand, the newly adopted regional plan did not deprive the landowners of all economically viable use of the land.

(n20)Footnote 210. *See also Hoover v. Pierce County, 903 P.2d 464 (Wash. App. 1995)* where the court held that there was no compensable taking resulting from flooding from a culvert installed as part of a county road project. There, the culvert was installed prior to the landowner's acquisition of the property but the flooding occurred after. The court held that the "taking" occurred at the time the culvert was installed. *But see Saunders v. State Hwy. Comm'n, 508 P.2d 981 (Kansas 1981)* holding that the right to lateral and subjacent support applies to the land itself and that it cannot be taken by the state without payment to the owner.

In *Schreiner Farms, Inc. v. Smitch, 940 P.2d 274 (Wash. App. 1997),* the court held that an elk owner did not suffer a "taking" when the state adopted a law that made it unlawful to "import, hold, possess, propagate, offer for sale, sell, transfer or release elk." The court reasoned that the landowner could sell the elk out of state and could use his land for other uses.

(n32)Footnote 222. *See, e.g., City of Ft. Smith v. Western Hide & Fur Co., 239 S.W. 724 (Ark. 1922).*

See Flo-Sun, Inc. v. Kirk, 783 So. 2d 1029 (Fla. 2001), holding that the federal Air and Water Pollution Control Act did not impliedly repeal the public nuisance statutes as they relate to pollution of air and water. This case abrogates *State v. SCM Glidco Organics Corp., 592 So. 2d 710 (Fla App. 1991).*

In *City of Erie v. Stelmack, 780 A.2d 824 (Pa. Commw. 2001),* the court upheld the demolition of an apartment building as necessary to abate a nuisance. The court opined that when abating a public nuisance, the remedy devised should be no harsher than the minimum necessary to abate the nuisance.

An allegation of illegal drug activity on the premises was deemed sufficient to support an action to abate a public nuisance in *State v. Zuckerman, No. CV010742845, 2001 Conn. Super. LEXIS 1743* (Jun. 20, 2001). In contrast, it was held in *City of St. Louis v. Varahi, Inc, 39 S.W. 3d 531 (Mo. App. 2001)* that maintaining a house of prostitution did not support a nuisance judgment.

(n33)Footnote 223. In *Lucas v. South Carolina Coastal Council, 112 S. Ct. 2886 (1992),* the Supreme Court held that the so-called "nuisance exception" to the taking doctrine did not exist. For further discussion of this case in the context of agricultural land, *see* James Wadley and Pamela Falk, *Lucas and Environmental Land Use Controls in Rural Areas: Whose Land Is This Anyway? 19 Wm. Mitchell L. Rev. 331 (1993).*

(n43)Footnote 233. *See, e.g.,* Gene Johnson, *Business,* Successful Farming (Oct. 1992) at p. 13:

> One interesting finding from a Successful Farming survey last year concerned your views on the government. "Does the federal government care if you make a profit?" was the question. Over 90% of you said "No!"
>
> I think we have more reason to feel this way in this election year. Am I just missing it, or is it not true that in the political debates dominating our country now, there's precious little discussion of farm issues?
>
> Maybe it's understandable in the presidential race. Farmers do make up only two or three percent of the population. But where I live in the heart of the Corn Belt, there's a Senate race going on, along with several House contests, and they're not talking about farm issues either. More and more, politicians seem to live by the creed that what you don't say can't hurt you... .
>
> Which leads to another point: Government numbers can be deceiving. The National Farmers Union was having trouble understanding how net farm income reported by USDA could be setting new records. In 1988, for example, net farm income was said to be $42 billion.
>
> With a little checking, it was discovered that IRS numbers for that year reflected a total taxable income at $527 million. The enormity of that discrepancy is illustrated by calculating the average income of all 2 million farms in the U.S. According to the USDA number, the average farm had a net income of

about $21,000; the IRS number said the average farm had taxable income of $263. Now that would give the public quite a different view of the state of things on the farm...

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.10

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.10 Agricultural Land Tenure Issues.

[Go To Supp]

§ 47.10(a) In General.

Land tenure describes the ownership relation between man, the land and the government. In feudal times, it designated a relation that existed between the lord and the tenant, being based on a grant from the lord of the land which was to be held by the tenant on the condition that certain services be rendered to the lord. n248 The kind of relation between the tenant and the lord described the particular tenure under which the lands were held. Those lords, in turn, held the land "of the King." Today, although land is considered to be "held of the King" in the sense that title is ultimately traced to a grant from the sovereign, n249 it is generally recognized that the owner of a fee simple holds title free of any tenure relationship -- at least in the feudal sense. n250

Nevertheless, the issue of tenure is important to an understanding of the regulation of agricultural land use for at least three reasons. First, there is a strong national sense that certain forms of ownership are more acceptable than others with respect to agricultural land. If one does not hold the land "the right way," agricultural activity may be limited or even prohibited. For example, family farms are typically preferred over corporately owned farms which may be severely restricted in the kinds of agricultural activity in which they may engage. n251

Second, there is a growing sense that those who own farmland do so with some implied management obligations that are owed to society at large. n252 While these obligations do not require the rendering of specific services to the lord as conditions upon which the right to hold the land may be predicated, these obligations of stewardship are conceptually not too unlike feudal service requirements in that the ability of individual farmers to farm the land effectively may be predicated upon satisfactory performance of these stewardship duties. n253 For example, farmers must abide conservation and environmental protection constraints that are rationalized on the basis of their import to society as a whole rather than on the basis of their impact on the farming operation. n254 These constraints may alter how farming is conducted or whether the farmer is eligible to participate in public entitlement programs. n255

Finally, within the agricultural sector itself, much farming occurs on land to which the farmer does not hold title. The kind and intensity of the land use activity that is permitted and the extent to which the law will protect that activity often depend on the tenure arrangement under which an interest in the land is held. n256

§ 47.10(b) The Family Farm as the Preferred National Farmland Tenure.

The roots of the family farm concept go back to the beginnings of our history as a nation. How the family farm emerged as the national ideal is not clear, but it has been suggested that it was the result of political and policy choices involving the plantation system of the Southeast, the hacienda system of the Southwest and the family farm of the Northeast. n257 One view is that the family farm of the Northeast prevailed because it was successfully linked to particular values associated with our emerging democracy. n258 Thomas Jefferson, for example, argued that small farms were necessary to maximize participation in electoral politics since land ownership was a requirement in order to vote and the smaller the landholdings of each individual, the greater the number of voters in a given area. n259

Initially, Jefferson proposed that for a farm to be considered a family farm, it was necessary to satisfy three conditions: n260

1) the farmer was basically a subsistence operator, buying and selling as little as possible;

2) he did his own work and made his own managerial decisions; and

3) he owned his land in fee simple.

By the 1860s the family farm concept of small farms was formally codified in the Homestead Act of 1862 which became a primary vehicle for promoting the settlement and occupation of much of the nation. n261 This was continued through the National Reclamation Act of 1902 n262 and still is, at least theoretically, a part of federal land and agricultural policy today. n263

Jefferson's definition has undergone considerable evolution since the early days of our history, n264 but the concept of the family farm is still considered significant as witnessed by the following statement which has appeared as a formal part of federal farm program legislation:

> Congress reaffirms the historical policy of the United States to foster and encourage the family farm system of agriculture in this country. Congress believes that the maintenance of the family farm system of agriculture is essential to the social well-being of the Nation and the competitive production of adequate supplies of food and fiber. Congress further believes that any significant expansion of non-family owned large-scale corporate farming enterprises will be detrimental to the national welfare. It is neither the policy nor the intent of Congress that agricultural and agriculture-related programs be administered exclusively for family farm operations, but it is the policy and the express intent of Congress that no such program be administered in a manner that will place the family farm operation at an unfair economic disadvantage. n265

§ 47.10(c) Justifying Concern over the Family Farm.

Our present and historical concern over the family farm is somewhat mythical. The ability to believe that most farms in the United States are family farms, which, as a matter of fact is true, allays deeply held popular fears about the ability of agriculture to provide adequate supplies of cheap food and fiber. An examination of anti-farm corporation statutes n266 suggests that the consumers of agricultural produce deeply fear two kinds of farm enterprise: those that are headquartered *outside* the particular jurisdiction (probably because of the risk that domestic production will be diverted to satisfy food needs elsewhere) and large enterprises (that are possibly seen as able to manipulate either supplies or prices to the detriment of the consumers.) n267 It is interesting that these concerns are greatest in midwest states in which agriculture is a major industry, but not in such states as California, Arkansas, Texas and Florida, which actually produce most of the vegetables and much of the meat consumed in the country. n268

One author has outlined arguments for and against corporate owned hog farms in Kansas. n269

Acceptance of the family farm as the farming ideal assumes, however, that most of these small, family-held farms, produce most of the food and fiber that is used or consumed, which, as a matter of fact, is not true. n270 Herein is the difficult policy problem for government -- how to allay the popular fears regarding food supply and cost without undermining the ability of agriculture to meet the nation's food and fiber needs. The paradox is that family farms must be promoted to allay fear but to meet food needs, family farms are largely irrelevant.

How is policy developed in such a situation? It is quite clear that the national espousal of the family farm as the farming ideal is "symbolic" more than real. n271 By affirming that the family farm is important, government says what the public wants to hear and fear is thereby reduced. On the other hand, efforts to promote the family farm are probably not serious. n272

§ 47.10(d) Implications for Agricultural Land Use Regulation.

Numerically, most farms are in the small farm category. Economically, most small farms do not contribute much to the national food and fiber picture. Middle- and smaller-sized farms are clearly difficult to justify in terms of their collective contribution to the food and fiber supplies of the country. Nevertheless, there are several reason to consider small farm agriculture an important social issue that merits attention in the context of land planning and regulation efforts.

First, small farms should be recognized as an access vehicle for individuals who wish to enter farming but who cannot afford to get in on a massive scale. This is important to the nation *if* there is serious interest in keeping agriculture from becoming the domain of large commercial institutions simply because the present median age of farmers is steadily rising. n273 It is hard to interest land planners in concerns of this type because while consumers generally fear corporate control of agriculture, they basically do not seem to care where their food comes from as long as it is abundant and cheap. n274 Hence, there is little popular or even national policy n275 pressure to protect or encourage small farms except as that relates to food production concerns. n276

Second, the stability and quality of life in rural communities appears to be directly linked to the presence of a large number of individual farmers actively engaged in the affairs of rural communities. A growing body of data suggests that there is a vital connection between the presence of a large number of small farms and the viability of rural communities. n277 Without these farms, rural communities suffer decline and disappear. The following impacts are suggested as a result of the loss of small farms: n278

1. Rural communities lose families engaged in agriculture which support schools, libraries and other institutions.

2. Main street business dependent upon the purchasing power of farm/ranch families may face bankruptcy. n279

3. Consumers experience higher "administered" food prices due to concentration of market power in corporations. n280

4. Urban areas face increased demands for housing, sewage disposal, welfare and other service programs due to farmers relocating to the cities. n281

5. Enhanced environmental concerns resulting from efforts to artificially enhance production by remaining farmers with chemicals and pesticides.

The rural community role played by small farms has historically been of little concern to land planners beyond those in the rural communities themselves. It has also been difficult to generate interest in rural communities as part of land use planning efforts because land use and land use planning have generally been approached as an urban or as a city land use matter.

Finally, but perhaps most significantly, there is substantial evidence that consolidation of farms into fewer and fewer large production units will have impacts on land ownership and land ownership opportunities that reach far beyond the rural communities and will affect anyone who wishes to own land in rural areas. n282 Past patterns suggest that as farmers leave farming (for whatever reason) the fewer farmers that remain tend to be larger. n283 This, in turn, is leading to the concentration of rural land ownership into fewer and fewer hands and if current trends continue, it is conceivable that a very few farmers could actually control not only the supply and price of food but could essentially control all land use activity outside of the cities. n284 This, of course, is frightening to the urban consumer, but in a more meaningful sense, it also offends a deep American sense of proprietorship over agriculture which seems to be of little concern to virtually everyone involved with rural land use issues, including land developers and others who may wish to move out from the cities. n285

It has been difficult to develop an acceptable conceptualization of the role of small farm ownership as part of land use regulation because the role of the small farm has been so engrafted into the question of farm economics and food production. What is needed, perhaps, is a recognition that there may be a need to both extend ownership opportunities and broaden the popular control base of rural land use. n286 What has typically been lacking is a persuasive and socially acceptable articulation of the desirability of small scale agricultural holdings and their associated ownership opportunities, and an effective conceptualization of how such patterns can fit into future land use desires and needs. As a minimum, there must be an understanding that the small farm has rural land use value beyond that of a mere producer of food and fiber.

§ 47.10(e) Farmland Tenure Problems: Fee Simple Ownership.

§ 47.10(e)(1) Fee Simple Ownership

Most farmland is still held in fee simple absolute ownership. This gives the landowner the same rights and privileges associated with ownership generally without regard to whether the land is used for agriculture. As such, the farmland owner is situated like any other landowner with respect to such concerns as the ability to use, profit from or dispose of the land. It is conventional to refer to these rights as sticks in a bundle. This is done very imprecisely and most landowners do not know the nature of the individual sticks in the bundle.

In very few situations does it make a difference in the quantum of rights (or number of sticks) possessed by the owner of the land that the land is held for agricultural use. There are, however, some circumstances under which the fact that the land is used for agricultural use has a definite limiting impact on the ability of the landowner to use the land for some other purpose. One might analogize these to either the attachment of strings to the sticks, such that the enjoyment of particular rights can be manipulated or controlled by someone else -- usually a public body, or, in some cases to the actual removal of sticks from the bundle itself. Restrictions on such rights are often quite subtle.

In some jurisdictions, it is possible to sever the right to develop the land from the fee itself and transfer that right to someone else or to another parcel. n287 These programs are often designed expressly to keep the land in agricultural use. Once the right is severed and transferred, the remaining fee is limited in terms of development opportunities. The

purchaser of such a limited fee may find that the land is relegated to a future of agricultural use only.

A similar result may occur where the fact that the land was used for agricultural purposes has resulted in preferential tax valuation. n288 Here, the promise to use the land for agricultural purposes may be binding on a subsequent generation n289 lest the owner suffer adverse economic consequences. A similar outcome may result from placing the land in the Conservation Reserve Program. n290 These particular programs are designed to induce the landowner to keep the land in agricultural use over a protracted period of time without changing the nature of the title interest held. However, when land subject to such limitations is purchased, the promises that limit the use are generally automatically extended to the new owner.

In a more subtle fashion, the status of the land as wetland or as fragile or highly erodible land may expose the agricultural landowner to use restrictions that are not normally imposed upon non-agricultural lands. While these restrictions are not considered to be part of the fee to the land because they represent a regulatory overlay regardless of the underlying ownership status, they conceptually should be considered a part of the ownership package because the mere purchase of the land exposes the owner to the potential restriction.

§ 47.10(e)(2) Spousal and Children Interests.

Under the federal price support legislation that has governed farming since the mid-1980s, there have been payment limitations respecting the amount of federal entitlements that can be received by farmers. n291 These regulations were phrased in terms of amounts that could be paid "per person" rather than "per farm." n292 This has generated considerable interest in devising ways in which the number of persons a single farm could claim in order to maximize the payments. Initially, by regulation in 1988, both the husband and wife were considered to be a single person. n293 This was modified to allow the spouse to claim separate person status provided that person contributed a separable entity (that was owned by that person previous to the marriage) to the farm and that they continue to operate those entities as separate and distinct from each other.

Apart from the matter of qualifying as a "separate person" for purposes of receiving federal support payments, the question of whether the spouse or children hold a separate interest in the farm has arisen in other areas including divorce and bankruptcy. One important variable is whether the state is a community property state or a non-community property state.

In community property jurisdictions, the issue will generally be resolved on the basis of whether the property is in the matrimonial domicile or whether it is located in a community property jurisdiction. In non-community property jurisdictions, the property acquired after marriage may be either separately or jointly owned and will generally be determined by who has the recorded title interest. In one case to the contrary, it was held that ownership was more a function of enjoyment or possession than bare paper title. n294 In divorce or marriage dissolution situations, equitable concerns often motivate courts to make distributions that are inconsistent with legal ownership. Where the assets of the farm may be required to continue the operation of the farm, which, in turn, is necessary for the long-term financial well being of all parties, it may be necessary to divide ownership without breaking up the farm.

Bankruptcy seems to have posed the most difficult issues regarding the division of ownership. In In re Wolsky, n295 the court rejected dissolution case law as neither persuasive nor controlling since it dealt with the "equitable distribution of property and not the issue of legal ownership of property." Such courts often consider the level of involvement of the spouse in the farming operation to determine whether the spouse should have an interest in such items as crops, livestock, farm machinery and so forth. n296

In some cases, the court has required an express agreement before it would recognize an ownership interest in the other spouse's property in exchange for services. n297 Finally, some courts have considered the question one of whether a partnership existed. n298

§ 47.10(f) Farmland Tenure Problems: Leaseholds.

An increasing amount of land is being farmed subject to leases. n299 Farm leases are like other kinds of leases involving real property n300 in that they create non-freehold estates in the land n301 and thereby are distinguished from such lease alternatives as employer-employee relations (such as cropper contracts and custom farming), n302 tenancies in common, partnerships and joint ventures. Farm leases may be for a period of years, from year to year or even terminable at will. Most of the law has developed around the leasing of land for the production of crops. Leases are possible, however, and in some locations, increasingly prevalent for such other purposes as raising livestock, grazing, hunting, recreational use and pasture.

A variety of leases are commonly used in farming operations. These include:

Straight-cash leases -- rent is either a fixed sum per acre or a fixed amount for the entire farm, often payable in installments.

Flexible-cash leases -- the amount of rent varies according to the production conditions or crop prices.

Crop-share leases -- the rent is determined as a particular fraction of the crop produced. In such leases, various expenses may also be fractioned.

Hybrid-cash lease -- contains elements similar to those found in crop share leases. That is, rent is set as a fraction of the crop or as a particular number of production units (such as bushels). Variations of this type may guarantee a particular amount by a particular date or may only establish a minimum number of units up to a particular fraction (e.g., 10,000 bushels or 1/3 of the crop whichever is greater).

Livestock-share -- rent is measured in terms of animals produced. Landlord typically shares in the expenses of production.

Irrigation crop-share -- rent is usually a certain portion of the crop produced by irrigation; expenses are shared, perhaps in a different fraction.

Labor-share lease -- this is typically used in a parent-child operation where the parent bears most of the management responsibility and the child provides labor.

§ 47.10(g) Leases: Statute of Frauds.

Since leases involve the transfer of an interest in the land from the landlord to the tenant, the statute of frauds of most jurisdictions will govern. Typically, the statute requires that leases exceeding one year in duration must be in writing, signed by the party to be bound. n303 The period may be measured from the time the agreement is entered into even though the term of the lease may begin at a later date and possession may actually be granted at that time. It has been held that an oral promise made in June to rent the land for a year beginning in August was unenforceable under the statute. n304

In Keppy v. Lilientahll, n305 the plaintiff sued the lessor to prevent the removal of hogs from a feeder pig operation. There was an oral agreement to lease the hogs in order to replenish the hog operation. The defendant argued that the lease was with the operator of the land, not with the plaintiff. Notwithstanding, it was held that the plaintiff was entitled to keep possession of the hogs by virtue of a herder's lien.

§ 47.10(h) Leases: Holdover Tenants.

Many farm leases are oral and are for periods exceeding one year. n306 These might be thought to be unenforceable

under most statutes of frauds. However, many jurisdictions have statutes n307 which treat holdover tenants as having year to year tenancies which are not in violation of the statute of frauds. n308 One becomes a holdover tenant when one remains in possession after the expiration of the lease term and acts in accordance with the terms of the lease with the consent of the landlord. n309 The lease then appears to be continued on the same terms as in the initial lease. n310 One court has indicated that unusual terms may not be carried over. n311

In F & F Ltd, v. Schields, n312 the court determined that the farm tenant was not entitled to federal price support payments after the written lease had expired and was not entitled to reimbursement for preparatory expenses incurred after the expiration of the lease. In this case, the tenant farmed seven quarter sections of land but the lease terminated as to five of those sections on July 31, 1992. The tenant did not honor the expiration date and refused to relinquish possession of the five sections of the land. Although the tenant may have been considered a hold-over tenant for some purposes, the issue before the court was whether the lease contemplated the receipt by the tenant of federal payments after the expiration of the written lease regardless of that status. The court found that the lease did not intend to continue the right to the payments after it expired.

In Jansen v. Pobst, n313 the court dealt with the impact of lease terminations on crops growing at the time of termination. Here, the lease was terminated by notice given in May, 1994 which set termination as of June 1, 1994. The trial court effectively considered the tenant to be a holdover tenant because the landowner had accepted some lease payments after the effective termination date of the notice and therefore construed the lease as a year-to-year lease. It further found that even though the notice was given seven months prior to the end of the lease year, it was effective. Missouri law required that notice be given not less than 60 days prior to the end of the lease year for year-to-year leases. The lessee continued in possession until after the 1995 crop was planted and the court awarded the 1995 crop to the tenant, subject to payment of one-third to the owners of the land, less the cost of harvest. The appellate court remanded the case on the issue of the amount owed to the owner of the land because the court failed to give any authority or findings of fact to support its conclusion. It also reversed the trial court on the termination holding.

§ 47.10(i) Leases: Part Performance.

The writing requirement of the statute of frauds may possibly be circumvented by the equitable doctrine of part performance. n314 Traditionally, part performance is satisfied by: 1) the payment of consideration; 2) possession by the lessee; and 3) the making of valuable improvements. n315 At least one court, however, has required that the tenant must do something more than "the ordinary use of the land for cropping" n316 in order to establish part performance. There, the planting activity involved alfalfa as opposed to wheat. The alfalfa was considered sufficient to remove the lease from the statute of frauds. n317 This is arguably consistent with the view that the purpose of the doctrine is not simply to show that the terms of the agreement have been partially satisfied, but to identify circumstances that unequivocally show that someone has an interest in the land other than the record owner.

§ 47.10(j) Leases: Lease Terms.

The rent may be paid by the tenant in cash or with a share of the crop, or in some combination of the two. n318 Cash leases may be either straight cash or flexible cash leases. Straight cash leases typically involve the payment of a fixed sum, either calculated for the entire farm or on a per acre basis. Flexible cash leases vary the amount due on the basis of crop prices when the crop is sold. In crop share leases, the landlord receives a portion of the crop as rent. The expenses associated with raising the crop are typically shared between the landlord and the tenant under crop share leases; the tenant typically pays all expenses under a cash lease. n319

§ 47.10(k) Leases: Termination of Farm Leases.

As a general rule, farm leases may be terminated in the same fashion as other leases. Generally, a lease will terminate at the end of the agreed term whether the lease is oral or written. n320 The common law traditionally required six months'

notice before a year-to-year tenancy could be terminated. This period has often been shortened by statute, typically to thirty days. n321

Notice generally must be in writing and must be properly delivered to the tenant. n322 Some statutes provide considerable flexibility in the manner in which the notice is given and consider delivery proper if the notice is served personally, is left at the normal residence of the tenant, is left with a person of a certain age or older, is posted on the premises or is sent by registered mail. n323 It is necessary to consider the particular requirements of a jurisdiction to insure that the delivery is acceptable.

It may be necessary to give the notice in a timely fashion as well. n324 Typically, the notice must be given a certain period in advance of the scheduled termination date. Notice thirty days prior to the expiration of the term appears common. n325

Typically, the tenant is under no obligation to give notice. n326 Similarly, no notice may be required where the lease has been breached. n327

Termination problems arise when the lease has been extended beyond the initial term or if a particular form of termination is required by statute. If the farm tenant is a holdover tenant, the fact that the law recognizes a particular kind of tenancy may require that the arrangement be terminated differently, even if it is written. Some jurisdictions have special rules relating to the termination of farm tenancies under these circumstances. n328 These rules may apply to both oral and written leases and must strictly be complied with in order to terminate the tenancy. n329

In Sherwood v. Panhandle Eastern Pipeline Co., n330 the landlord sued to have a lease terminated because of an unauthorized assignment of a natural gas lease. Although the lease provided that there could be no assignment of the lease without the written permission of the lessor, the lease did not otherwise prohibit the granting of the lease. The court held that the lease was not terminated because the breach did not involve an essential part of the lease and the lease did not contain a forfeiture provision. The lessor was entitled to recover damages for the breach but had not been able to demonstrate any.

In Jansen v. Pobst, n331 the court dealt with the impact of lease terminations on crops growing at the time of termination. Here, the lease was terminated by notice given in May, 1994 which set termination as of June 1, 1994. The trial court construed the lease as a year-to-year lease and found that even though the notice was given seven months prior to the end of the lease year, it was effective. Missouri law required that notice be given not less than 60 days prior to the end of the lease year for year-to-year leases. The lessee continued in possession until after the 1995 crop was planted and the court awarded the 1995 crop to the tenant, subject to payment of one-third to the owners of the land, less the cost of harvest. The appellate court remanded the case on the issue of the amount owed to the owner of the land because the court failed to give any authority or findings of fact to support its conclusion. It also reversed the trial court on the termination holding.

§ 47.10(l) Leases: Landlord Liens.

Although the title to the crop is normally in the tenant, many states recognize a lien in favor of the landlord on the crop to secure the payment of rent. n332 These liens are created by statute n333 and automatically arise in favor of the landlord. They typically attach as soon as the crop comes into existence, n334 and prevail over prior perfected security interests. n335 The duration of the lien may be limited to a specified time n336 or pertain only to the crops of a particular year. n337 It may also be confined to crops grown on the leased premises. n338

A purchaser of the crop without notice of the lien generally takes free of the landlord's claim. n339 Similarly, these liens may be waived by the landlord, either expressly or by implication. n340

As statutory liens, landlord liens for rent may be avoided by a farm tenant's trustee in bankruptcy. n341

§ 47.10(m) Leases: Improvements.

Under the common law, a tenant could not make substantial changes in the leased premises without the landlord's consent even though the changes improved or enhanced the property. n342 The general rule regarding fixtures also applied such that the tenant could not remove any improvements so attached to the land as to cause material injury to the landlord's estate.

It is recognized that the parties may modify the common law rules by so providing in the lease. n343 Similarly, several states have addressed the issue statutorily with respect to farm tenancies. n344 These statutes may require the landlord to compensate the tenant for certain longterm improvements n345 or may require that the improvements be removed while the tenant is still in possession. n346

§ 47.10(n) Leases: Emblements.

Generally, the tenant was considered under the common law to own the crop grown under a lease. n347 As a general rule, even under a cropshare lease where the landlord was given a fractional share of the crop as rent, title to the crop was not deemed under the common law to pass to the landlord until the crop was divided. n348 These rules are subject to modification by the terms of the lease and may actually vest title in the landlord in whole or in part. n349

It has been held that where a tenant has planted a crop and has every expectation that the crop may be harvested within the term of the tenancy, the tenant may claim and harvest the crop after a termination of the tenancy where harvest is delayed for reasons beyond the control of the tenant. n350 Conversely, if the crop is planted with knowledge that the lease will expire prior to harvest, or where the lease is surrendered before its expiration, the landlord should be entitled to the crop. n351

Vegetative products of the earth which are the result of annual labor of the person in possession of the land are called *fructus industriales*, or "emblements." n352 The doctrine of emblements is designed to determine title to such things growing on the land when a tenancy comes to an end at a time that is beyond the control or that cannot be foreseen by the tenant. n353 In most such circumstances, title to such products (usually the crop itself) will belong to the tenant. n354 Where the termination of the tenancy can be foreseen, as in the case of tenancies for years, the tenant is not entitled to emblements because the termination of the lease is considered to be certain and the tenant can take steps to insure that planting and harvest are done in a timely fashion (in advance of termination). n355 An exception to this rule is that a tenant from year to year may claim the crop where the tenancy is terminated by notice but the crops have been planted before the notice was given. n356

The claim to the crop by the tenant under the doctrine of emblements appears also to be defeated where the tenant terminates the tenancy by the tenant's own acts, or by acts which constitute breach of the lease. n357

Where the tenant dies before the expiration of the tenancy, title to the crop passes to the personal representative of the tenant. n358

In Taggart v. Battaglia, n359 the plaintiff had purchased land subject to a lease under which Christmas trees were being grown by the tenant. The lease allowed for the termination after 30 days notice given on or before January 30 each year. As a result of concerns over the lease expressed by the purchaser in negotiations over the sale of the property, the lessee signed a quit claim deed relinquishing all rights in the property. The lessee continued to care for the trees and removed 190 of them several months after the sale. The lessee argued that the doctrine of emblements allowed the removal of the trees because the lease was for an uncertain period of time and the trees were planted prior to the termination of the lease. The court held that the granting of the quit claim deed was a voluntary conveyance and it passed all the lessee's

rights in the trees.

In Jansen v. Pobst, n360 the court dealt with the impact of lease terminations on crops growing at the time of termination. Here, the lease was terminated by notice given in May, 1994 which set termination as of June 1, 1994. The trial court construed the lease as a year-to-year lease and found that even though the notice was given seven months prior to the end of the lease year, it was effective. Missouri law required that notice be given not less than 60 days prior to the end of the lease year for year-to-year leases. The lessee continued in possession until after the 1995 crop was planted and the court awarded the 1995 crop to the tenant, subject to payment of one-third to the owners of the land, less the cost of harvest. The appellate court remanded the case on the issue of the amount owed to the owner of the land because the court failed to give any authority or findings of fact to support its conclusion. It also reversed the trial court on the termination holding.

§ 47.10(o) Leases: Waste.

As a general rule, a tenant may not cause waste to the premises. n361 Waste is typically not precisely defined but seems to connote some sort of permanent harm or substantial injury to the premises. n362 This was considered to be a breach of a lease term for which damages, injunctive relief or specific performance may be sought. These wrongs would normally not result in termination of the lease. It has been recognized that termination may be provided as a remedy in the lease n363 or by statute. n364

There has been a growing sense that the tenant must affirmatively practice good stewardship as well. n365 This may be specifically provided in the lease n366 or implied by law. n367 Some courts have distinguished between breaches of *conditions*, which justify termination of the lease, and breaches of *covenants* which are remedied by an award of damages. n368 The obligation to farm in a good husbandlike manner has been held to be a covenant as opposed to a condition. n369

§ 47.10(p) Farmland Tenure Problems: Corporate Ownership of Farmland.

A number of states n370 in the Midwest have adopted statutes that restrict corporate ownership of farmland or otherwise limit that farming activities of corporations. n371 Many of these statutes date back to the Depression n372 or earlier n373 and probably grew out of efforts to keep banks from acquiring the farmland during difficult economic times. n374 On the other hand, the recency of legislative activity in several states suggests that the concerns are still being actively enforced. n375 For the most part, these statutes reflect the policy of protecting small or family farms and to some extent codify the fear of "outside" ownership and control by "large" operations.

States that have imposed farming restrictions on corporations must decide whether limited liability companies are subject to the farming restrictions. It would appear that these entities do not differ from corporations in ways that are relevant to the concerns which have motivated the adoption of restrictions. Kansas has determined that the entities are subject to such restrictions. n376 These business entities offer the limited liability advantages of corporations without the loss of other advantages that may come from partnerships or other business formats. It is yet to be decided in most states that have restrictions on corporations whether these new forms of businesses are subject to the farming restrictions imposed on corporations though most such states will probably include the new entities. It would appear that these entities do not differ from corporations in ways that are relevant to the concerns which have motivated the adoption of restrictions. Kansas has determined that the entities are subject to such restrictions. n377 The Kansas Corporate Farming Law has been amended to provide that limited liability agricultural companies can include family farm corporations, family farm limited liability agricultural companies, and natural persons. n378 On the other hand, Nebraska is attempting to prevent limited liability partnerships from owning farmlands, unless the partners are family members or persons who reside on or actively engage in working or managing the farm. The question as to whether limited liability companies can own farms is also argued by legal practitioners. n379

In related actions, several states have considered legislation to relax restrictions on corporations that may be engaged in agriculture. n380 Kansas adopted legislation to permit county commissioners to allow hog and dairy corporations. n381 Minnesota has relaxed restrictions on livestock production, except dairy operations. Missouri considered a bill to repeal all restrictions on corporations but it was withdrawn because of extensive popular opposition. n382 In Iowa, corporate farming was a big issue in the local elections in the 1990s and because of problems with huge corporate hog farms, the state has also considered lifting restrictions on corporate farming. n383

§ 47.10(q) Corporations: Impact on Farming Operation Structure.

Most of these statutes do not deny farmers the opportunity to organize their businesses in a corporate format. n384 Rather, they condition the availability of the corporate form of business upon such factors as the size or nature of the business, the family status of the incorporators, or activity of a particular agricultural nature. n385 In addition, the statutes typically exempt interests taken for security purposes, or land acquired in the process of debt collection, land operated for research or experimental purposes, acreage needed for normal non-farm business n386 expansion purposes, and so forth. n387 There may be a requirement that land acquired by corporations even pursuant to stated exceptions cannot be held beyond or must be disposed of within a certain period of time. n388 If the land is not disposed of during that time, the jurisdiction can have the land sold at public sale. n389 In a 1988 case, the North Dakota three-year holding period n390 was challenged on the ground that it was different from and therefore preempted by a longer n391 (five year) federal holding period of the National Bank Act. n392 The court held that there was no preemption. n393 The court reasoned that both provisions essentially served the same function to prevent the accumulation of farmland and ranchland by corporations and that the state law actually enhances the primary purpose of the federal law. n394

§ 47.10(r) Corporations: Interpreting Restrictions.

Some statutes seek to restrict corporate *ownership* n395 of farmland whereas others seek to discourage corporations from engaging in *farming activities*. n396 In the latter case, there may be serious questions as to what constitutes farming. In at least one case, a court has held that land leased on a cash rent basis did not constitute "farming" since there was no control over or involvement with any of the farming activities. n397 On the other hand, it has been argued that a contract between a farmer and a corporation to raise hogs for the corporation constituted an indirect acquisition of an interest in agricultural land. n398

Farming is typically defined fairly broadly under these statutes to include the cultivation of and for the production of agricultural crops, the raising of poultry, the production of eggs, the production of milk, the production of fruit or other horticultural crops, grazing or the production of livestock. n399 Farming may not include the production of timber, forest products, nursery products or sod or include contracts to provide spraying, harvesting or other farm services. n400

The requirement in some statutes n401 that the corporations be founded for the purpose of farming seems designed to exclude corporations, such as insurance companies and banks, from investing in farming and thereby removing the land from availability to individual farmers. Even though the land may be leased to individuals for farming purposes, and perhaps actually farmed, the statute seems more concerned that farmers not be denied an opportunity to own the land than it is that the land actually be used for farming purposes.

A recurring issue in Kansas has been the extent to which corporations can raise swine. The statute was amended in 1988 to expressly prohibit processors of pork or partnerships in which the processor holds shares from contracting for the production of hogs of which the processor is the owner. n402 The rationale of the provision was to prevent monopolies and to protect consumers. The provision, however, probably effectively eliminated the use of pork production contracts in Kansas where the contract is with a processor.

There has long been an exemption in the statute in favor of feedlots, which was popularly understood to apply to cattle though the statute itself was silent as to feedlots or confinement facilities of anything other than rabbits and poultry.

In 1993, the legislature adopted a measure that would have expanded the opportunities for swine producers to engage in agriculture in Kansas but it was vetoed by the Governor.

In 1994, the legislature revisited the area and passed legislation n403 that was signed by the governor which amends the corporation statute to permit the establishment of swine production facilities owned or leased by a corporation or limited liability company. This may occur if the county in which the facility is to be located has adopted a resolution, subject to notification and protest petition, admitting the establishment of a swine production facility in the county. In the alternative, qualified voters may petition the board of county commissioners requesting the establishment of such a facility.

The law also specifically protects the use of swine production contracts n404 from being considered a violation of the corporation statute by providing that such contracts "shall not be construed to mean the ownership, acquisition, obtainment or lease, either directly or indirectly, of any agricultural land."

Similarly, the legislature permitted the establishment of dairy facilities in counties where the board of county commissioners has adopted resolutions permitting such facilities. n405 A dairy facility is defined to mean the structures, the land and related equipment for housing, breeding, raising, feeding or milking dairy cows. The term also includes such land as may be necessary for the proper disposal of liquid and solid wastes and for the isolation of the facility to protect the cows from exposure or disease.

In local elections in the 1990s, corporate hog farming proposals were defeated in six of the seven counties in which the issue was on the ballot. n406 In an unpublished opinion, the Minnesota Court of Appeals held that the state anti-corporation statute does not create a private cause of action to enforce the statue. In Hommerding v. The Travellers Insurance Co., n407 the court dealt with the aftermath of a foreclosure of a mortgage held by Travelers. Travelers sold the farm to a third party and Hommerding sued, alleging a violation of the state statute. The court found no express grant of a private cause of action to enforce the statute within the statute itself and declined to imply one on the grounds that Hommerding was not a part of the class for whose benefit the statute was adopted; that the legislature did not intend to create a private remedy for the violation of the statute; and that implying such a remedy would not be consistent with the underlying purpose of the statute. n408

An opinion by the Attorney General in Kansas has ruled that swine finishing facilities do not constitute "farming" under the Kansas statute restricting the ability of certain corporations to own farmland in the state. The opinion cited as authority T-Bone Feeders, Inc. v. Martin, n409 which held that there was a distinction between a commercial feedlot and farming. The commercial feedlot was considered to be a specialized agri-business that was engaged in an agricultural endeavor but not engaged in farming. n410

Another Kansas Attorney General Opinion addressed the question of whether corporate ownership of farmland was detrimental to the public welfare. By statute, most corporations are barred from owning an interest, directly or indirectly, in farmland. Amendments gave counties the option of permitting dairy and swine corporations to locate within the county. The issue before the Attorney General was whether the county could rescind such a grant of permission and, if the county did so, whether it would constitute a "taking" of a property interest from the corporation. The Attorney General found that the state may exercise its police power to totally prohibit persons from engaging in occupations or businesses that are detrimental to the public welfare. Citing Mugler v. Kansas, n411 the Attorney General found that the adoption of the restrictions against corporations was well within the bounds of law and that "there was no vested right in carrying on a business that was legislatively declared detrimental to the public, and that the property owner was not entitled to compensation or a stay on the law's application." n412

In 1988, the Attorney General had ruled that hog production contracts between farmers and corporations resulted in the creation of an interest in farmland on the part of the corporation that violated the Kansas corporation statute. In

response, the Kansas legislature enacted K.S.A. § 17-5904(b) which provides:

Production contracts entered into by a corporation, trust, limited liability company, limited partnership or corporate partnership and a person engaged in farming for the production of agricultural products shall not be construed to mean ownership, acquisition, obtainment or lease, either directly or indirectly, of any agricultural land in this state. n413

In 1994, the legislature adopted Kan. Stat. Ann. § 17-5908 which permitted swine production facilities to locate in counties upon approval of a local ordinance authorizing the same. The question whether a production contract that involves the raising of swine constitutes a "production contract" under § 17-5904(b), which is exempt from the statute, or constitutes a "swine production facility" under 17-5908, which can be permitted only by local option. In the case at issue, the land, structures and related equipment would be owned by the farmer and the nursery pigs would be owned by the corporation. The Attorney General ruled that under those circumstances, the facility was not a swine production facility nor is it subject to the general prohibition against corporate farming because of § 17-5904(b). n414 In a related opinion, the Attorney General held that "swine finishing facilities" were not even considered "farming" for purposes of the corporate farm statute. In that opinion, the Attorney General ruled that finishing facilities were commercial feedlots and therefore not engaged in farming as defined in Kan. Stat. Ann. § 17-5903(h). n415

In an opinion relating to the procedures necessary to allow hog corporations to locate in a particular county under Kan. Stat. Ann. § 17-5908, the Kansas Attorney General has ruled that timely publication is jurisdictional in nature. Thus, an ordinance adopted by the county will not be effective until it has been published as required by the statute. The Statute requires that a notice be published twice, in consecutive weeks, after the ordinance has been enacted. In a case arising in Hodgeman County, a local option was adopted in 1994 but the notice was only published once at that time. In January 1997, the ordinance was published again, this time two consecutive times as required by statute. The Attorney General ruled that that publication was valid and resulted in the institution of the ordinance, notwithstanding that more than two years had passed between the time of the adoption of the ordinance and the publication. The ordinance did not lapse because of that delay, nor was the defect cured by the passage of time because the statute did not set a time frame within which publication must occur. n416 As a result of the fact that the ordinance took affect upon publication in 1997, a statutory 60-day period in which opponents could protest began to run. As a result of a timely protest petition, an election was held pursuant to the statute and the county residents voted against the resolution. According to the terms of the statute, that rendered the county ordinance invalid.

The Kansas corporate farming statute allows for a protest election, after the adoption of an ordinance permitting hog farms to locate in a particular county. n417 Whether or not such a protest is held, the Attorney General has ruled that the county may rescind its own resolution giving that permission. n418 The question has arisen whether the question of rescission may be delegated to the electorate by placing the matter on the ballot and making the outcome dependent upon the outcome of the vote. Here, the Attorney General has ruled that home rule powers will only permit an advisory election rather than a binding one since the matter at law is not a charter resolution. n419

§ 47.10(s) Corporations: Legality of the Restrictions.

The limitations on corporate ownership or farming activity have survived a variety of legal challenges. At the state level, there has been a long history of approval. n420 In at least one case, n421 a very restrictive corporation landownership statute has been upheld by the United States Supreme Court against a challenge that the restrictions violated due process guarantees of the Constitution. Similar challenges have been rebuffed including those relating to equal protection, n422 privileges and immunities clauses, n423 preemption by Federal Banking Laws n424 and violations of interstate commerce protection. n425

An opinion by the Attorney General in Kansas has ruled that swine finishing facilities do not constitute "farming" under the Kansas statute restricting the ability of certain corporations to own farmland in the state. The opinion cited as authority T-Bone Feeders, Inc. v. Martin, n426 which held that there was a distinction between a commercial feedlot

and farming. The commercial feedlot was considered to be a specialized agri-business that was engaged in an agricultural endeavor but not engaged in farming. n427

Another Kansas Attorney General Opinion has addressed the question of whether corporate ownership of farmland was detrimental to the public welfare. By statute, most corporations are barred from owning an interest, directly or indirectly, in farmland. Amendments gave counties the option of permitting dairy and swine corporations to locate within the county. The issue before the Attorney General was whether the county could rescind such a grant of permission and, if the county did so, whether it would constitute a "taking" of a property interest from the corporation. The Attorney General found that the state may exercise its police power to totally prohibit persons from engaging in occupations or businesses that are detrimental to the public welfare. Citing Mugler v. Kansas, n428 the Attorney General found that the adoption of the restrictions against corporations was well within the bounds of law and that "there was no vested right in carrying on a business that was legislatively declared detrimental to the public, and that the property owner was not entitled to compensation or a stay on the law's application." n429

The Nebraska farm corporation restrictions have also survived another challenge. The Nebraska Supreme Court reversed the Lancaster County District Court and held that a cooperative is prohibited from owning farmland and breeding feeder pigs under Article XII, section 8 of the Nebraska Constitution. In Pig Pro Nonstock Cooperative v. Moore, n430 the court held that notwithstanding language in the amendment that appeared to exempt "non-profit corporations" from the prohibitions, the coop did not fit the definition of that term the restriction intended. The court concluded that the non-profit language in section 8 was unclear and therefore open to judicial interpretation. Looking to the intent of the voters, the court found that the language of the constitutional amendment as a whole "reflects an intent to prohibit individuals who are not members of the same family ... from forming and utilizing a corporation to own and operate a farm or ranch land for their personal economic gain." In that context, "non-profit" was construed to mean "a corporate entity which does not distribute or otherwise confer any form of economic benefit upon its members, directors, or officers." The court found that the nature of a coop was such that it did confer economic benefits on its members in the form of cost savings and in the form of patronage refunds and thus operated with a profit motive. Further, the court seemed concerned that neither the act under which the cooperative was organized nor the by-laws of the corporation required that any of its members reside on its premises or personally conduct its operations. "It is precisely this type of absentee ownership and operation of farm and ranch land by a corporate entity which the plain language of article XII, section 8 prohibits." n431

§ 47.10(t) Farmland Tenure Problems: Foreign Ownership of Farmland.

At various times throughout our history, n432 there has been serious concern that investors from foreign countries might acquire too much farmland in the United States and somehow divert production from those lands to the foreign nations to our detriment. n433 This fear has supported a host of federal n434 and state restriction n435 on foreign ownership and a variety of federal reporting requirements. n436

Nevertheless, the data suggest that the amount of agricultural land held by foreign interests is small and appears to be quite stable and interest in further restrictions has waned since the mid-1980s. It is presently estimated that approximately 1% of privately owned agricultural land in the United States, or about 14.8 million acres, is held by foreign interests. This level has remained constant since 1981. Further, much of the land is actually held by U.S. corporations that are partly owned by foreigners. Federal Reporting Law requires that a corporation be identified as foreign if as little as 10% of the stock is held by foreign investors. Only 47% of all foreign held land is actually owned by investors not affiliated with domestic firms. n437

The most restrictive statutes relating to foreign ownership tend to operate in much the same fashion as restrictions on corporations in that they tend to exclude a particular group or class n438 from the ownership privilege. n439

§ 47.10(u) Farmland Tenure Problems: Split Fees.

The title to real property may be fractioned horizontally as well as vertically. That is to say, it can be shared with others sequentially over time, in the form of life estates, remainders, determinable fees and so forth. Likewise, it may be shared by others at the same time, in the form of joint tenancies, tenancies in common and the like. In each of these cases, it may be said that the fee has been split between various holders, each of whom has specific rights in the land. The extent to which one may use and enjoy the land varies with each of these different interests in land but for the most part, there is little difference between agricultural land and other land with respect to these estates.

There are a few situations where agricultural land may be significantly affected by the nature of the split fee. Examples include land held under the Stock-raising Homestead Act, land subject to a severance of mineral rights and possibly acquired from railroads under certain railroad land grants.

§ 47.10(v) Split Fees: Stock-Raising Homestead Act.

Under the Stock-raising Homestead Act of 1916, n440 unsettled public lands that were designated as chiefly valuable for grazing could be entered and acquired by individuals in parcels of up to 640 acres. Much of the large unsettled grazing areas of the West were broken up as a result of this act, with the title to the land passing to private ownership. Little actual cultivation of the land was required in order to acquire title, which came after Department of Interior approval of an application for a land patent. n441 Significantly, in granting the title to these lands, the federal government reserved the subsurface coal and mineral rights. As a result, landowners who hold title under the Stock-Raising Homestead hold the surface rights but do not own the mineral rights.

§ 47.10(w) Split Fees: School Land Grants and Rural Credit Act Lands.

Each of the Enabling Acts of public land states admitted to the Union since 1802 has included grants of designated sections of federal land for the purpose of supporting public schools. n442 Upon completion of an official survey, title to four numbered sections in each public land township passed to the state. n443 However, the federal government was free to dispose of the designated lands in any manner consistent with applicable federal statutes prior to the survey. If the particular sections had already been sold or otherwise disposed of pursuant to any other act of Congress, other lands equivalent thereto would be granted to the states. These other lands are identified as "indemnity lands." n444

Although the school land grants gave the states a somewhat random selection of land which could then be disposed of to generate money to support schools, these land grants did not include any numbered sections known to be mineral in character (that is, contain valuable mineral deposits). n445 Similarly, the "indemnity lands" were limited to "unappropriated, surveyed public land, not mineral in character." n446

The present practice appears to be that when the school lands are sold or leased, the state retains the mineral rights that may be present under those lands. Thus an individual who acquired an interest in such lands does not acquire the full fee.

§ 47.10(x) Split Fees: Railroad Land Grants.

As a means to encourage settlement and to finance the building of railroads, Congress began the practice of granting rights-of-way up to 100 feet wide through its public lands. n447 By 1859, the grants included the even-numbered sections within six miles of the line. Later, odd-numbered sections would be granted so that the railroads would not lose sections 16 and 36 which were designated as school lands. n448

The extent to which some of the railroad land grant statutes passed the full fee to the railroads was litigated in a case involving access to the railroad right-of-way for purposes of constructing a coal slurry pipeline. n449 The railroad in this case held its rights-of-way under two different statutes, the Pacific Railroad Acts of 1862 n450 and 1864. n451 The

court held that if the railroad claimed the lands under § 2 of those Acts, it acquired 200 feet right-of-way on either side of the railroad which consisted of surface rights only and all rights incident to use for railroad purposes. n452 The servient estate in such cases was reserved by the federal government and could be passed by homestead patent to individuals. n453 One case has held that these grants were also subject to the mineral lands exception such that the railroad did not receive any rights to oil or gas under the right-of-way. n454

With respect to title to the alternate odd-numbered sections which the railroad received under § 3 of the Act, and which the railroad could sell, the court held that the railroad acquired not only the surface but the servient estate under the right-of-way as well. n455 And while the section lands and the servient estate could be disposed of, the railroad could not alienate the right-of-way itself. Section 3, however, also contains an exception for mineral lands. n456 Thus, one who acquired lands from a railroad may or may not have a full fee interest in the land. If the lands are not designated as mineral lands, and were acquired from the railroad, or from the government under a homestead patent, the individual landowner will generally hold full title (including the mineral estate) except for any reserved railroad rights-of-way.

§ 47.10(y) Split Fees: Mineral Estates.

The mineral estate is a legally recognized interest in land that is considered part of the fee. This interest may be severed and be separately conveyed, thus splitting the fee. n457 This may be done with a mineral deed n458 if the severance is permanent or with a mineral lease or a determinable or defeasible fee arrangement if the separation is temporary or conditional. n459

Where the mineral estate is separated from the surface estate, the holder of the mineral estate will have certain rights to use the surface of the land to the extent necessary to exploit, develop and beneficially use the mineral estate. n460 In some jurisdictions, the mineral estate may be referred to as the "dominant" estate and the surface estate as the "servient" estate. n461

The ability of the holder of the mineral estate to use the surface is typically limited to only those activities that may be "reasonable." While that term is difficult to define, it generally contemplates that there may be some inconvenience, damage or disruption to the surface of the land and that some surface area may actually be occupied as part of the mineral estate development activity. n462

The relative importance of the mineral estate with respect to the surface interest may alter the extent to which the land may be used for agricultural activity. In one case, n463 the court dealt with a complaint from the owner of the land that the pumping activities of the oil company interfered with a rotary irrigation system that had been previously installed by the landowner. The oil company argued that the right to use the surface was absolute and that the consequences to the landowner were of no legal effect. The court disagreed but refused to hold that the landowner's rights were superior. The court found that the surface landowner had little or no alternative means of developing the surface of the land whereas the oil company had at least two reasonable pumping alternatives. In such a case, the court held that the landowner may not be denied an opportunity to establish the unreasonableness of the activity of the mineral estate holder. The test, according to this court, was whether the method and manner of using the mineral estate was reasonable as "measured by what are the usual, customary and reasonable practices in the industry under like circumstances of time, place and servient estate use." n464 The burden of showing unreasonableness was placed on the surface landowner.

One of the complications with which the holder of a mineral estate must contend is the so-called "lapsing" statutes that many states have adopted. n465 These statutes typically cover "mineral interests" which are generally broadly defined to include any interest in the minerals of virtually any kind. n466 These statutes cover both the leasing of the mineral estate as well as the actual severance of the minerals from the rest of the fee. Typically, the statutes reach any interest in minerals that is "created by an instrument transmitting, by grant, assignment, reservation or otherwise." n467

The statutes cause the mineral estate to "lapse" and revert to the current surface owner if the estate is "unused" for a stipulated period. n468 The statutes typically define "use" of the mineral estate to cover various types of activities that involve the development or exploitation of the minerals as well as the payment of taxes on the mineral interest or the inclusion of the interest as part of an operation that is developing the minerals elsewhere in the unit or pool.

These statutes appear to function somewhat like Marketable Title statutes in that they treat the unused mineral interest as a "stale" claim against the land that is subject to being extinguished by the mere passage of time. Generally, interests subject to Marketable Title statutes may be preserved from extinction by filing notice of some kind in the record that the interest is claimed. This, of course, must be done periodically. Many mineral lapse statutes follow this pattern, requiring that a statement of claim be filed prior to the end of the requisite period. Generally, these statements must be filed with the registrar of deeds in the county in which the land is located. n469

On the other hand, unlike Marketable Title Statutes, it is generally required that notice of some kind be filed by the potential successor to the interest or that other appropriate action be taken before the interest will be terminated. n470

§ 47.10(z) Farming and Ranching on the Public Domain.

There has been a strong sense that the public land should be available for private agricultural use. Ranchers in the West have long felt that they had an implied right to graze their animals on the public domain, n471 a position that was supported in at least one judicial decision. n472 Abuse of this privilege, together with drought and a failure of the states to adequately protect the range led to the general closing of the public domain to private acquisition and the adoption of a statutory framework in which grazing and other agricultural uses could be managed. n473

The first major legislation that affected grazing rights was the Taylor Grazing Act of 1934. n474 This was followed by authority to comprehensively manage the public domain resources of the nation found in the Federal Land Policy and Management Act of 1976, n475 the Public Rangeland Improvement Act of 1978 n476 and the National Forest Management Act of 1976. n477 Under these statutes, ranchers may secure the right to graze animals on the public domain for a portion of the year subject to public land use plans. n478

The right to graze on the public domain has several interesting land tenure features. It is notable that the nature of the precise interest acquired by the livestock owner is not clear. The statute and cases describe the rights involved variously as allotments, n479 preferences, n480 leases, n481 and permits. n482 Unlike a lease, however, the lessee does not have exclusive possession to the premises (as might be the case with a lease) since the land is subject to the statutorily mandated principle of multiple use n483 which opens public land to such uses as outdoor recreation, range, timber, watershed, wildlife and fish purposes in the "combination that will best meet the needs of the American People, making the most judicious use of the land...". n484

Further, unlike other property interests, grazing permits do not create in the holder thereof "any right, title or interest or estate in or to the lands" held by the United States. n485 In this context, it has been held that the permit rights are not even "property" for purposes of protection under the Constitution. n486

On the other hand, the grazing rights seem to attach to particular tracts of public land as well as land held by private landowners n487 in much the same way as appurtenant property rights. n488 For example, the grazing right may be passed with the "base" n489 acreage to a subsequent purchaser of such lands or will remain with such lands in the event that the individual loses ownership or control of the base property. n490 Similarly, the right may be "severed" in whole or in part from the base property and transferred to other base property. n491 Finally, permit rights seem to have protected status akin to equitable property rights based on use over time n492 and may not arbitrarily be canceled by the government. n493

Conceptually, grazing permit rights share much in common with usufructuary interests in that they represent a right to

use property of another. It might be argued that the language of the statute which expressly disavows any creation of any property interest in the federal lands is not necessarily inconsistent with this view. The history of the Act suggests that Congress was clearly attempting to close the public domain to individuals who may have wished to acquire private title thereto. In this sense, the Act was an effort to end the public land distribution policies that the nation had pursued since its founding as the way to secure the large land areas that had been acquired. Read in that fashion, it is arguable that Congress did not intend so much to determine that the grazing rights were not property as it intended to make clear that the acquisition of a grazing right was not part of any homesteading or other title acquisition process.

Alternatively, it might be argued that the permit is part of what Charles A. Reich has described as "new property." n494 This kind of property is largely an economic phenomenon and it is clear that the right not only has value but gives value to the base land to which it is attached. n495

There has been considerable controversy over the amount charged to ranchers for the use of the public domain. In 1994, the Secretary of the Interior Bruce Babbitt proposed to raise the fees from $1.98 per animal unit month to make it comparable to the approximately $9.70 that is charged per animal unit month on private land. This was met by vociferous resistance from Western livestock interests. n496 The proposal was actually more modest than the popular press reported and would have raised the fee to $3.96 over a three-year period. Nevertheless, the proposal died. n497

(n8)Footnote 255. *See* discussion of "swampbuster" and "sodbuster" provisions of the federal farm program, *infra*.

(n9)Footnote 256. Much farmland is leased from other landowners. See discussion of farm leases *infra*. Many jurisdictions have adopted particular rules that apply uniquely to farm leasing arrangements. *See, e.g.*, Kan. Stat. Ann. §§ 58-2506 and 58-2506(a). In these jurisdictions, oral farm leases may be considered valid despite Statutes of Frauds requirement. Further, in order to lawfully terminate an oral farm lease, the landowner may need to abide specific statutorily ordained conditions or requirements. Kan. Stat. Ann. § 58-2506a.

Some land is held on a split fee basis with the private landowner only having rights in and to the surface estate. This may be the result of a severance of the mineral estate. See discussion of split fees, *infra*.

Some of the land used by farmers and ranchers is public land and subject to specialized federal regulation. *See, e.g.*, Taylor Grazing Act, *43 U.S.C. § 315 et seq.*; Federal Land Policy and Management Act, *43 U.S.C. § 1701 et seq.* Here, the farmer may have acquired a right to graze cattle on the public domain by permit which can be secured only if the applicant owns the requisite amount of "base" acres. However, the right to use the public domain for grazing purposes

even under a federally issued grazing permit is not treated as a property right of the farmer or rancher. *See* discussion, *infra*.

(n16)Footnote 263. *See California Agrarian Action Project, Inc. v. The Regents of the Univ. of Cal., 58 Cal. Rptr. 769 (Cal. App. 1989),* holding that the Federal Land Grant program required that agricultural research be expressly directed to benefit the family farm.

See Zeigler, K., *Who Will Teach our Farmers: Learning the Value of Mentor Programs from State & Private Programs, 5 Drake J. Agric. L. 279 (2000).*

(n17)Footnote 264. Staff of Senate Committee on Agriculture, Nutrition and Forestry, 96 Cong.. 2d Sess., Changes in the Family Farm Concept, Farm Structure: A Historical Perspective on Change in the Number and Size of Farms 19 (Comm. Print 980) (statement of David Brewster).

Family farms are defined thusly by the United States Department of Agriculture:

> The essential characteristics of a family farm are not to be found in the kind of tenure, or in the size of sales, acreage or capital investment, but in the degree to which the productive effort and its reward are vested in the family.
>
> The family farm is a primary agricultural business in which the operator is a risk-taking manager, who with his family does most of the farmwork and performs most of the managerial activities.

(n20)Footnote 267. One commentator has traced the history of this fear and its impact on very divergent policies. *See* Ken Cook, *Loathing Suburbia: Views on Farmland Preservation from A West Virginia Limestone Ridge*, American Land Forum Magazine 70 (1983); It is interesting that while the fear has remained constant, policy has changed greatly. It might be argued that during the early decades of this century, it was popularly feared that if farms got too large, they would be too efficient and could therefore control supplies and prices. Therefore, the public demanded and government responded with policies that were designed the keep the farms small. After World War II, however, it was feared that if farms remained too small, they would be inefficient producers and thereby manipulate supplies and prices. The public therefore demanded and Government responded with policies that encouraged the consolidation of farms.

(n25)Footnote 272. *See, e.g.*, Howard Scher, Robert Catz and Gregory Matthews, *USDA: Agriculture at the Expense of Small Farmers and Farmworkers, 7 U. Tol. L. Rev. 837, at 861-62:*

> In sum, USDA has relegated both the small farmer and the farmworker to an outsider status in developing its agricultural policies. While small farms have been recognized, generally, as efficient agricultural producing units, they have fallen out of USDA's plans and policies simply because they don't contribute to the economy in a significant statistical way.

See also Fred Morrison, *State Corporate Farm Legislation, 7 U. Tol. L. Rev. 961 at 994 (1976)* where the author argues that farm-corporation statutes offer more of a symbolic, than a real, protection for the small family farms.

(n27)Footnote 274. One observer has suggested:

> The gradual disappearance of the small family [farm] has serious implications for our entire country. I would raise the question whether large-scale farming consolidation, further concentration of power in the diminished number of farms, and increased specialization do not diminish flexibility in our agricultural economy. Small farmers have traditionally played the role of a kind of shock absorber to carry the country through adverse economic conditions. There exists a certain resilience, continuity, and flexibility in the small family farm. The basic structure of family farms -- high equity, self-employment, lower operating costs, and the fact that once crops are in the costs of continuing the process until harvest are extremely low -- serve as an incentive to maintain output even if product prices fall to disastrously low levels. The existence of the small family farm thus helps to provide a constant food supply at affordable prices.

Sen. Gaylord Nelson, Family Farm Entry Assistance Act,Hearings on S. 2582 Before Subcommittee on Agricultural Credit and RuralElectrification of Senate Comm. On Agriculture, Nutrition and Forestry, 96 Cong., 1st Sess. at 48 (1979).

(n28)Footnote 275. It has been suggested that USDA has taken the position that:

> Agricultural policy should be directed toward maintaining agriculture as a viable industry and not as a way of life. The numbers of farms or farm population size is irrelevant except as these influence performance of the agricultural industry. There is no objective evidence to support the argument that there would be a net social benefit if the farm population were to increase or if its present size were maintained.

Howard Scher, Robert Catz and Gregory Matthews, *USDA: Agriculture at the Expense of Small Farmers and Farmworkers, 7 U. Tol. L. Rev. 837, at 844-45* [Quoting U.S. Dep't of Agric. Young Executives Comm., New Directions for the U.S. Agricultural Policy, 118 Cong. Rec. 21, 737 (1972)].

On Antitrust, Monopoly and Business Rights of the Senate Comm. On the Judiciary, 96th Cong., 1st Sess. 361.

(n32)Footnote 279. It has been discovered that for every five farms that go out of business, one rural business closes. James Wadley, *The Future of Government Regulation of Agriculture: Biting the Hand that Feeds Us? 3 N. Ill. U. L. Rev. 299, 317 (1983).* This is problematic because over 70% of the farmers are dependent upon these off-farm enterprises for supplemental employment and in the absence of such opportunities, rural poverty necessarily increases. *See, e.g.,* T. Carlin and B. Green, *Farm Structure and Nearby Communities, Rural Development Perspectives*, (Feb. 1989); M. Drabenstott, *Developing the Farm-Dependent Rural Economy: Policy Choices in* The Future of Rural America (Kenneth E. Prigg ed. 1991); P. Bartlett, *Part-time Farming: Saving the Family Farm or Saving a Life-Style?* 51 Rural Sociology 289 (1986); J. Belden, Dirt Rich, Dirt Poor (1986).

(n33)Footnote 280. *See* Jennifer Erickson, *Tyson Foods is Still on Top (The 400 Largest Farms in the U.S.)*, Successful Farming 20 (April 1992).

(n34)Footnote 281. T. Parker and L. Whitener, Farmers and Their Search for Off-Farm Employment 27, United States Dep't of Agric. Econ. Res. Serv. (1989).

(n35)Footnote 282. Concentrations of land ownership have reached a point where the individual opportunity to achieve independence and self-sufficiency (if that is still part of the American Dream at all) is possibly in serious jeopardy or at least beyond the reach of so many that present landholding patterns are generally accepted as, if not desirable, at least inevitable. It has been suggested that in many respects, our land tenure structure is in more urgent need of reform than that of Africa, Asia or Latin America:

> Land reform is also needed to increase the number of people in the United States who are free. This may sound silly in a country that presumes to be a breeder of free men. Yet ever-increasing numbers of Americans are not really free to assume responsibilities or to make major decisions affecting their lives. They work for large corporations or government bureaucracies or on assembly lines. They are not their own bosses, not proud of their work, and are not motivated to exercise their full rights as citizens. Farming has traditionally been a bastion of the independent small businessman who won't take guff from anybody and who prides himself on the quality of his work... .
>
> American land police should have as its higher priority the building of a society in which human beings can achieve dignity. This includes the easing of present social ills, both rural and urban, and the creation of a lasting economic base for democracy. A second priority should be to preserve the beauty and fertility of the land. Production of abundant food should be a third goal, but it need not be paramount and is not, in any case, a problem.

Peter Barnes, *Land Reform in America, in* Radical Agriculture at 30 (R. Merrill, ed., N.Y.U. Press, 1976).

(n36)Footnote 283. *See generally* James Wadley, *The Future of Government Regulation of Agriculture: Biting the Hand that Feeds Us? 3 N. Ill. U. L. Rev. 299 (1983);* Peter Barnes, *Land Reform in America* 26-38 *in* Radical Agriculture (R. Merrill, ed., 1976); James Wadley, *Small Farms: The U.S.D.A., Rural Communities Land Urban Pressures, 21 Washburn L.J. 478 (1982).*

(n37)Footnote 284. Another observer has suggested:

> The effects of local monopolies of rural lands in the lands of a few large agribusiness firms will not be confined to the consumer's food budget. It is in his role as user of rural land for non-food purposes that the consumer may feel the impact of rural land ownership concentrated most keenly. Food can be imported. The consumer can go abroad in search of cheaper recreation or residential amenities, but we cannot import the sights. The effects of concentration in agriculture are quite likely to drive up the

relative price of food in the long run. They are certain to drive up the cost of non-food producing uses of the land.

Richard Rodefeld, Family Farm Anti-Trust Act: Hearings on S. 334 Before the Subcommittee on Anti-Trust Monopoly and Business Rights of the Senate Committee on the Judiciary, 96 Cong., 1st Sess. at 435 (1979).

(n38)Footnote 285. Historically, the small farm has been promoted as the ideal land tenure system, as much because it enhanced access to land ownership for a maximum number of people as because it insured abundant food supplies. As the number of small farms has declined, the resulting land ownership patterns have been such that most Americans have been cut off from that ownership opportunity except as it may present itself through movement into expanding suburbia. Peter Barnes, *Land Reform In America* 26-38 in Radical Agriculture (R. Merrill ed., 1976); *Who Will Eventually Own America?* Town & Country 95 (June 1983).

(n39)Footnote 286. *See* Ken Cook, *Loathing Suburbia: Views on Farmland Preservation from a West Virginia Limestone Ridge*, American Land Forum Magazine 70 (Spring 1983). *See also* Karl Geier, *Agricultural District and Zoning: A State-Local Approach to a National Problem*, 8 Ecol. L.Q. at 676 (1980).

It has been predicted that in the near future, if current trends continue, land ownership will be concentrated such that only one percent of the remaining farm operators will possess half of the nation's arable land and food supply capacity. John Klein, *The Embattled Independent Farmer*, N.Y. Times Magazine at 139 (Nov. 29, 1981).

For a discussion of the impact of cash leasing on estate tax liability, *see* Harl, *Post-Death Cash Rent Leasing: One More Time, 75 Tax Notes, 1671 (1997);*

In *Hohenstein v. Commissioner, T.C. Memo 1997-56*, a qualified heir received the property from a farmer decedent and farmed the property for eight years, then became physically incapacitated and sold a portion of the farm and leased the remainder to unrelated parties on a cash basis. The heir reported the sale and paid the recapture tax but argued that the land should not lose its qualified status because he had materially participated for the period of eight years. The court held that the material participation and qualified use tests were separate tests and that the post-death cash lease was not a qualified use.

In an interesting case involving the effect of diseased premises on animals, the court in Wilcox v. Cappel, A-95-798 (Neb. App. Dec. 3, 1996, unpublished) held that the tenant had taken the premises "as is" and therefore could not recover for damages suffered by cattle that had grazed on the land. In this case, the landlord had an oral year-to-year agreement with the tenant permitting the tenant to graze his cattle on the landlord's cornstalks each fall after the harvest. The tenant had to fence the animals away from irrigation pumps, center pivots, electrical boxes and so forth. The tenant did not fence the animals away from a run-down building that neither party had inspected since 1979 and which had not ever been used under the lease. The cattle ingested nitrogen fertilizer stored in the building so the tenant lost 130 newborn calves and additional calves were aborted. Total losses claimed were approximately $130,000 in actual damages. The court held that the landowner was not obligated to remove obvious sources of danger that a reasonable inspection would have revealed. Even though the tenant was not required to fence off the building, the tenant knew the building was part of the lease and that the cattle were near the building.

For a discussion of the extent to which production contracts are distinguished from leases and regulated as part of corporate restrictions or otherwise, *see* Hamilton, *State Regulation of Agricultural Production Contracts, 25 U. Mem. L. Rev. 1051 (1995);* Hamilton, *Why Own the Farm if You can Own the Farmer (and the Crop)? Contract Production and Intellectual Property Protection of Grain Crops, 73 Neb. L. Rev. 48 (1994).*

Several states have statutes that specifically regulate production contracts in agriculture. See, e.g. Minn. Stat. Ann. §§

17.90-.98, 514.995; Wis. Adm. Code. § Ag. 101; Kan. Stat. Ann. § 16-1501-1506.

(n52)Footnote 299. One estimate is that forty percent of all farmland is being operated by persons other than the owner. Issue Briefing Paper 3, Office of Governmental and Public Affairs, No. 16, USDA (July 6, 1979).

The endorsement of a check given for a land lease was considered sufficient to avoid statute of frauds problems in Lindeman v. Johns, Mich. App. LEXIS 2559 (Mich. App. 2001).

In *Riddle v. Elk Creek Salers, Ltd, 52 S.W. 3d 644 (Mo. App. 2001),* the court held that a lessee was not entitled to abatement for the loss of a farmhouse that was destroyed by fire upon the exercise of an option to purchase the property under the lease where the option was not exercised until after the farmhouse had been destroyed.

The court, in *Geren v. Geren, 29 P. 3d 448 (Kan. App. 2001)* held that although someone acting as an attorney in fact did not have authority to terminate an oral farm lease, the successor trustee for the estate did have the authority. In this case, it was also held proper to post the notice of termination on the leased premises, rather than on the residence of the tenant, if the tenant refused service by certified mail.

(n53)Footnote 300. Farm leases may not be assignable without the written consent of the landlord in some jurisdictions. See Kan. Stat. Ann. § 58-2511. *See also Keefer v. Spoher, 273 P.2d 230 (Kan. 1949).*

See also Harting v. Barton, 6 P. 3d 91 (Wash. App. 2000) (mediation clause); *Land v. Wahl, 6 P. 3d 621 (Wash App. 2000)* (slander of title); *K & M Enterprises of Slaughter, Inc. v. C. P. Pennington, 764 So. 2d 1089 (La. App. 2000)* (risk of loss for deer damaging crop).

For further discussion, see Miller, Cynthia A. *Reasonable Options for Those Who do not Want to Sell the Farm: Farm Leases and Farm Management Companies. 5 Drake J. Agric. L. 251 (2000).*

(n54)Footnote 301. It is increasingly popular to lease items other than the land, such as equipment or livestock. These are not addressed here since they involve personal property as opposed to real property.

(n55)Footnote 302. For a discussion of when someone who farms the land is a cropper as opposed to a tenant, *see* Comment, *Landlord/Tenant-Termination of Agricultural Tenancy -- "Cropper" Defined, 42 Iowa L. Rev. 650 (1957);* Comment, *Cropper & Tenant Distinguished in Missouri, 24 Mo. L. Rev. 30 (1959); Farmland Cultivation Arrangement as Creating Status of Landlord/Tenant or Landowner-Cropper, 95 A.L.R.3d 1013 (1979). See also Sach v. United States, 422 F. Supp. 1092 (N.D. Ohio 1976).*

Resolution of the issue generally depends on the extent to which the one who does the actual farming has control over the operation, is at risk in the venture and is the one to whom the success or failure of the endeavor may be attributed, and is the one upon whom the activity is dependent in terms of knowledge and expertise.

(n56)Footnote 303. *See, e.g.*, Kan. Stat. Ann. § 33-105:

No leases, estates or interests of, in or out of lands, exceeding one year in duration, shall at any time hereafter be assigned or granted, unless it be by deed or note, in writing, signed by the party so adding or granting the same, or their agents thereunto lawfully authorized by writing, or by act and operation of law.

For further discussion, *see* Barbara Slotnik, *Avoidance of Statute: Effect of Performance Under Oral Agreement,* 41 TX Jur. 3d Frauds, Statute of, § 174 (1998). *See also Caballero v. Hymel, 713 So. 2d 1277 (La. App. 1998)* (suit over value of stubble left in field at end of lease. The court held that the public-records doctrine did not relieve landlord of obligation to honor oral lease).

The endorsement of a check given for a land lease was considered sufficient to avoid statute of frauds problems in Lindeman v. Johns, Mich. App. LEXIS 2559 (Mich. App. 2001).

(n57)Footnote 304. *Daniel v. Leben, 362 P.2d 634 (Kan. 1961). See also Bell v. Vaughn, 53 P.2d 61 (Ariz. 1935).*

(n67)Footnote 314. *See, e.g., Hooks v. Bridgewater, 229 S.W. 1114 (Tex. 1921).* It has been held that since part performance is an equitable doctrine, it is not applicable where legal damages are sought. *Trollope v. Koerner, 470 P.2d 91 (Ariz. 1970).*

See also *Pattelli v. Bell, 721 N.Y.S. 2d 734 (N Y. App. 2001).*

(n68)Footnote 315. *See Teague v. Roper, 526 S.W. 2291 (Tex. App. 1975).*

(n69)Footnote 316. *Stuber v. Sowder, 213 P.2d 989 (Kan. 1950).*

(n70)Footnote 317. "Here the parties were not dealing with an ordinary crop. One of the principle purposes of growing alfalfa is to fertilize the land. The preparation of the seedbed for the growing of alfalfa requires much more labor than for the growing of wheat, and the seed and phosphates are expensive." *Id.*

(n71)Footnote 318. Jake Looney, *Legal and Economic Considerations in Drafting Arkansas Farm Leases, 35 Ark. L. Rev. 395 (1981).* Common hybrid combinations and variations of crop and cash rent include:

> crop share cash: rent is paid as a share of the crops with a fixed sum for certain acreage or for buildings. Cash is paid for that portion of the farm over which the tenant has sole control.
>
> livestock share: the landlord furnishes the land, buildings, fences and so forth and owns a share of the livestock, feed operation and equipment. Expenses are shared and the tenant typically supplies all the labor. Landlord receives a share of the increase in the livestock herd or flock.
>
> irrigation crop share: rent is paid as a portion of the crop and tenant also pays a share of the irrigation costs.
>
> guaranteed bushel: tenant agrees to pay a fixed number of bushels regardless of the total amount grown. The crop is typically delivered to the landlord who then can control when and for what price it is sold.
>
> minimum cash or crop share: the land is rented for a specified amount or a particular fractional share of the crop, whichever is larger.

See Luvaas Family Farms v. Ferrell Family Farms, 23 P. 3d 1111 (Wash App. 2001), ability of co-tenant to lease property to a third party.

See Kettle, Inc. v. Caraway, 2001 Tex. App. LEXIS 3619 (Tex. App. 2001) where the issue was the failure to pay rent. The tenant did not plant a crop because of alleged misrepresentation of the amount of available irrigation water and because the landlord did not properly repair a pump. In the case, it was held that both the landlord and the tenant had breached obligations under the lease.

(n72)Footnote 319. *See Tiegs v. Watts, 954 P.2d 877 (Wash. 1998)* (tenant recovery against landlord for breach of lease and for creating a nuisance by contaminating a well upheld); *Caballero v. Hymel, 713 So. 2d 1277 (La. App. 1998)* (suit over value of stubble left in field at end of lease. The court held that the crop stubble were "movables by anticipation." In addition, the court held that the public-records doctrine did not relieve landlord of obligation to honor

oral lease. Tenant had no restoration obligation in absence of lease for loss of acres in cultivation between beginning and end of lease. As a result, the court held that the tenant was equitably entitled to compensation for the cane roots left in the field at the end of the lease); *Schumacher v. Stephens, 956 P.2d 76 (Mont. 1998)* (conversion of crop, breach of crop-share lease; harvest was actually less than estimated amount).

(n73)Footnote 320. *See, e.g.*, Kan. Stat. Ann. § 2509.

(n74)Footnote 321. *See, e.g.*, Kan. Stat. Ann. § 58-2505 shortening the notice requirement for year-to-year tenancies to thirty days. *See also* Kan. Stat. Ann. § 2504 which shortens the notice period to thirty days for tenancies at will. Three days' notice is required for tenancies of less than three months, Kan. Stat. Ann. § 2508, whereas ten days' notice is required for tenancies of longer than three months, Kan. Stat. Ann. § 2507.

(n75)Footnote 322. In some jurisdictions, no notice may be required to terminate particular kinds of tenancies. For example, in *Morling v. Schmidt, 299 N.W.2d 480* (Iowa, 1980) the farm lease termination statute was construed to apply only to land under cultivation and as a result did not apply to leases of pasture. *See also* Kan. Stat. Ann. § 58-2506 which applies only to leases involving tenants who occupy and cultivate farms and pertain to spring and fall crops.

(n76)Footnote 323. Kan. Stat. Ann. § 58-2510.

(n77)Footnote 324. *See, e.g., Becker v. McFadden, 561 P.2d 416 (Kan. 1977),* requiring timely notice of termination even to change the terms of the lease. In this case, the court observed that if proper notice is given and new terms are specified, the tenant will be subject to the new terms if he "either remains silent with reference to the notice or fails to express his non-assent to the terms." *Id.* at 555. *Denton v. Moser, 214 N.W.2d 28 (Iowa 1976)* suggests that the notice requirement may be waived by specific provisions in the lease, which may govern over the statutory provisions.

The court, in *Geren v. Geren, 29 P. 3d 448 (Kan. App. 2001)* held that although someone acting as an attorney in fact did not have authority to terminate an oral farm lease, the successor trustee for the estate did have the authority. In this case, it was also held proper to post the notice of termination on the leased premises, rather than on the residence of the tenant, if the tenant refused service by certified mail.

But see *Garnas v. Bone, 637 N.W. 2d 114 (Ia. 2001)* holding that in this case, a lease was mutually abandoned when the land was enrolled in the Conservation Reserve Program. Hence, no notice to terminate the lease was required.

In R.K. Richards v. Bockes, Iowa App. LEXIS 405 (Ia. App. 2001), the court awarded as part of the damages for wrongful termination of a farm lease the value of a government payment to which the tenant was no longer entitled because of the absence of the lease.

(n78)Footnote 325. *See, e.g.*, Kan. Stat. Ann. § 58-2505.

(n79)Footnote 326. *Nelson v. Ware, 47 P. 541 (Kan. 1897). But see Pollock v. Pollock, 72 N.W.2d 483 (Iowa 1955)* construing a statute that required notice to be given "by either party to the other." Iowa Code § 562.6.

(n80)Footnote 327. *See* Kan. Stat. Ann. § 2509:

Where the time for termination of a tenancy is specified in the contract or where a tenant at will commits waste, or in the case of a tenant by sufferance, and in any case where the relation of landlord and tenant does not exist, no notice to quit shall be necessary.

(n81)Footnote 328. *See, e.g.*, Iowa Code § 562.6.

(n82)Footnote 329. The Kansas farm tenancy termination statute, Kan. Stat. Ann. § 2506, is particularly interesting. The manner of termination varies depending upon whether the lease is written or oral and upon whether the

land is seeded to fall or spring crops. Generally, notice must be given thirty days in advance of March 1 and must fix the termination to take place on March 1. If the notice is not timely or otherwise valid, it will not be considered effective and the tenant may remain in possession for another year. In most cases, this notice procedure will be used to terminate leases involving spring seeded crops.

Fall seeded crops must be noticed for termination in the same manner as spring seeded crops, but the lease will not actually terminate at the date set in the notice. If the notice is given after fall seeded crops have been planted, the notice must be given in advance of March 1 and must set the termination date in the notice as March 1. The statute, however, will extend the lease until the day following the last day of harvesting such crops or on August 1, whichever comes first. Further, if the notice is given after March 1 and before a fall seeded crop has been planted, the law will terminate the tenancy after the last day of harvest or August 1 *of the succeeding year*.

The rationale for giving an additional year where the notice is not timely appears to be at least threefold. First, the legislature has established that holdover leases run, as a matter of statute, from March 1 to March 1. This is apparently so that tenants will be given adequate time to plan for the next crop year or for landlords to find a new tenant if one is needed for either spring or fall crops. Second, the legislature has established only a limited "window period" that ends 30 days in advance of March 1 as the time in which to give notice to terminate. This is apparently because due process requires adequate notice to terminate the relationship and if it occurs after 30 days before March 1, the tenant is likely to be harmed because efforts should be underway at that point to prepare for the next crop season. Finally, if there are no serious consequences associated with not strictly abiding the "window," landlords could give notice at any time and tenants would be evicted without an opportunity to complete the harvest or, if they were given an opportunity to harvest despite the lateness of the notice, the same result as under § 58-2506(b) would occur without any incentive to abide by § 2506(a). Thus, to insure that § 2506(a) is followed, defective notice or untimely notice must be considered void and the tenancy will continue until the next cycle. This result is necessary to insure that the land does not lie idle a full season. Subpart (c) codifies this position and clarifies that the full cycle is given (until harvest) not just until the subsequent March 1. (It is noted that the full cycle expires March 1 for other than fall seeded crops.) As noted above, subpart (b) is included to insure equity where needed even though the notice is timely and proper.

Where the tenant holds over from a written lease, and spring seeded crops are involved, notice must be given at least thirty days prior to the date set for termination in the lease and must set termination to occur on that date.

If the harvesting of the crops is delayed beyond the date at which the statute would terminate the tenancy, by reason of forces beyond the control of the tenant, the law will still allow the tenant to harvest the crop. *See Horne v. Oller, 615 P.2d 791 (Kan. App. 1980). See also Chamberlain v. Evans, 591 P.2d 237 (Mont. 1979).*

(n94)Footnote 341. *See* Richard Levin, *An Introduction to the Trustee's Avoiding Powers, 53 Am. Bankr. L.J. 173 (1979).*

(n95)Footnote 342. *See, e.g., Melms v. Pabst Brewing Co., 79 N.W. 738 (Wis. 1899).* The rationale for this rule is that the improvements are made for the benefit of the tenant and as a result, the tenant cannot recover the cost thereof at the termination of the lease. *See National Housewares Corp. v. Traikum, 444 S.W. 2d 68 (Ark. 1969).*

In *Hendrickson v. Wagners, Inc, 598 N.W.2d 507 (S.D. 1999),* the lessees of land adjacent to that of the plaintiffs dug drainage ditches which resulted in the discharge of the water onto the adjoining land. The court found that the ditches were intentionally dug and a permanent injunction was issued requiring the leaseholders to fill in the drainage ditches.

(n96)Footnote 343. *Cockrum v. McCallie, 488 S.W.2d 717 (Ark. 1973).* Kan. Stat. Ann. § 58-2501 imposes interesting but significantly narrowed limitations on the landlord's right to restrict the tenant with regard to improvements:

Any person in the possession of real property with the assent of the owner is presumed to be a tenant at will, unless the contrary is shown except as herein otherwise provided. *Where the landlord is renting farms in large numbers and a total acreage in excess of five thousand acres, and has tenants in excess of ten or more, and by the lease requires such tenants to erect or own and maintain substantially all of the buildings and improvements on the farm, such lease shall contain just and fair provisions for the free sale and transfer of such buildings and improvements, or the purchase thereof by the landlord, without requiring the tenant to remove the same from the land.* [emphasis supplied]

(n97)Footnote 344. 228. *See, e.g.*, Kan. Stat. Ann., § 58-2501a.

(n98)Footnote 345. 229. *See, e.g.*, Kan. Stat. Ann. § 58-2506a:

(a) When a notice of termination is given by the landlord pursuant to subsection (a) or (c) of Kan. Stat. Ann. § 58-2506, and the tenant prior to receiving such notice has (1) performed customary tillage practices or has applied or furnished fertilizers, herbicides or pest control substances and (2) has not planted the ground, the landlord shall pay the tenant the fair and reasonable value of the services furnished and the fertilizers, herbicides or pest control substances furnished.

(b) Where the tenancy is terminated by the landlord on March 1 pursuant to subsection (a) of Kan. Stat. Ann. § 58-2506, and the tenant planted and obtained a satisfactory stand of alfalfa the preceding fall, the landlord shall pay the tenant the fair and reasonable value of all services performed in preparing and planting the alfalfa and for all of the tenant's expenditures for deed, fertilizer, herbicide or pest control substances.

See Caballero v. Hymel, 713 So. 2d 1277 (La. App. 1998) (suit over value of stubble left in field at end of lease. The court held that the stubble from the crops were "movables by anticipation." The court also held that the tenant had no restoration obligation in absence of lease for loss of acres in cultivation between beginning and end of lease. As a result, the court held that the tenant was equitably entitled to compensation for the cane roots left in the field at the end of the lease).

(n99)Footnote 346. 735 Ill. Comp.. Stat Ann 5/9-316.

(n105)Footnote 352. Herbert Tiffany, Outlines of Real Property § 189 (1929). *Fructus naturales* are treated as part of the land until they are severed and as such tend to belong to the owner of the land, rather than the possessor. In that sense, emblements are generally considered to be personal property.

See Caballero v. Hymel, 713 So. 2d 1277 (La. App. 1998) (suit over value of stubble left in field at end of lease. The court held that the crop stubble were "movables by anticipation." Therefore, the tenant had no restoration obligation in absence of lease for loss of acres in cultivation between beginning and end of lease. However, the tenant was equitably entitled to compensation for the remaining stubble).

In *Heinold v. Siecke, 598 N.W. 2d 58 (Neb. 1999),* the court determined that the law of emblements governed the determination of ownerships of crops upon the death of a life tenant. The court ruled that the crops growing at the time of the life tenant's death became property of the estate, not property of the remainderman. The crops were subject to a sharecropping agreement and were harvested after the death of the life tenant. The court distinguished this case from an earlier case over a life estate that was held in joint tenancy. There it was held that crops growing on the land were not subject to claims of creditors but passed with the land to the surviving joint tenant. That difference between the cases

was that in the joint tenancy case, each joint tenant was considered to own the whole of the property from the time the interest was created. In contrast, when a remainderman ultimately succeeds to the possession of the life tenant, the remainderman does not succeed to the title but instead gets the title from another, independent source, from the time of the death of the life tenant.

(n126)Footnote 373. Nebraska (1881), and Minnesota (1891).

(n127)Footnote 374. *See* Philip Ridenour, *Kansas Farm Corporations: Some Observations and Recommendations*, 44 J. Kan. B.A. 241 (1975).

(n128)Footnote 375. *See, e.g.:*

> *Iowa:* In 1987, adopted amendments to Chapter 172C which further limit the land holdings of authorized farm corporations and trusts. In 1988, the legislature further restricted corporate farming by imposing a 1500 acre cap on land ownership for limited partnerships and limited contract feeding of swine by processors. *See* Hamilton, *State Roundup*, Agricultural Law Update 7 (Aug. 1988).
>
> *Kansas:* The legislature repealed existing, but narrow, farm corporation legislation and replaced it with broad restrictions. *See* Kan. Stat. Ann. § 17-5902 *et seq.*
>
> *Nebraska:* In 1982, voters in a state-wide referendum adopted Initiative 300 as an amendment to the

state constitution which imposes major restrictions on corporate ownership of farmland. *See* Neb. Const., art. XII, § 8.

See, e.g., Hall v. Progress Pig, Inc., 575 N.W.2d 369 (Neb. 1998) (Failure of county attorney to prosecute pork producer under constitutional provision limiting corporate farming operations gave citizens standing to bring action for injunction); *Hoogestraat v. Barnett, 583 N.W.2d 421 (S.D. 1998)* (action to remove Attorney General's ballot explanation that proposed constitutional amendment that placed restrictions on farm ownership might lead to successful lawsuits against the state. Held: statement exceeded authority).

See *Hall v. Progress Pig, Inc. 610 N.W. 2d 420 (Neb. 2000)* where citizens were allowed to bring an action which sought to enjoin a corporate pork producer's operation which was alleged to be in violation of the state's constitutional provisions limiting corporate farming operations. The constitutional provision was challenged as vague but the court upheld the provision against the challenge.

(n137)Footnote 384. *See, e.g.*, amendments to the Oklahoma corporate farming statute, 18 Okla. Stat. §§ 951 and 954 which effectively broaden exemptions and make the corporate form of business more accessible to corporations engaged in agriculture. § 951 increased the number of shareholders permitted for horse breeding businesses from ten to twenty-five. Section 954 adds operating hatcheries and providing supervisory, technical and other assistance to exempt activities under the poultry and swine exemption.

(n138)Footnote 385. *See, e.g.*, Kan. Stat. Ann. § 17-5904(a):

No corporation, trust, limited partnership or corporate partnership, *other than a family farm corporation, authorized farm corporation, limited agricultural partnership, family trust, authorized trust or testamentary trust shall, either directly or indirectly, own, acquire or otherwise obtain or lease any agricultural land in this state*. (emphasis added)

Family farm corporations are defined to include only those operations that are founded for the purpose of farming, and in which the majority of voting stock is held by natural persons related to each, all of whom have a common ancestor

within the third degree of relation, either by blood or adoption, or are the spouses or stepchildren of such persons. At least one of the stockholders must reside on the farm or be actively engaged in the labor or management of the farming operation. § 17-5903(j).

> Authorized farm corporations are defined as corporations founded for the purpose of farming, other than family farm corporations, in which all of the incorporators (which must be natural persons and cannot exceed 15 in number) are Kansas residents. At least 30% of the stockholders must be persons residing on the farm or actively engaged in the day-to-day labor or management of the farm. § 17-5903(k).
>
> Limited agricultural partnerships are defined as partnerships founded for the purpose of farming which do not involve more than 10 partners, who must be natural persons and at least one of which must reside on the farm or be actively engaged in the labor or management of the farming operation. § 17-5903(d).
>
> Family trusts are trusts in which a majority of the equitable interest is held by and the majority of the beneficiaries are natural persons related to each other, all of whom have a common ancestor within the third degree of relation, either by blood or adoption, or are the spouses or stepchildren of such persons. § 17-5903(m).
>
> Authorized trusts are trusts, other than family trusts, in which the beneficiaries are natural persons, not exceeding 15 in number, and the income thereof is not exempt from taxation under either state or federal law. § 17-5903(n).
>
> Testamentary trusts is a trust created by bequeathing or devising property in a will.

See, e.g., Hall v. Progress Pig, Inc., 575 N.W.2d 369 (Neb. 1998) (Failure of county attorney to prosecute pork producer under constitutional provision limiting corporate farming operations gave citizens standing to bring action for injunction); *Hoogestraat v. Barnett, 583 N.W.2d 421 (S.D. 1998)* (action to remove Attorney General's ballot explanation that proposed constitutional amendment that placed restrictions on farm ownership might lead to successful lawsuits against the state. Held: statement exceeded authority).

(n139)Footnote 386. *See* Op. Att'y Gen. 88-170 (Dec. 20, 1988), holding that land an insurance company wished to purchase that was located adjacent to farmland acquired through foreclosure in order to enhance the value of the foreclosed land was not "necessary to the operation of the business and therefore prohibited by the act.

(n140)Footnote 387. *See, e.g.,* Kan. Stat. Ann. § 17-5904; Minn. Stat. Ann. § 500.24 Subd. 3; Neb. Const., art XII, § 8 (1).

(n141)Footnote 388. *See, e.g., Asbury Hosp. v. Cass County, 7 N.W.2d 438 (N.D. 1943), aff'd, 326 U.S. 207 (1945),* upholding forced divestiture against a due process challenge. The rationale for the holding was that due process did not guarantee a return on the investment, only a fair opportunity for the same and that the time provided by the statute, during which the owner could enjoy the land and seek a buyer, gave the owner an ample time in which to seek to maximize the return from the property.

(n148)Footnote 395. *Id.*

A Kansas Attorney general opinion considered whether the acquisition of farmland by an insurance company constituted land "necessary for the operation of the business." Att'y Gen. Op. 88-170 (Dec. 20, 1988). In this case, an insurance company had acquired farmland as a result of the foreclosure of a loan. The company understood that under Kansas law, that land had to be disposed of within 10 years. (K.S.A. § 17.5904(4)) It determined that the value of the land could be enhanced if additional land was added to it. It therefore wanted to purchase adjacent property to sell with the foreclosed land. The Attorney General ruled that that later acquisition was not essential to the company's non-farm business purposes and would be barred by the statute.

(n149)Footnote 396. Compare Minn. Stat. Ann. § 500.24 Subd. 3:

No corporation or pension or investment fund *shall engage in farming;* nor shall any corporation or pension fund, directly or indirectly, own, acquire or otherwise obtain an interest, whether legal, beneficial or otherwise, in any title to real estate used for farming or capable of being used for farming in this state... .

See also Neil D. Hamilton, *State Regulation of Agricultural Production Contracts, 25 U. Mem. L. Rev. 1051 (Spring 1995).* The article identifies the nine states that have enacted corporate farming laws through either legislation or constitutional amendment (South Dakota, North Dakota, Minnesota, Wisconsin, Nebraska, Iowa, Missouri, Kansas, and Oklahoma), and the author distinguishes between laws that restrict corporate involvement in farming and corporate ownership of agricultural land.

(n190)Footnote 437. Peter DeBraal, *Foreign Ownership of U.S. Ag Land in '91*, AGRICULTURAL LAW UPDATE 6 (April 1992).

For specific data on foreign investment in agricultural land, see *Foreign Ownership of U.S. Agricultural Land Through December 1997: County-Level Data.* (Department of Agriculture, Economic Research Service). This information is available on diskette. Number ERS-98005INC. The data shows approximately 14.3 million acres in 1,938 of the nations 3,041 counties. A summary of the data is available online at www.ers.usda. gov/publications/summaries/SB943.HTM.

In a 2000 case, the Immigration and Naturalization Service denied a petition for preferred visa status as a foreign investor. This denial was upheld against challenges that INS abused its discretion and that the action violated the Administrative Procedures Act. The reason the petition was denied was because the alien refused to document the source of his capital. See *R.L. Investment Limited Partners v. Immigration and Naturalization Service. 86 F. Supp. 2d 1014 (2000).*

The law requires that corporations in which foreign holdings amount to 10 percent or more must register their land

ownership. As a result, approximately 61 percent of reported foreign holdings are actually held by U.S. corporations. Only 39 percent of the foreign-held land is owned by investors that are not affiliated with United States firms. When the 14.3 million acre total is adjusted for these partial interests, the amount drops to approximately 13.1 million acres. Agriculture Fact Book: 1998, United States Department of Agriculture, Office of Communications. Chapter 2-H. *See also* Charles Barnard, *Foreign Ownership of U.S. Agricultural Land Through December 1, 1996* Economic Research Service, United States Department of Agriculture, SD #941, July 1998. Most (57 percent) of the investors in United States farmland are from the countries of Canada, the United Kingdom, Germany and France, in that order. Agriculture Fact Book: 1998, United States Department of Agriculture, Office of Communications. Chapter 2-H. *See also* Charles Barnard, *Foreign Ownership of U.S. Agricultural Land Through December 1, 1996*, Economic Research Service, United States Department of Agriculture, SD #941, July 1998. Maine is the state that continues to have the largest number of acres owned by foreign persons: 3,037,198. This amounts to 17 percent of the state's privately owned agricultural land and 21 percent of all the reported foreign holdings of agricultural land nationwide. Ninety-one percent of the foreign holdings in Maine are owned by four companies. Two of these companies are Canadian, one that is a combined United States-French venture and one that is a combined United States-Canadian enterprise. Agriculture Fact Book: 1998, United States Department of Agriculture, Office of Communications. Chapter 2-H. *See also* Charles Barnard, *Foreign Ownership of U.S. Agricultural Land Through December 1, 1996*, Economic Research Service, United States Department of Agriculture, SD #941, July 1998.

According to the Agriculture Fact Book: 1998 published by the U.S. Department of Agriculture, Office of Communications, the level of foreign ownership of U.S agricultural land has remained relatively steady from 1981 through 1997 and has been slightly above or below 1 percent of the privately owned agricultural land in the United States. The total currently stands at 14.3 million acres, up 199,419 from 1996. Id. Chapter 2-H. *See also* Charles Barnard, *Foreign Ownership of U.S. Agricultural Land Through December 1, 1996*, Economic Research Service, United States Department of Agriculture, SD #941, July 1998. At the end of the reporting period, foreign persons owned 14.3 million acres. Forest lands account for approximately 45 percent of this ownership, cropland 17 percent, pasture and other agricultural uses 35 percent and nonagricultural land for 3 percent. Agriculture Fact Book: 1998, United States Department of Agriculture, Office of Communications. Chapter 2-H. *See also* Charles Barnard, *Foreign Ownership of U.S. Agricultural Land Through December 1, 1996*, Economic Research Service, United States Department of Agriculture, SD #941, July 1998.

Corporations own 79 percent of foreign held acreage, partnerships own 12 percent and individuals own 6 percent. The remaining 3 percent is held by trusts, institutions and associations. Agriculture Fact Book: 1998, United States Department of Agriculture, Office of Communications. Chapter 2-H.

(n191)Footnote 438. In *Lehndorff Geneva Inc., v. Warren, 246 N.W.2d 815 (Wis. 1976)* the court stated that it is constitutional to exclude non-resident aliens from land ownership since non-residents are not a "suspect" class.

(n192)Footnote 439. *See, e.g.*, Iowa Code Ann. §§ 567.1-567.11, which is generally regarded as the most restrictive of the state statutes. This statute excludes non-resident aliens, foreign businesses and foreign governments from acquiring any interest in agricultural land in Iowa. If such land is acquired, it must be divested within two years or it will escheat to the state. Land acquired for non-agricultural purposes in limited to 320 acres and must be put to such use within five years.

(n206)Footnote 453. Without belaboring the point, we are convinced, as was the trial court, that the grant to Union Pacific's predecessor pursuant to § 2 of the Pacific Railroad Act of 1862 was just what the statute said it was, the grant of the right-of-way, and did not convey title to the servient estate underlying the right-of-way. Such being the case, the servient estate remained with the United States and later passed under the homestead patent to *Maggie Majors, 606 F.2d at 937.*

Cox, 190 F.2d 293, 296 (10th Cir. 1951), cert. denied, 342 U.S. 867 (1951):* "Although the permits are available to the ranchers, they are not an interest protected by the Fifth Amendment against the taking by the Government who granted them with the understanding that they could be withdrawn at any time without the payment of compensation."

See also Bradshaw v. United States, 47 Ct. Cl. 549 (2000), holding that neither the grazing permit nor the historical grazing preferences constituted property under the Fifth Amendment. Likewise, the failure of the government to prevent feral horses from causing damage to the ranch and forage did not result in a taking.

In *Public Lands Council v. Babbitt, 120 S. Ct. 1815 (2000),* the Supreme Court upheld the authority of the Secretary to define the scope of a "grazing preference" and to eliminate thereby the requirement that a holder be engaged in the livestock business.

For further discussion, see Feller, Joseph M. and Brown, David E. *From Old Growth Forests to Old Growth Grasslands: Managing Rangelands for Structure and Function. 42 Ariz. L. Rev. 319 (2000);* Baas, Mark J., *Diamond Bar Cattle Co. v. United States: State Water Rights on Federal Lands for not Hold Property Interest to Graze on those Lands, 4 Great Plains Nat. Res. J. 296 (2000).*

(n240)Footnote 487. 43 C.F.R. § 4110.2-2(b): "The grazing preference specified shall attach to the base property supporting the grazing permit or grazing lease." "Grazing preference" is defined as the total number of animal unit months of livestock grazing on public lands apportioned and attached to base property owned and controlled by a permittee or a licensee. 43 C.F.R. § 4100.0-5. In essence, a grazing permit authorizes the grazing of a specified number of animals for a specified period of time, measured in animal unit months. The grazing preference, then, is the quantified substance of the grazing permit.

(n241)Footnote 488. *See 43 U.S.C. § 315b;* 43 C.F.R. §§ 4130.2, 4130.3.

(n242)Footnote 489. [B]ase property is defined as privately held land that (1) has the capacity to produce crops or forage that can be used to support authorized livestock for a specified period of the year (when the animals are not on the public domain) or (2) water that is suitable for consumption by livestock and is available and accessible to the livestock when they are on the public domain.

43 C.F.R. § 4100.0-5.

(n243)Footnote 490. 43 C.F.R. § 4110.2-1(d) provides the permit or lease will automatically terminate if the permittee or lessee loses ownership or control of all or part of the base property unless the permit holder requests in writing, in advance of losing ownership, that the permit be extended to the end of the grazing season or grazing year. The regulations then provide that:

[w]hen a permit or lease terminates because of a loss of ownership or control of a base property, the grazing preference shall remain with the base property and be available through application and transfer procedures at 43 CFR § 4110.2-3, to the new owner or person in control of that base property.

(n244)Footnote 491. 43 C.F.R. § 4110.2-3.

(n245)Footnote 492. *See, e.g., Red Canyon Sheep Co. v. Ickes, 98 F.2d 308 (D.C. Cir. 1938).* There, the court dealt with a proposed trade of land to a third party if land upon which the appellants claimed a grazing right on the basis of an interim license would normally be converted into a permit under the act for other land which could not be grazed. The trade would have had the effect of extinguishing the possibility of securing a grazing permit. The Secretary defended the exchange on the ground that the permit holders "lacked any interest to maintain the suit in that they had no vested interest in the lands and did not show themselves entitled to a patent." *Id. at 312.* The court enjoined the exchange:

> Therefore in view of the allegations in the bill that appellants have such adjacent land holdings, water rights, and other facilities as to bring them within a preferred class under the regulations, we are of the view that the interim licenses which have been temporarily issued to them must, under the Act, ripen into permits, provided that Grazing District No. 4, which has been set up so as to include the lands upon which the appellants have been running their sheep, continues to exist and to include such lands.

(n246)Footnote 493. *See Hinsdale Livestock Co. v. United States, 501 F. Supp. 773 (D. Mont. 1980)* holding that drought conditions did not create an emergency that would enable the Bureau of Land Management to evict ranchers

from grazing allotments before the expiration of their permits.

> We recognize that the rights under the Taylor Grazing Act do not fall within the conventional category of vested rights in property. Yet, whether they be called rights, privileges, or bare licenses, or by whatever name, while they exist they are something of real value to the possessors and something which have their source in an enactment of the Congress. The jurisdiction of equity is flexible and should not be confined to rigid categories so that the granting of an injunction will depend on nomenclature rather than substance.
>
> * * *
>
> We rule that the valuable nature of the privilege to graze which arises in a licensee whose license will in the ordinary course of administration of the Taylor Grazing Act ripen into a permit, makes that privilege a proper subject of equitable protection against an illegal act. To hold that appellants' rights are not of sufficient dignity to be entitled to equitable protection would be inconsistent with the cases discussing other analogous subjects of equitable protection within the purposes of the Act itself.

Id.

See Coalition v. Bosworth, 180 F. Supp. 2d 124 (D.D.C. 2001), dealing with the extent to which the Secretary must consider environmental impacts of federal grazing permits when they are renewed. In this case, the defendant Forest Service moved to transfer the case to the District of Montana. That motion was denied. See also *Arizona Cattle Growers Association v. United States Fish and Wildlife, 273 F.3d 1229 (9th Cir. 2001)* challenging the extent to which the Endangered Species act precludes ranchers from grazing their livestock in certain areas of potential habitat. Judgment for ranchers was, for the most part, upheld.

See also Central South Dakota Cooperative Grazing District v. Secretary of the United States Department of Agriculture, 266 F.3d 889 (8th Cir. 2001), regarding the authority of the Secretary to set maximum stocking levels for grasslands.

In *Anchustegui v. Department of Agriculture, 257 F.3d 1124 (9th Cir. 2001),* it was held that the Secretary could not cancel a grazing permit where the notice of cancellation did not provide the permit holder an opportunity to achieve compliance or to demonstrate that he had achieved compliance before the institution of the agency proceedings.

CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.11

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.11 State and Local Agricultural Land Use Issues.

[Go To Supp]

§ 47.11(a) In General.

State and local governments have traditionally been the units of government most actively involved in the regulation of agricultural land use. Historically, the most extensive efforts at regulation have occurred in cities and towns and it has been only in recent decades that the need for land use planning beyond the fringes of the cities has been recognized. The result has been an increase in regional or state-wide land use planning and regulation. n498 This has had a notable impact on agricultural land not only on the fringes of cities and towns but, in some cases, throughout the state.

A variety of concerns have motivated jurisdictions to adopt land use regulatory measures that affect agricultural land. These range from concerns regarding the loss of prime farmlands to agriculture uses as a result of urban development pressures to concerns regarding the availability of agricultural land for recreational and aesthetic purposes. Similarly, there is growing concern that the use of land for agricultural purposes has significant environmental implications that need to be addressed as part of the land use planning process. All of these, and other concerns have raised a number of land use issues that particularly affect agricultural land. n499

§ 47.11(b) Agriculture as a Nuisance.

The law of nuisance is designed to adjust problems between neighbors. Its foundation premise is that one should not act in a way that harms another. n500 Agricultural activity has inherent characteristics which may lead to "neighbor" type problems -- especially if the neighbor is non-agricultural in nature. Smells, dust, noise, flies, manure, heavy machinery and the like are all an integral part of crop and livestock production and are often considered offensive to others. Unfortunately, many "neighbors" have moved to the countryside with aspirations of forming a placid, bucolic relationship with nature only to discover that farming is neither placid nor bucolic. n501

As a general rule, reasonable farming activities will not be considered to be nuisances *per se*. n502 Generally, the determination that something is a nuisance therefore will depend upon a variety of factors pertinent to the particular situation, such as the type of neighborhood, the nature of the thing or wrong complained of, its proximity to those alleging harm or damage, its frequency or continuity, and the nature and extent of the injury, damage or annoyance.

n503 Clearly, these and similar particular facts govern in each case. As a result, it is possible for agricultural operations to constitute a nuisance depending on the manner in which they are conducted. n504

A Kansas Attorney General Opinion addressed the question of whether corporate ownership of farmland was detrimental to the public welfare. By statute, most corporations are barred from owning an interest, directly or indirectly, in farmland. Local amendments have given counties the option of permitting dairy and swine corporations to locate within the county. The issue before the Attorney General was whether the county could rescind such a grant of permission and, if the county did so, whether it would constitute a "taking" of a property interest from the corporation. The Attorney General found that the state may exercise its police power to totally prohibit persons from engaging in occupations or businesses that are detrimental to the public welfare. Citing Mugler v. Kansas, n505 the Attorney General found that the adoption of the restrictions against corporations was well within the bounds of law and that "there was no vested right in carrying on a business that was legislatively declared detrimental to the public, and that the property owner was not entitled to compensation or a stay on the law's application." n506

In Yoder et al. v. Showalter, n507 a number of individuals sued a hog farmer on a nuisance theory, claiming damages in excess of $6 million. The jury found that no nuisance had occurred with respect to seven of the thirteen plaintiffs. Of the remaining plaintiffs, the jury awarded $3000 to four, $100 to one and nothing to the sixth, even though it found a nuisance existed. Evidence in the case established that there were 17 large hog farms in the county and that the plaintiffs had no desire to move from the vicinity. Further, it was found that none of the plaintiffs were claiming any loss of property value.

In one case, the relationship between nuisance law and nonconforming status under the zoning laws was considered. In City of Glendale v. Aldabbagh, n508 the court dealt with a nonconforming use and the question of whether the right to continue that use had been lost as a result of nonuse for more than the permitted period, where the nonuse was the result of a public order. Here, the nonconforming use was an adult entertainment business. The owner was the subject of a restraining order that had been imposed because of allegations that the business constituted a public nuisance (due to unproven claims of prostitution). The owner argued that since he was never successfully prosecuted for the misconduct, the fact that the business had not been in operation in the interim should not constitute abandonment for purposes of losing the right to continue the nonconforming use. The court found otherwise even though the owner had no intent to abandon. The court held that "the termination of a nonconforming use does not require a decision by the property owner to discontinue the use. A nonconforming use may be lost through negligence or inadvertence. A use may also be lost if a person engages in civil or criminal misconduct that the property owner knows or should know could lead to involuntary closure and indeed does lead to closure." In this case, the court held that the cessation was brought about by the City's public nuisance action even though that action was dismissed by agreement of both sides. This case would seem to have important implications for farmers near urban areas who continue their operations as nonconforming uses. If the active use is interrupted by litigation over nuisance matters, the nonconforming status may be in jeopardy.

Liability of one landowner to another for misapplication of pesticides was addressed in 1900 Partnership v. Bubber, n509 in which the court allowed recovery for damages to the cotton crop resulting from crop dusting but denied any recovery on the part of the manager for his mental anguish. n510

§ 47.11(c) Laws Protecting Farming Against Nuisance Actions.

Virtually all states have adopted statutes, n511 usually called "Right to Farm" laws, which are specifically designed to give agricultural operations a measure of protection against nuisance actions. These statutes tend to be one of three major types: 1) those that establish a specific time after which an agricultural operation may not be declared a nuisance because of changed conditions in the area; n512 2) laws which create a rebuttable presumption that the operation is not a nuisance, n513 and 3) those which exempt particular kinds of operations from nuisance claims. n514

a. Statute of Limitations Approaches.

Statutes of this type typically provide that if the agricultural operation has been in existence for more than a year, n515 it may not be declared a nuisance because of changed conditions within the locality. n516 To establish that an agricultural operation is immune under the statute, it is necessary to establish: 1) that the only basis for the nuisance claim is changes in the neighborhood; 2) that the agricultural enterprise has been in existence for the required statutory period; 3) that the operation was not a nuisance when it began, and 4) the nuisance does not result from negligent or improper agricultural practices. In one case, n517 a court held that a hog operation simply was not a nuisance because it existed before plaintiffs moved into the area and was not operated in a negligent manner. The court stated:

> The policy of the legislation is clear. People may not move to an established agricultural area and then maintain an action for nuisance against farmers because their senses are offended by the ordinary smells and activities which accompany agricultural pursuits. Exceptions exist where there are changes in the activities, the activities were a nuisance in the first place without consideration of the changed conditions, and negligence... . We must observe that pork production generated odors which cannot be prevented, and so long as the human race consumes pork, someone must tolerate the smell. Indiana Code 34-1-52-4 addresses that fundamental fact and protects pork production when it is confined to its natural habitat, that is rural farm communities. n518

It has been held that "changed circumstances" refers only to "the extension of non-agricultural land uses, residential or otherwise, into existing agricultural areas." n519 Some jurisdictions appear to apply this requirement strictly and literally. In *Flansburg v. Coffee*, n520 the court held that Right-to-Farm statutes were not available because the hog operation in question was developed subsequent to plaintiff's ownership of the land and affirmed an award of damages and a permanent injunction against the operation. Agricultural operations will probably receive little additional protection from Right-to-Farm statutes in jurisdictions of this type.

The time period has been construed as running against the complaining neighbor rather than simply referring to the time in which the agricultural operation has been in existence. Thus, if the neighbor does not bring the action within the time allowed, the neighbor is barred from bringing the suit. n521 The time typically begins to run when the operation commences but a change in the operation may constitute a new operation. n522

b. Rebuttable Presumption Approaches.

A number of states have created a presumption that agricultural operations are not nuisances. n523 For the presumption to be invoked, these statutes typically require that: 1) the operation be established before surrounding non-agricultural uses, and 2) that the activity be conducted according to good farming practices. The presumption is rebuttable but to do so typically requires a showing that the activity has an adverse effect on public health or safety or that the operation is not farming according to restrictions imposed by law.

The extent to which statutes of this type go beyond the traditional common law position that agricultural operations do not constitute nuisances *per se* is also somewhat speculative in jurisdictions that have adopted this type of Right to Farm law. It is arguable that these statutes simply codify existing common law regarding nuisance and do not give agriculture any meaningful additional protection. The converse argument is that the statutes raise the threshold of proof required of claimants to prove the existence of a nuisance. In addition, they may relieve the agricultural operator of the obligation to affirmatively defend the operation as acceptable if it can be shown that the farming practices are consistent with law.

c. Specific Practices Approaches.

A few n524 states have addressed the nuisance problem in the context of particular kinds of agricultural operations and have limited nuisance actions with respect to those operations. These statutes typically address the problem of feedlots, dairy farms or poultry and egg production facilities and often do so in the context of specific regulations directed toward

those particular enterprises. n525

d. Impact on Farming Operations.

The Right-to-Farm statutes do not appear to have radically altered the law of nuisance as it relates to farming. In situations where the nature of the activity causes harm for which the law offers some redress, courts have found ways to avoid the impact of the statutes. n526 Some courts have focused on the fact that the farm arrived or was changed after the complaining landowners arrived in the neighborhood. n527 Others have considered such factors as the agricultural nature of the neighborhood and the timing of the non-agricultural uses as only among the various factors to be considered rather than determinative of the issue. n528 Others have found that the issue involves opposing rights of equal merit or dignity to those claimed by the farming operations. n529

On the other hand, at least one court has ignored the application of the statute entirely to find that no nuisance existed. n530 There, a nuisance action was brought against the owners of a feedlot. The feedlot argued that they were shielded by the state's Right-to-Farm-Act. n531 The Appellate Court assumed, without deciding, that the feedlot constituted an "agricultural operation" under the act. It then held that the act precluded a finding of nuisance only with respect to an activity which would not have been a nuisance but for a change in surrounding non-agricultural uses more than one year after the activity began. Here, the operation was alleged to be a nuisance because of an expansion in the operation itself, not because of changes in surrounding nonagricultural uses. As a result, the court held that the statute did not apply. The feedlot operators argued to no avail that the act codified a policy of protecting agricultural uses but the court characterized the act as simply a statutory adaptation of the common law "coming to the nuisance" defense. Then, the court ruled that "coming to the nuisance" was not a total bar to relief but a factor to be considered in evaluating the seriousness of the harm done by the defendant. On appeal, the Idaho Supreme Court did not address whether the Right-to-Farm statute applied at all. It reversed the Court of Appeals on an alternative policy basis that Idaho was a sparsely populated state and its economy depended on the benefits provided by the development of agriculture, lumber and mining industries and that to eliminate the complained conduct on the basis that it constituted a nuisance would place an unreasonable burden on these industries.

The nuisance statutes seem to be designed to shield farm operations from nuisance claims that may arise from non-farm neighbors who are likely to be oversensitive to the more "noxious" aspects of farming. This is particularly the case where the non-farm neighbors have moved into a traditionally farming area. On the other hand, where a farm neighbor, who has long been in the area, complains about nuisance-type activities of another farming operation, the statutes may be less suited to deal with the dispute. That has been the holding in a Court of Appeals decision in Kansas. n532 There, the Court ruled that the trial court erred in holding that the farm was shielded from the nuisance claim primarily because the activities of the party complaining about the nuisance were not of an non-agricultural nature.

Two cases illustrate the extent to which jurisdictions have split on the question of constitutionality of the protective statutes. In *Borman v. Board of Supervisors, 584 N.W.2d 309 (Iowa 1998),* the court held that the right to bring a nuisance action against someone else was a property right. The impact of the statutory immunity from nuisance actions deprived those landowners of that right without compensation. As a result, it declared the statute unconstitutional as a taking. In *Pure Air and Water Inc. of Chemung County, 668 N.Y.S.2d 248 (N.Y. App. 1998),* the right-to farm law was upheld against a claim that it denied a landowner due process on the ground that there was no property interest in having the courts determine the merits of a private nuisance suit.

§ 47.11(d) Keeping Land in Farming.

There has been considerable concern that the agricultural land base surrounding many cities is seriously threatened by urban and development pressures which have caused much agricultural land to be converted to non-agricultural uses. Much discussion n533 has occurred regarding this loss of farmland, how such losses should be measured and whether agricultural technology can possibly boost production on the remaining acreage to compensate for the loss of the best

farmland. n534

Much of the concern over the loss of farmland seems to be the result of a perceived threat posed by the loss of significant amounts of prime farmlands to the nation's ability to produce adequate food supplies. n535 The loss of land for farming, coupled with consumers' awareness that the agricultural sector has been beset by enormous financial problems has undoubtedly generated considerable fear that the agricultural sector may not be able to meet the long-term food production demands of the nation. n536

The other side of the coin, of course, is that farmlands are often needed for other purposes, such as urban expansion and development. Frederick Jackson Turner observed that the nation's frontier was a "safety valve" for urban discontent. n537 It would appear that much of the pressure on farmland in the urban fringe area is the result of urban residents who wish to escape what are possibly perceived as virtually insoluble urban problems. In this sense, the fringe areas around many growing cities have become something of a land use frontier, in which the needs of the agricultural sector must be delicately balanced against those of an increasingly number of urban oriented "refugees." n538 In many cases, the agricultural use must give way to other kinds of land use activity. The long-term consequences of such changes are largely understood and involve impacts on land ownership, land use patterns and may even have significant individual psychological impacts. Most jurisdictions have approached the problem as a matter involving the availability of land for a variety of competing uses, including agriculture.

Whether the popular fears regarding the threat to our nation's food supply are founded in fact or not, and whether all of the land that is taken for non-farming purposes is actually needed for those purposes, concern over the stability of the agricultural land base has focused a lot of attention on the issue of agricultural land conversion, particularly within the urban fringe area, as an important land use planning and regulation question.

Jurisdictions have developed a variety of approaches to the farmland loss/conversion problem. These programs vary widely throughout the nation. n539 Some jurisdictions emphasize effective planning as the key to accommodating the conflicting urban and rural interests. n540 Others tend to focus on the economic inability of the farmer to compete with a high land use density marketplace. n541 Still other jurisdictions seek to spread the risks of restricted development and the windfalls of permitted development evenly so that those who are not allowed to develop may still enjoy some of the economic advantages that may come from converting agricultural land to high-value urban uses. n542 A number of the more popular approaches will be briefly examined here.

In Napa County, California, voters adopted Measure J which essentially requires voter approval of changes in the designation of agricultural land and open space in the general plan and map of the county. This measure, which is effective for thirty years, allows redesignation without voter approval only under the following circumstances:

1. the land is redesignated in conjunction with annexation to a city;

2. the county board of supervisors makes specified findings that the land is physically unsuited for agriculture, that it is likely to be annexed in the future and that the proposed use is compatible with agriculture;

3. the land is redesignated as a site for a solid waste disposal facility;

4. that the redesignation avoids an unconstitutional taking of the property.

This measure was upheld against a challenge that the measure unconstitutionally ties the hands of future board of county supervisors and that the general plans cannot be amended by county initiative. n543

§ 47.11(e) Zoning as a Common Regulatory Approach to Keep Land in Agriculture.

Traditional, cumulative or *Euclidian* n544 zoning typically establishes districts in which certain uses are permitted as a matter of right or on a special exception or permit basis. n545 The general land use patterns of the jurisdiction are established and regulated primarily through the allocation of types of specific land uses to these districts. In addition to the regulation of basic land use activities within the several districts, zoning ordinances also typically control or regulate height, bulk and setback of structures, authorize variations and special exceptions, and control development density.

As a general rule, traditional zoning ranks land uses in a hierarchical scheme that typically considers single family dwellings as the highest priority use. Then, for the most part, the less preferred uses will not be permitted in areas or districts designated for higher priority uses. In the lower priority districts, higher priority uses will be permitted even though lower priority uses will be excluded. n546 The higher uses are said to cumulate in the lower districts.

Under this zoning approach, agricultural use typically is considered to be a lower priority use and may even be designated as "undeveloped" or "unused" land or as "open space." This results in permitting any uses ranked higher than agriculture to locate in agricultural zones, albeit often on a special exception basis, n547 no matter how inconsistent those uses may be with the agricultural uses. This cumulative location of higher priority uses in lower priority districts may well result in the location of uses which are actually incompatible with agriculture in the agricultural districts. For example, uses such as junkyards and cement plants may be "exiled" on this basis to agricultural areas. n548

The hierarchical scheme of traditional zoning is quite clearly biased in favor of development and typically treats agricultural land as a primary land resource for such development. This bias makes it relatively easy to get the district designation changed to permit proposed uses which are developmental in the sense of involving higher uses. This may leave existing agricultural uses in such areas vulnerable to the pressures of further development. It must therefore be said that in terms of keeping land in farming, traditional zoning typically affords little protection to agricultural uses in the long run and does not effectively deter the conversion of agricultural lands to so-called uses of higher priority.

The developmental bias against agriculture has motivated some jurisdictions to modify non-traditional zoning approaches to make them more protective of agriculture and more effective as farmland preservation devices. n549 These approaches are often called *non-euclidean* or *exclusive zoning*.

Like traditional zoning, non-euclidian zoning establishes areas or districts as the primary means of regulating land patterns. Unlike traditional zoning, however, these districts are devoted exclusively n550 or primarily to particular designated uses. n551 In these districts, even so called higher uses are excluded.

Non-euclidian agricultural zoning districts may be either exclusive and non-exclusive in nature. In exclusive agricultural zones, only agricultural use is permitted. In these districts, many kinds of development that are incompatible with agricultural use will not be permitted. If a non-agricultural use is proposed, it will typically be necessary to secure a change in the zoning itself. n552

In non-exclusive agricultural zones, uses other than agriculture may take place provided the proposed uses can satisfy relevant, restrictive criteria. These criteria may include minimum lot size restrictions, area-based allocations combined with small building lot sizes, sliding scale area-based allocations combined with small building lot sizes, or conditional use approval. n553 The purpose of these requirements, of course, seems to be to weed out the kind and size of used that are most problematic for agriculture or at least establish a buffer around the non-agricultural uses. In most zoning plans of this type currently in effect, large minimum lot sizes appear to be the most popular restrictive device by which non-agricultural use is excluded. n554

Where agricultural land loss is considered a significant problem, and where zoning is the land use planning regime of choice, non-traditional zoning of some type seems to be the most popular zoning form. However, most non-traditional zoning schemes appear to be non-exclusive in nature. n555 This means that there is still a likelihood in most jurisdictions that non-agricultural and agricultural uses may be found in the same location.

Zoning is sometimes undertaken with the particular objective of controlling development density or intensity. Zoning ordinances typically establish an overall density pattern for the jurisdiction. However, it may be possible to cluster or arrange the development in ways which facilitate greater densities than would otherwise be permissible in certain areas while at the same time arranging for other areas to be developed at less than the normally permitted density.

Cluster zoning groups development in a specific minimum area which, in turn, will leave the rest of the area undeveloped or dedicated to minimum density uses. n556 This is generally done to preserve open space around developments, but it may be that some of this open space may actually be used for agricultural purposes or at least serve as a buffer between the development and agricultural uses.

The *Planned Unit Development* (PUD) and *Planned Unit Residential Development* (PURD) approaches are common refinements of the clustering concept. Under these zoning approaches, the development plan is considered as a unit in which residential, non-residential, commercial and open space needs are all combined in order to maximize the size or area of low density development. n557 An advantage of this approach is that it may be used to structure the development so as to minimize the need to use adjacent farmland for support services that inevitably accompany development while at the same time establishing a buffer zone between the agricultural uses and the development.

Open space zoning seeks to structure or channel development so that space is maintained between the urban development area and the agricultural area. n558 This approach is more akin to exclusive zoning in that areas are typically designated in which only agricultural, forestry or recreational uses may be conducted and in which permanent structural uses may be prohibited.

It should be noted that the designation of a particular zone as "agricultural" typically will not prevent non-agricultural uses in the zone unless "agriculture" is designated as the exclusive use permitted in that zone. n559 In fact, under euclidean-style zoning ordinances, many non-agricultural land uses such as home occupations, government buildings, single family residential dwellings, neighborhood recreation facilities and churches might well be permitted as of right while such uses as cemeteries, hospitals, schools, utilities, and industrial activities might be permitted on a special exception or special permit basis. n560 This is largely because of the inherent bias in favor of development and the breadth of the definition of agriculture in most ordinances. n561

§ 47.11(f) Zoning: Agriculture as a Nonconforming Use.

Zoning typically considers land uses to be "nonconforming" when they do not agree with the uses permitted in particular zoning districts. This term is ordinarily used to refer to uses which are allowed to continue despite the fact they may not be permitted in that particular district. n562 Nonconforming use status may result for agricultural land uses when development essentially takes over an area formerly devoted to agricultural use. The remaining agricultural uses are now "out of place" because of the changes in zoning that have accompanied the development.

This status is particularly problematic for agricultural uses because the irreversible changes that have already occurred in the area have probably doomed the agricultural use in the long run. n563 As a practical matter, from a purely economic perspective, it is virtually inevitable that the agricultural use will cease, probably in the not too distant future, n564 unless it is of such a small scale that it can be maintained as an accessory or hobby use to some other activity. n565

The difficult question, therefore, will be how to allow the agricultural use to continue as long as the user wishes. This is because once the farming operation is considered to be a nonconforming use, it must constantly confront the problems associated with maintenance and improvement without running afoul of zoning limitations on changes in the intensity and nature of the nonconforming use. If substantial capital improvements are required to keep the operation competitive or even economically viable, the farmer may have a very difficult task of convincing the zoning authorities that the

proposed changes are sufficiently minimal that they do not alter either the intensity, nature or extent of the nonconforming use. n566 Farmers in some jurisdictions have been exempted from zoning regulations altogether. n567 In at least one case, this exempt status was the basis for the holding that a jurisdiction cannot use nonconforming status to accomplish zoning regulation of agricultural uses where state law generally exempts agricultural buildings and land from such zoning regulation by a county. n568

§ 47.11(g) Zoning: Treatment of Residential Dwellings on Farmland.

The application of zoning restrictions to residential dwellings on agricultural land is primarily a concern in jurisdictions which have exempted agricultural uses from zoning authority. One argument in favor of exempting the dwelling as well as the land from zoning regulation is that it the dwelling is clearly an incidental and accessory use to the actual farm use of the land and therefore should not be dealt apart from the "agricultural" use with which it is associated. n569 The corresponding contrary argument is that the use of the dwelling is for primarily residential rather than agricultural purposes and therefore, as to the structure itself, it is the dominant use and may be regulated as a residential use. At least one state has adopted this position by statute in regard to farm dwellings in urban counties. n570

Treating the dwelling as part of the farm seems preferable in most cases, since it effectively encourages individuals to live on the land that they farm which is consistent with the general predilection of the law and policy in this country. Unfortunately, it does not deal effectively with the situation in which a child, or children, of the farm parents wishes to construct a separate residence, or residences, on the farm premises. It may be appropriate to treat this activity as an additional development, rather than as an accessory use. If it can be shown that the additional dwellings are needed in relation to the viability of the farm operation, they should partake of the same status as is enjoyed by the primary farm dwelling.

Some jurisdictions appear to be more interested in regulating particular kinds of residential dwellings in agricultural area and are less interested in the farm dwelling itself. In these jurisdictions, the most common target seems to be the mobile or manufactured home. While it is difficult to argue that mobile homes constitute an agricultural use, it has been argued that the presence of a significant number of mobile homes in an agricultural area is one of the earliest signs that the area is changing from agricultural to residential. n571 In this context, it may be reasoned that mobile homes present a particular threat to agricultural areas because of their relative low cost and the fact that their location is often unregulated in undeveloped areas. Jurisdictions which have sought to exclude such dwellings from agricultural areas through their zoning ordinances, however, have not had much success. n572

In two cases in Iowa, the courts have eliminated the distinction between commercial farming and "traditional" farming. In Thompson v. Hancock County, n573 and Keuhl v. Cass County, n574 the Iowa Supreme Court determined that large commercial hog facilities were engaged in agriculture for purposes of zoning laws. In so doing, the court overturned the long-standing precedent, *Farmegg Prods., Inc. v. Humboldt County*. n575 The rule in Iowa had been that agricultural use was to be defined in terms of "traditional" activities before the activity would be exempt from zoning.

In City of Glendale v. Aldabbagh, n576 the court dealt with a nonconforming use and the question of whether the right to continue that use had been lost as a result of nonuse for more than the permitted period, where the nonuse was the result of a public order. Here, the nonconforming use was an adult entertainment business. The owner was the subject of a restraining order that had been imposed because of allegations that the business constituted a public nuisance (due to unproven claims of prostitution). The owner argued that since he was never successfully prosecuted for the misconduct, the fact that the business had not been in operation in the interim should not constitute abandonment for purposes of losing the right to continue the nonconforming use. The court found otherwise even though the owner had no intent to abandon. The court held that "the termination of a nonconforming use does not require a decision by the property owner to discontinue the use. A nonconforming use may be lost through negligence or inadvertence. A use may also be lost if a person engages in civil or criminal misconduct that the property owner knows or should know could lead to involuntary closure and indeed does lead to closure." In this case, the court held that the cessation was brought about by

the City's public nuisance action even though that action was dismissed by agreement of both sides. This case would seem to have important implications for farmers near urban areas who continue their operations as nonconforming uses. If the active use is interrupted by litigation over nuisance matters, the nonconforming status may be in jeopardy.

Farmers who sell their own produce from their premises and advertise the availability of the same through the use of signs located near roadways may be interested in the outcome in the case of *Schultz v. City of Rochester Hills*. n577 There the court dealt with a homeowner who sold beauty products from her home in an area zoned for single family use. She attached a large sign to a tree in her front yard to advertise the availability of her merchandise. The city ordinance permitted in-home businesses but prohibited signs. The court found that the restriction was an impermissible regulation of commercial speech where the ordinance merely regulates but does not prohibit other types of commercial advertising.

§ 47.11(h) Zoning: Agricultural Activity as an Appurtenance to Other Uses.

In addition to the farm dwelling itself, other structures may raise a question as to the extent to which they should share the same "agricultural" or "farming" status as the land with respect to zoning regulations. Here again, this is a more critical question in jurisdictions which exempt agricultural uses from zoning restrictions. In most cases, the outcome appears to depend upon the extent to which the structures and improvements are considered an integral part of the agricultural activity or whether they are merely incidental. n578 Greenhouses may be held to be commercial structures depending on their purpose and their relation to the general agricultural activity which occurs on the land. n579 Silos are generally considered to be agricultural in nature n580 as are roadside stands in which produce from the particular farm is sold. n581 On the other hand, sawmills n582 have not been considered accessory uses to farming operations.

§ 47.11(i) Zoning: Agricultural Use as an Accessory Use.

Because of the hierarchical nature of traditional zoning, it is probable that agricultural uses may be mixed with potentially incompatible non-agricultural uses even in designated "agricultural" use zones. n583 This, of course, has placed junkyards, cement plants and the like lawfully in agricultural areas. n584 On the other hand, it may be argued that what is normally an agricultural use, for example the keeping of horses or a farm animal in a residential area, albeit for recreation or as a pet, is contrary to zoning restrictions in any area not zoned for agriculture at all and therefore should be enjoined. Similarly, there may be an activity, such as the making of ice cream at a dairy, that occurs in conjunction with an agricultural land use but which appears to be nonagricultural in nature and in violation of zoning restrictions. In these cases, it will be necessary to determine whether the allegedly incompatible use can be permitted as a valid accessory use to uses that are permitted in the particular district.

Where the issue is the permissibility of the supposedly non-agricultural activity in areas zoned for agriculture, courts tend to focus on whether the goods were produced on the farm, n585 whether the activity is clearly incidental to the agricultural activity, n586 or whether the activity is customarily associated with farm use. n587

Where the issue is the maintenance of arguably agricultural uses (such as the keeping of horses) in an area not zoned for agricultural activity (such as a residential district), courts have approached the problem with less uniformity. Some courts have allowed the activity as an accessory use, n588 while others have disallowed such uses. n589 In many cases, courts are concerned that the activity may constitute a nuisance or may have an adverse impact on the character of the neighborhood. n590 In other cases, the distance from existing agricultural uses and the particularity of specific language n591 in the relevant ordinance seem to be the dominant factors in the decision. n592

§ 47.11(j) Zoning: Regulation of Lot Size.

Zoning may influence the size of the tract of land upon which a particular activity occurs. It has been popular in some jurisdictions to require a large minimum lot size before the land use could be changed from agricultural use to residential use. It has been thought that this approach would deter residential development which might seriously erode

the agricultural land base of the jurisdiction. n593 It has been reported that when used for this purpose, minimum lot sizes range from as little as three acres to as much as 640 acres. n594 At least one jurisdiction has upheld requirements of 160 acres. n595

Large lot zoning has been upheld by a number of courts where it was considered necessary to preserve the agricultural nature of the area. n596 In a few cases, courts have refused to uphold minimum lot requirements where such a requirement has had the impact of preventing agricultural use in areas where agriculture was otherwise permitted or encouraged. n597

As a practical matter, lot sizes smaller than ten acres are not likely to be very effective in preserving farmland since it is generally not feasible to conduct a successful agricultural operation on acreage that small. n598 Jurisdictions that are interested in minimum lot sizes of that dimension and smaller appear to be more interested in dispersing development and achieving lower use densities than in keeping the land meaningfully in agriculture. In these jurisdictions, it may be difficult to engage in lawful agricultural activities on the smaller tracts. n599

§ 47.11(k) Agricultural Districts.

Agricultural districting is a form of land use regulation that combines contractual obligations and land use planning. n600 Under this approach, the agricultural landowners who qualify voluntarily enter into a binding agreement between themselves and local authorities to create special districts. The land owner contracts to keep the land in a farming or agricultural use and the local authority makes reciprocal promises regarding special tax treatment and protection from certain types of government regulations, including special assessments and the exercise of the power of eminent domain. These agreements are binding for a specified period of time n601 and are enforced through heavy tax penalties which may be incurred if the landowners make unacceptable use of their land. n602

§ 47.11(l) Taxation.

Some jurisdictions have sought to induce farmers to keep their land in agriculture through preferential reductions in *ad valorem* taxes. n603 These tax concessions are designed to tax the land at a value that reflects its agricultural production potential rather than at a higher value which reflects its development potential. In most cases, this is described as using the "use value" of the land as opposed to the "fair market value" of the land. This approach is specifically designed to deter speculation in land values which significantly increases the cost of farming because it raises the cost of farmland which may be required to expand the farming operation in order to keep it economically viable. n604 It is notable that it does not take much of an increase in land value before the urban development value of the land may soon exceed the agricultural productive value of the land. When this occurs, an increasingly larger portion of the farmer's net agricultural income must be allocated to taxes, which rise accordingly. By restructuring the method by which taxes are determined, it may be possible to create an economic incentive for owners of agricultural land to retain that land in agricultural use. n605

Pure differential taxation or assessment approaches assess agricultural land for *ad valorem* property tax purposes solely on the basis of its present agricultural use value rather than its fair market value. n606 In most cases, this is based on a determination that the land is being used for bona fide agricultural purposes. n607 This type of preferential assessment is thought to reduce the farm's taxes by the difference between taxes imposed on the basis of fair market value and taxes based on the agricultural or current use value of the property. This, it is hoped, will provide a sufficient economic incentive to the farmer to keep the land in agricultural use. The biggest weakness of this approach is that the tax reduction pertains only while the land is "used" for "agricultural purposes." Not only is that somewhat difficult to define, n608 it does not seem to deter development where the cost of the increased taxes can be shifted to the developer or can be offset by greater income from the development itself.

Like pure differential assessment, *deferred taxation* requires that the land be assessed at its current use value rather than

its fair market value. Unlike pure deferential assessment, however, deferred taxation approaches require that some or all of the tax savings derived from the preferential assessment be paid if the land ceases to be used for agricultural purposes. n609 This recapture or "rollback" will vary from jurisdiction to jurisdiction and typically ranges between two and ten years. n610 This feature has not been particularly popular with the agricultural sector because it increases development costs. It is also administratively more complex than pure differential assessment because of the need to maintain records of both the agricultural use value of the land and the fair market value of the land. n611 Nevertheless, deferred taxation has been a surprisingly popular approach, being used in more than half the states. n612

In some jurisdictions, *restrictive agreements* are combined with preferential tax assessment techniques to implement the tax valuation approach as part of a contractual agreement between the landowners and the appropriate governmental unit. In exchange for the special tax considerations, the agricultural landowners agree by contract to form special districts in which their land will be maintained in agricultural use and taxed accordingly. These arrangements have not been particularly popular with the agricultural land owners because, once the districts are created, cancellation or withdrawal may be very difficult and may require the giving of notice often far in advance of termination, which may result in immediate reimposition of higher tax rates and other penalties. n613 It should also be noted that by the time development pressure on agricultural land becomes acute, it is probably too late to generate much support among the farmers, many of whom will likely already have decided to convert their land to non-agricultural uses, for this kind of restriction unless the tax savings is very large. As a result, this approach tends to be used where pressure to develop is less pronounced.

In jurisdictions where tax statutes give a preference to agricultural use, determining whether land is actually being used for "agricultural" purposes has particularly been a problem. This is because a developer may wish to acquire land some time in advance of the actual development and then hold that in some kind of "agricultural use" until that future development date in order to avoid the increases in land taxes that may result from development. Such tax savings may be substantial where the land is valued according to its "use" value as opposed to its "fair market value." In a Kansas case, n614 the Court of Appeals construed broadly the statutory definition of "agricultural land" and rejected arguments that the intent of the land owner was relevant to the determination of whether the land was actually being used for agricultural purposes. In this case, the land was located within the city limits, was completely enclosed by a fence and was exclusively seeded to fescue and cut periodically as hay. There were no farms or rural homesites associated with the land. The local appraiser had classified the land as "vacant" and had taxed it accordingly. The board of tax appeals found that the land was devoted to agricultural use. It found that there was no requirement that the land owner make a profit from the land and it did not matter what the surrounding landowners did with their land. Further, it did not matter what the landowner eventually intended to do with the land. The County argued that the statutory phrase "devoted to agriculture" required a serious and good faith undertaking of agricultural activity and precluded any temporary agricultural activity that was designed to avoid tax liability. The Court of Appeals upheld the board of tax appeals.

§ 47.11(m) Miscellaneous.

A variety of other approaches have been attempted to keep land in farming with varying degrees of success. The more common of these include land banking, n615 service and capital improvement districts n616 and scenic or conservation easements. n617

§ 47.11(n) Dealing with the Problem of Potentially Unfair Allocation of Development Opportunities.

Typically, the decision to keep land in agricultural use is also a decision not to "develop" that land. That, of course, means that other lands will be available for development and the owners thereof will reap the rewards associated therewith. Where a decision is made to limit the area available for development, difficult choices must be made regarding the particular lands that are available and unavailable for such uses. A very difficult issue in any land use planning scheme is deciding who gets the windfall that might result from such restricted development. Those who are required to keep their land in agricultural use for a protracted period of time typically share less in the largess that

comes from development than do others who own land that is susceptible of development and therefore tend to resist efforts that appear to unfairly deny them the economic benefits of development. A variety of approaches have been developed to address this problem.

§ 47.11(o) Allocation: Development Rights Plans.

A number of jurisdictions have developed approaches which involve the severance of the right to develop from the fee ownership of the land. Under these approaches, the severed "development right" may be either acquired by the jurisdiction, transferred to another individual landowner or limited in such a way that inconsistent uses are no longer possible. Two variations of this approach have been most popular.

The transferrable development rights (TDR) approach involves the designation of certain lands within a geographic area as those subject to developmental restriction and other lands within the area as those into which development is to be directed. n618 The owners of the restricted lands typically are permitted to sever and sell or transfer their rights to develop to other tracts of land or to the owners of land in the designated development areas. This transfer is promoted by the typical requirement that those proposing development must deliver to the permitting authority more rights than will have been assigned to their own lands. Thus, they will be required to purchase development rights from restricted landowners if they wish to develop the property at a greater density than would otherwise be permitted. In this manner, the restricted landowner shares in the economic return that comes from development through the sale of the rights necessary to facilitate the development itself. n619

The purchase of development rights (PDR) approach involves the direct purchase of the right to develop the land from owners of specific parcels by the governmental body or public land planning authorities. n620 These severed rights are then sold to potential developers, usually on the open market. n621 The purchase price of the rights is generally calculated on the basis of the diminution in the market value of the land as a result of the removal of the development rights and will thus be the difference between the value of the land when used for agricultural purposes or open spaces and its current market value. In return for the payment, the owner is restricted to agricultural and open space uses of the land in perpetuity. The land owner still retains all other rights of ownership.

As with the TDR schemes, the cash payment received by the landowner in exchange for the sale of the development right is seen as not only an incentive to remain in farming but as an opportunity to share in the increases in land values triggered by urban development in agricultural areas. Unlike TDR approaches, the public bears the cost of purchasing the development rights, which may be substantial.

§ 47.11(p) Allocation: Condemnation of the Right to Develop.

Both TDR and PDR schemes assume a voluntary severance of the right to develop the property or at least acceptance of the proposition that the payment is adequate compensation for the loss of the right to develop the property. It may be that some individual landowners will choose not to participate in such a program even if it is available. Where such lands pose serious threats to the agricultural preservation objectives or where transferable rights programs have not been adopted, a jurisdiction may need to acquire the right to develop the property through formal condemnation proceedings and the use of the power of eminent domain. Here, it may be necessary to "show that the proposed higher density development will create harms that the community may proscribe under the police power." n622

§ 47.11(q) Allocation: Compensable Regulation.

Compensable regulation preservation programs seek to specifically compensate the landowner for decreases in land value or loss of development potential due to development restrictions. Where this is undertaken, the jurisdiction typically establishes a fair market value for each parcel and then undertakes to guarantee that value. Then, if regulation is undertaken, "the landowner is immediately compensated if, and to the degree that, the regulation reduces the value of

the land for uses actually being made at the time the regulation is imposed." n623 In addition, the owner may be compensated if the land is sold at a price less than the pre-regulation guaranteed value. As with the PDR programs, a major drawback to this approach is the cost associated with the compensation which is borne by the public, funded through assessments imposed upon those within the planning district who have been benefitted from the regulations. n624 These assessments are generally characterized as benefit recapture approaches which then result in distributions to those who have suffered losses due to the regulation. n625

§ 47.11(r) Resource Management.

Agricultural activities require adequate resources for the operations to be successful. These requirements include adequate space, fertile soil, water and perhaps such production inputs as fertilizers, herbicides and the like. n626 If such resources are not readily available, it may be necessary to change particular agricultural activities, or change the use of the land to other uses (or, in some cases, cease using the land for any productive endeavor at all). The ability of a jurisdiction to control the availability of these resources in turn determines both the nature and the intensity of the agricultural use of the land. Where controls are intensive, agricultural use tends to be discouraged. Perhaps the most critical of these resources, in terms of the agricultural land use implications, are water and the land itself.

State law generally determines the conditions under which one is entitled to water. n627 In some jurisdictions, the state exercises substantial control over water availability. As a general rule, policy decisions regarding water availability tend to be made on the basis of what will promote the widest access to the water and facilitate the broadest possible uses thereof.

Nevertheless, in many places, there simply is not enough water to satisfy all demands. In these areas, the ability of the agricultural sector to meet food and fiber demands is directly affected by whether the agricultural users have sufficient water available of water for their activities. Historically, agriculture has required massive amounts of water, which have not always been wisely used. n628 Likewise, agricultural use of water has enjoyed a significant measure of protection under the water allocation laws of the states. However, as urban demands for water increase, difficult choices may become necessary with respect to water allocation. In the worst cases, it may be necessary in some places to choose between agricultural and urban uses, and to divert water from agricultural uses to what might be perceived as more "life sustaining" uses. Although no such choices have been made to date, such an allocation will require fundamental changes in agriculture as well as in the water right regime of the jurisdiction.

As a matter of history, the *soil* conservation problems of our nation have been enormous. n629 For years, states have been actively involved in dealing with the problem of soil loss and have even mandated that farmers engage in corrective practices where soil losses exceed established guidelines. n630 Some judicial decisions suggest that this type of control over actual farming practices is properly within the police power of the states. n631 As a practical matter, this view codifies the notion that the land owner is a steward of the land and has some measure of intergenerational responsibility regarding how the land is managed. This position also shifts a significant measure of control over the land use decision away from the land owner and vests it in the relevant (and possibly urban oriented) decision-making body.

There appears to be an interesting agriculture versus urban land use dimension to the agricultural soil loss problem. First, it has been suggested that in recent years the most significant cause of current erosion problems is the economic pressure to use fragile lands for production, which is most acute where there is intense competition for the land. n632 Although there have been changes in the national farm program to eliminate some of the economic incentives associated with government programs that perhaps have been an incentive to convert some fragile lands to crop production, n633 studies suggest that erosion on fragile lands in urbanizing areas is not being abated as a result, and actually is, on the average, significantly higher than erosion in other areas. n634

§ 47.11(s) Availability of Agricultural Land for Recreational Use.

An increasingly important issue to urban interests is the availability of an adequate amount of reasonably proximate land which can serve as the locus for recreational activity. As the amount of leisure time has increased, many have found that there is simply not enough public land available in many parts of the country to support even the existing level of demand for recreational use. Unfortunately, the public coffers in most places cannot bear the cost of acquiring the land needed. As a result, pressure is brought to bear on private "open space," which is typically agricultural land, to meet these needs. n635

Conventional concepts of real property law generally preclude a land owner from being compelled to open the land to public recreational use without compensation. Further, the law of trespass protects the landowner from uninvited intrusion. As a result, it has been necessary for most states to develop a program of inducement by which the private land would be opened voluntarily for recreational use, without the need for compensation and without jeopardizing the protection landowners receive from the trespass laws. n636 These statutes, often called "Recreational Use" statutes typically reduce the liability of the landowner for injuries suffered by recreational use entrants. n637

Under conventional laws of most states, the liability a landowner owes to others who may enter upon his or her land has historically depended upon the status of the entrant. If the entrant was there for purposes of the landowner, the entrant was considered to be an *invitee* and a high duty of care was imposed to warn and protect the entrant from known dangers. If the entrant was permitted to enter for purposes of the entrant, a lower status was imposed, that of a *licensee*, and a lower standard of care was required. *Trespassers* were owed very little protection. Indeed, in many states, the landowner was obligated only to refrain from intentionally inflicting harm. *Public entrants*, such as policemen, firemen, postmen and health inspectors, were treated as either invitees or licensees.

Most Recreational Use statutes appear to assume that the landowner may owe a duty of care that needs to be moderated in some way as an inducement to opening the land to recreational use. That is, under most statutes, the landowner is offered what would amount to a reduction in the duty of care by requiring only that the landowner treat all entrants as if they were trespassers. Thus, even though the landowner has ostensibly "invited" the entrant onto the land, the landowner does not need to act as if the entrant were an invitee or even a licensee.

A number of years ago, states began to move away from the *status* of the entrant as a basis for liability toward a standard of care governed by the actions of the landowner and the conditions of the premises. California led the way n638 with the adoption of the rule that the test to be applied to the landowner was "whether in the management of his property he has acted as a reasonable man in view of the probability of injury to others ..." n639 This decision has been followed in a growing number of jurisdictions. n640 *Mile High Fence v. Radovich, 474 P.2d 796 (Colo. App. 1970).*

Nebraska has abolished the common law classification of licensee and invitee in favor of a duty of reasonable care for all nontrespassers on the property. *See Heins v. Webster County,220 Neb. 750, 552 N.W.2d 51 (1996).*

For a discussion of recreational use of abandoned railroad beds, see Comment, "The Acquisition, Abandonment, and Preservation of Rail Corridors in North Carolina: A Historical Review and Contemporary Analysis," *75 N.C. L. Rev. 1989 (1997);* Wright, "Private Rights and Public Ways: Property Disputes and Rails-to-trails in Indiana," *30 Ind. L. Rev. 723 (1997).* Some jurisdictions have characterized the test as one of determining whether the landowner acted reasonably under the circumstances. n641

A 1993 decision in Kansas now moves that state away from the status based approach to the reasonable care approach. n642 This case changes the basic law in Kansas regarding licensees and invitees, replacing the distinctions involved in those classifications with the need to act reasonably under the circumstances. The decision in the case should not change the duty owed by a landowner to a recreational entrant under its Recreational Use statute n643 since that statute expressly makes irrelevant the status of the entrant in two ways. First, the statute provides n644 that an owner of land who directly or indirectly invites or permits any person to use the property for recreational purposes does not thereby "confer upon such person the legal status of an invitee or licensee to whom a duty of care is owed." Second, the statue

provides that the landowner does not incur any liability based on any act or omission of the entrant. n645 It may be arguable that the landowner now, since *Jones v. Hansen*, may be liable for his or her own omission (which would be the case under the "reasonable care" standard) since the statute says that the act, in no way, limits any liability which otherwise exists. n646 Arguably, the statute eliminates that possibility by defining the only other apparent basis for liability: willfully and maliciously failing to guard or warn of a dangerous condition, use, structure, or activity. n647

In states that adopted their Recreational Use statutes at a time when the traditional status based rules were followed, but which since have shifted to a reasonable use paradigm may need to consider whether their statutes effectively eliminate any change in the standard of care because the underlying status based regime upon which the statute was initially dependent no longer exists. If the recreational statutes are to continue to induce landowners to open their lands to recreation, a reduction in liability would still seem to be needed. One possibility would be to construe the statutes as retaining or imposing the old "trespasser" status limitation for recreational entrants only while all other liability issues outside the scope of the statutes would be resolved on the basis of the reasonable care standard. Another possibility would be to read the statutes as providing a different definition of what constitutes "reasonable" care within and without the context of recreational use. That is, under the statute, the landowner may still be deemed to have acted reasonably even though he or she does less than might be expected in the absence of a recreational entrant.

§ 47.11(t) Recreation: "Land" Open for Recreation.

Each statute defines the land covered. In some jurisdictions, "land" may be broadly defined to include land, roads, water, watercourses, private ways and buildings, structures, and even machinery and equipment when it is attached to realty. n648 In other jurisdictions, the statute may be interpreted strictly or narrowly and may limit "land" to "agricultural" n649 land or open space. n650 In some jurisdictions, the statute has been construed to apply only to private land and not to public land. n651 In other jurisdictions, the term has included both public and private land. n652 Some jurisdictions have limited the application of the statute to "rural," undeveloped or non-residential lands or have considered the size or location of the tract to be critical. n653

§ 47.11(u) Recreation: Defining "Recreational Use."

Recreation may be broadly defined to include hunting, fishing, swimming, boating, camping, picnicking, hiking, pleasure driving, nature study, water skiing, winter sports and viewing historical, archeological, scenic or scientific sites. n654 Courts have also considered motorcycle riding n655 and educational field trips, n656 to be recreational use. In one case, sitting on the beach watching others swim was held to be a recreational activity. n657 Some jurisdictions have required the activity to be one that can or must take place in the true outdoors n658 as opposed to indoors n659 or at least take place as a matter of fact in the true outdoors. n660 One state has construed its statute to apply to activities that more often than not are physical, outdoor and non-spectator activities. n661 On the other hand, walking a bike across a bridge has been held not to constitute "hiking." n662 Similarly, it has been held that the state's recreational use act did not cover an accident that fortuitously occurred in a city park simply because the truck was driving through the park. n663

It is not clear that the entrant must be on the land to engage in any particular activity or that the activity for which the entrant is there is, in the mind of the entrant, recreational in nature for the statute to be invoked. n664 Policy would suggest that the intention of the entrant is largely irrelevant in order to avoid endless problems of intent as to the entrant and to avoid entry into "a thicket entangled with speculation as to the motives of the landowner in permitting the use of the land." n665

§ 47.11(v) Recreation: Status of the Entrant.

The measure of responsibility owed by the landowner to a recreational entrant is approximately the same as is owed to a trespasser. n666 The landowner remains liable for willful or malicious failure to warn against a dangerous use,

structure, activity or condition. n667 Nevertheless, the theory of such statutes is that the entrant has been invited to the premises for purposes of engaging in recreational activity and hence will not be a trespasser. The 1979 Model Act proposes that the mere unexplained presence of an individual on the land of another raised at least a rebuttable presumption that the person was there for recreational activity and with the land owner's permission, such that the statute would apply and the landowner would be shielded against damage claims resulting from that presence. n668

Most state statutes do not appear to explicitly address the issue of permission to enter. n669 Some statutes ground the immunity from liability upon directly or indirectly either "inviting" or "permitting" the entrant to the property. n670 These terms are generally undefined in the statutes, however. Several courts have addressed the question whether an invitation must be specifically granted and reached divergent answers. In *Friedman v. Grand Central Sanitation, Inc.*, n671 a court held that the landowner was protected under the statute despite having deliberately fenced the property to exclude the public from using the land. In this case, the court held that there were alternative bases in the statute for protecting the landowner. Either the land was open to the public or under the rule that the landowner has no duty of care to keep the premises safe for entry or to warn of a dangerous use, condition or structure. Similarly, in *Johnson v. Stryker Corp.*, n672 the court held that the statute applied whether permission, express or implied, had been granted since the legislature had intended that at least part of the statute would be applied regardless of whether the land was open to the public for use.

In contrast, courts have held that a public invitation is required for the statute to apply n673 and a landowner's efforts to fence the public out or to post "no trespassing signs" would seem to avoid the statute. n674

It would seem that to require the landowner to specifically invite the public would deter many landowners from opening their lands to recreational use, which, in turn, would defeat the ultimate purpose of the statutes. Similarly, it would seem that landowners might be likely, if required to give such notice, to specify which activities were permitted and which were not, thereby limiting public recreational access, or would be reluctant to open their land for any purpose at all if the consequence was that the lands would be opened for all purposes. On the other hand, the unstated thrust of these statutes seems to be to shift a measure of control over how the land is used from the landowner to the public in exchange for the possible reduction in liability. If an act of the landowner is not required as part of this reciprocal arrangement, the acts become liability limiting measures only and the public is not assured of any greater access than it otherwise might have.

Nebraska has abolished the common law classification of licensee and invitee in favor of a duty of reasonable care for all nontrespassers on the property. n675

§ 47.11(w) Recreation: Imposition of Entry Charges.

Most statutes state or assume that the public must have access to the land for recreational use without charge. n676 There has been much litigation as to what constitutes a "charge" under the statutes. It would seem that the charge should directly relate to the question of access to the land for the purpose of recreational use in that if the charge is not paid, access would be denied. Courts that agree have held that the term "charge" connotes a quid pro quo in the sense that there is an exchange of something in return for the permission to enter. n677 In this sense, the payment of a fee to rent an inner tube did not constitute a charge to use the recreational facility. n678 Likewise, it has been held that the purchase of gasoline, food and canoe rental did not constitute a charge. n679 In one case, it was held that the fee charged to enter a cave was not a fee charged to use other recreational facilities on the site. n680

The payment may be made indirectly to the landowner. That was held to be the case where a payment of part of the receipts from concessions was made by a lessee to the landowner. This was considered at least an indirect charge for the use of the facility. n681 In perhaps the most extreme case, it was held in *Kinsner v. Trenton*, n682 that allowing people to swim free encouraged people to come to the marina site and thereby increased the proprietor's sales. Thus, it was held that the marina operator had imposed a charge on the user.

Some jurisdictions have broadly construed the meaning of charge to apply to the opportunity to utilize the overall benefits of an area. One court held that the fee to park a camping trailer was such a charge. n683

The popularity of the concept of "fee hunting" has led some states to exempt charges for that activity from those that might render the recreational use statutes inapplicable where the activity occurs on agricultural land. n684 The rationale for this is to encourage recreational access to agricultural land but also to allow farm operators to capitalize on an opportunity to supplement their income without jeopardizing their protected status under the recreational use statutes. n685

§ 47.11(x) Fence Laws.

Boundaries determine the geographic extent of one's title to land. As such, boundary issues are not directly related to the issues discussed in this chapter. n686 Nevertheless, a most rudimentary understanding of boundaries is useful in order to understand the unique features of fence laws as they relate to the keeping of animals on the premises and the liability that may result from their escape.

Fences are often considered by agricultural landowners to be the boundaries between properties. As a matter of law, however, the actual boundary will be an imaginary line that is located according to the description of the property in the deeds. Thus, the fence will usually only be considered evidence of where that imaginary boundary line is. In such a case, it is of little importance whether the fence is permanent.

On the other hand, it is possible that the fence has been used as part of the description of the land that has been used as the property has changed hands. For example, in what are called "metes and bounds descriptions," the land is located by a series of directions that trace the perimeter of the land. These descriptions indicate the direction and distance one moves in mapping the perimeter through a series of "calls" that rely upon identifiable landmarks. The description might include calls which include fences as landmarks. For example, such a description might read "begin at the intersection of Highway K-4 and County Road 1029 and go West 1000 feet along the existing fence to a point. Follow the fence South for 1000 feet..." In such a case, the boundary of the farm will be the physical boundary where the land abuts an adjoining tract of land and might well be marked by an existing fence, which the parties intend to use as the boundary marker. In such a case, the fence may actually be considered to be a permanent marker of the boundary for the land. If the fence deteriorates in later years or even is removed, it may be necessary to "relocate" or "recreate" the fence line in order to precisely determine the location of the boundary to the property.

In the more usual situation, the property will be described in a way that requires the mapping of survey lines. In such a case, a fence may not be built exactly on a boundary line and, indeed, may actually be deliberately built on one side of the line or the other in order to facilitate maintenance or avoid particular problems. This is normally of little concern since the fence is not, nor is it intended to be, the boundary line.

Problems may arise when fences have been in existence for a long time and the adjoining landowners have come to think of them as marking the boundary, regardless of whether they actually do. An important question then is whether, and if so, under what circumstances such a fence line can be substituted for the actual boundary line when it is not built exactly on the line. n687

It should be noted that the mere passage of time will generally not cause the fence to be substituted for the property description boundary. Thus, the fact that the fence has been there a hundred years, or more, means little by itself. On the other hand, patterns of use of the land on each side of the fence may cause the fence to become fixed as the boundary and have the legal effect of changing the boundary set out in the deed. Under the doctrine of adverse possession, n688 one may acquire title to property not one's own by making an open, notorious use of the property for a specified period of time. However, for adverse possession to accomplish this, it typically must be known that the property claimed does

not originally belong to the claimant. Where it is unknown where the actual boundary is, courts look to the intent of the party holding beyond the true line. If the occupation is by mere mistake and someone occupies land of another with no intent to claim that land as the occupant's own land, but rather intends to hold only up to the true line, wherever that line may be, it may be difficult to get a court to consider such occupation to be adverse.

The parties may agree that the fence actually constitutes the boundary in one of several ways. First, the parties may settle the boundary dispute on the basis of a written agreement and through the issuance of corrective deeds. In such an approach, the property descriptions of the adjoining tracts can be changed to reflect the fence line. This may require the execution of one or more deeds from one party to the other to transfer the area of adjustment.

Second, the parties may generate a memorandum of understanding that designates the fence line as the boundary, which then can be recorded in the land records and which will thereafter bind the present owners of the property and their successors. n689 Third, the doctrine of practical location or, as it is sometimes called, the doctrine of boundaries by acquiescence, may also be used to establish the fence as the actual boundary. n690

In Gravert v. Nebergall, n691 the Iowa Supreme Court ruled that the state fence statute was not unconstitutional, either on its face or as applied to plaintiffs, nor was it preempted by the grant of home rule powers to cities in a case in which the town trustees required the plaintiffs to pay part of the cost of maintaining a fence between plaintiffs and defendants.

In Graham v. Lambeth, n692 the court resolved a boundary dispute involving a fence. In the land sales transaction in 1964, the seller represented that an existing fence delineated the northern boundary of the property. The plaintiff (purchaser) had occupied the land up to the fence since that time. The defendants in this case purchased their property on the other side of the fence by a sheriff's deed. Defendant's predecessor in title was the same individual who sold the land to the plaintiff. Defendant subsequently ordered a survey which determined that the fence was located ten feet within the described boundaries of their property. The court held that the defendant could only acquire whatever interest was held by the previous owner and since the plaintiff had acquired title to the disputed land prior to the sheriff's sale, the sheriff was incapable of transferring title to the disputed strip. Since adverse possession does not give notice to the county tax assessor, failure to pay taxes on the disputed land did not affect the title.

In Palmer Ranch Ltd. v. Suwansawasdi, n693 plaintiffs had maintained a perimeter fence around a parcel of land and had grazed sheep and cattle thereon and on surrounding land for the past 18 years. The plaintiff claimed title to the surrounding land on the basis of adverse possession. The trial court disagreed and awarded title to the defendant. On appeal, the court reversed, holding that the occupation was not limited to the fenced portion since the occupation and use had occurred uniformly on all the land and that plaintiff had not fenced off the particular parcel for any particular purpose. No fencing of the disputed land was required to achieve adverse possession.

In Rafael v. Dale, n694 plaintiff's land bordered on defendant's land on three sides, with the fourth side being bordered by Forest Service land. The only access to defendant's land was over plaintiff's land. Plaintiff sought judgment to prevent defendant from crossing that land. The trial court held that defendants had a prescriptive easement to one route over the land. Plaintiff had argued that the use was not adverse because plaintiff's predecessor in title had prohibited defendant from crossing the land except at the route for which the easement was claimed. The appeal court found that evidence was presented to the trial court that the predecessor had actually sought to prohibit all crossing of the land by defendant made that use adverse. It held that the trial court had the discretion to determine whether that evidence was credible and that finding was not appealable.

§ 47.11(y) Fences: General Relation to Liability for Animals.

In addition to whatever role fences may play with respect to boundaries, fences in rural areas are typically used to confine or exclude animals to or from one's property. The effectiveness of the fence often makes the difference whether the animals stay on the property or roam freely. If animals get out, they often cause harm to others, who, in turn, may

seek legal recourse from the animal owners. Whether one may be judged liable for the harm done by animals which escape depends in large measure on the fence laws of the jurisdiction. In some jurisdictions, the owner of the animals is required to fence the animals in; in others, the potential victim may be required to fence the animals out. n695 The character of the fence laws, in turn, reflects the general preferences of the jurisdiction regarding how the agricultural land is used. n696 Those that favor fencing animals in tend to favor urban-type uses of the land or farming types of agriculture. Those that favor imposing the obligation to fence on those who would have the animals excluded from their lands tend to favor range-type agriculture and open space uses of land.

Many jurisdictions resolve the question of liability of the owner of the animal that has escaped a fence on the basis of the adequacy of the fence itself. n697 These jurisdictions tend to have specific laws that determine what constitutes an adequate n698 or lawful fence. n699 Some statutes are very detailed as to the construction and composition of such fences. n700 Some jurisdictions even impose criminal liability on anyone who interferes with such a fence or leaves a gate open. n701 The determination as to what constitutes a lawful fence may be delegated to what are called "fence viewers." n702 The decision of the fence viewers n703 may be final, and not subject to judicial review. n704 In these jurisdictions, if the owner of the animals has not erected a lawful or sufficient fence, and an animal escapes, the law may presume that the animals are out as a result of fault on the part of the owner of the animals and therefore impose liability for any damage done. n705

In many states, a land owner who does not wish to enclose his or her land may not be compelled to do so. This may also include not being compelled to pay one's share of a partition fence. Nevertheless, an unfenced boundary may preclude recovery for damages caused by trespassing animals. n706 In Bryant v. Purnam, n707 the court dealt with a problem of dogs that were owned by a tenant. The primary issue in the case was the extent to which the landlord could be held responsible for dogs that were loose in violation of a leash law. The court noted that fences were not the only means by which the requirements of the leash law could be satisfied.

§ 47.11(z) Fences: "Fence In" Jurisdictions.

At common law, the owner of animals had a duty to fence animals in and no duty was imposed on adjoining animals to fence them out. n708 Jurisdictions which continue this rule are sometimes called "fence in" jurisdictions. The common law also imposed a strict rule of liability on the owners of the animals which escaped, holding them responsible for the damage done regardless of whether the land to which they strayed was enclosed or not. n709 Many jurisdictions which still impose the obligation on the owner of the animals to fence them in now ground liability on a showing of negligence, which may be presumed from the fact that the animals are out. n710 The effectiveness or legality of the fence may be considered as a defense as may facts which suggest contributory negligence on the part of the victim. n711

§ 47.11(aa) Fences: "Fence Out" Jurisdictions.

Western cattle jurisdictions historically typically rejected the common law rule and held that the roaming livestock committed no trespass when they strayed onto unenclosed private land. n712 These jurisdictions placed the burden on the potential victim to fence the roaming animals out. These jurisdictions are sometimes referred to as "fence out" jurisdictions. n713 Here, liability will generally depend upon some affirmative failure to keep the animals in. n714 Negligence on the part of the animal owner will suffice. n715

§ 47.11(bb) Fences: Relation of Fence Laws to Other Statutes.

Many jurisdictions have other statutes that govern the question of liability for roaming animals. These statutes, sometimes called "roaming at large" statutes, n716 herd laws, n717 drover laws n718 and stray laws, n719 may need to be applied together with the fence laws to finally resolve liability issues. n720 These laws tend to ground liability on tort principles and are beyond the scope of this chapter.

§ 47.11(cc) Fence Repair Responsibilities.

Jurisdictions vary in the means employed to apportion the responsibility of adjacent landowners for the maintenance of border fences. Statutes in some states are silent as to how the cost is to be shared. n721 In some jurisdictions, the cost is to be apportioned evenly so long as both parties continue to occupy or improve such lands, unless otherwise agreed. n722 In others, the requirement is that each farmer face the fence at the middle and each will be responsible for the half to their right. n723 It should be noted that in some jurisdictions in which the statute speaks only of dividing the cost evenly, the precise means by which that is to be done will not be set forth. In those states, the practice has often developed to stand and face the fence at the middle and to maintain the portion to the right-hand side. In such cases, whether by practice or by statute, the custom is to maintain both sides of such a fence for the length for which that particular landowner is responsible. In apportioning the cost of the fencing, it appears common not to include needless expenses. n724

It is one thing to divide the cost of maintenance between the landowners; it is another to insure that each maintains the fence at an acceptable level. Jurisdictions again seem to vary in their responses. In some, a refusal to maintain may effectively convert the jurisdiction into a "fence-out" jurisdiction as far as liability is concerned. That is, if one landowner refuses to maintain his or her portion of the fence and animals of the other landowner escape through that area, there may be no recourse against the owner of the animals for damages done. Another option would be to allow the one landowner to do the entire repair and then allow for recovery from the other of his or her share. n725 A third alternative that appears to be fairly common is to invoke the authority of an independent third party to resolve the matter. In these states, this third party is often referred to as a "fence viewer." In Kansas, by statute, the county commission is constituted as the fence viewers who, upon application, will examine the situation and render a decision, from which there is no appeal specified, to the courts. n726

In Harry v. Smith, n727 a child was bitten by a dog, which had escaped from a yard through a fence that was improperly maintained. The dog was owned by a couple who had been permitted, by a tenant, to stay temporarily at the house. The court recognized the general rule that the landlord did not have any responsibility to protect third parties from injuries occurring off the premises, where the landlord simply had knowledge of the dangerous condition or passively permitted it to continue. However, the court remanded the case for findings regarding the degree to which the landlord/tenant relationship actually existed and whether the landlord had assumed an obligation to maintain the premises.

§ 47.11(dd) General Liability for Animals Kept on the Farm Premises.

In many respects, the issue of liability for the harm that may be caused by animals is not a proper part of the topic of this work since it tends to involve questions of personal tort liability and the focus here is on agricultural land. n728 Nevertheless, there has been a considerable amount of concern regarding the extent to which the owner of the premises may be subjected to liability for harm that may result from the escape of animals from the premises. In these cases, the issue is less the integrity of the fencing, but more what is known about the animals themselves and whether they are domestic or wild animals. This seems particularly the case near urban areas where animals, such as dogs and horses, may be kept as much for recreational as for farming purposes. This discussion is not intended to be exhaustive on the issues of liability for animals but is intended to address some of the more common problems associated with the keeping of animals that are associated with farming and ranching operations.

The general rules regarding liability for harm caused by animals seem fairly well settled. The first distinction that tends to be made is whether the animal is "wild" or "domestic." If the animal is wild, the owner or keeper will generally be held strictly liable for the harm so long as the harm is the result of the animal's normally dangerous propensities. "Known dangerous propensities" tend to be defined as any characteristic of the animal which a reasonable person should understand as posing a threat to human life or limb or serious damage to property. If the harm is not the result of such a propensity, it generally must be shown that the owner or keeper failed to exercise ordinary care to prevent injuries that could reasonably and foreseeably be anticipated. n729 Thus, if a bear falls on someone rather than biting

him, the owner would not be strictly liable unless the bear had exhibited a propensity for falling on people. It has been held that wild animals, "reduced to possession from a wild state in compliance with applicable law," are treated as personal property of the owner or keeper. n730

Domestic animals with known dangerous propensities tend to be subject to the strict liability rules. Animals without known dangerous propensities are generally subject to the reasonable care rules. In Pearson v. Jones Co., Ltd., n731 the plaintiff was injured as a result of being thrown from a horse while judging a hunting dog competition. The suit was filed against the horse's owner, who had provided the same for use at the competition. The court found that the owner had no knowledge of any dangerous propensity of the animal to throw riders and had recently allowed riders as young as 7 years old to ride without incident. Although there was evidence that the horse had bucked in the past, the owner did not know that at the time of the injury to the plaintiff. As a result, the owner was found not to be liable. In contrast, in Thornhill v. Deka-Di Riding Stables, n732 the plaintiff was thrown from a horse during a trail ride and sued the riding stable that had sponsored the ride and provided the horse. Here, the court held that the injury was sufficiently foreseeable to impose upon the owner of the stable a duty to provide safe trail rides. Then, invoking the rule that the owner or keeper of the animal may be liable for known dangerous propensities, the court held that the owner is bound to know the natural propensities of a particular class to which the animal belongs. However, there were sufficient issues of fact regarding whether there were such dangerous propensities, whether the owner knew of them and whether the rider had assumed any of the risk, that the summary judgment in favor of the stable was vacated and the case remanded.

Determining whether a particular animal is a wild or domestic animal has sometimes been problematic. In Munn v. Commonwealth, n733 the defendant had been charged with cruelty to animals for engaging in cockfighting. The lower court dismissed on the ground that the cruelty statute did not apply to birds. The Appellate Court reversed, holding that the term "animal" included all warm-blooded living creatures except human beings. In Thornhill v. Deka-Di Riding Stables, n734 the court found that horses were domestic animals and required some specific knowledge of dangerous propensities. In Jivden v. Law, n735 a case where the horse kicked and killed the decedent, the court found that although horses are domestic animals, the fact that this horse was known to be rambunctious and frisky did not constitute sufficiently dangerous traits for the imposition of the strict liability rule.

Fence laws may be relevant to resolving the issue of liability. In "fence in" jurisdictions, the failure to maintain a legal fence may result in the imposition of liability on a strict liability theory in the event animals escape and cause harm. Likewise, in "fence out" jurisdictions the failure to have a legal fence may effectively eliminate the possibility for any recovery for damage done by animals which enter the land. In Kansas, the law was changed recently from that of "fence out" to that of "fence in." In so doing, the legislature needed to deal with case law which provided that in the event an animal trespassed upon land protected by a legal fence, the owner of the animal would be liable for damage without proof of fault. The legislature adopted § 29-108 which provides that although animals are to be enclosed by a legal fence, strict or absolute liability will not arise for damages for injury to any person or property resulting from domestic animal trespass and, in all cases, the principles of ordinary negligence shall apply.

In Suddath v. Parks, n736 a farmhand, who was injured by a bull, brought an action against his employer, arguing that he should have been warned about the danger posed by the bull. The court considered whether the employer knew of dangers that were not obvious or apparent to the employee. Both seemed to know of the natural propensities of bulls to butt from time to time, and hence, the court found no need to warn.

In Roberts v. Weber and Sons, Inc., n737 the court considered the relevance of the doctrine of *res ipsa loquitur* to escaped animal situations. In this case, cattle had escaped from a pen and were hit by a truck driver. The truck driver sued for damages as a result of the injuries. The court held that, as a general rule, the owner of the animals owes a duty of ordinary care to travellers using abutting highways. Nevertheless, the doctrine of *res ipsa loquitur* may apply even where the landowner or animal owner is held to the ordinary care standard.

In an interesting case involving the effect of diseased premises on animals, the court in Wilcox v. Cappel, n738 held

that the tenant had taken the premises "as is" and therefore could not recover for damages suffered by cattle that had grazed on the land. In this case, the landlord had an oral year-to-year agreement with the tenant permitting the tenant to graze his cattle on the landlord's cornstalks each fall after the harvest. The tenant had to fence the animals away from irrigation pumps, center pivots, electrical boxes and so forth. The tenant did not fence the animals away from a run-down building that neither party had inspected since 1979 and which had not ever been used under the lease. The cattle ingested nitrogen fertilizer stored in the building so the tenant lost 130 newborn calves and additional calves were aborted. Total losses claimed were approximately $130,000 in actual damages. The court held that the landowner was not obligated to remove obvious sources of danger that a reasonable inspection would have revealed. Even though the tenant was not required to fence off the building, the tenant knew the building was part of the lease and that the cattle were near the building. n739

§ 47.11(ee) Liability for Animals "At Large."

Although noted in the text that this topic is also one perhaps more appropriate to a treatise on tort liability, in view of decisions regarding the association of fencing to the question, it is useful to include at least a brief overview of the area. n740

Liability for animals may depend upon where they are when they cause harm. If the animal is on the premises of the animal's owner and, therefore, still ostensibly under the owner or keeper's control, the general rules of liability based on domestic or wild status and the knowledge of the owner or keeper of any dangerous propensities should govern. This is discussed *supra* § 47.11(cc). If the animal is off the owner's premises, liability may depend upon how the animal got out or whether the animal is upon another's land (in which case, fence laws may be relevant). In some jurisdictions, particularly if the animal is in a public place, such as upon the highway, when it causes the harm, the resolution of the liability issues may also depend upon whether the animal is considered to be "running at large" for purposes of statutes that have been enacted to prevent the same.

The "running at large" statutes seem to have evolved after the general rejection in the United States of the common law rule of strict liability for harm caused by animals that were out. In that sense, they seem designed to shift responsibility away from the victim (as was the case in "fence-out" jurisdictions) to the animal owner. Liability is the result of having the animal "at large" rather than the consequence of any trespass of the animal onto the property of another. In that sense, these statutes would address the liability situation where the animal was on the highway and was hit by a car. Historically, such animals would not be affected by the fencing laws since no one could be said to have the duty to fence them out from their property. Today, most statutes do not appear to distinguish between animals that are out in public places, such as upon the highways, and those that are upon the land of another. If they are considered to be "running at large," liability may be imposed on the owner of the animal.

Statutes may be broad and general, such as § 47-122: "It shall be unlawful for any domestic animal, other than dogs or cats, to run at large." In some jurisdictions, the statutes may identify only certain animals that may not be allowed to run at large. For example, until recently, in Kansas, statutes ordained that bulls and boars, stags, stallions or jacks, swine and neat cattle could not run at large. n741 Dogs and cats are often the object of separate running at large statutes (often local) or leash laws.

The critical issue, of course, is what is meant by "running at large" since that term is rarely defined. In some jurisdictions, it has meant "not under the care of the herder." n742 In other jurisdictions, there has been an inquiry into why the animal is out and no liability will be imposed without some fault on the part of the animal owner. n743

In a 1995 case, Schneider v. Strigert, n744 the jurisdiction had an ordinance that made it unlawful for dogs to be at large. The court held that a violation of the ordinance was evidence of negligence but would not constitute negligence *per se.*

In Williams v. Hill, n745 the court found inapplicable the provisions of the running at large statute. In this case, a motorcyclist and a passenger were injured in a collision with a dog that was on a public highway. The court held that the owner of the dog could not be held liable under the statute in the absence of evidence that he knowingly or willfully placed the dog in the road. The statute provides:

The owner of such livestock or animal being or running at large upon the premises of another or upon the public lands, roads, highways or streets in the state of Alabama ... shall not be liable for any damages to any motor vehicle or any occupant thereof suffered, caused by or resulting from a collision with such stock or other animal, unless it be proven that such owner knowingly or willfully put or placed such stock upon such public highway, road or street where such damages were occasioned. n746

In Sybesma v. Sybesma, n747 the court held that there were no statutes in the state that make the owner of animals liable for personal injuries which result from allowing domestic animals to run at large on the highways. Therefore, common law principles govern and the plaintiff has alternative theories upon which to bring the case. Liability may arise either from the principles of strict liability or of negligence. If strict liability is used, the law requires knowledge of dangerous propensities; if negligence, there must be some breach of a duty of care. In this case, the plaintiff chose to sue in negligence.

In some places in the West, areas may be designated as "open range." This may alter the legal relationship between landowners, animal owners and the general public who may be traveling on public roads through those areas. In a 2000 case, *Larson-Murphy v. Steiner, 15 P.2d 209 (Mont. 2000),* the courts considered these relationships. Here, a motorist struck a bull which was standing in the middle of a highway within a herd district. An action was brought against the livestock owner and against landowners who had leased property to the livestock owners. The livestock owner and the landowner moved for summary judgment which was granted to the landowner and denied to the livestock owner. On appeal, the court affirmed in part and reversed in part, holding that the open range doctrine of "no duty" did not apply to the relationship between the livestock owner and the motorist. Likewise, it held that any assertion of legal duties arising from the legal relationship between the livestock owners and the motorist was beyond the scope of the "open range doctrine." In both cases, the court overruled prior law. The court also held that the fence laws of the jurisdiction did not require that the livestock owner fence the bull in. The court reversed the granting of summary judgment to the landowner because of questions regarding whether the landowner knew of or consented to the livestock owner's activity and whether he realized risks associated with that activity. The test in this case, apparently, is one of negligence.

Genuine issues of fact also precluded the granting of summary judgment to the livestock owner. The court held that the jury must determine whether the bull unlawfully obstructed the road and whether the bull's escape resulted from lack of reasonable care by its owners. The court determined that the animal owner and the motorist had an equal right to use the public highway under the laws of the state and must exercise care commensurate with the danger implicit in each's activity. The court determined that the rights were somewhat less equal in herd districts than they were in open range areas. The test to be applied in determining whether each has acted appropriately is to test the actions within the totality of the circumstances.

In *Palmer v. Hinders,2000 Tex. App. LEXIS 3657* (Tex. App. Amarillo, June 1, 2000), suit was brought to recover for injuries suffered when the plaintiff struck a cow owned by defendants. The court held that, under Texas law, an owner of livestock has no common-law duty to fence the animals in. Rather, the duty is statutory and responsibility is imposed only to the extent that one knowingly permits the animal to traverse or roam at large, unattended, on the right-of-way of a highway. "Knowingly" was interpreted to require an actual awareness by the actor of the nature of his conduct or the existence of the circumstances in question. In this case, the critical fact, of which the animal owner was unaware, was that the electrical fence used to confine the animals was inoperative despite having been repaired the day prior to the accident.

§ 47.11(ff) Liability for Harm to Animals.

The wild/domestic distinction has also been relevant in questions involving "dog kill" statutes. Many jurisdictions have statutes in which an owner of domestic animals may lawfully kill dogs which threaten or harm such animals. For example, *Kan. Stat. Ann.* § 47-646 provides n748

47-646.

Killing dog lawful, when. It shall be lawful for any person at any time to kill any dog which may be found injuring or attempting to injure any cattle, hogs, or sheep.

In such jurisdictions, the owner of the dog may also be subject to liability for any harm done to domestic animals. For example, *Kan. Stat. Ann.* § 47-945.

§ 47-645.

Liability of owner of dog for damages. If any dog shall kill, wound or worry any domestic animal the owners of such dog shall be liable to the owner of such animal for all damages that may be sustained, thereby to be recovered by the parties so injured before any court having competent jurisdiction.

A 1995 Washington case illustrates how far liability for harm caused by an animal may be extended. In Schneider v. Strigert, n749 the plaintiff was a motorcyclist who was injured when he struck a dog that was lying crosswise in the road after having been hit by an automobile. The dog had apparently tunneled its way out of a chicken pen. The lower court issued a summary judgment in favor of the dog owner. This was reversed on appeal and remanded to resolve factual issues regarding whether the escape of the dog was foreseeable and the reasonableness of the means by which the owner of the dog had sought to confine the dog. In this case, the jurisdiction had an ordinance that made it unlawful for dogs to be at large. The court held that a violation of the ordinance was evidence of negligence, but would not constitute negligence *per se*.

In McKinney v. Robbins, n750 a dog attacked a kitten. The owner of the kitten killed the dog and claimed that the killing was lawful under the dog-kill statutes of the jurisdiction. The lower court, on that basis, rendered judgment for the owner of the kitten. Reversing that decision, the Supreme Court found that kittens were not domestic animals for purposes of those statutes. The primary rationale for the holding was that the statute listed only livestock examples (sheep, goats, cattle, swine, poultry) and did not list domestic pets. Indeed, the legislative history suggested that the goal of the statutes was to protect livestock-type animals. In a similar vein, in Bueckner v. Hamil, n751 the dog in question had been shot as a result of attacking deer. The court found that "domestic animals" were only those that were "habituated to live in and about the habitations of men, or that contribute to the support of the family." This ordinance was a little broader than that in the *McKinney* case, *supra*, in that it listed "sheep, goats, calves or other domestic animals." Nevertheless, the court considered that the deer were not "domestic animals" within the purposes of such statutes. This focus may pose an interesting anomaly: it would be lawful to kill a dog that threatened one's cattle but not a dog that threatened one's children since children would not be domestic animals under any definition extant.

The issue has been raised whether the landlord could be held liable for the harm caused by the dogs in question. In Bryant v. Putnam, n752 the plaintiff was attacked by dogs owned by the landlord's tenant. The court held that the landlord owed no duty regarding the dogs. Similarly, in Mathes v. Nolan, n753 the plaintiff had been mauled by the dog owned by a tenant of the landlord who was sued. The court held that the landlord did not "possess" the land upon which the dog was located and could not be said to "harbor" the dog. The court defined harboring very narrowly as "allowing a member of his family, including servants ..., to keep the animal in the house or on the premises that are occupied as the home of the family group of which he is the head." Thus, since the tenant was not a member of the landlord's family and the location of the dog was not the landlord's residence, the landlord could not be said to be harboring the dog.

In Harry v. Smith, n754 a child was bitten by a dog that had escaped from a yard through a fence that was improperly maintained. The dog was owned by a couple that had been permitted to stay temporarily at the house by a tenant. Although the court recognized the general rule that the landlord did not have any responsibility to protect third parties from injuries occurring off the premises where the landlord simply had knowledge of the dangerous condition or passively permitted it to continue, the court remanded the case for findings regarding the degree to which the landlord/tenant relationship actually existed and whether the landlord had assumed an obligation to maintain the premises.

Cruelty to animals may also be the basis upon which liability for harm to animals may be predicated. In most jurisdictions, this activity is criminalized and is, in most respects, not within the scope of this work. True property concerns have been raised in at least one case, however. In Tiller v. State, n755 an individual was charged with cruelty to animals as the result of not properly feeding and caring for horses. The defendant raised as defenses that there was no proof the animals suffered pain, that the defendant did not own the animals in question and that the defendant did not own the land upon which the animals were being kept. All these defenses were rejected by the court as not within the elements required to be proved to establish the commission of the crime.

§ 47.11(gg) Agricultural Production Contracts.

One of the important developments in the area of production agriculture has been the use of production contracts. In many cases, this has been driven by the vertical integration of particular industrial segments of agriculture, most notably the production of chickens and the production of hogs. Because of the environmental and business structure impacts associated with these kinds of production, production contracts have suggested possible ways to maximize farm markets and profits. On the other hand, production contracts have changed the way that many on-farm decisions are made and present new financial and legal risks to farmers that they have not encountered before.

Production contracts are typically entered into between farmers who act as the growers of particular crops of livestock and a vertically integrated corporation. The contract typically arranges for the use of facilities, owned by the grower, to nurture a product or animals, owned by the corporation. The grower is compensated for the task of raising the product and is guaranteed a market for it.

States have taken an active interest in these contracts and in at least one state, it was ruled that the contract creates an indirect interest in farmland such that the relationship was subject to the state's restrictions on corporate farming. In response, the legislature enacted K.S.A. § 17-5904(b) which provides:

> Production contracts entered into by a corporation, trust, limited liability company, limited partnership or corporate partnership and a person engaged in farming for the production of agricultural products shall not be construed to mean ownership, acquisition, obtainment or lease, either directly or indirectly, of any agricultural land in this state.

In 1994, the legislature adopted K.S.A. § 17-5908 which permitted swine production facilities to locate in counties upon approval of a local ordinance authorizing the same. The question is whether a production contract that involves the raising of swine constitutes a "production contract" under § 17-5904(b), which is exempt from the statute, or constitutes a "swine production facility" under § 17-5908, which can be permitted only by local option. In the case at issue, the land, structures and related equipment would be owned by the farmer and the nursery pigs would be owned by the corporation. The Attorney General ruled that under those circumstances, the facility was not a swine production facility nor is it subject to the general prohibition against corporate farming because of § 17-5904(b). n756

Elsewhere around the country, states have taken a similar interest. Regulations relating to chicken production have been considered in several states, including North Carolina, Oklahoma, Alabama, Mississippi, Florida and Louisiana. Changes in the extent to which packers could engage in the production of livestock were considered in South Dakota

and Indiana, where measures were defeated which would have prohibited the packers from owning livestock for contract feeding purposes. In Missouri and Oklahoma, the statutes were amended to permit greater corporate ownership of livestock feedlots and confinement facilities. n757 In some states, the matter is regulated under statutes designed to deal with dealers or other middlemen and which may require licensing, bonding or record keeping. n758

> Briefly stated, the word "nuisance" while perhaps incapable of precise definition, generally is held to be something which interferes with the rights of citizens, whether in person, property or enjoyment of property or comfort, and also has been held to mean an annoyance, and that which annoys or causes trouble or vexation, that which is offensive or noxious, or anything that works hurt, inconvenience or damage.

In *Township of Franklin v. Hollander, 769 A. 2d 427 (N.J. Super. 2001),* the court held that the Right to Farm Act preempted municipal land use authority over operations. See also *Ammirata v. Zoning Board of Appeals of the Town of Redding, 786 A.2d 425 (Ct. 2001)* holding that the agricultural nuisance statute did not bar the requirement that the operation conform to the land management plan of the area.

(n4)Footnote 501. *See, e.g., Spur Indus. v. Del E. Webb Dev. Co., 494 P.2d 700 (Ariz. 1972).*

(n5)Footnote 502. *See, e.g., Vana v. Grain Belt Supply Co., 8 N.W.2d 837 (Neb. 1943):*

> As one man's enjoyment of property must be considered in connection with the reasonable and lawful use of other property by his neighbors, where pigs are raised under conditions as clean and sanitary as can reasonably be obtained, considering the characteristics of the animal and the necessity of confinement to close quarters, the fact that odors from these quarters are carried over the premises of the summer residence of another will not make an actionable nuisance.

Courts have specifically held that the following are not nuisances per se:

dairies: *Crump v. Carnahan, 99 So. 493 (La. 1924).*

cotton gins: *Rouse v. Martin, 75 Ala. 510 (1883).* fertilizer factories: *Northwest Fertilizing Co. v. Hyde Park, 70 Ill. 634, aff'd, 97 U.S. 569 (1879).*

horse stables: *Dallas v. Halbert, 246 S.W.2d 686 (Tex. Civ. App. 1952).*

feedlots: *Dill v. Excel Packing Co., 331 P.2d 539 (Kan. 1958).*

(n6)Footnote 503. *See Steifer v. City of Kansas City, 267 P.2d 474 (Kan. 1954).*

For further discussion, *see* Neil D. Hamilton, *Right-to-Farm Laws Reconsidered: Ten Reasons Why Legislative Efforts to Resolve Agricultural Nuisances May be Ineffective, 3 Drake J. Agric. L. 103 (1998); Keeping Pigs as a Nuisance, 2 A.L.R. 3d 931 (1998).*

(n7)Footnote 504. *See Higgins v. Decorah Produce Co., 242 N.W.2d 109 (Iowa 1932):*

> If, however, [a poultry plant] is so located, maintained, and operated as to emit noxious odors or give off noises so as essentially to interfere with the comfortable enjoyment of the property of others, it may constitute a nuisance. A perfectly lawful business, operated under some circumstances and in some locations, may so interfere with the comfortable enjoyment of private property as to constitute a private nuisance, and, when this occurs, it is subject to abatement as such.

Among cases that have dealt with the problem of agriculture as a nuisance are the following: *Tiegs v. Watts, 954 P.2d 877 (Wash. 1998)* (tenant recovery against landlord for breach of lease and for creating a nuisance by contaminating a well upheld); *Buchanan v. Simplot Feeders Limited Partnership, 952 P.2d 610 (Wash. 1998)* (nuisance immunity allowed only where nuisance suit arises because of urban encroachment into agricultural area and applies to both those seeking damages and injunctive relief); *Kirk v. United States Sugar Corp., 726 So. 2d 822 (Fla. App. 1999)* (court reversed dismissal of complaint alleging that defendants maintained a nuisance by the manner in which they raised sugar cane); *Pure Air and Water Inc. of Chemung County, 668 N.Y.S.2d 248 (N.Y.A.D. 1998)* (right-to farm law upheld against claim that denied landowner due process because there was no property interest in having the courts determine the merits of a private nuisance suit); *In re Nehemiah Associates, Inc., 719 A.2d 34 (Vt. 1998)* (involving inclusion of a waiver of a right to sue farmers over nuisance in subdivision deeds and requirement that some land be retained in agricultural use as open, cleared, uncluttered and unencumbered land); *Parker v. Barefoot, 502 S.E.2d 42 (N.C. App. 1998)* (judgment in favor of landowners in nuisance action against hog farmer reversed because judge failed to instruct jury that farmer used best technical knowledge available at the time to avoid the nuisance); *Borman v. Board of Supervisors, 584 N.W.2d 309 (Iowa 1998)* (Iowa) (statutory immunity from nuisance actions declared unconstitutional as a taking. Rationale: the statute imposes an easement on neighboring lands without compensation).

For further discussion of animal waste as a nuisance, *see* Martha Noble and J.W. Looney, *The Emerging Legal Framework For Animal Agricultural Waste in Arkansas, 47 Ark. L. Rev. 159 (1994).*

See also Superior Farm Management, L.L.C. v. Montgomery, 513 S.E. 2d 215 (Ga. 1999) (Hog operation as a nuisance. Where evidence shows with reasonable certainty that irreparable harm and damage will occur from the operation of an otherwise lawful business, equity will restrain the construction, maintenance and operation of such lawful business.)

For further discussion of environmental issues in agriculture, *see* Note, *Fighting Corporate Pigs: Citizen Action and Feedlot Regulation in Minnesota, 83 Minn. L. Rev. 1893 (1999);* Comment, *Old McDonald had a Government-Regulated-Confined-Swine-Operation; A Substitute for H.B. 2950, 38 Washburn L.J. 655 (1999).*

See also Crea v. Crea, 16 P.3d 922 (Idaho 2000). There the court held that an expanded farrow-to-finish hog operation could be a nuisance. In *Belvedere Township v. Heinze, 615 N.W. 2d 250 (Mich App. 2000),* the court found that whether a large-scale hog facility constituted a nuisance depended on the impact of the state's right to farm statute as well as the fact that it was not protected as a cognizable preexisting nonconforming use. The case had to be remanded for the determination relating to the right to farm statute. In *Zink v. Khwaja, 608 N.W. 2d 394 (Wis. App. 2000),* the

court awarded attorney fees to the landowner under the right-to-farm statute where the plaintiff failed to establish a nuisance existed as a result of flooding from a commercial cranberry farm.

Tax'n & L. 99 (1988); Jacqueline Hand, *Right-to-Farm Laws: Breaking New Ground in the Preservation of Farmland, 45 Pitt. L. Rev. 289 (1984).* South Dakota appears to be the only state presently without such a statute.

See also Weinhold v. Wolff, No. 94-1589, 555 N.W.2d 454 (Iowa 1996) (right to farm statute did not protect commercial hog feeder), citing to Neil D. Hamilton, A Livestock Producer's Legal Guide to: Nuisance, Land Use Control, and Environmental Law 21 (1992); Kathleen Roth, *A Landowners' Remedy Laid to Waste: State Preemption of Private Nuisance Claims Against Regulated Pollution Sources, 20 Wm. & Mary Envtl. L. & Pol'y Rev. 401 (Summer 1996)* (arguing that state statutes protect sources of pollution that operate within approved standards, far exceeding protection afforded polluters by permit-shield provisions and limitations on citizen suits); and John D. Burns, *The Eight Million Little Pigs -- A Cautionary Tale: Statutory and Regulatory Responses to Concentrated Hog Farming, 31 Wake Forest L. Rev. 851 (Fall 1996)* (analysis of federal and North Carolina statutes governing hog farming).

In *Ammirata v. Zoning Board of Appeals of the Town of Redding, 786 A.2d 425 (Ct. 2001)* the agricultural nuisance statute did not bar the requirement that the operation conform to the land management plan of the area.

In *Holubec v. Brandenburger, 58 S.W.3d 201 (Tex. App. 2001)* the defendant sheep feedlot owner failed to establish the affirmative defense against a nuisance claim that was available under the statute.

In *Travis v. Preston, 635 N.W.2d 632 (Mich App. 2001),* the court refused to apply retrospectively amendments that would shield farms from being treated as nuisances based on the violation of zoning laws. The statute was therefore not considered to present a defense to suits filed to enforce the zoning ordinance.

In *Town of North Kingston v. Albert, 767 A. 2d 659 (R.I. 2001),* the court held that dust from the excavation of a pond to supply water to a turf farm fell within a section of the Right to Farm law that specifically exempted dust created during plowing or cultivation operations from becoming either private or public nuisances.

In *Flo-Sun, Inc. v. Kirk, 783 So. 2d 1029 (Fla. 2001),* the court held that the Air and Water Pollution Control Act did not impliedly repeal the public nuisance statutes.

Other states having this type of statute include Arkansas, Colorado, Connecticut, Florida, Georgia, Idaho, Illinois, Indiana, Lousiana, Maryland, Mississippi, New Hampshire, New Mexico, North Carolina, North Dakota, South Carolina, Texas and Virginia.

(n16)Footnote 513. *See, e.g.,* Mich. Stat. Ann. § 12:122(3). Other states with legislation of this type include Arizona, Connecticut, Kansas, Maine, Massachusetts, New York, Oklahoma, Vermont and Washington.

(n17)Footnote 514. *See, e.g.,* Kan. Stat. Ann. § 47-1505 which provides in part that:

Any feed lot operated in compliance with such standards [as mandated by the state], and in compliance with the regulations made and promulgated by the commissioner shall be deemed to possess prima facie evidence that a nuisance does not exist.

Tiegs v. Watts, 954 P.2d 877 (Wash. 1998) (tenant recovery against landlord for breach of lease and for creating a nuisance by contaminating a well upheld); *Buchanan v. Simplot Feeders Limited Partnership, 952 P.2d 610 (Wash. 1998)* (nuisance immunity allowed only where nuisance suit arises because of urban encroachment into agricultural area and applies to both those seeking damages and injunctive relief); *Pure Air and Water Inc. of Chemung County, 668 N.Y.S. 2d 248 (N.Y.A.D. 1998)* (right-to farm law upheld against claim that denied landowner due process because there was no property interest in having the courts determine the merits of a private nuisance suit); *In re Nehemiah Associates, Inc., 719 A.2d 34 (Vt. 1998)* (involving inclusion of a waiver of a right to sue farmers over nuisance in subdivision deeds and requirement that some land be retained in agricultural use as open, cleared, uncluttered and unencumbered land); *Parker v. Barefoot, 502 S.E.2d 42 (N.C. App. 1998)* (judgment in favor of landowners in nuisance action against hog farmer reversed because judge failed to instruct jury that farmer used best technical knowledge available at the time to avoid the nuisance).

For further discussion, *see* Gail S. Shane, *Concentrated Animal Feeding Operations: Will Increased Enforcement and More Stringent Regulations under the Clean Water Act Adequately Protect the Public Health and Environment?* 13 NO. 3 NAAG Nat'l Envtl. Enforcement J. 1 (1998).

For a somewhat novel approach, *see In re Nehemiah Associates, Inc., 719 A.2d 34 (Vt. 1998)* (involving inclusion of a waiver of a right to sue farmers over nuisance in subdivision deeds and requirement that some land be retained in agricultural use as open, cleared, uncluttered and unencumbered land).

(n18)Footnote 515. Utah and California have a three-year period. *See* Cal. Civ. Code § 3481.5(a); Utah Code Ann. § 78-38-7(1).

(n19)Footnote 516. *See* S.C. Code Ann. § 46-45-30:

Operations Not to be Deemed a Nuisance Due to Changed Conditions. No agricultural operation or any of its

appurtenances shall be or become a nuisance, private or public, by any changed conditions in or about the locality of the operation after it has been in operation for more than one year when such operation was not a nuisance when it began. The provisions of this section shall not apply whenever a nuisance results from the negligent operation of any such agricultural operation or its appurtenances.

(n20)Footnote 517. *Shatto v. McNulty, 509 N.E. 897 (Ind. App. 1987).*

(n21)Footnote 518. *Id. at 899.*

(n22)Footnote 519. *Herrin v. Opatut, 281 S.E.2d 575 (Ga. 1981). But see Beam v. Birmingham Slag Co., 10 So. 2d 162 (Ala. 1942),* where the court refused to catalogue "changed conditions" and preferred a "case-by-case" approach to the problem.

But see Crea v. Crea, 16 P.3d 922 (Idaho 2000). There the court held that an expanded farrow-to-finish hog operation could be a nuisance despite a "right to farm" law. The court interpreted the changed circumstances of the statute to apply to expansions in the farming operation itself, rather than changes in the surrounding non-agricultural uses.

(n37)Footnote 534. *See, e.g.*, Edward Thompson, Jr., *Defining and Protecting the Right to Farm*, 5 Zoning &Planning Law Report 57 (Sept. 1982).

However, note the following text of the Water Bank Act, *16 U.S.C. § 1301* (1988) (originally at Pub. L. No. 91-559, § 2, *84 Stat. 1468):*

The Congress finds that it is in the public interest to preserve, restore, and improve the wetlands of the Nation, and thereby to conserve the surface waters, to preserve and improve habitat for migratory waterfowl and other wildlife resources, to reduce run-off, soil and wind erosion, and to contribute to flood control, to contribute to improved water quality and reduce stream sedimentation, to contribute to improved subsurface moisture, to reduce acres of new land coming into production and to retire lands now in agricultural production, to enhance the natural beauty of the landscape, and to promote comprehensive and total water management planning. The Secretary of Agriculture ... is authorized and directed to formulate and carry out a continuous program to prevent the serious loss of wetlands, and to preserve, restore, and improve such lands, which program shall begin on July 1, 1971.

Under the Agricultural Stabilization and Conservation Service, farmers may receive subsidies, one of which is payments for retiring agricultural land. *35 A.L.R.5th 285 (1996).*

(n38)Footnote 535. *See generally* Ken Cook, *Loathing Suburbia: Views on Farmland Preservation From a West Virginia Limestone Ridge*, American Land Forum Mag. 70-76 (Spring 1983).

The data suggests that approximately five million acres a year is lost to agricultural production. *See, e.g., Final Report*, National Agricultural Lands Study 27 (1981); H.R. Rep. No. 1400, 95th Cong., 2d Sess. 7 (1978).

(n39)Footnote 536. This is undoubtedly exacerbated by the fear, primarily among consumers who know little about agriculture and food production, that the high cost of government programs for agriculture and the fact that millions of acres of farmland have been withdrawn from production to be placed in the Conservation Reserve Program, suggests a trend in the direction of a national policy that favors a smaller agricultural production base which may further erode our ability to cheaply meet the nation's food and fiber needs.

(n40)Footnote 537. Peter Barns, *Land Reform in America in* Radical Agriculture, at 29 (R. Merrill, ed., N.Y.U. Press, 1976).

(n41)Footnote 538. In this context, it has been remarked that it is "vital that the farmland preservation movement become a force for democratic, graceful, ecologically sound dispersion of those who choose such a future. Preservation policies that uncritically accept and protect commercial agriculture may become the neutral or possibly regressive

fixtures of a land management apparatus that caters increasingly to the landed and the wealthy... ." Ken Cook, *Loathing Suburbia: Views on Farmland Preservation From a West Virginia Limestone Ridge*, American Land Forum Magazine 70 at 75 (Spring 1983).

(n42)Footnote 539. The wide range of programs is largely the result of two factors: the obvious complexity of the farmland loss problem and the extent to which the jurisdiction is willing to assert its authority over the fundamental land use problems involved. With respect to the former, it has been observed that four general factors must be considered:

> (1) *Demographic factors* such as a farmer's choice to sell his land due to his age, his health, because he is near retirement, or because he has no offspring who wish to continue farming.
>
> (2) *Economic factors* such as involving areas, usually on the fringe of urban areas, that have greatly increased in value due to metropolitan expansion, highway construction, commercial and industrial relocation, natural resources development and recreational use. Also included here is the farmer's reduced net returns on farming, higher property taxes and increased transportation costs.
>
> (3) *Transitional factors* such as the farmer's desire to farm elsewhere or, more often than not, to not farm at all.
>
> (4) *Secondary factors* such as complaints of residential neighbors, air and water pollution from nearby industries, other nuisance elements, and the decrease in the availability of farm labor and farm support businesses.

See Julian Juergensmeyer, *Farmland Preservation: A Vital Agricultural Law Issue for the 1980's, 21 Washburn L.J. 443 (1982).*

For further discussion, *see Untaxing Open Space: An Evaluation of the Effectiveness of Differential Assessment of Farms and Open Space* 49-56, Regional Science Research Inst. (1976).

With respect to the latter concern, the following factors have been identified as likely to stimulate stronger governmental or public intervention in land use decision making and hence would tend to explain when and if a particular jurisdiction is likely to consider a farmland preservation measure:

> 1. When there are problems that cross the boundaries of existing levels of jurisdictions, and do not confine themselves neatly to municipal or county entities.
>
> 2. Where there are problems created from the actions of a local body which may result in a negative impact on the interest of the broader public.
>
> 3. When there are lands which have limited local controls that do not effectively protect the land resource of the state.
>
> 4. Problems or conflicts involving implementation of state policies or funds.

For further discussion, *see* Richard H. Jackson, Land Use in America 64 (V. H. Winston and Sons, 1981).

See In re Nehemiah Associates, Inc., 719 A.2d 34 (Vt. 1998) (involving inclusion of a waiver of a right to sue farmers over nuisance in subdivision deeds and requirement that some land be retained in agricultural use as open, cleared, uncluttered and unencumbered land).

(n43)Footnote 540. *See, e.g.*, Myrl Duncan, *Toward a Theory of Broad-based Planning for the Preservation of Agricultural Land*, 24 Nat. Resources J. 61 (1984).

In *Suitum v. Tahoe Regional Planning Agency, 520 U.S. 725, 117 S. Ct. 1659, 137 L. Ed. 2d 980 (1997),* the Court dealt with a claim that the denial of permission to develop the property constituted a taking. The Regional Authority argued that the landowner was entitled to valuable "Transferrable Development Rights" (TDR's) and until those were exercised, it could not be determined whether there was a "taking" of property in violation of constitutional protections. The Court held that the matter was ripe for determination notwithstanding that she had not attempted to sell her TDR's and remanded the case for a "takings" determination. The Court argued that the issues associated with the taking claim and uncertainty of the value of the TDR's were susceptible of resolution. The agency had made a final determination because it had found that her land lies entirely within the zone in which development is not permitted. Any uncertainty as to the value of the TDR's was considered a simple issue of market determinations which courts routinely make. As a result, the matter was remanded.

(n47)Footnote 544. So named because of *Village of Euclid v. Ambler Realty Co., 272 U.S. 365 (1926)* which generally upheld local authority to adopt zoning ordinances.

(n48)Footnote 545. *See generally* Julian Juergensmeyer, *Farmland Preservation: A Vital Agricultural Law Issue for the 1980's, 21 Washburn L.J. 443, 451 (1982).*

(n49)Footnote 546. *See* Julian Juergensmeyer, *Farmland Preservation: A Vital Agricultural Law Issue for the 1980's, 21 Washburn L.J. 443, at 451 (1982):*

> Even those traditional zoning ordinances that allow only agricultural and other specific uses in agricultural zones allow a mix of potentially inconsistent uses which can exist in agricultural use zones: (1) citrus and other fruit crops cultivation, production and horticulture; (2) truck farms; (3) plant nurseries and greenhouses not involved with retail sales to the general public; (4) poultry and livestock production excluding swine raising; (5) grazing and pasturing of animals; (6) home occupations wherein products sold have been produced in major part by the permanent occupants thereof; (7) roadside stands of a temporary nature for the sale of fruits, vegetables and similar products produced on the premises, provided such stand is placed no closer than twenty-five feet to a property line; (8) government owned or operated building or use excluding public utility and service structures; (9) fish hatcheries or fish pools when approved in accordance with all applicable federal, state and county regulations and laws; (10) publicly owned or controlled parks and recreation areas; (11) bait production not involving retail sales; (12) stables, barns, sheds, silos, granaries, windmills and related agricultural structures; (13) dairies; (14) agriculture; (15) silviculture including timber production where such operation is first approved by the County Urban Forester; (16) single family dwelling and customary accessory uses including docks and boat houses; (17) neighborhood recreation areas when approved as part of a subdivision plat; (18)

prefabricated or modular housing when approved by the state as complying with applicable building codes; and (19) churches and other structures appurtenant thereto.

(n50)Footnote 547. *See* Julian Juergensmeyer, *Farmland Preservation: A Vital Agricultural Law Issue for the 1980's, 21 Washburn L.J. 443 at 452 (1982):*

The following is a fairly typical list of special exception uses that may be permitted in an agricultural district: (1) cemeteries, mausoleums; (2) kennels, including the commercial raising or breeding of dogs; (3) hospitals, sanitariums and convalescent homes, veterinary clinics; (4) private nursery schools, kindergartens, primary schools, secondary schools and colleges; (5) temporary asphalt plants for the purpose of specific public road construction; (6) sawmills; (7) public utility and service structures; (8) fraternal clubs when chartered by the state; (9) borrow operations complying with all applicable county ordinances; (10) country and golf clubs, fishing clubs, fishing camps, marinas, gun clubs or other similar enterprises or clubs when located on lands comprising five or more acres and making use of land in its predominantly natural state; (11) privately owned and operated recreational facilities open to the paying public, such as athletic fields, stadiums, racetracks and speedways.

(n51)Footnote 548. 3 Julian Juergensmeyer & James Wadley, Zoning: The Law in Florida § 2-9 (1980). *See also Desler v. Lane County Bd. of Comm'rs, 27 Or. App. 709, 557 P.2d 52 (1976).* In this case, a 40-acre tract of land was designated "agricultural" in the county's comprehensive plan. The court held a zoning classification as not contrary to the plan which conditionally permitted gravel operations and parks in the area. The court considered that the term "agricultural" had no rigid meaning but denoted land primarily reserved for agricultural and related activities although some localized areas might be considered rural. The ordinance recognized the potential need to place gravel operations and parks in agricultural areas. The ordinance, however, also acknowledged that these uses can only be permitted if they will not be unreasonably incompatible with the type of uses permitted in surrounding areas.

(n52)Footnote 549. *See* National Agricultural Lands Study, Final Report (1981).

For a case in which a residential subdivision was located in an agricultural district, see *Stevenson v. Blaine County, 9 P.3d 1222 (Id. 2000).* In Zickefoose v. Board of Zoning Appeals, Green Township, Ohio App. LEXIS 4122 (Ohio App. Sept 7, 2000), the court upheld the issuance of a variance for a cabinetmaking business that was to be located on land within an agricultural district. In *Brandon Charter Township v. Tippett, 616 N.W. 2d 243 (Mich. App. 2000),* the court upheld an exemption under the zoning ordinance which prohibited the parking and storing of commercial equipment within a rural estate district. Here, the owner of the equipment used it on his property to perform farming operations outside the township.

In *Dayton Prairie Water Association v. Yamhill County, City of Dayton, 11 P.3d 671 (Or. App. 2000),* the court upheld a county's decision to install water intake wells and other facilities for a water system in an exclusive agricultural use zone.

For further discussion, see Head, Thomas R. III., *Local Regulations of Animal Feeding Operations: Concerns, Limits and Options for the Southeastern States, 6 Envtl. Law 503 (2000);* Frug, Gerald E., *Euphemism and a Policy Strategy 30 Envtl. L. Rep. 11189 (2000).*

(n53)Footnote 550. In *McCord v. Pineway Farms, 569 S.W.2d 690 (Ky. App. 1978),* a subdivision was barred from an agricultural district even though it otherwise satisfied the minimum lot requirements on grounds that it was an unpermitted residential use.

In *Utsey v Coos County, 32 P. 3d 933,* (Or. App. 2001), the court considered the issuance of a permit to operate

off-highway vehicle trails and racetrack on land zoned for exclusive agricultural use to be a nonjusticiable controversy.

See Centre Lime and Stone Co., Inc. v. Spring Township Board of Supervisors, 787 A.2d 1105 (Pa. Commw. 2001) dealing with the exclusion of quarrying from a county. *See also* N & G. Construction, Inc. v. City of Pataskala, Ohio App. LEXIS 5216 (Ohio App. Dist 5 2001) dealing with statutes of limitations that apply to minimum lot zoning for agricultural uses.

Landowners were denied a conditional use permit that would have effectively divided their parcel of agricultural land so that an additional residence could be constructed that would have allowed the landowners to live closer to their daughter and grandchildren. *Trent v. German Township Board of Zoning Appeals, 759 N.E.2d 421 (Ohio App. 2001).*

(n54)Footnote 551. Julian Juergensmeyer, Introduction, *State and Local Land Use Planning and Control in the Agricultural Context, 25 S.D. L. Rev. 463 (1980).*

(n55)Footnote 552. *See generally*, National Agricultural Lands Study, The Protection of Farmland: A Reference Guidebook for State and Local Governments 110-112 (1981).

(n56)Footnote 553. *See* Note, *Agricultural Zoning in Pennsylvania: Will Growth Pressures Prevail? 91 Dick. L. Rev. 289, 296-298 (1986).*

(n57)Footnote 554. *See, e.g., Gisler v. County of Madera, 112 Cal. Rptr. 919 (1974)* (requiring 18 acres). This approach has the advantage of minimizing the impact of development on surrounding areas which in turn promotes some stability in the land use patterns of agricultural areas. On the other hand, it has been criticized as seriously affecting the economic value of the land and possibly excluding otherwise desirable development. From a purely agricultural point of view, most minimum lot sizes are too small to be conducive to effective continued agricultural use on the lots. This suggests that large lot zoning is perhaps a better buffer between agricultural areas and other development than it is a way to specifically keep the land in agricultural use.

(n58)Footnote 555. *See, e.g.*, Note, *Agricultural Zoning in Pennsylvania: Will Growth Pressure Prevail?, 91 Dick. L. Rev. 289, 296 (1986).*

(n59)Footnote 556. House, *Policy Instruments for Shaping Land Use Choices*, 3 Land Resources Today 4 (1974).

(n60)Footnote 557. *See* Frank Schniderman, *Transferable Development Rights: An Idea in Search of Implementation, 11 Land & Water L. Rev. 339 (1976);* Symposium, *Planned Unit Development*, 114 Pa. L. R. 1 (1965).

(n61)Footnote 558. Julian Juergensmeyer, *Farmland Preservation: A Vital Agricultural Law Issue for the 1980's, 21 Washburn L.J. 443, 455 (1982).*

(n62)Footnote 559. *See Byrd v. Stringer, 666 P.2d 1332 (Or. 1983)* holding that an ordinance allowing for a house in a farm use zone is not inconsistent with the state agricultural land preservation objectives.

(n63)Footnote 560. *See* 3 Julian Juergensmeyer & James Wadley, *Zoning: The Law in Florida*, §§ 2-9, 2-10.

(n64)Footnote 561. *See, e.g., Fidler v. Zoning Bd. of Adj. of Upper Macungie Twp., 182 A.2d 692 at 695 (Pa. 1962):*

> It is fundamental that restrictions imposed by zoning ordinances are in derogation of the common law and must be strictly construed. Such restrictions must not be so construed as to fetter the use of the land by implication. The permissive widest use of the land is the rule and not the exception, unless specifically restrained in a valid and reasonable exercise of the police power. [citations omitted]

(n65)Footnote 562. The primary legal justification for the continued presence of the nonconforming use is that it lawfully pre-existed the current classification which does not permit it. To permit the use to continue avoids the argument that termination of the use constitutes a "taking."

(n66)Footnote 563. The events that precede conversion of land in urban fringe areas from agricultural use to non-agricultural use has been described as generally following a predictable sequence. *See* 3 Julian Juergensmeyer & James Wadley, Zoning: The Law in Florida, § 3-6, n.3:

> A number of events tend to occur as urbanization intrudes into agricultural land that bear on the decision to remove land from agricultural production. First, as urbanization pressures focus on a particular area, cost of land begins to rise and speculation enters the picture as an important factor. As the cost of farmland rises, so do property taxes and estate and inheritance taxes. As a result, the urban development value of the land soon exceeds the agricultural productive value of the land.
>
> Second, as development occurs near or adjacent to farmland, pilfering and destruction of crops and machinery may occur caused by neighboring people; increased population makes effective use of pesticides difficult; increased traffic makes use of farm machinery hazardous on roads; complaints by neighbors as to dust, manure, etc. begin to come in to the local government, all of which generate increasing pressure for political action to be taken against the agricultural users.
>
> Third, once the farmer becomes convinced the area will inevitably become urbanized, there is a tendency to stop investing in improvements to the farm. Then, as rising taxes take their toll on adjacent farms, as support industries (such as seed and feed dealers, machinery suppliers, etc.) leave the area due to declining business, and as farm labor becomes expensive and scarce due to higher paying 'city' jobs, the farmer realizes that the return on investment already made will soon shrink. At this point, the decision usually is made to move the operation elsewhere and sell the property, or change its use to something more intensive.

(n67)Footnote 564. This is because by the time the agricultural use has assumed the status of a nonconforming use, further investment in the operation will typically have stopped or will have been severely limited by the restrictions against changing the intensity or nature of the use that are imposed on nonconforming uses.

(n68)Footnote 565. *See generally* James Wadley, *Small Farms: The USDA, Rural Communities and Urban Pressures, 21 Washburn L.J. 478 (1982).*

(n69)Footnote 566. *See Township of Bloomfield v. Beardslee, 84 N.W.2d 537 (Mich. 1957); Durning v. Summerfield, 235 S.W.2d 761 (Ky. 1951).* Where the need to change, expand or alter the nonconforming farm operation is the result of action taken by the municipality, at least one case suggests the possibility of getting a variance to accommodate the change without affecting the nonconforming status. *See Monterey Dev. Corp. v. Stuart Marine Ctr., Inc., 305 So. 2d 245 (Fla. App. 1974).*

See also Belvedere Township v. Heinze, 615 N.W. 2d 250 (Mich App. 2000), where the court found that a large-scale hog facility was not protected as a cognizable preexisting nonconforming use.

(n70)Footnote 567. *See, e.g.,* Kan. Stat. Ann. § 715b:

Cities are hereby authorized to adopt zoning regulations affecting all or any designated portion of the land located outside the city but within three miles thereof under the following conditions. Except for flood plain regulations in areas designated as a flood plain, nothing in this act shall be construed as authorizing a city to adopt regulations applying to or affecting any land in excess of three acres under one ownership which is used for agricultural purposes... (emphasis supplied)

(n71)Footnote 568. *See Lake County v. Cushman, 353 N.E.2d 399 (Ill. App. 1976):*

> Under the provisions of the ordinance any lot less than 200,000 square feet in size in an area zoned Agriculture is a non-conforming lot. The only principal permitted use on a non-conforming lot in an Agricultural zone is a single family dwelling; in other words despite the clear language of the statute, the ordinance attempts to bar any and all agricultural uses if the lot is less than five acres in size. This cannot be done. No rights exist and no powers are conferred with respect to zoning except by statute and the county board is bound by the powers, conditions and restrictions contained in the Act. The County argues that the statute is silent as to whether acreage limitations may be imposed on agricultural uses. But in fact the contrary is true. The statute clearly provides that there can be no regulation of any land or buildings used for agricultural purposes except that building or set back lines may be regulated. Nor can the power to impose such a limitation be read into the statute on the theory that the legislature only meant the term 'agriculture' to apply to large farms. [Citations omitted]

(n72)Footnote 569. *See Blauvelt v. Board of Leavenworth County Comm'rs, 605 P.2d 132 (Kan. 1980)* holding that it was improper to enjoin the construction of a farmhouse for failure to comply with zoning restrictions where the dwelling was on land used for agricultural purposes.

(n73)Footnote 570. *See* Kan. Stat. Ann. § 19-2960:

No zoning regulation shall apply to the use of land for agricultural purposes nor for the erection and maintenance of agricultural buildings so long as such agricultural buildings are used for agricultural purposes and no other. Dwellings, garages and other similar accessory buildings shall not be considered as agricultural buildings. All buildings, including agricultural buildings, may be regulated as to setback requirements from public roads so as to protect the future use and improvement of such roads.

Spot zoning: "An area is spot zoned when it is singled out for treatment different from that of similar surrounding land which cannot be justified on the bases of health, safety, morals or general welfare of the community and which is not in accordance with a comprehensive plan." *Bosse v. City of Portsmouth, 226 A.2d 99 (N.H. 1967).* The mere fact that an area is small and is zoned at the request of a single owner and is of greater benefit to him than to others does not make out a case of spot zoning 'if there is a public need for it or a compelling reason for it.'" *Edgewood Civic Club v. Blaisdell, 61 A.2d 517, 518 (N.H. 1948).*

(n74)Footnote 571. *See* Note, *Agricultural Zoning in Pennsylvania: Will Growth Pressure Prevail? 91 Dick. L. Rev. 289, 308-310 (1986).*

(n75)Footnote 572. *See, e.g., Hillsborough County v. Twin Lakes Mobile Homes Village, 153 So. 2d 64 (Fla. App. 1963)* where the court found that it was unreasonable to zone an agricultural area for residential use to exclude mobile homes and held that the zoning restriction had no substantial relation to public health, safety, morals, or general welfare and was arbitrary, unreasonable and unconstitutional.

See also Edwards v. Township of Montrose, 171 N.W.2d 555 (Mich. 1969), where the court held there was no showing of a reasonable relationship between the zoning of property as residential suburban agricultural and the proper exercise of the police power in refusing to permit the development of a mobile home park. The proposed park would have been located on land that was not suitable for general crop farming and was surrounded by undeveloped land bordered by a gravel pit operation and a commercial orchard.

See also Smith v. Building Inspector of Twp. of Plymouth, 77 N.W.2d 332 (Mich. 1956), where it was held that a permit should have been granted for the construction of buildings and facilities for use is a trailer park in an area of a rural township which was largely agricultural and open county despite a prohibition in the township zoning ordinance

against trailer camps.

See also Janas v. Town Bd. & Zoning Bd. of Appeals, Flemming, 51 A.2d 473 (N.Y.S. 1976), where the zoning ordinance exclusion of mobile homes was held unconstitutional.

But see Town of Pompey v. Parker, 53 A.2d 125, 959 (N.Y.S. 1976), holding that the restriction on mobile homes was based on a rational relationship to a permissible state objective.

In *Stevenson v. Blaine County, 9 P.3d 1222 (Id. 2000),* the court considered a request to locate a residential subdivision in an agricultural district zone.

The court held that the landowner's appeal from the county's approval of the plat was not timely.

(n83)Footnote 580. *See Moulton v. Building Inspector, 43 N.E.2d 662 (Mass. 1942).*

(n84)Footnote 581. *See e.g., Parrish v. Board of Appeal, 223 N.E.2d 81 (Mass. 1967); Kimball v. Blanchard, 7 A.2d 394 (N.H. 1939).*

(n85)Footnote 582. *Town of Lexington v. Menotomy Trust Co., 23 N.E.2d 559 (Mass. 1939).*

(n86)Footnote 583. *See, e.g., Desler v. Lane County Bd. of Comm'rs, 557 P.2d 52 (Or. App. 1976).*

(n87)Footnote 584. *See, e.g., Smith v. Miller, 239 A.2d 900 (Md. 1968)* (loam stripping business).

(n88)Footnote 585. In *Deutschmann v. Board of Appeal, 90 N.E.2d 313 (Mass. 1950),* the court stated, at 315:

> The fact that the products are not in their natural state does not mean that they cease to be products raised on the farm of their owner, who seeks there to sell them. We believe that the nature of the article to be sold is not the sole test, but where, by whom and in what fashion the article is produced are considerations of importance. We do not believe that the one who on his premises processes milk and cream from cows thereby ceases to be a farmer, selling his farm products there raised.

See also State v. Christensen, 137 P.2d 512 (Wash. 1943).

In *Kimball v. Blanchard, 7 A.2d 394 (N.H. 1939),* the court held that:

> The owners of farms are permitted, as an accessory use, to sell "farm produce on the premises." This

> is the only provision in the ordinance relating to the sale of farm products. The fact that ice cream is a "manufactured article" (*Syracuse Ice Cream Co. v. Cortland, 153 N.Y. App. Div. 456, 138 N.Y.S. 338, 339)* is not decisive on the controversy. Cheese and butter, though produced at factories and creameries, have been held to be "dairy farm products," within the meaning of a motor vehicle tax statute containing a provision exempting from its operation motor vehicles used exclusively in transporting dairy or other farm products between the point of production and the primary market. *State ex rel. Wisconsin Truck Owners' Ass'n v. Commission, 207 Wis 664, 242 NW 668... .*
>
> With these considerations in mind, we conclude it could not have been the purpose of the provision in question to prohibit a farmer, wherever his farm might be located, from selling on his own land a commodity composed primarily of agricultural material there produced. The interpretation for which the defendants contend would place under the ban such common farm 'manufactured' products as cider, maple syrup, butter and cheese. If there had been any intention to restrict the farmer's sales to farm produce in its natural state, the qualifying phrase could easily have been employed.

See also Parrish v. Board of Appeal, 223 N.E.2d 81 (Mass. 1967); DiPonio v. Cockrum, 128 N.W.2d 544 (Mich. 1964) holding that produce grown in an adjacent county could not be sold by a farmer on a produce stand located on the agriculturally zoned property.

(n89)Footnote 586. *Jackson v. Building Inspector of Brocton, 221 N.E.2d 736 (Mass. 1966):* "The meaning of the relevant, everyday terms used in the ordinance, viz. '[f]arming' and '[a]ccessory uses customarily incident to' farming is to be determined 'according to the common and approved usages of the language.'"

(n90)Footnote 587. *Moulton v. Building Inspector of Milton, 43 N.E.2d 662 (Mass. 1942)* (permitting silo); *Kimball v. Blanchard, 7 A.2d 394 (N.H. 1939)* (Sale of ice cream in connection with a dairy); *Southard v. Biddle, 305 S.W.2d 762 (Ky. 1957)* (Crop storage, even though crop storage was defined as "commercial" under the ordinance); *Earle v. McCarthy, 560 P.2d 665 (Or. 1977);* (Sale of burlap and string from a hops warehouse); *Gaspari v. Muhlenberg Twp. Bd. of Adj., 139 A.2d 544 (Pa. 1958)* (Production of artificial compost for sale).

(n91)Footnote 588. *See Foster Village Community Association v. Hess, 667 P.2d 850 (Haw. App. 1883)* (keeping a pig as a pet held to be a valid accessory use in residential district). The court reasoned, at 854-855, that:

> [t]he C[omprehensive] Z[oning] C[ode] does not define 'livestock,' and does not specifically provide for 'pets.' Although appellants concede that a pet is an accessory use, they argue that the clear import of the word livestock includes a solitary pig, even kept as a pet, and that a pig cannot be an accessory use because it is not a customary use in a residential district. The real thrust of appellants' argument is that since a pig is a very unusual pet, it is not customarily found in a residential district and, since a pig is livestock by definition, the keeping of a pig in the instant case is a violation of the CZC...
>
> We think appellants' argument is too strained and does not reflect the true intent of the city council. Under appellants' argument, the only animals permitted as pets in residential areas would be those that are customarily found in a residential neighborhood, such as dogs and cats or birds. The practical effect of appellants' position would be an extension of the zoning ordinance in derogation of the common-law, because under their interpretation every householder desiring to keep an unusual pet (we are aware of monkeys, skunks, white rats, snakes and iguanas) would first have to determine if such pets are usually and customarily kept in his neighborhood and, perhaps, other neighborhoods. Clearly this would be in derogation of every property owner's right to use his property in a lawful manner... .

The clear intent of CZC § 21-5.2(a) and (b) is in fact to allow the keeping of an animal which may be classified as

livestock in a residential district but only in accordance with the 'provisions relating to accessory uses.' CZC § 21-5.2(a)(1) is not an absolute prohibition of all livestock in all residential districts. Rather, the keeping of an animal normally considered to be livestock can be permitted if its maintenance comes within the provisions of CZC § 21-1.10. It follows then, as in this case, that it is the nature of the use that is determinative not the nature of the animal.

[Citations omitted. In oral argument, appellants conceded that geese may be allowed as pets in residential neighborhoods. *See* n.8, p. 855.]

(n99)Footnote 596. *See, e.g., Gisler v. County of Madera, 112 Cal. Rptr. 919 (1974)* (upholding a minimum 18 acre parcel size.): "While there is apparently no case directly passing upon exclusive agricultural zoning with a minimum 18-acre parcel size, most zoning ordinances provide for minimum lot sizes and they have been held valid."

See also Wilson v. County of McHenry, 416 N.E.2d 426 (Ill. App. 1981) (upholding a 160 acre minimum lot size); *Joyce v. City of Portland, 546 P.2d 1100 (Or. App. 1976).*

(n100)Footnote 597. *See, e.g., Lake County v. Cushman, 353 N.E.2d 399 (Ill. App. 1976); Meeker v. Board of County Comm'rs, 585 P.2d 1138 (Or. App. 1978),* where the court permitted the subdivision of an 82 acre parcel into smaller part-time farms on the ground that such development was actually more consistent with the policy of encouraging agricultural use and would more effectively insure the preservation of agricultural land than would the retention of the acreage in a single idle parcel; *Township of Marple v. Lynam, 30 A.2d 208 (Pa. 1943); Charlestown Twp. v. Fuguet, 366 A.2d 1376 (Pa. 1976).*

See also Eller v. Board of Adj. of London Britain Twp., 198 A.2d 863 (Pa. 1964) where the court held that a limitation of 69 acres for a mushroom farm in a residential and farming district was arbitrary and unreasonable. Evidence showed that a mushroom farm could be operated upon a much smaller tract of land even though such farms may give off unpleasant odors and present sanitation problems.

(n101)Footnote 598. *But see Eller v. Board of Adj. of London Britain Twp., 198 A.2d 863 (Pa. 1964)* where the

court held that an arbitrary 69 acre minimum lot size for a mushroom farm was unreasonable, largely because evidence showed that such an activity could be conducted on a much smaller tract of land.

(n102)Footnote 599. *See, e.g., Township of Marple v. Lynam, 30 A.2d 203 (Pa. 1943)* where the court held that since the township intended, by means of a zoning ordinance, to permit a land owner to use vacant land as a farm, that, by implication permitted the use of the land for such agricultural specialty as the size of the lot would permit. In this case, the land was used as a nursery.

See also Lake County v. Cushman, 40 Ill. App. 3d 1045, 353 N.E.2d 399 (1976) where the court held that, given the general exemption of agriculture from zoning ordinances found in state statutes, a county could not bar any and all agricultural uses where the lot in the agricultural zone was less than five acres.

(n110)Footnote 607. *See* Barry Currier, *An Analysis of Differential Taxation as a Method of Maintaining Agricultural and Open Space Land Use*, U. Fla. L. Rev. 821 (1978); Note, *Differential Assessment For Agricultural Land Creates a Tax Haven for Speculators, 34 U. Fla. L. Rev. 848 (1982).*

See also S. Klein, *Agricultural Land Preservation*, National Conference of State Legislators, Denver, Co. (Jan. 1982) at 31.

A variety of methods have been used by which the agricultural value of land may be determined. The most widely-used method appears to be the income approach where property value is estimated by dividing the expected annual net income from the land by the rate of return that the owner should expect to receive on his investment. 2 Julian Juergensmeyer & James Wadley, Florida Land Use Restrictions, § 21.04 at p. 7 (1979). Typically, an average based on a period of years is used to determine yields, prices, expenses and interest rates which are used to compute both the net income and the capitalization rates.

Alternatively, the so-called market approach may be used in which the value of the land is determined by comparing the property in question with other similar properties that have been sold recently. 2 Julian Juergensmeyer & James Wadley, Florida Land Use Restrictions § 21.04 (1979); *See also* Shawn Rader, *The Use Standard for Ad Valorem Agricultural Classification of Property and F.S. § 193.461(4), 60 FLA. B. J. 27 (Jan. 1986).*

A third method sometimes used is the cost approach whereby the classified use value of the land is determined in reference to replacement costs. Note, *Differential Assessment for Agricultural Land Creates a Tax Haven for Speculators, 34 Fla. L. Rev. 848 at n.14 (1982).*

(n111)Footnote 608. For a good discussion of the construction problem as it relates to the Florida statute, *see* Shawn Rader, *The Use Standard for Ad Valorem Classification of Property and F.S. § 193.461(4), 60 Fla. B.J. 27 (1986).*

In *Farm Credit Servs. v. Arkansas, 76 F.3d 961 (8th Cir. 1996),* the court held that production credit associations (PCA's) were immune from state taxation as federal instrumentalities, as a result of such designation under the Federal Farm Credit Act. *12 U.S.C. § 2077.* The state had argued that notwithstanding that act, PCA's resembled private corporations because of their structure and the manner in which they functioned under the Farm Credit Act.

The court held that for PCA's to be subject to state taxation, Congress must enact a clear waiver of their exemption.

(n118)Footnote 615. Land banking generally involves the purchase of agricultural land by a governmental body or by a private trust. The land may then be kept in agricultural use without regard to pressures to develop the land to non-agricultural uses. This approach has been popular in Europe and Canada. *See* Young, *The Saskatchewan Land Bank, 40 Sask. L. Rev. 1 (1975).* It has been used in the United States primarily in the context of private trusts. *See* American Farmland Trust, Statement of Purpose (1980).

(n119)Footnote 616. These approaches seek to regulate development by controlling the availability of such needed services as electrical power and sewer services. For further discussion, *see* John Keene, *Agricultural Land Preservation: Legal and Constitutional Issues, 15 Gonz. L. Rev. 621 (1980).*

(n120)Footnote 617. *See* Julian Juergensmeyer, *Farmland Preservation: A Vital Agricultural Issue for the 1980's, 21 Washburn L.J. 443 at 459 (1982).* The landowner typically burdens the land in the form of a negative restriction giving up the right to use the property in a manner inconsistent with the easement. All other customary interests in the land are retained by the grantor. The result is to give the participating public or private agency a dominant tenement under the easement without requiring any affirmative act upon the parcel. Since the easements work as a conveyance of development rights, the negative restriction will generally bind all future owners of the land with respect to non-agricultural development of that parcel.

For further discussion, *see* Vivian Quinn, *Preserving Farmland with Conservation Easements,* 1992/*93 Ann. Surv. Am. L. 235 (1994). See also* mandated voter approval or land redesignation from agricultural use to other uses, as upheld in the case of *DeVita v. County of Napa, 889 P.2d 1019 (Cal. 1995).* For a discussion of Transferable Development Rights generally, see National Trust for Historic Preservation, *A Review of Transferable Development Rights (TDR) Programs in the United States,* SG040 ALI-ABA 409 (2001).

(n121)Footnote 618. *See* D. Merriam & A. Merriam, *Bibliography of the Transfer of Development Rights,* Council of Planning Librarians Exchange Bibliography No. 1338 (1977); Donald Carmichael, *Transferable Development Rights as a Basis for Land Use Control, 1 Fla. St. U. L. Rev. 35 (1974);* John Costonis, *The Chicago Plan: Incentive Zoning and the Preservation of Urban Landmarks, 85 Harv. L. Rev. 574 (1972);* John Costonis, *Development Rights Transfer: An Exploratory Essay, 83 YALE L.J. 75 (1973);* John Keene, *A Review of Governmental Policies and Techniques for Keeping Farmers Farming,* 19 Nat. Resources J. 119 (1979).

Four commonly described methods for TDR plans are generally identified as (1) the New York Plan which allows transfers of unused development rights only to adjacent parcels; (2) the Chicago plan which allows transfers of unused rights within a designated district; (3) the Puerto Rico and New Jersey plans which permit transfers of rights from non-urban areas to urban areas and (4) the so-called uniform plan which allows the assignment of rights to all lands in the jurisdiction.

For a discussion of Transferable Development Rights generally, see National Trust for Historic Preservation, *A Review of Transferable Development Rights (TDR) Programs in the United States,* SG040 ALI-ABA 409 (2001). See also J. Nolon, *Local Land Use Controls that Achieve Smart Growth, 31 ELR 11025 (2001);* W. Flemming & J. Rivera, *Transfer of Development Rights as an Option for Land Preservation in a Historic New Mexico Community: La Cienega Valley, Santa Fe County, New Mexico,* 41 Nat. Resources J. 427 (2001).

(n128)Footnote 625. A notable variation of this approach is Zoning by Special Assessment Financed Eminent Domain (ZSAFED). According to this approach, because the police power of the jurisdiction is exercised to an excessive degree, compensation must be paid to the restricted landowner even though in the traditional sense the power of eminent domain has not been used. Money for the payments comes from assessments levied on those who benefit from the regulation. For a detailed discussion of how this approach works, *see* Donald Hagman, *Zoning by Special Assessment Financed Eminent Domain (ZSAFED), 28 U. Fla. L. Rev. 655 (1976);* Julian Juergensmeyer, *Farmland Preservation: A vital Agricultural Law Issue for the 1980's, 21 Washburn L.J. 443 at 460-461 (1982). See also Kansas City v. (n130)Footnote 627. For further discussion, *see* ch. 50, this treatise.

(n131)Footnote 628. Currently, it must be recognized that agricultural consumption of water is far and away the single largest use of water. The U.S. Water Resources Council has estimated that of the 106 billion gallons of water that are consumed each day in this country, agriculture uses 87.7 billion. In contrast, manufacturing requires 8.2 billion, power generation 1.4 billion, and domestic use 7.3 billion.

(n132)Footnote 629. For example, it has been estimated that the annual soil loss by way of sheet and rill erosion is two billion tons per year on the 413 million acres we designate as cropland. *See generally* R. Neil Sampson, Farmland or Wasteland: A Time to Choose 110-152 (1981). Although technically most soil that has been eroded is eventually deposited on another site, qualitative changes occur on both the eroded lands and recipient lands which may affect productivity on both sites. It has been discovered that there are places where the entire topsoil layer has been lost either through use or erosion in only 50 to 100 years of cultivation. *Id.* at 110-152. *See also* Frederick Swader, *Soil Productivity and the Future of American Agriculture, in* The Future of American Agriculture as a Strategic Resource 79-115 (Sandra Batie and Robert Healy, eds., 1980). USDA estimated that if current levels of erosion continue for the next 50 years, erosion would cause a reduction in the production capacity of the cropland of the nation equivalent to the loss of 23 million acres or eight percent of the total land base used for agriculture. It has also been suggested that wind erosion alone in the ten Great Plains States would cause a loss of productivity equivalent to the loss of another 62 million acres over the next 50 years. This loss in productivity is equivalent to a loss of between 50 and 75 million metric tons of grain, or approximately half the total exported from the United States in 1980. *See R. Sampson 126-131, supra.*

(n133)Footnote 630. *See, e.g.*, Kan. Stat. Ann. § 2-2002:

To conserve the natural resources of the state, and to prevent the injurious effects of dust storms, it is hereby made the duty of the owner of real property in this state to prevent dust, plant or weed blowing therefrom, as nearly as that can be done, by planting of perennial grasses, shrubs, trees, annual or biennial crops, or by cultivation at such times and in such manner as will prevent or minimize erosion of the soil and dust, plant or weed blowing therefrom.

(n134)Footnote 631. *See, e.g., Woodbury Soil Conserv. Dist. v. Ortner, 279 N.W.2d 276 (Iowa 1979).*

(n135)Footnote 632. One such pressure has been the floating of the U.S. dollar during the 1970s which made our agricultural production attractive abroad. *See, e.g.*, Philip Raup, *Competition for Land and the Future of American Agriculture, in* The Future of American Agriculture as a Strategic Resource 41-77 at 42-43 (Sandra Batie & Robert Healy, eds., 1980). *See also Who Will Eventually Own America?*, Town & Country 95-96 at 96 (June 1983). The result of the remarkable expansion in export demand during the 1970s stimulated farmers to plant "fence row to fence row." The pressure to generate a substantial exportable surplus, not only to meet world food needs but to assist with our own balance of trade problems, persists and is likely to increase as future demands for food expand and with the current market situation, the only real price flexibility for farmers is likely to be in the export marketplace.

(n136)Footnote 633. *See* Bickers, *Getting Closer: No Supports for Sodbusters*, Progressive Farmer 11 (Oct. 1983); Legislation which prohibits the payment of certain agricultural incentives to individuals who raise agricultural commodities on specific highly erodible lands -- called sodbusters -- and in wetlands -- called swamp busters was included in the Food Security Act of 1985, Pub. L. No. 99-198, *99 Stat. 3556* (codified as amended in scattered sections of 7, 12, & 16 U.S.C.). For a further discussion of the soil erosion problem, see James Arts & William Church, *Soil Erosion -- The Next Crisis? 1982 Wis. L. Rev. 535 (1982);* Sandra Batie, Soil Erosion: Crisis in America's Croplands? (1983).

(n137)Footnote 634. R. Neil Samson, Farmland or Waste Land: A Time to Choose at 120-122 (1981).

It has been suggested that one reason for this is the "impermanence syndrome" which results from the pressure generated by urban interests to convert the land to a non-agricultural use. Farmers may be induced to slow down their investments on the land as a result of feelings that the land will soon be lost to agricultural use and that it is therefore useless to invest in soil conservation practices that will soon be nullified by the impending urbanization. It has also been suggested that farmers in the urbanizing areas may already be farming poor soils due to the fact that urban growth has taken the better soils already and thereby pushed farmers on to the more marginal lands. *Id.* This may be because:

> as erosion eats away the land's productivity, affecting the marginal acres first, it forces more reliance on the nation's prime farmlands. Yet these are lands burdened with a disproportionate share of the urbanization and related development, so the competition for them is growing from two directions. As good land become urbanized and unavailable for food production, it forces agriculture on to more marginal land, which signals a new round of soil erosion and new pressures on the land and water base.

R. Neil Samson, The Ethical Dimension of Farmland Protection in Farmland Food and The Future 89-98 at 94 (M. Schnepf ed.).

(n138)Footnote 635. An interesting exception is the national "Rails to Trails" program of converting abandoned railroad beds into biking and hiking trails. This program is the result of a 1983 amendment to National Trails System Act, Pub. L. 98-11, codified at *16 U.S.C. § 1247*(d) and provides that any railroad wishing to abandon operations along a particular route may enter into an agreement that allows state agencies, local agencies or private interests to manage the right-of-way as recreational trails. This agreement must be approved by the Interstate Commerce Commission. This statute was challenged and upheld in *Preseault v. Interstate Commerce Comm'n, 110 S. Ct. 914 (1990).*

In *King County v. Central Puget Sound Growth Management Hearings Board, 14 P. 3d 133 (Wash. 2000)* the court dealt with a proposal to designate athletic fields within an area designated as agriculture. The Board granted the request and this was upheld on appeal to the Superior Court. The Supreme Court reversed because the proposal was inconsistent with the Growth Management Plan in that the areas designated did not have poor soil nor was otherwise unsuitable for agricultural purposes.

For further discussion, see Centner, Terrence J. *Tort Liability for Sports and Recreational Activities: Expanding Statutory Immunities for Protected Classes and Activities, 26 J. Legis. 1 (2000).*

In *Utsey v Coos County, 32 P.3d 933 (Or. App. 2001),* the court considered the issuance of a permit to operate off-highway vehicle trails and racetrack on land zoned for exclusive agricultural use to be a nonjusticiable controversy.

(n139)Footnote 636. At least two model acts have been proposed. In 1965, The Council of State Governments developed one proposal which encouraged landowners to open their lands in exchange for a limitation on the owner's liability toward persons who enter as a result. *See* Council of State Governments, *Public Recreation on Private Lands: Limitations on Liability*, 24 Suggested State Legislation 150 (1965). In 1979, the National Association of Conservation Districts commissioned a study of landowner liability and trespass laws which resulted in an updated model act. *See* William L. Church, Report on Private Lands and Public Recreation (1979). The 1979 proposal also limits liability for harm to recreational entrants but tends to define land and recreational use broader than the 1965 act and generally absolves the landowner of liability where the entrant is on the land without express or implied consent. Indeed, the acts consider presence on the land without further explanation to be prima facie evidence that the entrant is there for recreational purposes. For a further discussion of these model acts, *see* John Becker, *Landowner or Occupier Liability for Personal Injuries and Recreational Use Statutes: How Effective is the Protection?, 24 Ind. L. Rev. 1587 (1991).*

Recent cases include: United States v. 194.08 Acres of Land, More or Less, Situated in St. Martin Parish, State of Louisiana, 135 F.3d 1025 (5th Cir. 1998) (held that deer hunting servitude was within interest condemned by United States government for floodway system); *McCarthy v. New York State Thruway Authority, 675 N.Y.S.2d 254 (N.Y. App. 1998)* (Whether immunity for personal injury from fall from a sea wall was provided by recreational use statute. The victim in the case was assisting an individual who was fishing, which was a listed activity); *Craig v. Sepulvado, 709 So. 2d 229 (La. App. 1998)* (Injured hunter's father filed action against landowner. Landowner not entitled to recreational use immunity where landowner allowed grandchildren to use land for hunting but no evidence that she intended public to use her land for hunting. The court held the landowner was not strictly liable to hunter to whom she had given permission to hunt on the land nor was there any breach of duty to a young hunter who was shot while hunting on land without supervision or training in use of firearms); *Jenkins v. Arkansas Power & Light Co. 140 F.3d 1161 (8th Cir. 1998)* (Recreational use statute applied to lake owned by utility. Swimmer was severely injured when dove into submerged island in utility's reservoir that was open to the public. The court held that failure to mark submerged island was not malicious conduct given obvious danger associated with diving into water without first testing its depth. Shallow nature of water was not ultra-hazardous condition. Failure to warn was at most negligence).

See *Davis v. State, 6 P. 3d 1191 (Wash. 2000)* where a motorcyclist was injured when his motorcycle overturned after reaching a steep drop-off on sand dunes at a state-owned recreation area. The court held that the plaintiff failed to establish that the dune was not an "artificial condition" or that the state had actual knowledge of the injury causing condition sufficient to trigger an exception to state immunity. The court did find that there was a factual issue that needed to be resolved regarding whether the condition was a latent defect for purposes of the immunity exception.

For further discussion, see Centner, Terrence J. *Tort Liability for Sports and Recreational Activities: Expanding Statutory Immunities for Protected Classes and Activities, 26 J. Legis. 1 (2000).*

(n152)Footnote 649. Kan. Stat. Ann. § 58-32-1 *et seq.* expressly applies to "agricultural and non-agricultural land."

(n153)Footnote 650. *See Tijerina v. Cornelius Christian Church, 539 P.2d 634 (Or. 1975),* construing Or. Rev. Stat. § 105.655. There, an action was brought to recover for injuries suffered while playing baseball on the church's land. The church claimed the land was "agricultural land" for purposes of the statute but the court construed the statute narrowly and denied immunity under the statute to the church.

(n154)Footnote 651. *See, e.g., Pensacola v. Stam, 448 So. 2d 39 (Fla. App. 1986); Hovert v. City of Bagley, 325*

N.W.2d 813 (Minn. 1982), holding that the purpose of the Minnesota statute was to encourage the use of private land for public recreational purposes and therefore the legislature did not intend to include public land within the scope of the statute.

Note, Jeffrey C. Kastenband, *Conway v. Town of Wilton: Statutory Construction, Stare Decisis, Public Policy in Connecticut's Recreational Use Statute, 30 Conn. L. Rev. 1091 (1998).* (The Conway case involved the application of statute to publicly owned (municipal) land. The case reversed a four year old precedent to hold that public lands were not covered by statute. The rationale for the court's decision was a perceived legislative intent to the contrary).

(n155)Footnote 652. *See, e.g., Fisher v. United States, 534 F. Supp. 514 (D. Mont. 1982),* allowing the federal government to claim immunity under the statute for injuries suffered on public land; *Hubbard v. Brown, 785 P.2d 1183 (Cal. 1990),* holding that a holder of a federal grazing permit was protected under the statute against injuries suffered by a recreational user on the federal land grazed under the permit.

Miller v. United States, 442 F. Supp. 555 (N.D. Ill. 1976); Gonzales v. Board of Shawnee County Comm'rs, 799 P.2d 491 (Kan. 1990); Pennsylvania v. Auresto, 511 A.2d 815 (Pa. 1986).

(n156)Footnote 653. *See, e.g., Colvin v. Southern Cal. Edison Co., 240 Cal. Rptr. 142 (1987).* Act applies only to land that is intended or suitable for recreational use; *Ratcliff v. Town of Mandeville, 502 So. 2d 566 (La. 1987).* Statute applies only to underdeveloped, nonresidential, and rural and semi-rural land; *Wymer v. Holmes, 412 N.W.2d 213 (Mich. 1987).* Statute applies only to large, open or vacant tracts which are in a relatively natural state; *Harrison v. Middlesex Water Co., 403 A.2d 910 (N.J. 1979).* Statute does not apply to residential or populated neighborhoods.

(n157)Footnote 654. Kan. Stat. Ann. § 58-3202(c). This provision approximates the definition found in the 1965 proposed Model Act. *See* Council of State Governments, *Public Recreation on Private Lands: Limitations on Liability,* 24 Suggested State Legislation 150 at § 2 (1965).

McCarthy v. New York State Thruway Authority, 675 N.Y.S.2d 254 (N.Y. App. 1998) (Extending immunity for personal injury to fall from a sea wall was provided by recreational use statute. The victim in the case was assisting an individual who was fishing, which was a listed activity); *Craig v. Sepulvado, 709 So. 2d 229 (La. App. 1998)* (Injured hunter's father filed action against landowner. (n166)Footnote 663. *Smith v. Southern Pac. Transp. Co., 467 So. 2d 70 (La. 1985).*

See also Harrison v. Middlesex Water Co., 403 A.2d 910 (N.J. 1979), holding that an injury suffered as a result of attempting to rescue someone who had fallen through the ice on a pond did not constitute recreational use.

(n167)Footnote 664. *See Friedman v. Grand Cent. Sanitation, Inc., 571 A.2d 373 (Pa. 1990)* where the entrant was a hunter who had inadvertently wandered onto the premises of the defendant and was overcome by fumes from a sanitation landfill.

(n168)Footnote 665. *Id.*

In *Fisher v. United States, 534 F. Supp. 514 (Mont. 1982)* the court noted that:

> [t]he only purpose of the recreational use statue is to encourage landowners to make their lands freely available to the public by limiting the landowner's tort liability. While the general purpose of a law may not control the specific unambiguous language of it, policy does give guidance in cases where interpretation is needed... . In this case I think the policy of the law is served and the words of it are not violated if it be held that the statute is applicable in any case where the entry is made for what could reasonably be regarded by the general public as a recreational purpose regardless of some different purpose in the mind of the particular user.

(n169)Footnote 666. *See, e.g.,* Kan. Stat. Ann. § 58-3204:

[A]n owner of land who either directly or indirectly invites or permits without charge any person to use such property for recreational purposes does not thereby: (a) Extend any assurance that the premises are safe for any purpose. (b) Confer upon such person the legal status of an invitee or licensee to whom a duty of care is owed. (c) Assume responsibility for any injury to person or property caused by an act o[r] (sic) omission of such persons.

McCarthy v. New York State Thruway Authority, 675 N.Y.S.2d 254 (N.Y. App. 1998) (Extending immunity for personal injury to fall from a sea wall was provided by recreational use statute. The victim in the case was assisting an individual who was fishing, which was a listed activity); *Craig v. Sepulvado, 709 So. 2d 229 (La. App. 1998)* (Injured hunter's father filed action against landowner. Landowner not entitled to recreational use immunity where landowner allowed grandchildren to use land for hunting but no evidence that she intended public to use her land for hunting. The court held the landowner was not strictly liable to hunter to whom she had given permission to hunt on the land nor was there any breach of duty to a young hunter who was shot while hunting on land without supervision or training in use of firearms).

(n170)Footnote 667. *See, e.g.,* Kan. Stat. Ann. § 58-3206: "Nothing in this act limits in any way any liability which

otherwise exists: (a) For willful or malicious failure to guard or warn against a dangerous condition, use, structure, or activity."

See also Hogg v. Clatsop County, 610 P.2d 1248 (Or. App. 1980), holding the County liable for injuries caused as a result of diving into shallow water and hitting submerged logs and debris despite a sign in the area warning people not to dive. In this case, the County had refused to remove known submerged hazards.

See also Gard v. United States, 594 F.2d 1230 (9th Cir. 1979) cert. denied, 444 U.S. 866, holding that the simple failure to post a warning sign and to fence or patrol an area may constitute willful and malicious failure to warn.

See also Mandel v. United States, 719 F.2d 963 (8th Cir. 1983), later app., 793 F.2d 964 (8th Cir. 1986).

But see Davis v. United States, 716 F.2d 418 (1983), holding that the "willful and malicious failure to warn" under the act was a higher standard than "willful and wanton" under normal tort law.

See: Craig v. Sepulvado, 709 So. 2d 229 (La. App. 1998) (Injured hunter's father filed action against landowner. Landowner not entitled to recreational use immunity where landowner allowed grandchildren to use land for hunting but no evidence that she intended public to use her land for hunting. The court held the landowner was not strictly liable to hunter to whom she had given permission to hunt on the land nor was there any breach of duty to a young hunter who was shot while hunting on land without supervision or training in use of firearms); *Jenkins v. Arkansas Power & Light Co. 140 F.3d 1161 (8th Cir. 1998)* (Recreational use statute applied to lake owned by utility. Swimmer was severely injured when dove into submerged island in utility's reservoir that was open to the public. The court held that failure to mark submerged island was not malicious conduct given obvious danger associated with diving into water without first testing its depth. Shallow nature of water was not ultra-hazardous condition. Failure to warn was at most negligence).

See Davis v. State, 6 P. 3d 1191 (Wash. 2000) where a motorcyclist was injured when his motorcycle overturned after reaching a steep drop-off on sand dunes at a state-owned recreation area. The court held that the plaintiff failed to establish that the dune was not an "artificial condition" or that the state had actual knowledge of the injury causing condition sufficient to trigger an exception to state immunity. The court did find that there was a factual issue that needed to be resolved regarding whether the condition was a latent defect for purposes of the immunity exception. In *Snilsberg v. Lake Washington Club, 614 N.W. 2d 738 (Minn. 2000),* the court found there was no duty on the part of the club to warn against the obvious risk of diving head-first into shallow water nor was there a special relation with the club's guests that would give rise to a duty to prevent guests from diving under those conditions. There were material issues yet to be resolved, however, regarding whether the caretaker at the club was negligent in serving alcoholic beverages to under-age guests and then failing to warn of dangers from diving off the dock.

For further discussion, see Centner, Terrence J. *Tort Liability for Sports and Recreational Activities: Expanding Statutory Immunities for Protected Classes and Activities, 26 J. Legis. 1 (2000).*

(n171)Footnote 668. *See* William L. Church, Report on Private Lands and Public Recreation (1979). *See also* note 463, *supra*.

(n172)Footnote 669. *But see* Miss. Code Ann. § 89-2-7 which requires a landowner to publish annually a notice of availability of the land for public recreational purposes.

Rhode Island requires that the landowners notify the Director of the Department of Environmental Management that the lands are open. *See* R.I. Gen. Laws § 32-6-7.

In Ryan v. Harrison & Harrison Farms, Mont. LEXIS 192 (Mont. Aug. 3, 2001), the court denied the plaintiff access to a man-made lake on the farm. The farm had allowed the public to use the lake on a limited permission only basis . In

the past, plaintiff had received permission to fish on the lake but at some point that permission was withdrawn. The court held that the recreational use statute did not authorize passage across private land to access the lake.

In *Lonergan v. May, 53 S.W. 3d 122 (Mo. App. 2001),* the court upheld the application of the Recreational Use Act to extend immunity to an electric utility in an accident in which a passenger in a boat was killed on a lake owned by the utility.

In *Davis v. State, 30 P. 3d 460 (Wash. 2001),* the court found that the tire tracks leading to the top of a sand dune where motorcyclist was injured when he reached the drop-off did not alter the natural condition of the drop-off to such an extent as to transform it into an artificial state within the immunity provisions of the recreational use statute.

In *Waters v. Pertzborn, 627 N.W. 2d 497 (Wis. 2001)* the court refused to allow separate trials to separate juries on the issues of liability and damages where a child was injured when he sledded down a hill on landowner's property onto a street where a car struck him. The case was remanded for consideration as to whether the social guest exception to recreational immunity applied.

In *Cooper v. Cooper III, 786 So. 2d 240 (La. App. 2001),* the court granted summary judgment on the grounds that the recreational use statute barred recovery where an individual was injured while helping others erect a deer hunting stand and the stand fell on him and injured him.

(n187)Footnote 684. *See, e.g.*, Kan. Stat. Ann. § 58-4206(b).

(n188)Footnote 685. For further discussion, *see* Huffman, *Can Farmers and Hunters Coexist: Fee Hunting and Other Alternatives*, 6 Agricultural Law Update 4 (Oct. 1988).

(n189)Footnote 686. In *West Chester Township Zoning v. Fromm, 762 N.E.2d 400 (Ohio App. 2001)* the court upheld the conviction of a homeowner regarding a fence that was erected in violation of the zoning ordinance. The landowner's argument was that the fence restrictions did not have any meaningful relation to health, safety and moral concerns.

(n190)Footnote 687. Where the true property boundary location is uncertain because of conflicting surveys, a different principle comes into play. It is well established that the boundaries and markers established by the first survey of the land control in case there is a conflict with a subsequent survey. This is the case irrespective of any errors made in the original survey. In the case of a resurvey, the issue is not where an entirely accurate survey would locate the boundary lines but where the original survey in fact located them. The object is to locate the lost lines, not to dispute the location of them. This rule has been held to apply to both government and private surveys but is often overlooked by the subsequent surveyors who take the view that the line should be located with the most accurate survey possible. The theory behind the rule is that it is necessary to protect the rights of parties who have purchased, occupied and enjoyed the land in reliance upon the original survey. Where the reason for the rule does not exist, there is no need to apply it and in such a case, if the original survey is in error, it may be corrected with an accurate new survey. In a boundary dispute involving a disagreement between surveys, it is necessary to consider how the use of the land has been affected by the location of the boundary by the original survey. If the fence was erected along the old, but erroneous survey line, and the parties have actively farmed to the fence line, the fence should not be moved. If the fence does not follow either the original survey nor the later survey, the true boundary line may need to be designated. Whether the fence will need to be moved as a result will depend on the application of the other principles and doctrines discussed above.

See Hovendick v. Ruby, 10 P.3d 1119 (Wyo. 2000), where the court found that a mistaken belief that a fence constituted a boundary fence did not establish adverse possession, but merely a presumption of adverse possession. Issue of material fact to be resolved included whether the fence was actually a boundary fence or only a fence of convenience and whether the parties had entered into any oral agreements to divide the land. *See also* Hurst v. Baker, Ohio App. LEXIS 3872 (Ohio App., Aug. 22, 2000); *Heer v. Thola, 613 N.W. 2d 658 (Ia. 2000).* Adverse possession was allowed in *Cheatham v. Stokes, 760 So. 2d. 795 (Miss. 2000)* where occupation beyond an old fence line to a new fence was considered adverse.

See also Hargis v. H.G. Graham Farms, Inc., Ark. App. LEXIS 620 (Ark. App. 2001) involving old fence row as boundary.

(n191)Footnote 688. *See generally* Percy Bordwell, Disseisin and Adverse Possession, *33 Yale L.J. 1 (1923);* Percy Bordwell, *Seisin and Disseisin, 34 Harv. L. Rev. 592 (1921).*

(n192)Footnote 689. *See, e.g., McQueen v. Black, 168 Mich. App. 641, 425 N.W.2d 203 (1988).* For such a memorandum to be enforceable, the boundary must be uncertain or in dispute. Even though such agreements, called parol agreements, are not regulated by the statutes regulating conveyances, it is a good practice for the memorandum to accurately describe the land to be affected and be signed by the parties. The agreement should then be followed by

occupation to the line established by the agreement. It might well be that such an agreement has been reached sometime in the past between the adjoining landowners but was never reduced to writing nor recorded. The boundary may nevertheless be relocated accordingly, provided the agreement can be proved.

See Garretson v. McMurry, Ark. App. LEXIS 366 (Ark. App. 2001), finding a boundary by acquiescence on the facts of the case.

See also Larson-Murphy v. Steiner, 15 P.3d 1205 (Mont. 2000) where the court held that a violation of fencing laws did not give rise to negligence *per se* and whether one owed liability to a motorist who was harmed as a result of striking a bull in the middle of the highway was affected by the fact that the accident occurred in an area designated as "open range." In *Morris v. Florida Power and Light Co., 753 So. 2d 153 (Fla. App. 2000)* the plaintiff was injured by cows owned by a tenant of the power company. The animals escaped because of a defective fence but it was not clear to the court whether the power company had retained any duty to maintain the fence under the terms of its agreement with the tenant. The initial petition for relief against the power company was dismissed with prejudice. This was reversed to permit an inquiry into the terms of the lease. In Blaylock v. Nash, Tenn. App. LEXIS 614 (Tenn. App. 2000), the court upheld a finding of no negligence on the part of a stockyard operator from whom the cow that caused the injury supposedly escaped. The court held that the lawsuit was not frivolous despite evidence that the plaintiff had been compensated by his insurance carrier for property damage to the car but had elected not to have the car repaired. The car was then traded in on a newer vehicle for the same value as received from the insurance carrier.

(n193)Footnote 690. *Compare Bailey v. Hagler, 575 So. 2d 679 (Fla. App. 1991),* with *Goff v. Lever, 566 So. 2d 1274 (Miss. 1990).* Here, as a result of a dispute, one party typically occupies to the fence line and the other party acquiesces in that occupation for the same period of time as is required for adverse possession. The result is that the fence is then considered to be the true boundary.

For further discussion, *see* David S. Steward, *Iowa Agricultural Fence Law: Good Fences Make Good Neighbors, 43 Drake L. Rev. 709 (Mar. 1995);* Craig R. Heidemann, *Fencing Laws in Missouri: Confusion, Conflict, Ambiguity and a Need for Change, 63 Mo. L. Rev. 537 (1998).*

(n197)Footnote 694. *924 P.2d 242 (Mont. 1996).*

(n198)Footnote 695. In some jurisdictions, local jurisdictions have had the option of electing to require animals to be fenced in or out.

See:

Idaho: Benewah County Cattleman's Ass'n v. Board of County Comm'rs of Benewah County, 668 P.2d 85 (Idaho 1983). (County ordinance imposing liability upheld.)

Kansas: Walborn v. Stockton, 10 Kan. App. 2d 597 (1985). (Statute authorizing local elections subsequently repealed.)

Utah: Bastain v. King, 661 P.2d 953 (1983). (Utah law places liability on the owners of trespassing livestock unless the county enacts a fence law.)

(n199)Footnote 696. *See Maguire v. Yanke, 590 P.2d 85 (Idaho 1979).* For further discussion of fence laws, *see* 1 Neil Harl, Agricultural Law, ch. 3.

(n200)Footnote 697. *See, e.g.*, Kan. Stat. Ann. § 29-101:

All domestic animals, other than cats and dogs, shall be enclosed with a fence sufficiently close, composed of posts and rails, posts and palings, posts and planks or palisades, posts and wire, rails alone, laid up in the manner commonly called a worm fence, or turf, with ditches on each side, of stone, or a hedge in existence on July 1, 1986, composed of either thorn or Osage orange.

For further discussion, see Leonard Carlman, *Wildlife-Private Property Damage Law -- Once Upon a Time in Wyoming There was Room for Millions of Cattle and Enough Habitat for Every Species of Game to Find Room*, 29 Land and Water L.Rev. 89 (1994); Craig R. Heidemann, *Fencing Laws in Missouri: Confusion, Conflict, Ambiguity and a Need for Change, 63 Mo. L. Rev. 537 (1998).*

See also Harlow v. Hayes, 991 S.W.2d 24 (Tex. App., 1998) (This case involved a suit by passenger in auto for collision with horse after the horse broke free from owner's fenced property. The court held that the jurisdiction's fencing requirements did not establish minimum standard for enclosures built to confine livestock).

See Duncalf v. Ritscher Farms, Inc., 627 N.W. 2d 906 (Ia. 2001), affirming, on appeal from the decision of the fence-viewers, the mutual obligation to maintain the fence although one landowner did not keep livestock on his property.

(n201)Footnote 698. *See, e.g.*, Or. Rev. Stat. § 607.007(2):

"Adequate fence" means a continuous barrier consisting of natural barriers, structures, masonry, rails, poles, planks, wire or the combination thereof, installed and maintained in a condition so as to form a continuous guard and defense against the ingress or egress of livestock into or from the lands enclosed by said fence. Such natural barriers shall include hedges, ditches, rivers, streams, ponds or lakes.

(n202)Footnote 699. *See, e.g.*, Kan. Stat. Ann. § 29-104:

Fences of the material and of the height and sufficiency aforesaid, and all brooks, rivers, creeks, ditches and constructions which shall be equivalent thereto ... shall be deemed legal and sufficient fences.

(n203)Footnote 700. *See, e.g.*, Kan. Stat. Ann. § 29-102:

All fences composed of posts and rails, posts and palings, posts and planks, or palisades, or of stone, or composed of posts and wires, or of those composed of turf, shall be at least four feet high. Those composed of rails, commonly called worm fence, shall be at least four and one-half feet high to the top of the rider, and shall be thoroughly staked and ridered, or if not staked and ridered shall have the corners locked with strong rails, stakes or posts. Those composed of stone shall be at least 18 inches wide at the bottom and 12 inches wide at the top. Those composed of turf shall be thoroughly staked and ridered, and shall have a ditch on the outside not less than two feet wide at the top and three feet deep. With respect to fences composed of rails or lumber, the bottom rail, board or plank shall not be more than two feet from the ground. All such fences shall be substantially built and sufficiently close to prevent domestic animals, other than cats and dogs from going through. All hedge fences shall be of such height and thickness as will be sufficient to enclose domestic animals other than cats and dogs.

(n221)Footnote 718. Kan. Stat. Ann. § 47-104.

(n222)Footnote 719. Kan. Stat. Ann. § 47-201 *et seq.*

In *Watson v. Thomas, 646 So. 2d 84 (Ala. App. 1994),* the plaintiff sued for conversion for the sale of 26 head of cattle. The cattle had apparently strayed upon the land of the defendant who took them to auction at the direction of the investigator of the State of Alabama Department of Stockyards and Brands. The court held that the jury made a reasonable inference that the cattle belonged to the plaintiff and, therefore, were unlawfully converted by the defendant based on evidence that the defendant did not check with any neighbors to ascertain whether they were missing any cattle and defendant admitted that he had a feeling that the cattle belonged to the plaintiff.

See In the Matter of: A Partition Fence between Donald Howell and James Leas, 2000 Ohio App. LEXIS (Oh. App. Mar 29, 2000). There, the court required that before adjoining landowners can be compelled to construct a partition fence, the landowners must receive benefits exceeding their expenses from the construction and maintenance of the fence. A landowner cannot be compelled to construct such a fence if the cost of construction exceeds the value of the land before and after the installation of the fence. Here, there was credible evidence that the cost of the fence would be greater than the increase in the value of the land.

Cutler, *When Man's Best Friend Bites 54 J. Mo. B. 24 (1998).*

See also: Burnaman v. Louisiana Farm Bureau Ins. Co. 714 So. 2d 799 (La. App. 1998). In this case, a farrier brought suit against owner of horse for injuries sustained while providing services. The court held there was no unreasonable risk of harm sufficient to establish strict liability claim. The animal owner was held to owe no duty to inform farrier that one horse had been chasing another horse one or two weeks prior to the accident. In *Diaz v. Coyle, 953 P.2d 773 (Ore. App. 1998)* suit was brought against the owner of dog that killed livestock. When owner admitted liability, jury awarded damages which were doubled. The matter was appealed to determine whether award was compensatory or punitive. The court held the award to be compensatory. In *Domenghini v. Evans, 70 Cal. Rptr 2d. 917 (1998)* a rancher injured in a cattle roundup of his and other's cattle on a cattle ranch owned by his mother and grandmother brought suit against owner of the calf that caused the injury. The court held no liability because of assumption of risk.

(n232)Footnote 729. *Jivden v. Law, 461 S.W.2d 451 (W. Va. 1995).*

(n233)Footnote 730. *Animal Protect v. Friends of the Zoo, 891 S.W.2d 1777 (Mo. App. 1005).* In *Schreiner Farms, Inc. v. Smitch, 940 P.2d 274 (Wash. App. 1997),* the court held that an elk owner did not suffer a "taking" when the state adopted a law that made it unlawful to "import, hold, possess, propagate, offer for sale, sell, transfer or release elk." The court reasoned that the landowner could sell the elk out of state and could use his land for other uses.

(n234)Footnote 731. *898 S.W.2d 329 (Tex. App. 1994).*

(n235)Footnote 732. *643 N.E.2d 983 (Ind. App. 1994).*

(n240)Footnote 737. *533 N.W.2d 664 (Neb. 1995).* The court noted that jurisdictions were nearly evenly split on the issue and identified the following jurisdictions as being those that allow the use of the doctrine. Idaho: *O'Connor v. Block, 326 P.2d 386 (Id. 1958);* New York: *Loeffer v. Rogers, 523 N.Y.S.2d 660 (N.Y. 1988);* Oregon: *Watzig v. Tobin, 642 P.2d 651 (Or. 1982);* Washington: *Scanlan v. Smith, 404 P.2d 776 (Wash. 1965);* and Louisiana: *Anderson v. McCarty, 519 So. 2d 324 (La. 1988)* (noting that the court did not directly affirm the use of *res ipsa*, but rather suggested that the fact that animals are out raises a presumption of negligence). Jurisdictions not allowing *res ipsa* include Utah: *Vanderwater v. Hatch, 835 F.2d 239 (10th Cir. 1987)* (applying Utah law); Colorado: *Barnes v. Frank, 472 P.2d 745 (Colo. App. 1970);*Indiana: *Taylor Bros. v. Sork, 348 N.E.2d 42 (Ind. App. 1976);* Kansas:*Wilson v. Rule, 219 P.2d 690 (Kan. 1950)* and *Walborn v. Stockman, 706 P.2d 465 (Kan. App. 1985);* Mississippi: *Hughes v. W & S Constr. Co., 196 So. 2d 339 (Miss. 1967);* Ohio: *Reed v. Molnar, 423 N.E.2d 140 (Ohio 1981);* and Washington: *Brauner v. Peterson, 557 P.2d 359 (Wash. App. 1976)* (apparently contradicting *Scanlan*). *See also Schneider v. Strigert, 888 P.2d 1284 (Wash. App. 1995),* in which the court construed an ordinance that made it unlawful for dogs to be at large. The court held that a violation of the ordinance was evidence of negligence but would not constitute negligence *per se*.

In Colgazier v. Fisher, No A-95-858 (Neb. App. Nov. 5, 1996 unpublished) the court held that while a plaintiff need not plead the doctrine of *res ipsa loquitur* to utilize the doctrine, its availability depends on whether plaintiff can establish the elements of the doctrine. Thus, plaintiff must prove that the occurrence is one which would not, in the ordinary course of things, happen in the absence of negligence. Further, the plaintiff must prove that the instrumentality which produced the occurrence was under the exclusive control and management of the defendant. In this case, the animal owner could explain how the animals were out -- there was a short in the electric fence surrounding the area where the animals were kept. As a result, the doctrine was deemed not to apply.

In contrast, in Landkamer v. Sherbek, No. 3528-63-97 (Custer County Dist. Ct. May 2, 1997), the jury returned a verdict in excess of one million dollars against a rancher for the death of a passenger in an automobile that had collided with one of the rancher's steers. The theory of the case involved the application of the doctrine of *res ipsa loquitur*. Here, the farmer had constructed a very sound fence and could offer no explanation as to why the animals got out. The jury apparently felt that they could not have gotten out except for some negligence somewhere and applied the doctrine.

These cases create an interesting dilemma for the farmer or rancher. The more effective the steps taken by the landowner to keep the livestock confined, the more difficult it will be to explain why they are on the highway, which may actually assist the plaintiff in establishing the prerequisites to a *res ipsa* case. On the other hand, if the landowner does not take such steps, it is easier for the plaintiff to establish negligence. The bottom line is that either the animal owners will be effectively treated as strictly liable for the animals that get out or will consider the desirability of minimally effective fences so that they can more easily offer an explanation as to why the animals are out.

In an interesting case involving the effect of diseased premises on animals, the court in Wilcox v. Cappel, No. A-95-798 (Neb. App. Dec. 3, 1996, unpublished) held that the tenant had taken the premises "as is" and therefore could not recover for damages suffered by cattle that had grazed on the land. In this case, the landlord had an oral year-to-year agreement with the tenant permitting the tenant to graze his cattle on the landlord's cornstalks each fall after the harvest. The tenant had to fence the animals away from irrigation pumps, center pivots, electrical boxes and so forth. The tenant did not fence the animals away from a run-down building that neither party had inspected since 1979 and which had not ever been used under the lease. The cattle ingested nitrogen fertilizer stored in the building so the tenant lost 130 newborn calves and additional calves were aborted. Total losses claimed were approximately $130,000 in actual damages. The court held that the landowner was not obligated to remove obvious sources of danger that a reasonable inspection would have revealed. Even though the tenant was not required to fence off the building, the tenant knew the building was part of the lease and that the cattle were near the building.

(n259)Footnote 756. Att'y Gen. Op. 96-42 (April 29, 1996). In a related opinion, the Attorney General held that "swine finishing facilities" were not even considered "farming" for purposes of the corporate farm statute. In that opinion, the Attorney General ruled that finishing facilities were commercial feedlots and therefore not engaged in farming as defined in Kan. Stat. Ann. § 17-5903(h). The opinion cited as authority *T-Bone Feeders, Inc. v. Martin, 236 Kan. 641 (1985),* which held that there was a distinction between a commercial feedlot and farming. The commercial feedlot was a specialized agri-business that was engaged in an agricultural endeavor but not engaged in farming. Att'y Gen. Op. 97-72 (Sept. 15, 1997). In conjunction with changing the corporate rules relating to swine production generally, the legislature also adopted, in 1994, Kan. Stat. §§ 16-1501-1506 which was designed to regulate production contracts regarding swine production.

(n260)Footnote 757. *See* Mo. Ann. Stat. § 350.016 and Okla. Stat. Ann. tit. 18, § 954). Several states now have statutes that specifically regulate production contracts in agriculture. *See, e.g.* Minn. Stat. Ann. §§ 17.90-.98, 514.995 (adopted in 1990); Wis. Adm. Code. § Ag. 101 (adopted in 1993); Kan. Stat. Ann. § 16-1501-1506 (adopted in 1994).

(n261)Footnote 758. *See, e.g.,* Idaho Code § 22-1301; Wash. Rev. Code §§ 20.01.038, 20.01.040; Fla. Stat. § 601.61; Ga. Code § 2-9-2 and Va. Code §§ 3.1-722.8, 3.1-722.14. In other states, the matter may be addressed under statutes that focus on specific aspects of the performance, such as payment. *See, e.g.,* Cal. Food & Agric Code § 56701; Tenn. Code § 43-15-101.

In at least one case, producers have been successful in challenging particular practices under the contracts. *See Brasswell v. ConAgra, Inc. 926 F.2d 1169 (11th Cir. 1991)* where the court upheld a judgment rendered in favor of growers on a fraud and breach of contract basis. In some other cases, plaintiffs have successfully invoked provisions of the federal Agricultural Fair Practices Act of 1967 *(7 U.S.C. § 2302). See Baldree v. Cargill, Inc. 785 F. Supp. 704 (M.D. Fla. 1990).* For a discussion of the various legal issues involved with production contracts, *see* Hamilton, *State Regulation of Agricultural Production Contracts, 25 U. Mem. L. CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions § 47.12

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 47.12 Federal Policy Issues Relevant to Agricultural Land.

[Go To Supp]

§ 47.12(a) General Concerns.

For many years, the regulation of private land use was viewed as primarily a local governmental function. This regulation tended to focus on how the land was used and on the establishment of acceptable land use patterns within the particular local jurisdiction. In recent decades, however, a "quiet revolution" has occurred that has shifted some land use control power from local governments to state governments. n759 Focus at this level has tended to be area-wide in nature and has been grounded on the general notion that the larger concerns of the area are more important than the private interests of individual landowners. Regulation of land use activities at this level therefore tends to seek to conform land use patterns to state or area-wide goals and concerns.

Historically, the regulation of agricultural activity has been considered predominantly the province of the federal government. n760 Federal regulation has encouraged and discouraged particular agricultural activities in order to keep national feed and fiber production goals of supply and demand in balance. More precisely, national agricultural policy has tended to pursue the following specific goals: 1) to raise farm level incomes; 2) to more efficiently allocate resources; 3) to increase national self-sufficiency in food and fiber; 4) to reduce price and income instability; and 5) to generate abundant, low cost food and fiber supplies for the nation's consumers. n761 Very little concern was given to the question of how agricultural land was used except in the context of soil conservation. n762

Historically, the Department of the Interior has managed the public lands of the nation. With the adoption of the Endangered Species Act of 1973, n763 the Department assumed responsibility for the protection of plant and animal species that were threatened or endangered. Until recently, there was some uncertainty as to whether the regulations that have been adopted to protect habitat of such species could be imposed upon private landowners. Under § 9 of the Endangered Species Act, it is unlawful to "take" an endangered species. The Act defines "take" to include harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect or attempt to engage in any such conduct. n764 By regulation, the Department defined harm to include habitat modification or degradation that actually kills or injures wildlife by significantly impairing essential behavioral patterns, including the breeding, feeding or sheltering. n765 In earlier case law, n766 it had been held that habitat modification could "take" an endangered species though that case involved state action on public (albeit state) land. In Babbitt v. Sweet Home Chapter of Communities for a Greater Oregon, n767 the

power to regulate habitat, even if located on private land, has been recognized under the statute. The Court found that the Secretary's definition of harm was reasonable and within the ordinary definition of "harm" so long as actual injury or harm results to the endangered species. In addition, the Court found that the central purpose of the Endangered Species Act includes the conservation of ecosystems upon which the endangered species depend and that Congress intended that the statute provided comprehensive protection. Finally, the court found that Congress, in authorizing permits for the incidental taking of species, evidenced an intent to protect habitat. In a concurring opinion, Justice O'Connor indicated that liability for a taking would not be imposed unless it was foreseeable that the activities which modified the habitat would result in death or injury to the species. Further, Justice O'Connor suggested that the way the Court resolved the matter did not compel the Secretary to include habitat modification in the regulatory scheme, only that it was not unreasonable to do so. Thus, either Congress or the Secretary could narrow the scope of the "harm" issue.

The national focus on environmental concerns and land use problems during the decade of the 1970s had a significant impact on federal farm policy. As a result, the national farm program has assumed an additional role regarding agricultural land use. It is now an established part of the national farm program that farmers who wish to participate must adopt and implement approved conservation plans, and they may not convert certain fragile lands or wetlands to agricultural production. In addition, other federal-level concerns regarding resources use have had an influence on the development of nationally acceptable agricultural land use patterns. The Federal Farmland Protection Policy Act, n768 for example, requires federal agencies to assess the impact of their proposed programs on the conversion of farmland to non-agricultural uses. Similarly, the Surface Mining Control and Reclamation Act n769 mandates particular protection for "prime farmlands." The Conservation Reserve Program n770 is designed to encourage the removal of over 40 million acres of farmland from agricultural production. These and other programs have injected an element of land use concern into federal farm policy and policy has been modified as a result to increasingly promote an emerging national agricultural land use stewardship concept that posits that how and where agriculture occurs is a fundamental national concern.

The lead federal agency for dealing with agricultural land and policy issues has long been the United States Department of Agriculture (U.S.D.A.). In 1994, Congress adopted a proposal for a major reorganization of U.S.D.A. n771 This reorganization pares the number of agencies within the department from 42 to 29 and consolidates a number of farmer services such as crop insurance, price supports and farm credit into a single agency. The plan also authorizes the closing or merging of a significant number of county or area field offices and should reduce the number of employees within the Department by 7500 over five years. Among other things of relevance to the matter of agricultural land use, the plan provides for the creation of an undersecretary for food safety which would assume most of the duties of that type presently found in the Agricultural Marketing Service. Another new undersecretary would oversee food programs, such as food stamps and school lunches. Farmer's Home Administration "loans of last resort" programs are eliminated. The Soil Conservation Service is renamed the Natural Resources Conservation Service. Finally, the bill created a new appeals division to expand the National Appeals Division of A.S.C.S. to apply throughout the Department. One important issue is whether the federal government or the states will control activity on public lands. Although "the public lands" of the United States tend to be thought of as federal lands, state-owned land is also public land. One such kind of state land located within the federal public domain are the numbered sections that were historically given to the states to be managed as "school lands." These typically are not fenced or otherwise separated from the federal lands and will often be considered by the public as susceptible to the same uses as the federal land. In a case involving the adequacy of royalty payments under a coal lease, the court held that the state had an irrevocable duty to manage the school lands for the sole benefit of common schools and to receive "full value" from any dispositions of such lands. n772

§ 47.12(a)(1) Regulation of Biotechnology.

There has been a growing interest in the ability of technology to meet growing feed and fiber needs. This interest raises difficult questions as to the role government should play and the extent to which governmental regulatory authority can direct or redirect the future of agriculture. In recent years, the use of technology has resulted in the patenting of new

mice and oysters and the development of quite a range of disease-resistant bacteria. n773 A number of very difficult legal and ethical issues are raised by these developments that, while they may not directly affect questions of agricultural land, certainly affect the long-term nature of the industry. For example, will safety and ethical concerns result in "new" or just "more" regulation? n774 Will the new technology pose risks that cannot be readily dealt with? n775 Are risk management procedures adequate to deal with known and unknown risks posed by biotechnology and the release of biotech material? That is, will biotechnology cause untreatable diseases, radically alter the balance of nature within ecosystems, develop new strains of super pests, etc? Which products should be regulated? Is there a defensible basis for distinguishing between regulation of human as opposed to animal related biotechnology -- particularly food additives and hormone implants? Will ethical considerations play a significant role in regulation? Will biotechnology have a sufficient impact on agriculture to cause any fundamental restructuring of the industry? The current regulatory framework involves a number of agencies outside of agriculture. These include National Institutes of Health (N.I.H.) and The National Science Foundation (N.S.F.) which promote basic research. N.I.H. regulates bio-medical research and recombinant D.N.A. research financed either by federal funds or at institutions or facilities that receive N.I.H. monies. N.S.F. monitors environmental research and finances research with grants which are subject to N.I.H. regulations and guidelines which prohibit some types of experiments and mandate physical containment. Private company research compliance with N.I.H. guidelines is presently voluntary. The Food and Drug Administration (F.D.A.) regulates the development of new drugs, vaccines, food additives, medical devices, etc. These are reviewed for both safety and effectiveness. Finally, the Environmental Protection Agency (E.P.A.) reviews primarily non-food and non-drug biotechnology products to assess risks and benefits to society. In addition, the United States Department of Agriculture (U.S.D.A.) regulates some research, testing and production of agricultural biotech products. There is very little statutory authority in place to regulate biotechnology. Statutes include the National Environmental Policy Act (N.E.P.A.), n776 the Federal Food, Drug and Cosmetics Act (F.F.D.C.A.), n777 the Occupational Safety and Health Act (O.S.H.A.), n778 the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), n779 the Toxic Substances Control Act (T.S.C.A.) n780 and the Resource Conservation and Recovery Act (R.C.R.A.). n781 As a result, most efforts at regulation occur under a coordinated framework for regulating biotechnology that is administered under the auspices of the Office of Science and Technology Policy, n782 and policy statements promulgated by various agencies n783 and revisions and amendments thereto. There has been surprisingly little litigation involving biotechnology. Most cases have been concerned with the basic direction research should take n784 or with compliance with environmental impact statement (E.I.S.) requirements. n785

§ 47.12(a)(2) Regulation of Farm Chemical Use.

Chemicals play a major role in most contemporary agricultural production. These include fertilizers which encourage the growth of crops and other desirable plants, herbicides which inhibit growth of undesirable plants; insecticides, fungicides and other pesticides which kill insects and other plant and animal pests which threaten the crops; hormone implants which stimulate animal growth, and fuels, solvents and other chemicals that are used to maintain or use farm equipment. Many of these chemicals are sufficiently dangerous that they are considered toxic or hazardous. Studies of pesticide levels in ground water and of carcinogens in corn, apples, tomatoes and peaches have raised much concern that the use of such chemicals on the farm can have devastating effects off the farm. n786 Until relatively recently, the law primarily addressed these concerns as a question of civil liability between the chemical user and the individual harmed. Federal statutes have been adopted which focus specifically on hazardous or toxic chemicals. These statutes typically have not had a serious impact on many agricultural producers though many are concerned that a framework has been erected that could at some future date be used to restrict farm use of these chemicals. The major thrust of governmental regulation of hazardous chemicals has been expressed through licensing procedures that were either imposed on the manufacturer n787 or on the chemical applicator. n788 The major reason for this approach seems to have been the view that the party at greatest risk was the actual chemical user or applicator who most likely would be harmed as a result of mislabeling or misapplication of the chemicals. It seems to have been comfortably assumed that if a particular chemical was properly registered, labeled and applied, there was little risk of causing harm to anyone else. However, many of these chemicals have been discovered to be inherently dangerous or at least capable of long-term or far-reaching adverse impacts and that their mere *presence* on the premises, in the soil or in the groundwater, rather than

mislabeling or *misapplication*, posed considerable risks to society at large. As a result, in addition to regulation of the manufacture and application of the chemicals, the law now addresses such additional concerns as the manner in which the chemicals are stored, how they are transported, how the residues and empty containers are discarded, n789 how the public should be informed of the composition of chemicals kept on the premises, n790 and whether the chemicals are likely to be present in such places as public water supplies. n791 The federal acts that address hazardous and toxic chemicals may be classified as acts which focus primarily on the existence or availability of certain chemicals (which are considered hazardous by nature), those which focus on specific impacts that flow from chemical use (which are deemed harmful by virtue of where that impact is felt, how high the level of use, whether they are in underground storage tanks, etc)., and those which require the public disclosure of the presence or composition of such chemicals. n792

§ 47.12(a)(3) Protection of New Varieties of Plants.

Since the 1930s, patent law has permitted the protection of sexually reproducible plants. n793 This protection was available to "whoever invents or discovers and asexually reproduces any distinct and new variety of plant, including cultivated sports, mutants, hybrids, and new found seedlings, other than a tuber propagated plant of a plant found in an uncultivated state." n794 Such applications are treated the same as any other application and must conform to the requirements of the law of patents, including novelty and non-obviousness. Sexually reproducible plants may possibly be protected under the general utility patent provisions. n795 According to the holding in the case of Diamond v. Chakrabarty, n796 which upheld the grant of a patent for a particular strain of bacteria that had been developed to consume oil, a developer of a new sexually reproducible plant might treat the discovery as simply a new "composition of matter." The rationale of this approach is that the patent laws are not limited to protecting only non-living things and if the inventor can show that the new plant satisfies the applicable legal requirements, the patent laws do not expressly or implicitly prevent the issuance of a patent.

Sexually reproducible plants are more likely to be protected under the provisions of the Plant Variety Protection Act (P.V.P.A.). n797 This statute, adopted in 1970, grants patent-like protection through a certificate to the developer of "any novel variety of sexually reproducible plant (other than fungi, bacteria, or first generation hybrids) who has so reproduced the variety ... ." n798 This protection is not administered through the Patent Office but rather through the Department of Agriculture. Under the statute, it is an infringement of the exclusive rights granted by P.V.P.A. to sell or use for propagation the novel variety without the permission of the P.V.P.A. certificate. Farmers have long enjoyed an important exception to the Plant Variety Protection Act limitation on sales. This was the so-called "brown bag" sale provision which enabled farmers to plant and then save a portion of the seed produced for use in seeding the next year's crop. Under certain circumstances, this exception also authorized the farmer to sell the seed to other farmers for their seeding needs. Of course, it is not a violation of the statute for the farmer to sell the crop that is produced from the protected seed. Seed companies have been concerned that farmers were using this exception to compete with them in ways that seriously threatened their businesses. The United States Supreme Court has now decided a case which explored the limitations in the statute on the farmer's exception. In Asgrow Seed Co. v. Winterboer, n799 the court reviewed a decision by the Federal Circuit Court of Appeals n800 which upheld, almost without limitation, the right of the farmer to sell to other farmers protected varieties of seed without violating the provisions of the Plant Variety Protection Act. The Supreme Court reversed, construing the exception as applying only to seed that the farmer has saved for his or her own replanting but then has changed his or her mind about replanting it. That seed may be sold to other farmers. As a result, there is no general right of farmers to sell protected seed to other farmers for planting purposes. After the Federal Circuit decision, Congress passed legislation that significantly amends the Plant Variety Protection Act. The amendments retain the exemption for the farmer to save seed for replanting but eliminate the exemption for "brown bag" sales to other farmers. n801

§ 47.12(a)(4) Herbicides and Pesticides.

As part of the Federal Government's effort to oversee the introduction of herbicides and pesticides into the ambient

environment and to ensure that farmers and ranchers have adequate resources to deal with plant pests, Congress adopted the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA). n802 Under this statute, any composition that is used as a pesticide must be registered with the Environmental Protection Agency before it can be sold or distributed. In order to secure registration, the applicant must submit required data regarding the effects of the pesticide on the environment. n803 As part of the registration process, the pesticides are classified as being of general or restricted use. n804 If the pesticide is classified as restricted, it may be applied only by or under the direct supervision of a certified applicator. n805 States are specifically authorized to administer an approved applicator certification program. n806 Under the statute, it is unlawful for the pesticides to be misbranded. n807 Something is considered misbranded if the label bears any statement that is false or misleading, does not bear the registration number, does not contain proper instructions regarding directions for use, appropriate warnings, etc. n808 There has been some concern regarding the effect to which state law regarding implied warranties of fitness for particular purposes where the pesticide or herbicide does not perform as specified on the product label. The act provides that states are not to impose or continue in effect any requirements for labeling or packaging in addition to or different from those required under the federal law. n809 The question has been whether the state law of sales constitutes such an addition. This has been particularly critical since there is no remedy available to the farmer against the pesticide manufacturer under FIFRA in the event that harm is suffered as a result of the failure to properly label the product. In several cases, courts have held that FIFRA preempts both state statutory and common law damage claims where the claim is based on the label. See *Andrus v. Agrevo U.S.A. Co.*; n810 Cipollone v. Liggett Group, Inc. n811 Welchert v. American Cyanamid, Inc. n812 Taylor AG Indus. v. Pure-Gro. n813 Not only that, misrepresentations, and even advertising, point-of-sale signs and other informational materials, made by the company or agents separate from the label are also preempted where they merely repeat information contained in the label. *Kuiper v. American Cyanamid Co*. n814 To the extent that the label makes assertions that the herbicide was reasonably fit for the purposes stated in the label, the label has been held to create an express warranty of merchantability. This includes statements that the product will not harm the crop to which it is applied. FIFRA has been held to preempt these express warranties as well. *See Gooch v. E.I. Du Pont De Nemours & Co*. n815 In contrast, where the action is entirely grounded in state common law, no preemption issues arise. n816 State law-based claims by workers for the consequences of being exposed to cancer-causing products have not been held preempted. n817 In Hawkins v. Leslie's Pool Mart, Inc., n818 the court addressed a damage claim brought by owners of a swimming pool against the manufacturer of chlorinator tablets, alleging that she was injured when she ingested gaseous fumes after opening the container of tablets. The court held that the state law claims that the manufacturer failed to adequately warn of risk of sudden decomposition and sudden reactivation of the tablets or provide adequate directions for opening, closing and storing the container were preempted by FIFRA. The FIFRA preemption of the packaging claim was limited to the area of child-resistant packaging since the EPA has not specifically considered the particular packaging in dispute in this case. Thus, the specific claim that the manufacturer had negligently failed to safely package the tablets was not preempted.

§ 47.12(b) Federal Preemption.

The federal interest in agricultural land use poses potential problems from a land use planning point of view because the particular kinds of land use that are promoted or protected by the various federal agricultural programs may differ from the uses actually permitted or encouraged by the state and local planning schemes. Federal and state policies have already come into conflict regarding the interrelationship between agricultural use and environmental concerns. n819 The nature of these conflicts may vary from disagreements over something as fundamental as the extent to which land may be defined as "agricultural" in order to secure particular benefits that might be derived from such status. Conflicts may likewise arise because the underlying policies of federal programs are very different from local land use programs or regulations with respect to ultimate preferences regarding land use patterns. Finally, federal agricultural policies may limit the content and the context of the local program choices regarding goals and objectives.

State and local authority typically is preempted any time it conflicts with federal policy or stands as an obstacle to the accomplishment of federal program objectives. n820 Similarly, preemption occurs when it is clear that the federal regulation is intended to be pervasive or seeks to occupy the field. n821

Perhaps the most subtle and difficult form of preemption occurs where the effect of the local restriction simply deters someone from participating in a federal program and thereby frustrates the ability of the federal program to achieve its particular objectives. The growing pervasiveness of the federal presence with respect to the interrelation between agricultural land use and farm production makes it possible to argue that any local land use regulation that has the effect of deterring a farmer from participating in federal farm programs must give way to the federal regulation because the local plan actually constitutes an obstacle to the accomplishment of the federal objectives. n822

It has already been held that the federal interest in land use regulation prevails over state authority regarding private land use activities conducted on federal public lands. n823 Likewise, the federal interest has been held to dominate with respect to the private use and cultivation of private agricultural lands within federal reservations. n824 Federal statutes have specifically sought to influence the use of private, agricultural land throughout the nation where the particular use implicated national conservation and stewardship policies, goals or objectives. n825

As a result, consideration should be given to federal agricultural policy as an integral part of local and state land regulation and planning in order to minimize as well as to manage the potential for conflict between the two.

§ 47.12(c) Particular Federal Program Objectives: Agricultural Production Reduction.

Since the early 1930s, the federal government has played a major role in shaping the national patterns of agricultural production. n826 These programs were developed primarily in response to the economic crisis in Agriculture during the Depression. n827 Although the initial act was declared unconstitutional, n828 it was largely reenacted in the Agricultural Adjustment Act of 1937 and has served as the general pattern for farm programs since that time.

The primary purpose of the farm programs was to stabilize agriculture by leveling out severe swings in commodity prices. n829 It has been thought that if the historic "boom and bust" cycles of agriculture could be avoided, the nation could enjoy abundant supplies of food and fiber and farmers would enjoy higher incomes. n830 The key to controlling price swings, of course, has been the ability to control production and avoid the large scale overproduction which depresses farm commodity prices. Since the decision in *Wickard v. Filburn*, n831 there has been a strong national sentiment that participation in federal programs should be voluntary.

The dilemma for government has been how to effectively induce farmers to participate in order to control production without imposing controls that destroy farm income levels. The answer has been to separate national food production goals from farm income goals and to orient the programs toward production reduction while at the same time offering the farmers an "income supplement" as an inducement to participate. n832 That way, the level of a farmer's income is not threatened by participation in the program but the government can still achieve a measure of control over crop production.

The way that scheme works is that the farmer is induced to participate in the programs by the promise of minimal price floors. n833 Deficiency payments may be made if prices do not reach established market levels. Farm income may be further increased as a result of direct income supplementation. Post-harvest non-recourse loans from the government guarantee that the crop will bring a certain minimal return.

In exchange for these "guarantees," the farmer contracts with the government to produce the crop subject to governmental restriction. For example, it may be required that the farmer not plant more than his historic base acreage for particular program crops. It may be that the farmer will be required to idle a particular portion of the land in order to participate. It is through restrictions of this type that government manages production.

The impacts of federal farm programs on land use patterns is little understood. In the past, the size of the farm's acreage base for program crops n834 determined the price support income that the farmer received. This resulted in farms

specializing in a single crop or at least in a limited number of commodities. To plant anything else jeopardized the base. This also contributed significantly to the reluctance of farmers to rotate crops. This resulted in very rigid land use patterns.

In recent years, farmers have been given much more flexibility in terms of how many other crops may be raised without permanently reducing the base for particular program crops. This has given the farmer a larger measure of control over how the land would actually be used for crop production. On the other hand, changes in the federal farm program have required farmers to adopt approved conservation plans where the land could be described as "highly erodible."

The federal price support program is considered to be voluntary and farmers participate through contracts entered into with the Commodity Credit Corpora-tion and administrated through the Agricultural Stabilization and Conservation Service. Thus it is possible and indeed probable that many farmers will elect not to participate in the federal programs, despite what many consider to be significant economic pressures to participate. A census of agriculture revealed that in 1987 and 1988, fully two-thirds of all farms, or 1.4 million farms, did not receive direct support from government programs. n835 These farms which did not receive program payments account for approximately one-half of the land in farming in the United States and approximately one-half of the sales of farm products. n836 In 1996, Congress enacted the Federal Agriculture Improvements and Reform Act of 1996, commonly referred to as the 1996 Farm Bill. This makes major changes in federal farm programs and is designed to phase out the existing price support structure in the next seven years. It essentially freezes enrollment and then gradually reduces the support rate until it is eliminated. The goal of these changes is to give the farmers more flexibility in planting decisions. The new act retains most of the conservation compliance programs that have been incorporated into the farm program since 1985, including the swampbuster and sodbuster programs. In addition, it extends the Wetlands Reserve Program, gives the Conservation Reserve Program more of an environmental focus and places a greater emphasis on crop insurance than upon governmental assistance in emergencies. n837 This, in turn, has limited farmer control over land use decision making somewhat.

Because of the nature of the compliance conditions (acreage reduction, conservation compliance and so forth), it must be observed that farmers who wish to participate in federal programs have less control over how the farmland is used than farmers who do not participate. There are significant public costs associated with these federal programs which has caused much criticism. Congress has apparently determined, however, that the need to reduce overproduction and its attendant costs is greater than these program costs and there has been little in the way of serious effort to change the basic nature of these programs. Indeed, on the positive side, it may be said that there is a significant public benefit in the sense that without the farm programs, despite their cost, much of the conservation activity that has occurred in the last 8 years would not have occurred. Perhaps unfortunately, since the programs are voluntary, the government cannot achieve its production reduction objectives unless a significant number of farmers participate. Therefore, the inducement must be sufficiently valuable to attract more farmers than not. This has seemingly been the case. The economics of the farm marketplace and the "sweetness" of the inducement to participate appear to be such that most moderate or larger farm operators judge that the return from participation, despite the relinquishment of some control over how the land is farmed, is greater than the return would be without such participation.

§ 47.12(d) Particular Federal Program Objectives: Protecting Land for Agriculture -- Federal Farmland Protection Policy Act.

Primarily as a result of the conclusions reached by the National Agricultural Lands Study, n838 Congress adopted the Farmland Protection Policy Act of 1981 n839 as part of the Agriculture and Food Act of 1981. n840 Under the Act, the federal government, through U.S.D.A., is required to monitor the conversion of agricultural lands to non-agricultural uses and each department is required to develop a means by which adverse impacts on farmland that result from programs of each department may be identified. These impacts are to be considered by each department as a part of programmatic development and to the extent to which it is possible, adverse impacts are to be avoided or lessened. n841

The concern of the Act is clearly with the impact federal programs have on the conversion of agricultural land to non-agricultural uses. The Act expressly states that it "does not authorize the federal government to regulate the use of private or nonfederal land." n842

The Act nevertheless may have a significant impact on local land use planning and objectives. The Act was asserted, in one case, n843 as justification for an action by the Department of Transportation to locate a federally funded highway project in a historic site which contained a wildlife sanctuary and protected parkland. One of the Secretary's arguments in the case was that it would be inconsistent with the objectives of this federal Act to locate the project elsewhere because that would result in the irreversible conversion of farmland. n844

Although the Act is concerned with the impact of federal program decisions on agricultural land availability, in 1985, the Act was amended to require greater consideration of state farmland protection policies by the federal agencies in those locations in which federal projects are to be undertaken in agricultural areas. The Act does not require the federal government to defer to the state policies or to alter the project to accommodate the state interest. n845 Unfortunately, if the federal agency is not cooperative, all the Act insures is that the federal agency give some "consideration" to the state policies and then only in the context of the required identification of the adverse impacts of the project and consideration of alternatives. The Act expressly provides that it not be deemed to provide a basis for any action, either legal or equitable, by any person or class of persons, to challenge any federal project, program or activity that may affect farmland. n846 The Act was amended, however, to provide that the Governor of an affected State, where a State policy or program exists to protect farmland, may bring an action in the Federal District Court of the district where the federal program is proposed to enforce the requirements of the Act that require the federal agency to identify adverse impacts and consider alternatives that might more favorably protect the farmland. n847

The Act has been described as a "scarecrow of farmland protection -- a feeble attempt to scare away the conversion of agricultural land to non-agricultural uses, with no real force behind it." n848 Nevertheless, the Act represents an official policy position that federal agencies must increase their sensitivity to the issue of farmland conversion and at least formally consider the impacts of their own programs in that issue. In terms of the impact of federal policy on local land use activities and planning, even a "scarecrow" can have an impact and the mere presence of the federal statute may deter some development that otherwise might occur.

§ 47.12(e) Particular Federal Program Objectives: Protecting Land for Agriculture -- "Prime Farmlands."

In 1977, Congress adopted the Surface Mining Control and Reclamation Act n849 to deal with environmental concerns raised by strip mining of coal. The Act is significant with respect to agricultural land for two important reasons. First, in order to implement the Act, the Soil Conservation Service was charged with the development of a land classification scheme that could be used to identify the most important lands that were likely to be adversely affected by the strip mining. This resulted in the development of the "prime farmland" concept which has subsequently become a cornerstone of most local land use efforts to preserve and protect the "best" of the nation's farmlands for agricultural use.

Second, the Act provided that when the surface mining of coal occurred in areas designated as "prime farmland," special requirements relating to the restoration of the land were imposed on the mine operator who must demonstrate a "technological capacity" to restore the area, within a reasonable time, such that it was capable of producing the equivalent or higher crop yield as un-mined farmland in the area under equivalent levels of management. n850 In most cases, this has meant that the mine operator had to remove the soil layers separately, segregate and stockpile them, properly replace and regrade the soil and establish that soil productivity was returned to the same levels of crop yield as un-mined soil of the same soil type in the same area. n851 The special restoration provisions were challenged in *Hodel v. Indiana* n852 and were upheld by the Supreme Court. n853

The *Hodel* case is significant for an additional reason. With respect to the interrelationship between federal agricultural

land policy and state and local governmental regulatory authority, it was argued in the case that the Act abrogated state authority under the Tenth Amendment by mandating particular land use planning policies and controls since the state was required to essentially define "prime farmlands" in the same way the Secretary of Agriculture does under the Act. n854 The court responded by refusing to classify the Act as similar to a zoning ordinance typically enacted by state and local governments. In contrast, the Act was considered to be concerned with regulating conditions and effects of surface coal mining and therefore the restrictions on land use were seen as only temporary and incidental to that purpose. Further, the court held that the federal government is precluded, under the Tenth Amendment, from regulating states only where the state is being regulated as a state, where the regulation addresses matters that are indisputably attributes of state sovereignty and where it is apparent that the state's compliance with the federal law would directly impair its ability to structure integral operations in areas of traditional functions. Since none of those conditions could be satisfied in the case, the court found there was federal authority to protect the production capability of farmland if that was deemed to be in the interest of the federal government. Although the federal government has not sought to assert that authority directly beyond the area of surface mining, the fact that farmer participation in federal farm programs is conditioned upon the adoption and implementation of approved conservation plans suggests that the federal government has an interest in protecting the productive capacity of agricultural land and will assert that interest by exercising a significant measure of control over how the land is used or farmed.

According to data released by the Soil Conservation Service (now called the Natural Resources Conservation Service), the states with the most prime farmland are Texas with 38.8 million acres, Kansas with 23.4 million, Illinois with 21 million, Minnesota with 20.6 million, and Iowa with 18.6 million. n855 Since 1982, Kansas has lost 122,700 acres of prime farmland to urban development. In contrast, Texas has lost nearly a million acres in that same time. n856

§ 47.12(f) Particular Federal Program Objectives: Protecting Land for Agriculture -- Estate Planning Land Valuation.

Because farms and ranches represent a substantial investment in land, equipment and buildings, farmers and ranchers are very concerned with the impact of land-related taxes. Where such taxes are of concern, experience suggests that farmers are encouraged to keep the land available for agricultural use as a result of programs which minimize land valuation tax impacts.

As a general rule, federal estate taxes, when in effect, are calculated on the basis of the fair market value of the assets, including the land, in the estate at the time of death. This may cause problems for farmers or ranchers which can only be dealt with through effective advance planning since, in many cases, the fair market value of the land will reflect its nonfarm development value which is generally higher than its farm use value. This, in turn, may force the sale off part of the farm to satisfy the tax.

The Tax Reform Act of 1976 introduced some estate tax relief for farmers and ranchers by permitting actual agricultural use valuation of the farm property instead of valuation based on highest and best use. n857 This use value option is particularly useful to farmers situated on the urban fringe or in areas pressured by development where the value of the land as a development site for a new subdivision or shopping center is likely to greatly exceed the value of the land for agricultural production purposes. Congress apparently realized that reliance upon highest and best use for purposes of valuation was in fact forcing many farm estates to sell out in order to pay death taxes. Section 2032A was therefore adopted to provide an incentive to farmers to keep their land in agricultural use from generation to generation.

A number of criteria must be satisfied to take advantage of this exception to the general rule of valuation. First, the taxpayer must be engaged in farming or a small business. n858 Second, separate requirements must be met by both the decedent's estate and by the real property that is to be valued by the section. For the estate to qualify under § 2032A, the decedent must have been, at the time of death, a citizen or resident of the United States. The estate must meet two percentage composition tests: the adjusted value of the real and personal property used in the farm or closely-held business must comprise 50% or more of the adjusted value of the decedent's gross estate; and "the qualified real

property" must comprise at least 25% of the adjusted value of the gross estate of the decedent. n859

Third, a pre-death period of use requirement must be satisfied. The real property that is used in satisfying the 25% test noted above must have been owned and used as a farm for farming purposes by the decedent or a member of the decedent's family for at least five of the eight years ending at the decedent's death. n860 The requirements of ownership and devotion to a qualified use do not appear to have to be continuous, but merely have to total five years in the eight-year period. Also the real property does *not* have to have been used for a qualified use on the date of the decedent's death as is the case with the 50% test.

Fourth, for the estate to satisfy the 25% requirement under § 2032A(b)(1)(B), a "material participation" test must also be met by the decedent or a member of the decedent's family for the five of eight years period prior to decedent's death or date of retirement. A number of important factors have been identified in the government regulations that can be used in determining if the material participation requirement have been met:

1. Physical work and participation in management decisions are required. These include such things as consultation and decision making.

2. Involvement in a substantial number of decisions.

3. Regular inspections.

4. Financial exposure and investment responsibility.

5. Utilization of equipment and machinery.

6. The place of residence.

7. Any other relevant factors.

Since 1981, the requirement of material participation for a surviving spouse has been considered satisfied by a somewhat lesser involvement standard of "active management." Special rules also relate to the satisfaction of the material participation requirement by a decedent who is or disabled.

Fifth, the property in the estate must be passed from the decedent to a qualified heir of the decedent upon death. n861 The definition in the Code further provides that if a qualified heir disposes of any interest in the property to any member of the heir's family then that person shall become the qualified heir with respect to that interest. n862 If the property is transferred from one "qualified heir" to another, the latter steps into the shoes of the former and the latter is deemed to have received the property from the decedent.

The material participation and use requirements continues beyond death and must continue for a period of three years or more during the eight years following decedent's death or there is a recapture of the tax savings. Since 1981, § 2032A(c) allows for a two year grace period in which the qualified heir may wrap up his or her own affairs before beginning material participation in the farm of the estate without affecting the requirements of § 2032A.

The intent of Congress in enacting § 2032A appears to be to tax real property used in farming on the basis of its agricultural use value. Since the application of § 2032A may reduce the value of the land up to 60% and may result in a tax saving of up to $750,000, n863 there appears to be a significant incentive to keep the land in an agricultural use from one generation to the next.

The conservation easement is another estate planning tool that is being developed and increasingly utilized, allowing the landowner to sever the right to preserve the land's natural habitat. The landowner may transfer this right to a trust or

other public interest entity, which becomes a protector of such transferred rights. The landowner may continue to use all retained rights, unless contrary to the conservation easement. The diminution in value of the property that may result from creating a conservation easement is deductible from the property taxes in several jurisdictions. Two goals realized in creating a conservation easement are (1) lightening the landowner's tax burden and (2) ensuring the conservation of the biological condition of the land. n864

Recent changes in the Internal Revenue Code may encourage a greater use of conservation easements as a means by which fragile farmland may be protected. I.R.C. § 170 now treats "qualified conservation contributions" as charitable contributions for which the donor is allowed to take a deduction for income tax purposes. n865

Similarly, Section 508 of the Taxpayer Relief Act allows the executor of the estate of a farm decedent dying after Dec. 31, 1997, to exclude from the decedent's gross estate up to 40% of the value of land subject to qualified conservation easements. n866

§ 47.12(g) Particular Federal Program Objectives: Protecting Land for Agriculture -- Influencing Particular Use Patterns by Requiring Land to Remain Idle.

From time to time, the federal government has required that farmers idle a portion of their land in order to participate in federal price support programs. These requirements are variously described as "set aside" or "acreage reduction program (ARP)" lands. In essence, the acreage constitutes a specified portion of the farmer's lands which is not to be used to produce crops. The policy reason for such a requirement is the desire of the federal program to limit overproduction of certain commodities. Since the requirement is imposed in any given year as a result of a determination of the Secretary of Agriculture that it is needed, in some years there will be an acreage reduction requirement while in others there will not. n867 This, of course, encourages the farmer to keep the land available for agricultural use and not convert the set aside acres to a permanent non-agricultural use. Once the land is set aside for program purposes, it is most difficult for the farmer to use that land for anything else. Even use of the land for grazing is severely restricted. This feature of the program, as a practical matter, insures that the affected acreage will essentially be idle. In recent years, acreage reduction requirements have been as high as 15% of the program acres for some commodities. It is doubtful that this kind of requirement causes much land to be shifted from agricultural use to non-agricultural use. However, it does limit the kind of activity that may occur on significant portions of the farmer's lands.

§ 47.12(h) Particular Federal Program Objectives: Protecting Land for Agriculture -- Influencing Particular Use Patterns Through Allotments for Particular Uses.

Although production allotments have been a major part of the federal farm program, n868 these have never been popular with the agricultural sector because they are thought to grant too much control to the government over the actual farming operation. There are two areas of agricultural production where allotments or quotas still have some currency n869 and, while they have a relatively minor effect on agricultural land use as a whole, they do have a significant impact on the production of these two commodities.

Tobacco production is subject to national marketing quotas which are apportioned among the several states in which tobacco is produced. n870 The Secretary has authority to convert the marketing quota into specific acreage allotments, n871 or into production poundage quotas. n872 Tobacco allotments run with the land n873 and are transferrable, n874 provided a copy of the lease or sale agreement is filed with the local county committee. n875 The allotment program makes it very difficult for a non-allotment or quota holder to use the land for the production of tobacco, even though the land may otherwise be ideally suited to such an activity.

Peanuts are raised under an allotment program as well. Here, the federal government established a national poundage quota which is then allocated to states and, in turn, to individual farms. n876 Like tobacco allotments, these quotas are transferrable, either by sale or lease, from one farm to another. n877 Specific quotas may be reduced as a result of

non-production and, as a result, the additional production capacity may be allocated to other farms. n878 Quotas are particularly important in terms of limiting agricultural land use because the sale of any peanuts that are not represented by a quota or that exceed the farm's quota are subject to penalty. n879 This creates the interesting result that while the statute does not directly prohibit anyone from raising peanuts, only those with quotas may market them.

§ 47.12(i) Particular Federal Program Objectives: Requiring Conservation Compliance.

Since the mid-1980s, the federal price support law has mandated that all farmers who wish to participate in the federal programs but who farm "highly erodible" lands must have an approved conservation plan in place on the farm. n880 If such a plan is not developed by January 1, 1990 or within two years after the Soil Conservation Service has completed a soil survey for the particular farm, the farmer is declared ineligible for federal program benefits. n881 Because of the importance of participation in federal farm programs, these plans significantly influence the kind of farming practices a farmer may engage in and hence structure as well as limit the kind of agricultural activity that may occur on the land.

The determination of what constitutes "highly erodible" land is made by the Soil Conservation Service based on the average annual erosion rate and the soil type of the land, typically as a result of normal soil surveys. It may, however, be made without an on-site inspection. n882 A determination may be requested, where one has not previously been made, and the Service must respond in writing, within 15 days of receipt of the request, if possible. n883

Two significant land use impacts associated with these conservation plans have been little noticed and only time will tell whether the concerns they raise are significant. First, the economic cost of many of these plans may encourage a significant number of farmers, particularly those farming marginal lands, on a small scale, in urban fringe areas, to convert their lands to non-farm use or simply not participate in federal programs at all. This may frustrate not only the federal conservation objectives but local farmland preservation objectives as well. Second, it may be discovered that farmers in such areas who can afford to fund the plan may be reluctant to invest in conservation improvements where the local planning authorities are not willing to "hold the line" against non-agricultural development in the general area at least long enough for the farmers to get an acceptable return on their investment.

The 1996 farm legislation, The Federal Agricultural Improvement and Reform Act (F.A.I.R.) extended the Conservation Reserve Program through the year 2002 at a maximum acreage of 36.4 million acres. The 1996 farm legislation also extended the Wetland Reserve Program through the year 2002 at a maximum acreage of 975,000 acres divided equally among permanent easements, 30-year easements and restoration cost-share agreements. Congress adopted what is popularly called the Environmental Conservation Acreage Program. This program has two principal parts. One, *16 U.S.C. §§ 3837*-3837f, is called the Wetlands Reserve Program. Farmers who have historically farmed wetlands or have properly converted wetlands can offer to sell a wetland conservation easement to U.S.D.A. and follow a conservation plan that will restore and protect those lands in the future. The easements will range from permanent or thirty years to the maximum allowed by state law. Payments will represent the difference in value between the fair market value of the land with the easement and the land without the easement. The other part of the program, *16 U.S.C. § 3831*(b), supplements the existing conservation reserve program by providing new opportunities for owners of eligible land to enter into contracts with the federal government to conserve and protect the land. The farmers will agree to take the land out of intensive agricultural production and convert it to less intensive uses. A new program, called the Environmental Quality Incentive Program (E.Q.I.P.), has been approved primarily to assist livestock producers address environmental issues on farms and ranches. n884 In January, 2000, the Seventh Circuit decided a case that has tremendous significance regarding the liability of the federal government for "takings" of property under federal farm programs. In *United States v. Dierckman, 201 F.3d 915 (2000),* the court considered a challenge to an overpayment determination by the Department of Agriculture. It was claimed that the regulation of certain activity affecting wetlands violated the landowner's due process rights. The Court held that the Food Security Act was not enacted under the auspices of the Commerce Clause of the Constitution but rather under the spending power. The government is therefore not limited by the enumeration of Congressional powers in Article 1, Section 8 of the Constitution. As a result, the government may engage in indirect regulation of matters that would not fall within the scope of interstate commerce.

For further discussion, see Lauck, J., *After Deregulation: Constructing Agricultural Policy in the Age of "Freedom to Farm Act." 5 Drake J. Agric.L. 3 (2000).*

§ 47.12(j) Particular Federal Program Objectives: Conservation Reserve Program.

As part of the major reorientation of the national farm program to focus on environmental issues, the 1985 version included authority to contract with farmers on a long-term basis to remove land from agricultural production and convert it to conservation uses. n885 This program, known as the Conservation Reserve Program (CRP) has been designed to ultimately result in the withdrawal of 45 million acres of highly erodible land from production, n886 on a bid basis. n887 That is, farmers who own qualified land offer the land to the Reserve Program and if the land is accepted, the landowner and the Secretary enter into a contract in which the Secretary agrees to pay, on an annual basis, the bid "rental." The Secretary is prohibited from accepting more than 25% of the land in any county unless the Secretary determines that to do so will not adversely affect the economy of the county. n888 The contracts run for not less than ten and not more than fifteen years. n889 The land withdrawn from active agriculture must be dedicated to an approved conservation use and cannot be used for crop production for a protracted period.

Because the statute describes the annual payments as "rental payments," it may be tempting to view the arrangement as a lease. It is actually more similar to the conveyance to the federal government of a temporary conservation easement in which the landowner relinquishes the right to develop the land but promises to maintain the land in an approved conservation use. A lease normally conveys a possessory estate to the tenant, which is not the case with the CRP land. Similarly, the tenant assumes specific obligations regarding the care and protection of the premises. Under the terms of the CRP contract, the landowner must bear most of those burdens. The contract provides that the landowner or operator must: n890

1. implement a plan approved by the local conservation district for converting the land to a less intensive use such as pasture, permanent grass, legumes, forbs, shrubs, or trees;

2. place highly erodible cropland in the conservation reserve;

3. not use the land for agricultural purposes, except as permitted by the Secretary nor produce any agricultural commodity on the land;

4. establish approved vegetative cover, or water cover for the enhancement of wildlife on the land; n891

5. not conduct any harvesting or grazing or make commercial use of the forage;

6. not plant trees, such as Christmas trees or nursery stock, on the land for commercial purposes; n892

If the land subject to the contract is transferred before the end of the contract period, the landowner agrees in the contract to forfeit all rights to receive rental and cost sharing payments n893 and to possibly refund all payments, plus interest, received, unless the transferee agrees to assume all obligations of the contract and modifications thereto. n894

Tenants of land placed in the CRP may retain an interest in, and be entitled to a share of the CRP payments for the duration of the CRP contract. This is because, although the CRP contract is considered to terminate the existing lease because it is inconsistent with the lease, the tenant's rights to payments under the CRP contract arise from the CRP contract, not the lease, and are therefore contractual in nature. n895

A similar reserve program is being established for wetlands. The goal of this program is to place 1 million acres in a Wetlands Reserve Program by the end of 1995. Up to 50,000 acres may be accepted before September 30, 1992 from nine states n896 and it is expected that the program will be offered nationwide in 1993. n897

Between 1985 and 1995, the Conservation Reserve Program (C.R.P.) entered into contracts with farmers to remove approximately 36 million acres from agricultural production in all states except Arizona, Vermont, and Rhode Island. This is done at an annual cost of $1.6 billion. n898 The first of the C.R.P. contracts expired in 1995. In late 1994, former Secretary of Agriculture, Mike Espy, extended the contracts an additional year and announced that C.R.P. contract holders could enroll new land and extend contracts another 10 years or terminate their contracts, so long as the acreage would not exceed the CRP maximum. Participation would be subject to appropriation of funds to pay for such contracts. n899 The Clinton Administration announced that as 10-year contracts expired, some of the program's funding would be withdrawn from acreage where conservation benefits were determined to be marginal and redirected to lands where the conservation impact would be higher. n900

The 1996 farm legislation, The Federal Agricultural Improvement and Reform Act (F.A.I.R.) extended the Conservation Reserve Program through the year 2002 at a maximum acreage of 36.4 million acres. Some farmers of less environmentally sensitive lands could terminate their contracts early with written notice to the Secretary of Agriculture. New enrollments would be allowed up to the statutory limit. n901

§ 47.12(k) Particular Federal Program Objectives: General Restrictions on Sodbusting and Swampbusting.

Although federal farm program price supports and entitlements have been a well-intentioned mechanism by which the federal government could address the difficult problems of overproduction and low farm level incomes, the lure has been sufficient to induce some farmers to plant crops on fragile lands. In an effort to deter such activity, the farm program was altered in 1985 to specifically deny eligibility for farm program supports to farmers that convert highly erodible land or wetlands to crop production. In the popular vernacular, conversion of highly erodible soils is referred to as "sodbusting" while conversion of wetlands is termed "swampbusting." n902

The agricultural land use implications of these restrictions are significant. On the one hand, they restrict farming practices where the result would be to convert particular lands to cropland use. In other words, they remove, as a practical matter, certain lands from the possibility of crop land use if the land is to remain in agriculture.

On the other hand, these provisions of the price support laws might well encourage the non-agricultural development of lands which cannot otherwise be farmed without jeopardizing price support eligibility for the entire farm. n903 This may accelerate the movement of some lands out of agriculture.

Since the restrictions have meaning only in the context of eligibility for federal programs, the fact that federal programs are voluntary may mean that some farmers will continue to farm highly erodible lands or convert wetlands to farm production and withdraw from the federal programs.

The federal farm program legislation declares that any farmer who plants predominantly highly erodible land or converts wetlands to cropland use shall be ineligible for: n904

1. any type of price support payment (including loans, deficiency payments and direct payments);

2. farm storage loans made by the Commodity Credit Corporation;

3. crop insurance made under the Federal Crop Insurance Act;

4. federal disaster payments;

5. any loan made, insured or guaranteed under the Consolidated Farm and Rural Development Act or made by the Farmers Home Administration that is used for any purpose that will contribute to excessive erosion of highly erodible

land.

These provisions virtually eliminate any program benefits. Further, failure to comply may eliminate the prospect that at some future date, the farmer may reenter the federal program. The importance of farm program entitlements is such that this gives the federal government considerable leverage over conservation activities on the farm.

Restrictions on planting for conservation purposes, as well as restrictions that are designed to reduce agricultural production have been popular with environmental groups but unpopular with many in the agricultural sector. Many of these land-idling programs have been criticized in a study released by the National Grain and Feed Association. It is argued in the study that returning 38.5 million acres to production would dramatically improve farm income and create the equivalent of 225,000 new jobs. The study calls for the elimination of acreage reduction programs and paid land diversions that have been a part of the price support programs of the government. n905 The 1996 farm legislation, The Federal Agricultural Improvement and Reform Act (F.A.I.R.) extended the Wetland Reserve Program through the year 2002 at a maximum acreage of 975,000 acres divided equally among permanent easements, 30-year easements and restoration cost-share agreements. In a 1998 case, United States v. Dierckman, n906 the court found that the wetland in particular was subject to the provisions of the Food Security Act even if it does not affect interstate commerce. The rationale for this is that the Food Security Act, by its terms, clearly does not limit itself to wetlands that affect interstate commerce. Further, the Act was passed pursuant to the Spending Clause of the Constitution, not the Commerce clause. As such, Congress has broad power that reaches beyond its other enumerated Constitutional powers to promulgate regulations that advance the general welfare. The wetlands provisions have been held to focus on protecting the status quo of the wetlands that existed at the effective date of adoption of the Food Security Act. n907

§ 47.12(l) Sodbusting Specifically Considered.

The exclusion from benefits under the sodbuster rules arises as a result of "production" of an "agricultural commodity" on "highly erodible land." Agricultural commodities are defined in the Act to include "any agricultural commodity planted and produced in a State by annual tilling of the soil, including tilling by one-trip planters." n908 This definition excludes perennial crops and would seem to exclude production of much forage, suggesting that the real focus of the statute is to prevent soil loss that occurs as a result of recurring disturbance of the soil. "Production" is not defined but would seem to be suggested by the definition of agricultural commodities as referring to the practice of raising a crop rather than of harvesting or marketing a crop. This, in turn, suggests that no crop actually must be raised for the statutory exclusion to attach. This is significant because entitlements under the federal programs are generally measured in terms of acres planted (and the historic or average yields from those acres) rather than on the basis of bushels actually harvested.

"Highly erodible" land is defined in the statute in terms of soil types in reference to the Soil Conservation Service land capability classification system. If the lands are classified as class IV, VI or VII under that system, they are deemed to be "highly erodible." Alternatively, if the lands have not been classified, they must have an annual soil loss tolerance level, as established by the Secretary, on the basis of the universal soil loss equation and wind erosion equation, adjusted for such factors as climate, soil erodibility and field slope. The final regulations further define "soil loss tolerance" to require that the soil have an "erodibility index" of eight or more. n909 The "erodibility" index is a "numerical value that expresses the potential erodibility of a soil in relation to its soil loss tolerance value without consideration of applied conservation practices or management." n910 In essence, the determination is based on inherent characteristics of the soil itself in its natural context rather than upon the farming context in which the soil is actually tilled.

There is an exception to the exclusion. If the farmer is planting pursuant to and in compliance with an approved conservation plan for the highly erodible land, program benefits will not be excluded. n911 This plan must be in place as of January 1, 1990 or within 2 years after the Soil Conservation Service has completed a soil survey of the farm, whichever is later. n912 Finally, the farmer must be actively applying the conservation plan, which must be based on

the local Soil Conservation Service technical guide, and have the plan in place by January 1, 1995. n913

It is interesting that the Department has declined to do a Takings Implications Analysis n914 that is required for sodbuster or swampbuster rules on the ground that participation in federal programs is voluntary. n915

§ 47.12(m) Swampbusting Specifically Considered.

Swampbusting refers to the conversion of wetlands to crop production. Although the Act originally predicated the exclusion from federal farm program benefits upon the "production" of a crop on such converted land, recent changes now ground the restriction on the Act of conversion. n916 This is a significant change because this shifts the focus of the restriction from planting to the actual drainage activity.

The statute defines "wetlands" in terms of soil types and vegetation. Land that has a predominance of hydric soils n917 or that supports a prevalence of hydroponic vegetation n918 is defined as wetlands. The Secretary is charged with the development of criteria to determine the presence of such soils and vegetation.

Considerable controversy has surrounded attempts to precisely make those determinations. Environmental groups have been concerned that the criteria will so narrowly be drawn that many "true" wetlands will not be covered by the restriction. This fear, in part, has been fueled by the approach taken in the Act that "already farmed" wetlands will not be considered as triggering the exclusion from program benefits, which suggests that Congress has specifically determined that some wet areas can be farmed. Agricultural groups have been concerned that much of the land that is actually farmed each year will be drawn into the definition and as a result, they will jeopardize or lose their eligibility for federal farm program benefits. This matter had not been resolved as of 1992. n919 Part of the concern and confusion results from the potential overlap in concern and regulatory authority derived from § 404 of the Clean Water Act which requires a federal permit prior to engaging in certain activities in or on wetlands. n920 Although § 404 contains an exemption for farming activities, n921 compliance with swampbusting regulations does not exempt the farmer from potential liability under § 404. For example, while the farmer may not be excluded from program benefits because of activities conducted on "farmed wetlands," there is no assurance that such lands will not qualify as wetlands under § 404. Similarly, the fact that lands are considered wetlands for purposes of the swampbusting restrictions does not, in and of itself, determine that the lands are wetlands for § 404. n922

The Secretary is required to delineate wetlands on wetland delineation maps and shall make "a reasonable effort" to make an on-site determination before lands are listed whenever requested by an owner or operator. n923 Before the map may be certified as effective for making wetland determinations affecting program eligibility, notice must be given to affected landowners or operators. n924

The Act provides several significant exceptions. The most important is that a farmer will not be excluded from program benefits on the basis of wetlands conversion where the crop production occurs on: n925

1. wetlands where conversion commenced or occurred prior to December 23, 1985;

2. an artificial lake, pond or wetland created by diking non-wetland to collect or retain water for livestock, irrigation, fish production, flood control etc.;

3. a wet area caused by a water delivery system or irrigation system;

4. wetland where crop production is possible as a result of natural conditions which destroy the wetland characteristics of the land without any action by the farmer;

5. converted wetlands where the Action of the farmer is such that it is deemed by the Soil Conservation Service to have

minimal impact on the hydrologic or biologic aspect of the wetlands; and

6. converted wetlands which were converted by someone else and where the conversion was not part of a scheme to avoid compliance with the applicable regulations.

The Act contains an exception that is based on good faith n926 and mitigation of harm by reconversion or replacement. n927 Satisfaction of the requirements relating to good faith may result in graduated penalties rather than total exclusion from program benefits. n928

The Secretary is required to make an on-site inspection before any federal farm benefits may be denied. n929

For a case in which the isolated nature of the wetland was sufficient to deny E.P.A. authority to regulate, see *Hoffman Homes, Inc. v. E.P.A.* n930 In this case, the tract was less than an acre and was at least 750 feet from the nearest body of water that could be considered a creek under the general definition of "waters of the United States."

Congress adopted what is popularly called the Environmental Conservation Acreage Program. This program has two principal parts. One, *16 U.S.C. §§ 3837*-3837f, is called the Wetlands Reserve Program. Farmers who have historically farmed wetlands or have properly converted wetlands can offer to sell a wetland conservation easement to U.S.D.A. and follow a conservation plan that will restore and protect those lands in the future. The easement will range from permanent or thirty years to the maximum allowed by state law. Payments will represent the difference in value between the fair market value of the land with the easement and the land without the easement. The other part of the program, *16 U.S.C. § 3831*(b) supplements the existing conservation reserve program by providing new opportunities for owners of eligible land to enter into contracts with the federal government to conserve and protect the land. The farmers will agree to take the land out of intensive agricultural production and convert it to less intensive uses. Farmers may be exempt from the wetlands provisions § 404 of the Clean Water Act if they are engaged in "normal farming activities." In United States v. Brace, n931 the court rejected a farmer's claim that he was engaged in normal farming activities when he purchased the land in question from his father for the purpose of converting it to cropland. The court found that the activity was not a part of the farmer's "established" farming operations because his activities, intentions and result were to convert land that otherwise was not suitable for farming into a site that was suitable for farming. As a result, the farmer was considered to have "brought an area into farming use." The court also noted that even if the land had been in pasture, it would not be considered an "ongoing farming operation" if the change in use required modifications to the hydrological regime. Finally, the court considered the dredging necessary to the laying of drainage tile, the levelling and clearing of a wooded area and his spreading of the dredged material were not part of the normal farming activities. The 9th Circuit has upheld the requirement that the government impose a conservation easement to protect wetlands on all land sold from the inventory of the Farmer's Home Administration (FmHA). In National Wildlife Federation v. Espy, n932 the land was conveyed by a quitclaim deed to a bank which held a senior lien. FmHA argued that the conveyance failed to trigger the easement requirement since it had, through the quitclaim deed, "abandoned" the property. The court held otherwise and a subsequent sale of the property without the easement was to be voided unless the purchasers took title in good faith and without notice of FmHA's obligation to create the easement.

In the 1996 farm legislation, The Federal Agricultural Improvement and Reform Act (F.A.I.R.), Congress extended the Wetland Reserve Program through the year 2002 at a maximum acreage of 975,000 acres divided equally among permanent easements, 30-year easements and restoration cost-share agreements. n933 A number of cases have dealt with the problem of converting wetlands to some form of agricultural activity. Under provisions of the 1985 federal farm program, a farmer loses eligibility for federal price support payments if land that was formerly considered wetlands is converted to agricultural production. In Von Eye v. United States, n934 the farmer wanted to continue to drain wetlands on his farm but not lose program eligibility. Plaintiff had commenced the conversion of the wetlands prior to the effective date of the 1985 farm bill and it had been ruled by the National Appeals Division (NAD) that the wetlands fell within the "Commenced conversion" provisions of the statute. Problems began when the farmer experienced problems with a township-owned culvert and he replaced it with a bigger one, that was set lower into the

ground. The result was to drain more wetlands than had been previously converted. The Soil Conservation Service notified the farmer that the culvert caused a conversion of wetlands in violation of the statute. Plaintiff sued to obtain permission to complete the project and to remain eligible for the program benefits. The court ruled that his approved conversion ended in 1986 and 1987 and that the present activity constituted an unauthorized new activity that could not relate back to before the effective date of the 1985 Farm Bill. In United States v. Johansen, n935 The U.S.. Fish and Wildlife Service (USFWS) claimed three wildlife-protection easements that covered 102 acres. Recent years with higher-than-normal precipitation had expanded the land claimed to more than 200 acres and the landowner wanted to drain the area back to its former size. The USFWS refused to define the boundaries of the easements and plaintiffs proceeded to drain water off areas they believed to be outside the easements. USFWS filed charges of illegal drainage and claimed the easements gave them the full 200 acres. The court held that only the potholes that existed at the time of the easement conveyance were covered by the easements and criticized the government for refusing the request to define the easements and then prosecuting the landowner for making his own determination. In Gunn v. U.S.D.A., n936 the court considered the extent to which "farmed wetland" provisions of the 1985 Farm Bill allowed the maintenance of conditions or improvement of the land for crop production purposes. Here, the landowner, in 1992, replaced a tile drain that had been installed in 1906 by the county conservation district with an open ditch. The court found that the conversion did not commence until after the effective date of the statute and therefore constituted an illegal conversion notwithstanding that the farmer had been farming that land continuously for 85 years. The court in United States v. Reaves n937 held that a five-year statute of limitations applicable to wetland violations of § 404 of the Clean Water Act did not apply to a civil enforcement action brought by the U.S. Army Corps of Engineers more than 13 years after the claimed violation. The rationale of the court was that the discharge of dredged or fill material into wetlands constituted an ongoing violation so long as the fill remained. n938

§ 47.12(n) Regulating Private Agricultural Use of the Public Domain.

Nearly one-third of the land in the nation is held under public title. This land contains much of the nation's natural resources and scenic attractions. This public land has become an important location for many activities, such as recreation, mining, timber harvesting and even agriculture. It has been difficult to accommodate all of the demands that are made of the public domain. A number of statutes have been enacted to regulate many of these various competing uses and to give protection to the important public interests that the public land represents. There has been a major effort to develop plans that complement the statutory framework to guide the overall use of public lands n939

The private use of federal land is presently governed primarily by the land planning requirements of the Federal Land Policy and Management Act of 1976, n940 The Multiple Use, Sustained Yield Act of 1960, n941 The National Forest Management Act of 1976, n942 The General Mining Law of 1872, n943 The Mineral Leasing Act of 1920, n944 and the Wilderness Act. n945 These statutes envision a comprehensive classification of public lands. Activities on these lands are then to be adapted to the nature of the lands but governed by the goal of maximizing the use of the land without destroying its value or character for future generations.

The most significant agricultural n946 activity that occurs on public land is livestock grazing. This is regulated primarily by federal statute, n947 in conformity with the land use plans required by the Federal Land Policy and Management Act of 1976, n948 The Multiple Use, Sustained Yield Act of 1960, n949 and The National Forest Management Act of 1976. n950 Grazing rights are secured by permit n951 which typically allows the permit holder to graze a specified number of livestock for a particular period on an identified portion of the public domain.

Not only is the public domain an important source of grazing for farmers and ranchers, public land is important as a site for other kinds of uses as well. n952 It is also an important source of revenue for states in which significant areas of public lands are located. U.S.D.A. distributed approximately $299 million to 43 states and Puerto Rico from national forests and grasslands in 1994. This money was collected from land use fees and sale of resources on 191 million acres of national forests and grasslands. States are required to use their share of this money for public schools and roads. Payments are made twice a year -- 75% in October and the balance in December. n953 There has been considerable

controversy over the amount charged to ranchers for grazing use of the public domain. In 1994, the Secretary of the Interior Bruce Babbitt proposed to raise the fees from $1.98 per animal unit month (A.U.M). to $3.96 over a three-year period. The objective of this proposed change was to make grazing costs comparable to the approximately $9.70 that is charged per animal unit month on private land. This proposal was met by vociferous resistance from Western livestock interests n954 and the proposal died. n955 One important issue is whether the federal government or the states will control activity on public lands. Although most land in the public domain is federal, various states own or control significant amounts. Historically, for example, states were given specifically numbered sections within the public domain to be managed for school purposes. A case involving the adequacy of royalty payments under a coal lease raises some questions about the need of states to more aggressively seek to protect such lands and supervise activities that occur thereon. In Consolidated Coal v. Division of State Lands, n956 the court held that the state had an irrevocable duty to manage the school lands for the sole benefit of common schools and to receive "full value" from any dispositions of such lands. Another important issue is whether the lands in question are still in the public domain. Two cases address interesting problems of this type. In Keener v. State, n957 land was granted from the public land for the purpose of a road. The Department of the Interior regulations called for 50-foot wide rights-of-way for local roads. When the patent was issued, only a 33-foot wide right-of-way was described. The State claimed ownership to the land located within such a 50-foot right-of-way despite the patent language and sought to quiet title to such a width. The court ruled in favor of the state on the ground that the defense of laches did not bar assertion of the right to the greater width nor did estoppel preclude the state's claim. In Board of County Comm'rs v. Ritchey, n958 a landowner had had his land resurveyed and, as a result, had moved his fence onto an area the county claimed under an 1887 ordinance that had declared all land overlying section lands to be public land. The facts showed that the land in question had been a part of a railroad grant and that the railroad had conveyed the land prior to 1887, even though nothing in the official land records indicated such a conveyance. The court held that the railroad grant took the land out of the public domain prior to the adoption of the ordinance. Therefore, the lands overlying the section line were not public lands by virtue of that ordinance. On the other hand, the lands had been used as a road for a sufficient period of time to support the county claim that in the alternative, the county had acquired title to the disputed lands by adverse possession. n959

§ 47.12(o) Private Agricultural Activity: Grazing on Forest Service Lands.

Forest Service permits are of two types: permits with priority for renewal, which are issued for 10 years or less, n960 and permits with no priority, which are essentially temporary permits of one year or less. n961 Term permit holders have first priority for a new (or renewal) permit provided the holder has fully complied with the terms and conditions of the expiring permit. n962

Fees are charged for these permits n963 on the basis of animal unit months. "Animal Unit Months" (AUM's) are defined as one unit of grazing or use for one month. An animal unit is considered to be each cow, bull, steer, heifer, horse or mule 6 months of age or older at the time of entering the National Forest System lands or which becomes 12 months of age during the time of use, each weaned cow, bull, steer, heifer, horse or mule regardless of age. n964 Five adult sheep or goats or five weaned sheep or goats of any age are considered to constitute a single animal unit and to be the equivalent to one cow, bull, steer, heifer, horse or mule. n965 No additional charge is made for lambing on Forest Service lands. n966

The manner of establishing fees differs depending on whether the forest lands are in the 16 Western States n967 or are in the East. n968 In the west, the fee is determined to reflect the economic value of the use of the land. This is done through a complex formula that multiplies a base fair market value by an annual Forage Value Index, added to the sum of the Beef Cattle Price Index minus the Prices Paid index and divided by 100. n969 In the East, the value is determined through a "noncompetitive fee method" that is adjusted annually by a hay price index n970 or on the basis of competitive bidding. n971

The Chief of the Forest Service is authorized to cancel, modify or suspend grazing and livestock permits, in whole or in part if the permittee fails to comply with restrictions, including state and federal laws relating to protection of air, water,

soil and vegetation, fish and wildlife and other environmental values n972 and where the land is to be devoted to other public purposes. n973 Except in the case of an emergency, however, the Service must give two years prior notification. n974

Grazing may be conducted on National Grasslands on essentially the same basis as upon National Forests, n975 wilderness or primitive areas within the National Wilderness Preservation system only to the extent that grazing was established prior to the inclusion of the lands within the system. n976

§ 47.12(p) Private Agricultural Activity: Grazing on Bureau of Land Management Lands.

Grazing of Bureau of Land Management lands occurs under the auspices of the Taylor Grazing Act. n977 This act was adopted to "stop injury to public grazing lands by preventing over-grazing and soil deterioration, to provide for their orderly use, improvement and development, to stabilize the livestock industry dependent upon the public range" n978 and to "provide for inventory and categorization of public rangelands on the basis of range conditions and trends; consistent with land use plans, multiple use, sustained yield, environmental values, economic and other stated values." n979

Most permits are issued for livestock grazing in grazing districts n980 on the basis of preferences. Preference is given to those within or near grazing districts who are "landowners engaged in the livestock business, bona fide occupants or settlers, or owners of water or water rights, as may be necessary to permit the proper use of lands, water or water rights owned, occupied or leased by them...". n981 This preference attaches to a designated base property which will support the animals while they are not on the public domain. n982

Permits are issued for a term not to exceed 10 years and are subject to modification resulting from range depletion, range conditions and other causes. n983 The permits specify the time and season during which the animals may be grazed and the number of animals that may use the land. These privileges are expressed in terms of "animal unit months" n984 Grazing fees are established annually by the Secretary using a stipulated formula that is designed to determine the forage value of the land use. n985

Non-renewable grazing permits may be issued to qualified applicants where forage is temporarily available provided the use is consistent with multiple use objectives and does not interfere with existing livestock operations on the public lands. n986

One important issue is whether the federal government or the states will control activity on public lands. Although "the public lands" of the United States tend to be thought of as federal lands, state-owned land is also public land. One such kind of state land located within the federal public domain is the numbered sections that were historically given to the states to be managed as "school lands." These typically are not fenced or otherwise separated from the federal lands and will often be considered by the public as susceptible to the same uses, including grazing, as the federal land. A case involving the adequacy of royalty payments under a coal lease raised some questions about the need of states to more aggressively seek to protect such lands and supervise activities that occur thereon. In Consolidated Coal v. Division of State Lands n987 the court held that the state had an irrevocable duty to manage the school lands for the sole benefit of common schools and to receive "full value" from any dispositions of such lands. In Matter of Kalfell Ranches, Inc n988 the court considered the obligation of a grazing district to apportion grazing preferences after the sale of some of the land that was subject to those preferences. In the past, the district had changed from a policy of grazing in common to the use of individually fenced units. It was held that the district had to reduce grazing preferences proportionately in order to accommodate those who had lost their areas in the sale. This duty, it was held, was not abrogated by the shift to individually fenced areas. n989

§ 47.12(q) Private Agricultural Activity: Property Nature of the Grazing Permit.

The precise nature of the interest acquired by the livestock owner under grazing permits is not clear. The statute and cases describe the rights involved variously as allotments, n990 preferences, n991 leases, n992 and grazing permits n993 and livestock use permits. n994 In many respects, the privilege is similar to that of a conventional real property lease. Unlike a lease, however, the grazing permit or lease does not grant exclusive possession to the premises since the land is subject to the statutorily mandated principle of multiple use n995 which opens public land to such uses as outdoor recreation, range, timber, watershed, wildlife and fish purposes in the "combination that will best meet the needs of the American People, making the most judicious use of the land...". n996

By statute and regulation, grazing permits do not create in the holder thereof "any right, title or interest or estate in or to the lands" held by the United States. n997 In this context, it has been held that the permit rights are not even "property" for purposes of protection under the Constitution. n998

On the other hand, the grazing rights seem to attach to particular tracts of public land as well as land held by private landowners n999 in much the same way as appurtenant property rights. n1000 For example, the grazing right may be passed with the "base" n1001 acreage to a subsequent purchaser of such lands or will remain with such lands in the event that the individual loses ownership or control of the base property. n1002 Similarly, the right may be "severed" in whole or in part from the base property and transferred to other base property. n1003 Finally, permit rights seem to have protected status akin to equitable property rights based on use over time n1004 and may not arbitrarily be canceled by the government. n1005

A California case gave an interesting interpretation to the nature of the right in order to sustain an exemption for landowners for liability resulting in harm to recreational entrants. n1006 In that case the plaintiff was injured when the plaintiff's motorcycle struck an unmarked barbed wire fence that had been erected on Forest Service Land pursuant to a grazing permit. Under the terms of the permit, the defendant was responsible for the maintenance of all fences in the permit area. The court applied a California statute n1007 which provides that the "owner of any estate or any other interest in real property" "owes no duty of care to keep the premises safe for entry or use by others for any recreational purpose" to shield the defendant from liability. The court construed the term "interest in real property" to include defendant's interest under the grazing permit despite the express language of the regulations n1008 on the ground that the permit was not unlike a license or easement. The court dismissed the language of the statute as having application essentially only where there is a question of compensation in a taking context under the Fifth Amendment. n1009 For other purposes, the interest may be deemed a property interest.

Conceptually, grazing permit rights arguably share much in common with usufructuary interests in that they represent a right to use property of another. It might be argued that the language of the statute which expressly disavows any creation of any property interest in the federal lands is not necessarily inconsistent with this view. The history of the Act suggests that Congress was clearly attempting to close the public domain to individuals who may have wished to acquire private title thereto. In this sense, the Act would appear to be an effort to end the public land distribution policies that the nation had pursued since its founding as the way to secure the large land areas that had been acquired. Read in that fashion, it is arguable that Congress did not intend so much to determine that the grazing rights were not property as it intended to make clear that the acquisition of a grazing right was not part of any homesteading or other title acquisition process. It may also be argued, as the court did in *Hubbard*, that a major concern was with liability for compensation in a takings context. This position arguably was required in order to give the respective administrative officers of the Forest Service and the Bureau of Land Management the flexibility they need to adapt the grazing opportunity to changing grazing conditions. Unfortunately, the legislative history is largely silent on either of these arguments.

A final approach might be to characterize the permit as a species of what Charles A. Reich has described as "new property." n1010 This kind of property is largely an economic phenomenon and it is clear that the right not only has value but gives value to the base land to which it is attached. n1011

§ 47.12(r) Private Agricultural Activity: State Land Use Controls on Federal Land.

The case of California Coastal Commission v. Granite Rock Co., n1012 is interesting with respect to the authority states may have regarding state control over land use activities conducted on federal land. n1013 In that case, the Supreme Court considered whether the state of California could impose a state environmental protection scheme on a corporation that was authorized to engage in an activity on federal land. The state program required a state permit prior to implementing environmentally threatening activities; the corporation had secured federal permission to mine limestone in a highly scenic area of the Los Padres National Forest of the public domain. The court held that a state has power to enforce its "environmental" laws by requiring such permits. The decision suggests that these requirements can be enforced by injunctive relief. n1014 On the other hand, the court appears to assume, without specifically deciding, that a state is preempted from imposing "land use" regulations on the same activities. n1015 Despite the nature of the holding, the court appears to consider this still to be an open question. n1016

While federal statutes envision considerable coordination of federal and state interests with respect to land use planning by federal agencies in regard to federal lands, n1017 it has been difficult to achieve both state and federal objectives in all cases. The *Granite Rock* case suggests that there may be some parallel authority on the part of the state to accomplish the state's land use objectives on public lands that is independent of the federal authority.

The Conservation Reserve (CRP) program authorizes contracts with farmers to remove their land from agricultural production for a period of ten years. During that time, the land may be used for conservation kinds of uses and possibly timber production. In exchange for the agreement to keep the land out of production, the farmers are paid a "rental fee." Approximately 36 million acres have been enrolled in the program at an annual cost of $1.6 billion. This includes land

in all states except Arizona, Vermont, and Rhode Island. William Stevens, *U.S. Effort to Return Farm Land to Natural State Wins Praise, The Environment*, N. Y. Times, Tuesday, January 20, 1995, at B7.

The first of the CRP contracts were to expire in 1995. In late 1994, the then Secretary of Agriculture, Mike Espy, extended the contracts an additional year. He also announced that CRP contract holders could enroll new land and extend contracts another 10 years or terminate their contracts, so long as the acreage would not exceed the CRP maximum. Participation would be subject to appropriation of funds to pay for such contracts. This position was sharply criticized in Congress. *See The Washington Report*, Doane's Agric. Rep., December 30, 1994, at 4. Espy then resigned. The Clinton Administration announced that as 10-year contracts expire, some of the program's funding would be withdrawn from acreage where conservation benefits are determined to be marginal and redirected to lands where the conservation impact will be higher. It should be understood that the focus of this chapter is upon how agricultural land is regulated and managed. Obviously, there is much more than that involved within the general topic of government's relation to agriculture, regardless of the level of government that is considered. For example, this work does not specifically nor intensively deal with such matters as the Perishable Commodities Act, *7 U.S.C. § 499a* et seq.; the Packers and Stockyards Act, *7 U.S.C. § 181* et seq.; the United States Grain Standards Act, *7 U.S.C. § 71* et seq.; the Agricultural Marketing Agreement Act of 1937, *7 U.S.C. § 601* et seq.; the various acts administered under the auspices of the Animal and Plant Health Inspection Service; the various Rural Development programs; or the programs of the Food and Nutrition Service. All of these affect agriculture and even agricultural land in vital and fundamental ways. Nevertheless, they are beyond the scope of the inquiry here regarding the use of agricultural land. Notwithstanding the narrowness of the focus of this chapter, from time to time, cases or decisions pertaining to other concerns cut sufficiently across the entire spectrum of governmental relations to agriculture that they become pertinent to dealing with governmental actions regarding land. For example, in the 2001 case of *Kirby Produce Company v. U.S.D.A., 256 F.3d 830 (D.C. 2001),* the court addressed the extent to which Federal agency decisionmaking could be considered arbitrary or capricious. When matters involving governmental agencies are appealed to the courts, the courts are required to uphold the decisions of the Judicial Officer unless the Court finds that the decision was arbitrary, capricious, an abuse of discretion, not in accordance with law or unsupported by substantial evidence. In this case, the officer's decision was based on an arbitrary and capricious conclusion that the merchant, by requesting a continuance of the hearing, had admitted that it could not make a payment, as required by statute, within the time frame required by the statute. Another such case is *Livestock Marketing Association v. U.S.D.A., 132 F. Supp. 2d. 817 (D. So. Dak. 2001)* dealing with the extent to which farmers and ranchers can be compelled to make mandatory contributions toward the promotion of particular agricultural products. In this case, what was specifically at issue were contributions mandated by the Beef Promotion and Research Act. Here, the court ruled that the particular spending involved by the board violated the act and the First Amendment to the United States Constitution. The court distinguished the expenditures here from those upheld in *Glickman v. Wileman Bros. & Elliott, Inc., 521 U.S. 457 (1997).* There, the expenditures were for generic advertising whereas in the Livestock Marketing case, they were for "producer communications." In both cases, the programs involving mandatory contributions for product promotion had been authorized by referendum among the producers.

(n27)Footnote 785. *See, e.g., Foundation on Econ. Trends v. Heckler, 587 F. Supp. 753 (D.D.C. 1984), aff'd, 756 F.2d. 143 (D.C. Cir. 1985)* where the court held that a preliminary injunction was warranted to prevent the deliberate release of genetically altered bacteria into environment in field test sponsored by N.I.H. because of failure to compile environmental impact statement (E.I.S.) required by N.E.P.A.; *Laurel Heights Improvement Ass'n v. University of Cal., 238 Cal. Rptr. 451 (1987),* which held that the environmental impact report for proposed relocation of University's biomedical research facilities was inadequate because, *inter alia,* it did not adequately address the question of release of toxic chemicals, carcinogens and radioactive substances; *Foundation on Econ. Trends v. Lyng, 680 F. Supp. 10 (D.D.C. 1988),* which held that plaintiffs lacked standing to challenge issuance of a license under the Virus-Serum-Toxin Act, *21 U.S.C. §§ 151*-158; *5 U.S.C. § 702,* which permitted marketing of pseudorabies vaccine containing genetically altered virus. Further, U.S.D.A. finding that licensing would not have a significant impact on environment was not arbitrary or capricious; *Foundation on Econ. Trends v. Thomas, 661 F. Supp. 713 (D.D.C. 1986),* which held there was a lack of standing to challenge E.P.A. procedures by which genetically engineered pesticides may be released; *Foundation on Econ. Trends v. Johnson, 661 F. Supp. 107 (D.D.C. 1986),* which held there was a lack of standing to challenge operation of Coordinated Framework for Regulation of Biotechnology; Foundation on Econ. Trends v. Block, Civ. No. 84-3045 D.D.C. (Slip Opinion, Apr. 26, 1986), which granted summary judgment to USDA on a suit challenging the extent to which N.E.P.A. and A.P.A. affect U.S.D.A. animal productivity research; *Foundation on Econ. Trends v. Weinberger, 610 F. Supp. 829 (D.D.C. 1985),* which upheld an injunction against proposed construction of aerosol and toxic agent test facilities until the Department of Defense prepared an adequate EIS.

(n28)Footnote 786. *See, e.g.,* Thomas Fahey, Jr. & Richard Roznoy, *Aquifer Protection in Connecticut: Environmental Land Use Restrictions Run Deep, 68 Conn. B.J. 98 (1994);* Dich, Jan and Kerstin Wiklund, *Prostate Cancer in Pesticide Applicators in Swedish Agriculture,* The Prostate 34(2): 100-112 (Feb. 1, 1998); Christina S. Chen, *Persistent Organic Pollutants: Regime Formation and Norm Selection, 13 Conn. J. Int'l L. 119 (1998). See Harris v. Cropmate Company, 706 N.E. 2d 555 (Ill. App. 1999),* involving a suit by a farm operator who suffered damage to crops as a result of spraying on adjacent tracts. In cases of this type, issues of proof tend to require competent scientific proof regarding causation. Courts in these cases, since the Supreme Court's decision in *Daubert v. Merrell Dow Pharmaceuticals, Inc, 509 U.S. 579 (1993),* have struggled with the question of whether to continue to follow the "generally accepted" standard articulated by the D.C. Circuit Court in *Frye v. United States, 293 F. 1013 (D.C. Cir. 1923),* the rule set forth in Federal Rules of Evidence 702, or long standing state rules of evidence. In this case, acknowledging that *Daubert* held that *Frye* no longer applied to federal cases, the *Harris* court declined to adopt that test for Illinois actions and instead followed the *Frye* test. State law-based claims by workers for the consequences of being exposed to cancer-causing products have not been held preempted by the Federal Insecticide, Fungicide and Rodenticide Act FIFRA. *See DiPetrillo v. Dow Chemical Co., 729 A. 2d 677 (R.I. 1999).* In *Hawkins v. Leslie's Pool Mart, Inc., 184 F.3d 244 (5th Cir. 1999),* the court addressed a damage claim brought by owners of a swimming pool against the manufacturer of chlorinator tablets, alleging that she was injured when she ingested gaseous fumes after opening the container of tablets. The court held that the state law claims that the manufacturer failed to adequately warn of risk of sudden decomposition and sudden reactivation of the tablets or provide adequate directions for opening, closing and storing the container were preempted by FIFRA. The FIFRA preemption of the packaging claim was limited to the area of child-resistant packaging since EPA has not specifically considered the particular packaging in dispute in this case. Thus, the specific claim that the manufacturer had negligently failed to safely package the tablets was not preempted.

(n29)Footnote 787. *See, e.g.,* Federal Insecticide, Fungicide, and Rodenticide Act, *7 U.S.C. §§ 136*-136y.

(n30)Footnote 788. This is, for the most part, state level regulation, authorized under *7 U.S.C. §§ 136b* and 136v. See, e.g., Kan. Stat. Ann. § 2-2438a et seq. Misapplication can also be the basis for civil liability to those harmed by the application or use.

(n31)Footnote 789. *See, e.g.,* Toxic Substances Control Act, *15 U.S.C. §§ 2601*-2654; Solid Waste Disposal Act, *42 U.S.C. §§ 6901*-6991i; Comprehensive Environmental Response, Compensation and Liability Act, *42 U.S.C. §§ 9601*-9675.

(n33)Footnote 791. Federal Water Pollution Control Act, *33 U.S.C. §§ 1251*-1387; Safe Drinking Water Act (Public Health Service Act) *42 U.S.C. §§ 300f*-300j-11.

(n34)Footnote 792. STATUTES WHICH REGULATE THE EXISTENCE OF CHEMICALS:

Federal Insecticide, Fungicide, and Rodenticide Act (F.I.F.R.A.), *7 U.S.C. §§ 136*-136y. This act focuses on the manufacturing and distribution stages of production and has relied heavily on registration and proper labeling as the primary regulatory devices. In 1972, Congress adopted the Environmental Pesticide Control Act which made major changes in how registration was handled and injected the consideration of "unreasonable adverse impacts on the environment" into that process. Since 1972, registered pesticides are considered available for either "general" or "restricted" use. If the use is restricted, the chemical can only be applied by someone who has received special training and has been certified to use that chemical. Under the Act, farmers may be exposed to liability for civil and criminal fines for the unauthorized or uncertified application or resale of restricted chemicals though farmers will not likely be individually punished under this act for any pollution resulting from the chemical use.

Toxic Substances Control Act (T.S.C.A.), *15 U.S.C. § 2601 et seq*. The Toxic Substances Control Act was enacted to insure that as much as possible be known about chemicals which pose serious risks to the environment before they are manufactured, distributed or used. Under the act, the Administrator of the E.P.A. can order testing of existing and newly developed chemicals if there is a basis for concern that they pose unreasonable risks to the environment. Like F.I.F.R.A., this act may affect the availability of chemicals that might be of use in the course of farming operations and insure that they are adequately labeled. On the other hand, the Administrator may also prohibit or regulate the commercial use and disposal of residues and order the seizure of imminently hazardous chemical substances or mixtures if they are deemed to present "an unreasonable risk of injury to health or the environment." *15 U.S.C. § 2605.* These impacts obviously only affect individual farmers indirectly. If the farmer's use poses unreasonable risks, the Administrator may prohibit or limit the manufacture, distribution or manner of use of the particular chemical but the Act is not likely to impose direct liability on the farmer for any pollution consequences that may flow from the actual use of the chemicals. It is possible, however, for the Administrator to take action against a chemical user to seize the chemical or enjoin use or disposition of the chemical if the activity poses an imminent hazard to health or the environment. *Id.*

STATUTES THAT DEAL WITH POSSIBLE POLLUTION IMPACTS OF FARM CHEMICAL USE:

Clean Water Act (C.W.A.) also known as the Federal Water Pollution Control Act (F.W.P.C.A.), *33 U.S.C. §§ 1251*-1387, more directly addresses the pollution consequences of farm chemical use. The regulatory approach of this act is to trace pollution to its "source" and then impose restrictions on the source that are designed to eliminate or "filter out" the harmful discharges. The act classifies sources of pollution as "point sources" or "non-point sources." "Point sources" are those to which specific discharges may be traced and the point of pollution discharge thereby identified and regulated. The regulations include larger confined animal feeding units as point sources. The statute requires that point sources secure a National Pollution Discharge Elimination System (N.P.D.E.S.) permit before pollutants may be discharged into the "waters of the United States." Most pollution from agricultural activities cannot be precisely traced and is therefore typically considered to be "non-point source" pollution. Under this approach, the Act has settled on the

use of "best management practices" (B.M.P.'s) as the control technology to be used to deal with non-point sources of pollution. The B.M.P.'s that farmers are to adopt, of course, are not defined in the statute which defers such detailing to the states. The Regulations, 40 C.F.R. § 35.1521-4(c), define B.M.P.'s as "those methods, measures, or practices to prevent or reduce water pollution and include but are not limited to structural and non-structural controls, and operation and maintenance procedures. B.M.P.'s can be applied before, during and after pollution-producing activities to reduce or eliminate the introduction of pollutants into receiving waters." The statute itself uses "conservation practices" as the suggested approach. *33 U.S.C. § 1288*(j)(2). Under this approach, farmers are encouraged to voluntarily implement B.M.P.'s and the statute authorizes the use of cost-sharing contracts to accomplish this. *33 U.S.C. § 1288*(j)(1). One problem with this approach has been that many farmers have been unwilling to implement any practice that would increase the costs of farming unless there is a direct return benefit. Many B.M.P.'s do not generate such a return. As a result, in 1987, Congress mandated that the states do an "Assessment of Non-point Source Pollution" to review the development and implementation of pollution control mechanisms in their states. *See 33 U.S.C. § 319.* Interim reports suggest that states may be beginning to consider stronger measures of "encouragement" to enlist farmer participation. *See, e.g.,* Kansas Department of Health and Environment, Bureau of Water Protection, *Kansas Non-point Source Assessment, Interim Report.* Draft Mar. 4, 1988. It should be noted that other state statutes may require more than just using BMP's to control or prevent farm-based pollution. One state, for example, makes it unlawful to "discard or store any pesticide or pesticide container in such a manner as to cause injury to humans, vegetation, crops, livestock, wildlife, pollinating insects or waterways and wildlife therein." *See, e.g.,* Kan. Stat. Ann. § 2-2453(b).

Safe Drinking Water Act (S.D.W.A.) *42 U.S.C. §§ 300f*-300j-11 authorizes the establishment of maximum contamination levels for public water systems, including those that rely on groundwater sources. These levels are set at a level at which no known or anticipated adverse effects on human health will occur and which allows for an adequate margin of safety. The act requires the adoption of feasible treatment techniques which will insure that the required levels are achieved. These techniques are determined by considering the quality of source waters, protection afforded by watershed management, treatment practices and other relevant factors. States, for the most part, have the primary enforcement burden and do so through their own rules and regulations. Most of the act, of course, is targeted toward operators of public water supply systems in order to compel them to maintain a system that delivers safe drinking water. In such an approach, individual farmers are not directly affected. However, under the act, *42 U.S.C. § 300h-7,* states are required to develop a plan to protect wellhead areas (which means the surface and subsurface surrounding a water well or wellfield which supplied public drinking water through which contaminants are likely to move toward and reach the water well or wellfield). In these areas, the state is to insure that the wells are protected from contamination. As part of such a plan, a state may consider action designed to eliminate the source of the contamination -- which might be seepage of farm chemicals into the groundwater. Such an action obviously could affect the individual farm chemical user.

Solid Waste Disposal Act (S.W.D.A.), as amended by the Resource Conservation and Recovery Act (R.C.R.A.), 42. U.S.C. §§ 6901-6991, is the primary federal legislation dealing with the disposition of waste products. The regulatory approach here is first to identify specific contaminants and then to identify those who engage in specific activities involving those contaminants, such as generation of wastes, handling, treatment, storage, transportation of wastes, operation of dump sites and landfills, and so forth. Those engaged in the identified activities are the ones primarily regulated by the act and by plans promulgated under the act. This act is likely to reach many farm chemicals as well as such activities as the disposition of unused or leftover quantities of covered chemicals and their containers. By express provision of the regulations, however, farmers have been considered exempt from the act if they dispose of the wastes in the prescribed manner. 40 C.F.R. § 262.51. This requires that the farmer triple rinse the emptied hazardous chemical container, dispose of the residue on his or her own farm, and do so in a manner consistent with the disposal directions on the label. This act also regulates underground storage tanks which undoubtedly affects many farmers. A tank is considered to be an underground storage tank (U.S.T.) if more than 10% of its volume (including piping) is below grade. Excluded are certain small tanks including septic tanks, home heating oil tanks, tanks in basements and tanks that hold less than 110 gallons. U.S.T.s of 1,100 gallons or larger will generally have to be registered. Without registering, the farmer cannot use state funds for cleanup in the event of a spill. If the tank is installed after December

23, 1988, the installation must be properly certified and the tank must have proper overflow and spill prevention protection, corrosion protection and leak detection. The federal regulations call for a phase-in based on the number of tanks owned. For example, if the farmer owns less than 12 and passes less than 10,000 gallons through the tanks monthly, the farmer has until 1990 to show financial responsibility to cover at least $500,000 of cleanup costs per leak or spill and $1 million of annual aggregate coverage. All existing tanks must be retrofitted with corrosion, spill and overflow protection. Leak detection must be installed on tanks installed before 1988. Approved leak detection methods will vary with the tank's age. An approved leak detection method must be installed on all tanks built before 1965. By December 1998 or 10 years after retrofitting, monthly leak detection capability must be installed using approved technology.

Comprehensive Environmental Response, Compensation and Liability Act (C.E.R.C.L.A.), *42 U.S.C. §§ 9601*-9675 is primarily concerned with the cleaning up of inactive or abandoned toxic or hazardous chemical dumpsites. It is popularly called the Superfund Act because massive amounts of federal monies have been appropriated for this purpose where the cost of cleanup cannot be passed back to the original contaminator. As such, the act poses little direct threat to the farmer. On the other hand, a farmer might be affected because the act considers the presence of the hazardous chemicals rather than the act of disposition to be the problem. Therefore, mere ownership of the land or dump site is enough to bring an individual under the act even though that owner had nothing to do with putting the chemicals there. Farmer landowners may be fully liable for the cleanup costs and would not be able to pass that on to a third party (in this case, whoever actually put the chemicals there) unless the landowner can show 1) no knowledge of the prior use, 2) that the third party is the sole cause of the problem and 3) that the owner made a commercially reasonable site assessment that did not disclose the waste prior to the purchase.

STATUTES WHICH REQUIRE THE DISCLOSURE OF CERTAIN CHEMICALS:

Emergency Planning and Community Right-to-Know Act (E.P.C.R.T.K.A.), *42 U.S.C. §§ 11001*-11050, seeks to identify where hazardous chemicals are being generated and are being stored, require local jurisdictions to anticipate that those chemicals might be discharged into the environment and then develop a plan to deal with that emergency. The Administrator of E.P.A. publishes a list of hazardous chemicals covered by the act and establishes minimum amount levels that can be held, used or stored without having to be reported. Any facility that has any chemical on the list on the premises in amounts greater than that minimum amount is subject to the act. Facilities covered by the act must notify the E.P.A. of any release of the listed chemicals. They must also make available to the local planning committee and the public (on request) material safety data sheets (M.S.D.S.) which describe the contents of the hazardous chemicals held or used on the premises. This information must be submitted to the appropriate local emergency planning committee, to the state emergency response committee and to the fire department with jurisdiction over the facility. Some of this information must be made available to the public on request by the state committee. Failure to comply with these requirements subjects the violator to civil and criminal penalties.

In *Kuiper v. American Cyanamid Co., 913 F. Supp. 1236 (E.D. Wis. 1996),* the court rejected claims that the manufacturer had negligently misrepresented claims regarding a pesticide through deceptive advertising and the failure to include on the label cautions regarding the impact of the chemical after crop rotation. The court held that these tort claims were preempted by FIFRA, following an earlier court's conclusions in *Worm v. American Cyanamid, 5 F.3d 744 (4th Cir. 1993)* and *Welchert v. American Cyanamid, 59 F.3d 69 (8th Cir. 1995).* The court, however, opined that FIFRA may not preempt all tort claims for negligence or strict liability associated with the manufacture of the chemical and negligent misrepresentation where the claims are substantially different from information required to be on the label. Another case finding preemption of tort claims by *FIFRA is Grenier v. Vermont Log Bldgs., Inc., 96 F.3d 559 (1st Cir. 1996),* where the court held that FIFRA preempts label claims couched in terms of breach of warranty, misdesign or manufacturing defect.

In *United States v. Olin Corp., 927 F. Supp. 1502 (S.D. Ala. 1996),* the court invalidated portions of the Comprehensive Environmental Response, Compensation and Liability Act as an unconstitutional violation of the

commerce clause. The court held that these provisions regulated contamination which was purely a local matter and which did not "substantially affect" interstate commerce. This decision was reversed in *United States v. Olin Corp., 107 F.3d 1506 (S.D. Ala. 1997).*

(n65)Footnote 823. Public domain land is susceptible of private use in a variety of ways ranging from mining and extraction of minerals to fishing and hunting. In many cases, a major use of public areas is for private recreation. Important agricultural use of the public domain is commonly made in the form of grazing of livestock and harvesting timber. For a comprehensive exploratory overview of the general area of private use of the public domain *see* Coggins and Wilkinson, Federal Public Land and Resources Law (2d ed. 1986).

For an example of how extensive federal control over local land use regulation can be in the context of mining on public domain land, *see California Coastal Comm'n v. Granite Rock Co., 480 U.S. 572 (1987)* where the court seems to assume, though without specifically holding, that the Federal Land Policy and Management Act and the National Forest Management Act preempt the extension of state land use plans onto unpatented mining claims in national forest areas of the public domain.

See also Board of County Comm'rs v. Roger Kaul, No. 87 C. 84, (Jackson Cty. Dist Ct., Kan., Decided 3 May, 1988), where the State District Court held that the Jackson County zoning ordinance had no application to land located within the boundaries of an Indian reservation within the county.

In a 1990 decision by the 9th *Circuit, State of Nevada v. Watkins, 914 F.2d 1545 (9th Cir. 1990),* the Court upheld the power of Congress to designate a single state as the national high-level nuclear waste depository site. The primary rationale for the decision was grounded in the property clause and the fact that the site was located on federal land. The holding that Congress had the power to select the site was held to effectively preempt Nevada's attempt to veto this action. The court also ruled that the state's rights under the 10th Amendment were not violated. For further discussion of

the case, *see* James Davenport, *The Federal Structure: Can Congress Commandeer Nevada to Participate in its Federal High Level Waste Disposal Program? 12 Va. Envtl. L. J. 539 (1993).* For a discussion of *Nevada v. Watkins* in the context of public land law, *see 68 Tulane L. Rev. 1047.* In contrast, the United States Supreme Court held in a case decided after the Nevada decision that Congress could not, without violating the Tenth Amendment, compel the state of New York to take title to waste for which they had not provided a means of disposal. In *New York v. United States, 112 S. Ct. 2408 (1992),* the Court considered a challenge to a federal act that provided "incentives" to states to provide disposal sites for low-level nuclear waste generated in state. Although the Court upheld two of these incentives, it ruled that the provision that required the state to take title to waste for which it had not provided for disposition violated the Tenth Amendment. Another case has explored the extent to which state regulation of an area must give way to federal authority over the same subject matter. In *West Lynn Creamery, Inc. v. Healy, 114 S. Ct. 2205 (1994),* the United States Supreme Court invalidated Massachusetts milk pricing orders as contrary to minimum milk prices set pursuant to federal authority under the Agricultural Marketing Agreement Act. The Massachusetts program required dealers of milk in Massachusetts to make monthly payments into a state fund that was then distributed to producers in proportion to their contribution to the State's total production of raw milk. The court held that the Massachusetts program specifically imposed an impermissible burden on interstate commerce. In contrast, in an earlier case, *Medo-Bel Creamery v. State of Oregon, 673 P.2d 537 (Or. App. 1983),* a court held that the federal Milk Marketing Agreement Act did not preempt the state from setting higher minimum prices for milk. There, the court found that both the state and the federal statutes were designed to accomplish the same purpose, namely, to insure an adequate supply of milk by protecting the farmers who produce milk. The court said that "nothing in the statutes ... specifically or impliedly bars state action in setting minimum prices that are higher than those set under the federal statute. The purpose of the federal statutory scheme of establishing milk prices that are high enough to support producers and to continue a uniform supply of milk would not be adversely affected by state action setting prices higher than those set by the federal government. There is no impossibility of dual compliance with the federal and state regulatory bodies." "We therefore hold that Congress did not intend to preempt the field of setting milk prices. The states are preempted only from setting milk prices lower than those established by the federal government ... ." For a discussion of the preemptive effect of the labeling requirements of the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) *(7 U.S.C. §§ 136*-136y) on state Uniform Commercial Code implied warranties of fitness for particular purposes, *see Andrus v. Agrevo USA Co., 178 F.3d 395 (5th Cir. 1999); Cipollone v. Liggett Group, Inc, 505 U.S. 504 (1992); Welchert v. American Cyanamid, Inc., 59 F.3d 69 (8th Cir. 1995);* Taylor AG Indus. v. Pure-Gro 54 F.3dd 555 (9th Cir. 1995); and *Kuiper v. American Cyanamid Co. 131 F.3d 656 (7th Cir. 1997).* Express warranties of merchantability have also been held preempted. *See Gooch v. E.I. Du Pont De Nemours & Co., 40 F. Supp. 2d 863 (W.D. Ky. 1999).* In contrast, state law-based claims by workers for the consequences of being exposed to cancer-causing products have not been held preempted. *See DiPetrillo v. Dow Chemical Co., 729 A. 2d 677 (R.I. 1999).*

"Failure to warn" claims by consumers who were harmed by chemicals subject to FIFRA were barred as preempted in *Younger v. Spartan Chemical Co., 686 N.Y.S. 2d 152 (N.Y. App. 1999).* This case involved disinfectants. Larvicide claims were apparently beyond the preemptive reach of FIFRA, although the court did not directly address the issue in *Koch v. Shell Oil Co., 49 F. Supp. 2d 1262 (D. Kan. 1999).* In *Babalola v. Crystal Chemicals, Inc., 685 N.Y.S. 2d 679 (N.Y. App. 1999),* the court barred as preempted by FIFRA a claim against a distributor that there was a failure to properly inspect and test the product. However, the court did not bar as preempted a negligent testing claim against the manufacturer.

(n66)Footnote 824. In Board of County Comm'rs v. Roger Kaul, No. 87 C 84, (Jackson Co. Dist. Ct. Decided 3 May, 1988), the court held that the zoning ordinance of Jackson County did not apply to land located within an Indian reservation within the county. The court relied heavily on the decision in Confederated Tribes & Bands of the Yakima Nation v. County of Yakima, 828 F.2d (9th Cir. 1987) where the court held that the Yakima Tribe had authority to zone non-Indian fee land within the reservation boundaries based on the sovereignty of the Indian tribes. *See also Santa Rosa Band of Indians v. Kings County, 532 F.2d 655 (9th Cir. 1975).*

(n67)Footnote 825. *See, e.g.,* the Food Security Act of 1985, Pub. L. 99-198, *99 Stat. 1354,* § 1201 *et seq.,* which

mandates that any person who raises any agricultural commodity for which federal price supports are available on any land that is defined as "highly erodible" must have an approved conservation plan in place on that land by 1990 or such person shall be ineligible for federal price supports.

(n68)Footnote 826. Present programs relating to agricultural production began with the Agricultural Adjustment Act of 1933, Act of May 12, 1933, c. 25, tit. I, *48 STAT. 31*.

(n73)Footnote 831. *317 U.S. 111 (1942).*

(n74)Footnote 832. Paul Rasor and James Wadley, supra, n.19.

In 1996, in a radical departure from the historic approach to regulating farm production, Congress enacted the Federal Agricultural Improvement and Reform Act (FAIR). This was intended to constitute the basis for the federal farm program until the year 2002. (The act does not repeal the Agricultural Act of 1949, Pub. L. 81-439, *63 Stat. 1051*, as the permanent basis for the farm program. This approach gave farmers more flexibility as to how their land is used as the current approach is gradually phased out. Eventually, the decision of what to plant will be dictated more by market forces than by participation requirements of the federal farm program. Under the new program, there will be a one time sign up. If the farm is not enrolled during this period, it may not be enrolled at any time during the seven years of the program. Forms are available from the local Farm Service Agency. Eligible acres include wheat, feedgrains, upland cotton, and rice. Eligible farms must have at least one crop acreage base on the farm. Once enrolled, the farm is eligible to receive payments for seven years. The payments will be reduced each year until the end of seven years. The farmers who enroll in the program must comply with existing conservation compliance rules for their farms including those relating to wetlands. The Conservation Reserve Program is extended through the year 2002, but the acreage is limited to the currently enrolled 36.4 million acres. A maximum of 975,000 acres is permitted to be enrolled in the Wetland Reserve Program, divided equally between permanent easements, 30-year easements, and restoration cost-share agreements. A new program, called the Environmental Quality Incentive Program (EQIP), has been approved primarily to assist livestock producers address environmental issues on farms and ranches. The new approach allows any commodity to be grown on the contract acreage, with some restrictions for fruit and vegetable crops. On noncontract acreage, any crop, including fruits and vegetables can be grown and harvested. For further discussion, *see* Christopher R. Kelley, *Rethinking the Equities of Federal Farm Programs*, 14 N. Ill. L. Rev. 695 (Summer 1994); Christopher R. Kelley, *Recent Developments in Federal Farm Program Litigation, 25 U. Mem. L. Rev. 1107 (Spring 1995);* Christopher R. Kelley and James Loeoen, *Federal Farm Conservation Initiatives: Past, Present and Future, 9 Nat. Resources & Env't. 17 (Winter 1995);* Raymond D. Watson, *Conservation Reserve Programs: What Happens to the Land When the Contracts End? 14 N. Ill. U. L. Rev. 733 (Summer 1994).* For a discussion of the impact of the failure to comply with provisions of the federal statutes relating to "swampbusting" on eligibility to receive crop subsidies, *see United States v. Dierckman, 41 F. Supp. 2d 870 (S.D. Ind. 1998).*

(n80)Footnote 838. *See* Myrl Duncan, *Toward a Theory of Broad-based Planning for the Preservation of Agricultural Land*, 24 Nat. Resources J. 61, 68 (1984).

The National Agricultural Lands Study (NALS) was issued on January 17, 1981. It was primarily the work of the United States Department of Agriculture and the Council on Environmental Quality. It also involved the assistance of the Department of Defense, Department of Energy, Department of Housing and Urban Development, Department of the Interior, Department of State, Department of Transportation, Department of the Treasury, Environmental Protection Agency and the Water Resources Council. The study sought to determine as accurately as possibly the extent of private agricultural land in the nation and identify how and where those lands were held.

(n81)Footnote 839. *7 U.S.C. § 4201 et seq.*

(n82)Footnote 840. Pub. L. 97-98, *95 Stat. 1343 (1981).*

(n83)Footnote 841. *7 U.S.C. § 4202.*

Section 4201(b) provides that the purpose of the act is

to minimize the extent to which federal programs contribute to the unnecessary and irreversible conversion of farmland to non-agricultural uses, and to assure that federal programs are administered in a manner that, to the extent practicable, will be compatible with State, unit of local government, and private programs and policies to protect farmland.

The act does not grant any specific authority to the Secretary of Agriculture to enforce or oversee procedures in other federal agencies. The success of the act as a measure to protect land for agricultural use therefore depends upon the extent to which each agency is willing to consider farmland preservation as a priority objective. *See* Frank Schindman, *The Evolving Federal Role in Agricultural Land Preservation, 18 Urb. Law. 423 (1986).*

(n84)Footnote 842. *7 U.S.C. § 4208. See also* Richard Dunford, *The Evolution of Federal Farmland Protection Policy,* 37 J. Soil & Water Conservation 133, 136 (1982).

(n85)Footnote 843. *Wade v. Dole, 631 F. Supp. 1100 (N.D. Ill. 1986), aff'd sub nom., Eagle Found., Inc. v. Dole, 813 F.2d 798 (7th Cir. 1987).*

(n86)Footnote 844. *Id.* The Secretary indicated that if the highway was to be located in a farmland area, at least two adverse effects would follow:

> One is that farms will be split into two, causing farmers to travel substantial distances to bridges over the highway in the course of working the fields; the other is that a diagonal cut of a highway across a farm presents complications for the farm's mechanical operation. The diagonal cut skews rows, and in triangular intersections machines operate less effectively or break down more often. Some of these effects may be alleviated by selling land so that each farm lies on one side of the road (the farmer whose "south 40" now lies on the other side of the highway may swap with the farmer whose "north 40" got cut off). But the creation of triangular rather than square corners cannot be dealt with by changing the orientation of the furrows.

631 F. Supp. at 1113.

(n87)Footnote 845. The regulations provide that, if, after consideration of the adverse impacts a particular project may have on agricultural land, the agency wishes to proceed with an activity that results in the conversion of farmland to a non-agricultural use, the agency is not permitted to refuse to proceed with the project. *See 49 Fed. Reg. 27, 725 (1984)* codified at 7 C.F.R. § 658.

See also Strycker's Bay Neighborhood Council, Inc. v. Karlen, 444 U.S. 223 (1980) dealing with the extent to which the federal agency must "study, develop, and describe appropriate alternatives to recommended courses of action" under similar environmental legislation, holding that legislation required "consideration" but subject to the agency's discretion as to the choice of action to be taken.

Belcher, *Estate Planning for Family Business Owners: Section 2032a, Section 6166, and Section 303,* SC75 ALI-ABA 1327 (1998).

(n100)Footnote 858. That means that:

1. The taxpayer must be farming with an intent to realize a profit and not recreation or pleasure;

2. The taxpayer cultivates, operates and manages a farm, either as an owner or tenant. A taxpayer who leases land for a fixed fee (not based on production) and who does not participate in management is not generally considered to be "engaged in the business of farming." ("Farming" includes the following activities: stock, diary, poultry, fish, fruit and truck farms and also plantations, ranches, ranges and orchards. Farming does not include forestry or the growing of timber. A nursery engaged in raising ornamental plants, however, is considered a farm for purposes of the elections.)

The term "farm" is defined in § 2032A to include "stock, dairy, poultry, fruit, furbearing animal, and truck farms, ranches, plantations, nurseries, ranges, greenhouses or other similar structures used primarily for the raising of agricultural or horticultural commodities, and orchards and woodlands."

(n101)Footnote 859. "Adjusted value", as it is used in this context, means the value of the property determined *without* reference to § 2032A. That is, the fair market value minus the deductions allowed under I.R.C. § 2053(a)(4). Section 2053(a)(4) allows deductions for unpaid mortgages and indebtedness. "Qualified use" refers to the devotion of the property to "... use as a farm for farming purposes...".

(n102)Footnote 860. "Farming Purposes," as defined in I.R.C. § 2032A(e)(5), includes cultivating the soil or raising or harvesting of any agricultural commodity, handling, or storing any agricultural or horticultural commodity (but only if the operator regularly produces more than one-half of the commodity so treated) and planting, cultivating, caring for, or cutting of trees or preparation of trees for market.

(n103)Footnote 861. The term "qualified heir" means a member of the decedent's family who acquired such property (or to whom such property passed) from the decedent.

(n104)Footnote 862. The phrase "member of the family" is defined in § 2032A(e)(2) to include:

1) an ancestor of such individual,

2) the spouse of such individual,

3) a lineal descendant of such individual, of such individual's spouse, or of a parent of such individual, or

4) the spouse of any lineal descendant described in subparagraph (C).

The definition also provides that a legally adopted child shall be treated as a child by blood. Similarly, if the property passes to a trust, it is deemed to pass to a "qualified heir" if a "qualified heir" has a present interest. *Id.*

(n108)Footnote 866. I.R.C. § 2301(c). For further discussion, see Bowman, *New Tax Laws Could Aid Land Trusts,* Richmond Times Dispatch, pp B1, B4, (Sept 9, 1997). To qualify, the land must be located in or within 25 miles of a metropolitan area, or in or within 25 miles of a national park or wilderness area, or in or within 10 miles of an Urban National Forest. The land must also have been owned by the decedent or a member of the decedent's family for the three years preceding decedent's death. Finally, an easement must have been granted by the decedent or a member of decedent's family. This easement may be granted post-mortem so long as it is done no later than the date of election. The election is irrevocable and is made on the estate tax return.

A number of decisions have interpreted various aspects of special valuation under § 2032A. Following are some of the more significant decisions. In *Estate of Clara K. Hoover v. Commissioner, 69 F.3d 1044 (1995),* the court allowed the estate to claim a minority discount to arrive at the fair market value of the decedent's interest in the estate prior to reducing the value of the estate through the application of the special use valuation principles of § 2032A. Similarly, in *Estate of Luton v. Commissioner, T.C. Memo, 1994-539, supp. by T.C. Memo 1996-181,* the estate was allowed a 20% discount for minority interest and a 15% discount for lack of marketability. In *Estate of Bonner v. United States, 84 F.3d 196 (5th Cir. 1996),* the estate was allowed a fractional interest discount.

In *Hohenstein v. Commissioner, T.C. Memo 1997-56,* a qualified heir who received the property from a farmer decedent and farmed the property for eight years then became physically incapacitated and sold a portion of the farm and leased the remainder to unrelated parties on a cash basis. The heir reported the sale and paid the recapture tax but argued that the land should not lose its qualified status because he had materially participated for the period of eight years. The court held that the material participation and qualified use tests were separate tests and that the post-death cash lease was not a qualified use. In *Sass v. Hanson, 554 N.W.2d 642 (Neb. 1996),* a legal malpractice claim was filed against an attorney who had represented an estate electing special use valuation but eventually paying a recapture tax. The estate argued that the recapture tax would not have been assessed had proper legal advice been given. The court of appeals upheld a lower court decision that the action was barred by the statute of limitations. The court held that the statute was triggered at the time the party knew of the injury, not when the party obtained a legal right to seek redress in court. As a result, the cause of action accrued when letters were sent by the attorney to the heirs describing their options, not when the IRS assessed the recapture tax. These letters were sent at the time of death and did not warn the heirs to avoid cash leases. For further discussion, *see* Meints, *Farm Estate Planning Issues, Trends, and Concerns involved with Special Use Valuation,* 14 Agric. L. Update 4 (Jan 1997).

(n133)Footnote 891. The water cover cannot include ponds for the purpose of watering livestock, irrigating crops or raising fish for commercial purposes. *Id.*

In *Strong v. Glickman, 50 F. Supp. 2d 1 (D. D.C. 1999),* plaintiff had been awarded a CRP contract for the ten year period beginning in 1988 and continuing through 1997. The contract was awarded as a result of the County Committee reversing an earlier decision that denied the contract on the ground that the plaintiff had not established that an agricultural commodity had been grown on the land. In 1991, the USDA Office of Inspector General (OIG) began a review of various offices in response to allegations that programs were not being administered according to applicable regulations. OIG determined that plaintiff's contract had been improperly awarded and the contract was canceled. This was appealed through USDA and to the courts. Plaintiffs were allowed to retain all CRP payments already issued plus a 1992 payment. Plaintiffs appealed to the courts alleging that the government had violated the Administrative Procedure Act by canceling the contract. The primary arguments were that, by regulation, determinations regarding conformity with applicable regulations were to be deemed "final" and that USDA based the cancellation on provisions of the ASCS Handbook which had not been duly promulgated as regulations. The court rejected plaintiff's arguments in each case. First, the language regarding finality *(7 U.S.C. § 1385)* does not preclude USDA from reviewing its own decisions. (There is a later adopted rule that provides that when state and county committees make decisions in good faith and in the absence of misrepresentation, false statements, fraud or willful misconduct, unless otherwise appealed under that section, such decision shall be final unless otherwise modified within 90 days. *See 7 U.S.C. § 1433e.* The court held that this particular provision did not govern the matter before it.) Further, the court noted that finality limitations are only applicable to official determinations that are made in conformity with the applicable regulations and here, the evidence suggested that the decisions were not made in conformity with the regulations. Second, regarding the use of the Handbook, the court noted there is no clear line distinguishing substantive rules which must be promulgated with notice and comment, and interpretive rules, which have no such requirement. Interpretive rules are those which 1) are not determinative of issues or rights addressed; 2) express the agency's intended course of action; 3) express its tentative meaning of particular statutory terms; and 4) do not foreclose alternative courses of action or conclusively affect rights of private parties. In this case, regardless of how the handbook was characterized, it did not constitute the sole authority for depriving the plaintiffs of their contract.

(n134)Footnote 892. The Secretary may approve a tree planting plan as part of the approved vegetative cover where that is necessary to maintain adequate erosion control on the eligible cropland. 7 C.F.R. 704.2(23).

For further discussion of the issue of wetlands generally, *see*: Michael Blumm, *The Clinton Wetlands Plan: No Net Gain in Wetlands Protection,* 9 J. Land Use & Envtl. L. 603 (1994); Michael Lenetsky, *President Clinton and Wetlands Regulation: Boon or Bane to the Environment?* 13 Temp. Envtl. L. & Tech. 81 (1994). *See also* Linda A. Malone, *Conservation at the Crossroads: Reauthorization of the 1985 Farm Bill Conservation Programs, 8 Va. Envtl. L.J. 215 (1989)* (discussing reforms that would be most effective and efficient in preserving wetlands and highly erodible land); Alia S. Miles, *Searching for the Definition of "Discharge:" Section 401 of the Clean Water Act, 28 Envtl. L. 191 (1998).* In response to the requirement in the Clean Water Act that there should be "no net loss" of wetlands, and the stricter U.S. Army Corps of Engineers policy which requires mitigation for destroyed wetlands larger than 1/3 acre (rather than the previous 1 acre), some jurisdictions have been experimenting with "wetlands banking." Under these approaches, those who operate the banks create wetlands in areas that are not otherwise wetlands. Then developers who destroy wetlands elsewhere can purchase wetlands from the "banks" to mitigate the damage. For further discussion, *see* Kyra Epstein, *Private Wetland Banking Comes to Colorado Front Range,* U.S. Water News, p. 10 (Jan. 2000). For a case involving local approval of wetland replacement plans, *see Board Order, Kells v. City of Rochester, 597 N.W. 2d 332 (Minn. 1999).* For a case involving local authority to designate land as wetland, *see Bode v. Minnesota Department of Natural Resources, 594 N.W. 2d 257 (Minn. 1999).* For further discussion of the law relating to wetlands, see Johnathan

In *United States v. Dierckman, 201 F.3d 915 (2000),* the court held that the Food Security Act was not enacted under the auspices of the Commerce Clause of the Constitution but rather under the spending power. The government is therefore not limited by the enumeration of Congressional powers in Article 1, Section 8 of the Constitution. As a result, the government may engage in indirect regulation of matters that would not fall within the scope of interstate commerce. In *Prokop v. United States, 91 F. Supp. 2d 1301 (D. Neb. 2000),* the court upheld a USDA determination that portions of the farmer's land were "farmed wetland pasture" subject to the restrictions of the Act against allegations that the determination was arbitrary and capricious and denied the landowner due process.

(n145)Footnote 903. Food Security Act of 1985, §§ 1211, 1221, Pub. L. 99-198, *99 Stat. 1354 (1985)* codified as *16 U.S.C. §§ 3811,* 3821.

See Branstad v. Veneman, 145 F. Supp. 2d 1011 (N.D. Ia. 2001), regarding farmers' rights during appeal where it is alleged that the farmers improperly converted wetlands by repairing a tile drainage system on their farmland. *See* M. L. 603 (1994); Michael Lenetsky, *President Clinton and Wetlands Regulation: Boon or Bane to the Environment? 13 Temp. Envtl. L. & Tech J. 81 (1994).* In *United States v. Dierckman, 41 F. Supp. 2d 870 (S.D. Ind. 1998),* the court found that the wetland in particular was subject to the provisions of the Food Security Act even if it does not affect interstate commerce. The rationale for this is that the Food Security Act, by its terms, clearly does not limit itself to wetlands that affect interstate commerce. Further, the Act was passed pursuant to the Spending Clause of the Constitution, not the Commerce clause. As such, Congress has broad power that reaches beyond its other enumerated Constitutional powers to promulgate regulations that advance the general welfare. In this, the Food Security Act differs from the Clean Water Act, which does contain a limitation regarding interstate waterways. Further, even though there is a Memorandum of Agreement signed by USDA that provides that wetlands should be identified under the Food Security Act consistently with the Swampbuster provisions and the Clean Water Act, the court here said that that Memorandum did not address the question of whether the Swampbuster provisions should include an additional requirement that the wetland affect interstate commerce. In response to the requirement in the Clean Water Act that there should be "no net loss" of wetlands, and the stricter U.S. Army Corps of Engineers policy which requires mitigation for destroyed wetlands larger than 1/3 acre (rather than the previous 1 acre), some jurisdictions have been experimenting with "wetlands banking." Under these approaches, those who operate the banks create wetlands in areas that are not otherwise wetlands. Then developers who destroy wetlands elsewhere can purchase wetlands from the "banks" to mitigate the damage. For further discussion, *see* Kyra Epstein, *Private Wetland Banking Comes To Colorado Front Range,* U.S. Water News, p. 10 (Jan. 2000).

(n178)Footnote 936. *118 F.3d 1233 (8th Cir. 1997).* The focus of the wetlands provisions has been held to focus on protecting the status quo of the wetlands that existed at the effective date of adoption of the Food Security Act. *See Barthel v. United Stated Department of Agriculture, 181 F.3d 934 (8th Cir. 1999).* Since preexisting changes are not affected by the Act, a farmer was held entitled to the best water and farming regime that existed prior to the adoption of the Act. In response to the requirement in the Clean Water Act that there should be "no net loss" of wetlands, and the stricter U.S. Army Corps of Engineers policy which requires mitigation for destroyed wetlands larger than 1/3 acre (rather than the previous 1 acre), some jurisdictions have been experimenting with "wetlands banking." Under these approaches, those who operate the banks create wetlands in areas that are not otherwise wetlands. Then developers who destroy wetlands elsewhere can purchase wetlands from the "banks" to mitigate the damage. Resources & Env't L. 2 (1997); Wilkinson, *The National Forest Management Act: The Twenty Years Behind, The Twenty Years Ahead, 68 U. Colo. L. Rev. 659 (1997).* Newly enacted Section 508 of the Taxpayer Relief Act allows the executor of the estate of a farm decedent dying after Dec. 31, 1997, to exclude from the decedent's gross estate up to 40% of the value of land subject to qualified conservation easements. I.R.C. § 2301(c). For further discussion, *see* Bowman, *New Tax Laws Could Aid Land Trusts,* Richmond Times Dispatch, pp B1, B4, (Sept 9, 1997). To qualify, the land must be located in or within 25 miles of a metropolitan area, or in or within 25 miles of a national park or wilderness area, or in or within 10 miles of an Urban National Forest. The land must also have been owned by the decedent or a member of the decedent's family for the three years preceding decedent's death. Finally, an easement must have been granted by the decedent or a member of decedent's family. This easement may be granted post-mortem so long as it is done no later than the date of election. The election is irrevocable and is made on the estate tax return. This may encourage farmers who have inholdings in the public domain to create conservation easements that may make the use of that land more compatible with the manner in which the surrounding public domain land is managed.

(n224)Footnote 982. 43 C.F.R. § 4110.2-2(b).

See Coalition v. Bosworth, 180 F. Supp. 2d 124 (D.D.C. 2001), dealing with the extent to which the Secretary must consider environmental impacts of federal grazing permits when they are renewed. In this case, the defendant Forest Service moved to transfer the case to the District of Montana. That motion was denied. *See also Guardians v. Wells, 34 P. 3d. 364 (Az. 2001)* regarding a state proposal to lease school trust lands. In *Klump v. United States, 50 Fed. Cl. 268 (2001),* the court rejected a taking claim regarding water rights that were enjoyed by the cattle rancher. The rights were deemed lost when the grazing rights were cancelled. The Government petitioned the State to transfer the water rights to it. The Court held that there could be no taking if the government was not acting in its sovereign capacity. Here the Government merely petitioned as an adverse title claimant rather than in any sovereign capacity. *See also Central South Dakota Cooperative Grazing District v. Secretary of the United States Department of Agriculture, 266 F.3d 889 (8th Cir. 2001),* regarding the authority of the Secretary to set maximum stocking levels for grasslands. In *Anchustegui v. Department of Agriculture, 257 F.3d 1124 (9th Cir. 2001),* it was held that the Secretary could not cancel a grazing permit where the notice of cancellation did not provide the permit holder an opportunity to achieve compliance or to

demonstrate that he had achieved compliance before the institution of the agency proceedings. For further discussion, see A. Adams, Administrative Law (Annual Survey of Caselaw), *23 U. Ark. Little Rock L. Rev. 1017 (2001);* E. Schlenker-Goodrich, Moving Beyond Public Lands Council v. Babbitt: Land Use Planning and the Range Resource, *16 J. Envtl. L. & Litig. 139 (2001);* S. (n226)Footnote 984. Animal unit month is defined as the amount of forage necessary for the sustenance of 1 cow or equivalent. 43 C.F.R. § 4100.0-5.

(n227)Footnote 985. 43 C.F.R. § 4130.7-1(a)(1).

See Arizona Cattle Growers Association v. United States Fish and Wildlife, 273 F.3d 1229 (9th Cir. 2001) challenging the extent to which the Endangered Species act precludes ranchers from grazing their livestock in certain areas of potential habitat. Judgment for ranchers was, for the most part, upheld. *See also Central South Dakota Cooperative Grazing District v. Secretary of the United States Department of Agriculture, 266 F.3d 889 (8th Cir. 2001),* regarding the authority of the Secretary to set maximum stocking levels for grasslands. In *United States v. State Engineer, 27 P. 3d 51 (Nev. 2001),* the court reversed the state denial of a federal application for stockwater permits on public lands. The government's argument was that either the state statute on its face permitted BLM to hold the permits or else the statute was unconstitutional. The court avoided the constitutional issue by finding that the statute was unambiguous and that it allowed BLM to hold the permits in the name of the United States. For further discussion, see A. Adams, Administrative Law (Annual Survey of Caselaw), *23 U. Ark. Little Rock L. Rev. 1017 (2001),* E. Schlenker-Goodrich, Moving Beyond Public Lands Council v. (n228)Footnote 986. 43 C.F.R. § 4130.4-2.

For an interesting case in which the individual rancher's share of the animal unit months within a grazing district were apportioned among all of the remaining grazing preferences after the sale of land leased to the district, see *Kalfell Ranch, Inc. v. Prairie County Cooperative State Grazing District, 15 P.3d 888 (Mont. 2000).* In *Southwest Center for Biological Diversity v. United States Forest Service, 82 F. Supp. 2d 1070 (D. Az. 2000),* an environmental group challenged the issuance of livestock grazing permits without first consulting with the United States Fish and Wildlife Service. The court held that the group had standing to intervene during remedial but not the declaratory merits phase of the action but that the action was moot. In *Public Lands Council v. Babbitt, 120 S. Ct. 1815 (2000),* the Supreme Court upheld the authority of the Secretary to define the scope of a "grazing preference" and to eliminate thereby the requirement that a holder be engaged in the livestock business. For further discussion, see Feller, Joseph M. and Brown, David E. *From Old Growth Forests to Old Growth Grasslands: Managing Rangelands for Structure and Function. 42 Ariz. L. Rev. 319 (2000);* Baas, Mark J., *Diamond Bar Cattle Co. v. United States: State Water Rights on Federal Lands for not Hold Property Interest to Graze on those Lands, 4 Great Plains Nat. Res. See also United States v. Cox, 190 F.2d 293, 296 (10th Cir. 1951), cert. denied, 342 U.S. 867 (1951): "Although the permits are available to the ranchers, they are not an interest protected by the Fifth Amendment against the taking by the Government who granted them with the understanding that they could be withdrawn at any time without the payment of

compensation."

See also Kalfell Ranch, Inc. v. Prairie County Cooperative State Grazing District, 15 P.3d 888 (Mont. 2000) where the district was required to apportion grazing rights among remaining members of a cooperative grazing district when land leased to the district was sold. In this case, the apportionment resulted in the allotment of scattered lands that could not qualify for a grazing permit. Here the court found that the member was not entitled to an equitable award of monetary damages despite the fact that the member had sustained a large loss of animal unit months.

For further discussion, see Feller, Joseph M. and Brown, David E. From Old Growth Forests to Old Growth Grasslands: Managing Rangelands for Structure and Function. *42 Ariz. L. Rev. 319 (2000);* Baas, Mark J., Diamond Bar Cattle Co. v. United States: State Water Rights on Federal Lands for not Hold Property Interest to Graze on those Lands, *4 Great Plains Nat. Res. J. 296 (2000).*

See also Bradshaw v. United States, 47 Ct. Cl. 549 (2000), holding that neither the grazing permit nor the historical grazing preferences constituted property under the Fifth Amendment. Likewise, the failure of the government to prevent feral horses from causing damage to the ranch and forage did not result in a taking.

For further discussion, see Feller, Joseph M. and Brown, David E. From Old Growth Forests to Old Growth Grasslands: Managing Rangelands for Structure and Function. *42 Ariz. L. Rev. 319 (2000);* Baas, Mark J., Diamond Bar Cattle Co. v. United States: State Water Rights on Federal Lands for not Hold Property Interest to Graze on those Lands, *4 Great Plains Nat. Res. J. 296 (2000).*

(n241)Footnote 999. 43 C.F.R. § 4110.2-2(b): "The grazing preference specified shall attach to the base property supporting the grazing permit or grazing lease." "Grazing preference" is defined as the total number of animal unit months of livestock grazing on public lands apportioned and attached to base property owned and controlled by a permittee or a licensee. 43 C.F.R. § 4100.0-5. In essence, a grazing permit authorizes the grazing of a specified number of animals for a specified period of time, measured in animal unit months. The grazing preference, then, is the quantified substance of the grazing permit.

(n242)Footnote 1000. *See 43 U.S.C. § 315b;* 43 C.F.R. §§ 4130.2, 4130.3.

(n243)Footnote 1001. "Base property" is defined as privately held land that: (1) has the capacity to produce crops or forage that can be used to support authorized livestock for a specified period of the year (when the animals are not on the public domain) or (2) water that is suitable for consumption by livestock and is available and accessible to the livestock when they are on the public domain. 43 C.F.R. § 4100.0-5.

(n244)Footnote 1002. 43 C.F.R. § 4110.2-1(d) provides the permit or lease will automatically terminate if the permittee or lessee loses ownership or control of all or part of the base property unless the permit holder requests in writing, in advance of losing ownership, that the permit be extended to the end of the grazing season or grazing year. The regulations then provide that:

[w]hen a permit or lease terminates because of a loss of ownership or control of a base property, the grazing preference shall remain with the base property and be available through application and transfer procedures at 43 CFR § 4110.2-3, to the new owner or person in control of that base property.

(n245)Footnote 1003. 43 C.F.R. § 4110.2-3.

(n246)Footnote 1004. *See, e.g., Red Canyon Sheep Co. v. Ickes, 98 F.2d 308 (D.C. Cir. 1938).* There, the court dealt with a proposed trade of land to a third party if land upon which the appellant claimed a grazing right on the basis of an interim license which would normally be converted into a permit under the act for other land could not be grazed. The trade would have had the effect of extinguishing the possibility of securing a grazing permit. The Secretary

defended the exchange on the ground that the permit holders "lacked any interest to maintain the suit in that they had no vested interest in the lands and did not show themselves entitled to a patent." *Id. at 312.* The court enjoined the exchange:

> Therefore in view of the allegations in the bill that appellants have such adjacent land holdings, water rights, and other facilities as to bring them within a preferred class under the regulations, we are of the view that the interim licenses which have been temporarily issued to them must, under the Act, ripen into permits, provided that Grazing District No. 4, which has been set up so as to include the lands upon which the appellants have been running their sheep, continues to exist and to include such lands.
>
> * * *
>
> We recognize that the rights under the Taylor Grazing Act do not fall within the conventional category of vested rights in property. Yet, whether they be called rights, privileges, or bare licenses, or by whatever name, while they exist they are something of real value to the possessors and something which have their source in an enactment of the Congress. The jurisdiction of equity is flexible and should not be confined to rigid categories so that the granting of an injunction will depend on nomenclature rather than substance.
>
> * * *
>
> We rule that the valuable nature of the privilege to graze which arises in a licensee whose license will in the ordinary course of administration of the Taylor Grazing Act ripen into a permit, makes that privilege a proper subject of equitable protection against an illegal act. To hold that appellants' rights are not of sufficient dignity to be entitled to equitable protection would be inconsistent with the cases discussing other analogous subjects of equitable protection within the purposes of the Act itself.

Id.

Supp. To CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions Supp. to § 47.05

Supp. to § 47.05 Definitions.

[Go To Main]

§ 47.05(a) In General. [Go To Main]

Add:

Wallack v. Zoning Bd. of Review of the Town of Little Compton, 2003 R.I. Super LEXIS 131 (No. NC 2002-0515, Oct. 22, 2003) (agriculture is the art or science of cultivating land and management of livestock).

§ 47.05(b) Agriculture. [Go To Main]

Add:

In *Rodriguez v. Whiting Farms, 360 F.3d 1180 (10th Cir. 2004)* , the court construed the federal Fair Labor Standards Act agricultural exemption to find that employees who skinned and trimmed chickens to gather feathers to be used in fly-tying constituted agriculture. A Christmas tree farm was considered agriculture under the definition of the Fair Labor Standards Act in *United States Department of Labor v. North Carolina Growers Assoc. Inc. 377 F.3d 345 (4th Cir. 2004)* .

Add:

Braden Trust v. The County of Yuma, 69 P.3d 510 (Ariz. App. 2003) (home located on the farm and occupied by the

farmer is considered a structure for agricultural purposes under zoning law).

§ 47.05(c) Agricultural Land. [Go To Main]

Add:

Duane Donald Hebert, Debtor, 301 B.R. 19 (N.D. Iowa, 2003) (Iowa cases require at minimum a stipulation in documents saying homestead will be liable for a debt in order to held liable); *Iowa State Bank & Trust Co. v. Michel, 2004 Iowa Sup. LEXIS 158* (No. 28/02-1055, May 12, 2004) (agricultural land does not have to be used for but must only be suitable for farming).

§ 47.05(d) Farming. [Go To Main]

Add to Fn. 53:

In *Vicwood Meridian Partnership v. Skagit Sand and Gravel, 98 P. 3d 1277 (Wash. App. 2004)* , the court held that "farming" included a composting operation and rejected the argument that mushroom growing was an industrial activity.

Add:

In *Johnecheck v. Bay Township, 119 Fed. Appx. 707 (2004)* , the plaintiffs argued that placing wind turbine generators on their property was a type of "wind farming" under provisions of the Agricultural Zoning ordinance dealing with "specialized farming" which could be allowed without a permit from the Township Zoning Board. This argument was rejected. The plaintiffs challenged the ordinance as unconstitutionally exclusionary because it did not allow them to erect their turbines. This argument was rejected by the court.

Add:

Vincent W. Michels, Debtor, 2003 Bankr. LEXIS 367 (No. 03-00316, Chapter 12, N. D. Iowa, Apr. 14, 2003) (Farming operation is defined in part by the tillage of soil, dairying, raising of animals for sale all in an unmanufactured state).

Add:

In *State ex. rel Nixon v. Premium Standard Farms, Inc. 100 S.W.3d 157 (Mo. App. 2003)* , the court held that cattle grazing was an integral part of swine production and therefore permitted under an exception to the corporate farming prohibition. The farm argued that the cattle were used to graze on the land as a means to remove the nitrogen from

effluent applied to the land.

A question was raised and answered in the affirmative in *Borough of Closter v. Abram Demaree Homestead, inc. 839 A.2d 110 (N.J. Super. 2004)* whether a not-for-profit organic farming operation could be considered a farm for purposes of protecting the farm under the nuisance laws of the state. The court held that the particular statute, which applied only to commercial farming operations applied, to the activity in question even though all the produce from the farm was donated to feed the area's poor. The court reasoned that it was the fact that the produce had the required minimum value, rather than whether it was sold that determined that the operation was a commercial farm.

In *Department of Transportation v. Sunnyside Partnership, L. P. 785 N.E. 2d 1018 (Ill. App. 2003)* , the court held that a nursery was not a farm that qualified for protection under the jurisdiction's Farmland Preservation Act with respect to the exercise of taking authority of the Department for the construction of a road.

Add:

In *Richardson v. Zoning Com'n of Town of Redding, 944 A.2d 360 (Conn. App. 2008)* , the court held that the raising, breeding, and training of horses could not reasonably fall within the definition of farming.

§ 47.05(f) Farmland. [Go To Main]

Add to Fn. 79.

Davis v. Taylor, 132 P.3d 783 (Wash. App. 2006) , the court refused to protect a farming operation that had been in existence for more than 50 years from complaints raised by a neighbor who moved in after the farm had been established. In this case, the farm started out as an apple orchard. It was converted into a cherry orchard after the complainant built a house near the farm. The problem complained of was the use of propane cannons that were used to scare birds away from the cherries. This activity began after the complainants built their house. Although for other purposes, the law allows a conversion of farmland to other crops without jeopardizing its status as farmland, the nuisance statute requires that the conversion occur prior to local development. Thus, new or expanded activities are not immune from nuisance liability. As a result, it may be necessary to distinguish between that was historically done on the land compared with what is presently done there.

The Impact of the Farm Security and Rural Investment Act of 2002 on Lending Institutions and the Small Farmer. 9 N.C. Banking Inst. 243 (2005).*

Add:

In *Dairy Farmers of America v. Wilkins, 802 N.E. 2d 627 (Ohio 2004) , the court held that cooperatives were engaged in agriculture or rendering agricultural services for others for purposes of sales and tax statutes.*

Much recent litigation has explored the use of use value taxation as a means of encouraging landowners to keep land in agricultural use. *See e.g. Jones v. Department of Forests, Parks and Recreation, 857 A.2d 271 (Vt. 2004)* , holding that the use value appraisal program is designed to provide a tax incentive for landowners to maintain the property in agricultural uses; *Carmel Hollow Associates Ltd. Partnership v. Town of Bethlehem, 269 Conn. 120 (2004)* ; *Alexandria Tp. v. Orban 21 N.J. Tax 298 (2004)* ; *Cecarelli v. Board of Assessment Appeals of the Town of North Branford, 272 Conn. 485 (2005)* ; *Golf Trust of Alerica, L.P. v. Soat, 822 N.E.2d 562 (Ill. App. 2005)* ; *ENF Family Patrtnership v. Erie County Bd. of Assessment Appeals, 861 A.2d 438 (Pa. App. 2004)* ; *Jicarilla Apache Nation v. Rodarte, 103 P.3d 554 (N.M. 2004)* ; *R.H. Resorts Ltd. v. Donegan,* 29 Fla. Weekly D1691 (Fla. App. 2004); *Raisanen v. County of Hennepin, 678 N.W.2d 669 (Minn. 2004)* ; *Township of Monroe v. Gasko, 21 N.J. Tax 391 (2004)* .

In *Wetland Resource Ctr. v. Marion Cty., 809 N.E. 2d 1202 (Ohio App. 2004)* , the court held that the fact that the land qualified for compensation under federal wetlands mitigation programs because of contractual obligations, the land was

entitled to reduced property tax valuation as agricultural land.

In *Randall v. Bd. of Review for City of Ames, 682 N.W.2d 83, 2004 Iowa App. LEXIS 461 (Iowa App. 2004)* , the court held that land lost its agricultural classification for tax purposes when half the land was used for a golf course and there was no clear showing that the remaining land was used primarily for agriculture.

Supp. To CHAPTER 47 AGRICULTURE AND FARM LAW

6-47 Thompson on Real Property, Thomas Editions Supp. to § 47.09

Supp. to § 47.09 Governmental Authority to Regulate Agricultural Land Use.

[Go To Main]

§ 47.09(a) Police Power. [Go To Main]

Add:

Molamphy v. Town of Southern Pines, 2004 U.S. Dist. LEXIS 3594 (No. 97-30176-FHF, D. Mass., March 8, 2004) (to show a substantive deprivation in a zoning decision one must show that the decision does not have any foundation in reason, meaning that it does not reasonably relate to the public health, safety, morals, or welfare).

§ 47.09(b) Social Order and Nuisance. [Go To Main]

add:

In *Clajon Production Corp. v. Petera, 70 F.3d 1566 (10th Cir. 1995)* , the court held that a Wyoming provision which limited hunting licenses, reducing potential income of large land owners who sold out of state hunting services, did not constitute a "taking." It reasoned that there was a sufficient state interest in affording the opportunity to hunt to all residents and that the state did not destroy all beneficial use of the property.

§ 47.09(c) Power of Eminent Domain. [Go To Main]

Add:

The Court in *Star-Glo Associates v. United States, 59 Fed. Cl. 724 (2004)* , the court addressed the need to compensate citrus growers for the destruction of trees in order to control citrus canker. The Court held that the United States Department of Agriculture was bound by a provision in the Marketing Appropriations for Agriculture, Rural Development, Food and Drug Administration and Related Agencies Act of 2001 which placed a cap of $58,000,000 on the amount of available funds that could be used for citrus canker payments and once the cap was reached, the USDA had no further obligation to compensate plaintiffs and no relief was available. In a related case, *Fla. Dep't of Agric. & Consumer Servs. v. Haire, 865 So. 2d 610 (Fla App. 2004), 865 So. 2d 610* the court addressed administrative appeal requirements in an effort to prevent the destruction of trees exposed to citrus canker.

§ 47.09(d) "Takings." [Go To Main]

Add:

For Honesty and Integrity in *Regional Planning v. Cnty. of San Diego, 258 F. Supp. 2d 1132 (S.D. Calif. 2003)* (spending power allows Congress to indirectly regulate intrastate wetlands).

Add:

Terence J. Centner, *Governments and Unconstitutional Takings: When do Right-to-farm Laws Go Too Far? 33 B.C. Envt'l. Aff. L. Rev. 87 (2006).* See also *Walker v. United States, 69 Fed. Cl. 222 (2005)* .

In *Johnecheck v. Bay Township, 119 Fed. Appx. 707 (2004)* , the plaintiffs argued that placing wind turbine generators on their property was a type of "wind farming" under provisions of the Agricultural Zoning ordinance dealing with "specialized farming" which could be allowed without a permit from the Township Zoning Board. This argument was rejected. The plaintiffs challenged the ordinance as unconstitutionally exclusionary because it did not allow them to erect their turbines. This argument was rejected by the court. The matter was also argued to constitute a taking on the ground that the ordinance did not substantially advance a legitimate state interest. The court also rejected that argument. Notably, the United States Supreme Court shortly thereafter effectively eliminated the "substantially advances" test as a basis for a takings challenge. See *Lingle v. Chevron U.S.A. Inc. 544 U.S. 528, 125 S. Ct. 2074 (2005)* , arguing that the test came into existence in the case of *Agins v. City of Tiburon, 447 U.S. 255 (1980)* where it was treated primarily as a due process test and therefore did not apply to regulatory takings cases.

Add:

Spinell Homes Inc. v. Municipality of Anchorage, 78 P.3d 692 (Ak. 2003) (a per se taking will not be found when there is no physical invasion unless all economic value of a parcel of property has been destroyed).

Change citation from *681 N.Y.S.2d 312 (1997)* to *659 N.Y.S.2d 145 (N.Y. 1997).*

Add:

Gunstone v. Jefferson Cnty., 2004 Wash. App. LEXIS 499 (No. 29-709-4-II, Mar. 23, 2004) (municipality may be liable when property damage results from a street that diverts water onto another's property).

Add:

Friedenburg v. N.Y. State Dept. of Environ. Conserv., 767 N.Y.S.2d 451 (2003) (any person may obtain judicial review by denial or revocation of a permit which may constitute a taking).

Add:

Pascoag Reservoir & Dam, LLC v. State of R.I., 337 F.3d 87 (1st Cir. 2003) (plaintiff must usually seek compensation via inverse condemnation proceedings before initiating a takings suit in federal court).

add:

In *Resource Investments, Inc. v. U.S., 85 Fed.Cl. 447 (2009)* , the court held that the Government's denial of landowner's permit to construct and operate a landfill could support a takings claim.

Add:

See, e.g., Board of Directors of Richland Township v. Kenoma LLC, 284 S.W.3d 672 (Mo. App. S.D. 2009) (holding that a township could not pass zoning regulations restricting hog feeding farms).

§ 47.09(g) Specific Regulatory Objectives: Prevention of Harmful Uses. [Go To Main]

Add:

City of Tulsa v. Tyson Foods, Inc., 258 F. Supp. 2d 1263 (N.D. Okla. 2003) (if an annoyance is sufficient to become common to all persons within its influence, then it may be classified as of a public nature).

Add:

See also Star-Glo Associates v. United States, 59 Fed. Cl. 742 (2004) , where the court held that the United States Department of Agriculture was bound by a provision in the Marketing Appropriations for Agriculture, Rural Development, Food and Drug Administration and Related Agencies Act of 2001 which placed a cap of $58,000,000 on the amount of available funds that could be used for citrus canker payments and once the cap was reached, the USDA had no further obligation to compensate plaintiffs and no relief was available.

§ 47.09(i) Agricultural Land as the Environmental Battleground. [Go To Main]

Add:

See Bishop v. Veneman, 283 F. Supp. 2d 1207 (D. Kan. 2003) regarding the ability of USDA to reduce farm payments because of the farmer's failure to control weeds on land withheld from production. *See also Florida Wildlife Federation v. Collier County, 819 So. 2d 200 (Fla. App. 2002)* for a discussion of the extent to which agricultural use of land is subject to intensity-of-use standards under amendments to the county comprehensive plan and with respect to the protection of habitat for the Florida panther; *Fla. Dep't of Agric. & Consumer Servs. v. Haire, 865 So. 2d 610 (Fla App. 2004)* for a discussion of administrative appeal requirements in an effort to prevent the destruction of trees exposed to citrus canker.

6-47 Thompson on Real Property, Thomas Editions Supp. to § 47.10

Supp. to § 47.10 Agricultural Land Tenure Issues.

[Go To Main]

§ 47.10(b) The Family Farm as the Preferred National Farmland Tenure. [Go To Main]

Add:

Alex E. Snyder, *Saving the family Farm Through Federal Tax Policy: Easier Said than Done.* 62 Washington and Lee L. R. 729 (2005).

Add at end of section:

Two recent court decisions have called into question somewhat the ability of states to protect family farms by shielding them from competition posed by large corporate farms. *See South Dakota Farm Bureau, Inc. v. Hazeltine, 340 F.3d 583* (8th Cir. 2003) and *Smithfield Foods v. Miller, 241 F. Supp. 2d 978* (S.D. Iowa) , where the courts struck down anti-farm corporation statutes as violating the dormant *commerce clause*. In *Hazeltine*, the Court recognized that protecting the family farm was a legitimate purpose but held the state had failed to demonstrate that it had no other effective alternative. The Court did note that the federal government had made a compelling case for preserving the family farm in a 1998 report from USDA entitled *A Time to Act: Report of the USDA National Comm'n on Small Farms (1998)* but held that the state had not demonstrated that the measures proposed by the federal government were likely to be ineffective. For further discussion, *see* Choster, James, *Buying the Farm: The Eighth Circuit declares South Dakota's Anti-corporate Farming Amendment violates the Dormant Commerce Clause , 11* Mo. Envtl. L. & Pol'y Rev. 184 (2004); Redlin, M. and Redlin B., *Amendment E, Rural Communities and the Family Farm, 49 S.D. L. Rev. 7878 (2004);* Banks, J., *The Past, Present and Future of Anti-Corporation Farming Laws in South Dakota: Purposeful Discrimination or Permissive Protectionism. 49 S.D. L. Rev. 804 (2004).*

§ 47.10(c) Justifying Concern over the Family Farm. [Go To Main]

Add:

Alex E. Snyder, *Saving the family Farm Through Federal Tax Policy: Easier Said than Done.* 62 Washington and Lee L. R. 729 (2005).

§ 47.10(f) Farmland Tenure Problems: Leaseholds. [Go To Main]

Add:

In *County of Kendall v. Rosenwinkel, 818 N.E. 2d 425 (Ill. App. 2004)* , the court found that an agricultural structure (a grain bin) violated zoning setback requirements. In this case, the structure had been constructed by a tenant. The court found that the landlord was not liable for the tenant's zoning violation.

§ 47.10(g) Leases: Statute of Frauds. [Go To Main]

Add:

In *Mark v. Long, 907 N.E.2d 759 (Ohio App. 2009)* a court held that an oral lease was voidable under the statute of frauds and accordingly the landlord was not required to give a year's notice before terminating the lease.

§ 47.10(j) Leases: Lease Terms. [Go To Main]

Add:

In *Myers v. Leedy, 915 N.E. 2d 133 (Ind. 2009)* a farmer entered into a crop year lease agreement with a purchaser of the farm property. The purchaser then breached his contract with the seller of the land and the seller of the land ordered the farmer lessee off the land. The farmer lessee brought an action against the seller for not allowing him to complete the farming of the property. The court held in favor of the farmer lessee, reasoning that a lessee's interest does not expire where the vendor knew the lessee was farming the land.

§ 47.10(o) Leases: Waste [Go To Main]

Add:

In *Keller v. Bolding, 678 N.W. 2d 578 (N.D. 2004)* , the landlord had abruptly fired the tenant and argued that the firing was justified for failure on the part of the tenant to remove Canada thistle from the land. Despite finding that the failure to remove the thistle violated lease requirements regarding good husbandry, the court found that the firing was wrongful and awarded damages for lost profits to the lessee.

§ 47.10(s) Corporations: Legality of Restrictions. [Go To Main]

Add:

But see S.D. Farm Bureau, Inc. v. Hazeltine, 340 F.3d 583 (8th Cir. 2003) (Amendment E is unconstitutional unless defendants can show that there is no other method to advance their legitimate local interests).

Add at end of section:

In 2003, two courts held state farm-corporation statutes to be unconstitutional under the dormant *Commerce Clause*. In *South Dakota Farm Bureau, Inc. v. Hazeltine, 340 F.3d 583* (8th Cir. 2003) the court held that when state enactments are challenged as violative of the dormant *commerce clause*, the state law is subject to a two-tiered analysis. First, the court must determine whether the challenged law discriminates against interstate commerce. If so, it is *per se* invalid unless the state can demonstrate, under rigorous scrutiny that the state has no other means to advance a legitimate local interest. If the law is not deemed discriminatory, the provision will be struck down only if the burden it imposes on interstate commerce is clearly excessive in relation to the local or state benefits to be secured. In this case, the court found that the provision was intended to discriminate against out-of-state businesses and hence, was *per se* invalid. In this case, the provision was adopted by the voters of the state as an Amendment to the state constitution. The court found that it was impossible to ascertain the intent of the individual voters. Nevertheless, the court was satisfied that the drafters intended to discriminate and that intent was sufficient. In *Smithfield Foods v. Miller, 241 F. Supp. 2d 978* (S.D. Iowa) , the court also invalidated the statute because of its facially discriminatory intent. Here, the court refused to sever the part of the statute that was deemed discriminatory from the rest of the statute. Commentary discussing these cases can be found in Choster, James, *Buying the Farm: The Eighth Circuit declares South Dakota's Anti-Corporate Farming Amendment Violates the Dormant Commerce Clause* , *11* Mo. Envtl. L. & Pol'y Rev. 184 (2004); Redlin, M. and Redlin B., *Amendment E, Rural Communities and the Family Farm, 49 S.D. L. Rev. 787 (2004);* Banks, J., *The Past, Present and Future of Anti-Corporation Farming Laws in South Dakota: Purposeful Discrimination or Permissive Protectionism. 49 S.D. L. Rev. 804 (2004).*

In *State ex. rel Nixon v. Premium Standard Farms, Inc. 100 S.W. 3d 157 (W.D. Mo.2003)* , the court held that cattle grazing was an integral part of swine production and therefore permitted under an exception to the corporate farming prohibition. The farm argued that the cattle were used to graze on the land as a means to remove the nitrogen from effluent applied to the land.

In the case of *Jones v. Gale, 405 F. Supp. 2d 1066 (D. Neb. 2005)* , the provision in the Nebraska Constitution, popularly known as Initiative 300, was examined against a variety of constitutional challenges. In that case, the plaintiffs challenged the Nebraska provision of the state constitution as violating the *Commerce Clause*, the Privileges and Immunities Clause and the *Equal Protection Clause of the Constitution* as well as the Americans with Disabilities Act. The state contested the standing of the plaintiffs to bring the action, primarily because the corporations involved were out-of-state corporations. These arguments were rejected. The court did, however, find that the provision was discriminatory, on its face, against interstate commerce because it burdened out of state economic interests while benefitting instate economic interests. The court also found that the defendants failed to carry their burden of demonstrating that the restriction was the exclusive means of advancing legitimate local interests. See also *South Dakota Farm Bureau, Inc. v. Hazeltine, 340 F. 3d 583* (8th Cir. 2003) ; South Dakota Farm Bureau, Inc. v. Hazeltine, 202 F. Supp. 2d (D.S.D. 2002).

Two other challenges survived court scrutiny. The privileges and immunities challenge was based on the impact of the fact that the plaintiff was a citizen of Colorado and therefore could not participate on a daily basis in the operation of the farm as required under the restriction. The court noted that that consequence was faced by Nebraska residents as well and therefore did not constitute discrimination as required by the Constitution. As a matter of equal protection, the restriction was upheld primarily on the basis of established law (principally *MSM Farms, Inc. Spire, 927 F. 2d 330 (8th Cir. 1991)* .

The Americans with Disabilities Act challenge was grounded in a claim that because of the physical disabilities of two of the plaintiffs, they were unable to materially participate in the operation of the farm as required by the restriction. The court found that the restriction stood as an obstacle to the accomplishment of Congress= purposes in enacting the Disabilities act and therefore was invalid under the *Supremacy Clause of the United States Constitution*.

Despite the conclusion that aspects of the restriction did not fail constitutional challenges, the court found that the language that gave rise to the complaint that "at least one of whom is a person residing on or actively engaged in the day to day labor and management of the farm or ranch"--could not be severed from the restriction because the judge could not determine with certainty that the language constituted an inducement to the passage of the remaining portions of the enactment. Hence, the court concluded that the entire restriction failed.

§ 47.10(x) Split Fees: Railroad Land Grants. [Go To Main]

Add:

Whipps Land & Cattle Co., Inc. v. Level 3 Communications, LLC, 658 N.W.2d 258 (Neb. 2003) (rights of way are only easements and not fee interests).

§ 47.10(z) Farming and Ranching on the Public Domain. [Go To Main]

Supp. to § 47.11 State and Local Agricultural Land Use Issues.

[Go To Main]

§ 47.11(a) In General. [Go To Main]

Add:

For a discussion on preemptive state regulations and their relation to local laws see Nancy D. Perkins, "Principled Preemption in an Age of Interest Convergence: Preserving the Distinction between Pennsylvania's Environmental Regulation and Local Land Use Regulation," *47 Duq. L. Rev. 27 (2009).*

§ 47.11(b) Agriculture as a Nuisance. [Go To Main]

Add:

Terence J. Centner, *Governments and Unconstitutional Takings: When do Right-to-farm Laws Go Too Far? 33 B.C. Envt'l. Aff. L. Rev. 87 (2006).*

Fn. 502, add

Vana v. Grain Belt Supply has been criticized in a case in Nebraska: See Hall v. Phillips, 436 N.W. 3d 139 (1989).

Add to Fn 504:

In *Vicwood Meridian Partnership v. Skagit Sand and Gravel, 98 P. 3d 1277 (Wash. App. 2004)* , the court dealt with the problems posed by a composting activities that existed in association with a mushroom growing operation. While the composting did not constitute the growing of mushrooms, the court treated it as a necessary component of the mushroom operation and hence entitled to the benefit of the protective statute. It was argued that the composting was a new or expanded activity because it occurred in a new building. The court rejected this claim on the ground that the activity predated the facility.

§ 47.11(c) Laws Protecting Farming against Nuisance Actions. [Go To Main]

Add:

Terence J. Centner, *Governments and Unconstitutional Takings: When do Right-to-farm Laws Go Too Far? 33 B.C. Envt'l. Aff. L. Rev. 87 (2006).*

Change:

"South Dakota appears to be the only see state presently without such a statute" to "All fifty States have some version of a 'Right to Farm' statute. *See* Springsteen, Elizabeth R. "States' Right-To-Farm Statutes," available at www.nationalaglawcenter.org/assets/righttofarm/index.html. (South Dakota adopted such a statute; see *S.D. Codified Laws §§ 21-10-25.1 to 21-10-25.6.*)

Add;

For a discussion of Right to Farm Statutes see Dowell, Tiffany, Comment, "Daddy Won't Sell the Farm: Drafting Right to Farm Statutes to Protect Small Family Producers," 18 *San Joaquin Agric. L. Rev.* 127 (2009).

Add:

In *Borough of Closter v. Abram Demaree Homestead, inc. 839 A.2d 110 (N.J. Super. 2004)* the Court held that a not-for-profit organic farming operation could be considered a farm for purposes of protecting the farm under the nuisance laws of the state. The court held that the particular statute, which applied only to commercial farming operations, applied to the activity in question even though all the produce from the farm was donated to feed the area's poor. The court reasoned that it was the fact that the produce had the required minimum value, rather than whether it was sold that determined that the operation was a commercial farm.

Add:

In *Lindsey v. DeGroot, 898 N.E.2d 1251 (Ind. App. 2009)* , the court held that the Indiana Right to Farm Act was not unconstitutional because it did not constitute a taking.

§ 47.11(c) Laws Protecting Farming Against Nuisance Actions.
[Go To Main]

a. Statute of Limitations Approaches.

Add to Fn. 519:

The statutes have been described as "codifying the common law 'coming to the nuisance' defense." See *Vicwood Meridian Partnership v. Skagit Sand and Gravel, 98 P. 3d 1277 (Wash. App. 2004)* . Nevertheless, in *Davis v. Taylor, 132 Wn. App. 515, 132 P.3d 783 (Wash. App. 2006)* , the court refused to protect a farming operation that had been in existence for more than 50 years from complaints raised by a neighbor who moved in after the farm had been established. In this case, the farm started out as an apple orchard. It was converted into a cherry orchard after the complainant built a house near the farm. The problem complained of was the use of propane cannons that were used to scare birds away from the cherries. This activity began after the complainants built their house. Although for other purposes, the law allows a conversion of farmland to other crops without jeopardizing its status as a farm, the nuisance statute requires that the conversion occur prior to local development. Thus, new or expanded activities are not immune from nuisance liability.

Add to Fn 522.

The time is generally treated as beginning to run when the farming operation begins or from the date of a substantial change in the operation. *See Horne v. Haladay, 728 A. 2d 954 (Pa. 1999)* . Alternatively, the plaintiff must base the complaint on a violation of any Federal, State or local statute or regulation. *Id.* In cases where the existence of the farming operation predates the arrival of the complainant, the burden appears to be on the complainant to establish that the operation is conducted in violation of the law or that the complaint is filed in a timely manner with regard to a substantial change in the operation. There appears to be a presumption that farming operations that are not considered nuisances when they commence do not become such simply because someone later moves near the operation.

Add to Fn 523:

See *Horne v. Haladay, 728 A. 2d 954 (Pa. 1999)* .

Fn. 526.

Correct citation for Botsch: 239 N.W.2d 481 .

Add

For further information, see **Annotation, *Validity, Construction, and Application of Right-to-Farm Acts,* 8 A.L.R. 6 th 465 (2005).**

In *Vicwood Meridian Partnership v. Skagit Sand and Gravel, 98 P. 3d 1277 (Wash. App. 2004)* , the court considered whether a claim of negligence would replace a failed attempt to show that a farming operation was not protected by the jurisdiction's statute. In that case, the plaintiff argued that the harm done by the farming operation (noise, smell, flies, etc.) were governed by the doctrine of res ipsa loquitur. The court rejected the argument based on a lack of "palpable negligence" that could be shown by the complainant. The case arguably leaves open the res ipsa door provided a proper negligence foundation can be shown.

Correct citation for Botsch: *239 N.W.2d 481* .

§ 47.11(d) Keeping Land in Farming. [Go To Main]

Add to Fn. 533:

For further information, see J. Richardson, **Downzowning, Fairness and Farmland Protection**, 19 J. *Land Use and Envtl. Protection* (Fall 2003.)

Add:

Safran, J., *Contracting For Preservation: An Overview of State Agricultural District Programs.* 27 Zoning and Planning Law Report 1 (2004).

Add:

In *Department of Transportation v. Sunnyside Partnership, L.P. 785 N.E. 2d 1018 (Ill. App. 2003)* , the court held that a nursery was not a farm that qualified for protection under the jurisdiction's Farmland Preservation Act with respect to the exercise of taking authority of the Department for the construction of a road.

§ 47.11(e) Zoning as a Common Regulatory Approach to Keep Land in Agriculture. [Go To Main]

Add:

In *Inter-Lakes Health, Inc. v. Town of Ticonderoga Town Board, 786 N.Y.S.2d 643 (2004)* , the court the state's Agriculture and Markets Law preempted local zoning ordinances regarding agricultural activities on property located in agricultural districts. In *Ladner v. Hancock County, 899 So. 2d 899 (Miss. Ct. App. 2004)* , the court upheld the authority of the county to regulate the construction of a residence on unincorporated agricultural county land even though the landowner planned to use the residence as part of the agricultural purposes on the property.

In *County of Kendall v. Rosenwinkel, 818 N.E.2d 425 (Ill. App. 2004)* , the court found that an agricultural structure, a grain bin) violated zoning setback requirements.

In *Timoney v. Upper Merion Township, 2004 U.S. Dist. LEXIS 24678* (No. 01-1622, Dec. 8, 2004), the court addressed a claim that in zoning the property agricultural, the property was being treated differently from surrounding, similarly situated properties. The claim was treated by the court as a "class of one" equal protection argument. The basis for the claim was that the state Supreme Court had held that the continued agricultural zoning of the property constituted an unlawful and arbitrary exercise of police power and constituted reverse spot zoning. The federal district court refused to rely upon the Supreme Court's opinion as finding that the property was indeed similarly situated to other land in order to deny a motion for partial summary judgment.

In *Whidbey Envtl. Action v. Island County, 122 Wn. App. 156, 93 P.3d 885 (Wash. App. 2004)* the court found that the agricultural exemption in the zoning ordinance was overbroad because the county included all R zone lands within the exemption but without the support necessary to demonstrate that the exemption was necessary to protect agricultural activities.

M. Cordes, Agricultural Zoning : Impacts and Future Directions. 22 *Northern Illinois U. L. Rev.* 419 (2002).

§ 47.11(g) Zoning: Treatment of Residential Dwellings on Farmland. [Go To Main]

Add:

In *Ladner v. Hancock County, 899 So. 2d 899 (Miss. Ct. App. 2004)* , the court upheld the authority of the county to regulate the construction of a residence on unincorporated agricultural county land even though the landowner planned to use the residence as part of the agricultural purposes on the property.

§ 47.11(k) Agricultural Districts. [Go To Main]

Add:

Safran, J., *Contracting For Preservation: An Overview of State Agricultural District Programs*, 27 Zoning and Planning Law Report 1 (2004). *See also* Salkin, P., *Agricultural Districts*, 1 N.Y. Zoning Law & Prac. § 14:03, (2004)

In *Inter-Lakes Health, Inc. v. Town of Ticonderoga Town Board, 786 N.Y.S.2d 643 (2004)* , the court the state's Agriculture and Markets Law preempted local zoning ordinances regarding agricultural activities on property located in

agricultural districts.

§ 47.11(l) Taxation. [Go To Main]

Add:

Much recent litigation has explored use value taxation as a means of encouraging landowners to keep land in agricultural use. *See e.g. Jones v. Department of Forests, Parks and Recreation, 857 A.2d 271 (Vt. 2004)* , holding that the use value appraisal program is designed to provide a tax incentive for landowners to maintain the property in agricultural uses; *Carmel Hollow Associates Ltd. Partnership v. Town of Bethlehem, 269 Conn. 120 (2004)* ; *Alexandria Tp. v. Orban 21 N.J. Tax 298 (2004)* ; *Cecarelli v. Board of Assessment Appeals of the Town of North Branford, 272 Conn. 485 (2005)* ; *Golf Trust of Alerica, L.P. v. Soat, 822 N.E.2d 562 (Ill. App. 2005)* ; *ENF Family Patrtnership v. Erie County Bd. of Assessment Appeals, 861 A.2d 438 (Pa. App. 2004)* ; *Jicarilla Apache Nation v. Rodarte, 103 P.3d 554 (N.M. 2004)* ; *R.H. Resorts Ltd. v. Donegan,* 29 Fla. Weekly D1691 (Fla. App. 2004); *Raisanen v. County of Hennepin, 678 N.W.2d 669 (Minn. 2004)* ; *Township of Monroe v. Gasko, 181 N.J. 545 (2004)* .

In *Wetland Resource Ctr. v. Marion Cty., 809 N.E.2d 1202 (Ohio App. 2004)* , the court held that the fact that the land qualified for compensation under federal wetlands mitigation programs because of contractual obligations, the land was entitled to reduced property tax valuation as agricultural land.

In *Randall v. Board of Review for City of Ames, 20004 Iowa App. LEXIS 461 (Iowa App. 2004)* , the court held that land lost its agricultural classification for tax purposes when half the land was used for a golf course and there was no clear showing that the remaining land was used primarily for agriculture.

Add:

In *Osborn v. Tax Com'n, 217 P.3d 274 (Utah App. 2009)* the court examined different methodologies for calculating value for purposes of ad valorem taxation. It relied on *Beaver v. Utah State Tax Comm'n, 916 P.2d 344, 355 (Utah 1996)* in which the Utah Supreme Court explained that "[v]aluation is an art, not a science."

§ 47.11(o) Allocation: Development Rights Plans. [Go To Main]

Add:

For a discussion of the TDR approach see Rick Pruetz, *Beyond Takings and Givings: Saving Natural Areas, Farmland and Historic Landmarks with Transfer of Development Rights and Density Transfer Charges* (2003).

§ 47.11(r) Resource Management. [Go To Main]

Add:

For an example of how water acts can interact with farm acts see *In re Agricultural, Aquacultural, and Horticultural Water Usage Certification Rules, 981 A.2d 99 (N.J. Super A.D. 2009)* , in which a farmer's organization challenged the New Jersey Department of Environmental Protection's amendment of the Water Supply Management Act.

Add:

See Florida Wildlife Federation v. Collier County, 819 So. 2d 200 (Fla. App. 2002) for a discussion of the extent to which agricultural use of land is subject to intensity-of-use standards under amendments to the county comprehensive plan and the fact that Florida panthers frequented areas not included within the approved natural resource protection area.

§ 47.11(s) Availability of Agricultural Land for Recreational Use. [Go To Main]

Add to fn 639:

See also C. Butcher, The Forgotten Intent of the Williamson Act: The Regulation of Non Contracted Lands, 12 *Hastings West Northwest J. Envtl. L. and Pol'y* 37 (2005).

§ 47.11(u) Recreation: Defining "Recreational Use". [Go To Main]

Add:

For a discussion on how off-road vehicles have been treated see Kahr, Byron, "The Right to Exclude Meets the Right to Ride: Private Property, Public Recreation, and the Rise of Off-Road Vehicles," *28 Stan. Envtl. L.J. 51 (2009).*

Add to Fn. 660:

In *Leet v. City of Minot, 721 N.W. 2d 398 (2006)* , the court held that the legislature had intended to define "recreational purposes" broad enough to "cover all recreational activities." Nevertheless, where, as in this case, the individual had been injured by a falling curtain while he was on the premises as a employee of a vendor preparing for an activity at the facility the following day, "the plain language of the statute is not so broad as to include a person present on the property for purposes of the person's employment." Therefore, despite the conclusion that the statute was to be interpreted broadly, it could not encompass all activities. Thus, the injured party was on the premises of employment and not for a recreational purpose.

§ 47.11(x) Fence Laws. [Go To Main]

Add:

See e.g., Guenther v. Praest, 2004 Neb. App. LEXIS 258 (No. A-03-121, Sep. 28, 2004), where the court found that neither adverse possession nor acquiescence resolved the problem and that the title had to be quieted in the plaintiffs and that the defendants be enjoined from trespassing.

§ 47.12(g) Particular Federal Program Objectives: Protecting Lands for Agriculture-Influencing Particular Use Patters by Requiring Land to Remain Idle. [Go To Main]

Add:

See Bishop v. Veneman, 283 F. Supp. 2d 1207 (D. Kan. 2003) regarding the ability of USDA to reduce farm payments because of the farmer's failure to control weeds on land withheld from production.

§ 47.12(j) Particular Federal Program Objectives: Conservation Reserve Program. [Go To Main]

Add:

Angelo, Mary J. "Corn, Carbon, and Conservation: Rethinking U.S. Agricultural Policy in a Changing Global Environment," *17 Geo. Mason L. Rev. 593 (2010).*

§ 47.12(m) Swampbusting Specifically Considered. [Go To Main]

Add:

See B & D Land and Livestock Co. v. Veneman, 332 F. Supp. 2d 1200 (N.D. Iowa 2004) regarding the rights of a landowner to challenge a determination of "conversion" as well as a designation of "wetlands." In *Horn Farms, Inc., v. Veneman, 319 F. Supp. 2d 902 (N.D. Ind. 2004)* , the court addressed the constitutionality of the Swampbuster provisions of the Food Security Act, upholding the act as an exercise of Congressional authority under the Spending Clause but finding the agency's interpretation of an exemption for "prior converted wetlands" to be unreasonable.

Add:

In *Big Meadows Grazing Association v. United States, 344 F. 3d 940 (9th Cir 2003)* the landowner had conveyed an easement to the United States pursuant to the Wetlands Reserve Program. The government subsequently developed a conservation plan for the land to which the landowner objected. The government then unilaterally began implementing the plan. The court found that the law does not require the landowner's agreement to the plan. The court read the statute as requiring that the landowner agree to "a" wetland plan, not a particular plan. This assent may be inferred from the terms of the easement rather from a need for a separate contract of agreement. The fact that the government did not follow the program manual was of no consequence because the manual was nonbinding since it was not promulgated according to the Administrative Procedures Act and therefore was not a substantive document.

§ 47.12(n) Regulating Private Agricultural Use of the Public Domain. [Go To Main]

Add:

In *Public Lands Council v. Bruce Babbit, 529 U.S. 728 (2000)* , ranching organizations brought an action challenging

the Department of the Interior's regulations on grazing livestock on public lands. The Supreme Court found that the Secretary of the Interior did not exceed the scope of his authority by redefining the term "grazing preference" or by eliminating the requirement that applicants be engaged in livestock business.

§ 47.12(o) Private Agricultural Activity: Grazing on Forest Service Lands. [Go To Main]

Add:

For a discussion of the history of BLM's regulation of grazing on public lands see Hoffmann, Hillary M. "A Changing of the Cattle Guard: The Bureau of Land Management's New Approach to Grazing Qualifications," *24 J. Envtl. L. Litig. 243 (2009).*

§ 47.12(q) Private Agricultural Activity: Property Nature of the Grazing Permit. [Go To Main]

Add:

But see Walker v. United States, 69 Fed. Cl. 222 (2005) where the court held that although there may not be a property right in the grazing permit, the claimant is not barred from asserting a property right in water, access and forage rights. See also *Sacramento Grazing Association, Inc. v. United States, 66 Fed. Cl. 211 (2005)* . In *Goodrich v. United States, 434 F. 3d 1329 (Fed. Cir. 2006)* , the court held that the statute of limits for asserting a takings claim against the government for authorizing another rancher to use water on his allotment began to run at the time the Forest Service adopted an alternative Environmental Impact Statement which permitted the other rancher to use the water.

In *Colvin Cattle Co., Inc. v. United States, 67 Fed. Cl. 568 (2005)* , the court held that the presence of a state granted water right did not create a property right to graze cattle on federal lands.

CHAPTER 48 MINES AND MINERALS
I. Introduction, Basic Ownership Concepts, and Protection of Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.01

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.01 Introduction and Overview.

This chapter considers the law of private rights to own and develop mineral resources. The focus is coal, metals, and other hardrock minerals. Chapter 49 covers the peculiarities of oil and gas development.

The first portion of this chapter deals with basic ownership concepts and protection of rights. n1 The words "mineral" and "mine" are defined. n2 The rights of concurrent n3 and successive owners n4 are explored, as are remedies for trespass to minerals. n5 The second portion of the chapter covers the types of interests created from a landowner's rights, concentrating on the result of a severance of surface and minerals. n6 This portion looks at the relationship between surface and mineral owners n7 and the right to mine by strip, surface or long wall methods. n8 The chapter then turns to transfers of interests in minerals. Voluntary transfers are first examined, n9 including the ownership of minerals under rights-of-ways. n10 Involuntary transfers explored include adverse possession n11 and the impact of dormant mineral acts. n12 Finally, methods of developing minerals are explored. n13 Problems of mining partnerships n14 and multiple mineral development are considered, n15 as is the peculiar problem of coalbed methane development. n16

CHAPTER 48 MINES AND MINERALS
I. Introduction, Basic Ownership Concepts, and Protection of Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.02

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.02 Definition of "Mineral."

[Go To Supp]

The word "mineral" must be defined in several settings. n17 First, the owner of land in fee simple may sever, or separate, the surface from the minerals. n18 Similarly, some statutes require a state or federal government to reserve "minerals" when granting private rights to land. n19 Interpretation of the word "mineral" determines who owns specific substances. n20 In addition to ownership questions, another setting for disputes exists because some tax statutes refer to separate taxation of "minerals." n21 Finally, a specialized use of the word is in the Mining Law of 1872, which allows a person to locate a mining claim for a "valuable mineral deposit." n22

§ 48.02(a) Interpreting Private Conveyances.

The question of ownership arises when a conveyance simply refers to "minerals" or to a specified mineral or minerals with the addition of the words "other minerals." n23 Generally, the addition of the words such as "all" or "of every kind" will not expand the reference to minerals to cover any substance that could arguably be a mineral in nature. n24 Similarly, the terms "in," "on," or "under" will not be determinative of the conveyance's meaning.

All courts ostensibly seek the intent of the parties and attempt to determine this intent from the document at issue. Courts, however, split on whether the term "minerals" itself is ambiguous. Some declare the word ambiguous and thus allow extrinsic evidence to assist in determining intent. n25 Other courts use many rules of construction to resolve the dilemma and thereby declare the term "unambiguous." n26

The results of most of these judicial endeavors are often contradictory and unsatisfactory. This occurs partly because most rules seek to find the specific intent of the parties concerning a substance unnamed in the conveyance. Most often this is futile: if there were a specific intent, the substance most likely would have been named. n27 In determining how to define the term minerals, courts should seek predictability, require as little extrinsic evidence as possible, and give credence to expressed intent. These goals may be mutually exclusive at times. The following details some of the approaches.

COMPUTER-ASSISTED RESEARCH

LEXIS: interpret! w/30 convey! w/15 mineral!

§ 48.02(a)(1) *Ejusdem Generis*.

Courts have used the doctrine of *ejusdem generis* when the phrase "and other minerals" has followed specified minerals; n28 the generic term would only include substances "of the same kind, class or nature" as the named minerals. n29 This approach creates its own problems, namely determining what characteristic makes one mineral similar to another. n30 For example, minerals could be "like" oil and gas because they are hydrocarbons, n31 are sources of energy, n32 or are developed through wells. n33 Coal would be included under the first two formulations; salt water brine under the last. n34 Oklahoma uses this test to interpret the phrase "oil and gas and other minerals" and only includes minerals that are produced as a constituent of the oil or gas stream. n35

One formulation sometimes encountered is a reservation or conveyance of "oil and gas and other sources of petroleum." Some courts have found coal to be included. n36

COMPUTER-ASSISTED RESEARCH

LEXIS: ejusdem generis w/30 mineral!

§ 48.02(a)(2) Parol Evidence: Circumstances of Transaction.

Some courts acknowledge the ambiguity of the term "minerals" and allow parol evidence of the specific intent of the parties about whether a particular substance was to be included. n37 For example, the nature of the purchaser's business may be relevant. An oil and gas company would not have been interested in minerals that required a strip mine to develop. n38 The particular characteristics of the land may also be important. n39 Evidence of intent and circumstances surrounding the deed, however, would not be admissible if the instrument was unambiguous. n40

COMPUTER-ASSISTED RESEARCH

LEXIS: circumstanc! or intent! w/15 parol w/1 evidence w/30 mineral!

§ 48.02(a)(3) Parol Evidence: Community Knowledge.

Another use of parol evidence to counter the ambiguity of the word mineral is to look at whether the community at large had knowledge of the substance at the time of the conveyance and whether it was considered to be a mineral. n41 For example, if coal was known to exist but was not viewed as commercially recoverable, coal would not have been intended to be included in "minerals." n42 Other cases looked to what was known about the mineral character of particular substances. n43 Naturally, not all courts concur on the importance of such evidence.

COMPUTER-ASSISTED RESEARCH

LEXIS: community w/5 kn*w! w/15 parole w/1 evidence w/30 mineral!

§ 48.02(a)(4) Intrinsic Value.

An additional approach to ascertaining the scope of "minerals" is to declare that anything with intrinsic value separated from the soil is part of the mineral estate. To be a mineral, the substance must have "rare or exceptional character." n44 Under this interpretation, the term mineral generally will not include substances such as sand, gravel, clay, or limestone. n45 Some rather common materials, however, may have different values if put to specialized uses rather than simply

being used as fill. This could influence whether they are considered to be minerals. n46 Use of this method raises the question of whether to judge value at the date of the conveyance or the date of the dispute. The result could change: uranium might not be included if the conveyance date is chosen.

§ 48.02(a)(5) Ordinary and Natural Meaning.

Courts have stated that anything would be a mineral if it were such in the "ordinary and natural meaning" of the word mineral. n47 This formulation, however, does not include everything that would be mineral in the familiar division of the world into "animal, vegetable or mineral"; to do so would make the very soil part of the mineral estate. n48 Although it can be argued that the word "mineral" has no "ordinary and natural meaning," courts employing this test seem to look at what has a special value removed from the soil. n49 For example, sand and gravel may not be minerals unless the deposits were rare, exceptional, or had a special value because of a peculiar characteristic. n50 Courts also may look at scientific n51 and other non-legal definitions. These include how the word minerals is used in the mining industry, the commercial world, and by landowners. n52

LEXIS: mineral! w/30 meaning! w/5 ordinary or natural

§ 48.02(a)(6) Manner of Enjoyment.

The manner of enjoyment test may be traced to an influential article by Professor Eugene Kuntz. n53 Recognizing that a search for the specific intent of the parties was not fruitful, he substituted an acknowledgment that the parties had a general intent to separate ownership into two estates. The ownership of resources would be determined in accordance with the means by which the resources are enjoyed. Thus, the mineral estate would "own" and be entitled to remove all resources that obtain their value from severance from the soil. If removal destroyed the surface, however, the mineral owner should compensate the surface owner for the damage. n54

This test, however, would not be used if a specific intent could be found in a particular transaction. For example, a reservation that contemplated mining metallic ores would not include sand and gravel. n55 One court adopted the approach with a variation. It required compensation if the surface was destroyed and the recovered substance, rather than being unnamed in the deed, was not at the time of the conveyance known to be commercially valuable. n56

COMPUTER-ASSISTED RESEARCH

LEXIS: mineral! w/30 manner w/2 employment

§ 48.02(a)(7) Surface Destruction.

The surface destruction test also makes certain general assumptions about the intent of the parties. If there was a reservation or conveyance of the surface estate apart from the mineral estate, this test presumes that the parties did not intend that the mineral estate would subsume the surface estate totally. n57 Therefore, if a substance was not named in the grant and could only be removed by methods that would destroy the surface, it would not be included in the mineral estate unless there was some other evidence of specific intent to include it. n58 Some courts examine a general intent more closely to see whether the parties contemplated deep mining rather than strip-mining. n59

COMPUTER-ASSISTED RESEARCH

LEXIS: mineral! w/30 surface w/2 destruction

§ 48.02(a)(8) Texas Experience.

After employing various tests, the Texas Supreme Court sought the general intent of the parties in Acker v. Guinn. n60 It concluded that a conveyance encompassing "all minerals" or specific minerals and "all other minerals" did not contemplate destruction of the surface. Therefore, "near surface minerals" were excluded from the mineral estate. In later cases, the court further defined "near surface minerals." n61 They were minerals within 200 feet of the surface, which would require destruction of the surface by any reasonable method of extraction from the date of the deed to the date ownership was being determined. If any of the resource met this definition, the resource would belong to the surface estate regardless of what other depths it may be found. Obviously, this test made ownership unascertainable from the county records.

In Moser v. United States Steel Corp., n62 the Texas Supreme Court prospectively overruled *Acker*. Under its latest test, any resource that falls within the "ordinary and natural meaning" of the term "mineral" belongs to the mineral estate. If removal of the substance destroys the surface and the substance was not directly named, however, the mineral owner must pay damages. Despite the new test, the court will only apply it prospectively n63 and some minerals were declared "by law" to be part of the surface estate. These include building stone, limestone, caliche, surface shale, sand, gravel, near surface lignite, coal and iron. n64

§ 48.02(b) Interpreting Government Conveyances.

When the federal government or state government conveys land and reserves "all minerals" or named minerals and "other minerals," in addition to the general construction aids, some additional doctrines impact interpretation. First, because the reservations often are made pursuant to statute, the intent of the legislative body is important. n65 Second, conveyances from a governmental agency generally are construed in favor of the government. n66

Federal reservations of minerals have been construed broadly. n67 Reservations of "all minerals" under the Stock-Raising Homestead Act of 1916 n68 include gravel n69 and geothermal rights. n70 Other federal statutes, which dealt with rights of Native Americans, generally also were construed liberally. n71

COMPUTER-ASSISTED RESEARCH

LEXIS: mineral! w/30 government w/2 convey! or reserv!

§ 48.02(c) Distinction Between Lease and Deed.

The term "other minerals" is found not only in deeds, but may also be part of a lease of specific minerals. n72 Arguably, the same rules of construction used to interpret a deed could apply to a lease. Some jurisdictions, however, do not do this. For example, North Dakota applies opposite presumptions to deeds and leases. All conveyances of mineral rights are construed as granting "all minerals of any nature whatsoever except those minerals excluded by name" but leases are construed as granting only "those minerals specifically included and set forth by name." n73 Similarly, in Kansas, a reservation of "all of the oil, gas and other minerals in and under" the land was ambiguous as to commercial clay n74 but a lease of "natural gas, petroleum, and other minerals substance" unambiguously excluded clay. n75 One rationale for the difference is that by the time a lease is issued, more evidence of the specific intent of the parties is present. n76 For example, leases may refer to development methods common to oil and gas production, and thus be interpreted as not encompassing "minerals" recoverable by other mining methods. n77

§ 48.02(d) Taxation.

Various states tax "minerals" separately from the land. In theory, definitions for the purpose of interpreting tax statutes need not conform to those used to interpret private conveyances. n78

CHAPTER 48 MINES AND MINERALS
I. Introduction, Basic Ownership Concepts, and Protection of Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.03

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.03 Definition of "Mine" and Status of Mine Tailings.

[Go To Supp]

Private conveyances sometimes refer to a grant of "mines." n79 Because of this, the issue sometimes raised is what methods could be used to remove minerals. n80 The term "mine" is not necessarily limited to underground mines. If the grant also refers broadly to minerals, including oil and gas and clay, the term may include any method of getting minerals out of the ground. n81 Open pits may or may not be within the contemplation of the parties. n82

A second question raised in one case was whether conveying "mines of salt" included a grant of the empty chamber from which salt had been removed. Partially because the grant also referred to veins, the court concluded the deed conveyed a fee interest in the salt itself and not the empty spaces; "mine" described the mode of occurrence, not the place in which salt was found. n83

The term mine also is defined statutorily in certain worker safety n84 and other regulatory acts. n85 Often, these definitions go beyond what is commonly thought of as a mine and include connected areas, such as places from which minerals are extracted, appurtenant roads, and, more broadly, all lands, facilities and equipment or other property used in, to be used in, or resulting from the work of extracting or milling or the work of preparing coal or other minerals. n86 Because these statutes are remedial, their provisions are interpreted broadly. n87

Mine tailings are the waste product of mining and milling. Despite the term "waste," tailings may contain minerals recoverable by advancing technology. Therefore, title to the tailings can become an issue. n88 Upon initial extraction of minerals, tailings are considered personal property. n89 However, tailings may be deemed real property if that was the intent of the parties when they were placed on the land, n90 or if the tailings become embedded in the earth, n91 or if the tailings had been abandoned n92 or considered fill or waste. n93

CHAPTER 48 MINES AND MINERALS
I. Introduction, Basic Ownership Concepts, and Protection of Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.04

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.04 Ownership.

[Go To Supp]

§ 48.04(a) Ownership of Minerals in Place.

Minerals in the ground are considered real property. Spanish and British precedent reserved some mineral ownership to the crown. n94 In the United States, however, the owner of the soil generally has title to minerals. The common-law maxim, *cujus est solum, ejus est usque ad coleum et ad infernos* (to whomever the soil belongs, he owns to the sky and to the depths) governs ownership. n95

Oil and gas, however, are not necessarily subject to this ownership rule. n96 Another exception to the *ad coleum* principle is the doctrine of extralateral rights, which is a feature of the Mining Law of 1872 applicable to the public domain. n97 Extralateral rights allow owners of lode mining claims to follow certain veins outside the side boundaries of the claim. n98

COMPUTER-ASSISTED RESEARCH

LEXIS: mineral! w/15 own! w/30 real w/2 property

§ 48.04(b) Ownership of Produced Minerals.

Once produced, minerals are personal property. If the person who had owned the minerals in the ground had not granted the right to produce to another, the produced minerals would also belong to the mineral owner.

CHAPTER 48 MINES AND MINERALS
I. Introduction, Basic Ownership Concepts, and Protection of Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.05

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.05 Right of Parties to Develop, Produce or Lease Minerals.

[Go To Supp]

§ 48.05(a) Concurrent Owners.

In the large majority of jurisdictions, each cotenant may independently develop minerals because each cotenant has a right to possess the concurrently owned property; minerals are only possessed through development. n99 The developing cotenant, however, cannot oust the remaining tenants and must account to them. n100 For oil and gas, the basic measure of accounting is on the basis of net profits, computed as a proportionate share of the value of production minus a proportionate share of expenses of extracting and marketing. n101 This is perhaps also the preferred modern measure when other minerals are involved. n102 Earlier cases, however, used a rental, n103 royalty, n104 or value in place standard. n105 A customary royalty has also been used to compensate the non-developing cotenant when there is no proof of the market value of the produced mineral. n106

COMPUTER-ASSISTED RESEARCH

LEXIS: concurrent! w/2 own! w/30 mineral!

§ 48.05(b) Successive Owners.

§ 48.05(b)(1) General Prohibition of Waste.

Neither a life tenant nor the owner of a remainder interest may develop minerals independently. For the life tenant to do so would be waste; the holder of the remainder would be in trespass. n107

§ 48.05(b)(2) "Open Mine" Doctrine.

The exception to the statement that a life tenant cannot authorize mining is the "open mine doctrine." If the mineral interest was being mined or was leased for mineral development at the time the life estate became possessory, mining may continue and the benefits will inure to the life tenant. n108 This is, however, a rule of construction that may be

rebutted. n109

COMPUTER-ASSISTED RESEARCH

LEXIS: life w/1 tenant! w/50 open w/1 mine w/1 doctrine

§ 48.05(b)(3) Allocation of Benefits.

If both the life tenant and owner of the remainder interest authorize mineral development, the life tenant generally has the right to the equivalent of income and the corpus is owed to the remainder. With some exceptions, royalty is principal and rents as well as interest on royalties are income. n110

COMPUTER-ASSISTED RESEARCH

LEXIS: life w/1 tenant! w/30 remainder w/30 income or benefit!

§ 48.05(c) Rights of Other Interest Holders.

Holders of defeasible fees generally can develop minerals. Holders of security interests may not, but the terms of the security agreement as well as the terms of restrictive covenants on property may forbid development by the mineral owner. n111

CHAPTER 48 MINES AND MINERALS
I. Introduction, Basic Ownership Concepts, and Protection of Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.06

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.06 Rights Against Trespass.

[Go To Supp]

§ 48.06(a) Innocent Trespass.

A developer of minerals commits a non-willful, good faith or innocent trespass when the non-owner has a reasonable belief in the lawfulness of the development. n112 The measure of damages for an innocent trespass is sometimes a customary royalty for coal and hardrock minerals, n113 although the oil and gas measure is also used. Under this theory, damages are the fair market value of the produced mineral, less reasonable expenses, so long as those expenses benefitted the true owner. n114 In the solid mineral context, this translates to the value of the mineral at the mine mouth, less costs of mining, processing and transportation. n115

COMPUTER-ASSISTED RESEARCH

LEXIS: innocent! w/2 trespass! w/30 mineral!

§ 48.06(b) Willful Trespass.

If a trespass is found to be willful or in bad faith, the trespasser will be liable for the full market value of the minerals wrongfully removed. n116 This is the value of the mineral at the mine mouth with no deduction of costs of mining and processing. Courts differ on whether there can be a deduction for transportation costs. n117 Pennsylvania has also allowed compensation for the loss of the incidents of ownership, such as the right to determine the pace and terms of development. n118

COMPUTER-ASSISTED RESEARCH

LEXIS: willful! w/2 trespass! w/30 mineral!

CHAPTER 48 MINES AND MINERALS
II. Types of Mineral Interests Created from a Landowner's Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.07

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.07 Severance of Surface and Minerals.

[Go To Supp]

Unless otherwise stated, a conveyance of the land includes the minerals in the land. A deed, however, may convey minerals separately or by reservation or exception seek to remove them from a grant. n119 When one of these activities has taken place, it is said that the minerals are severed from the surface.

§ 48.07(a) Nature of the Mineral Estate.

Generally, if the minerals are truly severed, then two estates in land are created. n120 The owner of a mineral estate has the right to develop the minerals, the right of access and use of the surface for this purpose, and the right to lease the minerals and receive the proceeds of a mineral lease. n121 The mineral interest will be in the nature of a corporeal fee. n122

The wording of a grant or reservation, however, may create an incorporeal hereditament in the nature of a profit, n123 or easement, n124 or personal privilege. n125 For example, in a grant of all coal, the grantor reserved "the upper vein of coal and a sufficient quantity of lower veins for farm and domestic use, together with the right to dig and sell coal from the said upper 3-foot vein, for farm and domestic use and all rights to operate for oil, gas, and other minerals." n126 The court determined that the grantor retained the fee in the upper vein, but only a right of use of the other coal. n127

COMPUTER-ASSISTED RESEARCH

LEXIS: mineral! w/5 sever! w/15 estate!

§ 48.07(b) Nature of a Royalty.

A royalty interest is a right to a share of minerals when produced. n128 A royalty interest does not bear the costs of production. A royalty may be free-standing or reserved in a lease as compensation for the mineral lessor. Generally, an unaccrued royalty interest is an interest in real property, n129 even if it is incorporeal. n130 However, in some instances

a lease of minerals is actually a complete sale of minerals in place. n131 In such situations, the royalty is the consideration or price for the conveyance and is personalty. n132

§ 48.07(c) The Special Case of Louisiana.

In Louisiana, a separate estate in minerals cannot be created in fee, although two separate ownerships in the same property may be created. n133 A severance creates a servitude in the nature of an easement. n134 This servitude is defeasible; it will end or "prescribe" for non-use.

FOOTNOTES:
(n1)Footnote 119. For problems with exceptions and reservations, *see* § 49.18, *infra*.

Lewis v. Sac and Fox Tribe of Okla. Hous. Auth., 896 P.2d 503 (1995), cert. denied, 516 U.S. 975 (1995) (conveyance of "house and grounds" was equivalent to conveying "land" or "real property" and included the minerals; it was not a conveyance of just the surface).

Machipongo Land and Coal Co., Inc. v. Department of Envtl. Resources, 719 A.2d 19 (Pa. 1998) (there are three estates in land: surface, coal/mineral, and the right to support); *Ely v. Briley, 959 S.W.2d 723 (Tex. App. 1998)* (Under Texas law, the owner of a mineral estate possesses a bundle of interests, including the right to execute oil, gas, and mineral leases, and the right to receive bonuses, rentals and royalties. Each is a property right that can be separately conveyed or reserved. An unqualified reservation of the mineral estate reserves the entire bundle of property rights accorded a mineral estate. An unqualified reservation of a riparian mineral estate reserves the right to future accretion).

(n2)Footnote 120. *But see* § 48.07(c), *infra*.

Although severance creates two separate estates, a mineral owner, who has the right to use the surface to exploit the minerals, has sufficient interest in the surface to redeem it after a tax sale under a statute allowing redemption by "any person having a legal or equitable claim therein..." *Elliott v. Notch Mtn. Corp., 881 P.2d 434 (Colo. App. 1994); Pawnee Oil and Gas, Inc. v. County of Wayne, 751 N.E.2d 1268* (Ill. App. 5 Dist. 2001), *rev'd, Notch Mtn. Corp. v. CHAPTER 48 MINES AND MINERALS
II. Types of Mineral Interests Created from a Landowner's Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.08

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.08 Relationship Between Surface and Mineral Owners.

[Go To Supp]

§ 48.08(a) Rights of Mineral Owner to Use Surface.

The owner of a severed mineral estate has the right to use so much of the surface as is reasonably necessary for the production of minerals. n135 This is an implied right, one which exists even without an express grant in the document severing the mineral estate. n136 Implied rights, however, may be expanded or contracted by agreement of the parties. n137 The rights also may respond to new technology. n138

COMPUTER-ASSISTED RESEARCH

LEXIS: mineral! w/2 own! w/5 right! w/5 use! w/5 surface

The mineral estate is deemed dominant over the surface estate. n139 Therefore, the mineral owner is generally only liable for damages caused by negligence or unreasonable use of the surface. n140 Nevertheless, some doctrines have evolved at common law n141 and by statute n142 to protect the surface owner.

§ 48.08(b) Rights of Surface Owners.

A surface owner does not merely own the soil covering the surface. The surface estate includes all rights not part of the mineral estate. n143 Therefore, the owner of the surface may make such uses of it that do not unreasonably interfere with the extraction of minerals. n144 Some states statutorily require the miner to post security for the benefit of the surface owner before commencing surface disturbance. n145 Additionally, two common-law doctrines--the doctrines of subjacent support n146 and lateral support n147--temper the right of the mineral owner if the owner tries to extract all the minerals beneath or in the property. n148

COMPUTER-ASSISTED RESEARCH

LEXIS: surface w/2 own! w/15 right!

§ 48.08(b)(1) Subjacent Support.

If there has been a severance of mineral from surface estates, the surface owner has a right to have the surface supported in its natural state by the underlying mineral estate. n149 Therefore, subjacent support looks at property as if physically divided on a horizontal plane. The right to subjacent support is an absolute right: the mineral estate owner would be liable for subsidence n150 even if its mining operations were not negligent. n151 Explanations of the right include a natural right theory, a nuisance law analogue that requires property owners to not use their property to the detriment of others, and an easement theory. n152 A cause of action for subsidence generally does not arise until the supporting earth begins to fall and cause damage. n153

The right to support initially protected land in its natural state; to recover for damage to buildings required proof of negligent mining operations. n154 Nevertheless, because the weight of buildings is small compared to the weight of the overlying earth, courts determined that the miner would have to prove that the land would not have subsided but for the added building weight to avoid liability for consequential damages to the buildings as a result of the breach to support in a natural state. n155 Some courts avoided this exercise by finding that the "natural" state of the land included those buildings that reasonably could be anticipated either at the date of severance n156 or the date of mineral extraction. n157

Additionally, because of the absolute nature of the right to subjacent support, some cases have granted injunctions against proposed mining. n158 Others, however, have limited the cause of action to damages, at least in the absence of threats of appreciable damage to the surface. n159 The right to subjacent support however, may be waived, as discussed in § 48.09.

COMPUTER-ASSISTED RESEARCH

LEXIS: right! w/5 subjacent w/2 support! w/30 mineral!

§ 48.08(b)(2) Lateral Support.

The surface estate also has a right to lateral support. Lateral, or side, support looks to property as if physically divided vertically. Property must support adjoining property. Removal of minerals cannot make adjoining property subside because of sideward and downward movement. n160

The lateral support doctrine retains the distinction between land in the natural and improved state in some jurisdictions. Absolute liability in those jurisdictions only exists for damage to land in its natural state. In order to obtain damages for injury to buildings, negligence must be proven. n161 Other jurisdictions follow what has been identified as the majority view n162 and adopt variants of the rules for subjacent support, namely that recovery will be allowed if the buildings did not add to the problem n163 or if the land in its natural state could support the buildings. n164 Additionally, English courts allow rights to lateral support for buildings to be acquired by prescription if the buildings existed for sufficient time. n165 Courts in the United States, however, generally reject negative prescriptive easements. n166

COMPUTER-ASSISTED RESEARCH

LEXIS: right! w/5 lateral w/2 support w/30 mineral!

§ 48.08(c) Pennsylvania: Support Estate.

Pennsylvania views the right of subjacent support to be a separate right that could be owned by the surface estate or the mineral estate. n167 Additionally, the support estate may adhere to individual veins of coal, creating rights and duties between competing coal companies. n168 In theory, the separate right could be owned by a party without either the

surface or mineral estate, but in practice this does not occur. n169 In the event this type of ownership existed, the holder of the right to subjacent support would have a right violated if support is removed, but no damages.

§ 48.08(d) Adverse Possession by Surface Owner.

When a surface owner holds a severed mineral estate, acquired from a common grantor, the surface owner is considered a trustee of the mineral estate. Because of this relationship, the surface owner cannot obtain title by adverse possession until first repudiating the trust. Repudiation must be unequivocal and may be performed by "acts or words which clearly bring home to the mineral holder the knowledge that the surface owner is claiming the minerals adversely." n170 The surface owner who carries out such a repudiation and holds the mineral estate adversely for the required statutory period can obtain title to the mineral estate. The repudiation requirements are intended to provide additional protection to owners of mineral estates from surface owners. Under Texas law, it is impossible for a surface owner to acquire subsurface mineral rights through adverse possession. n171 For a discussion of adverse possession of mineral rights by persons other than surface owners, see § 48.12 *infra*.

CHAPTER 48 MINES AND MINERALS
II. Types of Mineral Interests Created from a Landowner's Rights.

6-48 Thompson on Real Property, Thomas Editions § 48.09

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.09 Right to Mine by Strip, Surface or Long Wall Methods.

[Go To Supp]

Mining may proceed by several methods. Room and pillar mining may have a relatively small subsidence impact on the surface; support pillars of coal are left behind after mining, with only 35-50% of the coal removed. This type of mining does cause subsidence, but generally only many years after the mining. Other techniques have more intrusive aftermaths. Some room and pillar mining operations use an "advance and retreat" technique, in which coal pillars are removed after the mine has been developed. Another technique, long wall mining, also extracts more of the coal seam than basic room and pillar mining. This underground mining method begins like a room and pillar mine, but then uses special extraction equipment to completely remove a very large panel of coal. Hydraulic jacks only support the roof where mining is taking place. n172 Both long wall mining and mining that removes pillars inevitably cause subsidence. Additionally, strip and surface mining destroy subjacent and lateral support for the surface because they consume the surface. n173

Because of the impact of some mining methods, courts must consider whether the document creating severed mineral interests authorized the technique. At one level, the issue is whether or not the surface owner waived the right to demand subjacent and lateral support. n174 Nevertheless, for surface and strip mining concerns, because the surface is rendered totally unusable, some courts treat whether it is authorized as an issue separate from whether the right to support has been waived. n175

COMPUTER-ASSISTED RESEARCH

LEXIS: right! w/5 min! w/15 strip or surface or long w/1 wall

§ 48.09(a) Waiver of Right to Support.

For the surface owner to have waived or released the right to support, courts require a deed to have either express waiver language n176 or, in order to imply a waiver, the deed must have clear and unequivocal language showing the intention of the parties. n177 A release of the right to subjacent support might not include a release of the right to lateral

support. n178 There may be distinct waivers of damage to the surface and to superjacent minerals. n179

Whether wording other than an express waiver creates a waiver of the right is fact-specific. n180 In West Virginia, and only West Virginia, a grant of "all the coal" and the right to remove it creates a waiver, n181 but even in West Virginia, references to a different amount of coal granted will not create the waiver. n182 In many jurisdictions, a grant of the right to mine "free of damages" also can work a waiver. n183 Nevertheless, there are cases to the contrary. n184 Stipulated damages for land "used" have variously been found sufficient or insufficient to cover land "damaged." n185

Courts differ on the extent of a waiver. At one extreme, some early cases state that only strict liability for removal of support is waived. Others include negligent acts within the waiver, n186 only allowing recovery for willful and intentional acts. n187 At the other extreme, some courts have found a waiver to include all potential causes of action. n188

Some surface owners assert that a waiver of subjacent support is not sufficient to authorize long wall mining, arguing that the amount of subsidence damage it causes was not within the contemplation of the parties. They have met with little success. Courts reject the argument, finding that longwall mining, unlike surface mining, produces damages similar in kind to underground mining. n189

COMPUTER-ASSISTED RESEARCH

LEXIS: waiv! w/5 right! w/2 support w/30 surface w/1 own!

§ 48.09(b) Authorization of Surface Mining.

Because of the impact on the surface, if a deed severing minerals does not expressly authorize surface or strip mining, courts generally require a clear indication that such mining was within the contemplation of the parties. n190 There is no formulation or single factor that consistently meets this test, although in individual cases single factors have been determinative. n191

For example, some courts have concluded that a grant of "all" minerals indicates a right to surface mine, n192 while others have reached the opposite result. n193 Cases similarly have differed on the import of a waiver of surface damages n194 and the presence of terms that imply underground mining. n195 References to the use the surface owner will make of the property are interpreted variously, n196 as is the importance of the quality and nature of the surface. n197 Additionally, the non-existence of alternative ways to develop the minerals may n198 or may not n199 indicate authorization of surface mining. Finally, some courts place importance on whether surface mining was known or customary at the time and place of conveyance. n200 Courts, however, sometimes do find surface mining authorized when broad mining rights are granted together with conveyances of "all" minerals and waivers of damages. n201

COMPUTER-ASSISTED RESEARCH

LEXIS: authoriz! w/15 mining w/2 surface or strip

§ 48.09(c) "Broad Form Deed" Controversy.

Kentucky has a long history of examining deeds to ascertain if surface mining was authorized. n202 In the early 1900s, deeds referred to as "broad form" or "Mayo" deeds came into use. These deeds employ great detail and grant "all" the minerals together with the right to use so much of the surface as the mineral owner deems "necessary or convenient." Typically, the surface owner also waives all damages that might occur because of mineral extraction and agrees that surface use will be limited to such uses which are consistent with the mineral rights conveyed. n203

Kentucky consistently found that these deeds authorized surface mining despite the fact that surface mining was not contemplated at the time of the deed. n204 Up until the 1987 case of Akers v. Baldwin, n205 Kentucky also upheld the damage waiver even if the surface were destroyed. In *Akers*, however, the Kentucky Supreme Court required damage payments if surface mining proceeded, but not for deeds or other mining authorizations that relied on the 1956 *Buchanan* n206 decision, namely those executed between the date of that decision and the *Akers* decision.

This case law provoked two responses. A statute attempted to create a rebuttable presumption that a conveyance only contemplated methods of removal common in the community at the deed's execution. This was held to violate the Kentucky constitution's provisions on separation of powers. n207 Thereafter, the Kentucky Constitution was amended to provide the same rebuttable presumption. n208

§ 48.09(d) Government Regulation.

Various states regulate impacts from mining, but the most wide-reaching legislation is federal. n209 In 1977, Congress passed the Surface Mining Control and Reclamation Act. n210 This statute provides a regulatory program that states can administer or, if the state does not so desire, the federal government will administer the program. n211 The Act is designed to temper the surface effects of both surface and underground coal mining. n212 Mine permits are required n213 and mining is prohibited in certain areas. n214 In certain respects, the Act provides additional protection for the surface owner. n215

Some cases have intimated that regulatory requirements may modify private contractual arrangements. For example, a surface mining act may create private rights not covered by a pre-existing waiver of damages. n216 However, other cases warn that federal law might not preempt state common law n217 or that new requirements may violate state constitutional protections. n218

CHAPTER 48 MINES AND MINERALS
III. Transfer of Interests in Minerals: Voluntary and Involuntary Transfers.

6-48 Thompson on Real Property, Thomas Editions § 48.10

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.10 Ownership of Minerals Under Roads and Other Rights-of-Way.

Often disputes arise between a governmental agency and abutting landowners over who should be credited with minerals beneath a road. Basically, the question is answered by determining whether the public entity received a fee interest or an easement in the road. n219 If the road was a fee, the minerals inure to the owner of the roadway. n220 If, however, the road was an easement, the minerals would remain with the ownership of the underlying fee. n221 Generally, the road will have a right to subjacent support. n222

In some circumstances, the fact that a fee grant was for a specific purpose may not preclude its use for mineral production. n223 However, one case held that when a statute vests the fee in the municipality for use as a street and no other use whatsoever, the city will not receive the minerals except as is needed to maintain and utilize the land as a street. n224

Similar questions emerge in interpreting whether a railroad has received a fee or a right-of-way easement. n225

CHAPTER 48 MINES AND MINERALS
III. Transfer of Interests in Minerals: Voluntary and Involuntary Transfers.

6-48 Thompson on Real Property, Thomas Editions § 48.11

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.11 Voluntary Transfer of Right: Requirements for a Conveyance of Minerals.

[Go To Supp]

The general requirements for a conveyance of real property apply to a conveyance of minerals. Therefore, there must be a writing, which must be signed by the party to be charged, contain words of grant, and aptly describe the land involved. Generally, recording is not required except in limited situations, but recording is advisable to protect the interest from the claims of creditors and bona fide purchasers. n226

CHAPTER 48 MINES AND MINERALS
III. Transfer of Interests in Minerals: Voluntary and Involuntary Transfers.

6-48 Thompson on Real Property, Thomas Editions § 48.12

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.12 Involuntary Transfer of Mineral Interests: Adverse Possession.

[Go To Supp]

Adverse possession not only bars a true owner from suing to regain title, but creates a new title in the adverse possessor. Adverse possession requires the claimant to enter property and remain thereon openly, notoriously, hostilely, exclusively and continuously for the requisite statutory period. n227 Some jurisdictions also require a "claim of right or ownership," n228 which is variously defined as simple hostility or as requiring a subjective belief in the possessor's claim. Adverse possession can apply to minerals. n229

COMPUTER-ASSISTED RESEARCH

LEXIS: adverse possession w/30 mineral!

§ 48.12(a) Minerals Not Severed When Adverse Party Enters.

If the minerals are owned by the surface owner when the adverse possessor enters the property, the adverse possessor need do nothing special to adversely possess the minerals. Adverse possession of the surface will bring with it all that the true owner actually owned. n230 If the true owner severs minerals by grant or exception after the adverse possessor entered, it will not affect the adverse possessor. n231 This comports with general adverse possession law, which requires an ouster to interrupt possession.

Similarly, if the adverse possessor purports to sever the minerals after entry but before the statute of limitations has run, the surface adverse possession will inure to the benefit of the purported mineral grantee of the adverse possessor. n232 When full title is gained, the minerals will pass to the adverse possessor's grantee under one of two theories: either because the acquisition of title by adverse possession relates back to the first entry n233 or because the severance is deemed ineffectual. n234 The surface adverse possessor gains the minerals on behalf of the possessor's grantee. Moreover, if the adverse possessor claims under color of title and purports to sever the minerals before actual entry onto the surface, some cases reach the same result and the minerals will pass. n235

Naturally, if the true owner is possessing some of the minerals without interfering with the adverse possessor's surface occupancy, the minerals will not be adversely possessed along with the surface. n236

COMPUTER-ASSISTED RESEARCH

LEXIS: adverse possession w/30 mineral! w/5 sever!

§ 48.12(b) Minerals Severed When Adverse Party Enters.

If the minerals had been severed from the surface at the time the adverse possessor enters the property, n237 acts sufficient to adversely possess the surface will not be sufficient to also gain title to the minerals. The rationale behind this rule is that entry on to the surface would not be adverse to the mineral owner nor would it provide notice to that owner. n238 The two separate estates are as distinct as two different parcels. n239 Therefore, if the minerals had been severed, the adverse possessor must actually possess the minerals to adversely possess them. n240 This is true even if the surface adverse possessor had color of title to the severed minerals n241 or had no notice of the severance. n242 A mineral owner, however, may adversely possess the surface if it uses the surface for non-mining purposes and otherwise meets the test of adverse possession. n243

§ 48.12(b)(1) Elements of Adverse Possession Applied to Minerals.

All of the elements of adverse possession must be satisfied in regard to the minerals. n244 To possess minerals adversely, however, requires actual commercial exploitation of the minerals. n245 Prospecting for ore n246 or exploratory drilling for oil or gas n247 is not possession. Additionally, mere leasing of minerals n248 or use of minerals for domestic purposes will not be sufficient. n249

The possession must be open and notorious. Mine entries and oil derricks and pumps on the property appear to give notice. n250 However, there will be no adverse possession if the minerals are accessed from outside of the property. n251 In other words, there must be some surface evidence of the possession. n252

The remaining criteria similarly track general adverse possession law. The requirement of continuous possession, like that in other situations, does not necessarily require that the minerals be worked each day of the limitations period. The adverse possessor must act as a reasonable true owner would in diligently developing minerals. n253 Taking minerals "from time to time," however, will not be sufficient. n254 Additionally, the possession in all instances must be exclusive n255 and the true owner must not interrupt the possession. Finally, the possession must be hostile and not permissive. n256 Therefore, if the minerals are owned in cotenancy, there must be an actual ouster for one cotenant to adversely possess against another cotenant because each cotenant has the right to develop. n257

Some jurisdictions have statutes that allow confirmation of title after a shorter time period if the adverse possessor paid taxes on the land. Generally, if the minerals have been severed, the adverse claimant must pay separately assessed taxes to take advantage of these statutes. n258

COMPUTER-ASSISTED RESEARCH

LEXIS: mineral! w/15 possess! w/15 open w/2 notorious
mineral! w/15 possess! w/15 reasonable w/2 owner
mineral! w/15 possess! w/15 exclusive!
mineral! w/15 possess! w/15 hostile
mineral! w/15 possess! w/15 continuous

§ 48.12(b)(2) Extent of Minerals Adversely Possessed.

How much minerals will be adversely possessed at the end of the statutory period may depend on two factors: the state of true title to the minerals and whether the adverse possessor claimed under color of title. Color of title is a document that purports to grant title but cannot do so because of the grantor's lack of title.

The first factor, the actual ownership of minerals, may determine what type of minerals will pass to the adverse possessor. If the adverse possessor claimed one mineral that was owned separately from other minerals, the possessor would only receive the mineral possessed. n259 For example, if oil and gas were developed and the owner of the oil and gas did not own the coal rights, the adverse possessor would not receive title to the coal. If one party, however, actually owned all the minerals, then adverse possession of one mineral may gain the adverse possessor title to the entire mineral estate, n260 although some courts separate out the minerals. n261

The result reached from looking at actual mineral ownership might change, however, if the adverse possessor's color of title was limited to specific minerals; the possessor would not have constructive possession of unnamed minerals and would only have actual possession of those developed.

Color of title also plays a role in the second issue, namely how much of the adversely possessed mineral the adverse possessor will receive. If the adverse possessor was claiming under color of title, n262 the possessor may gain title to the minerals throughout the land described, n263 provided certain conditions are met. The additional minerals must have been actually owned by the owner of the minerals that were actually possessed. n264 Moreover, the constructive possession that arises from color of title will not apply if the true owner or another n265 possessed a portion of the land or minerals.

If there was no color of title, the answer to the question of how much minerals pass is less clear. Some cases say the adverse possessor would only receive the minerals actually worked and possessed. Because the severed minerals have become personalty, this view would give the adverse possessor no minerals in the ground. n266 A slightly more expansive reading would give the adverse possessor the exposed workface. n267 Perhaps the most equitable solution when there is no color of title is for the adverse possessor to gain title to those minerals that could reasonably be developed from the investment made by the adverse possessor on the ground during the relevant statutory period. n268

CHAPTER 48 MINES AND MINERALS
III. Transfer of Interests in Minerals: Voluntary and Involuntary Transfers.

6-48 Thompson on Real Property, Thomas Editions § 48.13

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.13 Involuntary Transfer of Mineral Interests: Dormant Mineral Acts.

[Go To Supp]

Often, either because of inheritance or speculative purchases of mineral rights, the ownership of severed minerals becomes fractionated. This can make development difficult if mineral owners disagree or are unlocatable. n269 Outstanding mineral interests can also impede surface development. n270 Abandonment is difficult to prove at common law. Non-use alone is not sufficient; there must be proof of an intent to abandon. n271 Some marketable title statutes, which are designed to remove stale title claims generally, do not apply to mineral interests either expressly n272 or by court interpretation. n273 Other general marketable title statutes may apply to minerals, n274 but interests could be preserved without actual use under these statutes. n275 Many states have turned to dormant mineral statutes to clear titles. n276

Dormant mineral statutes operate either by creating a presumption of abandonment in specified circumstances or by simply deeming an interest lapsed in certain situations. n277 State courts have found some of these statutes to be unconstitutional. n278 The Supreme Court, however, upheld the Indiana statute against claims that it violated due process and the Takings Clause. n279 Dormant mineral statutes differ on what is necessary to preserve an interest and in whose favor the lapse operates. n280

COMPUTER-ASSISTED RESEARCH

LEXIS: dorman! w/5 mineral! w/5 interest!

§ 48.13(a) Ways to Preserve Mineral Interest from Dormancy.

The various state statutes may require the owner of a severed mineral interest to take different actions to preserve an interest. The statutes also can vary on the time frame in which the interest owner must act. Requirements for action range from 7 years n281 to 25 years. n282 Generally, the necessary actions are either use of the minerals, payment of separate taxes, or registration of an intent to hold the minerals. Some statutes, however, provide other compliance avenues and not all statutes allow the most common three actions. Additionally, the statutes often also require initial

registration of severed interests. n283

Registration of an intent to hold the interest should be a straightforward requirement. n284 Because the Indiana statute had this feature as a way to avoid a lapse, the Supreme Court felt the requirements of Indiana's act were not onerous. The owner's failure to comply caused the loss of property, in a manner analogous to a statute of limitations. n285 Georgia does not provide this avenue of preservation, but its statute nevertheless passed constitutional muster. n286 If use is required, or claimed to be the saving act, there can be litigation over whether appropriate use has occurred.

A severed mineral interest obviously is used if there is actual production of the mineral. If use is the only avenue claimed, there can be disputes over whether exploratory or other activity will suffice. n287 Some statutes expressly acknowledge exploratory actions, n288 including activities on land unitized with the land in question. n289 Mere leasing n290 or conveyance n291 of the minerals has not been considered "use" under the Indiana statute. Some statutes, however, expressly rebut dormancy if there is a recorded conveyance of the minerals; n292 this would also make leasing appear to suffice. n293 Additionally, filing of a mineral deed during an act's grace period after the act's enactment was sufficient to preserve a mineral interest holder's right without filing a "claim of interest." n294

Other ways to avoid the lapse of an interest exist. Payment of separate taxes on the severed mineral may also be sufficient under most statutes. n295 Some statutes except from their requirements certain types of mineral owners, such as licensed mining operators, and courts have upheld these exclusions. n296 Georgia also excludes leases for specific number of years. n297 A presumption that development is more likely in these situations justifies both of these exclusions. n298 Attempts to exclude mineral interests in certain areas of a state from the operation of a state's act, however, were found unconstitutional under state law. n299

Some statutes are in theory self-operative; the mineral interest is deemed lapsed at the expiration of the time period without one of the actions that rebut dormancy. Therefore, no notice or hearing is required, n300 although the factual questions may necessitate a quiet title action from a practical viewpoint. Other statutes require that the person claiming the benefit of the lapse file in court. n301 In addition, some statutes allow the mineral owner to make a late filing of intent to hold the minerals and thereby preserve the interest. n302 The Kansas court has stated that if the late filing is made, it was immaterial whether or not non-use had continued for the statutory period; filing meets the purpose of the statute. n303

COMPUTER-ASSISTED RESEARCH

LEXIS: preserv! w/5 interest! w/15 mineral!
avoid! w/5 lapse! w/15 mineral! w/5 interest!

§ 48.13(b) Party Benefitted from Dormancy.

The statutes differ on the party who will be able to take advantage of the dormancy of a mineral interest. Most declare that the surface owner will benefit; the interest deemed dormant will inure to the benefit of the surface owner. n304 Some statutes, however, refer to the "owner of the real property subject to a mineral right." n305 If the particular statute defines "mineral right" as including royalties and fractional interests, n306 this means that the owner of an encumbered mineral fee may benefit. In another variation, the Minnesota statute terminates title in favor of the state. n307

§ 48.14 Leases.

[Go To Supp]

A common method of developing minerals is through leasing. No specialized forms exist, but because of the investment required to open a mine, lessees generally want a long term or the right to continue the lease if the lessee is producing in commercial quantities. n308 Generally, royalties are a set amount per unit of mineral produced, but some leases use a percentage of value as is done with oil and gas.

§ 48.16 Sale of Coal in the Ground.

Some jurisdictions, most notably Pennsylvania, consider a lease that allows the lessee to continue mining until the mineral is exhausted to actually be a sale of the coal in the ground rather than a lease. n310 The purchaser must have the exclusive right to mine and must have either paid the stipulated consideration or be compelled to mine or pay for coal if not mined. The finding of a sale can impact taxation, inheritance, n311 and other allocations of benefits.

CHAPTER 48 MINES AND MINERALS
IV. Methods of Obtaining and Exploiting Rights to Mineral Resources

6-48 Thompson on Real Property, Thomas Editions § 48.17

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.17 Acquisition of Federally Owned Minerals.

[Go To Supp]

Mineral development and exploration on the public lands are governed by several laws. Hardrock minerals are obtained under the Mining Law of 1872. n312 Rights under this Act are primarily self-initiated: Lands are "free and open to exploration and purchase." n313 If a private person "discovered" a "valuable mineral deposit," a claim could be "located" and worked without further ado or, at the claimant's option, "patent" or fee title sought. n314

Statutes other than the Mining Law of 1872 apply to minerals other than hardrock. Congress removed common varieties of minerals from the operation of the mining law n315 and subjected them to sale provisions. n316 Earlier, the Mineral Lands Leasing Act of 1920 modified the Mining Law of 1872 so that patents would not be available for certain minerals, commonly referred to as the fuel and fertilizer minerals. n317 A leasing regime gave the Secretary greater control and discretion over development of these minerals. Although some of the impetus for the 1920 Act was a desire to protect producers and prevent overproduction, the Secretary's discretion included the right to protect non-mineral, as well as mineral, values of the lands. n318 Recent amendments to the Act underscore this concern:

> the Secretary of the Interior, or for National Forest lands, the Secretary of Agriculture, shall regulate all surface-disturbing activities conducted pursuant to any lease... and shall determine reclamation and other actions as required in the interest of conservation of surface resources. n319

FOOTNOTES:
(n1)Footnote 312. *30 U.S.C. §§ 21*-42.

(n2)Footnote 313. *30 U.S.C. § 22.* Acquired lands, however, are not open for mineral entry unless expressly made so. Additionally, lands not held for disposal are also not open to entry. *Oklahoma v. Texas, 258 U.S. 574 (1922).*

(n3)Footnote 314. *30 U.S.C. §§ 29,* 35-38. To be valid, minerals must be found in sufficient kind and quantity so that a reasonably prudent person would be justified in expending time and money with the reasonable prospect of developing a paying mine. *Castle v. Womble, 19 Pub. Lands Dec. 455 (1896).* A refinement of this test requires the

minerals be marketable at a profit. *United States v. Coleman, 390 U.S. 599 (1968).*

CHAPTER 48 MINES AND MINERALS
IV. Methods of Obtaining and Exploiting Rights to Mineral Resources

6-48 Thompson on Real Property, Thomas Editions § 48.19

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.19 Mining Partnerships.

[Go To Supp]

A mining partnership is a special type of relationship with some, but not all, of the characteristics of a common partnership. n321 Two of the most important differences from a general partnership are that the mining partnership is not deemed a separate entity and parties to a mining partnership must jointly own a mineral property. Some states statutorily define a mining partnership. n322 Other states also recognize the concept and may apply it to both hard minerals and oil and gas. n323

There is, however, a difference in what is necessary to create a mining partnership in various states. Some states simply require common ownership and joint operation of the property for mineral development. n324 Others also require evidence of an intent to share the costs and profits of development, n325 which in some instances can be inferred from a development agreement n326 and in some instances must be expressed. n327 A mining partnership does not require a written partnership agreement or express oral agreement if the requisite elements are present. Often, parties attempt to make non-operators under a joint operating agreement liable as mining partners, n328 but there will not be a mining partnership n329 unless a party has sufficient control that a court could find "joint operation." n330

If a mining partnership exists, each partner is personally liable for activities necessary or usual in the conduct of mining operations. n331 A partner has a limited ability to bind other partners; they are bound only to the extent authority to bind is expressly granted or for such dealings that appear necessary and usual in the management and conduct of the business of mining. n332 Each partner owes the others a duty of good faith in regard to partnership business, which borders on a fiduciary relationship. n333 In one important respect, mining partnerships differ from other partnerships. They will not dissolve upon the death of a partner and the interest in the mining partnership can be assigned by conveyance of the co-owned mineral. n334 Mining partnerships arise out of the need to develop jointly owned minerals, not out of any particular trust in or recognized skill of individual partners.

CHAPTER 48 MINES AND MINERALS
IV. Methods of Obtaining and Exploiting Rights to Mineral Resources

6-48 Thompson on Real Property, Thomas Editions § 48.20

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.20 Multiple Mineral Development and Correlative Rights.

[Go To Supp]

The relationship between surface and mineral estates generally is considered to be one in which the mineral estate is dominant. n335 If different minerals, however, are owned by two separate parties, the relationship between these owners is often described as one of "correlative rights." n336 This is a term used to refer to co-equal rights in a common resource, and was originally applied to rights in common pools of oil and gas. n337 Under this doctrine, each competing estate deserves protection; neither owner may exercise rights without due regard for the other. A neutral rule of reason governs. n338

One important aspect of correlative rights is whether the owner of a deeper mineral should have a right of access to the lower strata and, conversely, if the upper mineral interest has a right to support. These duties are considered reciprocal. n339 Balancing is required. n340 Some courts imply an easement of access to lower strata through the higher. n341

CHAPTER 48 MINES AND MINERALS
IV. Methods of Obtaining and Exploiting Rights to Mineral Resources

6-48 Thompson on Real Property, Thomas Editions § 48.21

AUTHOR: Professor Marla E. Mansfield College of Law University of Tulsa

§ 48.21 Coalbed Methane.

[Go To Supp]

Methane in coal seams may bring a danger of explosion to miners, requiring venting for protection, or the methane may itself be a developable source of natural gas. n342 Two questions arise. The first concerns ownership. If gas rights are held in separate ownership from coal, who owns the coalbed methane? The second question centers on how to reconcile the needs of two developers.

Not many jurisdictions have ruled on the first question, namely who owns the methane. Those who have ruled favor the coal estate as owner. n343 In order to facilitate development pending resolution in other jurisdictions, Congress in the Energy Policy Act of 1992 provided for development in escrow. n344 The second question will most likely be answered by employing the correlative rights concept or through legislative responses. n345

Add:

Florman v. MEBCO Ltd. P'ship, 207 S.W.3d 593 (Ky. App. 2006) (clay and limestone are not minerals, regardless of their value).

Carrier v. Salt Lake County, 2004 UT 98 (Utah 2004) (according to county zoning ordinances, gravel was not a mineral, and therefore gravel pit could not expand).

In re Pilgrim's Pride Corp., 421 B.R. 231, 242 (Bankr. N.D. Tex. 2009)

§ 48.02(a) Interpreting Private Conveyances. [Go To Main]

Add:

Caballo Coal Co. v. Fid. Exploration & Prod. Co., 84 P.3d 311 (Wyo. 2004) (dispute over whether deed that granted "all materials contained in or associated" with coal included grantor's interest in Coalbed Methane).

Add:

Bixler v. Oro Mgmt., L.L.C., 2004 WY 29, 86 P.3d 843 (Wyo. 2004) (district court found that agreement was ambiguous regarding what was intended by a "net mineral interest," but appellate court disagreed).

Add:

L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 259 (2009).*

§ 48.02(a)(1) Ejusdem Generis

Add:

L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009).*

Add:

L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009).*

Add:

James L. Ryan, *Sand Wars: Mineral Reservation Policies Lead the Supreme Court to Determine Whether Sand Is a Valuable Mineral in the Nevada Desert, 37 Loy. U. Chi. L.J. 213 (2005)* (discussing how the Stock-Raising Homestead Act of 1916 (SRHA) and the Pittman Underground Water Act of 1919 adopted a bifurcated approach to land patents and how the government issued a patent for surface lands but retained mineral rights); *Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005)* (discussing that generally a mineral estate did not include sand and gravel).

Add:

Cent. Natural Res., Inc. v. Davis Operating Co., 201 P.3d 680 (Kan. 2009)

§ 48.02(a)(2) Parol Evidence: Circumstances of Transaction.

Add:

First American Kickapoo operations v. *Multimedia, INC., 412 F.3d 1166 (2005)* ; *Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005)* .

Add:

In re Excel Laminates, Inc., (2005); *New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005)* .

Add:

Bixler v. Oro Mgmt., L.L.C., 86 P.3d 843 (Wyo. 2004) (district court erred when it relied upon parole evidence that directly contradicted unambiguous deed).

Ray v. Edwards, 2010 U.S. Dist. LEXIS 11834 (Okla. 2010) (court cannot look outside the four corners of the document when the contract language clearly and unambiguously expresses the mineral interest); *Cent. Natural Res., Inc. v. Davis Operating Co., 201 P.3d 680 (Kan. 2009)* .

§ 48.02(a)(3) Parol Evidence: Community Knowledge.

Add:

Griffis v. Anadarko E&P Co. LP, 2009 U.S. Dist. LEXIS 75124 (Ark. 2009) (applying Strohacker, the court determined the mineral interest lease contained rights to the oil and natural gas); *Robertson v. Union Pac. R.R. Co., 2009 U.S. Dist. LEXIS 106449 (Ark. 2009)* (applying Strohacker, the court determined that summary judgment was not appropriate because there was a genuine issue of material fact concerning the meaning of "mineral interests" in the county when the deed was first created).

Add:

Am. Land Holdings of Ind., LLC v. Jobe, 655 F. Supp. 2d 882 (S.D. Ind. 2009) (holding that although the deed said "all coal" could be mined, it did not allow for surface mining for the coal since surface mining was unknown to the county at the time the deed was drafted and consequently there would not have been the requisite intent for surface mining to occur); *Cimarron Oil Corp. v. Howard Energy Corp., 909 N.E.2d 1115 (Ind. 2009)* (an interest to mine "gas" did not include coal bed methane gas because at the time of conveyance it was not a common practice of the area).

Add:

Cent. Natural Res., Inc. v. Davis Operating Co., 201 P.3d 680 (Kan. 2009) (understood at time deed was created that coal and methane gas were two separate minerals because one was a gas and one was a solid; consequently, only the coal was deeded, and not the gas).

Add:

Coleman v. Regions Bank, 364 Ark. 59, 216 S.W.3d 569 (Ark. 2005) .

§ 48.02(a)(4) Intrinsic Value.

Add:

James L. Ryan, *Sand Wars: Mineral Reservation Policies Lead the Supreme Court to Determine Whether Sand Is a Valuable Mineral in the Nevada Desert, 37 Loy. U. Chi. L.J. 213 (2005); New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005)* ; *Home on the Range v. AT&T, 386 F. Supp. 2d 999 (2005)* ; *S. Utah Wilderness Alliance v. Bureau of Land Management, 425 F.3d 735 (2005)* ; *Hash v. United States, 403 F.3d 1308 (2005)* ; *Beres v. United States, 64 Fed. Cl. 403 (2005)* ; John Vaterlaus, Note, *Stuck Between A Rock and a Hard Place: The United States Supreme Court Misapplies Statutory Construction Precedent in* Bedrock Ltd. v. United, *38 Creighton L. Rev. 1263 (2005);* Ben Clark, Note, Bedroc Ltd. v. United States, *Sand and Gravel, Changing Value in Changing Times, 9 Great Plains Nat. Resources J. 78 (2005);* Albert C. Lin, *Erosive Interpretation of Environmental Law in the Supreme Court's 2003-04 Term,* 42 Hous. L. Rev. 565 (2005); *Zurich Am. Ins. Co. v. A.B.M. Indus. Inc., 397 F.3d 158 (2d Cir. 2005)* .

Hart v. Craig, 216 P.3d 197 (Mont. 2009) (to be a mineral, it must have special value); *In re Pilgrim's Pride Corp., 421 B.R. 231, 242 (Tex. 2009)* ("water is a natural inorganic substance with a definite chemical composition. Water has value--as evidenced by the price charged for bottled water." Thus water meets the definition of 'mineral'); Owen L. Anderson, "Geologic CO[2] Sequestration: Who Owns The Pore Space?" *9 Wyo. L. Rev. 97 (2009).*

Add:

Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005) . *Bed Roc Ltd., L.L.C v. United States, 124 S. Ct. 1587 (2004)* (sand and gravel in Nevada were essentially worthless and not considered valuable minerals subject to a statutory reservation).

Hart v. Craig, 216 P.3d 197 (Mont. 2009) (sandstone is not rare or exceptional simply because it can be sold commercially).

§ 48.02(a)(5) Ordinary and Natural Meaning.

Add:

Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005) .

Add:

Hart v. Craig, 216 P.3d 197 (Mont. 2009) (using the ordinary and natural meaning test to determine sandstone was not a mineral); L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 259 (2009)* (ordinary and natural meaning has been used to determine the meaning of "other minerals").

Add:

In re Pilgrim's Pride Corp., 421 B.R. 231, 242 (Tex. 2009)

Add:

Bed Roc Ltd., LLC v. United States, 124 S. Ct. 1587 (2004) (sand and gravel in Nevada were essentially worthless and not considered valuable minerals subject to a statutory reservation, reversing the lower court decision).

Add:

BLACK'S LAW DICTIONARY 1084 (9th ed. 2009) (defines "mineral" as "any natural inorganic matter that has a definite chemical composition and specific physical properties that give it value."); *Rando v. Anco Insulations Inc., 16 So. 3d 1065 (La. 2009)* (evaluating an educational definition of mineral that states a mineral is "an element or chemical compound that is normally crystalline and that has been formed as a result of geological processes"); L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009)* (defining mineral generally as "a naturally occurring inorganic element or compound having an orderly internal structure and characteristic chemical composition, crystal form, and physical properties").

Add:

Cent. Natural Res., Inc. v. Davis Operating Co., 201 P.3d 680 (Kan. 2009) (court analyzed the use and understanding of two minerals within the mining industry to determine the meaning of the mineral conveyance); but see *In re Pilgrim's Pride Corp., 421 B.R. 231, 242 (Tex. 2009)* (since water is a natural inorganic substance with a definite chemical composition and has value "as evidenced by the price charged for bottled water" it is considered a mineral).

§ 48.02(a)(5) Ordinary and Natural Meaning

Add:

New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005) .

Add:

Grable & Sons Metal Prods. v. Darue Eng'g and Mfg., 125 S. Ct. 2363 (2005) ; *New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005)* ; *Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005)* ; John Vaterlaus, Note, *Stuck Between A Rock and a Hard Place: The United States Supreme Court Misapplies Statutory Construction Precedent in* Bedrock Ltd. V. United, *38 Creighton L. Rev. 1263 (2005);* Albert C. Lin, *Erosive Interpretation of Environmental Law in the Supreme Court's 2003-04 Term*, 42 Hous. L. Rev. 565 (2005); James L. Ryan, *Sand Wars: Mineral Reservation Policies Lead the Supreme Court to Determine Whether Sand Is a Valuable Mineral in the Nevada Desert, 37 Loy. U. Chi. L.J. 213 (2005).*

Add:

New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005) ; *Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005)* .

Carrier v. Salt Lake County, 2004 UT 98 (Utah 2004) (according to county zoning ordinances, gravel was not a mineral, and therefore gravel pit could not expand).

Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005) ; John Vaterlaus, Note, *Stuck Between A Rock and a Hard Place: The United States Supreme Court Misapplies Statutory Construction Precedent in* Bedrock Ltd. V. United, *38 Creighton L. Rev. 1263 (2005);* Katherine Daniels Ryan, Brief, *The Supreme Court Modifies Homestead Claimants' Property Rights* in BedRoc Ltd. v. United States, *32 Ecology L.Q. 683 (2005);* Ben Clark, Note, Bedroc Ltd. v. United States, *Sand and Gravel, Changing Value in Changing Times, 9 Great Plains Nat. Resources J. 78 (2005);* Albert C. Lin, *Erosive Interpretation of Environmental Law in the Supreme Court's 2003-04 Term*, 42 Hous. L. Rev. 565 (2005); James L. Ryan, *Sand Wars: Mineral Reservation Policies Lead the Supreme Court to Determine Whether Sand Is a Valuable Mineral in the Nevada Desert, 37 Loy. U. Chi. L.J. 213 (2005).*

Add:

James L. Ryan, *Sand Wars: Mineral Reservation Policies Lead the Supreme Court to Determine Whether Sand Is a Valuable Mineral in the Nevada Desert, 37 Loy. U. Chi. L.J. 213 (2005).*

§ 48.02(a)(6) Manner of Enjoyment.

Add:

Caballo Coal Co. v. Fid. Exploration & Prod. Co., 84 P.3d 311 (Wyo. 2004) (in determining meaning of language within the deed, the court focuses on the general intent of the parties, concentrating on purposes of the grant in terms of respective manner of enjoyment of surface and mineral estates); *Hickman v. Groves, 71 P.3d 256, 258 (Wyo. 2003)* (dispute over whether seller had reserved right to CBM, court stated that manner of enjoyment should also be considered when reservations of rights are involved).

Minard Run Oil Co. v. United States Forest Serv., 2009 U.S. Dist. LEXIS 116520 (Pa. 2009) (reasoning that "the mineral estate owner must exercise his right of occupancy with due regard for the surface owner and, as such, may only occupy so much of the surface estate as reasonably necessary to remove his minerals and must take steps to mitigate and minimize damage to the surface estate"); *O'Brien Oil, L.L.C. v. Norman, 2010 OK CIV APP 23 (Okla. 2010)* (Oklahoma has the "Surfaces Damages Act" which requires compensation to surface owners for damages caused by mining of the mineral interests); *Belden & Blake Corp. v. Dep't of Conservation & Natural Res., 969 A.2d 528 (Pa. 2009)* (holding that a mineral estate owner has an absolute right to access and extract the minerals without consent of the surface estate owner and that the surface owner "cannot unilaterally impose extra conditions on the subsurface owner.").

COMPUTER-ASSISTED RESEARCH: Change "employment" to "enjoyment"

Add:

New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005) .

§ 48.02(a)(7) Surface Destruction.

Add:

Calvert Joint Venture #140 v. Snider, 816 A.2d 854 (Md. 2003) (court held that grantors couldn't use property's surface to prospect for minerals because any implied reservation to access the surface would be unreasonable considering that when the grantors made the agreement they were aware of grantee's plans to use the land for a subdivision, and because the grantors had access to the minerals through adjacent property).

Boswell Energy Corp. v. Arrowhead Homes, Inc., 2004 OK Civ. App. 83 (Okla. App. 2004) (the intent of the grantor and grantee of the deeds was that the landowner's predecessor conveyed only the surface rights and the landowner's predecessor reserved the mineral rights with express words).

L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009) (2009)* (unless the contrary intention is affirmatively and fairly expressed a grant or reservation of "minerals" or "mineral rights" should not be construed to include a substance that must be removed by methods that will, in effect, consume or deplete the surface estate); *Desoto Gathering Co., LLC v. Smallwood, 2010 Ark. 5, 6 (Ark. 2010)* (the owner of a mineral estate has only the right to reasonable use of the surface for developing minerals).

Add:

Calvert Joint Venture #140 v. Snider, 816 A.2d 854 (Md. 2003) (court held that grantors couldn't use property's surface to prospect for minerals because any implied reservation to access the surface would be unreasonable considering that when the grantors made the agreement they were aware of grantee's plans to use the land for a subdivision, and because the grantors had access to the minerals through adjacent property).

New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005) ; *Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005)* .

Am. Land Holdings of Ind., LLC v. Jobe, 655 F. Supp. 2d 882 (S.D. Ind. 2009) (court reasoned that although the deed stated "all coal" could be mined from the property, it did not mean that surface mining could be used to mine the coal on the surface because the extent of the damage to the surface would be greater than intended by the parties).

Add:

Am. Land Holdings of Ind., LLC v. Jobe, 655 F. Supp. 2d 882 (S.D. Ind. 2009) (the intent of the deed was to limit the amount of surface damage; additionally, deep mining was the only type of mining used in the county at the time of drafting and that implies intent for deep mining only).

§ 48.02(a)(8) Texas Experience

Add:

L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009).*

Add:

L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009).*

§ 48.02(b) Interpreting Government Conveyances. [Go To Main]

Add:

Osage Nation v. State ex rel. Okla. Tax Comm'n, 597 F. Supp. 2d 1250 (N.D. Okla. 2009) (court looked to congressional intent at the time the act was passed to determine that the surface estate was terminated at time of reservation).

Add:

Energy Mgmt. Servs. v. Shaw, 2005 UT App 90 . But see Bed Roc Ltd., LLC v. United States, 124 S.Ct. 1587 (2004) (reservation construed against the government because sand and gravel weren't considered valuable minerals).

Add:

SunriseValley, LLC v. Kempthorne, 528 F.3d 1251 (10th Cir. 2008) (sand, rock and gravel included in minerals reserved to federal government from a patent to a private owner).

Add:

John Vaterlaus, Note, *Stuck Between A Rock and a Hard Place: The United States Supreme Court Misapplies Statutory Construction Precedent in* Bedrock Ltd. V. United, *38 Creighton L. Rev. 1263 (2005);* James L. Ryan, *Sand Wars: Mineral Reservation Policies Lead the Supreme Court to Determine Whether Sand Is a Valuable Mineral in the Nevada Desert, 37 Loy. U. Chi. L.J. 213 (2005).*

Add:

N.M. ex rel. Richardson v. BLM, 565 F.3d 683 (10th Cir. 2009) .

Add:

New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005) ; John Vaterlaus, Note, *Stuck Between A Rock and a Hard Place: The United States Supreme Court Misapplies Statutory Construction Precedent in* Bedrock Ltd. V. United, *38 Creighton L. Rev. 1263 (2005). But see United States v. Hess, 348 F.3d 1237 (10th Cir. 2003)* (where an exchange patent reserved all minerals to the U.S. for the benefit of an Indian tribe, the reservation didn't include gravel based on the extent of the gravel and the intent of the parties).

Jicarilla Apache Nation v. United States, 88 Fed. Cl. 1 (Fed. Cl. 2009) (memo from a field solicitor from the US Department of Interior indicates that gravel and sand should be included in the mineral estate of the native American tribe).

§ 48.02(c) Distinction Between Lease and Deed [Go To Main]

Add:

L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009)* (in Mississippi a lease with the words "all other minerals" did not contain the right to strip mine for lignite, but later held that in a deed with the language "all mineral rights" allowed for strip mining of lignite).

Add:

In re Excel Laminates, Inc., (2005).

§ 48.02(d) Taxation. [Go To Main]

Add:

Groome v. Donlin Corp., 908 N.E.2d 330 (Ind. Ct. App. 2009) (since the mineral interest is subject to taxation, the interest must be created by deed and must be duly recorded).

Add:

Matagorda County Appraisal Dist. v. Coastal Liquids Partners, L.P., 165 S.W.3d 329 (Tex. 2005) ; *Williams Prod. Co. v. Wyoming Dep't of Revenue, 2005 WY 28* ; Ricky Turner, Note, *Royalty Dethroned: Wyoming's Approach to Gathering Costs,* Cabot Oil & Gas Corp. v. Followwill, *5 Wyo. L. Rev. 665 (2005).*

Supp. to § 48.06 Rights Against Trespass.

[Go To Main]

§ 48.06(a) Innocent Trespass. [Go To Main]

Add:

Dvorken Family L.P. v. Martin Marietta Materials, Inc., 2004 US Dist LEXIS 422 (No. SA-03-CA-0031, Jan. 6, 2004) (dispute over whether lessees' transport of off-site materials across the leased property constituted trespass); *Swepi, L.P. v. Camden Resources, Inc., 2004 Tex. App. LEXIS 3309* (No. 04-03-00067-CV, Apr. 14, 2004) (in dispute over instance of sub-surface trespass, court found that the rule of capture doesn't limit actions for trespass and conversion of oil and gas).

Desoto Gathering Co., LLC v. Smallwood, 2010 Ark. 5, 6 (Ark. 2010) (no trespass occurred because the mining company entered the land pursuant to a right-of-way and a partnership right to reasonably use the surface to extract the minerals).

Add:

Stitching Pensionfonds v. Qwest Communications International, Inc., 387 F. Supp. 2d 1130 (D. Colo. 2005) ; Kimberly D. Krawiec & Kathryn Zeiler, *Common-law Disclosure Duties and the Sin of Omission: Testing the Meta-Theories, 91 Va. L. Rev. 1795 (2005)* (discussing a duty to disclose information about mineral content when information is discovered while trespassing).

§ 48.06(b) Willful Trespass. [Go To Main]

Add:

Villarreal v. Grant Geophysical, Inc., 2004 Tex. App. LEXIS 2559 (No. 04-03-00541-CV, Mar. 24, 2004) (in geophysical trespass case, since trespass didn't occur, mineral company didn't wrongfully secure benefit).

Caudill v. Ritchie, 2009 U.S. Dist. LEXIS 37452 (Ky. 2009) (in Kentucky, an owner of surface rights is able to maintain an action for trespass against an owner of mineral or sub-surface rights who has exercised those rights "arbitrarily, maliciously, oppressively, or wantonly"); *Zeiler Farms, Inc. v. Anadarko E & P Co., LP, 2009 U.S. Dist. LEXIS 26886 (Colo. 2009)* (under accommodation doctrine of Colorado, if using the surface is not reasonable and necessary to the development of the mineral interest, the conduct is a trespass).

Supp. To CHAPTER 48 MINES AND MINERALS

6-48 Thompson on Real Property, Thomas Editions Supp. to § 48.07

Supp. to § 48.07 Severance of Surface and Minerals.

[Go To Main]

Add:

Hornsby v. Slade, 854 So. 2d 441, 445 (La. App. 1st Cir. 2003) (court found that sand and gravel were known mineral deposits that were inseparable parts of the land unless segregated as mineral rights, and thus they should have been considered in the sale price); *Harrison v. County of Stevens, 61 P.3d 1202* (Wash. App. Div. 3, 2003) (court held that because the mineral rights had been severed from the surface rights, the mineral rights owner couldn't affect passing of title or subdivision of the surface estate).

Swaim v. Stephens Prod. Co., 2004 Ark. LEXIS 588 (Ark. 2004) (according to the plain language of the Arkansas code, title vested in the riparian landowners by virtue of the land emerging by accretion, and thus the landowners owned the unsevered surface and mineral interests).

[Go To Main]

New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005) ; *Abraham v. Sklar Exploration Co., 408 F. Supp. 2d 244 (S.D. Miss. 2005)* ; *Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005)* ; Noblin v. Harbor Hills Dev., L.P., *Et Al* (Fla. Dist. St. 2005) (recognizing in this State that mineral rights may be severed from the surface rights and conveyed separately, and that two estates are thus created in the land); *Wedel v. American Electric Power Service Corp., 839 N.E.2d 1236 (Ind. Ct. App. 2005)* (discussing a situation in which a mineral estate is leased to a lessee who plans to severe the minerals and pay the lessor compensation); *Garza v. Prolithic Energy Co., L.P., 195 S.W.3d 137 (Tex. App. 2006)* (defining the essential attributes of a severed mineral estate as: (1) the right to develop (the right of ingress and egress); (2) the right to lease (the executive right); (3) the right to receive bonus payments; (4) the right to receive delay rentals; and (5) the right to receive royalty payments); Angela Neese, Comment, The Battle Between the Colorado Oil and Gas Conservation Commission and Local Governments: A Call for a New and Comprehensive Approach, *76 U. Colo. L. Rev. 561 (2005) ;*

John Vaterlaus, Note, *Stuck Between A Rock and a Hard Place: The United States Supreme Court Misapplies Statutory Construction Precedent in* Bedrock Ltd. V. United, *38 Creighton L. Rev. 1263 (2005);* James L. Ryan, *Sand Wars: Mineral Reservation Policies Lead the Supreme Court to Determine Whether Sand Is a Valuable Mineral in the Nevada Desert, 37 Loy. U. Chi. L.J. 213 (2005);* Christopher M. Alspach, *Adverse Possession of Severed Mineral Interests and the Need for Statutory Guidance, 37 Tex. Tech L. Rev. 1073 (2005)* (discussing the courts approach that after the mineral and surface estates have been severed, an adverse possessor of the surface estate cannot accomplish adverse possession of the mineral estate unless he takes actual possession).

Add:

Cent. Natural Res., Inc. v. Davis Operating Co., 201 P.3d 680 (Kan. 2009) ; *Pounds v. Jurgens, 296 S.W.3d 100 (Tex. 2009)* ; *Dick Props., LLC v. Paul H. Bowman Trust, 221 P.3d 618, 621 (Kan. 2010)* (after severance, two separate estates exist, each held by separate and distinct titles in severalty; consequently, the estate is then a freehold estate, the inheritance of which is independent of the other).

Add:

Veterans Land Bd. v. Lesley, 281 S.W.3d 602 (Tex. 2009) (mineral estate owner may use portions of the surface for drilling, storing, pumping, and transporting incidental to the full enjoyment of the mineral interest); *Dick Props., LLC v. Paul H. Bowman Trust, 221 P.3d 618, 621 (Kan. 2010)* (owner of the mineral estate has the right to explore, develop and produce oil and gas deposits and can also transfer these rights to another party by executing an oil and gas lease); *XTO Energy, Inc. v. Schmidt, 2009 U.S. Dist. LEXIS 105530 (2009)* ; *Desoto Gathering Co., LLC v. Smallwood, 2010 Ark. 5 (Ark. 2010)* .

§ 48.07(a) Nature of the Mineral Estate [Go To Main]

Add:

Veterans Land Bd. v. Lesley, 281 S.W.3d 602 (Tex. 2009) (mineral estate owner may use portions of the surface for drilling, storing, pumping, and transporting incidental to the full enjoyment of the mineral interest); *Dick Props., LLC v. Paul H. Bowman Trust, 221 P.3d 618, 621 (Kan. 2010)* (owner of the mineral estate has the right to explore, develop and produce oil and gas deposits and can also transfer these rights to another party by executing an oil and gas lease); *XTO Energy, Inc. v. Schmidt, 2009 U.S. Dist. LEXIS 105530 (2009)* ; *Desoto Gathering Co., LLC v. Smallwood, 2010 Ark. 5 (Ark. 2010)* .

§ 48.07(b) Nature of a Royalty. [Go To Main]

Add:

Maralex Resources Inc. v. Gilbreath, 76 P.3d 626 (N.M. 2003) (shut-in royalty clause covers situations when lessee stops producing because of market; the lessee can hold the lease by paying a pre-determined amount as substitute for royalty).

Swaim v. Stephens Prod. Co., 2004 Ark. LEXIS 588 (Ark. 2004) (landowner's royalty interests granted under a lease were applicable to accreted land).

Abraham v. Sklar Exploration Co., 408 F. Supp. 2d 244 (S.D. Miss. 2005) ; *Noblin v. Harbor Hills Dev., L.P., Et Al, 896 So. 2d 781 (Fla. Dist. St. 2005)* ; *EOG Res. Inc. v. Turner, 908 So. 2d 848 (Miss. Ct. App. 2005)* (discussing the well-established rights of the owner of the mineral estate to use the surface of the land); *Tex. Genco L.P. v. Valence Operating Co., 187 S.W.3d 118 (Tex. Ct. App. 2006)* (discussing how the accommodation doctrine preserves the mineral owner's absolute right to use the surface, but if there is only one means of surface use by which to produce the minerals, then the mineral owner has the right to pursue that use, regardless of surface damage); *Trenolone v. Cook Exploration Co., 166 S.W.3d 495 (Tex. Ct. App. 2005)* (discussing means to balance the rights of the surface owner and the mineral owner when there is an existing use by the surface owner which would otherwise be precluded).

Northup Props., Inc. v. Chesapeake Appalachia, L.L.C., 567 F.3d 767 (Ky. 2009) (there is a strong public policy against a lessee not developing a mineral interest for an unreasonable length of time simply for speculative purposes or because of lack of due diligence where the lessor's only revenue is from royalty payments on that interest); *In re Estate of Slaughter, 305 S.W.3d 804 (Tex. 2010)* (discussion and definitions of the terms "bonus," "royalty," and "rentals" in the mineral right context); *City of Alvin v. Zindle, 2009 Tex. App. LEXIS 9304, 6-7 (Tex. 2009)* (only a partial severance of the mineral estate occurs when the lessor reserves only a royalty interest in an oil, gas, and mineral lease); *Reichmann Petroleum Corp. v. Goen, 399 B.R. 463 (Tex. 2009)* (general discussion and application of a shut-in royalty clause to a mineral contract).

§ 48.07(c) The Special Case of Louisiana. [Go To Main]

Add:

Petro-Hunt, L.L.C. v. United States, 90 Fed. Cl. 51 (Fed. Cl. 2009) ; *Devon Energy Prod. Co., L.P. v. Am. Int'l Specialty Lines Ins. Co., 2009 U.S. Dist. LEXIS 38092 (Tex. 2009)* ; *La. R.S. 31:20* (the period of prescription on mineral servitudes begins to run on the date a servitude is created, and is interrupted only by "good faith operations for the discovery and production of minerals.").

Add new footnote 134.1: n134.1

FOOTNOTES:
(n2)Footnote 134.1. *Cent. Pines Land Co. v. United States, 61 Fed. Cl. 527 (Ct. Cl. 2004)* (the United States did not engage in any action that would constitute a taking of plaintiffs' mineral rights; rather, those rights reverted to the United States as surface owner by operation of Louisiana prescription law).

Supp. To CHAPTER 48 MINES AND MINERALS

6-48 Thompson on Real Property, Thomas Editions Supp. to § 48.08

Supp. to § 48.08 Relationship Between Surface and Mineral Owners.

[Go To Main]

§ 48.08(a) Rights of Mineral Owner to Use Surface. [Go To Main]

Add:

Dvorken Family L.P. v. Martin Marietta Materials, Inc., 2004 US Dist. LEXIS 422 (No. SA-03-CA-0031, Jan. 6, 2004) (dispute over whether lessees' transport of off-site materials across the leased property constituted trespass); *Burkett v. Amoco Prod. Co., 85 P.3d 576 (Colo. App. 2003)* (the question of what is reasonable and necessary can't be resolved until the site selection of potential well is made and reasonable alternatives are identified).

Ainbinder v. White Ash Land Ass'n, 363 F. Supp. 2d 762 (D. Pa. 2005) (mineral holders, who owned a separate mineral estate of the disputed land, did not need surface owner's consent to apply for a backfill and reclamation permit); *W. Atlas Int'l v. Randolph, 2005 Tex. App. LEXIS 2199 (Tex. App. 2005)* (as a matter of law, the mineral lessee had authority to enter the property; thus the seismic company's failure to seek permission before entering the land did not constitute a trespass); *Davis v. Devon Energy Prod. Co., L.P., 136 S.W.3d 419 (Tex. App. 2004)* (a permanent injunction was issued against the owners of land, who were interfering with the lessee's operations on the property). *But see Kysar v. Amoco Prod. Co., 379 F.3d 1150 (10th Cir. 2004)* (lessee was not empowered by virtue of the agreement to access a well by using portions of the back gate road that crossed the owners' land).

Zeiler Farms, Inc. v. Anadarko E & P Co., LP, 2009 U.S. Dist. LEXIS 26886 (Colo. 2009) ; *Greeley-Rothe LLC v. Anadarko E & P Co. LP, 2010 U.S. Dist. LEXIS 32253 (Colo. 2010)* (directional drilling of oil wells, rather than vertical drilling of oil wells, was required to meet the reasonably necessary requirement); *XTO Energy, Inc. v. Schmidt, 2009 U.S. Dist. LEXIS 105530 (2009)* (mineral interest owners may use surface for geophysical operations including seismographic surveys); *Pinnacle Gas Res., Inc. v. Diamond Cross Props., LLC, 201 P.3d 160 (Mont. 2009)* (surface owner does not have the power or right to prohibit the mineral holder from entering the property as long as the mineral holder's actions are necessary and reasonable).

Add:

But see Calvert Joint Venture #140 v. Snider, 816 A.2d 854 (Md. 2003) (court held that grantors couldn't use property's surface to prospect for minerals because any implied reservation to access the surface would be unreasonable considering that when the grantors made the agreement they were aware of grantee's plans to use the land for a subdivision, and because the grantors had access to the minerals through adjacent property).

Terrebonne Parish Sch. Bd. v. Castex Energy, Inc., 893 So. 2d 789 (La. 2005) (where a mineral lease granted the lessee the right to alter the surface in a reasonable manner and was silent regarding restoration, the statute only imposed a duty to restore the surface to its original condition where there was evidence of unreasonable or excessive use).

Desoto Gathering Co., LLC v. Smallwood, 2010 Ark. 5 (Ark. 2010)

Add:

Johnson v. Envtl. & Pub. Prot. Cabinet, 289 S.W.3d 216 (Ky. 2009) ; *Veterans Land Bd. v. Lesley, 281 S.W.3d 602 (Tex. 2009)* .

§ 48.08(b) Rights of Surface Owners [Go To Main]

Add:

New West Materials v. Interior Bd. of Land Appeals, 398 F. Supp. 2d 438 (2005) ; *Abraham v. Sklar Exploration Co., 408 F. Supp. 2d 244 (S.D. Miss. 2005)* ; *Kinney v. Keith, 128 P.3d 297 (Colo. App. 2005)* ; *EOG Res. Inc. v. Turner, 908 So. 2d 848 (Miss. Ct. App. 2005)* ; *Consolidation Coal Co. v. White, 875 A.2d 318 (Pa. Super Ct. 2005)* (discussing how under Pennsylvania law that it is the owner of the surface land who has the proprietary right to support of the surface, but the owner of the surface estate may by waiver, relinquish the right of subjacent support); *Tex. Genco L.P. v. Valence Operating Co., 187 S.W.3d 118 (Tex. Ct. App. 2006)* .

Pounds v. Jurgens, 296 S.W.3d 100 (Tex. 2009) ; *Veterans Land Bd. v. Lesley, 281 S.W.3d 602 (Tex. 2009)* : *Fiore v. County of Allegheny, 2009 Pa. Dist. & Cnty. Dec. LEXIS 274 (Pa. 2009)* ; *Desoto Gathering Co., LLC v. Smallwood, 2010 Ark. 5 (Ark. 2010)* (surface estate is depicted as the subservient estate that cannot reasonably interfere with the mineral estates interest in mineral extraction).

Add:

Broussard v. Hilcorp Energy Co., 998 So. 2d 946 (La. App. 2008) (action by landowners against mineral lessees for contamination of property allegedly resulting from negligent operation of the leases).

§ 48.08(b)(1) Subjacent Support.

Add:

Saddle Mt. Minerals, L.L.C. v. Joshi, 152 Wash. 2d 242 (Wash. 2004) (the estate owners could extract sand and gravel as long as it did not raise the issue of subjacent support).

Unified Gov't of Wyandotte County/Kansas City v. Inland Quarries, 2005 U.S. Dist. LEXIS 32503 (D. Kan. 2005) , Slip op. (D. Kan. 2005) (discussing an arbitration agreement that includes plaintiff's duty to maintain the road and defendant's exception to liability for damages or injunctive relief for vertical or lateral support); *Home on the Range v. AT&T, 386 F. Supp. 2d 999 (2005)* .

Hancock v. Island Creek Coal Co., 2009 U.S. Dist. LEXIS 30841 (Ky. 2009) ; *Ambrosia Land Invs., LLC v. Heritage Coal Co., LLC, 2009 U.S. Dist. LEXIS 48584 (Ill. 2009)* (there is an absolute right to subjacent support and a mining company will be strictly liable for failing to provide subjacent support, whether or not there was negligence involved, absent a release or waiver from the surface owner); LoValerie Mullins, "The Equity Illusion of Surface Ownership in Coalbed Methane Gas; The Rise of Mutual Simultaneous Rights in Mineral Law and The Resulting Need for Dispute Resolution in Split Estate Relations." *16 Mo. Envtl. L. & Pol'y Rev. 109, 144 (2009)* (the right of subjacent support imposes strict liability on mineral owners who damage surface lands by failing to support surface structures from under the ground).

§ 48.08(b)(2) Lateral Support

Add:

Home on the Range v. AT&T, 386 F. Supp. 2d 999 (2005) .

Randall Bezanson & Andrew Finkelman, "Trespassory Art," *43 U. Mich. J. L. Reform 245, 282 (2009)* (property owner may not mine or otherwise disturb the earth so as to cause adjacent land to subside).

§ 48.08(d) Adverse Possession by Surface Owner [Go To Main]

Add:

Gulley v. Davis, 2010 Tex. App. LEXIS 2710 (Tex. 2010) (possession of the surface estate that commences after a severance of the mineral estate is not sufficient to constitute adverse possession of the mineral estate, but when adverse possession commences before a severance of the mineral estate, the adverse possession includes both the surface and mineral estate).

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 48 MINES AND MINERALS

6-48 Thompson on Real Property, Thomas Editions Supp. to § 48.09

Supp. to § 48.09 Right to Mine by Strip, Surface or Long Wall Methods.

[Go To Main]

Add:

Citizens Coal Council v. Norton, 330 F.3d 478 (D.C. Cir. 2003) (deals with the Secretary of the Interior's interpretation of the Surface Mining Control and Reclamation Act, which interpretation excluded subsidence from regulation); *Evaline Cmty. Ass'n v. Good, 2003 Wash. App. LEXIS 1847* (No. 28805-2-II, Aug. 20, 2003) (rock quarry operator's surface mining use vested in 1997, when his application was approved against later enacted county regulations, and the permit didn't violate the Surface Mining Act).

Am. Land Holdings of Ind., LLC v. Jobe, 2010 U.S. App. LEXIS 9271 (Ind. 2010) (strip mining destroys the surface, making it completely unusable by the owner of the surface unless and until it is restored; consequently, some courts create a presumption against interpreting a grant of mineral rights to convey a right to strip mine the grantor's land); *Fiore v. County of Allegheny, 2009 Pa. Dist. & Cnty. Dec. LEXIS 274 (Pa. 2009)* (four factors to consider in determining whether strip mining is appropriate: (1) the general language in the grant is broad enough to include strip mining, (2) there is no prohibition against strip mining, nor limitation to strip mining, (3) the owner clearly has the right to mine all the coal, together with a release of the right of support and all damages to the surface, and (4) the nature of the land is unimproved terrain); *Ky. S. Coal Corp. v. Ky. Energy, 2009 Ky. App. Unpub. LEXIS 1035 (Ky. 2009)* (Kentucky requires a written statement from the surface owner allowing strip mining or a copy of the conveyance that expressly grants or reserves the right to extract coal by surface mining methods before strip mining may commence).

§ 48.09(a) Waiver of Right to Support [Go To Main]

Add:

Consolidation Coal Co. v. White, 875 A.2d 318 (Pa. Super Ct. 2005) .

Add:

Ky. S. Coal Corp. v. Ky. Energy, 2009 Ky. App. Unpub. LEXIS 1035 (Ky. 2009) ; LoValerie Mullins, "The Equity Illusion of Surface Ownership in Coalbed Methane Gas; The Rise of Mutual Simultaneous Rights in Mineral Law and The Resulting Need for Dispute Resolution in Split Estate Relations," *16 Mo. Envtl. L. & Pol'y Rev. 109, 144 (2009)* (legal protection is rare for surface owners who have waived their rights to subjacent support).

Add:

LoValerie Mullins, "The Equity Illusion of Surface Ownership in Coalbed Methane Gas; The Rise of Mutual Simultaneous Rights in Mineral Law and The Resulting Need for Dispute Resolution in Split Estate Relations," *16 Mo. Envtl. L. & Pol'y Rev. 109, 144 (2009)* (in West Virginia a party may effectively waive rights to subjacent support when the deed permits mining "without leaving any support for the overlying strata").

§ 48.09(b) Authorization of Surface Mining [Go To Main]

Add:

Pennsylvania federation of sportsman clubs v. *Norton, 413 F. Supp. 2d 358 (M.D. Pa. 2006)* ; *Ohio River Valley Envtl. Coalition, Inc. v. Norton, 2005 U.S. Dist. LEXIS 22265 (D. W. Va. 2005)* .

Am. Land Holdings of Ind., LLC v. Jobe, 2010 U.S. App. LEXIS 9271 (Ind. 2010) (strip mining not allowed because it was not within the intention of the parties at the time of drafting the deed); *Ky. S. Coal Corp. v. Ky. Energy, 2009 Ky. App. Unpub. LEXIS 1035 (Ky. 2009)* (Kentucky requires a written statement from the surface owner allowing strip mining or a copy of the conveyance that expressly grants or reserves the right to extract coal by surface mining methods before strip mining may commence to insure that requisite intent for strip mining is present).

Add:

L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009)* (court looked at the best mining practice for coal removal, strip mining, at the time of conveyance and interpreted the deed to allow for strip mining).

§ 48.09(c) Broad Form Deed Controversy [Go To Main]

Add:

Johnson v. Envtl. & Pub. Prot. Cabinet, 289 S.W.3d 216, 221 (Ky. 2009) (the "Broad Form Deed" amendment to the Kentucky Constitution does not change the laws governing mineral and mining rights under cotenancy).

§ 48.09(d) Government Regulation. [Go To Main]

Add:

Citizens Coal Council v. Norton, 330 F.3d 478 (D.C. Cir. 2003) (deals with the Secretary of the Interior's interpretation of the Surface Mining Control and Reclamation Act, which interpretation excluded subsidence from regulation); *W. Va. Highlands Conservancy v. Norton, 238 F. Supp. 2d 761 (S.D.W. Va. 2003)* (environmental organization is granted summary judgment regarding the Office of Suface Mining's approval of state program amendments inconsistent with the Surface Mining Control and Reclamation Act).

Add:

Hancock v. Island Creek Coal Co., 2009 U.S. Dist. LEXIS 30841 (Ky. 2009) .

Add:

Greenbelt Advocates v. Div. of Mineral Resources Mgt., 893 N.E.2d 230 (Ohio App. 2008) (proposed mining operation was not incompatible with land-use plans or programs; lands unsuitable petition (LUP) denied).

Mt. St. Helens Mining & Recovery Ltd. P'ship v. United States, 384 F.3d 721 (9th Cir. 2004) (the Forest Service, according to the Monument Act, offered to exchange land outside Mt. St. Helens National Volcanic Monument to a partnership owning mineral interests inside the monument, and was not required to make a like kind exchange).

Glover v. Union Pacific R. Co., 187 S.W.3d 201 (Tex. App. 2006) (persons who bought land next to railroad right of way, including mineral rights, do not have claim to mineral rights within the railroad right of way).

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 48 MINES AND MINERALS

6-48 Thompson on Real Property, Thomas Editions Supp. to § 48.11

Supp. to § 48.11 Voluntary Transfer of Right: Requirements for a Conveyance of Minerals.

[Go To Main]

Add:

Bixler v. Oro Mgmt., L.L.C., 86 P.3d 843 (Wyo. 2004) (dispute over whether parole evidence should be allowed to show equal mineral rights were conveyed).

See also Groome v. Donlin Corp., 908 N.E.2d 330 (Ind. Ct. App. 2009) (since the mineral interest is subject to taxation, the interest must be created by deed and must be duly recorded for tax purposes).

Add:

Natural Gas Pipeline Co. of Am. v. Pool, 124 S.W.3d 188 (Tex. 2003) (mineral lessees obtained a fee simple determinable in the mineral estates by adverse possession where their claim of title to oil and gas production was open, notorious, and hostile to the lessor's claims).

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 48 MINES AND MINERALS

6-48 Thompson on Real Property, Thomas Editions Supp. to § 48.12

Supp. to § 48.12 Involuntary Transfer of Mineral Interests: Adverse Possession.

[Go To Main]

Add:

James Rasband, *Questioning the Rule of Capture Metaphor for Nineteenth Century Public Land Law: A Look at R.S. 2477, 35 Envtl. L. 1005 (2005)* (discussing adverse possession in 19th Century land use law); Patrick S. Ottinger, *Production in "Paying Quantities" --A Fresh Look, 65 La. L. Rev. 635 (2005);* Richard White, J. Kenneth Kopf & Allan S. Katz, *Annual Survey of Texas Law: Real Property, 58 Smu L. Rev. 1077 (2005) ;* Christopher M. Alspach, *Adverse Possession of Severed Mineral Interests and the Need for Statutory Guidance, 37 Tex. Tech L. Rev. 1073 (2005); Rocket Oil and Gas Co. v. Donabar, 127 P. 3d 625 (Okla. Civ. App. 2005)* ; *Glover v. Union Pac. R.R. Co., 2006 Tex. App. LEXIS 1345 (2006)* ; *Freeman v. Stephens Prod. Co., 171 S.W.3d 651 (Tex. App. 2005)* ; *EOG Res. v. Wall, 160 S.W.3d 130 (Tex. App. 2005)* .

Add:

Pace v. Chesapeake Panhandle L.P., 2004 U.S. Dist. LEXIS 9887 (D. Tex. 2004) (lessee's possession was hostile and gave constructive notice since it continued to claim rights under the leases after the alleged lapses in production, and thus acquired a gas leasehold estate through adverse possession on the same terms and conditions as the original leases).

Gulley v. Davis, 2010 Tex. App. LEXIS 2710 (Tex. 2010) .

§ 48.12(a) Minerals Not Severed When Adverse Party Enters [Go To Main]

Add:

Rocket Oil and Gas Co. v. Donabar, 127 P.3d 625 (Okla. Civ. App. 2005) .

Leblanc v. EPA, 310 Fed. Appx. 770 (6th Cir. 2009) ; see generally Abraham Bell, "Private Takings." *76 U. Chi. L. Rev. 517 (2009).*

§ 48.12(b) Minerals Severed When Adverse Party Enters [Go To Main]

Add:

Gulley v. Davis, 2010 Tex. App. LEXIS 2710 (Tex. 2010) .

§ 48.12(b)(1) Elements of Adverse Possession Applied to Minerals.

Add:

Natural Gas Pipeline Co. of Am. v. Pool, 124 S.W.3d 188 (Tex. 2003) (mineral lessees obtained a fee simple determinable in the mineral estates by adverse possession where their claim of title to oil and gas production was open, notorious, and hostile to the lessor's claims).

Glover v. Union Pac. R.R. Co., 2006 Tex. App. LEXIS 1345 (2006) ; *Home on the Range v. AT&T, 386 F. Supp. 2d 999 (2005)* ; *Rocket Oil and Gas Co. v. Donabar, 127 P.3d 625 (Okla. Civ. App. 2005)* ; Christopher M. Alspach, *Adverse Possession of Severed Mineral Interests and the Need for Statutory Guidance, 37 Tex. Tech L. Rev. 1073 (2005).*

§ 48.12(b)(2) Extent of Minerals Adversely Possessed

Add;

Gulley v. Davis, 2010 Tex. App. LEXIS 2710 (Tex. 2010) .

Supp. To CHAPTER 48 MINES AND MINERALS

6-48 Thompson on Real Property, Thomas Editions Supp. to § 48.21

Supp. to § 48.21 Coalbed Methane.

[Go To Main]

Add:

Cimarron Oil Corp. v. Howard Energy Corp., 909 N.E.2d 1115 (Ind. Ct. App. 2009) (CBM under the "Eastern rule" remains part of the mineral coal interest, but under the "Western rule" it is part of the mineral gas interest; court held that the CBM belongs to coal owner); but see *Cent. Natural Res., Inc. v. Davis Operating Co., 201 P.3d 680 (Kan. 2009)* (CBM that migrates from the coal seam belongs to the gas owner unless explicitly stated or intended otherwise in the lease); See generally L. Michele McCain and Bernard H. Booth, IV, "Lignite Coal: A 'Mineral' under Mississippi Law," *28 Miss. C. L. Rev. 255, 260 (2009);* LoValerie Mullins, The Equity Illusion of Surface Ownership in Coalbed Methane Gas; The Rise of Mutual Simultaneous Rights in Mineral Law and The Resulting Need for Dispute Resolution in Split Estate Relations *16 Mo. Envtl. L. & Pol'y Rev. 109 (2009).*

Caballo Coal Co. v. Fid. Exploration & Prod. Co., 84 P.3d 311 (Wyo. 2004) (held that grantors intended to convey everything within the coal stream, including coalbed methane, when they granted interest in the coal); *Hickman v. Groves, 71 P.3d 256, 258 (Wyo. 2003)* (dispute over whether seller had reserved right to CBM, court stated that manner of enjoyment should also be considered when reservations of rights are involved); *McGee v. Caballo Coal Co., 69 P.3d 908 (Wyo. 2003)* (court stated that under deed's terms, grantors didn't intend to include coalbed methane as a mineral "extracted in association of coal operations" as its "mining" wasn't economically feasible at the time the deeds were signed); *Energy Dev. Corp. v. Moss, 591 S.E.2d 135 (W. Va. 2003)* (lessor granting lessee all oil and gas under certain real property didn't grant a right to develop coalbed methane, as such a grant wasn't contemplated by all parties); *Harrison-Wyatt, L.L.C. v. Ratliff, 593 S.E.2d 234 (Va. 2004)* (surface owners who conveyed all coal in and under land didn't pass title in coalbed methane, as that was a gas that wasn't part of the coal itself).

CHAPTER 49 PETROLEUM AND PIPELINES

6-49 Thompson on Real Property, Thomas Editions 49.syn

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.syn Synopsis to Chapter 49: PETROLEUM AND PIPELINES

§ 49.01 Introduction and Overview.

§ 49.01(a) Outline of Chapter.

§ 49.01(b) Definition of "Petroleum."

§ 49.01(c) Petroleum Geology and Engineering.

§ 49.01(d) Historical Development of Law of Oil and Gas; Necessity of Separate Treatment of Oil and Gas Rights from Solid Mineral Rights.

§ 49.02 Nature of Landowner's Interest in Oil and Gas in Place.

§ 49.02(a) Theories of Ownership.

§ 49.02(a)(1) Non-Ownership Theory.

§ 49.02(a)(2) Ownership in Place Theory.

§ 49.02(b) Rule of Capture.

§ 49.02(c) Legal Consequences Resulting from Nature of Interest.

§ 49.02(c)(1) Corporeal/Incorporeal Classification.

§ 49.02(c)(2) Real Property/Personalty Classification.

§ 49.02(d) Limitations on Rule of Capture.

§ 49.02(d)(1) Correlative Rights.

§ 49.02(d)(2) Conservation Regulation.

§ 49.03 Nature of Landowner or Mineral Interest Owner's Interest in Produced Oil and Gas.

§ 49.04 Protection of Rights to Oil and Gas.

§ 49.04(a) Trespass Resulting in Production.

§ 49.04(a)(1) Good Faith Trespass Distinguished from Bad Faith Trespass.

§ 49.04(a)(2) Measure of Damage for Bad Faith Trespass.

§ 49.04(a)(3) Measure of Damage for Good Faith Trespass.

§ 49.04(a)(4) Special Problems with Subsurface Trespass Through Slant Drilling.

§ 49.04(b) Trespass Caused by Underground Intrusion of Injected Substances.

§ 49.04(c) Usurpation of Geophysical Information.

§ 49.04(c)(1) Right to Explore.

§ 49.04(c)(2) Cause of Action with Physical Invasion.

§ 49.04(c)(3) Cause of Action When No Physical Invasion.

§ 49.04(d) Loss of Leasing Value as Element of Damage.

§ 49.04(e) Slander of Title.

§ 49.05 Concurrent Owners: Right of Cotenant to Develop, Produce, or Lease.

§ 49.05(a) Majority Rule: Independent Rights.

§ 49.05(b) Minority Rule: No Independent Rights.

§ 49.05(c) Exception to Minority Rule: Drainage.

§ 49.05(d) Accounting to a Non-Joined Cotenant by a Producing Cotenant.

§ 49.05(e) Relationship Between Lessees of Cotenants.

§ 49.05(f) Partition.

§ 49.05(g) Other Methods to Avoid Cotenancy Problems.

§ 49.06 Successive Owners: Right of Life Tenant or Remainderperson to Develop, Produce, or Lease.

§ 49.06(a) Effect of Lease from Life Tenant or Remainderperson Alone.

§ 49.06(b) Exception: Open Mine Doctrine.

§ 49.06(b)(1) Applicability of Doctrine.

§ 49.06(b)(2) Distribution of Proceeds.

§ 49.06(c) Joint Leases by Life Tenant and Remainderperson.

§ 49.06(c)(1) When Deemed to Occur.

§ 49.06(c)(2) Distribution of Proceeds.

§ 49.07 Rights of Other Interest Holders to Develop, Produce, or Lease.

§ 49.07(a) Defeasible Fees.

§ 49.07(b) Lands Subject to Servitudes and Restrictions.

§ 49.07(c) Lands Subject to Security Interests.

Scope

§ 49.08 Landowner's Severance of Oil and Gas Estate from the Surface Estate.

§ 49.08(a) Meaning of the Words "Minerals" and "Surface."

§ 49.08(b) Whether "Minerals" Includes "Oil and Gas."

§ 49.08(c) Relationship Between Oil and Gas Estate and Surface Owner.

§ 49.08(c)(1) Rule of Dominance: Right to Use Surface as Is Reasonably Necessary.

§ 49.08(c)(2) Accommodation Doctrine.

§ 49.08(c)(3) Surface Damage Acts.

§ 49.08(d) Ownership of Depleted Formations for Gas Storage.

§ 49.09 Attributes of the Mineral Estate.

§ 49.09(a) Component Rights and Liabilities Generally.

§ 49.09(b) Right to Lease Oil and Gas: Executive Right.

§ 49.09(b)(1) Alienability of Executive Right.

§ 49.09(b)(2) Revocability of the Executive Right.

§ 49.09(b)(3) Duration of the Executive Right.

§ 49.09(b)(4) Standard for Exercise of the Executive Right.

§ 49.09(c) Right to Proceeds of Oil and Gas Leases.

§ 49.10 Attributes of a Royalty.

§ 49.10(a) General Definition of a Royalty.

§ 49.10(b) Classification of Unaccrued and Accrued Royalty.

§ 49.10(c) Types of Royalty.

§ 49.10(c)(1) "Landowner's" Royalty Reserved in Lease.

§ 49.10(c)(2) Royalties Created by Lessee: Overriding Royalty.

§ 49.10(c)(3) Non-Participating Royalty.

§ 49.10(d) Relationship to Other Non-Cost Bearing Interests.

§ 49.11 Non-Participating Royalty.

§ 49.11(a) Typical Language Creating the Non-Participating Royalty: Fixed Fraction or Percentage "of Royalty."

§ 49.11(b) Computation of Share of Proceeds Due.

§ 49.11(c) Duration of Non-Participating Royalty: Rule Against Perpetuities.

§ 49.11(d) Proceeds in Which Royalty Owner Shares: Distinction Between Royalty and Bonus.

§ 49.12 Attributes of Non-Executive Mineral Interests.

§ 49.13 Attributes of a Term Mineral Interest or Term Royalty Interest.

§ 49.13(a) Fixed Term Interests.

§ 49.13(b) Defeasible Term Interests.

§ 49.13(c) Termination of Defeasible Interests: Meaning of "Production."

§ 49.13(d) Where Production Must Occur; Effect of Pooling.

§ 49.13(e) Legal Relation Between Term Owner and Reversioner.

§ 49.13(f) Reservation of Defeasible Term Interest: Validity Under Rule Against Perpetuities.

§ 49.14 The Special Case of Louisiana.

§ 49.14(a) Extent of Mineral Servitude or Royalty Burden.

§ 49.14(b) Interruption and Suspension of Prescription.

§ 49.14(c) Interruption of the Period of Prescription by Acknowledgment and Contractual Extension.

§ 49.15 Texas Relinquishment Act Lands.

§ 49.16 General Conveyancing Requirements.

§ 49.17 General Rules of Interpretation.

§ 49.18 Exceptions and Reservations.

§ 49.19 Conveyancing Problem: Mineral Interest or Lease?

§ 49.20 Conveyancing Problem: Mineral Interest or Non-Participating Royalty?

§ 49.20(a) Conveyances of "Oil and Gas in, on, Under, and that May Be Produced from... ."

§ 49.20(b) Conveyances of "Royalty."

§ 49.20(c) Conveyances of "Royalty" When Deed Includes Language Inconsistent with Royalty Interest.

§ 49.20(d) Conveyances of "Oil and Gas Produced and Saved."

§ 49.20(e) Size of Interest Conveyed as Influencing Interpretation.

§ 49.20(f) Reservation or Conveyance of Mineral Interest Without Executive Right and Without Rights to Bonus and Delay Rentals.

§ 49.20(g) Reservation or Conveyance of Mineral Interest Without Rights to Bonus and Delay Rentals.

§ 49.20(h) The Confused Situation in Oklahoma.

§ 49.20(i) Drafting Suggestions.

§ 49.21 Conveyancing Problem: Fractional Interests.

§ 49.21(a) Mineral Acres and Royalty Acres.

§ 49.21(b) Reservation of Fractional Interest When Grantor Conveys an Undivided Interest: Double Fraction Problem.

§ 49.21(c) Reservation of Fractional Interest Which Creates Overconveyance: Duhig Problem.

§ 49.21(c)(1) Statement of Problem.

§ 49.21(c)(2) Resolution of Problem: Estoppel By Deed.

§ 49.21(c)(3) When Duhig Is Used.

§ 49.22 Conveyancing Problem: Conveyances by Lessor of Leased Property.

§ 49.22(a) Apportionment of Rentals.

§ 49.22(b) Apportionment or Non-Apportionment of Royalties.

§ 49.22(c) Conveyance Made Expressly "Subject to" Outstanding Lease.

§ 49.22(c)(1) Purpose of "Subject to" Clause.

§ 49.22(c)(2) "Covers and Includes" Clause Creating "Two Grants" -- Inconsistency Between Land Granted and Land Subject to Lease.

§ 49.22(c)(3) "Covers and Includes" Clause Creating "Two Grants" -- Inconsistency Between Fractional Mineral Interest Conveyed and Share of Lease Proceeds Granted.

§ 49.22(c)(4) Impact of "Future Interest Clause."

§ 49.22(c)(5) Ratification and Revivor.

§ 49.22(d) Entirety Clause.

§ 49.22(e) Topleasing.

CHAPTER 49 PETROLEUM AND PIPELINES
I. Preliminary Matters.

6-49 Thompson on Real Property, Thomas Editions § 49.01

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.01 Introduction and Overview.

The law regulating property interests in and development of petroleum, more commonly referred to as oil and gas, draws upon familiar property concepts but has grown into a law unto itself. n1 One reason for the divergence is the physical characteristics of oil and gas. Another reason is their unique economic value. Therefore, appraising the legal venue requires a short excursion into science and history.

§ 49.01(a) Outline of Chapter.

The chapter following this introductory section has fifteen parts. The first three parts deal with problems of ownership and conveyances of oil and gas. "Basic Ownership Concepts and Protection of Rights" (§§ 49.02-49.07) considers the nature of the landowner's interest in oil and gas both in place and once produced, protection of interests in oil and gas, and development rights of co-tenants, successive owners, and other interest holders. "Types of Interests Created from a Landowner's Rights" (§§ 49.08-49.15) examines the severance of minerals from the surface, including the relationship between the two estates. This part also details the nature of various interests such as a mineral interest, a royalty, a non-executive mineral interest, and a term interest. Finally, some peculiarities of Texas and Louisiana law are considered. The third part, "Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers," (§§ 49.16-49.24) covers general conveyancing matters before examining problems such as how to distinguish between leases and mineral interests and between royalties and mineral interests. Conveyancing of fractional interests and interests subject to an oil and gas lease also are examined. Finally, the third part also surveys involuntary transfers such as those by adverse possession.

The next eight parts of the chapter detail the oil and gas lease. The introductory part, "Leasing the Oil and Gas Property Interest," (§§ 49.25-49.31) examines the basic premises behind leasing, who may lease, and the lease's granting clause. The next section, "Habendum Clause: Duration," (§§ 49.32-49.33) defines the primary and secondary term of a lease, with particular attention to defining what is "production" sufficient to maintain the lease in the secondary term. Next, "Drilling-delay Rental Clause: Primary Term Maintenance," (§§ 49.34-49.37) explains how a lessee may maintain the lease by either commencing drilling or paying delay rentals. The next two parts both examine substitutes for production: "Dry Hole, Cessation of Production and Drilling Operations Clauses" (§§ 49.38-49.41) and "Shutin Royalty, Pooling,

and *Force Majeure* Clauses" (§§ 49.42-49.45). If production is achieved, compensation for the lessor is at issue; "The Lease Royalty Clause" (§§ 49.46-49.50) details how royalties are computed and paid. Next, "Miscellaneous Lease Clauses" (§§ 49.51-49.53) looks at provisions that deal with lands and interests subject to lease, the lessee's administrative protections, and the lessor's additional compensation. The final part dealing with the oil and gas lease, "Implied Covenants in Oil and Gas Leases," (§§ 49.54-49.60) explains the nature and rationale behind supplementing the oil and gas lease and details the common administrative, developmental, and protective requirements. The lessor's obligations are also defined.

Two parts then cover activities of the oil and gas lessee other than those that directly relate to the lessor. "Lease Transfers by Lessee" (§§ 49.61-49.63) examines the lessee's right to transfer, a transfer's effect on the lessor, and the relationship between the lessee and transferee. The next part, "Oil and Gas Contracts by Lessee," (§§ 49.64-49.71) explains common contracts such as support agreements, farmouts, joint operating agreements, drilling contracts, unitization agreements, division orders, gas balancing agreements, and area of mutual interest provisions.

Problems relating to transportation are examined in "Pipelines: Regulation and Acquisition" (§§ 49.72-49.78). The final part is the Bibliography (§ 49.79).

§ 49.01(b) Definition of "Petroleum."

In popular parlance, the term "petroleum" often is applied to oil, which is the liquid phase of combustible hydrocarbons. Nevertheless, "petroleum" technically encompasses combustible hydrocarbons of the bitumen family in the gaseous, liquid, or solid state. At times the phases tend to co-exist, n2 although the amount of heat at the time of creation appears to determine whether gas or oil will be formed. Generally, the gaseous state is chemically shorter than the liquid or solid states. n3 The chemical formulas for petroleum range from the simple gaseous methane (CH[4]) to the more complex octane (C[8]H[1]8), a component of crude oil. Additionally, the chemical make-up of petroleum varies from field to field, with different associated impurities. A common impurity is sulphur, which makes oil or gas "sour" and requires treatment for removal.

§ 49.01(c) Petroleum Geology and Engineering.

Petroleum geology and engineering are two distinct specialties. The petroleum geologist finds oil or gas in the ground; the petroleum engineer determines how to bring it to the surface. Two topics are important to their tasks: petroleum formation and reservoir mechanics.

The predominant theory of petroleum formation is the organic theory. n4 According to it, pressure and its attendant heat, together with chemical and bacterial reactions, transformed organic matter from marine life in sedimentary rocks into petroleum. n5 The petroleum in these "source rocks" then migrated in a generally upward movement through "carrier" rocks, which were necessarily porous and permeable. A rock is "porous" if there are spaces between the rock material into which a fluid may go. A rock is "permeable" if the pores are connected so that fluid may be transmitted through the rock. Petroleum cannot migrate through rock that is impermeable, that is, a rock in which the pore spaces are isolated from one another.

An impermeable feature that stops petroleum migration is a "trap." Two types of traps exist, stratigraphic and structural. A change in rock type during disposition causes stratigraphic traps. Structural traps occur when folding or faulting moves impermeable rock over permeable rocks. When a trap stops migration, a reservoir is formed. The petroleum geologist looks for signs that conditions favorable to forming a petroleum reservoir exist, but without drilling, cannot confirm the presence of an oil or gas reservoir.

Despite its name, an oil or gas reservoir or "pool" does not resemble an underground lake or stream. The oil and gas does not gather into a body of fluid in a carved out area of rock. The fluids fill the interstices or pores of the reservoir

rock. This rock may be the carrier rock or rock adjacent to it. Important reservoir rocks are sandstones, limestones, and dolomites. In addition to being porous, reservoir rock must be permeable. Porosity allows the oil or gas to accumulate and permeability allows it to be recovered. Despite the lack of an oil or gas "lake," significant amounts of petroleum can be in the reservoir. If a rock is 10 feet thick, covers an acre, and has a porosity of 20% n6 there would be 15,553 barrels of oil if the only fluid present was oil and it totally filled or "saturated" the reservoir. Reservoir rocks are often thicker and of greater area than in this example.

Oil, however, will not normally be the only fluid in a reservoir. Water often is present, either as connate water in pores along with oil or separate from the oil. n7 Gas may also be in the reservoir. If all three fluids are present, they can layer in order of weight, with water on the bottom and oil and then gas above. Not all reservoirs will have a freestanding "gas cap" on top. Nevertheless, gas will almost always be present in solution in the oil. This makes classification of wells as oil or gas wells problematic at times, n8 and the classification can have legal importance because regulators treat oil and gas wells differently. n9 The presence of gas or water may also be relevant to the petroleum engineer.

The petroleum engineer deals with recovery of oil and gas. The resource is only recoverable through wells. Although a mechanical pump may move oil to the surface from the bottom of a well, only reservoir energy will move the oil or gas through the permeable reservoir rock to the wellbore. Contrary to prior belief, once the reservoir is reached, oil and gas are static and no longer migrate. However, if a well is drilled, a low pressure area forms at the wellbore and the petroleum will begin to move from areas of high pressure to low pressure. Reservoir energy provides the pressure differential. Three natural or "primary" energy drives exist. In descending order of efficiency, they are the water encroachment drive, the gas-cap drive, and the solution gas drive. No natural drive is sufficient to recover all the oil in a reservoir. n10

Avoiding wasteful dissipation of this reservoir energy, however, is a major concern of both private petroleum engineers and those employed by a governmental conservation agency. Additionally, artificial means can increase the energy drive's recovery potential. Before a drive has significantly dissipated, maintenance activities may consist of re-injecting gas. As the primary drive force dissipates, secondary and tertiary recovery activities will add substances to the reservoir such as water, gas, carbon dioxide, or even fire or microbes, all to increase pressure away from the recovery wells.

§ 49.01(d) Historical Development of Law of Oil and Gas; Necessity of Separate Treatment of Oil and Gas Rights from Solid Mineral Rights.

Several factors have influenced the history of oil and gas law and its current form. These include petroleum geology and petroleum engineering, the economic importance of oil and gas, and the problems of transporting the fluids. Courts quickly determined that oil and gas could not be treated as other minerals were treated. n11

The peculiarities of petroleum first influenced ownership rights. Although in some countries the crown owned minerals, American common law gave the owner of the surface the minerals beneath the land. Under the so-called *ad coleum* doctrine, ownership was *cujus est solum, ejus est usque ad coleum et infernum*, translated as "To whomever the soil belongs, he owns also to the sky and to the depths" n12 -- from heaven to the core of the earth. This doctrine works well with stationary hard rock minerals that are easily identified and associated with a particular tract of land. Oil and gas did not behave so predictably.

Early courts analogized oil and gas to wild animals or percolating waters. Ownership of these objects was not tied directly to ownership of land, but required "capture" to perfect possession. As late as 1921, one Texas case referred to oil and gas as "percolat[ing] restlessly about under the surface of the earth, even as the birds fly from field to field and the beasts roam from forest to forest." n13 This was, of course, incorrect. Oil and gas in a reservoir remain static until disturbed by man. Nevertheless, as discussed in § 49.02(a) *infra*, the "Rule of Capture" pervaded the law of oil and gas ownership.

Despite this geological error about undeveloped oil and gas, oil and gas do act differently than solid minerals because of reservoir mechanics. A well in the reservoir creates a low pressure area to which oil and gas will migrate. In popular parlance, people say the well will "drain" the reservoir. Oil or gas can in this manner be "drained" from beneath another's land. Experts may dispute the exact area any well could drain and the interrelationship between specific wells. Nevertheless, activities by one party owning interests in a reservoir will affect others who own interests in the reservoir. Additionally, because reservoir energy is so important for production, the greatest ultimate recovery of the resource may require coordinating the efforts of those who own interests in the common pool. Therefore, oil and gas law had to accommodate the realities of petroleum engineering.

The limitations of petroleum geology also made their mark on legal developments. The geologist combines knowledge of the surface with inferences about the subsurface from geophysical exploration to ascertain whether there are anomalies likely to contain oil or gas. Nevertheless, only drilling an expensive well can confirm the presence of the resource. Potential developers want to control when and where development dollars are spent and often desire to spread their risks. Many of the contracts that evolved in the oil and gas industry, including the basic oil and gas lease, reflect this reality.

Oil and gas law also responded to oil and gas's status as a limited resource of important economic consequence, not only because of its use as an energy source, but also as a feedstock for the petrochemical industry. Therefore, the public has an interest in wise development of oil and gas. Producing states have passed conservation laws to protect the public's interest in preventing waste of the resource. First concerned with physical waste, many of these statutes now also are concerned with economic waste. Similarly, federal statutes have been enacted to supplement state law. n14

Finally, the difficulties of transporting the product influence oil and gas law Pipelines are the most efficient way to transport oil, but oil may be stored on site in tanks and be moved by train or truck. The marketing and transportation problem is more acute for gas. Natural gas in the open air diffuses and escapes upward because it is lighter than air. Storage above ground is difficult. Additionally, natural gas only may be moved by pipeline. Marketing considerations have affected not only the regulation of pipelines, but also the duties of the lessee under an oil and gas lease.

Because of these practical influences, oil and gas law is a separate field of law. Both private and public law responded to the unique characteristics of petroleum. The legal regime that evolved differs from both general property law and the law governing hard rock minerals.

FOOTNOTES:

(n1)Footnote 1. It also has its own language, not only legal but technical. The only comprehensive annotated reference for defining this terminology is the Manual of Oil and Gas Terms, contained within P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law (Matthew Bender). The same material is also available in a separate volume as P. Martin & B. Kramer, Williams & Meyers Manual of Oil and Gas Terms (11th ed.).

(n2)Footnote 2. For a summary of early recognition of these problems, *see Gilbraith v. States Oil Corp., 4 F.2d 232 (5th Cir. 1925).*

(n3)Footnote 3. Because rights to gas and oil sometimes are separated, characterizing the various products of a well becomes important. Note, *Phase Severance of Gas Rights from Oil Rights, 63 Tex. L. Rev. 133 (1984); Amarillo Oil Co. v. Energy-Agri Prods., Inc., 794 S.W.2d 20 (Tex. 1990)* (ownership); *REO Indus. v. Natural Gas Pipeline Co. of Am. 932 F.2d 447 (5th Cir. 1991)* (rights of operators if unowned product in well).

(n4)Footnote 4. A second theory of formation is the inorganic theory, which posits that hydrogen and carbon joined deep in the earth and then migrated as petroleum to where currently located. If this is true, oil and gas could be found in places currently deemed unfavorable for their discovery.

(n5)Footnote 5. For the following material, *see generally* American Petroleum Institute, Introduction to Oil and

Gas Production 1-6 (1983); Bill D. Berger & Kenneth E. Anderson, Modern Petroleum, A Basic Primer of the Industry (3d. ed. 1992); Arville I. Levorsen, Geology of Petr. (2d ed. 1967); Interstate Oil Compact Commission, Oil and Gas Production (1951); and American Institute of Mining and Metallurgical and Petroleum Engineers, Petroleum Conservation (1951).

(n6)Footnote 6. Meaning 20% of the area by volume is available for fluids because it is pore space.

(n7)Footnote 7. Because all the water in the rock pores has not been displaced by oil, an oil well will often also produce salt water, which must be disposed of in an environmentally sound manner.

(n8)Footnote 8. For example, in Oklahoma a well is considered an oil well if it produces less than 15,000 mcf (thousand cubic feet) of gas per barrel of oil. It is a gas well if more than 15,000 mcf of gas is produced per barrel. Okla. Reg. 165:10-13-2.

(n9)Footnote 9. *See, e.g., Hufo Oils v. Railroad Comm'n of Texas, 717 S.W.2d 405* (Tex. Civ. App. 1986, *writ refused* n.r.e. (oil wells more densely drilled and casinghead gas produced from oil wells given priority for pipeline purchase).

(n10)Footnote 10. Typical recoveries are: water drive -- 30-50%, with recovery under the best conditions approaching 70% (average -- exceeding 50%); gas cap drive -- 25-50% (average less than 50%); and solution gas drive -- 10-25% (average 20%). Factors that influence recovery include the physical nature of the rock and oil, the care taken in completing and producing wells, the rate of production from the reservoir as a whole, and gas/oil and water/oil ratios. Rate of production is less of a variable for solution gas drives. American Petr. Institute, *supra* note 5, at 7; Levorsen, *supra* note 5, at 462-466.

(n11)Footnote 11. *See, e.g., Wettengel v. Gormley, 28 A. 934 (Pa. 1894)* (differences between solids and fluids and methods of producing solid minerals and oil or gas necessitate different treatment).

(n12)Footnote 12. *See Edwards v. Sims, 24 S.W.2d 619 (Ky. Ct. App. 1929).*

(n13)Footnote 13. *Medina Oil Dev. Co. v. Murphy, 233 S.W. 333 (Tex. Civ. App. 1921).*

(n14)Footnote 14. *E.g.*, Connally Hot Oil Act of 1935, *15 U.S.C. § 715b* (prohibits interstate shipment of oil produced in violation of state prorationing requirements).

CHAPTER 49 PETROLEUM AND PIPELINES
II. Basic Ownership Concepts and Protection of Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.02

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.02 Nature of Landowner's Interest in Oil and Gas in Place.

[Go To Supp]

§ 49.02(a) Theories of Ownership.

The Rule of Capture is the overriding principle defining the rights of a landowner or mineral owner to oil and gas in place. States have, however, developed two distinct theories to explain the nature of these rights. n15

§ 49.02(a)(1) Non-Ownership Theory.

The logical extension of the Rule of Capture would be to declare that the owner of the land (or owner of the minerals if severed) would have no rights to the oil and gas in place at all. Ownership would come to fruition only upon production or "capture." This view is espoused in several major producing states, including Oklahoma, n16 California, n17 Louisiana, n18 and Wyoming. n19 Other states also follow this theory but it is, nevertheless, the minority view. n20

The non-ownership theory does not mean that the landowner or mineral owner is devoid of rights to the oil and gas prior to production. An owner has the exclusive right to explore for, develop and produce the oil and gas from specified lands. Therefore, the theory is also referred to as the "exclusive right to take" theory. Many courts characterize these rights as a *profit a prendre*, which is a right to go upon land and take some part of the land or a product of the land. The owner's right is an interest in land to be protected from interference by others.

§ 49.02(a)(2) Ownership in Place Theory.

A majority of states adopt the theory of ownership that begins with the *ad coleum* doctrine and considers oil and gas part of the real property. Under the *ad coleum* doctrine, the owner of the soil owns the oil and gas while they are a part of it. In addition to ownership, the landowner (or owner of the minerals if severed) would have the exclusive right to explore for, develop and produce the oil and gas from the lands. The ownership in place theory has been adopted by Texas, n21 Colorado, n22 Kansas, n23 and New Mexico, n24 among others. n25

The ownership in place theory recognizes a fee simple estate in the land, but physical reality tempers the ownership

rights. The owner of the oil and gas rights owns the right to oil and gas in place and will be protected from trespassers. The owner, however, does not receive an absolute right to each molecule of oil or gas that is present beneath the land either prior to initial disturbance by man or at any particular time. "Ownership in place" is subject to the rights of others to divest the ownership by capturing the oil and gas. If the oil or gas migrates from the land, ownership ceases. In other words, rights are subject to the Rule of Capture and its non-liability function.

§ 49.02(b) Rule of Capture.

The Rule of Capture is an overriding concept that colors ownership rights to oil and gas in place. Its origin lies in an error about the nature of oil and gas. n26 Because early courts believed oil and gas to be constantly moving, courts analogized oil and gas to wild animals or subterranean water. n27 Rights to possess wild animals -- *ferae naturae* -- only become fixed upon "capture." n28 Moreover, a wild animal, once it escaped from the possessor back to its natural habitat, would become unowned and subject to capture again. n29 The one restraint on this system of ownership which recognized a landowner's rights was that it was trespass to enter another's property to capture a wild animal. n30

The analogy was the first stirring of oil and gas law, but oil and gas differ from wild animals. Oil and gas do not move without some human intervention and, even more importantly for a property regime, oil and gas exist in a closed system. A reservoir is finite in area and underlies a finite amount of surface acreage. Owners of mineral rights in lands not overlying the reservoir could not recover oil or gas by drilling vertically upon their own lands. They could only enter into the reservoir through trespass. As between parties with mineral rights to lands overlying the reservoir, the activities of one party in the reservoir can affect oil or gas originally beneath the land of another. Human interference causes drainage as reservoir energy drives oil and gas to areas of lower pressure. Therefore, the reservoir is physically a "common pool" beneath the lands. A well could "capture" oil and gas and potentially drain any area of the common pool.

The Rule of Capture, which was adopted from other settings, has been translated in some jurisdictions into a direct rule of real property. n31 However, the Rule of Capture has another aspect, one which is relevant in all jurisdictions. The "Rule of Capture" is a negative rule of liability: the owner of an interest in the common pool will have no liability for draining oil or gas from beneath the land of another through a well on the interest-owner's property. The draining well cannot bottom on lands to which the developer does not have mineral rights or it would be a trespass. n32 If the well is properly located, however, the drainage is *damnum absque injuria*, which cannot be the subject of an action. n33 The drained owner's recourse is self-help, namely to drill a well. n34 This is so even if artificial stimulation increased drainage. n35

The non-liability provided by the Rule of Capture influences property rights regardless of what theory of oil and gas ownership is adopted. Because of it, anyone with mineral rights in land overlying the reservoir may develop the reservoir from such land. The draining mineral developer gains ownership of the produced oil or gas. Many potentially may own the oil and gas while it is in the reservoir; oil and gas until produced are the "common" property of those with the right to develop the reservoir. The undeveloped reservoir is thus not only a common pool physically, but also from a legal perspective. Every owner of a right to the common pool has a right to produce the oil or gas and cannot prevent others from exercising similar rights. Therefore, a race to develop the minerals ensues. n36

Historically, this race induced mass production that not only lowered the price of the product, but forced expenditures on wells that were not required to drain the reservoir efficiently. n37 Moreover, when the only concern of any particular developer is speedy recovery to avoid oil or gas "capture" by another, reservoir energy was not conserved. Recovery of the maximum amount of the resource was therefore impossible. n38 Because of these examples of both physical and economic waste, limitations on the Rule of Capture arose.

§ 49.02(c) Legal Consequences Resulting from Nature of Interest.

§ 49.02(c)(1) Corporeal/Incorporeal Classification.

Ownership theories may influence whether an oil and gas interest is deemed corporeal or incorporeal. One result of the corporeal and incorporeal distinction is whether or not interests may be abandoned. n39 Another effect is on the causes of actions available to protect the interest.

If an interest in oil and gas is corporeal, it carries the right to possession and hence is possessory. Such interests are not subject to abandonment. However, if an interest in oil and gas is incorporeal, then, as a non-possessory interest similar to an easement or *profit a prendre*, it could be abandoned. Generally, jurisdictions adopting the non-ownership theory will find some interests in oil and gas subject to abandonment. n40 Leasehold interests will be abandonable n41 and, according to some precedent, so will fee interests in the oil and gas that are held separately from the surface because they, too, are mere profits a prendre. n42

In jurisdictions following the ownership in place theory, oil and gas interests held in fee, separate from the surface, would be corporeal and incapable of abandonment. Oil and gas leases in these jurisdictions can be classified as either corporeal or incorporeal. n43 The difference in result is often whether the lease is worded as a grant of the minerals in place or as a transfer of the exclusive right to develop the oil and gas. In Texas, however, regardless of any wording, the lessee's interest in an oil and gas lease is corporeal; it is described as a fee simple determinable. n44

In practice, whether or not an interest is subject to abandonment does not make a large difference in clearing titles of dormant interests. Proving non-use will not be sufficient to prove abandonment. An intent to abandon the oil and gas interest must also be shown. n45

A second effect of the classification of interests in oil or gas as corporeal or incorporeal is that it might influence the forms of action available to protect the interests. n46 Under traditional common law, the following remedies were only available to owners of possessory interests: trespass, ejectment, and compulsory partition. Therefore, in states following traditional rules, only owners of corporeal interests created under the ownership in place theory could employ these remedies. Other jurisdictions disavow the traditional distinction or treat rights in oil and gas as being of a special nature and allow all forms of action regardless of the classification. In jurisdictions following the traditional rule, however, substitute forms of action will protect the nonpossessory rights. If ejectment is unavailable, the remedy of quiet title will substitute.

§ 49.02(c)(2) Real Property/Personalty Classification.

Interests in oil and gas are generally deemed to be interests in land. Nevertheless, jurisdictions differ on whether these interests are real property or personalty. n47 The distinctions do not follow a jurisdiction's ownership theory. At common law, the classification depended on the duration of the interest, not its possessory nature. Interests that were freeholds were real property. These include fee estates and life estates. Other interests were personalty.

Employing the common law distinction, most oil and gas interests would be considered real property; even oil and gas leases have the possibility of lasting perpetually because they are granted for a specified time and "for so long thereafter as oil or gas are produced." n48 Nevertheless, where oil and gas are involved, the distinctions generally are made in specific contexts, such as taxation or inheritance. Therefore, the classification as realty or personalty depends on statutory interpretation.

§ 49.02(d) Limitations on Rule of Capture.

Under a pure Rule of Capture, there are no controls on the number and location of wells that a mineral interest owner may drill in the common pool. Limitations on the Rule of Capture, however, do exist. They are of two types: judge-made and statutory. The first restraints primarily adjust private rights. The second type of limits has dual

objectives. Statutes protect private rights and preserve public interests in the finite resource.

§ 49.02(d)(1) Correlative Rights.

The Rule of Capture emphasized individual action to the detriment of the common good. Although the rule enables individuals to acquire ownership of produced substances without accounting to others for the production, courts recognized that each owner of rights must exercise them with due regard to the rights of others with similar rights in the common pool. The term "correlative rights" generally describes the judicially recognized rights and duties. n49 The doctrine has both a negative and affirmative aspect; it forbids some activities in order to protect each party's right to an opportunity to gain their fair share.

The classic case used to illustrate correlative rights is *Elliff v. Texon Drilling Co.* n50 Texon negligently allowed a well to blow-out on its property, causing a loss of gas from Elliff's property because gas had migrated to Texon's out of control well. Texon claimed to have no liability for draining Elliff's property under the Rule of Capture. The court disagreed. Because Texon was wasting and not marketing the gas, it was liable. Its actions were not "legitimate" drainage and thus title to the gas remained with Elliff. n51 The Rule of Capture only negates liability when operations are non-negligent and legitimate. Each owner of rights in the common pool may expect others to refrain from harmful actions. n52

The converse of the duty to refrain from negligent action is a common-law right: each owner has a right to a reasonable opportunity to produce a fair share of the oil and gas. n53 This leads to a second limitation on the Rule of Capture. In order to be "legitimate," draining operations must be in conformity with the rules and regulations of the relevant conservation agency. The interrelationship of statutory and judge-made tenets is obvious in *Elliff*:

> These laws and regulations are designed to afford each owner a reasonable opportunity to produce his proportionate part of the oil and gas from the entire pool and to prevent operating practices injurious to the common reservoir. In this manner, if all operators exercise the same degree of skill and diligence, each owner will recover in most instances his fair share of the oil and gas. n54

§ 49.02(d)(2) Conservation Regulation.

The second major limitation on the Rule of Capture is that drilling must conform with the rules and regulations of the relevant oil and gas conservation agency. These restraints are justified partially as protection of correlative rights. n55 Therefore, a conservation statute does not divest private property without compensation but rather is a statute "protecting private property and preventing it from being taken by one of the common owners without regard to the enjoyment of the others." n56 A second rationale of such statutes is to prevent waste, not only because waste would impact correlative rights, but because waste injures the public. Oil and gas is a limited, but necessary resource.

Generally, waste of oil and gas refers to production techniques or practices that fail to maximize the natural reservoir forces necessary to obtain the greatest ultimate recovery of oil and gas. n57 It is thus concerned with physical waste of the hydrocarbons by not allowing for their recovery, by damaging reservoir energy, or by otherwise not conforming with proper engineering practices. Waste can take place underground or on the surface. Surface waste occurs by spillage, venting or flaring of gas, or by evaporation.

"Waste" is further defined in the various statutes of producing states. Statutory definitions may also seek to prevent "waste" of the surface itself through unnecessary drillsites. "Economic" waste may also be an element of concern. There are two aspects to economic waste. First, economic waste comes from allowing the resource to be sold for too low a price, which encourages overproduction and improvident use of the resource. n58 A second aspect of economic waste is forcing an operator to unnecessarily expend funds. n59

Common techniques authorized by the various statutes to protect correlative rights and prevent waste may be summarized as follows: n60

1. **Regulation of drilling through well permits.** Operators are required to obtain a permit that will specify proper drilling, completion, and abandonment techniques. After drilling, subject to some confidentiality rights, pertinent information about the subsurface will have to be filed with the agency.

2. **Regulation of drilling through well spacing.** Limiting the number of wells in a reservoir is one of the primary ways to moderate the effects of the Rule of Capture. One method is to specify the distance generally to be allowed between wells and from the boundaries of individual tracts. n61 A second method, more specific to the geology of a particular field, is to specify the size of a drilling or spacing unit. Ideally, the unit size should be that area which one well can efficiently and effectively drain. Only one well is allowed per unit. Because the drillsite is also specified, this technique controls both the number and location of wells and creates an orderly pattern of development. However, to prevent waste and protect correlative rights, exceptions will allow wells in different locations if necessary. n62 Additionally, to develop small tracts that do not equal the minimum unit size, almost all producing states allow "forced pooling," which is a statutory method for combining interests to share both the costs of drilling and proceeds of production. n63

3. **Regulation of Production and Marketing Through Market Demand Prorationing and Ratable Taking.** One controversial technique to prevent overproduction is to limit total state-wide production to the amount set by either statute or the conservation agency. n64 In the latter situation, production amounts would be based on specified criteria, often the amount of market demand as determined by the agency or by nominations by purchasers. The total statewide demand for various categories of oil and gas would then be prorated among the various producing reservoirs. Each producer in the field would receive an "allowable" enabling it to produce its fair share. n65 In order to assure a market for each producer, purchasers in a field are ordered to "ratably take" from each producer in order to meet the purchaser's demand. n66

4. **Regulation of Production Through Water/Oil and Gas/Oil Ratios.** Gas or water is often the drive mechanism in a reservoir. Both may be produced along with oil. In order to preserve the reservoir energy, a conservation agency may specify the amount of water or gas that may be produced per barrel of oil. In combination with limitations on oil production known as "allowables," production is further limited if the gas or water production will exceed what would have been produced at the specified ratio. n67

5. **Regulation of Unitization.** Secondary and tertiary recovery techniques require substances to be injected into the formation to enhance recovery when primary energy has dissipated. In order to do so efficiently, an entire reservoir or a sufficiently large portion of one must be operated as a "unit" without regard to lease or individual tract boundaries. If parties cannot voluntarily agree on such development, many conservation statutes allow for forced unitization. n68

This list is illustrative, not exhaustive. Moreover, not all conservation agencies can employ all the techniques.

FOOTNOTES:

(n1)Footnote 15. Some commentators posit a third: the qualified ownership theory. Under it, oil and gas are a part of the land and belong to the owner of the land so long as they remain in or on the land. When or if the oil and gas migrates, the ownership is lost. *See* 1 Walter Lee Summers, the Law of Oil and Gas § 62 (1954), citing *Ohio Oil Co. v. Indiana, 177 U.S. 190 (1900);* and *Rich v. Doneghey, 177 P. 86 (Okla. 1918);* and P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 203.2 (Matthew Bender). This theory is actually a variant of the non-ownership theory. It might, however, help account for the viability of correlative rights in these jurisdictions. *See* Richard W. Hemingway,

The Law of Oil and Gas § 1.3 (2d ed. 1983).

Kramer, Williams & Meyers Oil and Gas Law § 203.3 (Matthew Bender) (adding North Dakota, Tennessee, and Washington to list). They list Alabama under the non-ownership theory. *Id.* at § 203.1.

(n12)Footnote 26. Current cases reject the analogies to wild animals or water. *See, e.g., Lone Star Gas Co. v. Murchinson, 353 S.W.2d 870 (Tex. Civ. App. 1962).* Nevertheless, the idea's imprint remains.

(n13)Footnote 27. To wild animals, *see, e.g., Hammonds v. Central Kentucky Natural Gas Co., 75 S.W.2d 204 (Ky. 1934); Westmoreland & Cambria Natural Gas Co. v. De Witt, 18 A. 724 (Pa. 1889).* To subterranean water, *see, e.g., Peoples Gas Co. v. Tyner, 31 N.E. 59 (Ind. 1892); Jones v. Forest Oil Co., 44 A. 1074 (Pa. 1900).*

(n14)Footnote 28. *Pierson v. Post, 3 Cai. R. 175, 2 Am. Dec. 264 (N.Y. 1854)* (rights to a fox).

(n15)Footnote 29. *E.A. Stephens & Co. v. Albers, 256 P. 15 (Colo. 1927)* (exceptions when animal has habit of return or is far from natural habitat).

(n16)Footnote 30. *State v. Repp, 73 N.W. 829 (Iowa 1898).*

(n17)Footnote 31. In some jurisdictions no "rights" to oil and gas exist until the landowner (or mineral interest owner if the rights have been severed) "captures" the oil or gas by bringing it to the surface. *See* § 49.02(a), *infra*.

(n18)Footnote 32. *Alphonzo E. Bell Corp. v. Bell View Oil Syndicate, 76 P.2d 167 (Cal. App. 1938).* For other cases, *see* 1 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 4.2 (Anderson); Richard W. Hemingway, The Law of Oil and Gas § 4.2 (2d ed. 1983); 1 Walter Lee Summers, the Law of Oil and Gas § 61 (1954). Similarly, the Texas Supreme Court first held that the rule of capture does not apply to oil recovered through "fracing" (stimulating production through fracturing the formation) on the lands of another. It vacated this decision without confirming the lower court's rejection of this finding. *Geo-Viking, Inc. v. Tex-Lee Operating Co., 839 S.W.2d 797 (Tex. 1992).*

The Rule of Capture will not apply to pooled land; production must go to those who own interests in the pooled unit,

not simply to those producing. *Thornton v. City of Bryan, 846 S.W.2d 389 (Tex. App. 1992).*

(n19)Footnote 33. *Peoples Gas Co. v. Tyner, 31 N.E. 59 (Ind. 1892).*

However, when production occurs upon land within a pooled unit, the rule of capture is abrogated where two or more landowners or lessees are obligated to share production from a given well. *See Riley v. Riley, 972 S.W.2d 149 (Tex. App. 1998); Browning Oil Co. v. Luecke, 38 S.W.3d 625 (Tex. App. 2000)* (where the court stated that the rule of capture does not entitle the owner of a tract with a horizontal well to royalties on all gas and oil produced by the well).

(n20)Footnote 34. An early case aptly sums up the rule:

> [E]very landowner or his lessee may locate his wells wherever he pleases, regardless of the interests of others ... . He may crowd the adjoining farms so as to enable him to draw the oil and gas from them. What then can the neighbor do? Nothing; only go and do likewise. He must protect his own oil and gas. He knows it is wild and will run away if it finds an opening and it is his business to keep it at home.

Barnard v. Monongahela Natural Gas Co., 65 A. 801, 802 (Pa. 1907).

Browning Oil Co. v. Luecke, 38 S.W.3d 625 (Tex. App. 2000) (where the court noted that a natural consequence of the rule of capture is overdrilling resulting in physical and economic waste).

(n21)Footnote 35. *People's Gas Co. v. Tyner, 31 N.E. 59 (Ind. 1892)* (simulation of well through nitroglycerin).

(n22)Footnote 36. When each owner has a right to maximize the individual's self interest while imposing costs on another for which the actor does not have to account, external costs arise. In the presence of external costs, society overall might lose as each individual gains. *Cf.* Garrett Hardin, *The Tragedy of the Commons*, 162 Science 1243 (1968).

(n23)Footnote 37. *See* Northcutt Ely, *The Conservation of Oil, 51 Harv. L. Rev. 1209 (1938).*

(n24)Footnote 38. One result was the ratification in 1935 of the Interstate Compact to Conserve Oil and Gas by Kansas, Texas, Oklahoma, California, and New Mexico. Ch. 194, *57 Stat. 383 (1943).* Current signatories include, in addition, Michigan, Arkansas, Louisiana, New York, Pennsylvania, Kentucky, Ohio, West Virginia, Alabama, Florida, Tennessee, Indiana, Alaska, Nevada, Utah, Arizona, Colorado, Wyoming, Montana, North Dakota, South Dakota, Nebarska, and Georgia. The Compact calls upon member states to enact laws to prevent the waste of oil and gas. *See generally* 1 Walter Lee Summers, the Law of Oil and Gas § 105 (1954).

(n25)Footnote 39. *See generally* Annotation, *Abandonment of Oil or Gas Lease by Parol Declaration, 13 A.L.R.2d 951 (1941).*

For a general understanding of drilling units, *see Union Pacific Resources Co. v. Texaco, 882 P.2d 212 (Wyo. 1994).*

(n49)Footnote 63. Kansas is the sole state without forced pooling. It adjusts well allowables in accordance with the size of a tract. *See Mobil Oil Corp. v. State Corp. Comm'n, 608 P.2d 1325 (Kan. 1980).* Texas was a latecomer and its pooling statute is limited. Tex. Nat. Res. Code Ann., §§ 102.001-102.112. *See* 3 Ernest E. Smith and Jacqueline Weaver, Texas Law of oil and Gas § 12 (1990). Hence, Texas dealt with the problems of small tracts through "Rule 37 Exceptions." *See generally* 1 Summers, *supra* note 32, at § 86.

Browning v. Exxon Corp., 848 F. Supp. 1241 (M.D.La. 1994) (only forced pooling gives owner of land found to overlie the pool the right to a share of the proceeds with a correlative obligation of paying their share of the costs) *aff'd, 43 F.3d 668 (5th Cir. 1999).*

(n50)Footnote 64. Texas, Oklahoma and Kansas allow this technique. Among states that expressly or impliedly prohibit market demand prorationing are California, Colorado, Illinois, Kentucky, Mississippi, Montana, Ohio, Utah, and Wyoming. *See generally* 1 Summers, *supra* note 32, at §§ 87-97.

(n51)Footnote 65. *See generally* Robert E. Sullivan, Handbook of Oil and Gas Law § 163 (1955).

(n52)Footnote 66. *See generally* Summers, *supra* note 32, at § 103.1.

(N53)Footnote 67. For example, if the normal allowable for a well is 100 barrels of oil per day and the gas/oil ratio is set at 2,000 cubic feet of gas per barrel, the well must cease production when either 100 barrels of oil or 200,000 cubic feet of gas is produced. Therefore, a well producing 4,000 cubic feet of gas per barrel of oil will only be able to produce 50 barrels of oil per day.

(n54)Footnote 68. More exhaustive treatment may be found in Bruce M. Kramer and Patrick martin, the Law of Pooling & Unitization (Matthew Bender).

Cook v. Wyoming Oil and Gas Comm'n, 880 P.2d 583 (Wyo. 1994).

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.03 Nature of Landowner or Mineral Interest Owner's Interest in Produced Oil and Gas.

[Go To Supp]

All jurisdictions agree that once a person having the right to do so extracts oil or gas, it is capable of absolute ownership. The Rule of Capture does not apply to extracted oil or gas because it is a rule of real property law, and, once produced, oil and gas become tangible personal property. Produced oil and gas are subject to personal property rules. For example, misappropriation would be conversion.

Additionally, if produced oil or gas escapes by leakage, ownership remains with the producer unless the oil or gas is abandoned. n69 As with other personal property, a party claiming abandonment must prove the prior owner intended to abandon the oil or gas. A desire to recover the hydrocarbon upon learning of the leakage would negate this intent.

A more difficult question is ownership of gas that is re-injected into the ground for storage purposes. n70 An early case held that, as with a wild animal that returns to its natural habitat, the gas is again subject to the Rule of Capture. n71 With more commercial use of natural gas, the difficulties of storing it became more apparent. Natural gas is stored most efficiently in the ground. Some later cases therefore find that title remains with the original owner after ejection into a well-defined storage formation unless the gas is abandoned. n72 To formalize arrangements, parties generally seek gas storage agreements and various states have passed statutes to authorize condemnation of such rights. n73

CHAPTER 49 PETROLEUM AND PIPELINES
II. Basic Ownership Concepts and Protection of Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.04

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.04 Protection of Rights to Oil and Gas.

[Go To Supp]

Various theories protect ownership rights to oil and gas. When rights to explore are usurped or there is damage to the leasing value of the lands, remedies such as assumpsit and slander of title are used. If substantial wrongful production occurs, ejection and conversion remedies protect the true owner.

§ 49.04(a) Trespass Resulting in Production.

Regardless of the theory of ownership, a jurisdiction adopts concerning oil and gas in place, a party producing oil and gas without an ownership right will be guilty of conversion of oil and gas. If entry onto the mineral estate was made, trespass also may be alleged and ejectment sought as part of the remedy. The trespasser will be liable for all oil and gas recovered through a trespassing well, even oil and gas drained from beneath the trespasser's land. n74 This is because the true owner could have so drained under the Rule of Capture.

With oil and gas, the entry into the mineral estate may happen either through a well on the overlying land's surface that vertically reaches the reservoir or through a wellbore deviating from vertical and entering the minerals on a "slant" from a wellsite off the surface. Although both forms of trespass impact on the subsurface, only the second will be referred to as a subsurface trespass.

§ 49.04(a)(1) Good Faith Trespass Distinguished from Bad Faith Trespass.

Both subsurface trespass and trespass on the surface may be of two types: good faith or bad faith. In a majority of jurisdictions, all trespasses are presumed willful and thus in bad faith. Good faith is a matter of affirmative defense. n75 Oklahoma takes the converse view because the measure of damages for a bad faith trespass is punitive in nature; the plaintiff therefore must prove that the trespass was in bad faith. n76 Because of the distinction in damages available, categorizing a trespass as good faith or bad faith is of more than theoretical consequence. n77

A good faith trespasser acts upon an honest and reasonable belief in superiority of right. n78 The test to determine this

is both subjective and objective. Motive may be important in determining good faith, n79 but what a prudent person would have believed under the circumstances is also important. n80 The trespasser must not act with culpable negligence or willful disregard for the rights of others. n81 Notice of another's claim is often an element in determining good faith. n82 Because not all asserted claims are valid, however, mere knowledge of an outstanding interest should not automatically make a trespass willful. n83 Often courts distinguish between a party who peacefully entered before notice of a claim and those who enter only after being so informed; the latter situation is more indicative of bad faith. n84 Although not conclusive of bad faith, entering property initially during the pendency of litigation would be a sign of bad faith. n85 Acting upon the advice of an attorney who has been given all the facts and who was consulted in good faith rather than for a tactical advantage is a sign of good faith. n86

Many of the problems encountered in the oil and gas situation are similar to those existing when other minerals are involved. n87 One facet may differ. If a dispute arises over solid minerals, there is no physical urgency with the timing of mining. The coal, gold, or other substance will be there when the dispute is settled. With oil and gas, however, the hydrocarbon may be drained by another and irretrievably lost if a well is not drilled. Therefore, the presence of drainage is another factor to consider in determining the good faith of the trespassing driller. It will not, however, be conclusive of good faith. n88

LEXIS: (trespass w/15 good faith or unintentional! or nonwillful! or non-willful!) and oil or gas or (trespass! or unauthorized w/5 bad faith or willful! or wilful! or intentional!) w/30 (oil or gas)

§ 49.04(a)(2) Measure of Damage for Bad Faith Trespass.

As with solid minerals, n89 if a trespass is in bad faith or willful, damages will be the full value of the oil and gas removed. All improvements to the property and income from the well will belong to the true owner. This measure is punitive in nature; it exceeds the actual damage of the true owner because the oil or gas could not have been produced without expense. n90 In some circumstances, moreover, the owner will be able to collect the highest value of the oil or gas from the time of severance until the time of filing suit or at trial. n91 Interest may also be assessed.

COMPUTER-ASSISTED RESEARCH

LEXIS: (trespass! w/15 bad faith or willful! or wilful! or intentional!) w/50 (oil or gas) and (damage! or liabil!)

§ 49.04(a)(3) Measure of Damage for Good Faith Trespass.

A good faith trespasser who produces oil or gas is not required to account for the full value of the removed hydrocarbon. As with solid minerals, the measure is the value of the oil and gas in place. The royalty measure often used for solid minerals, n92 however, is seldom used for oil and gas. n93 Damages are computed as the value of the produced oil or gas less reasonable expenses for discovery and production. These expenses can include costs of drilling and completing a well in addition to standard operating costs. In Arkansas, a landowner who is without opportunity or equipment to develop the materials lost through a good faith conversion is limited in damages to anticipated lease proceeds or royalty value. n94

Three principles, however, limit credits for expenses. Costs charged against the value of production cannot exceed three measures: 1) customary and reasonable costs, 2) amounts the trespasser actually incurred, and 3) the benefit that was gained by the true owner. The first two limitations do not require extensive elaboration. They are designed to remove any potential economic gain to the trespasser. Limiting credits to expenses that benefit the true owner bears examination.

As one court phrased it, "benefit to the rightful owner -- not cost to the trespasser is the test of improvement." n95

Certain costs, such as lifting costs n96 and severance tax payments, n97 if expended, will always benefit the true owner because they always are incurred for production. n98 Seemingly, the cost of drilling a well also will always be necessary. While it is true that a well is needed to produce oil and gas, it does not follow that the well the trespasser drilled was required. If the true owner had another well that could have drained the same oil or gas, the cost of drilling the trespassing well would not have benefitted the true owner. No credit for the cost of drilling the producing well would be allowed in that circumstance. n99 Conversely, the trespasser could possibly recover the cost of drilling a dry hole if valuable geological information was gained and the drilling was part of an exploration plan that a reasonable and prudent operator in a good faith search for oil and gas would have undertaken. n100 In this regard, the questions are similar to those asked when a co-tenant seeks credit for costs upon accounting to a non-producing co-tenant. n101

Naturally, the trespasser can recoup costs only out of production. Additionally, only costs incurred during trespass may be recovered. n102 The true owner cannot be compelled to contribute. Additionally, the trespasser will be ejected from the land. Depending on timing, this can impact the good faith trespasser's ability to recoup costs. If production had continued long enough, the costs would be recovered by a credit against the damages due to the true owner. If production had not yet reached the pay-out point, courts have employed various techniques to keep the damages at the value of the mineral in place. These include using improving trespasser statutes to force the true owner to purchase the well or granting the trespasser a lien on the production to secure repayment of costs. n103 When the true owner proceeded on the theory that the unauthorized party was unjustly enriched by including nonowned lands in a pooling agreement, however, there was no recovery for unrecouped drilling expenses. n104

COMPUTER-ASSISTED RESEARCH

LEXIS: (trespass! w/15 good faith or unintentional or nonwillful! or
non-wilful!) w/50 (oil or gas) and (credit or recover! w/15 cost* or expense* or expenditure*)

§ 49.04(a)(4) Special Problems with Subsurface Trespass Through Slant Drilling.

If a party is drilling on the surface of lands, the person with the right to develop the oil and gas beneath the lands will be on notice. If, however, the trespass occurs because a well is drilled on the slant and bottoms in trespass, the fact of the trespass may not be readily apparent. Some jurisdictions therefore apply the discovery rule to the statute of limitations for a subsurface trespass. n105 The time to file suit is tolled until the true owner knows or should have known of the trespass. n106 Procedures exist to compel a directional survey and ascertain where the well is located. n107

Most often, a subsurface trespass is considered willful or in bad faith. To intentionally drill a slant well requires special equipment called a "whipstock." If one was used for a legitimate purpose, such as avoiding a fault, the operator should employ a directional survey to chart the well. If the well deviated from vertical unintentionally because the drill bit hit an unusually hard rock plane, the operator should have been aware of the incident and investigated. n108

COMPUTER-ASSISTED RESEARCH

LEXIS: (oil or gas w/50 trespass!) and underground or subsurface or slant w/2 drilling or well)

§ 49.04(b) Trespass Caused by Underground Intrusion of Injected Substances.

In order to perform secondary or tertiary recovery, n109 substances are added to the reservoir to increase reservoir pressure. It is not possible to control precisely where in the formation the substances will travel.

Therefore, unitization is the normal method to proceed with these activities. In Bumgartner v. Gulf Oil Co., n110

Bumgartner refused to join a unit and sued for trespass to recover the value of the oil the injected water "washed" out from under his lands. The court found that, so long as Bumgartner was given a fair and reasonable opportunity to join the unit, no willful trespass will result from enhanced recovery activities approved by the relevant conservation commission. n111 If the Rule of Capture authorizes a party to capture oil and gas that might migrate to a lawful well, a "negative rule of capture" allows the injection of substances into the formation even if the substances will migrate across borders and displace oil. Technical trespass rules should not inhibit necessary recovery techniques if done without injury to producing formations. n112 Some courts, however, have found liability for waterflood displacement under nuisance theories. n113

§ 49.04(c) Usurpation of Geophysical Information.

Until a well is drilled, no one conclusively can attest to the presence or absence of oil or gas beneath any specific property. Nevertheless, various geophysical exploratory techniques can ascertain the likelihood of its presence. These include magnetometers, n114 gravimeters, n115 and the more useful seismic devices. n116

§ 49.04(c)(1) Right to Explore.

The right to explore minerals, either by drilling for information n117 or by use of geophysical means, is a valuable right separate from the right to develop minerals. An oil or gas company wants to concentrate its drilling funds on areas with the greatest potential for production and will pay for exploratory data.

The right to authorize exploration of the mineral estate is a right of the mineral owner because it helps fix the estate's value. n118 This is true even if the mineral estate has been severed from the surface estate and surface entry is required to perform the exploration. n119 An owner of severed minerals has the right to use so much of the surface as is reasonably necessary to develop the minerals, which includes reasonable exploratory activities. n120

Generally, an oil and gas lease will grant the lessee the right to explore for minerals. This grant, however, will not necessarily be exclusive unless the lease expressly so states. n121 If the grant was not exclusive, the lessor will be able to authorize others to explore because, based on the reversionary interest, the lessor retains a stake in knowing the value of the minerals. Unlike production, exploration can be done more than once.

§ 49.04(c)(2) Cause of Action with Physical Invasion.

The hallmark of a trespass is unlawful physical invasion of the lands of another. If an unauthorized explorer places "shot holes" or other equipment for a seismographic survey on property, then there will be a physical entry not only of the surface, but of the minerals. However, if the waves from a non-negligently performed seismographic survey merely reverberate through minerals, there is no physical invasion and no trespass. n122 The analogy is to the lack of a cause of action for concussions from a neighbor's non-negligent blasting on the neighbor's own property or from non-excessive airplane overflights. Therefore, many companies will simply "shoot" on the periphery of lands for which they cannot gain authorization. In the oft-cited case for this proposition, however, the seismic information was not readable. Therefore, recovering data from the shooting may not be legitimate. n123

If there is a physical entry on the property and hence the minerals, a trespass action will lie. Although surface entry is required for the cause of action, normally damage to the surface will not be the damages sought. Loss of information or loss of the right to sell the explorative right is the true damage. Therefore, in some jurisdictions the owner may "waive the tort" in the case of a geophysical trespass and seek damages based on assumpsit. n124 Under this theory, the damage is the reasonable market value of the exploratory right taken. The court will create the contract the parties should have entered into for a prudent exploratory program. Other jurisdictions will allow the owner to proceed based on conversion. The damage on this theory is the value of the personal property taken, namely the seismic information itself. n125

§ 49.04(c)(3) Cause of Action When No Physical Invasion.

If there has been an usurpation of geophysical information without entry unto the property, trespass will not lie. Various theories have been suggested to compensate the mineral owner, including trade secret appropriation, invasion of privacy or interference with prospective advantage, the right to employ, or the right to lease. n126 None of these theories are well-developed because of the paucity of case law. One area that might be broached is slander of title. However, because results of geophysical surveys are not often broadcast, the element of publication may be missing. n127

§ 49.04(d) Loss of Leasing Value as Element of Damage.

Until drilling, the value of any tract for oil and gas production is speculative. Nevertheless, oil and gas companies do pay upfront money for the right to lease. n128 The market value of any particular tract will rise and fall based on several factors, which include the price of oil generally and the information available about both the particular land and lands surrounding the tract. If a tract of land is proven unproductive, however, the leasing value of the tract will fall despite what neighboring owners might receive as bonuses. The question arises whether this loss should be compensable.

Courts have taken divergent views. In *Humble Oil & Refining Co. v. Kishi*, n129 the court concluded loss of leasing value was a compensable damage. The defendant had wrongfully entered and drilled a dry hole in trespass. The owner, without proving the loss of a specific sale, could show that the land no longer commanded its earlier market value. The court noted that if the defendant had purchased the right to enter, it would have had to pay that market price. The opposite conclusion was reached in Martel v. Hall Oil Co. n130 The *Martel* court concentrated on the fact that the lands were shown to be valueless for oil; it could not condone preserving the right of the owner to sell "nothing" for "something." One commentator suggests that the debate should not be about whether a new "wrong" is recognized, but whether the loss was a foreseeable element of damage resulting from an otherwise unlawful act. n131

§ 49.04(e) Slander of Title.

A cause of action for slander of title requires proof of five elements: (1) the uttering and publishing to a third person, (2) of slanderous, that is false and injurious, words regarding title to property, (3) in which the plaintiff possessed an interest, (4) which words caused special damages, and (5) which acts were done by the defendant with malice. n132 Malice is an important element of the cause of action because, especially in the case of speculative property that is subject to fluctuations in value, any disparaging remark can impact the property's value. Moreover, parties must be able to pursue reasonable claims of title. n133 The special damage requirement demands proof that a specific sale was lost. n134

Two separate fact patterns seem to generate most slander of title claims: a trespasser drills a dry hole n135 or a lessee refuses to release a terminated oil and gas lease. The latter situation may result from a difference in opinion as to the current validity of a lease or from a simple refusal to execute a release. In both situations, a special bargain may be lost during the period title is clouded.

A classic case of slander of title is Kidd v. Hoggett. n136 A lessee argued that payment of shut-in royalties preserved a lease and was justified by the existence of a well capable of producing in paying quantities. Sales were not made from the well when possible and the lessor became suspicious. He leased to a third party on the condition that the original lessee execute a release. When this was not done, the second lease was not finalized. In fact, the well purportedly holding the first lease was not capable of production in paying quantities and the lessee knew it. In finding liability for slander of title, the court emphasized that the malice necessary to obtain actual damages, as opposed to punitive damages, means that the act or refusal to act was deliberate conduct without reasonable cause. n137

At common law, the lessee was not obligated, absent a contractual provision, to execute a release of an expired oil and gas lease. n138 The only exception was in Texas. n139 Therefore, many states have passed statutes making it the duty

of an oil and gas lessee, upon notice and demand by the lessor, to release of record leases that have terminated. n140 Such a failure will justify statutory damages and, if done with malice, will enable recovery of special damages that might be proven.

CHAPTER 49 PETROLEUM AND PIPELINES
II. Basic Ownership Concepts and Protection of Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.05

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.05 Concurrent Owners: Right of Cotenant to Develop, Produce, or Lease.

Several parties often hold oil and gas interests in co-tenancy. The situation may arise from inheritance or by conveyance. Because of the speculative nature of oil and gas development, purchasing undivided interests in several tracts spreads risk. Disputes, however, can arise when one party desires to develop and another cotenant does not. Additionally, if a cotenant is unlocatable, whether the oil and gas may be leased or developed without that owner's consent becomes a question.

§ 49.05(a) Majority Rule: Independent Rights.

In a majority of jurisdictions, each owner of an undivided interest in oil and gas may independently develop it or authorize others to develop the oil and gas. The rationale behind this view is that only through development is the oil and gas estate "possessed" and each cotenant has equal rights to possess the jointly owned property. The rule is the law in Alabama, Arkansas, California, Florida, Georgia, Kansas, Kentucky, Missouri, Montana, North Dakota, Oklahoma, Pennsylvania, and Texas. n141

Under this rule, individual development may occur so long as one cotenant does not exclude another from doing the same. n142 A developing cotenant will have to account to the non-developing cotenant. n143 As noted below, not all costs will necessarily be recoverable. Therefore, oil companies generally do not desire to rely upon the majority rule to develop a particular property. n144 Non-leasing cotenants can later ratify a lease and share in benefits proportionately. n145

§ 49.05(b) Minority Rule: No Independent Rights.

Under the minority rule, no individual cotenant may independently develop the oil and gas. This rule's rationale is that unproduced oil and gas is an interest in real property which should not be transformed into an interest in personal property, that is, produced oil and gas, without the consent of the owner. For one cotenant to produce would be waste. n146 Although a lease from one cotenant will not authorize development, it will bind the interest of that party and create development rights if the other cotenants later ratify it. n147

West Virginia adopted this position. The problem with the rule is it authorizes extortion by small interest owners refusing to consent. n148 Louisiana, Illinois and Michigan also follow the rule, but with statutory modifications that militate against "hold outs." n149

§ 49.05(c) Exception to Minority Rule: Drainage.

An exception exists to the minority rule. If drainage by wells on adjacent property is imminent, one cotenant may develop without the consent of the remaining cotenants. n150

§ 49.05(d) Accounting to a Non-Joined Cotenant by a Producing Cotenant.

A producing cotenant must account to the non-producers for their proportionate share of the proceeds minus a proportionate share of the costs of development, production and marketing. Accounting is a personal right and will not pass impliedly with a conveyance of the undivided interest. n151 Various rules governing accounting make development difficult if less than all cotenants agree to the activity, either by signing a lease or entering into a joint operating agreement. Therefore, most instances requiring accounting arise from an inadvertent failure to join all interests. Three factors lead to this conclusion.

First, the developing cotenant shoulders all the risk. For example, if the owner of 90% of the undivided interests produced, the producer would owe the other 10% of proceeds minus 10% of costs. n152 The developing cotenant may recover the non-producer's share of the cost of drilling and completing the well before it need account. No proceeds need be paid before recoupment of these costs. When that point is reached, the developer will account for 10% of the proceeds minus 10% of future production costs. In no event, however, are costs recoupable other than out of production. n153 The developer therefore bears the full cost of failure but must share the proceeds of a successful well. Only extremely favorable prospects with small outstanding interests would knowingly be developed in this manner.

Another reason to hesitate from knowingly entering into an accounting situation is that arguments can arise about what costs are chargeable. Naturally, only reasonable and necessary costs may be recouped. Cases have variously treated items such as overhead, interest on capital, and depreciation of equipment. n154

The third cautionary note is that the unit chosen as the basis for an accounting can also profoundly affect what costs are shared. If an accounting is done on a well-by-well basis, the developing co-tenant could not recover for a dry hole even if its drilling was part of a reasonable drilling plan. n155 Additionally, costs such as those for road development are difficult to apportion to individual wells in a field. Therefore, accounting should be on a per tract basis. The test for deductibility should be whether a reasonable and prudent operator would have incurred the costs in a good faith effort to recover oil and gas. n156

COMPUTER-ASSISTED RESEARCH:

LEXIS: (co-tenan! or cotenan! w/50 oil or gas) and (credit or recover! or account or accounting w/15 cost* or expense! or expenditure! or proceed*)

§ 49.05(e) Relationship Between Lessees of Cotenants.

If each cotenant leases to separate oil and gas companies, the respective lessees will step into the shoes of their lessors and become cotenants. Each will have the right to develop, but must acknowledge the others' similar rights. n157 The act of one lessee, however, will not automatically benefit the other. In other words, drilling or production by one lessee will not satisfy the drilling or production requirements of the other lessee. n158 If the lessees enter into a joint operating agreement, however, actions performed under the agreement will suffice for all leases. n159

If only one lessee develops, that lessee will have to pay two parties: 1) royalties to its lessor pursuant to the lease, and 2) proportionate net proceeds to the non-developing lessee pursuant to the rules of accounting between cotenants. The non-developing cotenant will have to pay its lessor pursuant to its lease. This contractual requirement can create practical difficulties because the non-developing lessee will not receive proceeds until the developing lessee recoups the costs of drilling the well. Its lessor, however, is entitled to royalties from first production. Some jurisdictions avoid the problem of forcing the lessee to pay before receiving proceeds by allowing royalties to be held in suspense until proceeds are received. The lessee will not be entitled to any proceeds until after its lessor has received all accrued royalties. n160 The more straight-forward approach is for the two lessees to execute an operating agreement under which they share expenses and proceeds as each are incurred. n161

§ 49.05(f) Partition.

One way to avoid the difficulties cotenancy presents is to seek partition. n162 A partition may be voluntary or involuntary. General rules regarding partition apply to partitions of undivided interests in minerals. n163 Because oil and gas may not be evenly dispersed throughout the jointly owned tract, however, the basic preference is to partition by sale rather than in kind. n164

In almost all jurisdictions, tenants in common may seek partition as a matter of right. Equity may only enter into a decision about the manner of partition. n165 The exceptions are Kansas n166 and Oklahoma, n167 which allow oppression and other equitable considerations to be pled as defenses to a partition action. n168 An Oklahoma statute also requires that a mineral interest owner show that co-owners are frustrating the petitioning cotenant's development objectives. n169 There are three additional general caveats on the availability of partition.

The first two center on ownership interests. First, partition is a possessory action. This leads to several conclusions and questions. Because owners of non-possessory interests in oil and gas cannot seek partition, all jurisdictions agree that owners of royalty interests cannot independently seek partition. n170 There is disagreement about whether or not it is necessary for a leasehold to be categorized as possessory to allow joint lessees to seek partition. Additionally, courts differ on whether the presence of a possessory leasehold will foreclose a co-tenant in the oil and gas estate from seeking partition. n171 The second limit on partition tied to ownership concepts is that the interests to be partitioned must be of equal dignity. Hence, a lessee cannot force partition upon the lessor and the owner of the remaining undivided interest. n172

The third limit on partition is that express and implied agreements to not partition will be enforced if they are limited to reasonable time periods. n173 A mere mining partnership will not be sufficient to imply such an agreement. n174 A more specific agreement to conduct join development operations, such as a drilling program, may be sufficient to imply an agreement to forego partition. n175

COMPUTER-ASSISTED RESEARCH

LEXIS: partition w/2 (oil or gas or mineral!)

§ 49.05(g) Other Methods to Avoid Cotenancy Problems.

Other methods exist to counter obstacles to development. n176 One is to "force pool" the non-consenting undivided interest. Forced pooling is the compulsory joinder of property interests in a proposed well spacing unit for the purposes of accounting for costs and proceeds of a well. Most forced pooling statutes either expressly or by interpretation allow for forced pooling of undivided interests. n177

In some jurisdictions, statutes govern leasing of the interests of unknown or unlocatable interest holders. n178 By subjecting the interest to a lease, the developer is bound only to pay proportionate royalties, not proportionate net

proceeds.

(n12)Footnote 152. *Prairie Oil & Gas Co. v. Allen, 2 F.2d 566 (8th Cir. 1924). But see* Kentucky position, *Petro. Exploration Corp. v. Hensley, 284 S.W.2d 828 (Ky. Ct. App. 1955)* (only remedy for non-developer prior to suit is share of customary royalty; net proceeds only available after filing suit).

(n13)Footnote 153. *Krug v. Cities Serv. Petr. Co., 618 P.2d 323 (Kan. App. 1980).* The developing cotenant's interest is thus referred to as "cost bearing" and the non-developing interest called the "non-cost-bearing" or "carried" interest.

(n14)Footnote 154. *See* Richard W. Hemingway, The Law of Oil and Gas § 5.1(B) (2d ed. 1983), P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 504.1 (Matthew Bender).

(n15)Footnote 155. *Compare Connette v. Wright, 98 So. 674 (La. 1923)* and *Moody v. Wagner, 23 P.2d 633 (Okla. 1933)* (costs of dry or marginal well shared because benefits from overall program shared), with *Burnham v. Hardy Oil Co., 147 S.W. 330, aff'd, 195 S.W. 1139 (Tex. 1917)* (no right to recoup dry hole cost).

(n16)Footnote 156. P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 504.3 (Matthew Bender).

Alternatively, the question could be framed as whether it would unjustly enrich the non-developing cotenant to not share the costs. Richard W. Hemingway, The Law of Oil and Gas § 5.1(B) (2d ed. 1983). This formulation subtly differs from the prudent operator standard. Looking for unjust enrichment employs hindsight where the prudent operator standard looks at the situation at the time the development plan is undertaken.

(n22)Footnote 162. *See* Annotation, *Partition of Undivided Interests In Minerals (Including Oil and Gas) In Place*, 173 A.L.R. 854 and Annotation, *Right to Partition in Kind of Mineral or Oil and Gas Land*, 143 A.L.R. 1092.

See also Dunn v. Patton, 718 N.E.2d 264 (Ill. App. 1999) (partition action barred where court found parties were not tenants in common).

(n23)Footnote 163. For complete discussions, see Richard W. Hemingway, The Law of Oil and Gas § 3.3 (2d ed. 1983), 1 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law §§ 6.1-6.6 (Anderson); 3 Summers, *supra* note 32, at §§ 535-538 and P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law §§ 506-507 (Matthew Bender).

(n24)Footnote 164. *Fortney v. Tope, 247 N.W. 751 (Mich. 1933)* (allocating unproductive land a greater inequity than forcing sale). *See generally* P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 506.3 (Matthew Bender). There is some precedent for "checkerboarding" mineral distribution to counter possible inequities in partitions in kind. *Phillips v. Phillips, 104 N.W.2d 52 (Neb. 1960).* One commentator suggests that partitions in kind could be practical. If an area is not known to be valuable for oil and gas, partition could be in kind with the presumption that oil and gas distribution, if present at all, would be uniform. If oil and gas is likely or known in the area, expert testimony could be had on its distribution. 1 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 6.4 (Anderson).

(n25)Footnote 165. *Moseley v. Hearrell, 171 S.W.2d 337 (Tex. 1943)* (equities immaterial). Because a joint tenant may sever the relationship and turn it into a tenancy in common, that type of interest is generally subject to partition. A tenancy by the entirety may not be partitioned.

(n26)Footnote 166. *Strait v. Fuller, 334 P.2d 385 (Kan. 1959).*

(n27)Footnote 167. *Cox v. Lasley, 639 P.2d 1219 (Okla. 1981).*

(n28)Footnote 168. Arkansas and Mississippi may also take this view. *Schnitt v. McKellar, 427 S.W.2d 202 (Ark. 1968); Stern v. Great Southern Land Co., 114 So. 739 (Miss. 1927).*

(n29)Footnote 169. 12 Okla. Stat. Ann. § 1501. The party must also show that a compulsory pooling order would not remedy the difficulty.

(n30)Footnote 170. *DeMik v. Cargill, 485 P.2d 229 (Okla. 1971).* A royalty interest granted on one co-tenant's undivided interest may be affected if the cotenant's interest is partitioned. The royalty will attach only to those lands granted to the cotenant in severalty, with an increase in size to compensate for the lesser areal extent. P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 506.5 (Matthew Bender). *See also*, Annotation, *Right to Partition of Overriding Royalty Interest in Oil and Gas Leasehold, 58 A.L.R.3d 1052.*

CHAPTER 49 PETROLEUM AND PIPELINES
II. Basic Ownership Concepts and Protection of Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.06

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.06 Successive Owners: Right of Life Tenant or Remainderperson to Develop, Produce, or Lease.

§ 49.06(a) Effect of Lease from Life Tenant or Remainderperson Alone.

Neither a life tenant nor a remainderperson may develop individually or authorize development of oil and gas unless drainage is imminent. n179 The remainderperson has no right of possession until the life tenant dies; a lease from the remainderperson will only authorize entry if it is still valid when the remainderperson's interest becomes possessory. n180 A life tenant may not diminish the estate owing to the remainderperson. To develop the minerals would be affirmative waste. n181 However, if drainage is imminent, the life tenant may be required to lease or develop the oil and gas or be guilty of permissive waste. Moreover, the document creating a life estate may authorize leasing or development by the life tenant. n182 In most states, a court of equity would have inherent authority to order the lease or sale of interests that are being drained.

§ 49.06(b) Exception: Open Mine Doctrine.

Oil and gas interests owned by a life tenant subject to rights of a remainderperson may be developed during the life tenant's possession without the permission or joinder of the remainderperson under the "open mine" doctrine.

§ 49.06(b)(1) Applicability of Doctrine.

The open mine doctrine applies when there was an open mine on the premises at the time a life tenancy came into possession. n183 An oil and gas well is a "mine" for the purposes of the doctrine. Additional wells may be drilled pursuant to the lease under which the well existing on the relevant date was drilled. If there was no well, but the interest was leased on the date the life estate comes into being, the open mine doctrine will apply to wells drilled pursuant to that lease. n184 A 1990 Texas case extended the doctrine. The testator set up a testamentary trust, allowing the trustee to execute oil and gas leases. When the trust was to terminate, the testator's son was to receive either a life estate or fee title depending on circumstances. The son received a life estate and oil and gas leases executed by the trustee were in existence. The open mine doctrine applied. n185 Even if the open mine doctrine applies, the life tenant cannot execute additional leases. n186 The open mine doctrine affects both life estates created by conveyance or will and those created by law, such as homesteads and dowers. n187

COMPUTER-ASSISTED RESEARCH

LEXIS: (open w/1 mine) w/50 (oil or gas w/15 well or lease)

§ 49.06(b)(2) Distribution of Proceeds.

In the event the open mine doctrine applies, the life tenant may keep all proceeds without accounting in any manner to the remainderperson.

§ 49.06(c) Joint Leases by Life Tenant and Remainderperson.

Unless the open mine doctrine applies, the life tenant was given authority to lease by the document creating the life estate, or a court approved a lease, the only way to develop oil and gas subject to a life estate is to lease from both the life tenant and remainderperson jointly.

§ 49.06(c)(1) When Deemed to Occur.

Several mechanisms exist to obtain a sufficient lease from both parties. First, a joint lease obviously will be present when the life tenant and remainderperson execute one lease. Second, if one party executes a lease purporting to bind the whole interest, the other may ratify the lease. n188 Third, if the two parties execute leases with substantially identical terms and the same lessee comes to hold the leases, merger occurs and the lessee is deemed to have full rights. n189 One case allowed effective production rights to pass even if the terms of the two leases differed; the lessee had the duty to account for the differing royalty rates. n190

Statutes in several states allow courts to appoint receivers or trustees for the purpose of executing leases covering contingent future interests. n191

§ 49.06(c)(2) Distribution of Proceeds.

If a lease has been properly authorized, proceeds are shared pursuant to basic tenets regulating life estates. n192 The remainderperson is entitled to receive the undiminished property, known as the corpus or principal. The life tenant is entitled possession or the income of the property for life. Normal lease proceeds that are considered principal are the bonus and royalty payments. n193 These should be preserved for the remainderperson with the life tenant entitled to interest earned on the sums. n194 Under a minority rule, however, the bonus is income and paid to the life tenant. n195 Other proceeds generally deemed income are delay rentals. n196

CHAPTER 49 PETROLEUM AND PIPELINES
II. Basic Ownership Concepts and Protection of Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.07

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.07 Rights of Other Interest Holders to Develop, Produce, or Lease.

§ 49.07(a) Defeasible Fees.

Generally, the owner of a determinable fee estate, a fee estate subject to a power of termination, or a fee estate subject to an executory interest may develop or lease the estate for oil and gas without accounting to the holder of the future interest. n197 Naturally, if the document creating the interest forbids oil and gas development, it cannot be done, but a prohibition will not be inferred from a grant specifying that property be used for only certain purposes. Oil and gas development may still take place so long as it does not diminish the use of the land for the primary purpose stated in the limitation. n198 If the future event causing defeasance occurs, the lease from the present owner will terminate. Therefore, it is wise to lease the future interest if possible.

§ 49.07(b) Lands Subject to Servitudes and Restrictions.

As between the owner of an easement or beneficiary of a servitude and the owner of the servient estate, the owner of the servient estate will generally be the party capable of developing or leasing the oil and gas. n199 Nevertheless, the holders of the dominant interests could enjoin oil and gas development if it interferes with their rights. n200

§ 49.07(c) Lands Subject to Security Interests.

Generally, the owner of property subject to a mortgage or deed of trust is the party authorized to develop or lease the oil and gas. This is so despite the fact that in a title theory state, the mortgagee has technical title to the property. n201 Nevertheless, the act of development may constitute waste n202 or leasing might breach various terms of the security agreement. n203 As a practical matter, therefore, a lessee of oil and gas interests needs waivers of priority or subordination agreements from pre-existing lienholders. This will remedy not only the aforementioned problems, but allow the lease to survive the foreclosure of a preexisting lien.

FOOTNOTES:
(n1)Footnote 197. The Restatement of Property states that when the owner of a limited fee is engaging in wanton and unconscionable conduct that will diminish the future interest holder's estate, the future interest holder may seek an

injunction if the interest is likely to vest. Restatement of Property § 193 (American Law Institute 1983). Reasonable oil and gas development is not deemed to be such an act. *Id.* at cmt. h to § 193.

(n2)Footnote 198. *Skipper v. Davis, 83 S.W.2d 318 (Tex. Comm. App. 1935)* (can lease if grant for use for church purposes only, with title to revest in grantor if use abandoned); *but see Devendorf v. Akbar Petr. Corp., 577 N.E.2d 707 (Ohio App. 1989)* (cannot include land "For residential use" in drilling unit).

(n3)Footnote 199. A grant of a right-of-way, however, may be more a determinable fee than an easement based on the language creating the interest. *See* Richard W. Hemingway, The Law of Oil and Gas § 5.4 (2d ed. 1983).

(n4)Footnote 200. *Devendorf v. Akbar Petr. Corp., 577 N.E.2d 707 (Ohio 1989). See also, Property Owners of Leisure Land, Inc., 786 S.W.2d 757 (Tex. App. 1990)* (subdivision restrictions imposed after minerals severed cannot impact mineral estate).

(n5)Footnote 201. *But see* Richard W. Hemingway, The Law of Oil and Gas § 5.6 (2d ed. 1983) (mortgagor not entitled to lease in title theory state although no cases located).

CHAPTER 49 PETROLEUM AND PIPELINES
III. Types of Interests Created from a Landowner's Rights.

6-49 Thompson on Real Property, Thomas Editions

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

When someone owns land in fee simple absolute, this includes all rights to the land; the entire proverbial bundle of sticks is owned. These "sticks" include the right to develop any minerals. n204 If nothing is said about minerals when land is transferred, the mineral rights will pass to the grantee. n205 The fee owner, however, may independently grant or reserve particular rights. Out of any initial ownership, different estates and interests may be created. What is passed or reserved depends on the intent expressed in the operative act, and is, of course, limited by the rights the owner had in fact. Although general conveyancing requirements apply, some special requirements may exist. n206

FOOTNOTES:
(n1)Footnote 204. *See* § 49.02, *supra* for theories of ownership in place of minerals and oil and gas in particular. In the oil and gas industry, when the "fee interest" is referred to, ownership of both the surface and mineral rights in fee simple absolute is meant.

(n2)Footnote 205. *Harris v. Currie, 176 S.W.2d 302 (Tex. 1944); see also Day & Co. v. Texland Petr., Inc., 786 S.W.2d 667 (Tex. 1990)* (executive right is incident of mineral estate and impliedly passes by warranty deed unless excepted); *Ford v. Raab, 744 P.2d 956 (Okla. 1987)* (rule of property that all is conveyed which is not specifically reserved promotes unity of title).

(n3)Footnote 206. For example, an instrument creating severed mineral interests in Kansas must be recorded in 90 days after execution, or the interest is void unless it is listed for taxation separately from the fee interest in the land. Kan. Stat. § 79-420. *See Ford v. Willits, 688 P.2d 1230 (Kan. App. 1984), aff'd 697 P.2d 834 (1985)* (both failure to record in 90 days and failure to list for taxation must occur to invalidate a mineral deed).

CHAPTER 49 PETROLEUM AND PIPELINES
III. Types of Interests Created from a Landowner's Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.08

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.08 Landowner's Severance of Oil and Gas Estate from the Surface Estate.

[Go To Supp]

One frequent change from fee simple ownership is the creation of a separate mineral estate, or a "mineral fee." n207 The act creating the separate estate is referred to as a severance. It may be either a reservation in a deed conveying the surface or a direct grant of minerals. The owner of the severed mineral estate will have the same rights in regard to the minerals that the owner of the land had before the severance. More particular transactions may directly refer to the oil and gas estate and transfer or reserve all of the owner's rights to oil and gas. The interest thus created would be complete or "fee" ownership of the oil and gas.

§ 49.08(a) Meaning of the Words "Minerals" and "Surface."

Grants and reservations often refer simply to "all minerals" or refer to specific minerals and add the catch-all "and all other minerals." What substances generally are considered to be mineral is discussed elsewhere. n208 Two points about the words "minerals" and "surface," however, must be underscored.

First, the two interests are entwined. The mineral estate includes a right to use the surface and the surface estate includes a right to subjacent support. Second, the surface estate is more than simply the uppermost plane of dirt. The surface estate includes all rights to the real property that were not conveyed with the mineral estate, including rights to water.

The general effect of a severance was conceptualized by Professor Kuntz: when the mineral estate is severed from the surface, the general intent is to create two modes of enjoyment of the land. n209 Unlike the surface estate, mineral estates are enjoyed by removing substances that gain their value through removal. Surface estates are enjoyed by using the earth in place.

§ 49.08(b) Whether "Minerals" Includes "Oil and Gas."

A more specific question than what is a mineral is whether the words "all minerals" or "all other minerals" include oil and gas. n210 By the majority rule, the terms are not ambiguous but will include oil and gas unless an intent to exclude

oil and gas is shown in the deed itself. n211 A deed reference to mining techniques appropriate to hardrock mining, such as sinking shafts and stripmining, may show an intent to exclude oil and gas. n212 In determining specifically whether oil and gas is a "mineral," only limited use is made of doctrines such as *ejusdem generis* (general words following a specific enumeration are limited to things of a like class) n213 and *expression unius est exclusio alterius* (expression of one thing is the exclusion of another). n214

In addition to the majority rule, other rules exist to determine if oil and gas are included in "minerals." One is the opposite of the majority rule; oil and gas is presumed excluded unless the wording of the grant shows the opposite intent. n215 Other interpretive methods include the so-called "Pennsylvania rule," which simply states that oil and gas are not included in the term minerals. n216 A more widely adopted approach is one which finds the terms ambiguous and employs extrinsic evidence of specific intent to include or exclude oil and gas. n217 Types of relevant parole evidence include: 1) the nature of the grantee's business, or 2) the knowledge of either the parties to the deed or the general community about the value or presence of oil and gas. As time passes, presenting such proof becomes more difficult and title more precarious, forcing oil and gas developers to obtain leases from all potential parties. n218

§ 49.08(c) Relationship Between Oil and Gas Estate and Surface Owner.

The right to use the surface to recover oil and gas is so important that ownership of oil and gas is often defined as the exclusive right to explore for, develop and produce the oil and gas from the lands. n219 If the right to use the surface is not express in the grant, it nevertheless passes by implication. n220 Nevertheless, surface owners also have rights and interests. n221

§ 49.08(c)(1) Rule of Dominance: Right to Use Surface as Is Reasonably Necessary.

The starting point to analyze the relationship between the oil and gas estate and the surface is the theory of dominance. n222 Because use of the surface is necessary to recover minerals, the oil and gas estate has the right to use so much of the surface as is reasonably necessary for exploration, development and production. The surface estate is servient to the mineral. The oil and gas lessee often may use water needed for drilling n223 and also impliedly may dispose of produced salt water. n224 Mineral development, however, may not be negligent or inflict willful or wanton injury on the surface. n225 Unreasonable or excessive surface use will create liability. n226

Before the surface may be used for mineral production, the basic mineral owner's right requires the surface use to be necessary. This requirement may seem to limit the mineral owner, but necessity initially was used as a sword. Few courts second-guessed the reasonableness of or need for a proposed use. n227 Use of the surface, however, was and is limited to that necessary to remove the minerals from the servient estate. n228 Therefore, the owner of the oil and gas could not use the surface of particular land for the benefit of other land. n229 This may be true even if the subject land was unitized with additional land. n230 The inability to use the surface for unit activities may be changed by agreement n231 or by interpretations of statutes allowing for compulsory pooling or unitization. n232 Some courts have implied a duty to restore the property after use n233 but most do not require this if the lessee did not expressly assume the duty. n234

COMPUTER-ASSISTED RESEARCH

LEXIS: (reasonable or necessary w/10 surface) w/50 (oil or gas w/15 lessee! or lease!)

§ 49.08(c)(2) Accommodation Doctrine.

A specialized doctrine, first announced in Getty Oil Co. v. Jones, n235 regulates the rights of the surface owner and an oil and gas lessee. The surface owner in *Jones* had installed a center-pivot irrigation system, which was the most practical farming method for the location. Getty subsequently drilled two new oil wells on the tract. The beam pumps

Getty installed to serve these wells interfered with the irrigation system, but were, the court found, reasonably necessary for production. n236 Another operator, faced with a similar conflict, had used alternative production methods that did not make center-pivot irrigation impossible.

The *Jones* court recognized that both the surface and mineral estates have value. When land was capable of both agricultural and mineral production, public policy therefore required an accommodation between the two uses. If a planned mineral development would substantially interfere with an existing surface use, the oil and gas lessee would have to use any reasonable less damaging alternative means to accomplish its purpose. n237 If the less damaging alternative was economically feasible, refusal to use it would be unreasonable, even if the alternative increased costs. Reasonableness of various alternatives are tested by comparison with "usual, customary, and reasonable practices in the industry under like circumstances of time, place, and servient estate use." n238 Therefore, allowable production methods will vary from locale to locale. The accommodation doctrine, however, is not a straight balancing requirement. If there is no reasonable alternative, and the burden to show one appears to be on the surface owner, n239 the test reverts to whether the proposed use is non-negligent and will enhance mineral production.

The accommodation doctrine has moved beyond Texas and has been expressly adopted in Arkansas, Pennsylvania, North Dakota, Utah, and West Virginia. n240

LEXIS: (reasonable or necessary w/10 surface) w/50 (oil or gas w/15 lessee! or lease!) and accommodation or accommodate)

§ 49.08(c)(3) Surface Damage Acts.

In several oil and gas producing states, surface damage acts have legislatively modified the relationship between the surface and mineral estates. n241 These acts require notice to the surface owner and payment for "damage" to the surface. "Damage" under the acts includes damage for reasonable and necessary use of the surface. The acts did reflect the normal practice of the industry to make some payment for surface use, but technically the dominant oil and gas interest had owned the right to make reasonable and necessary use of the surface.

Prior to the enactments, an oil and gas lessee was only legally liable for negligent, wanton, or willful damage to the surface. Despite this rearrangement of rights, the acts have been upheld against challenges that they had violated due process or unconstitutionally taken private property. n242 After initial opposition, oil companies have recognized that the acts can benefit development because they assure a right of entry when their procedures are followed n243 and they have been construed as a surface owner's sole remedy. n244

§ 49.08(d) Ownership of Depleted Formations for Gas Storage.

One of the most efficient ways of storing gas is in depleted formations, preferably near places of consumption. If there has been a severance of estates, two questions arise because the prospective storer will need to gain both surface and subsurface rights.

First, with whom must the storer negotiate for rights to use the surface, either for injection or production purposes? This is easily answered. Consent of the surface estate owner will be needed; neither the standard oil and gas lease nor the easement for reasonable use of the surface will authorize use of the surface for purposes of storing nonnative gas. n245

The second question involves use of the underground formation itself. The cases are less clear on who owns the right to authorize this use. n246 Therefore, absent legislation, authorization of both owners is required. Many jurisdictions provide for condemnation if voluntary consent is not forthcoming. n247

CHAPTER 49 PETROLEUM AND PIPELINES
III. Types of Interests Created from a Landowner's Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.09

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.09 Attributes of the Mineral Estate.

[Go To Supp]

§ 49.09(a) Component Rights and Liabilities Generally.

A definition of a mineral estate, or fee in oil and gas, is necessary to distinguish it from other rights in oil and gas. Each of the mineral estate's component attributes may be individually considered and assigned. n248 As complete ownership of the minerals, the mineral estate includes the right to develop the oil and gas and use the surface for that purpose. n249 Concomitantly, the interest holder bears a liability for costs. n250 Most mineral interest owners do not develop minerals directly, but do so through leasing. The lessee will then bear the costs of development. The owner of the mineral right also has the right to lease oil and gas, referred to as the executive right, and the right to all proceeds of an oil and gas lease. Additionally, the covenants made by a lessee benefit the mineral owner, who has the right to enforce these duties.

§ 49.09(b) Right to Lease Oil and Gas: Executive Right.

Ownership of the executive right gives control of mineral development because the executive right authorizes leasing. n251 When minerals are owned in cotenancy, one cotenant may desire sole control over leasing either because of knowledge of the oil and gas industry or, conversely, because of a desire to protect a surface interest. n252 Assigning the executive right to one person would also make oil and gas more marketable because an oil and gas developer need only deal with one person and would avoid the problems cotenancy creates. n253 To meet these objectives, the executive right over a particular mineral interest must be able to be separated from that mineral interest so that someone other than the particular mineral interest owner would control leasing of it.

The general consensus is that severing the executive right is possible. n254 The severance of the executive right traditionally comes about in two ways: 1) a party conveys to another, reserving to the grantor an undivided interest in the minerals and the exclusive right to lease the minerals; or 2) a grant is made of an undivided interest in the minerals together with the exclusive right to lease the minerals reserved to the grantor. n255

In order to explain the viability of the severed executive right, analogies are made to powers of appointment, n256 powers coupled with an interest, n257 and statutory powers in trust. n258 These theories may be unnecessary because of

a simple property analysis. If a grantor grants an undivided interest in minerals but reserved the exclusive leasing right, the grantor has in essence reserved the entire mineral estate, burdened with an incorporeal interest. This incorporeal interest is the mineral interest devoid of the executive right. It has no possessory rights and the non-executive interest received by the grantee only differs from a royalty because additional lease benefits attach to the non-executive interest. n259

Although a severed executive right has been justified analytically, questions arise about whether the severed executive right is alienable, whether it may be revoked, and how long it may endure. In addition to these property questions, the standard to judge any exercise of the right also provides controversy. n260 Louisiana answers all questions statutorily, n261 but other jurisdictions use case law.

§ 49.09(b)(1) Alienability of Executive Right.

Under the current majority view, the person who holds the executive right over another's mineral interest may convey that right. n262 An exception would be if the language creating the right indicated that it was a personal right. n263 Initial cases differed on the rationale for the result, but the most recent cases simply treat the executive right as a property interest. n264 If the right was granted with or reserved with an undivided interest in minerals in the same tract, the exclusive executive right will pass with a conveyance of the undivided interest to which the exclusive executive right was attached. n265

COMPUTER-ASSISTED RESEARCH

LEXIS: (executive w/1 right or interest) w/50 (aliena! or transfer!)

§ 49.09(b)(2) Revocability of the Executive Right.

The few cases that have considered the matter found that the mineral owner could not revoke the power to lease held by another. n266

COMPUTER-ASSISTED RESEARCH

LEXIS: (executive w/1 right or interest) w/50 (revoke or revocability or terminate or end)

§ 49.09(b)(3) Duration of the Executive Right.

In most instances, unless limited when created, the executive right over a non-executive mineral interest owned by another may last forever. n267

This is especially true when the holder of the executive interest also owns an undivided interest in the minerals in the tract affected by the executive interest. In Dallapi v. Campbell, n268 however, a California court found the executive interest violated the Rule Against Perpetuities. The case is not of wide import because its facts differ from most common fact patterns.

Dallapi involved lots in Los Angeles that had been conveyed with a reservation to the grantor of the exclusive right to "lease and contract for drilling." The grantor retained neither any surface lots nor any mineral interest in the property. Therefore, the court reasoned that the grantor only reserved the right to create leases in the property of another. These leases, not being in existence, would be future interests. Because the reservation did not envision the grantor being the lessee, the grantor's rights were considered a special power of appointment. Moreover, exercise of the power was not limited in time. Therefore, it was impossible to state that the future interest created pursuant to the executive right would vest, if at all, within the period of lives of persons in beings, plus twenty-one years. n269 The court concluded

the executive right could not be exercised because it violated the Rule Against Perpetuities.

The reasoning of *Dallapi* contains the seeds of its avoidance. First, even if the power of appointment analogy is used, viewing the right as a general power of appointment would vest the executive interest. n270 Second, the executive interest could be deemed vested if it was part of a vested property right. A California case after *Dallapi* reasoned that when a person with a mineral interest in particular lands reserves the exclusive executive right in a conveyance of an undivided interest in the minerals, the grantor actually retained all rights in the mineral estate except the share of mineral proceeds conveyed to another. This right to share proceeds would be an incorporeal hereditament. n271 The court viewed both the conveyed right to receive income and the interests reserved as immediately vested. Therefore, if the exclusive executive right is held by someone who also has a mineral interest in the affected tract, the Rule Against Perpetuities should not be violated. If there is no such interest, in order to avoid the *Dallapi* result, the executive right should clearly allow the holder to be the lessee or it should be limited in time.

Logically, when the policies of the Rule Against Perpetuities are considered, the Rule should not be used to invalidate an executive right. The right does not restrain alienation nor render property unmarketable. In fact the exclusive executive right has the opposite effect because it makes development less complicated than when co-tenants exist. n272

COMPUTER-ASSISTED RESEARCH

LEXIS: (executive w/1 right or interest) w/50 rule against perpetuities

§ 49.09(b)(4) Standard for Exercise of the Executive Right.

If one party holds the executive right, the person with a right to proceeds from minerals but no executive right is at the mercy of the executive to obtain a return from the minerals. This is so if the executive right affects either a nonexecutive mineral interest n273 or a nonparticipating royalty interest. n274 The financial realities of the relationship demand a standard to judge the propriety of executive right exercises.

This standard has been set at various levels, ranging from requiring good faith, which would be a simple absence of fraud, n275 to imposing a strict fiduciary requirement on the executive. n276 The good faith standard presumes that the executive's self interest would protect the nonexecutive. Most courts seem to follow the Texas lead n277 and require an intermediate level, namely that the executive use utmost good faith. n278 The executive's duty arises out of the relationship itself and need not be stated in the deed. n279

Texas consistently labels this duty as one of utmost good faith when it adjudicates private rights. n280 Nevertheless, some cases have blurred this ostensible standard with a fiduciary one. The case most-cited for requiring utmost good faith, Manges v. Guerra, n281 also refers to a breach of a fiduciary duty. Manges, the executive, leased to himself at a nominal bonus and also received benefits under a farmout agreement. These benefits were not shared with the non-executive. The court canceled the Manges-to-Manges lease and assessed punitive damages for a willful and wanton violation of the executive's duty. Both remedial responses are appropriate for a breach of a fiduciary duty. Nevertheless, the case stated the executive must exercise utmost good faith and acquire for the non-executive every benefit extracted for the executive. n282

Later Texas cases note the potential confusion in standards, but generally find the questioned conduct was sufficient to breach either the utmost good faith or fiduciary standard. n283 Certain questions, however, need clarification, including whether or not the executive may lease to itself. Under a fiduciary standard, self-dealing is a per se violation. Cases interpreting the executive's duty have not totally precluded self-dealing, but will find a breach if the lease to the executive does not contain fair market bonuses and royalties. n284

Factual circumstances other than self-dealing also can trigger a claim that the executive violated the non-executive's

rights. n285 Generally, the executive must act as a reasonable and prudent landowner would and obtain the most advantageous lease terms available, with due regard for the interests of the non-executive. The executive has no duty to negotiate anything other than a standard, marketable lease. n286 A standard lease would only be objectionable if the terms are designed purposely to injure the non-executive. If parties to a lease collude to damage the non-executive, however, the lessee has been held liable for inducing or contributing to the breach of duty to the non-executive. n287

COMPUTER-ASSISTED RESEARCH

LEXIS: (executive w/1 right or interest) w/50 (duty or standard w/15 non-executive or royalty or nonparticipating)

§ 49.09(c) Right to Proceeds of Oil and Gas Leases.

The owner of the mineral estate may participate in all proceeds of an oil and gas lease. If the mineral estate is transferred while it is still subject to a lease, the right to the proceeds passes with the reversionary interest. n288 The main proceeds of the lease include bonuses, delay rentals, and royalties. Miscellaneous proceeds include shut-in royalty payments and minimum royalties.

Each of the three main proceeds serve distinct purposes. The bonus is the initial payment made for the privilege of entering into the lease. It is customary and generally computed on a per acre basis. Sometimes, if the value of the leasehold is high, some bonus may be deferred and paid out of production. n289 Payment of a bonus is not a prerequisite for a valid lease. The primary consideration for an oil and gas lease is the royalty. It is a share of production, free and clear of costs. n290 Delay rentals are not similar to rentals in a traditional lease. They buy time to delay the obligation to drill a well. n291

Although each of the proceeds generally inure to the mineral estate, the right to receive any of these proceeds may be assigned separately. A mineral interest that has no right to delay rentals or bonuses is generally referred to as a non-participating mineral interest. n292

App. 1982)* (employs what "ordinary prudent landowner" would do as test for standard). Louisiana has adopted the utmost good faith standard by statute. La. Rev. Stat. Ann. §§ 31:105-31:113. The standard has also been used to judge the executive's duty in enforcing lease covenants. *Shelton v. Exxon Corp., 921 F.2d 595 (5th Cir. 1991)* (executive expressly had exclusive right to enforce).

(n32)Footnote 279. *Dearing, Inc. v. Spiller, 824 S.W.2d 728 (Tex. App. 1992).*

(n33)Footnote 280. For Relinquishment Act lands, where the state owns the minerals but makes the surface owner its agent for leasing, a fiduciary standard governs the exercise of the executive right. Tex. Nat. Res. Code Ann. §§ 52.188 & 52.189. *But see* (not fiduciary under 1934 law because no ordinary agency arose).

(n34)Footnote 281. *673 S.W.2d 180 (Tex. 1984).*

(n35)Footnote 282. Because an initial opinion that did not use fiduciary language was withdrawn and the new opinion used such language, the mixed signals increased. *Compare, 26 Tex. Sup. Ct. J. 430 (Tex. 1983) with, decision on rehearing, 673 S.W.2d 180 (Tex. 1984).*

(n36)Footnote 283. *Mims v. Beall, 810 S.W.2d 876 (Tex. App. 1991)* (notes equation of standard with fiduciary); *Hawkins v. Twin Montana, Inc., 810 S.W.2d 441 (Tex. App. 1991)* (notes confusion but actions would violate utmost good faith as well as fiduciary standard).

(n37)Footnote 284. *Dearing, Inc. v. Spiller, 824 S.W.2d 728 (Tex. App. 1992).* This case at one point seems to make a blanket prohibition of self-dealing, but later says the executive would not, as a matter of law, be barred from developing the property itself. The facts showed several offers to lease the property on better terms than the executive granted to his family company.

(n38)Footnote 285. *See* P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 339.3 (Matthew Bender);

Richard W. Hemingway, The Law of Oil and Gas § 2.2 (2d ed. 1983).

(n39)Footnote 286. *Union Producing Co. v. Scott, 173 F. Supp. 361, 365 (S.D. Tex. 1958), aff'd sub nom., Scott v. Union Producing Co., 267 F.2d 469 (5th Cir. 1959), cert. denied, 363 U.S. 842 (1960), reh'g denied, 364 U.S. 855 (1960)* (inclusion of shut-in royalty clause not objectionable even if term interest not extended by payment; such a lease could command a higher bonus and no collusion was found).

(n40)Footnote 287. *Kimsey v. Fore, 593 S.W.2d 107 (Tex. Civ. App. 1979)* (lease terms manipulated to prohibit drilling during period that term royalty interest existed); *Dearing, Inc. v. Spiller, 824 S.W.2d 728 (Tex. App. 1992)* (punitive damages assessed); *Mims v. Beall, 810 S.W.2d 876 (Tex. App. 1991)* (lessee was executive's son but dicta hints liability could extent to arm's length lessee).

(n41)Footnote 288. *See* § 49.22, *infra*.

(n42)Footnote 289. *Lane v. Elkins, 441 S.W.2d 871 (Tex. Civ. App. 1969).*

(n43)Footnote 290. *Duvall v. Stone, 213 P.2d 212 (N.M. 1949). See* greater detail, § 49.10, *infra*.

In trying to determine the market value of an unproven oil and gas lease "taken" by government, the court noted such value is not reflected by cash transactions. The bonuses and "rents" paid for a lease are generally small and the primary consideration for the lease is the royalty. This is an arrangement in the face of uncertainty that "protects developers from paying too much, and the owners from receiving too little." *Miller Bros. v. Department of Natural Resources, 513 N.W.2d 217, 221 (Mich. App. 1994), appeal denied, 527 N.W.2d 513 (Mich. 1994).*

(n44)Footnote 291. *See* §§ 49.34-49.35, *infra*.

(n45)Footnote 292. It may also, under one view, have no executive right. *See* § 49.20(g), *infra*.

CHAPTER 49 PETROLEUM AND PIPELINES
III. Types of Interests Created from a Landowner's Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.10

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.10 Attributes of a Royalty.

[Go To Supp]

§ 49.10(a) General Definition of a Royalty.

A royalty is a right to a share of the produced oil and gas, free and clear of the costs of exploration, development, and production. n293 In other words, a royalty is an interest in gross production and it is not cost-bearing. By way of example, if a person had a 1/8 royalty interest, the party would be entitled to 1 out of every 8 barrels of oil produced. By definition, a royalty interest lasts for the life of the production and is not limited in dollar value or time. n294

A royalty owner only has the right to receive the specified share of production. In contrast to a mineral interest, the royalty interest contains no right to develop the minerals, no right to use the surface for development, and no right to execute leases. n295 Royalties may be created in different settings, but every royalty interest has the same basic rights and limitations.

§ 49.10(b) Classification of Unaccrued and Accrued Royalty.

Whether or not a royalty is considered real or personal property can be important for purposes of taxes, inheritance, and other matters. Jurisdictions are in full agreement when it comes to the classification of accrued royalty, that is royalty after the oil or gas has been produced. Accrued royalty is personal property. n296 Rights to accrued royalty will not pass with conveyance of the mineral estate. Unaccrued royalty -- royalty to be paid out of future production -- is treated differently. n297

Generally, in ownership in place jurisdictions, a royalty is an interest in land, namely an incorporeal hereditament. It will be real property if the duration of the interest is equivalent to a freehold. Therefore, it must extend for a life estate or be capable of continuing in perpetuity. n298 The potential for infinite duration can be met by an interest that lasts "so long as oil or gas is produced." n299 Kansas, despite being an ownership in place jurisdiction, treats unaccrued royalty as personal property. n300

Non-ownership states logically should not treat a royalty as an incorporeal hereditament because the oil and gas lease

itself is incorporeal; an incorporeal hereditament traditionally may only be carved out of a corporeal estate. Nevertheless, non-ownership states view a royalty having the duration of a freehold as real property for some purposes. n301 However, in certain contexts, such as whether to subject a landowner's royalty to taxation separate from the interest of a lessee, non-ownership states may break ranks with ownership states. n302

§ 49.10(c) Types of Royalty.

§ 49.10(c)(1) "Landowner's" Royalty Reserved in Lease.

Perhaps the most common form of royalty is the royalty payable under an oil and gas lease. n303 This interest is referred to as a "land owner's royalty." Despite this label, it is owed to the mineral interest owner, who may differ from the landowner if the minerals had been severed. Therefore, it is also referred to as the "lessor's royalty." The landowner's or lessor's royalty is deemed reserved from the conveyance to the lessee. The traditional royalty in most states has been a 1/8 royalty, except in California where it is 1/6. Nevertheless, there is no binding standard royalty. Royalty amounts are negotiable and may exceed the norms in geologically promising areas during boom times.

§ 49.10(c)(2) Royalties Created by Lessee: Overriding Royalty.

An oil and gas lessee receives rights to develop the minerals and rights to the production not reserved to the lessor as royalty or otherwise committed under the lease or other agreements. The lessee's interest is referred to as the "working interest." Presuming the "normal" landowner's royalty of 1/8, the working interest would be 7/8 of production. Royalty interests created out of the working interest are referred to as "overriding royalties." n304

Traditionally, overriding royalties compensate those who assist in evaluating and acquiring acreage, such as geologists, independent land agents, or other consultants. n305 Overriding royalties also are often reserved by a lessee when making an assignment of a lease.

Additionally, lessors desiring a greater interest in production than the royalty often state that additional consideration payable out of production will be an "overriding royalty." This override is often treated differently than those reserved from the working interest. n306

An overriding royalty, like any other royalty, is expressed as a fraction or percentage of production. In drafting an overriding royalty, care must be taken to delineate against what amount the fraction applies. For example, if a 1/16 override is to be created, it could mean 1/16 of all 8/8 production or be based on 1/16 of the working interest's 7/8 of production. Overrides created by the lessee are generally specified to be a fractional share of 7/8 of production. n307

§ 49.10(c)(3) Non-Participating Royalty.

As stated elsewhere, ownership of the mineral estate includes the right to receive royalty. Moreover, incidents of a mineral estate may be separately conveyed. Often, either an investor or a mineral estate owner desires to share the proceeds of oil and gas development but does not want to either assume or give up control over development. A method to achieve this passive sharing in the benefits of a mineral estate is to assign the mineral owner's right to receive royalty. A "nonparticipating royalty" is the term used to describe a royalty carved out of the mineral estate independent from an oil and gas lease. The complexities of this interest are explored in § 49.11, *infra*.

§ 49.10(d) Relationship to Other Non-Cost Bearing Interests.

The royalty should be compared to other interests that are not chargeable with the costs of development. Often, either to secure financing or to further compensate a lessor, a "production payment" is created. A production payment gives its owner the right to a certain percentage of gross production until a specified dollar amount has been received. A production payment differs from a royalty because a royalty is for the life of production.

Finally, a caveat about certain other interests that sometimes are referred to as non-cost bearing. For example, the undivided mineral interest of a non-producing co-tenant is called a "carried" or "non-cost bearing" interest. n308 These terms when used in regard to a mineral interest are different than in the royalty context. The mineral interest in certain settings is deemed non-cost bearing because the interest holder is not personally liable to contribute for expenses. The mineral interest, however, is charged with the costs of exploration, development and production; the party incurring these costs when the mineral interest is "carried," however, can only recoup the costs through production. A royalty interest owner, by contrast, is not charged with these costs in any manner, either by direct charge or through deductions from proceeds.

(n12)Footnote 304. *Reynolds-Rexwinkle Oil v. Petex, Inc., 969 P.2d 906 (Kan. App. 1998)* (stating that a lessor owes a duty of fair dealing to a holder of an overriding royalty interest who must show fraud, collusion or bad faith in order to prove a breach of that duty. Without a contract provision to the contrary, an overriding royalty will be extinguished by a subsequent top lease unless the lessor breaches the duty of fair dealing. *XAE Corp. v. SMR Property Management Co., 968 P.2d 1201 (Okla. 1998)* (holding that overriding royalty interest owners who were granted their interests in kind, by separate conveyance, rather than by reservation in a lease assignment, had no right to enforce an implied covenant to market).

AEC Industries v. Survivor Oil, 7 P.3d 1052 (Colo. App. 1999). Defendant was the assignee of certain shallow formations and rights to a specific well. In later assigning both interests to another company, it reserved "an overriding royalty interest" free and clear of any cost of development or operations. The court held that the reserved right was in the nature of a carried working interest rather than an overriding royalty interest because the interest was contingent upon the assignee first recovering its costs. Overriding royalty interests are usually shares of gross production free of costs. As a carried working interest, it was subject to its assignee's mechanic's liens.

(n13)Footnote 305. Roark v. Stoark Oil & Gas, Inc., 813 S.W.2d (Tex. 1991); *Crockett v. McKensie, 867 P.2d 463 (Okla. 1994).*

Overriding royalties also can result under some forced pooling statutes when a mineral owner or working interest owner elects not to participate in a well in the drilling unit. *See, Grace Petroleum Corp. v. Corporation Comm'n, 841 P.2d 1172 (Okla. App. 1992); Clements v. ONEOK Resources Co., 946 P.2d 1154 (Okla. 1997)* (record owner of an overriding royalty interest in a well would have a claim for royalties against leasehold holder if a duty to inform of production was found to exist). *See also Goodall v. Trigg Drilling Co., 944 P.2d 292 (Okla. 1997).*

Roark v. Stoark Oil & Gas, Inc. to Roark v. Stallworth Oil & Gas, Inc., and Crockett v. McKensie, 867 P.2d 463 (Okla. 1994).

(n14)Footnote 306. *Anschutz Corp. v. Natural Gas Pipeline of Am., 632 F. Supp. 445 (D.C. Utah 1986)* (in actuality only grant of additional value to lessor, not an interest of a different type than lessor's royalty).

(n15)Footnote 307. *Concord Oil Co. v. Pennzoil Exploration & Prod. Co., 878 S.W.2d 191 (Tex. App. 1994)* (where a mineral deed contains more than one fraction regarding the interest conveyed, the conveying instrument shall be read as a whole and has priority over the subjective intent of the parties), *rev'd on other grounds, 966 S.W.2d 451 (Tex. 1998).*

(n16)Footnote 308. *See* § 49.05(d), *supra*. Similarly, a mineral interest that is force-pooled is "carried."

OXY USA, Inc. v. Colorado Interstate Gas Co., 883 P.2d 1216 (Kan. App. 1994) (even if "carried," working interest owners bear costs; assignee of working interest owner is not free of costs).

CHAPTER 49 PETROLEUM AND PIPELINES
III. Types of Interests Created from a Landowner's Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.11

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.11 Non-Participating Royalty.

§ 49.11(a) Typical Language Creating the Non-Participating Royalty: Fixed Fraction or Percentage "of Royalty."

Although the intricacies of conveyances are discussed elsewhere, n309 typical language creating non-participating royalties illustrates that the interest may be of two types. In one instance, the interest is stated as a fixed fraction of production. For example, an owner may grant a "1/16 royalty in" or "1/16 of the oil and gas produced and saved" from a particular tract of land. n310 Alternatively, a non-participating royalty may be created that grants of a percentage "of the royalty," with phrasing such as "1/2 of the royalty in oil and gas produced" from a particular tract. n311 The share of gross production attributable to each of these formulations differs. n312

§ 49.11(b) Computation of Share of Proceeds Due.

If a royalty is conveyed in terms of a fixed fraction, the amount of gross production due under it is simple. The owner of a 1/16 royalty would be entitled to 1/16 of gross production, or 1 out of 16 barrels of oil. This is a greater share of gross production than would be attributable to an undivided mineral interest in the same amount, *i.e.*, 1/16. Because the royalty in an oil and gas lease is generally apportioned based on the size of the lessor's mineral interest, the owner of an undivided 1/16 mineral interest would receive 1/16 of the royalty reserved in the lease. If the royalty is 1/8, this would be 1/148 of gross production, or 1 out of 148 barrels of oil. Naturally, a 1/16 royalty would be more valuable if there is significant production because of the higher share of gross production. n313 The royalty owner, however, does not participate in bonus and delay rentals as does the mineral interest holder. n314 When there is no production, these are the most valuable proceeds of an oil and gas lease.

Stating the royalty as a fixed fraction of production has another impact. The holder of the executive right could not affect the royalty interest holder's return because it is fixed in advance. This removes any question of what duty may be owed the non-executive, but the fixed return also prevents the fixed royalty holder from participating in any above normal royalty rates that may be negotiated in a lease. The second form of non-participating royalty, the grant of a percentage *of royalty*, refers to and embraces this fluctuation in lease terms. As a consequence, however, if the royalty is based on "1/2 of the royalty," the non-participating royalty owner is dependent on the executive for the amount of

proceeds to be received. n315

When a royalty is phrased in terms of "1/2 of the royalty" the actual share of production is not determinable until a lease is executed. The royalty reserved in the lease will then be divided in half; in other words, the term "1/2 of the royalty" means 1/2 of the royalty specified in any lease. The amount of gross production received by the royalty owner would be equivalent to that received by the owner of a 1/2 mineral interest. If the lease had a 1/8 royalty, both the royalty owner and 1/2 mineral owner would receive 1/16 of gross production. The mineral interest owner, however, unlike the royalty interest owner, would share in bonus and rentals.

§ 49.11(c) Duration of Non-Participating Royalty: Rule Against Perpetuities.

If a non-participating royalty is viewed as a property interest that transfers a present right to share in the proceeds of oil and gas development, then the interest can last forever. Almost all jurisdictions take this view and find the duration of the royalty may be perpetual without violating the Rule Against Perpetuities. n316 Under this analysis, the only uncertain or future aspect of the transaction is whether there will be any practical benefit from the grant. Practical benefit is similar to possession. Deferring possession has never violated the Rule Against Perpetuities so long as the legal right or estate is vested in a timely fashion. n317

Kansas, however, has taken a different view. In *Cosgrove v. Young*, n318 the court stated that until a lease is executed and production begins, a right to royalty is uncertain. The royalty interest therefore is not vested at the time of the grant. Because nothing in the grant analyzed in *Cosgrove* assured production within the time allowed by the Rule Against Perpetuities, the royalty could vest too late and violate the rule. Therefore, a perpetual non-participating royalty may not be created in Kansas. As for non-participating royalties of lesser duration, cases that pre-dated *Cosgrove* had upheld a conveyance of royalties in an existing lease or in leases executed by a specific grantor. n319 However, if production is the "vesting act," as is hinted at in *Cosgrove*, it would seem no non-participating royalty could be granted unless it is limited to 21 years and so long as all and gas is produced. n320

Applying the Rule Against Perpetuities to non-participating royalty interests does not further the policies behind the rule. Non-participating royalties are useful ways of sharing proceeds of mineral development without multiplying controlling interests. Although Kansas reasserted its invalidation of perpetual non-participating royalties, it simultaneously seemed to approve of perpetual non-participating mineral interests. n321

LEXIS: (non-participating w/1 royalty) or royalty w/50 rule against perpetuities

§ 49.11(d) Proceeds in Which Royalty Owner Shares: Distinction Between Royalty and Bonus.

Generally, a royalty interest owner, whose interest is phrased in terms of a fraction "of royalty," shares in "royalties" under a lease and does not share in bonuses. n322 When a bonus is paid as a sum certain upon execution of a lease, the only potential conflict is the executive may seek a higher bonus and sacrifice some possible royalty revenue. There is, however, no question that the royalty interest owner will not share in the bonus payment. When, however, the lease specifies that a "bonus" will be paid out of production, royalty and bonus could be considered to overlap. n323

Courts in Texas, however, distinguish royalty and bonus by ascertaining if the payment is to occur throughout the productive life of a well. If it is, it is treated as royalty and shared with a royalty interest holder regardless of the payment's label as overriding royalty or bonus. n324 If, on the other hand, the payment out of production is specified as a sum certain, then it will be a production payment and considered a bonus. n325 Additionally, if the sum must be paid regardless of whether production occurs, it will be a bonus. n326

Oklahoma, however, has in one case declared that the terms "bonus" and royalty can be ambiguous. n327 In resolving the case with extrinsic evidence, the court declared that anything which exceeded the "normal" 1/8 royalty was a bonus belonging to the owner of bonus rights. Under this view, an overriding royalty reserved in addition to the lease's royalty would not be shared with the royalty interest owner. Only payments specifically designated as the landowner's royalty would be shared.

Because of the potential for the executive to manipulate proceeds to maximize the executive's return, the deed creating the royalty interest should specify that the royalty owner will share in all proceeds payable out of production regardless of label. Alternatively, the drafter should consider whether creating a non-executive mineral interest would better serve the client's needs and desires.

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.12 Attributes of Non-Executive Mineral Interests.

A non-executive mineral interest can, depending on the grant, have the right to receive all the proceeds of a mineral lease. To create a nonexecutive mineral interest, a grant or reservation would convey or reserve an undivided interest in the minerals, but assign the exclusive right to lease to another. For example, a grant of a non-executive mineral interest results from a conveyance of an undivided 1/2 interest in all the minerals in a tract when the conveyance reserves to the grantor the exclusive right to lease the minerals.

The non-executive mineral interest owner has no right to develop or lease, but participates in production and bonus and delay rentals according to the deed. n328 Rights to bonus and delay rentals may be withheld or pass with the interest. n329 If the deed does not specifically allocate the royalty, bonus or delay rental, the rights will adhere to the mineral interest because all attributes of a mineral interest are deemed to pass with its grant unless expressly reserved or, conversely, will remain with a mineral interest's reservation unless granted to the grantee. Whether or not the non-executive interest may enforce the covenants of an oil and gas lease, however, is less clear. n330

If the mineral interest created expressly states that the owner of it will not have rights to lease and will not share in bonus and rentals, there is some tendency to label this particular interest a "non-participating fee" or "non-participating mineral interest," the word "non-participating" being a shorthand for not sharing in bonus and rentals. n331

CHAPTER 49 PETROLEUM AND PIPELINES
III. Types of Interests Created from a Landowner's Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.13

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.13 Attributes of a Term Mineral Interest or Term Royalty Interest.

§ 49.13(a) Fixed Term Interests.

Rather than conveying an interest in minerals that necessarily will last in perpetuity, an interest may be granted that is limited in time, such as for a specific term of years. The interest granted may take the form of any of the available interests, including a mineral interest or a royalty interest. Obviously, a mineral interest limited to a specific term of years would not be attractive to a developer; rights would end at the specified date whether or not capital had been recouped. A passive investor, however, may accept the interest as an assignment of proceeds. n332

§ 49.13(b) Defeasible Term Interests.

The more common term interest states that it is for a specific term of years and for so long thereafter as a certain event continues, usually so long thereafter as production continues. n333 Such a grant, if it is of a full or undivided mineral interest, creates a fee simple determinable. For example, a grant could convey all the oil, gas, and other minerals in a particular tract for a period of ten years from a specified date and so long thereafter as oil, gas and/or other minerals or any of them are produced therefrom. n334 The estate is often referred to as a "defeasible" or "base" fee. Title vests immediately in the grantee subject to the grantor's possibility of reverter in the event production does not occur before the required date or fails to continue. n335

A non-participating royalty may also have a defeasible term. n336 Naturally, the holder of such an interest will be dependent on the executive to grant oil and gas leases. n337

§ 49.13(c) Termination of Defeasible Interests: Meaning of "Production."

Unless otherwise specified in the deed creating the interest, the "production" necessary to keep a defeasible fee from terminating is actual production in paying quantities. n338 This is so even in jurisdictions such as Oklahoma, which take the position that a lease will be maintained past the primary term by a well capable of production. n339

Constructive production, which may be sufficient to preserve an oil and gas lease in its secondary term, n340 will not be

sufficient to preserve the defeasible term interest. For example, payment of shut-in royalties will not be "production" despite the fact that they are only payable if a well capable of production in paying quantities has been drilled. n341

There is a conflict about whether other doctrines used in construing oil and gas leases are applicable to defeasible term interests. Texas employs the "temporary cessation of production" doctrine; n342 a term royalty would not terminate unless the cessation of production was permanent. n343 Oklahoma takes the opposite view, partially because the estate terminates naturally and the consideration paid for a defeasible interest would have reflected this fact. n344 Oklahoma also justifies its position by noting that the term owner has not expended funds to achieve production as the oil and gas lessee did. n345 The last case so holding, however, was decided 5 to 4.

The drafter of a term interest for a person acquiring the same should define production to include any manner by which an oil and gas lessee may maintain a lease in the secondary term. In other words, the term interest should last as long as any oil and gas lease will extend if the lease achieved the status of production under the lease's terms before the end of the term interest's stated period. n346

COMPUTER-ASSISTED RESEARCH

LEXIS: (term w/3 royalty or interest) and (production or produce w/15 habendum or extend or extension) w/50 (amount or quantity or nature or kind)

§ 49.13(d) Where Production Must Occur; Effect of Pooling.

Term deeds generally require production on the "premises or any part thereof." n347 If the term deed encompasses separately described tracts, then production on any tract will preserve the interest as to all the land. n348 Because production anywhere on the land will meet the requirement for all the land, if a unit well is on the subject land, the term interest in theory should be preserved for all the land even if some of it is not in the unit, but there is little case law. n349 The same result of extending the interest was reached in Texas if all the land was in the unit but the unit well was off the subject land. n350

Kansas and other jurisdictions have had more trouble with production occurring off the land subject to the term interest. n351 Kansas, however, has more recently recognized that unitization, especially that performed voluntarily to comply with spacing unit requirements, is a necessary part of conservation. Therefore, if the land in which the interest is held is unitized, production from a unit well, if drilled off the subject land, will preserve the term interest, but only in regard to portions of the lands included in the unit. n352 This ruling is not to be applied retroactively to term interests that would have expired under the prior law before it was changed. n353

The drafter of a term interest for a person acquiring the same should insist that the interest will continue so long as production continues on the premises or any lands unitized with the premises. Parties should negotiate whether the term interest should be divisible by expressly stating it is not divisible or by including the equivalent of a "Pugh" Clause. n354

COMPUTER-ASSISTED RESEARCH

LEXIS: (term w/3 royalty or interest) and (production or produce w/15 habendum or extend or extension) w/50 paragraph unit

§ 49.13(e) Legal Relation Between Term Owner and Reversioner.

Two factors color the analysis of the relationship between the term owner and reversioner. One emphasizes that the relationship differs from that of a lessor and lessee. n355 Under the leasing arrangement, development by the lessee for

the mutual benefit of the lessor and lessee is anticipated. Therefore, the lessee has the power to extend the lease interest by developing and, if it makes an investment to that end, the investment is for the mutual benefit of the parties and should be protected. When a defeasible term interest is granted or reserved, there is no anticipation that the term interest holder will develop for the mutual benefit of it and the reversioner. In fact, if the term interest is a mineral interest with the right to lease or develop, the term interest holder will be developing for its own benefit and will be denying an opportunity for the possibility of reverter to become possessory. Because of the conflicting interests between the term interest holder and the reversioner, doctrines designed to protect the investment of a lessee are inapplicable. n356 Additionally, no case law forces a co-tenant of a term mineral interest owner to act to prevent the term interest from expiring. n357

The second factor also recognizes conflicting interests, especially between the reversioner who has the executive interest for a defeasible term royalty interest. Towards the end of the specified time, the executive may prefer to have the royalty interest lapse. The self-interest of the executive, therefore, may not be sufficient to protect the royalty holder. n358 Because of this, there is some precedent stating the executive has a special duty to the term interest holder to act within a reasonable time before expiration of term interest. n359

§ 49.13(f) Reservation of Defeasible Term Interest: Validity Under Rule Against Perpetuities.

When one grants a defeasible term interest, the grantor will retain a possibility of reverter. The grantor's interest will become possessory at the end of the specified term or when production ceases. The timing of the event is unknown and therefore, could extend beyond the time allowed for vesting under the Rule Against Perpetuities. However, a possibility of reverter never violates the Rule because it is presently vested; only possession is deferred. A different analysis applies if a grantor reserves a term mineral interest, *i.e.*, grants the surface and reserves the minerals for 10 years and so long thereafter as oil and gas is produced. The grantee's interest in the minerals is technically an executory interest. Because the interest does not "vest" until it is possessory, the executory interest violates the Rule Against Perpetuities. n360 Courts have upheld the interest, however, for various reasons. n361 The simplest reason would be to simply declare the Rule inapplicable to these interests because they do not impede development and thus inhibit marketability or alienability. n362

CHAPTER 49 PETROLEUM AND PIPELINES
III. Types of Interests Created from a Landowner's Rights.

6-49 Thompson on Real Property, Thomas Editions § 49.14

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.14 The Special Case of Louisiana.

[Go To Supp]

Louisiana law, based on civil law, takes a different view of mineral ownership. n363 A severed mineral fee does not exist. If one grants or reserves minerals, an incorporeal mineral servitude results, defined as "the right of enjoyment of land belonging to another for the purpose of exploring for and producing minerals and reducing them to possession and enjoyment." n364 Non-participating royalties may also be created. n365 Both of these interests are subject to the doctrine of prescription *liberative causa*. Unless used within ten years, beginning on the day created, they will be extinguished by prescription from non-use. n366 An oil and gas lease is not subject to liberative prescription, n367 but because no lease may have a duration of more than ten years without drilling or mining operations or production, n368 the result is the same.

§ 49.14(a) Extent of Mineral Servitude or Royalty Burden.

A deed may contain several tracts and either reserve or grant a mineral servitude or royalty in the lands. If the tracts are contiguous, one servitude or royalty will be created. n369 Activity sufficient to interrupt prescription on one tract will be sufficient to interrupt prescription throughout the lands. However, if lands included within a deed are non-contiguous, separate servitudes will result and separate acts on each non-contiguous tract will be required to interrupt prescription. n370 Lands are non-contiguous if separated by a road or if they only touch at one point.

COMPUTER-ASSISTED RESEARCH

LEXIS: (mineral w/3 servitude) or royalty and (tracts w/15 contiguous or non-contiguous)

§ 49.14(b) Interruption and Suspension of Prescription.

What acts are sufficient to interrupt prescription differ for mineral servitudes and royalties. In order to interrupt prescription for a royalty, production is necessary. n371 Production in paying quantities is not required, but there should be some removal and storage of oil. n372 For gas, a shut-in well that is capable of production in paying quantities will

suffice. Less than production may interrupt prescription of a mineral servitude. Good faith operations will interrupt prescription even if they result in a dry hole. n373 Good faith operations commence on the spudding in date, not the date on which operations preparatory to drilling begin. n374

For both types of interests, if the necessary act occurs on lands unitized with lands subject to the servitude or royalty, interruption will result, but only insofar as the lands contained in the unit. n375 If the unit activity is on the burdened land itself, it will interrupt prescription throughout. When the act that interrupted prescription ceases, that is, when operations or production ends, a new ten-year period begins.

Prescription may also be suspended. Simple ownership of the interest by a minor or a person with a disability will not work a suspension. n376 If, however, the owner of a mineral servitude is prevented from using it by an obstacle that the owner can neither prevent nor remove, the prescription of non-use will not run for the time the obstacle remains. n377 Parallel provisions deal with suspension by obstacle for royalties. n378 If prescription is suspended, the original period resumes when the obstacle is removed. For example, if five years remained before the obstacle, the interest would prescribe in five years after removal of the obstacle if not interrupted or extended.

COMPUTER-ASSISTED RESEARCH

LEXIS: royalty and (interrupt w/15 prescription) and produce or production
(mineral w/3 servitude) and (interrupt w/15 prescription) and (produce or production or operate or operation* or drill)
or (mineral w/3 servitude) and (suspen! w/15 prescription)
or
royalty and (suspend* or suspension w/15 prescription)

§ 49.14(c) Interruption of the Period of Prescription by Acknowledgment and Contractual Extension.

The owner of lands subject to a servitude may interrupt the period of prescription by an acknowledgment intending that result. A mere mention in a conveyance that the interest conveyed is subject to a servitude or royalty will not have that effect. To be effective, the acknowledgment "must express the intent of the landowner to interrupt prescription," n379 be in writing, and be recorded to affect third parties. n380 These rules, with some modification, apply to royalties. n381

The effect of an interruption by acknowledgment is the same as interruption by use: a new ten year period begins. Mineral servitudes and royalties may be extended for lesser time periods by a contractual extension entered into by the landowner or burdened servitude owner. n382 The same formalities govern as for an acknowledgment.

(n8)Footnote 370. La. Rev. Stat. Ann. § 31:64 (servitudes); La. Rev. Stat. Ann. § 31:103 (royalties).

Because the state of Louisiana cannot convey the beds of navigable waters, if the relevant waters were navigable, certain tracts would not be contiguous. If waters were not navigable in 1812 (date of statehood), but became naturally navigable by the time the state transferred title of the surrounding lands, the beds are to be deemed "public" and not subject to conveyance. Hence, the lands were found to be non-contiguous. *Vermilion Bay Land Co. v. Phillips Petroleum Co., 646 So. 2d 408 (La. App. 1994), writ denied, 650 So. 2d 1176 (La. 1995).*

§ 49.15 Texas Relinquishment Act Lands.

Texas reserved oil and gas in all lands classified as "mineral lands" when it issued patents during certain eras. By 1942, the state had reserved the minerals under 7,485,000 acres of land. Of these, 7,400,000 acres are subject to the Relinquishment Act of 1919. n383 This act makes the "owner of the soil" the agent of Texas for the purpose of leasing lands. Under current law, the surface owner is a fiduciary for the state and may not engage in self-dealing. The owner is entitled to one-half of the economic benefits from each particular lease negotiated. Although the surface owner may assign these benefits, the assignment will only last for the life of a particular lease. No future lease benefits may be assigned and a conveyance of a mineral interest by the owner of the soil of Relinquishment Act lands is meaningless. n384

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.16

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.16 General Conveyancing Requirements.

A "conveyance" is a transfer of ownership by an instrument that is intended both to be presently operative and to pass an interest in land to another. Oil and gas conveyances must meet the same formalities as apply to real estate conveyances in general. n385 These include the necessity of (1) a writing, (2) words of grant, (3) an adequate description, (4) a designation of the parties, and (5) proper execution. Additionally, because oil and gas conveyances are subject to the Statute of Frauds, a writing signed by the party to be charged is essential. Finally, as with all conveyances, completion of the conveyance requires delivery of the instrument and acceptance of the conveyance.

In addition to these basic requirements, other requirements may be found in recording acts, which apply to oil and gas interests. These requirements generally do not affect the validity of an instrument as between the parties to it; a conveyance is valid between these people without recording. In Kansas, however, a severed mineral interest is void unless recorded within ninety days or filed for taxation separately from the surface. n386 Moreover, in all jurisdictions, recording is a practical necessity for a business transaction. Therefore, any requirements for attestation and acknowledgment found in the relevant jurisdiction's recording act should be followed.

For oil and gas transactions that are considered conveyances, the general rule is that no consideration is required for validity. The exception is Kansas, which requires "serious consideration" for an oil and gas lease. n387 Consideration is advisable, however, in all jurisdictions for several reasons. Consideration is needed: 1) to take advantage of recording acts that protect "purchasers," 2) to avoid potential charges of fraud that could support a rescission, n388 and 3) to prevent creditors from challenging the transaction. n389

FOOTNOTES:
(n1)Footnote 385. *See generally* P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 220 (Matthew Bender).

Robbins v. HNG Oil Co., 878 S.W.2d 351 (Tex. App. 1994) (reference in deed to another deed to show source of title does not act to enlarge specific description in the deed); *Energy Development Corp. v. Quality Environmental Processes, 734 So. 2d 965 (La. App. 1999)* (a property description in a conveyance is adequate to give notice to third

parties when it describes the property affected by reference to other conveyances available in the public records).

(n2)Footnote 386. Kan. Stat. Ann. § 79-420. Compliance is a condition precedent to title vesting and title may be attacked by grantor's successors. *Becker v. Rolle, 508 P.2d 509 (Kan. 1973); Ford v. Willits, 688 P.2d 1230 (Kan. App. 1984).* The statute does not apply to royalty interests or leases and does not apply when the grantor excepts a mineral interest from a conveyance. *See generally* Pierce, *supra* note 320, at § 5.10.

(n3)Footnote 387. Unlike other jurisdictions, Kansas considers an oil and gas lease a contract, rather than a conveyance. Therefore, it will need consideration. *Brinkman v. Empire Gas & Fuel Co., 245 P. 107 (Kan. 1926).*

(n4)Footnote 388. *Brisco v. Reschke, 226 P.2d 255 (Kan. 1951)* (deed "good without consideration in the absence of a wrongful act on the grantees such as fraud or undue influence").

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.17

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.17 General Rules of Interpretation.

Many of the same rules of interpretation that apply to other deeds are used to interpret conveyances of interests in oil and gas. n390 Generally, courts attempt to construe the intent of the parties. First, they consider the wording of the deed, using only what is contained within the deed's four corners. If there is still doubt about intent, rules of construction are employed. For example, handwritten or typed words inserted in a form will be granted greater weight in determining intent than the basic form language. As with other instruments, oil and gas transactions may be construed against the drafter, who is generally the grantor. As a last resort, but only if a deed is deemed ambiguous, courts will allow extrinsic or parole evidence of intent. n391

FOOTNOTES:
(n1)Footnote 390. *See* Bruce M. Kramer, *The Sisyphean Task of Interpreting Mineral Deeds and Leases! An Encyclopedia of Canons or Construction*, 24 Tex. L. Rev. (1993); Bruce M. Kramer, *Property and Oil and Gas Don't Mix: The Mangling of Common Law Property Concepts, 33 Washburn L.J. 540 (1994);* Richard C. Maxwell, Oil and Gas Conveyancing: Is There Truth in Labeling?, *33 Washburn L.J. 569 (1994).*

(n2)Footnote 391. Ambiguity is not a prerequisite for parole evidence in a direct attack on a conveyance, that is, in a suit seeking reformation or rescission. *Wiseman v. Priboth, 310 S.W.2d 600 (Tex. Civ. App. 1958)* (mutual mistake alleged and reformation sought). *See also*, Richard W. Hemingway, The Law of Oil and Gas § 3.2(A) (2d ed. 1983). *McCall v. McCall, 24 S.W.3d 508 (Tex. App. 2000).* A deed to described tracts together with all improvements and appurtenances was unambiguous and did not transfer grantor's separate pre-partition royalty interests that were not appurtenant.

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.18

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.18 Exceptions and Reservations.

A grant generally, if unrestricted, passes all the grantor might own. People often desire to treat ownership of minerals separately from the surface. To this end, an exception or reservation in a deed may initially sever minerals. If the minerals have already been severed, the grantor also may retain an undivided interest in the minerals by exception or reservation. The two techniques -- exception and reservation -- have technical differences.

Traditionally, an exception holds back something from the grant and the grantee never receives this interest. Under this view, the estate "excepted" must already be in existence on the date of the grant. A reservation, however, traditionally was considered a regrant. The deed passed the interest to the grantee and the reservation passed it from the grantee to grantor. n392 A reservation, therefore, under old rules, would require words of inheritance to be perpetual. Most jurisdictions have abandoned this distinction and treat the two techniques interchangeably when ascertaining duration.

Another traditional rule constraining drafters was that an exception or reservation needed to be in the granting or reddendum clause of a deed. If the attempted exclusion was in any other location, it would be invalid because it would be repugnant to the grant. Many cases dealing with oil and gas reject this rule in favor of seeking the intent of the parties from the entire four corners of the deed. n393

Some interpretive problems remain. One reoccurring question is whether an exception is designed to retain an interest for the grantor or simply to exclude an interest that may be outstanding from a deed's warranty. Oklahoma has been the most particular in this regard, n394 requiring "apt" words of reservation to effectively prevent passage to the grantee. n395 Therefore, the clause "Except an undivided 1/2 of the mineral rights under the land" after the habendum did not allow the grantor to retain a mineral interest n396 but the following words in the same locale did withhold a mineral interest: "Except 15/16 of all mineral rights reserved." n397 In a later case, however, where the questioned language was in the granting clause after the land description, the Oklahoma courts were more lenient; minerals were reserved when the phrase "except oil, gas, and other minerals" appeared in the granting clause. n398 When the attempted reservation is made outside of the granting clause, a form of the word "reservation" appears necessary.

Another problem frequently encountered is what to do about an exception or reservation in favor of a third party. A

majority of jurisdictions still adhere to the traditional rule that neither can be created in favor of a third party or stranger to the title. n399 Therefore, if a deed excepts an interest that is not valid by restating the interest or by referring to the deed purportedly creating the interest, most jurisdictions hold that the third party does not receive the interest by virtue of the exception. The jurisdictions split, however, over whether the interest passes to the grantee or remains with the grantor. n400

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.19

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.19 Conveyancing Problem: Mineral Interest or Lease?

Occasionally, a dispute arises over whether a transaction is a deed conveying a mineral interest or a lease of the minerals. In some instances, the effectiveness of the transaction may be at issue. For example, under the Texas Relinquishment Act, the surface owner may only act as an agent for the state to lease minerals, not to sell them. n401 In Kansas, mineral interests not timely recorded are invalid but leases are not subject to the rule. n402 More generally, the Internal Revenue Service often questions a transaction because the tax treatment of bonuses for a lease and consideration for a deed differ; bonuses are ordinary income while sale proceeds may be capital gains. n403 Finally, the grantor may seek to forfeit an interest created by a document that has characteristics of both a deed and lease when it has existed for a long period without development. n404

When faced with an ambiguous transaction, no one factor is conclusive in distinguishing mineral interests from leases, but courts do consider whether the primary mode of consideration was a royalty and whether the royalty approximates current leasehold royalties in the area. If so, a lease would be indicated. n405 Other factors that would point to the leasehold classification would be the presence of drilling obligations, n406 surrender clauses, forfeiture clauses, and words such as "let and demise." n407 Conversely, words such as "grant and convey" and large cash considerations would tend to show a deed. n408

One important functional difference between the two types of transactions is that, because a lease anticipates development, it has various implied covenants. n409 It has been argued that with hybrid arrangements, the presence of these duties should not be a function of labelling the transaction as a lease or sale, but should depend upon the probable intent of the parties and what would be needed to accomplish the transaction's purpose. n410

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.20

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.20 Conveyancing Problem: Mineral Interest or Non-Participating Royalty?

[Go To Supp]

Often an instrument with a fractional interest is unclear about whether a royalty or mineral interest has been granted or reserved. n411 This occurs because parties do not fully understand the nature of the various rights in oil and gas or because they use inappropriate form deeds. In interpreting an instrument, its title is never given conclusive effect. If other indicators lead the court to label the interest as it appears in the document, the title will be mentioned. Nevertheless, courts may find that an interest is the opposite of the document's title. n412 The result of a classification may be dramatic.

In some jurisdictions, the classification can fundamentally affect a transaction's validity. n413 In all jurisdictions, however, the classification will impact the economic results. Unless otherwise stated, a mineral interest shares in all proceeds under an oil and gas lease; these include royalty, bonus and delay rentals. Sharing in the last two may be important because bonus and delay rentals may be the only significant return if the lands do not produce. The share of production will be less for a mineral interest, however, than the same share of production that belongs to the holder of a royalty of the same fraction. For example, a party owning a 1/8 royalty will receive 1/8 of gross production, or, 1 out of 8 barrels of oil. The owner of an 1/8 mineral interest will receive 1/8 of the royalty reserved in an oil and gas lease. If the lease has a 1/8 royalty, the mineral interest owner would be entitled to 1/64 of production, or 1 barrel out of 64. n414

Interpreting whether a particular transaction creates a mineral interest or royalty is often difficult. Any particular deed may have idiosyncratic language and any relevant jurisdiction may have decisions that are "sports." Seeming judicial irregularities arise because courts may decide a deed is ambiguous and allow in parol evidence of intent in order to do "justice" when a scrivener's error or misunderstanding is suspected. Therefore, although some frequently occurring phrases and interpretations are offered, further research is suggested.

§ 49.20(a) Conveyances of "Oil and Gas in, on, Under, and that May Be Produced from... ."

A deed that simply states that a fraction of "oil and gas in and under" or "in, on, or under" the described land is

conveyed or reserved will create a mineral interest if there are no additional clauses to confuse matters. If the phrase "and that may be produced and saved from" the land is added, the result is the same: a mineral interest results. n415 The "in and under" terminology creates the hallmark of a mineral interest.

While it is clear that this terminology alone will create a mineral interest, the addition of other provisions relating to oil and gas may or may not transform the interest into a royalty. Often, a deed includes an express grant or reservation of an easement across the surface for development purposes. This right of ingress and egress is totally consistent with a mineral interest and, of course, will not detract from the conclusion that a mineral interest has been created.

§ 49.20(b) Conveyances of "Royalty."

In a majority of jurisdictions, the term "royalty" is considered unambiguous and if the term is used without any other language, a cost free share of gross production -- a "non-participating royalty" -- will be created. n416 For example, in most jurisdictions, a conveyance or reservation simply referring to a 1/16 royalty would entitle the holder to 1/16 of gross production. A grant or reservation of a fraction "of royalty" would similarly create a cost free interest tied to the royalty reserved in an existing or future lease. For example, a grant of 1/2 "of royalty" would give 1/16 of gross production under a lease reserving a 1/8 royalty. n417 In neither instance would the holder have the right to bonus, rental, development, or executive rights.

There are exceptions to this general rule. Oklahoma's law is discussed in § 49.20(h) *infra*. It, like the law of at least one other state, was influenced by a theory West Virginia embraced. Adopting a position as venerable as Lord Coke, West Virginia declared that the conveyance of the profits of land is a conveyance of the land itself. n418 Therefore, conveying or reserving "1/2 of royalty" would result in granting or reserving an undivided 1/2 mineral interest. A reference to a 1/16 royalty would create an undivided 1/16 mineral interest. West Virginia has been inconsistent with the rule, n419 but Colorado adopted it. n420

Whether or not a royalty could be created in Colorado was unclear until legislation declared one could be created. n421 Alabama n422 and Illinois n423 have cases that also appear to adopt Coke's rule.

While it is clear that the "royalty" terminology alone will create a royalty in most jurisdictions, the addition of other provisions relating to oil and gas may or may not transform the interest into a mineral interest.

§ 49.20(c) Conveyances of "Royalty" When Deed Includes Language Inconsistent with Royalty Interest.

If a reservation or conveyance uses the "royalty" or "oil and gas produced and saved" terminology but also grants or reserves rights that are inconsistent with a royalty interest, a mineral interest may result, especially in those jurisdictions that find the word "royalty" ambiguous. For example, if easements of ingress and occupancy for the purpose of drilling, storing and marketing oil and gas are added, the interest may be transformed to a mineral interest, which has such rights. n424 Some cases, however, reject this simplistic result and look for the overall intent of the parties; the presence of the easements would be just a factor. n425

Although development and exploration easements are inconsistent with the definition of a royalty, other easements, such as the right to enter to "utilize" the land granted would not be. n426 A royalty owner may want to enter the property to monitor production or to gather oil after it is produced because oil royalty may be taken "in kind." n427 However, because a royalty interest is by definition non-possessory, a drafter should avoid inserting easements unless clearly limited.

§ 49.20(d) Conveyances of "Oil and Gas Produced and Saved."

As with the word "royalty," the use of "oil and gas produced and saved" alone will create a royalty. n428 Hence, a grant

or reservation of 1/16 of the oil and gas produced and saved will entitle the holder to 1/16 of gross production. Jurisdictions that adopt Lord Coke's rule, however, will find an undivided 1/16 mineral interest created because the grant of the profits is deemed to be a grant of the real property interest. n429 The addition of other provisions relating to oil and gas may or may not transform the interest into a mineral interest. n430

§ 49.20(e) Size of Interest Conveyed as Influencing Interpretation.

Some cases have viewed the size of the interest reserved or conveyed as important in determining whether a mineral interest or royalty has been created. Language that might otherwise indicate a royalty, but which involves a large interest, has been interpreted as creating mineral interests. n431 Interpretive questioning begins if the interest greatly exceeds the normal 1/8 royalty reserved in a lease because it becomes difficult to see what royalty the remaining mineral interest would be entitled to upon leasing. When outstanding "royalties" are as large as 1/4 or 1/2, leasing may become difficult because so much of production would be non-cost bearing. n432 Courts in essence find clear language ambiguous when placed in the context of business. n433

Others argue that leasing would not be impossible, especially in very productive areas, n434 or if the party with a very large royalty bargains for different rights, such as a bonus. Some cases have in fact found royalties created by such clear language as "an undivided 1/2 interest in and to all of the oil, gas, and, or, other minerals that may be produced from said land." n435

§ 49.20(f) Reservation or Conveyance of Mineral Interest Without Executive Right and Without Rights to Bonus and Delay Rentals.

While other sections have examined the effect of beginning with language characteristic of a royalty and adding to it additional rights reminiscent of a mineral interest, deeds often do the reverse: they start with language characteristic of a mineral interest and then remove attributes of the estate. The removal may be expressed or implied.

One explicit example would be a deed in which the grantor grants "1/16 of the oil and gas in, on, and under the land, but the grantor reserves all right to bonus, rental, and the exclusive right to lease." The right remaining to the grantee is the right to share in gross production, which is the right to which a royalty interest is entitled. The question becomes, how much gross production should the grantee receive? If the interest is construed as a royalty, the grantee receives 1/16. If a mineral interest is created, the grantee receives 1/16 of whatever royalty is reserved in a lease.

When the fraction conveyed is less than the standard royalty reserved in a lease, some cases have construed such a grant or reservation as a royalty interest either without explanation or because the limited rights would be inconsistent with a mineral interest. n436 Other cases reach the opposite result. n437 There is even less uniformity when the fraction involved exceeds the normal lease royalty. n438

In most jurisdictions, if a royalty is intended, it should and can be created directly: there is no need to delineate a mineral estate and then remove rights. In Kansas, however, a perpetual non-participating royalty is not possible because it is deemed to violate the Rule Against Perpetuities. n439 A "non-participating fee" must approximate for a perpetual non-participating royalty in Kansas. The drafter must begin with the "in and under language" and remove other attributes. n440 The formulation discussed in this section, however, would not give the grantee the amount of production probably intended. To approach the intended result of a 1/16 share of gross production, the grant would have to be of an undivided 1/2 mineral estate, with all attributes other than royalty removed. Naturally, if a lease reserves something other than a 1/8 royalty, the share of production going to the grantee will not be 1/16th but will be 1/2 of the reserved royalty.

§ 49.20(g) Reservation or Conveyance of Mineral Interest Without Rights to Bonus and Delay Rentals.

Another example of rearranging the attributes of a mineral estate are deeds in which the grantor grants "1/16 of the oil and gas in, on, and under the land, but the grantor reserves all right to bonus and rental." This differs from the previous example because no mention is made of the right to lease. Two approaches exist to determine who will have the executive right.

Some cases have held that the executive right is impliedly reserved when the benefits of the executive right are reserved. n441 Therefore, the right will reside with the party who has the right to bonus and delay rentals. The cases that adopt this posture, however, do not continue with the functional analysis to find that the interest without these rights is a royalty. Most conclude that a mineral estate results. One difference in categorizing the interest as a royalty or mineral interest may be the size of the fraction involved. n442

Other precedent, including some of the most recent, pursues a literal approach in assigning executive rights rather than the functional approach. Because each and every attribute of a mineral estate may be separately conveyed, the grantee would receive a mineral interest with executive rights when a grantor reserved the right to bonus and rental. n443 This mineral interest would only, however, receive income from production.

This mineral interest would, of course, resemble a royalty interest except the owner of it would be required to consent to leases. There might be instances where the royalty owner was intended to have executive rights. Requiring a royalty owner to consent to a lease would eliminate the possibility of executive abuse. To achieve this end, however, a royalty interest should be directly created with the addition of the following: "Grantee shall have no right to participate in bonuses and rentals under existing or future leases, they being reserved exclusively to the grantor. But grantee, his heirs and assigns shall have the right to join in the execution of any lease and no lease shall be valid without his joinder." n444

§ 49.20(h) The Confused Situation in Oklahoma.

Oklahoma has had great difficulty with the mineral/royalty distinction. This is partly because its courts find the term "royalty" to be ambiguous. They note that parties use the word both in the technical sense and also to refer to all the benefits that accrue to a mineral owner. n445 No brief summary can possibly be definitive and eliminate the need for individual research, but the following provides the general contours of Oklahoma's Byzantine jurisprudence.

If one encounters the phraseology "royalty" or "oil and gas produced and saved" without added rights, a royalty interest may be created. Although the courts do not always articulate these rationales, two important variables help determine whether a royalty will result: 1) whether the amount of production assigned to the interest is certain; and 2) whether a lease is in existence at the time of the transaction. If the percentage of gross production is certain, a cost-free share of gross production or royalty is more likely to result regardless of whether or not a lease is outstanding at the time of the grant. In other words, the following grants or reservations most likely will create a royalty: "a 1/16 royalty," "1/16 of the oil and gas produced or saved," or "1/2 of the normal 1/8 royalty." n446 If additional rights are added to the grant, however, a mineral interest may result. n447

The result may differ if the grant or reservation is phrased in terms of a percentage or fraction "of royalty." The Oklahoma courts have found ambiguity unless the land was currently under lease. n448 Without the ability to refer to a lease for definition, there is no way to gauge the amount of gross production adhering to the interest. Therefore, a grant or reservation of "1/2 of royalty" generally will create a mineral interest if no lease existed. n449 The owner will share not only in royalties, but also in bonus and rentals and will have leasing and development rights. The same terminology will create a true royalty if the land was under lease at the time of conveyance. n450 In this circumstance, the amount of gross production adhering to the interest is "made certain" by reference to the lease. Despite what appears to be general rules, however, there are cases that do not fit the mold.

Oklahoma also has examined the reverse problem, that is, when language begins as a mineral interest and then removes

attributes of the estate. Oklahoma appears to align with the "non-participating mineral interest" interpretation for deeds such as the following: the grantor grants "1/16 of the oil and gas in, on, and under the land, but the grantor reserves all right to bonus, rental, and the exclusive right to ease." n451 However, a royalty results if the grant reads "1/16 of the oil and gas produced, but the grantor reserves all right to bonus, rental, and the exclusive right to lease." n452 Because Oklahoma reads the phrase "oil and gas produced" as a royalty, the result would probably be the same without the reservation of lease rights. n453

§ 49.20(i) Drafting Suggestions.

In addition to the specific comments made above, generally the drafter should be concise and clear on the rights to be conveyed or reserved and the consequences of the choices. A form should not be elected and then modified to meet the desires of the parties. The desires of the parties should be ascertained and met with specific drafting.

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.21

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.21 Conveyancing Problem: Fractional Interests.

[Go To Supp]

In most jurisdictions, if a person conveys an undivided interest in minerals to another, a tenancy in common is created. In addition to the problems for development that co-tenancies may present, n454 conveyances of fractional interests create interpretive problems. These generally involve questions of quantity.

§ 49.21(a) Mineral Acres and Royalty Acres.

A simple method of conveying an undivided interest in the minerals in a tract is to use a fraction or percentage. In other words, the grantor could grant 1/4 (or 25%) of the minerals in and under certain described property. The grantee would receive this fractional interest in all the described property, regardless of the actual acreage in the tract. From practical standpoint, this means 25% of all proceeds would be payable to the grantee. Other manners of description, however, are holdovers from the past and can complicate how to distribute proceeds.

Fractional conveyances also have been described in terms of "minral acres." If a grantor desired to convey 1/4 of the grantor's minerals and the grantor believed the tract's acreage to be 20 acres, such a grant may be of "5 mineral acres" in the described land. If the tract's acreage was judged to be 160 acres, the grant would read "40 mineral acres." In other words, minerals in sufficient acreage would be given to enable that number as a numerator to create the desired fraction when the tract's acreage is the denominator.

Unfortunately, if the tract has more or less acreage than presumed, the fractional interest will differ. n455 For example, if the 20 acre tract actually contains 21 acres, the grantee will only receive 5/21 or 23.8% of proceeds. Conversely, if the acreage is less than 20 acres, the grantee will receive a higher percentage of the minerals and therefore of proceeds from development. Therefore, this phraseology may be useful as a way to protect the grantee from acreage shortage if the acreage amount is questionable. n456 Nevertheless, it will be difficult for an oil and gas company to ascertain from the record whom should be paid what. Because of these difficulties, current drafters should avoid use of this terminology and if possible and not cost prohibitive, accurate surveys should be performed coupled with a correction instrument for past conveyances.

A similar but even greater difficulty arises with conveyances of "royalty acres." For example, for the 20-acre tract, the grantor might convey "5 royalty acres." This would indicate a cost-free interest but would not answer how great a cost-free interest is created. Two possible constructions exist: 5 royalty acres in a 20 acre tract could create a 25% royalty, giving 25% of gross production, or it could create 25% "of royalty," which would give the grantee 1/4 of any royalty reserved in any lease. One case held that the latter interpretation was correct, n457 but there is no way to predict what other courts might do. n458 In addition to this problem from the use of "royalty acres," if the tract acreage differs from what was expected, the percentages would also vary as is case with mineral acres. Therefore, drafters should avoid royalty acre descriptions if possible.

Finally, drafters should avoid appending a mineral or royalty acre descriptions to a fractional description. For example, some deeds involving a 20 acre tract might state that an undivided 1/4 interest in the minerals in and under the land is being conveyed, but continue with "It is my intent to convey 5 mineral acres." Again, difficulties arise in putting the percentage of proceeds that would be allocated if the acreage differs from the presumed 20 acres. Although some courts have ignored the mineral acres language as surplusage, n459 other courts found the mineral acres limited the grant if there were more acres n460 or increased the percentage ownership going to the grantee if the grantor owned less acreage. n461 Others construed the deed against the drafter. n462

or
(royalty w/1 acre) and (fraction w/1 share w/15 proceed or production or royalty)

§ 49.21(b) Reservation of Fractional Interest When Grantor Conveys an Undivided Interest: Double Fraction Problem.

A double fraction problem can occur when the grantor either 1) initially owns a fractional interest, or 2) conveys a fractional interest and then reserves a fractional interest. The question is whether the fractional interest conveyed or reserved is a fraction of the whole mineral interest or a lesser interest.

For an example of the first situation, consider the following. A grantor owns an undivided 1/2 interest in the minerals in and under § 1 and conveys one of the following: a) an undivided 1/2 interest in the minerals in and under § 1, or b) all my interest in § 1. In both instances, grantee would receive an undivided 1/2 interest in the minerals. There is no question of a double fraction. If, however, the grantor conveyed either: a) an undivided 1/2 of the grantor's interest in § 1, or b) an undivided 1/2 of an undivided 1/2 interest in all the minerals in and under § 1, the grantee would receive an undivided 1/4 of the minerals. The fractional interest conveyed is multiplied by the fraction representing the grantor's interest. In a different situation, however, no multiplication takes place. When a deed refers to "1/4 of the minerals *out of* the grantor's 1/2 mineral interests," the phrase "out of" merely indicates a source for the interest; 1/4 of the minerals pass, not 1/8. n463

The second situation raises the question of whether a reservation by a grantor is proportional to the grantor's interest in the minerals or to the entire mineral estate. For example: a grantor owns an undivided interest in the minerals in and under § 1 and conveys an undivided 1/2 interest in the minerals in and under § 1, but reserves either a) an undivided 1/4 interest in the minerals in and under the *land conveyed* (or the land described and conveyed), or b) an undivided 1/4 interest in the minerals in and under the *land described*. In the first instance, the Texas courts will find the grantor reserved 1/4 of 1/2. The reservation is a fraction of the grantor's estate that was conveyed; the grantee thus receives 3/8 of the minerals. n464 In the second instance, however, the grantor will have reserved a full 1/4 interest in the minerals and the grantee will receive a 1/4 undivided interest. The fractional reservation is a fraction of the entire mineral estate because the term "land described" is interpreted to mean the physical land, not the interest owned by the grantor. n465

Despite the artificial nature of the distinction, courts hesitate to abandon it because these rules have been long-standing. n466

§ 49.21(c) Reservation of Fractional Interest Which Creates Overconveyance: *Duhig* Problem.

§ 49.21(c)(1) Statement of Problem.

The overconveyance problem arises when a grantor only owns a partial interest in minerals and executes a deed with two attributes: 1) it does not acknowledge the outstanding interest and 2) it contains a reservation by the grantor of an undivided interest. For example, the owner of an undivided 1/2 interest in the minerals simply conveys "§ 1." This grant would include all the surface and the minerals, but the deed continues as follows: "but reserves to the grantor an undivided 1/2 interest in the minerals in and under § 1." The granting clause purports to grant 100% of the minerals, from which 50% would be reserved. By simple subtraction, the grantee would expect to receive 50%. Because the grantor only owns 50%, to give credit to both the grant and the reservation would be impossible; an overconveyance results. These facts, in a simplified form, are the facts of the famous Duhig v. PeaveyMoore Lumber Co. case. n467

Before examining how the case resolved the issue, it must be emphasized that if the grant acknowledges the outstanding interest, there will be no "overconveyance" and no "*Duhig*" problem. For example, no problem exists if the example above conveyed "§ 1, subject to a previously reserved undivided 1/2 interest in the minerals and further reserving to grantors an undivided 1/2 interest in the minerals." n468 The grantor would retain the 1/2 mineral interest and the grantee would receive the surface and no minerals. Similarly, if the outstanding interest was an undivided 1/4, there would be no overconveyance in either of the following two grants: a) "an undivided 3/4 interest in the minerals in and under § 1, but reserving unto the grantor an undivided 1/4 interest in the minerals;" or b) "all the minerals in and under § 1, subject to a previously reserved undivided 1/4 interest in the minerals and further reserving to grantors an undivided 1/4 interest in the minerals." After both these grants, the grantee would have 1/2 the minerals and the grantor would retain 1/4.

Sometimes, a deed tries to achieve a similar result by referring to an earlier deed after a metes and bounds description. Some courts have construed the second deed to transfer a limited interest if the prior deed described an outstanding interest, but often a reference to a prior deed is simply to confirm a legal description by more firmly establishing its boundaries and the reference will state this purpose. This type of incorporation by reference will not limit the current deed's granting clause. When the second deed, however, refers to a prior deed and states the metes and bounds description and adds "being the same land conveyed in deed executed by Mr. X," some cases limit the current granting clause to the quantum of interest that passed in the deed incorporated by reference. n469 Courts similarly differ on whether a reference back to another deed "for all purposes" would limit the quantum passing in the current deed to that which passed in the prior. n470

§ 49.21(c)(2) Resolution of Problem: Estoppel By Deed.

In the classic overconveyance situation, the *Duhig* court held that the grantee took 50% of the minerals and the grantor retained no minerals. n471 Two explanations for the result are given. The first, which was the author of the *Duhig* opinion's personal explanation, was that as a matter of construction, only a 50% grant was intended. The reservation was merely a withdrawal of the unowned minerals from the conveyance. The majority of the court asserted a more complex analysis. n472

The majority looked at the amount the deed purported to warrant. The granting clause seemingly gave 100% of the minerals, but the reservation of the 1/2 mineral interest would have excepted that from the warranty. The intended conveyance was, therefore, of a 50% interest, but the majority said that the reservation of 50% was also intended. At the moment the reservation is given effect, however, the warranty to the grantee is breached. The normal remedy for a breach of warranty is damages, but here the grantor has an interest which, if given to the grantee, would make the

grantee whole. The majority, therefore, used a variant of after acquired title to say that the grantor is estopped from asserting the reservation. Therefore, the grantee receives as much as possible from the grantor. n473

The resolution is a technical estoppel, not an estoppel *in pais*. Even if the grantee knew of the outstanding interest, the *Duhig* doctrine will apply. n474 In fact, in most instances, at least constructive knowledge will exist. North Dakota at one point seemingly rejected *Duhig* when the grantee had constructive or actual knowledge of the interest. n475 It backpedaled from this position. *Duhig* would only be inapplicable if the grantee owned the outstanding interest. n476

North Dakota's final position is correct if the *Duhig* doctrine is meant to resolve title questions for remote grantors and grantees. Certainty of title requires matters to be resolved from the county records. n477 The only instance of actual knowledge of an outstanding interest on the part of the grantee that can be documented from the county records would be when the grantee owned that interest. Therefore, for title certainty, the rule in the *Duhig* case should be fairly mechanically applied. In essence, the grantee should receive what was warranted, computed as the quantum in the granting clause minus what was expressly reserved.

Obviously, giving this amount to the grantee would overcompensate the grantee who knew of the outstanding interest and bargained based on that knowledge. It would obviously disappoint the grantor who believed that minerals were being reserved. As between the parties to the deed, however, if an error has occurred, the proper remedy is reformation. n478 The rule in *Duhig* does not forbid equitable results between the parties; it is a rule of construction for title certainty. As between successors in interest to the grantor and the grantee, the grantee's successors prevail and receive title, rather than the traditional breach of warranty remedy. The reason title is given is that the traditional remedy is damages, which are limited to the consideration paid. With the highly speculative nature of minerals, this would be an unsatisfactory remedy, especially for a remote grantee after the value of the minerals had been proven. Under *Duhig*, any potential loss from an over conveyance is allocated to the grantor. The rule in *Duhig* has been adopted in numerous jurisdictions. n479

§ 49.21(c)(3) When *Duhig* Is Used.

The next question is whether or not the *Duhig* doctrine should apply in situations that are distinguishable from its parent case. *Duhig* involved a warranty deed and an attempted reservation of a mineral interest identical to the outstanding interest. Fact patterns may differ both in the type of instrument involved and the types of interests outstanding and reserved.

First, courts have differed on the importance of a warranty. If the jurisdiction emphasizes the contractual nature of the case and breach of warranty theory, the rule will not apply to quitclaim deeds. n480 However, if the theory is simply "estoppel by deed," which requires a grantor to stand by a conveyance and not to deny what has been conveyed, the opposite conclusion may result and the rule be applied to quitclaim deeds. n481

Second, the nature of the interest outstanding and reserved may influence results. The rule has not been limited to when these interests are identical, but the courts have been more apt to use the rule when the difference between the outstanding and reserved interests was merely in quantum. For example, consider an outstanding 1/2 interest and a conveyance of "the minerals in § 1, reserving unto the grantor an undivided 1/4 interest in the minerals." The amount the grantee would anticipate is an undivided 3/4 interest. The rule would give the grantee 1/2 the minerals and a cause of action for breach of warranty for the remaining 1/4 interest. Similarly, if in the preceding conveyance the outstanding interest was 1/8 and the grantor reserved 1/4 (which totals 3/8), the grantee would receive 3/4 of the minerals and the grantor would be able to retain 1/8 of the minerals. The outstanding 1/8 would be subtracted from the grantor's attempted reservation of 1/4.

Third, *Duhig* involved an outstanding mineral interest and an attempt to reserve a mineral interest. Therefore, courts had to determine if it should be used when other types of mineral rights are involved. *Duhig* has and definitely should be

applied if there is an outstanding non-participating royalty interest and the grantor attempts to reserve a non-participating royalty interest. n482 It is less obvious that *Duhig* should apply to give the grantee a grantor's reserved royalty interest when what is outstanding is a mineral interest. This requires elaboration.

For example, if the grantor only owned an undivided 1/2 mineral interest, but conveyed "§ 1, reserving an 1/16 royalty," the grantee would anticipate receiving 100% of the mineral interest subject to a 1/16 royalty. The grantee's royalty would not necessarily be equivalent to that adhering to a simple undivided 1/2 mineral interest, which is the most the grantee could actually receive. Under the anticipated grant, the grantee's royalty share could have exceeded that adhering to an undivided 1/2 interest if a lease was executed with a royalty greater than 1/8 because only 1/16 would be owed to another. The grantee would keep all of the royalty in excess of 1/8. Giving the grantee the grantor's reserved 1/16 royalty only will partially compensate for the missing mineral interest when royalty is considered. Additionally, it will not give the grantee the other attributes appurtenant to a mineral interest, such as bonus or rental which the outstanding interest has. Nevertheless, courts have applied *Duhig* and given the interest to the grantee. n483 Similarly, if the outstanding interest was a non-participating royalty, *Duhig* has been used to force the grantor's interest to bear all the burden of the outstanding royalty rather than apportioning the burden between the grantor and grantee. n484

The *Duhig* doctrine has been rejected in certain situations. The most important rejection was for leaseholds. The lessor's royalty will not be reduced under this theory if the lessor does not have the full interest purportedly leased. n485 *Duhig* is also not used to force substitution of rights in different lands. If there was a breach of warranty as to a portion of a tract, extra rights cannot be given in another tract to satisfy the breach. n486

FOOTNOTES:
(n1)Footnote 454. *See* § 49.05, *supra*.

(n2)Footnote 455. This situation is not one of failure of title, but occurs because the acreage is different than anticipated because of poor surveying or natural phenomena such as accretion and deliction. When there has been a failure of title, some courts have changed the normal rule that damages are the sole remedy for a breach of warranty. For example, if the grantor only owned 10 of the 20 acres, the 5 mineral acres would apply to the 10 owned acres, giving the grantee 50% of those minerals. *Daniel v. Allen, 129 S.W.2d 392 (Tex. Civ. App. 1939).* Traditional rules would have given the grantee a damage claim for 2.5 mineral acres. *See also Pursue Energy Corp. v. Perkins, 558 So. 2d 349 (Miss. 1990)* (grantor owned less undivided interest in one tract than was supposed; grantee gets larger interest in second tract subject to the deed). For support of the traditional rule, especially for larger tracts on which more than one well could have been drilled, *see* Richard W. Hemingway, The Law of Oil and Gas § 3.1 (2d ed. 1983).

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.22

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.22 Conveyancing Problem: Conveyances by Lessor of Leased Property.

[Go To Supp]

In the next subsections, the factual patterns involve a lessor dealing with an oil and gas estate after it has already been leased. The lessor either conveys the mineral estate or executes a second lease. Many of these problems involve transfer of a portion of the mineral estate in severalty (i.e., by tract) rather than transfer of an undivided interest in the minerals.

§ 49.22(a) Apportionment of Rentals.

Absent any other agreement between the parties to the deed or leasehold, if a leasehold exists and the lessor then subdivides the tract subject to the lease by conveying a portion in severalty, the universal rule is that rental payments will be apportioned. n487 In other words, each owner would be entitled to rentals in the proportion that their tract bears to the total lease acreage. For example, if delay rentals of $320 were due for a 160 acre tract, the owner of 40 acres would be entitled to 40/160 or 1/4 of the rentals, being $80.

§ 49.22(b) Apportionment or Non-Apportionment of Royalties.

Often, after a tract of land has been leased, the owner of the minerals subdivides the tract by conveying a portion of it in severalty. At this point, it must be determined whether royalties should be apportioned or only be paid to the party owning the tract that contains the well. Absent an agreement between the parties to the deed or leasehold, the majority rule is that of non-apportionment. n488 In order to obtain royalties, a party must own the producing tract. In absence of forced pooling, this may create hardships if spacing regulations forbid drilling on some tracts. A minority of jurisdictions choose apportionment as the rule in face of silence by the parties. n489 In all jurisdictions, parties may expressly adopt one or the other rule to achieve desired ends.

§ 49.22(c) Conveyance Made Expressly "Subject to" Outstanding Lease.

§ 49.22(c)(1) Purpose of "Subject to" Clause.

When an interest is conveyed in minerals already under lease, the grantor will generally state in the deed that the conveyance is "subject to" the existing lease. In most jurisdictions, lease proceeds always would be transferred without any express assignment. n490 Therefore, most cases find the purpose of the "Subject to" Clause to be protection of the grantor from a breach of warranty. n491 There is some precedent, however, that grants a greater import to the words; under it, the mere presence of the words "subject to" the lease implies the parties intend apportionment of royalties. n492

§ 49.22(c)(2) "Covers and Includes" Clause Creating "Two Grants" -- Inconsistency Between Land Granted and Land Subject to Lease.

In addition to acknowledging that a conveyance is "subject" to a lease, a conveyance often continues and states that it "covers and includes" proceeds of the existing lease. This clause developed because, under early Texas case law now rejected, n493 the proceeds of an existing lease would not automatically pass to the grantee. The "covers and includes" language has been interpreted as creating a "second grant," one which may either implement or destroy the intention of the parties about how they intend to share proceeds.

In Hoffman v. Magnolia Petroleum Co., n494 the grantee was conveyed an undivided 1/2 interest in the oil and gas in and under a 90 acre tract. This tract was part of a leasehold containing 320 acres. The instrument continued: "It is understood and agreed that this sale is made subject to said lease but covers and includes one-half of all the oil and gas rental or royalty due to be paid under the terms of said lease." The court held that the grantee received 1/2 of the royalty payable from a well located anywhere on the leasehold. A "second grant" separate from the mineral interest in the 90 acres was made, which was a grant of lease proceeds. This grant affected the entire leasehold because only one lease existed. n495

Most likely this result was not what the parties intended. The grantee received one-half of royalties from wells throughout the leasehold, which is a form of apportionment. But if the parties had desired to contractually adopt the apportionment rule, which would allow the grantee to share in royalties wherever wells were drilled, the share of proceeds going to the grantee should have reflected the proportion the 90 acres bore to the 320-acre leasehold. The amount should have been 90/320, adjusted to show the grantee only received an undivided 1/2 interest, or 9/64 of the proceeds. If, however, the parties had desired to follow the rule of non-apportionment, the clause should have read: "It is understood and agreed that this sale is made subject to said lease but covers and includes one-half of all the oil and gas rental or royalty due to be paid under the terms of said lease *insofar as said lease covers all or any part of the land described in this deed*." n496 Without the underscored language, the two-grant theory gave the grantee a second grant of lease proceeds regardless of the land generating the proceeds.

§ 49.22(c)(3) "Covers and Includes" Clause Creating "Two Grants" -- Inconsistency Between Fractional Mineral Interest Conveyed and Share of Lease Proceeds Granted.

A second possibility for a "two-grant theory" occurs not because of an inconsistency between lands subject to a lease and lands conveyed, but because a fractional mineral interest is conveyed in leased lands and the "covers and includes" language uses a different fraction to describe the share of lease proceeds the grantee is to receive. For example, a party wishes to purchase 1/2 of a lessor's interest in minerals. Because a lease exists with a 1/8 royalty, the lessor erroneously believes that the lessor's interest is a 1/8 interest, rather than recognizing that the lessor owns all of the minerals subject to a lease. Therefore, the mistaken lessor's conveyance reads: "an undivided 1/16 interest in the minerals in and under § 1,... but covers and includes 1/2 of all the oil and gas rental or royalty due to be paid under the terms of said lease." The two fractions, of course, grant divergent amounts of gross production. Employing the "two-grant" rationale, courts have found that a permanent 1/16 undivided interest was conveyed, together with a grant of proceeds equal to 1/2, which grant will last through the existence of the specified lease. n497 Thereafter, the grantee will receive only the proceeds attributable to a 1/16 interest, which would be 1/16 of lease proceeds. If the deed continues with a "future interest" clause, however, the result may be clouded.

§ 49.22(c)(4) Impact of "Future Interest Clause."

Two deed clauses and their interrelationship have been discussed: 1) a granting clause that conveys a specified fractional mineral interest and 2) a "covers and includes" clause that deals with proceeds of the lease to which the conveyance is subject. Some deeds add a third clause, which deals with how proceeds and rights will be held after the existing lease ends. This is referred to a "future interest clause." Naturally, all these fractions should be uniform. The reversionary interest found in the "future interest clause" should conform to the earlier granted mineral interest.

Inconsistent fractions in these clauses, however, create interpretive problems. By way of illustration, the previous example may be restated and continued, making the conveyance:

> an undivided 1/16 interest in the minerals in and under § 1, (*granting clause*) ... but covers and includes 1/2 of all the oil and gas rental or royalty due to be paid under the terms of said lease," (*"covers and includes" or "subject to" clause*). In the event said lease is forfeited, the lease interests and all future rentals on said land ... shall be owned jointly ... each owning a 1/2 interest in all oil, gas and other minerals (*Future Interest Clause*).

With this addition, another inconsistency exists: the undivided interest, which should govern the reversion, differs from the fraction in the Future Interest Clause. In this regard, three lines of decisions arose.

Generally, courts refrain from finding the deeds ambiguous and using parole evidence to ascertain intent. n498 Instead, one approach reconciles the interests within the four corners of the deed. A second approach employs the "two-grant" theory to the "third grant," allowing each clause to independently operate. n499 Finally, a court may give one of the clauses controlling weight. The fate of such deeds in Texas is illustrative of the confusion.

Texas, in Alford v. Krum, n500 adopted a bright-line rule that seemingly would end all doubts. The case held that the granting clause would take precedence and overrule any inconsistent clause. Therefore, in the example, the 1/16 mineral interest would control. The Future Interest Clause would not be given independent life because to do so would be "repugnant to the grant." n501 Despite its clarity, the rule was criticized and did not survive. In two cases decided on the same day, the Texas Supreme Court both overruled and distinguished Alford v. Krum.

Jupiter v. Snow n502 was the case where the court found *Alford v. Krum* inapplicable to the deed. Freed from the bright-line rule, the court held that the Future Interest Clause could and did convey an interest in grantor's possibility of reverter, which interest differed from the other interests conveyed. Despite the refusal to apply *Alford v. Krum*, the facts of *Jupiter v. Snow* were close to those found in the earlier case. n503 Luckel v. White, n504 decided the same day, also had similar facts. n505 Rather than distinguishing the case from *Alford v. Krum*, however, the court held that under the "four corners rule," all clauses of a deed must be examined to ascertain intent for a proper harmonizing of the deed. Labels such as "granting" or "habendum" attached to clauses should not control clear intent. Therefore, the Supreme Court overruled *Alford v. Krum*. n506

It appears that Texas has firmly adopted the "three-grant theory," or at least has aligned with the jurisdictions that attempt to find the parties' intent. If any question might arise about retroactive "overruling" and possible reliance on *Alford v. Krum*, the "repugnant to the grant" theory was greatly limited by *Jupiter v. Snow* to make it easy to distinguish *Alford v. Krum* and its "bright-line rule."

§ 49.22(c)(5) Ratification and Revivor.

If a conveyance is made "subject to" a specific lease or deed, and that lease or deed was invalid or had terminated, some precedent would make the reference to the lease validate the prior instrument. Two theories are involved: ratification and revivor. Courts often do not distinguish the two. n507 The "subject to" clause acting as a ratification is less

offensive than construing it as a revivor. n508

Ratification basically involves adopting the acts of another or reaffirming a lease or deed that was technically invalid. For example, a cotenant who has not joined in a lease executed by another cotenant may ratify the lease and join in its terms. A deed or lease may be invalid because of a defective acknowledgement or description. A subsequent acknowledgment of the technically defective instrument or the cotenant's act may truly be evidence of intent to ratify the lease and adopt it.

Revivor, however, deals with breathing new life into an initially effective interest that has ended by its own terms. Sometimes a lessor actually may not know the status of an oil and gas lease, which may be dependent on whether there is production in paying quantities. A casual reference to the lease in itself should not be considered a regrant of the interest. n509

Nevertheless, to avoid such an impact, the "subject to" clause should be limited. If a specific lease or deed is mentioned, the conveyance should be subject to it "to the extent said lease (deed or reservation) is valid." A general clause should read "This deed is subject to any valid oil and gas lease (or deed or reservation) of record."

LEXIS: (subject w/1 to w/15 lease!) w/15 oil or gas w/50 ratify or ratification or revive or revivor

§ 49.22(d) Entirety Clause.

The entirety clause is part of an oil and gas lease, but it is discussed here because it may impact on the lessor's conveyances of the leased property. An entirety clause allows the lessee to treat the leased property as one unit despite subdivisions by the lessor. It specifies that the lessee will pay royalties based on the apportionment rule. n510 The provision is for the administrative convenience of the lessee because each party will share in production from each well in the same amount. Most cases state that a subsequent deed cannot affect this prearranged plan. The lessor, therefore, cannot specify that royalties should be paid on a non-apportioned basis, that is, only to the owner of the tract on which a well is drilled. The entirety clause binds the lessor for the life of the lease. n511

§ 49.22(e) Topleasing.

"Topleasing" is the term employed when a lessor grants a second oil and gas lease while the mineral interest is already leased. n512 A toplease generally is granted towards the end of the existing lease's primary term; the toplessee is betting that production will not extend the lease into its secondary term. As such a "bet," the toplessee cannot avoid paying its agreed upon bonus by surrendering the toplease before the end of the primary term of the original lease. n513

Although the toplessee is often a third party, a lessee may "toplease" its own lease to assure that the land will remain leased even if its current lease expires. Because the lessee often has to agree to more onerous terms to assure the lock-up, a lessor will argue that the toplease is a novation and supersedes the existing lease. There is some support for this position. n514

Once a maligned practice, topleasing is now simply another business tool. Two potential problems should be avoided by careful drafting.

§ 49.22(e)(1) Obstruction.

The existing lessee may claim that by executing the toplease, the lessor is guilty of obstruction. Obstruction most frequently occurs when the lessor physically prevents operations, but the doctrine also may apply if the lessor wrongly

repudiates the lessee's title because the repudiation may make it unwise for the lessee to proceed. Although there is some support for the position that a toplease is obstruction, n515 other cases ignore the problem. n516 To attempt to avoid a claim of clouding the lessee's title, the toplease should be made expressly "subject to the existing lease, to the extent that it is valid."

COMPUTER-ASSISTED RESEARCH

LEXIS: topleas! or top-leas! w/50 obstruct!

§ 49.22(e)(2) Rule Against Perpetuities.

A poorly drafted toplease may be invalid under the Rule Against Perpetuities, but a properly drafted one will not violate the Rule. In Peveto v. Starkey, n517 a "top" term royalty deed was invalid because it was to "become effective only on the expiration of" the prior existing term royalty interest. Because the term royalty interest would extend "for so long as production" continued, there was no assurance the second interest would vest in time. If a toplease is to become effective on the expiration of the prior lease, it would have the same infirmity. An oil and gas lease also has the duration of a fee simple determinable and the future interest would vest too late. n518

To avoid the problem, the top lease should be drafted so that it becomes effective, if at all, within the proper time frame. For example, the toplease may state that it is subject to an existing lease and will become effective at the end of that lease, with the proviso that the toplease will automatically terminate "if such lease has not expired 21 years from the date hereof," or "1 year after the end of its primary term." n519 Alternatively, the toplease could be expressed as a present lease of the lessor's reversionary interest, which being subject to an existing lease, would vest in possession at its conclusion. A present interest with only possession deferred does not violate the Rule Against Perpetuities.

(n8)Footnote 494. *273 S.W. 828.* (Tex. Com. App. 1925).

(n9)Footnote 495. *Hoffman v. Magnolia Petr. Co., 273 S.W.2d 828 (Tex. Com. App. 1925).* The grant continued to state that should the lease end, then mineral rights "shall be owned jointly ..., each owning one-half interest in all oil, [and] gas ... in and upon said land." The court interpreted this to mean shared ownership in minerals in the 90 acres.

(n10)Footnote 496. Under current Texas law, no "covers and includes" clause would be required to reach this result because proceeds impliedly pass and Texas follows the majority rule of non-apportionment. This automatic passage would also be true in the other jurisdictions that follow the rule of non-apportionment.

(n11)Footnote 497. *Wood v. Sims, 273 S.W.2d 617 (Tex. 1954). See also Anadarko Petr. Co. v. Venable, 850 S.W.2d 302 (Ark. 1993).*

Concord Oil Co. v. Pennzoil Exploration & Prod. Co., 966 S.W.2d 451 (Tex. 1998) (a grant of a 1/96 interest in oil and gas was negated by a right to 1/12 of all rentals and royalties. The deed created only an interest in minerals as a single estate).

(n12)Footnote 498. *But see Heyen v. Hartneet, 679 P.2d 1152 (Kan. 1984)* (grant of undivided 1/16 interest and expression that grantee should receive 1/2 of proceeds "if such land is covered by a ... lease" ambiguous; undivided 1/2 interest based on evidence of intent and presumption to construe in favor of grantee).

(n13)Footnote 499. *Paddock v. Vasquez, 265 P.2d 121 (Cal. App. 1953).*

(n14)Footnote 500. *671 S.W.2d 870 (Tex. 1984).*

(n15)Footnote 501. In the actual case, the "covers and includes" clause referred to 1/16 of royalty, so the case was stronger that the parties intended a 1/16 mineral interest. The "bright line rule," however, was followed in later cases without this inconsistency in the "covers and includes" and "future interest" clauses.

(n16)Footnote 502. *819 S.W.2d 466 (Tex. 1991).*

(n17)Footnote 503. *819 S.W.2d 466 (Tex. 1991).* The concurring justice found the deeds to be near "twins." The deed contained: a grant of an undivided 1/16 interest in and to all oil and gas (*granting clause*); an acknowledgment that the land was currently leased and that "the grantee herein is to receive 1/16 part of the oil ... produced, that grantors now intend to convey 1/2 of the interest they now have in production under said lease" (subject to clause); and "in the event said lease is forfeited, ... the grantee is to have and hold an equal undivided 1/2 of all such minerals" (*future interest clause*).

(n18)Footnote 504. *819 S.W.2d 459 (Tex. 1991).*

(n19)Footnote 505. The issue litigated was whether the grantee would receive 1/4 of a lease royalty that exceeded 1/8 of if the grantee was limited to a fixed 1/32 royalty. The deed contained: 1) granting clause conveying undivided 1/32 royalty interest; 2) "subject to" clause acknowledging existing lease and grantee's right to 1/4 of royalties thereunder; and 3) "future lease" clause reserving grantor's executive rights and stating grantee would receive 1/4 of royalties under any lease.

(n20)Footnote 506. *819 S.W.2d 459 (Tex. 1991)* (future interest clause conveyed distinct present interest in grantor's possibility of reverter different from interest in current leases; grantee entitled to 1/4 of future royalties, but could not receive less than 1/32, which was fixed figure's purpose).

(n21)Footnote 507. For the distinction, *see Bradley v. Avery, 746 S.W.2d 341 (Tex. Civ. App. 1988)* (no revivor of expired lease by execution of division order that did not refer to lease).

(n22)Footnote 508. *See generally* P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 340.4 (Matthew Bender); and Ernest E. Smith, *The "Subject to" Clause, 30 Rocky Mtn. Min. L. Inst. 15-1 (1984).*

(n23)Footnote 509. *Cf. McVey v. Hill, 691 S.W.2d 67 (Tex. App. 1985), writ refused* n.r.e. (need clear language recognizing validity of expired instrument to be ratification).

Cf. Jolyne Corp. v. Michels, 446 S.E.2d 494 (W. Va. 1994) (reference in deed to prior lease not sufficient to estop grantor from claiming lease invalid; reservation or exception in favor of a stranger to title not effective).

(n24)Footnote 510. A typical clause reads: "If the leased premises are hereafter owned in severalty or in separate tracts, the premises, nevertheless, shall be developed and operated as an entirety, and royalties shall be paid to each separate owner in the proportion that the acreage owned by him bears to the entire leased acreage." *Gypsy Oil Co. v. Schonwald, 231 P. 864 (Okla. 1924).* Some forms add tracts "now owned in severalty or in separate tracts." This can create unexpected results. *Thomas Gilcrease Found. v. Stanolind Oil & Gas Co., 266 S.W.2d 850 (Tex. 1954)* (applies when parties initially have differing undivided interests in different tracts subject to lease). *See generally* Annotation, *Validity, Construction, and Application of Entirety Clause in Oil and Gas Lease, 48 A.L.R.3d 706 (1993).*

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.23

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.23 Involuntary Transfer of Interests in Oil and Gas: Adverse Possession.

[Go To Supp]

§ 49.23(a) Effect of Surface Possession.

§ 49.23(a)(1) No Severance of Minerals and Surface.

If there has been no severance of the oil and gas from the surface estate, the surface adverse possessor who meets all the requirements for adverse possession in the relevant jurisdiction will own the oil and gas. n520

§ 49.23(a)(2) Prior Severance of Minerals and Surface.

As with minerals generally, n521 if the oil and gas has been severed from the surface, adverse possession of the surface will not be sufficient to gain title to the oil and gas. n522 If only an undivided interest is severed, there is some precedent that surface possession would acquire the minerals the surface owner holds. n523 Moreover, any effective severance must occur before the adverse possessor enters. A later severance will not impact the adverse possessor's rights because an actual or constructive ouster is needed to interrupt the adverse possession. n524 The peculiarities of oil and gas require further examination of what constitutes a severance of it from the surface.

What creates a severance to some extent depends on a state's ownership theory. In an ownership in place state, a grant of a mineral interest or fee in oil and gas will obviously create a severance because the oil and gas is owned in place. Although not as clear conceptually, the same effect occurs in a non-ownership state. n525 Similarly, an oil and gas lease operates as a severance in states that view the lessee's interest as a corporeal estate in land. n526 Because the lessee's rights are similar in states that construe the lease as a *profit a prendre*, the lease should also be a severance in those jurisdictions, but there is some case law to the opposite effect. n527 In Louisiana, where a lease is a contractual right, no severance occurs. n528

Another question that might arise is the extent to which a lease severs interests. The better view is that the severance is not only of the lessee's working interest, but also severs the reversionary interest and royalty retained by the surface owner-lessor. n529 Under this view, surface possession would acquire none of the interest subject to the lease.

Additionally, non-participating royalties would not be subject to adverse possession by the surface possessor, but not because of severance theory. Non-possessory interests are not capable of being adversely possessed. n530 No mineral interests may be adversely possessed in Louisiana. n531

COMPUTER-ASSISTED RESEARCH

LEXIS: adverse possess! and (oil or gas or mineral) and (server or severance)

§ 49.23(a)(3) Merger.

If a severance has taken place, what will be the impact of a later reacquisition of the oil and gas estate by the surface owner? If the severance was by mineral deed, the surface owner may be considered to own two separate estates because the doctrine of merger traditionally does not operate on estates of equal dignity unless there is an intent to merge. n532 Therefore, an adverse possessor entering after the reacquisition would not acquire the minerals by surface possession. If, however, a leasehold ends, merger does occur and the adverse possessor entering thereafter may adversely possess both estates by surface activities.

COMPUTER-ASSISTED RESEARCH

LEXIS: adverse possess! and (oil or gas or mineral) and merge[*]

§ 49.23(b) Effect of Actual Possession of Minerals.

§ 49.23(b)(1) Acts of Possession.

As with all minerals, actual possession of the oil and gas for the requisite time period will be sufficient to adversely possess the oil and gas. n533 Actual production of oil and gas in a commercial manner will be required. n534 Mere execution of a lease is insufficient. n535 Additionally, cases have required the production to be on the tract, not on other lands, even if the tract was included in a production unit. n536

§ 49.23(b)(2) Rights Acquired: Color of Title.

Cases dealing with hard rock minerals have limited adverse possession to minerals loosened and mined. n537 By analogy, some cases limit the adverse possessor of oil and gas to the oil and gas producible from one well even if the adverse possessor was claiming under an instrument giving color of title to a specific tract. n538 Other cases, however, grant the adverse possessor rights to the extent purportedly granted in the color of title instrument. n539

§ 49.23(b)(3) Rights Acquired: No Color of Title.

When there is no instrument giving the adverse possessor color of title, statutory provisions in various jurisdictions may govern. It also has been argued that the possessor should get that which may be drained by the producing well. n540

CHAPTER 49 PETROLEUM AND PIPELINES
IV. Transfer of Interests in Oil and Gas: Conveyancing and Involuntary Transfers.

6-49 Thompson on Real Property, Thomas Editions § 49.24

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.24 Involuntary Transfers Through Non-Use: Dormant Mineral Acts, Marketable Title Acts, Abandonment, Prescription.

Generally, title to oil and gas, like title to any minerals, is not lost by mere non-use. For example, another must adversely use severed oil and gas for title to be transferred under adverse possession theory. Various statutory enactments may modify this and transfer title through non-use. These statutes include dormant mineral acts n541 and marketable title acts. n542 Other exceptions include the Louisiana doctrine of prescription, which limits the duration of non-used interests in oil and gas to ten years. n543 Three jurisdictions have enacted prescriptive statutes that create results similar to Louisiana. n544 Finally, in jurisdictions that deem a mineral interest to be incorporeal, it may be abandoned. Proof of abandonment requires, in addition to non-use, proof of an intent to abandon, which is difficult to prove. n545

CHAPTER 49 PETROLEUM AND PIPELINES
V. Leasing the Oil and Gas Property Interest.

6-49 Thompson on Real Property, Thomas Editions § 49.25

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.25 Evolution of Modern Lease Form.

The original leases for oil and gas had fixed terms, usually relatively long. n546 This arrangement satisfied neither lessors nor lessees. First, lessors objected because, unlike hard minerals that could always be recovered after a lease expires, neighbors could drain oil and gas during the lengthy term. Second, if there was production, the lessee had to give it up at the end of the term but, because the lessee often could remove casing, the lessor did not retain a producing well. Moreover, during the term, the lessor received no consideration without production. To combat some of these problems, "no term" leases emerged: the lessee would have the right each year to extend the lease by the payment of rentals even if the leasehold was not developed. "No term" leases were attacked on two grounds: they were illusory or violated the Rule Against Perpetuities. n547 Therefore, a combination of a fixed term and extended term emerged. The lease's term would be for the designated period of years and "so long thereafter" as oil or gas is produced. As detailed below, rental payment provisions were developed to defer drilling in the fixed period. n548

The modern form attempts to reconcile the competing interests of the lessor and the lessee. The lessee wants to control the pace of expensive development and to maintain the lease so long as it is either profitable to operate or has speculative value. The lessor, who does not bear the costs of exploration and production, desires quick production, which will generate royalties.

FOOTNOTES:
(n1)Footnote 546. CHAPTER 49 PETROLEUM AND PIPELINES
V. Leasing the Oil and Gas Property Interest.

6-49 Thompson on Real Property, Thomas Editions § 49.26

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.26 Nature of the Lease.

An oil and gas lease has elements of both a conveyance and a contract. n549 Like a conveyance, it grants rights to use property. Most jurisdictions consider the lease a conveyance for purposes of recording acts and determining the prerequisites to its validity. Unlike the typical deed, however, the parties to a lease are not in a deal that is resolved in a one time contact. They enter into a continuing relationship with contractual rights and duties. It is best, therefore, not to pigeon-hole the oil and gas lease in one or the other category because the lease's attributes change in different settings.

The nature of the lessee's interest in the lease similarly has been determined on a case by case basis in most jurisdictions. n550 Different statutory settings or other contextual situations result in different conclusions. Nevertheless, most jurisdictions label the lessee's interest in an oil and gas lease as a non-possessory interest in land or an incorporeal hereditament, namely a *profit a prendre*. n551 This is true in all non-ownership states. n552 Of the ownership jurisdictions, only three treat the interest as possessory, akin to a fee simple determinable. n553 Kansas, an ownership in place state, treats the lessee's interest as personal property. n554

FOOTNOTES:
(n1)Footnote 549. *Jolyne Corp. v. Michels, 446 S.E.2d 494 (W. Va. 1994)* (lease is both a conveyance and a contract).

(n2)Footnote 550. Similarly, the nature of the landowner's royalty is interpreted situationally. Annotation, *Oil and Gas Royalty as Real or Personal Property, 56 A.L.R.4th 539 (1987).*

(n3)Footnote 551. *See Shields v. Moffitt, 683 P.2d 530, 532 (Okla. 1984)* (oil and gas lease a "hybrid offspring of an intermarriage between real and personal property" described as "hydra-headed") and *Hinds v. Phillips Petr. Co., 591 P.2d 697 (Okla. 1979).*

(n4)Footnote 552. *See* § 49.02(c), *supra*.

CHAPTER 49 PETROLEUM AND PIPELINES
V. Leasing the Oil and Gas Property Interest.

6-49 Thompson on Real Property, Thomas Editions § 49.27

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.27 Requirements for an Effective Lease.

[Go To Supp]

Oil and gas leases are subject to the Statute of Frauds. n555 Therefore, they must be in writing and signed by the party to be charged. Additionally, the lease must adequately identify the parties to the lease and describe the property. To be operative, a lease must be delivered and accepted. Acknowledgement and recording is not a prerequisite to a lease's validity, but is necessary to protect the lessee from bona fide purchasers and to provide notice. n556 Consideration is not required except in Kansas n557 and Louisiana. Nevertheless, the custom is to pay a "bonus" to the lessor upon execution of the lease. Consideration is also advisable to protect the lessee under recording acts and to protect it from creditor's claims such as an allegation that the lease was a fraudulent conveyance.

FOOTNOTES:
(n1)Footnote 555. *EP Operating Co. v. MJC Energy Co., 883 S.W.2d 263 (Tex. App. 1994)* (sale of working interest in an oil and gas lease is sale of real property subject to the Statute of Frauds; equitable estoppel -- a reliance on a promise to execute a contract -- not applicable when the terms of that contract were not established); *Ogden v. Ogden, 643 So. 2d 245 (La. App. 1994)* (claim for profits from sale of oil and gas lease based on oral agreement not enforceable; agreements in regard to immovable real property must be in writing even if not seeking title), *writ denied, 648 So. 2d 1339 (La. 1995).*

(n2)Footnote 556. *Anson Corp. v. Oklahoma Corp. Comm'n, 839 P.2d 676 (Okla. App. 1992).*

(n3)Footnote 557. Unlike other jurisdictions, Kansas considers an oil and gas lease a contract, rather than a conveyance. Therefore, it will need consideration to be effective. *Brinkman v. Empire Gas & Fuel Co., 245 P. 107 (Kan. 1926).* The lease, however, is within the purview of recording statutes.

CHAPTER 49 PETROLEUM AND PIPELINES
V. Leasing the Oil and Gas Property Interest.

6-49 Thompson on Real Property, Thomas Editions § 49.28

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.28 Interpreting Leases.

A lease is construed pursuant to normal contract and conveyance rules, with some additional canons. n558 Because the lessee generally controls the lease terms, leases are often construed against the lessee. Nevertheless, at some points courts recognize that the lessee has made extensive investments and therefore a lease should be interpreted to preserve the investment. n559 Overall, a lease should be viewed and interpreted to encourage development for the mutual benefit of the lessor and lessee. Because of this mutuality, interpretive techniques applied to longterm or relational contracts are appropriate. n560

FOOTNOTES:
(n1)Footnote 558. *See generally* Bruce M. Kramer, *The Sisyphean Task of Interpreting Mineral Deeds and Leases! An Encyclopedia of Canons or Construction*, 24 Tex. L. Rev. (1993); Bruce M. CHAPTER 49 PETROLEUM AND PIPELINES
V. Leasing the Oil and Gas Property Interest.

6-49 Thompson on Real Property, Thomas Editions § 49.29

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.29 Parties to the Lease.

[Go To Supp]

§ 49.29(a) Necessary Parties.

A lease must come from the owners of the mineral interest, not surface or royalty owners. In addition to ascertaining who owns the mineral interest, the potential lessee must discover who has the executive interest relevant to that mineral interest. n561 Special requirements exist if the interest is subject to a life estate, trust, estate, or marital rights. n562

§ 49.29(b) Authority to Bind Parties.

When dealing with someone acting in a representative capacity two things must be reviewed: local law and the document, if any, creating the relationship. These sources of authority must be examined both at the time the lease is executed and thereafter whenever dealing with the representative. Although the representative may have been able to bind the property initially to a lease, the representative capacity may end. At that point, the representative could not deal with the property, for example, by accepting delay rentals or shut-in royalties.

§ 49.29(b)(1) Homestead Property and Property Subject to Claims by Spouses.

Marital property rules can create problems when leasing from married individuals. n563 A state's common-law and statutory regime could impact the rights gained from a spouse acting individually.

Under common-law dower and curtesy, a spouse had rights to real property the other spouse owned, which rights became operative upon the owning spouse's death. Although many states have either modified or rejected dower and curtsy, to the extent such rights exist, joinder of the non-owning spouse in any lease is advisable. A lease from only the owning spouse, however, is not invalid.

Joinder of both spouses is also advisable in states having other regimes. Some create rights to a "homestead" in particular property. n564 If a state has adopted the Uniform Probate Code provision allowing a spouse to take a forced share of a spouse's "augmented estate," obtaining both spouses' signatures may be even more important. Under this

precept, property conveyed by the decedent alone may have to be returned to the estate in certain circumstances. n565 Finally, community property rules may give a non-owning spouse rights when the property is not the separate property of the owning spouse. Arizona, California, Idaho, Louisiana, Nevada, New Mexico, Texas and Washington have community property regimes. Because of the complexity of rules determining separate ownership of property, joinder of both spouses is advisable in most community property states to assure rights if the property is categorized as community. Nevertheless, in some jurisdictions they are limited protections for bona fide purchasers and others. n566

COMPUTER-ASSISTED RESEARCH

LEXIS: (oil or gas w/2 leas!) w/50 homestead
or
(oil or gas w/2 leas!) w/50 (dower or curtesy)
or
(oil or gas w/2 leas!) w/50 community w/2 property

§ 49.29(b)(2) Property Under Estate or Trust Administration.

Generally, a trustee leasing property for oil and gas would be committing waste unless the instrument creating the trust or a state statute authorizes such leasing. The authorization may exist without express authority to execute oil and gas leases. A trust instrument generally will be read to authorize an oil and gas lease if it grants the trustee the power to sell the property. n567 There is, however, precedent to the contrary. n568 Additionally, a trustee authorized to "lease and manage" property may be able to lease for oil and gas under certain circumstances. n569 To supplement contractual authority and to expedite development, most oil and gas producing states have statutes allowing trustees to grant oil and gas leases. n570 The Uniform Trustees' Powers Act authorizes not only leasing, but expressly allows the trustee to enter into pooling and unitization agreements. n571 Most statutes also allow the lease to extend beyond the term of the trust, which is contrary to the common law of trusts. n572 Statutes may also govern the apportionment of proceeds among the beneficiaries. n573

In the case of a decedent's estate, executors of a testate estate similarly need authority from the will or statute to execute a lease. Some wills provide for oil and gas leasing. As with trusts, some cases imply the power to lease from the power to sell, but it is not necessarily the general rule. Naturally, administrators of intestate estates may only look to statute for leasing authority. Statutes in many oil producing states authorize both executors and personal representatives to execute oil and gas leases, but some of these statutes may not allow a lease to be effective beyond the period of administration unless production begins before the administration ends. n574 Generally, court confirmation is necessary. n575

COMPUTER-ASSISTED RESEARCH

LEXIS: oil or gas w/2 leas!) w/50 (authority or execute w/15 trustee or trust)
or
(oil or gas w/2 leas!) w/50 (authority or execute w/15 executor or representative)

§ 49.29(b)(3) Property of Minors or Incompetents.

Property of minors or incompetents generally cannot be leased without the appointment of an appropriate conservator or guardian. n576 Judicial approval may be needed. Without a statute specifically authorizing longer leases, a minor's guardian cannot execute a lease for a period beyond the child's minority. If there is production within that time, however, a lease may continue under its "so long thereafter" provision. A child reaching majority may also ratify leases that could otherwise be repudiated. A statute may be necessary to confirm a guardian's authorization of unitization or pooling. In the absence of such authority, unit or pooled production off the leasehold may not be sufficient to hold the lease if the minor so elects upon reaching majority.

COMPUTER-ASSISTED RESEARCH

LEXIS: oil or gas w/2 leas!) w/50 (authority or execute w/15 minor or guardian or child or children)

§ 49.29(b)(4) Property of Unascertainable Owners.

Future interests may include contingent rights for which no one may execute a lease because it is impossible to determine who will take the interest. To avoid the problem of unascertainable owners, statutes have been passed that allow for the leasing of future interests running to such parties. n577 These statutes generally set up a statutory trusteeship, which is subject to judicial control. n578

§ 49.29(b)(5) Property Owned by Native Americans.

Property owned by tribes or individual Native Americans generally may not be leased in the same manner as privately owned property. Tribal minerals may only be acquired through statutory routes, which require approval of the Secretary of the Interior. n579 Secretarial approval of leases of minerals owned by individual Native Americans is required if the lands are allotted or trust lands.

CHAPTER 49 PETROLEUM AND PIPELINES
V. Leasing the Oil and Gas Property Interest.

6-49 Thompson on Real Property, Thomas Editions § 49.31

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.31 Granting Clause.

[Go To Supp]

§ 49.31(a) Size of Interest Granted.

A lessor may not necessarily own the entire fee interest in the oil and gas. Nevertheless, oil and gas leases taken from undivided interest owners often purport to grant a lease on 100% of the minerals. Lessees seek such grants to avoid having some interests unleased if the lessor should own a different undivided interest than originally thought because of ambiguities in the chain of title, or from doctrines such as *Duhig*. n582 Proceeds of the lease are adjusted downward through the proportionate reduction clause. n583 Lessors under such leases may want to modify the warranty clause to avoid warranting title to that which they know they do not own. If the warranty is stricken or modified, the lessee may want to account for after-acquired title by having the lease "cover and include all interest in the described land now or hereinafter acquired."

§ 49.31(b) Substances Covered by Grant.

An oil and gas lease may simply grant rights to "all oil and gas" or it may add "other hydrocarbons" or "other minerals" to the grant. n584 As with other grants, what is included in the term "other minerals" is subject to dispute. The result in a leasing situation is not necessarily the same as when a mineral deed is interpreted, because a lease shows an immediate intent to develop minerals in a specific manner. n585 The doctrine of *ejusdem generis* is often used, but there are questions as to what minerals are "like" oil and gas. Possible "likenesses" include hydrocarbons, minerals produced in the oil and gas stream, or minerals producible by wells. n586

Additionally, questions may arise about what is either oil or gas. Cases have not limited "gas" to combustible natural gas but have included other gaseous products. n587 When oil is separately leased from gas, the dividing line between the two phases determines ownership and is not always clear. n588

§ 49.31(c) Land Covered by the Lease: "Mother Hubbard" Clause.

Because of possible survey inaccuracies, especially in Texas, leases often add a so-called "Mother Hubbard" or

"cover-all" clause. A typical clause is placed after the land description and reads as follows:

> This lease also covers and includes all land owned or claimed by lessor adjacent or contiguous to the land particularly described above, whether the same be in said survey or surveys or in adjacent surveys, although not included within the boundaries of the land particularly described above. n589

Its obvious use, for which judicial approval exists, is to claim for the lessee small parcels of land, n590 including those that may have been gained by adverse possession. n591 Courts have explained that the clause serves a public policy against separate ownership of small strips. n592 If, however, the lessor owns a larger tract adjacent or contiguous to the described lands, the applicability of the clause is questioned. Cases reject inclusion of extra land that approaches or exceeds the size of the particularly described land. n593 This is especially true if the existence of the tract was known at the time the lease was executed. n594 If there was an ambiguity apparent on the face of the lease, however, additional land could be included. n595

The operation of the Mother Hubbard Clause raises other questions. One is whether recording the lease will give notice to a purchaser of the land included in the operation of the clause, but not particularly described in the lease. Some of the sparse case law refuses to bind subsequent good faith purchasers. n596 The lessee should have required an amendatory description to put of record. n597

A second question relates to the effect inclusion of additional acreage will have on the lessee's duties. Because rental payments are often expressed on a per acre basis, additional land may make rental paid based on the described land inadequate. Therefore, the lessee should limit acreage for rental purposes to a stated acreage. n598

COMPUTER-ASSISTED RESEARCH

LEXIS: (mother hubbard or cover-all or cover all clause) w/50 (notice w/15 purchaser)
or
mother hubbard or cover-all or cover all clause

§ 49.31(d) Uses Permitted by the Grant.

An oil and gas lease generally grants the lessee the exclusive right to develop and produce the oil and gas. Rights to explore by seismographic means are included in the grant, but exploration rights may not be exclusive unless expressly made so in the grant. n599 The oil and gas lease also will impliedly give the lessee the right to use so much of the surface as may be reasonably necessary for exploration and production. n600 The common law easement for surface use, as modified by any relevant statute, may be further modified by lease terms. Rights may be either expanded or limited. To list some common examples of limitation, the lessor may require damages for growing crops, n601 burial of pipelines to certain depths, or location of wells away from improvements. The rights of the lessee may also be expanded from the common law rights of a mineral owner, but only if the lessor is also the surface owner. A common expansion is the express right to use the surface for development of minerals not only on the leased land, but also on land pooled or unitized with the leased land. n602

CHAPTER 49 PETROLEUM AND PIPELINES
VI. Habendum Clause: Duration.

6-49 Thompson on Real Property, Thomas Editions § 49.32

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.32 Primary Term Defined.

The habendum clause of a lease defines its term. A typical clause would read:

> Subject to other provisions herein contained, the term of this lease is for X years from this date (the "primary term") and so long thereafter as oil, gas, or other hydrocarbons are being produced from said land.

The primary term is the definite time period specified in the lease as a number of years. During this period, the lessee has the right, but not the obligation, to drill a well. n603 The lessee therefore may pace development.

FOOTNOTES:
(n1)Footnote 603. If the oil and gas are being drained by wells on adjoining lands, the lessee's duties may change. *See* § 49.58(a), *infra*.

CHAPTER 49 PETROLEUM AND PIPELINES
VI. Habendum Clause: Duration.

6-49 Thompson on Real Property, Thomas Editions § 49.33

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.33 Secondary Term Defined.

[Go To Supp]

The secondary term of an oil and gas lease is that period in which the lease is kept alive by production. It is the defeasible aspect of the lease: it will last "for so long as oil or gas is produced." Production, therefore, is necessary to propel a lease into the secondary term and necessary to maintain the lease in the secondary term. n604 In most jurisdictions, the habendum clause forms a special limitation on the estate; the lease term is not an interest subject to a condition or right of re-entry. Because the term has a special limitation, a lease terminates automatically at the end of the primary term or during the secondary term if there is no production. n605

Generally, the habendum clause itself requires production from the leased land, but other provisions of the lease may expand where production could occur. n606 Additionally, other provisions of the lease may provide for substitutes for production. These substitutes are of two types. They may define an activity as constructive production n607 or declare that, if certain circumstances happen, a lease will not cease. The latter types of provisions buy time to obtain production. n608 These savings clauses and other doctrines, such as the "temporary cessation" rule, operate to modify the harsh results of an automatic termination of a lease.

§ 49.33(a) Meaning of "Production."

§ 49.33(a)(1) Majority Rule.

Under the majority rule, production sufficient to propel a lease into its secondary term must be actual production in paying quantities. n609 Actual production means the hydrocarbons must be brought to the surface. n610 Because oil may be stored efficiently, it normally will be possible to produce it immediately even if the oil is not sold immediately. n611 Natural gas, however, cannot be stored easily. Once produced, it must be marketed through a pipeline. Therefore, in majority rule jurisdictions, production for gas means actual marketing of gas. For oil, actual severance of the oil without marketing may suffice in some jurisdictions.

§ 49.33(a)(2) Minority Rule.

The minority rule is often referred to as the "discovery rule," but this is slightly misleading. n612 Under it, production is present when there is a discovery of oil and gas in paying quantities, but the lessee must do more than simply have discovered the oil and gas. The lessee must employ reasonable diligence toward obtaining a market. A second, intertwined aspect of this requirement is that the lessee must find a market within a reasonable time. The appraisal of the reasonableness of the delay before marketing, however, is influenced by the diligence the lessee displayed. n613 Additionally, the lessee must have some reasonable likelihood of eventual marketing success to sustain the lease. n614 The minority rule recognizes that the oil and gas lease gives the lessee until the end of the primary term to drill. Of necessity, a time lag exists between drilling a well and marketing either oil or gas, although the time lag is more marked for gas, which requires an extensive infrastructure. n615

Because of its adoption of this rule, Oklahoma is more flexible than some other states in ascertaining whether or not a lease has terminated for failure to produce. The lease is not considered to automatically terminate if there is an interruption in paying quantities so long as the interruption does not extend for longer than is justifiable and reasonable under the circumstances. n616 Nevertheless, when the interruption in production is sufficient, the lease will end by its own terms without a court determination. n617

§ 49.33(a)(3) Variants and Special Circumstances.

Some case law suggests a variant of the two rules about the type of production required. Some jurisdictions apparently recognize the difference between oil and gas: the majority rule is followed for oil, but the minority rule is applied to gas. n618 Therefore, actual production is required for oil, but only discovery and reasonable marketing diligence for gas.

Additionally, some states that adopt the majority rule and require actual production modify this stance if the lease contains an operations clause. Such a clause allows the lessee to maintain the lease if operations are in progress at the end of the primary term. n619 Cases have interpreted this clause as indicating an intent to give the lessee a reasonable time after the drilling is completed to commence production. n620 Moreover, a lease in a majority rule state may expressly adopt the minority rule by stating the habendum clause will be satisfied if there is a well capable of production or if a discovery is made. n621

Finally, although it is almost universal to interpret a lease that merely requires "production" to mean that production must be in "paying quantities," n622 a lease may modify this rule. If a lease specifies how much production is necessary to satisfy the habendum clause, the delineation will prevail. n623 The lease language must be specific to change the general rule; references to "commercial quantities" may simply mean "paying quantities." n624 If a lease has a flat-rate royalty and a minimum rental, paying quantities might not be needed if the other sums are paid. n625

§ 49.33(b) How Much Production Is in "Paying Quantities."

Production in paying quantities generally requires a return to the lessee over production and marketing costs. n626 It is immaterial whether the lessee recovers the costs of initially drilling and equipping the well n627 or of lease acquisition. At the point of measuring whether paying quantities exist, these sums have already been spent and the question is whether the lessee should be able to maintain the lease after a sizeable investment. If the current costs of operating are less than the amount that may be realized from marketing, the lessee should be able to take this profit, no matter how small, in order to recoup at least some of the sums expended. n628

In ascertaining whether this litmus test of profitability is met, all income attributable to the working interest is included n629 and deductions are made for all out of pocket costs, such as labor, trucking, transportation, replacement and repair of equipment, production taxes, utilities, license fees, and maintenance of equipment. n630 These are actual and direct costs of continuing production. n631 Depreciation on the well itself is not counted, n632 but some jurisdictions count depreciation on the lifting equipment. n633 Other items such as overhead n634 are variously treated. If one well is

profitable and another not, the habendum clause is arguably satisfied even if the overall operation may be unprofitable. n635

Other definitions of the amount of production that suffices exist. In Kentucky, paying quantities simply means production that provides the lessor with royalties sufficient to compensate for the inconvenience of the lessee's occupation and operations. n636 Louisiana had required not only paying quantities for the lessee, but also that the production provide adequate consideration to the lessor. n637 Current Louisiana law only looks to the amount of royalties to determine if the lessee is operating prudently or out of improper motives. n638

§ 49.33(c) Marginal Wells: Period in Which to Test Paying Quantities.

If a well is marginal, a lease does not terminate as soon as a loss is shown. With marginal wells, the operative question has been defined in Clifton v. Koontz n639 as "whether or not under all the relevant circumstances a reasonably prudent operator would, for the purpose of making a profit and not merely for speculation, continue to operate a well in the manner in which the well in question was operated." n640 Under this and similar approaches, whether a lease terminates for failure to produce in paying quantities depends on all surrounding facts and circumstances. These include why production is low, whether past production was profitable, and what prospects exist for future production. n641 Actions that negate speculation and indicate reasonable holding include attempts to rework the lease n642 or to respond to regulatory change. n643 Some states, however, refuse to consider the good faith of the operator in making paying quantities determinations and require only objective proof. n644

In determining paying quantities under any test, courts do not look at any specific time frame. That is, there is no rule that a lease must show a profit computed on a yearly, monthly, or quarterly basis. n645 Part of the reason for this is because the oil and gas industry is subject to seasonal production fluctuations and price instability. The reasonably prudent operator must have sufficient time to gather and assess data to determine whether to abandon or continue working the lease. As a rule of thumb, however, courts will consider a minimum of one year's information. n646

§ 49.33(d) Equitable Defenses: Estoppel and Waiver.

Generally, a lease will terminate if the lessee fails to produce in paying quantities regardless of the actions of the lessor. After a lease could be deemed terminated, signing a division order or accepting royalties will not estop the lessor from claiming the lease had ended. n647 However, if the lessee stands by after an event that could terminate the lease and permits the lessee to expend large sums, estoppel may be claimed, but the defense will meet with limited success. n648 Cases differ on whether there is a duty to inform the lessees of purported invalidity and therefore on whether silence in the face of development will estop the lessor. n649

The lessee will prevail, however, if the lessor actively obstructed the lessee and prevented operations. The lessor will be estopped from asserting the lease's termination. n650 The filing of a lawsuit challenging the validity of the lease will also stay the habendum clause's effect because a prudent operator would not drill under such a cloud. n651 Unequivocable notice that a lessor considers a lease invalid short of filing suit may have the same effect. The lessee may, however, be obligated to pay delay rentals during this time. n652

§ 49.33(e) "Temporary Cessation of Production."

The automatic nature of a lease's termination when production in paying quantities ceases is harsh when physical production ceases because of mechanical breakdowns or the need to rework wells. Believing parties to leases anticipated such events would happen and did not desire the lessee to loose the lease, courts developed a doctrine to blunt this harshness. n653 Under this doctrine, a cessation of production will not be considered a cessation of production under the habendum clause if the cessation is only "temporary." If it is found to be a temporary cessation, it is as if there was no cessation. n654 If the cessation occurs in the secondary term, the lease will be preserved unless the

cessation continues beyond the "reasonable" period of time the lessee has to resume production. n655

Factors considered in ascertaining whether a cessation was temporary include the length of cessation, the reason for the termination, and the lessee's diligence in restoring production. n656 These factors interrelate. The length of time allowed varies with the cause of the interruption and the lessee's seeming diligence. n657 If the cause was beyond the control of the lessee or for work which will eventually benefit the lessor through greater production or a better market, the courts are more likely to find the cessation temporary. n658

If the lease has a *force majeure* clause n659 or an express cessation of production clause, n660 the common-law doctrine of temporary cessation may be supplanted. Statutes may also be determinative. n661

FOOTNOTES:
(n1)Footnote 604. *Egeland v. Continental Resources, 616 N.W.2d 861 (N.D. 2000).* Production or other operations on any part of the land covered by an oil and gas lease will extend the lease beyond the primary term for all leased land even though a compulsory pooling order is obtained.

(n2)Footnote 605. *Baldwin v. Blue Stem Oil Co., 189 P. 920 (Kan. 1920)* (lease expires even if welldelayed by drought followed by excessive rain, blizzard, epidemic, and wartime restrictions on materials). *But see Stewart v. Amerada Hess Corp., 604 P.2d 854 (Okla. 1979)* (thereafter clause not truly akin to common-law conditional limitation).

San Mateo Community College Dist. v. Half Moon Bay Ltd. Partnership, 76 Cal. Rptr. 2d 287 (1998) (a term lease of five years containing a "thereafter" clause created a determinable fee extending the lease as to any well producing or being drilled at the time. Since no well was producing or being drilled, the lease ended at the end of the term. The conditions in the habendum clause were not subject to the force majeure clause which had limited application to the lease covenants.).

Maschhoff v. Klockenkemper, 740 N.E.2d 830 (Ill. App. 2000) (where the lease terminated through abandonment by nonproduction while the lessee was engaged in litigation to establish the validity of his lease).

(n3)Footnote 606. *See* § 49.44, *infra*. The Habendum Clause itself can enlarge the area from which production may extend the lease by requiring it "on the leased land *or land pooled therewith*."

A lease's habendum clause may state that it would continue "as long as the oil and gas is produced or the premises are being developed or operated." The additional language has been interpreted as incorporating the test to determine if a cessation of production was temporary. *Eichman v. Leavall Resources Corp., 876 P.2d 171 (Kan. App. 1994)* ("develop" means to "make active" or to make available or useful and "operate" means "to cause to function ... to put or keep in operation").

Jolyne Corp. v. Michels, 446 S.E.2d 494 (W. Va. 1994) (use of free oil or gas for domestic use does not in itself keep a lease in effect after the primary term).

(n20)Footnote 623. *Renner v. Huntingon-Hawthorne Oil & Gas Co., 244 P.2d 895 (Cal. 1952)* (50 barrels a day on average over 30 days). When such production ceased, the continued acceptance of royalties created a tenancy for month to month.

(n21)Footnote 624. *Cf. Texaco, Inc. v. Fox, 618 P.2d 844 (Kan. 1980)* (interpreting royalty deed). *But see* cases defining "commercial quantities" differently in statutory setting, *State v. Wallace, 369 N.E.2d 781 (Ohio App. 1976)* (means sufficient to sell in statute requiring plugging of non-commercial wells) and *Pan Am. Corp. v. Shell Oil Co., 455 P.2d 12 (Alaska 1969)* (no need to show profitable production for first "commercial" discovery). Under a farm-out, "commercial producers" may mean more than "paying quantities". *Weaver v. Florida Exploration Co., 608 So. 2d 1034 (La. App. 1992, writ denied), 612 So. 2d 99 (La. 1993).*

(n22)Footnote 625. *Bruen v. Columbia Gas Transmission Corp., 426 S.E.2d 522 (W. Va. 1992), but see Morris Exploration Inc. v. Guerra 751 S.W.2d 710 (Tex. App. 1988) writ dismissed* w.o.j. (paying minimum royalties insufficient without actual production).

Hayes v. Equitable Energy Resources Co., 266 F.3d 560 (6th Cir. 2001) (where the court declined to follow the *Bruen* rule for flat rate leases and found no Kentucky authority that eliminated the implied covenant of reasonable development from leases that include fixed rental payments. The lease in question also contained a production component).

(n23)Footnote 626. *See generally* 2 Summers *supra* note 32, at §§ 306-307 and P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 604.6 (Matthew Bender).

Duncan Land & Exploration v. Littlepage, 984 S.W.2d 318 (Tex. App. 1998) (well operated periodically during an eight-month period with minimal expenses so as to produce a small profit was found to have production in commercial quantities). *Abraxas Petroleum Corp. v. Hornburg, 20 S.W.3d 741 (Tex. App. 2000).* Requirements for "production" are equally applicable to "producing in paying quantity." Operating and marketing expenses include taxes, overhead charges, labor, repairs, depreciation on salvable equipment and out-of-pocket lifting expenses. Original drilling or reworking expenses are not included.

(n24)Footnote 627. If initial drilling and equipping costs are recovered, a well is said to have "paid out".

(n25)Footnote 628. *Garcia v. King, 164 S.W.2d 509, 511 (Tex. 1942)* ("If a well pays a profit, even small, over operating expenses, it produces in paying quantities, though it may never repay its costs, and the enterprise as a whole may prove unprofitable.").

(n26)Footnote 629. Only the lessor's royalty is initially withheld. *See* P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 604.6(f) (Matthew Bender) (weight of authority holds that overriding royalties and other payments from the working interest not deducted). *See Hininger v. Kaiser, 738 P.2d 137 (Okla. 1987)* (override similar to capital expenditure).

(n27)Footnote 630. *Hininger v. Kaiser, 738 P.2d 137 (Okla. 1987); Reese Enters. v. Lawson, 553 P.2d 885 (Kan. 1976)* (also included costs to plug and abandon wells).

See generally

Annotation, *Meaning of 'Paying Quantities' in Oil and Gas Lease, 43 A.L.R.3d 8 (1972).*

Costs of converting a well to a saltwater disposal well were extraordinary expenses similar to capital expenses and should not be considered operating costs even if running the disposal well will substitute for prior costs that were operating costs, namely for trucking salt water off the leasehold. *Lege v. Lea Exploration Co., Inc., 631 So. 2d 716 (La.*

App. 1994), rit denied, 635 So. 2d 1112 (La. 1994).

(n28)Footnote 631. If labor charges are not actually expended, as when the lessee is not paid any wages, the value is not charged as an expense. *Blausey v. Stein, 400 N.E.2d 408 (Ohio St. 1980). CHAPTER 49 PETROLEUM AND PIPELINES
VII. Drilling-Delay Rental Clause: Primary Term Maintenance.

6-49 Thompson on Real Property, Thomas Editions § 49.34

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.34 Historical Rationale: Implied Covenant to Drill Exploratory Well.

Early oil and gas leases often extended for lengthy periods with only minimal initial consideration. Because the true consideration for the lease was potential royalties, courts found lessees had an implied duty to drill an exploratory well within a reasonable time. n662 To avoid this duty, lessees provided additional consideration as an alternative to drilling. Payments were added to lease so the lessee could hold it without drilling. n663

These payments delayed the obligation to drill for a specified period, usually one year. Therefore, they are called "delay rentals." Delay rentals are not truly analogous to surface lease rentals; they are not the prime consideration for the right to possess the property of another, but are designed to rebut a duty to drill if the lessee chooses not to drill. Like surface rentals, however, delay rentals are considered income, both for purposes of distribution between successive owners n664 and for income tax. n665 Delay rentals only may be used during the primary term of a lease. Without production or a substitute for it, the secondary term neither begins nor continues.

CHAPTER 49 PETROLEUM AND PIPELINES
VII. Drilling-Delay Rental Clause: Primary Term Maintenance.

6-49 Thompson on Real Property, Thomas Editions § 49.35

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.35 Two Forms: "Unless" and "Or."

[Go To Supp]

Two basic forms of delay rental clauses developed. n666 The "or" form was developed first and obligates the lessee to "drill or pay." A typical clause may read:

> Commencing with the first day of the second year of the term hereof, if the lessee has not theretofore commenced drilling operations on said land or terminated the lease as herein provided, the lessee shall pay or tender to lessor annually, in advance, the sum of _____per acre per year for so much of said land as may then be held under this lease, until drilling operations are commenced or this lease is terminated as herein provided.

The "or" lease today is primarily used in California and Appalachia.

The second form of delay rental clause is an "unless" clause. Under this form, the lease will automatically terminate "unless" a well is commenced or delay rentals are paid:

> If no well is commenced on said land on or before one year from the date hereof, this lease shall terminate as to both parties, unless the lessee on or before that date shall pay or tender to the lessor or to the lessor's credit in the _____Bank at _____(which bank and its successors shall be Lessor's agent and shall continue as the depository for all rentals payable hereunder regardless of changes in ownership of said land or the rentals) the sum of _____Dollars, herein called rentals, which shall cover the privilege of deferring commencement of drilling operations for a period of twelve months. In like manner and upon like payment or tender annually, the commencement of drilling operations may be deferred for successive periods of twelve months each during the primary term hereof.

This type of delay rental clause is sometimes called a "Producers 88 lease" because the printer of the first commonly used lease with an "unless" clause marked the form with that label. The term "Producer's 88," however, does not fully define the terms of any oil and gas lease because the label has been affixed to myriad printed forms. n667

§ 49.35(a) Construction of "Unless" Clause.

With an "unless" clause, the lessee is neither obligated to pay the rentals nor drill. The lessee has the option to either drill, pay rentals, or let the lease lapse. The lessor may neither sue to collect rentals nor to compel drilling. n668 The clause's most distinctive feature, however, is its self-operative nature.

Under the majority view, the "unless" clause creates a special limitation on the lessee's estate. n669 The lease terminates automatically upon the happening of the condition, which is the non-payment of rentals when there is no drilling. Therefore, the clause creates an estate analogous to a fee simple determinable.

The majority interpretation does not view the lease's demise as a forfeiture because the estate itself is limited. The primary term specified in the habendum clause is conditioned by the "unless" drilling clause. The term has no viability without either drilling or delay rental payments. Under this analysis, not even the special provisions of bankruptcy proceedings could impede operation of the clause and prevent a lease from defeasing. n670 Nevertheless, in some jurisdictions there is room for equitable intervention to prevent the estate's end. n671

§ 49.35(b) Construction of "Or" Clause.

Nonpayment of rentals under the "drill or pay" clause is never grounds for an automatic termination of the lease. n672 Under this formulation, the payment of rentals is not a condition, but a covenant. The lessee will have a firm obligation to pay rentals. Therefore, most "or" leases provide that the lessee may surrender the lease and avoid rentals. Initially, such clauses were viewed as creating an estate terminable at the will of one party and therefore terminable by both. However, the surrender clause was later recognized as valid. n673 Nevertheless, because the "or" lease required the lessee to act to avoid liability for rentals, the "unless" clause was developed. The automatic termination under the clause, which is desirable when a lessee intends a lease to lapse, may be harsh when nonpayment occurs for other reasons.

§ 49.35(c) Modification of "Or" Clause: Forfeiture Rights.

A lessor's sole remedy under an unmodified "or" lease is to sue for rentals due and unpaid. n674 Therefore, lessors revised these forms to allow the lessor to forfeit the lease if the lessee fails to pay rentals. Before forfeiture may result, however, the lessor frequently is required under the lease to give the lessee notice of default and an opportunity to cure. n675 Statutes in some producing states create the same type of rights. n676 Lessor forfeiture powers, however, generally do not transform an "or" type lease into an "unless" one. Termination will not be automatic upon nonpayment under these schemes. The lessor must act and object to nonpayment, making this type of "or" estate analogous to a fee simple on condition subsequent.

Louisiana is in the majority because, by statute, leases terminate upon the end of the agreed term or upon the occurrence of an "express resolutory condition." Article 133 of the Mineral Code, La. Rev. Stat. Ann. § 31:133.

Holman v. Meridian Oil, 988 S.W.2d 802 (Tex. App. 1999) (involving a determinable estate created by an "unless" clause. Although a duty to release an expired lease may exist, delay in releasing will not cause liability in damages when the record indicates that the lease has ended automatically).

(n5)Footnote 670. *Good Hope Refineries, Inc. v. Benavides, 602 F.2d 998 (1st Cir. 1979), cert. denied, 444 U.S. 992* (trustee's 60-day period to preserve rights of debtor does not extend payment period); *Trigg v. United States, 630 F.2d 1370 (10th Cir. 1980)* (automatic stay inapplicable).

(n6)Footnote 671. *Ledford v. Atkins, 413 S.W.2d 68 (Ky. 1967)* (equity can deny forfeiture) and *Phillips Petr. Co. v. Curtis, 182 F.2d 122 (10th Cir. 1950).*

(n7)Footnote 672. *Girolami v. Peoples Natural Gas Co., 76 A.2d 375 (Pa. 1950). See also* 3 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 29.3(c) (Anderson). Despite seeming universal agreement on this, two Michigan cases enforced an "or" lease the same as an "unless" one. *Steed v. Pure Oil Co., 245 N.W. 550 (Mich. 1932); Concord Oil & Gas Co. v. Thompson, 226 N.W. 857 (Mich. 1929).*

(n8)Footnote 673. *Federal Oil Co. v. Western Oil Co., 112 F. 373 (D. Ind. 1902); Guffey v. Smith, 237 U.S. 101 (1915). See generally* 2 Summers, *supra* note 32, at § 332 (older lease forms interpreted).

(n9)Footnote 674. *Butler v. Nepple, 354 P.2d 239 (Cal. 1960)* (lessor can neither terminate lease nor force drilling).

(n10)Footnote 675. *E.g.*, "Upon the violation of any of the terms or conditions of this lease by the lessee and the failure to begin to remedy the same within 90 days after written notice from the lessor so to do, then, at the option of the lessor, this lease shall forthwith cease and terminate."

(n11)Footnote 676. W. Va. Code, § 36-4-9a (60-day notice); Ky. Rev. Stat. Ann. § 353.020 (lessee may avoid lease if lessor does not accept late payment). *See also Warner v. Haught, Inc., 329 S.E.2d 88 (W. Va. 1985)* (statute may not be used by lessee to willfully refrain from payment until notified; equitable forfeiture possible).

W. Va. Code § 36-4-9a also creates a rebuttable legal presumption that if a lessee fails to produce, and either use or sell, oil and gas from the leased premises for a period longer than 24 months, the lessee is presumed to have abandoned any well on the premises. In *Howell v. Appalachian Energy, 519 S.E.2d 423 (W. Va. 1999),* the lessee failed to rebut the presumption created by eight years of non-production and was deemed to have abandoned the well and equipment left on the premises.

CHAPTER 49 PETROLEUM AND PIPELINES
VII. Drilling-Delay Rental Clause: Primary Term Maintenance.

6-49 Thompson on Real Property, Thomas Editions § 49.36

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.36 Satisfaction of Clauses: Drilling.

[Go To Supp]

§ 49.36(a) Commencement or Completion as Requirement.

Rental payments are unnecessary if the lessee undertakes the necessary development actions required by the lease. The lease's wording can impact what is required under the general heading of "drilling." Most leases require either commencement of a "well" or commencement of "operations for the drilling of a well." The two requirements are construed in the same manner, which is outlined below. There is some case law, however, that requires more than preparatory activity, notably penetration of the earth by a drill bit, when a lease employs phrases such as "commence drilling operations," "commence to drill a well," or "commence the actual drilling of a well." n677 Other courts do not make distinctions and follow the same rules regardless of the lease's wording. n678 All courts, however, distinguish clauses that require a well be "completed" by a certain date. Actions sufficient to be "commencement" will not satisfy completion requirements. n679

§ 49.36(b) Definition of "Commencement."

To "commence" either a well or operations for drilling does not require actual spudding of the well, which is penetration of the ground by the drill bit. n680 Rather than requiring spudding, any activities on the ground done in good-faith preparation for drilling and diligently pursued to completion generally will suffice. The commencement requirement is multi-faceted: physical operations, good faith, and diligence are all needed and the tests tend to interrelate. n681 Moreover, the activities must be timely. In the case of the drilling clause, the lessee has until midnight of the specified day to commence. n682 If the lessee then proceeds to complete a well, courts generally are liberal in construing what satisfies the drilling requirement because liberality will foster development and protect the lessee's investment. n683

§ 49.36(b)(1) Meaning of Operations.

The first requirement for commencement is that there be some "operations." Operations for drilling that satisfy commencement may include building roads, n684 clearing drill pads, n685 beginning a water well to obtain water necessary for drilling, n686 or performing other actions that a reasonable and prudent operator would undertake in a

good faith effort to obtain oil or gas. n687 Although courts do tend to accept substantial compliance with the duty, they seemingly require some on the ground activity, which may take place off the leasehold in certain circumstances. n688 For example, applying to the conservation agency for an order placing lands in a drilling unit could be sufficient if drilling is commenced on the unit in time and the leased lands eventually are included in the unit. n689

There is a difference of opinion about whether the lessee must have a drilling permit or contract with a driller for preparatory work to be deemed commencement. n690 The determining factor may be one of the other requirements: good faith or diligent prosecution.

§ 49.36(b)(2) Good Faith.

Activities that normally would be sufficient to be "commencement" will not suffice if a court finds them to have not been done in good faith but as a sham. Naturally, subjective intent is hard to determine. Therefore, courts look to objective evidence, such as due diligence. The requirement of good faith at the time the initial work was done, however, may be judged independently from later due diligence. For example, if the lessee was doing preliminary work at a slow pace to await information from adjacent wells, the lessee may not have had a good faith intent to actually drill a well on the relevant date, which most often is the end of the primary term. n691

§ 49.36(b)(3) Due Diligence.

Related to the requirement of good faith is the requirement that activities "commenced" must be diligently pursued to completion. Diligence after the relevant date is an important indicator of the lessee's good faith on the date that "commencement" was required. n692 If the lessee does not diligently pursue the work, it is as if the operations were not commenced. An "unless" lease would therefore automatically terminate if no rentals were paid. n693

FOOTNOTES:
(n1)Footnote 677. *Lewis v. Nance, 66 P.2d 708 (Cal. 1937)* ("drilling of a well for oil" requires actual drilling); *but see Solberg v. Sunburst Oil & Gas Co., 235 P. 761.* (Mont. 1925) ("Commence drilling operations" -- as opposed to "commence operations for the drilling of a well" -- requires actual drilling). These cases deal with commencing a well at the end of the primary term. *See* § 49.40, *infra*. The standards are generally the same in that context as for meeting the drilling requirement in the primary term and for the dry hole and continuous operations clause, §§ 49.39 and 49.41, *infra*.

Exxon Corp. v. Crosby-Mississippi Resources, Ltd., 154 F.3d 202 (5th Cir. 1998) (operator satisfied requirement to actually commence drilling by engaging subcontractor to drill the hole for conductor pipe since it is more than preparatory. Creation and use of the conductor pipe hole was a necessary part of the drilling process since the conductor pipe was required to support the great weight of the drill pipe.).

(n2)Footnote 678. *See, e.g., Fast v. Whitney, 187 P. 192 (Wyo. 1920)* (no distinction between commencing "operations" and commencing "drilling"); *Jones v. Moore, 338 P.2d 872 (Okla. 1959)* ("Commence to drill a well" did not require actual spudding). For a full discussion, see 3 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 32.2 (Anderson).

(n3)Footnote 679. *Baldwin v. Blue Stem Oil Co., 189 P. 920 (Kan. 1920); Wilds v. Universal Resources Corp., 662 P.2d 303 (Okla. 1983).*

(n4)Footnote 680. *Vickers v. Peaker, 300 S.W.2d 29, 32 (Ark. 1957),* states the rationale: "Does drilling commence with operations for the well or does it commence only with the piercing of the ground with the drill bit? Does 'baking a cake' begin with the preparations of the dough or only with the actual placing of the dough in the oven?". *See also Petroleum Energy v. Mid-America Petr., 775 F. Supp. 1420 (D. Kan. 1991).*

CHAPTER 49 PETROLEUM AND PIPELINES
VII. Drilling-Delay Rental Clause: Primary Term Maintenance.

6-49 Thompson on Real Property, Thomas Editions § 49.37

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.37 Satisfaction of Clauses: Payment of Rentals.

[Go To Supp]

§ 49.37(a) General Requirements.

If there is no drilling, rental payments are essential to maintain an "unless" lease during its primary term. Although courts are liberal in determining what constitutes commencement of operations for drilling, they take the opposite tack in determining what suffices for paying rentals: the requirement is strictly construed. Substantial compliance is generally not enough, possibly because rentals do not further the ultimate goal of production and do not represent a substantial investment. Courts require rental payments be made at the proper time, in the proper amount, to the proper party, and in the proper manner. n694

§ 49.37(a)(1) Date of Payment.

Delay rental payments are generally payable on or before a date certain. The lease may directly specify the date or state that rentals are due on or before the anniversary date of the lease, which is one year from the date of the lease. The anniversary date is generally the date inserted in the lease form, not the date the lease becomes effective by execution and delivery. n695 Counting one year from the specified date is done in the same manner as for other contracts; the date of contracting is not counted. For example, if a lease is dated April 1, rental will be due April 1 of succeeding years. Regardless of how the lease specifies the due date, the lessee will have until midnight to perform. n696 Most courts allow payment the following business day if the due date falls on a Sunday or holiday. n697 Courts, however, generally will not listen to personal woes as excuses for late payment. n698

§ 49.37(a)(2) Amount of Payment.

Rental payments must be in the full amount. Minor insufficiencies have caused leases to terminate. n699 When rentals are based on acreage subject to the lease, discovery of the actual acreage subject to the lease or the undivided interest owned by the lessor may change the rental amount due from that previously believed to be owed. Increases may occur because title questions are resolved n700 or because more land is included in the leasehold. n701 Therefore, the lessee should specify in the lease that rentals will be based on a certain acreage figure, regardless of whether more or less

acreage actually is subject to the lease.

Moreover, if there is a dispute about the rentals due, the lessee should pay any additional amount and then litigate. The amount of rentals due is generally minimal, but eventual court resolution of the dispute is justified; royalty computations may be impacted substantially if there is a change in the acreage included or quantum of undivided interest owned. These issues may be of import in the rental dispute. When a court determines the threshold question, namely whether a lease terminated for failure to pay rentals, a prompt tender of disputed rentals when notified of the lessor's position may convince a court of the lessee's good faith, even if the tender was technically late. n702

§ 49.37(a)(3) Recipient of Payment.

The owner of the minerals generally is entitled to rentals. n703 Payment to an owner jointly with a non-owner may vitiate the payment. n704 If there are co-tenants, however, each is owed rental in proportion to their interests. The lessee will be liable for paying the proper amount to the proper parties. n705 If, however, one lease was executed and all parties are collectively referred to as "Lessor," the lessee need only make one payment payable to all jointly. n706

Additional problems arise if the lessor transfers all or a partial interest after execution of the lease. The normal lease does not provide for joint payment in this instance, n707 but transfers are binding on the lessee upon proper notice. The owner on the date the rental payment becomes due is entitled to rentals. n708 Even without a specific clause in the lease detailing how notice is to be given, mere recordation of a transfer is not sufficient notice to require the lessee to pay the new owner. n709 The lessee may, however, pay based on the state of the record. n710 Prepayments of rentals, however, will not bind an assignee of the lessor without notice of the payment. Therefore, additional payments may be needed for the new owner on the rental due date despite the lessee having paid the prior lessor in advance. n711

Because of the difficulties that can arise out of co-tenancies and transfers, various lease clauses have been developed to protect the lessee. n712 In extremely complicated situations, the lessee may desire a rental payment division order, which is a document signed by those entitled to payments stipulating their interests. n713

§ 49.37(a)(4) Manner of "Payment" or "Tender" -- Use of Checks.

Payment or tender must be made as specified in the lease. The lessee or someone authorized by the lessee must make the payment; the lessee cannot take advantage of an unrelated third party's payment. n714 Moreover, unless the lease specifies otherwise, rentals must be received by the relevant date, not merely mailed. n715 Even if a lease does not specifically allow the lessee to pay by check, payment by check will be sufficient unless an express demand for legal tender is made. n716 Most modern lease forms specify that mailing by the due date is sufficient, as is payment by check. Mailing, however, must be to the proper address n717 and the lessee must have funds to cover a check. n718 If these conditions are met, delay or loss in the mail is immaterial. Although most courts strictly construe the lease against the lessee, alternate means, such as employing Western Union in a timely manner, may be sufficient, but only if the lease allows mailing to be effective payment. n719

§ 49.37(b) Role of Equity.

Under the majority view, there should be little or no role for equitable concerns when a lessee fails to make proper payments under an "unless" clause. The lease terminates automatically pursuant to its own terms. Nevertheless, occasionally courts will find that the failure to pay was not chargeable to the lessor without fully reconciling the theory employed. n720

§ 49.37(c) Protection of Lessee by Courts.

§ 49.37(c)(1) Excuses for Nonpayment or Tardy, Inadequate, or Improper Payment of Rentals.

Generally, courts require rental payments in strict conformity with the lease and will not excuse errors of the lessee or its agents. n721 Almost all jurisdictions, however, have cases that excuse improper payments caused by an independent third party over which the lessee has no control. n722 To reach this result, the lessee must have been acting in good faith. Similarly, if the lessee acts in good faith and the erroneous payment arose from ambiguity created by the lessor, courts will excuse tardy or inadequate payment. n723 This is especially so if the lessor fails to inform the lessee of the faulty payment. n724 If the lessor is attacking the lessee's title, rental may be waived, but third party litigation will not be an excuse. n725

§ 49.37(c)(2) Revivor.

In some instances, courts have construed an acceptance of late rental payments or other actions which treat the lease as in existence to act as a revivor of the terminated lease. n726

§ 49.37(c)(3) Estoppel or Waiver.

Two different theories have sometimes been used to find that a lease that otherwise would have terminated will not be. These theories concentrate on the actions of the lessor. Estoppel technically means that the lessor's actions have misled the lessee to the lessee's detriment. A waiver would be the lessor's intentional relinquishment of a known right. Courts use these theories without always precisely distinguishing them. n727

Estoppel has been found when the lessor retains an inadequate or late payment for an unreasonable length of time without challenging the leasehold. n728 Sometimes, the court only will allow the lease to be maintained up to the acreage for which payment was received. n729 Nevertheless, without additional investment by the lessee, the lessor's actions should more accurately be described as a waiver, rather than an estoppel. This is especially so because the lessor is not under a general duty to speak when an improper delay rental payment is made. n730 A significant number of cases, however, state the lessor has such a duty if the lessor knows of an error in time to inform the lessee before the rental due date. n731

§ 49.37(d) Protection of Lessee by Lease Terms.

§ 49.37(d)(1) Use of Depositary Bank.

One common way to assist the lessee in making proper delay rental payments is to have the payments be made to a specified bank, referred to as the depositary bank. n732 Although the lease will call the bank the lessor's agent, it is not a true agent. For example, the clauses frequently allow for continued payment to the depository if the lessor dies. n733 Moreover, the bank has limited authority. The bank may only accept proper and timely rentals and its accepting improperly tendered rentals will not estop the lessor. n734 In one aspect, the depository bank is connected to the lessor: Its errors will not be charged to the lessee. n735 Therefore, the lease will not terminate if the bank credits the account of the lessor late or in an improper amount.

§ 49.37(d)(2) Notice of Assignment Provisions.

In order to avoid double liability for rental payments and other problems caused when the lessor assigns an interest, leases often state that no assignment by the lessor will be effective until the lessee is provided with certified copies of transfer documents. Better versions of these clauses provide for a grace period, making the transfers only effective a stated time after receipt. This gives the lessee time to change its records and will prevent difficulties from transfers close to the rental date. n736 If, however, the lessee fails to wait for proper notification and acts based on a title opinion, it may not be protected. n737

§ 49.37(d)(3) Notice of Incorrect Payment Clauses.

Because of the automatic nature of lease termination under the "unless" clause, lessees have attempted to draft savings clauses. n738 Many leases have general "notice of default" clauses that state that if the lessee fails to perform any of its obligations under the lease, it will not be in default until notified by the lessor and the lessee fails to remedy the problem within a stated time period. Cases have refused to apply these general clauses to a failure to pay delay rentals, because to do so would be repugnant to the "unless" clause. n739 A similar fate met a clause providing that a lease would not terminate if there was a neglect or failure to pay rentals until the lessor gave written notice and the lessee failed to pay in ten days. n740

More narrowly drawn clauses were better received. A court upheld the following:

> If Lessee shall in good faith and with reasonable diligence attempt to pay any rental ... , but shall incorrectly pay all or some portion of such rental ... , this lease shall be maintained in force ... , provided that such erroneous rental payment be corrected within thirty (30) days after receipt by lessee of written notice. n741

A direct modification of the "unless" clause to simply require good faith attempts to tender proper rentals was also effective. n742 In the instances where courts approved savings clauses, the lessees did not attempt to overreach and negate the "unless" clause by providing grace for willful failures to pay. The tailored savings clauses simply incorporated equitable principles into the performance obligation.

§ 49.37(d)(4) Use of "Or" Leases.

Because the "or" form of the drilling-delay rental clause does not automatically terminate upon a failure to properly pay rentals, the lease protects a significant investment in bonus payments from inadvertent loss. Therefore, despite the potential for firm rental obligations if not surrendered, the form should be considered for valuable leases.

§ 49.37(d)(5) Use of "Paid-up" Leases.

A "paid-up" lease is another way to insure against inadvertent loss of a lease because all rental payments are paid in advance. A lessee considering this option should not merely prepay with a traditional lease form, but should use a lease that expressly states the lease's nature. This will avoid a claim for rentals from an assignee of the lessor. The lease should also expressly state that the payment of rentals is for the privilege of delaying drilling for the entire primary term and that no duty, either express or implied, exists to drill an exploratory well. To not do so may risk courts implying the duty to drill within a reasonable time, which duty was the original impetus for delay rentals. n743

CHAPTER 49 PETROLEUM AND PIPELINES
VIII. Dry Hole, Cessation of Production and Drilling Operations Clauses.

6-49 Thompson on Real Property, Thomas Editions § 49.38

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.38 Rationale for Inclusion: Necessity of Production.

The habendum clause of the oil and gas lease requires production at the end of the primary term and at all times thereafter. Without production, the lease will automatically terminate. Therefore, the lessee will want to preserve its investment if it drills and the resulting well is incapable of production or if production once begun ceases. Additionally, if the lessee is drilling a well at the close of the primary term, the lessee will need time to complete it. The dry hole, operations, and cessation of production-continuous operations clauses meet these concerns. They also answer questions about the lessee's duties during the primary term.

CHAPTER 49 PETROLEUM AND PIPELINES
VIII. Dry Hole, Cessation of Production and Drilling Operations Clauses.

6-49 Thompson on Real Property, Thomas Editions § 49.39

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.39 Dry Hole Clause.

[Go To Supp]

§ 49.39(a) Basic Form.

A common formulation of the dry hole clause is as follows:

> If prior to discovery of oil, gas, or other hydrocarbons on this land... Lessee should drill a dry hole or holes thereon... this lease shall not terminate if Lessee commences additional drilling or reworking operations within sixty (60) days thereafter, or if it be within the primary term, commences or resumes payment or tender of rentals or commences operations for drilling or re-working on or before the rental paying date next ensuing after the expiration of sixty (60) days from the date of completion of the dry hole. n744

Different clauses vary the time in which additional operations must begin or rental payments must be made. n745

§ 49.39(b) Use in Primary Term.

If a dry hole is drilled in the primary term, under the dry hole clause, the lessee has the option of continuing drilling operations or resuming rental payments. Prior to use of such clauses, the few cases that considered the effect of a dry hole reached different results. n746 Although all agreed that a dry hole would meet the drilling requirement for the year in which the well was drilled, some courts required the resumption of rentals or drilling in following years. Others viewed the lease satisfied for the primary term. The dry hole clause clarified duties after drilling a dry hole.

The dry hole clause, however, was not intended to modify the lessee's duties if a producing well was drilled. Drilling a producing well would satisfy the drilling and rental requirements for the entire primary term. n747 Therefore, a dry hole drilled after a producing well should not reinstate the duty to pay delay rentals and the wording of most dry hole clauses so indicates by referring to drilling of a dry hole before discovery of oil or gas. n748

§ 49.39(c) Use in Secondary Term.

The dry hole clause preserves the lease in the secondary term because it allows the lessee to try again through re-working the dry hole or drilling another well. Because it only applies before discovery of hydrocarbons, it will not be used if the dry hole is drilled after a paying well ceases production. n749

§ 49.39(d) Construction Problems.

§ 49.39(d)(1) Definition of a Dry Hole.

No precise definition of a dry hole appears in either case law or the typical oil and gas lease. A "duster" -- a well that produces no hydrocarbons -- obviously is a dry hole. However, often wells will contain a "show" of oil or gas or even produce some oil or gas, but not sufficient amounts to make the lessee desire to expend the sums necessary to complete a well. n750 In light of this, one suggested definition is that a dry hole should be a well from which the only benefit the lessee gains is geological information because the well will not meet the requirements of the lease, such as the need to produce in paying quantities. n751

§ 49.39(d)(2) Definition of Completion.

The lessee generally must act under dry hole clauses in a specific time period. Often, this time runs from the "completion" of a dry hole. A producing well is completed when it is made ready to produce, n752 but this does not resolve the question of when a dry hole is completed. To arrive at some guidelines, it is instructive to combine both the definition of a dry hole as an unsuccessful venture and the prudent operator rule. n753 The earliest date for completion would be when the target formations have been tested. n754 If a prudent operator would engage in further operations such as fracturing the well, however, a well would not be completed until that was done. n755 The latest date would be when the lessee formally plugs and abandons the well, but performing activities that the prudent operator would not do will not delay the date of completion. n756 Because there is little precedent and determining when a well is completed is fact specific, a lessee should choose the earliest possible date to measure when the lessee's performance is due.

§ 49.39(d)(3) Definition of "Additional Drilling" and "Re-working" Operations.

One option after a dry hole is to commence re-working or drilling operations. "Re-working operations" is another term without a specific definition. Courts liberally have included any work that a reasonable and prudent operator would do in a good faith effort to obtain or increase production. n757 The work, however, must be done with the intent to improve matters; routine starting of a pump on the leasehold to keep a pump in working order will not be "re-working." n758

Commencing additional drilling is treated in the same manner as what is necessary to commence operations for drilling under the drilling clause. n759 Preparatory work on the ground may be sufficient for "additional drilling." n760 If the lease has a pooling clause, the lessee may pool the leasehold with other property within the specified time after drilling the dry hole and commence drilling on land pooled with the leased tract. n761 Cases split on whether the lessee could save the lease by pooling with a pre-existing producing well during the grace period of the dry hole clause. n762

§ 49.39(d)(4) Time Rental Payment Is Due.

Drilling a dry hole may alter the date on which rental payments are due. Some clauses provide a grace period after completion of the dry hole before rentals must be resumed. n763 Therefore, rentals may be "skipped" for a year because the normal payment day falls within this grace period. n764 More importantly, some versions of the dry hole clause may actually change the date for rental payments.

An example of a clause that changes rental dates is found in Superior Oil Co. v. Stanolind Oil and Gas Co.: n765

> Should the first well drilled ... be a dry hole, then ... , if a second well is not commenced on said land within twelve months thereafter, this lease shall terminate ... , unless the lessee shall resume the payment of rentals in the same amount and in the same manner as hereinbefore provided. And it is agreed that upon the resumption of the payment of rentals, as before provided, that [the delay rental clause] ... shall continue in full just as though there had been no interruption in the rental payments.

Under this clause, the first rental payment after the dry hole would be due twelve months from the well's completion, regardless of the normal rental due date. The remaining rentals could be due arguably on the original rental date or twelve months after the first payment. In *Superior Oil Co.*, the majority found the past practices of the parties established the rental date as the anniversary of the dry hole. n766 Ambiguities such as this should be avoided in drafting. For existing leases, the parties should establish the meaning and amend the lease.

CHAPTER 49 PETROLEUM AND PIPELINES
VIII. Dry Hole, Cessation of Production and Drilling Operations Clauses.

6-49 Thompson on Real Property, Thomas Editions § 49.40

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.40 Operations Clause.

§ 49.40(a) Basic Use: Conclusion of Primary Term.

An oil and gas lessee generally has until the last day of the primary term to begin drilling a well. Nevertheless, production is needed at the end of the primary term. n767 Operations clauses solve this contradiction. This treatise applies the label "operations clauses" to clauses which are only applicable at the end of the primary term and which are triggered by lessee activity on that date. These clauses are designed to allow the lessee, at a minimum, to complete the well on which it is working at the end of the primary term. If the well is a producer, the lease will then continue. Of two types of operations clauses, one allows more than well completion.

§ 49.40(b) Types of Clauses.

§ 49.40(b)(1) Well Completion.

The first type of operations clause is termed a "well completion" clause because it only allows the lessee to complete or re-work the well on which the lessee was working at the end of the primary term. n768 An example of a clause interpreted in this manner is from Rogers v. Osborn: n769 "If at the expiration of the primary term oil, gas, or other mineral is not being produced ... but lessee is then engaged in drilling or re-working operations ... , this lease shall remain in force so long as operations are prosecuted with no cessation of more than thirty (30) consecutive days, and if they result in the production of oil, gas, or other mineral, so long thereafter as oil, gas or other mineral is produced from said land."

§ 49.40(b)(2) Continuous Operations.

In order to avoid the restrictive interpretation of Rogers v. Osborn, n770 a new form of operations clause was drafted, known as a "continuous operations" clause: "If at the expiration of the primary term oil, gas, or other mineral is not being produced ... but lessee is then engaged in drilling or re-working operations ... , this lease shall remain in force so long as the same or any other such operations are prosecuted with no cessation of more than thirty (30) consecutive days, and if they result in the production of oil, gas, or other mineral so long thereafter as oil, gas or other mineral is

produced from said land." Under this clause, the lessee may begin a second well if the first well is unsuccessful. n771

§ 49.40(c) Delay Between Completion of Operations and Production.

Technically, the cessation of operations would terminate the lease because the extension lasts while the lessee is working or production is needed. Production, under the majority view, means actual production and marketing. Some courts imply that the lessee would have a reasonable period to come into production in these circumstances. n772

FOOTNOTES:
(n1)Footnote 767. On the conflict between the Habendum Clause and the drilling clause, which allows drilling up until the last day, *see* 4 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 47.4(a) (Anderson) and Richard W. Hemingway, The Law of Oil and Gas § 6.6 (2d ed. 1983). Under the minority definition of "production," the lessee would impliedly have the right to complete the well if the lessee acts with diligence and good faith. *Simons v. McDaniel, 7 P.2d 419 (Okla. 1932).*

(n2)Footnote 768. *Griffin v. Crutchen-Tufts Corp., 500 So. 2d 1008 (Ala. 1986). Skelly Oil Co. v. Wickham, 202 F.2d 442 (10th Cir. 1953). See generally* 4 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 47.4(b)(1) (Anderson) (referring to clause as the "continuous drilling clause").

Johnson v. Yates Petroleum Corp., 981 P.2d 288 (N.M. App. 1999). Lessee satisfied the requirements of a well completion clause to commence drilling operations when, during the primary term, he staked and surveyed the well location, received a permit to drill the well and began to clear brush and level the location. Efforts continued and the well was completed 70 days after the primary term ended.

CHAPTER 49 PETROLEUM AND PIPELINES
VIII. Dry Hole, Cessation of Production and Drilling Operations Clauses.

6-49 Thompson on Real Property, Thomas Editions § 49.41

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.41 Cessation of Production -- Continuous Operations Clause.

[Go To Supp]

§ 49.41(a) Basic Forms.

Cessation of production clauses and general continuous operations clauses are designed to allow the lessee to maintain a lease by continuing the effort to develop after the discovery of oil or gas. They tend to take several forms. n773 One directly refers to cessation of production and often is inserted in the same provision as the dry hole clause. For example, the dry hole clause cited above in actuality also contained a cessation of production clause:

> If prior to discovery of oil, gas, or other hydrocarbons on this land Lessee should drill a dry hole or holes thereon, *or after discovery of oil or gas the production thereof should cease from any cause*, this lease shall not terminate if Lessee commences additional drilling or re-working operations within sixty (60) days thereafter, or if it be within the primary term, commences or resumes payment or tender of rentals or commences operations for drilling or re-working on or before the rental paying date next ensuing after the expiration of sixty (60) days from the date of completion of the dry hole. n774

A second method is to concentrate on the secondary term and combine the clause with the basic operations clause:

> If at the end of the primary term, Lessee is conducting operations for drilling a new well, *or if after the expiration of the primary term, production on this lease shall cease*, this lease nevertheless shall continue as long as said operations continue or additional operations are had, which additional operations shall be deemed to be had where not more than sixty (60) days elapse between abandonment of operations on one well and commencement of operations on another well, and if production is discovered, this lease shall continue as long as additional operations are had. n775

Without claiming to exhaust the ingenuity presented in lease forms, the final method noted is to modify the habendum clause:

> Subject to other provisions herein contained, this lease shall remain in force for a period of ten years

> from this date, called primary term, and as long thereafter as oil, gas or other mineral is produced from said land, *or as long thereafter as Lessee shall conduct drilling or reworking operations thereon with no cessation of more than sixty days*. n776

Obviously, with this variety, generalization is difficult.

§ 49.41(b) Use in Primary Term.

Some versions are not operative in the primary term. Those that refer to the primary term generally give the lessee the option of resuming rental payments or resuming operations. n777 In the primary term, any production, whether in paying quantities or not, suffices to hold the lease without rental payments. Therefore, the clause, with its requirements of additional rentals or drilling, should only be triggered by a complete cessation of production.

§ 49.41(c) Use in Secondary Term.

The clauses have special significance in the secondary term because they allow operations to extend the lease and therefore "buy time" to get to actual or constructive production and avoid termination of the lease. n778

§ 49.41(d) Construction Problems.

§ 49.41(d)(1) Definition of "Cessation of Production."

Production may cease because of total, physical cessation of production or production may cease because the amount produced is no longer sufficient to be in "paying quantities" and thus satisfy the habendum clause. n779 As noted earlier, to compute whether production is in "paying quantities" requires examination of operating revenues and expenses over a reasonable period of time to ascertain if a reasonable and prudent operator would continue to operate the leasehold. n780 The period specified in a cessation of production clause is not the accounting period in which to determine paying quantities. n781

Because of the flexibility in paying quantities determinations, logically the cessation of operations clause should not be triggered by a cessation of such production; the lessee would not know conclusively when it would have to resume operations because it would not know when paying production ceased. Therefore, Texas expressly holds that the cessation of production clause only applies after a physical cessation of production. n782 Oklahoma, however, has applied the clause after a cessation to produce in paying quantities, placing the lessee with marginal production at risk. n783 Therefore, in Oklahoma and other jurisdictions that have not ruled on this point, these clauses should be modified to state that they will only come in to play when *all* production ceases for mechanical or geological reasons. If production ceases in Oklahoma because of a marketing decision, but a well is still capable of producing in paying quantities, a lease will not terminate in Oklahoma if a lessee does not resume production or re-working operations within the period specified in the clause. The clause's requirements are not triggered because the lease habendum clause is satisfied in Oklahoma if there is a well capable of producing in paying quantities. n784

§ 49.41(d)(2) Relationship of Express Clause to Judgemade Doctrine of Temporary Cessation of Production.

Judges have construed leases to give the lessee a reasonable period of time to restore production when there has been a temporary cessation of production. n785 At least in the form of continuous operations that amends the habendum clause, the contractual time period will define what period of time will be reasonable to resume production. n786 The clause is not cumulative with the judgemade rule but gives content to it.

§ 49.41(d)(3) Payment of Shut-in Royalty Within Specified Period.

Although the cessation of production clauses expressly refer to additional drilling or re-working, the trend is to allow

the lessee to do anything that would extend the lease during the specified period. Therefore, payment of shut-in royalty within the time for additional operations would extend the lease. n787

CHAPTER 49 PETROLEUM AND PIPELINES
IX. Shut-in Royalty, Pooling, and Force Majeure Clauses.

6-49 Thompson on Real Property, Thomas Editions § 49.42

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.42 Rationale for Inclusion: Necessity of Production.

Under the basic terms of the habendum clause, production is needed to enter the secondary term of an oil and gas lease and to maintain the lease during the secondary term. n788 Therefore, sums expended for drilling could be lost if the lease is interpreted literally. For example, this could happen if gas is discovered and there is no ready pipeline, which is essential to marketing, because most jurisdictions require actual production and marketing to satisfy the habendum clause. Additionally, if only production directly on the leasehold can maintain a lease, the lease may be lost because a conservation agency's rules require minimum acreage for drilling or because a lessee desired to locate wells in a field based on geological indications. Finally, causes outside of its control may thwart the lessee's attempts to produce. The shut-in royalty clause, provisions for pooling, and the *force majeure* clause provide the lessee with alternative means to hold a lease and to achieve flexibility in development.

CHAPTER 49 PETROLEUM AND PIPELINES
IX. Shut-in Royalty, Pooling, and Force Majeure Clauses.

6-49 Thompson on Real Property, Thomas Editions § 49.43

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.43 Shut-in Royalty Clause.

§ 49.43(a) Basic Forms.

The shut-in royalty provision developed to solve the problem of drilling a well capable of producing gas, but for which no marketing is possible because either a pipeline or purchaser is lacking. Because pipelines are not built until there are sufficient developed reserves, there is almost always a time lag between discovery and actual marketing of gas. n789 Shut-in royalty clauses have the uniform goal of preventing a lease from terminating in this situation. Nevertheless, shut-in royalty clauses have numerous variants. n790 They often differ in when payments are due. n791 More importantly, when they will allow payments to be made also varies: some clauses restrict use to wells that produce gas only or are only operative when marketing is impossible. n792

Two general types of clauses, however, may be distinguished based on whether the payments are obligatory or optional. The distinction between these types of forms is necessary to ascertain what will result if a lessee fails to pay the shut-in royalties. n793 By way of example, the following form creates an obligation to pay:

> If a well capable of producing gas in paying quantities is completed hereunder and is shut-in for a period of 90 consecutive days, *this lease shall not terminate, but Lessee shall be obligated to pay or tender to the Lessor as royalty for constructive production, an amount ... [specified]*. Such payment or tender shall be made promptly following the end of each such 90-day period. n794

Forms that do not obligate the lessee to pay the rentals, but which allow the lessee to do so include the following:

> To pay to lessor, as royalty for gas from each well where gas only is found, while such gas is being sold or used of the premises [a certain percentage of value], *and while not so sold or used, the sum of _____dollars per annum for each such well, and while such royalty is so paid such well shall be held to be a producing well within the meaning of [the habendum clause]*. n795

Alternatively, the optional form may state that "where gas ... is not sold or used, lessee may pay or tender a royalty ... . If such payment or tender is made, it will be considered that gas is being produced within the meaning of [the habendum

clause]." n796

§ 49.43(b) Use in Primary Term.

Not all shut-in royalty clauses are usable in the primary term; some specifically state that they apply when a well is drilled "in the secondary term." For leases in which the shut-in royalty is not applicable in the primary term, the lease must be held by other provisions. n797 If applicable in the primary term, most lessees believe that the payment of shut-in royalties, as being equivalent to production, would satisfy the requirement to drill or pay delay rentals. Lessors, however, resent being paid less than delay rentals. Therefore, in drafting the clause, shut-in royalties should be in an amount at least equal to delay rentals and paid on the same date in the primary term. n798

§ 49.43(c) Use in Secondary Term.

Shut-in royalties are most useful in the secondary term. They provide consideration for the lessor and, more importantly, the clause defines what would be "constructive production." Constructive production extends and maintains a lease in the same manner that actual production would. For example, if the shut-in royalty payments are considered the equivalent of production n799 and there is a grace period in which to pay the royalties after completion of the shut-in well, production would be deemed present until the date for payment passes without such payment. n800 Similarly, there is no need to create constructive production through the payment of shut-in royalties if there is other actual production on the lease. n801

§ 49.43(d) Effect of Failure to Pay.

§ 49.43(d)(1) Payment Obligatory or Optional.

Whether or not the failure to pay shut-in royalties will terminate an oil and gas lease depends on whether the payment is a covenant or a condition. n802 If a condition, non-payment will cause the lease to end. An alternative mode of analysis centers on asking whether the payment is the equivalent of production. If so, non-payment will mean there is no production and the lease will terminate if it is in the secondary term. n803

To ascertain what is equivalent to production, the forms detailed *supra* in § 49.43(a) should be examined. In the form in which the payment was obligatory, the clause expressly states that the lease will not terminate *if a well capable of producing gas in paying quantities is completed*. The existence of the shut-in well is the condition for lease continuance; payment of royalties is simply a covenant to provide additional consideration. n804 The two other forms, however, state that *if payments are made*, there will be the equivalent of production. Stated this way, the payment of shut-in royalties creates a special limitation on the estate because only with payment is constructive production achieved. n805 If the lease requires royalty payments and they are not made, as with non-payment of delay rentals under the unless form, n806 the lease will terminate automatically for non-payment. In Louisiana, however, non-payment of shut-in royalties will not create an automatic termination of the lease because of the statutory requirement of notice and demand before judicial termination for non-payment of royalties. n807

Because of the potential impact of non-payment, in drafting a lease from the viewpoint of the lessee, the form should be one that makes the existence of a well capable of production in paying quantities the operative fact which creates constructive production. Shut-in royalties should simply be obligatory consideration. If the lessee desires to end the lease, it should surrender it.

§ 49.43(d)(2) Relationship to Definition of "Production" in Habendum Clause.

As noted previously, n808 a majority of jurisdictions interpret the word "production" in the habendum clause as requiring actual production and marketing. Other jurisdictions require only discovery of hydrocarbons in paying quantities and diligence toward marketing. A court in a minority jurisdiction could give effect to a contractual provision

requiring payment of shut-in royalties as a precondition for "production" despite the fact that the drilling of the well itself would satisfy the habendum clause for entry into the secondary term. n809 Oklahoma, however, has ruled that regardless of lease wording, non-payment of shut-in royalties will not be a special limitation on the lease so long as the lessee is diligently attempting to market. n810 Therefore, shut-in royalties in Oklahoma only moderate the time required to actually produce and market. n811

§ 49.43(e) Construction Problems.

§ 49.43(e)(1) Definition of "Shut-in" Well.

A shut-in well must be a well capable of producing in paying quantities. n812 A lessee may not take advantage of the shut-in royalty clause by simply drilling a well in a geologically promising area and turning off its valve. n813 Requiring the well to be capable of producing in paying quantities is logical because the shut-in well or the royalty payment provides constructive production; most jurisdictions define the production necessary to satisfy the habendum clause as production in paying quantities.

§ 49.43(e)(2) When Is Well "Shut-in" and Payments Due

A well, at one level, is "shut-in" when the valve is turned off. For a once producing well, minor repair down time should not necessitate payment of shut-in royalties and the cessation of production clause will allow the lessee to get back into production. However, a once producing well could be shut-in for lack of market. The date of shut-in would clearly be the date the well ceased to produce, but the date is less clear if the well had never been put on line. As with determining when a dry hole is completed, n814 a lessee should use the earliest possible time in computing when a well that has never been produced has been "shut-in."

In addition to ascertaining the date of "shut-in," when the obligation to pay shut-in royalties first accrues and when later payments are due also are often problematical. n815 Many clauses require that shut-in royalties be paid in advance. If the payments are constructive production, in the absence of actual production in jurisdictions that require the same, a gap between the time when the lease is held in another manner and the "production" will cause the lease to end. The royalties must be paid while the lease is in effect. n816 Texas, a state following the majority rule on what constitutes production, therefore ruled that such a payment must be made before the end of the primary term or a lease will terminate by its own terms. n817 Similarly, if the lease is in the secondary term, the shut-in royalties must be paid before the well is shut-in or the lease will terminate. n818

In order to avoid the problem of a lack of time to pay the shut-in rentals, most modern clauses refer to shut-in times of certain lengths before payments are due. For example, a clause may state that if a well is shut in for 60 days, then shut-in royalty payments may be paid. If there is a grace period, the lease will remain alive for that time. n819 Additionally, some cases have allowed shut-in royalty payments to be made during the period the lessee is granted to resume operations under a cessation of production clause or continuous operations clause. n820 The time of performance selected for all these clauses should be uniform.

Once an initial payment is made, problems may arise in computing when the next shut-in royalty payment is due. Although the clause may state that the payments are to be made "annually" or "quarterly," the date on which to begin counting is problematic. n821 Some clauses require payments annually on the anniversary of the date of the shut-in or payment of the shut-in royalty. n822 Neither of these dates will be the anniversary date of the lease. To fix the date for future payments, a lessee generally will require a shut-in royalty receipt, which details the period for which the payment applies. These receipts have been found binding. n823 Under other clauses, there may be a "floating" date because the payments literally are required each time a well is shut-in. If the well is produced sporadically, new payments may be due after each shut-in even when resumption and shut-in occurs during a period for which earlier shut-in royalty was made. n824

§ 49.43(e)(3) Person or Persons Entitled to Receive Payment.

Because rights to the benefits of a mineral estate may be divided among different parties, determining who is to receive the shut-in payment may create difficulties. n825 Arguably the lease terms could be read literally: if the payments are called "royalty," they are paid to royalty owners, but if called "rental," they go to the parties entitled to delay rentals. Other approaches may be more functional. If the shut-in payments are not credited against actual royalties, they would more logically be related to "delay rentals," which pay for the privilege of delaying development.

To avoid inadvertent loss of the leasehold, a well-drafted shut-in royalty clause should specify who should be paid, especially if the clause is one that makes payment the equivalent of production. Many lease clauses specify that the shut-in payments, even if denominated as royalty, are to be paid to the same party as the delay rentals.

§ 49.43(f) Scope of Clause.

§ 49.43(f)(1) Gas or Oil and Gas.

Most of the early clauses applied to wells "that produce gas only." This could create problems if a well produces condensate along with gas, but courts have allowed use of the clause in this situation, but only if the condensate production alone would not be profitable. n826 The reason for limiting the clause to "gas wells" was the belief that oil could always be produced and sold. n827 This is not, however, the case under modern conservation practices. If an oil well produces gas, the conservation agency may not allow the oil to be produced without recovery or recycling of the gas. n828 Although a well-drafted *force majeure* clause may give relief in some circumstances, in drafting a modern shut-in royalty clause, the wording should apply to the drilling of a well for oil, gas, or both.

§ 49.43(f)(2) Shutting in for Reasons Other than Lack of Market.

Often the clauses state that the payments may be made if there is no market or pipeline for the gas. This was the original impetus for the clause. Currently, however, a lessee may in good faith want to shut-in the well for other reasons, such as awaiting better prices. If the clause is not limited to specific triggers, payments may be required if wells are shut-in for other purposes. n829 This also provides a benefit: the lessee may be privileged to take advantage of the constructive production the clause provides for any good faith business purpose. The lessee should avoid limiting the clause's use or specify that it may be used when the lessee deems it advisable. n830 Naturally, the lessor may desire limits on its use.

§ 49.43(f)(3) How Long May Payments Be Made.

If the lease does not expressly limit how long the payment of shut-in royalties may preserve the lease, in theory the lessee may continue their use indefinitely. As detailed in the next subsection, courts have not necessarily allowed this. A lessor, however, would be wise to state a specific limit on the time that the lease could be held without actual production.

§ 49.43(g) Interrelationship with Implied Covenant to Market.

Courts have found that the lessee has an implied duty to market oil or gas because the lessor's ultimate goal is royalties. n831 The payment of shut-in royalties cannot supplant the implied duty. Nevertheless, payments may make a court more liberal in ascertaining both the lessee's diligence and the reasonableness of any delay because the parties anticipated the problem and provided some consideration to the lessor in the interim. At some point, however, a court may find that, despite the payment of shut-in royalties, an unreasonable period of time has elapsed without marketing or that the lessee has not been reasonably diligent in marketing efforts. n832

CHAPTER 49 PETROLEUM AND PIPELINES
IX. Shut-in Royalty, Pooling, and Force Majeure Clauses.

6-49 Thompson on Real Property, Thomas Editions § 49.44

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.44 Pooling and Unitization Clauses.n833

[Go To Supp]

§ 49.44(a) Meaning of Pooling and Unitization.

The terms "pooling" and "unitization" are often used loosely and interchangeably. "Pooling," however, means joining together tracts and interests in minerals to form a drilling or spacing unit under conservation rules. n834 The "pooled" interests would share in the expense and proceeds from the one well permitted per unit. "Unitization," on the other hand, refers to joining together of interests in a common reservoir in order to develop it pursuant to the best geological and engineering principles without concern for tract boundaries. n835 Unitization is most common for secondary and enhanced recovery activities. Waterfloods and other such pressurization techniques require use of the formation itself.

Most lease clauses expressly deal with pooling, not unitization. Without a lease term authorizing unitization, the lessor will have to consent to any unitization agreement. The law governing voluntary unitization, and the laws of various jurisdictions authorizing a conservation agency to approve a compulsory unit, will not be detailed. n836 Under the majority rule, however, an agreement either approved by a conservation agency or consented to by the lessor will modify the habendum clauses of the underlying leases to allow production or operations anywhere on the unit to satisfy each individual lease. Language to the contrary, of course, will prevent this result. n837

This chapter also will not extensively cover compulsory pooling, which allows a conservation agency to approve one party's application to pool interests in a drilling or spacing unit. All producing jurisdictions other than Kansas have provisions for compulsory pooling. n838 Kansas adjusts allowables based on acreage; even non-contiguous acreage may be assigned to a well to increase its allowable. n839 Texas's pooling law is limited to fields discovered after a certain date and to instances where the proponent has attempted voluntary pooling under fair and reasonable terms. n840 To otherwise account for small tract development, exceptions from spacing requirements are granted. n841

§ 49.44(b) Basic Form.

The pooling clause allows the lessee to unilaterally modify the rights of the lessor and lessee by allowing the lessee to combine all or part of the lease with other land for the purposes of complying with

operational duties and for sharing production. The clauses can differ in particulars, n842 but for the purposes of discussion, the following is a sample:

> Lessee may at any time or times pool any part or all of said land and lease or any stratum or strata, with other lands and leases, stratum or strata, in the same field so as to constitute a spacing unit to facilitate an orderly or uniform well spacing pattern or to comply with any order, rule, or regulation of the state or federal regulatory or conservation agency having jurisdiction. Such pooling shall be accomplished or terminated by the filing of record a declaration of pooling, or declaration of termination of pooling, and by mailing or tendering a copy to lessor, or to the depository bank. Drilling or re-working operations upon or production from any part of such spacing unit shall be considered for all purposes of this lease as operations or production from this lease. Lessee shall allocate to this lease the proportionate share of production which the acreage in this lease included in any such spacing unit bears to the total acreage in said spacing unit.

The lessee may pool or create a unit for operating purposes, which will directly modify where operations and production required by the lessee may be performed. Pooling also effects both the lessee's duty to pay and he lessor's right to receive royalty.

§ 49.44(c) Use in Primary Term.

If pooling is done in the primary term, drilling operations on the pooled unit, even if off the leasehold, will suffice for the lessee's drilling equirements so that delay rentals will not be needed. Moreover, if the operations for drilling are taking place on the last day of the primary term, the lease will be extended under the lease's operations clause. n843

§ 49.44(d) Use in Secondary Term.

After pooling, unit production, or continuous operations on the unit after the cessation of production, will allow the leasehold to be maintained even if the production or operations are not on the leasehold. n844 Despite the fact that a shut-in royalty clause refers to a well "on said land," if the pooling clause specifically states that operations on the pooled unit should be deemed as if on the leased land, a shut-in royalty payment should preserve a lease even if the shut-in unit well is off the leasehold. n845 One problem occurs if a unit well in a unit formed to produce gas produces oil and is considered an oil well. The oil production will not satisfy the habendum clause of all the committed leases n846 nor will the production be apportioned. n847 However, if production of pooled or unitized substances is achieved, all leases generally will be preserved for "all purposes," including rights to non-unitized substances. n848

§ 49.44(e) Effect of Production or Operations Within the Unit upon Acreage Within and Outside of the Unit.

§ 49.44(e)(1) Rule of Indivisibility.

The general rule is that a lease is indivisible, that is, operations or production anywhere on a lease preserves the entire leasehold. n849 Therefore, the entire lease will be preserved in the following situations:

1) All of the lease is in the unit and the unit well is on the leasehold;

2) All of the lease is in the unit and the unit well is not on the leasehold;

3) Only part of the lease is in the unit and the unit well is on the leasehold; n850 and

4) Only part of the lease is in the unit and the unit well is not on the leasehold. n851

Examples 1 and 3 merely reflect normal indivisibility because the leasehold itself has production. The lessor, however,

has to share the production with other mineral owners because it will be apportioned according to acreage included in the unit. The remaining two examples show how the pooling clause extends indivisibility: The entire lease will be maintained whenever production is attributed to any portion of the lease. From a financial perspective, moreover, the lessor has a reason to object to indivisibility in examples 3 and 4: all of the lease is held but royalties are computed and attributable only to the acreage within the unit. The remaining acreage is not "earning" any return for the lessor. n852

§ 49.44(e)(2) Effect of "Pugh" Clause.

In order to modify the result of the rule of indivisibility, a lessor's attorney by the name of "Pugh" drafted a clause. n853 The so-called "Pugh" clause may read as follows:

> Notwithstanding anything to the contrary herein contained, the commencement of operations for drilling, the drilling or reworking of a well, or the production of oil, gas, or other mineral from any well situated on lands included within a unit embracing a portion of the leased premises and other lands not covered hereby *shall serve only to maintain this lease in force as to that portion of the leased premises embraced in such unit*; but during the primary term delay rentals payable hereunder shall be proportionately reduced and be payable only on that portion of the leased premises not included in such unit.

The basic thrust of a Pugh Clause is that operations and production will only preserve that part of a leasehold included in a unit. n854 It traditionally is found as part of the pooling clause.

§ 49.44(e)(3) Scope of "Pugh" Clause.

In its traditional form, the Pugh Clause only operates if a unit combines both leased and unleased lands; it will not apply if a unit is comprised solely of lands subject to the lease. Nevertheless, a particular clause may state that it will operate in the latter situation. Moreover, some forms of the clause will only apply if the unit well was off the leasehold, not if the unit well is on the leasehold. n855 Similarly, clauses may be drafted so that they only apply to voluntary pooling, but not to units formed by compulsory pooling. n856 Therefore, clauses must be read carefully.

A final scope question is that the Pugh Clause generally refers to "lands" or "tracts" in units, but pooling clauses often allow the lessee to pool individual stratum. Courts have split on whether the Pugh Clause would horizontally divide the lease, preserving only those strata that have been unitized and releasing the remaining strata. n857 If there are multiple plays in an area, the lessor may expressly draft for this result.

§ 49.44(e)(4) Statutory Modification of Rule of Indivisibility.

Some jurisdictions have modified the rule of indivisibility by the statutory equivalent of a Pugh Clause, which applies when statutory drilling or spacing units are created. n858

§ 49.44(f) Allocation of Production.

Most pooling clauses specify that production will be allocated on the basis of proportionate acreage. n859 For example, if the unit is 160 acres and 80 acres are from one lease and 40 acres each from two other leases, the production would be allocated 80/160 or 1/2 to the 80 acre portion and 40/160 or 1/4 to each of the other leaseholds. The lessee will then pay royalty based on the lease's royalty provision. That is, the lessor of the 80-acre tract would be entitled to 1/2 the royalty reserved in the lease. Presuming a 1/8 royalty, this would be 1/16. n860 If the lease does not specify the method of allocation, it is possible that the allocation could be on a more sophisticated basis than simply acreage, such as a combination of acreage, pay zone thickness, and porosity.

§ 49.44(g) Methods of Achieving Pooling or Unitization.

§ 49.44(g)(1) Community Lease.

A "community lease" is one that contains multiple tracts and lessors. The tracts included may or may not be contiguous and the lease may have been executed in counterparts. If the community lease "pools" the tracts, it should authorize proportionate payment of royalties and avoid the need for internal offset wells to prevent drainage of individual lessor's tracts. Whether a community lease has this pooling effect differs from jurisdiction to jurisdiction. n861 In Texas, the execution of a community lease creates a strong presumption that pooling was intended, requiring clear evidence in the lease to rebut the presumption. n862 Oklahoma also finds a presumption that pooling was intended, but the rebuttal may be easier. n863 New Mexico finds no presumption. n864 Community leases are no longer used, most likely because more formal unitization and joint operating agreements are favored.

§ 49.44(g)(2) Basis and Authority of Lessee to Pool.

Absent authority in the lease, a lessee may not voluntarily pool the lessor's interest. n865 Therefore, pooling can only take place under the terms of a lease or a statutory provision. One exception is the doctrine of "equitable" or "judicial pooling," which appears limited to Mississippi and may be of less import after passage of its compulsory pooling act. Under it, drilling a well in an established drilling or spacing unit automatically pooled the interests. n866 Additionally, a lessor may validate an unauthorized pooling by conduct amounting to a ratification. Acceptance of a royalty check with knowledge that it is being paid because of production from a unit may be a ratification of the pooling n867 or work to estop the lessor from objecting. n868 Arguably, the lessor should only be estopped if the unit well was off the leasehold because only then would the lessor clearly be accepting the benefits of the unitization. n869

§ 49.44(h) Problems Under Pooling Clauses and with Unitization.

§ 49.44(h)(1) Exercise Within Authority of Lease.

Pooling clauses generally state when and for what purposes pooling may occur. Some clauses limit the lessee to pooling when necessary to create a drilling or spacing unit; others state that the lessee may pool when necessary "in the lessee's judgment" for orderly development and conservation." n870 Courts are generally liberal in finding that pooling is within the power granted the lessee because pooling fosters general conservation policy. n871

Nevertheless, lease terms may restrict lessee options. If there are limitations on the size of a unit, these limits will be strictly construed, n872 but larger units may be allowed under the authority of compulsory pooling orders. n873

On proper timing of pooling, the lessee may pool whenever the lease is in existence. n874 Pooling at the end at the primary term is authorized n875 and the lessee may exercise the power more than once if the lessee is acting in good faith and the pooling clause is silent on how often it may be used. n876 When a lease refers to pooling for development, however, courts generally required pooling before production, justifying this result on the belief that the clause was designed to enable drill sites to be chosen regardless of lease boundaries. n877

Current leases generally do not limit the power to pool to development only. They allow pooling after production when they authorize pooling "when in the lessee's judgment it is necessary or advisable to do so in order to properly develop and operate said leased premises" n878 or "before or after production." n879 Leases also may expressly allow the lessee to include land on which production is present. Naturally, the lessors may claim the pooling was done in bad faith. The lessor of the productive land, who now must share royalties, and the lessor of the non-developed land, whose lease's habendum clause is now satisfied, may both object.

§ 49.44(h)(2) Compliance with Formal Requirements.

Pooling clauses often require that a declaration of pooling be filed of record. These and other formal requirements are strictly construed. Pooling will not be effective until they are performed, which could affect the timeliness of the

pooling for purposes of extending or maintaining a lease. n880 Moreover, the pooling must be done by the lessee or a duly authorized agent of the lessee. n881

§ 49.44(h)(3) Exercise in Good Faith: Pooling and Unitization.

A theoretically different question from whether the lease authorizes the exercise of pooling is whether the exercise of the power is proper under the circumstances. n882 Often, a lessee desires to preserve multiple leases by including some acreage from each in a unit. For example, a 160-acre unit may contain 100 acres from one lease and 10 acres from each of six other leases. When such pooling is done near the end of primary terms and results in extending many leases, lessors often object. Courts have provided standards to judge the pooling.

Because the lessee has the power to alter the lessor's rights through pooling, the lessee is under a duty to act fairly and in good faith. n883 The source and dimensions of this duty are unclear. The lessee is neither the lessee's true agent nor a fiduciary. n884 The lessee may consider its own interests when it pools.

Nevertheless, courts inquire about whether there is a bona fide geological or development rationale for the pooling. Simply because the lessee acted at the last moment n885 or gerrymandered to preserve acreage will not necessarily indicate bad faith. n886 Including non-productive land or excluding presumptively productive acreage, however, would tend to show bad faith. n887 Similar findings result if the lessee is simply attempting to preserve leases without any plan to develop the acreage so held. n888 One case listed relevant factors as including: 1) whether one well could recover the maximum amount; 2) whether a fair distribution of proceeds would result; 3) whether additional wells were economically feasible; and 4) whether additional wells would affect the ultimate recovery of gas or impact oil recovery from adjacent lands. n889 Some cases have also looked at subjective intent when examining the propriety of pooling. n890 Cancellation was an appropriate remedy if the pooling was unfair, arbitrary, not in good faith, contrary to the purposes of the lease or injurious to the lessor. n891

Lessees are also under a duty to act in good faith when they seek field unitization orders from the relevant conservation agencies. The Tenth Circuit in Amoco Prod. Co. v. Heimann n892 explained that the duty is not that of a fiduciary. Furthermore, good faith does not require the lessee to disclose all geological facts nor require cooperation with the lessor. The lessee does not have unbridled discretion in unitization, but where the unitization requires approval by the conservation agency, the danger of lessee unfairness is ameliorated. In *Heimann*, when the agency concluded that the agreement protected correlative rights after a contested agency hearing, this determination included components of the lessee's good faith duty; the court therefore need not re-litigate the issue. n893 In a situation without a contested hearing, a court might be more active. n894

§ 49.44(h)(4) Duty to Exercise Power.

If a well is producing on or is about to be drilled on adjacent property with which a leasehold could be pooled, and this is the only well that could be drilled in a spacing unit, the lessee may have a duty to pool the lease so the lessor could share in production from this well. The duty may be a part of implied covenants to prevent drainage n895 or to seek favorable administrative action. n896

§ 49.44(h)(5) Cross-Conveyance Theory.

Texas and other jurisdictions adopted a cross-conveyance theory to explain pooling and unitization. n897 Under this theory, each party to the pooling or unitization agreement conveys an interest in their individual property to the others. The theory may affect the following: whether all parties must be included in any lawsuit, the ability for one party to unilaterally leave the agreement, the applicability of the Statute of Frauds and other conveyancing doctrines, venue selection and other matters. n898 To avoid the problems, agreements often expressly disclaim cross-conveyances, even in Texas. n899 Oklahoma, Kansas, and West Virginia have rejected the theory. n900 Additionally, the majority of

jurisdictions, even if they have not verbalized their rationales explicitly, appear to follow a contractual theory to justify the sharing of proceeds. n901

§ 49.44(h)(6) Effect of Pooling on the Non-Executive.

In Texas n902 and other states, n903 the lessee's power to pool a lease will not bind a non-executive interest in the property. For example, a royalty owner may have a non-participating royalty interest in the west half of a section. The lessee may pool this half-section with the east half to create a 640 acre unit, which would apportion the lessor's royalty regardless of the location of the well. The non-participating royalty, however, would be owed in full if the well was located on the west half if the royalty owner did not ratify the pooling. Conversely, if the non-participating royalty owner does not ratify the pooling, the royalty owner would not share in any proceeds of a well on the east half. Louisiana has case law to the contrary of Texas, holding that the non-executive is bound by pooling clauses in a lease; the self-interest of the executive is considered sufficient to protect the non-executive from imprudent lease terms. n904

In all jurisdictions, the non-executive does have the power to ratify pooling. n905 This is because without such power, the non-executive would be at the mercy of the executive. The land subject to the royalty could potentially never be developed if included in a larger lease or a lease with a pooling clause. Therefore, a royalty owner may ratify a pooling agreement if the action is taken promptly. n906

§ 49.44(h)(7) Conflict with Rule Against Perpetuities.

The right to pool may create rights to share in the proceeds of production on lands not owned by the lessor and enable others to share in proceeds from the lessor's lands. Because of this, some analogize the right to pool with the right to create future interests in the property of another. Therefore, if unlimited in time, it could violate the Rule Against Perpetuities. n907 Although the few cases considering the matter rejected the attack, n908 many drafters limit the time in which pooling could occur to twenty-one years.

CHAPTER 49 PETROLEUM AND PIPELINES
IX. Shut-in Royalty, Pooling, and Force Majeure Clauses.

6-49 Thompson on Real Property, Thomas Editions § 49.45

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.45 *Force Majeure* Clauses.

§ 49.45(a) Rationale for Inclusion.

A *force majeure* clause attempts to excuse non-performance when causes outside the control of the lessee render performance impossible. Naturally, the clause is most important if the required performance is a special limitation on the leasehold, such as the need to conduct operations or to produce to preserve the lease.

§ 49.45(b) Basic Form.

Force majeure clauses vary in their coverage and detail. n909 All state that a lease will not terminate if the described force majeure events prevent the specified types of performance. Often the clauses also state that if the events occur in the primary term, the primary term will be extended. n910 A short example follows:

> The drilling and operating requirements of this lease shall be suspended while, but only as long as lessee is prevented from complying therewith, in whole or in part, by strikes, lockouts, war or inability (other than financial) of Lessee to obtain material or supplies, as well as delays in transportation, accidents and other matters of any kind or nature whatsoever beyond the control of Lessee. n911

Even without a *force majeure* clause, equitable concerns sometimes will prevent a lease from termination. n912 If, however, a *force majeure* clause covers some items and not others, a court might state that the performance is not excused by the happening of a non-covered event.

§ 49.45(c) Interpretation.

Force majeure clauses generally are construed strictly, n913 at least in reported cases. n914 "Beyond the control of the lessee," rather than being a shibboleth allowing wide-ranging relief, is treated more as a limitation on the clause's operation. n915 One way to approach a *force majeure* problem is to ask three questions: 1) is the performance that has not been performed covered by the clause?; 2) is the event that has purportedly prevented performance contained in the clause?; and 3) did the alleged preventing event actually prevent performance? n916

For an example of the first problem, presume that drilling at the end of the primary term did not occur. The clause quoted in § 49.45(b) refers to "drilling requirements" and most likely would cover the inability to drill at the end of the primary term. n917 A clause, however, that merely refers to "all obligations [of the lessee], express and implied" may not cover this drilling. The lessee is not obligated to drill at any time in the primary term.

The next question asks whether the preventing event is contained in the clause. Most *force majeure* clauses end with a catch-all to include all items "beyond the control of the lessee" and some even add "whether similar or not" to those listed. Nevertheless, most courts employ some version of ejusdem generis. For example, operations of a bankruptcy court will be sufficiently similar to an "order of government," n918 but heavy rains would not be a "flood" or "act of God" if the rains were seasonal and predictable. n919

Predictability also enters into the final question: did the alleged preventing event actually prevent performance? If the problem was predictable, the lessee should have provided for alternative means of performance. n920 If there are alternative ways to perform, the event did not cause the non-performance. n921 Increases in expenses and decreases in prices paid for oil or gas are generally deemed predictable and not force majeure events. n922 Additionally, even if a clause refers to the event as causing the non-performance "in whole or in part," courts tend to require the *force majeure* event to be the sole cause of the problem.

CHAPTER 49 PETROLEUM AND PIPELINES
X. The Lease Royalty Clause

6-49 Thompson on Real Property, Thomas Editions § 49.46

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.46 Implications of General Form of Oil and Gas Royalties.

Oil and gas royalties generally are expressed in terms of a percentage, rather than as a fixed sum per unit of oil or gas produced. The percentage formula hedges against uncertainty; return for the lessor is tied to production. Some leases further link the lessor's return to the amount of production by either providing a sliding scale for royalties, which increases the royalty percentage if production is higher, or by increasing royalties after "pay-out," which is recovery of drilling costs. n923 Therefore, the lessor's return varies with the lessee's cost recovery.

The majority of leases, however, have a fixed royalty. Prior to the 1970s, the generally accepted royalty was 1/8 in all but California, where 1/6 (or 162/3%) was usual. The royalty, however, is negotiable. n924 During the last boom cycle, royalties of 1/6 and 3/16 were common. Competitive areas could command higher royalties.

§ 49.46(a) Oil "In Kind."

The basic oil and gas lease generally provides that the royalty on oil is an agreed upon fraction of oil produced. n925 For example, the lessee may agree to pay as royalty:

> On oil, 1/8 of that produced and saved from said land, the same to be delivered at the wells or to the credit of Lessor into the pipelines to which the wells may be connected. Lessee shall have the option to purchase any royalty oil in its possession, paying the market price therefore prevailing for the field where produced on the date of purchase.

The oil royalty phrased in this manner is due "in kind." The lessor has a right to the oil itself and owns the royalty oil. Therefore, the royalty share is "reserved" from the lessee's working interest and never passed to the lessee. The quoted clause allowing the lessee to purchase the oil acknowledges this. Some modern forms delete the in kind reference and treat oil like gas.

§ 49.46(b) Gas in Value or Proceeds.

Royalty for gas is not generally in kind. n926 A common formulation, which has created difficulty, n927 provides:

> On gas, including casinghead gas, condensate or other gaseous substances produced and sold or used off the premises ... . The market value at the well on 1/8 of the gas so sold or used, provided that on gas sold at the well the royalty shall be 1/8 of the amount realized from such sale.

The gas royalty is not in kind, but is stated as a specified fraction of the value of the gas or of the proceeds of its sale. n928 The lessee has title to all gas produced. n929 It is presumed that the lessee will dispose of the gas and compensate the lessor in cash. If the lessee uses the gas in production, often the lease provides that no royalty would be due on such gas.

§ 49.46(c) Result of Distinction.

The distinction between the oil "in kind" royalty and the gas royalty reflects historic differences in production and marketing. The lessor easily could store and sell a share of the oil, which generally requires little processing. Gas, however, cannot be stored easily and is only marketable when a pipeline is built. In order to attract a purchaser, one party having title and the right to sell was considered more advantageous. When gas was sold primarily by long-term contract to pipelines, prices would be higher the greater the amount of gas that could be committed to a sale. Although still true, more interest holders in one well are making separate sales because not only are wellhead sales no longer regulated, but shorter contracts and spot sales are more prevalent. n930 Nevertheless, because of the historical distinction in the types of royalties, there are differences in the relationship of the lessor to the product and the remedies available if the lessee does not pay.

Because the lessor "owns" royalty oil unless the lessee purchases it, the lessor generally is requested to sign division orders for the purchaser. n931 The lessee traditionally is viewed as the lessor's agent for sales if the lessor does not arrange for storage or sale of the oil. If royalty payments are not made, the lessor may seek remedies for conversion as well as contractual remedies. n932 Conversion may yield higher damages, but will have a shorter statute of limitations. Additionally, because of an "in kind" royalty, if creditor's attach the lessee's tanks, the lessor can separate the royalty oil.

With gas, however, the lessor cannot use a conversion remedy because the lessee owns the gas. n933 All the lessee has is a contractual right to payment of the royalty. The lessee will be a simple creditor of the lessee. In addition, the lessor is not technically a necessary party to a gas sales contract, but purchasers often include a lessor on division orders.

CHAPTER 49 PETROLEUM AND PIPELINES
X. The Lease Royalty Clause

6-49 Thompson on Real Property, Thomas Editions § 49.47

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.47 Products Covered by the Royalty Clause.

[Go To Supp]

A lease for oil and gas often allows the lessee to recover other minerals, particularly sulfur. Nevertheless, the primary emphasis is hydrocarbons. Originally, gas was considered a waste and the percentage royalty applied only to oil. If a well produced only gas, royalty was a flat rate per annum. n934 Initially, courts upheld these flat rates as full compensation. n935 More recent courts attempted to avoid the seeming inequitable return to the lessee for a now valuable resource. n936 As gas became more valuable, the current lease form evolved with a percentage royalty for gas. n937

COMPUTER-ASSISTED RESEARCH

LEXIS: gas w/1 oil w/15 other w/1 mineral w/50 royalty w/1 clause

Because of the different treatment of oil and gas, however, it becomes of legal as well as geologic interest to determine which phase of the hydrocarbon is being produced. As one court put it:

> Generally, "oil" as used in [leases & sales contracts] ... means crude or unrefined petroleum which is measured and sold in volume according to grade or gravity, while "gas" consists of invisible vapors which are produced from the earth, containing varying amounts of hydrocarbon, some of it denominated "dry" and in other instances "wet," depending upon the amount of liquid hydrocarbons which can be extracted. n938

Legal controversies center on the "wetness" of gas and whether the gas is produced in association with oil.

§ 49.47(a) Royalty on Gas Produced from an Oil Well -- Casinghead Gas and Gasoline.

An oil well may also produce gas, referred to as "casinghead gas." n939 Lessees initially simply vented this gas, but

conservation agencies later required either recovery of the gas or its re-injection. Casinghead gas often has liquids, which may be removed by treatment. The treated liquids are "natural gasoline" and the remaining dry gas would be "residue gas." n940 Old lease forms did not mention these products directly in the lease or royalty provisions.

The handling of casinghead gas under these old forms differed. n941 Texas took the approach that the lease covered casinghead gas, but that royalty was payable not under the flat rate for gas, but under the oil royalty. n942 Oklahoma, conversely, held that the lease did not cover the casinghead gas. The lessor could recover the value of the products recovered minus reasonable costs. n943

Leases then began to mention casinghead gas, but the first versions allowed for a flat rate payment for gas produced from an oil well. Most courts found this would be all the compensation required. No additional payment was needed for the value of the recovered gasoline. n944 Current lease forms tend to include casinghead gas in the percentage gas royalty clause. Therefore, the only issue is when to set the value: either before removal of the gasoline or at the time the end products are sold. n945

COMPUTER-ASSISTED RESEARCH

LEXIS: royalty w/1 clause w/15 casinghead

§ 49.47(b) Royalty on Liquid Components Produced from a Gas Well -- Condensate and Distillate.

Not all gas wells produce "dry" gas, but some produce gas rich in liquids. n946 Such gas is "wet gas" and processes similar to those used to treat casinghead gas may remove the liquid components. These components were first called distillates but are now more commonly referred to as condensates. Generally, royalty is paid under the gas royalty clause. n947 Payment of royalties on the gas stream, however, is deemed payment for the condensates in the gas and the majority rule does not require further payment when the condensates are extracted by the lessee or third-parties. n948 The value of wet gas commanded in the market should reflect the value of the liquids it contains, n949 but some cases do require payments for the constituents. n950

COMPUTER-ASSISTED RESEARCH

LEXIS: (condensate or distillate or liquid w/1 components w/50 royalty)

§ 49.47(c) Other Minerals.

The royalty for the other minerals covered by the lease may be the same percentage royalty as for the hydrocarbons or may be different. n951 Quite often, royalty clauses provide for a fixed dollar amount for each unit of certain minerals produced, especially sulfur. n952

§ 49.47(d) Royalty on Take-or-Pay Payments or Settlements.

Take-or-pay gas contracts obligated pipelines to either take minimum gas amounts or pay certain sums, "take or pay payments." n953 Royalty is not owed on these take-or-pay payments, but would be payable if gas is later taken and the payments credited. Courts have split on whether royalties would be owed on settlements pipelines made to escape the contracts, which had become onerous because of lower gas prices. n954

COMPUTER-ASSISTED RESEARCH

LEXIS: (take-or-pay w/1 settlement! w/50 royalty)

Natural Gas Pipeline Co., 789 F.2d 1151 (5th Cir. 1986), reh'g denied, 793 F.2d 1287* (need not pay for drips taken out of gas away from lease). *See* 3 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 41.3(b) (Anderson) and Richard W. Hemingway, The Law of Oil and Gas § 7.3 (2d ed. 1983).

(n16)Footnote 949. *Carter v. Exxon Corp., 842 S.W.2d 393 (Tex. App. 1992)* (royalty based on "market value at well").

(n17)Footnote 950. *Compare Barby v. Cabot Corp., 465 F.2d 11, 14 (10th Cir. 1972), with Old Kent Bank & Trust Co. v. Amoco Prod. Co., 679 F. Supp. 1435 (W.D. Mich. 1988)* (include constituent prices if payment based on "amount realized at well" and sale not at wellhead; use gross proceeds less expenses).

(n18)Footnote 951. *See generally* 3 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 41.2 (Anderson).

(n19)Footnote 952. *But see Schwartz v. Prairie Producing Co., Inc., 833 S.W.2d 629 (Tex. App. 1992)* (lease clause for royalty on amount realized for gas may apply to sulfur recovered from hydrogen sulfide in gas, not clause granting $1.00 per then of sulphur mined; ambiguity requires trial). For duties of the lessee with respect to minerals other than oil and gas, *see* 3 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 41.4 (Anderson).

(n20)Footnote 953. *CIG v. Hunt Energy Corp., 47 S.W.3d 1 (Tex. App. 2000)* (the court noted that in a take-or-pay contract, the producers are provided with steady income to pay operating and other expenses. The buyer takes the risk that it will not be able to make up a deficiency in payment within the make-up period).

(n21)Footnote 954. *Compare Diamond Shamrock Exploration Corp. v. Hodel, 853 F.2d 1159 (5th Cir. 1988)* (royalty only due on gas actually produced); *Gerard J.W. Bros. & Co., Inc. v. Harkins & Co., 883 F.2d 379,* reh'g denied, *889 F.2d 271 (5th Cir. 1989)* (same result for settlements); *Killam Oil Co. v. Bruni, 806 S.W.2d 264 (Tex. App. 1991) writ denied,* (no royalties due under market value royalty clause); *with Frey v. Amoco Prod. Co., 603 So. 2d 166 (La. 1992)* (royalties due under "amount realized" royalty provision); *Hurd Enters. v. Bruni, 828 S.W.2d 101 (Tex. App. 1992)* (may be recoverable if lessee cannot recoup gas); and *Klein v. Jones, 980 F.2d 521 (8th Cir. 1992) cert. denied, 519 U.S. 815 (1996)* (restrictive interpretation of royalties clause in conventional lease inconsistent with its purpose and unfair to lessor).

Courts also differ on how to measure what damages a purchaser must pay if the purchaser breaches a take-or-pay contract. *Compare, Roye Realty & Dev., Inc. v. Arkla, Inc., 863 P.2d 1150 (Okla. 1993)* (damages computed pursuant to U.C.C. measure, namely, the difference between market price at the time the aggrieved party knew of the repudiation and the contract price), *with Colorado Interstate Gas Co. v. Chemco, Inc., 854 P.2d 1232 (Colo. 1993)* (U.C.C. § 2-708 does not apply; pipeline must either take gas or pay contract price as alternative performance). *See also, Stoute v. Wagner & Brown, 637 So. 2d 1199 (La. App. 1994)* (no class certification for all royalty owners in field over producers' failures to pay royalties on take-or-pay settlements because of different leases and gas purchase agreements). Beverly M. Barrett, Note, *Oil and Gas: Are Royalties Owed on all Take-or-Pay Settlements in Oklahoma, 46 Okla. L. Rev. 745 (1993);* Patricia A. Brown, *Case Note: Equitable Right to Royalties on Take-or-Pay Settlements,* 47 Ark. L. Rev. Vol. 749 (1994).

Transamerican Natural Gas Corp. v. Finkelstein, 933 S.W.2d 591 (Tex. App. 1996) (holding that a royalty owner is not entitled to a share from a take or pay agreement when no gas is extracted or sold; however, the scope is limited to recoupable settlements and does not extend to non-recoupable settlements); *Yates v. Powell, 98 F.3d 1222 (10th Cir.*

1996) (holding that royalties are only due when production has occurred, and thus in a take-or-pay situation, where no gas is produced, no royalty is due);); *Condra v. Quinoco Petroleum, Inc., 954 S.W.2d 68 (Tex. App. 1997)* (where nonrecoupable payment was not paid for production, division orders did not allow overriding royalty holders to claim royalties on the take-or-pay settlement); *Roye Realty & Developing, Inc. v. Watson, 2 P.2d 320* (Okla. 1996 (corrected opinion) (under Oklahoma law, a royalty owner is not entitled to share in take-or-pay settlements unless the lease contains clear language to the contrary); *Alameda v. Transamerican, 950 S.W.2d 93 (Tex. Civ. App. 1997)* (holding that no royalties are payable either for recoupable or for non-recoupable settlements in take-or-pay situations); *Independent Petroleum Ass'n of America v. Babbitt, 92 F.3d 1248 (D.C. Cir. 1996)* (the Minerals Management Service attempt to change Department of the Interior precedent by requiring royalties on take-or-pay settlements is deemed an impermissible departure from established practices); *Independent Petroleum Ass'n of America v. Babbitt, 971 F. Supp. 19 (D.D.C. 1997)* in further proceedings, the prevailing lessee in the D.C. Circuit was exempted from royalties on various types of nonrecoupable take-or-pay payments and, under collateral estoppel, Department of Interior was enjoined from attempting to collect royalties from lessee in actions in other circuits or in administrative proceedings). *EEX Corp. v. U.S. Dept. of Interior, 111 F. Supp. 2d 24 (D.D.C. 2000).* Royalties did not accrue on nonrecoupable take-or-pay settlement payments received by lessee, even if settling purchaser was ultimate purchaser of freed-up gas. Nonrecoupable settlement payments serve as compensation for freed-up gas, gas that the lessee would not have been able to sell without the settlement. Identity of the subsequent purchaser is not relevant.

Watts v. Atlantic Richfield Co., 115 F.3d 785 (10th Cir. 1997) (where royalties would be payable on settlement proceeds under "production-type" lease to the extent that the proceeds constitute payment for gas actually produced and sold despite the absence of an explicit provision to that effect. Royalties cannot be reduced by the acceptance of non-cash items. The duty to pay is based upon an agreement by the producer to exchange its right to pursue a higher price for a lump sum settlement. A reduction in the price that a purchaser is obligated to pay for gas production is not required).

Westerman v. Rogers, 1 P.3d 288 (Colo. App. 1999). The court adopted the analyses of *Yates v. Powell, 98 F.3d 1222 (10th Cir. 1996)*and *Watts v. Atlantic Richfield Co., 115 F.3d 785 (10th Cir. 1997),* and concluded that royalty interests extend to any settlement or payment in which a producer receives consideration for compromising its pricing claim, but only to the extent that the claim relates either to past or future production actually taken by the settling producer. *See United States v. Century Offshore Mgmt. Corp., 111 F.3d 443 (6th Cir. 1997)* (where a lump-sum payment made to a bankrupt natural gas producer by a purchaser under term fixed price contracts had a sufficient nexus to production so as to compel payment of royalties. This payment was an advance under a substituted requirements contract where the parties intended a continuing relationship with future gas sales. Royalties were based on the price paid by the purchaser for gas produced and delivered plus the amount of the lump sum payment allocable to the gas ultimately taken).

Compare Black Butte Coal Co. v. United States, 38 F. Supp. 2d 963 (D. Wyo. 1999) (take-or-pay payments or settlements are not royalty bearing until they are credited toward the purchase of make-up gas). *See also, Stoute v. Wagner & Brown, 637 So. 2d 1199 (La. App. 1994), writ denied, 644 So. 2d 638 (La. 1994). See United States v. Century Offshore Mgmt. Corp., 111 F.3d 443 (6th Cir. 1997), cert. denied, 522 U.S. 1090 (1998).*

Questar Pipeline Co. v. Grynberg, 201 F.3d 1277 (10th Cir. 2000). Under a settlement agreement between a gas pipeline and the owner of a working interest under a take-or-pay contract, the pipeline prepaid and any gas taken over a minimum amount would be credited to making up the prepaid amount. Unit operating agreement required that each owner take proportionately. Pipeline had no right to allocate 100% of unit production to the owner with whom the settlement was made when the price of gas was low so as to maximize the amount of gas it could take before reaching the prepaid total.

Goss Family Ltd. Partnership v. Wood, 15 P.3d 517 (Okla. Civ. App. 2000) (where the lessor was entitled to royalties on gas produced and sold from the premises, there was no right to a royalty on the settlement payment as a non-refundable buy-out to a take-or-pay purchase contract).

CHAPTER 49 PETROLEUM AND PIPELINES
X. The Lease Royalty Clause

6-49 Thompson on Real Property, Thomas Editions § 49.48

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.48 Deductions from Royalty.

[Go To Supp]

§ 49.48(a) Free and Clear of Costs of Production and Discovery.

One of the hallmarks of a royalty is that it is "free of costs." While it is true that a royalty is free of the costs of production and discovery, costs beyond that stage may be proportionately charged against the lessor's interest. Production and discovery costs clearly include costs of lease acquisition, geophysical exploration, drilling the well, equipping the well for production, labor, re-working wells, secondary recovery, and energy required to pump wells. n955

§ 49.48(b) Post-Production Costs Chargeable.

Costs beyond that of discovery and production will be charged proportionately to the lessor. n956 For example, severance taxes are shared, absent provisions to the contrary in the lease or peculiarities of statute. n957 Generally, a lessee may charge costs of transporting, cleaning, dehydrating, and sweetening gas. n958 Compression costs are shared in some jurisdictions. n959 Little uniformity is found in the treatment of costs for separators at or near the well, for measuring production, overhead, interest on borrowed money, and depreciation. n960 Naturally, no costs that are shown to be unreasonable may be charged to the lessor. n961

COMPUTER-ASSISTED RESEARCH

LEXIS: 260k79.3 post-production w/50 (oil or gas)

§ 49.48(c) How to Distinguish.

The basic distinction is between costs of production and costs subsequent to production. In essence, the lessee bears the cost of bringing the oil and gas to the surface and readying it for market. Courts employ several tests to determine the nature of a cost.

Some of these are general. Where costs are incurred may influence the result, with costs on the leasehold usually carried by the lessee. Another way to distinguish the types of costs is whether the costs are to make the product marketable or to increase the value of the product. The lessee should bear the cost of producing a marketable product from the perspective of the nature and quality of the product. n962 An example is sweetening costs. These costs are chargeable to the lessor when courts presume that there is a market for sour gas, n963 but were not chargeable in one case in which the parties stipulated no such market existed. n964 Another general test is to look at the custom of the industry in the area. This might explain why compression costs are not charged to the lessor in some areas, where compression is always needed for gas to enter a pipeline because of low reservoir pressures and where lessees customarily pick up the cost.

A final and perhaps crucial test is the wording of the lease. A lease may clearly state what costs are or are not to be shared and this will bind the parties. n965 Less specifically, a lease may refer to the royalty being free and clear of cost "at the pipeline or other delivery point." Under this construction, transportation costs were cost-free to the lessor. n966 More generally, many leases refer to royalty computations "at the well," which indicates that post-production costs such as transportation and processing are not cost-free to the lessor. n967 This method of proceeding and the resultant industry custom is so strong that a court implied "at the well" as the computation point when a lease referred to "gross proceeds at the prevailing market rate." n968 Similarly, "free of cost in the pipe line to which the Operator may connect wells" was read to imply that parties presumed a connection at the well and the lessee was not to bear alone post-production costs such as treating, transporting, and compression. n969 Leases simply requiring payment on "gross proceeds" have been variously interpreted on the issue of cost deduction. n970

Schroeder v. Terra Energy, 565 N.W.2d 887 (Mich. App. 1997) (where agreement obligated an oil and gas operator to pay a percentage of gross proceeds at the wellhead, deduction was allowed for refining and transportation costs required to make the product marketable).

(n3)Footnote 957. *See* 3 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 42.2 (Anderson).

For an example of a lease tax-shifting clause, *see J.M. Huber Corp. v. Santa Fe Energy Resources, Inc., 871 S.W.2d 842 (Tex. App. 1994); Lee M. Bass, Inc. v. Shell Western E & P, Inc., 957 S.W.2d 159 (Tex. App. 1997)* (where the lessee agreed to reimburse lessor for all taxes assessed against production, its value or proceeds of sale, ad valorem taxes known to be an obligation of the lessor were not specifically listed and were not reimbursable).

Feerer v. Amoco Production Co., 242 F.3d 1259 (10th Cir. 2001) (under settlement agreement, working interest

owners could not reallocate to royalty interest owners the portion of the severance tax attributed by them to the increased value of post-settlement carbon dioxide royalty payments).

(n4)Footnote 958. "Sweetening" refers to removing hydrogen sulfide, a poisonous and corrosive impurity found in some natural gas. Sulfur may be recovered in the process.

Atlantic Richfield Co. v. Farm Credit Bank of Wichita, 226 F.3d 1138 (10th Cir. 2000). Royalty based on the proceeds of sale at the mouth of the well necessarily incorporated a transportation deduction since the nearest market was 400 miles distant. As a "marketable product" jurisdiction, interest during construction and cost of capital were deductible in reasonable amounts as transportation costs.

Creson v. Amoco Production Co., 10 P.3d 853 (N.M. App. 2000). Royalty payments based upon net proceeds derived from sale at the well anticipated deductions for post-production costs including transportation, dehydration, compression and other costs adding value to the wellhead product.

CHAPTER 49 PETROLEUM AND PIPELINES
X. The Lease Royalty Clause

6-49 Thompson on Real Property, Thomas Editions § 49.49

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.49 Compensation for Royalty Based upon "Market Value" or "Proceeds."

§ 49.49(a) General Distinction.

Royalty clauses for gas use various formulations such as 1/8 of the "market value," "market price," "proceeds," or "amount realized from sales." The first two wordings are interpreted similarly. What is important is the prevailing price for gas, not necessarily the lessee's sale. The distinction between the two wordings, which is sometimes ignored, is that "price" determinations employ only comparative sales, but opinion evidence may define "value." n971 A bigger distinction is when royalty clauses refer to "proceeds" or "amount realized." In these cases, the lessee's sales contract is of prime importance. n972

§ 49.49(b) Problem of Market Value Royalty and Long-Term Contracts.

Market value royalties created a problem when prices began to rise faster than inflation. n973 The federal government regulated interstate sales of natural gas from 1954 until 1993. Prices were historically low until the late 1970s. n974 Unregulated intrastate prices exceeded the interstate prices. To counter the dual market differential, the National Gas Policy Act of 1978 regulated wellhead prices regardless of whether sales were interstate or intrastate. n975 Currently, wellhead prices are unregulated and prices have fallen dramatically. n976 The historical swings, however, caused conflicts under long-term contracts.

Lessors, who were being paid royalties under long-term interstate contracts entered into before the price rises of the early 1970s, later saw higher prices being paid in both the interstate and intrastate markets. Therefore, the lessors under old contracts sought royalties based on "market value" or "market price" unrelated to the proceeds their lessees were realizing. Under this theory of market value, the lessor would receive a higher percentage of the contract proceeds. A simple example explains the problem from the lessee's perspective. If a contract generates $80 in proceeds subject to royalty, the lessor entitled to 1/8 would receive $10. If the current market value of the gas is $160, the lessor would receive $20. Because the lessee is still only generating $80, the lessor would receive 1/4 of the proceeds. Although the falling prices of natural gas moots the dilemma, the cyclical nature of the industry mandates knowledge of the problem.

COMPUTER-ASSISTED RESEARCH

LEXIS: (market value w/15 royalty) and long-term w/15 contract

§ 49.49(b)(1) Definition of Market Value: *Vela* Rule.

One line of cases adopted the lessor's position: "market value" or "market price" refers to the value at the time the natural gas actually is produced and delivered. The rule became known as the *Vela* rule, after the Texas case that announced it. n977 The rationale behind the rule is that until production, a gas contract is executory. To not use current prices would make market value equivalent to proceeds. n978 Mississippi, n979 Kansas, n980 Montana, n981 and West Virginia n982 have adopted the rule.

§ 49.49(b)(2) Definition of Market Value: *Tara* Rule.

An alternative line of cases, beginning in Oklahoma, defined "market value" as the price assigned in the sales contract applicable to the lease's production, provided the contract was negotiated prudently and in good faith. n983 In addition to Oklahoma, this rule has been adopted in Arkansas n984 and possibly Louisiana. n985 Under this so-called *Tara* rule, market value could never exceed the contract price. The "market value at the well," however, could be less than the contract price if costs of marketing, transporting, and treating are backed-out. Some have argued that the right to subtract costs was the rationale behind the market value at the well wording. n986

§ 49.49(b)(3) When Sales Are "At the Well."

Some lease forms combine proceeds royalty provisions with market value provisions, each being employed in different situations. n987 Generally, these provide that royalties will be computed based on proceeds when sales are made "at the well." Therefore, lessees strenuously argued that sales were at the well to avoid paying based on current market value. The Texas approach was to define the term based on whether sales occurred on the leaseholds, concentrating on where title was transferred. n988 Other courts insisted that "at the well" referred to the quality of the gas, not merely a location. Under this view, the lessor is entitled to royalty on the gas as it emerges from the well; if the sales contract included consideration for treatment or transportation, the sale was not "at the well." n989 More recent cases adopted the latter approach. n990

§ 49.49(b)(4) How to Determine Market Value.

Market value or market price generally is proven by comparable sales. n991 Comparable sales are those comparable in time, quality of gas, quantity of gas, and availability of marketing outlets. n992 Cases diverged over whether the similar sales must deal with gas sold in the same legal market or subject to the same price restraints. n993 In all instances, however, lack of perfect matches required adjustments to sales data. For example, if there are no sales of sour gas, sales of sweet gas would have to be used with deductions for the cost of processing the gas. Working back to subtract costs from the price in the one contract signed by the lessee is one way of showing market value, but is the least favored. Nevertheless, it may be the only provable value. n994

§ 49.49(b)(5) Curing or Avoiding the Market Value Problem.

The lessee's approach to the market value problem in an existing lease would be to amend either the sales contract or the lease. A sales contract amendment would attempt to compensate the lessee for excess royalty payments. The goal of amending the lease would be to obtain the lessor's consent to computing the royalty based on the contract price minus agreed upon costs. One method of doing this indirectly could be use of a division order. In some jurisdictions, a division order can modify the lease terms in this manner because the lessor will be estopped from challenging payments made under the order. n995 The lessor, however, will have the right to revoke the division order at any time. In other jurisdictions, a division order attempting to modify a lease is invalid. n996

New leases should be drafted to avoid the problem. For example, all royalties could be based on the amount realized or proceeds of the contract, with the lessee's right to subtract costs clearly defined. n997 Making the gas royalty payable in kind would be another avoidance technique. This would, however, relinquish the benefit of lessee control of the total gas stream. A variant of this approach is to allow the lessor to take royalty in kind or in value, but to require all proposed contracts to be presented to the lessor. The lessor could then either approve the contract or elect to take in kind. If there is no election, the lease would deem the contract approved and the royalty would be computed on the basis of the contract price. n998

CHAPTER 49 PETROLEUM AND PIPELINES
X. The Lease Royalty Clause

6-49 Thompson on Real Property, Thomas Editions § 49.50

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.50 Payment of Royalty.

[Go To Supp]

§ 49.50(a) Division Orders.

§ 49.50(a)(1) Nature of a Division Order.

A purchaser of gas or oil will want to confirm that those owning the minerals have authorized the sale and are being paid as their interests demand. To obtain this assurance, the purchaser will normally require all persons entitled to a share in production to sign a "division order." n999 These instruments are most important in the oil industry; regardless of the form of the oil royalty, the lessee generally will deliver all the oil to one purchaser and lessor will have to approve the sale of royalty oil. n1000 For oil transactions, a division order is not technically a contract, but is more a continuing offer to sell the oil on the terms and conditions contained in the division order. Neither party is obligated to sell or purchase, but if they do, the division order's terms will bind the parties. n1001 In the gas industry, division orders are used to protect the purchaser from disagreements about the division of proceeds. The lessee generally has title and authority to sell the lessor's gas. n1002

In addition to stating the amount of each party's interest, division orders often contain numerous other items about the purchase price, the quality of the gas or oil, and the computation of royalty. n1003 Lessors often object to terms of division orders and may submit alternative "statements of interest." The cases are split on whether a signed division order may be a prerequisite for royalty payments. Technically, the lease itself obligates the lessee to pay royalty, especially for gas royalties, where there is no "in kind" provision. n1004 Nevertheless, division orders are customary in the industry and there may be an implied duty for the lessor to cooperate by signing reasonable normal documents. n1005

Because of attempts to modify leases through division orders and the duress felt by lessors to sign orders to receive royalties, some states statutorily defined what terms may be required in a division order and declared that any terms contrary to the lease contained in a division order are invalid unless also contained in a separate agreement. n1006 Other states reached this conclusion judicially. n1007

§ 49.50(a)(2) Effect of Division Order.

The division order is a direction to the purchasing company to pay the proceeds to the owners of production in the specified percentages. It warrants title to the oil or gas and allows for payment in accordance with the division order's terms.

Most importantly, the division order can bind the signatories in regard to payments already made under it. n1008 They cannot sue the purchaser for conversion or for improper payment. Because a division order is not a royalty conveyance, n1009 under the better view, the interest owners could still sue each other if one was overpaid and another underpaid. n1010 Moreover, if the operator prepared the erroneous orders and retained the benefits of the purchase payment, division orders would not prevent suing it. n1011

§ 49.50(a)(3) Modifying or Terminating Division Orders.

Any party to a division order always may revoke it under the customary form. n1012 If a party agreed at one point to a division of proceeds other than one based on ownership shares, that agreement may be changed unilaterally. n1013

§ 49.50(b) Failure to Pay.

The general rule is that, absent a special provision in the lease, a failure to pay royalty will not lead to a forfeiture of a lease because royalty payments are covenants, not conditions. n1014 Courts, however, do have the inherent power to cancel a lease for the lessee's willful and repeated breaches. Additionally, statutes have changed the result in some instances and allowed the lessor to seek cancellation of a lease for non-payment of royalties. n1015

§ 49.50(c) Interest.

Absent a statute, only Kansas regularly allowed prejudgment interest on overdue royalty payments. n1016 The common-law rule granted prejudgment interest only in actions for sums certain; royalties can be subject to question, such as the reasonableness of costs deducted and what the lessor owns. n1017 Nevertheless, if sums were actively used by the lessee during the period of suspense, interest could be required to be paid. n1018 Many states now provide for interest by statute. n1019

§ 49.50(d) Overpayment.

Overpayment of royalties may happen in several situations. n1020 If a lessee overpays royalty because the lessor does not own the interest believed to have been owned, the lease's warranty or proportionate reduction clauses may give the lessee relief. Absent these clauses or if the overpayment was for other reasons, the lessor need not refund payments the lessee voluntarily made. n1021 Refunds can be compelled, however, if payments resulted from a mistake of law or fact. n1022

§ 49.50(e) Statutory Provisions.

Many oil and gas producing states have passed statutes to grant lessors additional rights in regard to royalty payments. n1023 Many of these statutes obligate the first purchaser to pay the lessor directly, thereby eliminating the lessee as a middleman. n1024 Interest generally is required on late payments. n1025 The statutes also often limit the reasons why payments may be withheld. n1026 For example, most only allow suspense accounts for disputes about marketable title and will require payment of royalties attributable to mineral interests not disputed. n1027 Penalties for willful or unreasonable withholding of royalties and provisions for attorney fees are common. n1028

FOOTNOTES:

cert. denied, 299 U.S. 553. In regard to gas, *see Gavenda v. Strata Energy, Inc., 705 S.W.2d 690 (Tex. 1986).*

In Louisiana, division orders constitute contracts that are binding until revoked and are intended to protect the lessee and purchaser from improper payment of royalties. They authorize distribution of the proceeds of sale to certain identified persons in proportion to their ownership interests in the minerals sold. *See Louisiana Land and Exploration Co. v. Pennzoil Exploration & Prod. Co., 962 F. Supp. 908 (E.D. La. 1997).*

(n2)Footnote 1000. *See generally* 3 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 36.3 (Anderson).

(n3)Footnote 1001. *Amerada Petr. Corp. v. Melton, 281 P. 591 (Okla. 1929)* (division order contained necessary contract terms).

(n4)Footnote 1002. *See generally* 3 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 40.6 (Anderson). If cotenants are involved in a sale, however, the operator's authority to sell all the gas is not necessarily implied. Absent a division order in this situation, the purchaser risks becoming a converter. *Teel v. Public Serv. Co., 767 P.2d 391 (Okla. 1985); but see Anderson v. Dyco Petr. Corp., 782 P.2d 1367 (Okla. 1989)* (seemingly limiting *Teel* to when the purchaser knows the operator's authority was revoked; generally a cotenant may sell gas and balancing or other accounting devises adjust rights among cotenants).

(n5)Footnote 1003. *See, e.g.*, division orders in *Exxon Corp. v. Middleton, 571 S.W.2d 349 (Tex. Civ. App. 1978), reversed in part, 613 S.W.2d 240 (Tex. 1981)* (transformed market value lease to proceeds by stipulating royalty to be determined by contract proceeds) and *Hull v. Sun Ref. and Mktg. Co., 789 P.2d 1272 (Okla. 1989)* (attempted to add warranties as to gas quality). *See generally* Summers, *supra* note 32, at § 390.

(n6)Footnote 1004. *Hull v. Sun Ref. and Mktg. Co., 789 P.2d 1272 (Okla. 1989)* (may not require under statute despite pre-existing common usage making division order execution precondition to royalty payment); *Schaffer v. Tennoco Oil Co., 647 S.W.2d 446 (Ark. 1983)* (implying signing is not prerequisite to duty by allowing interest on withheld royalties). *See also* La. Rev. Stat. Ann. § 31:138.1.

CHAPTER 49 PETROLEUM AND PIPELINES
XI. Miscellaneous Lease Clauses

6-49 Thompson on Real Property, Thomas Editions § 49.51

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.51 Lands and Interests Subject to Lease.

§ 49.51(a) Mother Hubbard Clause.

The "Mother Hubbard" or "cover-all" clause is discussed, *supra*, at § 49.31(c).

§ 49.51(b) Warranty Clause.

In some jurisdictions, using words such as "demise" or "grant" will imply a warranty in a lease. n1029 Most leases, however, have express clauses through which the lessor warrants title. A typical lease warranty would read: "Lessor hereby warrants and agrees to defend the title to such lands... ." Technically, this language would only create a covenant of warranty, a promise to defend title against future lawful claims and demands. To breach such a warranty would require ouster of the lessee. Nevertheless, some courts have treated the clause as a general warranty, which would include the covenants of seisin, right to convey, and no encumbrances. n1030 These covenants may be breached without ouster.

Because a court might include the present covenants in the warranty, many lessors reject the warranty clause, especially when the lease is written to seemingly convey 100% of the mineral interest when the lessor owns only an undivided or partial interest. The lessor would be in breach of the warranty upon execution of the lease. As with other warranties, the fact that both parties knew of the outstanding interest will not preclude a breach. n1031 Lessees generally do not use the warranty to obtain return of bonus money if the lessor did not have full title because lessees want granting clauses to cover the entire interest in the minerals to account for after acquired title. n1032 In spite of this custom, however, a breach of warranty suit would be possible. The lessee could seek a return of bonus and delay rentals, both with interest. n1033 A lessor therefore may want to limit the warranty to the interest the lessor is believed to own and, to meet the lessee's concern, expressly include any after-acquired interests in the grant. Alternatively, if there are known outstanding interests, they should be excluded from the warranty. n1034

§ 49.51(c) Proportionate Reduction or Lesser Interest Clause.

The proportionate reduction or lesser interest clause protects the lessee from having to pay royalty or delay rentals to

more than one party. It has two uses. The first use protects the lessee when the lessor's title fails. Without such a clause, if the lessor's title to some but not all of the mineral estate fails, some precedent suggests the lessee could not reduce royalty and rental payments if the lease was in gross, and not granted on an acreage basis. n1035 The second use of the clause realigns lease benefits when the lessor purports to grant rights to all the minerals but only owns an undivided interest. A lease may knowingly be granted on more than the lessor owns in the following type of situation. Two parties each own an undivided 1/2 interest in the minerals. A lessee intends to pay a 1/8 royalty in total. To ensure that the lessee has leased all the minerals even if the share each lessor owned was not truly one-half, the lease from each owner may purport to cover the whole mineral estate. However, if each lease reserves a royalty of 1/16, the share of a 1/8 royalty would not be accurate if one party actually owned more or less than the other. The lesser interest or proportionate reduction clause remedies this problem as well as title failures. n1036

The clause allows future adjustments that permit the lessee to accurately pay all lessors. A typical clause reads:

> Without impairment of Lessee's rights under the warranty in the event of failure of title, it is agreed that in case lessor owns a lesser interest in the above described land than the entire and undivided fee simple estate therein, then the royalties and rentals herein provided for shall be paid the said lessor only in the proportion which his interest bears to the whole and undivided fee. n1037

For the co-tenant situation, the clause enables the lessee to insert in each lease the full royalty and rental amount that the lessee intends to pay for the whole mineral estate. Whatever interest the two co-tenants own, the lessee will never pay more than a total of a 1/8 royalty and the specified rental; each lessor will receive a proper share. The same result can be seen in the title failure situation. If title fails, the lessor would only receive a share of proceeds proportionate to actual ownership.

Title failure, however, may be of several types, which leads to the first interpretive problem, namely, what triggers the need to reduce benefits. If there is total failure of title to a portion of the lands covered by the lease, royalties will not be owed on a well drilled on the unowned acreage. Conversely, if a well is drilled on land in which the lessor's title to the minerals is complete, royalties should not be reduced. Therefore, the clause is used when an interest is outstanding in minerals to which the lessor also has a claim. The outstanding interest could be an undivided interest in the minerals or other right to the minerals.

The proportionate reduction clause functions in these outstanding interest situations. The clause will reduce benefits if there is an outstanding undivided mineral interest. If the outstanding interest is not a mineral interest but a non-participating royalty, the lessor's royalty is also reduced using the proportionate reduction clause. The method of reduction in this situation has varied. When there was an outstanding 1/8 non-participating royalty and a lease with a 1/8 royalty, one court limited the lessor's royalty to 1/8 of 7/8 of production or 7/64. n1038 Another approach is to subtract the outstanding royalty from the leasehold royalty. n1039

Some confusion also exists about whether a lessee may proportionately reduce rentals and royalties when the lease is a partial interest lease, that is, when the lease purports to grant an undivided interest rather than a full interest. In *Texas Co. v. Parks*, n1040 the lessor owned an undivided 1/2 interest in 320 acres. The lease only purported to cover the lessor's undivided 1/2 interest. Rentals were to be $160 and royalty 1/8. The lessee tendered rentals of $80 under the proportionate reduction clause. The court held the lease terminated for failure to pay proper delay rentals; there was no failure of title and no reason to reduce the rentals because the lessor owned the 1/2 interest leased. Crypticly, the court hinted that royalties may be reduced under a different computation formula. n1041

Peculiar facts may explain the result. The rental amount inserted already appeared to be half of what would it would have been at a normal $1.00 an acre delay rental. Therefore, the court resisted the lessee's attempt to reduce an already reduced rental. Nevertheless, the case should alert the drafter to the need for clarity. One way around the problem would be to modify the proportionate reduction clause so the trigger reads as follows: "if Lessor owns an interest in the oil, gas

and other minerals on, in or under said land less that the entire fee simple estate (whether or not this lease purports to cover the whole or fractional interest) ..." n1042

A final interpretive problem is what payments are to be proportionately reduced. Most clauses refer to "rentals and royalties." Generally, bonuses are not affected because they are paid prior to lease execution. n1043 Overriding royalties the lessor retains, however, create some controversy. In some jurisdictions, they are in the nature of bonuses and therefore not affected. n1044 Other jurisdictions might consider the overriding royalties to be "royalties" but still refuse to proportionately reduce the payment because the extra overriding royalties generally are typed in or added to the lease in a rider. These courts found that the proportionate reduction clause of the printed form should not impact the specially bargained for consideration. n1045 There is precedent, however, to the contrary. n1046

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.52 Lessee's Administrative Protections.

[Go To Supp]

§ 49.52(a) No Increase of Burden Clause.

Most leases state that the lessor's interest shall be assignable in full or part, but further state that "no change or division in the ownership of the land, rentals, or royalties, however accomplished, shall operate to enlarge the obligations, or diminish the rights of Lessee." n1047 Courts have cited the clause when determining if delay rentals were properly paid to avoid penalizing a lessee for wrongly interpreting an ambiguous document the lessor drafted. n1048 The clause also negates a demand that each new lessor would be entitled to free gas or separate tanks for in kind royalty. More importantly, the lessee's implied covenants are not increased. n1049 Subdivision by the lessor will not require the lessee to drill additional or offset wells within the original leasehold boundaries.

§ 49.52(b) Notice of Assignment Clause.

This clause states that no change of ownership of the lessor's interest will be binding on the lessee until the clause's notification requirements are met. A prior discussion looked at the clause in the context of delay rental payments. n1050 It also will assist the lessee in making shutin royalty payments and complying with notice requirements, such as sending copies of pooling declarations.

The clause is designed to prevent the lease from being forfeited because the lessee misdirected its compliance. n1051 It is not, however, a shield to allow the lessee to escape from other duties, such as the lease's implied covenants. These duties run with the land and the lessor's assignee may enforce them regardless of whether the notice provisions are met. n1052

§ 49.52(c) Surrender Clause.

Oil and gas leases are often of large acreage. Because the lessee may later decide only part is potentially productive, the lessee may want to surrender portions of the lease. An oil and gas lease, like any lease, is deemed indivisible. n1053 A surrender clause, however, gives the lessee the express right to surrender portions of the lease: "Lessee may at any time

or times execute and deliver to lessor or to depository named above or place of record a release covering any portion or portions and be relieved of all obligations as to the acreage surrendered, and thereafter the rental payable hereunder shall be reduced in the proportion that the acreage covered hereby is reduced by said release or releases." n1054

The lessee must comply with any formal requirements contained in the clause, n1055 but if performed, the lessee will be relieved of future obligations unilaterally. The lessor does not have to accept the surrender for it to be effective. n1056 The lessee, however, will still be liable for accrued obligations n1057 and royalty payments will not be proportionately reduced. n1058

Some precedent holds that the clause does not allow a lessee to surrender specific formations; the clause as quoted anticipates acreage reduction. n1059 The lessee, however, may want to be relieved from requirements to drill to prevent drainage from or to develop specific formations. For this reason, the lessee may desire to expressly provide for release of formations.

§ 49.52(d) Separate Ownership or Divisibility Clause.

As with the lessor's interest, the lessee's interest is also generally assignable. n1060 If the lessee transfers a specific tract, the lessee would want the duties in regard to that tract separated from the original lessee's duties. Under basic property law, the lease would be indivisible and the failure of either the assignee or the lessee to pay rentals or otherwise perform would endanger the entire leasehold. The separate ownership clause changes this result: "In the event of an assignment hereof in whole or in part, liability for breach of any obligation issued hereunder shall rest exclusively upon the owner of this Lease, or portion thereof, who commits such breach." The clause is most often employed for delay rental obligations; a lease will therefore only terminate for the acreage leased by the party who does not pay delay rentals. n1061

§ 49.52(e) Notice of Forfeiture and Judicial Ascertainment Clauses.

A lessee generally wants to counter the harshness of the oil and gas lease, which allows the lease to be forfeited on the happening of certain events. Therefore, a "notice of forfeiture" clause similar to the following is often added:

> The breach by Lessee of any obligations arising hereunder shall not work a forfeiture or termination of this Lease nor cause a termination or reversion of the estate created hereby nor be grounds for cancellation hereof in whole or part unless Lessor shall notify Lessee in writing of the facts relied upon in claiming a breach hereof, and Lessee, if in default, shall have sixty days after receipt of such notice in which to commence the compliance with the obligations.

A variant of the clause is more general:

> In the event lessor considers that lessee has not complied with all its obligations hereunder, both express and implied, lessor shall notify lessee in writing, setting forth specifically in what respect lessor claims lessee has breached this lease. The service of notice and elapse of sixty days without lessee meeting or commencing to meet the alleged breaches shall be a condition precedent to any action by lessor for any cause. If within sixty days after receipt of such notice lessee shall meet or commence to meet the breaches alleged by lessor, lessee shall not be deemed to be in default hereunder. n1062

Both clauses generally will be effective and enforceable; they correspond with general equitable dislike of forfeitures. n1063 Employing the abhorrence of forfeiture rationale behind the clause, some cases have held that notice would not be required if damages were the only remedy sought, even under the second type of clause, which refers to "any action" of the lessor. n1064 A more appropriate analysis would forego notice if notice would be futile n1065 or if the lessee's default was active, n1066 so that the lessee would have to be aware of it.

All jurisdictions recognize another limitation on the use of both clauses. If the required obligation creates a special limitation on the estate, non-performance does not technically lead to a forfeiture. Courts have less impetus to temper the impacts of the failure to perform. Therefore, a generally phrased clause will not save an "unless" lease from automatic termination when the lessee fails to pay delay rentals. n1067 Nor will the clause affect the habendum clause; the lease will end for failure to produce in paying quantities despite lack of notice. n1068

A variant of the notice clause, referred to as a judicial ascertainment clause, states that the lease will not terminate until a court ascertains that the lessee is in default and the lessee does not there after begin activity to rectify the default within a specified time. n1069 After an initial distaste for the clause because of a belief that they would multiply actions, courts generally do uphold the clause. n1070 Most lessors, however, will not accept such a clause, at least if an attorney represents them.

§ 49.52(f) Subrogation Clause.

If an oil and gas lease is subsequent to a mortgage or could be impacted by a tax sale, the lessee obviously wants to avoid foreclosure or other consequences of the lessor's delinquency. Therefore, the subrogation clause expressly allows the lessee to make payments and then be subrogated to the lienholder's position. n1071

§ 49.52(g) Entirety Clause.

The entirety clause, which allows the lessee to treat the leased premises as one unit if the lessor subdivides the land, is discussed in § 49.22(d).

§ 49.52(h) Equipment Removal Provisions.

Wells drilled by a lessee and pumping equipment are generally classified as trade fixtures. n1072 During the pendency of a lease, they belong to the lessee. n1073 To confirm that title to them will not automatically pass to the lessor at the end of the lease, most leases allow the lessee to remove equipment, including casing, "at any time." n1074 Even without this clause, lessees were given a reasonable time after a lease ended to remove equipment. n1075 The basic lease clause does not necessarily change the common-law result because the phrase "at any time" has been limited to allow removal only in a reasonable time. n1076 The time period therefore will depend on the circumstances of each case. n1077 Some courts ask whether the delay has injured the lessor. n1078 If the clause contains a specific time for removal, however, that time will bind. n1079

Under any rule, the lessee may not remove casing or otherwise incapacitate a producing well. Title to the casing and non-removable equipment remains with the lessee, but it must be allowed to be used for production with appropriate compensation. n1080 The lessor, however, cannot force the lessee to leave the casing in a non-paying well simply to afford the lessor access to free gas. n1081

CHAPTER 49 PETROLEUM AND PIPELINES
XI. Miscellaneous Lease Clauses

6-49 Thompson on Real Property, Thomas Editions § 49.53

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.53 Lessor's Additional Compensation.

[Go To Supp]

§ 49.53(a) Minimum Royalty Clause.

A minimum royalty clause, which is not standard, assures that the lessor will receive a specified amount annually even if production is not adequate to generate such amounts. n1082 Most such clauses are not phrased so as to make the payment of the royalty a special limitation on the estate.

§ 49.53(b) Free Gas Clause.

Some leases allow the lessor free gas, generally for domestic purposes. n1083 Often, the free gas clause states that the connection will be at the expense of the lessor. n1084 Texas has held that the clause creates benefits and burdens that run with the land and can be assigned like any other property interest. n1085 Depending on the wording of the clauses, however, they may create personal rights rather than covenants that run with the land. n1086 Unlike other lease benefits, the clause runs in favor of the surface owner, not the mineral owner. n1087 The no increase in burden clause should prevent the duty from multiplying when the surface is subdivided, n1088 but the extent to which the benefit is divisible upon subdivision may depend on the clause's wording. References to "principal residence" and the like tend to limit use to one building. n1089

CHAPTER 49 PETROLEUM AND PIPELINES
XII. Implied Covenants in Oil and Gas Leases

6-49 Thompson on Real Property, Thomas Editions § 49.54

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.54 Basis and Nature of Implied Covenants.

§ 49.54(a) In Fact or in Law.

The lessee has traditionally written the oil and gas lease with the lessee's primary goals in mind, which are to obtain both the right but not the obligation to develop the leasehold and to receive security in its tenure should exploitable hydrocarbons be discovered. Other than the need to drill one producing well to satisfy the habendum clause, the lease generally does not have extensive provisions on development. The lessor, who has given up the exclusive right to develop, is therefore subject to the lessee's discretion in many matters. For example, if a well on adjacent lands drains the leasehold, the lessor's hydrocarbons are permanently lost. Even without drainage, if the lessee decides to defer development, the lessor is deprived of any possible return. The clash between what the lessee desires and what the lessor, who does not bear any costs, wants has led courts to supplement the written lease and imply duties on the lessee.

Two theories predominate as explanations of these implied covenants or duties. First, the duties may be implied in law, as a result of the status of the parties. The covenants therefore would be similar to the law of landlord/tenant, husband-wife, or bailor-bailee; duties arise out of the status of the parties. n1090 The covenants would be inherent in the lessor-lessee relationship, in which one party undertakes to develop the property of another for their mutual benefit. The covenants would be designed to promote fairness. n1091 The second main theory to explain the covenants is that the duties are implied in fact: if the parties had considered the matter, the provisions would have been included. The covenants therefore come from the intention of the parties. n1092

A third theory, which may be viewed as a variant of the others or a separate theory, is that the implied covenants are simply an outgrowth of the contractual doctrine of cooperation. n1093 This explanation finds the covenants' origins in two sources: the internal impetus of the reasonable expectations of the parties and the external power of good morals. Analogies exist. For example, the Uniform Commercial Code's duty of good faith, which it imposes in all contracts, codifies the trend to require cooperation. n1094 More specifically, courts have recognized that when one party receives exclusive development rights, the non-developing party is at the mercy of the developer for any return; courts therefore tend to imply a duty on the developer to use good faith efforts to meet the goals of both parties. n1095 An oil and gas lease and its implied duties would be similar to judicial doctrines developed for other relational contracts. n1096

Finally, some have suggested another source of, or at least influence on, the implied covenants: societal goals, which in the past heavily encouraged developing resources. In light of this policy, the lessor's requests to require all reasonable development found fertile soil. n1097 Nevertheless, society may reassess its goals and decide to conserve resources. The emphasis on immediate development may fade. n1098

§ 49.54(b) Effect of Classification.

Classifying a covenant as implied in fact or in law does not have much substantive impact, but the classification may influence procedural rules. If implied in fact, the statute of limitations for written agreement governs n1099 and venue n1100 will be determined pursuant to normal contractual rules. On the other hand, covenants deemed implied in law would be subject to the generally shorter statute of limitations for oral agreements and venue may be limited to the location of the property. It appears, at least for procedural purposes, the majority rule is that covenants are implied in fact. n1101

Another result of the classification may be the ease with which the covenants can be disclaimed or modified. If the duties are implied in fact, any expression on the subject could displace the presumed contractual provision. Covenants that are implied in law, however, are generally harder to disclaim or modify because they tend to reflect societal norms as well as contractual practices. Although nominally adopting the implied in fact rationale, courts are less clear about how to treat the implied covenants when the question of waiver is involved. n1102

CHAPTER 49 PETROLEUM AND PIPELINES
XII. Implied Covenants in Oil and Gas Leases

6-49 Thompson on Real Property, Thomas Editions § 49.55

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.55 Reasonable Prudent Operator Standard.

[Go To Supp]

The reasonable and prudent operator standard governs compliance with all the implied covenants and is used to review the lessee's actions. In fact, to a certain extent, there is only one implied duty, and that is to develop and operate the property as a reasonable and prudent operator would. n1103 The "prudent operator" was aptly defined in *Brewster v. Lanyon Zinc Co.*: n1104

> The object of the operations [on an oil and gas lease] being to obtain a benefit for both lessor and lessee, it seems obvious, in the absence of some stipulation to that effect, that neither is made the arbiter of the extent to which or the diligence with which the operations shall proceed, and both are bound by the standard of what is reasonable ... Whatever, in the circumstances, would be reasonably expected of operators of ordinary prudence, having regard to the interests of both lessor and lessee, is what is required.

Louisiana has a parallel requirement, which requires the lessee to be a "good administrator." This requirement is based in statute. n1105 Neither standard treats the lessee as a fiduciary required to subordinate its interests to those of the lessor. n1106 The lessee, however, must consider the interests of both parties.

The "prudent operator" standard does not delineate specified acts for the lessee to perform in certain situations, but it is not simply a requirement that the lessee refrain from subjective bad faith. n1107 The test, like that of the reasonable man from tort law, is a flexible test of what a normally prudent person would do in the particular factual situation. Nevertheless, more than just lack of negligence and compliance with minimal industry standards is needed because the lessee is entrusted with the lessor's development objectives. As a prudent operator, however, the lessee need not go beyond doing what could bring profit to it.

FOOTNOTES:
(n1)Footnote 1103. Courts, however, sometimes state that there is no independent duty to act as a reasonable and prudent operator; it is only relevant in regard to one of the named duties.

(n2)Footnote 1104. *Brewster v. Lanyon Zinc Co., 140 F. 801 (8th Cir. 1905).*

(n3)Footnote 1105. La. Rev. Stat. Ann. § 31:122. *See also Williams v. Humble Oil & Ref. Co., 290 F. Supp. 408 (E.D. La. 1968), aff'd, 432 F.2d 165 (5th Cir. 1970), reh'g denied, 435 F.2d 772 (5th Cir. 1970), cert. denied, 402 U.S. 934 (1971); Frey v. Amoco Prod. Co., 603 So. 2d 166 (La. 1992).*

In re Texaco, 254 B.R. 536 (Bkrtcy. S.D.N.Y. 2000). Included within the duty to act as a reasonably prudent operator is the lessee's obligation to restore the leased property which may not occur until at or near the termination of the lease.

(n4)Footnote 1106. *Hurd Enters. v. Bruni, 828 S.W.2d 101 (Tex. App. 1992)* (no independent duty of good faith and fair dealing; reasonable prudent operator standard protects lessor unless confidential or special relationship exists).

(n5)Footnote 1107. *Ramsey Petr. Corp. v. Davis, 85 P.2d 427 (Okla. 1938)* (rejecting good faith test); *Texas P. Coal & Oil Co. v. Barker, 6 S.W.2d 1031 (Tex. 1926)* (rejecting good faith test). *See generally* P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law §§ 806.1-806.3 (Matthew Bender) and 5 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 58.3 (Anderson).

Abraxas Petroleum Corp. v. Hornburg, 20 S.W.3d 741 (Tex. App. 2000). Every contract carries a common law duty to perform the agreed tasks with care, skill, reasonable expedience, and faithfulness. A breach of contract to conduct all operations in a good and workmanlike manner imposes similar liability in contract. In deciding whether a plaintiff may recover in tort, contract, or both the court must determine whether the claim is for breach of a duty imposed by law and whether the injury is only the economic loss to the subject of the contract itself.

CHAPTER 49 PETROLEUM AND PIPELINES
XII. Implied Covenants in Oil and Gas Leases

6-49 Thompson on Real Property, Thomas Editions § 49.56

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.56 General Classification of Implied Covenants.

Covenants have been classified in several ways. For example, some duties deal with development and are so labelled. These include covenants to drill an initial exploratory well and to reasonably develop known formations. All jurisdictions recognize these covenants. Some also recognize a third independent development covenant, which requires further exploration into unproven formations or acreage. A second category contains covenants designed to protect the leasehold. The primary, basic covenant is the covenant to protect from drainage. Some jurisdictions additionally seem to require the lessee to not depreciate the lessor's interest. Finally, some covenants deal with the duty to manage and administer the leasehold. The most important of these covenants is the duty to produce and market hydrocarbons. More generally, the lessee must operate with reasonable care and seek favorable administrative action.

These categories of duties are not hard and fast. A particular complaint may involve overlapping duties. For example, in order to protect a lease from drainage, a lessee may need to seek a favorable ruling from a conservation agency for a drilling unit or exception location. n1108 Despite the fluidity of labelling, some of the lessee's covenants have well defined elements and the classification may be useful. The covenants of the lessor are less well defined and classified.

FOOTNOTES:
(n1)Footnote 1108. The latter allows a well to be drilled in a location different than that mandated by drilling and spacing rules.

CHAPTER 49 PETROLEUM AND PIPELINES
XII. Implied Covenants in Oil and Gas Leases

6-49 Thompson on Real Property, Thomas Editions § 49.57

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.57 Development Covenants.

[Go To Supp]

§ 49.57(a) Initial Well.

One of the first implied covenants was the duty to drill an initial well within a reasonable time. Early leases often had a minimal bonus and no additional consideration except royalties. Therefore, courts insisted that the parties anticipated development within a reasonable time. Without this, the consideration would be insufficient to tie up the lessor's property for an extended period. n1109 As noted previously, n1110 the delay rental payment was developed to counter the implied duty; it provides consideration for the delay of initial exploratory drilling. In almost all jurisdictions, therefore, the implied covenant is negated in the conventional "unless" or "or" oil and gas lease. n1111 In Indiana n1112 and Kentucky, n1113 however, the covenant is reinstated upon the lessor's demand despite a provision for payment of rentals. Failure to include a provision for a delay rental payment may make the duty reappear. n1114

§ 49.57(b) Reasonable Development.

The reasonable development covenant, also referred to the duty to drill additional wells or to fully develop, has been adopted in all jurisdictions. n1115 To a certain extent, the covenant is more accurately described as a duty to maintain an active interest in the lease; development may consist of activities other than drilling. A breach typically is asserted when the lessee has only drilled a small number of wells or when existing wells begin to decline. It also causes contention when the leasehold is large, covers non-contiguous tracts, or is only partially in a unit.

The development covenant applies after oil or gas has been discovered and production obtained. The duty may be applicable in the primary term, n1116 but most disputes arise in the secondary term. As stated by the Supreme Court:

> The production of oil on a small portion of the leased tract cannot justify the lessee's holding the balance indefinitely and depriving the lessor, not only of the expected royalty from production pursuant to the lease, but of the privilege of making some other arrangement for availing himself of the mineral content of the land. n1117

One justification for the covenant, evidenced in the quotation, reflects the belief that development is the primary motive for a lease. Judging the duty demands two examinations. First, the lessee must display reasonable diligence. Second, any development demanded must be mutually profitable.

The hallmark of the reasonable development duty is concern with the pace of developing a known resource. When the lessee fails to diligently develop, the lessor is denied the use of the royalties that would be generated. In theory, the lessor has the right to benefit from the lease's production when the oil and gas should be produced, not at some remote future date. n1118 The demand for timely receipt of income is probably the main motivation for lessor suits. Other policies behind the covenant, however, may include preventing both potential waste and averting drainage. For example, the number and timing of wells may influence maximum recovery. Moreover, even if drainage of the leasehold cannot be proven, if there is surrounding production, courts recognize that there may be some drainage and therefore loss to the lessor. n1119

A pooling or unitization order does not supplant the covenant, but the terms of the conservation agency order will influence how the development should proceed. n1120

§ 49.57(b)(1) Proof of Breach of Reasonable Development.

To show a breach of the implied covenant, the lessor bears the burden of proving two elements: 1) an additional well, if drilled, would likely be profitable, and 2) the lessee has unreasonably delayed drilling or other activity. n1121 A realization that the lessee often has the greatest information tempers this burden. Therefore, the plaintiff's expert was not disqualified as an expert because he did not possess all the technical information that the defendant's experts had available. n1122 The lease or equitable concerns may impose additional procedural requirements on the lessor.

The issue of profitability concentrates on the lessee. Any production, of course, would engender a profit for the lessor because the lessor does not bear costs. In this context, profitability for the lessee means that the well must return not only operating costs, but also must return the cost of drilling the well. The lessee should not be forced to expend funds with no hope of recovering the expenditure. n1123 Moreover, the lessee should be able to achieve a reasonable profit over expenses. n1124

The second issue could also be phrased as whether the lessee has shown reasonable diligence in development. It is not enough for the lessor to simply show that another operator would have already drilled a well n1125 or that a seemingly long time has elapsed. n1126 The lessor must prove that a reasonably prudent operator would not have delayed as long under the particular circumstances. Circumstances examined include: 1) the geological data available, 2) the wells already drilled on the leasehold and on adjacent land, 3) the productive capacity of existing wells, 4) drilling costs, 5) the time lapse between prior drilling and the demand for more drilling, and 6) the size of the disputed leasehold. n1127 Market factors, such as the prevailing price for oil or gas and governmental regulations, may also influence a decision on whether delay was reasonable. n1128

A final potential hurdle for the lessor in order to maintain a suit may be notice. The lessor must notify the lessee of its concerns and demand drilling if the lessor desires to cancel the lease. n1129 The lessee would then have a reasonable time to comply. In a majority of jurisdictions, if the lessor is only seeking damages, no notice is needed. n1130 A lease clause, however, may expressly require notice. n1131 If the lessor proceeds on a theory of abandonment, no notice need be given because abandonment involves a voluntary relinquishment of the lease. n1132 Notice also is not needed if it would be futile because the lessee has clearly stated an intent to not develop. n1133 Some cases require the intent to have been manifested to the lessor. n1134

§ 49.57(b)(2) Effect of Inordinate Delay.

In some instances, one or two wells have produced on a leasehold and the lessee had not drilled for numerous years. At a certain point, the delay appears presumptively inordinate. In Oklahoma, once a long delay has been shown, the lessee has the burden of proving that a well would not be profitable or that the delay has not been unreasonable. n1135 Similar results have been achieved by statute. n1136 When the presumption of breach is raised by the time elapsed since last drilling, the lessee can rebut a breach by showing that it has maintained an active interest in the leasehold without drilling. Development activities may include seismic work, drilling plans on adjacent lands to test the formation, farmouts, or other exploratory or secondary recovery planning. n1137

Concern about delay reflects an overriding concern of some courts: lessees should not hold leases for "mere speculation" but must have the honest intent to develop the lease eventually. n1138 There is a fine line between prudently anticipating additional information and waiting until others have proven the area before proceeding. Merely waiting for others to drill and obtain geological information is not compliance with the duty, n1139 but awaiting information on wells being drilled in which the lessee is participating may be prudent. n1140

In addition to its relevance to a claim of breach of the development covenant, long delay also may lead the lessor to allege that the lessee has abandoned the lease's undeveloped areas. n1141

A Texas case stated that there was an implied limitation on a lessee's interest in a lease; it ends when the lessee has abandoned the purpose of the lease or ceased using the leasehold. The court stated this analysis differs from judging compliance with the covenants of reasonable development or exploration, which require additional activity to be profitable. n1142

§ 49.57(b)(3) Effect of Express Lease Provisions.

Because the covenant of reasonable development is implied, an express lease provision could supplant it. n1143 Whether a clause negates the implied duty hinges on whether the clause is inconsistent with the implied duty. n1144 Inconsistency is clear if the lease provision expressly stated that the lessee would not have any express or implied development duties other than drilling the well required to meet the habendum clause. n1145 To negate the duty, the lease must show a clear, unmistakable, unequivocal intent to limit or define the development obligation of the lessee. n1146 Most cases, however, do not arise under leases that expressly waive the implied duty, but involve a lease clause stating that the lessee must drill a certain number of wells or a clause stating that the lessee shall not be required to drill more than the described number. An example of the latter type would be a clause stating that the lessee will not have to drill more than one oil or gas well per stated acreage in order to be full development. Such a clause could define the duty. n1147 Clauses that merely state the number of wells to be drilled, however, could appear to contain additional affirmative duties, rather than being an attempt to limit an implied duty.

To ascertain whether the implied duty is displaced in this situation, courts look to the totality of circumstances to see if it would be reasonable to conclude that the parties would consider the delineated wells to be full development. For example, 16 wells on a total of 170 acres would be sufficient. n1148 No one, however, would accept that 6 wells on 40,000 acres would fully develop the leasehold. n1149 In the latter case, the implied covenant was not supplanted.

§ 49.57(b)(4) Remedies.

Courts take three approaches if the lessee is found to have violated the duty to fully develop. n1150 Some will only grant damages to the lessor. n1151 Others, including Texas and Kansas, begin with a presumption of damages as the appropriate remedy, but will cancel the lease if the damage remedy would be inadequate. n1152 The final approach, followed in Oklahoma, allows cancellation regardless of the adequacy of damages because development goes to the essence of the contract. n1153

If a court orders cancellation, this equitable remedy is used flexibly. Often cancellation is partial; the lessee will be able

to retain acreage or formations that have been developed. n1154 Another important tool is conditional cancellation, n1155 which gives the lessee the chance to perform. The undeveloped portion of the lease will be canceled unless the lessee begins drilling activities within a stated time period.

If damages are awarded, either with or without cancellation, they are measured usually by the amount of royalties the wells should have produced. This measure could lead to double recovery; if there was no drainage, royalties would again be due when the oil was later produced. Interest on the foregone royalties may be the appropriate measure or, alternatively, damage payments could be a credit against future royalties. n1156

§ 49.57(c) Further Exploration.

§ 49.57(c)(1) Situations in Which Question Arises.

The covenant of further exploration, like the reasonable development covenant, only comes into play after there has been initial development. Unlike the development covenant, however, the exploration covenant is not concerned with pacing development of a known field, but demands that the lessee move into less charted waters. In five situations, courts have required lessees to do more than simply develop known deposits:

1. When production has declined from all fully developed known formations,

2. When intense interest in another formation exists in the area,

3. When the lease covers distinct minerals, some of which are undeveloped,

4. When the lease covers non-contiguous tracts that have not all been developed, and

5. When the lease covers a large area compared to the developed acreage. n1157

Naturally, the line between development and exploration is not firm: no well is assured to be a producer until drilled and, therefore, there can be no truly "known" deposits before drilling. Nevertheless, the fundamental loss from a breach of the development covenant is delay in return from production. The loss from a failure to explore primarily may be a loss of information. n1158

Although all courts have at times required activity from lessees in the enumerated situations, not all jurisdictions recognize a separate covenant of exploration. Some use the development covenant to cover these scenarios. The premier advocate of a separate exploration covenant was the late Professor Charles Meyers. n1159

§ 49.57(c)(2) Proof of Breach.

To show a breach of the covenant of further exploration, the lessor must prove that: 1) further exploration would have a reasonable prospect for success, and 2) the lessee has unreasonably delayed undertaking work which a reasonable and prudent operator would have performed. n1160 In some instances, the work requested will be drilling an additional well. As with development, however, exploration may also be fulfilled by seismic work, a systematic drilling program on other land, farmouts, or other prudent means of gathering data. n1161 In essence, the heart of a breach of this covenant, when viewed as an alleged failure to take an active interest in the lease and thus accusing the lessee of holding the lease for speculative purpose, is as follows: a reasonable and prudent operator would have done something under the circumstances and this lessee did nothing. n1162

As with the development covenant, whether or not the lessee violated the reasonable and prudent operator standard may require a wide-ranging examination of geology and economics. In other circumstances, the lessee's admitted disinclination to do further exploration alone may prove a breach because development of the entire lease for the mutual

benefit of the parties is considered an implied condition of the lease. n1163 In all cases, in order to proceed, the lessor will have to give the same notice and opportunity to perform as is required for the covenant of reasonable development. n1164

§ 49.57(c)(3) Whether Profitability Must Be Proven.

One of the most fervent debates over the existence of an exploration covenant is whether or not the lessor must prove that additional drilling would likely be profitable. n1165 To demand absolute proof of profitability in the exploration scenario, which deals with deposits not yet proven to exist on the questioned portion of the leasehold, would, in the words of Professor Meyers, "defeat the lessor's claim before it is ever considered." n1166 The Oklahoma Supreme Court countered, criticizing the de-emphasis of profitability:

> Failure to recognize the profit motive as an instrumental force in oil and gas leases on behalf of both lessee and lessor is to ignore the very essence of the contract. It is unquestionable that both the lessee and lessor intend to benefit monetarily from the produce of the land through sale of its hydrocarbons. To state otherwise is folly or worse ... . It is simply not realistic to ignore profit as a consideration of the prudent operator simply because the lessor demands a wildcat be drilled on a productive lease rather than an additional well to a productive formation. n1167

The truth of the matter is somewhere in the middle.

The separate covenant as formulated originally did consider profitability as part of the circumstances considered in making a prudent operator determination. n1168 Oklahoma itself recognizes that the prudent operator rule for the development covenant does not require absolute proof of the profitability of an additional well, but only that there be a probability of profit. The difference in the development and exploration scenarios is only one of magnitude because there is always risk in drilling a well. n1169 Therefore, the proof of potential profitability needed resides on a sliding scale, which would influence in what manner and when a prudent operator would act. The less probable a profit may be, the more prudent delay would appear. In the long run, however, an oil and gas operator that only drilled "guaranteed" producers would run out of reserves. The prudent operator takes calculated risks.

§ 49.57(c)(4) Existence of Duty in Various Jurisdictions.

The separate duty of exploration, together with the declaration that the lessor need not prove the profitability of an additional well, has been met with varied approval. Colorado n1170 and Kansas n1171 have expressly adopted it. Other states have precedent that may recognize it. n1172 Oklahoma n1173 and Texas n1174 have expressly rejected a separate covenant of exploration. Nevertheless, both states will look at the totality of development and the need for further exploratory or development work under a flexible reading of the covenant of reasonable development. In fact, Oklahoma may be one of the more active jurisdictions in condemning speculative holding and requiring the lessee to show an active interest in the lease. n1175 For example, Oklahoma reverses the burden of proof about the profitability of additional drilling after an inordinate delay elapses after previous work n1176 and it recognizes that a lease may be abandoned.

§ 49.57(c)(5) Remedies.

The remedy for a breach normally would be either absolute or conditional cancellation of the unexplored acreage. Damages would be difficult to compute. n1177 When there is a failure to explore specific formations, courts may horizontally sever the lease, conditionally canceling it as to specific formations only. n1178 There may be no need to conditionally cancel the lease and give the lessee an opportunity to perform if no further development was planned or would be economically justified. n1179

(n28)Footnote 1136. For example, Kansas's Deep Rights Act creates a presumption that the covenant has been breached when no minerals have been produced from the subsurface formations for which relief was sought and shallow oil, gas or other production on the lease had commenced at least 15 years earlier. Kan. Stat. Ann. § 55-224 (shifts burden of proof).

CHAPTER 49 PETROLEUM AND PIPELINES
XII. Implied Covenants in Oil and Gas Leases

6-49 Thompson on Real Property, Thomas Editions § 49.58

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.58 Protection Covenants.

[Go To Supp]

§ 49.58(a) Implied Covenant to Protect from Drainage.

The implied covenant to protect the leasehold from drainage is fundamental and stems directly from the Rule of Capture. n1180 If a well on adjoining property drains oil or gas, the owner of the minerals being drained has no recourse other than self-help. Once the lessor has granted the exclusive right to develop to the lessee, the lessee must undertake such self-help n1181 or the hydrocarbons will be lost to the lessor irreparably. With the arrival of conservation rules limiting the number of wells that can be drilled, the duty has been both contracted and expanded. While the lessor cannot demand a well be drilled contrary to regulations, n1182 the lessee may have a duty to seek an exception location n1183 or to include part of the leasehold in a drilling unit so the lessor would gain some return from the draining well. n1184

The scope of the duty to protect from drainage may also depend on the type of drainage involved. Most cases of drainage entail local drainage, which takes place when one well directly drains a contiguous tract. One court, however, applied the duty to combat field-wide drainage. n1185 Field-wide drainage results from basic reservoir mechanics. For example, in a water-drive reservoir, development anywhere in the field, but particularly production high in the structure, will hasten the end of the productive life of wells lower in the structure. In order to prevent such drainage, the lessee may have to drill additional wells or rework wells on the leasehold lower on the structure, or the lessee may have to seek unitization or other administrative relief. n1186 As with the other implied covenants, regardless of the type of drainage involved, the lessee is only required to do that which the reasonable and prudent operator would do. n1187

§ 49.58(a)(1) Proof of Breach of Drainage Covenant: Generally.

The general elements of a claim for breach of the covenant to protect from drainage are that: 1) substantial drainage has occurred, and 2) an offset well could be profitably drilled. n1188 If damages are sought, the lessor will also have to show the amount of royalties the lessor would have received had proper measures been taken. n1189 The lessee is not deemed a guarantor against drainage; therefore, the duty does not arise if there is only minimal drainage. n1190 The duty, however, may be triggered if there is substantial drainage from one well even if the drained tract is draining other

land through a well. n1191 The burden of proof of all elements is on the lessor, including whether the offset well would be profitable. n1192 As with the development covenant, profitability in this context includes recovering the cost of drilling the well in addition to costs of operating and producing. A reasonable return for the lessee is also needed. n1193

Additionally, the lessor generally must give notice to the lessee and demand protection if the lessor seeks the remedy of cancellation. n1194 The lessee will then have a reasonable time to drill on offset or otherwise remedy the drainage. In a majority of jurisdictions, notice is not required as a prerequisite to an action for damages, n1195 but can impact damage computation. A minority view requires notice before a damage claim. n1196 A lease clause may also necessitate notice. Notice may be foregone if the lessee necessarily would have known of the drainage, as when it is causing the drainage or acquires an interest in the draining well. n1197

§ 49.58(a)(2) Proof of Breach of Drainage Covenant When Lessee Causes Drainage.

Sometimes the lessee, being accused of failing to protect a leasehold from drainage, has caused the drainage. The lessee either owns the minerals beneath the draining well or is a common lessee, that is, the lessee of both the leasehold being drained and the leasehold on which the draining well is located. Some courts sense an inherent unfairness in this situation, believing the lessee to be profiting while the lessor gains no return. n1198 The concern arises from an appreciation of simple human nature.

In a normal drainage situation with separate ownership of the draining and drained tracts, the self-interest of the lessee should protect the lessor. The lessee will get no return and will loose the drained hydrocarbons unless it drills on the drained leasehold. Therefore, if an offset well would be profitable, the lessee would drill it. The interests of the lessor and lessee do not have the same congruence if the lessee is benefiting through the draining well. Its expenses are less without a second well. Courts react to this situation in several ways. n1199

Some cases simply note that the lessee is causing the drainage. n1200 Others expressly state that the rules about drainage do not change. n1201 The most extreme change in the normal rules of drainage have been suggested by courts in Mississippi n1202 and elsewhere. These cases hold that if the lessee has caused the drainage, the lessee may be liable to the drained lessor for damages even if an offset well might not be profitable. n1203 Other courts have adopted an intermediate position. The effect of the lessee causing the drainage is to reverse the burdens of proof. Under this view, the lessor need only prove that substantial drainage has occurred. The lessee will bear the burden of proving that an offset well could not be profitably drilled. n1204 Oklahoma appears to take this position, and has also stated that it will not adopt a theory of strict liability, n1205 but will look to see if a prudent operator would have drilled the well if there was no common ownership. n1206

Almost all jurisdictions do modify the burden of the lessor in one respect; notice to the lessee will not be necessary as a precondition to suit if the lessee operates or owns an interest in the draining well. n1207 Additionally, some will not apply express clauses that limit offset liability when the lessee causes the drainage, n1208 or will not allow the acceptance of delay rentals to act as a waiver of the duty to protect. n1209

§ 49.58(a)(3) Effect of Express Provisions.

Because the duty to protect against drainage is an implied covenant, parties could change the duty by express provisions. Simply delineating the number of wells required on a leasehold, however, will generally only impact the implied covenant to develop. Development requirements and drainage protection are two duties that coexist. n1210 To supplant the drainage covenant, a lease must have express provisions that clearly negate or limit the duties of the lessee in regard to drilling offset wells. n1211 Some courts will generally enforce these clauses, but other cases limit their effectiveness to the primary term n1212 or to drainage not caused by the lessee. n1213 Courts will also enforce clauses that make the judgment of the lessee conclusive about the need to offset. n1214

Difficulty arises, however, when clauses pledge that the lessee will drill offsets in certain situations without expressly negating the duty to drill other wells. For example, a clause may state that the lessee will drill an offset well if a well is drilled at a specified distance from the boundary of the leasehold. Old clauses of this nature may state the maximum offset distance to be 150 or 200 feet. This specified distance may have at one time been a good faith estimate of the distance at which drainage could occur, but modern engineering would recognize the possibility of drainage from a further distance. Additionally, as conservation practices have changed, often no well would be allowed within the distances that would trigger the duty. Consequently, if such a clause delineated the lessee's total duty to offset, the lessee would never have to drill a well to combat drainage. Some courts, therefore, have refused to allow this type of clause to supplant the implied covenant to protect against drainage, stressing the unfairness of leaving the lessor unprotected when the lessor could have reasonably believed the lessee was undertaking an affirmative protective duty under the clause. n1215 Others do allow the clauses some effect, and even engraft on them traditional drainage requirements that limit when the lessee must drill. The lessee will not have to drill offsets unless there has been substantial drainage. n1216

§ 49.58(a)(4) Drainage in the Primary Term.

In the primary term, the lessee has the option to defer drilling by paying delay rentals. Delay rentals are designed to counter the implied covenant to drill an exploratory well within a reasonable time. Logically, the lessor has not relinquished the right to be protected from drainage. n1217 Nevertheless, if the lessor accepts delay rentals with knowledge of the drainage, the majority rule is that the implied right to demand an offset well is waived or the lessor estopped from seeking drilling or damages for the period of the rental. n1218 If the lease has an express requirement to offset, however, the acceptance of rentals will not waive rights to protection under it. n1219 The corollary of all these positions is that the lessor may decline delay rentals and demand protection from drainage. n1220

§ 49.58(a)(5) Remedies.

The preferred remedy for drainage is damages, which make the lessor whole for the loss of oil or gas. n1221 Jurisdictions that require notice often give the lessee a reasonable period of time after notice of the drainage to act as a reasonable and prudent operator would act to prevent the drainage. Damages are computed from that period after the date of notice, however notice was received. n1222 Other jurisdictions would begin to accrue damages from the time a reasonable and prudent operator would have drilled. Damages are alternatively measured by royalties on the drained hydrocarbons, n1223 or royalties on what would have been produced from the offset well. n1224 If the lessor has an interest in the draining well, damages will be reduced to the extent royalty actually had been received. n1225 Lease cancellation or conditional cancellation is a theoretical option, but it is usually only used in the face of a lessee's bad faith or if damages are impossible to ascertain. It is more appropriate when remedies for future drainage are considered. n1226 In some states, n1227 however, statutes require offset of wells drilled within certain distances and specify cancellation as the remedy for a breach. At least one case found no double recovery in ordering both cancellation and damages. n1228

§ 49.58(b) Implied Covenant Not to Depreciate the Lessor's Interest.

Cases have imposed duties upon lessees for drainage they may have caused even if the drilling of an offset well would not be profitable. n1229 For example, the *Millette* court asked whether the lessee must protect the "interests of his lessor against a depletion of the lessor's lands by the affirmative act of the lessee upon adjacent land" and responded by recognizing a duty "to conserve the mineral resources of lessors or to refrain from depletory acts... ." n1230 Similarly, the Tenth Circuit stated that the relationship of lessor and lessee includes "an implied covenant running to the ... [lessor] to refrain from any action which would deplete ... [the lessor's] property in the lease." n1231 Some posit that these cases lead to an additional implied covenant, called the covenant to not depreciate the lessor's interest by affirmative act. n1232 These formulations, however, ignore the reasonable and prudent operator standard, with its emphasis on mutual profit, and therefore most jurisdictions reject them.

Nevertheless, in other situations, such as pooling and unitization, courts recognize the potential for conflict between the lessor and lessee and insist on good faith when the lessee uses the authority to pool or unitize. n1233 For drainage, including drainage by the lessee, there may be a duty to pool or unitize, which would require a lower standard of proof than required to compel the drilling of an offset well. For other problems from joint development, courts have recognized that conservation agency review may provide some controls. n1234

CHAPTER 49 PETROLEUM AND PIPELINES
XII. Implied Covenants in Oil and Gas Leases

6-49 Thompson on Real Property, Thomas Editions § 49.59

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.59 Administrative and Management Covenants.

[Go To Supp]

§ 49.59(a) Implied Covenant to Produce and Market.

Obviously, the central motivation for an oil and gas lease for both parties is the production of oil and gas and, for the lessor, the resultant royalties. Therefore, courts imply a duty to produce and market, which requires the lessee to use due diligence to market produced oil and gas within a reasonable time and at a reasonable price. n1235 The implied duty is of greatest concern with gas because it often requires processing and pipeline connections. n1236 Oil, on the other hand, theoretically is always able to be marketed and the lessor technically may take royalty in kind. But when marketing is not occurring or is being done on questionable terms, the implied covenant should apply to oil because the lessee generally markets both the lessee's oil and the royalty oil.

The implied covenant to market has been considered operative in the primary term of the lease. n1237 Naturally, in the secondary term, the majority of jurisdictions require actual production to maintain the lease even when gas is at issue. A shut-in royalty payment, however, may maintain the lease without actual marketing. n1238 The implied covenant, nevertheless, will eventually require actual marketing. In jurisdictions that allow the "discovery" of hydrocarbons to suffice for entry into the secondary term, diligence in attempting to market is also required. The test for this is similar to the proof of the implied duty to market in a reasonable time. Moreover, in all jurisdictions, the implied covenant also looks to the terms of the sale.

§ 49.59(a)(1) Proof of Breach of Duty to Market in Reasonable Time.

To show a breach of the covenant, the lessor will have to show: 1) there had been a discovery of oil or gas, 2) the product was not sold, 3) a prudent operator could have sold the oil or gas through reasonable diligence, and 4) the lessor was damaged. n1239 If equipment is necessary to make the oil or gas marketable, the lessee must install it, but not if it would be unprofitable. n1240 In judging the lessee's performance, both absolute time lapse and diligence are important.

The oil or gas must be marketed within a reasonable time, but what period of time will be reasonable will depend on the circumstances of the particular case. For example, in Bristol v. Colorado Oil and Gas Corp., n1241 nine and one-half

years after a well was drilled, which was eight years after the end of the primary term, was not an unreasonable length of time because the gas was in wildcat territory and needed processing. The lessee continued drilling to have sufficient reserves to entice a pipeline and began selling gas relatively soon after a pipeline was built. The diligence of the lessee impacted the reasonableness of the time frame. A lesser time period would be unreasonably long if the lessee had not been actively seeking a market or otherwise developing the area. Essentially, the lessor must prove that the lessee was not doing all that the reasonable and prudent operator would do. Some cases, however, find that an inordinate delay is prima facie proof of a breach. n1242

In order to prevail on a claim of breach of the duty to market, the lessor will have to give notice to the lessee and demand that marketing begin. n1243

§ 49.59(a)(2) Proof of Breach of Duty to Market at Reasonable Price.

The second aspect of the implied duty to market is the duty to market at a reasonable price. This is of concern to the lessor whose royalties are computed on a proceeds basis. n1244 Most of the time, the self-interest of the lessee will coincide with that of the lessor. To prevail on a claim that the duty has been breached, the lessor must show that a reasonable and prudent operator would have achieved a better price under the circumstances. n1245 The duty does not require the lessee to always obtain the highest available price because terms other than price may be important, but the lessee should not accept prices significantly lower than the market.

Although most cases simply involve the second-guessing of the lessor about the lessee's business acumen, sometimes the lessee may have an agenda separate from that of the lessor. If there is potential for conflict, however, the duty requires the lessee to treat each lessor individually. One case vividly showed that the lessee may not sacrifice one lessor for the overall betterment of the lessee's market position. In Amoco Production Co. v. First Baptist Church of Pyote, n1246 the lessee had numerous low-price contracts. In marketing the particular lessor's gas, it accepted a price lower than that received by other sellers of gas from the same well. In exchange, the price on the other low-price contracts was raised. The court found the lessee violated its duty to market the lessor's gas at a reasonable price. n1247

Notice should not necessarily be a prerequisite to a suit alleging this breach because notice implies the lessee could remedy the breach by performance. n1248 The offending contract, however, will have already been entered into when the lessee learns of it by way of royalty receipts.

§ 49.59(a)(3) Remedies.

Remedies differ for the two types of breaches of the implied covenant to market. n1249 If the lessee fails to market at all, damages are difficult to ascertain. They would be based on the royalties that would have been received, n1250 creating the same problems of potential double recovery as with damages for failure to diligently develop. n1251 Cancellation or conditional cancellation would be allowed in most jurisdictions, n1252 with absolute cancellation being more frequent for breaches of this covenant than for development covenants. Texas, however, might only allow damages. n1253

The analysis changes if the lessee has simply failed to market on the best terms. Damages would make the lessor whole. These should be based on the difference between royalties computed under the contract that should have been negotiated and the royalties under the offending contract. n1254 If a long-term contract would have been prudent, those terms should govern damages. The court in Amoco Production Co. v. First Baptist Church of Pyote, n1255 however, based damages on the market value of the gas, which could fluctuate, rather than requiring adherence to the terms of one of the contracts that represented the best terms at the time of contracting. The court in essence transformed a royalty provision designed to be computed on proceeds into a market value provision.

§ 49.59(b) To Operate with Reasonable Care.

There is a general implied covenant that the lessee will operate with reasonable care. n1256 This covenant is also referred to as the covenant of diligent and proper operation. It covers not only what should be done, but the manner in which operations should be carried out. The customs of the industry provide the standards with which the prudent operator should comply. n1257 If testing or reworking a well would normally be done, the lessee should perform the work. n1258 The duty may also require secondary recovery or other advanced techniques. n1259 The lessee, however, is not the guarantor of operations and may in good faith rely on the advice of its experts. n1260

Violation of this duty may lead to liability in tort for negligence as well as for breach of contract. n1261 Remedies may include damages, but mandatory injunctions could be issued in appropriate circumstances. Additionally, willful and repeated violations can justify cancellation. n1262

§ 49.59(c) To Seek Favorable Administrative Action.

Conservation agency rules now govern many aspects of oil and gas operations. Wells can only be drilled in certain locations and production may be curtailed to preserve reservoir energy or to prevent waste that accompanies producing in excess of market demand. There is a growing sense that the lessee may not use administrative rulings as an excuse for non-performance, but must seek affirmative administrative relief. n1263 The duty to seek favorable administrative action may also include the duty to appeal adverse orders n1264 and to intervene in proceedings where others are seeking orders that could negatively impact the leasehold. n1265 This duty may be a separate covenant or part of other covenants, such as the duty to diligently develop, to protect from drainage, or to operate with reasonable care.

The test for compliance with this duty is not whether the agency would grant the request, but whether the prudent operator would have applied for the relief. n1266 This standard does, to a certain extent, encompass the likelihood of success because a reasonable and prudent operator is not quixotic. n1267 The lessee may also rely on the reasonable advice of its experts. n1268

FOOTNOTES:
(n1)Footnote 1235. *Cabot Corp. v. Brown, 754 S.W.2d 104 (Tex. 1987). See generally* 5 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 60.1 (Anderson); P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 853 (Matthew Bender); and Richard W. Hemingway, The Law of Oil and Gas § 8.9(C) (2d ed. 1983).

Pack v. Santa Fe Minerals, 869 P.2d 323 (Okla. 1994) (no breach occurs if lessee voluntarily stops producing and marketing gas from a well for a reasonable time when the lessee is justified by equitable considerations; sales were slowed in the summer in order to maximize returns and avoid exceeding a well's yearly allowable). *Cf. Coosewoon v. Meridian Oil Co., 25 F.3d 920 (10th Cir. 1994)* (Oklahoma law gives operator of lease a fiduciary duty to royalty owners to market gas or oil at highest market price available, but failure to pay royalties timely is not evidence of a failure to market); *Crain v. Hill Resources, 972 P.2d 1179 (Okla. Civ. App. 1998)* (oil and gas lessees breached the implied covenant to market the product by failing to diligently seek a market in the 15 years after the wells were drilled).

Union Pacific Resources Group v. Hankins, 51 S.W.3d 741 (Tex. App. 2001) (issue of possible breach of implied covenant to market was pertinent to all class members).

(n2)Footnote 1236. *Roberts Ranch Co. v. Exxon Corp., 43 F. Supp. 2d 1252 (W.D. Okla. 1997)* (where the producer of gas had no right to use gas to operate its sulfur extraction plant for post-production treatment required to make the gas marketable. The contrary result would have allowed the producer to pass on to the lessor a substantial portion of post-production costs applicable to the producer under its obligation to make the gas marketable).

(n3)Footnote 1237. *Davis v. Cramer, 808 P.2d 358 (Colo. 1991), on remand, 837 P.2d 218 (Colo. App. 1992).*

(n4)Footnote 1238. *See* § 49.43, *supra*.

Condra v. Quinoco Petroleum, Inc., 954 S.W.2d 68 (Tex. App. 1997) (Although the holder of an overriding royalty has no right to enforce an express covenant in the original lease, an implied covenant to market arises under the assignment. Such covenant relates only to actual production and settlement payments made in the absence of production do not create a breach.).

(n5)Footnote 1239. P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law §§ 855-856 (Matthew Bender). *See also Robbins v. Chevron U.S.A., 785 P.2d 1010 (Kan. 1990)* (judged by what an experienced operator of reasonable prudence would have done under conditions existing at the time).

Danne v. Texaco Exploration & Prod. Co., 883 P.2d 210 (Okla. App. 1994) (where there was a gas meter on well and spot market sales could have been made, lessee failed to exercise due diligence to market product to readily available gas purchaser; lease, however, does not terminate automatically for this failure and lessors who accepted benefits estopped from then seeking to forfeit lease).

Rogers v. Westerman Farm Co., 29 P.3d 887 (Colo. 2001) (where court found that marketability of the product was a question of fact based on condition and location. It must be acceptable for purchase and sale in a commercial marketplace and must be commercially saleable in the oil and gas marketplace. The first-marketable product rule is adopted in part).

(n6)Footnote 1240. *Compare Kretni Dev. Co. v. Consolidated Oil Corp., 74 F.2d 497 (10th Cir. 1934), cert. denied, 294 U.S. 750* (need not build unprofitable pipeline to transport to market), with *Union Oil Co. of Cal. v. Ogden, 278 S.W.2d 246 (Tex. Civ. App. 1955)* (must build half-mile long pipeline needed to market).

(n7)Footnote 1241. *225 F.2d 894 (10th Cir. 1955). Cf. Sword v. Rains, 575 F.2d 810 (10th Cir. 1978)* (passage of time is not itself determinative).

(n8)Footnote 1242. *Davis v. Cramer, 808 P.2d 358 (Colo. 1991), on remand, 837 P.2d 218 (Colo. App. 1992).*

(n9)Footnote 1243. *Davis v. Cramer, 808 P.2d 358 (Colo. 1991), on remand, 837 P.2d 218 (Colo. App. 1992)* (accepting less than formal demand when lessee knows of lessor's position). *See generally* 5 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 60.4 (Anderson).

(n10)Footnote 1244. It will also be of concern in those jurisdictions that compute market value based on the value at the time of contracting. These jurisdictions, however, require that the contract be one that was negotiated in good faith. Therefore, the implied covenant's basic duty must be met at the time of contracting. *See* § 49.49(b)(2), *supra*.

(n11)Footnote 1245. *Greenshields v. Warren Petr. Corp., 248 F.2d 61* (10th Cir.), *cert. denied, 355 U.S. 907 (1957)* (low price acceptable for distressed gas required to be sold to allow oil production); *Gazin v. Pan-Am. Petr. Corp., 367 P.2d 1010 (Okla. 1962)* (prudent to reject first contract and work to increase reserves for higher price). For an argument that a lessee's business judgment should not be second-guessed if made in good faith, *see* P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 856.3 (Matthew Bender).

Schroeder v. Terra Energy, 565 N.W.2d 887 (Mich. App. 1997) (where royalties calculated at the prevailing market price did not require the operator to obtain the best market price); *Watts v. Atlantic Richfield Co., 115 F.3d 785 (10th Cir. 1997)* (where the lessors sought to prove that the producer breached its duty to obtain the best price available).

(n12)Footnote 1246. *579 S.W.2d 280 (Tex. Civ. App. 1979).*

CHAPTER 49 PETROLEUM AND PIPELINES
XII. Implied Covenants in Oil and Gas Leases

6-49 Thompson on Real Property, Thomas Editions § 49.60

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.60 Duties Implied on Lessor.

[Go To Supp]

There are few duties implied on the lessor. The doctrine of obstruction, however, states that a lessor shall not interfere with the lessee's obligations. The lessee receives property rights that must be respected. n1269 In addition to this, there is some precedent stating that the lessor has a duty to cooperate by consenting to prudent operations. For example, if the lessee proposes a fair and reasonable unitization agreement, the lessor must consent or the lessee may be excused from developing the leasehold. n1270 The lessor, however, is not required to consent if there is a difference in expert opinion on the prudence of the activity. n1271 The breach of this duty by the lessor may be an actionable wrong n1272 or an excuse for non-performance by the lessee. n1273

CHAPTER 49 PETROLEUM AND PIPELINES
XIII. Lease Transfers by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.61

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.61 Lessee's Right to Transfer.

Transfers of oil and gas working interests are frequent. Many take place because original lessees may obtain a lease for speculative purposes with the intent to sell it to a developer. Other transfers occur because the developing lessee needs financing. Most leases state that the lessee's interest is freely transferable. Even in the absence of such a clause, the lessee could transfer its interest because the interest is a property right. This is also true in Kansas, which considers the leasehold to be personal property. Efforts by lessors to forbid assignment have met with objections as restraints on alienation. n1274 Consent to assignment provisions tailored to legitimate business concerns, however, should be as enforceable in this situation as with leaseholds generally. n1275 A transfer of an interest in a lease or a contract, however, is generally subject to the Statute of Frauds, which means it must be in writing and must adequately describe the interest to be conveyed. n1276 So long as these requirements are met, a lessee may transfer interests in the leasehold in numerous ways. n1277 Obviously, it may assign its whole interest in the lease. Often, the assignment will be accompanied by a reservation of a non-cost bearing interest. This is an overriding royalty, which has no operating rights. n1278 Another option is to assign a full working interest in only some of the acreage in the lease n1279 or some formations. n1280 Such an assignment is referred to as a partial assignment. It differs from assigning an undivided interest in the lease, which would make the assigner and assignee co-tenants.

If the lessee does transfer an undivided interest in the lease, the burden of any outstanding interests in the leasehold, such as overriding royalties, may fall on either the lessee's retained interest or on the transferred interest. In the normal transaction, the parties are aware of the interests and will specify the burden. A proportionate burdening is common. If the outstanding interests are not mentioned, the transferred interest would be unburdened. Conversely, if the transfer is specified as "subject to" the stated interests, the transferee will bear the full burden of the outstanding interests. n1281

CHAPTER 49 PETROLEUM AND PIPELINES
XIII. Lease Transfers by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.62

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.62 Effect of Transfer on Lessor.

§ 49.62(a) Further Rights Against the Lessee.

Neither an assignment nor sublease will release the lessee from liability on the express covenants of the lease because the lessee is in privity of contract with the lessor. n1282 There is less authority and little agreement among commentators on whether the lessee remains liable for implied covenants. n1283 A lease term may expressly release the lessee upon assignment, but most such clauses are interpreted to only impact future liabilities, not accrued ones.

§ 49.62(b) Future Rights Against the Transferee.

The lessor's rights against the transferee could depend on the distinction between an assignment and a sublease. n1284 An assignee is in privity of estate with the lessor. n1285 The lessor therefore could enforce any covenants that "touch and concern" the oil and gas estate. Because almost all provisions, both express and implied, of the oil and gas lease "touch and concern" the estate, the lessor could proceed directly against the assignee. n1286 Technically, the lessor would not have a direct cause of action against a sublessee, but would have to sue the lessee. n1287 An exception to this would be if the sublessee expressly assumed the obligations and covenants of the lease in the transfer instrument. The lessor could enforce this promise as a third-party beneficiary. n1288

Under traditional theory, an assignment results from the transfer of the lessee's total term in either the entire leasehold or particular tracts. n1289 If any interest is retained, then the transaction would be a sublease. One reoccurring question is what results if the lessee retains an overriding royalty in the interest assigned. Some cases find the overriding royalty to be a sufficient withheld interest to make the transaction a sublease, n1290 but others disagree. n1291 Similar results have occurred when the lessee retained rights to be notified of the transferee's intent to surrender the lease and a right to take a reconveyance. n1292

The difference between a sublease and assignment is routinely followed in Louisiana, but a statute has lessened the import of the distinction. n1293 In other jurisdictions, the common-law distinction is commonly ignored because it does not comport with industry custom. n1294

CHAPTER 49 PETROLEUM AND PIPELINES
XIII. Lease Transfers by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.63

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.63 Rights and Duties of the Lessee and Transferee.

[Go To Supp]

§ 49.63(a) Protection of Non-Operating Interests By Implied Covenants.

The lessee's non-operating interest retained in many assignments is an overriding royalty interest. Naturally, the lessee will see no return on this interest unless the assignee produces, but, unless the transfer document requires the drilling of an initial well, there will be no duty to drill one. Because the parties to the creation of an override are more sophisticated, it is argued that implied covenants would be inappropriate. n1295 Nevertheless, there is a movement to imply a general obligation of fair dealing, which would run from the operator to the non-operator and would encompass elements of the traditional implied duties owed to the lessor. n1296 Moreover, despite precedent to the contrary, n1297 some cases allow the lessee with a retained override to enforce the implied covenants, especially the covenant to protect against drainage. n1298 The lessee will have no greater rights nor will the transferee have any greater duties than are owed to the lessor. Other courts simply apply a duty of good faith, which would be less than an affirmative duty to protect from drainage. n1299

§ 49.63(b) Protection of Non-Operating Interests Against "Wash-out."

When the lessee retains an overriding royalty in a lease, it is reserved out of that particular lease's working interest. Therefore, if that lease should terminate, the original lessee's interest will end. n1300 The transferee therefore will have an incentive to let the burdened lease expire and to take a new lease. The general rule is that the transferee is not a fiduciary in respect to the overriding royalty holder. n1301 Exceptions are two: fiduciary responsibilities arise if special circumstances create a fiduciary relationship n1302 or if fraud and collusion take place. n1303 Unless one of the exceptions exist, the transferee could take a new lease without recognizing the override obligation. This was especially troublesome to some when the "new" lease was taken during the life of the burdened lease.

To remedy this problem, many assignments state that the override shall apply to "all modifications, renewals and extensions" of the assigned lease. This will require the transferee to recognize the rights of the overriding royalty holder. n1304 A constructive trust may be imposed on the new lease if the transferee topleases. n1305 Despite the future operation of the provision, the clause does not violate the Rule Against Perpetuities because the lease and the rights

granted under the assignment are vested. n1306

With the prevalence of these clauses, there is a need to determine what is a modification, renewal, or extension of the original lease. If the new lease the transferee takes is substantially different from the original, it may be a new lease to which the overriding royalty will not attach. n1307 Factors considered include: 1) the circumstances surrounding execution of the new lease, 2) the relationship of parties, 3) similarities and differences in terms of the new and old leases, and 4) whether additional consideration was given for new lease. n1308 The extension clause may be mooted if, in addition to applying the override to modifications, renewals and extensions, the assignment also grants the assignee the right to surrender the lease or releases the assignee from obligations to drill or keep the original lease alive. n1309

§ 49.63(c) Implied Covenants of Title from Lessee.

In an assignment of a lease, the lessee generally is not viewed as impliedly giving a warranty of title to the leasehold. To avoid implications arising under a jurisdiction's general law about the use of certain words of grant, most assignments expressly detail what, if any, title assurances are given. Regardless of the lessee's obligations, the transferee will be able to take advantage of the lessor's warranty of title.

§ 49.63(d) Performance or Failure of Performance by a Partial Assignee.

The general requirements of an oil and gas lease are deemed to be indivisible. Most leases, however, state that in the case of a partial assignment, in which only certain acreage is assigned, failure by an assignee or the original lessee to pay delay rentals will only impact the acreage of the lease held by that party. n1310 This applies to segregated tracts and will not assist when undivided interests are assigned; the total rental attributable to a tract must be paid. This express change in the rule of indivisibility is held to confirm indivisibility as to other duties. Each tract will not be viewed as a separate lease.

Under the rule of indivisibility, compliance with a duty for a segregated tract in a lease is compliance for all tracts under the lease. Therefore, the habendum clause will be satisfied for the entire lease if there is production on any of the acreage. n1311 Similarly, the entire lease will be held by one operator's shut-in royalty payments n1312 or activities sufficient to comply with the operations, dry hole, or cessation of production clauses. One possible exception is Louisiana, which had held that production will only retain the acreage held by the producing operator. n1313 Naturally, *Pugh* Clauses and other changes to indivisibility may apply and require production from more than one part of a leasehold. n1314

Royalty payments are primarily due from the operator upon which production is obtained. Although the original lessee will probably remain liable for all royalties, the royalty duty is divisible to the extent that the partial assignee will not be liable for royalties accruing from production on lands not within its assignment. n1315

§ 49.63(e) Divisibility of Implied Covenants After a Partial Assignment.

The implied covenants generally are also deemed to be indivisible. Obligations will not increase because of the assignment of the lease into separate tracts. To a certain extent, however, indivisibility is not an important issue. Each well capable of production should be marketed and each operator could be held accountable for both marketing and prudent operation. n1316 Only the operator of acreage being drained from a well off the leasehold will be required to provide drainage protection; internal offsets between assigned tracts are never required. n1317 The biggest question regarding divisibility arises under the implied covenant of reasonable development.

One operator may be the assignee of a portion of the leasehold on which there has been no development. Some cases have held that the covenant is divisible and each assigned tract must be judged separately. n1318 Others maintain the covenant is indivisible. n1319 If the covenant of reasonable development is indivisible, the lessor will have to prove that

the leasehold as a whole was not being reasonably developed. The lack of development of the single tract may not be conclusive. Nevertheless, when the leasehold encompasses large acreage, the doctrine of partial cancellation will enable a laggard operator to lose an interest without impacting other parts of the leasehold. Therefore, the question of divisibility or indivisibility primarily impacts the scope of evidence the lessor must present. n1320

CHAPTER 49 PETROLEUM AND PIPELINES
XIV. Oil and Gas Contracts by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.64

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.64 Support Agreements.

In order to obtain money for drilling, the owner of the right to drill may seek contributions from parties who own interests in other lands. These parties desire geological information from the well to be drilled because it would assist in appraising their own lands. n1321 Often the agreements are informal "letter agreements" without a great degree of detail.

§ 49.64(a) Dry Hole, Bottom Hole, and Acreage Contribution Agreements.

The three main types of support agreements are the dry hole agreement, bottom hole agreement, and acreage contribution agreement. In all three, one party agrees to drill to a specified depth or formation on that party's own land and to run standard tests. n1322 The party agreeing to supply money for the drilling will receive the test results and other geological information. In a dry hole agreement, however, the money will only be paid if the test well is dry. A bottom hole agreement will require payment regardless of the productive status of the well. In the acreage contribution agreement, rather than a money payment, the non-drilling party promises to convey interests in leases in the area of the test well in exchange for the information. n1323 Bottom hole and dry hole agreements may also obligate the drilling party to convey an interest in the drill site or other acreage to the contributor. In this form, the agreements are sometimes called "purchase letters"; without the assignment they are generally referred to as "donation letters."

Problems under these agreements are varied. They include determining whether a well is dry or whether it was properly completed pursuant to the agreement's terms. Additional issues arise over what acreage should be contributed by or conveyed to the supporting party. More generally, the Statute of Frauds applies, requiring an adequate description of the lands involved, n1324 and tax implications should be considered in drafting. n1325

§ 49.64(b) Remedies for Breach.

The support agreements technically may not require a well to be drilled, but if one is begun, the drilling party must carry out the undertaking. n1326 In some other situations, the remedy for a failure to drill a well is the cost of drilling it. n1327 This measure, however, is not used for a breach of a support agreement. The non-breaching party simply lost information. The loss was not of a well on the injured party's own land, which would have given potential return

through production as well as information. Therefore, the value of the lost information is the damage, measure, computed by determining what one would normally pay by way of contribution for access to logs and other information. n1328
