XIV. Oil and Gas Contracts by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.65

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.65 Farmout Agreements.

[Go To Supp]

§ 49.65(a) Purpose and General Operation.

A farmout agreement is one in which the owner of a working interest (the farmor) agrees to convey an interest in property to another (the farmee) in exchange for the agreement to drill a specified well on the farmor's property. n1329 A farmout, from the viewpoint of the farmor, is a way to drill without the expenditure of funds. This enables the farmor to preserve a lease at the end of its primary term and spread its risks. From the farmee's perspective, the farmout allows it to earn acreage without the expenditure of bonus money. Generally, the farmee will not be considered a fiduciary. n1330

There is no specific form for a farmout. n1331 Generally, however, the working interest in the drill site is conveyed to the farmee before drilling begins. The farmor traditionally will reserve an overriding royalty interest, often with the right to "back in" or convert this non-operating interest into a share of the working interest after the well has paid out drilling, completing, and operating costs. n1332 The farmee may also earn an interest in additional acreage, either as a result of the initial well being a producer or because it accepts an option to drill additional wells. The Statute of Frauds applies. Therefore, the acreage must be particularly described. n1333

Farmouts can make the drilling of the initial well either a covenant or a condition. If it is a condition for the farmee to earn acreage, generally the only result of non-drilling will be that the farmee will not receive the assignment, n1334 but damages have been awarded. n1335 Often, drilling the first well is considered a covenant of the farmee. In such instances, the attorney for the farmee should require an adequate force majeure clause n1336 because the well must be drilled or the farmee will be in breach. Damages are variously determined. n1337 Measures include the cost of drilling the well n1338 or the value of an interest that would have been sold during drilling by the farmee but was rendered worthless by a third party drilling a dry hole. n1339 In controversies between the farmee and its subsequent assignee, damages could be royalties lost on the retained interest when another drilled successfully. n1340

§ 49.65(b) Tax Consequences.

The parties to the farmout want the transfer of the working interest to the farmee to be a non-taxable event. For the transfer of the working interest in the drillsite, the Internal Revenue Service agrees that the farmor contributes minerals and the farmee contributes drilling as capital to a joint enterprise. n1341 Transfers of interests in other lands, if triggered by the success of the initial well and not through subsequent drilling, may be income to the farmee, namely additional compensation for drilling the first well. This is because "property" for tax purpose is defined as each separate legal interest owned by a taxpayer in each geological deposit and in each separate tract or parcel of land. n1342 Careful planning is required. n1343

A second tax aspect of the arrangement is the farmee's desire to deduct intangible drilling costs as an expense in the year incurred. This may only be done by a party who owns the entire working interest until payout.

CHAPTER 49 PETROLEUM AND PIPELINES
XIV. Oil and Gas Contracts by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.66

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.66 Joint Operating Agreements.

§ 49.66(a) Purpose.

An operating agreement specifies the rights and duties of parties with interests in prospective wells in a specified geographic area. It covers how development shall proceed and how costs are to be allocated. n1344 One party is denominated the operator and has specified rights and duties for drilling. The remaining parties are designated "non-operators." They typically only have the right to consent or withhold consent to specified activities and to replace the operator in enumerated circumstances. Generally, operating agreements are used in two different situations. First, co-tenants n1345 or parties who own interests in a drilling unit and who are in the oil and gas industry may desire to designate one party as an operator for the convenience of all. Second, an operator may want to develop for the benefit of itself and investors. In the latter situation, the operator will generally charge an operating fee.

The relationship that arises under a joint operating agreement is somewhere between that of co-tenants, with accounting rights, n1346 and a partnership, where each party is liable for all debts incurred and all torts committed. Under a joint operating agreement, each party is liable only to the extent of its interest in the minerals unless the non-operator exerts sufficient control to transform the arrangement to a mining partnership. n1347 A mining partnership, which is implied, requires three elements: a joint interest in the property, an express or implied agreement to share profits and losses, and cooperation in the project. n1348 Courts have declared that the standard rights a non-operator retains are insufficient to give rise to a mining partnership. A non-operator under the standard agreement only has rights to receive certain data, to have access to the site, and to be consulted. While the non-operator may decide not to participate, it may not veto the operator's plans nor enter into contracts. n1349 Therefore, the liability of the non-operators is several. Each party's interest, however, could be subject to mechanics' and materialmen's liens.

§ 49.66(b) General Operation.

Although parties to a joint operating agreement may design it in any manner they choose, most agreements at least begin with the "Model Form Operating Agreement" promulgated by the American Association of Petroleum Landmen and known as A.A.P.L. Form 610. This form was initially published in 1956, and amended in 1977, n1350 1982, and 1989. n1351 The new forms bear the respective dates.

The operator generally has broad authority to act to achieve the agreement's goals. The Model Form states that the operator will only be liable for "gross negligence and willful misconduct." n1352 Courts construe this provision as negating any fiduciary requirement. n1353 Moreover, the operator is only subject to removal for specified reasons. Nevertheless, the agreement generally describes the required drilling with specificity.

The joint operating agreement typically is entered into after the parties have agreed to drill the initial well and the operator will be required to commence it by a date certain and to drill to the target formation. The operator is authorized to expend sums to drill the well, although the non-operators may have an option to reconsider whether they consent to completion. n1354 Plugging and abandonment also requires consent.

Additional development will require the operator to seek consent, which is normally given in the form of a written "Authorization for Expenditure," referred to as an "AFE." The amount designated for drilling in the AFE is considered only an estimate; the consent given will be for the operation approved, despite cost overruns. n1355 The non-operator will have the option to "go non-consent" initially in regard to a well or, under some operating agreements by express provision, when the costs exceed those in the AFE by a certain percentage. n1356 The participating owners will advance the non-consenting party's share of the cost. The non-consent provision, however, will not shield the non-consenting party from liability for costs imposed by regulation. n1357

To account for the remaining costs, the non-consenting party will not share in the proceeds if the well produces until those who advanced costs attributable to the non-consenting interest have recovered those costs and a penalty, expressed as a percentage of costs. Requiring recovery in addition to actual costs has been upheld against challenges that such provisions are unenforceable penalties; they are designed to compensate those taking the risk that the well will be a non-producer. n1358 High non-consent penalties encourage parties to participate in the risk. Sometimes, there is a distinction in the penalty between recovery of non-avoidable, expenditures with little risk, such as supplying surface equipment, and the actual drilling costs, which require risk taking. n1359

Smith, *Duties and Obligations Owed by an Operator to Nonoperators, Investors, and Other Interest Owners*, *32 Rocky Mtn. Min. L. Inst. 12-1 (1986);* and 2 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 19A.6 (Anderson).

Ernest E. Smith, *Joint Operating Agreement Jurisprudence, 33 Washburn L.J. 834 (1994); Oklahoma Oil & Gas Exploration, Drilling Program 1983-A v. W.M.A. Corporation, 877 P.2d 605 (Okla. App. 1994)* (even if parties to JOA did not go through formal procedures to replace an operator, non-operators may be equitably estopped from denying that assignee of old operator is the operator if they have dealt with that party as operator).

(n2)Footnote 1345. The actions of the operator will satisfy the terms of all leases held by any of the participating parties. *Compare* § 49.05(e), *supra*.

(n3)Footnote 1346. *See* § 49.05(d), *supra*. Accounting allows one co-tenant to operate alone and provides post-production remedies. It does not allocate the risk of drilling.

(n4)Footnote 1347. *Blocker Exploration Co. v. Frontier Exploration, Inc., 740 P.2d 983 (Colo. 1987); Berchelmann v. Western Co., 363 S.W.2d 875 (Tex. Civ. App. 1963).*

(n5)Footnote 1348. *Sparks Bros. Drilling Co. v. Texas Moran Exploration Co., 829 P.2d 951 (Okla. 1991). See*§ 48.19, *supra*. *See generally* P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law § 435 (Matthew Bender) and 2 Kuntz, Lowe, Anderson, Pierce, and Smith, Oil and Gas Law § 19A.7 (Anderson).

(n6)Footnote 1349. *Blocker Exploration Co. v. Frontier Exploration, Inc., 740 P.2d 983 (Colo. 1987); Sparks Bros. Drilling Co. v. Texas Moran Exploration Co., 829 P.2d 951 (Okla. 1991)* (investigating billing is merely acting as a prudent investor, not cooperating in project). *Compare Mud Control Labs. v. Covey, 269 P.2d 854 (Utah 1954)* (rights of non-operator under joint operating agreement that preceded form rose to level of mining partner).

(n7)Footnote 1350. *See* Marvin L. Wigley, *AAPL Form 610-1977 Model Form Operating Agreement, 24 Rocky Mtn. Min. L. Inst. 693 (1978).*

(n8)Footnote 1351. Andrew B. Derman, *The New and Improved 1989 Joint Operating Manual*, Monograph Series No. 15 (Section of Natural Resources, Energy & Environmental Law, ABA and The National Energy & Policy Law Institute, University of Tulsa: 1991).

(n9)Footnote 1352. *Stine v. Marathon Oil Co., 976 F.2d 254 (5th Cir. 1992)* (both physical acts and administrative acts covered by exculpatory clause); *but see Johnston v. American Cometra, Inc., 837 S.W.2d 711 (Tex. App. 1992)* (using a reasonable and prudent standard to judge operator's marketing duty; no mention of any exculpatory clause in agreement).

An operating agreement often gives the operator a right, but not a duty, to market the gas of the non-operators. In exercising such a right, the operator is not required to maintain high-priced sales contracts and may settle contract disputes, but the operator may not let its wholly-owned subsidiary "alter ego" profit on the sale of the non-operator's gas. *Atlantic Richfield v. The Long Trusts, 860 S.W.2d 439 (Tex. App. 1993).* For interpretation of an agreement's market-sharing provision, *see Amoco Rocmount Co. v. Anschutz Corp., 7 F.3d 909 (10th Cir. 1993). See Norman v. Apache Corp., 19 F.3d 1017 (5th Cir. 1994)* (agreement requires operator to act in "good and workmanlike manner;" under Texas law, operator may have to act as reasonable and prudent operator not only in regard to express provisions of the agreement but also in other situations), *cert. denied, 510 U.S. 1112 (1994).*

(n10)Footnote 1353. *Dime Box Petr. Corp. v. Louisiana Land & Exploration Co., 938 F.2d 1144 (10th Cir. 1991).* The court noted that, under Colorado law, the operating agreement would have given rise to a joint venture and fiduciary duties if the exculpatory clause was not present. *Cf. Texstar North Am., Inc. v. Ladd Petr. Corp., 809 S.W.2d 672 (Tex. App. 1991)* (no implied duty of good faith).

Connaghan v. Maxus Exploration Co., 5 F.3d 1363 (10th Cir. 1993) (operator owed no fiduciary duty to non-operator but breached operating agreement by settling lawsuit without consent of non-operator); *Norman v. Apache Corp., 19 F.3d 1017 (5th Cir. 1994)* (under Texas law, joint operating agreement in and of itself will not support finding of a partnership or joint venture; need special relationship for fiduciary duty), *cert. denied, 510 U.S. 1112 (1994).*

(n11)Footnote 1354. *See LPCX Corp. v. Red Eagle Oil Co., 818 P.2d 431 (Okla. 1991)* (consent to reworking operation required under 1956 Agreement).

(n12)Footnote 1355. *M & T, Inc. v. Fuel Resources Dev. Co., 518 F. Supp. 285 (D. Colo. 1981)* (so long as costs are reasonable and necessary). If, however, a non-operator is not a party to an operating agreement, it may limit its consent to the AFE amount. *Sonat Exploration Co. v. Mann, 785 F.2d 1232 (5th Cir. 1986).*

(n13)Footnote 1356. *See Forest Oil Corp. v. Superior Oil Co., 338 So. 2d 758 (La. App. 1976)* (allowing non-consent when costs reached 150% of AFE).

(n14)Footnote 1357. *Railroad Comm'n v. Olin Corp., 690 S.W.2d 628 (Tex. App. 1985),* (nonconsenting parties liable to control and plug well when operator financially incapable). *See generally* Annotation, *Duty and Liability As to Plugging Oil or Gas Well Abandoned or Taken Out of Production, 50 A.L.R.3d 240 (1973).*

(n15)Footnote 1358. *See Hamilton v. Texas Oil & Gas Corp., 648 S.W.2d 316 (Tex. App. 1982)* (upholding 400% penalty as valid; standard in industry was for provisions between 200% and 500%). *Cf. Bennion v. ANR Prod. Co., 819*

P.2d 343 (Utah 1991) (statutory risk penalty not unconstitutional taking of property).

Nearburg v. Yates Petroleum Corp., 943 P.2d 560 (N.M. App. 1997) (where A.A.P.L. Form 610 provided a non-consent penalty provision which allowed the consenting party to recoup up to 200% of its cost of new surface equipment and up to 500% of its cost of drilling and new equipment in the well before the non-consenting party shared in production. Since the parties to the agreement are not obligated to participate in all proposed operations, an election not to do so is not a breach and the recoupment provision does not create liquidated damages or an unenforceable penalty. It is a covenant subject to a condition where the non-consenting party agrees to relinquish temporarily its specified interest in production in exchange for the consenting party bearing the risk of the operation).

(n16)Footnote 1359. For example, a 100%-300% non-consent penalty would allow the contributing parties to recover 100% of the non-risk expenditures and 300% of the risky expenditures. This may be modified to reflect the time value of the money expended on the first category of expenses or to reflect a higher risk for the second type.

§ 49.67 Unitization Agreements.

Unitization agreements, also called unit agreements, are similar to joint operating agreements; they also allow for mutual development and designate an operator. n1360 Unitization, however, generally will impact the habendum clauses of the underlying leases, while a joint operating agreement does not. n1361 Unitization joins together all, or a significant portion of, a specific geological reservoir in order to develop it as a single consolidated unit employing the best engineering practices. Costs and proceeds are shared pursuant to the agreement's formula. Although unitization may occur for exploration or primary recovery operations, the main use of unitization is to provide for secondary and tertiary recovery operations.

XIV. Oil and Gas Contracts by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.68

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.68 Area of Mutual Interest Provisions.

An Area of Mutual Interest, or "AMI," provision may appear in farmouts, joint operating agreements, or other contracts between oil and gas developers. n1362 The rationale for the AMI is that oil and gas operations can profoundly affect values of property near the operations; parties engaging in such activities want to share the benefits of their risk taking if operations indicate that nearby property is more valuable than others might suppose. The AMI provision obligates each party to share leases they might obtain in the designated area, which must be described with sufficient clarity to be enforceable. n1363 The acquiring party is required to give the other party notice of the acquisition and an option to share in the purchase, which option would be exercisable in a time certain. The requirements may be drafted to be personal obligations, but because the obligations touch and concern land, they may be covenants running with the land, n1364 but this will require some privity of estate. n1365 Because the AMI creates contractual rights and not property rights, it does not violate the Rule Against Perpetuities. n1366 An AMI contained in a farm-out will expire when the farm-out expires without drilling. n1367

CHAPTER 49 PETROLEUM AND PIPELINES
XIV. Oil and Gas Contracts by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.69

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.69 Drilling Contracts.

Most oil and gas operators contract with drilling companies for well drilling. General rules for contracts apply to these transactions. n1368 Nevertheless, three main types of contracts can be identified. n1369 "Daywork" contracts pay the drillers by the time spent. The risks of difficulties encountered in drilling are therefore on the oil and gas operator. The operator will have more control over the contractor's actions than under the other forms of contract and in fact supervises drilling. "Footage" contracts compensate the driller based on the footage drilled. The risks, therefore, are on the driller, although often the driller is compensated at daywork rates in specified circumstances. The oil and gas operator has less control over the drilling. Under a "turnkey" contract, the driller assumes most risks and the operator has little opportunity for input. A set price is negotiated for a completed well at a specified depth. n1370 Obviously, in a busy drilling environment when drill rigs are at a premium, daywork contracts are encountered more frequently.

CHAPTER 49 PETROLEUM AND PIPELINES
XIV. Oil and Gas Contracts by Lessee

6-49 Thompson on Real Property, Thomas Editions § 49.70

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.70 Gas Balancing Agreements.

[Go To Supp]

Often more than one oil and gas lessee has rights to the gas from a gas well. This may occur when the lessees: 1) are co-tenants, 2) have pooled interests to form a drilling unit, or 3) have rights to unit production. The lessees may decide to sell their gas under separate contracts, which may have different purchasers or prices. These are referred to as "split-stream" sales. However, it is impossible to physically divide the gas as it emerges from the well. When gas is sold by one party, it inevitably includes gas "owned" by others in the sale. The basic law of cotenancy would require an accounting, but industry custom allows for balancing in kind. Under this process, after sales have been credited to one party, the other would have the right to produce and sell to "balance" the ownership rights. n1371

In some instances, however, cash payments would be needed to settle rights. This is "cash balancing." It obviously must be used when the deposit has been depleted. There is controversy about its customary use in other situations. n1372 One other problem with cash balancing is the price to be used to determine cash balancing, especially if the market price has fluctuated. A gas balancing agreement is a contract that attempts to regulate rights between the parties and explain when balancing in kind and cash balancing would be required. There are no standard terms.

Statutes may also influence how parties participate in a sale from a well. For example, Oklahoma allows non-selling parties to elect to market share. n1373

CHAPTER 49 PETROLEUM AND PIPELINES
XV. Pipelines: Regulation and Acquisition

6-49 Thompson on Real Property, Thomas Editions § 49.72

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.72 Types of Pipelines: Gathering Distinguished from Transmission.

[Go To Supp]

Pipelines are the most efficient transport for oil and gas, although rail or trucks may also transport oil. n1374 All pipelines are similar to the extent that a fluid passes through them, but they are classified by function. "Gathering lines" are one type. In a simplified definition, they are those pipelines that transport oil or gas from the leasehold to a main pipeline. They generally are of a smaller diameter and lower pressure than long distance trunk or transmission lines.

The distinction between gathering and transmission is important for purposes of regulation under two statutes because the statutes exempt gathering from their reach. Under the Natural Gas Pipeline Safety Act, n1375 the limited gathering exception is restricted to those pipelines that connect a transmission line to a well. n1376 The Natural Gas Act exempts both "production and gathering of natural gas" from federal jurisdiction. n1377 Whether or not a natural gas pipeline is a gathering line for this purpose is determined under a modified primary function test, which flexibly looks at: 1) diameter and length of pipeline; 2) location of compressors and processing plants; 3) extension of facility beyond the central point in a field; 4) location of well along all or part of the facility; 5) geographical configuration of the system; and 6) operating pressure. n1378

FOOTNOTES:
(n1)Footnote 1374. For natural gas, pipelines historically were not only transporters but the major purchasers. This pipeline role will not be as prevalent, especially in the interstate market. The Federal Energy Regulatory Commission in Order 636 required gas pipelines to "unbundle" their merchant and transportation services. They must offer "comparable" transportation service for gas that the pipeline is not selling. Order 636, *57 Fed. Reg. 13,2647* (Apr. 16, 1992); *orders on reh'g*, Order 636-A, *57 Fed. Reg. 36,128* (Aug. 12, 1992) and Order 636-B, *57 Fed. Reg. 57,911* (Dec. 8, 1992).

(n2)Footnote 1375. *49 U.S.C. § 1671*(3) (exempt if in rural locations outside of towns and other populated areas). After the 1992 amendments, the act applies to regulated gathering systems.

(n3)Footnote 1376. *Hamman v. Southwestern Gas Pipeline, Inc., 721 F.2d 140 (5th Cir. 1984).*

(n4)Footnote 1377. § 1(b) of the Natural Gas Act of 1938, codified at *15 U.S.C. § 717*(b). *See generally* Annotation, *What Constitutes "Production and Gathering of Natural Gas" Excluded from Coverage of Natural Gas Act, 44 A.L.R. Fed. (1979) 843.*

(n5)Footnote 1378. *See Farmland Indus., 23 F.E.R.C. P 61,063 (1983); EP Operating Co. v. Federal Energy Reg. Comm'n, 876 F.2d 46 (5th Cir. 1989).* Jurisdiction over gathering facilities may also exist because the company operating the facilities is a natural gas company subject to jurisdiction. *Northern Nat. Gas Co. v. F.E.R.C., 929 F.2d 1261 (8th Cir. 1991), cert. denied, 502 U.S. 856 (1991), but see Northwest Pipeline Co. v. F.E.R.C., 905 F.2d 1403 (10th Cir. 1990)* (rejecting jurisdiction simply because owner has primary function of transporter).

CHAPTER 49 PETROLEUM AND PIPELINES
XV. Pipelines: Regulation and Acquisition

6-49 Thompson on Real Property, Thomas Editions § 49.73

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.73 Justification for Regulation.

Most of pipeline regulation comes under the heading of public utility law and will not be extensively discussed. n1379 Nevertheless, among the justifications for regulation is the fact that pipelines may be "natural monopolies," which occur when a company enjoys economies of scale so that it can become the sole provider of service. The capital intensive nature of pipeline enterprises lend themselves to this phenomenon; once one pipeline is built there may be little incentive for another to enter the market and duplicate expensive facilities. n1380

A second justification, employed by the states for their common purchaser and ratable take requirements, is to avoid waste of oil and gas and protect correlative rights. n1381

CHAPTER 49 PETROLEUM AND PIPELINES
XV. Pipelines: Regulation and Acquisition

6-49 Thompson on Real Property, Thomas Editions § 49.74

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.74 Federal Regulation of Pipelines.

§ 49.74(a) Safety and Pollution.

Numerous general statutes may apply, but two specific statutes are the Oil Pollution Act of 1990 n1382 and the Natural Gas Pipeline Safety Act. n1383 The first act provides for rather strict liability for spills of oil and the second provides construction standards that preempt conflicting state or local standards. n1384

§ 49.74(b) Oil Pipelines.

The Hepburn Act made common carrier interstate oil pipelines subject to the Interstate Commerce Act. n1385 The Federal Energy Regulatory Commission determines rates. Entry and exit into the industry are subject to control.

§ 49.74(c) Gas Pipelines.

The Natural Gas Act of 1938 n1386 regulates the interstate transportation of natural gas as well as sales for resale. n1387 Pipelines are regulated as public utilities, with rates determined by the Federal Energy Regulatory Commission. Entry and exit into the industry are subject to control. Current regulatory practice is to allow competition, where present, to have a greater role in defining the industry. n1388

CHAPTER 49 PETROLEUM AND PIPELINES
XV. Pipelines: Regulation and Acquisition

6-49 Thompson on Real Property, Thomas Editions § 49.75

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.75 State Regulation of Pipelines.

[Go To Supp]

§ 49.75(a) Utility Regulation: Oil and Gas Pipelines.

States may regulate intrastate oil and gas pipelines as utilities in the same manner that the federal government regulates interstate pipelines. n1389

§ 49.75(b) Common Purchaser and Ratable Take Statutes.

Common purchaser statutes provide that those pipelines in the business of purchasing oil or gas must buy from all producers and not discriminate. Some states apply these statutes to natural gas pipelines; they must purchase from all producers within reasonable reach of their pipelines and not discriminate on price or other matters if the gas is of the same quality. n1390 If the pipeline cannot purchase all such gas, it must take "ratably" from the producers, that is, in the proportion each producer's production bears to the production of the field or other common source of supply. Statutes apply similar duties on oil pipelines in some states. n1391 Because these statutes are designed to prevent waste and protect correlative rights, they should be constitutional if the pipelines are public utilities or common carriers. n1392

§ 49.75(c) Federal Preemption of State Regulation.

The Natural Gas Act does not occupy the field of natural gas regulation even if it affects interstate commerce. The Act expressly reserves the governing of production and gathering for state action. n1393 The federal government therefore cannot prescribe methods of production under authority of the Natural Gas Act. n1394 States, however, cannot impact the purchasing decisions or rate structure of an interstate pipeline directly. Therefore, a state cannot impose its ratable take statute on an interstate pipeline. n1395 However, a state may act to prevent waste and protect correlative rights and such actions directed to a producer are not preempted even if they have incidental impact on the finances or decisions of an interstate pipeline. n1396

CHAPTER 49 PETROLEUM AND PIPELINES
XV. Pipelines: Regulation and Acquisition

6-49 Thompson on Real Property, Thomas Editions § 49.76

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.76 Acquisition of Pipelines by Condemnation.

§ 49.76(a) Interstate Pipelines.

A certificate of public convenience and necessity granted under the Natural Gas Act allows the pipeline to acquire rights of way through a condemnation action filed in Federal District Court. n1397 If an underground storage project is part of the jurisdictional facility, the Federal Energy Regulatory Commission must certificate the storage project, but the statute does not refer to condemnation for these purposes. n1398

§ 49.76(b) Intrastate Pipelines.

Most states give the power of eminent domain to oil and gas pipeline companies that are either public utilities or common carriers. n1399 A pipeline built solely to transport a company's own production and not forced to become a common carrier under any state or federal regulation might not be covered. n1400

§ 49.76(c) Valuation.

Generally, because a pipeline is an easement, classic diminishment of value methods determine the condemnation award for the lands actually taken. n1401 The highest and best use of the property is considered. n1402 Damages are also available for agricultural losses and for costs of restoring the land. n1403

Severance damages are assessed if lands not taken have been impacted by the easement. Courts have allowed evidence that the remaining property may have a diminished value because of fears n1404 about dangers from a high pressure pipe line explosion n1405 or from accidents with sour gas, which contains poisonous hydrogen sulfide. n1406

FOOTNOTES:

CHAPTER 49 PETROLEUM AND PIPELINES
XV. Pipelines: Regulation and Acquisition

6-49 Thompson on Real Property, Thomas Editions § 49.77

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.77 Acquisition of Pipelines by Voluntary Action.

[Go To Supp]

§ 49.77(a) Rights Under Oil and Gas Lease.

The granting clause of an oil and gas lease often gives the lessee the right to lay pipelines. This may or may not be phrased as an exclusive right. The lessee's right, nevertheless, may be assignable if the assignment does not increase the burdens on the lessor's estate. n1407 Naturally, its grantee's rights would end when the oil and gas lease terminates. Because the lessee's right, however, is related to lease development, the lessor may retain the right to grant a pipeline easement for a transmission or trunk line.

§ 49.77(b) Rights to Multiple Lines.

A pipeline easement may expressly state that the grantee receives the right to lay multiple pipelines. n1408 In this event, courts have found the right to be vested immediately and thus to not violate the Rule Against Perpetuities regardless of when the second line is constructed. n1409 The right may be assignable. n1410 Moreover, courts have held that the right will not be abandoned simply by the passage of time. n1411 Nevertheless, there is precedent to the contrary. Louisiana held that the failure to build another line was lost by prescription after ten years. n1412 Another court found that an easement was fixed when one line was built and another was not built for forty years. n1413

The amount of clarity in the grant may lead to some of these different results. For example, a grant to lay "pipeline or pipelines" for a sum certain per rod would envision more than one pipeline, n1414 but a mere reference to "pipeline or pipelines" may not give rights to lay additional lines. n1415

§ 49.77(c) Requirement of Burying Pipeline Below Plow Depth.

Often in agricultural areas the easement requires the grantee to bury the line below plow depth. This responsibility has sometimes been deemed a continual one, requiring reburying the pipeline after erosion n1416 or after lands had been terraced. n1417

CHAPTER 49 PETROLEUM AND PIPELINES
XV. Pipelines: Regulation and Acquisition

6-49 Thompson on Real Property, Thomas Editions § 49.78

AUTHOR: Professor Maria E. Mansfield College of Law University of Tulsa

§ 49.78 General Relationship Between Dominant and Servient Estate.

[Go To Supp]

The pipeline easement is the dominant estate. Although the grantor retains the general right to use the property subject to the easement, use of the servient estate may not make operation or maintenance of the pipeline more expensive or more dangerous. n1418 In one instance, the court found the placement of fill dirt from thirteen to over nineteen feet deep to be such an interference. n1419 More frequently, disputes occur over the placement of structures in the easement area. In deeds that expressly prohibit structures, questions arise over what is a structure. n1420 If the owner of the servient estate desires to use it in a manner that could interfere with the easement, that owner bears the cost of relocating the pipeline. n1421

FOOTNOTES:
(n1)Footnote 1418. *See* Annotation, *Correlative Rights of Dominant & Servient Owners in Right of Way for Pipeline, 28 A.L.R.2d 626 (1953).*

Mobil Pipeline Co. v. Smith, 860 S.W.2d 157 (Tex. App. 1993) (owner of land burdened by an agricultural lease may grant a pipeline right of way and the farm tenant could not block access); *Columbia Gas Transmission Corp. v. Tarbuck, 845 F. Supp. 303 (W.D. Pa. 1994)* (easement width was unspecified but interpreted to be 50 feet, which would allow effective use of right-of-way for intended purpose), *Columbia Gas Transmission Corp. v. Tarbuck, 845 F. Supp. 303 (W.D. Pa. 1994), aff'd, 62 F.3d 538 (3d Cir. 1995); Avery v. Colonial Pipeline Co., 444 S.E.2d 363 (Ga. App. 1994)* (operator of pipeline could clear trees and vegetation to permit aerial inspection and maintenance crew access; pipeline has implied right to take actions required of them by federal regulatory laws).

(n2)Footnote 1419. *Mississippi River Transmission Corp. v. Wachter Constr. Co., 731 S.W.2d 445 (Mo. App. 1987). See also, Dudly v. Southern Nat. Gas Co., 442 So. 2d 54 (Ala. 1983)* (sawdust, timber, scrap metal & machinery on easement).

Columbia Gas Transmission Corp. v. Tarbuck, 845 F. Supp. 303 (W.D. Pa. 1994) (further dumping of dirt and rock enjoined), *aff'd, 62 F.3d 538 (3d Cir. 1995).*

(n3)Footnote 1420. *Mid-America Pipeline Co. v. Lario Enters., 942 F.2d 1519 (10th Cir. 1991)* (race track with asphalt and fill on easement was "structure" that would interfere with normal operation and maintenance).

(n4)Footnote 1421. *Minard Run Oil Co. v. Pennzoil Co., 214 A.2d 234 (Pa. 1965)* (surface owner must bury pipeline sufficiently deep to withstand traffic of its proposed road); *Craft v. Arkansas Louisiana Gas Co., 8 Ark. App. 169, 649 S.W.2d 409 (1983)* (house built over pipeline required builder to move pipeline).

Southern Wilderness Alliance v. Kempthorne, 525 F.3d 966 (10th Cir. 2008) (BLM's sale of oil and gas leases reversed by federal district court; private lessees not allowed to intervene).

Sierra Club v. Mainella, 459 F. Supp. 2d 76 (D.D.C. 2006) (National Park Service decisions to exempt certain drilling operations from directional drilling regulations were ruled arbitrary and capricious); *BP America Petroleum Production v. Burton, 127 S.Ct. 638, 166 L.Ed.2d 494 (2006)* (attempt to enforce orders to remit underpayments on oil and gas leases was not bound by the six-year statute of limitations, which applies only to court actions); New Mexico ex re. *Richardson v. Bureau of Land Management, 459 F. Supp. 2d 1102 (D. N.M. 2006)* (BLM was required to prepare site-specific environmental analyses of an oil and gas development project prior to issuing the lease, rather that waiting until just before drilling); *Southern Utah Wilderness Alliance v. Norton, 457 F. Supp. 2d 1253 (D. Utah 2006)* (BLM lease issuance denied, because BLM had not taken a "hard look" at the no-leasing alternative); *Northern Alaska Environmental Center v. Kempthorne, 457 F.3d 969 (9th Cir. 2006)* (an environmental impact statement was sufficiently site-specific without being required to examine each parcel of a proposed lease).

Chihuahuan Grasslands Alliance v. Norton, 507 F. Supp. 2d 1216 (D. N.M. 2007) (judicial challenge to agency procedure arising from competitive oil and gas fluid minerals lease sale of public lands).

Supp. To CHAPTER 49 PETROLEUM AND PIPELINES

6-49 Thompson on Real Property, Thomas Editions Supp. to § 49.33

Supp. to § 49.33 Secondary Term Defined.

Change author's first name to Marla.
[Go To Main]

Add:

Anadarko Petroleum Corp. v. Thompson, 60 S.W.3d 134 (Tex. App. 2000) (a lease for a term of one year and as long thereafter as "gas is or can be produced" is extended only by actual production in paying quantities).

Anadarko Petroleum Corp. v. Thompson, 60 S.W.3d 134 (Tex. App. 2000) was overturned by *Anadarko Petroleum Corp. v. Thompson, 94 S.W.3d 550 (Tex. 2002)* (the clause "gas is or can be produced" is construed to mean that a well actually producing gas or capable of producing gas sustains this particular lease. To be "capable of producing gas,"" a well must be capable of producing gas in paying quantities without additional equipment or repairs.)

§ 49.33(a) Meaning of "Production." [Go To Main]

§ 49.33(a)(2) Minority Rule.

add:

Baytide Petroleum, Inc. v. Cont'l Res., Inc., 2010 Okla. LEXIS 6 (Okla. 2010)

add:

Smith v. Marshall Oil Corp., 85 P.3d 830 (Okla. 2004)

§ 49.33(b) How Much Production Is in "Paying Quantities." [Go To Main]

Add:

Exxon Corp. v. Miesch, 180 S.W.3d 299, 2005 Tex. App. LEXIS 9862 (Tex. App. Corpus Christi 2005) (distinguishes *Abraxas* stating that the duties and injuries in *Abraxas* are sound in contract alone, and the only way they can recover is through the contracts between the parties. Additionally, a party cannot recover is there is a tort separate and apart from the contractual agreement.). *See also Bosch v. Dallas Gen. Life Ins. Co., 2005 Tex. App. LEXIS 2512* Tex. App. Houston 14th Dist. Apr. 5, 2005) (Following *Abraxas* and stating that in order to recover compensatory damages, a breach of contract plaintiff must show that they suffered some pecuniary loss as a result of the breach. Actual damages are recoverable in a breach of contract action when the loss is a natural and foreseeable consequence of the defendant's conduct. Additionally, the mitigation of damages doctrine requires the injured party to exercise reasonable care to minimize damages.)

CHANGE Exxon Corp. v. Miesch, 180 S.W.3d 299, 2005 Tex. App. LEXIS 9862 (Tex. App. Corpus Christi 2005) TO Exxon Corp. v. Miesch, 180 S.W.3d 299 (Tex. App. 2005)* aff'd in part, rev'd on other grounds, *Exxon Corp. v. Emerald Oil & Gas Co., L.C., 2009 Tex. LEXIS 113 (Tex. 2009)

CHANGE Grinnell v. Munson, 137 S.W.3d 706 (Tex. App. 4th Dist. 2004) TO Grinnell v. Munson, 137 S.W.3d 706 (Tex. App. 2004)

CHANGE Wood v. Axis Energy Corp., 2005 La. App. LEXIS 888 (La. App. 3rd Cir. 2005) TO Wood v. Axis Energy Corp., 899 So. 2d 138 (La. App. 2005)

Add:

Grinnell v. Munson, 137 S.W.3d 706 (Tex. App. 4th Dist. 2004) (To establish a cessation of production in paying quantities, a lessor must show "that the lease failed to yield a profit over a reasonable period of time and that a reasonably prudent operator would not have continued to operate the well in the manner it was being operated"); *Wood v. Axis Energy Corp., 2005 La. App. LEXIS 888 (La. App. 3rd Cir. 2005)* (Trial court properly included overhead of non-lessee operator when determining whether or not the well was producing in "paying quanities").

See also *Wood v. Axis Energy Corp., La. App. 04-1464, 899 So. 2d 138, 2005 La. App. LEXIS 888* (La.App. 3 Cir. Apr. 6, 2005) (holding that the plaintiff's were not estopped from claiming that the lease terminated for failure to produce in paying quantities. Subsequently the plaintiff's were not estopped because they it was only after they undertook an investigation of the records that they realized that their initial demand for the termination of the lease. Also, the plaintiff's need not specifically allege the defendants owed them proceeds and therefore the plaintiff should have been awarded an amount for lost lease opportunities.)

CHANGE Wood v. Axis Energy Corp., La. App. 04-1464, 899 So. 2d 138, 2005 La. App. LEXIS 888 (La. App. 3rd Cir. 2005) TO Wood v. Axis Energy Corp., 899 So. 2d 138 (La. App. 2005)

§ 49.33(c) Marginal Wells: period in Which to Test Paying Quantities [Go To Main]

Add:

Brown v. Reeter, 170 S.W.3d 151, 2005 Tex. App. LEXIS 4794 (Tex. App. Eastland 2005) (holding that a party does not need to address the profitability of obtaining production from the lease because she alleged a complete cessation of product for several months.)

CHANGE Brown v. Reeter, 170 S.W.3d 151, 2005 Tex. App. LEXIS 4794 (Tex. App. Eastland 2005) TO Brown v. Reeter, 170 S.W.3d 151 (Tex. App. 2005)

§ 49.33(d) Equitable Defenses, Estoppel and Waiver [Go To Main]

CHANGE See Also *Barker v. Kruckenberg, 33 Kan. App. 2d 545, 105 P.3d 273, 2005 Kan. App. LEXIS 91 (2005)* TO See also *Barker v. Kruckenberg, 105 P.3d 273 (Kan. App. 2005)*

Add:

See Also *Barker v. Kruckenberg, 33 Kan. App. 2d 545, 105 P.3d 273, 2005 Kan. App. LEXIS 91 (2005)* (concluding that it would be inequitable to let a party terminate a lease based on the assertion that the lessee failed to pay a minimum royalty three years prior, especially because the lessee made a additional investment during the interim. Additionally the lessor failed to promptly assert his right of forfeiture and therefore he waived his right to terminate the lease. Additionally, a forfeiture of an oil and gas lease is only appropriate when damages are not practicable.)

§ 49.33(e) "Temporary Cessation of Production." [Go To Main]

Add:

Guinn Investments, Inc. v. Ridge Oil Co., 73 S.W.3d 523 (Tex. App. 2002) (As a matter of first impression, a non-operating oil and gas lessee whose interest during the secondary term is held solely by production from another tract under the same lease may invoke the "Temporary Cessation of Production" doctrine.)

Add rev'd on other grounds, *148 S.W.3d 143 (Tex. 2004)* .

Add:

Somont Oil Co. v. A & G Drilling, Inc., 49 P.3d 598 (Mont. 2002) (Montana, an ownership-in-place state, will recognize a temporary cessation in production only when it is caused by a sudden stoppage of the well or a mechanical breakdown of the equipment used in connection with the well, or the like.)

Ridge Oil Co. v. Guinn Investments, 148 S.W.3d 143 (Tex. 2004) (The temporary cessation of production doctrine applies when there is more than one lessee under a lease. In this case, however, the cessation of production became permanent when the lessee resumed production under a new lease); *Smith v. Marshall Oil Corp., 85 P.3d 830 (Okla. 2004)* (Lease terminated because lessee failed to produce an equitable considerations for his failure to produce gas in "paying quantities.")

Elliott Indus. v. BP Am. Prod. Co., 407 F.3d 1091, 2005 U.S. App. LEXIS 8139 (10th Cir. N.M. 2005) (holding that the party's noncontractual claims do not depend upon or require any interpretation of the "at the well" language of the royalty obligations.)

Columbine II, L.P. v. Energen Resources Corp., 2005 U.S. App. LEXIS 7373 (5th Cir. 2005) (Although language in the sublease indicated that royalties would be paid "at the mouth of the wellhead," the express provision prohibiting deduction of post-production transportation costs controlled and the company could not deduct payments to the well operators from the royalty payments); *Ramming v. Nat. Gas Pipeline Co. of Am., 390 F.3d 366 (5th Cir. 2004)* (Post-production cost deductions from royalty payments were permissible since payments were based on "net proceeds" and "market value"); *Howell v. Texaco, Inc., 2004 Ok. 92 (Okla. 2004)* ("An intra-company gas sale can not be the basis for calculating royalty payments"); *Nexen Pet Petroleum U.S.A., Inc. v. Norton, 2004 U.S. Dist. LEXIS 5471 (E.D. La. 2004)* (Lessee could not claim costs of moving oil from outer offshore platforms to central platform as a transportation cost and deduct from royalty payments).

Bice v. Petro-Hunt, L.L.C., 768 N.W.2d 496 (N.D. 2009) (The majority of states interpret the term "market value at the well" to mean royalty is calculated based on the value of the gas at the wellhead. This interpretation is commonly referred to as the "at the well rule." According to the "at the well" rule, any costs incurred by the lessee after the gas

reaches the wellhead, whether to improve the quality of the gas or to transport it to a market where it may be sold, may be deducted before the royalty is calculated.)

§ 49.48(c) How to Distinguish. [Go To Main]

Add:

Wellman v. Energy Resources, Inc., 557 S.E.2d 254 (W. Va. 2001) (If an oil and gas lease provides for a royalty based on proceeds received by the lessee, unless the lease provides otherwise, the lessee must bear all costs incurred in exploring for, producing, marketing, and transporting the product to the point of sale.)

Stalnaker, 607 S.E.2d 765 (W. Va. 2004)* (1990 oil and gas lease was a supplement to the original 1918 lease and did not create another free gas allowance to a second dwelling that was built after the original land was divided); *Alicea v. Welch, 2004 Ohio 3854 (Ohio App. 5th Dist. 2004)* (Lessor was within in his rights to cut off free gas to neighbor since lessor had no right to grant free gas to neighbor).

Add:

EOG Res., Inc. v. Wall, 160 S.W.3d 130, 2005 Tex. App. LE XIS 1060 (Tex. App. Tyler 2005) (The free gas clause is limited to the "principal dwelling," the burden to the mineral estate cannot be extended to additional dwellings without the consent of the lessee. Additionally, the right to take free gas under the clause in a oil and gas lease is both transferable and assignable, however, there can be only one principal dwelling.)

Sutherland v. Fox, 2005 Ohio 1786, 2005 Ohio App. LEXIS 1724 (Ohio Ct. App., Ashland County Apr. 15, 2005)

(every application of he free gas was specifically set forth in the original oil and gas lease and since this lease included "one dwelling" provision there is nowhere in any of the leases or applications is there contemplated the division of free gas rights.)

Add:

Harmon v. McMasters, 57 S.W.3d 850 (Ky. App. 2001) (free gas may be transferred from one dwelling to another so long as the use is limited to one dwelling and so long as the transfer is to another house on the original leasehold).

XII. Implied Covenants in Oil and Gas Leases.

§ 49.54(a) In Fact or Law [Go To Main]

Add:

Ashokan Water Servs., Inc. v. New Start, LLC, 807 N.Y.S.2d 550, 2006 N.Y. Misc. LEXIS 70, 2006 NY Slip Op 26012 (N.Y. Civ. Ct. 2006) (the court refuses to enforce an express "best efforts" provision, or to imply one where it is not expressed, in those situations in which it amounts to a dreaded "agreement to agree.")

§ 49.57(b) Reasonable Development. [Go To Main]

Add:

Jacobs v. CNG Transmission Corp., 332 F. Supp. 2d 759, 162 O.&G.R. 33 (W.D. Pa. 2004) (Oil and gas lease for "drilling and production rights" and "natural gas storage rights" was not severable. Lessee breached implied covenant to develop and produce oil or natural gas and lease was terminated despite payment of delay rental).

Add:

Meisler v. Gull Oil, Inc., 848 N.E.2d 1112 (Ind. App. 2006) (the implied covenant of reasonable development did not extend to the diligent operation of existing oil and gas wells).

Add:

St. Luke's United Methodist Church v. CNG Development Co., 663 S.E.2d 639 (W. Va. 2008) (partial rescission of oil and gas lease sought based on underdevelopment of property).

§ 49.57(b)(1) Proof of Breach of Reasonable Development

Add:

Exxon Corp. v. Miesch, 180 S.W.3d 299, 2005 Tex. App. LEXIS 9862 (Tex. App. Corpus Christi 2005) (every claim of improper operation by a lessor against a lessee should be tested against the general duty of the lessee to conduct operations as a reasonably prudent operator in order to carry out the purposes of the oil and gas lease.)

§ 49.57(b)(4) Remedies

Add:

Zimmerman v. Group Maint. Corp., 2005 Ohio 3539, 2005 Ohio App. LEXIS 3254 (Ohio Ct. App., Ashtabula County July 8, 2005) (pursuant to a original lease, a lessee is required to pay royalties to the lessor from the oil and gas revenues.)

§ 49.57(c)(1) Situations in Which Question Arises.

Add:

Lundin/Weber Co. v. Brea Oil Co., *11 Cal. Rptr. 3d 768 (Cal. App. 5th Dist. 2004)* (Since the lease detailed the lessee's exploration and development responsibilities, court would not recognize an "implied covenant of further exploration").

§ 49.59(a) Implied Covenant to Produce and Market. [Go To Main]

Add:

Wellman v. Energy Resources, Inc., 557 S.E.2d 254 (W. Va. 2001) (West Virginia holds that a lessee impliedly covenants that he will market oil or gas produced and bear the costs so associated.)

Delete reference to Union Pacific Resources Group case. *See Union Pacific Resources Group v. Hankins, 111 S.W.3d 69 (Tex. 2003)*

§ 49.59(a)(2) Proof of Breach of Duty to Market at Reasonable Price.

add:

Union Pac. Res. Group, Inc. v. Hankins, 111 S.W.3d 69 (Tex. 2003) (A covenant to market at a reasonable price is implied only with respect to proceeds leases that calculate royalties on an amount realized, not to market-value leases that base royalties on current market value.)

§ 49.59(b) To Operate with Reasonable Care [Go To Main]

Add:

See also United States v. E.I. Dupont De Nemours & Co., 432 F.3d 161 (3d Cir. 2005) (holding responsible parties liable for all the removal and remedial costs necessarily incurred through the monitoring, enforcing, and overseeing of the removal of products.)

See also Crabtree v. Estate of Crabtree, 837 N.E.2d 135, 2005 Ind. LEXIS 1002 (Ind. 2005) (stating that a majority of courts will not allow punitive damages if the tortfeasor dies, because the goal of punitive damages are to punish the wrongdoer. Therefore, if the wrongdoer dies they cannot be punished and punitive damages are not recoverable against the estate of the deceased tortfeasor.)

Add:

Leib v. Rex Energy Operating Corp., 256 F.R.D. 178 (S.D. Ill. 2009) (action alleging pollution caused by operation of oil wells).

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions 50.syn

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.syn Synopsis to Chapter 50: WATER RIGHTS

§ 50.01 Introduction.

§ 50.01(a) General Nature of Water Rights Law.

§ 50.01(b) Water as a Natural Resource.

§ 50.01(c) Exploitation of the Resource.

§ 50.01(d) Management of the Resource.

§ 50.01(e) The Law and Its Relation to What Is Known About the Resource.

§ 50.01(f) Questions That Are Driving Water Right Evolution: What Should Be the Legal Status of Water Rights?

§ 50.01(g) Questions That Are Driving Water Right Evolution: How Should Water Be Allocated?

§ 50.01(h) Questions That Are Driving Water Right Evolution: How Far Can Water Be Moved to Meet Needs?

§ 50.01(i) Questions That Are Driving Water Right Evolution: Do Cities Have a Higher Claim to the Water Than Does the Countryside?

§ 50.01(j) Questions That Are Driving Water Right Evolution: What Is the Best Way to Deal with Water Shortages?

§ 50.01(k) Questions That Are Driving Water Right Evolution: To What Extent May Water Quality Concerns Govern Water Allocation Choices?

§ 50.02 Traditional Structure of Water Rights Law.

§ 50.02(a) In General.

§ 50.02(b) Structural Features of Water Rights.

§ 50.02(c) Historical Development of the Classification Structure.

§ 50.02(d) Traditional Classification Scheme: Distinctions Based Upon the Nature of the Water Use (Consumptive and Non-Consumptive Uses).

§ 50.02(e) Traditional Classification Scheme: Distinctions Based Upon the Location of the Water.

§ 50.02(f) Traditional Classification Scheme: Surface Waters.

§ 50.02(g) Traditional Classification Scheme: Groundwaters.

§ 50.02(h) Traditional Classification Scheme: Distinctions Based on the Status of the Waterbody.

§ 50.02(i) Traditional Classification Scheme: Confined Surface Waters.

§ 50.02(j) Traditional Classification Scheme: Diffused Surface Water.

§ 50.02(k) Traditional Classification Scheme: Underground Streams.

§ 50.02(l) Traditional Classification Scheme: Percolating Groundwater.

§ 50.02(m) Special Problem Waters.

§ 50.02(n) Special Problem Waters: Artificial Waterbodies.

§ 50.02(o) Special Problem Waters: Flood Waters.

§ 50.02(p) Special Problem Waters: Springs.

§ 50.02(q) Special Problem Waters: Return Flow Waters.

§ 50.02(r) Special Problem Waters: Foreign and Imported Waters.

§ 50.02(s) Water Right Administration Within the Traditional Framework.

§ 50.02(t) Problems Posed by the Traditional Classification System.

§ 50.02(u) Alternatives to Traditional Structure.

§ 50.03 Water Rights as Property.

§ 50.03(a) In General.

§ 50.03(b) Water Rights as Real Property.

§ 50.03(c) Property Attributes of Water Rights: Access.

§ 50.03(d) Property Attributes of Water Rights: Usufruct.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.01

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.01 Introduction.

§ 50.01(a) General Nature of Water Rights Law.

To most people, water rights refer to the property right one may have in water to use it for one's own beneficial purposes. The law's view of water right allocation, however, may be broader than the popular view. The law of water rights generally concerns the allocation of rights of access to water for the purpose of making publicly approved uses of the water. n1 As such, this area of the law deals with the manner in which water rights are acquired, n2 the substantive content of such rights, n3 and the extent to which the right or the rightholder may be required to defer to public or private interests in the exercise of such rights. n4 Water right law also deals with a variety of different aspects of water use and abuse and therefore does more than simply allocate rights in water between users who are competing for a share of a limited resource. In addition, the law of water rights governs access to water for recreational and other similar uses n5 and addresses the issue of liability for harm caused by changes in surface drainage patterns. n6

Further, in many jurisdictions, the law of water rights will deal with such peripheral issues as water quality n7 and liability for the misuse of water. n8

Although every jurisdiction has adopted a regime that governs the issues of water right acquisition and exercise, there is great individual variation among the states in this regard. n9 Despite these system differences, however, there is great uniformity as to the nature of the water right itself. n10

In recent decades, the law of water rights, and particularly the prior appropriation doctrine, has been criticized as being inherently flawed for its failure to adequately address environmental issues. n11 The difficulty is probably not in the narrowness of the law of water rights but in the fact that the law of water rights is grounded in the law of property with its attendant recognition of rights to which the law assigns stability, endurance and dimension. n12 The key to reshaping water rights to better accommodate shifts in values is probably not in killing the doctrine but in defining and redefining the nature of the property right so that it better reflects the changes in social values that occur from time to time.

Several issues have dominated concerns over water rights in the past several years. First, there is a growing sense that an increasing number of water rights issues must be dealt with on a multi-national scale. n13

Second, the struggle between federal and state interests regarding water has been intensifying. n14

Finally, the need to modernize state systems to address rapidly changing needs seems increasingly to be of concern to many. n15

LEXIS: water w/1 right! w/10 allocat! or law!

§ 50.01(b) Water as a Natural Resource.

It would appear that the total quantity of water available on earth is fixed -- at least for practical purposes. Nevertheless, water in nature is known to move through what may be described as a hydrologic cycle. n16 This movement of the water from place to place suggests that, at least in particular geographic areas, water may be considered to some extent to be a renewable resource. Nevertheless, the prevailing view of the general public, and to some extent the view of the law, appears to be that water is a finite and exhaustible resource. This view has played a significant role in the development of the various water right regimes recognized throughout the country, as it may support such divergent approaches to water allocation as management and exploitation. For example, in a jurisdiction where water is plentiful, or where the usable supply recharges fairly readily, much of the system's orientation is likely to be toward management of the resource, as opposed to exploitation. Where water is scarce, or where recharge is slow, more emphasis is likely to be placed on allocation, with a possibly tacit assumption that at some point the resource will be exhausted.

It has also been argued that the law of water rights, and particularly the prior appropriation doctrine, should be broadly conceived to more clearly recognize the status of water, not only as a natural resource, but as an integral part of a complex interrelated natural environment that may need protection in ways that are not always possible because of the present structure of the doctrines. n17 It should be observed that the difficulty is probably not the result of any inherent flaws in the law of water rights as much as it may be in the fact that the law of water rights is grounded in the law of property. Because of this grounding, the law's insistence on particularly quantifiable rights that have some measure of stability and security makes it somewhat difficult for the law of water rights to quickly accommodate shifts in values. It should also be noted that in recent years, there has been an increasing effort to make the law of water rights more sensitive to the needs of the natural environment while at the same time promoting the needs of the human environment. n18

One approach to the difficulty of property rights has been to permit only a public body to acquire the water rights in large amounts of water. The water then can be leased for private use and handled as a matter of contract, rather than property law. n19

COMPUTER-ASSISTED RESEARCH

LEXIS: water w/5 natural w/1 resource!

§ 50.01(c) Exploitation of the Resource.

Because of the historic need to supervise competition for water in areas where the available supply is unable to meet the existing or anticipated demand, most allocation systems tend to reflect an exploitative, rather than a management, orientation. Unfortunately, this has sometimes resulted in the establishment of water use and water right patterns which do not always comport with evolving notions of what may be most desirable in the long run from a management perspective. This situation has been further compounded by the fact that the law has historically accorded protected property right status to water rights. This typically makes it very difficult to alter or eliminate established

exploitation-oriented patterns and makes it very difficult to manage the resource in ways which meet future needs. This has caused our water right structure, in many cases, to be out of step with social values regarding the actual use of the resource. n20

The inability to quickly change established patterns that may be deemed overly exploitative has caused sharp criticism of particular water rights doctrines. n21

COMPUTER-ASSISTED RESEARCH

LEXIS: exploit! w/5 water w/2 resource!

§ 50.01(d) Management of the Resource.

In recent years, it appears that courts and legislatures in some jurisdictions may be interested in taking a closer look at the fundamental nature of water rights as property, and at the relationship between private rights and public interests in major, limited natural resources. This may give these systems an opportunity to engage in some meaningful management planning without altogether sacrificing allocation objectives. Further, at least a few courts are beginning to take the position that the private right to use the water may need to give way to the larger public need to protect other dimensions of the environment. n22 In a similar fashion, most jurisdictions are developing longterm water management plans that seek to integrate a wide range of concerns relating to the actual availability and use of water. n23 Recent cases suggest a growing effort to accommodate the needs of the human environment (which appear to drive exploitation of the resource) with the needs of the natural environment (which tend to drive efforts of management). The law of water rights has been criticized as being more interested in exploitation than management. n24 It is not disputed, of course, that in the long term, the needs of both the natural and the human environment benefit from management. n25

COMPUTER-ASSISTED RESEARCH

LEXIS: manage! w/10 water w/2 resource! or right!

§ 50.01(e) The Law and Its Relation to What Is Known About the Resource.

Water is relatively abundant on this planet and it occurs in a great variety of places and forms. It does not always occur, however, where it is most needed, nor does it always appear in the form most useful or accessible to people. It may be found in either a frozen or solid state or as a liquid. It falls from the atmosphere as rain and snow, and it flows over the ground as streams and rivers, where it is often collected in lakes and ponds. Much of it is found in the ground, where it may occur in a confined or a saturated state. It is wont to move, both above and in the ground. In some places it is abundant; in others, it is very scarce. Despite its form or location, it is a most vital and life sustaining substance.

Scientists have long known that water resources are physically interrelated and move in what has been described as a hydrologic cycle. This is the case regardless of where the water is found or its particular form. n26 This cycle might be described as a series of recurring events in which water falls from the atmosphere as precipitation, then flows over or into the land, where it is again returned to the atmosphere by evaporation or transpiration. n27 The interrelationship of water in this cycle means that an impact upon water in any of its forms, at any stage in the hydrologic cycle, will have an effect elsewhere in the water system. For example, the use of water in one place may diminish the supply in another. In a similar fashion, the cutting of trees, the removal of vegetation or the draining of swamps or other wetlands may increase water supplies elsewhere. Likewise, the creation of lakes may influence the time, place or pattern of precipitation.

Despite this interrelationship, the law has been slow to recognize that water in one form or place is linked to water elsewhere. This is undoubtedly because the need for legal supervision of water use and allocation evolved rather slowly

in response to the need to supervise competition for water in specific, localized areas where a particular available source was unable to meet the existing or anticipated demand for the water. The law has found it convenient, in such a situation, to classify water for purposes of water rights based on how and where the water occurred in relation to the need to use the water, probably primarily in order to minimize the extent to which the law has had to intervene in the allocation process. The result has been that the common law quite early recognized four general categories of water:

(1) confined surface water, located in defined watercourses,

(2) diffused surface water,

(3) water in distinct underground streams, and

(4) percolating groundwater. n28

Waters in each of these categories were considered separate and distinct, and, often, very different rules were developed for each category. n29

Although the law no longer adheres as rigidly as it once did to the common-law classification scheme, the majority of jurisdictions still significantly organize their water rights laws around the four common-law categories.

There has been pressure in most systems to change water law rules to conform to what is known about the resource. Unfortunately, this process has been slow, since the common-law classifications have been used for so long that changes typically raise difficult questions regarding the sanctity of existing and established property rights. As a result, the law has tended and perhaps always will tend to lag somewhat behind what is known about the water resource. Decisions therefore still tend to rely on established precedent rather than being grounded on any newly developed understanding of the resource. Unfortunately, this situation has made it difficult for the law to respond quickly to changing water needs and injects a measure of uncertainty into the viability of established precedents. This is seen in the present struggle in most jurisdictions regarding a variety of difficult legal issues. These questions appear to be driving the present evolutionary trends of water rights systems.

LEXIS: water w/5 categor!

§ 50.01(f) Questions That Are Driving Water Right Evolution: What Should Be the Legal Status of Water Rights?

Although there is a strong notion that water should be universally available for life-sustaining needs, most allocation decisions have historically dealt with water claims that have commercial rather than life-supporting utility. These decisions have resulted in the recognition of rights of considerable economic value that are given significant protection within our legal system as "property rights." n30 As the demand for water grows and known supplies diminish, difficult choices must therefore be made as to who should have protected access to water-- those who have a commercial interest in it or those who have a lifesustaining interest in it--and under what circumstances and to what extent is it still feasible to consider the private water rights as inviolate property.

The law of water rights, and particularly the prior appropriation doctrine, has been criticized as being inherently flawed for its failure to adequately address environmental issues. n31 The difficulty is probably not so much in the narrowness of the law of water rights as in the fact that the law of water rights is grounded in the law of property with its attendant recognition of rights to which the law assigns stability, endurance and dimension. If a goal of the water right system is now to give protection to emerging environmental values, the key to reshaping water rights to better accommodate such

shifts in values is probably not in radically restructuring the doctrine but in defining and redefining the nature of the property right involved so that it better reflects the changes in social values that occur from time to time. It should be noted that in recent decades, much redefinition has occurred in the law of property generally. n32 Given the peculiar nature of the property right embodied in the water right, such redefinition is not only possible but probable as water availability falls behind water demand and as values associated with water applications change. On the one hand, treating water rights as property has given a measure of certainty to the investment that has been associated with the development of water supplies. Historically, these costs have been borne by those seeking access to the water, and according property rights to those who have expended resources and effort to develop the water supplies and used them to further economic endeavors seems fair. Unfortunately, this has sometimes resulted in the establishment of use and water right patterns which are counter-productive to present notions of what may be the most desirable way in which water should be utilized but which, because of the status the law has historically accorded water rights as a species of property, cannot easily be terminated or altered. This, in turn, has greatly complicated the process of planning to meet future needs.

On the other hand, water is vital to human life and there is a need for allocation policies and rules that promote access to water for the largest possible portion of the population in the jurisdiction. This suggests a great need for flexibility in making allocation decisions which may require the elevation of public need above economic utility. Courts and legislatures in some jurisdictions have taken a closer look at the fundamental nature of water rights as property in recent decades, n33 and the result seems to be an increasing recognition that rights to make use of water may be modified to conform to larger social needs and concerns. n34 While this has injected some measure of uncertainty as to the nature and extent of a particular individual's water right at any specific point in time, it seems to give the system more flexibility in the long term to meet changing water use needs. At some point, however, our system may need to specifically address the question whether it is better to allocate water through a non-property right oriented framework. n35

COMPUTER-ASSISTED RESEARCH

LEXIS: legal w/1 status w/15 water w/1 right!

§ 50.01(g) Questions That Are Driving Water Right Evolution: How Should Water Be Allocated?

One of the most difficult issues with which our systems must grapple is the specific question of water allocation. Should water be considered an economic commodity or a public resource? Should it be sold to the highest bidder or be allocated only to those that satisfy some, perhaps arbitrary, criteria? Should the claimant be required to own land in particular locations? n36 Should water be allocated on a "first come, first serve" basis? n37 Should water be made available only to those who somehow have qualified for "water rights"?

It may be argued that the conventional approach of allocating water rights only to those that satisfy system-imposed criteria clearly tends to narrow or reduce the number of potential water users in the jurisdiction -- which may be desirable where water supplies are limited or scarce. However, the approach which grounds access to water upon having secured a water right through such qualification channels, even where water is distributed to others -- as in the case of municipal water systems -- arguably uses the need to qualify for a water right as the basis for exercising some social control over the decision to grant access to water. The presence of a water right that the legal system will recognize and protect carries with it the connotation that the system has judged the applicant and the purpose for use as worthy of the water.

Historically, our water right allocation systems have predicated access to the right upon the acceptability of the ultimate water use, requiring that the use be either reasonable or beneficial. n38 This approach leaves unanswered questions. Can society's definition of "reasonableness" or "beneficial" change over time and, as a result, deny water to a former right holder? Alternatively, can some other mechanism, such as the marketplace, fairly allocate water? To what extent should

altruistic feelings and human need outrank commercial gain and free enterprise as the basis for water allocation decision making?

In contrast, there may be something to recommend the notion that water allocation decisions be made in an economic marketplace. Often, water availability is a factor in many development activities that have considerable public economic value and importance. Without the water, the development will not occur, jobs will not be created, services will not be rendered, and so forth. In our politico-socio-economic system, there are strong feelings that the true costs of water management can best be dealt with where access to the water is secured through market mechanisms. Such allocations may arguably also result in more efficient water use as well. n39

§ 50.01(h) Questions That Are Driving Water Right Evolution: How Far Can Water Be Moved to Meet Needs?

Water does not always occur in nature where it is most needed. Since our earliest efforts at managing the resource, there has been a concern with the need to be able to move water to the place where it is most needed. On the other hand, there has been a sensitivity to the fact that moving water too far, particularly outside its natural watershed, may deprive others of an opportunity to use it. As the need for water grows in particular jurisdictions, other places in other jurisdictions may come to be increasingly regarded as potential sources of supply. To what extent should the legal system permit the movement of large quantities of water from one jurisdiction to another? How should the water be treated upon arrival if it is stored prior to use? Can any water rights be created in excess water that may result from such transfers? How should those that are denied water as a result of water movement be treated? These and other such questions will undoubtedly become more common as our water needs grow. Although we have developed some mechanisms to respond to some of the concerns, n40 these tend to be somewhat localized in nature. It may be that there will be a need to develop a nationwide response to these concerns.

§ 50.01(i) Questions That Are Driving Water Right Evolution: Do Cities Have a Higher Claim to the Water Than Does the Countryside?

Agriculture is the largest single water user in the nation. Much of this water is applied to land through irrigation as an integral part of crop production. Much water is undoubtedly wasted in the process. n41 Some may argue that the artificial application of water for such purposes is an "unnatural" use of the water. This argument has some appeal where supplies are scarce and there is intense competition for the water for other, more arguably life-sustaining, purposes. n42 In some parts of the country, it may be appropriate at some point to ask whether it is more valuable to give the water to agricultural as opposed to urban uses. If the choice is between green fields and green lawns, the choice may be easier than if the choice is between food production and public drinking water. Nevertheless, in water scarce areas, the viability of entire communities may require the transferring of water from agricultural use to urban use. Presently, several major (primarily western or southwestern) cities have purchased farmland in order to acquire the water rights. Others have simply purchased water rights from agricultural interests. So far, there has been no noticeable impact on national food supplies. That may not be the case in the future and it may be necessary to consider the difficult questions such choices present. n43

§ 50.01(j) Questions That Are Driving Water Right Evolution: What Is the Best Way to Deal with Water Shortages?

All water allocation regimes have developed ways to respond to water shortages. Appropriative jurisdictions tend to reduce or eliminate the most recent users, thereby freeing up water for the earlier appropriators. Riparian jurisdictions tend to apportion the water among all the users, or at least among those whose uses may be said to be reasonable at the time of the emergency. Both systems operate on a sometimes unstated hierarchical basis in which particular uses are considered more valuable, useful, reasonable or beneficial than other uses. n44 Both systems, however, also operate on the unstated assumption that such restructuring of the entitlements will never be undertaken on a permanent or long-term basis so that hierarchy of uses will ever be seriously invoked. n45 Unfortunately, at the time a water shortage is recognized, many jurisdictions find that they have become significantly over-committed -- that is, they already have recognized more water rights than there is available water in the system. In those situations, some right holders who have invested considerable amounts of money to develop their properties or businesses may find their investments destroyed or rendered useless when their entitlement is reduced or terminated.

As water supplies are stretched to meet the needs of growing populations, the most recent users -- even though their uses may be regarded as among the most beneficial -- are often the most disadvantaged. This may cause some rethinking of society's notions of what are acceptable water uses in times of water shortage, which in turn may pose a serious threat to older, less efficient or less desirable uses. This has actually occasioned the reconsideration of the preferred use hierarchy in an effort to resolve the shortage problem on a more equitable or fair basis. n46 It is not unreasonable to expect that as the need for water grows, jurisdictions will need to take a serious look at how uses are ranked during water shortages, and it may be that some serious restructuring of the allocation framework may be necessary, in order to make sure that the distributional priorities match society's vision of how the scarce water ought to be shared. n47

§ 50.01(k) Questions That Are Driving Water Right Evolution: To What Extent May Water Quality Concerns Govern Water Allocation Choices?

The quality of water available for consumptive use has truly become a major national concern in the last decade. This has raised many unanswered questions about the interrelationship between water allocation laws and water quality laws. It has also injected concerns about the extent to which the water user assumes specific stewardship obligations regarding the water as part of the water right itself. Also unclear is the extent to which a government grant of a use privilege, such as a water right, actually constitutes governmental subsidization of desired outcomes. To the extent to which it may be seen as such, there appears to be an opportunity to use the water right granting process as a vehicle for social engineering, including addressing such matters as environmental impacts and water quality concerns. To what extent does such an approach require modification of the property nature of the water right? To what extent should individual water users bear the burden of providing a public benefit in the nature of a clear water resource? Is an activity that results in any contamination of the water a "reasonable" or "beneficial" activity? As the nature of the resource becomes better understood, jurisdictions will increasingly have to consider not only the interrelationship between the various forms and locations of water but the relationships between water use and other facets of a healthy environment.

The law of water rights, and particularly the prior appropriation doctrine has been criticized as being inherently flawed for its failure to adequately address environmental issues. n48 It is clear that environmental concerns generally are

assuming a larger role in water allocation decisions. n49

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.02

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.02 Traditional Structure of Water Rights Law.

§ 50.02(a) In General.

Because water is so vital to the development of society, all systems have developed a methodology for granting and securing rights to the use thereof. n50 As a result, it must be recognized that neither the notion of water rights, nor the particular right allocation methods, are unique to the United States. n51 Although there is considerable variation throughout both the United States and the world regarding the specific details of water rights and water right allocation, there is surprising structural similarity in how water is managed for water right purposes. n52 This is true even though each of the United States is considered to have considerable sovereignty regarding the selection of a water right regime. n53 Much of this commonality results from shared notions regarding the fundamental nature of the water right itself and similar views regarding the significance of particular types of water use.

§ 50.02(b) Structural Features of Water Rights.

Water law has two significant structural elements that merit consideration. First, water rights are considered to be real property rights and are protected as such. n54 The property nature of water rights secures their status vis a vis other rights within the legal system and provides a conceptual framework for dealing with the rights themselves.

Second, water rights are classified according to the kind of water to which they relate, the kind of use that is made of the water and where the water is found. This aspect of water rights is the primary source of labels for the various kinds of rights as well as for the various kinds of allocation systems. This dimension of water right structure is discussed in this section. n55

LEXIS: water w/2 right! w/15 real w/1 property water w/2 right! w/15 classif!

§ 50.02(c) Historical Development of the Classification Structure.

Water has had significant social value from time immemorial. It has been used to sustain life, for transportation, for

power generation and manufacturing. Land settlement patterns have been influenced by water availability and population centers have historically been located near water. Societal control over access to water has also been influenced by the location of water. Where water supplies were abundant and demands were few, there seems to have been little need for formal regimes to govern the use of water. n56 On the other hand, where water was scarce and there has been significant competition between users, public intervention into the allocation of the water early proved to be necessary in order to preserve public peace and prevent the forcible taking by one of water that was claimed by another. In most jurisdictions, the most serious concerns were largely the same: how to keep the waterways accessible for transportation and available for commercial use, n57 and how to assure that those who depended upon the water for life supporting purposes had adequate water.

Earliest efforts to influence allocation of access to water seem to have been tied to particular sources of water, and to vary depending on the particular nature of the use of the water. n58 Life-sustaining uses seem to have always received the highest priority, and waterbodies and particular sources of water that were regarded as having the highest social utility seem to have been considered the most imbued with the public interest and within the scope of public authority. n59 This historic "source and use" approach to allocation has engendered considerable structural similarity among allocation systems.

Further, since neither water supplies nor the demand for water have remained constant over time in any jurisdiction, changes have occurred to adapt the formal systems to existing situations and need, usually in order to deal with the most pressing problems of allocation. As systems have changed, there has been an identifiable measure of borrowing from other systems. This has generated a considerable degree of similarity regarding fundamental concerns such as how access to water might be secured, what the water may legitimately be used for, and how disputes over water should be resolved.

As a result, although there is much diversity between jurisdictions, there is also much similarity, especially with respect to the basic structure of water right allocation. n60

§ 50.02(d) Traditional Classification Scheme: Distinctions Based Upon the Nature of the Water Use (Consumptive and Non-Consumptive Uses).

The allocation of water rights, historically, has depended upon such factors as the kind of use to be made of the water, the nature of the source from which the water was to be taken, and where the water was located. All of these factors interplay to create a very interesting structural matrix. In the United States, it is common, though misleading, n61 to characterize a water right allocation system as either riparian n62 or appropriative n63 in nature, based on how consumptive use rights are allocated with respect to confined surface waters. Such labels do not reflect the true variety in allocation systems present in the various jurisdictions of this country.

The primary distinction the law of water rights makes is between:

(1) rights which represent the power and authority to withdraw the water from the system and to consume or dispose of it, and

(2) rights which merely authorize the use of the water in place.

This distinction classifies rights based upon the nature of water use involved. The critical factors involved in this distinction are the nature and purpose of the ultimate use to which the water is put and the impact of that use of the

water on the quantity or quality of the water available thereafter for others to use from the same source of supply. Generally, if the use of the water "consumes" the water and thereby reduces the quantity or quality of the water available to others, the use is considered *consumptive* in nature. If quality or quantity is not reduced or otherwise adversely affected, the use is considered *non-consumptive*. In common popular parlance, the term "water rights" has typically, but misleadingly, been applied only to rights to make consumptive use of the water.

Consumptive uses are those which are considered to reduce the quantity or quality of the water that is available for others to use after the particular use is made. These uses typically physically remove the water from the water source and include such uses as irrigation, n64 manufacturing and industrial use, n65 municipal water supplies, n66 and possible recreational use n67 and power generation. n68

Non-consumptive use rights involve uses in which neither the quantity nor quality of the water is greatly affected by the use. These uses do not require that the water be removed from the source, nor is it consumed but, rather, the water is used for such purposes as recreational use, commerce and transportation, minimum stream flow maintenance, and even aesthetics. Allocation rules regarding non-consumptive uses typically differ markedly from those relating to the extraction and use of water for consumptive use purposes. n69

COMPUTER-ASSISTED RESEARCH

LEXIS: consumptive w/1 use! w/15 water! non-consumptive w/1 use! w/15 water!

§ 50.02(e) Traditional Classification Scheme: Distinctions Based Upon the Location of the Water.

This distinction is based on whether the waters to which the water right attaches are considered to be on the surface of the ground, called *surface waters*, or beneath the surface of the ground, called *groundwaters*. This distinction between surface and groundwater supplies appears to have developed from the fact that surface supplies were usually the first and the easiest sources of water to be exploited, and reflects a practical approach to the problem of water right allocation in which determinations relating to water availability were often largely made on the basis of a visual inspection of the water supply source. n70

Generally, the water must be said to be occurring "*naturally*" on the surface or in the ground before it becomes the object of the law of water rights. n71 "*Sewage effluent*" has been held not to be "*water*" for purposes of water right allocation statutes. n72 In Hoover v. Pierce County, n73 the court held that where the municipality had built a road and as a result thereof, water was diverted which destroyed an individual's property, a taking of such property occurred. In this case, diffused water was defined to include water produced by rain, melting snow and springs.

COMPUTER-ASSISTED RESEARCH

LEXIS: surface w/1 water! w/15 right! ground w/1 water! w/15 right!

§ 50.02(f) Traditional Classification Scheme: Surface Waters.

States east of the Mississippi River are commonly called *riparian* states, n74 because they have generally elected to allocate surface water rights based upon the ownership of land that borders on, or is riparian to, the water supply. As discussed below, there are significant internal variations between these states. n75

Most states west of the Mississippi River are generally described as *appropriative* (or prior appropriation) states. n76 Here, entitlement to the water is based on the notion of diverting the water from the surface water source, or appropriating it, and applying that water to a beneficial use. n77

The remaining Western states, and the state of Mississippi, water rights are said to be allocated according to a combination of riparian and appropriative. These states n78 are sometimes called "*hybrid*" or *mixed* systems. n79 In Louisiana, the allocation of water is based on the Civil Code which in turn was developed on the basis of the Cuban Civil Code which was, in turn, patterned after the French model. n80 In Hawaii, water rights are commonly considered to be allocated on the basis of a combination of principles derived from riparian water law n81 and ancient Hawaiian legal principles. n82

COMPUTER-ASSISTED RESEARCH

LEXIS: riparian w/2 state! w/15 water w/2 right!
appropriative w/2 state! w/15 water w/2 right!
prior w/1 appropriation w/2 state! w/15 water w/2 right!
hybrid or mixed w/2 state! or system! w/15 water! w/2 right!

§ 50.02(g) Traditional Classification Scheme: Groundwaters.

Water under the surface of the ground has been more difficult for the legal system to deal with than water on the surface, largely because of the difficulty of accurately determining available quantities of water, directions of water flow, and rates of movement. As a matter of fact, it was earlier presumed that groundwater was not practicably usable for consumptive use purposes. As a result, there was a strong feeling that groundwater could be owned by the owner of the land as part of the fee despite the nearly universal view of the law that water in place was not susceptible to private ownership. n83 As the demand for water grew over time, it was discovered that surface supplies alone could not supply enough water to satisfy the total demand, and that the use of groundwater was necessary as an alternative source. Rules were therefore developed to govern competition for this resource.

There is much more variation regarding allocation of water rights in groundwater. Here, jurisdictions do not conveniently divide among Eastern and Western states but rather are scattered among a variety of allocation doctrines or approaches. These include the absolute ownership doctrine, the American or reasonable use rule, the doctrine of correlative rights, the *Restatement (Second) of Torts* rule, and those which have adopted separate groundwater codes.

The earliest rule considered the water beneath the surface of the land to be part of the land itself and, therefore, within the ownership package of the landowner. n84 Under this rule, called the *absolute ownership rule*, one could extract as much water as wanted without any liability to others. n85

The *American* or *reasonable use rule* modifies the absolute ownership doctrine to impose limits on the amount of water extracted, the use to which the water is put and the location of the ultimate water use. n86 Otherwise, the doctrine considered the water to be part of the land and automatically vested in the landowner.

The *correlative rights* doctrine posits that all water users located over a common pool or source share in that pool on a correlative basis. n87 That is, each user's rights are affected by and dependent upon every other user's rights and must be adjusted accordingly.

In some jurisdictions, the user's rights will be judged on the basis of their reasonableness, as measured by the *Restatement (Second) of Torts*. n88 In these jurisdictions, tort concepts are used to quantify the water right.

It is common for the same rules that apply to confined surface waters to be applied to *confined underground waters*. n89 In these jurisdictions, there may actually be two separate groundwater right allocation schemes in place -- one for confined groundwaters and one for percolating groundwaters.

Some jurisdictions have adopted *specialized codes* which apply specifically to groundwater. n90 These are often based

on the appropriative model of water right allocation and may require a governmental permit in order to use the water.

Colorado has several different classes of groundwaters: groundwater which is tributary to a stream, groundwater that is not tributary to a stream which is identified as "designated groundwater" and groundwater that is not tributary to a stream which is identified as simply "non-tributary groundwater." n91 "Designated groundwater" is water that is in basins designated by the Colorado Groundwater Commission. "Non-tributary groundwater" is water not tributary to a stream that is outside such basins. n92 "Tributary groundwater" is water that will, within 100 years, deplete the flow of a natural stream at a rate greater than one-tenth of one percent of the annual rate of withdrawal. n93

Finally, a few systems no longer make a distinction between surface and groundwaters and invoke the same principles and doctrines to address the allocation of water rights regardless of the location of the water. These jurisdictions are generally referred to as *unified* jurisdictions. n94

§ 50.02(h) Traditional Classification Scheme: Distinctions Based on the Status of the Waterbody.

Although most systems receive their popular moniker based upon how rights are granted in surface waters, it matters a great deal to the law whether the water involved is confined or dispersed on the surface or through the ground. In most instances, physical conditions associated with the water, such as where it is located or how it is found in relation to the land, determine the particular classification. n95

§ 50.02(i) Traditional Classification Scheme: Confined Surface Waters.

Confined surface waters include rivers, streams, ponds, lakes, n96 swamps and so forth. The primary determinant of such a classification is whether the waterbody may be said to be a "watercourse." n97 This is usually established by the presence of physical features, such as identifiable banks or beds, which confine the water in a recurring way to a discernible location. The presence of such banks or beds is often determined by physical evidence n98 or by vegetation n99 which grows only in water covered locations. In an early case, streams were defined to consist of:

> Water flowing in a definite channel, having a bed and sides or banks, and discharging itself into some other stream or body of water. The flow of water need not be constant, but must be more than mere surface drainage occasioned by extraordinary causes; there must be substantial indications of a stream, which is ordinarily a moving body of water. n100

The objective of the law appears to be to distinguish confined waters from diffused or unconfined waters. This is because diffused waters have historically been considered unreliable sources of water for consumptive use purposes and therefore not subject to consumptive use water right allocation rules. n101

COMPUTER-ASSISTED RESEARCH

LEXIS: confined w/1 surface w/1 water!

§ 50.02(j) Traditional Classification Scheme: Diffused Surface Water.

Diffused water is generally defined to include unconfined water on the surface of the land. n102 This category includes rainfall runoff until it either seeps into the ground or runs into a confined waterbody. Waters of this type have generally

not been the object of consumptive use water rights. n103

COMPUTER-ASSISTED RESEARCH

LEXIS: diffused w/1 surface w/1 water!

§ 50.02(k) Traditional Classification Scheme: Underground Streams.

American jurisdictions early presumed that underground water occurred in underground streams. n104 Although this presumption has since generally been reversed, n105 because of what has been learned about groundwater, it is known that underground streams do in fact exist. n106 The presence of underground streams is typically established through evidence of the presence of beds and banks, a well-defined and distinct channel, and a current of water in much the same fashion as is required for surface streams. n107

If it is established that a body of water exists as an underground lake or stream, it is common for the confined surface water rules to be invoked to govern the appropriation of water for consumptive use purposes. n108

COMPUTER-ASSISTED RESEARCH

LEXIS: underground w/1 stream!

§ 50.02(l) Traditional Classification Scheme: Percolating Groundwater.

It is now understood that most water which occurs in the ground is dispersed through the soil and is considered to be percolating water. This means that it oozes and flows though the soil but without a defined channel. This kind of water is much like diffused surface water except that it represents the major source of groundwater used for consumptive use purposes. n109

COMPUTER-ASSISTED RESEARCH

LEXIS: percolating w/1 ground w/1 water!

§ 50.02(m) Special Problem Waters.

There are several kinds of waterbodies that have been particularly problematic for jurisdictions to deal with, within the traditional classification-based structure. These include artificially created waterbodies, flood and overflow waters, springs, intermittent streams and once-used waters that are being returned to the watercourse as drainage. As a result, these waterbodies have sometimes received special attention in some jurisdictions.

§ 50.02(n) Special Problem Waters: Artificial Waterbodies.

According to early English common law, and hence the rule in most American jurisdictions, only waters found in natural waterbodies were considered to be available for appropriation or use. n110 Therefore, an impoundment of diffused surface water was not, and typically is not generally considered to be available for appropriation for consumptive use purposes by someone other than the landowner upon which the water is captured. n111 Likewise, artificial waterbodies are generally not deemed susceptible of public non-consumptive use rights. n112 As a result, where a dam is built on a natural stream, and thereby creates a lake capable of being used by motorboats, the law will generally not recognize an automatic right in the public to make that use of the water without permission of the owner of the lake. n113

An exception to the general rule exists with respect to consumptive use rights in certain publicly created artificial

waterbodies. For example, an individual may acquire the right to appropriate water for consumptive use purposes in waters impounded in certain federally constructed reservoirs. n114

An exception to the general rule is also sometimes recognized where the watercourse has been in existence or maintained for a sufficiently long period that it may be considered a natural watercourse for purposes of recognizing these rights. n115 This seems particularly the case where public use has been permitted for a long time, even though the lake would otherwise be private. In such cases, courts have sometimes also invoked the doctrine of estoppel to protect the public access rights. n116

COMPUTER-ASSISTED RESEARCH

LEXIS: artificial w/1 waterbod!

§ 50.02(o) Special Problem Waters: Flood Waters.

Flood waters are generally considered to be part of surface watercourse waters even though they may extend beyond the normal boundaries of the lake, river or stream, provided they are physically connected to the stream. n117 Upon separation from the stream, flood waters tend to be considered to be diffused surface waters even though they still may actually be within the physical boundaries of the natural flood plain. n118

Because flood waters are not predictable, they are not normally considered susceptible to consumptive use rights. On the other hand, where the water is simply the result of an annual, predictable event, such as spring snow-melt, the temporary, but regularly occurring, increase in stream capacity may be considered part of the annual stream yield for consumptive use purposes and, therefore, may be appropriated or claimed by individual users. At least one jurisdiction has recognized a so-called meadow right in which the claimant was considered to have rights in the spring overflow water in order to maintain pasture for livestock. n119

COMPUTER-ASSISTED RESEARCH

LEXIS: flood w/1 water!

§ 50.02(p) Special Problem Waters: Springs.

The law has had a difficult time classifying springs because of their intimate connection with both surface and groundwater. The recognition of consumptive use in the out-flow water from springs may preclude someone else from asserting rights to the groundwater that eventually surfaces at the spring. Conversely, granting rights to the groundwater that supplies the spring can actually cause the spring to dry up, which may jeopardize rights of others in the streams or lakes into which the spring flows. In some jurisdictions, the law has responded to this difficulty by focusing on the kind of groundwater supply that feeds the spring. Where the spring is fed by an underground stream, the law in these jurisdictions has tended to apply the surface rules that apply to streams. n120 Where the source is percolating groundwater, these jurisdictions tend to apply the groundwater rules applicable to that type of water. n121 In some jurisdictions, the rule appears to be that if the spring dissipates before reaching a surface waterbody, it may be considered diffused surface water and dealt with accordingly. n122

COMPUTER-ASSISTED RESEARCH

LEXIS: spring! w/50 water! w/2 law! or right!

§ 50.02(q) Special Problem Waters: Return Flow Waters.

Return flow waters may be defined as waters that have been removed from the source of supply for consumptive use purposes but have not been completely consumed. The unused waters are then returned to the stream. Return flow water becomes a classification problem for several reasons. First, the property right nature of water rights is such that the water is considered to be the personal property of the user as long as it is in the possession of the appropriator. n123 As such, the user is generally considered to have the right to use and even re-use the water so long as the use satisfies the reasonable or beneficial use requirements of the jurisdiction and is not released from the user's possession. As long as the water is within the dominion of the user, it will typically not be considered available for further appropriation. Once it leaves the possession of the user, however, it may be considered abandoned and thereby returned to the supply for further appropriation. Although waters of this type are undoubtedly very valuable to subsequent users, who might otherwise not have any water available to them, and it might be considered wasteful in a particular jurisdiction not to permit others to use these waters, their availability for subsequent appropriation is fraught with uncertainty, since the law will not compel the user to abandon it for others to use. n124 Indeed, it may be considered wasteful in some jurisdictions to abandon the water and there may be unstated pressures in the system which actually discourage those uses which may generate return flow waters from releasing the water, once the initial use has ended. On the other hand, if the water actually is abandoned and subsequently used, the new or later user's interest in the water ought to be fairly protected. This creates the classification problem: how should these waters be treated so that the rights of subsequent users can be protected without interfering with rights of present or prior users?

Second, return flow waters are not always returned to the same place or even the same watershed from which they were extracted. This undoubtedly distorts the available supply in both the waterbody to which the waters are returned and downstream in the watershed from which the waters were removed. This may mislead potential users into concluding that there is more water available for use than may actually be present in the system.

Third, return flow waters raise very difficult issues regarding the transferability of water rights. A transfer of the right to a user that is geographically remote to the place of first use undoubtedly will cause any return flow waters to be discharged into a different watershed. Similarly, even though the right is not transferred far, the new point of extraction or return for such waters by the transferee may be in an entirely different location even if it is still within the same watershed. In either case, although there may still be considerable return flow waters, they may be beyond the reach of those who may have come to depend on them.

Finally, return flow waters may return to the stream as diffused water, which may not be considered an object of appropriation rights at all until they actually reach a stream. Where such waters must cross land, they will be subject to jurisdictional rules regarding diffused waters, n125 which may make it difficult to protect these waters for eventual future appropriation. Someone who may be interposed between the point of use and the point of return to the stream may wish to cast the water in an entirely different direction and may have the right to do so. Such waters may also be captured as diffused waters in surface impoundments such as stock ponds, and may never reach the stream at all. n126

There has been little consistency in how these waters are dealt with. Some riparian jurisdictions have dealt with this problem indirectly by imposing place of use restrictions on the water user which are designed to keep the water within the watershed of origin. n127 Some jurisdictions have imposed similar restrictions on groundwater, which after use, may end up in a surface waterbody. n128 Appropriative jurisdictions have typically not limited the place of use. Place of use restrictions, at best, only insure that any water returned after use will most likely end up in the same source of supply, and do not focus on the impact of such return on other potential users that it was originally extracted from.

Some jurisdictions have adopted procedures that require consideration of the impact on return flow users before a transfer of the water right will be approved. n129 In these jurisdictions, the subsequent user has a type of protected right but because the new user typically cannot compel the original user to release water, the right is inherently inferior to that of the first user. Further, most jurisdictions predicate the right to transfer upon the absence of an adverse impact on junior downstream users. n130 No consideration is generally required regarding the effect of the transfer on potential new users in a potentially different watershed.

COMPUTER-ASSISTED RESEARCH

LEXIS: return w/1 flow w/1 water!

§ 50.02(r) Special Problem Waters: Foreign and Imported Waters.

Foreign or imported waters are generally considered to be waters transported from one watershed to another by artificial means. Since these waters are not natural to their eventual place of use, their presence may distort the perceptions of the traditional system regarding the quantity of water available for use. Further, since the waters may be stored prior to their use, they may be commingled with the natural waters in the area. Since water is fungible, it may be difficult to segregate or separately identify the imported waters for purposes of recognizing rights therein. As a result, foreign and imported waters have posed some interesting problems for water right allocation systems.

Some riparian jurisdictions have dealt with the issue by formally seeking to discourage such transfers. n131 In these jurisdictions, the mere movement or use of waters beyond their natural watershed is deemed unreasonable per se and therefore forbidden. In other jurisdictions, where the transportation of the water is permitted, the importer will be considered to have full rights in it on the theory that the water is personal property as a result of having been reduced to possession. n132

Most appropriative jurisdictions permit movement of water from one place to another, though permission may be required where the movement may affect existing water right holders. n133 Such transportation may generally be done in natural or artificial watercourses, n134 even though the water is commingled with other water in those watercourses. Despite the general view that, once water is released from the possession of the water right holder after it has been captured, it becomes available for further appropriation by others, this transported water may still be deemed to be within the control of the appropriator and neither riparian landowners nor other appropriators may secure rights to use the water. n135

The storage of foreign or imported water is also problematic where it is commingled with other waters, either on the surface or in the ground. Most jurisdictions generally consider the importer to have full rights to the water, including the right to re-use the water. n136

§ 50.02(s) Water Right Administration Within the Traditional Framework.

The above basic water right allocation structure was created in response to particular problems and largely evolved at a time when central governments were relatively weak. As a consequence, the government played a relatively minor role with respect to approval of secure water rights as well as right enforcement. Rather, the various early systems created by the several states depended on individual efforts both to secure water rights and to police water right problems. In such a framework, it was necessary to depend upon easily ascertainable (and usually visual) criteria in order to ascertain who had legitimate water rights claims, as well as to calculate the amount of water available for use and to determine the extent of demand likely to be made of the particular source of supply. n137

Early allocation systems relied on the number of individuals owning land abutting the water supply, or upon the existence of physical diversionary structures by which water could be diverted out of the source of supply, as the primary means of controlling the number of water users. These factors were thought to readily reveal whether there were too many competitors for the same source of supply. Significantly, these factors were matters that were within the

"control" or "expertise" of anyone who was interested in using the water. Thus, the system could function without governmental intervention simply by requiring individual water users to satisfy the conditions that would reveal their presence to others who could then act accordingly. In riparian systems, the required act consisted of the acquisition of land that bordered on the source of supply. n138 In appropriative systems, the water right claimant must make a diversion of the water which was then applied to a beneficial use. n139

In such a system, anyone who wished to acquire a water right had only to ascertain, based on the presence of existing water users, whether water was available and then satisfy the minimal criteria of either purchasing land that adjoined the water source or of constructing a diversionary structure that would physically remove the water from the source.

After the right was secured, it was generally the responsibility of the individual water right claimant to assert the right against the alleged cause of interference. This is because the matter of interference with water rights by another was typically left to the individual. In some systems, interference with a water right was considered entirely a private matter, and it was left to the individual to assert the right against the alleged trespasser through legal action directed against that individual. n140 Even where the state has been involved in the policing of water right use, complaints still likely must be brought to the state's attention by the affected individual.

As noted below, n141 governments play a much more active role in the administration of water right regimes than they did early in the history of the nation. Although the traditional structure is largely intact, there has been a distinct movement toward requiring governmental approval of claimed water rights and more governmental authority to police and adjust conflicts arising from competing claims to the water. The rigidity of the structure, however, may limit government somewhat in its ability to deal with the full range of social problems and issues that arise in the course of dealing with water right disputes. At some point, it may be necessary to restructure the water right allocation regimes in order to give governmental authorities necessary flexibility to conform the water right systems of the various jurisdictions to the needs of modern society.

In some states a permit may need to be secured to authorize the recapture and reuse of the water. n142

COMPUTER-ASSISTED RESEARCH

LEXIS: water! w/1 right! w/5 administrat!

§ 50.02(t) Problems Posed by the Traditional Classification System.

It may be said that the compartmentalization of traditional water right structure ignores the interrelationship of water found in nature in the hydrologic cycle. Each of the separate categories in the law of water rights has historically been perceived as virtually independent of the others. The law has then developed quite different rules for each category of uses or sources. This has resulted in rules for uses of waters of one compartment which are incompatible with rules relating to another. Often these rules are in conflict. For example, the law relating to appropriation and consumption of water is considered to be independent of the law relating to rights to make a non-consumptive use of the water. Similarly, the issue of liability for acts associated with misuse of water is considered unrelated to the issues of water consumption. As a result, consumptive use rights generally allow water to be removed from the water source without regard to rights of non-consumptive users. If the water is removed for irrigation, it will no longer be present in the stream for boaters. Neither set of rules appears to recognize the existence of the other. Similarly, if someone lawfully blocks a drainway, this may deprive someone lower in the drainage pattern who depends upon the water to fill a stock pond. However, the law of diffused water does not recognize that drainage water may have significant value for consumptive use purposes.

The most serious consequence of this structural incongruence is perhaps the lack of flexibility in the system to deal with changes occasioned by the development of a more modern society. Rights created and recognized at a time when water

was presumed to be abundant or from sources that were thought to have little social utility beyond that of consumptive use water sources or to have no connection with other waters in the system may be protected by the law in ways which make it difficult for the system to grant water to more recent users for more pressing or needful purposes.

A second serious consequence with which the legal system must contend, as it deals with water right matters within the traditional classification scheme, is that the law will inherently lag behind what is known about the resource. The format of the system itself makes it difficult to manage the resource in accordance with our more accurate understanding of water simply because of the presence of a substantial number of rights which were created, and which the law protects as valuable property rights, pursuant to what may be described as a somewhat artificial view of the resource.

Although property rights have not been discussed in this section, the fact that water rights are considered property has also had a couple of adverse consequences. First, rights that have been acquired years ago may lock in undesirable water use patterns. For example, the early right holder may not be able to change the particular use to which the water is dedicated without risk of losing priority to later right holders. In order to preserve the priority status, the use remains even though it may not be as desirable now as it was when the use began. This is an even more serious problem where the use is wasteful or not very efficient. It may actually deprive others of an opportunity to have water.

Second, the property right structure makes it difficult for the system to shift water from privately valuable uses to socially significant, but perhaps less economically valuable, uses without a high public cost. It may be necessary to condemn or purchase the right from the early right holder in order to terminate the earlier use. For example, in some western jurisdictions, cities have had to purchase farmland in order to secure water rights with an early priority that will assure the cities of an expanded but dependable supply. This has the desired consequence of increasing the public water supply but has the adverse consequence of forcing the agricultural landowner to idle the land. n143

A major problem with the traditional classification scheme is that it addresses primarily the matter of securing a right of access to the water in its natural state. Once the water right is exercised, the water then tends to be treated as an article of commerce and as personal property rather than real property. In other words, the domain of the water right structure tends to end upon exercise of the water right and leaves to other approaches the task of dealing with the consequences. For example, this has subjected state right allocation schemes to potential federal oversight under the auspices of the commerce clause. n144

COMPUTER-ASSISTED RESEARCH

LEXIS: classif! or compartmentaliz! or categor! w/15 w/1 right! w/5 problem!

§ 50.02(u) Alternatives to Traditional Structure.

Although it is difficult to separate problems associated with the fact that water rights are considered to be property rights from problems associated with the classification structure of water rights, a number of jurisdictions have struggled with the difficulty of adapting water right structure to the needs of modern society. Efforts have been made to moderate the rigidity of the traditional classification structure, as well as to avoid the more problematic consequences of water rights as property rights.

Several jurisdictions n145 have abandoned the requirement that water on the surface be treated differently from water under the ground. n146 These jurisdictions are called unified jurisdictions, n147 and include the states of Florida, Iowa, Kentucky and Minnesota. n148 The primary advantage of this approach is that the same allocation rules may be used regardless of the source of water. It should be noted that even these jurisdictions still distinguish between consumptive and non-consumptive uses and have a separate legal regime for diffused surface water.

Some jurisdictions have sought to moderate the rigidity of treating water rights as property rights by creating alternative

means of securing the right. For example, a public entity may acquire a water right and then lease a portion of its right to another water user. n149 Although leases still involve property right concepts, there is an opportunity in the lease to condition the use of the water in ways that might not otherwise be permitted. Further, the lease may be used to facilitate water transfers where, as in riparian systems, the right to transfer is otherwise severely limited.

Contracts, of course, do not involve property rights. Historically, users of water supplied by a public water supply system did not individually acquire any property rights in the water. Rather, they entered into a contract with the supplier and received the water on that basis. There has been some experimentation with the use of contracts as a basis of further water distribution. n150 Contracting for water has the advantage of reducing the number of property right based water rights with which the public authority must deal and therefore gives the system greater flexibility in dealing with changing needs. On the other hand, contract rights may seem a little less secure to the right holder and many may be reluctant to invest in the development of the resource unless there is the kind of assurance of future access to the water that is not as likely under a contract as under a vested property right.

Every inhabitant who is a householder shall have free fishing and fowling in any great ponds, bays, coves and rivers, so far as the sea ebbs and flows within the precincts of the town where they dwell unless the freemen of the same town, or general court have otherwise appropriated them.

Kanazaswa, Mark T., *Efficiency in Western Water Law: The Development of the California Doctrine, 1850-1911, 27 J. Legal Stud. 159 (1998).*

> Provided that no town shall appropriate to any particular person or persons, any great pond, containing more than ten acres of land, and that no man shall come upon another's property without their leave, otherwise as hereafter expressed.

(n11)Footnote 60. For further discussion, *see* John C. Peck, *The Kansas Water Appropriation Act: A Fifty-Year Perspective, 43 U. Kan. L. Rev. 735 (July 1995);* Christine A. Klein, *The Constitutional Mythology of Western Water Law, 14 Va. Envtl. L.J. 13 (Winter 1995);* Ray Jay Davis, *Water, Water Everywhere: Two New Model Water Codes, 9 Prob. & Prop. 8* (Sept.-Oct. 1995).

(n59)Footnote 108. *See* Frank Maloney et al., Florida Water Law 42 1980 (Water Resources Research Center, Univ. of Fla., Pub. No. 50, 1980).

(n60)Footnote 109. *See* discussion at § 50.11(d), *infra*.

Colorado has three different classes of groundwaters: 1) groundwater which is tributary to a stream, 2) groundwater that is not tributary to a stream which is identified as "designated groundwater" and 3) groundwater that is not tributary to a stream which is identified as simply "non-tributary groundwater." Colo. Rev. Stat. § 37-90-103(6)(a). "Designated groundwater" is water that is in basins designated by the Colorado Groundwater Commission. "Non-tributary groundwater" is water not tributary to a stream that is outside such basins. *Id.* "Tributary groundwater" is water that will, within 100 years, deplete the flow of a natural stream at a rate greater than one-tenth of one percent of the annual rate of withdrawal. Colo. Rev. Stat. § 37-90-103(10.5).

For a discussion of the extent to which rights in groundwater may be severed from the land, *see* Julie McNitt, *A New Chapter in Missouri Percolating Groundwater: The Non-Severability of Water Rights From Land, 59 Mo. L. Rev. 235 (1994).*

Application for Water Rights of Hines Highlands Ltd. Partnership and Aspen Wilderness Workshop v. Hines Highlands Ltd. Partnership, 929 P.2d 718 (Colo. 1996); SRBA v. Hagerman Water Rights Owners, 947 P.2d 409 (Id. 1997); USI Properties East, Inc. v. Simpson, 938 P.2d 168 (Colo. 1997); State v. Acquavella, 935 P.2d 595 (Wash. 1997). See also Maddocks v. Giles, 728 A. 2d 150 (Me. 1999).

(n61)Footnote 110. *Broadbent v. Ramsbotham, 11 Ex. 602, 156 Eng. Rep. 971 (1865). See also Publix Supermarkets, Inc. v. Pearson, 315 So. 2d 98 (Fla. App. 1975).* For further discussion, *see* Corbridge, *Surface Rights in Artificial Water Courses*, 24 Nat. Res. J. 887 (1984); Kusler, *Artificial Lakes and Recreational Subdivision, 1971 Wis. L. Rev. 369.*

See also Alburger v. Philadelphia Elec. Co., 535 A.2d 729 (Pa. 1988); In re the Adjudication of Water Rights in the *Lower Guadalupe River, 730 S.W.2d 64 (Tex. App. 1987).* In the Texas case, the court held that once surface waters collected in a natural depression come to rest, they become a lake and are subject to appropriation as a natural waterbody. In contrast, in *Arizona Public Service Co. v. Long, 773 P.2d 988 (Ariz. 1989),* "sewage effluent" was not even considered to be "water" for purposes of appropriation.

See Wehby v. Turpin, 1997 Ala. LEXIS 482 (Ala. 1997, appeal from Shelby Circuit Ct., CV-96-122). This dispute

involved the reconstruction of a man-made lake in a way that threatened recreational use rights claimed by plaintiffs.

(n62)Footnote 111. *See, e.g.*, Kan. Stat. Ann. § 82a-728(a).

(n63)Footnote 112. *See, e.g., Anderson v. Bell, 433 So. 2d 1202 (Fla. 1983); Black v. Williams, 417 So. 2d 911 (Miss. 1982); Goodrich v. McMillian, 187 N.W. 386 (Mich. 1922); Kiwanis Club Found. v. Yost, 139 N.W.2d 359 (Neb. 1966); Hood v. Slefkin, 143 A.2d 683 (R.I. 1958). But see* Richard Bartke and Susan Patton, *Water Based Recreation in Michigan - Problems of Developers, 25 Wayne L. Rev. 1005 at 1009-10 (1979),* where it is argued that artificial waters should be treated the same as natural waters for purposes of recreational use. In *In re the Adjudication of Water Rights of the Lower Guadalupe River, 730 S.W.2d 64 (Tex. App. 1987),* the court held that once surface waters which collected in a natural depression came to rest, they became a lake and were at that point subject to appropriation.

(n64)Footnote 113. *Anderson v. Bell, 433 So. 2d 1202 (Fla. 1983); Publix Supermarkets, Inc. v. Pearson, 315 So. 2d 98 (Fla. App. 1975).* If the stream upon which the dam is located is not navigable, the newly created lake may still be said to be private in many jurisdictions despite the fact that it is capable of supporting public recreational use since the public may have no lawful right of access to the water. *Id.* This is arguably the case even where the lake has been created for recreational purposes, such as a lake built on the resort grounds for the exclusive use of patrons of the particular resort. *See, e.g., Silver Blue Lake Association v. Silver Blue Lake Home Owners Association, 245 So. 2d 609 (Fla. 1971). See also Publix Supermarkets, Inc. v. Pearson, 315 So. 2d 98 (Fla. App. 1975).* Where the lakes are created for purposes that include public recreation, as is the case with certain flood control or reclamation projects, public permission to use may be implied or will be expressly granted or may be mandated by the legislation that authorized the construction. This is particularly the case where the project includes the acquisition of the bed underlying the water by the public.

(n65)Footnote 114. *See generally* Joseph Sax, *Federal Reclamation Law*, 2 Waters and Water Rights, ch. 8 (Robert Clark ed. 1967).

(n66)Footnote 115. *See, e.g., Bolinger v. Henry, 375 S.W.2d 161 (Mo. 1984); Kray v. Muggli, 86 N.W. 882 (Minn. 1901).*

In *Johnson v. Board of County Commissioners, 897 P.2d 169 (Kan. App. 1995),* the court held that after 62 years, the configuration of a stream, as altered by the construction of a bridge, would be considered a natural watercourse.

(n67)Footnote 116. *Greisinger v. Klinhardt, 9 S.W.2d 978 (Mo. 1928).*

(n68)Footnote 117. *See, e.g., Watts v. Evansville, Mt. C. & N. Ry., 129 N.E. 315 (Ind. 1921); Frese v. Michalec, 28 N.W.2d 197 (Neb. 1947); Thomson v. Public Serv. Comm'n, 5 N.W.2d 769 (Wis. 1942). But see DeRuwe v. Morrison, 184 P.2d 273 (Wash. 1947); Keener v. Sharp, 111 S.W.2d 118 (Mo. 1937).*

Johnson v. Board of County Comm'rs of Pratt County, 913 P.2d 119 (Kan. 1996) (if water continues to flow in same direction while outside banks of stream, returning upon subsidence of flood, it is to be deemed part of running stream and not surface water).

See Akins v. State, 61 Cal. App. 4th 1, 71 Cal. Rptr. 314 (1998), (reversing lower court which had found the state liable for inverse condemnation for flooding during a heavy storm in 1986); *M & D, Inc. v. McConkey, 573 N.W.2d 281 (Mich. App. 1997)* (liability for failure to disclose flooding problem; liability of state for failure to maintain drain); *Stott v. Finney, 950 P.2d 709 (Idaho 1997)* (flooding resulting from failure of upstream dam); *Morgan v. Earnest Corp. 704 S. 2d 272 (La. App. 1997).*

There is a tendency to apply tort principles of trespass, nuisance or negligence rather than property principles of water right law to resolve liability issues associated with flooding or drainage. *See, e.g., Bays v. Kent State Univ., 684 N.E.2d*

1328 (Ohio 1997) (flooding due to University action).; *Akins v. State, 61 Cal. App. 4th 1, 71 Cal. Rptr. 314 (1998)* (reversing lower court which had found the state liable for inverse condemnation for flooding during a heavy storm in 1986); *M & D, Inc. v. McConkey, 573 N.W.2d 281 (Mich. App. 1997)* (liability for failure to disclose flooding problem; liability of state for failure to maintain drain).; *Stott v. Finney, 950 P.2d 709 (Idaho 1997)* (flooding resulting from failure of upstream dam).: *Morgan v. Earnest Corp. 704 S. 2d 272 (La. App. 1997); Hutchinson v. Town of Andover, 1997 Conn. Super. LEXIS 87 (1997); Steiner v. County of Marshall, 568 N.W.2d 627 (S.D. 1997); Lhotka v. United States, 114 F.3d 751 (8th Cir 1997); Andersen v. Village of Little Chute, 549 N.W.2d 737 (Wis. 1996); Rodriguez v. City of New York, 1996 LW 239948* (S.D.N.Y. May 8, 1996); *Richhart v. Gleason, 672 N.E.2d 1064 (Ohio 1996).*Where the flooding is the result of alleged mismanagement of a man-made structure, such as a reservoir, liability will be determined on the basis of negligence rather than strict liability. *See Jensen v. Intermountain Power Agency, 977 P.2d 474 (Ut. 1999).*

Where damage claims for flooding are grounded in either nuisance or trespass, damages can include not only the diminution of the market value of the property or the restoration and loss of use of the property, but also discomfort and annoyance to the property owner. Annoyance generally refers to distress arising out of physical discomfort, irritation or inconvenience caused by odors, pests, noise and the like. In the absence of evidence of physical manifestations of the distress, creation of unreasonable risk of bodily harm or willful and wanton conduct, the court in *Webster v. Boone, 992 P.2d 1183 (Colo. App. 1999)* held that damages were not available for emotional distress where the flooding was the result of removing a railroad grade. In this case, the court also disallowed an award for attorney fees and costs.

Where the flooded land is determined to be a wetland, the property may be subject to regulation under the Clean Water Act *(33 U.S.C. §§ 1251* to 1387) and the "swampbusting" provisions of the Food Security Act of 1985 *(16 U.S.C. § 3811).* For a further discussion, *see* Chapter 47.12(k) *supra. See also Weyerhaeuser v. Pierce County, 976 P.2d 1279 (Wash. 1999); Gaudreau v. Clinton Irrigation District, 30 P.3d 1070 (Mont. 2001).*

Further, where impoundments have been erected for flood control purposes, the excess water that results in the creation of reservoirs tend to be considered available for consumptive as well as non-consumptive use even though the waters are technically "flood waters." The fact the water is confined seems to satisfy the systems concerns regarding the reliability of the supply. *See California v. United States, 438 U.S. 645 (1978).*

(n69)Footnote 118. *See, e.g., Hengelfelt v. Ehramann, 3 N.W.2d 576 (Neb. 1942); Crawford v. Rambo, 7 N.W. 249 (Ohio 1886). But see In re the Adjudication of Water Rights of the Lower Guadalupe River, 730 S.W.2d 64 (Tex. App. 1987),* where the court held that once surface waters which collected in a natural depression came to rest, they became a lake and were at that point subject to appropriation.

(n70)Footnote 119. *See, e.g., In re Silvies River, 237 P. 322 (Or. 1925).* Colorado has also recognized a "meadow right," provided there is some controlled system of diversion. *See Broad Run Inv. Co. v. Deuel & Snyder Imp. Co., 47 108 P. 755 (Colo. 1910).*

(n71)Footnote 120. *See, e.g., Tampa Water Works Co. v. Cline, 20 So. 780 (Fla. 1896); Whitmore v. Utah Fuel Co., 73 P. 764 (Utah 1903).*

See also Centamore v. Commissioner, 634 A.2d 950 (Me. 1993), where an individual sought to prohibit the transfer of water from a spring beyond the boundaries of the municipality. In this case, the state law, 22 M.R.S.A. § 2660-A, prohibited the transportation of large quantities of water outside of the municipality in which the water was located unless the transfer is approved by the Commissioner of the Department of Human Services. As a matter of fact, the Commissioner had approved the transfer of water from an individual's spring for commercial merchandising. Petitioner objected and brought an action against the Commissioner but did not join the permit holder to the suit. The Superior court denied the petition and remanded for joinder of a "necessary party," holding that the failure to join the permit holder impeded his ability to protect his interest and any relief granted in his absence would not completely and

effectively adjudicate the dispute.

(n82)Footnote 131. *See* § 50.08(m), *infra*.

See also Centamore v. Commissioner, 634 A.2d 950 (Me. 1993) where the state law, 22 M.R.S.A. § 2660-A, prohibited the transportation of large quantities of water outside of the municipality in which the water was located unless the transfer is approved by the Commissioner of the Department of Human Services. In this case, the Commissioner had approved the transfer of water from an individual's spring for commercial merchandising. Petitioner objected and brought an action against the Commissioner but did not join the permit holder to the suit. The Superior court denied the petition and remanded for joinder of a "necessary party," holding that the failure to join the permit holder impeded his ability to protect his interest and any relief granted in his absence would not completely and effectively adjudicate the dispute.

(n83)Footnote 132. *Id.*

(n84)Footnote 133. *See, e.g.*, Kan. Stat. Ann. § 82a-708b.

But see City of Westminster v. Church, 445 P.2d 52 (Colo. 1968), where the court appears to allow unrestricted reuse or disposition of imported water without regard to injury to other appropriators. However, in a later decision, Colorado appears to adopt at least a modified version of the prevailing view. In *Southeastern Colo. Conserv. Dist. v. Fort Lyon Canal Co., 720 P.2d 133 (Colo. 1986),* the court held that changes in the use of stored water would be limited to historical uses in order to prevent injury to other appropriators.

(n85)Footnote 134. *See, e.g., Denver v. Fulton Irrigating Ditch Co., 506 P.2d 144 (Colo. 1972),* dealing with imported water which was not considered to be naturally part of the stream.

(n86)Footnote 135. *Id.*

In *Dodge v. Ellensburg Water Co., 729 P.2d 631 (Wash. 1986),* the court held that imported water that was abandoned by the developer did not become public water subject to state authorized appropriation. *See Salt Lake City v. Silver Fork Pipeline, 5 P.3d 1206 (Utah 2000).*

(n87)Footnote 136. *See, e.g., City of Los Angeles v. San Francisco, 537 P.2d 1250 (Cal. 1975).*

The general rule may be modified by the presence or absence of specific plans to reuse the water. In *Water Supply and Storage Co. v. Curtis, 733 P.2d 680 (Colo. 1987),* the applicant for the water requested that the court decree that "the water may be used and reused and put to a succession of uses until totally consumed." The court ruled that such a holding may be appropriate in a suitable situation but since the applicant had no concrete plans for reuse, the request would be denied.

Westlands Water District v. United States, 153 F. Supp. 2d 1133 (E.D. Cal. 2001).

(n88)Footnote 137. It was far easier to estimate the quantity available if the source was visible, such as a surface waterbody like a stream or a lake. It is probably for this reason that surface allocation systems developed before groundwater systems.

See Empire Lodge Homeowners' Association v. Moyer, 39 P.3d 1139 (Colo. 2001); United States v. Commonwealth of Puerto Rico, 144 F. Supp. 2d. 46 (D. Puerto Rico 2001).

Doctrine: State of Alaska v. Babbitt, 25 Real Est. L.J. 308 (1997); Mossman, *Whiskey Is for Drinkin' but Water Is for Fightin' About: A First-hand Account of Nebraska's Integrated Management of Ground and Surface Water Debate and the Passage of L.B. 108, 30 Creighton L. Rev. 67 (1996);* Geon, *A Right to Ice? The Application of International and National Water Laws to the Acquisition of Iceberg Rights, 19 Mich. J. Int'l L. 277 (1997).*

(n95)Footnote 144. *See Sporhase v. Nebraska, 458 U.S. 941 (1982).* It has also engendered restrictions on the transportation of the water itself, not as part of the water rights laws per se, but grounded in other concerns. *See, e.g., Centamore v. Commissioner, 634 A.2d 950 (Me. 1993).* There, the state law, 22 M.R.S.A. § 2660-A, prohibited the transportation of large quantities of water outside of the municipality in which the water was located unless the transfer is approved by the Commissioner of the Department of Human Services. In this case, the Commissioner had approved the transfer of water from an individual's spring for commercial merchandising. Petitioner objected and brought an action against the Commissioner but did not join the permit holder to the suit. The Superior court denied the petition and remanded for joinder of a "necessary party," holding that the failure to join the permit holder impeded his ability to protect his interest and any relief granted in his absence would not completely and effectively adjudicate the dispute.

Because of perceived weaknesses in the traditional classification scheme, some jurisdictions may apply tort principles of trespass, nuisance or negligence rather than property principles of water right law to resolve liability issues. This is particularly the case with diffused surface water where liability associated with flooding or drainage is at issue. *See, e.g., Bays v. Kent State Univ., 684 N.E.2d 1328 (Ohio 1997)* (flooding due to University action); *Akins v. State, 61 Cal. App. 4th 1, 71 Cal. Rptr. 314 (1998)* (reversing lower court which had found the state liable for inverse condemnation for flooding during a heavy storm in 1986); *M & D, Inc. v. McConkey, 573 N.W.2d 281 (Mich. App. 1997)* (liability for failure to disclose flooding problem; liability of state for failure to maintain drain); *Stott v. Finney, 950 P.2d 709 (Idaho 1997)* (flooding resulting from failure of upstream dam): *Morgan v. Earnest Corp. 704 S. 2d 272 (La. App. 1997); Hutchinson v. Town of Andover, 1997 Conn. Super. LEXIS 87 (1997); Steiner v. County of Marshall, 568 N.W.2d 627 (S.D. 1997); Lhotka v. United States, 114 F.3d 751 (8th Cir 1997); Andersen v. Village of Little Chute, 549 N.W.2d 737 (Wis. 1996); Richhart v. Gleason, 672 N.E.2d 1064 (Ohio 1996).*

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.03

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.03 Water Rights as Property.

[Go To Supp]

§ 50.03(a) In General.

Water rights are commonly considered to be property rights but it is clear that they are different from most other property rights. An interesting discussion of the fundamental nature of water rights as a species of property rights is found in the case of *United States v. Willow River Power Co*. n151 In that case, the federal government had constructed Red Wing Dam, a hydroelectric power plant, on the upper Mississippi River downstream from its junction with the St. Croix River. The Willow River Power Company maintained a small power plant on the St. Croix. The pool from the federal dam raised the level of the water on the St. Croix to the point that Willow River Power Company could not generate power from its facility. The power company claimed that the federal dam had "taken" or destroyed its riparian water right which permitted the use of the river and, as a result, the power company should be paid compensation for the taking. The Supreme Court denied the taking claim for two reasons.

First, the federal government had a superior interest in the stream, by virtue of its navigational servitude, n152 which functioned much like a paramount title claim. In discussing the relation between this interest and the claimed water right, the Court noted that:

> Rights, property or otherwise, which are absolute against all the world are certainly rare, and water rights are not among them. Whatever rights may be as between equals such as riparian owners, they are not the measure of riparian rights on a navigable stream relative to the function of the Government in improving navigation. Where these interests conflict, they are not to be reconciled as between equals, but the private interest must give way to a superior right, or perhaps it would be more accurate to say that as against the Government such a private interest is not a right at all.

Second, with respect to the claim that the right to a certain level of water in the river was a protected water right, the Court noted that:

> It is clear, of course, that a head of water has value and that the Company has an economic interest in keeping the St. Croix at the lower level. But not all economic interests are "property rights"; only

> those economic advantages are "rights" which have the law back of them, and only when they are so recognized may courts compel others to forbear from interfering with them or to compensate for their invasion. The law has long recognized that the right of ownership of land may carry with it a legal right to enjoy some of the benefits from adjacent waters. But that a closed catalogue of abstract and absolute "property rights" in water hovers over a given piece of shore land, good against all the world, is not in this day a permissible assumption. We cannot start the process of decision by calling such a claim as we have here a "property right"; whether it is a property right is really the question to be answered.

The Court then determined that the claimed right was not a protected interest as against the government's action. n153

A criticism that may be made of contemporary water right structure is that the property nature of water rights may deprive the system of some flexibility in responding to changing values. As our system has become more conscious of the need to give a significant measure of protection to various aspects of the natural environment, it has become apparent that one common obstacle is the rigidity with which the law tends to deal with property rights. n154 The reason is undoubtedly that the law values very highly those attributes of stability and endurance that tend to be associated with property rights because they stimulate investment and development of the property to which the rights pertain. This, in turn, appears to be an outgrowth of the early views that property is important and merits legal protection because of its connection to individual wealth. Indeed, it is often considered to be a primary means by which wealth may be generated. On the other hand, the needs of society are not always grounded in the same kinds of concerns and the choice that the law must often confront when it deals with the clash between private property interests and social interests is whether property should be protected primarily to protect the individual or the common good. In this sense, the system frequently struggles with whether the legal concept of property may be imbued with any significant sense of social function. n155

The aspect of water rights that may ultimately permit the forging of a compromise may be the fact, as discussed below, that the essence of the water right itself is derived from Roman Law and not from the English Common law system. This permits the argument that at least the water right, as property, comes with a significant inherent sense of social function which should enable the courts to define or redefine the nature of the right to make it more responsive to changing social needs and values. n156

Although the general rule is that water rights are a species of real property, that designation refers to the right of access to the water while it is in its natural state. Once the right is exercised and the water is reduced to possession, it may be considered the personal property of the water right holder. As such, it may become an article of commerce. n157 This distinction has been useful in avoiding some restrictions regarding the transferability of the water right. For example, in riparian jurisdictions, the general rule is that water rights cannot be transferred in the absence of a transfer of title to riparian land. Nevertheless, it may be permissible to sell water resulting from the exercise of the water right to someone who otherwise would not qualify as a riparian. In response, some jurisdictions have sought to control the marketing of water where it has the potential to impact water supplies within the jurisdiction. n158

COMPUTER-ASSISTED RESEARCH

LEXIS: water! w/1 right! w/15 property w/1 right!

§ 50.03(b) Water Rights as Real Property.

The law of real property rights tends to be concerned with rights which exist or may exist in favor of private persons in connection with land. n159 Although, strictly speaking, real property consists of only those interests known in the common law as freehold estates, for practical purposes, most rights of ownership, rights to dispose of land not based on ownership, and rights relating to the use and profit of another's land and liens are also considered real property rights. n160

Water rights are interesting in that, while they are real n161 property interests, n162 they do not embody an ownership interest in the water itself. n163

COMPUTER-ASSISTED RESEARCH

LEXIS: water! w/1 right! w/15 real w/1 property

§ 50.03(c) Property Attributes of Water Rights: Access.

In both a real and a practical sense, water right must be considered as a *right of access* to water in order to facilitate the use of the water for only such purposes as the law deems acceptable. From this, it is apparent that the "ability to properly use," rather than "ownership," is the primary property attribute, as it is through the restrictions on use that the law gives its substantive dimension to the water right. Indeed, the right to use is the essential feature of the water right itself. Clearly, the holder of the water right has only a right to make a permitted use of a particular quantity of water; the water right holder does not "own" that quantity of water unless or until it is lawfully reduced to possession. n164

COMPUTER-ASSISTED RESEARCH

LEXIS: right! w/1 access w/1 water! w/50 property w/1 right! or attribute!

§ 50.03(d) Property Attributes of Water Rights: Usufruct.

Water rights are considered to be "usufructary" in nature. n165 A usufruct has been defined in the context of water rights in our legal system as "the right of enjoying a thing, the property of which is vested in another, and to draw from the same all the profit, utility and advantage which it may produce, provided it be without altering the substance of the thing." n166 The concept of usufruct is of Roman law derivation and is a part of the category of rights described in Roman law as *iura in re aliena*, rights in the property of another (or the law of servitudes). n167 In Roman law, the usufruct was one of the four personal servitudes, and represented the right to use and take the fruits and profits of another's property, movable or immovable, without fundamentally altering its character. n168

Rev. 1 (1989); John Leshy, *The Prior Appropriation Doctrine of Water Law in the West: An Emperor with Few Clothes*, 19 J. of the West 5 (1990).

(n5)Footnote 155. *See* James B. Wadley, *The Emerging "Social Function" Context for Land Use Planning in the United States: A Comparative Introduction to Recurring Issues, 28 Washburn L.J. 22 (1988). But see* Michael Heyman, *Property Rights and the Endangered Species Act: A Renascent Assault on Land Use Regulation, 25 Pac. L.J. 157 (1994).*

(n6)Footnote 156. In *Imperial Irrigation District v. State Water Resources Control Board, 225 Cal. App. 3d 548 (1990),* the court responded to a claim by the district that once the right to use water becomes vested, it must be considered a property right which cannot be undermined without the payment of just compensation. The court found that the decision of the board "substantially impacted the practical use and administration" of the District's water. Nevertheless, it did not find the interference unconstitutional. The court said "[t]he historic concepts of water 'rights' in California were dramatically altered by the adoption in 1928 of [a constitutional amendment which empowered the Board to conduct hearings to determine whether particular water uses were reasonable or wasteful]. Our Supreme Court ... acknowledged that the new provision altered previously vested rights... . It has been long established that all property is held subject to the reasonable exercise of police power and that constitutional provisions declaring that property shall not be taken without due process of law have no application in such cases." The rationale of the court is that no one can lawfully acquire a vested right in an unreasonable use of the water.

(n7)Footnote 157. *See Sporhase v. Nebraska, 458 U.S. 941 (1982).*

(n8)Footnote 158. *See Centamore v. Commissioner, 634 A.2d 950 (Me. 1993).* There, the state law, 22 M.R.S.A. § 2660-A, prohibited the transportation of large quantities of water outside of the municipality in which the water was located unless the transfer is approved by the Commissioner of the Department of Human Services. In this case, the Commissioner had approved the transfer of water from an individual's spring for commercial merchandising. Petitioner objected and brought an action against the Commissioner but did not join the permit holder to the suit. The Superior court denied the petition and remanded for joinder of a "necessary party," holding that the failure to join the permit holder impeded his ability to protect his interest and any relief granted in his absence would not completely and effectively adjudicate the dispute.

In some jurisdictions, tort rather than property rules may be invoked. This is particularly the case where the problem is one of liability for harm caused by the water. *See also Akins v. State, 71 Cal. Rptr. 314 (1998)* reversing lower court which had found the state liable for inverse condemnation for flooding during a heavy storm in 1986. *See also M & D, Inc. v. McConkey, 573 N.W.2d 281 (Mich. App. 1997)* (liability for failure to disclose flooding problem; liability of state for failure to maintain drain); *Stott v. Finney, 950 P.2d 709 (Idaho 1997)* (flooding resulting from failure of upstream dam): *Morgan v. Earnest Corp., 704 S. 2d 272 (La. App. 1997); Hutchinson v. Town of Andover, 1997 Conn. Super. LEXIS 87 (1997); Steiner v. County of Marshall, 568 N.W.2d 627 (S.D. 1997); Lhotka v. United States, 114 F.3d 751 (8th Cir 1997); Andersen v. Village of Little Chute, 549 N.W.2d 737 (Wis. 1996); Richhart v. Gleason, 672 N.E.2d 1064 (Ohio 1996).*

In *Good v. United States, 39 Fed. Cl. 81 (Ct. Cl. 1997),* the court held that the federal navigational servitude did not constitute a complete defense to a takings claim arising from the denial of an application for a permit to fill wetlands. On the other hand, the court ruled that the Endangered Species Act did not require that the land be maintained in its natural state and thus did not deprive the landowner of all economic value associated with the property. Finally, the court held that the federal and state regulatory regimes were so pervasive that a developer could not have a reasonable

expectation of putting into effect the development plans.

For further discussion, *see* John Peck & Kent Weatherby, *Condemnation of Water and Water Rights in Kansas, 42 U. Kan. L. Rev. 827* (Summer, 1994). The property right in water may include not only quantity but quality as well. In *Hale v. Colorado River Mun. Water, 818 S.W.2d 537 (Tex. App. 1991),* the court recognized that the riparian landowner enjoyed a right in the quality of the water that could not be taken without just compensation. In this case, the quality was adversely affected by the presence of chloride-saturated spillage.

(n12)Footnote 162. Some jurisdictions include water within the definition of land. *See* Kan. Stat. Ann. § 58-3202(a), relating to liability for recreational use of land:

> "Land" means land, roads, water, watercourses, private ways and buildings, structures, and machinery or equipment when attached to realty.

(n13)Footnote 163. *See, e.g.*, Kan. Stat. Ann. § 82a-707(a):

Surface or groundwaters of the state may be appropriated as herein provided. Such appropriation shall not constitute ownership of such water, and appropriation rights shall remain subject to the principle of beneficial use.

For further discussion, *see* Deborah K. Paulus, *Reflections on Takings: The Watuppa Ponds Cases, 17 W. New Eng. L. Rev. 29 (Winter 1995);* Peggy B. Johnson, *The Takings Issue in the Local Government and Watershed Context, 1995 Det. C.L. Rev. 12 (Spring 1995);* Christine A. Klein, *The Constitutional Mythology of Western Water Law, 14 Va. Envtl. L.J. 13 (Winter 1995);* A. Lynne Krogh, *Water Right Adjudications in the Western States: Procedures, Constitutionality, Problems and Solutions, 30 Land & Water L. Rev. 9 (Winter 1995);* Corbridge, James N., *Historical Water Use and the Protection of Vested Rights: A Challenge for Colorado Water Law, 69 U. Colo. L. Rev. 503 (1998).*

In *Barnhill v. City of North Myrtle Beach, 511 S.E. 2d 361 (S.C. 1999),* the court upheld an ordinance that restricted the launching and beaching of motorized watercraft, including personal water craft, on public beaches. This ordinance had been challenged as an unconstitutional restriction on access to navigable waters, as preempted by state law and as a regulatory taking. The court held that the public's right of access to navigable waters was subject to reasonable regulation and found the ordinance to be reasonably related to the legitimate public interest in public safety. The ordinance was held not to be preempted because the state authority related only to activities "on the water" and would not affect plaintiffs who sought to operate a land-based jet ski rental business. The ordinance was held not to constitute a taking because the beach was governmental property and there is no private vested property right in a particular use of government property. In this case, a license to conduct a business did not include the public non-consumptive use water right of access to the water.

In *R & R Associates v. City of Providence, 724 A. 2d 432 (R.I. 1999),* it was held that some municipalities and water districts were not liable for the taking of riparian rights. This was because, by statute, only Providence was liable for any takings, even when done for the benefit of end-user communities and water districts.

Water rights were held not to grant any ownership interest in the water itself in *Farmers High Line Canal and Reservoir Co. v. City of Golden, 975 P.2d 189 (Colo. 1999).*

For further discussion, *see* Michael A. Heller, *Boundaries of Private Property, 108 Yale L.J. 1163 (1999).*

(n14)Footnote 164. Upon reduction of the water to possession, the nature of the ownership interest changes from a real property interest to a personal property interest and it may be said that the water right holder "owns" the water.

(n15)Footnote 165. *See, e.g., Williams v. City of Wichita, 374 P.2d 578 (Kan. 1962); F. Arthur Stone & Sons v. Gibson, 630 P.2d 1164 (Kan. 1981).*

This is the case as well even under the common-law doctrine of absolute ownership. *See Williams v. City of Wichita, 374 P.2d 578 (Kan. 1962)* where the court alluded to a "lack of understanding of the meaning of the term 'ownership' as applied to percolating waters" as the basis for an argument that the landowner actually owned the water in and below his or her land. *190 Kan. at 328-29.* The court then stated that:

> [t]he common law concept of 'absolute ownership' of percolating water while it is in one's land is an anomaly -- while giving him the right to abstract from his land all the water he can find there, it affords him no protection against the acts of neighbors who, by pumping on their own land, manage to draw out of his land all the available water it contains. Much of the language in the cases pertaining to absolute ownership is *obiter dicta* and completely unnecessary to the respective decisions... . Thus the use of the term "ownership" as applied to percolating water has never meant that the overlying owner had a property or proprietary interest in the corpus of the water itself... . There is a right of use as it passes, but there is no ownership in the absolute sense. (emphasis added) *Id. at 330.*

The court in this case noted that even under the common law the water belonged to the landowner only "in a limited sense." The landowner had the right to capture the water and "reduce it to his possession and control" at which time it "ceases to be percolating water and becomes his personal property." *Id.*

The court then held that:

> the right of the plaintiff to groundwater underlying his land *is to the usufruct of the water and not to the water itself.* Legislation limiting the right to use is in itself no more objectionable than legislation forbidding the use of property for certain purposes. (emphasis added)

(n17)Footnote 167. *See* Barry Nicholas, an Introduction to Roman Law 140 (1962).

(n18)Footnote 168. In Roman law, personal servitudes were considered similar to praedial servitudes in several respects. Both are fractions of ownership vested in someone other than the owner, they are burdens on ownership which restrict the enjoyment of the owner. They 'run with' the servient property and can be asserted against the world at large. Personal servitudes differ from praedial servitudes in that personal servitudes are conceptualized as personal to the owner and are limited in duration rather than perpetual. Significantly, praedial servitudes effect a permanent enhancement of the content of one ownership at the expense of that of another whereas the personal servitudes, including usufruct, effects a division in time but not the content of the ownership. *Id.* pp. 144-145.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.04

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.04 Limitations on the Property Nature of Water Rights.

§ 50.04(a) In General.

Because the water right holder only has a usufructary interest in the water, the nature of the water right is inherently limited to a right of enjoyment through the use of the water. The right to claim a particular quantity of water under a water right may be further bounded by the obligation to use water for beneficial or reasonable purposes. Thus, even though someone may have a property interest in the water, unless the water is properly used, lawful access can be restricted by the state or even terminated. In this sense, the extent of the right is directly related to the manner and extent of water use. If the water is not used properly, the right to continue the use may be withdrawn or the quantity permitted by the right modified to conform to the extent of actual beneficial or reasonable use.

There are a number of significant limitations on the scope and substantive nature of the water right. These include superior public interests, inherent government authority to supervise the acquisition of water rights and the use of water, system-imposed limitations on the nature of approved uses, jurisdictional rules regarding priorities of use and the presence of superior water rights possessed by others. Some of these limitations will be discussed further. n169

COMPUTER-ASSISTED RESEARCH

LEXIS: limit! w/15 water! w/1 right!

§ 50.04(b) Rationale for the Limited Nature of Water Rights.

The central concept that the water right is usufructary in nature is largely derived from Roman law, n170 and is based on the concept that some things are too vital to human life and to society as a whole to allow them to become the object of unlimited personal monopoly or dominion. n171 English and American legal systems differ from Roman law in that they do not recognize a specific category of things that cannot be owned by anyone. Indeed, these systems require that real property, even property that has public value, must have an owner. Nevertheless, the Roman law notion that certain things ought not be susceptible of private monopoly and control has been influential on English and American law with respect to the manner in which rights in water are addressed.

The English and American common law early recognized that things such as light, air, water and wild animals must remain in "common" until reduced to possession. n172 Because of this heritage, our system does permit some "ownership" of what otherwise might be "public things." To permit this, it has been necessary for our law to recognize several classes of public things. Some things are considered to be public in title but are treated as essentially private in nature, such as public office buildings. The public may be excluded from these with little difficulty. Other things are deemed owned by the state but are considered held in trust for the use and enjoyment of the public. n173 This category would include such things as the federal public domain lands and the beds of navigable waterbodies. n174 Finally, there are things which are considered to be held in common until an approved act reduces them to private possession, at which time the things become the personal property of the possessor. Water itself is viewed as held this way n175 and is so recognized by statute in some states. n176

However, most jurisdictions consider that it is the life-sustaining nature of water that justifies restricting the manner in which rights in water are acquired and as providing the rationale for limitations on the property status of the rights. n177

§ 50.04(c) Specific Limitations: Superior Public Interests.

In *United States v. Willow River*, n178 the United States Supreme Court denied a claim that private water rights were taken as a result of a federal power project. The particular federal interest consisted of a claimed navigational servitude. As noted in § 50.16(h) below, the navigational servitudes operate conceptually like title interests which may have been held back by the federal government when title to the navigable waterbodies passed to the states and are therefore in the nature of an encumbrance upon title that is superior to any interest that was subsequently created under state law. n179 In this case, the navigational servitude may be said to be superior, as much because it was created first as because it is federal in nature.

In a similar sense, federally reserved water rights n180 may be superior to state created water rights because they pre-date the state-created rights. Federal reserved rights are implied by law when public land is set aside for particular reservation purposes. n181 These rights are superior only to those private rights created later in time.

On the other hand, a number of governmental interests have been held to be superior to private water rights as a matter of principle, not just because they may enjoy particular priority under the specific allocation system involved. n182 These include the ability of the state or federal government to manage water for the benefit of the public at large including, specifically, the ability to prevent waste of water, n183 to allocate water for domestic and other uses, n184 to maintain water quality and safety, n185 to protect the public trust in navigable waters, n186 to promote commerce and transportation on water n187 and to provide for minimum streamflow requirements. n188

In Wortelboer v. Benzie County, n189 the court upheld the authority of the state to establish varying lake levels during the year even though, in this case, it produced flooding and erosion and the fish killed created an intolerable stench.

LEXIS: public or government! w/1 interest! w/15 limit! w/15 water! w/1 right!

§ 50.04(d) Specific Limitations: Principles of Reasonable and Beneficial Use.

Most United States water allocation systems limit the substantive nature of the water right by defining the range of acceptable uses to which the water may be put. These uses are variously described as "reasonable" or "beneficial" depending on whether the system is described as a riparian or as an appropriative system. In riparian systems, the limitation is imposed through the doctrine of reasonable use. n190 In appropriative systems the corresponding concepts are known as the doctrine of beneficial use. n191 Both doctrines have the effect of limiting the nature of the water right by establishing a narrow and potentially changing universe of uses to which the water may be put. As applied, if the use

is not acceptable under the relevant doctrines of reasonable or beneficial use, the right to use may be altered or withdrawn or denied. Hence, it may be said that the right to use the water under a water right exists only so long as a reasonable or beneficial use is made of the water.

Further, this limitation is arguably an ongoing one, n192 and it is conceivable that, at some future date, the definitional content of the terms "reasonable" and "beneficial" may change in response to changes in the public interest and circumstances, which at that point in time may result in a change or limitation of existing water rights. This means that not only is the water right presently limited to a particular array of acceptable uses, it is also limited by the possibility of future reevaluation and possible termination. In this sense, the "vesting" of the water right n193 must be said to be subject to a continuing contingency -- that the nature of the use to which the water is put may be reconsidered and, in order for the water right to continue, it is necessary that the use to which the water is put be, at the time of re-evaluation, reasonable or beneficial. The nature of this limitation is such that the water right must be seen as held subject to the implicit caveat that if the use fails to satisfy the system's requirements regarding the character of the use, the right itself may be terminated or modified. n194

COMPUTER-ASSISTED RESEARCH

LEXIS: reasonable or beneficial w/1 use w/15 water! w/1 right!

§ 50.04(e) Specific Limitations: Authority to Change the Rules Regarding "Vesting."

Vested property rights are commonly thought to be among the most secure of rights. Indeed, there is the notion that once rights have vested, they are entitled to the full protection of the law and are immune from governmental invasion. Although a vested water right is typically said to be protected against unreasonable governmental interference, courts have made it clear that the state has some flexibility to determine and change the rules relating to the vesting of water rights. n195

This power largely results from the ongoing connection between the right of access to the water and the manner in which the water is used: existing rights persist only so long as the relevant criteria continue to be satisfied and new rights cannot be created unless the claimant abides the appropriate (albeit somewhat changeable) criteria. It thus cannot be said that water rights, once secured, are forever immutable and beyond governmental modification.

COMPUTER-ASSISTED RESEARCH

LEXIS: vest! w/2 water! w/1 right!

§ 50.04(f) Specific Limitations: Power to Prevent Misuse.

The power to modify is also the result of governmental authority regarding misuse and abuse of the water. This results from the status of the public as the owner of the water and the right holder as the possessor of a lesser, fractioned interest therein. As with "reasonable" or "beneficial," the definitional content of the term "misuse" may also change in meaning over time to reflect changes in society's needs and circumstances such that what is viewed as an acceptable use of the water at one point in time may be considered unacceptable at another. As a result, the water right may be reconsidered and radically altered at some future date, or the quantity available thereunder adjusted or perhaps terminated altogether, simply because the use that is presently not considered to be wasteful may, at that later date, be so considered.

Thus, it may be said that both the vesting of a water right and the question of propriety of use are always contingent upon the continuous satisfaction of specific, but changeable, use-related criteria, and a failure to comply at any time may result in the termination of the right despite their present "vested" status. n196

COMPUTER-ASSISTED RESEARCH

LEXIS: prevent! w/2 misuse! w/15 water! w/1 right!

§ 50.04(g) Specific Limitations: Police Power.

From time to time, it may be determined that the current water right allocation scheme of the jurisdiction is no longer adequate to meet the present and future needs of that jurisdiction. At such a time, the jurisdiction may be interested in making radical or fundamental changes in its water right system. The presence of "vested" rights may be seen as an effective deterrent to such changes where the substantive nature of the right may be altered in the process. However, given the particular nature of "vested" water rights, governments have a surprising amount of flexibility in making such changes. n197

Part of this flexibility is derived from the fact that the management of water resources is considered to be within the scope of the police power of the jurisdiction. This subjects water rights to government's power and authority to restrict where it is necessary to protect the health, safety, welfare or morals of the community. n198 Reasonable restriction of rights may occur under the guise of the police power without exposing the government to liability for "taking" the rights. As a result, courts have allowed some fundamental changes in the nature of basic water right allocation systems. n199

COMPUTER-ASSISTED RESEARCH

LEXIS: police w/1 power! w/15 water! w/1 right!

§ 50.04(h) Specific Limitations: Government as Proprietor of the Resource.

Much of the usable water in the United States arises on public domain land. Although, as a general proposition, states are given great authority over the creation of rights in this water, the federal government retains considerable authority, as the proprietor of the land, to supervise the ultimate use and development of the resource.

At the state level, authority is more extensive. In most jurisdictions, the state is deemed to hold title to the water itself and to have only granted limited rights of access to individuals. As such, the state has considerable authority to supervise the use and management of the water. This is derived from the view that the public not only holds title to the resource but holds that title in trust with an affirmative duty to insure that particular public benefits are derived from its use or exploitation. n200

COMPUTER-ASSISTED RESEARCH

LEXIS: government! or state! or federal w/2 authority w/15 water! w/1 right!

§ 50.04(i) Specific Limitations: Ability of Government to Restrict Unexercised Rights.

Courts have widely recognized that vested, but unexercised, rights may lawfully be treated differently from vested, but fully exercised, rights and in many cases have upheld governmental authority not only to change from a riparian to an appropriative system, n201 but to change the rules by which water rights "vest," such that future, unexercised and unquantified water rights are eliminated. n202

COMPUTER-ASSISTED RESEARCH

LEXIS: government! w/2 restrict! w/15 unexercis! w/1 right! w/2 water!

§ 50.04(j) Specific Limitations: "Priority" Systems Associated with the Allocation of Water Rights.

Most water allocation systems appear to indulge the implicit assumption made when a right is granted or recognized, that there will be a sufficient amount of water available to satisfy the claims represented by the right. Nature, of course, does not always cooperate with that assumption and it is likely that there may be times when the amount of water is not adequate to satisfy some or all right holders. In such a situation, each system has devised rules or a mechanism by which to deal with the shortfall. One consequence of these rules may be that some right holders may be denied the ability to enjoy their rights to the fullest extent. In order to justify any reduction in rights, it is necessary to consider that each right is inherently subject to the claims of all other relevant right holders. In this sense, all water rights are correlative, n203 at least in the sense that each water right is subject to, and affected by, every other water right pertaining to the same water source.

Many jurisdictions have developed priority-based mechanisms for determining which of several competing uses may be preferred over the others or how adjustments are to be made when there is not enough water for all. These rules or mechanisms inherently condition the status of a particular water right upon its relation to higher or lower priority rights, such that the ability to fully use and enjoy the particular water right may be significantly limited by the possibility that a competitor can show superior or preferred status.

In appropriative systems, primary priority is established on the basis of the timing of the use; the first to use is preferred over subsequent users. n204 In these jurisdictions, if water supplies are sufficient to meet the claims of all right holders, the inferior, junior or lower priority rights may be denied water. n205 In some jurisdictions, if the time of use is the same, a further priority structure may be invoked which discriminates between the competing claims on the basis of factors, such as the nature of the ultimate water use itself. n206

Status is relevant for priority purposes, and hence, as an inherent limitation on individual water rights, in riparian jurisdictions, as well. Use of the water by non-riparians, for example, may be tolerated only until the use is challenged by a riparian user who can show that the non-riparian's use is harmful and therefore unreasonable. n207 Likewise, "priority" (in the sense that one claim may be preferred over another) is typically established on the basis of land ownership: those who own land abutting the watercourse are preferred over those who do not. n208 Even among right holders of equal status, that is, those who all own riparian land, there is a basis for possibly elevating one claimant over another through the application of the doctrine of reasonable use. n209 If one's use is not reasonable, it will not be permitted as against a user who is making a reasonable use. n210 Thus, in a very real sense, the scope or extent of a particular right limits its relationship to opposing or competing claims and may be adversely affected or reduced by the ability of the competitor to show superior or protected status. Finally, even where all competing right holders are considered to have equally protected status, rights are co-dependent upon each other in that all rights may be reduced equally or equitably if there is not sufficient water for all. n211

COMPUTER-ASSISTED RESEARCH

LEXIS: priorit! w/15 water! w/1 right! w/5 allocat!

§ 50.04(k) Specific Limitations: Exclusivity of the Right.

The water right must be considered to have both an affirmative and a negative dimension. On the affirmative side, the water right authorizes the water right holder to use and enjoy the water represented by the particular right. Although this right is subject to jurisdictional limitations relating to the beneficial or reasonable nature of that use, it must be considered a positive right which entitles the right holder to a particular benefit. This follows from the usufructary nature of the right. On the other hand, the right has a negative, or exclusionary, dimension to it as well. The water right

holder may exclude anyone else from intruding upon the right. n212 This follows from the perception that right grants an exclusive claim to a particular amount of water for the approved use. As a result, the right holder may not only lawfully exclude others from the specific quantity of water to which the right pertains, but may raise the existence of that right as a potential obstacle to the granting or acquisition of other rights by other potential claimants. This latter feature of the right is evident in the requirement that, for a claim to be reasonable or beneficial, it cannot adversely affect existing rights.

COMPUTER-ASSISTED RESEARCH

LEXIS: exclusiv! or exclud! w/15 water! w/1 right!

§ 50.04(l) Specific Limitations: Duration.

Water rights may be of limited duration. There is considerable variation among the respective states on this issue. In some jurisdictions, the right is perpetual; n213 in others it is for a specified period of time. n214 In some jurisdictions, the right exists only so long as the use continues, n215 whereas in others, it lasts as long as the prerequisite riparian land is owned. n216

(n8)Footnote 176. *See, e.g.*, Kan. Stat. Ann. § 82a-702:

All the water within the state of Kansas is hereby dedicated to the use of the people of the state, subject to the control and regulation of the state in the manner herein prescribed.

See also Proctor v. Sim, 236 P. 114 (Wash. 1925).

(n9)Footnote 177. The California Courts have used a somewhat different rationale -- that one simply can not lawfully acquire a vested right in an unreasonable or otherwise prohibited use of the water. *See Imperial Irrigation District v. State Water Resources Control Board, 225 Cal. App. 3d 548 (1990),* where the court stated: "[t]he historic concepts of water 'rights' in California were dramatically altered by the adoption in 1928 of [a constitutional amendment which empowered the Board to conduct hearings to determine whether particular water uses were reasonable or wasteful]. Our Supreme Court ... acknowledged that the new provision altered previously vested rights ... ." The court then found that "[i]t has been long established that all property is held subject to the reasonable exercise of police power and that constitutional provisions declaring that property shall not be taken without due process of law have no application in such cases." This approach would seem to give the state actually two different ways to reshape a water right without interfering with the "vested property" features of the right: first, it could simply force the elimination of any and all aspects of the resulting use of water that were considered "unreasonable." Second, so long as the state stays within the scope of the police power, the courts recognize that there is no intrusion into the arena of vested rights.

(n15)Footnote 183. *See* § 50.09(w), *infra*.

(n16)Footnote 184. *See* § 50.21, *infra*.

(n17)Footnote 185. *See, e.g.*, Clean Water Act, *33 U.S.C. §§ 1251*-1376.

In *Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency, 34 F. Supp. 2d 1226 (D. Nev. 1999),* a case not directly involving water rights, the court held that an ordinance temporarily prohibiting most construction and a resolution temporarily suspending all permit approvals deprived the owners of all economically viable use of their land. In contrast, the regional plan did not deprive the landowners of all economically viable uses of their land and did not constitute a taking. The ordinances in question were adopted to deal with high hazard lands around alpine lakes and the effect of such lands on eutrophication problems in the lakes. The case is particularly useful for its definition of "economically viable." The court held that the a permitted use of the land is economically viable when a sufficient

number of people would be willing to buy property for that use, whatever it might be. This means the determination is to be made in the context of a "competitive marketplace." If there is only one willing buyer, such as a neighbor, interested in acquiring the land in order to protect the view from the property, there would not be a "competitive" market for the property. The fact that the permitted use might not be one the current owner wants to make does not matter. On the other hand, the fact that someone, such as the government or an environmental group, may be willing to buy the land that can be used only in its natural state does not necessarily mean that leaving the property in its natural state is an "economically viable" use.

In *Barnhill v. City of North Myrtle Beach, 511 S.E. 2d 361 (S.C. 1999),* the court upheld an ordinance that restricted the launching and beaching of motorized watercraft, including personal water craft, on public beaches. This ordinance had been challenged as an unconstitutional restriction on access to navigable waters, as preempted by state law and as a regulatory taking.

The court held that the public's right to access to navigable waters was subject to reasonable regulation and found the ordinance to be reasonably related to the legitimate public interest in public safety. The ordinance was held not to be preempted because the state authority related only to activities "on the water" and would not affect plaintiffs who sought to operate a land-based jet ski rental business. The ordinance was held not to constitute a taking because the beach was governmental property and there is no private right in a particular use of government property.

In *St. Croix Waterway Association v. Meyer, 178 F.3d 515 (8th Cir. 1999),* the court upheld Minnesota's slow no-wake regulations against a challenge that they violated the public trust doctrine.

In *R & R Associates v. City of Providence, 724 A. 2d 432 (R.I. 1999),* it was held that the municipalities and water districts were not liable for the taking of riparian rights. This was because, by statute, only Providence was solely liable for any takings, even when done for the benefit of end-user communities and water districts.

In *Farmers High Line Canal and Reservoir Company v. City of Golden, 975 P.2d 189 (Colo. 1999),* the court refused to allow junior water right holders to seek modification of the city's water rights to impose volumetric limitations.

In *Good v. United States, 39 Fed. Cl. 81 (Ct. Cl. 1997),* the court held that the federal navigational servitude did not constitute a complete defense to a takings claim arising from the denial of an application for a permit to fill wetlands. On the other hand, the court ruled that the Endangered Species Act did not require that the land be maintained in its natural state and thus did not deprive the landowner of all economic value associated with the property. Finally, the court held that the federal and state regulatory regimes were so pervasive that a developer could not have a reasonable expectation of putting into effect the development plans.

Klein, *The Constitutional Mythology of Western Water Law, 14 Va. Envtl. L.J. 13 (Winter 1995).*

In *Board of County Commissioners of Ottowa County v. Village of Marblehead, 711 N. E. 2d 663 (Oh. 1999),* an established sewer district was given authority under a statute to complete a county water service project even though the area had been acquired by a municipality during the pendency of the project. The City argued that the statute violated the state Constitution's grant to municipalities of exclusive rights to supply water service to municipal residents. The court held that the statute authorized a valid exercise of police powers that did not substantially infringe on the municipality's constitutional power to operate utilities.

In *Purdie v. Attorney General, 732 A. 2d 442 (N.H. 1999)* the court used the mean high tide rather than the highest high water mark to determine the public boundary between public and private shorelands. In this case, it was held the state effected an unconstitutional taking by using the higher mark.

For further discussion, *see* Michael A. Heller *Boundaries of Private Property, 108 Yale L.J. 1163 (1999).*

(n32)Footnote 200. *See, e.g.*, Kan. Stat. Ann. § 82a-702:

All the water within the state of Kansas is hereby dedicated to the use of the people of the state, subject to the control and regulation of the state in the manner herein prescribed.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.05

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.05 State Authority Over Water Rights.

[Go To Supp]

§ 50.05(a) Basis for State Authority.

The power to grant or recognize water rights is clearly recognized as within the power of states. n217 This power is deemed to fall to the states as successors to the Crown of England. n218 As such, the states hold title to the beds of navigable waterbodies, n219 as well as to the water itself, n220 and have the authority to determine the particular allocation system that operates within the state. n221 Although courts accept this position as well settled and to have occurred when the state adopted the common law at statehood, as a matter of history, this view actually enlarges the Common Law view and represents an interesting melding of Roman and English Common Law principles.

The Roman law of water and the common law of England approach the problem of control over water from distinctly different perspectives. According to the Roman view, running water was esteemed to be of sufficient life-sustaining value that it was considered not susceptible of private ownership or monopoly. As such, it was considered to be held in common and accessible to all.

In contrast, the English early adopted an association between ownership and access to the water and the ownership of the underlying land. Tidal waters were distinguished from inland waters and the Crown was considered to "own" the bed of the sea out as far as a cannon shot would reach. n222 Inland waters were susceptible of private ownership. n223 The operative assumption of the English position appears to be that from the ownership of the soil is derived the power to control access to the surface of the water. n224

Since the early days of the United States, there has been a considerable evolution in the doctrine of state authority such that it is quite clear that the acquisition of a water right, regardless of whether the claim is based on the ownership of land associated with the water, carries no title to the water itself until the same is actually reduced to possession. n225

It should be made clear that while the state has authority over the issuance of water rights based on its status as successor to the King, its actual power to regulate water rights is grounded in the inherent police power to protect the health, safety, welfare and morals of the community. n226 As such, the states are not dependent upon any grant of such power from the federal government. This is significant where the exercise of a particular federal power may have the

seeming effect of preempting state action. For example, in the cases where federal authority under the Endangered Species Act, n227 apparently impinges upon state granted water rights, the holdings should not be read as displacing state authority over the issuance or granting of water rights. Rather, the cases would suggest that perhaps there is concurrent jurisdiction over the effects that may result from the uses of water that are authorized by the state granted water right. Where those effects violate federal law, there should be federal consequences that will not be excused by the fact that the state initially authorized the use in the first place. Perhaps a useful way to rationalize the apparent conflict between federal and state authority is to suggest that water rights cannot be granted for activities that are illegal or produce unlawful consequences. If illegality results from the exercise of a water right, it would seem that the use authorized by the water right should be characterized as unreasonable or non-beneficial and therefore should be terminated or modified. If the illegality is the result of the failure to conform to a federal law, that should be of little consequence since state law has never pretended to be the sole arbiter of what is or is not lawful or unreasonable. That a state may suppress a state granted water right because the resulting use of the water is deemed unreasonable is abundantly certain. What is uncertain, of course, is whether the federal government has the power to compel the state to make such a determination and take such an action. One possible outcome from these cases may be to only enjoin the activity that offends the federal law and leave the water right intact so long as it can otherwise be exercised in ways which do not offend the federal restriction. n228

COMPUTER-ASSISTED RESEARCH

LEXIS: state! w/1 authority w/15 water! w/1 right!

§ 50.05(b) State Authority Over Water Arising on Public Land.

State authority over the allocation of water is considered to extend to all water resources within the state's boundaries, even though the water actually has as its source, or is physically located upon, the federally controlled public domain. n229 This authority was expressly granted to Western states by statute n230 but has been considered applicable throughout the United States. n231 As a result, those who seek water rights must claim them under the authority of state law. An important exception to this general rule involves federally created or "reserved" rights. n232 There, the priority, quantity and even validity of competing, state authorized claims law may be preempted by the superior federal status of the rights.

COMPUTER-ASSISTED RESEARCH

LEXIS: state! w/1 authority w/15 water! w/5 public w/2 land or domain

§ 50.05(c) Federal Regulatory Authority Over State Created Water Rights.

The federal government possesses and exercises a wide variety of power over water use. Water-related federal authority may affect: 1) the use and obstruction of navigable waterways; n233 2) pollution and the prevention of contamination of water resources; n234 3) the use of the public land where much of the nation's water originates; n235 4) activities which involve interstate commerce n236 and 5) the use of federally developed reservoirs and reclamation structures from which water is made available to users throughout much of the West. n237 Although these laws are not intended to preempt state water right allocation laws, n238 the exercise of federal regulatory authority over water may have the effect of destroying or modifying the state granted water right. n239

As noted above, the federal government may possess rights in water that are superior to state granted rights. Rights, such as the federal navigational servitude, n240 are based on both federal proprietary and superior sovereign concepts. Although these rights do not grant the federal government access to a particular quantity of water for consumptive use purposes, they may permit the federal government to engage in activities involving the waterbodies which may adversely affect or destroy individual consumptive rights. n241 Reserved rights n242 do grant rights in water for

consumptive use purposes and are neither derived from nor dependent upon state law for their existence or their quantification. n243 These rights are considered to be superior to and have priority over state granted rights which are perfected subsequent to the federal right. n244 Finally, the federal government may claim or hold water rights which are secured under state law, in which case the federal government acts as a direct competitor for the water with individual water users. n245

The most subtle dimension of the federal presence arises by virtue of federal jurisdiction over activities which directly or indirectly impair or impede interstate commerce. n246 This power has been justified federal regulation of activities which pollute or otherwise adversely affect watercourses, n247 as well as for compelling the removal of obstructions from navigable waterways. n248 It is also the supporting basis for federal water quality and pollution control legislation. n249 This power, however, typically has not been the basis for dealing with issues of water consumption, state water right allocation, or other water rights questions that traditionally have been treated under state law. The 1982 case of *Sporhase v. Nebraska ex rel. Douglas* n250 may suggest that the Commerce Clause play a role in water right allocation decisions. In that case, the Supreme Court invalidated a portion of the Nebraska water right allocation statute that denied an individual who owned land partly in Nebraska and partly in Colorado from securing a water right in Nebraska for water which then would be used across the state boundary in Colorado. The Court considered water to be an article of interstate commerce and perceived the statute to constitute an unreasonable state barrier. At least part of the Court's rationale for that decision was the concern that Congress have the power, albeit unexercised, to regulate the interstate consequences of groundwater overdrafts. n251

In a 1992 case, a lawsuit was filed n252 by the Sierra Club to compel the federal government to assume control over the Edwards Underground Aquifer in order to protect and insure water availability for minnows, salamanders and wild rice species that live in Comal Springs which are listed as endangered under the Endangered Species Act. n253 Under this act, the Secretary of Interior is required to publish a list of all species determined by the Interior Department or by the Commerce Department to be endangered and then to promulgate such regulations as the Interior Secretary deems necessary and advisable for the conservation of such species. n254 The act indicates that the federal government may acquire water or an interest therein for the purpose of conserving any endangered species or threatened species, n255 though this is to be done through cooperation "to the maximum extent practicable with the states." n256 It would appear such a requirement would require that the federal interest be acquired either through condemnation or pursuant to relevant state law. Further, the language of the statute does not appear to suggest that it is intended to preempt state water rights. Despite what would seem to be a strained interpretation of the statute to construe the provisions relating to cooperation with the states to suggest that to the extent that state created water rights interfere with the specified objectives or prohibitions of the act, the state law or regulation could be considered void under § 1535(f), the judge nevertheless enjoined the state from interfering with the purposes of the federal statute. n257

In addition to the enumerated primary bases of federal control over water, environmental protection may have a similar, albeit indirect effect. This may particularly be the case where areas are reserved for environmentally related purposes, such as national parks and national monuments. Apart from the effect of "reserved" rights for those purposes, discussed at §§ 50-17 and 50-18, the Wilderness Act of 1964, *16 U.S.C. §§ 1131*-36, other aspects of the Wilderness Act may have an impact on states and others activities in those areas that involve claims to the use of the water. In *United States v. Gotchink, 57 F. Supp. 2d 798 (D. Minn. 1999),* the court considered the prosecution of two Chippewa Indians who used a motorized boat and a power ice auger to exercise their treaty-protected fishing rights in the Boundary Canoe Area Wilderness (BCAW) area contrary to the BCAW regulations. The court held that Congress had not preempted the treaty rights of the Indians but could regulate the scope of the content of those rights to the extent that they were the result of valid, non-discriminatory conservation measures. Under this construction of Indian rights, the Indians could not use the boat, but could use the auger.

(n37)Footnote 253. *16 U.S.C. §§ 1531*-1544.

The judge in the *Edwards Aquifer* case allowed the Texas legislature until May 31, 1993 to develop a management plan for the aquifer. If the legislature failed to meet the court's mandate, the judge authorized the U.S. Fish and Wildlife Service to intervene. *See* U.S. Water News, April, 1993, at 1. One response of the Texas legislature was to establish a water bank under which the Texas Water Development Board was given the authority to purchase, sell, hold and transfer water and water rights. The plan particularly calls for the acquisition of rights in the Guadalupe River which will be pumped and stored for later use in the Edwards-Trinity Aquifer. *See* U.S. Water News, Nov. 1993, at 13. In addition, the state can function as a negotiator between buyers and sellers of the water rights that may be "deposited" or listed with the water bank. A permit granting surface water rights will be protected for ten years while "deposited" in the bank. The board was not given exclusive rights to handle transfers of water rights and such transfers can take place outside of the bank. *Id.*

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.06

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.06 Non-Consumptive Uses.

[Go To Supp]

§ 50.06(a) In General.

A non-consumptive use of water is ordinarily defined as any use that neither diminishes the supply available to other users nor adversely affects its quality. As a general rule, the right to make non-consumptive use of the water may be enjoyed by both the public at large and by riparian landowners.

Non-consumptive rights traditionally have included the rights of ingress and egress from the water, boating, bathing, fishing, wharfing and, in at least some jurisdictions, the right of view. n258 In recent decades, some jurisdictions have also included the right to make recreational use of the water. n259

Non-consumptive use rights are sometimes referred to as riparian rights because they tend to implicate the question of title to the banks or beds of the waterbodies. n260 This is probably because neither the quantity nor the quality of the water is affected by the particular use, and access to the water has historically been seen as turning on the question of title to either the upland or the bed beneath the water. These rights, however, should not be confused with consumptive use riparian rights which are discussed *infra*.

There appear to be two distinct classes of claimants of non-consumptive use (riparian) rights: individual landowners who claim such rights based upon their title to the riparian land that borders on the water and members of the public at large who claim based upon public title to the beds underlying the water. n261 The rights claimed in each case are substantially identical. n262

In recent years, there has been a growing interest in the international implications of non-consumptive use on shared waterbodies and waterways. n263

COMPUTER-ASSISTED RESEARCH

LEXIS: non-consumptive or riparian w/1 use! w/5 right! water!

§ 50.06(b) General Limitations on Rights.

Traditionally, non-consumptive use rights attach to the high seas, inland waterbodies, bays, rivers and lakes but do not attach to swamp or overflow lands (which are covered by water only at times of flooding). n264 Such rights also do not appear to attach to artificially created waterbodies. n265 Rights of this type involving waters of the sea or the ocean are technically referred to as littoral rights rather than riparian rights and are limited by state rules regarding public access below the mean high water mark. n266 Under the common law, the boundary for proprietary purposes was the ordinary high tide mark, which would suggest that unless the state has broadened access, the public claim to rights of this type would ordinarily be greater than the private upland ownership-based claim. n267

All non-consumptive use right holders, whether individual landowners or members of the public at large, compete among themselves for access to the water and are generally considered to be co-equal n268 regarding their entitlement to use the water. n269 In this sense, their rights may be said to be correlative. n270

The right to make particular non-consumptive uses of the water is generally permitted only to the extent that the uses may be considered acceptable under the doctrine of reasonableness. n271 This means that the particular uses of any particular individual must be balanced against the uses of all other right holders. n272

§ 50.06(c) Specific Public Rights: Ingress and Egress from the Water; Passage Along the Foreshore.

This particular right appears to be derived from the early notions that a major function of the common law of water rights was to insure that those that owned land adjoining water should have access to the water for purposes of making use of the water. n273 Lawful access has therefore been considered a required prerequisite to the making of particular uses. In the context of non-consumptive uses, the law appears to assume that title to land, the upland in the case of individual riparian right claimants and title to the bed of the waterbody in the case of the public at large, is the ultimate source of the right of access.

It appears that the right of access in the case of the general public may differ somewhat from the right of access of the individual riparian landowner. In the case of public title, the right appears to be coterminous with the extent of title. n274 Since, in many jurisdictions, the boundary of public title is described as the ordinary high water mark, the public would have the right of access only below the high water mark. This is sometimes described as a right of passage along the foreshore. As a general rule, public water users must have lawful access to the water itself n275 and generally would not have the right to trespass across land owned by private landowners above that mark. n276 It has been held that there may be a limited right of portage onto private land to avoid barriers. n277

Private riparian landowners claiming non-consumptive use rights may have rights of user that extend beyond the boundaries of their title. Clearly, where their land abuts streams, the beds to which are held in title by the public, they would have the same rights of access to the water as would the general public. n278 Where the stream or lakebeds are not held in public title, the upland landowner may hold title to the entire bed of the stream or lake and, therefore, could enjoy the right of access to the entire surface, though the general public may not have a similar right of access. n279 Where the upland owner owns only a fraction of the bed, the landowner may enjoy a right to use the entire surface, even though that involves access to water beyond the particular dimensions of the owner's title. n280

§ 50.06(d) Specific Public Rights: Boating, Bathing and Fishing and Other Commercial Uses of Water.

Traditionally, these specific rights have carried a strong commercial connotation. n281 This is probably derived from the early notions that waterbodies that are large enough to support and sustain widespread public use and enjoyment should be available for such use but those which could not, should not. It was logical and convenient under that view to focus on the commercial utility of the waterbody to make that determination.

In recent decades, there has been a considerable movement in the direction of including recreational activities within the scope of the protected rights. For example, a number of states n282 have adopted so-called recreational boatability tests to determine whether the waterbody should be considered open to public access.

It should be noted that the right to fish does not automatically entitle anyone to actually remove fish from the water. Because fish are typically considered wildlife, the right to fish may require further public permission in the nature of a license. Quantities of fish taken may also be subject to public limitation. Therefore, the right to fish, as well as other non-consumptive use rights, n283 should be considered a right of access to the water for that particular purpose. Permission to engage in the actual activity involved may require additional permission.

COMPUTER-ASSISTED RESEARCH

LEXIS: limit! w/5 non-consumptive or riparian w/1 use! w/5 right!

§ 50.06(e) Specific Public Rights: Wharfing.

Wharfing is generally used to refer not only to the specific activity of constructing wharves, n284 but to other activities which involve physical occupation of the water with structures or with dirt. n285 Such activities, however, must not unreasonably interfere with others' lawful rights of access. n286 In one case, the court held that an individual had the lawful right to temporary anchorage of a houseboat but did not have the right to permanently affix the boat as if it were an island in a way that would interfere with the rights of access to the lake by upland owners. n287

COMPUTER-ASSISTED RESEARCH

LEXIS: wharfing w/15 public w/1 right!

§ 50.06(f) Specific Public Rights: View.

Where the right of view is recognized as a non-consumptive use right, it is considered limited to the right of an unobstructed view over only the right holder's own interest and does not extend over all of the water that the land faces. n288

COMPUTER-ASSISTED RESEARCH

LEXIS: view w/15 public w/1 right! w/15 water!

§ 50.06(g) Relation Between Consumptive and Non-Consumptive Uses.

The rigid compartmentalization of traditional water rights n289 has complicated the relationship between consumptive and non-consumptive use rights and has sometimes relegated non-consumptive use rights to a position of lesser importance. n290

Clearly, the conflict between the two is difficult to deal with for if the water is allowed to be withdrawn from the source of supply, it will not be there for any non-consumptive users to enjoy. If the source of supply is totally depleted for consumptive use purposes, non-consumptive use automatically becomes impossible. On the other hand, if non-consumptive uses are given the larger measure of protection, the ability to make consumptive uses will necessarily be diminished.

Nevertheless, there are a few cases in which non-consumptive uses have been given protection against competing consumptive uses. For example, in Taylor v. Tampa Coal Co., n291 the defendant was enjoined from pumping water

from the lake for irrigation purposes and thereby lowering the level of the lake in order to protect the recreational use rights of boating, bathing, picnicking and fishing. In Sanitary District v. United States n292 the Sanitary district was enjoined from diverting water in quantities which would have lowered the level of the Great Lakes and thereby prevented the riparian owners from using their docks and wharfs to access the water for commercial activities.

In most cases, the non-consumptive use right most sought to be protected will be the right to engage in recreational activity. In the past, the difficulty associated with protecting such a right under the non-consumptive approach has been the reluctance to consider recreation a "commercial" use. On the other hand, the difficulty associated with trying to protect it within the paradigm of consumptive use has been the reluctance of jurisdictions to recognize recreation as the kind of activity for which water could or should be appropriated because it involved an instream kind of use and did not require any diversion or removal of the water from the watercourse.

In recent decades, an increasing number of jurisdictions have broadened their consumptive use statutes to facilitate the acquisition of water rights for the purpose of recreation. n293 The argument in favor of such an expansion is that recreation is the kind of use for which investment may be expected and the way to insure the investment that is likely to generate the erection of recreational facilities or stimulate the improvement of the waterbodies upon which such recreation is likely to occur is through the security that consumptive use water rights offer.

The argument that favors continuing to expand non-consumptive doctrines to accommodate recreational use is two fold: 1) such an approach eliminates the need for anyone to secure any formal permission to engage in the activity -- if the status of the waterbody permits public non-consumptive uses, then the public may engage in such activities as a matter of right; 2) consumptive water rights tend to be considered to be exclusive which may empower those who hold the consumptive recreational use rights to exclude members of the general public or to extract other types of permission to engage in the activity (such as user fees, licenses, etc).

For further discussion generally, *see also* Bruce Elder, *Judicial Recognition of the Public Interest in Water Recreation: Nebraska and United States Supreme Court Realities*, 15 Pub. Land L. Rev. 199 (1994).

§ 50.06(h) Private Non-Consumptive Use Rights.

Private rights are derived from the fact of ownership of the land that borders on the watercourse. n294 Historically, the purpose of the rights seems to have been to insure that the upland landowner had access to water frontage in order to develop improvements necessary to commerce, navigation and fishing. n295

While these rights generally tend to be considered the same as those possessed by the public at large, discussion in the cases sometimes has focused on whether the upland landowner had the right to exclude the public at large from the waters that front particular parcels of land. n296 In most, the rule appears to be that the private rights must defer to the public rights and this matter will generally be resolved based on the presence or absence of public rights. n297

Where the state holds title to the bed of the watercourse, the state may grant exclusive access to the area between the state boundary, generally the ordinary high water line, and the edge of the water, which may effectively cut the riparian landowner off from the water. n298 Further, the upland owner's ability to exercise recognized rights of access or wharfing may be considered implicitly subject to a greater public right of use to the same area. n299

LEXIS: private w/5 non-consumptive w/1 use w/5 right!

§ 50.06(i) Navigability as the Traditional Basis for Public Non-Consumptive Use Rights.

Traditionally, the general rule was that the public at large had the right of access to waterbodies for the purpose of making non-consumptive uses only where the bed of the waterbody was determined to be held in public title.

The state is generally considered to hold title to the beds of all waterbodies that are "navigable" as a matter of law. n300 According to legal theory, title to the beds of inland waterbodies passed to the states at the time of statehood if the waterbody satisfies the following criteria: 1) that the stream has the capacity 2) in its natural condition 3) to sustain commerce 4) according to traditional modes of trade and travel over water 5) as of the date of statehood. n301 It is generally undisputed that the waters of the sea are available for public use as they are considered navigable. n302

The rationale for this approach appears to be the presumption that waterbodies that are large enough to support significant public commercial use ought to be open to the public at large for all related kinds of activities. n303 Therefore, the central focus of the navigability determination is upon the size and nature of the watercourse.

§ 50.06(j) Determining Navigable Status: Capacity for Commercial Use.

Whether a particular waterbody is navigable is a question of fact and generally will not be judicially noticed. n304 Since navigability at the time of statehood must be proved, the most reliable indicia tend to be historical patterns of commercial use. Since details of such a history will often be lacking, courts have demonstrated a propensity to accept a surprisingly meager amount of evidence of commercial activity, such as the floating of logs, n305 or the passage of a boat load of livestock, n306 to justify the conclusion that the waterbody was navigable at the time of statehood. The historic capacity for commercial use may be inferred from more recent use or even from present use. n307

LEXIS: navigable w/1 status w/15 commercial w/1 use!

§ 50.06(k) Determining Navigable Status: Natural Condition of the Waterbody.

It has been held that recent improvements are not relevant to the issue of determining navigability at the time of statehood since the issue is one of the natural condition of the waterbody. n308 Nevertheless, courts have determined waterbodies to be navigable despite a significant recent reduction in size or capacity. n309 There appears to be no particular depth, width or volume required, n310 and it has been held that "occasional difficulties in navigation" will not preclude a finding of navigability. n311

§ 50.06(m) Determining Navigable Status: Meander Lines.

Early surveyors were instructed to identify bodies of water that were of sufficient size to be included within those trust lands. The lines by which the surveyors identified the boundaries of waterbodies for that purpose have been referred to as "meander lines." The fact that the waterbody is represented on the early federal surveyor's maps by socalled "meander lines" is considered to create a rebuttable presumption of navigability, though such a designation is not generally considered particularly persuasive. n313

COMPUTER-ASSISTED RESEARCH

LEXIS: navigable w/1 status w/15 meander w/1 line!

§ 50.06(n) Public Access to Navigable Waters.

Public non-consumptive use rights include rights of boating, bathing, fishing, ingress, egress, passage along the foreshore, travel and commercial transportation over the waters, wharfing, recreation and, sometimes, view. n314 As a general rule, the exercise of the rights must be reasonable and must not unreasonably interfere with the lawful rights of others. n315 It has been held that as between public and private holders of non-consumptive use rights, the rights of the public at large prevail over the rights of individual private riparian landowners. n316

The public right of use may extend, under certain circumstances, above the water line to include rights to use the beach or foreshore. The geographical boundaries of public use in most jurisdictions appears to be the physical extent of public title to the beds underlying the waterbodies. n317 That is, the public rights can only be exercised on waters that cover land owned by the public or on dry land below the landward boundary of public title. In most jurisdictions, and the federal government, the boundary between public and private land is the ordinary high watermark. n318

As a general rule, before the public is entitled to exercise any nonconsumptive use rights, the public must have lawful access to the water. n319 This may be a problem where private landowners own all the land adjacent to the watercourse. n320 Under certain circumstances, it has been held that the public can condemn or purchase access to the water. n321

The problem of access to the dry beach area adjoining waterbodies has been a difficult problem in many jurisdictions. The general rule appears to be that the public right of access pertains only to the area below the mean high water mark or seaward of the "dry sand" unless the public has acquired the right of access across the private land. n322

The public right across the dry sand has been established in a number of jurisdictions on a variety of theories such as municipal ownership of the dry sand, n323 public trust, n324 prescription, n325 public dedication, n326 implied dedication of recreational easements, n327 and custom. n328

Where a public right to beach access is recognized, it is generally considered to belong to the public at large, not just to residents of a municipality which owns portions of the dry sand. n329 Some states have sought to statutorily identify and delineate the extent of public beach access rights. n330

§ 50.06(o) Traditional Public Rights in Non-Navigable Waters.

The traditional rule has been that if the waterbody is not navigable for purposes of vesting title in the state, it is not considered open for purposes of public non-consumptive use. n331 In that situation, the riparian landowner is deemed

to hold title to the bed n332 and may exclude the public from the premises. n333 It has been held that landowners in jurisdictions following the traditional rule may even erect fences to keep the public out, so long as the structures do not impede the flow of the water and are not constructed with malicious intent. n334 In some jurisdictions, intruders have been considered to be criminal trespassers and have been prosecuted accordingly, even though there is no physical contact with the bed or bottom of the waterbody. n335

The traditional rule of no access to non-navigable waterbodies has been modified somewhat to accommodate the relationship between private landowners, such that the owner of land underlying the beds of such waterbodies may not exclude other landowners who also have an interest in the same beds. n336 Thus, other individual riparian landowners may be able to use the entire surface of the non-navigable waterbody, except perhaps where the waterbody has been artificially improved. n337 Where an artificial improvement has been used for a significant length of time, however, some courts have treated the waterbody as if it were a natural one and have refused to allow the landowner to return it to its natural state or prevent access thereto. n338

§ 50.06(p) Non-Traditional Approaches to Public Access to Non-Navigable Waters for Non-Consumptive Use Purposes.

There has been dissatisfaction in a number of jurisdictions with the traditional approach to the question of public nonconsumptive use access, particularly as that relates to recreational use of water. Two concerns seem to dominate. First, there is concern that the traditional focus on commercial use in the determination of navigability may be unrealistically narrow and, as a result, may exclude the public from making other appropriate uses, such as recreational use, of many water courses which are of sufficient size to support that kind of activity. Second, there is concern that having to formally adjudicate the navigability-based title status of each individual waterway, before it may be known whether the public has lawful use rights to such waters, is wasteful of public resources and leaves the matter of public access too uncertain. A number of jurisdictions have therefore been persuaded to depart from the traditional approach and to grant public access on some other basis. It is probable that as a result of these changes, the traditional rule that the public has access only to navigable waters is followed only in a minority of jurisdictions. n339

Jurisdictions seeking to broaden public rights of access have adopted a variety of approaches to the problem. Some have redefined navigability in terms that permit public access to a greater number of waterbodies. n340 Others have developed alternative methods of identifying those waterbodies which should be susceptible to public use which base the right of public access on some other footing than the "navigable" status of the waterbody, such as upon the fact of public ownership of the water itself or upon the susceptibility of the water to non-consumptive use. n341

§ 50.06(q) Non-Traditional Approaches: State Authority to Change Definitions of Navigability.

Although the question of navigable status, for purposes of passing title to the state upon statehood, is a federal question, n342 what the state does with the waterbodies, and even title to the beds, is a question of state law. n343 As a result, a number of states have determined that they have the legal authority to extend public access beyond waters to which the public had access under traditional rules and concepts. This is based upon analogous changes in federal law involving the concept of navigability. There, various definitions have been formally given to the concept of navigability under federal law depending upon the purpose for which the definition may be relevant. For purposes of passing title to the states at the time of statehood, the law has followed the constant definition announced in the *Holt State Bank* case. For purposes of admiralty jurisdiction, federal authority extends to all waters, fresh or salt, with or without tides, natural or artificial, which are in fact navigable in interstate or foreign water commerce. n344 This definition is broader, in many respects, than the "navigability for title" definition. It has also become fairly fixed in terms of content. For purposes of

federal regulation, the definition has undergone considerable evolution, beginning with a definition similar to that of maritime law, basing federal authority to regulate upon whether the waterbody was "navigable in fact" and actually in use for purposes of navigation. n345 Regulatory authority was later extended to waterbodies "which once were navigable." n346 Further evolution occurred when authority was extended over waters which could be made navigable "by reasonable improvement," n347 and then to tributaries of navigable streams. n348 More recently, the federal government has departed from any requirement that the waters be navigable at all for certain kinds of regulation, such as over dredge and fill activities. For those purposes, the law simply requires that the waters be "waters of the United States." n349 All of this suggests that there is nothing inherent in the concept of navigability that limits state or federal regulatory authority, except to the extent that the state may adopt the federal title definition as its regulatory definition. If public access is seen as a function of the state police power, it is arguably subject to limitations on that power. Arguably, since a property right is involved, the exercise of the power may not be confiscatory. Otherwise, the jurisdiction should have considerable power to redefine navigability.

COMPUTER-ASSISTED RESEARCH

LEXIS: state! w/15 change! w/5 definition! w/2 naviga!

§ 50.06(r) Non-Traditional Approaches: Broad State Definitions of Navigability.

Some states have defined navigability for purposes of state law rather broadly, primarily in an effort to enhance opportunities for public recreation. n350 One of the most common definitional changes of this type has occurred in jurisdictions that have employed the so-called "recreational boatability" test. n351 These jurisdictions typically define a waterbody as navigable if it is large enough to support use by pleasure boats. n352 Other jurisdictions have adopted even less stringent definitions, requiring nothing more than the capability of floating a canoe or a saw-log. n353 Most far-reaching appear to be states which define navigability in terms of actual capacity for public recreational use. n354 Many of these definitions have the practical and legal impact of extending public rights of access to waterbodies to which the state cannot claim title under the federal navigability test and suggest that the fact that the state does not have title may not necessarily invalidate the public right of access. Indeed, it has been suggested that the primary reason that the traditional concept of navigability is used is simply because it is the traditional way by which the problem has been addressed. n355

COMPUTER-ASSISTED RESEARCH

LEXIS: state! w/15 broad! w/5 defin! w/2 naviga!

§ 50.06(s) Non-Traditional Approaches: Public Trust.

State attempts to divest the title to beds of navigable waterbodies, or to relinquish the authority to control the use of the water, have been held to be governed by the public trust doctrine. n356 In such a case, courts typically consider whether the jurisdiction has violated the objectives of the public trust under which the lands are deemed held. n357 The public trust doctrine has generally been considered to apply only to the title interest of the state in the land under the waters. n358 In several California cases, the doctrine has been used to justify control over the water itself. n359 Although several jurisdictions have broadened public access to non-navigable waters in this fashion, n360 at least one decision has declined to do so, on the grounds that legislative, rather than judicial, action is required before public rights can be extended beyond waters not navigable for title. n361

In recent years, there has been an interest in expanding the public trust and using it as a means for dealing with a broad spectrum of water right allocation issues. n362

COMPUTER-ASSISTED RESEARCH

LEXIS: public w/1 trust w/15 naviga!

§ 50.06(t) Other Non-Traditional Approaches.

A number of other approaches have been used to broaden public access to traditionally non-navigable waterbodies. At least one state has relied on pre-statehood legislation to find a right of public access. n363 There, early treaties were interpreted to give the public a right of access to "the great rivers." In other states, access has been based on the concept of public dedication n364 or on claimed prescriptive use rights. n365 Finally, some states have found language in the state constitution that could be used as the basis for granted expanded public assess. In *Montana Coalition for Stream Access v. Curran*, n366 for example, the court found support in both the State Constitution and state ownership of the water and in the fact that the waterbody in question could support the use. Private title to the bed was expressly declared to be irrelevant. n367

FOOTNOTES:
(n1)Footnote 258. James Wadley, *Summary Guide to Florida's Water Rights* 4, U. Fla., I.F.A.S. Circular #412 (1976). *See also Wilbour v. Gallagher, 462 P.2d 232 (Wash. 1969). See also* Carroll Dunscombe, Riparian and Littoral Rights 7 (1970).

Montana has a statute that regulates the public use of streams and associated lands. *See* Mont. Code Ann. §§ 23-2-301. This statute has generally been construed to grant to the public the right to use the beds and banks of streams up to the ordinary high-water mark even though fee title to such lands may be privately held. *See Montana Coalition for Stream Access v. Curran, 682 P.2d 163 (Mont. 1984).* The court in *Curran* held that any surface waters that are capable of recreational use may be so used by the public without regard to stream bed ownership or navigability. The public right to use land in conjunction with the exercise of that right was limited in a subsequent case, *Galt v. State Department of Fish, Wildlife, and Parks, 731 P.2d 912 (Mont. 1987).* There, the court held that the public right to use land below the high-water mark existed only to the extent necessary for utilization of the water itself and public authorization of such lands for such activities as the building of duck blinds, boat moorages, camping or big game hunting constituted an unconstitutional confiscation of private property. The court also invalidated as unconstitutional a provision of the statute that required the landowner to bear the cost of constructing portage routes around artificial barriers.

For further discussion generally, *see also* Bruce Elder, *Judicial Recognition of the Public Interest in Water Recreation: Nebraska and United States Supreme Court Realities*, 15 Pub. Land L. Rev. 199 (1994).

(n3)Footnote 260. *See, e.g.*, Note, *Riparian Property Rights: Kansas Law of Riparian Ownership, 21 Washburn L.J. 96 (1981).*

(n4)Footnote 261. Early cases construed English law as apparently having identified several categories of streams to which variations of these rights might attach. In *Wood v. Fowler, 26 Kan. 682 (1882),* the court referred to the English rule and identified three such categories:

> First, those small streams, which could not be used for any purpose of navigation, in which title to the soil was in the riparian owner, and along which the public had no rights of highway or otherwise; and intermediate class, in which the riparian owner owned to the middle of the channel, but along whose stream the public had all the rights of a highway; and a third that which was called technically the

navigable stream, where the title to the bed of the stream was in the sovereign, and all rights were in the public.

(n5)Footnote 262. For further discussion, *see* Raez Rahman, *The Law of Non-Navigational Uses of International Watercourses: Dilemma for Lower Riparians, 19 Fordham Int'l L.J. 9 (Oct. 1995);* Ann Brown, *Mother Nature and Missouri's River Boundaries*, 51 J. Mo. St. B. 37 (Jan.-Feb. 1995).

See Stupak-Thrall v. United States, 70 F.3d 881 (6th Cir. 1995) (upholding federal authority to regulate private, riparian use of a lake within a wilderness area), *vacated, 81 F.3d 651 (6th Cir 1966), affirmed* by an equally divided *en banc* court, *89 F.3d 1269 (6th Cir. 1996).* The case was back before the court in *Stupak-Thrall v. Glickman, 988 F.*

Supp. 1055 (WD Mich. 1997). Here, the court held that the Forest Service could not bar motorboats from using a lake within a Wilderness Area where the right to use the lake was a prior existing riparian right. The court further held that such a restriction, if imposed, would constitute a "taking" of property in violation of the Constitution.

It has been held that notwithstanding the right to bathe, municipalities can lawfully close beaches and prohibit bathing under certain conditions. *See State v. Oliver, 727 A. 2d 491 (N.J. Super. 1999).*

(n26)Footnote 283. For example, even though the landowner may have a riparian right to wharf, a building permit for the actual construction may be required.

In *Kraft v. Burr, 476 S.E.2d 715 (Va. 1996),* the court held that the king could properly convey title to land under navigable waters to private individuals and on the basis of that title, the landowners could enjoin fishermen from fishing or wading in the river running over the lands.

(n27)Footnote 284. *See, e.g., Johnson v. Bryant, 359 So. 2d 433 (Ala. 1977).*

See also W. Mich. Dock v. Lakeland Inv., 534 N.W.2d 212 (Mich. App. 1995). In Massachusetts, the historic "great ponds" have been held to be open to common use though this has been held not to include the right to erect structures in the pond. *United States v. Grabler, 907 F. Supp 499 (D. Mass. 1995).*

ABKA Ltd. Partnership v. Wis. Dep't of Nat. Res., 573 N.W.2d 900 (Wis. App. 1997) (involving the application of the public trust doctrine to the number of boat slips on a lake that must be available for public rental).

For limits on the right to wharf, *see Nagawicka Bay Sailing Club Owner's Ass'n v. Wis. Dep't of Nat. Res. 570 N.W.2d 911 (Wis. App. 1997),* holding that it was proper to limit the extent to which a pier extended into a lake on the basis of potential adverse environmental effects.

See also Sea Cabin on the Ocean IV Homeowners Ass'n v. City of North Myrtle Beach, 828 F. Supp. 1241 (D. S.C. 1993) (pier was appurtenance owned by homeowners' ass'n and public had no right to walk or fish from pier); *Jacobs v. Lyon Township, 502 N.W.2d 382 (Mich. App. 1993)* (erection of a nonexclusive dock at end of road which permitted reasonable public use of the lake for boating, fishing and swimming was within power of township. Public sunbathing, lounging and picnicking exceeded authority).

See also an unreported Rhode Island Superior court decision, *Harbor Realty v. Coastal Resources Management Council, 1999 R. I. Super. LEXIS 63* (CA No. PC 97-2747, Feb. 19, 1999) involving the right to construct a new commercial fishing facility in Newport harbor. The court refused to overturn a council determination that the *construction would not impair any existing riparian rights.*

See also Tumino v. Long Beach Township, 725 A. 2d 1173 (N.J. Super. 1999) (the court held that the coastal zone management rules promulgated by the Department of Environmental Protection preempted an ordinance governing the length of docks); *Cove Properties, Inc. v. Walter Trent Marina, Inc., 702 So. 2d 472 (Ala. Civ. App. 1999)* (describing the right to wharf out as terminating at the point of navigability).

(n29)Footnote 286. *Bach v. Sarich, 445 P.2d 648 (Wash. 1968).*

See also an unreported Rhode Island Superior court decision, *Harbor Realty v. Coastal Resources Management Council, 1999 R. I. Super. LEXIS 63* (CA No. PC 97-2747, Feb. 19, 1999) involving the right to construct a new commercial fishing facility in Newport harbor. The court refused to overturn a council determination that the construction would not impair any existing riparian rights.

(n30)Footnote 287. *West v. Smith, 511 P.2d 1326 (Idaho 1973)* (houseboat had been moored for 27 years before objections were raised).

(n31)Footnote 288. Carroll Dunscombe, Riparian and Littoral Rights 2 (1970).

In *Bubis v. Kassin, 733 A. 2d 1232 (N.J. Super. 1999),* inland lot owners brought an action against oceanfront landowners, the village and the Department of Environmental Protection alleging that the construction of a berm and fence restricted their access to the beach and interfered with their view of the ocean. The court held that the inland landowners had a right of access to the beach sufficient to contest the legality of the fence but in the absence of any restrictive covenants, a property owner has no right to an unobstructed view across a neighbor's property.

(n32)Footnote 289. *See* § 50.02, *supra*.

(n33)Footnote 290. *See* discussion in *People v. Emmert, 597 P.2d 1025 (Colo. 1979),* of the provision in the Colorado Constitution that declares all water of the state to be public property to apply only to the allocation of water for consumptive use purposes.

(n34)Footnote 291. *46 So. 2d 392 (1950).*

(n35)Footnote 292. *266 U.S. 405 (1912).*

(n36)Footnote 293. *See, e.g.,* Nev. Rev. Stat. § 533.030(2) which provides that "use of water ... for any recreational purpose is beneficial use." This statute was the apparent basis for the recognition of a water right in the United States Bureau of Land Management to maintain the level of water in a lake sufficient for recreational purposes. *See Nevada v. Morros, 766 P.2d 263 (Nev. 1988).*

(n37)Footnote 294. *See,* Note, *Riparian Property Rights: Kansas Law of Riparian Ownership, 21 Washburn L.J. 96 (1981).*

(n38)Footnote 295. *See Fowler v. Wood, 85 P.2d 763 (Kan. 1906).*

In *Hale v. Colorado River Mun. Water, 818 S.W.2d 537 (Tex. App. 1991),* the court recognized that the riparian landowner enjoyed a right in the quality of the water that could not be taken without just compensation. In this case, the quality was adversely affected by the presence of chloride-saturated spillage.

See Stupak-Thrall v. United States, 70 F.3d 881 (6th Cir. 1995) upholding federal authority to regulate private, riparian use of a lake within a wilderness area), *vacated, 81 F.3d 651 (6th Cir 1966), affirmed* by an equally divided *en banc* court, *89 F.3d 1269 (6th Cir. 1996).* The case was back before the court in *Stupak-Thrall v. Glickman, 988 F. Supp. 1055 (WD Mich. 1997).* Here, the court held that the Forest Service could not bar motorboats from using a lake within a Wilderness Area where the right to use the lake was a prior existing riparian right. The court further held that such a restriction, if imposed, would constitute a "taking" of property in violation of the Constitution.

See also Statler v. Catalano, 691 N.E.2d 384 (Ill. App. 1997) (private use of nonnavigable lake).

(n39)Footnote 296. *See, e.g., People v. Emmert, 597 P.2d 1025 (Colo. 1979).*

(n40)Footnote 297. *See Capune v. Robbins, 160 S.E.2d 881 (N.C. 1968).*

(n41)Footnote 298. *See Silver v. Dreyer, 327 P.2d 1031 (Kan. 1958).*

(n42)Footnote 299. *See Capune v. Robbins, 160 S.E.2d 881 (N.C. 1968).* Undoubtedly this situation has led commentators to suggest that the public right, if present, is paramount to the private right. Professor Johnson has argued

that private riparian landowners' rights have been restricted in the state of Washington in waters, the beds of which are publicly owned, where those rights are in conflict with the constitutional power of the state to control those waters. *But see* Johnson, *Riparian and Public Rights to Lakes and Streams, 35 Wash. L. Rev. 580 (1960).*

(n43)Footnote 300. *United States v. Oregon, 295 U.S. 1 (1935); Oregon v. Corvallis Sand & Gravel Co., 429 U.S. 363 (1977).*

In *State v. Plaquemines Parish Govern., 652 So. 2d 1 (La. App. 1994),* the court needed to determine whether particular lands were held by the state as school trust lands or were beds of nonnavigable waters. Those lands in question that were subject to the ebb and flow of the tide on April 12, 1812 were deemed to belong to the state regardless of their navigability. These lands were not part of the state school trust lands because title did not come to the state as part of the grant of such lands out of the public lands by the federal government. Those that were navigable, but not affected by the ebb and flow of the tide, would also belong to the state and not be part of the school trust lands because title passed to the state by virtue of their navigability. Only those lands under nonnavigable rivers and streams that were not tidelands would be subject to the school land trust.

In Massachusetts, the historic "great ponds" have been held to be open to common use though this has been held not to include the right to erect structures in the pond. *United States v. Grabler, 907 F. Supp. 499 (D. Mass. 1995).*

See also Dubois v. United States Dep't of Agric., Civil No. 95-50-B (N.H. 1995).

It has been held that some claims of the Indians against the state are barred by the Eleventh Amendment. In Idaho v. Coeur d'*Alene Tribe of Idaho, 117 S. Ct. 2028, 138 L. Ed. 2d. 438 (1997),* the Supreme Court ruled that claims regarding title to the bed of the lake within the boundaries of the reservation were the functional equivalent of a quiet title action and did not come within the doctrine of *Ex Parte* Young and were therefore barred by the Eleventh Amendment.

See also Statler v. Catalano, 691 N.E.2d 384 (Ill. App. 1997) (private use of nonnavigable lake); *Atlanta Sch. of Kayaking v. Douglasville-Douglas County Water and Sewer Authority, 981 F. Supp 1469 (N.D. Ga. 1997)* (challenge to resolution granting access to reservoir and boat ramp only to residents of the county. Injunction issued).

See also United States v. Nye County, 920 F. Supp. 1108 (D. Nev 1996), holding that title to dry federal lands did not pass under equal footing doctrine to the state at time of statehood.

Compare George v. Director, 86 F.3d 1162 (9th Cir. 1996) (Navigability for maritime purposes); *Rizzi v. Underwater Constr. Corp., 84 F.3d 199 (6th Cir. 1996)* (navigability for purposes of Longshore and Harbor Workers' Compensation Act).

In *Kraft v. Burr, 476 S.E.2d 715 (Mich. App. 1996),* the court held that the king could properly convey title to land under navigable waters to private individuals and on the basis of that title, the landowners could enjoin fishermen from fishing or wading in the river running over the lands.

Despite the fact that the matter of state title to the beds is inextricably connected to the question of navigability, the state was held not to be an indispensable party in a case in which a riparian landowner sued a neighboring marina alleging that the marina encroached upon the landowner's riparian rights. *See Cove Properties, Inc. v. Walter Trent Marina, Inc., 702 So. 2d 472 (Ala. Civ. App. 1999),* describing the right to wharf out as terminating at the point of navigability.

See Lehigh Falls Fishing Club v. Andrejewski, 735 A.2d 718 (Pa. Super. 1999). The court found the river in question to be navigable and thus the disputed portion was owned by the Commonwealth and held in trust for public use. This

case is interesting because the initial case which decided the navigability of, among others, the Lehigh River in 1826 was later included in an official reporter without reference to the river and the court had to determine whether the river was inadvertently included in 1826 or inadvertently omitted in 1874.

Ed. 2d 231 (1997)* (title to certain lands not deemed to pass to state upon statehood).

(n56)Footnote 313. *Webb v. Board of Comm'rs of Neosho County, 257 P. 966 (Kan. 1927).*

In *North Shore, Inc. v. Wakefield, 530 N.W.2d 297 (N. D. 1995),* the court ignored the use of "meander lines" in a deed description, holding that in the absence of clear intent to the contrary, the deed would convey land to the ordinary high-water mark to preserve the riparian status of the property.

See Riparian Owner's Right to New Land Created by Reliction or by Accretion Influenced by Artificial Condition not Produced by Such Owner, 63 A.L.R.3d 249 (1998 Supp.).

(n57)Footnote 314. G. Graham Waite, *Public Rights to Use and Have Access to Navigable Waters, 1958 Wis. L. Rev. 335.*

In *ABKA Ltd. Partnership v. Wisconsin Dep't of Nat. Res., 573 N.W.2d 900 (Wis. App. 1997),* the department determined that public trust doctrine required a specific number of boat slips on a lake to be available for public rental.

See also State v. Linn, 556 N.W.2d 394 (Wis. App. 1996) (Department of Natural Resources has authority under public trust doctrine to protect public right of access to navigable waters. Here the village was enjoined from enforcing a parking ordinance that restricted parking for nonvillage residents); *Sea Cabin on the Ocean IV Homeowners Ass'n v. City of North Myrtle Beach, 828 F. Supp. 1241 (D. S.C. 1993)* (pier was appurtenance owned by homeowners association and public had no right to walk or fish from pier); *Jacobs v. Lyon Township, 502 N.W.2d 382 (Mich. App. 1993)* (erection of a nonexclusive dock at end of road which permitted reasonable public use of the lake for boating, fishing and swimming was within power of township. Public sunbathing, lounging and picnicking exceeded authority); *Steier v. Batavia Park Dist., 670 N.E.2d 1215 (Ill. App. 1996)* (park district without authority to limit use of river launch by personal watercraft).

In *Bubis v. Kassin, 733 A. 2d 1232 (N.J. Super. 1999),* inland lot owners brought an action against oceanfront landowners, the village and the Department of Environmental Protection alleging that the construction of a berm and fence restricted their access to the beach and interfered with their view of the ocean. The court held that the inland landowners had a right of access to the beach sufficient to contest the legality of the fence. The court held that in the absence of any restrictive covenants, a property owner has no right to an unobstructed view across a neighbor's property.

See Lehigh Falls Fishing Club v. Andrejewski, 735 A. 2d 472 (Pa. Super. 1999). The court found the river in question to be navigable and thus the disputed portion was owned by the Commonwealth and held in trust for public use. This case is interesting because the initial case which decided the navigability of, among others, the Lehigh River in 1826 was later included in an official reporter without reference to the river and the court had to determine whether the river was inadvertently included in 1826 or inadvertently omitted in 1874.

In *Barnhill v. City of North Myrtle Beach, 511 S.E. 2d 361 (S.C. 1999),* the court upheld an ordinance that restricted

the launching and beaching of motorized watercraft, including personal water craft, on public beaches. This ordinance had been challenged as an unconstitutional restriction on access to navigable waters, as preempted by state law and as a regulatory taking.

The court held that the public's right to access to navigable waters was subject to reasonable regulation and found the ordinance to be reasonably related to the legitimate public interest in public safety. The ordinance was held not to be preempted because the state authority related only to activities "on the water" and would not affect plaintiffs who sought to operate a land-based jet ski rental business. The ordinance was held not to constitute a taking because the beach was governmental property and there is no private right in a particular use of government property.

In *St. Croix Waterway Association v. Meyer, 178 F.3d 515 (8th Cir. 1999),* the court upheld Minnesota's slow no-wake regulations against a challenge that they violated the public trust doctrine.

(n98)Footnote 355. *See* Glenn MacGrady, *The Navigability Concept in the Civil and Common Law: Historical Development, Current Importance, and Some Doctrines That Don't Hold Water, 3 Fla. St. U. L. Rev. 513 (1975).*

(n99)Footnote 356. *Illinois Cent. R.R. v. Illinois, 146 U.S. 387 (1892).*

Selkirk-Priest Basin Ass'n v. State ex rel. Andrus, 899 P.2d 949 (Ida. 1995); Gwathmey v. State, 646 S.E.2d 674 (N.C. 1995).

See ABKA Ltd. Partnership v. Wisconsin Dep't of Nat. Res., 573 N.W.2d 900 (Wis. App. 1997) (involving the application of the public trust doctrine to the number of boat slips on a lake that must be available for public rental).

See also State v. Linn, 556 N.W.2d 394 (Wis. App. 1996) (Department of Natural Resources has authority under public trust doctrine to protect public right of access to navigable waters. Here the village was enjoined from enforcing a parking ordinance that restricted parking for nonvillage residents).

In *Bubis v. Kassin, 733 A. 2d 1232 (N.J. Super. 1999),* inland lot owners brought an action against oceanfront landowners, the village and the Department of Environmental Protection alleging that the construction of a berm and fence restricted their access to the beach and interfered with their view of the ocean. The court held that the inland landowners had a right of access to the beach sufficient to contest the legality of the fence. The court held that in the absence of any restrictive covenants, a property owner has no right to an unobstructed view across a neighbor's property. Here, the court held that the inland owners' rights to use the beach would be governed by the public trust doctrine so long as the area in question remains below the high water line, *citing Matthews v. Bay Head Improvement Ass'n, 471 A. 2d 355 (N.J. 1984), cert. denied, 469 U.S. 821 (1984); Borough of Neptune City v. Borough of Avon-by-the Sea, 294 A.2d 47 (1972).* Thus, if the mean high water line were to shift ocean-ward as a result of accretion, any express easement over the beach upon which the inland owner's claims were based would be revived.

It has been held that notwithstanding the right to bathe, the public trust doctrine did not preclude municipalities from lawfully closing beaches and prohibiting bathing under certain conditions. *See State v. Oliver, 727 A. 2d 491 (N.J. Super. 1999).*

In *St. Croix Waterway Association v. Meyer, 178 F.3d 515 (8th Cir. 1999),* the court upheld Minnesota's slow no-wake regulations against a challenge that they violated the public trust doctrine.

In *State v. Longshore, 982 P.2d 1191 (Wash. App. 1999)* it was held that the public trust doctrine did not encompass the right to take clams from private property.

In *Providence & Worcester Railroad Co. v. Pine, 729 A.2d 202 (R.I. 1999),* it was held that once the railroad filled in and improved land below the mean high water line, the company established rights to the land free and clear of the public trust.

(n109)Footnote 366. *682 P.2d 163 (Mont. 1984).*

The *Curran* holding regarding the public right to use land in conjunction with the exercise of that right was limited in

a subsequent case, *Galt v. State Department of Fish, Wildlife, and Parks, 731 P.2d 912 (Mont. 1987).* There, the court held that the public right to use land below the high-water mark existed only to the extent necessary for utilization of the water itself and public authorization of such lands for such activities as the building of duck blinds, boat moorages, camping or big game hunting constituted an unconstitutional confiscation of private property. The court also invalidated as unconstitutional a provision of the statute that required the landowner to bear the cost of constructing portage routes around artificial barriers.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.07

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.07 Consumptive Uses.

§ 50.07(a) In General.

Although it is uniformly recognized throughout the country that the nature of the water right is that it is a usufructary right, there is considerable variety throughout the United States as to how such water rights are actually acquired. This is undoubtedly the result of the considerable sovereignty each state is regarded as having with respect to the selection of a water right allocation regime. n368

§ 50.07(b) Naming the Systems.

It is common in our system to label the state by how water rights in *confined surface waters* are allocated. Thus, a particular state will be called a "riparian jurisdiction" because it allocates and adjusts water rights in rivers, lakes and streams according to the doctrines of "riparianism... . n369 Similarly, a state may be called an "appropriative jurisdiction" because appropriative principles govern the acquisition of water rights in surface waters within the state. n370 It should not be understood that simply because a jurisdiction is identified as riparian or appropriative that all water rights recognized in the state are governed by those principles. Indeed, in many states, the regime that governs water rights in groundwater will differ from the regime of surface waters. n371

Further, it must be recognized that the terms "riparian," "appropriative," and so forth are inevitably used only in the broadest generalized sense when they are used as system labels. There is considerable internal variation between riparian states and between appropriative states on many significant issues of water right interpretation. In that sense, despite any commonality of labelling, each state must be recognized as having its own unique water right regime. Even as states borrow rules and principles from one another, the differences between systems may continue to remain substantial simply because each state is attempting to fashion its own effective system to respond to its own particularized circumstances and conditions.

COMPUTER-ASSISTED RESEARCH

LEXIS: nam! or label! w/15 water! w/1 right! w/15 state!

§ 50.07(c) Variations in Allocation Systems: Surface Waters.

In a most generalized sense, states east of the Mississippi River may be characterized as allocating water rights based upon the ownership of land which borders on the particular water supply. These states are commonly called riparian states, n372 because such land is said to be "riparian" to the water. n373

Most states west of the Mississippi River are described as appropriation (or prior appropriation) jurisdictions. n374 This is because individuals secure water rights in surface waters in these jurisdictions by "appropriating" or exercising physical control or dominion over the water. n375

The remaining western states, n376 and the state of Mississippi, allocate water rights in surface waters in a combination of ways and are commonly called "hybrid" systems, largely because they recognize a mixture of both riparian and appropriative rights. In Louisiana, the allocation of water is based on the Civil Code which evolved from the Cuban Civil Code and which is, in turn patterned after the French model. n377 In Hawaii, surface water rights are allocated on the basis of a combination of principles derived from riparian water law n378 and ancient Hawaiian legal principles. n379

COMPUTER-ASSISTED RESEARCH

LEXIS: surface w/1 water! w/15 riparian or appropriation w/2 state! or jurisdiction!

§ 50.07(d) Variations in Allocation Systems: Groundwaters.

Historically, there has been more variation regarding allocation of water rights in groundwater than there has been in surface systems. Here, jurisdictions do not conveniently divide among eastern and western states but rather tend to scatter among a variety of approaches including the absolute ownership doctrine, n380 the American or reasonable use rule, n381 the doctrine of correlative rights, n382 the *Restatement (Second) of Torts* rule, n383 and even separate groundwater codes. n384

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.08

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.08 Consumptive Use of Surface Waters: Riparian Systems.

[Go To Supp]

§ 50.08(a) In General.

Riparian systems are among the simplest, as well as the oldest, water right allocation systems in the United States and the world. n385 Most of the jurisdictions in the eastern United States are considered to be riparian jurisdictions, even though in recent decades there have been many modifications in order to adapt these systems to local situations and conditions. n386 Some western jurisdictions n387 continue to recognize some riparian rights. n388

§ 50.08(b) Historical Development.

The development of these systems in the United States generally occurred at the same time as the development of the common law of water rights in England. n389 There appears to have been some borrowing of legal principles from the English system. However, much credible evidence suggests that the American system borrowed from a variety of sources and that the English system has actually relied heavily on the American system for the development of basic principles and concepts. n390

The particular structure of riparian systems, that rights may be claimed by anyone who owns land that borders on or abuts the watercourse, is generally attributed to the coincidence of such factors as the presence of fairly plentiful water supplies, a weak central government, and European legal influence. n391 Under these circumstances, a simple method for right allocation was found in the requirement that land must be owned which borders on the watercourse before a right will be recognized. This eliminated the need for central governmental intervention and empowered the landowner to bear the primary responsibility regarding policing and protecting the right.

§ 50.08(c) Riparian Lands: Defined.

Ownership of "riparian land" has been the *sine qua non* of water right acquisition in riparian systems since the inception of these systems. This is largely because ownership of such land was a fact that could readily be ascertained by anyone who wished to claim a water right, and offered a very simple administrative mechanism to the courts which served as the primary arbiter of rights in the system. Thus, to qualify for a water right, as a general rule, the claimant must own

"riparian" land.

Riparian land is generally considered to be land that borders on surface watercourses such as lakes and streams. n392 The landowner's ownership interest in the land generally must actually "touch the water," n393 though it is not necessary for the landowner to actually own an interest in any portion of the bed. n394 Land is therefore considered to be riparian where the ownership interest immediately adjoins the public title interest in the beds of navigable waterbodies, as well as where it extends below the water's edge as is the case with non-navigable waterbodies. n395

In North Shore, Inc. v. Wakefield, n396 the court ignored language in a deed that described the boundary of the property as the "meander line" of the lake and held that in the absence of clear intent to do otherwise, the deed would be construed as including land to the ordinary high-watermark of the lake, making the property riparian. The rationale for the decision was to maintain stability of land titles where the issue was title to accreted land on the edge of the lake.

In Griffin v. Lamberjack, n397 the court distinguished between riparian land and land covered by a drainage easement as the ground for an action alleging trespass and nuisance. In this case, the court held that the land that bordered on the "dredge cut" was not riparian.

In W. Mich. Dock v. Lakeland Inv., n398 the court considered the owner of a dock to be riparian to a lake because the pier was accreted to the shoreline and the end abutted the lake. n399

COMPUTER-ASSISTED RESEARCH

LEXIS: riparian w/1 land! w/15 water! w/1 right!

§ 50.08(d) Riparian Lands: Legal Significance of Riparian Status.

Being able to denote particular lands as riparian establishes at least three critical matters: 1) it identifies the individuals who may claim consumptive use water rights; 2) it identifies the specific waters to which the water right pertains; and 3) it identifies the particular lands upon which the waters may be used as the water right is exercised. n400

COMPUTER-ASSISTED RESEARCH

LEXIS: legal w/1 status w/15 riparian w/1 land!

§ 50.08(e) Riparian Lands: Determining Which Particular Lands Are Riparian: Source of Title.

In most riparian jurisdictions, the water rights which the landowners enjoy are considered to be limited to the waters which are "adjacent" to the lands. n401 Similarly, the use of the water may be restricted to qualified riparian lands. n402 Jurisdictions have used two quite different tests to determine whether a particular tract is riparian.

The "source of title" rule limits riparian rights to the smallest subdivision, parcel or tract of waterfront land held under one title in a chain of title leading to the present owner. n403 Under this rule, the amount of land considered to be riparian can only be decreased rather than increased. n404 It appears that this rule originated in California but tends to be followed in other western jurisdictions which mix riparian and appropriative principles, since it is seen as promoting the policy found in most of these jurisdictions to limit the extent of riparian rights. n405

COMPUTER-ASSISTED RESEARCH

LEXIS: riparian w/1 land! w/15 source w/1 title

§ 50.08(f) Riparian Lands: Determining Which Particular Lands Are Riparian: Unity of Title.

The "unity of title" rule appears to be followed in the majority of riparian jurisdictions. n406 This rule considers any tract held by one owner which abuts the watercourse to be riparian. n407 Although this rule is more inclusive, as it permits the enlarging of the riparian parcel through the purchase of contiguous land, n408 some riparian jurisdictions limit the amount that could be claimed as riparian under this rule to an amount that is considered reasonable. n409

COMPUTER-ASSISTED RESEARCH

LEXIS: riparian w/1 land! w/15 unity w/1 title

§ 50.08(g) Riparian Lands: Place of Use Limitations.

Some riparian jurisdictions confine the use of water to those portions of riparian land that are located within the same watershed as the source from which the water is extracted. n410 This appears to be based upon the assumption that water used outside the watershed may be returned to different watercourses which, in turn, will either damage the downstream users along the first watercourse, due to the reduction of the stream's flow, or will damage those on the second watercourse, due to the increase there in the stream flow. n411 There is some disagreement among the authorities as to whether the watershed limitation represents a majority viewpoint. n412 It has been criticized as not being particularly adapted to modern conditions. n413

COMPUTER-ASSISTED RESEARCH

LEXIS: riparian w/1 land! w/15 plac! w/2 use! w/1 limit!

§ 50.08(h) Vesting of Riparian Rights.

Riparian rights are said to vest at the time title to the land is acquired and are considered part of the package of rights in the fee. n414 This approach differs significantly from appropriative rights systems in which the water right is considered to be vested only after the right has been exercised in a way which involves the actual application of the water to a beneficial use. Thus, in riparian systems, no actual use of the water is required at the time title is taken to riparian land in order to secure the water right, nor is it necessary to record any claim to the water right as part of the vesting process. This means that the water right will generally not be lost through non-use and that it automatically passes with the property when the land is transferred. n415

COMPUTER-ASSISTED RESEARCH

LEXIS: vest! w/15 riparian w/1 right!

§ 50.08(i) The Quantity of Water to Which the Riparian Right Holder Is Entitled.

The owner of riparian land is considered to hold, as an adjunct to title in the land, a water right in the waters that are adjacent to the land. The particular quantity of water to which the right holder may be entitled is not fixed and will vary depending upon the particular doctrine of the jurisdiction regarding quantification. Two doctrines have been used by riparian jurisdictions to resolve disputes regarding the amount of water claimed. These approaches seek to discriminate between acceptable and unacceptable uses of the water.

§ 50.08(j) Quantity: Natural Flow Doctrine.

The natural flow doctrine is considered the earliest means by which quantities of water claimed under riparian rights were established. According to this rule, which is sometimes referred to as the English Rule, each riparian proprietor on

a watercourse has the right to have the stream flow to the proprietor's land in its natural condition, not perceptibly diminished, polluted or retarded by the use of others. n416

The primary advantage of this rule is that each right holder is assured some meaningful opportunity for access to the stream for the purpose of using the water since the full flow of the stream will assuredly pass by each separate parcel of riparian land. On the other hand, such a rule inherently and severely limits the amount of water that may be actually removed from the stream for consumptive use purposes, since virtually any consumptive use will diminish the quantity or quality of the water available to other users downstream. Thus, it may be observed that the practical consequence of the natural flow doctrine was to maintain a stable, but low, volume demand on the water supply.

In order to preserve a significant right of access and to facilitate the opportunity to make a meaningful use of the water, jurisdictions that followed this doctrine very early distinguished between "natural" and "artificial" uses and permitted the riparian proprietor to use as much water as was needed for "natural" uses, n417 but limited the amount of water that could be used for "artificial" or industrial uses. Natural uses were defined as those necessary to sustain life and included bathing, drinking, watering animals and household uses. n418 Artificial uses, on the other hand, were defined as those which enhanced man's comfort and prosperity. The former uses were always permitted; the latter only so long as they did not materially interfere with the natural flow of the watercourse. n419 An examination of the cases indicates that mining operations, irrigation, power generation and large scale livestock operations have been considered artificial uses. n420

The natural flow doctrine also required that water be used on riparian land or for purposes connected with the riparian land. n421 Because of the restrictiveness of this approach, most riparian jurisdictions have abandoned the natural flow doctrine. n422

COMPUTER-ASSISTED RESEARCH

LEXIS: natural w/1 flow w/1 doctrine w/15 riparian w/1 right!

§ 50.08(k) Quantity: Reasonable Use Doctrine.

The reasonable use doctrine differs markedly from the natural flow doctrine in that it was designed to enhance the opportunity to make non-life sustaining uses of the watercourse rather than to simply maintain the status quo. This approach, sometimes called the American Rule, is the approach to the issue of water right quantification presently taken by the majority of riparian jurisdictions. n423

Each riparian proprietor in a jurisdiction that follows the reasonable use rule may use as much water as is necessary for any lawful purpose so long as: 1) the use is reasonable; and 2) does not unreasonably interfere with the legitimate uses and needs of other proprietors on the stream. n424 The dual concerns of the concept of "reasonableness" focus on the impact of the use upon the interests of the water right holder himself as well as on the impact of that use upon the correlative rights of other protected right holders. Thus, the mere fact that the particular use of the water is of benefit to the riparian landowner is not sufficient by itself to establish the reasonableness of the use. n425 It is also necessary to determine whether the use has an unacceptable impact on the rights of others. n426 A variety of factors must be considered to make such a determination. These include such concerns as:

1) the purpose of the use;

2) the suitability of the use to the particular source of supply;

3) the economic and social value of the use;

4) the extent of harm caused and the practicality of avoiding harm;

5) the impact of the use on existing uses, land values and investments;

6) the utility of the use to the user;

7) the ability of the user causing the harm to avoid the loss; and so forth. n427

Because of the focus of the determination of reasonableness, the quantity of water represented by the right will generally not vary directly with the size of the stream, n428 the size of the riparian tract or the length of its frontage on the water supply, n429 or even with the length of time the water has been used or when the use first began. Rather, these concerns are among the factors which influence the nature and extent of water use, its benefit to the right holder and its impact on the rights of others. n430

COMPUTER-ASSISTED RESEARCH

LEXIS: reasonable w/1 use w/1 doctrine w/15 riparian w/1 right!

§ 50.08(l) Quantity: Adjusting the Quantity.

Approaching the question of quantification from the perspective of the impact of the use upon the rights of others has at least three significant consequences:

1) new uses have an equal chance with established uses to compete for the resource;

2) the reasonableness of any existing use may be reconsidered at any time in the future that a new, competing use arises; and

3) the quantity of water represented by any particular water right is never considered to be fixed and may change over time.

This is because the quantity of the water to which the right holder may lay claim really never becomes fixed, even though a particular quantity of water is presently being used. Further, since the validity of the exercise of the right must continuously be judged in terms of its impact on other existing and future rights, the reasonableness of any established use may be reconsidered at any time in the future as a result of subsequent uses of the water and changes in conditions and situations. As a result, for example, if water supplies are depleted by drought or by an increase in water users, it may be necessary, and lawfully within the parameters of the doctrine, to scale back the quantity required for a particular use in order for that use to remain reasonable.

The primary strength of this approach is that it allows the use of the water in ways which may reduce the source of supply for others. It also has the advantage of flexibility in that the amount may be adjusted over time to reflect changes in the use of the watercourse. On the other hand, the system makes the investment in developments which require water somewhat risky since there is no assurance that the particular quantity needed will always be available, or that society's determination that a particular use is reasonable will not change if circumstances change.

As a result, a variety of rules have been adopted and several riparian jurisdictions have developed rules that are designed to allocate water on a "fair share" basis and give a measure of predictability and security to the quantity of water represented by the water right. In some jurisdictions, for example, it has been held that where users are located on opposite sides of a watercourse, and the water supply is inadequate to meet the needs of both, each may have one-half of the available water. n431 Similarly, in times of water shortage, it has been held that water may be apportioned ratably or

equitably. n432

COMPUTER-ASSISTED RESEARCH

LEXIS: adjust! w/2 quantity w/15 riparian w/1 right!

§ 50.08(m) Transferability of Riparian Rights.

Riparian water rights are considered to be appurtenant to and to run with the land. n433 As such, they automatically follow the title to the land in any title conveyance. In most riparian jurisdictions, the water right cannot be severed from the title to the land and transferred separately. Historically, this made much sense, since there were no governmental agencies or right recording agencies to track water right ownership. In such a situation, the fact of presence of riparian land gave notice of the existence of a potential claim to the water adjacent to the property, and could of itself also serve as the means of identifying the particular right holder. Since there was no convenient way to do a "water right title search," a visual inspection of the watercourse, which would reveal the extent to which claims existed in or to the water, was both necessary and a practical way to keep track of water rights.

As population pressures on water supplies and the need to use the water beyond the borders of the watercourse have grown, some jurisdictions have modified the "no severance" rule to permit limited transfers. n434 And, even in jurisdictions which have not permitted the outright transfer of the water right, there has been some accommodation of the right to transfer the water itself, after it has been reduced to possession through the proper exercise of the right. n435

It may be that even though the ability to transfer either the right or the water is recognized in the jurisdiction, the actual exercise of the right may implicate questions of reasonableness. The ultimate disposition of the water will generally be considered to be a relevant factor in the determination of whether the right is being exercised in a reasonable manner. A transfer, though otherwise lawful, may possibly terminate a water right if it is determined that the ultimate location or use of the water after the transfer is unreasonable. For example, although there is no longer a requirement in many jurisdictions that the water be used on riparian land, it may be that the extraction of water for the sole purpose of selling it elsewhere could be considered unreasonable where the impact of such a removal destroyed existing lawful uses. n436

§ 50.08(n) Providing Water for Non-Riparian Users.

An early rule in many riparian jurisdictions was that riparian rights could be exercised only by riparian landowners and that any use of the water by non-riparians was considered unreasonable *per se*, except where water was used for narrowly defined life-sustaining or domestic uses. n437 In recent decades, the view has generally been taken that nonriparian uses are only presumed to be improper and it must affirmatively be established that they are harmful. n438 A few states now permit non-riparian use even though it causes harm to downstream users. n439

COMPUTER-ASSISTED RESEARCH

LEXIS: non-riparian w/1 use! w/2 water!

§ 50.08(o) Riparian Rights of Municipalities.

Since riparian land must be owned in order to claim riparian rights, municipalities pose an interesting problem. Even though the city may own land that borders on the watercourse, most of the individuals served by the city will not and

should not be allowed to claim the water through the city's ownership of a small bit of riparian land. Further, if the jurisdiction has restrictions on the use of water on non-riparian land, the city would not be able to distribute any water to its inhabitants since that would essentially involve a non-riparian use of the water. Finally, the sheer size of the demand for water by cities and the general life-sustaining nature of the water uses might be seen as invariably prevailing over the claims of individual right holders on the watercourse. On the other hand, it would seem inconsistent with good public policy to prevent cities from assuming the responsibility of supplying their inhabitants with water. Cities therefore pose an interesting dilemma to riparian systems: how is water made available to cities without radically departing from the principles of the system?

As a general rule, it is neither possible nor practical to require that each individual inhabitant of a municipality make an individual extraction of water from a watercourse. As a matter of fact, most inhabitants would not qualify as riparians because they do not own qualified land. Indeed, the sound management of the resource requires that demands of the type most likely to be made by the inhabitants of the municipality be aggregated and dealt with as a collective problem. Therefore, it is commonly recognized that municipalities have an obligation to supply water to their inhabitants. But since municipalities become major users of the water, and obviously have a potentially harmful impact on other water users from the same source, it is commonly required that municipalities either must qualify as actual riparian landowners on the watercourse, in order to enjoy riparian rights, or use the public power of eminent domain to acquire the rights to the water from private landowners who do qualify for access to the water. n440 These jurisdictions also appear to test the extent to which the municipality may claim the water on the basis of whether the extraction is reasonable. n441

In other jurisdictions, municipalities are given a preference to the water because of the need to provide a public water supply. n442 In many jurisdictions, the need for flexibility in dealing with municipal water supplies has given rise to developments outside the strict confines of riparian rights which have justified such measures as inter-basin transfers of water. n443

LEXIS: riparian w/1 right! w/15 municipal!

§ 50.08(p) Administrative Water Right Allocations in Riparian Systems.

The advent of strong central governments is starting to have an impact on the administration of riparian water right systems, and many have moved away from traditional allocation frameworks. A high number of riparian jurisdictions have now adopted some variation of a permit system to assist in dealing with allocation problems. n444 Although most of these systems are limited in scope, often exempting certain uses from the permit requirements n445 or requiring permits for certain uses or for uses from certain kinds of water supplies, n446 they have the effect of diminishing the extent to which the individual landowner exclusively controls the right acquisition process.

Requiring a permit may also move the jurisdiction away from the rigid land ownership and place of use requirements as well, though most of these jurisdictions still continue to condition the issuance of the right upon whether the proposed use is reasonable or in the public interest. n447

Permit systems in riparian jurisdictions differ importantly from permit systems in appropriative jurisdictions. Most of the presently existing permit systems grant permits of limited duration n448 and typically do not provide for any priority among right claimants based on the time the use was commenced or the permit application was filed or granted. n449 Further, these jurisdictions seem to retain the traditional riparian rules for dealing with water shortages under which water may be apportioned ratably or equitably n450 rather than on the basis of timing of the appropriation, as is the case in appropriative jurisdictions.

The major significance of any change in the direction of governmental control would seem to be that it increases the opportunity for nonriparians to secure access to the water.

In the case of *DeBernardo v. Pinewood Lake Association, 747 A.2d 1076 (Conn. Super. 1999),* plaintiffs enjoyed riparian access to a lake on the basis of their membership in the association. The deeds by which they acquired their cottages on the lake expressly noted that no riparian rights in the lake were transferred by the deeds. As lot owners, they were allowed to join the association and it was through the association that they secured the right of access to the lake. The by-laws of the association denied the owners of the cottages the right to occupy them for a specified period of time, between November 1 and April 1 of each year. Because the plaintiffs continued to occupy their cottages after that time, they were expelled from the association and denied access to the lake. The court invalidated the restrictions as unenforceable because they were not equally enforced against all members and did not advance a legitimate corporate purpose.

(n49)Footnote 433. Omerod v. Todmosden Mill Co., 11 L.R. 155 (Q.B. Div'l Ct. 1883).

In *Pfluger v. Clack, 897 S.W.2d 956 (Tex. App. 1995),* a deed was used to sever the mineral estate from the surface estate. The court held that the water rights pertained to the surface estate. There was no evidence that the land was riparian land. Although not at issue in the case but an interesting consideration is whether the court intended the water rights (now part of the surface estate) to be managed according to surface water rights doctrines.

For a case involving vicarious exercise of riparian rights, *see DeBernardo v. Pinewood Lake Ass'n, 747 A.2d 1076 (Conn. Super. 1999).* In this case, plaintiffs enjoyed riparian access to a lake on the basis of their membership in the association. The deeds by which they acquired their cottages on the lake expressly noted that no riparian rights in the lake were transferred by the deeds. As lot owners, they were allowed to join the association and it was through the association that they secured the right of access to the lake. The by-laws of the association denied the owners of the cottages the right to occupy them for a specified period of time, between November 1 and April 1 of each year. Because the plaintiffs continued to occupy their cottages after that time, they were expelled from the association and denied access to the lake. The court invalidated the restrictions as unenforceable because they were not equally enforced against all members and did not advance a legitimate corporate purpose.

(n57)Footnote 441. *Id.*

Habeeb, Wade R., *Propriety of Injunctive Relief Against Diversion of Water by Municipal Corporation or Public Utility, 42 A.L.R. 3d 426* (1998 Supp.).

(n58)Footnote 442. *See, e.g., St. Anthony Falls Water Power Co. v. St. Paul Water Comm'rs, 58 N.W. 33 (Minn. 1894).*

Whether a municipality has an obligation to supply water to end-users has been the source of some litigation. In *Haik v. Town of Alta, 120 S. Ct. 166, 149 L. Ed. 2d 148 (1999),* the town refused to extent water to plaintiffs. As a result of this, plaintiffs were unable to develop their land. The court refused to find that an interest in water for the purpose of real estate development was a fundamental right, citing *Lockary v. Kayfetz, 917 F.2d 1150 (9th Cir. 1990); O'Neal v. City of Seattle, 66 F.3d 1064 (9th Cir. 1995); Manguson v. City of Hickory Hills, 933 F.2d 562 (7th Cir. 1991); Ransom v. Marrazzo, 848 F.2d 398 (3d Cir. 1988); Chatham v. Jackson, 613 F.2d 73 (5th Cir. 1980). See also Thompson v. Salt Lake City Corp., 724 P.2d 958 (Ut. 1986); Rose v. Plymouth, 173 P.2d 285 (Ut. 1946); Platt v. Town of Torrey, 949 P.2d 325 (Ut. 1997).* In this case, the court rejected an equal protection claim finding that there were plausible reasons for Alta to refuse to extend the water lines to the Haik property. Here, the town was bound by a contract with Salt Lake City regarding the supply of water and even though the town had the physical capacity to extend the lines, it did not have the legal authority to do so.

In *Spring v. Bradley, 733 A. 2d 1038 (Md. 1999),* the court ruled against an owner of an undeveloped tract who brought an action to compel the town to supply water and sewer service to the property, citing several cases dealing with the obligations of towns to supply services. These included *Bair v. Mayor and City Council of Westminster, 221 A. 2d 643 (Md. 1966); Merryman v. Baltimore, 138 A. 324 (1927).* These cases were cited for the proposition that a municipality cannot be required to impose a burden on its utility facilities or on the city itself by providing services to persons who are outside of its corporate limits and beyond its taxing powers.

See also R & R Associates v. City of Providence, 724 A. 2d 432 (R.I. 1999), where it was held that some municipalities and water districts were not liable for the taking of riparian rights. This was because, by statute, only Providence was solely liable for any takings, even when done for the benefit of end-user communities and water districts.

Municipalities may adopt ordinances requiring that township residents must connect to municipal systems and to cease using wells for domestic consumption purposes without violating the residents' due process rights. *See Kusznikow v. Township Council of Township of Stafford, 730 A. 2d. 930 (N.J. Super. 1999).*

In *Landmark Development, Inc. v. City of Roy, 980 P.2d 1234 (Wash. 1999),* the court rejected a claim that the city acted in an arbitrary and capricious manner by charging an unreasonable water connection fee for a residential development outside the city limits.

In *Vernon Township Water Authority v. Vernon Township, 734 A. 2d 935 (Pa. Commonwealth Ct. 1999),* a court found that a township did not have the authority to mandate water connections in some areas and not in others and invalidated an optional tap ordinance.

In *Board of County Commissioners of Ottowa County v. Village of Marblehead, 711 N. E. 2d 663 (Oh. 1999),* an established sewer district was given authority under a statute to complete a county water service project even though the area had been acquired by a municipality during the pendency of the project. The City argued that the statute violated the state Constitution's grant to municipalities of exclusive rights to supply water service to municipal residents. The court held that the statute authorized a valid exercise of police powers that did not substantially infringe on the municipality's constitutional power to operate utilities.

In *Turlock Irrigation District v. Heterick, 84 Cal. Rptr. 2d 175 (Cal. App. 1999),* the court dealt with the obligation of an irrigation district, as a municipal corporation, to execute a gas supply contract for the benefit of its customers. The court found the corporation not to be obligated to execute the contract. The reason was that under state law, the power of irrigation districts as municipal corporations was specifically limited to supply only water, electricity, drainage and closely related activities, such as the operation of cement plants and rock quarries.

In *County of Del Norte v. City of Crescent City, 84 Cal. Rptr. 2d 179 (Cal App. 1999),* the court rejected the argument that unincorporated areas outside city limits had a right to hook up to the city water system and held that the city's denial of water service was not arbitrary where the reason for the limitation was the pressure of population growth in the city on the city's system.

R & R Associates v. City of Providence Water Supply Board, 765 A. 2d. 432 (R.I. 2001); Gregg Neck Yacht Club, Inc. v. County Commissioners of Kent County, 769 A. 2d 982 (Md. App. 2001).

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.09

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.09 Consumptive Use of Surface Water: Appropriative Systems.

[Go To Supp]

§ 50.09(a) In General.

Most western states of the United States n451 are considered to be appropriative jurisdictions, at least in part. n452 Appropriative systems are sometimes called "prior appropriation" jurisdictions, because of the principle followed in these jurisdictions which determines the priority of the water rights on the basis of the time at which the right was secured. It is commonly said in these jurisdictions that "first in time is first in right." n453 In recent decades, the prior appropriation doctrine has been criticized as being inherently flawed for its failure to adequately address environmental issues. n454 The difficulty is probably not in the narrowness of the law of water rights but in the fact that the law of water rights is grounded in the law of property with its attendant recognition of rights to which the law assigns stability, endurance and dimension. n455 The key to reshaping water rights to better accommodate shifts in values is probably not in eliminating the doctrine but in defining and redefining the nature of the property right so that it better reflects the changes in social values that occur from time to time. n456

§ 50.09(b) Appropriative Systems and Riparian Systems Compared.

Traditional appropriative systems differ from riparian systems in several important respects. First, appropriative systems are based on the principle of actually using the water rather than upon the principle of land ownership as the means by which the right is secured. n457 In contrast to riparian systems, it is not necessary to own land abutting the source of supply in order to secure a water right. On the other hand, it is necessary for the right claimant to take some kind of affirmative action to remove or divert the stream from its source and apply the water to a recognized beneficial use before any right will be recognized. n458

Appropriative systems also tend to prioritize water rights and give highest priority to those rights which were established first. Riparian rights appear to be correlative without regard to when the water right was acquired or when the water was even initially used.

Finally, appropriative systems predicate the continued viability of the water right on the continual use of the water. If the water is not used for a protracted period of time, the right may be lost. In contrast, riparian rights inhere in the title

to the land and are not lost through non-use.

COMPUTER-ASSISTED RESEARCH

LEXIS: appropriative w/15 riparian w/2 system!

§ 50.09(c) Basic Principles.

Water rights in an appropriative system are said to vest, are quantified, and disputes between competing right claimants are adjusted on the basis of the following common major principles:

(1) water rights are secured as a result of the actual use of the water;

(2) use must be for a beneficial purpose;

(3) a failure to exercise the right may cause the right to be extinguished or forfeited; and

(4) priority may be claimed for the rights based upon the time the use began or the right was established.

COMPUTER-ASSISTED RESEARCH

LEXIS: vest! w/15 appropriative w/1 water! w/1 right!

§ 50.09(d) Vesting of the Right: Generally.

An appropriative water right can be secured only by properly "appropriating" the water. For the appropriation to be proper, the right must involve unappropriated water from a natural water supply; the water must be properly brought within the dominion of the appropriator; and it must be applied to an acceptable use.

How vesting is defined is a critical issue. It is well understood that the law of property protects only "vested" rights. Unexercised rights are generally not considered to be "vested." It is on this basis that some jurisdictions have radically restructured their water right regimes to eliminate future unquantified claims to water without "taking" property rights. There has been a growing interest in recent years in the extent to which the means of "vesting" itself may be changed. That is, to what extent can a jurisdiction redefine "vesting"? Recent cases and statutes suggest there may be more flexibility than heretofore understood. n459

One common way to redefine vesting is to add additional requirements to the existing framework that must be satisfied before the right may be considered "vested." For example, some states have added a "public interest" criterion to the determination of whether the application for large amounts of water should be approved. n460 Another approach may be to refine the concept of "reasonable" or "beneficial use" to exclude certain proposed uses from the possible pool of uses for which rights may be granted or in which rights may actually "vest" since the law could not recognize rights in unreasonable uses. n461 Another way a redefinition of "vesting" may be accomplished is through the subjection of the exercise of "vested" rights to the exercise of police power by the jurisdiction. n462

In many jurisdictions, vesting requires a present use rather than some speculative future use. Exceptions are commonly made by statute for municipalities or other public sources of water in order to facilitate long-term planning for the water needs of the jurisdiction. In In re Water Right Claim No. 1927-2, n463 the court considered claims to water by the U.S. Fish and Wildlife Service for a wildlife refuge. The court found that the use of the water for the protection of the habitat was a beneficial use, notwithstanding that the area was already subirrigated by high-water table water. It also found that the claim was not an impermissible future use even though the water may not be immediately needed because of the

subirrigation.

§ 50.09(e) Vesting: Availability of Unappropriated Water.

As a general rule, water is available for appropriation if:

1) it is found in a natural waterbody;

2) it is not subject to another's appropriation right or lawful claim; and

3) the removal of the water from the source of supply will not harm any other lawfully protected water right holder. n464

The determination of whether there is sufficient water in excess of valid prior or superior claims is a factual determination n465 and is one that will generally be made by the water permit granting agency. This determination will be based on data regarding the usual or ordinary known volume or capacity of the water source and data relating to the quantities of water which are already claimed from that source by competing known claimants who hold enforceable water rights.

COMPUTER-ASSISTED RESEARCH

LEXIS: unappropriated w/1 water! w/15 availab!

§ 50.09(f) Vesting: Natural Sources of Supply.

Appropriative water rights are generally recognized only in natural sources of supply. n466 Nevertheless some artificially created waterbodies may be available for certain purposes or under certain circumstances. For example, waters in reservoirs constructed by the Corps of Army Engineers or by the Bureau of Reclamation may be the object of water rights (including storage rights) held by the state or the federal government. n467 Likewise, diffused surface runoff which has been impounded in livestock watering ponds may be collected and lawfully used for consumptive use purposes under the auspices of particular statutes. n468

COMPUTER-ASSISTED RESEARCH

LEXIS: natural w/1 source! w/1 supply w/15 appropriative w/1 water! w/1 right!

§ 50.09(g) Vesting: Withdrawal or Diversion as "Notice."

It was early required that there be a "diversion" of the water from the source of supply. This act was considered necessary:

(1) to give notice "to the world" of the specific claim to the water; and

(2) to constitute irrevocable evidence of the intent to use the water.

For a diversion to be effective, it was necessary to physically remove the water claimed from the source by or through the construction of some kind of structure which would give the required notice of the claim. In addition, the fact that a certain amount of water was no longer present in the stream could be seen as announcing that amount of water was no longer available for appropriation.

In a few jurisdictions, a physical diversion appears to still be required as evidence of an intent to use the water as a predicate to the proper acquisition of a water right. n469

Concerns regarding notice and intent have been addressed as part of the administrative supervision of water rights. Since the right acquisition process generally begins with the filing of an application with the appropriate agency or governmental official which is charged with making the determination of whether unappropriated water is available for additional water rights, there is less of a concern that the "world" be given notice that someone wishes to appropriate the water. The requirement of intent also has little currency in the sense that most courts presently hold that intent need not be established through such formalistic means as physical dominion over the water. n470 It is typically held that an application, filed in good faith, n471 is sufficient to satisfy any remaining notice or intent requirements. n472

COMPUTER-ASSISTED RESEARCH

LEXIS: withdraw! or diver! w/15 notice! w/15 water! w/1 right!

§ 50.09(h) Vesting: Withdrawal or Diversion as Evidence of Location of the Claim and Other Uses.

Although the physical fact of diversion no longer is critical from a notice point of view, it may still be a significant facet of the vesting process for other purposes. The diversion serves to establish the location of the water right, n473 which is generally considered to be the point at which the water is withdrawn from the source even though the place of actual use is quite remote.

The requirement of an actual diversion may also be used to deter or eliminate speculative water rights. n474

COMPUTER-ASSISTED RESEARCH

LEXIS: withdraw! or diver! w/15 locat! w/15 water! w/1 right!

§ 50.09(i) Vesting: Defining "Diversion."

In some jurisdictions, "diversion" is defined in terms of man-made mechanisms or means for diverting the water. n475 In others, the significant issue is whether the water is brought within the dominion or control of the appropriator n476 whether it is actually removed from the watercourse or not. n477

§ 50.09(j) Vesting: Problems of Instream Use.

Jurisdictions which take a broad view of the meaning of diversion appear more willing to recognize instream uses as a "diversion." n478 Jurisdictions which take a more traditional view may still require the physical removal of the water from the source by some artificial means.

In some jurisdictions, water in the source may be formally withdrawn from further appropriation in order to protect instream uses. n479 In these jurisdictions, it is no longer necessary to argue that the instream use constitutes a valid diversion of the water, since the water is shielded from further appropriation by anyone who wishes to ultimately remove the water from the source of supply. In other jurisdictions, action has been taken to create a public reservation of the water in trust for instream uses, n480 or to authorize individual appropriation rights for some kinds of instream uses. n481 It has been held that water need not always be physically removed from the source of supply to satisfy beneficial use requirements. n482

COMPUTER-ASSISTED RESEARCH

LEXIS: instream w/1 use! w/15 water!

§ 50.09(k) Vesting: Use of Natural Overflow.

In some jurisdictions, courts have dealt with claims to water that periodically escapes the boundaries of a stream where the primary utility of this water has been to grow pasture or other crops. Some jurisdictions have recognized this as a valid appropriation, n483 adopting the argument that the recognition of such a right insures that other appropriators will not subsequently extract so much water that at no time will the stream flood and thereby fail to water the pasture. n484 Jurisdictions rejecting such a view tend to do so based on the argument that the claimant has done nothing in the way of a "diversion" to cause the water to flow to that land. n485 In some jurisdictions, the right to make such a use of the water is protected under a particular species of water rights commonly called "meadow right," n486 which appears conceptually to be a sort of domestic use, communal type right.

COMPUTER-ASSISTED RESEARCH

LEXIS: natural w/1 overflow w/15 water!

§ 50.09(l) Vesting: Application to Beneficial Use.

Appropriative jurisdictions also require, as a condition associated with the vesting of water rights, that the water actually be applied to a beneficial use. n487 The requirement of beneficial use also is considered to be an on-going obligation associated with the water right. n488 That is, if at some future date, the use of the water ceases to be beneficial, the right may be terminated.

§ 50.09(m) Vesting: Defining "Beneficial Use."

Beneficial use was initially defined in terms of the value of the particular use of the water to the water right-holder, as well as in terms of the value of the use to society as a whole. Historically, the utility of the use to the right-holder was probably considered to outrank the utility of the use to society. In recent decades, courts and legislatures have shown an increasing interest in the larger social impacts of the use on other kinds of uses and upon the accomplishment of benefits that flow to society as a whole. n489 As a result, there seems to be a strong propensity to balancing all factors relevant to the matter of utility.

Factors which have been considered relevant to the determination of whether a particular use is beneficial now tend to focus on two separate concerns -- the nature of the use and the efficiency of the appropriation. n490

§ 50.09(n) Vesting: Defining "Beneficial Use" -- Nature of the Use.

Whether a particular use is "beneficial" depends in large part on whether:

(1) the use benefits or enhances the productivity of the land of the appropriator; n491

(2) the use benefits society as a whole; n492

(3) the use is reasonable with respect to the rights of others, n493 and rights of the public; n494 and

(4) the use does not cause harm to other appropriators. n495

Most jurisdictions also appear to require that the use in question be a *present* use rather than a *speculative* one. n496 A variety of particular uses have been held to be beneficial. These include aesthetics, n497 domestic use, n498 electricity generation, n499 fish and wildlife maintenance, n500 flood control, n501 irrigation, n502 land reclamation, n503

livestock watering, n504 municipal use, n505 recreational use, n506 and sand and gravel preparation. n507

COMPUTER-ASSISTED RESEARCH

LEXIS: beneficial w/1 use! w/15 water!

§ 50.09(o) Vesting: Defining "Beneficial Use" -- Efficiency of Use.

Courts in many jurisdictions have also focused on the reasonableness of the appropriation in relation to the efficiency of the application of the water itself. n508 In this context, courts have considered whether the use is economical n509 or efficient. n510 Courts have held that extravagant or wasteful applications of the water are not beneficial even though the use may be considered economical to the appropriator, n511 particularly where there is a less wasteful method of water application which could be used. n512

COMPUTER-ASSISTED RESEARCH

LEXIS: beneficial w/1 use! w/15 efficien! w/15 water!

§ 50.09(p) Vesting: The Problem of Due Diligence.

The priority of a water right is generally measured from the point in time at which the right is considered to vest. In view of the fact that several different things must occur before the right vests, it might be anticipated that the law will not consider the right to have actually vested until the completion of the last of the requirements. Some projects, of course, require much more time to complete than others and such a rule, blindly followed, might deprive one who starts first but finished last of protection over another who began later but finished earlier to divert land-use water from the same source. For this reason, the law has long recognized that if the activities necessary to secure the vesting of a water right are diligently pursued and accomplished within a reasonable time, the priority of the water right would be dated from the time of beginning rather than ending of the process. n513 The doctrine invoked to achieve such a result is commonly called the "doctrine of relation back." This doctrine is followed today and is considered to apply to statutory as well as common-law rights. Indeed, when the right is granted as the result of a formal application, statutes typically provide that the priority of the right will be dated from the time the application is received, provided that the conditions prerequisite to the issuance of the right have been accomplished within the time frame set forth in the statute. n514

In order to successfully invoke the doctrine of relation back, the would-be appropriator must, of course, show that the activities required (usually a diversion of the water, and application to beneficial use) were done with reasonable dispatch and completed as quickly as possible. Nevertheless, the meaning of due diligence and reasonable speed are naturally uncertain. The greatest risk is perhaps that someone will complete their project at less than optimum speed but in the meantime may deprive others of the opportunity to appropriate water, because, until the first appropriator's project is completed, it may be impossible to determine whether there is any unappropriated water left for the second appropriator to claim. In this sense, the requirement of diligence insures that undeveloped water will not be hoarded. n515

The Colorado Legislature defined "reasonable diligence" for the first time in 1990 providing that "The measure of reasonable diligence is the steady application of effort to complete the appropriation in a reasonably expedient and efficient manner under all the facts and circumstances." n516 It has been held that the economic feasibility of the project is a relevant fact in the determination of reasonable diligence. n517 Further, the legislation provides that reasonable diligence performed for one part of a project of integrated system that is comprised of several features will be deemed sufficient for the entire project. n518

§ 50.09(q) Priorities Generally.

A traditional feature of appropriative systems is that certain water rights are considered to have priority over other rights. This priority is determined on the basis of the timing of the vesting of the right and has caused these jurisdictions to be popularly known as "prior appropriation" jurisdictions.

§ 50.09(r) Priorities: Rights of Senior Appropriators.

Once the right is secured, it will be considered subordinate only to existing water rights, and generally will not be reduced or suspended in times of shortage unless it is necessary to limit the right in order that those with superior claims might be satisfied. Thus, the senior appropriator is considered to have the first right of withdrawal from the stream, and it is only the surplus beyond that which may be rightfully claimed by the appropriator that is generally considered to be available to others.

According to traditional priority rules, the earlier (or senior) appropriator is considered to be superior to later (or junior) appropriators and is deemed to have the right to sufficient water to satisfy the full needs of the senior appropriator before the junior appropriator may withdraw any water, if there is not enough water available to meet the needs of both appropriators. n519 This still appears to be the general rule in appropriative jurisdictions.

Because this rule causes the junior appropriator to bear the burden of water shortages, it makes the establishment of the priority of a particular water right not only most critical, but a valuable aspect of the property right itself.

There is increasing interest in allowing junior appropriators to provide an alternate source of supply to a senior appropriator or to make other modifications in the manner in which water is extracted in order to allow the junior appropriator to divert water without causing harm to the senior. n520

COMPUTER-ASSISTED RESEARCH

LEXIS: priorit! w/15 senior w/1 appropriator! w/50 water! w/1 right!

§ 50.09(s) Priorities: Establishing Priority.

In most appropriative jurisdictions, priority was initially considered to be established only upon the completion of all the events necessary to secure or vest the water right, subject to the doctrine of relation back. n521 This meant that until the diversion and application process was completed, priority could not be determined. However, once the water was actually applied to beneficial use, the priority of the right would be measured as of the beginning of the diversion process. This approach was adopted to accommodate those appropriators who needed to construct extensive diversion works to move the water considerable distances. Under this approach, another appropriator, seeing the beginning construction, could not rush in and immediately secure a right of higher priority simply because the diversion required less time to complete.

As jurisdictions have modernized the allocation of appropriation rights, through the adoption of administratively granted permits, it is now common to determine priority based upon the date an application is filed with the state administrative agency. There is still a need to complete the diversion and water application process, however, since the acquisition of the right is typically subject to the condition that all statutory or other requirements are satisfied. n522 Once the process of development is completed, the "relation back" doctrine comes into play and establishes priority as of the date the process was begun. n523

COMPUTER-ASSISTED RESEARCH

LEXIS: establish! w/5 priorit! w/50 water! w/1 right!

§ 50.09(t) Priorities: Tie-Breakers.

The likelihood of two claimants having exactly the same priority is diminished to the extent that the right process is initiated with the filing of an application, since each application may be dated to the precise time it is accepted for filing and it is unlikely that two applications will be processed at exactly the same time.

Nevertheless, some jurisdictions have adopted an additional priority structure to serve as a "tie-breaker." In one state, for example, the statute establishes the following order of priority in the event the timing of the use is not dispositive: domestic uses are preferred first, then municipal, irrigation, industrial, recreation and power uses. n524

COMPUTER-ASSISTED RESEARCH

LEXIS: priorit! w/15 tie-breaker! w/50 water! w/1 right!

§ 50.09(u) Priorities: Seasonal Priority.

Most jurisdictions do not recognize seasonal priority. That is, the appropriator will generally be considered to be entitled to take the water at any time it can be put to beneficial use. n525 It may be, however, that the right is limited with respect to the time the water can be used. n526 In that situation, the right would have priority only within the stipulated time frame.

COMPUTER-ASSISTED RESEARCH

LEXIS: seasonal w/5 priorit! w/50 water! w/1 right!

§ 50.09(v) Quantity of Water to Which Rightholder Is Entitled.

The amount of water claimed under an appropriation right is typically limited to the amount 1) of water first appropriated 2) that is actually being used 3) used for for beneficial purposes. n527

§ 50.09(w) Quantity: Establishing an Amount.

The amount to which the appropriator is entitled is affected by a variety of concerns. First, the amount claimed, to some extent, is said to be directly determined by the amount that is actually used. As a general rule, one cannot claim a right to more water than is actually being beneficially used.

Second, the amount actually considered to be beneficially used may be affected by the capacity of the transmission device. Here, the quantity to which the appropriator is entitled will generally be measured as the amount withdrawn at the point of diversion rather than as the amount actually applied to beneficial use at the ultimate point of use. This is justified on the ground that more water must be withdrawn than will actually be used in order to compensate for amounts lost in transit due to seepage and transpiration loss.

The amount to which the appropriator is entitled may also be reduced in a variety of ways. First, as a general rule, if no water is used by an appropriator during a protracted period or even during certain times of the year, the right may be lost to withdraw water at any time and be considered as extending only to the period of actual historical beneficial use. n528

Second, the quantity of water available under a valid appropriation right is usually limited to the amount that was *first* appropriated and put to a beneficial use. n529 Later increases in the amount will generally be considered the object of separate appropriation rights, and subject to a different priority, unless the additional amount meets increased needs which are within the scope of the claimant's "original intent" and the withdrawal is made within a "reasonable time."

n530 However, it is generally recognized that the appropriator does not have the right to the full *flow* of the stream simply because one is the senior appropriator. n531

It has been held that the amount claimed may be reduced if it is extravagant or wasteful, if there is a more efficient method of application available to the appropriator, n532 or if the amount claimed exceeds the reasonable needs of the appropriator. n533

COMPUTER-ASSISTED RESEARCH

LEXIS: quantity! or amount! w/15 appropriat! w/15 water!

§ 50.09(x) Waste Generally.

The problem of waste is a particularly difficult problem for appropriative systems to deal with. It is arguably institutionalized through three particular features of appropriative systems:

1) the rigidity of the priority structure which gives greater protection to older, often less efficient uses;

2) the practice of measuring the amount of water to which the appropriator is entitled at the point of extraction rather than at the point of use; and

3) the propensity in any determination of whether the use is beneficial to give greater weight to the utility of the use to the appropriator than to society at large.

Priority of water rights is a problem since the earliest uses are given the greatest measure of protection. Often the earliest uses will be the least efficient or will be for purposes which are of lesser importance to society. However, since a significant change in the purpose of water use, or even a reduction in the amount used, may risk changes in the water right, there is considerable pressure not to abandon, alter or change early uses, n534 since these changes may result in either having the new use considered as a separate or different use with a later priority, or having the quantity to which the right relates reduced to reflect the amount actually used.

Measuring the amount of water at the point of diversion, as opposed to the point of use, discourages conservation. Since the first to use the water did not have to worry about the needs of later users and could acquire the water at essentially no cost, there was no incentive to construct efficient transportation structures. If a high percentage of the water was lost in the process of getting it from its source to the actual place of use, more water could simply be diverted to offset the losses. n535

Early court interpretations of the concept of "beneficial use" placed heavy reliance upon the utility of the water to the appropriator. n536 This undoubtedly encouraged the use of water for purposes such as irrigation which require (and therefore remove from availability to other appropriators) incredible amounts of water. Although irrigation is vital to successful agriculture in arid areas, irrigation has frequently been criticized as one of the more inefficient uses of water. n537

COMPUTER-ASSISTED RESEARCH

LEXIS: waste! w/50 water! w/1 right!

§ 50.09(y) Waste: Defining Waste.

Waste has been difficult to eliminate, partly because of features of appropriative systems that seemingly encourage it

and partly because of a lack of consensus as to what "waste" actually means in the context of water law and how the concept may be quantified in any meaningful manner. It is clear that courts have held that wasteful uses are generally not considered to be beneficial uses and must be discontinued. n538 It has also been held that water in excess of those amounts actually needed may be considered waste and as a result may possibly be claimed by other appropriators. n539 However, it has been very difficult to determine whether a particular use is wasteful and how much water is being wasted.

It is virtually impossible to find cases which describe particular uses as wasteful *per se*, though the significance of the inquiry should not be minimized. If the *use* itself is wasteful, it will not satisfy the requirements for beneficial use and may be enjoined in its entirety, and the entire amount represented by the appropriation will be considered available for other appropriators. On the other hand, if the use itself is not considered wasteful, only the "excess" may be considered subject to further appropriation. This requires the difficult determination of how much is being claimed in excess of what is actually needed.

It appears to be the practice of courts dealing with the issue of waste to resolve the matter according to all the circumstances surrounding the use. This, of course, must be done on a case-by-case basis. It also appears that only blatantly wasteful uses are likely to be successfully challenged on this ground. This makes the measurement of any "waste" amount a difficult problem.

Part of the measurement problem results from a difficulty determining how much water is actually needed for any particular purpose and, hence, how much of any specific appropriation amount that may be claimed under the right is waste. Traditionally, it has been held that appropriators may claim an amount at the point of diversion which is adequate to supply the amount needed at the point of use. n540 This legitimizes the practice of appropriating enough water from the stream to offset transmission losses due to evaporation, seepage and transpiration. Courts have considered pressing water shortage problems as a basis for requiring more stringent measures to reduce transportation and transpiration losses. n541

It has, therefore, become a generally accepted view that only "excessive," n542 "extravagant," n543 or "unreasonable" n544 waste will be enjoined. In at least one case, the court has suggested that the appropriator is only entitled to an amount that is "reasonable," which should be measured not only in relation to the users' needs on the lands of the appropriator, but reasonable in relation to the reasonable requirements of other, including subsequent, appropriators. n545 In that case, the court ordered improved methods of diverting, conveying, and measuring water so as to assure the greatest possible use of the water.

§ 50.09(z) Transferability of Water Rights.

Like riparian systems, most appropriative jurisdictions n546 have considered water rights to be appurtenant to the land of the water right holder. n547 This means that when such lands are sold or transferred, the water right will automatically revert to the purchaser unless reserved or excepted. When land is fractioned or subdivided, it has been held that a pro rata portion of the water right passes with each parcel. n548 Unlike traditional riparian systems, however, appropriative systems allow water rights to be severed from the land and transferred separately from the land. n549 In Arizona, water rights must be sold together with the land, even though the water may be used on land other than that to which the water right is "attached" for purposes of transfer. n550

In McCasland v. Miskell, n551 the general rule was followed that the sale of land to which water rights are appurtenant conveys the water rights in the absence of evidence of an intent to the contrary. Further, rights that are appurtenant to the land cannot be severed from the land simply by using the water on a different tract. Such a transfer requires approval of the state engineer.

COMPUTER-ASSISTED RESEARCH

LEXIS: transfer! w/30 water! w/1 right!

§ 50.09(aa) Transfers: Approval.

Appropriative jurisdictions vary as to how such transfers must be structured to be effective. n552 Many jurisdictions require some kind of formal administrative approval of the transfer, in which the land to which the water is to be transferred and the nature of the use to be made of the water after the transfer must be identified. n553 Some jurisdictions require that the transfer be in writing, just as any other conveyance of real property. n554 Approval of a state agency may be required before the transfer is effective, though some jurisdictions require approval only if the place of diversion or the nature of the use is changed as a result of the transfer, n555 or if other appropriators are harmed. n556

Authorized transfers or changes generally do not involve a loss of priority. n557

COMPUTER-ASSISTED RESEARCH

LEXIS: approv! w/5 transfer! w/30 water! w/1 right!

§ 50.09(bb) Transfers: Water Markets.

As in riparian jurisdictions, once the water is reduced to possession, it is considered personal property and generally may be disposed of accordingly. n558 This feature of water rights coupled with the general transferability of water rights has created a market structure for water and water rights in many western states. n559 It has become common in some jurisdictions for individuals or organizations to acquire water rights in order to sell the water to others for municipal or domestic uses. n560 Such uses will generally be considered beneficial, although no specific benefit is derived by the appropriator on land owned by the appropriator.

LEXIS: water! w/5 market! w/30 transfer! or sell!

§ 50.09(cc) Transfers: Protecting Junior Appropriators.

It is the rule in most appropriative jurisdictions that the transfer of water rights will not be permitted if the effect is to harm other appropriators, including junior right holders. n561 It is generally the burden of the proponent of the transfer to present at least a *prima facie* case that no harm will result. n562 The burden then shifts to those claiming harm to demonstrate that the proposed change would interfere with their rights. n563

COMPUTER-ASSISTED RESEARCH

LEXIS: protect! w/5 junior w/1 appropriator! w/30 transfer!

§ 50.09(dd) Municipal Rights.

Appropriative jurisdictions generally do not accord municipalities any special priority by virtue of their status as municipalities. This has forced cities and towns to secure appropriation rights just as any other water user, or to purchase water rights from others. n564 These rights have priority based on the time the right was established. Hence, cities can improve their future water supply situation by purchasing rights from those who hold the highest priority.

In addition, most municipalities have the authority to condemn the water rights, if needed, and will thereby assume the priority of the acquired right. n565

Whether a municipality has an obligation to supply water to end-users has been the source of some litigation. In Haik v. Town of Alta, n566 the town refused to extend water to plaintiffs. As a result of this, plaintiffs were unable to develop their land. The court refused to find that an interest in water for the purpose of real estate development was a fundamental right. n567 In this case, the court rejected an equal protection claim finding that there were plausible reasons for Alta to refuse to extend the water lines to the Haik property. Here, the town was bound by a contract with Salt Lake City regarding the supply of water and even though the town had the physical capacity to extend the lines, it did not have the legal authority to do so.

In County of Del Norte v. City of Crescent City, n568 the court rejected the argument that unincorporated areas outside city limits had a right to hook up to the city water system and held that the city's denial of water service was not arbitrary where the reason for the limitation was the pressure of population growth in the city on the city's system.

In Spring v. Bradley, n569 the court ruled against an owner of an undeveloped tract who brought an action to compel the town to supply water and sewer service to the property, citing several cases dealing with the obligations of towns to supply services. n570 These cases were cited for the proposition that a municipality cannot be required to impose a burden on its utility facilities or on the city itself by providing services to persons who are outside of its corporate limits and beyond its taxing powers.

In Landmark Development, Inc. v. City of Roy, n571 the court rejected a claim that the city acted in an arbitrary and capricious manner by charging an unreasonable water connection fee for a residential development outside the city limits.

On the other hand, municipalities may adopt ordinances requiring that township residents must connect to municipal systems and to cease using wells for domestic consumption purposes without violating the residents' due process rights. n572

In Board of County Commissioners of Ottowa County v. Village of Marblehead, n573 an established sewer district was given authority under a statute to complete a county water service project even though the area had been acquired by a municipality during the pendency of the project. The City argued that the statute violated the state Constitution's grant to municipalities of exclusive rights to supply water service to municipal residents. The court held that the statute authorized a valid exercise of police powers that did not substantially infringe on the municipality's constitutional power to operate utilities.

In Vernon Township Water Authority v. Vernon Township, n574 a court found that a township did not have the authority to mandate water connections in some areas and not in others and invalidated an optional tap ordinance.

In Turlock Irrigation District v. Heterick, n575 the court dealt with the obligation of an irrigation district, as a municipal corporation, to execute a gas supply contract for the benefit of its customers. The court found the corporation not to be obligated to execute the contract. The reason was that under state law, the power of irrigation districts as municipal corporations was specifically limited to supply only water, electricity, drainage and closely related activities, such as the

operation of cement plants and rock quarries.

In Farmers High Line Canal and Reservoir Company v. City of Golden, n576 the court refused to allow junior water right holders to seek modification of the city's water rights to impose volumetric limitations.

§ 50.09(ee) Termination and Loss of Right.

Traditionally, appropriation rights have been considered to be perpetual, subject to loss only through non-use. Such a termination may occur in a variety of ways. n577

§ 50.09(ff) Termination: Abandonment.

In most appropriative jurisdictions, abandonment is defined as the non-use of water together with an intent not to continue the use. n578 It will generally be easier to establish the fact of non-use than it will be to establish an intent not to continue the water use. Such proof is a question of fact which generally must be supported by clear and convincing evidence. The underlying policy of appropriative jurisdictions to encourage the maximum efficient use of waters within the jurisdiction will generally support an inference of the intent to abandon, simply from the fact of protracted non-use. n579

The termination of a water right as a result of abandonment will typically release the water back into the public domain for further appropriation. Thus, water rights may not be acquired simply on the ground that the right has been abandoned. Rather, the would-be appropriator may need to show abandonment to establish that there is sufficient water available to support the new or proposed appropriation. n580

COMPUTER-ASSISTED RESEARCH

LEXIS: terminat! w/5 water! w/1 right! w/30 abandon!

§ 50.09(gg) Termination: Forfeiture.

Appropriative jurisdictions generally have a statutory means of termination based on the non-use of water. These provisions allow the administrator of the system to terminate the water right based on nonuse for a specified period of time. n581 These statutes differ in concept from abandonment in that a formal act of termination by the administrator is required before the water right will be extinguished. This action occurs within the context of a procedure which is triggered by the fact of non-use within the prescribed period. The administrator is generally not required to prove an intent not to use.

The water right holder may avoid forfeiture in most jurisdictions upon a showing of "good cause." In most jurisdictions, non-use resulting from conditions beyond the control of the water right holder, such as weather conditions, will generally be considered to be "good cause." It has been held that forfeiture may result from acts within the control of the right holder, such as the use of the water for purposes other than those for which the right was secured, even though those other uses may actually be considered beneficial purpose. n582

As with abandonment, the termination of a water right as a result of forfeiture typically releases the water back into the public domain for further appropriation.

COMPUTER-ASSISTED RESEARCH

LEXIS: terminat! w/5 water! w/1 right! w/30 forfeit!

§ 50.09(hh) Termination: Prescription, Adverse Possession, Estoppel.

Water rights generally cannot be acquired in most appropriative jurisdictions as a result of prescription, adverse possession or estoppel. Nevertheless, water rights may be lost in this manner. n583 It will generally be necessary to show that the use of the water has been terminated as a result of adverse use by another for the period of time necessary to terminate any other real property interest in the jurisdiction. The party who is causing such an interference, however, neither acquires the water right of the party against whom the activity is directed nor receives any special priority regarding the acquisition of a right in the water that may be released back into the public domain for appropriation by others. n584

COMPUTER-ASSISTED RESEARCH

LEXIS: terminat! or los! w/5 water! w/1 right! w/30 prescription or adverse possession or estoppel!

§ 50.09(ii) Re-Use.

According to the rules by which water rights are considered to be property rights, water rights are real property rights and the right holder does not thereby acquire any title interest in the water itself. However, once the right is exercised to reduce a particular quantity of water to possession, that water becomes the personal property of the right holder and is treated as such by the legal system. This has meant that, as a general rule, as long as water that has been reduced to possession remains on the property of the appropriator, it can be captured and re-used for as long as the appropriator desires. n585 Once it leaves the property, it may be considered abandoned and hence available to others who may secure valid water rights which would entitle them to capture it for their use. n586

This approach has occasioned an interesting dilemma for the system; how can the initial user be given an unfettered right to use the water, while at the same time recognizing rights in subsequent users who may claim the water after it leaves the premises, without giving those subsequent users the right to compel the initial water right holder to let the water go. Most courts appear to have taken the position that the junior appropriator cannot compel the original user to release any excess. n587 On the other hand, such junior appropriators may be given some protection when the transfer of the senior right would cause them harm. n588 Similarly, it has been held that water cannot be captured for re-use on other lands when junior appropriators have relied upon its return to the stream. n589

The reuse of water that has been imported and stored underground prior to the time of initial use poses interesting problems to the system. This water is unlike surface waters in that its users are not the same kind of junior or return flow users to be protected. On the other hand, its undoubtedly has been commingled with other groundwaters to which other appropriators may have rights yet there is generally no likelihood that it will be returned to the ground after the initial use.

There are some cases which have held that when a developer of imported water abandons that water, it does not return to the public water supply to become available for appropriation by others at all. n590 On the other hand, there are cases which hold imported water to be the same as non-imported water and as such, become public water upon abandonment. n591

In at least one jurisdiction, courts have suggested that the reuse issue regarding stored water may raise questions of changes in use that the system can legitimately address. n592

COMPUTER-ASSISTED RESEARCH

LEXIS: re-use w/30 water! w/1 right!

§ 50.09(jj) Adoption of Administrative Principles.

Today, nearly all appropriative jurisdictions, including mixed systems which recognize some riparian rights, n593 have statutes which require water users to obtain permits for the use of surface or groundwaters of the jurisdiction. n594 These statutes have injected a significant measure of administrative supervision of the acquisition and exercise of water rights. There is much variety in the extent to which such administrative control is exercised, but it is clear that the right holder no longer controls the acquisition of water rights as was the case in the early days of such systems.

In some jurisdictions, these statutes may exempt certain uses, such as domestic use, livestock, or small scale diversions, from the permit requirements. In some jurisdictions, the acquisition of an initial permit does not constitute the final grant of a water right but only the official authorization to undertake the specific acts, such as the diversion of the water to beneficial use, which are still considered necessary in order to ultimately secure the right. n595 In these jurisdictions, the right is not considered vested until the administrator finally certifies that all criteria necessary to the acquisition of the water right have been properly followed. n596

LEXIS: administrat! w/15 water! w/1 right!

FOOTNOTES:
(n1)Footnote 451. The states of Colorado, Idaho, Montana, Nevada, New Mexico, Utah and Wyoming are generally said to be pure, or Colorado Doctrine appropriative doctrine jurisdictions. That is, these jurisdictions do not recognize any riparian consumptive use water rights. Frank Maloney et al., Florida Water Law 1980, 60 (Water Resources Research Center, Univ. of Fla. Pub. No. 50 (1980)).

In Alaska, California, Kansas, Mississippi, Nebraska, North Dakota, Oklahoma, Oregon, South Dakota, Texas and Washington, some riparian rights are considered to exist. *Id.* These jurisdictions are sometimes called mixed or California Doctrine jurisdictions. *See* § 50.10 *infra*.

For a further discussion of water rights in Texas, *see* Martin Hubert & Bob Bullock, *Senate Bill 1, The First Big and Bold Step Toward Meeting Texas's Future Water Needs*, 30 Texas Tech L. Rev. 53 (1999).

(n2)Footnote 452. Several western states have adopted a mixture of riparian and appropriative principles. *See* discussion of Mixed Systems, § 50.10 *infra*. These states include California, Mississippi, Nebraska, North Dakota, Oklahoma, Oregon, South Dakota, Texas and Washington.

The right to construct a means to convey the water to the place of use is said to follow the water right. This has allowed the owners of irrigated lands who owned a water right but whose chain of title did not contain an express grant of rights to the irrigation ditch that carried the water to claim an implied easement over the non-irrigated parcel. *See Rennard v. Vollmar, 977 P.2d 1277 (Wyo. 1999).* In this case, this rule entitled the owner of the water right to an injunction against interference with the ditch by the non-irrigated parcel owners and to defeat their counterclaim for trespass and property damage. *See generally* Young, Daniel S. and Helton, Duane D. *Developing a Water Supply in Colorado: The Role of an Engineer. 3 U. Denver Water L. Rev. 373 (2000).*

(n3)Footnote 453. *See, e.g.*, Kan. Stat. Ann. § 82a-707(c):

As between persons with appropriation rights, the first in time is the first in right... .

(n8)Footnote 458. *Coffin et al. v. Left Hand Ditch Co., 6 Colo. 443 (1882).*

(n9)Footnote 459. *See, e.g., Imperial Irrigation District v. State Water Resources Control Board, 225 Cal. App. 3d 548 (1990).*

(n10)Footnote 460. *See* Mont. Code. Ann. § 85-3-311(2).

(n11)Footnote 461. *See, e.g., California Trout, Inc., v. Superior Court of Sacramento County, 207 Cal. App. 3d 585 (1989),* where the court observed that "[i]f a statute sanctioned a manifestly unreasonable use of water, it would transgress the constitution."

(n12)Footnote 462. *See, e.g., Imperial Irrigation District v. State Water Resources Control Board, 225 Cal. App. 3d 548 (1990),* where the court said "[t]he historic concepts of water 'rights' in California were dramatically altered by the adoption in 1928 of [a constitutional amendment which empowered the Board to conduct hearings to determine whether particular water uses were reasonable or wasteful]. Our Supreme Court ... acknowledged that the new provision altered previously vested rights... . It has been long established that all property is held subject to the reasonable exercise of police power and that constitutional provisions declaring that property shall not be taken without due process of law have no application in such cases."

(n13)Footnote 463. *524 N.W.2d 855 (S.D. 1994).* For further discussion, *see* Note. Washington Water Rights Based on Actual Use or on Delivery System Capacity? Department of Ecology v. Theodoratus, Darryl V. Wareham. *24 Seattle U. L. Rev. 187 (2000).*

(n14)Footnote 464. Competing consumptive and non-consumptive use rights may be used for purposes of making this determination. *See Taylor v. Tampa Coal Co., 46 So. 2d 392 (Fla. 1950).* Thus, water may not be considered available if the removal of the water would interfere with the non-consumptive use right of recreation.

Whether the water is available may be depend upon whether the water is characterized as confined or diffused. *See In re* the Adjudication of Water Rights in the *Lower Guadalupe River, 730 S.W.2d. 64 (Tex. App. 1987).* There, the court held that once the surface waters were collected and came to rest in a natural depression, it could be considered a lake and therefore available for appropriation by the public.

See Corbridge, James N., *Historical Water Use and the Protection of Vested Rights: A Challenge for Colorado Water Law, 69 U. Colo. L. Rev. 503 (1998).*

A permit for a right to use the water was required in *Norden v. State, 973 P.2d 910 (Or. 1999)* where the water from a spring, if undiverted, would flow into a creek. Under Oregon law, if the water would not leave the land of the user if undiverted, no permit is required.

(n15)Footnote 465. *See* Note, *Unappropriated Water: The Amount of Water Remaining After Taking Into Account All Existing Permits at Their Recorded Levels*, 16 TEXAS Tech. L. Rev. 989 (1985).

See, e.g., In re Application of the Hitchcock and Red Willow Irrigation Dist., 410 N.W.2d 101 (Neb. 1987): "While it is true that some unappropriated water is present during times of high flow at the proposed diversion point, to be available in a practical sense, the supply of water must be fairly continuous and dependable."

See Empire Lodge Homeowners' Association v. Moyer, 39 P.3d 1139 (Colo. 2001).

See also Board of County Comm'rs v. Collard, 827 P.2d 546 (Colo. 1992); In re Application A-16642, 463 N.W.2d 591 (Neb. 1990); State v. Morros, 766 P.2d 263 (Nev. 1988) which all hold that a physical diversion is not necessary to acquire a right of appropriation. *See Matter of Bd. of County Comm'rs, 891 P.2d 952 (Colo. 1995)* holding that "diversion" required an open physical act sufficient to give third parties notice. Such an act might include planning that is focused on the acquisition of water, feasibility studies, capital expenditures and the filing of applications for permits. *See also State ex rel. Matrinez v. McDermett, 901 P.2d 745 (N.M. App. 1995),* holding that mere diversion of the water into an irrigation ditch was not sufficient of itself to constitute a diversion since irrigation contemplates growing something.

(n28)Footnote 478. *State of Idaho, Dept. of Parks v. Idaho Dept. of Water Admin., 530 P.2d 924 (Idaho 1974).*

See e.g., Nevada v. Morros, 766 P.2d 263 (Nev. 1988). Nevada does not have a statute that expressly authorized instream use of water. The court, however, found a basis upon which to recognize a water right in the United States Bureau of Land Management to maintain the level of water in a lake sufficient for recreational purposes in Nev. Rev. Stat. § 533.030(2) which provides that "use of water ... for any recreational purpose is ... a beneficial use."

But see Board of County Comm'rs v. Collard, 827 P.2d 546 (Colo. 1992), where the court held that the water court had misinterpreted Colorado statutes to find a right to instream flows.

For discussion of the development of the right to make instream use, *see* J. Beeman, *Historical Development of Instream Flows in Idaho,* 37 Advoc. (Mar. 1994) 16.

In *In re Application of A-16642, 463 N.W.2d 591 (Neb. 1990),* the court held that nothing in the Nebraska Constitution prohibits appropriations for instream use.

Rev. 503 (1998);* Kanazaswa, Mark T., *Efficiency in Western Water Law: The Development of the California Doctrine, 1850-1911, 27 J. Legal Stud. 159 (1998).* For further discussion, *see* Note, *Washington Water Rights Based on Actual Use or on Delivery System Capacity? Department of Ecology v. Theodoratus, Darryl V. Wareham, 24 Seattle U. L. Rev. 187 (2000).*

(n38)Footnote 488. *See, e.g.,* Kan. Stat. Ann. § 82a-707(a):

Surface or groundwaters of the state may be appropriated as herein provided. Such appropriation shall not constitute ownership of such water, and *appropriation rights shall remain subject to the principle of beneficial use*. (emphasis added.)

(n39)Footnote 489. *See, e.g., In re* Water Rights in *Escalante Valley Drainage Area, 348 P.2d 697 (Utah 1960).*

See Ir Re Water Right Claim No. 1927-2, 524 N.W.2d 855 (S. D. 1994), regarding the protection of fowl habitat as a

beneficial use, holding in the affirmative. *See also Aspen Wilderness Workshop v. Colo. Water, 901 P.2d 1251 (Colo. 1995),* approving an appropriation for the purpose of preserving the natural environment.

(n40)Footnote 490. *See, e.g., State Water Resources Control Bd. v. Forni, 126 Cal. Rptr. 851 (1976).*

An increasing number of states are defining "beneficial use" to include recreational use of the water. *See, e.g.*, Nev. Rev. Stat. § 533.030(2) which provides that "use of water ... for any recreational purpose is ... a beneficial use." *See also Benz v. Water Resources Comm'n, 764 P.2d 594 (Or. 1988),* which considered an application for water to leach boron (which had been deposited as the result of extensive irrigation) from the soil. The Commission found that leaching boron from the soil was a beneficial use of the water and allowed it only on the condition that the right be subordinate and inferior to both the storage and direct use of water for other consumptive use purposes. The court upheld the Commission.

A change in use may call into question the beneficial nature of the use. In *Evans v. Water Resources Dep't, 839 P.2d 257 (Or. 1992), rev. denied, 847 P.2d 409 (1993),* the court held that water first diverted for mining and later used for irrigation would be considered the exercise of an irrigation right.

Legislation in Arizona now requires the cities to pay a "transfer fee" to the county from which the water is being transferred to offset such losses. *See* Ariz. Rev. Stat. § 45-566.

In response to a case involving the impact of the Endangered Species Act on rights to pump water from the Edwards Aquifer in Texas, the judge allowed the Texas legislature until May 31, 1993, to develop a management plan for the aquifer. *See* U.S. Water News, April, 1993, at 1. One response of the Texas legislature was to broaden authority to transfer water rights in the state. In so doing, the legislature approved the establishment of a water bank under which the Texas Water Development Board was given the authority to purchase, sell, hold and transfer water and water rights. The plan that was approved to implement the changes in legislation particularly called for the acquisition of rights in the Guadalupe River which are to be pumped and stored for later use in the Edwards-Trinity Aquifer. *See* U.S. Water News,

Nov. 1993, at 13. In addition, the state was authorized to operate the water bank which will handle water right transfers. Rights are listed as being for sale with the bank which then can function as a negotiator between buyers and sellers of the water rights that may be "deposited" or listed with the water bank. A permit granting surface water rights will be protected for ten years while "deposited" in the bank. The board was not given exclusive rights to handle transfers of water rights and such transfers can take place outside of the bank. *Id.*

Keith Higginson & Jack A. Barnett, Water Rights and Their Transfer in the Western United States (Conservation Foundation 1984).

The needs of municipalities for water has often impelled them to purchase water rights in rural areas and then transfer the rights to the cities. One of the consequences of this activity has been to change the land use patterns in the rural areas in ways that may adversely affect the rural tax base. Legislation in Arizona requires the cities to pay a "transfer fee" to the county from which the water is being transferred to offset such losses. *See* Ariz. Rev. Stat. § 45-566. *See, generally* Howe, Charles W. *Protecting Public Values in a Water Market Setting: Improving Water Markets to Increase Efficiency and Equity. 3 U. Denver Water L. Rev. 357 (2000).*

(n110)Footnote 560. *Navajo Dev. Co. v. Sanderson, 655 P.2d 1374 (Colo. 1982).*

(n111)Footnote 561. *See, e.g., Southeastern Colorado Water Conservancy Dist. v. Fort Lyon Canal Co., 720 P.2d 133 (Colo. 1986).*

In the past, most jurisdictions probably considered little other than the impact on junior appropriators that may result from a transfer of water rights. Indeed, some jurisdictions have held that is the only issue to be considered. *See In re Application of Sleeper, 759 P.2d 787 (N.M. 1988).* Other jurisdictions are starting to take a broader view and consider the impact on landowners and others beyond the class of junior appropriators. *See Bonahm v. Morgan, 788 P.2d 497 (Utah 1989)* holding that the officials should have considered the likelihood that the transfer would cause an increase in flooding adjoining landowners. The state had argued that only the issue of impairment to other water right holders was germane to the approval. This suggests that the law is increasingly willing to consider that the transfer of a water right involves more than the simple transfer of a property interest and may have far reaching effects related to both the

manner and the purpose for which the water is to be used.

Aspen Wilderness Workshop, Inc. v. Hines Highlands Ltd. Partnership, 929 P.2d 718 (Colo. 1996) (under situations in which any use by a junior appropriator would cause persistent injury to senior water users, water court must eliminate injury by imposing conditions on exercise of junior right); *City of Thorton v. Bijou Irrigation Co., 926 P.2d 1 (Colo. 1996)* (change of water rights cannot be approved if change will injuriously affect vested rights of water users; this protection extends to junior appropriators' rights in return flows).

(n112)Footnote 562. *See, e.g., Danielson v. Kerbs Ag., Inc., 646 P.2d 363 (Colo. 1982).*

For an interesting way to avoid problems with junior appropriators, *see Arizona Public Serv. Co. v. Long, 773 P.2d 988 (Ariz. 1989).* There, the court held that sewage effluent was not "water" for purposes of the water rights statute. As such, the cities could sell the effluent without regard to the possibility that it might be used by downstream appropriators. As such, the transaction was not construed to involve the sale or transfer of a water right.

(n113)Footnote 563. *See, e.g., Danielson v. Castle Meadows, Inc., 791 P.2d 1106 (Colo. 1990).*

United States v. Gila Valley Irrigation Dist., 920 F. Supp. 1444 (D. Ariz. 1996) (prior appropriator of water bore burden of proving whether practices of junior appropriator had degraded quality of water).

(n114)Footnote 564. *City of Thornton v. The Farmers Reservoir and Irrig. Co., 575 P.2d 382 (Colo. 1978).*

As the needs of municipalities for water has grown, cities have looked to rural areas as a source of water. In many cases, cities have purchase water rights in rural areas which then have been transferred to the cities. One of the consequences of this activity has been to change how that land that no longer has access to water may be used. In many instances, the changes in use have had an adverse impact on the rural tax base. Legislation in Arizona now requires the cities to pay a "transfer fee" to the county from which the water is being transferred to offset such losses. *See* Ariz. Rev. Stat. § 45-566. *For a discussion of municipal liability for the consequences of water use, see* Habeeb, Wade R., *Propriety of Injunctive Relief Against Diversion of Water by Municipal Corporation or Public Utility, 42 A.L.R. 3d 426* (1998 Supp).

(n115)Footnote 565. *Town of Sterling v. Pawnee Ditch Extension Co., 94 P. 339 (Colo. 1908).*

Some states authorize municipalities to claim rights in water even though the water is presently unused (a departure from normal appropriation principles that authorize water rights only in water that is actually being used). This is to insure that water is available for anticipated growth. *See* N.M. Stat. Ann. § 72-1-9 which permits a municipality to hold unused water rights for up to forty years. *See Colorado Springs v. Eagle Co. Commr's Bd., 895 P.2d 1105 (Colo. App. 1994)* for a discussion of the power of county governments over interbasin transfers by municipalities.

See also Scott v. McTiernan, 974 P.2d 966 (Wyo. 1999), where the court refused to find abandonment of water rights where the nonuse of the water was not voluntary but the result of deliberate actions of the parties seeking a declaration of abandonment.

(n129)Footnote 579. *Beaver Park Water Inc., v. Victor, 649 P.2d 300 (1982).*

According to South Dakota statutes, abandonment is presumed after three years of non-use and the water is deemed to revert to the public for further appropriation. This statute appears to be self-executing. Nevertheless, the court in *In re Cancellation of the Stabio Ditch Water Right, 417 N.W.2d 391 (1987)* held that due process required a hearing. This suggests that some statutes that are cast in "abandonment" language may actually be construed as "forfeiture" statutes. In *Denver v. Snake River Water Dist., 788 P.2d 772 (Colo. 1990),* the court held that Denver had failed to produce sufficient evidence to overcome the presumption of abandonment. It did recognize that efforts to sell the water right would constitute evidence on non-abandonment.

In *Musselshell River Drainage Area, 840 P.2d 577 (Mont. 1992),* the court held that the rule that a rebuttable presumption of abandonment may be inferred from long periods of continuous non-use did not violate the state

Constitution.

In *Matter of Clark Fork River Drainage Area, 833 P.2d 1120 (Mont. 1992),* the court held that the city had abandoned its water right after 23 years of non-use.

Consolidated Home Supply Ditch & Reservoir Co. v. Berhtoud, 896 P.2d 260 (Colo. 1995) (abandonment requires a concurrence of nonuse and intent to abandon).

See also Scott v. McTiernan, 974 P.2d 966 (Wyo. 1999), where the court refused to find abandonment of water rights where the nonuse of the water was not voluntary but the result of deliberate actions of the parties seeking a declaration of abandonment. *See Haystack Ranch, LLC, v. Fazzio, 997 P.2d 548 (Colo. 2000).*

See United States v. Orr Ditch Co., 256 F.3d 935 (9th Cir. 2001), recognizing the Nevada rule that prolonged non-use of a water right does not create a rebuttable presumption of abandonment. *See also Defenders of Wildlife v. Hull, 19 P.3d 722 (Az. App. 2001); SRBA v. Rosenkrance, 20 P.3d 693 (Id. 2001),* holding that water rights were forfeited after the expiration of a statutory five-year period.

See N. Nachtigal, *To Abandon or Not to Abandon: What Constitutes Voluntary Abandonment in the Wake of Scott v. Mctiernan, 5 Great Plains Nat. Resources J. 247 (2001).*

(n130)Footnote 580. *See Consolidated Home Supply v. Town of Berthoud, 896 P.2d 260 (Colo. 1995). See also State ex rel. Martinez v. McDermett, 901 P.2d 745 (N.M. App. 1995).*

(n131)Footnote 581. *See, e.g.,* Ariz. Rev. Stat. § 45-190.

Because water rights are considered property, it is generally necessary to give notice and hold a hearing before water rights may be forfeited. *See, e.g., Sheep Mountain Cattle Co. v. Department of Ecology, 726 P.2d 55 (Wash. 1986).* In this case, the statute was dealing with notice and hearing was repealed and the authority of the Department of Ecology to give notice and hold a hearing was eliminated. The court held that forfeiture under such circumstances was unconstitutional as it deprived the Company of property without due process. In *Aberdeen-Springfield Canal Co. v. Peiper, 982 P.2d 917 (Ida. 1999),* nonuse of water did not cause canal company to forfeit its water right because there was no evidence that canal company did anything to cause the nonuse by stockholders in the company.

See also Scott v. McTiernan, 974 P.2d 966 (Wyo. 1999), where the court refused to find abandonment of water rights where the non use of the water was not voluntary but the result of deliberate actions of the parties seeking a declaration of abandonment.

See also Defenders of Wildlife v. Hull, 19 P.3d 722 (Az. App. 2001); SRBA v. Rosenkrance, 20 P.3d 693 (Id. 2001), holding that water rights were forfeited after the expiration of a statutory five-year period.

See also L. Boens, *Aberdeen-Springfield Canal Company v. Peiper: Interpreting Idaho's Forfeiture Statute as Applied to Carey Act Companies, 5 Great Plains Nat. Resources J. 237 (2001).*

(n132)Footnote 582. *Hennings v. Water Res. Dep't., 622 P.2d 333 (Or. App. 1981).*

In *Eureka v. Office of State Eng'r, 826 P.2d 948 (Nev. 1992),* the court held that substantial use of the water after the end of the statutory period of non-use "cures" the forfeiture. Forfeiture is not favored and clear and convincing proof may be required before the water right may be terminated. *See Aberdeen-Springfield Canal Co. v. Peiper, 982 P.2d 917 (Idaho 1999),* where nonuse of water did not cause canal company to forfeit its water right because there was no evidence that canal company did anything to cause the nonuse by stockholders in the company.

(n133)Footnote 583. *In re* Drainage Area of Bear River in *Rich County, 361 P.2d 407 (Utah 1961).*

(n134)Footnote 584. In some jurisdictions, there is an interest in using appropriative (surface) principles to resolve groundwater problems. Consider Kevin J. Neese, *Certainty in Groundwater Rights: Is Prescription Still Available?,* 12 Cal. Real Prop. J. 26 (Fall 1994).

See also Green v. Stansfield, 886 P.2d 117 (Ut. App. 1994), dealing with the acquisition of an easement for an irrigation ditch by adverse use.

(n135)Footnote 585. *Cleaver v. Judd, 393 P.2d 193 (Or. 1964).*

In some jurisdictions, the right to reuse may be conditioned upon securing approval from the administrator of the water rights. *See, Water Supply and Storage Co. v. Curtis, 733 P.2d 680 (Colo. 1987)* where the applicant requested a ruling that the water to which the water right applied could be used and reused and put to a succession of uses until it was totally consumed. The water court declined to give such a ruling. The court noted that such a ruling might be proper under appropriate circumstances but in this case, the applicant did not have any concrete or fully developed plans to reuse the water. In that sense, he did not qualify for a right to that water since he lacked the requisite "intent" to appropriate the water. *See also Central Neb. Pub. Power & Irrigation Dist. v. Abrahamson, 413 N.W.2d 290 (Neb. 1987).*

It has been held in one case that where the right to reuse is established by contract, changes in the right to reuse must also be negotiated by contract: *Denver v. Consol. Ditches, 807 P.2d 23 (Colo. 1991); Thorton v. Bijou Irrigation Co., 926 P.2d 1 (Colo. 1996).*

(n136)Footnote 586. *Pulaski Irr. Ditch Co. v. Trinidad, 203 P. 681 (Colo. 1922).*

See Arizona Public Serv. Co. v. Long, 773 P.2d 988 (Ariz. 1989). There the court held that sewage effluent was not "water" for purposes of the water rights statute. As such, the cities could sell the effluent without regard to the possibility that it might be used by downstream appropriators.

(n141)Footnote 591. *See Arizona Public Serv. Com. v. Long, 773 P.2d 988 (Ariz. 1989).*

(n142)Footnote 592. *See Southeastern Colo. Conserv. Dist. v. Fort Lyon Canal Co., 720 P.2d 133 (Colo. 1986),* where the court held that permitted changes in use of stored water were limited to historical uses in order to prevent injury to other appropriators.

(n143)Footnote 593. *See* § 50.10, *infra*.

(n144)Footnote 594. *See, e.g.*, Cal. Water Code § 1225.

Of all the appropriative jurisdictions, only Colorado does not require permits. In Colorado, new water appropriators

must go to water court and begin a proceeding which announces the intention to divert the water. Objectors may claim that there is no water available for appropriation, or that the proposed use is not beneficial, or that it will interfere with existing rights. If no objection is raised, the court will issue a decree, generally conditional upon satisfactorily completing the diversion and using the water in an appropriate manner. *See* Colo. Rev. Stat. §§ 37-92-301(4), 302(1)(a), 601.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.10

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.10 Mixture of Hybrid Systems.

§ 50.10(a) In General.

In a number of jurisdictions, n597 one method of water right allocation, such as the appropriative doctrine, may co-exist with an entirely different approach, such as the riparian doctrine. These jurisdictions are said to be "mixed." A common characteristic of most of these states is that they were at one time riparian systems, but later converted to an appropriative method of right allocation without completely abrogating riparian rights. In large measure, most of these jurisdictions have justified the shift to appropriative principles on the ground that riparian principles were not suited to the arid climate of the state. n598

§ 50.10(b) Protecting Existing Riparian Rights.

Hybrid jurisdictions have given a significant measure of protection to riparian water rights that are deemed to have been in existence when the change was made from the riparian to the appropriation doctrine. n599 Though this protection is seen as required to avoid constitutional problems, it is generally limited in scope or duration. In many of these states, the only riparian rights that were considered to be preserved were those that were actively being used at the time the appropriative statute was adopted, or prior to a particular date determined in the statute. n600 In other jurisdictions, unexercised riparian rights may not be considered lost as a result of non-use n601 and may even be considered to have an earlier priority date than appropriation rights, since the latter are always created under statutes which were designed to replace the riparian system. n602

In virtually all mixed jurisdictions, it is no longer possible to acquire new riparian rights. n603 It is clear from the construction given to the statutory provisions which preserve pre-existing riparian rights that these jurisdictions prefer appropriative rights to riparian rights and therefore wish to not only limit, but probably eventually eliminate, the riparian rights. n604

COMPUTER-ASSISTED RESEARCH

LEXIS: protect! w/15 riparian w/2 right!

§ 50.10(c) Quantifying the Pre-Existing Riparian Water Rights.

Hybrid jurisdictions typically limit the scope of riparian rights to the amount of water that was actually being used at the time the system changed from riparian principles to appropriative principles, or to a reasonable amount of water. n605 It is also common to require that the water be used only on riparian land. n606

A few hybrid jurisdictions allow the quantity represented by the right to be increased to meet limited future needs, n607 but may allow appropriation right claimants to use the water until such time as the future need is established. n608

§ 50.10(d) Constitutionality of Termination of Pre-Existing Riparian Rights.

When jurisdictions have made the change from riparian to appropriative principles, it has been common to terminate or cancel certain preexisting common law or riparian rights. Because water rights are considered property rights, any change which infringes vested property rights may raise questions regarding the constitutionality of the change itself.

The issue of whether the cancellation of "vested" but un-used riparian rights is constitutional has been much litigated. In most of these cases, the changes in water right allocation systems has been upheld as not unconstitutionally depriving the water right claimant of a vested property interest. n609 The rationale in most cases seems to be that there is no protected property interest in the speculative future exercise of a presently unquantifiable right and, since nothing was being terminated that was presently being used, there was no damage or harm for which compensation had to be paid. These decisions give jurisdictions much needed flexibility in adapting their particular right allocation systems to changing circumstances because they give some measure of control over both the definition of "vesting" and the process by which it occurs. n610

COMPUTER-ASSISTED RESEARCH

LEXIS: constitution! w/15 terminat! w/15 riparian w/2 right!

FOOTNOTES:
(n1)Footnote 597. California, Mississippi, Nebraska, North Dakota, Oklahoma, Oregon, South Dakota, Texas and Washington are commonly considered to be hybrid or mixed systems.

Kansas is sometimes considered to be a mixed jurisdiction because of the change in 1945 from riparian to appropriative principles. However, although riparian right holders were given a period of time during which the common law rights could be converted to appropriative-type statutory rights, all unexercised riparian rights were extinguished at the time of the statute. *Williams v. City of Wichita, 374 P.2d 578 (Kan. 1962).* Since the statute treats pre-existing (converted) riparian rights exactly the same as rights created under the statute, and since exercised but unconverted riparian rights were extinguished by statute as of July 1, 1980 [Kan. Stat. Ann. § 82a-704a(f)], it would seem that the sections of the statute, particularly §§ 82a-716 and 82a-717a, were intended by the legislature to apply to rights claimed under the common law only until the opportunity to convert those rights to statutory rights expired. Further, the statute has been amended to make the statutory right acquisition process mandatory on all rights claimants, regardless of whether the basis for their claim is the common law or an act of appropriation. *Stone v. Gibson, 639 P.2d 1164 (Kan. 1981).* Thus it is difficult to say that riparian consumptive use rights of any kind continue to exist as such in that jurisdiction.

In *Franco-American Charolaise, Ltd. v. The Oklahoma Water Resources Board, 855 P.2d 569 (Okla. 1990), readopted, reissued and rehearing denied*, April 3, 1993, the court held that a riparian owner still held a vested right to the reasonable use of the stream despite a 1963 statutory amendment that provided that water rights could be secured after that date on the basis of an appropriation. The question to the court was whether the legislature could abrogate the riparian landowner's right to initiate new reasonable uses on the water in the stream. In holding in favor of the landowner, the court ruled that the amendment was constitutionally infirm. The court reasoned that to hold otherwise deprived the riparian landowner of the right to have his or her use of the water be judged on the basis of its "reasonableness" within the riparian doctrine. The landowner was seen as losing this right even where an existing use was only being expanded, rather than a new use being initiated. The impact of the statute was seen as judging all new uses, regardless of their nature or origin, according to the "time" priority established in the appropriative system. This was seen as antithetical to the very nature of the common-law riparian right, which places no stock in the fact of past use, present use or even non-use.

Rev. 24 (1954).*

But see Franco-American Charolaise, Ltd. v. Oklahoma Water Resources Bd., 855 P.2d 569 (Okla. 1990), readopted, reissued and reh'g denied, April 3, 1993, where the court invalidated a statutory amendment that had the apparent effect of extinguishing future unexercised riparian rights of riparian landowners. Under the provisions of a 1963 statutory amendment, water rights could be secured after that date on the basis of an appropriation. The question in this case was whether the legislature could abrogate the riparian landowner's presently unexercised right to initiate new reasonable uses on the water in the stream by requiring that any such activity comply with the right acquisition rules for new water appropriations. In holding in favor of the landowner, the court ruled that the amendment unconstitutionally deprived the landowner of a property interest in the water rights. The court reasoned that to hold otherwise, deprived the riparian landowner of the right to have his or her use of the water be judged on the basis of the "reasonableness" principles of the riparian doctrine, even where the "new" claim was grounded only in the expansion of an existing use. The impact of the statute was seen as judging all new uses, regardless of their nature or origin, according to the "time" priority established in the appropriative system. This was seen as antithetical to the very nature of the common-law riparian right, which places no stock in the fact of past use, present use or even non-use.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.11

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.11 Consumptive Use of Groundwater.

[Go To Supp]

§ 50.11(a) In General.

It has become apparent that the demand for water in our nation has outstripped the ability of surface watercourses to meet that demand. n611 As a result, many water users have turned to the primary alternative source of supply -- groundwater.

Historically, not enough was known about groundwater to allow it to be considered as an important source of water for consumptive use purposes. Early rules therefore developed which considered groundwater to be part of the land itself which could be owned absolutely and used exclusively by the landowner. n612 Since these rules developed independently of surface water allocation rules, they were often different from the surface rules.

As the need to use groundwater has grown, it has been discovered that the traditional rules do not always adequately serve the public needs regarding the effective management of water supplies. There has therefore been considerable evolution in the law of groundwater right in order to modify, alter or avoid some of the historic rules. Thus, as a general rule today, groundwater is considered to be owned by the public at large, rather than by the individual landowner, and is therefore subject to significant public supervision and control. n613

LEXIS: consumptive w/2 use! w/15 groundwater

§ 50.11(b) Traditional Classification of Groundwater Generally.

Water under the ground was traditionally classified much the same as surface waters: if the waters were collected or confined into a discernable channel or watercourse they were called underground streams; n614 if they were found in a dispersed, unconsolidated state, they were called percolating groundwaters. n615 Different rules were developed to deal with these different types of groundwater.

In some jurisdictions, the groundwater may be considered part of the surface estate. In such jurisdictions, if the mineral estate is severed from the surface estate, the water would logically be treated as subject to surface rules as part of the surface estate. Notwithstanding the logic, even though the two estates are separated, the water tends to be managed by the jurisdiction as if it were still groundwater. n616

§ 50.11(c) Classification: Confined Groundwater.

In most jurisdictions, it was early presumed that all groundwater was found in a confined state. This confined water was further presumed to be found in underground streams, n617 which were assumed to have the same characteristics as surface waterbodies. This facilitated the application of the rules relating to the allocation of rights in surface confined waters to the underground waters. Therefore, the traditional rules regulating access to underground streams in most jurisdictions were the same as were used for confined surface waterbodies. n618

A more accurate understanding of the nature of groundwater and the difficult problems associated with establishing the existence of underground streams caused most jurisdictions to reverse the general presumption that all ground waters were confined. In fact, groundwater is now generally presumed to be percolating in most jurisdictions and regulated accordingly. Nevertheless, where water is actually found as underground streams, the surface rules of the jurisdiction were still deemed to apply. n619

COMPUTER-ASSISTED RESEARCH

LEXIS: confined w/2 groundwater

§ 50.11(d) Classification: Percolating Groundwater.

Percolating groundwater was early presumed to be an insignificant source of water for consumptive use purposes. As a result, the water was considered to be a part of the land of the landowner and it was felt there was little need to regulate access or use. As the national need for water has expanded, most jurisdictions have changed their allocation rules regarding percolating groundwater. There has been considerable variation among these jurisdictions as to how rights to such waters should be granted.

Typically, water rights in groundwater will be derived from ownership of the land or from some type of appropriative activity. One difficult to resolve question is whether the right could be acquired from the party who is considered by the law to have the groundwater right by adverse use. Most appropriative surface systems disallow the use of prescriptive use as a means by which rights can be acquired from others. n620 When a jurisdiction chooses to extend the surface rules to groundwater (either as an underground stream or as the chosen allocation doctrine) it would normally be assumed that the proscription against adverse use or prescriptive use would apply. On the other hand, riparian surface systems have been more inclined to allow rights to be acquired by adverse use since the acts will often result in a transfer of title to riparian land as well. In most cases, the goal of the allocation system is thought to be to bring certainty to the question of whether one has a right or not. Adverse use and prescription are usually thought of as unsettling to such a goal. In mixed (riparian/appropriative) systems, the issue is particularly difficult: does the system extend the appropriative or the riparian rules to the undergroundwater? n621

LEXIS: percolating w/2 groundwater

§ 50.11(e) Traditional Groundwater Right Allocation Doctrines: Absolute Ownership.

The earliest approach to the allocation of consumptive use rights in percolating groundwater has been known as the

absolute ownership doctrine, which was derived from old English case law. n622 According to this approach, the water was considered to be part of the land itself, and the owner of the land was therefore considered to have exclusive rights to any percolating groundwater beneath that land. The landowner could extract unlimited quantities of water from the land, regardless of injury caused to others, so long as no harm was caused by malice and no water was wasted. n623

It was considered that the water right belonged "to the owner of the land, as much as to the land itself, or the rocks or stones in it," n624 and was deemed to have been acquired when title to the land was acquired. The water itself was accessed under a "capture" theory: whoever actually withdrew the water was entitled to it. Thus, one landowner could actually withdraw water from beneath a neighbor's tract. And, since the right to extract the water was considered "absolute," the landowner who owned the land from which the water was being extracted had no rights against the adjoining landowner who was actually doing the extracting.

It is somewhat misleading to label the ownership interest of the landowner in the water as "absolute," because of the lack of protection against anyone who withdrew the water, even from beneath one's own land. It is also misleading to say that either landowner actually "owned" the water at all until it was reduced to possession. n625

Only a few jurisdictions still appear to retain this rule. n626

COMPUTER-ASSISTED RESEARCH

LEXIS: absolute w/1 ownership w/15 groundwater

§ 50.11(f) Traditional Groundwater Right Allocation Doctrines: American or Reasonable Use Rule.

In an attempt to impose reasonable limitations on the manner in which the water was used, and to restrict the place of use, most jurisdictions modified the absolute ownership doctrine. These changes have resulted in a doctrine known as the American, or reasonable use, rule. n627 Like the absolute ownership rule, the American rule takes the position that the water should be treated as part of the land and is thereby "owned" by the overlying landowners. Unlike the absolute ownership rule, however, the water extracted under this rule must be used on overlying land and the use must be reasonably related to the natural use of the land. If these conditions are met, the landowner could use as much water as desired regardless of the adverse effects to other landowners. n628

The sale or use of water on distant lands was considered unreasonable where it impaired the groundwater supply of another landowner. n629 Likewise, courts have generally considered waste to be unreasonable *per se*. n630

The American rule appears to be presently followed by a few more jurisdictions than is the absolute ownership doctrine. n631

COMPUTER-ASSISTED RESEARCH

LEXIS: american or reasonable w/1 use w/rule w/15 groundwater

§ 50.11(g) Traditional Groundwater Right Allocation Doctrines: Correlative Rights.

A few jurisdictions have considered all landowners over a common pool of groundwater to share an equal right to make use of the water in the pool. This approach is usually denominated as the "correlative rights doctrine." n632 This approach appears to be a deliberate extension of the surface doctrine of riparian rights to percolating ground water except that the water is, typically, equitably apportioned among the landowners, and each landowner is considered to have an equal or correlative right to a fair or just proportion of the water. n633 In some jurisdictions, this approach appears to be at variance with riparian principles, in that the amount of water that can be claimed under a correlative

right may vary with the size of the land owned. It has been held in such jurisdictions that the quantity of water to which one may be entitled may be determined by comparing the size of the surface area of the right-holder to the entire area overlying the source of supply. n634 However, as in most riparian jurisdictions, in times of shortage, all users may be reduced proportionately.

COMPUTER-ASSISTED RESEARCH

LEXIS: correlative w/1 right! w/15 groundwater

§ 50.11(h) Traditional Groundwater Right Allocation Doctrines: Restatement, Second (Tort) Rule.

In a few jurisdictions, n635 the *Restatement Second* rule regarding groundwater withdrawals n636 appears to have been adopted as a means of regulating rights to groundwater. This view appears conceptually to be an incorporation of many of the elements of the surface water reasonable use rule into the historic American rule. This approach specifically seeks to balance equities and hardships associated with the use among all the competing users, by considering all circumstances which bear on the question of whether a particular use or withdrawal is reasonable. n637 In this sense, the Restatement view is a little broader than the American rule which tends to judge the reasonableness of a use solely on the relation of the use to overlying land. It also appears to be a departure from the correlative rights approach, in that the quantity of water to be used is generally not determined with reference to the land area overlying the source of supply.

§ 50.11(i) Modern Groundwater Right Allocation Doctrines: Groundwater Codes.

In recent years, an increasing number of jurisdictions have rejected the traditional distinction between underground streams and percolating groundwater, as well as the various traditional doctrines relating to rights in percolating groundwater, and have adopted specialized legislation in the form of groundwater codes, or have adopted the same allocation rules for all water found in the ground. n638

A number of jurisdictions have adopted statutes or codes that apply specifically to groundwater. n639 Since many of these jurisdictions are located in the Western United States, such codes tend to be based on the appropriative model of allocating water rights. These codes typically use a permit application procedure to evaluate proposed withdrawals of groundwater, and may even require that a permit be secured before any activity relating to the withdrawal of the water will be permitted.

Other jurisdictions have adopted limited application codes, in which a permit may be required only if the use exceeds a certain amount, n640 comes from a particular source, or involves a particular kind of use. n641 Some jurisdictions limit or regulate the location of the point of groundwater extraction, such as through well-spacing requirements that limit the proximity or size of wells. n642

In Wagoner v. CPNRD, n643 the court considered whether a farmer could be compelled to provide deep soil samples that might reveal residual nitrates. The Groundwater Management District had ordered the farmer to cease any agricultural activity on the land as a result of his failure to provide such samples. The court held that the district did not have the authority before the 1991 Amendments to order the generation of such information.

§ 50.11(j) Modern Groundwater Right Allocation Doctrines: Unified Systems.

Jurisdictions which do not distinguish between percolating groundwater and underground streams, or between surface and groundwater are called "Unified" jurisdictions. In these jurisdictions, the same allocation rules are applied to all

water within the jurisdiction, regardless of whether it is found on the surface or under the ground. n644 Such jurisdictions may apply either riparian or appropriative principles, but tend to vest considerable authority over the decision to allocate water in an administrative structure. n645

COMPUTER-ASSISTED RESEARCH

LEXIS: unified w/1 system! or jurisdiction! w/15 groundwater

§ 50.11(k) Area-wide Management of Groundwater Resources.

Several jurisdictions have developed area-wide approaches to deal with the problem of wide-spread groundwater overuse. n646 Some states have adopted codes which manage groundwater only within small geographic areas within the state. n647 These approaches may focus on the particular geographic areas of overuse, or apply only where there is a public or administrative designation of the area as "critical" or "intensive." n648

In others, the districts may be located where the most serious groundwater usage problems are located. n649 Finally, in some states, these districts blanket the entire state. n650

Some special or intensive use districts may be created as a result of the exercise of a local authority, while some have been created by the legislature itself. n651 Regardless of their creation, these districts tend to play a significant role in determining appropriate levels of resource extraction, n652 restricting new uses in problem areas, n653 determining the relationship between individual appropriators and such users as cities, n654 and perhaps even the extent to which some uses should prevail over others. n655 In some districts, special management approaches may be adopted which impose specific limits or provisions which may actually depart from established general rules. n656 Some permit only the extraction of amounts that do not exceed the annual recharge (called "safe yield"). n657 Others permit extractions to exceed the safe yield and actually result in the mining of the resource. n658

COMPUTER-ASSISTED RESEARCH

LEXIS: manage! w/15 groundwater

§ 50.11(l) Groundwater Storage.

In water shortage areas, it may be necessary to import water from afar in order to meet the local needs. It is often desirable to import such water in advance of the need and then store it until such time as it is actually required. In order to minimize evaporation loss, there is increasing interest in underground storage. n659

Most legal problems regarding storage tend to involve the extent to which the importer still retains rights to the water. Since the water may be commingled with water already in the ground, it may be necessary to determine the extent to which the water still retains any separate identity or may otherwise be considered within the control of the importer.

Courts have considered the critical issue in cases of this type to be whether the water has been released from the appropriator's control. The emerging rule appears to be that, even though the water is no longer on the appropriator's premises nor in the appropriator's conduit, it is still subject to the appropriator's rights unless or until it is forfeited or abandoned as a matter of fact or of law. n660 Abandonment is generally a question of intent and will be determined largely on the basis of the conduct of the parties. n661 It has been held in at least one jurisdiction that abandonment will not be presumed. n662

In jurisdictions which perhaps wish to discourage the practice of underground storage, the contrary position appears to be that once the water returns to the ground, it may be considered to have been abandoned, and therefore becomes

public water which is available for future appropriation. n663

Closely aligned to the issue of storage is the idea of moving groundwater from one place to another since it is often the imported water that will be stored in the ground. The law has dealt only indirectly with the issue of groundwater transport and movement except in the importation context. A notable exception is "American Rule" or "Reasonable Use" jurisdictions which have had, as a part of the allocation doctrine itself, a limitation on movement that was expressed in the requirement that the water be used on overlying land. In other jurisdictions, it is fairly assumed that the water can be exported or moved to another location for purposes of use. In recent years, there has been a growing interest in water movement generally that has extended to groundwater. n664

LEXIS: storage w/15 groundwater or underground

§ 50.11(m) Interference with Surface Waters.

Although the hydrologic cycle posits that all water is related, the legal system has historically separated groundwater from surface water for purposes of regulation. Experience has suggested a variety of ways in which the use of one kind of water may interfere with the other. For example, extensive groundwater extractions may cause water from surface supplies to migrate into the ground toward the well in order to re-establish equilibrium in the cone of depression that has formed around the well. Likewise, drilling a well upstream from where the water emerges in a spring may interfere with the flow of the spring. Finally, depletion of rivers which are major groundwater recharge points may cause problems for groundwater users. When the use of one kind of water interferes with the use of another, it would seem that both should be managed together. Such coordinated use of surface and groundwater is generally referred to as "conjunctive use." n665

It is typically difficult for consumptive use regimes to effectively manage ground and surface uses in a coordinated fashion because of the historic compartmentalization of the law which has produced different rules for surface and for groundwater use. The typical response in most jurisdictions is to simply select one set of rules or the other as the governing paradigm. Some jurisdictions have selected surface rules, n666 whereas other jurisdictions have selected the groundwater rules. n667

A few jurisdictions have sought to develop special restrictions on groundwater which specifically apply to uses which interfere with surface rights. n668 Other jurisdictions have sought ways to shift surface claims which might interfere with the coordinated development of both surface and ground resources to alternative sources. n669

Jurisdictions which have adopted a unified approach to the problem of water right allocation, of course, do not distinguish between surface and groundwaters, and therefore apply the same rules to both. n670 These states appear to have the greatest flexibility in dealing with the problem.

In Simpson v. Yale Investments Co., n671 the court held that a junior user of tributary water who applied to augment his supply was not precluded therefrom by a senior user in the absence of any showing of injury to the senior's right.

COMPUTER-ASSISTED RESEARCH

LEXIS: interfere! w/15 surface w/2 water!

§ 50.11(n) Recurring Groundwater Problems: Well Interference.

Not all of the problems posed by groundwater use involve the question of water right allocation. Often the use of water

under a lawfully secured right will harm other kinds of interests or even other water users. A number of the more common problems of this type shall be discussed in this section.

Perhaps the most wide-spread harmful consequence of groundwater use is that it may harm another's efforts to extract water from the ground. When water is pumped from the ground, the static water level around the well is lowered, which creates a "depression" in the surface of the underground water, which roughly resembles an inverted cone. As the level of the water is drawn down further, this cone extends progressively further from the well. Groundwater migrates toward the point at which water is being extracted, in order to establish equilibrium and "refill" the cone. When extraction terminates, the cone will gradually disappear. However, when pumping is continued faster than the natural rate of recharge, the size of the cone is enlarged and will extend laterally until it meets a natural source of recharge, such as the bottom of a stream or lake. If the cones of two or more wells overlap or intersect, or the cone reaches a point of groundwater recharge, such as a stream bed, interference is likely. The deeper cone will draw water away from a shallower cone or will draw water away from the surface waterbody that has become the point of recharge. n672 Users of that water may no longer have convenient access and will, perhaps, need to extend their well lower to find an alternative source of water.

Various responses have been developed to deal with this problem. Most eastern jurisdictions appear to permit only reasonable groundwater extractions. In these jurisdictions, the harm caused to another's well, the purposes for which the water was extracted, and where the water is to be used are all relevant to the determination of the reasonableness of the extraction. n673

In the western states, the seniority of the adversely affected appropriation may complicate matters. It appears that priority is given considerable, though not necessarily dispositive, weight in determining whether the offending extraction should be allowed to continue. n674

Correlative rights doctrine jurisdictions may reduce all users ratably when interference occurs. In some jurisdictions, the larger user may be required by statute to pay compensation for damages caused by the pumping, and possibly other costs as may be necessary, to provide the same quality and quantity as before the interference. n675 Many jurisdictions attempt to minimize the likelihood of well interference through well spacing requirements. n676

In *Prather v. Eisenmann*, n677 for example, the Nebraska court found the interference to be actionable only to the extent that it caused unreasonable harm to the plaintiffs. Rather than terminate the particular pumping which had caused the problem, the court ordered the defendant to reimburse the plaintiffs for the cost of extending their well deeper into the ground.

COMPUTER-ASSISTED RESEARCH

LEXIS: interfere! w/30 well or groundwater

§ 50.11(o) Recurring Groundwater Problems: Pollution.

The drilling of a well opens a channel into the ground through which pollutants may enter to contaminate the water supplies of other users. In a similar fashion, in some parts of the nation, the removal of fresh water may allow salt water to intrude and destroy the groundwater resources in that area. In either case, pollution can effectively destroy the value of a water right.

Water pollution is generally considered to be an environmental, rather than a water right, problem in most jurisdictions, including the federal government. This has resulted in the adoption of a variety of statutory provisions, n678 or in the creation of a multiplicity of agencies to deal with the problem in that context. Most of these statutes or agencies are concerned with water quality rather than with the allocation of water rights.

There is some question as to the extent to which these environmental measures can or will preempt state-created water rights. On the one hand, it is expressly provided in some of the federal statutes that they shall not interfere with the state authority to allocate water rights. n679 On the other hand, litigation involving the Endangered Species Act suggests otherwise. n680

In some jurisdictions, water quality has been sufficiently linked to water rights that these states may exercise considerable authority over the actual extraction of the water in order to prevent pollution. For example, a state might require pollution prevention measures as a condition associated with the drilling or even pumping of the wells. It has even been held that pollution of the water can constitute an unlawful interference with another's water right. n681 In one California case, the right-holder was considered to be "entitled to have the water...in its natural state of purity." n682

In jurisdictions which recognize less of a connection between the exercise of water rights and pollution, authority over the water right has been held to prohibit only unreasonable, negligent or nuisance type pollution. n683

COMPUTER-ASSISTED RESEARCH

LEXIS: pollution w/30 groundwater

§ 50.11(p) Recurring Groundwater Problems: Subsidence.

Intensive groundwater extractions may deprive the surface of underground support. When this occurs, the surface of the land may sink, creating a problem identified as subsidence. Subsidence can harm roads, fences, ditches, structures and even the storage capacity of the aquifer. It is known that this problem occurs in areas of severe depletion of the groundwater, such as Arizona, Texas, California, and Kansas.

Property law has long recognized the right to have the surface supported in its natural state. This right is typically described as the right to lateral and subjacent support. There are a few cases which have addressed the surface subsidence harm caused by groundwater extractions under this property right approach. n684

It appears to be more common, however, to approach the problem as one of tort or nuisance and invoke those rules, rather than conventional water right principles or general property doctrines in order to fashion a remedy for the problem. n685

A few jurisdictions have attempted to deal with the problem of subsidence within their groundwater management approaches. n686 These efforts are generally grounded upon specific statutory authority which may have the advantage of having been formulated specifically to deal with the problem.

For a discussion of concerns regarding municipal uses and liability, see Habeeb, Wade R., *Propriety of Injunctive Relief Against Diversion of Water by Municipal Corporation or Public Utility, 42 A.L.R 3d 426* (1998 Supp.). For a discussion of individual landowner liability, *see* Karnezis, Kristine Cordier, *Liability of Landowner Withdrawing Ground Water from Own Land For Subsidence of Adjoining Owner's Land, 5 A.L.R. 4th 614* (1998 Supp.).

See also City of Valparaiso v. Defler, 694 N.E.2d 1177 (Ind. App. 1998) (city's right to remove groundwater from its own property did not shield it from liability claim for subsidence damage caused to adjacent property).

Municipalities may adopt ordinances requiring that township residents must connect to municipal systems and to cease using wells for domestic consumption purposes without violating the residents' due process rights. *See Kusznikow v. Township Council of Township of Stafford, 730 A. 2d. 930 (N.J. Super. 1999).*

In *N.T. Hill v. City of Fresno, 85 Cal. Rptr. 2d 562 (Cal. App. 1999),* the court dealt with a challenge to well water fees charged developers as a condition for approval of subdivision maps. The fees were to pay for the drilling or maintenance of wells that would serve the needs of the new residents. The issues in the case concerned the procedures by which such challenges may be made. See *Postma v. Pollution Control Hearings. 11 P.3d 726 (Wash. 2000).*

(n4)Footnote 614. *Tampa Waterworks v. Cline, 20 So. 780 (Fla. 1896); Koch v. Wick, 87 So. 2d 47 (Fla. 1956).*

Chatfield East Well Co., v. Chatfield East Property Owners Assoc., 956 P.2d 1260 (Colo. 1998) (developers of land denied the right to transfer to well-drilling company any rights to nontributary groundwater under the land on ground that landowners did not "own" the water under their land).

(n5)Footnote 615. Percolating groundwaters are those which "ooze, seep or filter through the soil beneath the surface, without a defined channel." *Clinchfield Coal Corp. v. Compton, 139 S.E. 308, 311 (Va. 1927).*

Colorado has three different classes of groundwaters: 1) groundwater which is tributary to a stream; 2) groundwater that is not tributary to a stream, that is identified as "designated groundwater"; and 3) groundwater that is not tributary to a stream, that is identified as simply "non-tributary groundwater." Colo. Rev. Stat. § 37-90-103(6)(a). "Designated groundwater" is water that is in basins designated by the Colorado Groundwater Commission. "Non-tributary groundwater" is water not tributary to a stream that is outside such basins. *Id.* "Tributary groundwater" is water that will, within 100 years, deplete the flow of a natural stream at a rate greater than one-tenth of one percent of the annual rate of withdrawal. Colo. Rev. Stat. § 37-90-103(10.5). *See also Qualls, Inc. v. Berryman, 789 P.2d 1095 (Colo. 1990); Danielson v. Castle Meadows, 791 P.2d 1106 (Colo. 1990).*

(n20)Footnote 630. *See, e.g., Barclay v. Abraham, 96 N.W. 1080 (Iowa 1903).*

(n21)Footnote 631. American rule jurisdictions are said to include Alabama, Connecticut, Illinois, Michigan, New Hampshire, New York, Pennsylvania, Tennessee and West Virginia.

In *Adams v. Lang, 553 So. 2d 89 (Ala. 1989),* the court considered the issue of liability resulting from groundwater extraction. In this case, the pumping of water for catfish ponds caused the artesian wells of the plaintiff to cease flowing. The court rejected the law of nuisance as the basis for decision, holding that the conflict was between persons making competing uses of groundwater and hence subject to the rule of reasonable use. In this case, since the water was being used on overlying land, the use of the water for catfish ponds was not an unreasonable use. Therefore, the defendant was not liable for the harm to the artesian wells.

Texas apparently continues to refuse to follow the reasonable use doctrine. In *Sipriano v. Great Springs Waters of America, 42 Tex. Sup. Ct. J. 629 (Tex. 1999),* the court refused to substitute the rule of reasonable use for the current common law framework of capture. *See also Maddocks v. Giles, 728 A. 2d 150 (Me. 1999),* where the court invoked the absolute ownership doctrine, called the absolute dominion rule, rather than the reasonable use rule, in a dispute in which it was alleged that excavation activities at a gravel pit caused an underground spring to run dry. The court found no liability for the action.

(n25)Footnote 635. These include Michigan, Ohio and Wisconsin. *But see Wiggins v. Brazil Coal and Clay Corp., 452 N.E.2d 958 (Ind. 1983),* where the court refused to adopt the Restatement position, despite a dissent which specifically suggested it should be the rule for the case.

(n26)Footnote 636. Restatement (Second) of Torts, §§ 857-858.

Section 858 provides:

(1) A proprietor of land or his grantee who withdraws groundwater from the land and uses it for a beneficial purpose is not subject to liability for interference with the use of water by another unless

(a) the withdrawal of groundwater unreasonably causes harm to a proprietor of neighboring land through lowering the water table or reducing artesian pressure,

(b) the withdrawal of groundwater exceeds the proprietor's reasonable share of the annual supply or total store of groundwater, or

(c) the withdrawal of the groundwater has a direct and substantial effect upon a watercourse or lake and unreasonably causes harm to a person entitled to the use of the water.

(2) The determination on liability under clause (a), (b), and (c) of subsection (1) is governed by the principles stated in sections 850 to 857.

Section 850A defined unreasonableness for purposes of the issues under § 858. Included are such factors as the purpose of use, the suitability of the use to the water supply, the economic value of the use, social values, the extent of harm, the ease with which the harm can be avoided, protection of existing values and the burden of loss.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.12

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.12 Unified Systems.

§ 50.12(a) In General.

A number of jurisdictions have sought to eliminate the compartmentalization of the common law and deal with all water in the same manner. n687 In these jurisdictions, rights in surface and groundwater will be acquired and regulated according to a common set of rules. n688

COMPUTER-ASSISTED RESEARCH

LEXIS: unified w/3 system! w/15 groundwater or surface

§ 50.12(b) Advantages.

The primary advantage of this approach is that it adopts a consistent regime for dealing with rights in both surface and groundwaters. It may be that the principles of such a regime will be those ordinarily found in appropriative jurisdictions, n689 riparian jurisdictions, n690 or a hybrid of the two. n691

Breaking down the rigid walls between surface and groundwaters makes it much easier to deal with what are often described as conjunctive use problems -- uses of one kind of water (such as groundwater) that interfere with the use of the other (surface waters). n692

§ 50.12(c) Dealing with Surface-groundwater Interface.

The use of groundwater interfaces with the use of surface water; it is sometimes said that the uses are "conjunctive." n693 This kind of use is difficult to deal with for most jurisdictions, because of the historic compartmentalization of water rights law which has resulted in different rules for surface and groundwater. These jurisdictions tend to resolve the problem by selecting either the surface n694 or the groundwater n695 rules as the decisional paradigm. A few jurisdictions have developed special restrictions on groundwater which specifically apply to uses which interfere with surface rights. n696

Jurisdictions which have adopted a unified approach to the problem of water right allocation, of course, do not distinguish between surface and groundwaters, and therefore apply the same rules to both. These states appear to have the greatest flexibility in dealing with the problem.

COMPUTER-ASSISTED RESEARCH

LEXIS: conjunctive w/5 use! w/30 groundwater or surface

§ 50.12(d) Disadvantages.

The primary disadvantage of most present unified systems is that they only regulate consumptive uses of the water and do not address non-consumptive issues or liability problems associated with diffused water. This makes it difficult to deal, for example, with the situation where the water needs to be left in the stream to facilitate recreational use but is being removed by someone entitled to do so under a valid consumptive use right. n697 In these situations, if the water is allowed to be withdrawn from the source of supply, there may not be enough remaining for the non-consumptive right-holders to enjoy. On the other hand, if non-consumptive uses are given the larger measure of protection, the ability to make consumptive uses will necessarily be diminished, which may be considered an inefficient use of the resource.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.13

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.13 Administrative Management of Water Rights.

§ 50.13(a) In General.

Under traditional riparian and appropriative doctrines, water rights were created and recognized with little intervention on the part of state. In riparian jurisdictions, rights resulted from the mere act of owning riparian land. No permission or approval by any public agency or official was required. Similarly, in appropriative jurisdictions, the right resulted from the acts of diverting the water from the source of supply and applying it to a beneficial use. As in the case of riparian systems, no official approval or permission was needed. In both cases, the respective systems developed at a time when governments were weak and the public interest ill-defined. In each case, the law grew largely as the result of case law involving individuals' efforts to assert water rights against the claimed interference of others. In such a scenario, devices such as land ownership or physical diversion of the water could readily be used as the formal means by which water rights were secured and by which the world was put on notice of the individual claimant's rights. Early statutes relating to water rights in these jurisdictions therefore tended to focus on specific problems such as conservation, drainage, public water supply and water policy development. n698

In recent years, there has been a general movement in the direction of greater state control over the water right acquisition and enforcement processes. Today, as a general rule, most states, including many riparian jurisdictions, will be directly involved in full administration of the state's water right system and may actually make the determination as to whether water is available to meet existing as well as proposed uses. n699

COMPUTER-ASSISTED RESEARCH

LEXIS: state! w/5 administrat! or manage! w/15 water! w/1 right!

§ 50.13(b) The Administrator as the Source of the Water Right.

In jurisdictions which rely upon traditional riparian or administrative doctrines, there may be little for an administrator to do. In these jurisdictions, water rights will continue to be secured and protected through private activities and actions rather than through any form of state intervention.

In other jurisdictions, the administrator may play an active but secondary role to that of the individual. In these jurisdictions, the individual is still responsible for performing the acts by which the water right is secured and will generally not need any permission or approval from the administrator. However, the administrator may act as a registrar and as the primary source of public information and notice regarding water rights. n700 Indeed, a water right may not be enforceable against others unless and until they are officially put on notice of the existence of the claim. To create such notice, the right may need to be registered with the administrator. In this role, the administrator functions in a manner very similar to the registrar of deeds.

In some jurisdictions, this role has been enlarged to involve some influence or control over decisions as to the availability of unappropriated water, whether uses for which the right is claimed are reasonable or beneficial, whether one use interferes with prior or protected uses, and so forth, but does so within the confines of the registration process. The administrator in these jurisdictions may be in charge of a "permit" acquisition process. In such states, it is commonly recognized that the water right will not be recognized unless and until a permit is issued. This has the obvious effect of shifting a measure of control over the actual creation of the water right away from the individual claimant and to the administrator.

In some jurisdictions, very much authority and control over the water right acquisition process is recognized on the part of the administrator. In these jurisdictions, no water right may be secured without the specific *prior* approval of the administrator. n701 In these jurisdictions, it might be said that the administrator has actually replaced the individual right claimant as the party which practically and functionally controls the water right acquisition process. This approach has been criticized because of the discretion given to the administrator n702 by the water right allocation statutes in these jurisdictions, which impose minimal constraints on the administrator's discretion regarding the creation and protection of water rights. n703

COMPUTER-ASSISTED RESEARCH

LEXIS: administrator! w/15 water! w/1 right! w/5 acquisition!

§ 50.13(c) The Administrator as Policeman.

In jurisdictions in which the individual is responsible for securing the water right, the individual also generally has the responsibility to protect those rights. Interference by others will typically be policed through lawsuits brought against the alleged infringer, and the court will function as the arbiter for water rights disputes. As more responsibility over water rights is shifted to the administrator, it is common to find an enlarged police role as well. In some jurisdictions, the administrator will be able to take action to enjoin infringing activities when moved to do so by complaints from affected rightholders. In jurisdictions granting the greatest measure of power to the administrator, the administrator has the initiative and discretion to act in protecting the integrity of the entire system or in resolving specific problems.

§ 50.13(d) Policing the Administrator.

A major concern that arises as this authority and control over water rights is shifted to an administrator, is whether the administrator will act arbitrarily in administering the water right system. This matter is generally governed by statutes that limit administrative discretion n704 and guard against arbitrary actions. n705

In most jurisdictions, regardless of the power of the administrator, if the individual has done what the statute requires in order to secure a water right, and water is available in a sufficient quantity to supply the right, the water right *must* be granted. n706

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.14

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.14 Making Changes in Water Right Allocation Systems.

[Go To Supp]

§ 50.14(a) In General.

Many jurisdictions have struggled with the need to modernize their water right allocation regimes. Such changes, however, have not always been easy to make because of the difficult nature of the legal issues and concerns that are raised once a system seeks to depart from long-standing positions and rules. n707

§ 50.14(b) The Need to Change.

Pressure to make such changes results from a variety of structural, informational and public interest factors. For example, most jurisdictions have encountered difficulties as a result of the fact that the law of water rights developed with a strict sense of separation between surface and groundwaters. This has made it difficult to deal with situations where the use of one kind of water, such as groundwater, causes interference with rights claimed in another, such as surface water. Likewise, jurisdictions often made binding decisions on less than adequate information about the resource itself which has had the effect of permitting the establishment of undesirable allocation or use patterns. Assumptions about future water availability, which have not always been accurate, have undoubtedly caused jurisdictions to adopt rules which now serve to perpetuate questionable uses or practices. Finally, many jurisdictions have experienced a lack of flexibility in meeting changing societal needs for water and responding to changing notions regarding the desirability of particular uses. These, and undoubtedly other, factors have suggested that there are particular attributes of virtually all allocation regimes which from time to time will be considered no longer useful or desirable.

On this basis, a number of jurisdictions have determined that the allocation of water rights on the basis of land ownership is not appropriate where water is scarce and the need is physically remote to the source. These states have therefore replaced riparian principles with appropriative ones. n708

§ 50.14(c) State Authority to Change Allocation Regimes.

It is well settled that the choice of which water right regime should govern allocation questions is a matter of state rather

than federal law. n709 This includes the authority to initially determine which of the various doctrines to use, n710 as well as to later decide to change from one doctrine to another. n711 The primary rationale for such authority appears to be lodged within the police power of the jurisdiction. n712

COMPUTER-ASSISTED RESEARCH

LEXIS: state! w/5 authori! w/15 change! or choice! w/30 water! w/1 right! w/2 regime! or system!

§ 50.14(d) Limits on State Authority.

It has been held that the ability to make fundamental changes in the water right allocation regime of a particular state is limited by the extent to which such changes interfere with or destroy existing valid, vested rights. n713 It has been held that unexercised or unused rights may not be considered "vested" for purposes of making such changes. n714 The rationale for this holding appears to be the difficulty associated with the quantification of the right where the exercise of the right is speculative at best.

It might also be argued that, since the power to make the changes is derived from the police power, the exercise of that power may be tested according to general limitations on the police power as well. That is, unless the proposed change falls within the objectives of the police power of the jurisdiction, it could be argued that the changes may not be made. n715 Conversely, as long as the proposed change promotes the health, safety and welfare of the community and the police power is not being exercised unreasonably, nor in an arbitrary, capricious, confiscatory or discriminatory manner, the change should be permitted. n716

(n3)Footnote 709. *See Kansas v. Colorado, 206 U.S. 46 at 94 (1907):*

> [Each state] may determine for itself whether the common law rule in respect to riparian rights or

> that doctrine which obtains in the arid regions of the West of the appropriation of waters for the purpose of irrigation shall control. Congress cannot enforce either rule upon any state.

In *California-Oregon Power Co. v. Beaver Portland Cement Co., 295 U.S. 142 (1935),* the court held that the states have the power to legislate with respect to waters and water rights:

> as they deemed wise in the public interest ... with the right in each to determine for itself to what extent the rule of appropriation or the common law rule in respect of riparian rights should obtain. For since "Congress cannot enforce either rule upon any state ... the full power of choice must remain with the state."

(n4)Footnote 710. In *Connecticut v. Massachusetts, 282 U.S. 660 (1932),* the court observed that:

> the laws in respect of riparian rights that happen to be effective for the time being in both states do not necessarily constitute a dependable guide or just basis for the decision of controversies such as that here presented. The rules of the common law on that subject do not obtain in all the States of the Union, and there are variations in their application. The doctrine of appropriation prevails in some states. And every state is free to change its laws governing riparian ownership and to permit the appropriation of flowing waters for such purposes as it may deem wise.

(n5)Footnote 711. *See Baumann v. Smrha, 145 F. Supp. 617 (D.C. Kan. 1956), aff'd, 352 U.S. 863 (1956):*

> The power of a state either to modify or reject the doctrine of riparian rights because unsuited to the conditions in the state and to put into force the doctrine of prior appropriation and application to beneficial use or of reasonable use has been long settled by the adjudicated cases. Of course, such a modification in the law of the state must recognize valid existing vested rights... .

Fain v. Great Springs Waters of America, 973 S.W.2d 327 (Tex. App. 1998) (court refused to overrule well-settled rule of absolute ownership).

(n6)Footnote 712. For further discussion, *see* John C. Peck, *The Kansas Water Appropriation Act: A Fifty-Year Perspective, 43 U. Kan. L. Rev. 735 (July 1995).*

(n8)Footnote 714. *See Baumann v. Smrha, 145 F. Supp. 617 (D.C. Kan. 1956), aff'd, 352 U.S. 863 (1956):*

> [W]e do not regard a landowner as having a vested right in underground waters underlying his land which he has not appropriated and applied to beneficial use. We hold that the state could properly apply the doctrine of prior appropriation and application to beneficial use to unused and unappropriated waters so long as it recognized and afforded protection to rights which landowners had acquired at the time of the effective date of the act to appropriate and use water.

See also In re Hood River, 227 P. 1065 (Or. 1924). But see Franco-American Charolaise, Ltd. v. Oklahoma Water Resources Bd., 855 P.2d 568 (Okla. 1990) holding that vested, but presently unexercised, common-law riparian rights cannot be taken without compensation.

But see Franco-American Charolaise, Ltd. v. The Oklahoma Water Resources Board, 855 P.2d 569 (Okla. 1990), readopted, reissued and rehearing denied, April 3, 1993, where the court invalidated a statutory amendment that had the apparent effect of extinguishing future unexercised riparian rights of riparian landowners. Under the provisions of a 1963 statutory amendment, water rights could be secured after that date on the basis of an appropriation. The question in this case was whether the legislature could abrogate the riparian landowner's presently unexercised right to initiate new reasonable uses on the water in the stream by requiring that any such activity comply with the right acquisition rules for new water appropriations. In holding in favor of the landowner, the court ruled that the amendment unconstitutionally deprived the landowner of a property interest in the water rights. The court reasoned that to hold otherwise deprived the riparian landowner of the right to have his or her use of the water be judged on the basis of the "reasonableness" principles of the riparian doctrine even where the "new" claim was grounded only in the expansion of an existing use. The impact of the statute was seen as judging all new uses, regardless of their nature or origin, according to the "time" priority established in the appropriative system. This was seen as antithetical to the very nature of the common-law riparian right, which places no stock in the fact of past use, present use or even non-use.

(n9)Footnote 715. *See* John Peck, Legal Constraints On The State of Kansas In Imposing Conservation Practices on Holders of Existing Water Rights (United States Department of the Interior, 1986); Op. Att'y Gen. Kan. 88-6 (Jan. 19, 1988).

(n10)Footnote 716. *See Keystone Coal Ass'n v. DeBenedictis, 480 U.S. 470 (1987). See also Imperial Irrig. Dist. v. State Water Resources Control Bd., 275 Cal. Rptr. 250 (1990)* where the court quotes with approval Eric Freyvogle, *Context and Accommodation in Modern Property Law, 41 Stanford L. Rev. 1592, 1546-47 (1989)* that "California has regained for the public much of the power to prescribe water use practices, to limit waste, and to sanction water transfers." *But see Franco-American Charolaise, Ltd. v. Oklahoma Water Resources Bd., 855 P.2d 568 (Okla. 1990)* holding that vested, but presently unexercised, common-law riparian rights cannot be taken without compensation. In this case, it was argued that the legislation in question was a valid exercise of the police power in the same sense that a zoning ordinance is. This was rejected by the court.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.15

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.15 Interstate Allocation of Water.

[Go To Supp]

§ 50.15(a) In General.

Many watercourses flow from one state to another across state boundaries. It is, therefore, quite possible that the water right laws of one of the states through which the water flows will be different in important respects from the laws of other states associated with that same water course. For example, the Missouri River flows through or past states which have adopted appropriative principles, n717 riparian principles, n718 or a mixture of both. n719 This means that individuals who claim water from that source may have acquired their rights in very different ways. Problems arise when the use of water in one state causes harm to, or interferes with, uses of the water made by water right holders in another state. Because of differences between the states regarding allocation rules, these problems are particularly difficult to deal with. A number of different methods have been developed to resolve disputes where the watercourse crosses state lines. n720

COMPUTER-ASSISTED RESEARCH

LEXIS: interstate w/5 allocat! w/15 water!

§ 50.15(b) Jurisdictional Matters: Disputes Between Individuals.

It may be possible to resolve disputes involving parties from different states in the state courts of, or federal courts sitting in, one or the other of the states which has jurisdiction over the watercourse in which the rights are claimed. n721 This approach is best suited to the resolution of disputes between individual water right claimants, but it may require that the party from the non-forum state submit to the jurisdiction of the other state, n722 or that jurisdiction be secured through the extraterritorial jurisdiction of the state. n723 On the other hand, it is settled that a state does not have a duty under the Constitution to protect individuals from harm inflicted by other private entities n724 and therefore may decline to decide the matter. n725

COMPUTER-ASSISTED RESEARCH

LEXIS: individual! w/5 dispute! w/30 water! w/1 right!

§ 50.15(c) Jurisdictional Matters: the State Acts as *Parens Patriae*.

Where the dispute involves many individuals or the right of the state to control the rights to water within a particular watercourse, it may be necessary to bring the action on behalf of the citizens of one state against the neighboring state. n726 When states sue each other on behalf of their citizens, such suits generally must be brought in the United States Supreme Court. n727 Although Supreme Court jurisdiction is considered "exclusive," the Court has, on occasion, refused jurisdiction. n728 Where the United States is a required party to the suit, consent to join the United States must be secured before judicial relief may be granted. n729 The United States may be involved because of the application of federal statutes such as the Endangered Species Act. n730 Whether consent is granted is usually discretionary, n731 except in the case of McCarran Adjudications. n732

§ 50.15(d) Resolution Doctrines: Comity.

Comity is the principle by which the courts of one jurisdiction may give effect to the laws and decisions of another jurisdiction as a matter of courtesy. Although a court may be reluctant to invoke the laws of another jurisdiction which were fundamentally and conceptually different from its own, where the water right dispute involves jurisdictions that use essentially the same allocation system, one court may comfortably resolve the dispute by applying the common principles of both states' water right allocation systems to the dispute as if the boundaries between the states did not exist. In the case of Bean v. Morris, n733 for example, the court found that even though the problem involved claims to Sage Creek which flowed through portions of both Wyoming and Montana, both jurisdictions allocated water rights on the basis of similar appropriative principles. The court then determined that "in the absence of legislation to the contrary, the States were willing to ignore boundaries, and allowed the same rights to be acquired from outside the State that could be acquired from within." As a result, the court effectively merged the priority structure of the two jurisdictions and the rights of individual appropriators in the respective jurisdictions were considered to have been allocated as if no boundary between the states existed.

In these cases, the law tends to be primarily concerned with the respective equities of water claimed by the respective individual claimants rather than the particular doctrines followed in the respective states. n734

COMPUTER-ASSISTED RESEARCH

LEXIS: comity w/30 water! w/1 right!

§ 50.15(e) Resolution Doctrines: Equitable Apportionment.

Equitable apportionment is an approach taken by the courts and is particularly suited to situations in which the jurisdictions are quite different with respect to their allocation rules and principles. Here, the volume of the watercourse or stream is apportioned between the two states in a way which establishes the quantity of water that is to be managed under the laws of each state. n735 In the first case in which this judicial doctrine was invoked, *Kansas v. Colorado*, n736 the court had to resolve a problem involving one state which allocated water rights in the Arkansas River on the basis of riparian principles, whereas the other invoked appropriative principles. There, the court held that the waters of the River should be equitably apportioned between the states on the ground that:

> One cardinal rule, underlying all the relations of the States to each other, is that of equality of right. Each State stands on the same level with all the rest. It can impose its own legislation on no one of the others, and is bound to yield its own views to none. Yet whenever ... the action of one State reaches through the agency of natural laws, into the territory of another State, the question of the extent and the limitations of the rights of the two States becomes a matter of justiciable dispute between them, and this court is called upon to settle that dispute in such a way as will recognize the equal rights of both and at

the same time establish justice between them. n737

The primary object of the equitable apportionment approach is to fairly and equitably divide the flow of the watercourse between the states involved. This is a difficult matter to determine and typically involves the appointment of a special master to make a factual determination of the problem and make recommendations to the court. This investigation generally considers such diverse matters as the physical and climatic conditions of the respective states; the nature and extent of established uses; the dependence of the economies of both states upon particular water uses; the quantities of water actually available for use, including storage water, in both states; the benefits and harm resulting from the competing existing and proposed uses; the efficiency of water use and the appropriateness of conservation measures in each state to augment water supplies and minimize harm or injury to users in the other state, and so forth. n738

In addition, the court may impose affirmative duties on the respective states to manage the waters so that a fair share is available for use in the other state. n739

COMPUTER-ASSISTED RESEARCH

LEXIS: equitable w/1 apportionment w/30 water!

§ 50.15(f) Other Resolution Approaches: Interstate Compacts.

An alternative to adjudication, of course, is negotiation. In a number of cases, states have avoided the always uncertain outcome of judicial resolution by negotiating a resolution of the problem with the other states involved with the watercourse. This is done through the adoption of an interstate compact or agreement. n740 Such interstate compacts have been held to be binding provided Congress assents to the compact. n741

Properly adopted and approved interstate compacts which are based upon the principles of equitable apportionment have been held to have the status of federal law, n742 and to have the effect of preempting contrary state laws. n743 They have also been held not to constitute an impermissible burden on interstate commerce. n744

Interstate compacts are considered to be fully binding contracts between the signatory states which cannot be unilaterally nullified by either state. n745 However, it has been held that state courts can interpret state laws alleged to be in conflict with the compact according to the general allocation laws of the state. n746

The binding status of an interstate compact alters the posture of states involved in trans-boundary water problems in the sense that the compacts would also seem to be considered to represent a binding official position of the state on the matter of the choice of a particular dispute resolution device for problems of interstate water allocation and, as such, must be considered the preferred method of dispute resolution for matters covered by the compact. Therefore, disagreements between the states should be addressed and, if possible, resolved, within the framework of the compact before it would be proper for the state to seek to adjudicate the matter on the basis of equitable apportionment litigation. n747

COMPUTER-ASSISTED RESEARCH

LEXIS: interstate w/1 compact! w/30 water!

§ 50.15(g) Other Resolution Approaches: Congressional Apportionment.

In only a few cases has Congress directly intervened and mandated a particular apportionment of an interstate watercourse. In the case of the Colorado River, for example, it has been held that Congress legislatively allocated the lower basin of the river between the states involved in the Boulder Canyon Project. n748

On the other hand, it has been held n749 that Congress did not intend to apportion the Upper Basin of the Missouri River under the Flood Control Act of 1934. n750

(n30)Footnote 746. *Id.*

(n31)Footnote 747. *See Texas v. New Mexico, 462 U.S. 554 (1983).*

Recent litigation involving interstate compacts includes *Nebraska v. Wyoming, 113 S. Ct. 1689 (1993); Texas v. New Mexico, 107 S. Ct. 124 (1987); Oklahoma & Texas v. New Mexico, 111 S. Ct. 2281 (1991);* and the re-opened Kansas v. Colorado which has not yet reached a final decision. *See* Roger Meyers, *Kansas-Colorado suit in homestretch,* Topeka Capital-Journal, Wed., Nov. 18, 1992, at 9A. The master's report in *Kansas-Colorado* ruled in favor of Kansas. A final decision by the Supreme Court is expected in 1995. For further discussion, *see* Robert T. Stephan, *Water Rights to the Arkansas River: The Status of* Kansas v. Colorado, *4 Kan. J.L. & Pub. Pol'y. 65 (Fall 1994);* Beaverstock, Jeffrey Uhlman, *Learning to Get Along: Alabama, Georgia, Florida and the Chattahoochee River Compact, 49 Ala. L. Rev. 993 (1998);* Note, *Charting No Man's Land: Applying Jurisdictional and Choice of Law Doctrines to Interstate Compacts, 111 Harv. L. Rev. 1991 (1998).*

For the latest decision in the ongoing problem over water in the Arkansas River between Kansas and Colorado, *see Kansas v. Colorado, 115 S. Ct. 1733 (1995).* In this decision, the court ruled that in the absence of a showing by Kansas of "material deletion" in the amount of water available to Kansas at the border, it could not establish a violation of the interstate compact. The court also found that laches did not bar Kansas's claim that Colorado pumping violated the compact. Finally, the court ruled that increases in stateline flows that were the result of a post-compact agreement could not offset depletions from post-compact well pumping.

The compact may obligate federal administrators to use particular allocation formulae in releasing water from storage facilities subject to contracts. *See Goshen Irrigation Dist. v. Pathfinder Irrigation District, 62 F. Supp. 2d 1218 (D. Wyo. 1999).*

(n32)Footnote 748. *Arizona v. California, 373 U.S. 546 (1963).* Congressional action resulted from a long history of unsuccessful efforts to resolve claims to the river by Upper and Lower Basin states. *See also* Truckee-Carson-Pyramid Lake Water Rights Settlement Act, Pub. L. 101-168, *104 Stat. 3294 (1990)* dividing the water

of the Truckee River, the Carson River and Lake Tahoe between Nevada and California.

In 1990, Congress exercised its authority to apportion the Truckee River. Truckee-Carson-Pyramid Lake Water Rights Settlement Act, Pub. L. 101-618, *104 Stat. 3294.*

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.16

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.16 Federal/State Relations Regarding the Administration of Water Rights.

[Go To Supp]

§ 50.16(a) In General.

Courts have held that the authority to manage water resources within their own boundaries belongs to the states. n751 This is the case even though the water actually arises upon or has as its source in the federally controlled public domain. n752 This power has authorized those states to choose their own allocation systems and to change those systems from time to time. n753

The power to manage the water resources within each particular state gives each state the authority to create and recognize water rights to such water resources. This has meant that any individual water appropriators must secure their own rights in and to such waters under the laws of that particular state. n754

An important exception to this general rule arises with respect to federally created or "reserved" rights. These rights are not claimed under state law, and indeed may even preempt the priority, quantity and even validity of competing state authorized water right claims. n755

There are also a number of federal interests that are not in the nature of water rights which may qualify or limit the nature or extent of state-created water rights such as the federal navigational servitude. n756

COMPUTER-ASSISTED RESEARCH

LEXIS: federal w/15 state! w/15 administrat! w/30 water!

§ 50.16(b) Specific Federal Authority Which May Affect State Created Water Rights: General Federal Power to Legislate for the General Welfare.

The Constitution grants the federal government broad powers to tax, spend and regulate for the common welfare. n757 In a conceptual sense, this power is the equivalent of the State's police power except to the extent that the Constitution itself imposes limits on that power. As a result, the federal government must be considered to have great inherent power

over the waters of the nation where such power is necessary to regulate for the common good and welfare of the nation. Congress has typically deferred to the states to manage the water rights aspects of situations where federal regulatory authority has been invoked. n758 These statutes which disavow federal control over or interference with state created water rights must be considered to be self-imposed limitations on federal power. n759 If that is the case, Congress has the power to withdraw the limitation.

On the other hand, if consumptive use water rights are considered to have the same constitutional origin as non-consumptive use water rights, n760 then the federal government may have no authority to displace the states as the *creator* of the rights, even though there may be federal power to limit or otherwise modify the rights. This is because non-consumptive use rights have traditionally been considered to emanate from the state's title to the beds of navigable waterbodies which the states acquired at time of statehood on the theory that the state, not the federal government, stepped directly into the shoes of the sovereign and directly acquired whatever rights were possessed by the king. If that is the case, the power to create such water rights is an inherent feature of the state and not the federal government.

COMPUTER-ASSISTED RESEARCH

LEXIS: federal w/15 regulat! w/15 welfare w/30 water!

§ 50.16(c) Specific Federal Authority: General Federal Regulatory Authority.

The federal government has considerable regulatory authority over a variety of activities which may affect the availability of water for use pursuant to a state granted or recognized water right. This authority extends to such diverse matters as the regulation of activities on or in navigable waterways; n761 the prevention of pollution and contamination of water resources; n762 the regulation of the use of the public land upon which much of the nation's water originates; n763 the protection of interstate commerce; n764 the protection of endangered species and their habitat; n765 and the control of the federally developed reservoirs and reclamation structures and water therein. n766

Although these laws generally are not intended to preempt state water right allocation laws, n767 there is probably no constitutional impediment to the assertion of federal power to override state water rights law. Clearly the power to tax and spend for the general welfare, and the Supremacy Clause, support the claim of federal power. Indeed, the exercise of federal regulatory authority over water or activities which may occur in or on water already has had the effect of destroying or modifying the state granted water rights in several cases. n768

COMPUTER-ASSISTED RESEARCH

LEXIS: federal w/15 regulat! w/30 water!

§ 50.16(d) Specific Federal Authority: General Federal Authority Under the Commerce Clause.

Federal authority under the Commerce Clause may well be the most expansive of powers by which the federal government may influence the exercise of state created water rights without directly exercising control over water allocations. Indeed, because the full regulatory potential of this power has not been asserted, it is sometimes referred to as the "dormant" Commerce Clause.

A very long history of judicial interpretation n769 indicates that the federal government has jurisdiction over a wide variety of activities which directly or indirectly impair or impede interstate commerce. n770 This power has been asserted with respect to a variety of activities involving water and as such has been the basis for regulating activities which pollute or otherwise affect certain watercourses, n771 as well as for compelling the removal of obstructions from navigable waterways. n772

As a general rule, however, federal power regarding interstate commerce has typically not been asserted as a basis for confronting state laws regarding water right allocations. A 1982 U.S. Supreme Court case may suggest a broadening of federal power under the guise of the Commerce Clause with respect to state water allocation decisions.

The United States Supreme Court in 1982 invalidated a state statute which prevented an individual who owned land partly in that state and partly in an adjoining state from securing a water right in the first state for water which then would ultimately be transferred to and used in the adjoining state. n773 The critical feature of the state statute was a provision which authorized the state to deny the application where the adjoining state did not grant citizens of that state reciprocal rights to the waters of the adjoining state. n774 Since the adjoining state did not permit its waters to leave the state for use in the first state, the application was denied. The Court considered the water involved to be an article of interstate commerce, n775 and the lack of reciprocity to constitute an unreasonable state barrier to such commerce. An interesting part of the Court's rationale for invalidating the state statute was the alleged potential, though presently not exercised, power of Congress under the Commerce Clause to regulate, and provide a uniform method for dealing with, among other things, groundwater overdrafts.

While the Court noted that a state may favor its own citizens in times and places of shortage or under such circumstances as might suggest that a prohibition on exportation is necessary to conserve and protect the public welfare, n776 the case must be considered as potentially broadening federal authority over the allocation of water rights by states. The Court's rationale in this and other related cases seems to be that a state may not preserve its own resources exclusively for the benefit of its own citizens. n777

LEXIS: commerce w/1 clause w/15 water!

§ 50.16(e) Specific Federal Authority: Water Power and Reclamation.

Congress has considerable authority to erect hydroelectric, reclamation and flood control dams on navigable and non-navigable waterways of the nation. This authority is justified not only under the Commerce Clause but on the basis of national defense powers under the Constitution and on its status as a proprietor of public lands. n778 Indeed, the actual construction of some of these facilities need not even be federal, but may be done by private individuals who may secure a license therefor from the Federal Energy Regulatory Commission. n779

It is clear that such projects may interfere with legitimate state interests in the affected waterways. n780 In some cases, it has been held that those state created rights have been taken by condemnation, and fair compensation must be paid. n781 In other cases, including at least one water right case, the court held that there was no taking of the right. n782 It is clear that states cannot veto the projects based upon the prospect of interference with state created rights. n783

Federal reclamation projects are particularly associated with water use and water right. Such projects have long been an integral part of efforts to settle the western public domain lands and have been specifically designed to develop water for lands which have needed irrigation water in order to be productive, but for which the landowners typically did not have the resources to construct major diversion works. n784 Indeed, one of the primary purposes of the Reclamation Act of 1902 was to publicly subsidize the construction of facilities that could provide irrigation water. n785 As a result, much of the irrigation water of the West comes from federal reclamation projects. n786

The federal government does have considerable control over and responsibility for, the disposition of much of the water developed as a result of reclamation projects. n787 Storage of water under contracts between the ultimate water user and the federal government are common and directly involve the federal government in the question of water management. n788

There has been considerable controversy as to the extent to which federal reclamation projects are subject to state water laws. n789 In California v. United States, n790 it was held that water rights associated with the project generally must be secured under state law and that, once rights are acquired, the water must be distributed according to state law, except where the state law is in direct conflict with the federal law. n791

§ 50.16(f) Specific Federal Authority: Environmental Protection.

The general power to legislate for the public welfare also largely underwrites federal legislation regarding water quality and pollution control. n792 As is the case with regulation of interstate commerce, regulatory authority regarding environmental matters has generally not been asserted as a basis for overriding state water right allocation decisions. A 1992 case in this area may well suggest a broadening of federal power over state water allocations under the auspices of environmental protection. n793 In this case, federal authority under the auspices of the Endangered Species Act n794 was asserted to protect habitat that was the threatened by the exercise of state-created water rights. n795

It is perhaps possible to rationalize the federal claim of authority to protect endangered species with state plenary authority to issue water rights where the exercise of a particular federal power may have the seeming effect of preempting state action. The holdings of the cases n796 should not be read as displacing state authority over the issuance or granting of water rights. Rather, the cases would suggest that perhaps there is concurrent jurisdiction over the effects that may result from the uses of water that are authorized by the state-granted water right. Where those effects violate federal law, there should be federal consequences that will not be excused by the fact that the state initially authorized the use in the first place. Perhaps a useful way to rationalize the apparent conflict between federal and state authority is to suggest that water rights cannot be granted for activities that are illegal or produce unlawful consequences. If illegality results from the exercise of a water right, it would seem that the use authorized by the water right should be characterized as unreasonable or non-beneficial depending on whether the jurisdiction is riparian or appropriative, respectively, and therefore the use that is the object of the right should be considered an inappropriate subject for the recognition of a water right. If the illegality is the result of the failure to conform to a federal law, that should be of little consequence since state law has never pretended to be the sole arbiter of what is or is not lawful or unreasonable. That a state may suppress a state-granted water right because the resulting use of the water is deemed unreasonable is certain. n797 What is uncertain, of course, is whether the federal government has the power to compel the state to make such a determination and take such an action to modify a water right *after* one has already been recognized. One possible argument is that such a change to make something unlawful that may have been lawful at the time the right was created constitutes a taking -- at least to the extent that the inability to exercise the right is lost and the land upon which the right is exercised is rendered completely without viable economic use. This would more likely be the case regarding water rights in existence prior to the adoption of the federal statutes at issue. On the other hand, if the activity covered by the federal statute was made illegal prior to the issuance of the right, but it was not discovered until later that the problem actually existed in respect of a particular water right, the case should go the other way. One possible outcome from these cases may be to only enjoin the activity that offends the federal law and leave the water right intact so long as it can otherwise be exercised in ways which do not offend the federal restriction. n798

§ 50.16(g) Specific Federal Authority: Federal Proprietary Interests and Rights as Owner of Public Domain Land.

The federal government is the owner of vast amounts of public land. n799 Early cases suggest that the federal government holds that title in public trust, n800 but with only the powers of an ordinary private owner. n801 Later decisions suggest that the title is held with the more expansive powers of a sovereign. n802 This has caused some concern regarding state authority regarding those lands. n803

Federal proprietary interests have been asserted as the basis for regulation of such diverse activities as public access, n804 power generation, n805 and wild animal control. n806

On the other hand, it has long been understood that the federal government relinquished control to the states over rights of access to water arising on public domain land. n807 It has also been held that the federal government did not have the status of a riparian landowner such that riparian water rights could be asserted by holders of land patents of land formerly in the public domain. n808 It has generally been understood from the foregoing that the federal government did not, and could not, claim water rights simply on the basis of its status as a proprietor of public domain land. n809

The case of In re Water of Hallett Creek System n810 suggests that the federal government may claim rights as a riparian proprietor in those states which recognize riparian rights the same as any other riparian landowner. n811

LEXIS: federal w/5 proprietary w/1 interest! w/15 water! federal! w/5 own! w/15 public w/1 land!

§ 50.16(h) Specific Federal Authority: Federal Navigational Servitude.

The federal government also possessed the right, known as the federal navigational servitude, n812 to undertake activities involving navigable waterbodies which are necessary to the promotion and protection of navigation and commerce in such waterbodies. The servitude typically serves as the basis for federal construction of navigational improvement projects and works in navigable waterways, n813 the exercise of regulatory authority to remove obstructions, n814 and the construction of public access for such non-consumptive uses as recreation. n815

This right is conceptually based on both federal proprietary and superior sovereign powers, and has been held to empower the federal government to conduct its activities within navigable waterways without the need to compensate affected private property holders. n816 Where damage from the federal activities on navigable waters is experienced in non-navigable areas, compensation is generally not considered to be owed if the federal project is expressly undertaken for the purpose of protecting the interest in navigation in the navigable waterway. n817

Courts have justified the superiority of the federal navigational servitude and its no compensation feature on the proprietary grounds. It is argued that when title to the beds of navigable waterbodies passed to the state at time of statehood, the federal servitude was held back, akin to a pre-existing title interest, which pre-dates or is otherwise superior to the private interest, such that those who undertake activities on navigable waterways do so with the knowledge of the existence of a prior federal and public title interest in navigation and can thereby have no expectation of compensation if their activity is considered to interfere with or obstruct navigation. n818

The federal navigational servitude seems to be present only in naturally navigable waterbodies and appears to extend therein only to the ordinary high-water mark. n819

Nevertheless, the federal activity which is undertaken under the auspices of the federal navigational servitude may actually permit the federal government to adversely affect or destroy individual state-granted water rights. n820

Mieke, 474 S.E.2d 599 (W. Va. 1996)* (state's imposition of fuel use tax on fuel consumed during interstate transportation on inland waterways was fairly related to services provided by the state under commerce clause analysis); *Acorn v. Edwards, 81 F.3d 1387 (5th Cir. 1996)* (Congress is free, pursuant to its commerce clause power, to combat lead contamination in drinking water by regulating drinking water coolers that move in interstate commerce).

(n21)Footnote 771. *United States v. Holland, 373 F. Supp. 665 (M.D. Fla. 1974).*

(n22)Footnote 772. *See United States v. Standard Oil Co., 384 U.S. 224 (1966).*

(n23)Footnote 773. *See Sporhase v. Nebraska ex rel. Douglas, 458 U.S. 941 (1982).*

(n24)Footnote 774. In this case, the Nebraska statute forbids the exporting of water except where the use of the

water was reasonable, not detrimental to the public welfare, not contrary to conservation needs, and the state to which the water was transported granted reciprocal rights to residents of Nebraska. Colorado did not grant reciprocal rights. Therefore, the application for a water right was denied.

(n25)Footnote 775. The court seems to assume that there is no difference between water that has been reduced to possession and water which is as yet unextracted from the ground insofar as the question of "articles of interstate commerce" is concerned. This view is questionable. It is arguable that it is only after water has been reduced to personal possession that it should be considered an article of commerce since water that has been reduced to possession is generally regarded to be personal property whereas water in the ground is still held by the state with title in the state. (n34)Footnote 784. *See generally Federal Reclamation Law in* 2 Waters and Water Rights, ch. 8 (Robert Clark ed., 1967).

(n35)Footnote 785. The Reclamation Act of 1902, ch. 1093, *32 Stat. 388,* as amended, *43 U.S.C. § 371 et seq.* (codified in scattered sections of 43 U.S.C.).

The Reclamation Act, as initially enacted provided that the water was to be made available only to residents on land near the facilities and the water was to be used on no more than 160 acres. In recent years, the residency requirement has been removed and the acreage limitation has been increased. *See* Reclamation Reform Act of 1982, Pub. L. No. 97-293, *96 Stat. 1261,* which repealed the residency requirement and raised the acreage limitation from 160 (320 for husband and wife) to 960.

See also 43 C.F.R. part 426 which recognizes a number of alternative arrangements, such as leasing, which generally will avoid the acreage limitation.

State of Alaska v. U.S., 35 Fed. Cl. 685 (1996).

The storage contracts may obligate federal administrators to use particular allocation formulae in releasing water from storage facilities subject to contracts. *See Goshen Irrigation Dist. v. Pathfinder Irrigation District, 62 F. Supp. 2d 1218 (D. Wyo. 1999).*

(n36)Footnote 786. According to U.S. Water NEWS, Nov. 1992, 1, federal reclamation projects serve the following fraction of total irrigated acreage within the respective states:

Arizona: 53 percent
California: 40 percent
Colorado: 7 percent
Montana: 17 percent
Utah: 8 percent

(n37)Footnote 787. John Peck, *Legal Aspects of Water Storage in Federal Reservoirs in Kansas, 32 U. Kan. L. Rev. 785 (1984).*

But see State of Mo. v. Andrews, 586 F. Supp. 1268, 787 F.2d 1986 (8th Cir. 1986), cert. granted sub nom. ESTI v. Missouri, 408 U.S. 905 (1987), holding that the Oahe reservoir in Missouri was not a reclamation project within the meaning of the Reclamation Project Act and hence, the Secretary could not unilaterally execute a contract to provide water from the water for industrial use.

(n38)Footnote 788. *Id.* In one case, *Carson-Truckee Water Conservancy Dist. v. Clark, 741 F.2d 257 (9th 1984),* it was argued that the Secretary of Interior violated the Washoe Project Act by refusing to sell water from the project for municipal and industrial use. The Secretary had decided some water should be saved, at least temporarily, for the conservation of endangered species of fish. The court held, however, that although municipal and industrial uses were beneficial uses for which water could be sold, the Secretary was not obligated to sell water simply because those uses were the only present uses for which the Secretary could obtain some reimbursement for the cost of the project. The Secretary's decision to save the water to preserve wildlife was upheld.

See Board of County Commissioners of the County of Arapahoe v. Crystal Creek Homeowners Association, 14 P.3d 325 (Colo. 2000); City of Kaukauna, Wisconsin v. Federal Energy Regulatory Comm'n, 214 F.3d 388 (7th Cir. 2000).

(n40)Footnote 790. *438 U.S. 645 (1978).*

(n41)Footnote 791. For further discussion, *see* Reed D. Benson & Kimberly J. Priestley, *Making a Wrong Thing Right: Ending the "Spread" of Reclamation Project Water, 9 J. Envtl. L. & Litig. 89 (Annual 1994).*

(n42)Footnote 792. *See, e.g., 33 U.S.C. §§ 1251*-1376 (Clean Water Act); *33 U.S.C. §§ 1401*-1445 (Ocean Dumping); *42 U.S.C. §§ 300f*-300j-26 (Safe Drinking Water Act); *42 U.S.C. §§ 6901*-6992k (Solid Waste Disposal Act); *42 U.S.C. §§ 9601*-9675 (Comprehensive Environmental Response, Compensation and Liability Act of 1980); *43 U.S.C. §§ 1701*-1784 (Federal Land Policy and Management); *16 U.S.C. §§ 1451*-1464 (Coastal Zone Management Act of 1972); *42 U.S.C. §§ 4321*-4370a (National Environmental Policy Act of 1969).

In the case of *United States v. Dierckman, 41 F. Supp. 2d. 870* (S.D. Indiana), the court dealt with a challenge to a farmers eligibility to receive crop subsidies where the farmer was alleged to have violated the "swampbusting" provisions of the Food Security Act of 1985. The farmer argued that the wetlands involved were beyond the power of the government to regulate because they did not affect interstate commerce. The court found that the Food Security Act was adopted pursuant to the spending clause rather than the interstate commerce clause and hence could reach matters that might be beyond the reach of other enumerated clauses. In contrast, the ability to regulate wetlands under the Clean Water Act would be subject to interstate commerce clause considerations.

See generally Baas, Mark J., *Diamond Bar Cattle Co. v. United States: State Water Rights on Federal Lands for not Hold Property Interest to Graze on those Lands, 4 Great Plains Nat. Res. J. 296 (2000).* In a 2000 case, the court held that there was a reserved water right for the Hells Canyon National Recreation Area but not one created under the Wilderness Act. *See SRBA v. Potlach Corporation, 12 P.3d 1260 (Id. 2000).*

(n59)Footnote 809. *California v. United States, 438 U.S. 645 (1978). But see* Charles Wilkinson & H. Michael Anderson, *Land and Resource Planning in the National Forest, 64 Or. L. Rev. 1 (1985)* in which it is argued that the federal government, through the Forest Service, has the authority, notwithstanding state water rights law to the contrary, to set minimum stream flow levels within national forest.

In *Nevada v. Morros, 766 P.2d 263 (Nev. 1988),* the fact that the federal government was the proprietor of the land for purposes of managing grazing activity on the public domain was sufficient to sustain an application for a state-granted right to the United States Bureau of Land Management to maintain the water level of a lake at a level sufficient to sustain recreational use and fishery needs. The court suggested that such an interest would also be sufficient to sustain a state-created water right for the purpose of watering livestock and wildlife.

On the other hand, the fact that the federal government owns the land may affect water rights claimed under state law. *See Camp v. United States Bureau of Land Management, 183 F.3d 1141 (9th Cir. 1999).* In this case, the landowner sought to enforce an easement right of way for water rights with respect to lands formerly managed by the Bureau of Land Management (BLM). The land in question was transferred to someone else as a result of a land exchange and BLM refused to renew the easement. The District Court found the claims to be time-barred. On appeal, the court held that publication of the proposed land exchange in the Federal Register did not start the running of the statute of limitations for claims by a landowner who was entitled by regulation to receive personal notice.

In *United States v. Alpine Land & Reservoir Co., 174 F.3d 1007 (9th Cir. 1999),* the United States claimed water rights under the reservation doctrine for the Newlands Reclamation Project. The federal rights were the subject of adjudications which were entered in 1944 and 1980. Pursuant to the terms of the decrees, in 1996, the United States Fish and Wildlife Service filed an application with the State Engineer to change the place and manner of use of the water rights it had purchased from others and that had been adjudicated in 1944 and 1980. The State Engineer granted the transfer applications. Churchill County filed a protest to the transfer in state court, which was enjoined by the federal district court, on the ground that it had exclusive jurisdiction to hear appeals regarding the water rights that were the subject of the adjudication decrees. On appeal, the 9th Circuit agreed that the district court's jurisdiction was both continuing and exclusive. The court further held that the Anti-Injunction Act, *28 U.S.C. § 2283,* which prohibits federal courts from enjoining state court proceedings did not change that result. There are three exceptions to the Anti-Injunction act: where expressly authorized by Congress, where necessary in aid of federal jurisdiction, or where necessary to protect or effectuate its judgments. In this case, the second exception, in aid of jurisdiction applied.

In *United States v. Gotchink, 57 F. Supp. 2d 798 (D. Minn. 1999),* the court considered the prosecution of two Chippewa Indians who used a motorized boat and a power ice auger to exercise their treaty-protected fishing rights in the Boundary Canoe Area Wilderness (BCAW) area contrary to the BCAW regulations. The court held that Congress had not preempted the treaty rights of the Indians but could regulate the scope of the content of those rights to the extent that they were the result of valid, non-discriminatory conservation measures. Under this construction of Indian rights, the Indians could not use the boat could use the auger.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.17

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.17 General Federal Reserved Water Rights.

[Go To Supp]

§ 50.17(a) In General.

The federal government may claim or hold water rights of various types. These water rights may be perfected under state law n821 or may be independent of state law. n822 Where rights are secured under state law, the federal government is considered to possess the same rights as any other individual water right holder and may not be discriminated against simply because the rights are held by the federal government. n823 Federal rights which arise independently of state law generally have priority over state granted rights which have been perfected subsequent to the federal right. n824

§ 50.17(b) Federal Reserved Rights, Generally.

The doctrine of federal reserved water rights was initially announced in the case of Winters v. United States. n825 Although this particular case concerned claims of Indians to the water, the doctrine has subsequently been extended to all federal lands which have been reserved for particular purposes. n826 In *Winters*, the water right was claimed on behalf of the Indian tribe by virtue of the fact that the Reservation itself was created for the Indians before the non-Indian settlers began to use the water. The court upheld the Indians' claim on the rationale that at the time the Reservation was created out of the public domain, an amount of water was reserved by "necessary implication" to insure that the Reservation would have adequate water to carry out the purposes for which it was created. This granted a water right to the Indians despite the fact that, prior to that time, no water was actually being used by the Indians (which would have been necessary to support the creation of a water right under state law).

The federal reserved rights were initially implied as arising out of the act of reservation on the theory that Congress surely would not have set aside the lands for the purposes for which the reservation was being created without insuring the wherewithal necessary for the reservation to be successful. In that sense, the reservation doctrine is an implied exception to the general proposition that the federal government has delegated to the states the authority to manage the waters of the nation which arise on public domain land. n827 In recent years, Congress appears to follow the practice of explicitly noting in the act of reservation that water sufficient for the reservation purpose is being set aside as well. n828 This, however, should probably not be seen as suggesting that, *unless* the federal government explicitly reserves a water

right at the time a reservation is created, no such water right is intended. This is for two reasons. First, in at least one case, the reservation legislation has expressly stated the intention of Congress that the manner in which water is statutorily reserved in one reservation situation should not be considered as a precedent of any kind regarding any other reservation situation. n829 Second, the authority of the state to manage the water resources on public domain land rests principally upon the fact of federal deference to state authority, n830 which may not be the case in any given particular situation that significantly affects national public interests.

LEXIS: federal w/1 reserv! w/15 water! w/1 right! reserv! w/1 doctrine w/15 water!

§ 50.17(c) Waters to Which the Reservation Doctrine Applies.

The federal reserved water rights apply to surface water sources and probably apply to groundwater sources as well, though no final court decision appears to have explicitly so held. n831 Such rights enjoy priority based upon the date the reservation was created. Such rights will, therefore, prevail over subsequent private water rights claimed under state law, as well as over subsequent water rights claimed by the states themselves. n832

§ 50.17(d) Priority of Reservation Rights.

The reserved right is deemed to have come into existence at the time the reservation was created. n833 Priority of the right is therefore not dependent upon the time any actual use of the water begins, the nature of the uses to which the water is or may be applied, or the location of water use. n834

§ 50.17(e) Quantifying the Federal Reserved Rights.

The general rules for determining the amount of water which could be claimed as having been reserved under the federal reserved water rights doctrine were announced in the case of United States v. New Mexico, n835 in which the court held that the amount of water reserved was limited to that amount necessary to accomplish the particular purposes for which the reservation was created. Most of the commentary regarding the decision in this case has been critical of the narrow construction given to reservation purposes by the majority of the court. n836

§ 50.17(f) Reservation Defined.

The reservation doctrine applies to any "reservation" of federal land from the public domain. n837 This has been defined to include the withdrawal of land from the public domain for particular purposes and includes such particularized uses of the public domain as national parks, national monuments, national forests, military bases, and wildlife refuges. n838

§ 50.17(g) Relevant Reservation Purposes.

According to United States v. New Mexico, n839 the reserved right extends only to that amount of water needed to accomplish the *primary* purpose of the reservation. n840 Thus, water which is needed for a secondary use of the reservation would appear to require rights secured in the same manner as any other private appropriator. n841 As a result, courts have looked very closely at, and have tended to read somewhat narrowly, the enactments which have given rise to the reservations in order to ascertain the primary purposes of the reservations. n842

§ 50.17(h) McCarran Amendment Adjudications.

Congress adopted the McCarran Amendment in 1952 to facilitate the quantification of federal reserved water rights. n843 This statute was drafted as a waiver of the defense of governmental immunity in any action brought to establish

the priority and quantity of all rights in a particular water system. This waiver is limited to federal consent to be a party suits:

> (1) for the adjudication of rights to the use of water of a river system or other source, or (2) for the administration of such rights, where it appears that the United States is the owner of or is in the process of acquiring water rights by appropriation under state law, by purchase, by exchange, or otherwise, and the United States is a necessary party to such suit. n844

It has been held that such an adjudication may take place in federal or state court, which are considered to have concurrent jurisdiction over the federal rights involved. n845 Where the adjudication occurs in state court, federal substantive law should be applied by the state court to determine federal rights though that does not always appear to be the case. n846

The federal waiver of sovereign immunity in McCarran adjudications extends only to what may be described as "general, area-wide adjudication" which joins all water right holders within the watershed. n847 It would therefore not apply to individual suits against the United States brought by individual water users. n848 Similarly, since the statute provides for a waiver only in the case of "suits," it would also not extend to state administrative proceedings which affect water rights claimed by the federal government.

McCarran proceedings are typically very complex and time consuming, since they are designed to quantify and resolve once and for all the total priority situation for the water supply, n849 and the proceeding may involve federal rights of all types, including Indian rights. n850

(n8)Footnote 828. *See, e.g., 102 Stat. 3961, 3968 (1988),* designating particular areas within the National Park System in the State of Washington as wilderness areas:

> Subject to valid existing rights, within the areas designated as wilderness by this act, Congress hereby expressly reserves such water rights as necessary, for the purposes for which such areas are so designated. The priority of such rights shall be the date of the enactment of this Act.

But see 102 Stat. 4576, creating the Hagerman Fossil Beds National Monument in Idaho:

> Congress finds that there are unique circumstances with respect to the water or water-related resources within the Monument designated by this title. The Congress recognizes that there is little or no water or water-related resources that require the protection of a federal reserve water right. Nothing in this title, nor any action taken pursuant thereto, shall constitute either an expressed or implied reservation of water or water right for any purpose.

SRBA v. State, 959 P.2d 449 (Idaho 1998) (United States claim to reservation rights in all springs and waterholes located on lands that have been withdrawn for stockwatering purposes upheld).

(n9)Footnote 829. In legislation establishing a National Monument in New Mexico, *101 Stat. 1539,* Congress reserved "the minimum amount of water required to carry out the purposes" of the reservation and then noted that:

> Nothing in this section shall be construed as establishing a precedent with regard to future designations, nor shall it affect the interpretation of any other Act or any designation made pursuant thereto.

See James v. Jesse, 744 P.2d 491 (Colo. 1987) where the federal government claimed a reserved water right to instream flows within national forests. The claim was grounded in scientific evidence that efficient instream flows were necessary "to secure favorable conditions of water flows" (one of the few acceptable federal purposes recognized in *United States v. New Mexico, 438 U.S. 696 (1978),* under the Forest Service Organic Act). The trial court dismissed the claim on a motion for summary judgment. The state Supreme Court reversed, requiring a full consideration of the legislative history and factual circumstances to determine whether the purpose of the Organic Act would be entirely defeated unless the United States is allowed to maintain minimum instream flows over the forest lands. If so, the United

States should be granted a reserved right; if not, the claim should be denied. On remand, the United States' claim was denied. In the Matter of the Amended Application of the United States for Reserved Rights in the Platte River (Case No. W-8439-76) (Dist. Ct. Water Div. No. 1, Feb. 12, 1993).

For further discussion generally of the problem of federal reserved rights to instream flows, *see*: Diane McConkey, *Federal Reserved Rights to Instream Flows in the National Forests, 13 Va. Envtl. L.J. 305 (1994).*

In *SRBA v. Potlach Corporation, 12 P.3d 1260 (Id. 2000),* the court held that there was a reserved water right for the Hells Canyon National Recreation Area but not one created under the Wilderness Act. The court refused to find a reserved right to the entire unappropriated flow of water within the Sawtooth National Recreational Area. The court held that the act did not imply a reserved right for either the wilderness portion or the non-wilderness portion.

(n10)Footnote 830. In *Winters v. United States, 207 U.S. 564, 577 (1908),* the court noted that "[t]he power of the Government to reserve the waters and exempt them from appropriation under state law is not denied nor could it be." In *United States v. New Mexico, 438 U.S. 696 (1978),* the court noted that "[w]here Congress has expressly addresses the question of whether federal entities must abide by state water law, it has almost invariably deferred to state law." Nevertheless, "[w]here water is necessary to fulfill the very purposes for which a federal reservation was created, it is reasonable to conclude, even in the face of Congress' express deference to state water law in other areas, that the United States intended to reserve the necessary water."

See Sierra Club v. Yeutter, 911 F.2d 1405 (10th Cir. 1990) denying reserved rights under the Wilderness Act. *But see Sierra Club v. Block, 622 F. Supp. 842 (D. Colo. 1985)* recognizing reserved rights under the Wilderness Act. *See also* Nevada Wilderness Protection Act of 1989, Pub. L. 101-195, *103 Stat. 1784;* Arizona Wilderness Act of 1990, Pub. L. 101-628, *104 Stat. 4469,* which expressly reserve water for the purposes of the acts.

(n11)Footnote 831. *See, e.g., Cappaert v. United States, 426 U.S. 128 (1976)* in which the court held that extractions of groundwater could not interfere with the federal right which the court seems to have characterized as a surface right (even though the Ninth Circuit had held the water involved to be groundwater. *See 508 F.2d 313, 317 (1974).*

See also In re General Adjudication of All Rights to Use Water in the *Big Horn River System, 753 P.2d 76 (Wyo. 1988).* The Wyoming Supreme Court held that the reservation doctrine applied to ground water but no facts had been presented to support the recognition of rights in groundwater in that case. Upon review by the United States Supreme Court, that issue was not addressed. *See Wyoming v. United States, 492 U.S. 406 (1989).*

SRBA v. State, 959 P.2d 449 (Idaho 1998) (United States claim to reservation rights in all springs and waterholes located on lands that have been withdrawn for stockwatering purposes upheld).

Wilderness areas water right claims have been particularly troublesome. In *Sierra Club v. Block, 622 F. Supp 842 (D. Colo. 1985)* the court found that the Wilderness Act could be construed to reserve unappropriated water. The problem has been in compelling the government to assert the claims. In *Sierra Club v. Yeutter, 911 F 2d 1406 (10th Cir 1990),* the avoided the issue by finding the matter not ripe for adjudication. In 1988, the Solicitor of the Department of the Interior issued an opinion concluding that the Wilderness Act reserved no water. *96 Int. Dec. 211.*

In *United States v. Gotchink, 57 F. Supp. 2d 798 (D. Minn. 1999),* the court considered the prosecution of two Chippewa Indians who used a motorized boat and a power ice auger to exercise their treaty-protected fishing rights in the Boundary Canoe Area Wilderness (BCAW) area contrary to the BCAW regulations. The court held that Congress had not preempted the treaty rights of the Indians but could regulate the scope of the content of those rights to the extent that they were the result of valid, non-discriminatory conservation measures. Under this construction of Indian rights, the Indians could not use the boat could use the auger.

State of Alaska v. Babbitt, 72 F.3d 698 (9th Cir. 1995) (amount of water reserved under reserved water rights doctrine is limited to what is necessary to fulfill purposes of land reservation).

(n16)Footnote 836. *See, e.g.*, Sally Fairfax & Dan Tarlock, *No Water For the Woods: A Critical Analysis of United States v. New Mexico, 15 Idaho L. Rev. 509 (1979). But see* Alan Boles & Charles Elliott, *United States v. New Mexico and The Course of Federal Reserved Water Rights, 51 Univ. Colo. L. Rev. 209 (1980).* In this case the court found that, since the reservation was a national forest, it was reserved essentially for only two purposes: to conserve the water flows for private and public uses under state law and to furnish a continuous supply of timber for the people. Accordingly, no water was considered reserved for recreation, aesthetics, wildlife preservation nor for cattle grazing.

(n26)Footnote 846. *See, e.g., United States v. Bell, 724 P.2d 631 (Colo. 1986)* where the court imposed state procedural limitations against the federal government which had the effect of reducing the priority of the federal claim.

See also In re General Adjudication of All Rights to Use Water in the *Big Horn River System, 753 P.2d 76 (Wyo. 1988), aff'd* on other grounds by an equally divided Supreme Court, *492 U.S. 406 (1989).*

It has been held that where the adjudication occurs in state court, the federal government can be compelled to pay filing fees despite language in the Amendment, *43 U.S.C. § 666*(a) that provides that no judgment for costs shall be entered against the United States in any such suit. *See United States v. Idaho 113 S. Ct. 1893 (1993).*

But see United States v. Oregon Water Resources Dep't, 774 F. Supp. 1568 (D. Or. 1991), holding that it would be a violation of treaty rights to require Indian Tribes to pay filing fees in *McCarran* adjudications.

(n27)Footnote 847. *Dugan v. Rank, 372 U.S. 609 (1963).*

See also United States v. District Court In and For Eagle County, 401 U.S. 520 (1971); United States v. District Court In and For Water Division Number 5, 401 U.S. 527 (1971).

In *Elephant Butte Irrigation Dist. v. United States, 849 P.2d 372 (N.M. 1993),* it was argued that the adjudication did not satisfy the requirements of the McCarran Amendment because it did not include the entire main stem of the Rio Grande in New Mexico. The court held that the Rio Grande Compact justified the exclusion and because of the terms of the Compact, the resulting adjudication would not constitute "piecemeal litigation." But for the Compact, however, the court suggests that the main stem of a river should ordinarily be included.

See also United States v. Oregon Water Resource Dep't, 774 F. Supp. 1568 (D. Or. 1991), holding that the adjudication was not deficient because it did not include groundwater right claims. The court held that there was nothing in the act that required the simultaneous adjudication of both surface and groundwater claims.

For an interesting discussion of the immunity problem, see Zolezzi, Jeanne M. *The Battle Between Sovereign Immunity and State Law.* 15 SUM Nat. Res. & Envt. 36 (2000).

See also Fent v. Oklahoma Water Resources, 235 F.3d 553 (10th Cir. 2000). In this case, the suit was dismissed because it was deemed barred by federal sovereign immunity and because the state was entitled to Eleventh Amendment immunity as well. The suit alleged an illegal contract between the federal government and the state to store water.

(n28)Footnote 848. *Id.*

Gardner v. Stager, 103 F.3d 886 (9th Cir. 1996) (waiver of sovereign immunity provided by McCarran Amendment was inapplicable to claimants' private suit for water rights against United States).

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.18

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.18 Indian Reserved Rights.

[Go To Supp]

§ 50.18(a) In General.

According to the above-stated general rule, Indian reservations may also give rise to federal reserved water rights. Indeed, not only did the *Winters* n851 case deal specifically with such a claim, until the 1950s it was commonly thought that Indian rights were the *only* kind of federal reserved rights.

As other reservations have come to be recognized as having reserved rights, an important question arises as to the extent to which reserved rights claimed on the basis of Indian reservations should differ from reserved rights claimed for non-Indian reservations. Although, conceptually, both rights are seen as arising from an implication of Congressional intent regarding the need for water as an integral part of the ability of the reservation to achieve the purposes for which it was created, subtle differences do and must exist between the two. Much of the difference undoubtedly has to do with the long and troubling history of how Indians have been dealt with as a matter of law and a real contemporary concern that the Indians not be unduly restricted in the development of reservation lands.

Important differences exist regarding how reservation purposes are defined and the role such purposes play in quantifying the water rights. n852

LEXIS: indian! w/5 reserved w/1 right!

§ 50.18(b) Reservation Purposes.

In *Winters*, n853 the court noted that the government policy involved in the creation of Reservations for Indians was to make them a "pastoral and civilized people." It has not generally been understood from this that it was ever Congress's intent to force the Indians to forever adopt a subsistence agrarian lifestyle. In fact, in a later decision, the court opined that Congress intended some flexibility and held that enough water be set aside "to satisfy the future as well as the present needs of the Indian Reservation," n854 as if to suggest that the amount of water required and how the water was

used on reservations may change over time as circumstances might require.

The difficulty with Indian reserved rights, however, probably has more to do with the effects of the Indian rights on state control over water than it does with what society wishes the Indians to achieve. The reality is that Indian reserved rights potentially claim a major portion of the water available in certain areas of the country and the Indians' use of the water is considered to be a serious threat to the availability of the water for other users, regardless of the uses to which the Indians may put the water. In that sense, the "reservation purpose" issue may be considered simply the means by which water is removed from state jurisdiction and, as a result, there may be considerable pressure in jurisdictions of that type to construe the language of the original treaties rather literally, not because of any interest in restricting the Indian's development, but to prevent the Indian reserved right from claiming what may be perceived as "too much" of the state's water. This seems to have been the case in at least one decision n855 where the court, over a vigorous dissent, n856 refused to allow the Indians to use the water claimed under a reserved right for fisheries, livestock, wildlife, aesthetics or mineral development, on the ground that the treaty said that the sole purpose of creation of the reservation was agricultural. n857

COMPUTER-ASSISTED RESEARCH

LEXIS: indian! w/5 reservation! w/30 government! w/5 purpose! or policy

§ 50.18(c) Quantifying the Water Rights.

Under the reservation doctrine, an amount of water sufficient to accomplish the purpose of the reservation is deemed to be "reserved" with the land as it was withdrawn from the public domain. Since neither the fact that water was saved, nor any reference to an exact amount of water thus reserved is ever mentioned in the documents associated with the creation of the reservation, the doctrine of reserved rights has had to judicially address both omissions. The *Winters* court recognized the existence of the right, but did not fix the quantity of water that could be claimed under the right. The criteria for determining that amount have been established in subsequent litigation as being based on the amount of practicably irrigable acreage within the reservation. n858

§ 50.18(d) McCarran Proceedings.

Congress adopted the McCarran Amendment in 1952 n859 to facilitate the quantification of federal reserved water rights, n860 including Indian Reserved Water Rights. n861 This statute was drafted as a waiver of the defense of governmental immunity in any action brought to establish the priority and quantity of all rights in a particular water system. This waiver is limited to "general, area-wide adjudications" which join all water right holders within the watershed. n862

§ 50.18(e) Negotiations.

Because of the complexity of McCarran adjudications, some jurisdictions have determined that a negotiated arrangement with the Indians is desirable. At least one state has legislatively created a negotiation commission that is charged specifically with the responsibility of negotiating water right settlements with the Indian tribes within the jurisdiction. n863 Such agreements must be confirmed by the federal government in order to be effective. n864

COMPUTER-ASSISTED RESEARCH

LEXIS: negotiat! w/15 indian! w/30 water!

§ 50.18(f) Practicably Irrigable Acreage.

When the court in *Arizona v. California* considered the need to quantify Indian reserved rights, it rejected the idea that

Indians should have as much water as was "needed for reservation purposes" as too uncertain. n865 Instead, the court held that the Indian claim was to as much water was necessary to irrigate all practicably irrigable acreage within the reservation. n866 This is a matter of a factual determination, n867 and it has been suggested n868 that it involves a two-part analysis: lands which are susceptible of irrigation must be identified; n869 then it must be ascertained whether such lands can actually be irrigated at a reasonable cost. n870

Once the measure of practicably irrigable acreage has been determined, it is then necessary to determine how much water is actually required to actually irrigate that land - should the Indians actually use the water for irrigation. n871

COMPUTER-ASSISTED RESEARCH

LEXIS: practicably w/1 irrigable w/2 acreage or land

§ 50.18(g) Use Limitations.

As a general proposition, it would appear that Indians should be free to use the water granted to them under reserved rights for whatever purpose they wish since, unlike trees in the national forest, Indians were confined to reservations against their wishes and, as a practical matter, for the purpose of removing them from the rest of the land to which they laid claim so that it would be available for settlement by non-Indians. It would seem patently inconsistent with any notion of self-determination to require that the Indian reserved right be subjected to a literal interpretation of "reservation purposes" in the same fashion as has been required for national forests. n872 Thus, it has been held that the Indians do not actually have to use the water at all or for irrigation purposes in order to maintain their claim to the right. n873 Unfortunately, it would appear that the Indians are not totally free to use the water for any other purpose the Indians may wish. n874 Clearly domestic use, municipal and commercial use has been subsumed within the amount deemed granted under the practicably irrigable acreage standard. n875 Beyond that, there is some uncertainty.

One court did not allow the Indians to use the water for fisheries, livestock, wildlife, aesthetics or mineral development on the ground that the treaty said that the sole purpose of creation of the reservation was agricultural. n876 In that case, after remand from the United States Supreme Court, n877 the Indians argued that the agricultural requirement was to be used only as a measure of the quantity of water to which the reserved right attached and that it did not actually restrict the use to which the Indians put the water. The Court disagreed:

> Our opinion [in *Big Horn I, 753 P.2d 273 (Wyo 1988),* aff'd by evenly divided Supreme Court, *492 U.S. 406 (1989)]* clearly and unequivocally stated that the Tribes had the right to use a quantified amount of water on their reservation solely for agricultural and subsumed purposes and not for instream purposes. If we had intended to specify what water could be used for merely as a methodology to determine the amount of water the Tribes could use for any purpose, we would have said so. Big Horn I, having been affirmed by the United States Supreme Court is final and controlling. The tribes do not have the unfettered right to use their quantified amount of future project water for any purpose they desire. n878

This case illustrates the primary difficulty presented by the Indian reserved rights. The Indians, as somewhat sovereign and therefore free from state control, may claim rights to substantial amounts of water in chronically water-short areas that are superior to state-created water rights. That poses a serious threat to non-Indian water right claimants under state law and to the ability of the state to manage water within the state's boundaries. To allow the Indians an unfettered choice as to how the water may be used is likely to insure that all of the water claimed by the Indians will be used and there will be little left for the non-Indians. On the other hand, confining the Indians to agricultural uses of the water seemingly forces the Indians to engage in activities that may not be as economically rewarding and therefore less attractive which may well result in less water actually being used and therefore more water will likely be available, at least nominally, to nonIndians. Historically, there has been much ambivalence in the nation's policy as to how Indians

should be dealt with. To insist that the Indians forever remain a "pastoral" people in order to have a defensible claim to the water is inconsistent with any effort to make them a part of the mainstream of society and appears to perpetually subject them to a secondary class of citizenship. No other minority is similarly treated as a condition associated with the exercise of any similar right. To argue that the water right is a privilege and therefore can be conditioned in this fashion flies in the face of the reality of how and why reservations were created in the first place. n879

COMPUTER-ASSISTED RESEARCH

LEXIS: indian! w/15 use! w/5 water!

§ 50.18(h) Allocation of Reserved Rights and Priorities Within the Reservation.

It appears that all lands within the reservation enjoy the reserved rights and are entitled to that portion of the water represented by the right in the same proportion as the irrigable acres within that particular tract represent of the reservation's total irrigable acres. n880 Lands which remain in continuous ownership by either the tribe, or as individual Indian allotment, neither lose their water rights nor the priority of such rights simply because the rights are not exercised. n881 On the other hand, lands that are transferred to non-Indians but reacquired by the Indians or the tribe may be treated differently. Reacquired allotment lands may enjoy their original priority provided the non-Indian did not lose the water right through non-use during the time such lands were owned by non-Indians. Homestead lands that were reacquired by the Indians would have the date of reacquisition as their priority date together with such rights as may have been secured by the non-Indian under state law. n882 This appears to be the case even where the reservation and the tribe may have been formally terminated and then recreated. n883

COMPUTER-ASSISTED RESEARCH

LEXIS: reserved w/1 right! w/15 water! w/30 indian! priorit! w/15 water! w/30 indian!

§ 50.18(i) Rights Claimed by Non-Indians on Reservations.

In many Indian reservations, a mixture of non-Indian landowners may be found together with Indian landowners. Such non-Indian landowners may claim water rights based upon the reserved right of the reservation. The Indian right may be shared with the non-Indians in a variety of ways. It is possible for the Indians to lease their water right to the non-Indians. n884 It is also possible for the Indians to transfer such rights by other means of conveyance as well. n885 In at least one case, a court has recognized the claim of a non-Indian landowner based upon the purchase of Indian lands within the reservation from the owner of Indian allotment lands. n886 There, the non-Indian claim to a water right based upon an Indian reserved water right was upheld. n887

In In re Big Horn River, n888 the court held that lands that were located within the boundaries of the Wind River Indian Reservation but which were not owned by Indian allottees did not have the priority date of the reservation. These lands, it was held, were ceded back to the United States for purpose of sale. As a result, the reservation right disappeared as the purpose for which the right was recognized no longer pertained. For these lands, the priority date would be that of the permit granted by the chief engineer to the initial water user. n889

COMPUTER-ASSISTED RESEARCH

LEXIS: non-indian! w/15 water! w/2 right!

§ 50.18(j) State Authority Over Indian Rights.

Although it appears that the state may have some authority over certain aspects of Indian water rights, much is unclear.

State courts may consider questions of Indian Reserved rights as a part of the adjudication proceedings authorized by the McCarran Amendment. n890 Indeed, at least one court has described the effect of the McCarran Amendment as being "to place federal reserved rights within the state adjudication system." n891 On the other hand, the court in *Walton* n892 refused to allow the state to exercise jurisdiction over non-Indian owners of lands within the reservation with respect to matters such as the regulation of water on the ground that such power was preempted by the creation of the reservation. In contrast, other jurisdictions have expressly upheld state regulation of on-reservation, non-Indian water use. n893

Where the law has recognized that non-Indians may hold Indian reserved water right, any transfers of such rights to other non-Indians may be subject to state law to the extent that they involve changes in the place of extraction or use. n894

Federal and Indian policy has historically been fraught with ambivalence. On the one hand, there has been a desire to protect the cultural integrity of Indians by recognizing some measure of tribal sovereignty. On the other, there has been a sense that Indians should be fully integrated into the mainstream of American life. History demonstrates that we have succeeded at neither. History also reveals a tortured trail of abuse and oppression. n895 Indeed, an objective consideration of the relation between Indians and the American system reveals that Indians, as a group, are undoubtedly the least protected of all minorities.

At the state level, considerable jealousy exists regarding access to and control over water. The fact that much water in arid Western States has given rise to fears that Indian control over water may have widespread negative effects on state administration of water rights. This fact, coupled with the historic state propensity to leave Indian rights unprotected (if not affirmatively abused) has left Indians in a very vulnerable position in water right adjudications conducted in state courts. Cases such as the *Big Horn River System Adjudication,* and the *Pyramid Lake* cases suggest that the interests of the Indians are likely to receive short shrift when compared to either state interests or other federal interests. For this reason, it may be argued that granting state courts jurisdiction over Indian rights has been a mistake. It is clear, since the cases dealing with the Endangered Species Act, n896 and associated commentary, n897 that considerable power exists at the federal level to protect Indian water rights outside of the reserved doctrine. Further, recent developments in the area of Indian Law itself, suggest that to expose tribes to state court adjudications of water rights may violate principles of tribal sovereign immunity. n898

For an interesting discussion of the opinion that was almost issued in the Big Horn case, see Mergen, Andrew C. and Liu, Sylvia F., *Misplaced Sensitivity: The Draft Opinions in Wyoming v. United States, 68 U. Colo. L. Rev. 683 (1997).*

See also Grand Traverse Band of Ottawa and Chippewa Indians v. Director, Michigan Dep't of Nat. Res. 141 F.3d 635 (6th Cir. 1997) (court held that municipalities were bound by consent order expressly providing for implementation of the treaty right to fish and upheld right of transient mooring at public marina).

Assistance in understanding the usufructary nature of Indian water rights may be gathered from two non-water law, but water-related cases. In *United States v. Gotchink, 57 F. Supp. 2d 798 (D. Minn. 1999),* the court considered the prosecution of two Chippewa Indians who used a motorized boat and a power ice auger to exercise their treaty-protected fishing rights in the Boundary Canoe Area Wilderness (BCAW) area contrary to the BCAW regulations. The court held that Congress had not preempted the treaty rights of the Indians but could regulate the scope of the content of those rights to the extent that they were the result of valid, non-discriminatory conservation measures. Under this construction of Indian rights, the Indians could not use the boat could use the auger. In *Minnesota v. Mille Lacs Band of Chippewa Indians, 119 S. Ct. 1187 (1999),* the Supreme Court held that the usufructary rights of the Indians recognized under an 1837 treaty had not been abrogated or terminated by an Executive Order which, in 1850, removed Chippewa Indians from lands previously ceded nor did they terminate when the band entered into another treaty in 1855 or by the admission of Minnesota into the Union. Significantly, the court noted that treaty rights regarding natural resources are reconcilable with state sovereignty over those resources such that statehood by itself is not sufficient to extinguish rights to hunt, fish and gather on land within state boundaries.

(n6)Footnote 856. Thomas, J., in his dissent, argued that:

> [t]he purpose of establishing an Indian reservation, such as the Wind River Indian Reservation, is to provide a homeland for Indian peoples. If one is to assume that, pursuant to the reserved rights doctrine relating to water, there is an implied reservation of those waters essential to accomplish the purpose of the reservation of land, then I cannot agree that the implied reservation of water with respect to the Wind River Indian Reservation should be limited, as the majority has held in approving the judgment of the district court. The fault that I find with such a limitation is that it assumes that the Indian peoples will not enjoy the same style of evolution as other people, nor are they to have the benefits of modern civilization. I would understand that the homeland concept assumes that the homeland will not be a static place frozen in an instant of time but that the homeland will evolve and will be used in different ways as the Indian society develops... .

For an interesting discussion of the opinion that was almost issued in the Big Horn case, *see* Mergen, Andrew C. and Liu, Sylvia F., *Misplaced Sensitivity: The Draft Opinions in* Wyoming v. United States, *68 U. Colo. L. Rev. 683 (1997).*

Rev. 195 (1994);* Wes Williams, Jr., *Changing Water Use for Federally Reserved Indian Water Rights*: *Wind River Indian Reservation, 27 U.C. Davis L. Rev. 501 (1994).*

For an interesting discussion of the opinion that was almost issued in the Big Horn case, *see* Andrew C. Mergen & Sylvia F. Liu, *Misplaced Sensitivity: The Draft Opinions in Wyoming v. United States, 68 U. Colo. L. Rev. 683 (1997).*

Regarding the ability to sue the states in federal court to enforce and quantify water rights, see discussion of Eleventh Amendment immunity of states in *Cayauga Indian Nation of New York v. Cuomo, 1999 U.S. Dist. LEXIS 10579 (N.D. N.Y. 1999).* For a decision finding that two legislative measures revising the state's water laws were unconstitutional because those provisions affected Indian water rights, *see San Carlos Apache Tribe v. Superior Court, 792 P.2d 179 (Ariz. 1999).* Sovereign immunity was not an issue in this case because the challenge was brought in state court and alleged violations of the state Constitution.

For further discussion, see Benson, Reed D. *Can't Get No Satisfaction: Securing Water For Federal and Tribal Lands in the West.* 30 Envtl L. Rpt. 11056 (2000).

See Arizona v. California, 120 S. Ct. 2304 (2000).

(n9)Footnote 859. *43 U.S.C. § 666*(a).

For further discussion, see Benson, Reed D. *Can't Get No Satisfaction: Securing Water For Federal and Tribal Lands in the West.* 30 Envtl L. Rpt. 11056 (2000).

See also State Engineer of the State of Nevada v. South Fork Band of the Te-Moak Tribe of Western Shoshone Indians of Nevada, 114 F. Supp. 2d 1046 (D. Nev. 2000). Here, the court rejected a state motion to remand to state court to enforce a state court water rights decree. The tribe had moved to remove the case to federal court.

(n10)Footnote 860. For further discussion, *see* § 50.17(h) *supra*.

For a general discussion, see Helton, Taiawagi, *Indian Reserved Rights in the Dual-system State of Oklahoma, 33 Tulsa L.J. 979 (1998);* Eichelberger, Eunice A., *United States District Court Jurisdiction of Action Brought by Indian Tribe Under 28 U.S.C.A. § 1362, 65 A.L.R. Fed. 649* (1998 Supp.) (jurisdiction to sue states etc).; Zeh, Charles R., and Hearne, Treva J., *Development Considerations on Indian Lands,* 13-SUM Nat. Resources & Env't 350 (1998); Chambers, Reid Peyton, *Indian Law in the United States Supreme Court-Experiences in the 1980's and Predictions for the 1990's, 22 Am. Indian L. Rev. 601 (1998).*

(n11)Footnote 861. *See Colorado River Water Conserv. Dist. v. United States, 424 U.S. 800 (1976).*

In *In re* the General Adjudication of All Rights to Use Water in the *Big Horn River System, 835 P.2d 273 (Wyo. 1992),* the court held that the tribal water agency could not be substituted for the Wyoming state engineer as the administrator of the Indian's reserved water rights, even within the reservation. The court held that the state engineer was obligated to protect the Indian's reserved rights and that the courts had authority to take appropriate enforcement action.

See also Stephen Feldman, *The Supreme Court's New Sovereign Immunity Doctrine and the McCarran Amendment: Toward Ending State Adjudication of Indian Water Rights, 18 Harv. Envtl. L. Rev. 433 (1994).* Gina McGovern, *Settlement or Adjudication: Resolving Indian Reserved Rights, 36 Ariz. L. Rev. 195 (1994).*

For discussion of the ability of the judge in an adjudication to communicate ex parte with the state Department of Water Resources, *see San Carlos Apache Tribe v. Bolton, 977 P.2d 790 (Ariz. 1999),* holding that the communications were proper where they involved routine scheduling, administrative or other matters not involving the merits of the adjudication and the Indians were not prejudiced thereby. The court noted that, when in doubt or whenever practicable, the judge should err in favor of giving notice of the communications.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.19

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.19 Non-Reserved Indian Rights.

[Go To Supp]

§ 50.19(a) In General.

In addition to reserved rights, Indians may claim water in other ways. Certainly, water rights may be claimed and perfected under the laws of the various states; these rights would be identical to any other state-created water rights. Courts in some jurisdictions have recognized at least two other kinds of Indian water right claims which are not a part of the state water right system and, in fact, are likely to override or prevail over state-created rights. These rights are commonly called pueblo water rights and aboriginal water rights. n899

§ 50.19(b) Pueblo Rights.

Pueblo water rights tend to be recognized in the Southwest, where these historic claims have sometimes been recognized in association with historic villages or towns. n900 The water right appears to be derived, not so much from the fact that the pueblo or town has existed from time immemorial, but from the fact that the town has needed and used water for so long that there can be no question as to the existence of the claim to the water. These rights are then recognized as having ancient status and, therefore, priority based on the fact that such towns themselves were in existence before the creation of the current water right allocation system of the particular jurisdiction. This accords the rights the same status and protection as pre-existing vested rights.

Alternatively, the claim to the water may be protected as a pre-existing right where it may be traced to some Mexican or Spanish Land Grants. n901 This type of claim may actually be broader than a pueblo claim and may extend the doctrine of protecting ancient rights to individual claims which may be recognized on the same basis as that the towns, n902 which, under this approach are considered to be the successors to the historic grantees of the Spanish or Mexican governments. n903

Pueblo rights pertain to water naturally occurring within the boundaries and are considered to embrace both surface and groundwater. n904 However, unlike other Western water rights, they are not subject to the requirement that the water have been used continually since the founding of the pueblo in order to support the existence of the right. n905

Pueblo rights have been held to entitle the town to such water as may be needed for the residents of the village. n906 They therefore would possibly appear to be even more open-ended than Indian reserved rights as to quantity. It has been held that pueblo water rights are limited principally only by the needs of the community. n907

COMPUTER-ASSISTED RESEARCH

LEXIS: pueblo w/2 water! w/2 right!

§ 50.19(c) Aboriginal Water Rights.

It has been argued successfully in at least one case n908 that Indians may claim a right to the water simply on the ground that their claims to the water pre-date the present system. Claims of this type are generally denominated as aboriginal water rights since they are not dependent upon any claim that the right is derived from or related to an historic pueblo or village, nor are they derived in any way from federal reservations.

Given the significance of actual use of the water with respect to the acquisition of water rights in most jurisdictions in the Western states, it might appear that before one could claim an aboriginal right in such a jurisdiction, there must be evidence of uninterrupted use, since aboriginal rights do not seem to be derived from any implied grant or historic status as a village or town. Further, it might be argued that in order for such a right to be confirmed as a pre-existing right, not only must the use of water pre-date the establishment of the present system but it must also be continuous or uninterrupted from the previous period to the present day. Clearly, such a requirement of historic and uninterrupted use, of course, will be virtually impossible to show in most cases and such a requirement would, more often than not, deny the existence of the right.

The little discussion of the creation of aboriginal rights that is found in the cases does not appear to support the requirement of either continual use or uninterrupted use. n909 In this sense, the aboriginal rights doctrine is more consistent with the reserved rights doctrine than it is with the doctrine of the particular jurisdictions in which the right may be claimed. n910 In fact, the cases seem to talk more in terms of the historic nature of the Indian claims to the land rather than the water as the basis for the asserted right. And even here, there seems to be little concern that the Indian's claim to the land be continuous or uninterrupted. n911

The most frequently asserted rationale of the aboriginal right differs from that of both the reserved right and the pueblo right in the sense that whereas the United States government "reserved" the water for the Indians when the reservations were created or the right is claimed based on the historic fact of existence of the pueblo, the aboriginal right appears to be derived directly from the status of sovereignty of the Indian Tribe prior to its submission to United States Authority, n912 and in that sense is somewhat similar to the navigation servitude, which is generally considered to have been "held back" when there was a transfer of jurisdiction. n913 The aboriginal right may be deemed to have simply been retained by the tribe on the basis of tribal sovereignty when the tribe submitted to United States jurisdiction. n914 Indeed, in at least one case, a court has suggested that where the creation of the reservation simply confirmed the existing territorial claims of the tribe, the treaty should be viewed "not as a grant of rights to the Indians, but a grant of rights from them - a reservation of those not granted." n915

On this basis, it has been observed that "[w]here the Reservation is located on lands aboriginally owned by the Indian tribe, their water rights may even be said to have existed from time immemorial." n916 This rationale seems to have been accepted in at least one decision n917 as the basis for determining whether an Indian claim to water fell within the *Winters* doctrine. n918 And at least one court n919 has held that where the area in question had been the ancestral homeland of the tribe, the Indian claim for water to maintain instream flows to support hunting and fishing had the priority of a reserved right and was held to date from "time immemorial." This right was obviously unaffected by non-use that resulted from the dissolution of the tribe and the conveyance of tribal lands into non-Indian ownership. n920

COMPUTER-ASSISTED RESEARCH

LEXIS: aboriginal w/2 water! w/2 right!

§ 50.19(d) Priority of Pueblo and Aboriginal Rights.

The theory upon which both kinds of rights is grounded is that these claims are historic claims and therefore must be recognized and protected as such. Specifically, it is argued that the Indian claim to the water pre-dates the creation of either the current state or federal water right allocation systems. High priority is assigned to such rights as a result of the fact that in the western United States, where such rights have been more often recognized, the date at which the claim is considered to have been perfected determines the relationship between claims, with the earlier claims given priority over later claims. Since the Indian claims pre-date the current formal state systems, they are recognized as having inherent high priority over rights perfected under those systems.

It is also argued that the Indian claims should prevail over state-created claims, on the ground that where the rights were recognized or granted by governments that controlled these areas before the United States acquired them, they should be considered to be "vested rights," and therefore constitutionally preserved and protected as state systems were created. n921

(n3)Footnote 901. *See* Anastasia Stevens, *Pueblo Water Rights in New Mexico*, 28 Nat. Res. J. 535 (1988).

New Mexico, in an interesting decision, appears to have repudiated the pueblo water right doctrine. In the case of *New Mexico v. City of Las Vegas, 880 P.2d 868 (N.M. App. 1994),* the Court of Appeals determined that the State Supreme court, if provided the opportunity, would overrule the doctrine announced in *Cartwright v. Public Serv. Co., 343 P.2d 654 (N.M. 1958).* It therefore declined to follow the holding in that case and appears to have even vacated the effect of *Cartwright*. In *Cartwright,* the court appears to have recognized that the City of Las Vegas held a pueblo water right. In New Mexico, the court held that there was no evidence that the city had relied on that decision in any way that would perfect a vested right to the water. In New Mexico, the court apparently was persuaded to renounce the doctrine on the ground that certain legal scholars have argued that there is no historical basis for the doctrine and that it is incompatible with New Mexico's system of prior appropriation doctrine.

Regarding the history of pueblo water rights, the court exercises rather curious judgment as to what it considers good scholarship and appears to confuse the ultimate nature of water rights with criticism of the accuracy and detail of early Spanish records. The court finds that under Spanish law, water was held in common and concludes that as such, there could be no protectable right, let alone property right in the water. The Spanish view actually seems no different from the Roman law view which is generally recognized as the basis for water rights in our system and certainly has been the basis for both the "reasonableness" and "beneficial use" limitations in both riparian and appropriative systems, including that of New Mexico. However, since no aspect of Spanish law specifically spoke to the issue of claiming an interest in any particular water use as a right, the court concludes that there was no legal basis for protecting the claim of pueblos to the water. The court forgets that the appropriative doctrine itself originated without such specific reference to particular water uses as property but rather was a derivative of the mining codes of the mining camps of the Sierras and was designed primarily to resolve disputes as to the validity of individual claims made by trespassers. Indeed, the "property right" essence of appropriative water rights has simply evolved from a particular set of dispute resolution mechanisms. In that sense, the court is as ignorant of implications of the history of prior appropriation doctrines as it is willing to capitalize in gaps in the history of Spanish administration of water in the Colonial period. Thus, it appears that the court is actually seeking to invalidate the entire historic doctrine simply because it is unwilling to find a basis in the present doctrine upon which to accommodate rights that may have arisen under earlier systems. This seems to be the epitome of anglocentrism and risks a challenge that the entire appropriative system the court is seeking to validate is itself unconstitutional for failure to protect property rights acquired prior to its creation. What really seems to be troubling the court is not the existence of pueblo rights per se, nor even the basis upon which they may arise, but that the doctrine grants to the city an absolute preference to what the court is afraid may be the entire flow of the stream. That the city has such an unlimited right may be more the possibly unsupported conclusion of earlier scholars than a historical feature of the doctrine. However, the court assumes that the criticism on that point actually proves the history. Further, the court neither offers any explanation as to how an absolute right of that nature is any different than a similar appropriative right to the same water nor does the court consider whether that particular interpretation is even an accurate understanding of Spanish law -- given the already accepted conclusion that the nature of rights to water under the Spanish system was essentially the Roman view of rights to water.

The court finds the pueblo doctrine to be incompatible with prior appropriation doctrine in two respects. First, it is argued that pueblo rights make the job of the State Engineer more difficult because such rights are not readily quantifiable. That conclusion is directly derived from the notion that the pueblo rights represent a possibly unlimited claim to the flow of a stream, which may be the actual historical flaw. Further, the court ignores entirely other areas where identical problems exist -- such as the problem with federal reserved rights (including Indian rights). And clearly, such rights do not cease to exist as a matter of law or of historical fact in appropriative systems simply because at some point in time, they are not quantified. It might be observed that *both* the reserved rights doctrine and the pueblo doctrine may be judicial creations rather than relics of history. Finally, the court ignores the fact that there are systems in which riparian rights (to which pueblo rights are conceptually similar) coexist with appropriative rights (*see Franco-American Charolaise, Ltd. v. The Oklahoma Water Resources Bd., 855 P.2d 569 (Okla. 1990), readopted, reissued and rehearing denied*, April 3, 1993) and courts have felt constrained by the constitution from simply eliminating the one in favor of the other simply because one made administration of the other less convenient. The court seems a bit quick to judgment if indeed its goal is to invalidate the pueblo rights doctrine because of the convenience of the State Engineer.

Second, the court is concerned that if the pueblo right is recognized for the City of Las Vegas, other cities may claim such a right and that might somehow jeopardize the ability of the state to comply with its obligations under the provisions of interstate water compacts. That argument suggests that pueblo rights, if recognized, would somehow be different from any other kind of water right recognized by the state that might have an effect of water committed to compact purposes. What the court appears to be afraid of here is that the state may have to terminate later-granted water rights. That situation, however, is a fairly common means of adjusting water deliveries under compacts where courts conclude that one state or another has not fulfilled its obligations. The same argument could be made against the state issuing any new water rights where there is likely to be a similar impact.

The court seems to consider that the real problem with the pueblo rights is determining how much water they represent. While that may be a significant problem, there also seems to be an unstated concern that cities should not have *any* particular priority to water over individuals or rural water users. Both issues seem better suited to the legislature for resolution than to the courts. On the other hand, since the court has chosen to respond to the situation, it may be suggested that in the court's rush to avoid the problem of quantification of pueblo rights, the court may have eliminated one problem simply by creating another: upon what basis *do* cities, that have used water since before New Mexico became a state, protect those rights under the state-adopted doctrine of prior appropriation without losing their priority to every water right claimant that has secured a water right since that time?

(n4)Footnote 902. *See Appalachicola Land & Dev. Co. v. McRae, 98 So. 505 (Fla. 1923)* holding that Indians in Florida held title to certain lands based on grants from Spanish authorities. For a later case relying on the Globe Equity Decree, *see United States v. Gila Valley Irrigation Dist., 804 F. Supp. 1 (D. Ariz. 1992).*

But see Menominee Indian Tribe of Wisconsin. v. Thompson, 161 F.3d 449 (7th Cir. 1998) (court held that the tribe retained no aboriginal rights to hunt or fish on off-reservation lands under Treaty of 1831).; *Native Village of Eyak v. Trawler Diane Marie, Inc., 154 F.3d 1090 (9th Cir. 1998)* (court held that aboriginal title claim to exclusive hunting and fishing rights in the ocean area of the outer continental shelf were barred under federal paramountcy doctrine).

(n11)Footnote 909. *See, e.g., Gila River Pima-Maricopa Indian Community v. United States, 684 F.2d 852 (Ct. Cl. 1982);* United States v. Gila Valley Irrig. Dist., Globe Equity Decree No. 59 (D. Ariz. 29 June 1935); United States v. Adair, 38.*723 F.2d 1394 (9th Cir. 1983).*

(n12)Footnote 910. Under the reservation doctrine, it has never been necessary for the Indians to have been using the water reserved to them either before or after the creation of the reservation for such a right to be claimed. Indeed, the amount typically arbitrarily allocated based on "practicably irrigated acreage" which, as a matter of fact, generally exceeds the level of demand at the time the reservation was created. It may be argued that the reservation right exists only by the grace of Congress and the courts, and therefore has only such dimensions as either may dictate. On the other hand, the reservation doctrine gives some measure to the historic status of Indians and their need for water as

independent nations and seeks to recognize to some extent their right to self-determination. Indeed, the reservation doctrine was initially derived from the notion that the reservations for which "reserved rights" were created were the result of treaties with the Indians in which they were acting as sovereign nations. On that same theory, it might be argued that the aboriginal right is as much a reflection of their previous sovereignty as it is a reflection of their previous needs for water. Nevertheless, the reservation doctrine recognizes that at least that type of non-use based water right can exist independently of a use-based appropriative system.

(n13)Footnote 911. *Id.*

(n14)Footnote 912. *See, e.g., Gila River Pima-Maricopa Indian Community v. United States, 684 F.2d 852 (Ct. Cl. 1982);* United States v. Gila Valley Irrig. Dist., Globe Equity Decree No. 59 (D. Ariz. 29 June 1935).

(n15)Footnote 913. *See* § 50.16(h), *supra*.

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.20

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.20 Diffused Surface Water.

[Go To Supp]

§ 50.20(a) In General.

The popular conception of water law as a legal institution is perhaps that it has been created essentially to deal with the issues that arise as a result of water shortage and is the mechanism by which rights to a scarce resource are allocated among the several competitors for that resource. Further, it appears to be a widespread view that the primary interest of the legal system in water is essentially focused upon the ability of individual users to enjoy and consume the water that may be the object of their water right. Indeed, it is difficult for many to imagine circumstances, other than floods or natural disasters, under which the problem to be dealt with is the matter of overabundance of water. It is also difficult to imagine waters that might not be considered particularly useful for consumptive use purpose.

Nevertheless, one branch of water rights law has been designed specifically to deal with diffused surface waters and the problems that arise as a result of activities associated more with the use of the land than with the use of the water.

In the case of Britton v. Claibourne Co., Texas, n922 the court addressed a damage claim in which the plaintiff alleged that his property was flooded as a result of runoff from the road. The court held that there was no defect in the road that caused the flooding. Rather, it was construction by private individuals on the other side of the road. Thus, where the damage was the result of natural runoff caused by private individuals, neither the county nor the city would bear responsibility for damage done thereby. The harmed landowner was deemed to have an action against the individual across the street for "producing an unnatural amount of water." n923

§ 50.20(b) Diffused Water Defined.

Diffused water is generally defined as water that occurs on the surface of the land in an unconfined state, n924 such as "water from rain, melting snow, springs or seepage, or detached from subsiding floods, that lies or flows on the surface of the earth but does not form a part of a watercourse or lake." n925 A notable characteristic of diffused waters is their inability to maintain an identity or existence as a confined waterbody. n926 Diffused surface water, therefore, also includes puddles or "ponds" which have no outlet, but which are formed as the result of rainfall. n927 On the other hand, it has been held that flood and overflow waters from streams and lakes are not diffused waters but are considered

a part of those watercourses so long as the water remains connected to such waterbodies. n928

In Hoover v. Pierce County, n929 the court held that where the municipality had built a road and, as a result thereof, water was diverted which destroyed an individual's property, a taking of such property occurred. In this case, diffused water was defined to include water produced by rain, melting snow and springs.

In Johnson v. Board of County Commr's, n930 the court held that after 62 years, the configuration of a stream, as altered by the construction of a bridge, would be considered a natural watercourse. As a result, a later modification was deemed to require approval from the appropriate authorities. Further, the new bridge created a duty to prevent unnecessary harm downstream. The claims of those injured were not deemed to have accrued for purposes of the statute of limitations until the injured knew that the bridge was the source of the erosion that caused the harm. n931

LEXIS: diffused w/2 surface w/2 water!

§ 50.20(c) Diffused Water Contrasted with Confined Surface Water.

For most purposes relating to water rights, diffused surface water stands in direct contrast to confined surface water. As a general rule, diffused surface water is not considered to be sufficiently reliable as a source of water to be usable for consumptive use purposes, and therefore is ordinarily not the object of consumptive use rights. Further, diffused water is considered to be a problem rather than an asset to landowners in many jurisdictions and is therefore typically addressed as a matter of potential liability. Finally, to the extent that diffused surface water actually has some utility to the landowner, rights therein tend to be structured as within drainage easements rather than as a part of more conventional consumptive use rights. n932

§ 50.20(d) Drainage Rights.

In many parts of the nation, it may be difficult to imagine why someone might want diffused surface water to come to or be upon their land. In areas of water scarcity, however, many landowners, particularly users of agricultural land, may depend upon the presence of diffused surface water to keep livestock ponds full or to naturally irrigate the land. As noted above consumptive use water rights are typically not granted nor even recognized in water of this type. n933 Therefore, it is common in jurisdictions of this type to find statutes which specifically grant the landowners the right to impound and use such waters. n934 Further, many jurisdictions appear to have adopted some form of the civil law rule n935 by which a species of reciprocal drainage easements is imposed upon the several landowners to respect the natural drainage patterns in order to assure that the natural diffused surface water flows will not be disrupted.

COMPUTER-ASSISTED RESEARCH

LEXIS: drain! w/15 right! or easement!

§ 50.20(e) Drainage into Natural Waterbodies.

As a general rule, the law allows landowners to discharge water into natural waterbodies as a means of draining the land. This right is recognized in the common law n936 as well as in the statutes of many jurisdictions. n937 Such discharge may occur without liability where 1) the drainage results from the reasonable use of the land, 2) the waters are not diverted into watercourses which would not have received the water naturally, and 3) the natural capacity of the watercourse is not exceeded. n938 It has been held that the upper landowner may use artificial drainage systems to facilitate the natural drainage flow but may not, as a result, increase the volume of water discharge. n939 Public landowners appear to be subject to the same rules. In a 1984 case, it was held that where a city caused the discharge of

water to exceed the capacity of the natural watercourse, liability could properly be imposed on the upper city landowner. Further, it was held that the act of inundating the lower landowner itself may result in the inverse condemnation of the property of the lower landowner. n940

COMPUTER-ASSISTED RESEARCH

LEXIS: drain! w/15 natural w/2 waterbod! or watercourse! inverse condemnation w/30 water!

§ 50.20(f) Common Law Approaches to the Problem of Too Much Water.

Where the problem is too much water in an existing natural drainway, n941 the law generally focuses upon the impact of the water upon, or its relation to, land use activities upon the land n942 and structures rights accordingly. Part of the rationale for this approach is that the drainway is a natural feature of the landscape which can be observed and private land use decisions can, and should be made accordingly.

Jurisdictions tend to follow one of two different doctrines to deal with this problem. n943

§ 50.20(g) Common Law Approaches: Common Enemy Rule.

Under one rule, called the "common enemy" rule, the diffused surface water is considered to be the common enemy, and each landowner is deemed to be entitled to protect himself, regardless of the consequences to others. n944 This rule apparently was adopted on the mistaken assumption that it represented the common law of England. n945

Under this rule, any landowner affected by too much water could build a dike to keep the water from coming onto the land, or could dig a ditch to convey the water off the property in any direction that seemed convenient. Further, the rule allows the landowner to dispose of any excess water that might arise because of activities that occur on that landowner's land as well. For example, an individual might wish to construct a new building and pave an area as a parking lot. To do so, land may have to be leveled which might cause water to run off which might otherwise have been absorbed by the land, or which might have naturally drained in a particular direction to not flow onto the land of a different neighbor. Under this rule, the landowner traditionally could cast the water off the property without regard to where it was cast. This rule is popular in developed areas because it does not discourage land development or the improvement of the land.

As one might imagine, a rule of this type might permit unlimited development of the property but is also likely to cause much harm to neighboring landowners. Many common enemy jurisdictions have modified the doctrine to permit only those changes in the drainage pattern that were incident to the ordinary use, improvement or protection of one's land and which were done without negligence or malice. n946 Similarly, upper landowners may be held liable for harm where the total volume of water has been unreasonably increased or where its velocity has excessively accelerated. n947 While this still permits most development, it does give the non-developing or lower landowner some protection from the increased drainage occasioned by development since in determining whether the activity that alters the drainage is reasonable, it has been deemed appropriate to consider the nature and extent of harm caused to others.

In some jurisdictions, there seems to be a tendency to handle these matters as questions of tort, rather than of water rights. Hence, it is common to find the allegations of harm couched in terms of criminal mischief, nuisance, trespass and negligence. n948

COMPUTER-ASSISTED RESEARCH

LEXIS: common w/1 enemy w/5 rule w/30 water!

§ 50.20(h) Common Law Approaches: Civil Law Rule.

The "civil law rule" operates on the principle that water should flow where nature intends it to flow. n949 Under this rule, the natural drainage pattern was protected and water could not be cast from one's property to another unless it was done in conformity with the natural drainage pattern. The lower owner was obligated to receive water from the upper owner and the upper owner, in turn, was obligated to neither increase the volume nor alter the flow of the water. n950 While this rule was less likely to cause harm to the lower owner, it greatly limited what one could do with the land.

Most civil law jurisdictions have modified the rule to permit the upper owner to make modifications in the drainage pattern and even to accelerate the flow of water so long as the changes are not substantial or do not unreasonably or negligently cause harm to the lower owner. n951 This modification of the rule allows both upper and lower landowners to make reasonable drainage and improvement of their respective lands. n952 Further, since the lower owner is only obligated not to obstruct the natural flow from the upper owner, some alteration of the drainage pattern may be allowed so long as it is not unreasonable or is not done negligently. n953

Although the rule has been modified, the lower landowner is still considered to be burdened with a drainage easement in favor of the upper landowner and must receive the water. n954 The upper owner likewise is still obligated not to harm the lower owner. Despite the modification of the rule in favor of reasonable development activity, at least one case required a landowner to re-contour the land and restore the pre-development drainage pattern so as not to flood a neighbor. n955

COMPUTER-ASSISTED RESEARCH

LEXIS: civil w/1 law w/5 rule w/30 water!

§ 50.20(i) Common-Law Approaches: Hybrid Jurisdictions.

In at least one state, the legislature has adopted the civil law rule for "lands used for agricultural purposes and for highways wholly outside the boundaries of incorporated cities." n956 Otherwise, the rule in the state appears to be the common enemy rule (as modified by the concept of reasonableness). n957

In some jurisdictions, there seems to be a tendency to handle these matters as questions of tort, rather than of water rights. Hence, it is common to find the allegations of harm couched in terms of criminal mischief, nuisance, trespass and negligence. n958

§ 50.20(j) Modifying the Common Law: Reasonable Use.

Several jurisdictions n959 have adopted the general tort principle of reasonableness to resolve liability problems resulting from land use activities which affect diffused water. According to this view, the courts tend to judge the reasonableness of the landowners' activities regarding the surface waters on the basis of all relevant circumstances. n960

In some jurisdictions, the matter has been dealt with legislatively. In Texas, it has been held that provisions of the Water Code which prohibited the diversion of surface water in a manner that damaged the property of another was invoked in a dispute in the case of Fairfield Estates L.P. v. Griffin. n961

COMPUTER-ASSISTED RESEARCH

LEXIS: reasonable w/1 use! w/30 diffused w/2 water!

§ 50.20(k) Civil Law, Common Enemy and Tort Rules Compared.

Since both the common enemy and the civil law rules have been modified to incorporate the concept of reasonableness into their rules to some extent to eliminate, or at least moderate, the somewhat harsh impacts of the traditional rules, n962 the outcome of many cases in both kinds of jurisdictions will appear to be the same. Further, since an increasing number of jurisdictions resolve the matter on the basis of the tort concept of reasonableness, one might wonder, then, what difference, if any still remains.

The significant primary difference between those jurisdictions which still adhere to the civil law rule or the common enemy rule, and those which resolve these issues by invoking the tort rule, would seem to be that the former will apply the principles of property law, while the latter will apply principles of tort law, to resolve essentially the same type of factual problem. This will affect both the extent of duty recognized and the basis upon which the duty is predicated. In the property oriented jurisdictions, the concept of easements n963 and the relationship between the respective parcels loom large, while tort law tends to be focused on aspects of the parties' conduct and the relationship between the several actors.

As between modified civil law and common enemy jurisdictions, the most significant difference would appear to involve burdens of proof. In the common enemy jurisdictions, the conduct of the upper owner would seem to be presumed to be acceptable and the lower landowner would have the burden of demonstrating that it was unacceptable. In the civil law jurisdiction, the upper landowner would seem to have the burden of justifying the alteration in the drainage pattern.

In recent years, there seems to be an increasing tendency to resolve diffused water problems as if they were tort rather than water right or property matters. n964 In City of College Park v. Pichonse, the court found that the easement held by the city carried with it the duty to maintain the premises of the easement so that water not overflow and damage adjoining properties. In Cunningham v. West Va.-American Water Co., the court found that the doctrine of res ipsa loquitur did not apply in the case of a collapsed water main that caused the flooding at issue. n965

(n12)Footnote 933. An exception may possibly be found in the so-called "meadow right" in some Western jurisdictions which recognizes a consumptive use right in the spring flood overflow of streams. *See, e.g., Broad Run Inv. Co. v. Deuel & Snyder Imp. Co., 108 P. 755 (Colo. 1910); In re Silvies River, 237 P. 322 (Or. 1925).*

In *Griffin v. Lamberjack, 644 N.E.2d 1087 (Ohio App. 1994),* the court used the presence of a drainage easement rather than a threat to riparian rights as the basis for resolving a nuisance and trespass action involving drainage problems. In *Freyou v. Iberia Parish Sch. Bd., 657 So. 2d 161 (La. App. 1995)* the court seems to prefer trespass doctrines to water right doctrines to deal with sewage treatment plant overflows.

In *Bennett v. Tarrant Co. Water Control & Improve. Dist. No. 1, 894 S.W. 2d 441 (Texas App. 1995),* the court held that a flowage easement, contained in a deed, allowed the land to flood occasionally and even though flooding in 1989 and 1990 may have rendered the property useless for its intended purpose during those years, no taking of property occurred.

In *Johnson v. Board of County Comm'rs, 897 P.2d 169 (Kan. App. 1995),* the court held that after 62 years, the configuration of a stream, as altered by the construction of a bridge, would be considered a natural watercourse.

In *Hendrickson v. Wagners, 598 N.W. 2d 507 (S.D. 1999),* it was held that down-drainage landowners were entitled to a permanent injunction against the up-drainage landowners for harm caused by intentionally draining water onto their land which resulted in crop losses. In this case, the injunction required the up-drainage landowners to fill in the drainage ditches. Evidence in this case supported the conclusion that the ditches were intentionally dug.

See Hedger Brothers Cement and Materials, Inc. v. Stump. 10 S.W. 3d 926 (Ark. App. 2000); Screws v. Watson, 755 So. 2d. 1289 (Miss. 2000); Luhnow v. Horn, 760 N.E.2d 621 (Ind. App. 2001); Juergensmeier Farms, Inc, v. Kearney County, 2001 Neb. App. LEXIS 183 (Neb. App. 2001); City of Dothan v. Eighty-Four West, Inc., Ala. Civ. App. LEXIS 600 (Ala. App. 2001); *Gorman v. Connell, 2001 Del. Ch. LEXIS 46 (Del. Chancery 2001); Kovanda v. Vavra, 633 N.W. 2d 576 (Neb. 2001).*

(n13)Footnote 934. *See, e.g.,* Kan. Stat. Ann. §§ 42-313; 82a-718(a).

Janet Fairchild, *Modern Status of Rules Governing Interference with Drainage of Surface Waters, 93 A.L.R. 3rd 1193* (1998 Supp.); Martin J. McMahon, *Liability for Diversion of Surface Water by Raising Surface Level of Land, 88 A.L. R. 4th 891* (1998 Supp.).

(n14)Footnote 935. *See* § 50.20(h), *infra*.

In some jurisdictions, the matter may be resolved by reference to non-water right doctrines. Where damage claims for flooding are grounded in either nuisance or trespass, damages can include not only the diminution of the market value of the property or the restoration and loss of use of the property, but also discomfort and annoyance to the property owner. Annoyance generally refers to distress arising out of physical discomfort, irritation or inconvenience caused by odors, pests, noise and the like. In the absence of evidence of physical manifestations of the distress, creation of unreasonable risk of bodily harm or willful and wanton conduct, the court in *Webster v. Boone, 992 P.2d 1183 (Colo. App. 1999)* held that damages were not available for emotional distress where the flooding was the result of removing a railroad grade. In this case, the court also disallowed an award for attorney fees and costs.

Similarly, where the drainage problem is the result of a man-made structure, such as a reservoir, liability will be determined on the basis of negligence rather than strict liability. *See Jensen v. Intermountain Power Agency, 977 P.2d 474 (Ut. 1999).*

In *Hendrickson v. Wagners, 598 N.W. 2d 507 (S.D. 1999),* the civil law rule was invoked to hold that down-drainage landowners were entitled to a permanent injunction against the up-drainage landowners for harm caused by intentionally draining water onto their land which resulted in crop losses. In this case, the injunction required the up-drainage landowners to fill in the drainage ditches. Evidence in this case supported the conclusion that the ditches were intentionally dug.

Southern States Utilities, Inc. 792 So. 2d 504 (Fla App. 2001); Tarrant Regional District v. Gragg, 43 S.W. 3d 609 (Tx. App. 2001);* City of Whitesboro v. Williams, No. 05-99-01840-*CV, 2001 Tex. App. LEXIS 568* (Jan. 29, 2001).

(n18)Footnote 939. *See, e.g., Hargreaves v. Akrbina, 635 P.2d 221 (Colo. App. 1981). See also Martinson v. Hughey, 244 Cal. Rptr. 795 (1988).*

(n19)Footnote 940. *See Patterson v. City of Belleview, 681 P.2d 266 (Wash. App. 1984).*

(n20)Footnote 941. Occasionally, the problem will be one of too much water in a natural watercourse. Here, the critical issue appears to be how the excessive water got into the watercourse. The law typically views this problem as one of land use or tort law rather than of water rights law and commonly finds that the upper landowner will have a common law duty of care to act in any reasonable manner. Generally, the upper landowner may use and enjoy the property so long as no actionable harm is caused to others and no relevant statutes are violated. It has been held that a landowner, including cities, cannot discharge water into a natural drainway beyond the natural capacity of the drainway to receive the water. *See Patterson v. City of Belleview, 681 P.2d 266 (Wash. App. 1984).*

Fairchild, Janet, *Modern Status of Rules Governing Interference with Drainage of Surface Waters, 93 A.L.R. 3rd 1193* (1998 Supp.); McMahon, Martin J., *Liability for Diversion of Surface Water by Raising Surface Level of Land, 88 A.L. R. 4th 891* (1998 Supp.); In *Locklin v. LaFayette, 21 Cal. App. 4th 1190 (1992), aff'd, 867 P.2d 724 (Cal. 1994),* the court held that an upstream landowner could discharge surface waters into a natural watercourse that was inadequate to accommodate the increased flow. *But see Hickman v. Hunkins, 489 N.W.2d 316 (Neb. App. 1992),* where the court held that an upper appropriator could not negligently interfere with the rights of lower appropriators when draining surface water. *See also Hedlund v. White, 836 P.2d 250 (Wash. 1992),* holding that the discharge of collected surface water onto the adjacent property owner's land constitutes trespass.

Where the flooding is the result of a man-made structure, such as a reservoir, liability will be determined on the basis of negligence rather than strict liability. *See Jensen v. Intermountain Power Agency, 977 P.2d 474 (Ut. 1999).*

Where damage claims for flooding are grounded in either nuisance or trespass, damages can include not only the diminution of the market value of the property or the restoration and loss of use of the property, but also discomfort and annoyance to the property owner. Annoyance generally refers to distress arising out of physical discomfort, irritation or inconvenience caused by odors, pests, noise and the like. In the absence of evidence of physical manifestations of the distress, creation of unreasonable risk of bodily harm or willful and wanton conduct, the court in *Webster v. Boone, 992 P.2d 1183 (Colo. App. 1999)* held that damages were not available for emotional distress where the flooding was the result of removing a railroad grade. In this case, the court also disallowed an award for attorney fees and costs.

In *M.Condello v. Town of Irondequot, 693 N.Y.S. 2d. 775 (N.Y. App. 1999),* the court discusses the different statutes of limitations that might apply where the damage is the result of negligence, trespass and nuisance and in suits for equitable relief. In this case, a school district and city were sued for harm that allegedly resulted from grading the property and removing dead trees. The court found no liability as there was no evidence that the water was artificially drained onto the adjacent property and the improvements in the case were found to be made in good faith.

In *Hendrickson v. Wagners, 598 N.W. 2d 507 (S.D. 1999),* it was held that down-drainage landowners were entitled to a permanent injunction against the up-drainage landowners for harm caused by intentionally draining water onto their land which resulted in crop losses. In this case, the injunction required the up-drainage landowners to fill in the drainage

ditches. Evidence in this case supported the conclusion that the ditches were intentionally dug.

See also Graber v. Logan County Water Resource Board, 598 N.W.2d 846 (N.D. 1999), where board closed a drain on one landowner's land because of harm caused to a neighbor.

In *Sherburn v. Patterson Farms, Inc., 593 N.W. 2d 414 (S.D. 1999)* the court required the removal of a dike that obstructed the flow of water across an adjoining property.

It should be noted that many jurisdictions have statues, not a part of the water right allocation statutes, *see, e.g.,* Kan. Stat. Ann. §§ 24-206-24-307, that make it unlawful to wilfully obstruct ditches, drains and watercourse and which may require formal state permission to change the contour of any natural stream. These statutes must be observed in dealing with such drainage problems. Nevertheless, it will generally be the normal responsibility of landowners to keep the drainways clear of any obstructions, such as silt, that affect than landowner's use of the land. The landowner may have a further duty to remove obstructions from waterways on his land that cause harm to others.

On occasion, the obstruction to a natural watercourse may actually originate on another tract of land (such as where run-off carries debris from one farm and deposits it on another farm in a way that blocks the stream and perhaps causes flooding). This also appears to be considered the recipient landowner's problem unless it can be shown that the debris is the result of a careless practice by the upstream landowner (in which case, the matter would be dealt with under general nuisance law) or was intentionally done (which might be the basis for liability in tort). In these cases, the lower landowner may be able to compel the upper landowner (or whoever is actually causing the problem) to stop the practice or to compensate the lower landowner for the damage done.

Where the obstruction results from a natural event, such as the deposit of silt, it may not be possible for the lower landowner to do anything except clean the stream out at his or her own expense. If it is necessary to create a new channel for the water, it may be necessary to get permission from any affected landowner who may have to bear the burden of the water, since it no longer follows the natural drainage pattern. *See Hargreaves v. Akrbina, 635 P.2d 221 (Colo. App. 1981).* Such permission will normally granted in the form of a drainage easement.

In situations where the problem is chronic or recurring siltation or flooding and does not involve actionable fault by any one landowner, the law in most jurisdictions permits the affected landowners to band together and take collective action to address the problem. This will generally be done through the formation of a drainage or irrigation district, which is then vested with the authority to do what is necessary. In the absence of such a drainage district, the problem will generally remain an individual landowner's problem.

(n21)Footnote 942. For example, in a 1988 case, the court upheld the right of the upper owners to utilize artificial drainage systems to facilitate the natural drainage flow so long as the drainage system merely increases the velocity, but not the volume, of water discharge. *Martinson v. Hughey, 244 Cal. Rptr. 795 (1988).*

(n22)Footnote 943. In *Hoover v. Pierce County, 903 P.2d 464 (Wash. App. 1995),* the court held that where the municipality had built a road and as a result thereof, water was diverted which destroyed an individual's property, a taking of such property occurred.

In *Hendrickson v. Wagners, 598 N.W. 2d 507 (S.D. 1999),* the civil law rule was interpreted to hold that down-drainage landowners were entitled to a permanent injunction against the up-drainage landowners for harm caused by intentionally draining water onto their land which resulted in crop losses. In this case, the injunction required the up-drainage landowners to fill in the drainage ditches. Facts in this case supported the conclusion that the ditches were intentionally dug. The civil law rule was held to permit the discharge of surface water over but not onto the land of another. The right to discharge was further held not to include discharge by artificial means.

In *M.Condello v. Town of Irondequot, 693 N.Y.S. 2d. 775 (N.Y. App. 1999),* the court discusses the different statutes of limitations that might apply where the damage is the result of negligence, trespass and nuisance and in suits for equitable relief. In this case, a school district and city were sued for harm that allegedly resulted from grading the property and removing dead trees. The court found no liability as there was no evidence that the water was artificially drained onto the adjacent property and the improvements in the case were found to be made in good faith.

In *Sherburn v. Patterson Farms, Inc., 593 N.W. 2d 414 (S.D. 1999)* the court required the removal of a dike that obstructed the flow of water across an adjoining property.

City of Dothan v. Eighty-Four West, Inc., 2001 Ala. Civ. App. LEXIS 600 (Ala. App. 2001); Kilpatrick v. Tomlin, 2001 Tex. App. LEXIS 1703 (Tx. App. 2001).

CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions § 50.21

AUTHOR: Professor James B. Wadley School of Law Washburn University

§ 50.21 Domestic Use.

§ 50.21(a) In General.

The Roman Law approach to the allocation of rights in water was predicated upon the perception that water was life-sustaining and therefore should not be the object of private ownership. This view that there is a need to make sure that some water is available to all for such purposes is seen in many jurisdictions in specific rules or doctrines that assure that some minimal amount of water will be available to all who need it. n966 Most jurisdictions consider these life-sustaining purposes to be involved in the "domestic use" of the water. Most jurisdictions also consider such a use of the water to be inherently reasonable or beneficial. n967

§ 50.21(b) Securing Water for Domestic Use Purposes.

One way water is provided for domestic use purposes, of course, is through publicly maintained, sponsored or chartered water distribution companies or franchises. n968 Indeed, in most jurisdictions, it would appear that there is an assumption there is a public responsibility to provide water for life-sustaining needs. n969 As a general rule, where water is provided by such a distribution system, the distributor of such water will normally need to qualify for a consumptive-use water right. n970 This is the case even though the distributor is a city. n971 Alternatively, the entity may have to exercise its power of eminent domain to condemn the rights to the water that is required. n972

Where individuals must compete with other individuals for such water, the water right allocation rules in many jurisdictions have been modified to specifically allow ready access to water for domestic use purposes. This is most frequently accomplished by considering the domestic use of water to be a high-priority kind of consumptive use or a use that is not subject to regulation under the water allocation rules of the jurisdiction. n973

COMPUTER-ASSISTED RESEARCH

LEXIS: domestic w/1 use! w/15 water! w/15 compan! or franchise!

§ 50.21(c) Defining Domestic Use.

Domestic use tends to be defined in terms of particular small-scale uses that are deemed vital to the maintenance of life. For example, one jurisdiction limits domestic use to:

> the use of water by any person or by a family unit or household for household purposes, or for the watering of livestock, poultry, farm and domestic animals used in operating a farm, and for the irrigation of lands not exceeding a total of two (2) acres in area for the growing of gardens, orchards and lawns. n974

As noted above, where water is provided through some public distribution system, the distributor of such water will normally need to qualify for a water right under the rules of the jurisdiction in order to have lawful access to the quantity of water needed for distribution. n975 Generally, no particular priority will be given to such rights even though the water will ultimately be used for domestic use. n976 This is because such large-scale uses are not considered to fall within most definitions of domestic use.

COMPUTER-ASSISTED RESEARCH

LEXIS: domestic w/1 use! w/5 water!

§ 50.21(d) Priority of Domestic Uses.

Since some water will be considered available in some fashion to virtually everyone for domestic purposes, it is important to consider the relation between rights of this type and other consumptive-use rights. Although such a use of water is clearly consumptive in nature, it may be given an unstated priority over other consumptive uses. n977

In jurisdictions where the timing of the water use determines priority, the point in time at which the domestic use began may be considered significant in the event of a dispute over water availability, even though there is no requirement that the domestic use be registered at the time it commences. n978

In riparian jurisdictions, there may be a statutory exemption for domestic use n979 or a presumption that the use is not unreasonable *per se*. n980

Where water is provided through some public distribution system, the distributor may be granted by statute a preference to water for public use purposes. n981

COMPUTER-ASSISTED RESEARCH

LEXIS: priorit! w/30 domestic w/1 use! w/15 water!

§ 50.21(e) Amount of Water That May Be Claimed.

The amount of water that can be claimed under a domestic use right varies from jurisdiction to jurisdiction. In some, "domestic use" is defined in terms of the need for the water for particularly identified lifestaining purposes, without regard to the amount of water. n982 In other jurisdictions, the amount may be limited by the defined need or by quantity. n983

COMPUTER-ASSISTED RESEARCH

LEXIS: domestic w/1 use! w/15 water! w/30 amount!

FOOTNOTES:

(n1)Footnote 966. Historically, the need for water for all was addressed within the so-called natural flow doctrine which distinguished life-sustaining uses from artificial uses and gave significant protection and preference to the natural, life-sustaining uses. *See* § 50.08(j), *supra. See also Meng v. Coffey, 93 N.W. 713 (Neb. 1906).* Recently, the need to make water available for life-sustaining purposes has been codified in statutes of many jurisdictions. *See, e.g.*, Fla. Stat. Ann. § 373.219; Minn. Stat. § 109.41(1).

(n2)Footnote 967. *See, e.g., Evans v. Merriweather, 4 Ill. (3 Scam.) 492 (1842). See* J. H. Buescher, *Wisconsin's Water Law*, 31 Wis. B. Bull. 30, 42 (October 1958): "So-called 'domestic uses' are reasonable under all conditions and circumstances."

(n3)Footnote 968. *See, e.g.*, Kan. Stat. Ann. § 12-2701 *et seq. See also* Clifford Davis, *The Right to Use Water in the Eastern United States, in 7* Water and Water Rights § 614.2 (Robert Clark ed. 1976).

D. Yoskowitz, *Markets, Mechanisms, Institutions, and the Future of Water, 31 Envtl. L. Rep. 10237 (2001).*

(n4)Footnote 969. *See, e.g.*, Kan. Stat. Ann. § 82a-705. *But see Thompson v. Salt Lake City Corporation, 724 P.2d 958 (Utah 1986)* holding that the city had no legal duty to provide water service to all members of the public.

(n5)Footnote 970. *See* discussion of municipal water rights at §§ 50.08(o) and 50.09(cc) *supra*. Often, the water represented by these rights will be stored in reservoirs pursuant to contracts with the federal government. *See* § 50.16(e).

This position undoubtedly results from the large quantity of water required and the likely impact such substantial withdrawals will have on other users. It is also likely the result of the fact that municipalities enjoy extensive powers which are not possessed by individual water users, such as the power of eminent domain, by which they can protect their interest without regard to the priority status of their water rights.

(n6)Footnote 971. *Id.*

(n7)Footnote 972. *See Reynolds v. Roswell, 654 P.2d 537 (N.M. 1982).*

(n9)Footnote 974. Kan. Stat. Ann. § 82a-701(c).

(n10)Footnote 975. *See* discussion of municipal water rights at §§ 50.08(o) and 50.09(cc), *supra*. Often, the water represented by these rights will be stored in reservoirs pursuant to contracts with the federal government. *See* § 50.16(e).

See also In the matter of *Water Use Permit Applications, No. 21309, 2000 Hawaii LEXIS 321* (Sept. 27, 2000).

(n11)Footnote 976. *See Pernell v. Henderson, 16 S.E.2d 449 (N.C. 1941).*

(n12)Footnote 977. For example, there may be no formal perfection requirements in a particular jurisdictions that must be satisfied in order to secure water for domestic use purposes.

See, e.g., Kan. Stat. Ann. § 82a-728:

Except for the appropriation of water for the purpose of domestic use ... it shall be unlawful for any person to appropriate or threaten to appropriate water from any source without first applying for and obtaining a permit to appropriate water... .

See also Kan. Stat. Ann. § 82a-705:

No person shall have the power or authority to acquire an appropriation right to the use of water for other than domestic use without first obtaining the approval of the chief engineer... .

(n13)Footnote 978. *See, e.g.*, Kan. Stat. Ann. § 82a-709.

(n14)Footnote 979. Minn. Stat. § 109.41(1).

(n15)Footnote 980. *See* J. H. Beuscher, *Wisconsin's Water Law*, 31 Wis. B. Bull. 30, 42 (October 1958).

(n16)Footnote 981. *See, e.g.*, N.Y. Environmental Conservation Law §§ 15-0501-15-1529. *See also* R.I. Gen. Laws § 46-15-7. For further discussion, *see* Sherry Peel, *Acquisition of Muicipal Water Rights in Texas: A Conceptual and Operational Analysis, 17 Tex. Tech. L. Rev. 811 (1988).*

(n17)Footnote 982. *See* J. H. Buescher, *Wisconsin's Water Law*, 31 Wis. B. Bull. 30, 42 (Oct. 1958):

> Domestic uses include the use of water for household purposes and for the watering of livestock. It is generally assumed, in this state as elsewhere, that a riparian may even exhaust the water in the watercourse if necessary to meet legitimate domestic uses.

(n18)Footnote 983. Kan. Stat. Ann. § 82a-701(c). *See also* Kan. Admin. Reg. § 5-1-1(m): "Household purposes - The use of water by a person for cooking, cleaning, washing, bathing, human consumption, restroom facilities or other uses normally associated with the operation of a household. Household purposes includes the use of one and one-half acrefeet of water or less per calendar year by an industrial user." *See also* Kan. Admin. Regs. § 5-3-3:

Storage of water for domestic use. Any person entitled to use water for beneficial purposes may collect and store the same so long as such collection, storage, use and times of use thereafter are consistent with reasonable storage and conservation practices. A reasonable quantity of water stored for domestic use shall be considered to be that quantity sufficient to satisfy the domestic use for the current year and two succeeding years.

Supp. To CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.06

Supp. to § 50.06 Non-Consumptive Use.

[Go To Main]

§ 50.06(h) Private Non-Consumptive Use Rights. [Go To Main]

Add:

See Ace Equipment Sales, Inc. v. Buccino, 82 Conn. App. 573 (2004) . There, the court held that each riparian owner of land that abuts a nonnavigable waterbody, his intimates and guests, are given the right of reasonable use of the entire water body, subject to the rights of other riparian owners. *In contrast, in Columbia Land Development, L.L.C. v. Clark, 868 So. 2d 1006 (Miss. 2004)* , the court held that where landowners own land on a nonnavigable lake but whose title extends only to the margin thereof, but does not include an ownership interest in the beds thereof, has no right to boat upon or take fish from the lake. In such situations, the public at large, likewise, does not have any right of access to the lake. Normally, ownership of the bed of nonnavigable river beds will lie with the owner of the adjacent land. *See Portage County Bd. of Comm'rs v. Akron, 808 N.E.2d 444 (Ohio App 2004)* .

The rule regarding rights of upland owners of land abutting non-navigable waters does not extent to artificial water bodies. *See Ace Equipment Sales, Inc. v. Buccino, 869 A. 2d 626 (Conn. 2005)* where abutting landowners were not allowed to use an artificial nonnavigable pond on the land of another.

§ 50.06(i) Navigability as the Traditional Basis for Public Non-Consumptive Use Rights. [Go To Main]

Add:

See Portage County Bd. of Comm'rs v. Akron, 808 N.E.2d 444 (Ohio App 2004) ; *White's Mill Colony, Inc. v. Williams,*

609 S.E.2d 811 (S.C. 2005) ; *Walker Lands, Inc. v. East Carroll Parish Police Jury, 871 So. 2d 1258 (La. App. 2004)* . *See also* Barcott, B. There's An Old Saying in Colorado: You Can Steal My Wife, But Not My Water, 2004 Aug. Legal All. 48 (2004).

See Bauman v. Woodlake Partners, LLC., 681 S.E.2d 819 (N.C. Ct. App. 2009) .

§ 50.06(k) Determining Navigable Status: Capacity for Commercial Use [Go To Main]

add:

See Bauman v. Woodlake Partners, LLC., 681 S.E.2d 819 (N.C. Ct. App. 2009) , holding that in order, under the public trust doctrine, to establish a lake created by damming a creek, it must be established that the creek was navigable prior to the damming.

§ 50.06(n) Public Access to Navigable Waters. [Go To Main]

Add:

See Ace Equipment Sales, Inc. v. Buccino, 82 Conn. App. 573 (2004) .

§ 50.06(o) Traditional Public Rights in Non-navigable Waters. [Go To Main]

Add:

The traditional rule was followed in *Ace Equipment Sales, Inc. v. Buccino, 869 A. 2d 626 (Conn. 2005)* where abutting landowners were not allowed to use a nonnavigable pond on the land of another. In this case, the deed specifically limited the use of the pond by the abutting landowners to industrial purposes.

§ 50.06(s) Non-Traditional Approaches: Public Trust. [Go To Main]

Add:

See Parks v. Cooper 676 N.W.2d 823 (S.D. 2004) holding that all water in South Dakota belongs to the people in accord with the public trust doctrine. *See also Columbia Land Development L.L.C. v. Secretary of State, 868 So. 2d 1006 (Miss. 2004)* .

Add:

See also Michigan Citizens for Water Conservation v. Nestle Waters North America, Inc., 709 N.W. 2d 174 (2006) , confining the public trust doctrine to navigable waters.

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.08

Supp. to § 50.08 Consumptive Use of Surface Waters: Riparian Systems.

[Go To Main]

§ 50.08(h) Vesting of Riparian Rights. [Go To Main]

Add:

Riparian rights are held to be an incident of the ownership of land that abuts a lake. *Ace Equipment Sales, Inc. v. Buccino, 82 Conn. App. 573 (2004)* . In *Coastal Plains Utilities, Inc. v. New Hanover County, 601 S.E.2d 915 (N.C. App. 2004)* , the court held that a party asserting a riparian right must show that it is a riparian proprietor or that in some what that it has acquired riparian rights in a stream. As such, the proprietor is entitled to the natural flow of the stream, undiminished in quantity and unimpaired in quality except as may be occasionally the result of reasonable use of the water by other proprietors.

§ 50.08(j) Quantity: Natural Flow Doctrine. [Go To Main]

Add:

North Carolina still appears to follow a modified version of the doctrine. *See Coastal Plains Utilities, Inc. v. New Hanover County, 601 S.E.2d 915 (N.C. App. 2004)* , where the court held that a party asserting a riparian right is entitled to the natural flow of the stream, undiminished in quantity and unimpaired in quality except as may be occasionally the result of reasonable use of the water by other proprietors.

§ 50.08(m) Transferability of Riparian Rights. [Go To Main]

Add:

But see Panetta v. Equity One, Inc. 378 N.J.Super. 298, 875 A. 2d 991 (N.J. Super. 2005) , where the court considered the matter of the water right being conveyed with the land as one of intent and that the right would pass automatically unless it was expressly excluded. The case was based on *N.J. S.A.46:3-16* that mandated that deeds be construed to include all appurtenant property rights, such as a riparian grant, unless expressly excluded. In this case, the riparian grant had an existence independent of the ownership of the property, a fact that was unknown to all of the parties except the son of the grantor, who did not disclose this fact when he prepared the deed. The property involved was upland property.

§ 50.08(o) Riparian Rights of Municipalities. [Go To Main]

Add:

In Ohio, municipalities claiming riparian water rights do not have the ability to sell or supply water to individuals who reside outside the city's jurisdiction although the rights do constitute a property interest that can be appropriated and conveyed separately from the underlying land. *See Portage County Board of Commissioners v. City of Akron, 808 N.E. 2d 444 (Ohio App. 2004) . See also Pittsburgh County Rural Water District No. 7 v. City of McAlester, 358 F.3d 694 (10th Cir 2004)* ; *Cobb County v. City of Smyrna, 606 S.E.2d 667 (Ga. App. 2004)* .

§ 50.08(p) Administrative Water Right Allocations in Riparian Jurisdictions. [Go To Main]

Add:

For further discussion, *see* Choe O., Appurtenancy Reconceptualized: Managing Water in an Era of Scarcity, *113 Yale L. J. 1909 (2004).*

Supp. To CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.09

Supp. to § 50.09 Consumptive Use of Surface Water: Appropriative Systems.

[Go To Main]

§ 50.09(e) Vesting: Availability of Unappropriated Water. [Go To Main]

Add:

In *Bitterroot River Protective Association, Inc. v. Siebel, 108 P. 3d 518 (Mont. 2005)* , the court held that amendments to an original application constituted new applications and did not relate back to the original application. As a result, the new applications were prohibited by the fact that the subbasin had been declared closed to new appropriation.

Add:

The burden of demonstrating that waters that have been released into a natural carrier from another source constitute water that is available for appropriation is generally on the party asserting that he or she is entitled to use the water. *See Hidden Hollow Ranch v. Fields, 321 Mont. 505 (2004)* . The test regarding the burden of proof is typically by a preponderance of the evidence. *See City of Aurora v. Simpson (In re Water Rights of Park County Sportmen's Ranch), 2005 Colo. LEXIS 122* (No. 96CW 14, Feb. 14, 2005).

Salvaged water was addressed in the case of *City of Aurora v. Colo. State Engineer, 2005 Colo. LEXIS 122* (No. 96CW 14, Feb. 14, 2005), holding that the rule that applicants may not claim credit for salvaged water applies to the destruction of all native vegetation whether or not it is classified as phreatophytic.

Developed water typically refers to water not previously part of the river system and therefore not subject to administration by the state engineer. *City of Aurora v. Simpson (In re Water Rights of Park County Sportmen's Ranch), 2005 Colo. LEXIS 122* (No. 96CW 14, Feb. 14, 2005).

For further discussion, *see* Barcott, B. There's An Old Saying in Colorado: You Can Steal My Wife, But Not My Water. 2004 Aug. Legal All. 48 (2004).

§ 50.09(j) Vesting: Problems of Instream Use. [Go To Main]

Add:

In *Phelps Dodge Corporation v. Arizona Department of Water Resources, 118 P. 3d 1110 (Az. App. 2006)* , the court held the power of the Department of Water Resources to issue permits to appropriate water for instream flows even though the appropriations did not involve a physical diversion of water. In this case, the United States Forest Service applied for a permit to appropriate water in Cherry Creek for fish, wildlife and recreational purposes.

§ 50.09(l) Vesting: Application to Beneficial Use. [Go To Main]

Add:

Joyce Livestock Co. v. United States (In re SRBA Case No. 39576), 144 Idaho 1 (Idaho 2007) (a rancher's predecessors obtained water rights on federal land by applying the water to a beneficial use; the water rights are appurtenant to their patented land).

Add:

See also State ex rel. Martinez v. City of Las Vegas, 89 P.3d 47 (N.M. 2004) , holding that the City of Las Vegas could not claim an on-going, open-ended pueblo water right. The application to beneficial use must be completed within a reasonable time. *See also In the Matter of the General Determination of the Rights to use All of the Water, Both Surface and Underground within the Drainage Area of Utah Lake and Jordan River in Utah, Salt Lake, Davis, Summit, Wasatch, Sanpete, and Juab Counties in Utah v. Pinecrest Pipeline Operating Company and Pinecrest Water Users Association, 98 P.3d 1 (Utah. 2004)* . There, the court somewhat reluctantly upheld the trial court's determination that beneficial use was found in "satisfying aesthetic desires, reducing fire hazard, and creating property line buffers." The intended use--growing trees--failed because no trees grew. The court was clear to note that its decision should not be interpreted to find that a beneficial use could be established simply by irrigating natural vegetation.

The failure of a city to make a beneficial use of the water within the statutory 5-year period resulted in a denial to the municipal water board of a permit as a matter of law. *See Waterwatch of Oregon, Inc. v. Water Resources Commission, 88 P.3d 327 (Or. App. 2004)* .

§ 50.09(n) Vesting: Defining "Beneficial Use."--Nature of the Use [Go To Main]

add:

See Vance v. Wolfe, 205 P.3d 1165 (Colo. 2009) , holding that applying Colorado River water in Colorado for the use of coalbed methane production constitutes beneficial use.

add:

In Colorado, beneficial use constitutes water use required to accomplish the purposes of the water appropriation under reasonably efficient practices. *See Vance v. Wolfe, 205 P.3d 1165 (Colo. 2009)* .

§ 50.09(r) Priorities: Establishing Priority. [Go To Main]

Add:

In *Bitterroot River Protective Association, Inc. v. Siebel, 108 P. 3d 518 (Mont. 2005)* , the court held that amendments to an original application constituted new applications and did not relate back to the original application. In this case, that meant that the new applications were prohibited by the fact that the subbasin had been declared closed to new appropriation. Priority of a water right relates back to the time it was initiated once proper application to beneficial use is made. *State ex rel. Martinez v. City of Las Vegas, 89 P.3d 47 (N.M. 2004) . See also Hidden Hollow Ranch v. Fields, 92 P.3d 1185 (Mont. 2004)* .

See Waterfall Cmty. Water Users Ass'n v. N.M. State Eng'r (In re Application by Waterfall Cmty. Water Users Ass'n), 216 P.3d 270 (N.M. Ct. App. 2009) , holding water can no longer be appropriated after a water source has been completely appropriated.

§ 50.09(w) Quantity: Establishing and Amount. [Go To Main]

Add at end of second paragraph.

When calculating transportation loss in light of later transfers of the place of diversion or manner of use, any "freed up" water resulting from lower transportation losses may not be considered part of the water right. *See United States v. Truckee-Carson Irrigation Dist. 429 F. 3d 902 (9th Cir. 2005)* .

§ 50.09(y) Transferability of Water Rights. [Go To Main]

Add:

See also Barnes v. Hussa, *39 Cal. Rptr 3d 659 (2006)* .

§ 50.09(z) Transfers of Water Rights. [Go To Main]

Add:

In *Trail's End Ranch, L.L.C. v. Colorado Division of Water Resources, 91 P.3d 1058 (Colo. 2004)* , the court held that changes in the points at which water is removed from the source constitute diversions which may require adjudicating changes to the user's water rights, which, in turn, could possibly alter the user's claim to priority. The court also held that the right to transfer was one of the incidents of a water rights so long as the change neither enlarges the right nor injuriously affects others. It is therefore applied for and adjudicated in the same manner as the initial determination of the water right. *See also Herrmann v. Lindsey,* 136 S.E.3d. 286 (Tex. App. 2004).

In *Herrington v. State ex rel. Office of the State Engineer, 92 P.3d 31 (N.M. App. 2004)* , the court upheld a determination that appropriators were not entitled to change their point of diversion from surface sources to ground water.

In *Hanson v. Turney, 94 P.3d 1 (N.M. App. 2004)* , the court upheld the State Engineer's denial of permission to change the use of the water from irrigation to a subdivision.

In *City of Golden v. Simpson, 83 P.3d 87* Colo. 2004), the court treated a stipulated change decree as if it were a contract.

See also City of West Richland v. Department of Ecology, 103 P.3d 818 (Wash. App. 2004) , regarding the transferability of unperfected water rights.

Add:

In Barnes v. Hussa, *39 Cal. Rptr 3d 659 (2006)* , the court upheld the movement of water from a creek across the land of others to noncontiguous parcels on the ground that the landowners did not meet the burden of showing harm to others.

§ 50.09(dd) Municipal Rights. [Go To Main]

Add:

In the case of *State ex rel. Martinez v. City of Las Vegas, 89 P.3d 47 (N.M. 2004)* , the court denied that a city could claim an open-ended pueblo water right, finding such to be inconsistent with the principles of the appropriation doctrine.

§ 50.09(ff) Termination: Abandonment. [Go To Main]

Add:

See also *Snider v. Kirchhefer, 115 P. 3d 1 (Wyo. 2005)* .

Add:

In *Snider v. Kirchhefer, 115 P. 3d 1 (Wyo. 2005)* , the court refused to grant standing to someone who challenged another's water right as abandoned on the ground that the plaintiffs had failed to show how their water right would be benefitted by abandonment or harmed by the resuscitation of the other water right. The court used a substantial evidence test to review whether the state board's decision was correct.

§ 50.09(gg) Termination: Forfeiture. [Go To Main]

Add:

Courts often use the terms abandonment and forfeiture interchangeably. *See Snider v. Kirchhefer, 115 P. 3d 1 (Wyo. 2005)* , where the court reversed a determination by a state board that a water right had been abandoned on the ground that the plaintiffs had failed to show how their water right would be benefitted by abandonment or harmed by the resuscitation of the other water right. The court used a substantial evidence test to review whether the state board's decision was correct. In *Department of Conservation and Natural Resources, Division of Water Resources v. Foley, 109 P. 3d 760 (Nev. 2005)* , the court held that some changes, including cancellation of water rights, may not always entitle the water right holder to notice of cancellation. This case involved a forfeiture based on lack of use and the issue of notice involved claimants of water rights whose interests did not appear in the files of the State Engineer.

See also Frick Farm Prop., L.P. v. State, 216 P.3d 170 (Kan. 2009) where the court upheld water rights were forfeited after statutory non-use of five years, when the party was not timely in providing evidence of reasonable non-use.

Add:

In *Hannigan v. Hinton, 97 P.3d 1256 (Ore. App.2004)* , the court held that water rights that were appurtenant to mining claims were subject to the state's forfeiture statute and that use of the water at a location that was different than that designated on the water rights certificate constituted nonuse for purposes of the application of the forfeiture statute. *See also In the Matter of the General Determination of the Rights to use All of the Water, Both Surface and Underground within the Drainage Area of Utah Lake and Jordan River in Utah, Salt Lake, Davis, Summit, Wasatch, Sanpete, and Juab Counties in Utah v. Pinecrest Pipeline Operating Company and Pinecrest Water Users Association, 98 P.3d 1 (Utah. 2004)* .

N. Kern Water Storage Dist. v. Kern Delta Water Dist., *54 Cal. Rptr. 3d 578 (2007)* (the state properly measured the forfeiture of appropriated water rights).

§ 50.09(ii) Re-Use. [Go To Main]

Add:

In *City of San Marcos v. Texas Commission on Environmental Quality, 128 S.W.3d 264 (Tex. App. 2004)* , the court found that the city's rights to wastewater effluent were abandoned when the city discharged the water into the river. The city therefore could not divert the water again three miles downstream for reuse.

Supp. To CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.11

Supp. to § 50.11 Consumptive Use of Groundwater.

[Go To Main]

§ 50.11(a) In General. [Go To Main]

Add:

Traditionally, the federal government has not played a significant role regarding the allocation of water rights in ground water. Nevertheless, the federal government has a vital role regarding the quality of groundwater as a result of federal legislation. For further discussion, *see* Leshy, J. The Federal Role in Managing The Nation's Groundwater, 11 Hastings W.-Nw. J. Envtl. L. & Pol'y 1 (2004).

§ 50.11(f) Traditional Groundwater Right Allocation Doctrines: American or Reasonable Use Rule. [Go To Main]

Add:

Arizona applies the reasonable use rule to areas or claims not covered by the Arizona Groundwater Code. *See Brady v. Abbott Laboratories, 433 F. 3d 679 (9th Cir. 2005)* : *Hansen v. United States, 65 Fed. Cl. 76 (2005)* , holding that the landowner has a protected property interest in groundwater under the land under South Dakota Law.

Add:

Nebraska still follows the reasonableness rule. *See Spear Ranch, Inc. v Knaub, 691 N.W.2d 116 (Neb. 2005)* , where the court held that although the surface waters were allocated based on appropriation doctrines, ground water was governed by the common law rule of reasonableness.

§ 50.11(g) Traditional Groundwater Right Allocation Doctrines: Correlative Rights. [Go To Main]

Add:

Courts have held that even though the right to claim the water is inherent in the title to the land, the right carries no proprietary interest in the water itself nor does such a claimant have any priority regarding other similarly situated claimants. *See Spear T. Ranch, Inc. v. Knaub. 691 N.W.2d. 116 (Neb. 2005)* .

§ 50.11(m) Interference with Surface Waters. [Go To Main]

Add:

In *Spear T Ranch, Inc. v. Knaub, 691 N.W. 2d 116 (Neb. 2005)* , the court found in favor of a groundwater user against a claim by a surface user that the groundwater use interfered with rights to creek water. The court noted that Nebraska water law ignores the hydrological fact that groundwater and surface water are inextricably related. Thus, even though the two bodies of water may be related, the court rejected the idea that priority in surface rights does not give the claimant a superior claim to that of a later groundwater extractor since the two systems were treated in law as fully independent of one another. Any recourse would have to be based on tort rather than water law.

Add:

But see Spear T Ranch, Inc. v. Knaub, 691 N.W. 2d 116 (Neb. 2005) , where the court found in favor of a groundwater user against a claim by a surface user that the groundwater use interfered with rights to creek water. The court noted that Nebraska water law ignores the hydrological fact that groundwater and surface water are inextricably related.

Add:

In a case from Nebraska, *Spear Ranch, Inc. v Knaub, 691 N.W.2d 116 (Neb. 2005)* , the court held that a groundwater user is not subject to liability for interference with the use of water of another unless the withdrawal of the groundwater has a direct and substantial effect on the surface water and unreasonably causes harm to the person entitled to use the surface water. There, the court held that although the surface waters were allocated based on appropriation doctrines, ground water was governed by the common law rule of reasonableness.

For a discussion of the right of a surface water user to acquire the full amount of the appropriation by tapping into ground water sources, *see Herrington v. State, 92 P.3d 31 (N.M. App. 2004)* ,

But see Brady v. Abbott Laboratories, 433 F. 3d 679 (9th Cir. 2005) , where the court found that the parties had not pled the case under the Arizona Groundwater Code but rather under the reasonable use common law groundwater rules. In *Reed v. Cloninger, 131 P.3d 359 (Wyo. 2006)* the court dealt with the reverse situation--where a surface use caused the groundwater level to rise to the point of causing damage to the basement of a house. See also *Michigan Citizens for Water Conservation v. Nestle Waters North America, Inc., 709 N.W. 2d 174 (2006)* holding that the test for interference caused by groundwater extraction was a reasonable use balancing test and that under this test, extracting water by a spring water bottling company, was considered unreasonable. The plaintiffs had also argued that the extraction was unlawful under the public trust. The court held that since the water was not navigable, the public trust doctrine did not apply. In *McNamara v. City of Rittman, 838 N.E. 2d 640 (Ohio 2005)* , the court answered in the affirmative two certified questions from the 6th Circuit: whether a landowner had a property interest in groundwater underlying its land and whether governmental interference with that right could constitute an unconstitutional taking.

§ 50.11(o) Recurring Groundwater Problems: Pollution. [Go To Main]

Add:

It is difficult to claim harm to water rights as a result of pollution in many jurisdictions. *See New Mexico v. General Electric Co., 335 F. Supp. 2d. 1266 (D. N.M. 2004)* ; *New Mexico v. General Electric Co. 335 F. Supp. 2d 1185 (D. N.M. 2004)* .

§ 50.11(p) Recurring Groundwater Problems: Subsidence. [Go To Main]

Add:

In the case of *Brady v. Abbott Laboratories, 433 F. 3d 679* (9th Cir. 2005) , plaintiffs argued that extraction of groundwater which caused pecan trees planted on the surface to die was actionable as common law tort and nuisance. The court disagreed and used the groundwater reasonable use doctrine to deny recovery.

Supp. To CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.14

Supp. to § 50.14 Making Changes in Water Right Allocation Systems.

[Go To Main]

§ 50.14(d) Limits on State Authority. [Go To Main]

Add:

In *Department of Conservation and Natural Resources, Division of Water Resources v. Foley, 109 P. 3d 760 (Nev. 2005)* , the court held that some changes, including cancellation of water rights, may not always entitle the water right holder to notice of cancellation. This case involved a forfeiture based on lack of use and the issue of notice involved claimants of water rights whose interests did not appear in the files of the State Engineer.

Add:

In *Department of Conservation and Natural Resources, Division of Water Resources v. Foley, 109 P. 3d 760 (Nev. 2005)* , the court held that some changes, including cancellation of water rights, may not always entitle the water right holder to notice of cancellation. This case involved a forfeiture based on lack of use and the issue of notice involved claimants of water rights whose interests did not appear in the files of the State Engineer.

Supp. To CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.15

Supp. to § 50.15 Interstate Allocation of Water.

[Go To Main]

§ 50.15(a) In General. [Go To Main]

Add:

For further discussion, *see* Hennessy, M., Colorado River Water Rights: Property Rights in Transition. *71 U. Chi. L. Rev. 1661 (2004);* Hansell, W., Who Gets the Hooch?: Georgia, Florida, and Alabama Battle for Water from the Appalachicola-Chattahoochee-Flint River Basin., *55 Mercer L. Rev. 1453 (2004).*

§ 50.15(c) Jurisdictional Matters: The State Acts as *Parens Patriae*. [Go To Main]

Add:

See e.g. Three Forks Ranch Corp. v. City of Cheyenne Wyoming, 96 Fed. Appx. 567 (10th Cir, 2004) , where the court held that the Upper Colorado River Basin Compact did not create a private right of action.

Add:

In *Alabama v. United States Army Corps of Engineers, 424 F. 3d 1117* (11th Cir. 2005) , the court held that disputes between states regarding water stored in federal reservoirs did not constitute the kind of problem for which exclusive Supreme Court jurisdiction was required.

§ 50.15(f) Other Resolution Approaches: Interstate Compacts. [Go To Main]

Add:

In *Three Forks Ranch Corp. v. City of Cheyenne Wyoming, 96 Fed. Appx. 567* (10th Cir, 2004) , the court held that the Upper Colorado River Basin Compact did not create a private right of action.

§ 50.15(g) Other Resolution Approaches: Congressional Apportionment. [Go To Main]

Add:

Congress approves the boundaries between states. When the boundary involves a waterbody, Congress has the ultimate power to declare where the boundary is located in the water. The boundary between Virginia and Maryland was set by compact between the two states and approved by Congress as at the low-water mark on the Virginia side of the Potomac River, effectively granting to Maryland ownership of the entire riverbed. In *Virginia v. Maryland, 540 U.S. 56 (2003)* , the Supreme Court held that that did not deprive Virginia of her riparian rights in the river nor did it deprive her of the power to withdraw water from the river.

Add:

For further discussion, *see* Hennessy, M. Colorado River Water Rights: Property Rights in Transition. *71 U. Chi. L. Rev. 1661 (2004).*

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.16

Supp. to § 50.16 Federal/State Relations Regarding the Administration of Water Rights.

[Go To Main]

§ 50.16(c) Specific Federal Authority: General Federal Regulatory Authority. [Go To Main]

Add:

In *Trout Unlimited v. U.S. Department of Agriculture, 320 F. Supp. 2d 1090 (D. Colo. 2004)* , the court found that the federal assertion of authority to impose bypass flows as a condition on the use of National Forest Land did not constitute the assertion of a water right that would conflict with state law.

§ 50.16(e) Specific Federal Authority: Water Power and Reclamation. [Go To Main]

add:

For a discussion on whether irrigation districts have equitable property interests in water from a federal reclamation project to which the United States has legal title, see *Klamath Irrigation Dist. v. United States, 227 P.3d 1145 (Or. 2010)* .

Add:

The conflict between federal power and state law was addressed in *Natural Resources Defense Council v. Patterson, 333 F. Supp. 2d 906 (E.D. Cal. 2004)* in which it was held that the Bureau of Reclamation had not released sufficient

water from a dam to reestablish and maintain historic fisheries. *See also Central Valley Water Agency v. Untied States, 327 F. Supp. 2d 1180 (E.D. Cal. 2004)* .

§ 50.16(f) Specific Federal Authority: Environmental Protection. [Go To Main]

Add:

See Pac. Coast Fed'n of Fishermen's Ass'ns v. U.S. Bureau of Reclamation, 426 F.3d 1082 (9th Cir. 2005) . There, the federal government sought to balance the interests of fisheries and irrigation agriculture as it discharged its responsibilities under the Endangered Species Act to protect coho salmon and its habitat. The court found that the plan adopted by the government was arbitrary and capricious because it didn't contain a reasoned explanation for the decisions.

Add:

The conflict between managing waterways for flood control, commercial activity and for the protection of endangered species is addressed in *In re Operation of the Missouri River System, 2004 U.S. Dist. LEXIS 11410* (No. 03-MD-1555 (PAM), June 21, 2004, D. Minn.), where the court upheld the decisionmaking of the Army Corps of Engineers decisions regarding the management of the Missouri River. *See also Central Valley Water Agency v. Untied States, 327 F. Supp. 2d 1180 (E.D. Cal. 2004)* ; *Central Delta Water Agency v. State Water Resources Control, 20 Cal. Rptr. 3rd 898 (Cal. App. 2004)* .

For further discussion, *see* Hasenstein, E. Frankenstein and Pitbull? Transmogrifying the Endangered Species Act and "Fixing" the San Juan-Chama Project after Rio Grande Silvery Minnow v. Keys. *34 Envtl. L. 1247 (2004).*

§ 50.16(g) Specific Federal Authority: Federal Proprietary Interests and Rights as Owner of the Public Domain. [Go To Main]

Add:

It has long been held that ranchers who are allowed to graze their livestock on the public domain under the terms of grazing permits do not have a protected property interest in the permits themselves. Nevertheless, they do have a property interest in the associated water rights. *See Walker v. Untied States, 69 Fed. Cl. 222 (2005)* ; *Colvin Cattle Co, Inc. v. United States, 67 Fed. Cl. 568 (2005)* ; *Sacramento Grazing Association v. United States, 66 Fed. Cl. 211 (2005)* .

Add:

It has long been settled that the federal government may apply for and claim water rights under the rules of the states

just the same as a private appropriator or water user. In the recent case of *Phelps Dodge Corporation v. Arizona Department of Water Resources, 118 P. 3d 1110 (Az. App. 2006)* , the court upheld the power of the Department of Water Resources to issue permits to appropriate water for instream flows, even though the appropriations did not involve a physical diversion of water. In this case, the United States Forest Service applied for a permit to appropriate water in Cherry Creek for fish, wildlife and recreational purposes.

§ 50.16(h) Specific Federal Authority: Federal Navigational Servitude. [Go To Main]

Add:

In *Cooper v. Louisiana Department of Public Works, 870 So. 2d 315 (La. App. 2004)* , the court held that permanent flooding of land resulting from the construction of dams and locks along the Ouachita and Black Rivers affected drainage servitudes which were not subject to the federal navigational servitude.

Thompson on Real Property, Thomas Editions

Supp. To CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.17

Supp. to § 50.17 General Federal Reserved Water Rights.

[Go To Main]

§ 50.17(b) Federal Reserved Rights Generally. [Go To Main]

Add:

In *Trout Unlimited v. United States Department of Agriculture, 320 F. Supp. 2d 1090 (D. Colo. 2004)* , the court found that the federal assertion of authority to impose bypass flows as a condition on the use of National Forest Land did not constitute the assertion of a water right that would conflict with state law.

Federal reserved water rights are deemed to exist independently of state law. They are not derived from actual use but are tied to stated purposes regarding the reservation of land for a federal purpose and arise at the time the land is withdrawn from the public domain. These rights are not subject to loss for abandonment. *See In re Water Rights of U.S., 101 P.3d 1072 (Colo. 2004)* .

Supp. To CHAPTER 50 WATER RIGHTS

6-50 Thompson on Real Property, Thomas Editions Supp. to § 50.18

Supp. to § 50.18 Indian Reserved Rights.

[Go To Main]

§ 50.18(a) In General. [Go To Main]

Add:

In *The Mattaponi Indian Tribe v. Comm. 43 Va. App. 690 (2004)* , the court held it was without jurisdiction to adjudicate the tribe's assertion of water rights with respect to a reservoir project. The water rights were claimed under a 1677 Treaty. *See also United States v. Orr Water Ditch Co., 309 F. Supp. 2d 1245 (D. Nevada 2004)* ; *United States v. Clifford Matley Family Trust, 354 F.3d 1154 (9th Cir. 2004)* .

For a discussion regarding the impact of treaties as a basis for asserting claims to water by Indian tribes, see *Skokomish Indian Tribe v. United States, 401 F. 3d. 979 (9th Cir. 2005)* .

§ 50.18(c) Quantifying the Water Rights. [Go To Main]

Add:

In *United States v. Truckee-Carson Irrigation Dist. 429 F. 3d. 902 (2005)* the court limited the amount of water that could be used by the tribe under a temporary change in place and manner of use application approved by the state engineer to the maximum amount of water allocated to the prior use. In so doing, the tribe was denied any additional water that might result from a reduced transportation loss. For a further example of using state, rather than federal law regarding Indian water rights, see *United States v. Orr Water Ditch Company, 391 F. 3d 1077 (2004)* .

§ 50.18(j) State Authority over Indian Rights. [Go To Main]

add:

See also United States v. Orr Water Ditch Co., 600 F.3d 1152 (9th Cir. 2010) . In this case the court held the district court did have jurisdiction where taking groundwater would adversely affect the Tribe's decreed water rights, when it was argued that the district court only had jurisdiction to adjudicate issues regarding surface water.

Add:

In *Flathead Joint Board of Control v. United States Department of the Interior, 309 F. Supp. 2d 1217 (D. Mont. 2004)* , the tribe successfully resisted efforts on the part of a state irrigation district to access information about the tribe's use of water. The matter was filed as a request under the Freedom of Information Act (FOIA) and the court held that information about allocation of water rights on the reservation were "commercial or financial" information and not subject to disclosure. Nor was the tribe considered an "agency" for purposes of the intra and inter-agency FOIA exception. Documents prepared by the federal agency and not given to the tribe were considered to be attorney-client or work products protected against discovery.

§ 50.19(b) Pueblo Rights. [Go To Main]

Add:

In *State ex rel. Martinez v. City of Las Vegas, 89 P.3d 47 (N.M. 2004)* , the court addressed the question of whether the Pueblo rights doctrine still existed in the State of New Mexico. In an earlier decision in this case, the appellate court speculated that if the Supreme Court was presented with the opportunity, it would repeal the doctrine. Thus, the appellate court overturned the New Mexico case that had recognized the existence of the doctrine. Here, the Supreme Court refused to overturn *Cartwright v. Public Service Co. of New Mexico, 343 P.2d 654 (1958)* on the ground that there was no historical basis for the pueblo doctrine. Rather, the court overturned *Cartwright* based on its inconsistency with New Mexico law and not protected by the Treaty of Guadalupe Hidalgo (under which the State eventually acquired the power to administer water rights). Inconsistency was found in the fact that pueblo rights are potentially open-ended regarding amount and purpose of use and are not lost for by forfeiture or non-use. Priority dates, under New Mexico law fix the right to the amount used at that time. The court also rejected the rule from *Cartwright* as a property right because of its inconsistency with the goals of prior appropriation and because it has not induced the kind of reliance contemplated by a rule of property. The court held that although the city did not possess a pueblo right, the matter had to be remanded for the district court to quantify the claimed right of the city based on its reliance interest in the *Cartwright* decision (which involved the city of Las Vegas).

§ 50.20(g) Common Law Approaches: Common Enemy Rule. [Go To Main]

Add:

South Carolina follows the common enemy rule. *See Lucas v. Rawl Family Ltd. Partnership, 598 S.E.2d 712 (S.C. 2004)* .

§ 50.20(j) Modifying the Common Law: Reasonable Use. [Go To Main]

Add:

West Virginia, Ohio and Pennsylvania follow the reasonable use rule. *See In re Flood Litigation, 607 S.E.2d 863 (2004)* ; *Portage County Bd. of Comm'rs v. Akron, 808 N.E.2d 444 (Ohio App. 2004)* ; *Shamnoski v. PG Energy, 858 A.2d 589 (2004)* . *See also McCormick v. Walmart Stores, Inc. 600 S.E.2d 576 (W. Va. 2004)* .

§ 50.20(k) Civil Law, Common Enemy and Tort Rules Compared. [Go To Main]

Add:

In *Heidkamper v. Odom, 880 So. 2d 362 (Miss App. 2004)* , the court addressed the conditions upon which injunctive relief is available to prevent future flooding from a farm pond as a result of construction of a new dam. The court held that injunctive relief was proper upon a showing of imminent, irreparable harm to the property. In *Greenwald v. Kersh, 593 S.E.2d 381 (Ga. App. 2004)* , the court addressed the matter as nuisance question and specifically had to determine whether the neighbors had ratified the tortious acts of the independent contractor and whether the construction violated

restrictive covenants applicable to the property.

In *Cooper v. Sharon Springs Cent. School Dist., 777 N.Y.S.2d 564 (N.Y.A.D. 2004)* , liability was predicated upon the fact that an upper owner allowed a quantity of debris to enter a watercourse such that it caused damage to lower owners.

In *Cooper v. Louisiana Department of Public Works, 870 So. 2d 315 (La. App. 2004)* , the court used the one-year tort statute of limits to address claims of landowners for permanent flooding. The time did not begin to run until inundation of the lands ceased.

§ 50.21(d) Priority of Domestic Uses. [Go To Main]

add:

In Georgia, no lawful use of water supersedes the right to use water for domestic purposes; all other lawful uses of water are treated equally. *See Tunison v. Harper, 690 S.E.2d 819 (Ga. 2010)* .

CHAPTER 51 PRIVATE PROPERTY RIGHTS IN AIRSPACE

7-51 Thompson on Real Property, Thomas Editions § 51.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 51.01 Introduction.

This chapter discusses landowners' various claims to the airspace appurtenant to their properties. These include access to solar energy, access to wind energy, conflicts arising from weather modification activities, aesthetic nuisance, interference with radio and television reception, and disputes over airspace development rights.

Recognition of the full range of property characteristics in airspace is a recent development, and relatively little litigation has occurred in this area. With this dearth of judicial guidance, scholars and legislators have stepped in.

CHAPTER 51 PRIVATE PROPERTY RIGHTS IN AIRSPACE

7-51 Thompson on Real Property, Thomas Editions § 51.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 51.02 Solar Access.

(a) Introduction.

Nowhere in the United States is the sun ever directly overhead, so the sunlight reaching any one parcel of property will, therefore, have to pass through the airspace appurtenant to other property. The passage of sunlight through airspace "parcels" is much increased whenever the sun's trajectory is lower on the horizon, such as at more extreme latitudes and during winter months.

The right of access to sunlight, where it exists, may be considered a property right. As with other land use issues, securing a right such as one land parcel's access to sunlight necessarily limits the range of uses open to adjoining landowners. For example, adjoining landowners may not install buildings or landscaping over certain heights, if to do so would interfere with an adjacent solar access right.

(b) Rights to Solar Access Under Traditional Private Nuisance Law.

American courts have never accepted the English doctrine of ancient lights, which recognizes a prescriptive right to the free flow of light and air, nor have they applied the law of private nuisance to achieve the same result. Moreover, the private nuisance doctrine in American courts is subject to inherent limitations that affect its ability to protect solar access. Among these limitations are the requirements that a private nuisance cause of action be based on defendant conduct that is "unreasonable" and damage to the plaintiff's property rights that is "substantial." These limitations make it unlikely that nuisance law can adequately secure solar access. In a case of aggravated conduct by a neighboring property owner, analogous to "spite fence" cases, one court used private nuisance doctrine to protect solar access from unreasonable and spiteful interference by a neighbor. n1 Another court allowed a landowner to challenge the proposed construction of a neighboring residence that would interfere with the sunlight, n2 but that court recognized it was breaking with tradition. Even if nuisance doctrine were regularly employed as a means of securing a right of solar access, an interference could be enjoined only if it were substantial and unreasonable. n3 To make nuisance more useful in this area, courts or statutes must define at what point an interference that occurred during only part of a day, or that obstructed only part of the property, would be considered either substantial or unreasonable.

COMPUTER-ASSISTED RESEARCH

LEXIS: solar access or light! w/30 nuisance

(c) Rights to Solar Access Under Easement Law.

Under the English doctrine of ancient lights, a landowner could, after a long period of appropriate use, obtain a prescriptive right, in the nature of an easement against neighboring land, to the free flow of light and air necessary to maintain that use. This doctrine of ancient lights has not been accepted in this country. n4 Instead, American landowners can seek to secure easement rights of solar access by express grant or reservation. n5

An express easement, created by grant or reservation, that protects solar access is a negative easement, permitting its holder (the owner of the dominant tenement) to prohibit interfering uses of the land that is subject to the easement (the servient tenement). Courts have upheld the right of private parties to create such easements protecting rights of access to sunlight, n6 and many states have also enacted statutory provisions specifically authorizing the regulation or the creation of solar access easements. n7

These state statutes vary from simply codifying the common law to elaborating on nuisance scope and remedies. The statutes usually require that the easements must be in writing and may be recorded as an instrument embodying a property interest. Other elements in the statutory easements include provisions for horizontal and vertical dimensions and angles in the descriptions, time restrictions on obstructions, lists of restricted obstructions, transferability, enforcement, and remedies.

COMPUTER-ASSISTED RESEARCH

LEXIS: solar access or light! w/30 easement!

(d) Rights to Solar Access Secured by Restrictive Covenants.

Another device that may be used to secure rights to solar access is the private restrictive covenant. Widely used in residential property developments, private restrictive covenants are often imposed by a developer on the entire tract, so that the owner of each lot is not only bound to observe the covenant's restrictions but is also entitled to enforce observance of the restrictions by every other owner in the development. Such a reciprocal negative servitude or easement could be used to restrict building or landscape improvements on lots that would obstruct solar access.

If a landowner seeking secured solar access is confronted with covenant restrictions, it is sometimes possible to obtain judicial relief. In addition to finding waiver of enforcement from general disregard of the covenant by those bound by it, a court may refuse enforcement because of changed circumstances. In a California case, a landowner seeking to install rooftop collector plates for a solar water heater overcame a covenant restriction against rooftop structures visible from the surrounding area when the court cited new concerns strengthening the public policy to promote the use of solar energy. n8

Legislative relief from covenants restricting solar access is found in state statutes that limit the life of restrictive covenants, n9 or that actually prohibit covenants restricting solar access. n10

COMPUTER-ASSISTED RESEARCH

LEXIS: solar access or light! w/30 covenant!

(e) Private Property Solar Access Rights Modified by Legislation.

If public enthusiasm for solar energy grows, private property rights may be forcibly adjusted by public legislation. A state may resort to its police power and the public nuisance doctrine to prohibit interference with private rights of solar access. No published court decision yet holds that the obstruction of a solar collector can be enjoined as a public nuisance, but there are no theoretical legal obstacles to such a position. n11 And, one state statute has prohibited planting vegetation that casts excessive shade on solar collectors, a prohibition which, however, is enforceable only by public authority. n12

A state may also create a right to solar access, as a right is available to a private property owner. One state has established a permit procedure for a private landowner intending to install a solar collector, which permits and protects the holder from interference with solar access. n13 Another state has established statutory rights to solar access similar to the prior appropriation water rights in that state; a landowner seeking solar access may restrict obstructions on neighboring land if the solar collection is prior in time to those obstructions and if the solar energy is put to beneficial use. n14

Municipal zoning ordinances may also impact on solar access by a private landowner. In some states, legislation specifically authorizes governmental entities with zoning power to consider solar access as a proper public purpose and a proper subject of zoning regulation. n15 Customary zoning restrictions, such as limitations on the height of structures, minimum setback and side clearance requirements, and lot size requirements, may all relate to solar access in particular circumstances. n16

(f) Reflected Sunlight as a Nuisance.

Another type of airspace right is at issue when bright sunlight reflects from something on one parcel of land to the annoyance of persons on neighboring land. In the first known solar reflection case, in 1929, the court rejected the plaintiff's claim of nuisance, probably because the harm was intangible and minimal. n17 In another case the reflection from a municipal water tank painted silver was the object of a complaint for nuisance and for an unconstitutional taking of the plaintiffs' property rights. n18 The nuisance claim was rejected, because no negligence was shown (a result that possibly would not be followed today), and even though the city had constructed the tank in violation of its own zoning ordinances. On appeal, the state supreme court eventually held that if the glare materially depreciated the value of the property, a compensable taking could be found. n19 A court today might be more receptive to nuisance claims in this type of action, if the reflected glare is a serious interference with the plaintiff's use of land, even if intangible, and regardless of the absence of negligence in the defendant's conduct.

FOOTNOTES:
(n1)Footnote 1. *Dunbar v. O'Brien, 220 N.W. 278 (Neb. 1928).*

(n2)Footnote 2. *Prah v. Maretti, 321 N.W.2d 182 (Wis. 1982). Mellenthin v. Berger, 666 N.W.2d 120 (Wis. App. 2003)* (landowners are limited by the private nuisance doctrine so that they do not have an unlimited right to use their land).

(n3)Footnote 3. *See* discussion of nuisances in fact in ch. 67, *infra*.

(n4)Footnote 4. If the doctrine of ancient lights in its traditional form were accepted in this country, even for the specific purpose of encouraging reliance on sunlight as an alternative source of energy, it would have inherent limitations in its practical application: the prescriptive right can be secured only after a long period of sustained use, and the right of access to light is limited to that amount of light necessary for ordinary work.

(n5)Footnote 5. Illustrating the rather severe consequences of not obtaining such a private right is the well-known case of *Fontainebleau Hotel Corp. v. Forty-Five Twenty-Five, Inc., 114 So. 2d 357 (Fla. App. 1959).* A luxury hotel was permitted to build a high-rise addition, even though the addition shaded the swimming pool area of an adjacent hotel during the afternoons of winter days.

(n6)Footnote 6. Gastineau v. City of Bothell, No. 42979-5-*I, 1998 Wash. App. LEXIS 1785* (Wash. App. Div. 1, 1998) (private party's attempt to establish standards on access to sunlight); *Petersen v. Friedman, 328 P.2d 264 (Cal. Dist. App. 1958); Lattimer v. Livermore, 72 N.Y. 174 (1878); Depner v. United States Nat'l Bank, 232 N.W. 851 (Wis. 1930).* In finding that an easement of access to the light and air over premises had not been expressly granted by language contained in a lease, the court explained: "No words need be used to withhold an easement of light and air, but to create one words must be employed which clearly show the intention to give such an easement." *232 N.W. at 853.*

CHAPTER 51 PRIVATE PROPERTY RIGHTS IN AIRSPACE

7-51 Thompson on Real Property, Thomas Editions § 51.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 51.03 Access to Wind Power.

[Go To Supp]

(a) In General.

Access to wind has become significant for the same reasons that access to solar energy has assumed renewed importance. Choosing the proper site for wind energy conversion systems is perhaps even more critical to success than is siting for solar access, because wind fluctuates and the choice of good sites is narrower. Perhaps the most striking technical aspect of wind energy is that the power of wind increases eight times if the wind speed is only doubled. Even increases of a lesser magnitude are dramatic: a 12-mile-per-hour wind carries 70% more power than a 10-mile-per-hour wind. n20 Obtaining the best site for maximum wind availability and eliminating interferences with wind flow are factors of extreme importance.

However, use of wind power is not free of controversy. Devices for generating usable energy from wind present some physical danger from the equipment, as well as increased noise and aesthetic disturbance. Continuing technological improvements may ameloirate these concerns.

(b) Access to Wind Under Common Law.

The doctrine of "ancient lights," recognized in England as leading to a prescriptive right to the free flow of light and air, not only does not enjoy acceptance in this country, but has never been applied by analogy to recognize a right to unobstructed wind power. Other well-established legal doctrines securing analogous rights in various natural resources have never been applied to wind power access. These other doctrines include riparian and prior appropriation water rights, rights to lateral and subjacent support, rights to natural drainage, and rights to natural diffusion of pollution-free air. Perhaps the legal doctrine most closely related to wind power rights would be the right to unmodified weather. n21 No court has held that access to wind power should be free of interference based on the right to unmodified weather.

Access to wind power, if available at all under traditional common law principles, is secured in the same ways access to solar power is protected: by private nuisance law and the possibilities of securing easements or covenants or the benefits of public legislation. No court has yet held that a landowner's access to wind power should be free of interference from a neighbor on the basis of private nuisance principles, which require the plaintiff to establish unreasonable use and

substantial harm as prerequisites for relief. Otherwise reasonable uses that disturb nearby land uses will usually not be enjoined, if the disturbed uses are considered especially sensitive. n22 Under private nuisance rules, therefore, a land use requiring access to the maximum wind power might be considered an especially sensitive use that would not be allowed to suppress otherwise reasonable uses of nearby land.

As with solar access, a landowner wishing to secure wind access could purchase an easement in the adjacent lands and have control over the interference with the wind emanating from that land. Either the traditional negative easement, which prohibits the burdened owner from certain conduct or uses on the burdened property, or the newer airspace easement, which maintains three-dimensional airspace free of obstruction, could secure access to windflow. n23 Just as numerous states have accorded statutory recognition and modification of easements securing solar access, wind access may also be strengthened by such statutes. Oregon was the first state to provide statutory sanction for wind easements, n24 and now Minnesota, n25 Montana n26 and Wisconsin n27 also have wind easement statutes. n28 If covenants are used to secure wind access, they must be carefully drafted to ensure that they run with the land and, therefore, can be enforced by and against successive owners. Without the consent of all landowners involved, neither easements - traditional or statutory - nor covenants are available to secure access to wind power. n29

(c) Securing Private Wind Access by Public Regulation.

As Oregon has done, a state may authorize municipal authorities to protect access to wind by local ordinance. n30 Such an ordinance may also be used to control or regulate harmful effects of wind energy conversion equipment. Municipal zoning regulations may be used to direct the siting of wind conversion devices or to prohibit improvements or plantings that inhibit windflow in certain areas. Minnesota required utilities operating nuclear power plants within the state boundaries to put in place wind power systems by the end of 1998, and required additional systems by the end of 2002. n31

(d) Protecting the Rights of Nearby Landowners.

If a jurisdiction promulgates public regulation of wind access, the rights of nearby landowners should also be considered. The rather brief experience with wind energy conversion systems has revealed several possible adverse effects from wind power devices.

A major concern from use of wind conversion machines is safety. Equipment failure in the past has resulted in collapsing structures and in blades being thrown. The very first commercial wind conversion machine in 1945 threw an 8-ton blade 750 feet, fortunately injuring no one. On more modern equipment, fragments of a thrown blade could be cast a distance of a quarter mile. Wind machines in colder sites, especially at higher elevations, could possibly build up snow and ice on the blades and eventually throw particles into nearby areas. n32 No reported cases have appeared relating to these safety concerns, but undoubtedly the landowner with the wind energy conversion system is exposed to possible tort liability.

Noise is another possible objection to use of wind machines. When what was then the world's largest windmill in Boone, North Carolina, went into operation in 1979, the huge, two-bladed rotor mounted on a 135-foot tower, when operating at 35 r.p.m., generated complaints of "irritating low frequency sounds, windows rattling, and crockery shaking, apparently caused by the windmill." n33 One expert attributed the problem to air flowing around the legs of the tower, so that the wind currents were altered by the structure before flowing toward the blades. While the noise problem could be cured by facing the blades into the wind, additional problems of interference with television reception, microwaves and radar beams apparently persisted. n34 Windmill towers have also been resisted on aesthetic grounds, specifically, that they should not be constructed where pleasing views and open spaces are to be preserved. n35 Potential environmental concerns are the damage that wind turbines can inflict on bird populations and the reduction in downwind energy potential caused by the presence of an operating wind turbine. n36

Equitable accommodations between users and nonusers of wind power could become very complex if larger numbers of landowners began installing wind conversion equipment. Even more complex would be the future problem of workouts between competing wind users.

CHAPTER 51 PRIVATE PROPERTY RIGHTS IN AIRSPACE

7-51 Thompson on Real Property, Thomas Editions § 51.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 51.04 Summary of Weather Modification Issues in Use of Airspace.

(a) In General.

Although weather modification is a source of potential disputes involving use of airspace, such disputes have produced little reported litigation. The conflicting interests center on the issue of whether an activity to modify the weather for the benefit of some land alters the weather to the disadvantage of other land. No party can complain against another because of adverse effects from natural weather patterns, but when the natural events are altered by human intervention, then a cause of action may arise.

Weather modification proceeds almost exclusively from techniques of cloud seeding. The seeding is usually intended to enhance natural precipitation in particular areas at times when seedable clouds appear. Seeding is also used to dissipate cloud cover or fog, such as around major airports, or to reduce the severity of hailstorms. Both types of seeding activities are probably effective much of the time, although it is difficult to determine with certainty what artificial adverse effects, if any, are part of the weather actually experienced. As stated by one commentator:

> Because it is impossible to predict exactly how much precipitation a given cloud would produce in the absence of seeding, it is equally impossible to measure the effect of seeding. By the same token, because no two clouds are alike in their precipitation potential, it is impossible to obtain accurate comparative data by seeding one cloud and leaving another alone. Determining "normal" precipitation for purposes of comparing it to "enhanced" precipitation is another problem ... Largely because of these uncertainties, experimental cloud seeding has at times yielded unexpected results, such as producing a decrease in precipitation when an increase was intended. n37

Because of this uncertainty, even the successful projects have the potential to injure the intended beneficiaries. Heavy accumulations of snow, increased avalanches, and unexpected flooding could result from overly successful projects to increase precipitation.

(b) Weather Control Litigation.

Surprisingly little weather modification litigation has emerged, and only one case has resulted in a judgment for the

plaintiff. Most of the litigation arose in the early years of weather modification and has now virtually ceased. n38 In the only case in which the plaintiff prevailed, n39 ranchers persuaded the court, through testimony of lay observers, that cloud seeding to suppress hail had diminished the precipitation they would naturally have received. In other cases, the plaintiffs have failed to meet similar burdens of proof. Also, many weather modification projects are now preceded by a series of administrative activities, including hearings at which concerned landowners may voice their interests and fears. These administrative procedures, coupled with plaintiffs' poor prospects for success in court, have combined to reduce the actual litigation to almost nothing.

COMPUTER-ASSISTED RESEARCH

LEXIS: litigat! or modif! w/5 weather w/30 own! w/5 land! or property

(c) Legal Theories for Weather Modification Complaints.

Several common law doctrines provide at least a theoretical possibility of relief for plaintiffs aggrieved by artificially induced weather patterns. These include an ordinary tort action, a trespass action, and a nuisance action.

In a tort action, the plaintiff must show causation, that "but for" the weather modification activities the damage or injury would not have occurred. The uncertainties inherent in all aspects of weather modification activities make causation almost impossible to prove. In the absence of empirical evidence, plaintiffs must rely on expert opinion testimony or statistical probability analyses, neither of which can definitively address the factor of causation for any individual incident. n40

A trespass action is possible if the defendant has caused some other instrumentality to enter the plaintiff's land or airspace. However, trespass claims also require some element of intent on the part of the trespasser, at least intent to enter. Thus, a plaintiff suffering, for instance, from flooding possibly induced by weather modification would have to show that the defendant was reasonably certain that additional moisture would fall on the plaintiff's land. n41

The plaintiff in a nuisance action must show both that the defendant's conduct was unreasonable and that the resulting interference with the plaintiff's land use was substantial. One plaintiff who sought to enjoin cloud seeding as a nuisance on the ground that it would interfere with a resort business was not successful against a defendant trying to provide more culinary water for a very large city population. n42 Success in a nuisance action seems more likely if the plaintiff can show actual damage to the land and buildings as a result of defendant's weather modification activities. The plaintiff may also be more likely to succeed if weather modification can be characterized as an extra-hazardous activity, for which the defendant may be strictly liable for damages. The courts have, so far, rejected this approach in the cases in which it has been advanced. n43

With remedies so difficult to obtain in litigation, some intervention by public law has occurred. Illinois, for a time, allowed cloud seeding only if a permit was first obtained and then only if the seeding was at least supervised by a licensed cloud seeder (although this restriction, along with the state's entire Weather Modification Act, were repealed as of December, 1991); n44 Pennsylvania prohibits seeding to suppress lightning. n45

CHAPTER 51 PRIVATE PROPERTY RIGHTS IN AIRSPACE

7-51 Thompson on Real Property, Thomas Editions § 51.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 51.05 Airspace Rights and Aesthetic Nuisance.

(a) Introduction.

One of the rights to airspace is a right to occupy that space with visual matter. To fill one's land with disorderly and ugly junk may not only offend others' subjective aesthetic sensitivities, but may have more objective consequences in terms of reduced property values. This section explores the emerging legal doctrines governing aesthetic values in airspace rights.

(b) Aesthetic Considerations Under Private Nuisance Law.

A landowner disturbed by the unsightliness of uses or activities on neighboring land has usually been denied judicial relief under traditional nuisance law. Courts are reluctant to grant injunctive relief for claims based solely on aesthetic considerations, because of the danger that the court's own subjective notions in matters of aesthetics will improperly interfere with private property rights. n46 More recently, however, courts have shown more willingness to consider disturbance of a property owner's aesthetic sensitivities as a claim for which relief can be granted. As expressed by one court that did grant injunctive relief, based solely on aesthetic considerations, in ordering unsightly property to be cleaned up:

> [L]egitimate but unsightly activity such as the accumulation of debris on land or the operation of a junkyard ... may become a private nuisance if it is unreasonably operated so as to be unduly offensive to its neighbors. n47

Aesthetics as a consideration in nuisance actions was first announced in a 1972 New Hampshire case in which plaintiffs sought to have an unsightly boat shed removed from a residential area adjacent to a lake. n48 The shed was not removed because the court, in its own aesthetic judgment, did not deem the shed ugly enough to warrant such action. The same court, in a later case, ordered a dock removed from a lake waterfront, because the dock blocked the view of the lake from the plaintiff's residence located on shorefront property. n49

In another state, a dog kennel operation conducted near a cottage and a business was ordered removed, in part because it detracted from the appearance of the plaintiff's premises. n50

Aesthetic considerations were first relied on as the sole factor in a nuisance action for injunctive relief in 1975. In that case, the Oregon Supreme Court stated that "visual aesthetic sensibilities" could be an appropriate basis for recovery in a nuisance action, but refused to order removal of a fence near the beach, because the fence was not sufficiently offensive. n51 The first successful nuisance action based exclusively on aesthetic considerations was decided in 1982, when the Virginia Supreme Court ordered wrecked automobiles removed from a lot in a residential area. n52 In that case, a restrictive covenant prohibited landowners from maintaining any nuisance on the property, and the court in ordering relief effectively decided that the unsightliness of the auto wrecks constituted a nuisance.

It is also likely that injunctions against construction of funeral homes in residential areas are related to the subjective and negative emotional reactions nearby residents are likely to experience if the funeral home goes into operation. n53 For instance, one court declared that:

> the operation of this funeral business ... had an immediate and continuing depressing effect upon [the plaintiffs] which substantially decreased the quiet and peaceful enjoyment of their homes. n54

Most courts, however, are still reluctant to introduce possibly subjective criteria such as aesthetic considerations as factors for determining competing property rights. As expressed by a Missouri court:

> Aesthetic considerations are fraught with subjectivity. One man's pleasure may be another man's perturbation ... . Judicial forays into such a nebulous area would be chaotic. Any imaginary good from doing so is far outweighed by the lurking danger of unduly circumscribing inherent rights of ownership of property and grossly intimidating their lawful exercise. n55

These concerns relate directly to the elements of a private nuisance action that a plaintiff must establish: the interference with the plaintiff's use of land must be substantial, and the defendant's conduct must be unreasonable. Not every incident of unsightliness on land is necessarily a substantial interference with plaintiff's own use and enjoyment of land. A plaintiff's subjective or hypersensitive perceptions should not be the basis for limiting the defendant's use of land. The unreasonableness of the defendant's conduct may depend on whether the benefit to the plaintiff and public of changing the conduct far outweighs the cost or inconvenience to the defendant.

COMPUTER-ASSISTED RESEARCH

LEXIS: aesthetic! or unsightl! w/30 nuisance

(c) Aesthetic Considerations in Public Land Use Regulation.

The traditional reluctance of courts to look beyond the subjectivity of aesthetic judgments is not matched by local legislative branches of government, which more frequently employ aesthetic criteria in land use planning measures. Local elected officials have had to decide whether exercise of governmental police power could be based on "modern societal aesthetic considerations," in such matters as a county criminal ordinance regulating use of land as junkyards. n56 The Supreme Court of North Carolina, in a 1982 opinion comprehensively surveying the decisions of courts in all the other states, concluded that even then most jurisdictions accepted aesthetic considerations as a legitimate basis for police power regulations:

> In light of our 1972 perception ... that the trend was growing toward allowing such regulation, the continued shift such that the trend now represents the new majority, and our general agreement with the views expressed in the recent cases ..., we expressly overrule our previous cases to the extent that they prohibited regulation based upon aesthetic considerations alone. We do not grant blanket approval of all regulatory schemes based upon aesthetic considerations. Rather, we adopt the test ... that the diminution in value of an individual's property should be balanced against the corresponding gain to the public from

such regulation. n57

The conclusion that a majority of jurisdictions now accept that viewpoint had already been reached by scholarly research. n58 The "societal" aesthetic considerations identified by the North Carolina Supreme Court - concern for environmental protection, control of pollution, and prevention of unsightliness - may argue for protection of private property rights of nearby landowners. n59

CHAPTER 51 PRIVATE PROPERTY RIGHTS IN AIRSPACE

7-51 Thompson on Real Property, Thomas Editions § 51.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 51.06 Interference with Radio and Television Reception.

[Go To Supp]

If legal mechanisms are developing to secure access to solar and wind energy, it would seem by rather straightforward analogy that protection of access to radio and television broadcast signals would be afforded by the same legal principles. Ironically, the law on interference with broadcast reception has developed in just the opposite direction. This legal development is based on a single case holding that no nuisance liability would attach to a structure so tall that it distorted commercial television reception on nearby land. n60 The plaintiff in this action sought to enjoin construction of the 110-story Sears Tower in Chicago, because it distorted television reception and thus lowered property values. The distortion occurred because the receiving antennas were lower than the interfering structure. The court noted the analogy to the American rule denying prescriptive rights to the free flow of light and air and concluded that each landowner had a right to use the airspace over its land to build a structure to any desired height, and that interference with broadcast signals was not a sufficient basis for limiting that right.

The court in the *Sears* case also cited other factors, noting that the quality of reception is a function of where the broadcaster chooses to locate the transmitter, in addition to the location of the receiver and of the interfering structure. To require a defendant landowner to refrain from building interfering structures on the land, when the extent of the restriction depends on the uncontrolled choice of the broadcaster in placing a transmitter, was deemed too broad an intrusion into the property rights of the defendant landowner. In this respect, the broadcast access differs from solar energy access, in that the latter imposes a quite predictable restriction on neighboring land. Preemption by federal law has also been given as a reason for rejecting a private nuisance action complaining of radio interference. n61

In one earlier case, the Massachusetts Supreme Court held that a radio broadcaster had no basis in nuisance for requiring a neighboring landowner to stop a landfill project that would reduce the electrical conductivity of the land and thus weaken the broadcast signal. n62 By contrast, an appliance store owner's complaint stated a cause of action in nuisance, when it alleged that a computer placed in a nearby business leaked radiation that distorted the television reception in the appliance store. n63

Airspace rights questions have also arisen in connection with satellite dishes. The dish owners have sought unimpeded

and cost-free access to any broadcast signals that were emitted into the airspace of a satellite dish owners's property; the broadcasters have sought to retain some ownership rights in those signals even when the signals reached the airspace of another, especially the right to charge for reception. The problem became somewhat contained, but by technology rather than resort to property law: a broadcaster wishing to exclude non-paying receivers simply scramble the signal and then charges interested recipients a fee for the use of decoding devices. The property owner is still the master of signals emitted into the property's airspace, but only of such signals as are actually received or "captured," in this instance a scrambled signal. n64 Health issues arise from concerns about radio frequency emissions. n65

CHAPTER 51 PRIVATE PROPERTY RIGHTS IN AIRSPACE

7-51 Thompson on Real Property, Thomas Editions § 51.07

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 51.07 Rights to Airspace of Adjoining Landowners.

[Go To Supp]

(a) Airspace as Property.

A common law Latin maxim of cujus est solum, ejus est usque ad coelum et ad inferos, was understood to be the concept that the owner of the land's surface owned also to the heavens above and to the depths below that surface. Blackstone, who believed the maxim had its origin in civil law, n66 stated "Land hath also, in its legal signification, an indefinite extent, upwards as well as downwards... . So that the word 'land' includes not only the face of the earth, but every thing under it, or over it." n67

Airspace has been likened to other migrating things that might come onto one's land: it is not considered to be really property in the sense of being owned, until it is reduced to the possession or use of the surface owner. n68 A landowner also has the freedom to make use of the airspace as high as capabilities and resources permit. Until so used, the airspace remains a form of public or common property. n69 American courts generally recognize private property rights in airspace of adjoining landowners. Maintaining a structure that encroaches on, over, or under another's land is a trespass. Trespass can be caused by any structure or object that extends over adjacent land and violates that land's airspace. Courts have found such trespasses from wires extending across adjacent land, and from eaves, shutters, walls, roofs, and bay windows which project over the boundary line of adjacent land. n70

When commercial air travel became an obvious development for the future, the federal government asserted exclusive national sovereignty in the airspace over the entire country. This has led courts to conclude that private property rights in airspace are limited to whatever airspace the landowner needs for enjoyment or use of the land, so that airspace rights are merely incidents of land ownership. n71 Reinforcing the notion that private rights in airspace have been limited by impositions of sovereign power are the zoning restrictions in every jurisdiction that describe bulk and height limitations on buildings. n72

(b) The Severability of Airspace Property Rights.

Airspace that is within the "reach" of the private landowner can be severed from surface rights, especially by sale or lease. Railroads were early practitioners of this procedure, selling or leasing airspace over their urban lands for

commercial use while retaining ownership of the underlying surface land. n73

Related to the severance of airspace rights from rights in the land surface itself is the rise of the transferable development right, known widely as a "TDR." Used initially as a device for preserving historic landmarks, the TDR has gone on to a wider variety of applications. To encourage historic preservation at little public expense, the owner of a historic landmark was recognized as having a property right in the undeveloped airspace above the historic structure or land. As permitted by local land use regulations, that landowner was allowed to place certain developments in that airspace but, according to TDR practice, could separate those development rights from the land beneath, and convey them to some other landowner whose own development rights were perhaps not so extensive. The grantor who had conveyed the development rights was thereafter unable to destroy the historic landmark in the process of carrying out some development project. n74

In giving legal recognition to the severance of airspace rights from surface rights when transferring development rights, courts have confirmed the property characteristics of airspace. They have, perhaps, also extended the private rights in airspace a bit, since the purchaser of development rights may have resources for use of those rights that reach higher into that airspace than had the landowner who granted the airspace rights for development. n75 The TDR has possible applications going well beyond historic preservation and, for example, has been used for preservation of agricultural land. n76

The use of TDRs is confined to a few large cities that have chosen to place heavy restrictions on vertical development. Distinct from the sale of TDRs is the much more common practice of simply conveying rights to the airspace over public property. Cities sell development rights to private owners in the airspace over public lands, n77 and states have begun to enact statutes governing such conveyances. However, as can be noted from the following summary of examples of such state legislation, a wide variety of approaches and limitations characterizes such legislation: n78

California: areas above or below state highways may be leased for up to 99 years. n79

Colorado: property rights in areas above the surface of land may be created in others than the surface owners. n80

Connecticut: airspace over school land may be conveyed to a private developer. n81

District of Columbia: the mayor may lease airspace to private parties. n82

Georgia: lease of air rights is permitted over limited access highways. n83

Louisiana: permits for construction of buildings over highways may be issued. n84

Massachusetts: leasing of airspace is permitted over certain municipal properties. n85

Minnesota: air rights of railroad or public utility company may be leased or sold; n86 air rights over a highway may be leased. n87

Nebraska: airspace over city property may be leased for up to 99 years. n88

Nevada: use of airspace over highways is permitted. n89

New Hampshire: airspace over certain public properties may be leased for up to 99 years. n90

North Dakota: space above, below, and adjacent to parking facilities may be used for development. n91

Oklahoma: airspace is real property and may be conveyed as other property interests are conveyed. n92

Pennsylvania: creation of estates in airspace is authorized. n93

Virginia: airspace over public roads may be leased. n94

Washington: airspace over public property may be sold or leased to private parties. n95

Wisconsin: airspace over public property may be sold or leased. n96

The existence and scope of airspace rights are still being explored. With hindsight an occasional older case may be seen as a harbinger of future contests. n97

CHAPTER 51 PRIVATE PROPERTY RIGHTS IN AIRSPACE

7-51 Thompson on Real Property, Thomas Editions § 51.08

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 51.08 Appendix.

(a) Montana's Wind Energy Easement.

Mont. Code Ann. § 70-17-303 Wind energy easement:

(1) An easement obtained for the purpose of insuring the undisturbed flow of wind across the real property of another must be created in writing and is subject to the same conveyancing and instrument recording requirements as other easements on real property.

(2) An instrument creating a wind energy easement must include:
(a) a legal description of the real property benefitted and burdened by the easement;

(b) A description of the dimensions of the easement sufficient to determine the horizontal space across and the vertical space above the burdened property that must remain unobstructed;

(c) the restrictions placed upon vegetation, structures, and other objects that would impair or obstruct the windflow across and through the easement; and

(d) the terms or conditions, if any, under which the easement may be changed or terminated. [Enacted 1983]

(b) Illinois' Statute Regulating Cloud Seeding Activity.

Ill. Stat. Ann. tit. 11, § 7321:

Except as provided in Section 11 of this Act, no person may engage in weather modification activities:

(a) Without both a professional weather modification license issued under Section 12 of this Act and a weather modification operational permit issued under Section 18 of this Act; or

(b) In violation of any term, condition or limitation of such license or permit.

[Note: This provision was later amended to require only the permit and not the license and, subsequently, by operation of the State's Regulatory Agency Sunset Act, the weather modification regulatory provisions were placed under deferred repeal, to take effect December 31, 1991.]

(c) Private Restrictive Covenant Prohibiting Aesthetic Nuisance.

a. No billboard, unsightly objects, or nuisance shall be erected, placed or permitted to remain on any lot, nor shall any lot be used in any way or for any purpose which endangers the health or unreasonably disturbs other lot owners.

b. No lot may be used in whole or part for the storage of any property or object that will cause such lot to appear in an unclean or untidy condition or that will be visually obnoxious to a reasonable person.

(d) Oklahoma Airspace Act (Okla. Stat. Ann. ch. 60 §§ 801 *et seq.*)

§ 801. Short title.

This act shall be known as the Oklahoma Airspace Act.

§ 802. Airspace defined - provisions pertaining to aviation not affected for purposes of this act.

Airspace is defined as that space which is either occupied or subject to being occupied for the reasonable enjoyment and use of the land surface and any structures thereon by the surface owner or owners, his or their heirs, successors or assigns. The airspace owned by a surface owner or owners is that which lies within the vertical upward extension of his or their surface boundaries. Airspace as defined herein shall in no way be deemed to contravene, supersede, amend, modify or alter the existing powers, requirements, limitations or other provisions of statutory or common law pertaining to aviation, air transportation, air commerce, or air operations.

§ 803. Airspace as real property.

Airspace as defined herein is real property, and until title thereto or rights, interests or estates therein are separately transferred, airspace is the property of the persons holding title to the land surface beneath it.

§ 804. Airspace subject to same statutes, rules of law and common law as other real property.

A. It is the purpose of this act that airspace shall be subject to being acquired, held, enjoyed, possessed, alienated, granted, sold, conveyed, exchanged, transferred, partitioned, assigned, demised, leased, released, charged, mortgaged, encumbered, assessed, devised, condemned, vacated, zoned, platted, divided, subdivided, and otherwise utilized and manipulated in the same manner, upon the same conditions and for the same uses and purposes as other real property; and airspace shall be subject to the same statutes, rules of law, and common law as other real property.

B. All of the rights, privileges, immunities, incidents, powers, remedies, burdens, servitudes, duties, liabilities, limitations and restrictions which apply to titles, estates, rights, and interest in other real

property shall apply to airspace.

C. No power set forth herein, however, shall alter, amend, supersede, hinder, contravene, prevent or affect the exercise of the rights, privileges and immunities otherwise granted by statutory or common law to individuals, partnerships, corporations, business associations, air commerce, air operations, or to public service corporations.

§ 805. Titles, estates, rights and interests as pertaining to airspace.

All forms of titles, estates, rights, and interests which may presently exist or which may hereafter by created by law or equity under statutes pertaining to real property may be legally created, transferred and conveyed in airspace, whether or not such airspace is contiguous to the surface of the earth; and the same shall constitute titles, estates, rights and interests in real property under and subject to the laws pertaining thereto.

§ 806. State, governmental units, individuals, corporations, etc., as possessing same powers and duties with respect to airspace as to other property.

A. The state and all of its departments, commissions, agencies, instrumentalities, divisions, subdivisions and authorities, including all counties, municipal corporations and governmental units of any kind, shall have the same powers, rights and duties with respect to airspace as are possessed with respect to other real property.

B. All private individuals, partnerships, corporations, foundations, trustees, fiduciaries, and all other private persons whatever their legal status, shall have the same powers, rights and duties with respect to airspace as are possessed with respect to other real property.

§ 807. Division of airspace.

Airspace may be divided or apportioned horizontally and vertically, and in any geometric shape or design, in the exercise of any of the powers, rights, or duties by public bodies or private persons under this act.

§ 808. Right, title, and interest to pass at death of owner.

The right, title, interest and estate of a decedent in and to airspace shall pass at his death by testamentary disposition, or in the event of intestacy, shall pass in the same manner as provided by the laws of this state for the descent of other real property.

§ 809. Taxation.

All titles, estates, rights and interests in airspace are subject to taxation to the same extent and in the same manner as other real property is taxed; and for the purpose of taxation, titles, estates, rights and interests in airspace held by persons other than by the owner or owners of the land surface shall be taxed separately from the land surface and from other separately owned airspace, and the owner or owners of the land surface shall not be taxed for airspace which is not owned, nor to the extent that his or their rights therein have been diminished. Nothing contained in this section shall be construed to authorize taxation of unimproved or undeveloped airspace whether by adding to the assessed valuation of the surface or by taxation on said unimproved or undeveloped airspace itself. This act shall not apply to aviation, air or space travel.

§ 810. Powers of state over highways, streets, bridges, etc., not extended so as to cause violation.

The powers granted under this act shall in no way extend the power of state and local authorities having jurisdiction over highways, roads, streets, alleys, bridges or rights-of-way to the point that (a) federal regulations pertaining to federal aid rights-of-way are violated, (b) constitutional limits on the power of such authorities are exceeded, or (c) the right of the public to full and unobstructed use of highways, roads, streets, alleys, bridges and rights-of way is impaired.

§ 811. Joint development use plans.

A. The state and any of its political subdivisions, port authorities and turnpike authorities may join, cooperate and contract with other agencies or instrumentalities of federal, state or local government, or with private persons, corporations, partnerships, business associations, fiduciaries or personal representatives in and for the acquisition, condemnation, purchase, lease, sale, assignment, mortgage or use of title, rights, interests and estates in airspace. This power shall include, but shall not be limited to, the joint development and multiple use of rights-of-way and adjoining property or airspace. In furtherance of such functions, the aforementioned entities and authorities shall have the following powers:

1. To do all things necessary to develop and effectuate a joint development and multiple use plan for an area which is to be developed, including the coordination of such plan and cooperation with all other affected agencies of federal, state or local governments; to collect and distribute informational material pertaining thereto; to cooperate and coordinate activities and function with interested or affected private persons, corporations, partnerships, business associations, fiduciaries, personal representatives or groups; to employ consultants, planners and professional or advisory personnel or services; to contract with federal, state, regional, or local authorities or agencies, or with private persons, corporations, partnerships, business associations or other such organizations or associations for the preparation of transportation and land use studies; and to contract for services, labor, supplies, equipment or other items with governmental authorities or private persons, corporations, partnerships, business associations, fiduciaries, personal representatives or other persons as may be necessary to effectuate the joint development and multiple use plan;

2. To apply for, accept, receive, spend, and account for such funds, grants, loans, gifts and services from federal, state, regional or local governments or their instrumentalities or from private persons or from other sources as may be needed to develop and effectuate the joint development and multiple use plan; and to provide and agree to such reasonable conditions and requirements as may be necessary in connection therewith; and

3. To perform such other acts and enter into such contracts or execute such other legal documents as may be necessary or appropriate to develop, effectuate or execute the joint development and multiple use plan.

B. The state and any of its political subdivisions, port authorities and turnpike authorities may join with any other federal, state, regional or local governmental authority in the condemnation through exercise of power of eminent domain of land or airspace in excess of that necessary for the highway, road, or street right-of-way, whenever such excess condemnation is necessary and appropriate to effectuate a joint development and multiple use plan.

§ 812. Sale of unneeded airspace or real property.

Any governmental authority, agency, or instrumentality which holds right, title, interest or estate in airspace or in other real property which is not needed for a public purpose or for public use may sell, convey or transfer the right, title, interest or estate owned by it, or any lesser right, title, interest or estate, to such persons as the laws of this state permit at public or private sale for not less that seventy-five percent (75%) of the appraised land value thereof, as established by two or more disinterested, qualified appraisers. Along with transfers of unneeded airspace or real property, or right, title, interest or estate therein, the transferor may also grant or transfer easements or other rights and interests in retained airspace and real property which may be required to provide access or support of structures erected in the transferred airspace or property.

§ 813. Governmental authority holding only easements for use as rights-of-way.

In situations in which a governmental authority or agency holds only an easement for use as a right-of-way over land on which is constructed a highway, street, road, alley or bridge:

1. The governmental authority or agency shall possess for and on behalf of the public a right to use such easement for highway, street, road, alley or bridge purposes with full, free and unobstructed passage over such improvements as well as the right to construct, maintain, repair, alter and remove such improvements, subject to all other laws pertaining thereto; and

2. In addition thereto, the governmental authority and agency shall possess for and on behalf of the public the right to make full use of the airspace over, under or upon said right of way, provided that the residual right, title, interest and estate of the owner or owners of the fee in and to the land on which said improvements exist shall not in any way be encumbered, limited, or additionally burdened without just compensation being paid to such owner or owners and with the determination of such just compensation to be made in the manner provided by law for additional takings under the power of eminent domain.

§ 814. Right of eminent domain.

This act shall not alter, amend, repeal, modify or affect the laws of this state providing for the exercise of the power of eminent domain by public or quasi-public agencies, authorities and instrumentalities or by private persons, except as may be specifically provided herein and except that the power of eminent domain may be exercised to condemn and acquire airspace in the same manner as provided by law for the acquisition of other real property or for rights or interests in same. The procedure and rules provided by law for condemnation of real property by public or quasi-public agencies, authorities or instrumentalities and by private persons shall apply to the condemnation of airspace. Whenever more than one procedure for condemnation is provided by law, and whenever there is doubt as to which procedure applies in a particular condemnation proceeding, the condemnation procedure applicable to the State Highway Commission or agency shall be followed.

§ 815. Laws pertaining to powers, privileges, immunities, duties and liabilities of agencies not affected.

Except as specifically provided herein, this act shall not alter, amend, repeal, modify or affect the laws of this state which pertain to the powers, privileges, immunities, duties and liabilities of authorities, agencies, instrumentalities or other such divisions or departments of state and local governments, or to improvement districts or to private persons.

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.01

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.01 Common Law Origins.

[Go To Supp]

The common law imposed on an innkeeper the responsibility to preserve from harm all property of a guest that had been placed in the innkeepers's custody, subject to very limited exceptions. The origin of this policy is well described by the New York Court of Appeals in Julett v. Swift as intended to facilitate travel from one portion of the country to another. n1 The traveler was particularly subject to fraud and theft and through necessity was obliged to place confidence in total strangers. Care of the guest's property was placed in the control of the innkeeper's servants over whom the guest had no control. Such servants would have no interest in preserving the guest's property unless their employer was held responsible for its safety. In the event of loss, the guest would usually be dependent upon the testimony of complete strangers who might have some acquaintance or alliance with the innkeeper. The Supreme Court of Iowa noted that "the rule devolved from the Roman era and was designed to protect travel and commerce in times of highwaymen who were often in league with innkeeping." n2

In Dickerson v. Rogers, the Supreme Court of Tennessee, quoting from Sir William Jones' Treatise on Bailments, observed that:

> "travelers, who are most numerous in a rich and commercial country, are obliged to rely almost implicitly on the good faith of inn-keepers, whose education and morals are not of the best, and who might have frequent opportunities of associating with ruffians and pilferers, while the injured guest would seldom or never obtain legal proof of such combinations, or even of their negligence,if no actual fraud had been committed by them." n3

In order to avoid liability for loss to property entrusted by a guest, the innkeeper must establish that the occurrence was caused by act of God, the public enemy or fault of the guest, or the innkeeper's servants or employees. n4 Liability extended to clothing, jewelry, money, horses and articles of bulk unless one of the exceptions applied. Loss might occur through burglary, theft, fire or negligence. n5 As innkeepers became more plentiful and more trustworthy, statutory limits were commonly imposed on the broad responsibility established at common law. n6 No longer were travelers embarking on journeys through a sparsely settled countryside where the inn was the only hope for protection against highwaymen. n7

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.02

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.02 Relation of Innkeeper and Guest.

An inn has been described as a:

> house of entertainment for travelers, and an innkeeper is a person who publicly professed that he keeps an inn, and will receive therein all travelers who promise to pay an adequate price and who come in a situation fit to be received.
>
> To establish the relation of host and guest, the traveler must visit the inn for the purpose of availing himself of the entertainment offered, and the innkeeper must receive the traveler for the purpose of entertaining him. n8

Although the guest is frequently described as a traveler, the distance traveled is irrelevant. Anyone away from home, regardless of distance, who receives accommodations at the inn, is a guest and entitled to hold the innkeeper to the responsibilities at law. n9

At common law, the broad liability imposed upon innkeepers did not apply to proprietors of boarding houses or lodging houses. In such cases, liability of the owner was limited to the exercise of care to preserve the property of the boarders or lodgers. n10 Some jurisdictions have eliminated this distinction and treat all guests of establishments equally when they receive the same services whether they are travelers or n11 Of course, hotels and motels for transients have succeeded to the role formerly held by the roadside inn.

A person who elects to use some services provided by the inn but does not engage a room or partake of food and entertainment was not entitled to common law benefits for items deposited. Where plaintiff sought to recover from an innkeeper for the value of his horse, harness and robes destroyed by fire, the court applied the usual rules of bailment because the owner was not and did not expect to become a guest at the inn. The horse and related items were left for safekeeping in a barn connected with the inn. n12 In a more modern setting, a patron of a hotel checkroom whose property is not returned upon demand is not a guest of the hotel when the guest does not also partake of the available food, room or entertainment. n13 Similarly, the daughter of a guest who had her luggage delivered to the hotel where her parent was staying was a bailor who was not within innkeeper-guest statutory provisions. n14

Mere occupancy of rooms at the inn does not necessarily create the relationship of innkeeper-guest. To achieve "guest" status, the person must be a paying patron who is staying at the inn for the person's own purposes. Band members who were furnished four rooms at a hotel as part payment for their musical engagement were not "guests" of the hotel when their band equipment was stolen from the stage area. n15 Weekly and monthly residents of a YMCA were found to be part of guest-hotel relationship and were not tenants of a landlord. n16 The YMCA provided linen service, mandatory housekeeping service and utilities. None of the rooms had individual bathroom facilities, refrigerators or kitchen ranges. Although each resident received a room key, its removal from the premises was not permitted. The written agreement between the parties described the relationship as one of guest-hotel where the resident accepts the status of a day-to-day licensee and disavows the creation of a tenancy. The exclusive possession and control requisite for a tenant's relationship with a landlord did not exist. n17

LEXIS: innkeeper! or host! w/15 guest!

FOOTNOTES:

(n1)Footnote 8. *Wise v. United States, 8 F. Supp. 2d 535 (E.D. Va. 1998)* (where a patron of the hotel bar who had not rented a room was not within the statutory requirement imposed on the hotel to take reasonable precautions to protect the persons and property of its guests; patron was only a business invitee). *Greene v. Doral Conference Center Associates, 2005 WL 1023060* (N.Y.A.D., 2005) (unsuccessful action against a sports and health club to recover damages for breach of common-law duty of innkeepers to receive guests); *Fabend v. Rosewood Hotels & Resorts, L.L.C., 381 F.3d 152 (3d Cir. 2004)* (unsuccessful action against campground operator for breaching innkeeper's duty to protect guests from unreasonable risks of harm). *Hill v. Memphis Hotel, 136 S.W. 997, 998 (Tenn. 1911).*

(n2)Footnote 9. *Walling v. Potter, 35 Conn. 183 (1868).*

(n3)Footnote 10. *See also* Andrea Bastian & Stephen Barth, Defining Hospitality Entities in Contracts and Statutes: A Proactive and Preventative Approach, *33 Golden Gate U. L. Rev. 105 (Spring 2003).* This article includes a description of a 1905 case in New York (*Crapo v. Rockwell, 48 Misc. 1, 5 (N.Y. Trial Term 1905))* where a plaintiff who had been living in a hotel for seventeen months brought a liability suit against the hotel for lost and damaged property. The plaintiff argued that the hotel "had many of the same characteristics of an 'inn' and was, accordingly, subject to liability laws that only applied to inns. The hotel argued that, historically, transient guests stayed at inns while hotels tended to house long term guests or 'tenants.' If the court classified the [hotel] as an 'inn,' the owner, as the insurer of a transient guest's property pursuant to the concept of infra hospitium, would be liable for the plaintiff's loss under common law." *Id.* at 110. The New York Supreme Court, held that an "inn" was defined as accommodating travelers (transient guests), seeking protection from the dangers of such travel. The plaintiff was held to be a tenant of the hotel, instead of a transient guest of an "inn." The hotel was therefore not liable for the loss of and damage to the plaintiff's property. The author concludes, "If the facts of this case were considered today, a different outcome would most likely result, because hotels have evolved from long term tenancies into transient guest lodging." *Id. Asseltyne v. Fay Hotel, 23 N.W.2d 357 (Minn. 1946)* where the hotel catered to transient guests and long-term lodgers. Plaintiff, who lost personal property when the building was destroyed by fire was an out-of-state resident who had accepted a teaching position for the school year. As such she was a lodger who failed in her obligation to prove that defendant was negligent.

(n4)Footnote 11. *See Harkins v. Win Corp., 771 A.2d 1025 (D.C. 2001)* (where the occupant of a furnished room for eight months who paid on a weekly basis and was obliged to make the room accessible for linen and cleaning service was not subject to abrogation of the common-law rule allowing self-help to evict a non-paying roomer. Roomers are usually persons with fewer possessions who would find it easy to relocate). *Leon v. Kitchen Bros. Hotel, 277 N.W. 823 (Neb. 1938),* where plaintiff and his wife had lived at defendant's hotel for nearly two years and had no other home. The plaintiff was a guest and subject to statutory limitations on liability of the hotel if it satisfied its burden to show

compliance with the statutory provisions.

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.03

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.03 Commencement and Termination of Guest Status.

Ordinarily, the relationship of innkeeper and guest arises when the guest registers and engages accommodations. In addition, the relation may arise when baggage is entrusted to the innkeeper or the innkeeper's employee, if the parties contemplate that accommodations will be engaged within a reasonable time. A salesman who deposits baggage with a hotel proprietor with no intention of becoming a guest is not subject to innkeeper-guest rules when the baggage disappears without explanation. Registration as a guest after the loss occurs was unavailing since the salesman had only intended to use hotel facilities available without charge at the time that he delivered his baggage to the porter. n18

The case may be contrasted with the disappearance of an attache case from the vicinity of the owner while he was completing the usual room registration form and inquiry of the desk clerk about the availability of safe deposit boxes. Since the owner of the case had an advance reservation, occupancy of a room by him was clearly within the contemplation of the parties. As a guest, the owner of the case was subject to a $500 limit on hotel liability for loss of the contents of the case, which had an alleged but undisclosed value of $300,000. n19

Where the status of the property owner as a guest has been clearly established it is irrelevant whether the item has been physically delivered to the hotel by the guest or whether the guest is aware of its arrival. n20 A hotel that allows a regular guest to register early in the day in the expectation and hope that an occupancy cancellation would take place later in the day has created the status of innkeeper and guest even though no room becomes available thereafter. n21

The status of innkeeper-guest does not necessarily terminate immediately upon check out and departure by the guest. Where the hotel has undertaken to store baggage or valuables as an accommodation to the guest, the status of "guest" continues and statutory limitations apply in the event of loss or damage to the retained property. n22

It is not necessary that the hotel agree directly with the guest to provide this service. A hotel patron who checked out and inadvertently left behind a jewelry box she had hidden behind two telephone books for safekeeping was treated as a "guest" and subject to the usual liability limits. The jewelry box had been found by a maid who delivered it to the housekeeping department for delivery to the director of hotel security. Its disappearance thereafter was unexplained. n23

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.04

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.04 *Infra Hospitium.*

[Go To Supp]

The common law rule imposing a broad obligation upon the innkeeper for injury to or loss of the property of a guest applied only when the damaged or missing property was said to be "*infra hospitium*." n24 It has been said that this term includes "all property deposited and accepted in exclusive control of the innkeeper, wherever the innkeeper elects to physically store the property, whatever its character, so long as it is not the type of property for which special statutory provision exists." n25 Although property of the guest retained within the building itself was always intended to be subject to the benefits of the common law rule, it is now customarily applied to automobiles and their contents when dominion and control over them has been entrusted to the innkeeper. n26 It may be necessary for the garage area to be a part of the hotel. n27 Where the vehicle was damaged through negligent operation by a hotel employee, "*infra hospitium*" has been applied. n28 The theft of a tote bag from the possession of guests while they were entering a livery cab parked in the hotel's driveway entrance has been said to occur while the bag and its contents were infra hospitium. Although the hotel retained no direct control over the bag and its contents, issues of fact arose as to whether the hotel had provided adequate security and whether the hotel knew of prior third-party criminal activity in the driveway area. n29

COMPUTER-ASSISTED RESEARCH

LEXIS: infra hospitum
innkeeper! w/15 obligat! w/30 loss! or injur!

FOOTNOTES:
(n1)Footnote 24. "It was the rule at common law that an innkeeper was absolutely liable as an insurer of the property of his guest when brought infra hospitium, whether such loss arose by reason of burglary, theft, fire or negligence, unless the loss was occasioned by the neglect or misconduct of the guest, an act of God or the public enemy." *Davidson v. Madison Corp., 247 N.Y.S. 789, 795 (1931), aff'd 177 N.E. 393 (1931). See Hotel Corp. of Am. v. Travelers Indem. Co., 229 A.2d 158 (D.C. 1967)* where the common law doctrine of *infra hospitium* was applied to the loss of a fur coat from the guest's assigned room.

(n2)Footnote 25. *Shepherd Fleets, Inc. v. Opryland USA, Inc., 759 S.W.2d 914, 923 (Tenn. App. 1988).* The court referred to *Dickerson v. Rogers, 23 Tenn. 179 (1843),* as imposing liability on an innkeeper for a fatal injury to a horse cause by a defect in the stable maintained by the inn for its guests.

(n3)Footnote 26. *See Governor House v. Schmidt, 284 A.2d 660 (D.C. 1971),* where the hotel was found to be a virtual insurer of the guest's property under the theory of *infra hospitium*. The items disappeared from the guest's vehicle while it was parked in a garage that was operated by a parking management company for the hotel. The garage was physically a part of the hotel structure and access was obtained only through the hotel lobby or the driving ramp.

(n4)Footnote 27. *Hallman v. Federal Parking Servs., 134 A.2d 382 (D.C. 1957),* where personal property of a guest left in his car in plain sight was removed by break in after the car had been parked by a bellboy in an independently managed lot. Since the lot was not an integral part of the hotel, the guest was denied the benefit of the *infra hospitium* rule and limited to the less favorable rules arising out of bailment.

(n5)Footnote 28. *Merchants Fire Assur. Corp. of N.Y. v. Zion's Secs., 163 P.2d 319 (Utah 1945).* The court states that "the goods of a guest to be "infra hospitium' and render the innkeeper liable for its loss need not always be within the walls of the inn. (cit. omitted) It is sufficient if the goods are placed where the hotel by its acts has directed the goods to be placed." *163 P.2d at 320.*

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.05

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.05 Modern Limitations on the Innkeeper's Liability.

[Go To Supp]

(a) In General.

The broad innkeeper's liability for loss of or damage to the property of travelers that existed at common law has been modified by statute to some extent in every jurisdiction. n30 Although it is rare for a state to mandate that an inn, hotel or motel provide a place of safekeeping for the valuables of its guests, this requirement is occasionally imposed. n31 Statutes that set liability limits on loss to the establishment serve as an encouragement to the proprietor not subject to a mandate to provide such service. n32 These limits may relate to liability for deposited items and to items retained by the guest. n33 Other statutes seem more intent on compelling the establishment to keep the sleeping rooms secure. n34 Where a hotel furnished the room number of a female guest to her inquiring estranged husband and the husband assaulted a man found in her room, the hotel did not breach any duty to the injured party. Even if a duty to protect the guest's anonymity existed, the attack by her husband, who had identified himself as her brother, was not foreseeable. n35 A female guest was allowed to recover damages against a hotel for injuries suffered in a rape that occurred in the guest room. The hotel security guard saw the unknown male on a stairway and made no inquiry; the self-closing hinges on the hotel room door were defective and the lighting in the area could be found to be inadequate. An innkeeper has a duty to exercise reasonable care to protect its guests, while they are on the premises, from reasonably foreseeable criminal acts of intruders. n36 The wife of a controversial speaker who was shot and killed while giving a speech in the hotel banquet room stated a cause of action against the hotel based upon its failure to provide proper security. A few hours before the speech, the hotel received a telephone call from a man who refused to identify himself inquiring whether metal detectors would be in place during the speech. Hotel security and the sponsor of the speaker were promptly informed of the call. n37 Where hotel guests were attacked in its parking lot by unknown persons, it was for a jury to determine whether a series of prior incidents in the parking lot should have placed the hotel on notice of a dangerous condition of serious crime in the area and on the premises with the resultant risks involved. n38 The duty of a hotel to keep its premises secure from foreseeable criminal activity did not extend to a prospective patron assaulted on a public sidewalk under the hotel canopy as he was about to enter the hotel caf'e. n39 "An innkeeper owes a duty of ordinary care to its guests, invitees, and patrons. This duty is defined as that standard of care exercised by an ordinary innkeeper under the circumstances." n40 Hotel had no duty to protect a bystander from assault on hotel grounds by a hotel patron because the victim was not an invitee of the hotel and the assault was not foreseeable. n41 Such limits are unlikely to discourage patronage by most guests who may be happy that the additional security exists.

(b) Notice to Guests.

Notice is an important component in the application of the rules establishing the extent of the innkeeper's liability. In some jurisdictions, a guest who is given proper notice of the availability of a secure place for the safekeeping of valuables and thereafter ignores it, is barred from recovery against the establishment for the loss, irrespective of its n42 More frequently, compliance with the notice requirements will not absolve the hotel from loss caused by its own fault or the wrongdoing of its employees. n43

Although statutory requirements for the delivery of notice vary considerably, it is quite common to require a posting in the assigned sleeping room. Alternative locations such as the hotel office, the lobby or other conspicuous places in the public rooms may suffice. n44 Most jurisdictions require posting in the assigned room and in the public areas as well. n45 Where the posting requirements are not complied with, the hotel is denied the benefits of utilizing the liability limits. n46 Since these statutes are in derogation of the common law, courts tend to require strict compliance. n47 Appending the required notice to a paper disclosing unrelated information is not certain to be adequate. A requirement that the notice be placed in a conspicuous position is a requirement that the notice itself be conspicuous. To precede it with diverting material may result in a failure by the guest to read it. n48 A hotel that fails to provide to the guest all notice required by statute is likely to remain subject to the nearly absolute liability of the common law. n49 Knowledge by the guest that a place of safekeeping was available is not equivalent to statutory compliance. n50 When the hotel complies with the statute, its limited liability is not restricted to property left unprotected in the room. Usually there is no requirement that the loss occur from the assigned room. Robberies causing loss to the guest in any part of the hotel are likely to be covered. n51

Failure to comply with the statutory notice requirements may deprive the hotel of liability limits even when loss occurs through theft from a hotel employee after the item was deposited for safekeeping. n52

(c) Statutory Provisions of Individual States.

Every state has enacted statutory provisions modifying the broad liability imposed upon the innkeeper at common law. The most common provisions relate to monetary limits on loss sustained by a guest who deposits valuables in a place of safekeeping provided by the inn, hotel or motel, unless the parties make a written agreement to the contrary. Where the guest disregards the notice relating to the place of safekeeping, responsibility of the hotel for loss of the guest's valuables is extinguished except under narrow circumstances (e.g., loss is caused by the fault or wrongdoing of the establishment). Separate monetary limits on loss frequently apply to trunks, valises, packages, other miscellaneous personal belongings, or merchandise samples. Less frequently, state legislatures have enacted special provisions relating to loss by fire and loss to items while in transit to or from the hotel. Since the variances within the jurisdictions are so great, the statutes of each state are separately set forth in summary form.

Alabama: Safekeeping. Every hotel must provide a safe depository for valuable articles of its guests. Posting of notice, including limitations of liability, is required in the hotel lobby and the assigned room. n53 Where the hotel complies, it has no liability for loss or damage to the valuables for any cause unless the items are left in the safe depository. A liability limit of $300 exists for valuables deposited unless a contract between the parties provides otherwise. The hotel

has no obligation to pay more than the actual value of the items regardless of stated value and no obligation to assume a liability in excess of $5,000 irrespective of stated value or actual value. n54 A hotel may contract to vary its liability for the safety of the goods of its guests. n55 Where no variation or modification has occurred, the maximum liability of the hotel is set at $5,000 for all items except baggage. n56

Baggage. Every hotel is required to provide storage space for baggage brought by all users of the hotel, including registered guests. Notice must be displayed in the lobby. Where the space is provided and notice is given, the hotel is not liable for any loss to baggage unless it is taken from the storage space or the assigned room. Liability is limited to $500 unless a contract provides for a greater amount. n57 Baggage provisions include all wearing apparel and merchandise samples but exclude "valuables." n58

Definitions of "hotel," "safe depository" and "valuables or valuable articles" are provided. n59

Alaska: Safekeeping. When the hotel or boarding house provides a place for safekeeping and notice has been posted, the operator has no liability for items of the guests which were not deposited. n60 The operator is not obligated to receive items valued at more than $1,000. If such items are deposited, the operator is not liable without a written agreement assuming additional liability and such responsibility is limited to losses occurring through the negligence of the operator or its agent. n61

Baggage. Liability of the hotel or boardinghouse is limited to losses caused by its negligence or that of its agents. n62 Property left behind or sent in advance may be deposited with a storage company or sold at public auction at least four months after departure of the guest or receipt of the property. n63

Definitions of "guest," "hotel or boardinghouse" and "operator" are provided. n64

Arizona: Safekeeping. When an innkeeper provides a fireproof safe and notice is posted in the assigned room or the office of the inn, no liability exists for loss or injury to items of small size or unusual value except when caused by the act of the innkeeper. n65 The innkeeper may refuse to receive items valued at more than $500. Unless there is a written agreement to the contrary, liability of the innkeeper is limited to $500 except for loss or injury caused by its own fault or negligence. n66

Baggage. Liability is limited to $100 for property kept in a storeroom or baggage room and to $75 for property kept in a parcel or check room. n67

Merchandise Samples or Displays. No liability exists unless the guest gives written notice of the possession or display. Where notice is given, liability is limited to $500 unless caused by the fault or negligence of the innkeeper. n68

The statute applies to a hotel, boarding house, lodging house, apartment house, motel and auto camp. n69

Arkansas: Safekeeping. An innkeeper or hotel keeper who maintains a safe or vault and gives proper notice thereof is not liable for loss or injury to items not delivered for safekeeping unless caused by its negligence or that of its employees. n70 There is no obligation to receive for safekeeping items valued at more than $300, and liability is limited to that amount unless the parties agree to the contrary. n71

Baggage. Liability of the operator is restricted to that of a depository for hire with liability limited to $300 for each trunk and its contents, $100 for each valise and its contents, $25 for each package and its contents and $100 for miscellaneous effects, including wearing apparel and personal belongings. An additional liability may be expressly assumed. Liability for loss due to fire, explosion or vehicle damage is limited to that intentionally or negligently caused by the innkeeper. No liability exists for acts of God. n72

Baggage or other property not claimed by departed guests or such items forwarded in advance of becoming a guest may be held by the innkeeper at the owner's risk. n73

California: Safekeeping. An innkeeper who keeps a fireproof safe and gives notice thereof by posting in the office or assigned room is not liable for articles of unusual value brought by the guest who does not deposit them for safekeeping, except when the loss is caused by the innkeeper's own acts. Liability is limited to $500 for all property of the guest unless a receipt is provided. n74

Baggage. Liability of the innkeeper is that of a depository for hire with a limit of $1,000 in the aggregate. Unless a greater liability is assumed in writing, liability limits are $500 for each trunk and its contents, $250 for each valise and its contents, $250 for each package and its contents and $250 for all other personal property. n75

The statutes specifically include an innkeeper, hotelkeeper, operator of a licensed hospital, rest home or sanitarium, boarding house, housekeeper or lodging house keeper. The baggage provisions also relate to a furnished apartment house keeper and a furnished bungalow court keeper. n76

Colorado: Safekeeping. Any hotel keeper or innkeeper who provides a safe or vault and posts notice thereof in the assigned room and in the public area is not liable for loss sustained by the guest unless the valuables were deposited for safekeeping. Necessary baggage is excluded. For deposited articles, liability does not exceed the declared value at the time of deposit. n77 There is no obligation to receive items valued at more than $5,000 and liability is limited to that amount unless an agreement to the contrary is made. n78

Baggage. Unless an agreement for a greater liability is made, the hotel keeper or innkeeper is limited in liability to $200 for loss of articles left in the assigned room. n79 There is no liability for loss of items when the room is left unoccupied and unlocked, n80 or for items not left in the assigned room nor in the custody of the inn or hotel. n81 Property of a departed guest accepted without charge by the inn or hotel is held as a gratuitous bailment with a liability limit of $50. n82

Unless the innkeeper, hotel keeper or its employees cause the loss through negligence, there is no liability for damage caused by fire, any unforeseen causes or by inevitable accident. n83 Liability is never greater than the actual loss sustained. n84

Connecticut: Safekeeping. The proprietor of an inn or hotel who maintains a safe and posts notice thereof in the office or assigned room is not liable for more than $500 for items delivered unless a greater value is declared and a receipt for the greater value is given. Where the guest fails to utilize the safe, with proper notice given, the proprietor is not liable for loss to the guest of money, jewelry or other valuables. n85

Baggage. Liability for property deposited in a baggage room or checkroom is limited to $350. For property taken from the assigned room, a limit of $1,000 applies. For other losses, liability is limited to $1,000 where damage is caused by the proprietor or an employee. If none of the above circumstances occurred, there is no liability. n86

Delaware: Safekeeping. A hotel, inn or boarding house may avoid common law liability for loss to the valuables of its guests by providing a safe or vault and placing notices thereof in the assigned room and in the public parts of the establishment. n87

Baggage. No statutory provision was found.

District of Columbia: Safekeeping. An establishment which provides lodging to transient guests may avoid liability for loss to the valuables of its guests by providing a suitable place for safekeeping of personal property (excluding automobiles) and posting notices thereof in the assigned room and the public parts of the establishment. n88 A guest

failing to utilize this service is barred from recovery except for property usually retained by a guest in the room. Where loss occurs pertaining to items left for safekeeping, the guest may recover fair market value up to a limit of $1,000. n89

Baggage. Where the establishment maintains a checkroom and posts proper notices, liability for damage to personal property may be limited to the lesser of fair market value or $200, except when loss is caused by the establishment or its employees. n90

Florida: Safekeeping. The operator of a public lodging establishment has no obligation to accept for safekeeping any valuables of a guest. If such items are accepted, liability is limited to loss occurring through the negligence of the establishment not to exceed $1,000 if a receipt setting forth that limitation is delivered to the guest. n91

Baggage. Liability is restricted to losses occurring through the negligence of the establishment with a maximum of $500. This limit may be increased to $1,000 if the guest files an inventory, including values, and the operator is given an opportunity to inspect the items and compare them with the inventory. n92

Georgia: Safekeeping. An innkeeper may provide a place of safekeeping for the valuables of a guest and, with proper posting of notices, avoid liability for items not placed for deposit. Liability for items deposited is limited to $750 unless the guest possesses a receipt for the items. n93 Where the items are to be placed in the hotel safe, a limit of $1,000 applies unless the parties contract for a greater liability. n94

Baggage. Deposit of property in designated public rooms or in an assigned guest room is a delivery to the innkeeper. n95 If loss occurs through theft, the innkeeper is liable as an insurer of the stolen property. n96 Liability of the innkeeper is limited to $1,000 unless an inventory with values is provided to the innkeeper. n97

Hawaii: Safekeeping. A hotel keeper may avoid or limit liability for loss to the valuables of a guest, not caused by the fault of the hotel keeper, by providing a safe or vault and posting a notice thereof in the assigned room and in a public room. Liability is limited to $500 for deposited items if a receipt so stating is provided to the guest. No liability exists for items not deposited. These limits do not apply when the hotel is at fault. n98 Where loss is sustained to an item placed in a security box within the guest's assigned room, there is no liability unless loss was caused by the fault of the hotel. n99

Baggage. No liability exists except when loss is caused through the fault of the hotel. Where the item has been specially intrusted to a hotel employee, liability is limited to $500 unless there is an agreement to the contrary. n100

Where loss to any item is caused by fire or by any other cause or force over which the proprietor has no control, the hotel keeper is responsible to provide ordinary and reasonable care. n101 Rules for valuation of property are set forth. n102

Idaho: Safekeeping. Although the hotel keeper has no obligation to accept valuables for safekeeping, if they are accepted, liability is limited to loss caused by the negligence of the proprietor, not to exceed $1,000, unless a greater liability is assumed. n103

Baggage. Liability for loss of clothing, goods or other property exists only when caused by the innkeeper's negligence. Recovery is limited to $500 unless the guest files an inventory, with values, and an opportunity to inspect and compare is presented. With such an inventory, the maximum liability increases to $1,000 or a higher amount if the hotel keeper agrees in writing. n104

Definitions are provided for "guest," "hotel" and "hotel keeper." n105

Illinois: Safekeeping. Where a hotel provides a safe or vault and posts 10 notices thereof, no liability exists for loss to

the valuables of a guest who fails to deliver the property for safekeeping except, when the loss is caused by the hotel or its employees, a liability limit of $250 applies. Where loss occurs to property delivered to the safe or vault, maximum liability is $500 unless the proprietor agrees to a higher limit. n106

Baggage. Excluding merchandise samples or inventory for sale, liability exists only when loss occurs through the fault of the hotel or its employees with a maximum limit of $250. Where property is placed in a check room, the liability limits are for a trunk and its contents $250, a valise and its contents $75, a package and its contents $25 and all other personal belongings $75. n107 The same monetary limits apply to losses occurring to property being transported to or from the hotel in a company vehicle. n108

For property left by a departed guest or forwarded to the hotel by an expected guest, the hotel has the liability of a gratuitous bailee not to exceed $100 unless a greater liability is assumed. n109

Merchandise Samples or Inventory for Sale. No liability exists, irrespective of the cause of the loss, unless the guest has given written notice of the presence of the merchandise and its value and has received an acknowledgement thereof from the hotel. In such case, liability is limited to $250 unless a greater liability is assumed in writing. n110

Indiana: Safekeeping. Where the hotel provides a safe for the valuables of guests and notices thereof are posted in the assigned room and public parts of the hotel, a guest who fails to utilize such service may not recover against the hotel for loss to such items even if caused by the neglect of the hotel. Liability for loss to items delivered for deposit in the safe is limited to $600, regardless of cause, unless a greater liability is assumed in writing. n111

Baggage. Excluding merchandise samples and inventory for sale, liability for loss to personal property of a guest is limited to $200, regardless of cause. The same limit applies to property placed in check rooms. n112

For loss to property left by a departed guest, the hotel has the liability of a gratuitous bailee, not to exceed $100. n113 For loss to property of a guest while it is in transit to or from the hotel, liability is limited to $200 unless prior written notice of value is given. Such notice will increase the liability limit to $400 unless a greater obligation has been assumed. n114

Merchandise Samples or Inventory for Sale. No liability exists, irrespective of the cause of the loss, unless the guest has given written notice of the presence of the merchandise and its value and has received an acknowledgement thereof from the hotel. In such cases, liability is limited to $400 unless a greater liability is assumed in writing. n115

"Guest" is defined as including a transient guest, permanent guest, tenant or boarder. n116

Iowa: Safekeeping. Where the inn or hotel provides a safe or vault and posts notices in the assigned room and in the public parts thereof of the hotel, liability for loss is limited to $100. Proper locks on the assigned rooms are also required. n117 Where the guest has offered to deliver the item for deposit in the safe and the innkeeper has refused to accept it, the liability limit is inapplicable. However, the hotel is not obligated to accept items valued at more than $500. n118

Baggage. Liability for property of the guest placed in the hotel's care is that of a depository for hire. n119 Maximum liability limits are for a trunk and its contents $250, a valise and its contents $150, a package and its contents $50 and miscellaneous effects $100. n120 Where baggage has been left by a departing guest or forwarded by a prospective guest, the hotel may hold such items at the risk of the owner. n121

Kansas: Safekeeping. Liability of a hotel or motel for loss of valuables of a guest delivered for safekeeping is limited to $250 unless a larger amount is agreed upon. There is no liability where such items have not been delivered to the facility together with an itemized list. n122

Baggage. Liability for loss to baggage and other personal effects is limited to $250 or is excluded under the same circumstances. n123

Merchandise Samples or Inventory for Sale. Liability for loss is limited to $250 after notice and receipt by the hotel of an itemized list. No liability exists otherwise. A hotel is not obligated to accept guests bringing merchandise or samples. n124

A similar limitation of $250 applies to other property of a guest. n125 Definitions of "hotel" and "motel" are limited to establishments providing four or more guest rooms. n126

Kentucky: Safekeeping. No liability for loss of valuables exists where the guest fails to deliver the items to the hotel for safekeeping regardless of the cause. Notice must be posted in a public place. Where valuables are delivered, liability is limited to $300 unless modified by an agreement in writing. n127

Baggage. Liability for loss to personal property is limited to $100 unless caused by the negligence of the hotel or its employees. n128

Merchandise Samples and Inventory for Sale. Liability is limited to $200 unless a greater liability is assumed. n129 The guest must provide notice to the hotel and obtain a written acknowledgement of receipt of notice. n130

Liability for loss to property left by a departed guest is that of a gratuitous bailee and is limited to $100. n131 Liability for loss to property of a guest while in transit to or from the hotel is limited to $100 if no notice is given or $200 when written acknowledgement of receipt of notice of value is provided. A written agreement may establish a greater liability. n132 No liability for loss by fire exists unless the loss is caused by the negligence of the hotel or its employees. n133

Louisiana: Safekeeping. Every hotel or inn is required to provide a safe deposit for valuable articles of guests. n134 No liability exists for valuables not deposited by the guest, despite posting of notice thereof, except for loss caused by fraud or negligence of the hotel or its employees. n135 A liability limit of $500 applies except when increased by a written agreement, or when no safe deposit facility is provided, or when proper posting of notices did not occur or when the guest utilizes the safe deposit facility. n136

Baggage. The hotel is liable for stolen or damaged effects of a guest, whether caused by servants, agents or strangers. n137 The liability limit of $500 applies to loss of cash, jewelry, rare art items, furs, cameras or negotiable instruments included in the effects. n138

Maine: Safekeeping. An innkeeper who provides a metal safe and maintains suitable locks on sleeping rooms is not liable to a guest for loss of valuables if proper notice is given. Liability for loss to items accepted for deposit exists when caused by theft or negligence of hotel employees or when custody is refused by the hotel. There is no obligation to receive items valued in excess of $300. If items of greater value are accepted liability is limited to $300. n139 A greater liability may be assumed in writing. n140 A receipt for property delivered for safekeeping must be provided to the guest in order for the hotel to avoid liability. Where loss is caused by negligence of the hotel, its liability continues. n141

Baggage. For items placed under the hotel's care but not deposited for safekeeping, the liability of a depository for hire applies with limits for loss set at $150 for each trunk and its contents, $50 for each suitcase and its contents, $10 for each package and its contents, and $50 for miscellaneous effects unless a greater liability is assumed. No liability exists for loss by fire not caused by negligence of the hotel or its employees. Baggage or other property of departed guests or anticipated guests may be held by the hotel at the owner's risk. n142

Maryland: Safekeeping. A hotel is not liable for loss of valuables of a guest when the guest declines to use the safe provided, after proper notice, and loss is not caused by collusion or negligence of the hotel. n143 A limit of $300 applies to liability for losses unless the valuables are disclosed to the hotel and a greater value declared. n144 A hotel need not accept items valued at more than $1,000. n145 Maximum liability of $1,000 applies to loss of valuables irrespective of whether they are accepted for safekeeping. n146

Baggage. Liability for loss to property other than valuables is limited to $300 if taken from the assigned room or a baggage room. n147 For such property taken from check rooms, a $75 limit applies if proper notice was given. n148

No liability exists for fire loss except when caused by the negligence of the hotel or its employees. n149 A "valuable" is defined as money, jewelry, securities or plate. n150

Massachusetts: Safekeeping. An innkeeper is liable for loss to valuables of a guest deposited for safekeeping not to exceed $1,000 unless a greater amount is agreed upon. Where valuables are not deposited, no liability exists.

Baggage. Liability for loss is limited to $300. n151

For loss caused by fire or overwhelming force, the innkeeper is liable only if ordinary and reasonable care is not provided. n152

Michigan: Safekeeping. A hotel providing a safe and secure lock on rooms is not liable for loss of valuables unless the hotel has refused to accept the guest's request to deposit the articles. Proper notice of the service must be given. Liability exists for any loss caused by theft, or negligence of the innkeeper or its employees. n153

Baggage. The liability of a depository for hire applies. Unless there is a written agreement to the contrary, liability is limited to $150 for each trunk and its contents, $50 for each suitcase and its contents and $10 for each package and its contents, with an overall limit of $250. n154

Minnesota: Safekeeping. Where an innkeeper provides a safe and proper notice is given, no liability exists for loss to items not deposited by the guest for safekeeping. There is no obligation to accept items valued in excess of $1,000. Where the hotel has refused the guest's offer of deposit, the liability limit of $1,000 applies. n155 For large items of special value, the innkeeper is not liable unless the items are accepted by the hotel with an inventory including values. When accepted, usual valuation rules apply. n156

Baggage. Liability is limited to $1,000 for loss of property from the assigned rooms. n157 No liability exists for loss occurring elsewhere unless a receipt evidencing delivery is presented to the guest. In such case, the limit of $1,000 applies. n158

No liability exists for loss to valuables or other personal property left by departed guests or received from prospective guests. n159 The valuation limits do not apply to property injured by the innkeeper negligently or intentionally. n160

Definitions are provided for "guest," "hotel," "innkeeper," "transient occupancy" and "valuables." n161

Mississippi: Safekeeping. An innkeeper who provides a safe for valuables and suitable locks on assigned rooms is not liable for loss to valuables unless the guest's offer of deposit has been refused. Maximum liability for items received is set at $500 and no obligation exists to accept items of greater value. n162

Baggage. Liability of a depository for hire is imposed for loss to items other than valuables. Maximum limits are set at $100 for each trunk and its contents, $25 for each valise and its contents and $5 for each package and its contents unless a greater liability is assumed in writing. Where loss occurs through theft or negligence of the hotel or its employees, the

limits do not apply. n163

Missouri: Safekeeping. An innkeeper who provides a safe for valuables and gives proper notice thereof is not liable for loss of those items unless they have been refused for deposit. n164 Unless a greater liability is assumed, a limit of $200 applies for items actually delivered. The limit does not apply when loss is caused by willful negligence or wrongdoing of the innkeeper.

Baggage. Baggage is subject to the same rules as money or jewelry. For other property, actual delivery and a receipt are not required. n165

There is no liability for any loss caused by fire not intentionally produced by the innkeeper or the innkeeper's servants. Liability for loss due to theft by an innkeeper or its employees is expressly created.

Merchandise Samples and Inventory for Sale. No liability exists unless notice of the merchandise is given. The innkeeper is not compelled to accept such a guest. n166

Montana: Safekeeping. An innkeeper who keeps a fireproof safe and gives notice thereof is not liable for loss of the guest's valuables not deposited except when caused by the innkeeper's own acts. n167

Baggage. Liability, not to exceed $500, exists for property placed in the innkeeper's care unless loss is caused by irresistible superhuman cause, a public enemy, negligence of the owner or the owner's invitee. n168 Absent negligence on the part of the innkeeper or the innkeeper's employees, no liability exists for loss or wearing apparel, goods or personal effects. n169

Where loss to the property of the guest is caused by fire resulting from the negligence of the innkeeper or the innkeeper's employees, liability is expressly imposed. n170

Nebraska: Safekeeping. No liability exists for loss of valuables of a guest when the hotel maintains a safe, provides rooms with suitable locks and gives notice of the statute when the guest declines to utilize the service. An exception exists if the hotel denies the request of the guest for usage. Where property is accepted, liability exists only when loss is caused by the negligence or dishonesty of the proprietor. There is no obligation to accept property valued at more than $500. That limit applies to all property accepted unless a greater amount is agreed upon in writing. n171

Baggage. Where property is placed in a check room, liability is limited to $200 for a trunk and its contents, $75 for a valise and its contents, $25 for a package and its contents and $75 for miscellaneous effects. A greater liability may be assumed in writing. n172

Liability for items of former guests who have departed for more than 48 hours is that of a gratuitous bailee and recovery is limited to $250 unless a greater liability is assumed. n173 For items being transported to and from any hotel, a limit of $500 applies unless a greater value is declared by the guest. n174 For loss or damage to any property brought to the hotel, arising from the negligence of the proprietor, a limit of $1,000 applies unless a greater value was declared by the guest. n175

Definitions are provided for "hotel," "motel," "rooming house," "boarding house," "apartment house" and "guests." n176

Nevada: Safekeeping. A hotel that provides a fireproof safe and gives notice thereof is not liable for loss of valuables by a guest who fails to use such service. An owner is not obligated to receive items valued at more that $750 or those too large for the safe. n177 Liability is limited to $750 unless a greater amount is assumed in writing. n178

Baggage. Liability for items lost or damaged in guest rooms exists only when there is gross neglect by the proprietor. n179 The above limit of $750 also applies.

New Hampshire: Safekeeping. A hotel keeper is required to provide a safe for deposit of a guest's valuables. If a guest fails to utilize the service after receipt of notice, the hotel keeper is not liable for any loss to the valuables if the hotel keeper is shown to be free of fault or negligence or that the guest caused the loss. For valuables deposited by the guest, liability of the hotel is limited to $1,000.

Baggage. Liability for loss from assigned rooms exists unless the hotel keeper proves freedom from fault or negligence. Maximum liability is $300. For loss of property outside of the assigned room, the hotel keeper is not liable for said property unless as specially entrusted to the hotel's care and custody. n180

There is no liability for damage to guests' property caused by fire unless it was caused by the hotel keeper's negligence. n181

New Jersey: Safekeeping. A guest who fails to utilize a safe provided for deposit of valuables after receipt of notice thereof, has no right of recovery from the hotel for loss sustained. Where valuables are delivered for deposit, liability is limited to $5,000 unless a larger amount is agreed upon. The guest must prove the amount of loss. n182

Baggage. No liability to the guest exists where the hotel is without fault or negligence. Liability is possible for loss of property taken from an assigned room or when the property has been specially entrusted. The guest must prove the amount of loss and a liability limit of $1,500 applies. n183

The hotel keeper is required to provide ordinary and reasonable care for all items in the hotel's custody and is not liable for loss from any force over which the hotel has no control. n184 Definitions of "hotel," "guest" and "valuables" are provided. n185

New Mexico: Safekeeping. A guest who fails to utilize a safe provided for deposit of valuables, after receipt of notice thereof, has no right of recovery from the hotel for loss sustained.

Baggage. Hotel keepers are liable to a guest for loss to property (including valuables) when caused by their theft or negligence with a limit of $1,000. n186

New York: Safekeeping. A hotel that provides a safe or safe deposit boxes and gives public notice thereof is not liable for any loss to valuables of its guests not deposited for safekeeping. An establishment is not required to accept property valued at more than $1,500 and liability is limited to that amount unless a written agreement to the contrary is made. n187

Baggage. Liability for loss to wearing apparel or other property from the assigned room, lobby or hallway is limited to $500 unless caused by negligence of the hotel. Liability for loss to articles deposited in a baggage room is limited to $100 unless a written receipt showing a larger value is issued by the hotel. In such case, liability is limited to $500 except when loss is caused by the hotel's negligence. For parcels deposited in a checkroom without charge, the usual $200 liability limit for loss, exclusive of that caused by the hotel's negligence, may be raised to $300. n188 Loss through fire produces no liability except when the hotel is at fault. n189

For loss of an animal destroyed by fire, liability is limited to $300 unless a larger amount is agreed upon. n190 For property damaged or lost while in transit to and from the hotel, a liability limit of $250 applies unless it is raised to a maximum of $500 through use of a receipt. These limits do not apply when the hotel is at fault. n191

North Carolina: Safekeeping. An innkeeper must accept for safekeeping valuables of a guest in an amount not

exceeding $500 and may refuse to receive items of greater value. No liability exists for valuables not so deposited. n192

Baggage. Liability for loss or damage exists only in cases resulting from a failure to exercise reasonable care. Such liability is limited to $100 unless a list with values is provided to the innkeeper. Upon receipt of the list, the liability limit does not apply. n193

No liability exists where loss occurs through fire not caused by the innkeeper's negligence or resulting from any force over which the innkeeper has no control. n194

North Dakota: Safekeeping. A hotel keeper who provides a safe, proper lock on the sleeping rooms and public notice of the statute is not liable for injury to a guest's property not deposited unless the guest has offered to make the deposit and the hotel has refused it. The hotel is not obliged to accept property valued at more than $300 and liability is limited to that amount for accepted items. n195 A greater liability may be agreed upon. The limits do not apply when loss is caused by theft or negligence of the hotel keeper. n196

Baggage. Property placed in the custody of the hotel, other than in the assigned rooms, is held at the owner's risk except for loss through negligence of the hotel. n197 Liability for property placed in the assigned rooms is that of a depository for hire subject to limits of $150 for each trunk and its contents, $10 for each package and its contents, and $50 for other miscellaneous effects. A greater liability may be assumed in writing. No liability exists for fire not caused by the hotel keeper. n198 Property of a departed guest or a prospective guest may be held by the hotel at the risk of the owner. n199

Ohio: Safekeeping. A hotel keeper who provides a safe, proper lock on sleeping rooms and public notice of the statute is not liable for injury to a guest's property not deposited unless the guest has offered to make the deposit and the hotel has refused it. n200 No hotel keeper is obligated to accept items valued at more than $500 and that limit applies to articles received except when loss occurs through theft or negligence of the innkeeper. n201

Baggage. Liability for other property placed in its care is that of a depository for hire. Unless greater amounts are assumed, liability is limited to $150 for each trunk and its contents, $50 for each valise and its contents and $10 for each package and it contents. n202

Oklahoma: Safekeeping. Where a hotel provides a place of safekeeping for valuables of a guest and provides proper notice of the fact, no liability exists where the guest has failed to deposit the property regardless of the cause of the loss. A hotel is not required to accept items valued at more than $300, and liability is limited to that amount for items received unless a written agreement is made to increase liability. n203

Baggage. Liability for loss irrespective of cause is limited to $100 for each trunk and its contents, $75 for each valise and its contents, $25 for each package and its contents and $50 for miscellaneous effects, with an overall limit of $250, unless a greater amount is agreed to in writing. Liability for property of departed guests is that of a gratuitous bailee and is limited to $50. Liability limits for baggage in transit are the same as those applicable to baggage in the hotel. n204 Definitions of "apartment hotel" and "guest" are provided. n205

Oregon: Safekeeping. A hotel keeper who provides a safe, proper lock on the sleeping rooms and proper notice of the statute is not liable for injury to a guest's property not deposited unless the guest has offered to make the deposit and the hotel has refused to accept it. The hotel is not obliged to accept articles valued at more than $300, and liability is limited to that amount for accepted items. A greater liability may be agreed upon. The limits do not apply when loss is caused by theft or negligence of the hotel. n206

Baggage. No liability exists unless baggage or other property is delivered to the hotel for safekeeping or loss is caused by the negligence of the hotel. n207 For other property, the hotel has the duty of a depository for hire with liability limits of $150 for each trunk and its contents, $50 for each valise and its contents, $10 for each package and its contents

and $50 for other miscellaneous effects unless a greater liability is assigned in writing. n208

Baggage or other property left by departed guests or forwarded by prospective guests may be held at the risk of the owner. n209 In cases where liability is imposed on a hotel, other than those specifically noted, liability is limited to $50 except when caused by theft or gross negligence of the hotel. n210

Pennsylvania: Safekeeping. A hotel keeper who provides a safe, a proper lock on the sleeping rooms and proper notice of the statute is not liable for injury to a guest's property not deposited unless the guest has offered to make the deposit and the hotel has refused to accept it. The hotel is not obliged to accept property valued at more than $300 and liability is limited to that amount for accepted items. n211 A greater liability may be agreed upon. The limit does not apply when loss is caused by theft or negligence of the hotel. n212

Baggage. No liability exists unless baggage or other property is delivered to the hotel for safekeeping or loss is caused by the negligence of the hotel. n213 For other property, the hotel has the duty of a depository for hire with liability limits of $150 for each trunk and it contents, $50 for each valise and its contents, $10 for each package and its contents and $50 for other miscellaneous effects unless a greater liability is assumed in writing. Baggage or other property of departed guests or prospective guests may be held at the risk of the owner. n214

Rhode Island: Safekeeping. A hotel that provides a place of safekeeping for valuables of a guest and gives public notice thereof is not liable for loss of property not deposited. Where property is delivered, liability is limited to $500 unless a greater sum is agreed to in writing. n215

Baggage. No liability exists for items, other than valuables deposited, unless loss occurs through negligence of the hotel keeper. For items not within the assigned room, no liability exists unless they were held in the custody of the hotel. n216

South Carolina: Safekeeping. A hotel that provides a safe for valuables of a guest and gives notice thereof in the assigned room is not liable for loss of property not deposited. When property is delivered, liability exists only when negligence of the hotel keeper caused the loss and a limit of $2,000 applies.

Baggage. When notice is placed in the assigned room directing the guest to keep the door locked, no liability exists for loss caused by failure to comply with the notice. When the hotel keeper's negligence contributes to the loss, a $500 limit applies.

None of the limits apply when loss is contributed to by the wilfulness of the hotel keeper. A definition of "innkeeper" is provided. n217

South Dakota: Safekeeping. A hotel keeper who provides a safe, proper lock on the sleeping rooms and proper notice of the statute is not liable for injury to a guest's property not deposited unless the guest has offered to make the deposit and the hotel has refused to accept it. The hotel is not obliged to accept property valued at more than $300 and liability is limited to that amount for accepted items. n218 A greater liability may be agreed upon. The limit does not apply to any loss caused by theft or negligence of the hotel keeper. n219

Baggage. No liability exists unless baggage or other property is delivered to the hotel for safekeeping or loss is caused by the negligence of the hotel. n220 For other property, the hotel has the liability of a depository for hire, with liability limits of $150 for each trunk and its contents, $50 for each valise and its contents, $10 for each package and its contents and $50 for miscellaneous effects unless a greater liability is assumed in writing. n221 Baggage or other property of departed guests or prospective guests may be held at the risk of the owner. n222

Tennessee: Safekeeping. When a hotel provides a place of safekeeping for the valuables or merchandise samples of a

guest and posts notice thereof in the assigned room, the proprietor is not liable for any loss to such items sustained by a guest who fails to utilize such service. n223 Liability is limited to $300 unless a greater amount is agreed upon. n224

Baggage. When a storage place is provided and notice thereof is given, the hotel is not liable for loss to baggage not deposited in the storage place and not taken from the assigned room unless theft was perpetrated by an employee of the hotel. n225 Existing liability is limited to $150 unless a greater amount is agreed upon in writing. n226

Texas: Safekeeping. A hotel keeper who provides a safe, a proper lock in sleeping rooms and proper notice of the statute is not liable for more than $50 for injury to a guest's property not deposited unless the guest has offered to make the deposit and the hotel has refused to accept it. This limit does not apply when loss occurs through negligence or wrongdoing of the hotel. n227

Baggage. No basic provision concerning liability for baggage of guests has been found. Property of departed guests or prospective guests may be held at the risk of the owner. n228

Utah: Safekeeping. A hotel providing a safe for valuables of its guests and giving notice in the office and assigned rooms is not liable for items not deposited unless loss is caused by acts of its employees. For deposited items, liability is limited to $250 unless a receipt is given by the hotel and a higher value is declared by the guest. n229 The hotel is not required to accept property valued at more than $250, and liability is limited to that amount unless otherwise agreed. Liability exists when loss is caused by theft or negligence of the hotel keeper. n230

Baggage. Excepting valuables, the liability of a hotel for loss to property of guests placed in its care is that of a depository for hire. Liability is limited to $150 for each trunk and its contents, $50 for each valise and its contents, and $10 for each package and its contents, unless a greater liability is assumed. n231

Vermont: Safekeeping. A hotel keeper who provides a safe for the valuables of the guests and gives public notice thereof is not liable to guests for loss to property not deposited unless caused by lack of ordinary care and diligence. n232

Baggage. No liability exists unless loss is caused by lack of ordinary care and diligence of the hotel keeper. n233 The same standard applies to loss or damage to samples or when loss is caused by fire or overwhelming force. n234

A liability limit of $300 applies to all property unless the guest gives notice of the additional value and offers to pay any charges for care. n235

Virginia: Safekeeping. When the hotel posts a notice in the office and the assigned room stating that all valuables must be deposited in the office, no liability exists for loss to items not so deposited. There is no obligation to accept an item valued at more that $500.

Baggage. Liability for loss from the assigned room is limited to $300. The hotel has the duty to exercise due care and diligence to provide honest and competent employees and to take reasonable precautions to protect the property. n236 When the hotel provides suitable locks on the doors and windows and the guest fails to keep the opening secure, the hotel is not liable. n237 When loss occurs through fire or overwhelming disaster, liability is limited to $200 except when caused by negligence of the hotel. n238 No liability exists for items lost or damaged unless they are left in the assigned room or placed in the actual custody of an employee. n239

Washington: Safekeeping. When a hotel provides a safe for the valuables of its guests and gives public notice thereof, it has no liability for loss or damage to items not deposited regardless of the cause. No obligation is imposed to accept property valued at more than $1,000. A liability limit in that amount exists irrespective of the value of the property unless a greater amount is assumed in writing. Loss must be caused by theft or gross negligence of the hotel. n240

Baggage. Excepting valuables, liability is limited to loss caused by gross negligence, not to exceed $200 unless a greater amount is assumed in writing. Other limits include $150 for each trunk and its contents, $50 for each valise and its contents, $10 for each package and its contents and $50 for miscellaneous effects unless increased by written agreement. Property of departed guests and prospective guests may be held at the risk of the owner. In no event shall liability for loss of these goods received by the hotel exceed $100. n241

West Virginia: Safekeeping. A hotel is not liable for loss to the valuables of a guest provided that notice is posted in the assigned room, office and public reception room that such items must be deposited in the office and no such deposit is made.

Baggage. A liability limit of $200 is imposed when loss takes place from the assigned room. The hotel has the duty to exercise due care and diligence in providing honest employees and to take every reasonable precaution to protect the property of the guests. n242

Wisconsin: Safekeeping. A hotel that provides a safe for the valuables of its guests, proper locks on sleeping room doors and gives proper notice thereof is not liable for loss of valuables not tendered for safekeeping. There is no obligation to accept items valued at more than $300. Liability for loss is limited to that amount unless it is increased by written agreement. n243

Baggage. No liability exists for loss to property not delivered to the hotel for safekeeping unless caused by the negligence of the hotel. n244 No liability exists for fire loss unless intentionally caused by the hotel. When liability exists because loss was caused by theft or gross negligence of the hotel, limits include $200 for each trunk and its contents, $75 for each valise and its contents, $10 for each package and its contents and $50 for miscellaneous effects unless a greater liability is assumed. Property of departed guests or prospective guests may be held at the risk of the owner. n245

Wyoming: Safekeeping. A hotel keeper who provides a safe for the valuables of the guests and gives proper notice thereof is not liable for loss to undeposited items unless caused by the negligence of the hotel keeper. This exemption from liability does not apply to such valuables usually retained in the room or on the person of the guest. n246 The form of notice is set forth in the statute. n247

Baggage. No statutory provision.

FOOTNOTES:

(n1)Footnote 30. "In almost all jurisdictions, statutes modify or limit the strict common-law liability of the innkeeper for the loss of or damage to property of guests. Some statutes reduce the liability of an innkeeper for the loss of or damage to the property of a guest from that of an insurer to that of a depository for hire, while others limit the innkeeper's liability for loss or damage to a specified amount. Such statutes are in derogation of the common law, so they are strictly construed and cannot be extended in their operation or effect by a doubtful implication. However, the rule of strict construction may not be pushed to the extent of nullifying the beneficial purpose of the statute, or lessening the scope plainly intended to be given to it." 40A Am. Jur. 2d Hotels, Motels, and Restaurants § 157 (2003). *See* § 52.05 (c), *infra,* for details.

(n2)Footnote 31. For statutes requiring the hotel to provide a safe, *see, e.g.,* Ala. Code § 34-15-12; La. Civ. Code

Ann. art. 2968; N.H. Rev. Stat. Ann. § 353:1.

(n3)Footnote 32. *See, e.g.*, Cal. Civ. Code § 1860; Md. Code Ann., Bus. Reg. § 15-103; excluding liability where a guest declines to utilize such service.

(n4)Footnote 33. *See, e.g.*, Conn. Gen. Stat. Ann. § 44-1; Ga. Code Ann. § 43-21-10, 43-21-11.

(n5)Footnote 34. *Donaldson v. Y.W.C.A. of Duluth, 539 N.W.2d 789 (Minn. 1995)* (lodging house owed no duty to prevent resident from committing suicide), *reversing 526 N.W.2d 215 (Minn. App. 1995)* (which held that a special relationship between the lodging house and the resident gave rise to a duty to aid the resident in distress).

(n6)Footnote 35. *Ellis v. Luxbury Hotels, 666 N.E.2d 1262 (Ind. App. 1996).*

(n7)Footnote 36. *Kukla v. Syfus Leasing Corp., 928 F. Supp. 1328 (S.D.N.Y. 1996).*

(n8)Footnote 37. *Kahane v. Marriott Hotel Corp., 672 N.Y.S.2d 55 (A.D. 1st Dept. 1998).*

(n9)Footnote 38. *McNeal v. Days Inn of America, 498 S.E.2d 294 (Ga. App. 1998).*

(n10)Footnote 39. *McAndrew v. Pierre Hotel, 693 N.Y.S.2d 20 (1999); Rednour v. Hilton Hotels Corp., 724 N.Y.S.2d 739 (A.D. 2001)* (where a homeless person using the telephone in a hotel lobby had no cause of action against the hotel for injuries sustained from a sudden criminal attack); *Camp v. Loughran, 727 N.Y.S.2d 471 (A.D. 2001)* (where an intoxicated guest on a group ski weekend failed to show a breach of duty by the hotel in relation to her sexual assault by other weekend participants); *McAvey v. Lee, 260 F.3d 359 (5th Cir. 2001)* (where a motel was found liable to a guest who fractured his heel while chasing two unidentified robbers who had taken his wallet by force in his motel room); *Young v. Fitzpatrick, 865 So. 2d 969 (La. App. 2004)* (motel was not liable for breaching its duty of ordinary care to the victim of a stabbing at the motel by a motel guest. Insufficient evidence of criminal activity on the motel premises made the attack unforeseeable and the motel staff exercised reasonable care).

(n11)Footnote 40. *Id. at 974; Gardin v. Emporia Hotels, Inc., 61 P.3d 732 (Kan. App. 2003).*

(n12)Footnote 41. *See, e.g.*, Me. Rev. Stat. Ann. tit. 30.A § 3851; Ohio Rev. Code Ann. § 4721.01; Or. Rev. Stat. § 699.010; Tex. Rev. Civ. Stat. Ann. art. 4592.

(n13)Footnote 42. In *Chapparone v. First Florence Corp., 504 S.E.2d 761 (Ga. App. 1998),* the motel was not liable for jewelry valued at $20,000 allegedly stolen from a locked attach'e case left in the room by the guests during their stay. The motel provided lockers for the deposit of valuable articles. Statutory notice of this service was provided in the assigned room. As a result, the motel was absolved of responsibility for undeposited valuables. Failure of the motel manager to mention three thefts from the motel during the preceding year was not relevant. In *Gooden v. Day's Inn, 395 S.E.2d 876 (Ga. App. 1990),* the limitation on liability was upheld even though an employee of the hotel absconded with the money. The statute contained no exception for losses caused by the negligence or intentional torts of the hotel's employees.

In *Goncalves v. Regent Int'l Hotels, 447 N.E.2d 693 (N.Y. 1983),* the court distinguished between negligence arising from non-compliance with statutory provisions and negligence causing loss to the valuables of the guest although full compliance with the statute took place. The latter type of negligence did not remove the limited liability provided to the hotel by the legislature.

(n14)Footnote 43. In *Terry v. Lincscott Hotel Corp., 617 P.2d 56 (Ariz. 1980),* the liability of the hotel for jewelry stolen from the guest's assigned room was eliminated by the guest's disregard of notice of the availability of the safe. If active misfeasance of the innkeeper had caused the loss, liability would have continued.

Under Nevada law, a guest seeking to recover for loss of jewelry not deposited for safekeeping has the burden of proving that loss occurred through the hotel's gross neglect. *Kabo v. Summa Corp., 523 F. Supp. 1326 (E.D. Pa. 1981).*

In *Schear v. Motel Mgt. Corp. of Am., 487 A.2d 1240 (Md. App. 1985),* recovery for loss of valuables from the assigned room was limited to $300 by statute unless the loss resulted from collusion or negligence on the part of the hotel.

(n15)Footnote 44. *See Grimes v. M.H.M., Inc., 776 S.W.2d 336 (Ark. 1989).* Two briefcases containing valuable coins and jewelry disappeared from the guest's assigned room. A question of fact existed as to whether the hotel had posted the required notice in ten conspicuous places in the hotel.

(n16)Footnote 45. *See Searcy v. La Quinta Motor Inns, 676 So. 2d 1137 (La. App. 1996)* (guests at the defendant's motel were allowed to recover $4,939, the value of personal property stolen from their room during their absence. The attempt of defendant to limit liability to $500 pursuant to statute was unsuccessful on appeal. To receive the benefit of the statutory limit, the innkeeper was required to post the article limiting liability conspicuously in the guest room and registration area. Evidence indicated that the statutory text was posted in the guest room in small print on a 3 x 7 inch card, but that only a general disclaimer of liability which did not contain the required statutory wording was posted in the registration area. *O'Rourke v. Hilton Hotels Corp., 560 So. 2d 76 (La. App. 1990)* (the court limited liability to $500 for loss of a guest's rings left in the assigned room. Posting of notices by the hotel was sufficiently conspicuous to comply with the statute).

In *Insurance Co. of N. Am. v. Holiday Inns of Am., 337 N.Y.S.2d 68 (1972),* plaintiff sought to recover $35,000 paid to its insured, a guest of defendant, taken from the guest's assigned room. The statutory defense limiting liability was properly dismissed because the hotel had not posted all of the required notices in the public rooms. Such notices had been properly posted in the guest rooms.

(n17)Footnote 46. *Nicholaides v. University Hotel Assocs., 568 A.2d 219 (Pa. Super. 1990).* The coin collection of guests disappeared from a dresser drawer in their hotel room. Liability would be limited to $300 if the statutory requirements were satisfied. The jury found that no such compliance had occurred.

See also Kates v. Brunswick Motel Enters., 371 S.E.2d 686 (Ga. App. 1988). Property of a guest disappeared from the assigned room and the innkeeper was granted summary judgment in a suit by the guest to recover for the loss. The statutory notice requirements were complied with by placing three notices in the assigned room, one on the wall behind the registration desk and one on the registration form signed by the guest. The statute did not set forth precise locations for posting of the notice.

(n18)Footnote 47. *Latini v. Loews Corp., 657 F. Supp. 475 (S.D.N.Y. 1987).* The purse of a guest was removed from her luggage in her room while she was absent. Although the hotel provided safe deposit boxes for guests to store valuables, a question of fact existed as to whether notices of the availability of the safe deposit boxes were conspicuously posted in the hotel office as required by statute. Twenty-three posters appeared in other parts of the hotel.

Buck v. Hankin, 269 A.2d 344 (Pa. Super. 1970). Valuables of a guest were stolen from the assigned room. Common law liability of the motel remained because it did not give statutory notice of its place for safekeeping. Notice on the registration card of the management's willingness to provide a safe for the storage of valuables was not equivalent to a posting in ten conspicuous places as required by the statute.

(n19)Footnote 48. In *Roth v. Investment Prop. of Lexington, 560 S.W.2d 831 (Ky. App. 1978),* guests unsuccessfully attempted to recover for valuables stolen from the assigned room. Although the statutory requirements for posting in public places were not complied with, a suitable notice was posted on the door of each sleeping room. The notice provided was thought to be more likely to give actual notice to the guest than the form set forth by statute.

See also North River Ins. Co. v. Tisch Mgt., Inc., 166 A.2d 169 (N.J. Super. 1960).

(n20)Footnote 49. *Ippolito v. Hospitality Management Associates, 575 S.E.2d 562 (S.C. App. 2003).* When $500,000 in jewelry and $8,000 of cash were stolen from two guests' room, the court held that it was a question for the jury whether the guests were supplied with adequate notice regarding the availability of safety deposit boxes. Postings of such availability were not in the guest room and although one of the victims admitted he was aware of the availability of a safe, he said he was not informed that he was required to keep valuables in the safe. *Skyways Motor Lodge Corp. v. General Foods Corp., 403 A.2d 722 (Del. 1979).* Valuables of a guest were removed from his assigned room during his absence. Failure of the hotel to advise the guest of the availability of a safe or vault kept in place the nearly absolute liability of the hotel as established at common law. A notice with small type posted in the room requiring valuables to be left in the office was not sufficient. The statute provided that a notice disclosing the existence of a secure safe or vault be posted in every lodging room and other conspicuous places.

(n21)Footnote 50. *Featherstone v. Dessert, 22 P.2d 1050 (Wash. 1933).*

(n22)Footnote 51. However, common law principles may apply to personal injury and property loss to guests assaulted in the hotel parking lot. There was no duty to warn guests of one prior armed robbery of a guest in the parking lot or fifteen incidents or robberies and damage to cars in and around the hotel. *See Roberts v. Forte Hotels, 489 S.E.2d 540 (Ga. App. 1997).* Motel patrons unsuccessfully sued the motel for loss of possessions stolen from them in the motel parking lot by an armed robber as they exited their car. This criminal activity was not reasonably foreseeable since there appeared to be no showing of prior criminal conduct. Liability would exist upon proof of failure to exercise reasonable care to discover the occurrence of harmful acts together with failure to give patrons adequate warning of possible events. *Dettlaff v. Holiday Inns, 10 Fed. Appx. 100 (4th Cir. 2001). Nagashima v. Hyatt Wilshire Corp., 279 Cal. Rptr. 265 (1991)* where property of a guest was taken from her possession while she stood at the checkout counter in the hotel lobby. Liability of the hotel was limited by statute to $500 while the property was on the hotel premises.

(n23)Footnote 52. *See Florida Sonesta Corp. v. Aniballi, 463 So. 2d 1203 (Fla. App. 1985),* where a notice limiting liability of the hotel was posted in the assigned room but the hotel failed to comply with the portion of the statute requiring posting in the office, hall, or lobby, or other prominent place in the establishment.

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.06

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.06 Property Deposited for Safekeeping.

(a) Disclosure of Value.

One of the most common sources of litigation arises when the guest deposits the item of value with the hotel for safekeeping and, thereafter, a loss occurs when the hotel is in possession. The guest will not have declared the value of the item to the hotel and the hotel will have made no inquiry of the guest. The relevant statute will allow the hotel to refuse to accept for deposit items valued at more than a designated limit. In most jurisdictions, the burden is placed upon the guest to disclose the value. Failure to do so will limit the recovery of the guest to the amount set forth in the statute. n248 A statement by the guest that the items delivered were valuable but without disclosure of approximate value will not prevent the statutory limit from taking effect. n249 A guest who makes a false representation minimizing the value of the items delivered will be limited in recovery to the value asserted. n250 A minority of jurisdictions place the burden upon the hotel to make inquiry rather than require the guest to volunteer the worth of the item deposited. n251 In some states, the negligence of the hotel or its employees bars the hotel from reducing its liability because of the guest's non-disclosure of value. n252

A hotel that provides notice of the availability of a place for safekeeping in a manner inconsistent with the statutory plan will not be able to use the statutory liability limits when loss to the deposited property takes place. n253 For example, issuance to guests of registration cards stating: "Valuable packages must be deposited at the office ... otherwise the management will not be responsible for any loss" estopped the hotel from utilizing the $1,000 statutory limit on liability. n254 A guest who makes a deposit based on such notice could reasonably believe that the hotel would have full responsibility in the event of a loss.

COMPUTER-ASSISTED RESEARCH

LEXIS: safe w/1 keeping w/30 disclos! w/15 value! w/30 hotel!

(b) Suitability of Place.

Statutes that limit the liability of a hotel when it provides a place for keeping safe the valuables of its guests have varying levels of specificity. It may be necessary to provide a "safe," a "metal safe," a "vault" or any appropriate secure

place may suffice. In Ohio, safe deposit boxes of the type commonly found in banks were held to be within the statutory reference to a "metal safe or vault." n255 Similar safe deposit boxes provided in a New York hotel were treated differently. The Court of Appeals found that a material issue of fact existed regarding the equivalence of the safe deposit boxes and the "safe" required by statute. To be within the statutory provision, "a "safe' should be a receptacle that, under the circumstances, provides adequate protection against fire, theft, and other reasonable foreseeable risks. In deciding this question, all aspects of a hotel's security system may be considered." If the safe deposit boxes were found to be the type of secure place contemplated by the statutory limitation on liability, recovery for the alleged loss of more than $1,000,000 would be limited to $500 even if negligence of the hotel were shown. n256

COMPUTER-ASSISTED RESEARCH

LEXIS: safe w/1 keeping w/30 hotel! w/15 place! or vault!

(c) Requirement of Access.

Maintaining a secure safe on the premises and providing the guest with the statutory notice of its presence may not be sufficient to absolve the hotel of liability for loss of valuables taken from the assigned room. Ready accessibility appears to be another important requirement. In Zaldin v. Concord Hotel, the defendant did not provide entry to the safe between the hours of 11 p.m. and 8 a.m. n257 Guests who had placed jewelry in the vault and withdrawn it for evening use were denied the privilege of returning the items shortly after midnight. During the night, the items were stolen from the guest's room. In the absence of any statutory authority in the hotel to restrict access, summary judgment in favor of the hotel was error. When the hotel elects to refuse usage of the safe by the guest, it is not providing a safe and becomes ineligible to receive the statutory protection.

Similarly, guests who sought to return jewelry to the safe deposit box previously provided to them by the hotel but were unable to do so, were allowed to recover against the hotel when the items were stolen from their assigned room while they slept. When returning to the hotel at 5:30 a.m., they waited at the front desk for 24 or more minutes but were unable to locate a hotel employee to assist them. Negligence of the hotel in failing to provide an employee to facilitate restoration of the items into the safe deposit box was sufficient to impose liability. n258

LEXIS: safe w/1 keeping w/30 access! w/30 hotel!

FOOTNOTES:
(n1)Footnote 248. Illustrative cases include:

Pachinger v. MGM Grand Hotel-Las Vegas, 802 F.2d 362 (9th Cir. 1986) (when jewelry valued at $19,000 was stolen from an allegedly safe storage area and recovery was limited to $750 (applying Nevada law).

Weiser v. Albuquerque Oil and Gasoline Co., 325 P.2d 720 (N.M. 1958), where a jewelry sample case left with the motel desk clerk disappeared. The case was not placed in the available safe because it was too large, but the guest was given a receipt by the clerk. A liability limit of $1,000 was applied.

Robert Altman, Inc. v. Biltmore Hotel, 11 Cal. Rptr. 838 (1961), where jewelry cases deposited by a salesman-guest disappeared from the hotel vault. Liability was limited to $250. *See also Ricketts v. Morehead Co., 265 P.2d 963 (Cal. App. 1954).*

Oppenheimer v. Morton Hotel, 210 F. Supp. 609 (W.D. Mich. 1962), aff'd, 324 F.2d 766 (6th Cir. 1963), where a briefcase containing diamonds valued at $50,000 disappeared after it had been deposited with the hotel clerk who issued

a safety deposit form to the guest. Liability was limited to $50.

Eichberg & Co. v. Van Orman Fort Wayne, 248 F.2d 758 (7th Cir. 1957) where jewelry samples valued at $29,646 were delivered to a bellboy to be placed in the hotel vault. Liability was limited to $400 when the jewelry disappeared from the hotel manager's office. The merchandise was too large to fit in the available safe.

Carlton v. Beacon Hotel, 157 N.Y.S.2d 744 (1956), aff'd, 149 N.E.2d 527 (1958), where the guest deposited for safekeeping jewelry and foreign currency valued at $23,000. The "Declared Valuation" portion of the form provided by the hotel was left blank by the guest. Recovery was limited by statute to $500.

(n2)Footnote 249. *K.S.K. Jewelry Co. v. Chicago Sheraton, 283 F.2d 28 (7th Cir. 1960),* where items delivered for safekeeping disappeared from a locked checkroom where they were placed because they were too large for the vault.

(n3)Footnote 250. *Kalpakian v. Oklahoma Sheraton, 398 F.2d 243 (10th Cir. 1968),* where jewelry alleged to be worth $286,546 was described as having a value not to exceed $1,500.

(n4)Footnote 251. *Sagman v. Richmond Hotels, 138 F. Supp. 407 (E.D. Va. 1956)* where a salesman-guest deposited a valise containing jewelry with hotel employees who placed the bag in the vault from which it disappeared. The innkeeper who fails to make inquiry as to value does so at his own risk and his right to refuse to accept items valued in excess of the statutory limit was waived.

(n5)Footnote 252. *See Layton v. Seward Corp., 31 N.W.2d 678 (Mich. 1948)* Loss of $3,500 delivered by a guest to the hotel clerk to be placed in the safe must have occurred through theft or negligence of hotel employees. The liability limit of $250 did not apply. In *World Diamond, Inc. v. Hyatt Corp., 699 N.E.2d 980 (Ohio App. 1997),* jewelry dealers as hotel guests deposited personal jewelry and trade inventory in safe deposit boxes provided by the hotel without any disclosure of value. Two days later the boxes were found empty without any evidence of forcible entry. The guests were given the opportunity to avoid the $500 liability limit by showing an oral special arrangement or loss through hotel negligence or employee theft. Notice requirements were satisfied..

Schiffman v. Narragansett Hotel, 134 A.2d 153 (R.I. 1957). A salesman-guest deposited jewelry samples with the hotel for safekeeping. When loss resulted from negligence of the hotel, the statute limiting liability did not apply. Nevertheless, plaintiff had no adequate proof of damages.

Cf. Nova Stylings v. Red Roof Inns, 747 P.2d 107 (Kan. 1987). An unknown person entered the hotel manager's office and removed a bag of jewelry placed there for safekeeping by a salesman-guest. The statutory limit on the innkeeper's liability applied even when the innkeeper was negligent.

Kahn v. Hotel Ramada of Nev., 799 F.2d 199 (5th Cir. 1986). Valuables of a guest disappeared from the hotel baggage room. The hotel's liability was limited to $750 even if the guest proved gross negligence.

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.07

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.07 Property Kept in the Assigned Room.

When a hotel provides to the guest all required statutory notice, the guest is potentially subject to an elimination of claim or to a statutory liability limit for loss or damage to property while it is in the assigned room. n259 Statutory limits may apply irrespective of the cause of loss or may apply only when no showing is made that the hotel or its employees caused the loss. n260 Variations among jurisdictions are sufficiently great that examination of local law is required. Distinctions may be made between loss through conversion rather than through negligence, or between acts of the hotel and acts of its employees. In Bhattal v. Grand Hyatt-New York, the court concluded that the statutory limits did not apply to loss occurring after a mistaken and unauthorized removal of luggage from the locked room assigned to the guest, since such an act constituted a conversion by the hotel. Employees of the hotel had acted in good faith, relying on the accuracy of a computer which was actually in error. The court distinguished the limits applicable to losses caused by unauthorized actions of hotel employees from the policy excluding limits when loss is caused by the hotel itself. n261

As a means of restricting the guest's ability to recover for loss of property from assigned rooms, Nevada, for example, has imposed the rigid standard of gross neglect. n262 In Louisiana, the innkeeper is absolved from responsibility for loss of property "stolen by force and arms, or with exterior breaking open of doors, or by any other extraordinary violence." n263 However, this article did not apply to loss occurring after an assault on guests in their room and a breaking of the security chain lock when initial entry was obtained through use of a pass key obtained from the desk clerk. n264 More commonly, the usual rules of negligence are applied. n265 It has become more common for hotels to provide secure safes with individual keys or combinations in the hotel room itself. Where a jewelry salesman was unable to deposit his samples valued at $142,000 in the safes provided at the check-in desk because the safes were too small, he was directed by the clerk to use the room safe instead. A notice stated that a guest's valuables so deposited were insured up to $10,000. During the absence of the guest, the safe was forcibly removed from the wall and the contents stolen. It was held that the posted sign did not limit the hotel's liability to $10,000 and that the clerk's representation that the room safe was secure induced usage and estopped the hotel from relying on the statutory limitation on liability. n266

LEXIS: guest! w/15 property w/2 loss! or damage! w/15 hotel! w/5 assigned w/2 room!

FOOTNOTES:

(n1)Footnote 259. *See, e.g., Duvall v. The Ritz Carlton Hotel Co., 946 F.2d 418 (5th Cir. 1991).* A patron returned from dinner and found that cash and property valued in excess of $3,000 had been stolen from his hotel room during his absence. The statutory limitation on liability of $500 was found to be applicable. Required notices were properly posted and patron ignored the safe deposit boxes available for use. No notice of the presence of the items in the room had been given to the hotel. *Bleam v. Marriott Corp., 655 N.Y.S.2d 566 (N.Y. App. Div. 1997).* In *Nadjarian v. Desert Palace, 895 P.2d 1291 (Nev. 1995),* guests suffered the loss of personal property valued at $24,800 placed by them in their complimentary assigned room. The Supreme Court found that the statutory liability limit of $750 for property left in the room of a guest might not apply. After assigning the initial room to the plaintiffs, the hotel in error checked the plaintiffs out and re-rented the room to another while plaintiffs' belongings remained inside. Some, but not all, of this property was transferred by the hotel to a second assigned room. The loss of the remaining property might have occurred from the first assigned room or during the transfer process such that summary judgment in favor of the hotel was not proper. The statutory limitation of $500 was applied to a loss caused by a failure to repair the lock on the balcony door of plaintiffs' hotel room. The guests argued unsuccessfully that the hotel was estopped from relying on the limitation by misleading them that the room was safe. No affirmative statement of safety was proved. After the problem was reported, the repairman went to the wrong room. Although such act may have been a negligent mistake, it was not an affirmative action to mislead. *Southernmost Affiliates v. Alonzo, 654 So.2d 1066 (Fla. App. 1995).* In *H.K. Mallak, Inc. v. Fairfield FMC Corp., 209 F.3d 960 (7th Cir. 2000)* a jewelry salesman was robbed as he stepped into the guest room for the first time. The protection of the notice statute does not apply to the losses of a guest resulting from "an inside job." Additionally, notice provisions cannot limit liability of the hotel for losses to the guest occurring prior to having an opportunity to read them.

(n2)Footnote 260. *See Gooden v. Day's Inn, 395 S.E.2d 876 (Ga. App. 1990),* where a hotel employee absconded with money removed from the guest's assigned room by a housekeeper who believed the room to be unoccupied. Under the relevant statutes, the hotel was not liable for articles stolen from the guest's room whether the loss arose through negligence of the hotel's employees or was actually perpetrated by such employees.

Cf. Philip v. Fairmont-Roosevelt Hotel, 469 So. 2d 1140 (La. App. 1985) where a ring disappeared from the guest's assigned room during her absence. A showing of negligence was required to extend liability beyond the $100 statutory limit.

(n3)Footnote 261. *563 F. Supp. 277 (S.D.N.Y. 1983).*

(n4)Footnote 262. *See, e.g., Owens v. Summa Corp., 625 F.2d 600 (5th Cir. 1980),* where a burglar obtained entry to an assigned room through alteration of the dead bolt lock. Similar facts occur in *Levitt v. Desert Palace, 601 F.2d 684 (2d Cir. 1979)* and in *Levin v. Desert Palace, 465 A.2d 1019 (Pa. Super. 1983)* (applying Nevada law).

(n5)Footnote 263. La. Civ. Code Ann. art. 2970.

(n6)Footnote 264. *Kraaz v. LaQuinta Motor Inns, 410 So. 2d 1048 (La. 1982).*

(n7)Footnote 265. *See, e.g., Kutbi v. Thunderlion Enters., 698 P.2d 1044 (Or. App. 1985),* where a thief removed jewelry, clothing and luggage from the assigned room when the guest was not present.

(n8)Footnote 266. *Charles Bernard, Ltd. v. Tobias Jewelry, 751 So. 2d 711 (Fla. App. 2000).*

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.08

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.08 Property Kept in Other Locations Within the Hotel.

In cases where loss or damage occurs to property of a guest not deposited for safekeeping, it is usually irrelevant whether the injury or disappearance takes place in the assigned room or some other part of the hotel. For example, where a working prototype model manufactured by plaintiff disappeared because of overnight entry into a locked conference room, the item was treated as a merchandise sample. The liability limit of $250 applied to loss anywhere within the hotel since no agreement for a greater liability was undertaken. n267

Similarly, a guest who ate dinner in the rotating dining room of a hotel and lost her valuables from her purse by placing it on the stationary portion of the structure was subject to the usual statutory provisions barring recovery because she had failed to deposit her property for safekeeping. n268 A guest who was deprived of her possessions while standing in the hotel lobby at the checkout counter was also subject to liability limits. n269

A bailment is created when a guest of the hotel leaves the hotel restaurant after dinner without taking her purse, and the busboy, pursuant to instructions, places the item with the restaurant cashier. When the cashier thereafter delivered the purse to the wrong person, the hotel breached its duty of reasonable care in the return of the valuables. n270

In some cases, the property of the guest may come within the custody and control of the innkeeper even before the innkeeper is aware of that fact. A prospective guest who placed his luggage in the area used by the hotel to assist guests during registration became subject to the usual innkeeper-guest rules. When the luggage disappeared while he waited for hours to get a room assignment, it was treated as being entrusted to the hotel because it had been placed in the site provided. n271 In contrast, no bailment was created when a patron attending a luncheon in defendant-hotel placed her mink fur jacket in an unattended coatroom. No custody or control was surrendered to the hotel and there was no showing that an implied or constructive delivery occurred because there was no showing of an expectation by the hotel that the area would be utilized by the patron. n272

(n2)Footnote 268. *Summer v. Hyatt Corp., 266 S.E.2d 333 (Ga. App. 1980).*

(n3)Footnote 269. In *Moog v. Hilton Hotels Corp., 882 F. Supp. 1392 (S.D.N.Y. 1995),* a large bag containing jewelry and keys disappeared from the floor area adjacent to the guest's legs while she was in the checkout line. The district court found that several issues of fact precluded the hotel from obtaining summary judgment. Since the hotel provided a safe deposit box for its customers, which this plaintiff had used, claims thereunder would be limited to $1,500 even though the loss occurred during the checkout process. Plaintiff asserted that she had never been notified of the statutory liability limit. Although notices of the limitation had been posted, it was doubtful that they were placed where they could readily be seen by guests. Additionally, the plaintiff asserted that her insurance company refused to pay for the loss because the hotel security officer failed to file a police report as he agreed to do and because the hotel failed to provide accurate information concerning the loss to the insurer. The extent of the apparent authority of the security officer and the responses of the hotel in similar situations were in dispute. *Nagashima v. Hyatt Wilshire Corp., 279 Cal. Rptr. 265 (1991).*

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.09

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.09 Property Kept in Garages and Parking Lots.

For some time, it has been common practice for facilities catering to the housing of transient guests to provide convenient parking accommodations. These accommodations may be on or away from the premises, gratuitous or with additional charges, open or enclosed, with or without access controls and availability of valet service. Baggage, clothing and other personal property of the guest frequently remain stored in the guest's car during the period of occupancy. When loss or damage occurs to the vehicle or its contents, the hotel or motel usually is subject to the rules of bailment in determining its responsibility to the guest. n273 Places that merely provide an open and unguarded parking area do nothing to take possession of the auto or its contents. Control remains entirely with the guest, and no bailment is created. n274 Where the guest is able to show that control and dominion were placed with the innkeeper, a bailment exists and the bailee has the obligation to provide reasonable care for the subject matter bailed. n275 Delivery of the car keys to a hotel employee directed to park the vehicle in the hotel garage commonly is found to establish a bailor-bailee relationship. n276

Where the hotel employee is off-duty at the time, usual agency rules preclude attributing liability to the employer. n277 Contents of the car are included as a part of the bailment when they are apparent to the hotel or are of a type likely to be found in the car. n278 In some cases denying recovery to a guest, it is not clear whether the guest failed to show the creation of a bailment or failed to show that the bailee did not exercise the degree of care required by the circumstances. n279 Where delivery is made to the wrong person as part of the attempt to return, the rules applying absolute liability for misdelivery will ordinarily be applied. n280 The common law principle of "*infra hospitium*" is usually limited to belongings of the guest brought within the hotel building. n281 Consequently, statutory limitations on this liability of the hotel ordinarily do not affect potential recovery of the guest for loss or damage to the guest's car or its contents. n282 Such statutes are intended to modify the broad liability otherwise existing because of an innkeeper-guest relationship. In some cases, the valuables, clothing and baggage of the guest that are stolen or damaged after being left in the automobile are subject to the same statutory limitations applicable if those items had been brought by the guest to the assigned room and loss thereafter occurred. n283 Where the person suffering the loss is not a registered guest of the motel but is on the premises for other purposes, the statutes relating to limitations on the liability of an innkeeper ordinarily do not apply. n284

COMPUTER-ASSISTED RESEARCH

LEXIS: guest! w/15 property w/2 loss! or damage! w/15 hotel! w/5 garage! or parking!

FOOTNOTES:
(n1)Footnote 273. Iowa Code Ann. § 671.8 provides that a hotel or inn has the liability of a bailee for hire for damage to the guest's auto, or its contents while in the garage of the proprietor. Recovery for loss of contents is limited to $50 unless an inventory was filed with the proprietor at the time the auto was left in the garage. Where the garage is not personally owned or operated by the hotel or inn, no liability results. (*See* § 671.7.)

(n2)Footnote 274. *Miller v. Commonwealth Motor Hotels, Inc., 267 N.E.2d 925 (Mass. 1971).* Motel was not liable for theft of guest's vehicle from unattended parking lot.

Cloward v. Pappas, 387 P.2d 97 (Nev. 1963). Motel fire caused loss of property in assigned room and loss of car parked in adjacent carport. The insurer's liability of an innkeeper existing at common law did not apply to car. The guest retained control over the car and no bailment was created.

Sewell v. Mountain View Hotel, Inc., 325 S.W.2d 626 (Tenn. App. 1959). Car of a guest was damaged by a drunken driver while parked in the hotel lot. The court held that the innkeeper was not liable as a matter of law. The car was not "*infra hospitium*." No bailment was created. No attendant was provided to park or look after cars placed in the lot. The guest did not surrender the right of control to the innkeeper who is not responsible for acts of third persons with whom he is in no way connected.

(n3)Footnote 275. *Allen v. Hyatt Regency-Nashville Hotel, 668 S.W.2d 286 (Tenn. 1984).* Hotel guests parked their car in an enclosed hotel garage that maintained security personnel and an attendant controlling the exit. The facts were sufficient to create a bailment for hire and, upon proof of demand and non-delivery, the presumption of negligence applied.

(n4)Footnote 276. *Bidlake v. Shirley Hotel Co., 292 P.2d 749 (Colo. 1956).* A guest who delivered his car keys to a uniformed employee of the hotel to have his car placed in the garage utilized by the hotel surrendered possession of the car to the hotel. When the employee took the vehicle for a joyride and caused it to be damaged, the hotel was liable for losses sustained to the auto and to personal property removed from the glove compartment.

Dumlao v. Atlantic Garage, Inc., 259 A.2d 360 (D.C. 1969). Hotel guest's car and its contents disappeared from the hotel garage where it had been parked by the doorman. The hotel was not liable as a bailee for undisclosed contents. Facts failed to show that a bailment of the contents had been accepted by the hotel or that such an acceptance should be imputed.

Traylor v. Hyatt Corp., 178 S.E.2d 289 (Ga. App. 1970). Guest of a hotel was allowed to sue as a gratuitous bailee for clothing of his two children, college students, left in his car after delivery to a hotel employee for parking. Summary judgment was improperly granted to defendant and the complaint was reinstated.

Zurich Fire Ins. Co. of N.Y. v. Weil, 259 S.W.2d 54 (Ky. 1953). Hotel guest gave his car keys to a bellboy who parked the car in the hotel garage. Another bellboy, while off duty, stole the keys and the car, wrecked the vehicle and abandoned it. The hotel had a duty of ordinary care as a bailee for hire and this duty was breached.

Todd v. Natchez-Eola Hotels Co., 157 So. 703 (Miss. 1934). The hotel was liable for loss of a guest's car taken by the parking lot attendant for his personal use without permission.

(n5)Footnote 277. *Smith v. Hotel Antlers Co., 133 N.E.2d 89 (Ind. App. 1956).* A hotel guest gave his car keys to a hotel bellman in civilian clothes while attending a party in the guest's rooms. The bellman was allegedly intoxicated at the time and a collision soon followed. When loss occurred, the driver was the agent of the guest, not of the hotel.

Therefore, no bailment with the hotel existed. In any event contributory negligence of the guest barred recovery on a bailment theory or on strict liability of an innkeeper.

(n6)Footnote 278. *LaFayette Hotel Co. v. Gordon & Ferguson, Inc., 365 S.W.2d 857 (Ark. 1963).* Sample case of a salesman-guest was stolen from his car which was parked by the hotel doorman in a nearby garage. The court held that it was error to require the hotel to prove that it was free of negligence. The bailor had the burden of showing negligence of bailee. No statute was involved.

Hallman v. Federal Parking Servs., 134 A.2d 382 (D.C. 1957). Contents of a guest's auto were stolen while the car was parked in the hotel lot. Delivery to a bellboy caused an acceptance of the car and its contents into custody of hotel. The contents were in plain view. The lot was not an integral part of the hotel and it became liable as a bailee for hire. It was immaterial that payment was made directly to the lot and not the hotel. *Cf. Lucas v. Auto City Parking Co., 62 A.2d 557 (D.C. 1948)* where contents were not in plain view and no agreement, express or implied, existed.

General Acc. Fire & Life Assur. Co. v. J.F.D.L., Inc., 148 So. 2d 857 (La. App. 1963). A guest's auto and its contents were stolen from the street in front of the hotel where it had been parked by a hotel parking attendant. Guest had made arrangements to park the car in the hotel garage. The court held that there was a question for trial as to whether the suitcase and its contents were items that might be expected to be left in the car giving constructive notice to the hotel sufficient to create a duty of care. Negligence of the hotel was established.

Campbell v. Portsmouth Hotel Co., 20 A.2d 644 (N.H. 1941). Bailment of the guest's car included the contents ordinarily expected to be kept in it.

(n7)Footnote 279. *Brown v. Christopher Inn Co., 344 N.E.2d 140 (Ohio App. 1975).* Items were stolen from the van of a guest while it was parked in hotel lot. No recovery was permitted because no evidence of negligence was shown. The representation of a hotel porter that the contents would be safe did not make the hotel an insurer.

(n8)Footnote 280. *Martin v. Holiday Inns, Inc., 245 Cal. Rptr. 717 (1988).* An auto and U-Haul trailer containing all of the guests' personal possessions were stolen from the motel parking lot. The ninety-day statute of limitations applicable to conversion of clothing, baggage, etc., left at hotel was held to be inapplicable.

Kallish v. Meyer Hotel Co., 184 S.W.2d 45 (Tenn. 1944). A hotel guest delivered his car to the hotel doorman who completed a claim check purporting to be issued by a garage with which the hotel had a working relationship. The vehicle was misdelivered by the garage and found later in a damaged condition. Garage storage charges were billed by the hotel. A bailment for hire was created with the hotel. Its liability as an innkeeper was not considered.

Dispeker v. New Southern Motel, 373 S.W.2d 904 (Tenn. 1963). Car of guest was stolen from hotel parking lot by off-duty bellboy. Hotel was liable on theory of misdelivery because the removal by the bellboy was an analogous act. No showing of negligence is required. The auto was the subject of a bailment for hire because it was delivered to a hotel employee for parking. The thief learned, while on duty, that the car would start without an ignition key.

(n9)Footnote 281. "The term 'infra hospitium,' includes all property deposited and accepted in exclusive control of the innkeeper, wherever the innkeeper elects to physically store the property, whatever its character, so long as it is not the type of property for which special statutory provision exists." *Shepherd Fleets, Inc. v. Opryland USA, Inc., 759 S.W.2d 914, 923 (Tenn. App. 1988).*

Phoenix Assur. Co. of N.Y. v. Royale Inv. Co., 393 S.W.2d 43 (Mo. App. 1965). Guest's car was stolen from a hotel parking lot. The statutory limit on liability of $200 for property of a guest related to things carried into the hotel by the guest and did not include the car. The hotel was nothing more than a bailee for hire of the car.

Shepherd Fleets, Inc. v. Opryland USA, Inc., 759 S.W.2d 914 (Tenn. App. 1988). An employee of a hotel negligently

drove his personal vehicle so as to strike the guest's car parked in the hotel's valet parking lot. Since the car was in the exclusive control of the hotel, it was "practically an insurer" of its value. Statutes limiting liability for baggage and valuables did not apply.

Andrew Jackson Hotel, Inc. v. Platt, 89 S.W.2d 179 (Tenn. App. 1935). The auto of a hotel guest was damaged in a collision while it was being operated by a garage employee. The guest had asked the hotel to arrange for repairs to the car and the garage was an agent of the hotel for that purpose. When the car was removed for repairs, the liability of the hotel ceased. Negligence of the driver of the other vehicle was the proximate cause of the injury. The garage keeper was a bailee for hire who was liable only for his own negligence or that of his employees. The court indicated that "*infra hospitium*" will apply to goods of a guest placed outside of the inn on the direction of the innkeeper without the consent of the guest. Here the guest consented and the principle did not apply.

Merchants Fire Assur. Corp. of N.Y. v. Zion's Secs. Corp., 163 P.2d 319 (Utah 1945). A bellboy parked a guest's car in the hotel garage, returned later for a joyride and damaged the car. The court applied the concept of "*infra hospitium*" to items placed outside of the hotel at its direction as well as goods brought into the hotel building. As a result, the hotel was liable for the damage caused. It was not necessary to prove the existence of a bailment, although one had been created.

Cf. Governor House v. Schmidt, 284 A.2d 660 (D.C. 1971). A guest left his car and its contents in a hotel parking garage. The common law rule of "*infra hospitium*" applied because the garage was physically a part of the hotel structure. It was not necessary for the hotel to be on notice of the contents of the auto left in its custody.

Ellerman v. Atlanta Am. Motor Hotel Corp., 191 S.E.2d 295 (Ga. App. 1972). An auto and its contents owned by a guest were stolen from the motel parking lot. The relationship of innkeeper-guest was created. A contract purporting to exempt the motel from liability for the car's contents was void as against public policy.

Vilella v. Sabine, Inc., 652 P.2d 759 (Okla. 1982). The guest's vehicle and its contents parked in a motel parking lot that was patrolled by a security guard were under the care of the motel within the meaning of a statute generally imposing liability under such circumstances. The statute is a codification of the common law rule making the innkeeper a virtual insurer of property entrusted to its care by a guest. Such liability has not been reduced to that of a bailee for hire. The statute limiting liability for baggage and other items for personal use applied to the extent that these items were part of the contents of the car.

Park-O-Tell Co. v. Roskamp, 223 P.2d 375 (Okla. 1950). The hotel was liable for the loss of a guest's auto and its contents left in the hotel garage provided to guests without charge.

(n10)Footnote 282. A guest sued the hotel where he was staying for the value of personal belongings stolen from his car while it was parked in the hotel's parking lot. Although the alleged loss was in excess of $50,000, summary judgment was granted in the Circuit Court limiting the hotel's liability to the statutory maximum ($1,000 for the loss of valuables and $500 for loss of clothing and other property). Since these amounts did not meet the Circuit Court jurisdictional threshold, the matter was transferred to County Court. The District Court granted certiorari to review the transfer to county court, which would be improper if the hotel made affirmative representations of parking lot safety, thus estopping it from asserting the statutory limitations. *David v. Prime Hospitality Corp., 676 So. 2d 1049 (Fla. App. 1996). Fennema v. Howard Johnson Co., 559 So. 2d 1231 (Fla. App. 1990).* A U-Haul moving van containing almost all of the possessions of the guests and with an automobile in tow were stolen from the motel parking lot. The court held that the statute limiting the motel keeper's liability for loss of a guest's property may not apply to items stolen from the parking lot. In any event, the motel was estopped from invoking the statute because the motel clerk had misled the guests into believing that their contents were safe.

Howard Johnson Co. v. Fair, 575 So. 2d 723 (Fla. App. 1991). The statute limiting the motel keeper's liability does

not apply to automobiles or trailers left in the motel's parking lot. A guest's pickup truck and enclosed trailer were stolen from the motel parking lot. A negligent misrepresentation by the hotel clerk was found to be the cause of the loss.

Plant v. Howard Johnson's Motor Lodge, 500 N.E.2d 1271 (Ind. App. 1986), 514 N.E.2d 1048 (Ind. 1987). A U-Haul moving van and its contents, the possessions of a hotel guest, were stolen from the parking lot of the motel. The van was later recovered but the contents were not. The court held that the statute limiting liability for loss to items brought into the hotel did not apply. A question of fact existed as to whether the motel failed to exercise due care and summary judgment in its favor was improper. Liability of the hotel for the contents of the vehicles depended upon whether the patron exercised reasonable care in leaving the property in the vehicle under the circumstances. Apparently, the court was ready to impose a duty on the hotel even if no bailment for hire was shown.

Kushner v. President of Atlantic City, Inc., 251 A.2d 480 (N.J. Super. 1969). The auto of a guest was stolen from the motel parking lot. Upon a showing of delivery of the vehicle and keys to a hotel employee and a failure to return upon demand, the motel was presumed to be negligent. Full recovery ($6,000) was allowed when the hotel failed to rebut the presumption. The statute limiting liability to $100 for loss of clothing, baggage or other chattels was not applicable.

(n11)Footnote 283. *Solomon v. Downtowner of Tulsa, Inc., 357 F.2d 449 (10th Cir. 1966).* A salesman's jewelry samples were stolen from a guest's car in a motel parking lot, where they were placed by him immediately prior to checking out. No notice of existence or value was given to the motel as required by a statute which excluded motel liability for merchandise samples in the event of non-compliance. This statute applied to departing guests in same manner as to registered guests. Non-liability for loss in the hotel room was not expanded to unlimited liability when the samples were placed in the trunk of the car.

Savoy Hotel Corp. v. Sparks, 421 S.W.2d 98 (Tenn. App. 1967). Valuables of a guest were stolen from his car while it was parked in the hotel parking garage. The car was also stolen but recovered with $500 in damage. The hotel was not liable for the contents because it provided a place of storage which was ignored by the guest. Usual bailment rules were applied to the damage to the car.

(n12)Footnote 284. A person attending a dinner meeting at defendant's hotel parked in the hotel parking garage during a heavy rainstorm. When the patron returned to her car, she found that it had suffered damage from a flash flood occurring in that part of the city. No warning signs were posted by the hotel. Evidence supported instructions to jury to determine whether the damage to the vehicle directly resulted from the failure to warn. There was a rebuttable presumption that the car owner would have heeded the warning. *Rust v. Hammons, 929 S.W.2d 834 (Mo. App. 1996). Diplomat Restaurant, Inc. v. Townsend, 165 S.E.2d 317 (Ga. App. 1968).* Innkeeper statute limiting liability did not relate to items stolen from an auto in restaurant parking lot. In order to apply, lodging must be furnished to the guest. Plaintiff recovered full value for items taken.

CHAPTER 52 INNS AND INNKEEPERS

7-52 Thompson on Real Property, Thomas Editions § 52.10

AUTHOR: Professor John C. Welsh Albany Law School Union University

§ 52.10 Innkeepers Liens.

(a) Creation.

Almost all jurisdictions provide for a statutory lien in favor of hotel keepers or innkeepers under which they may retain possession of baggage or other items of personal property as security for the payment of charges due or funds advanced. n285

In some cases, similar types of establishments, such as boardinghouses, lodging houses, restaurants and bed and breakfast establishments, are also specifically included within the purview of the lien.

Such inclusions are an extension of the common law where the lien on possessions of a guest was limited to innkeepers. n286 It is conventional doctrine that this preferred status of the innkeeper was grounded upon the concept that the inn provided for travelers a safe haven from dangers of the road. n287 The Ninth Circuit has said: "Beginning in medieval times, an innkeeper had the nearly absolute duty at common law to take in all travelers and to accept their belongings for safekeeping. With minor exceptions he was absolutely liable to his guests for the full value of those belongings." n288 With such obligations imposed, it was reasonable to provide the innkeeper with an easy method of assuring payment from the departing guest, who was frequently a total stranger. n289 Since hotels and boardinghouses had no similar obligation to accept all persons seeking shelter and to keep their belongings safe, the protection of the lien was thought to be unnecessary for those occupations. n290

Although the expectation is that the property brought upon the premises by the guest will be owned by the guest or another person, such as an employer, with an obligation to pay the charges, the lien may be broad enough to cover property of others while in the possession of the guest when the hotel has no notice of the interest of the true owner. n291 Occasionally, local policy dictates that certain items be excluded from the impact of the lien (e.g., tools and uniforms, n292 intoxicating liquors and military documents, pay or awards, n293 or medications and children's clothing. n294 Commonly, the lien attaches for the full amount of unpaid indebtedness. However, some jurisdictions place an upper limit on the amount of the charges to which the lien will apply. n295 Issues of priority among liens will vary in result according to local law. n296

(b) Enforcement.

Procedures for the enforcement of the innkeeper's lien vary considerably within the jurisdictions. n297 Failure of a statute to provide basic constitutional protections of notice and an opportunity for a hearing has been a concern on some occasions.

A typical criticism of a statutory plan was addressed by Klim v. Jones, which found the former California Innkeeper's Lien Law to be unconstitutional. n298 That version of the statute failed to provide for any hearing prior to the imposition of the lien, an approach consistent with early common law principles. n299 Emphasis was also placed upon the hardships imposed by the statute for persons with meager assets and minimal economic strength. Consistent with the *Klim* position that the court had no desire to abolish the innkeeper's lien, the statute was amended to provide that the lien could be enforced only after final judgment for the charges claimed was rendered in favor of the innkeeper. n300 A detailed procedure was established to allow the innkeeper to retain the property pursuant to a writ of possession which may be issued *ex parte* if prescribed conditions are met. n301 Notice of the application is provided to the defendant who is given an opportunity to defeat the issuance of the writ. n302

The challenge to the Florida innkeeper's lien resulted in a similar decision. In Johnson v. Riverside Hotel, Inc., the court found that the property of the motel guests could be seized by the proprietor without notice or hearing in violation of due process requirements. n303 Through the statutory scheme, private individuals were given powers ordinarily vested in state officials. n304 For present enforcement of this hotelkeeper's lien, the operator may apply for a writ of distress enabling the retention of the property until final judgment is rendered. n305 The writ must be served on the defendant unless the defendant cannot be found. n306

In a similar situation, the Illinois statute permitting the private seizure of the property of hotel residents was sustained even though notice of the lien was not provided to the guests. n307 Such a seizure was not traditionally an action of the state ceded to private individuals. n308 Neither was the statutory authorization for the lien a sufficient state involvement so as to produce an unconstitutional deprivation of property rights. n309

New York also found that the enforcement of the innkeeper's lien law allowing the property of a guest to be detained without notice of a hearing was in violation of procedural due process requirements. n310 In time, the statute creating the lien was removed by the legislature. n311 Following the invalidation of the innkeeper's lien, the Court of Appeals with consistency declared that the State Constitution precluded the *ex parte* sale of a bailed automobile in an attempt to enforce a garage man's lien. n312

In other cases, issues relating to state action have been resolved so as to validate the possessory rights of the lienholder even though *ex parte* sale provisions are found to be available to the innkeeper. n313

FOOTNOTES:
(n1)Footnote 285. *See Perkins v. Marriott Int'l, 945 F. Supp. 282 (D.D.C. 1996).* Hotel patrons failed to pay their breakfast, which they believed was complementary. Although they were advised that the breakfast could not be charged to the room, they temporarily left the hotel without making a cash payment. In their absence, their belongings were searched and the room lock was changed. The court found that nonpayment of the charge created a lien in the

hotelkeeper and terminated any reasonable expectation of privacy for the patrons as to items left in the room. Conn. Gen. Stat. Ann. § 49-69; D.C. Code Ann. § 30-102(a); Ill. Comp. Stat. ch. 740 § 90/2; Ind. Code Ann. MCLS § 427.201. Ala. Code § 35-11-130 creates a lien in favor of hotels, inns, boardinghouses and restaurants; Alaska Stat. § 34.35.510 creates a lien in favor of hotels and boardinghouses. Property in the possession of a guest but owned by another is expressly excluded from the lien when the hotel has actual notice of that fact. Definitions of a "guest," "hotel or boardinghouse" and "operator" are provided in § 34.35.530; Ariz. Rev. Stat. Ann. § 33-951 creates a lien in favor of hotels, inns, boardinghouses, lodging houses, apartment houses and auto camp keepers. *See Elkhart Inv. Corp. v. Gazin, 537 P.2d 974 (Ariz. App. 1975),* distinguishing between an auto camp and a mobile home park; the innkeepers' lien was never intended to apply to vacant land; Ark. Stat. Ann. § 20-26-305(a) creates a lien in favor of hotels, inns, rooming houses and boardinghouses not to exceed $200; Cal. Civ. Code § 1861 creates a lien in favor of hotels, motels, inns, boardinghouses and lodging houses; Colo. Rev. Stat. § 38-20-102(b)(2) creates a lien in favor of hotels, motels, inns, boardinghouses and any other person renting temporary shelter to transient guests; Del. Code Ann. tit. 25, § 3901 creates a lien in favor of hotels, inns and a variety of other businesses; D.C. Code Ann. § 34-102(a) creates a lien in favor of hotels, motels or similar establishments providing lodging to transient guests; Fla. Stat. Ann. § 713.67 creates a lien in favor of keepers of hotels, apartment houses, rooming houses and boardinghouses. *See also* § 713.68; Ga. Code Ann. § 43-21-5 creates a lien in favor of inns, boardinghouses, lodging houses and eating houses; Haw. Rev. Stat. § 486K-2 creates a lien in favor of hotel keepers; Idaho Code § 39-1806 creates a lien in favor of hotel keepers. "Hotel" includes inns, public lodging houses and places with more than 10 bedrooms. *See* § 39-1801; Ill. Ann. Stat. ch. 71, para. 2 creates a lien in favor of hotel proprietors; Ind. Code Ann. § 32-8-27-2 creates a lien in favor of owners of any hotel, inn, boarding, eating, or lodging house or restaurant. Under § 13-1-7-33, this lien is extended to the operator of a mobile home park. *See Nicholson's Mobile Home Sales, Inc. v. Schramm, 330 N.E.2d 785 (Ind. App. 1975);* Iowa Code Ann. § 583.2 creates a lien in favor of inns, rooming houses, eating houses and any structure where rooms or board are furnished. *See* the definition of "hotel" in § 583.1; Kan. Stat. Ann. § 36-201 creates a lien in favor of inns, hotels, boardinghouses, apartment houses and rooming houses; Ky. Rev. Stat. Ann. § 376.340 creates a lien in favor of hotels, inns, boardinghouses and houses of private entertainment; La. Civ. Code Ann. art. 3233 creates a lien in favor of innkeepers and all others who let lodgings or receive boarders. Under art. 3234, the lien exists on all items brought by the guest whether owned by the guest or another; Me. Rev. Stat. Ann. tit. 30-A, § 3861 creates a lien in favor of inns, hotels and boardinghouses; Md. Com. Law II Code Ann. § 16-502 creates a lien in favor of hotelkeepers. By § 16-501, keepers of inns, motels and boardinghouses are included; The lien formerly existing under Mass. Ann. Laws ch. 255, § 23 has been abolished. The validity of the section had been sustained in *Davis v. Richmond, 512 F.2d 201 (1st Cir. 1975).* An exception exists under Mass. Ann. Laws ch. 140 § 14 where a guest abandons property for 6 months; Mich. Stat. Ann. § 18.301 creates a lien in favor of a keeper of any hotel, inn, boardinghouse, lodging house, bed and breakfast or furnished apartment; Minn. Stat. Ann. § 327.76, subd. 1 creates a lien in favor of innkeepers; Miss. Code Ann. § 75-73-15 creates a lien in favor of hotels, inns, boardinghouses and restaurants; Mo. Ann. Stat. § 419.060, subd. 1 creates a lien in favor of inns, hotels and boardinghouses, not to exceed $200 owed for board, lodging and money advanced. The lien is also placed upon the wages of the guest. *See Jackson v. Engert, 453 S.W.2d 615 (Mo. App. 1970)* distinguishing among a guest, a lodger and a boarder; Mont. Code Ann. § 71-3-1401 creates a lien in favor of hotels, inns, boardinghouses or lodging houses; Nev. Rev. Stat. Ann. § 108.480 creates a lien in favor of hotels, motels, inns, motor courts, boardinghouses and lodging houses. Exempted from the lien are tools or implements necessary to carry on the trade or employment of the guest as well as required work uniforms; N.J. Stat. Ann. § 2A:44-48 creates a lien in favor of hotels, apartment hotels, inns or boardinghouses; N.M. Stat. Ann. § 48-3-7 creates a lien in favor of innkeepers and others. Liens are also created in favor of operators of hotels, rooming houses, apartment houses, rental dwellings and others under§ 48-3-16; *see Blye v. Globe-Wernicke Realty Co., 300 N.E.2d 710 (N.Y. 1973)* declaring the New York innkeeper's lien unconstitutional because of a failure to provide notice and an opportunity for a hearing. The lien statute was repealed in 1990 by N.Y. Lien Law § 181. However, *see United States v. Rahme, 813 F.2d 31 (2d Cir. 1987)* and cases cited therein for continuing application of the statute after *Blye* and prior to repeal; N.C. Gen. Stat. § 44A-2 creates a lien in favor of hotels, motels and boardinghouses; N.D. Cent. Code § 35-19-01 creates a lien in favor of any inn, hotel or tourist camp for charges not exceeding $200; Ohio Rev. Code Ann. § 4721.04 creates the innkeeper's lien. *Cf. Trout v. Tipton, 145 N.E.2d 478 (Ohio App. 1956)* where defendant failed to show that she was a licensed rooming house operator entitled to a lien; Okla. Stat. Ann. tit. 15, § 501 creates a lien in favor of innkeepers and boardinghouse

keepers; Or. Rev. Stat. § 87.156 creates a lien in favor of inns, hotels and motels. Medications, food and children's clothing are excluded; Pa. Stat. Ann. tit. 37, § 71 creates a lien in favor of keepers of inns of hotels for charges not exceeding $200; R.I. Gen. Laws § 34-33-1 creates a lien in favor of hotel keepers and innkeepers; S.C. Code Ann. § 45-1-30 sets forth provisions allowing sale of a guest's property to satisfy an unpaid obligation without expressly creating a lien; S.D. Codified Laws Ann. § 44-11-5 creates a lien in favor of any lodging establishment for charges not to exceed $500. *See* § 34-18-1(6) for definition of a "lodging establishment"; Tenn. Code Ann. § 66-17-101 creates a lien in favor of all hotels, boardinghouses and lodging houses; Tex. Rev. Civ. Stat. Ann. art. 4594 creates a lien in favor of hotels, boardinghouses, rooming houses, inns, tourist courts and motels; Utah Code Ann. § 38-2-2 creates a lien in favor of keepers of inns, hotels, boardinghouses and lodging houses; Vt. Stat. Ann. tit. 13, § 2585(a) creates a lien in favor of hotels; Va. Code Ann. § 43-31 creates a lien in favor of innkeepers, boardinghouse keepers and houses of private entertainment; Wash. Rev. Code Ann. § 60.66.010 creates a lien in favor of all keepers of inns, hotels, lodging houses and boardinghouses; W. Va. Code § 38-11-5 creates a lien in favor of keepers of inns, lodging houses, restaurants, eating houses or boardinghouses; Wis. Stat. Ann. § 779.43(2) creates a lien in favor of keepers of inns, hotels, boardinghouses and lodging houses; Wyo. Stat. § 33-17-103 creates a lien in favor of any keeper of a hotel, boardinghouse, lodging house or restaurant.

(n13)Footnote 297. Ill. Ann. Stat. ch. 71, para. 2 has been replaced by Ill. Comp. Stat. ch. 740 § 90/2; Idaho Code § 39-1806 has been renumbered as Idaho Code § 39-1807; Ind. Code Ann. § 32-8-27-2 has been replaced by §

32-33-6-1(b); Mich. Stat. Ann. §§ 18-302 and 18-303 have been replaced by MCLS §§ 427.202 and 427.203; Tex. Rev. Civ. Stat. Ann. art. 4595 has been repealed; Va. Code Ann. § 43-34 has been amended to raise the maximum value to $5,000; Wyo. Stat. § 33-17-103 requires 10 days prior notice when payment is not made within 60 days after it becomes due. Ala. Code § 35-11-131 permits enforcement by seizure and sale if payment is not made within 10 days after demand, upon giving 10 days notice of sale; Alaska Stat. § 34.35.520 permits enforcement by sale if the lien is not satisfied within 60 days after the charges become due. Ten days notice of the sale is required; Ariz. Rev. Stat. Ann. § 33-952 permits enforcement by sale if the charges remain unpaid for 4 months. Notice of sale must be published unless the debt is less than $60. No sale may occur until the expiration of 4 weeks from the date of the first publication; Ark. Stat. Ann. § 20-26-305(d) permits enforcement by sale after the lien is not satisfied for 90 days, upon giving 10 days notice of sale; Cal. Civ. Code § 1861 permits enforcement only after final judgment is obtained in a suit to recover the charges. Property not owned by the guest is not subject to the lien if the hotel receives notice of that fact prior to sale; Colo. Rev. Stat. § 38-20-107 permits enforcement when charges are not paid within 30 days after they become due. Under § 38-20-109, 10 days notice of sale is required; Del. Code Ann. tit. 25, § 3903 permits enforcement when charges are not paid within 30 days after they become due. Under § 3905, 15 days notice of sale is required; D.C. Code Ann. § 34-102(b) permits enforcement when charges are not paid within 30 days after they become due. Public sale may occur thereafter upon notice by registered or certified mail plus publication once a week on 3 successive weeks; Fla. Stat. Ann. § 509.403 allows enforcement through a writ of distress when the guest vacates without payment of an outstanding account. *See also* § 509.401 for lockout rights given to the owner of a public lodging establishment; Ga. Code Ann. § 43-21-6 allows enforcement through sale 30 days after termination of the guest relationship. Notice must be given at least 10 days prior to the sale; Haw. Rev. Stat. § 486K-3 allows enforcement through sale after 3 months detention. Notice by publication is required; Idaho Code § 39-1807 allows enforcement through sale 30 days after the lien arose and 15 days after notice. Items not legally in the guest's possession or not owned by the guest are excluded from the lien when the hotel keeper has notice of the interest of the third party; Ill. Comp. Stat. ch. 740, 390/2 allows enforcement through sale 60 days after the lien arose and 10 days after notice; Ind. Code Ann. § 32-33-6-1cb allows enforcement through sale 60 days after the lien arose and 10 days after notice; Iowa Code § 583.3 allows enforcement by ordinary action with attachment and execution. Under § 583.4, an alternative sale procedure is provided when the lien is unsatisfied for 90 days. 10 days notice is required; Kan. Stat. Ann. § 36-203 allows enforcement through sale after the property has been retained for 90 days, upon notice by posting and mailing; Ky. Rev. Stat. Ann. § 376.350 allows enforcement through a sheriff's sale. No notice provisions are included; La. Civ. Code Ann. art. 3236 allows enforcement through sale after 6 months retention. Publication of a notice of sale is required 4 weeks prior to the sale; Me. Rev. Stat. Ann. tit. 30-A, § 3862 allows enforcement through sale after 90 days, upon giving 10 days notice; Md. Com. Law II Code Ann. § 16-502 allows enforcement through sale 15 days after the charges come due. Notice by publication is required at least 10 days before the sale; Mass. Ann. Laws ch. 140, § 14 allows enforcement through sale 6 months after the departure of a guest who has abandoned the items. The conventional innkeeper's lien has ceased to exist; Mich. C.L.S. 427.202 § 18.302 allows enforcement through sale 3 months after departure of a guest. Under § 427.203, notice by publication is required 15 days before the sale and also by personal service if it possible; Minn. Stat. Ann. § 327.76, subds. 2, 3 permits enforcement only after final judgment is obtained in an action to recover the charges due. The innkeeper may take possession of the items during the pendency of the action if it appears that their use as security for payment will be reduced or eliminated. A bond may be required. Sale may occur more than 30 days after entry of final judgment for the innkeeper; Miss. Code Ann. § 75-73-17 allows enforcement through sale when charges are not paid within 10 days after demand upon 10 days notice of sale; Mo. Ann. Stat. § 419.060, subd. 2 allows enforcement through sale 90 days after the lien is created upon giving notice by posting and mail. Under § 419.070, enforcement is permitted against the guest's wages; Mont. Code Ann. § 71-3-1402 allows enforcement through sale 6 months after departure of the guest. Notice by publication is required; Nev. Rev. Stat. Ann. § 108.480 allows enforcement through sale 30 days after default in payment. Under § 108.500, notice by publication is required 10 days prior to the sale together with notice by mail when possible; N.J. Stat. Ann. § 2A:44-49 allows enforcement through sale upon publication of notice of sale for 3 days; N.M. Stat. Ann. § 48-3-13 allows enforcement of the lien in the same manner as foreclosure of a chattel mortgage. Under § 48-3-14, notice by posting or by publication is required; N.Y. Gen. Bus. Law § 207 allows enforcement through sale after 15 days prior notice by publication. *See* § 209 for an alternative sale provision when the lien has remained unpaid for 18 months. These sections continue to exist even

though the statute creating the lien has been repealed. *See* N.Y. Lien Law § 181; N.C. Gen. Stat. § 44A-4 allows enforcement through sale when charges are unpaid for 30 days after notice by mail; N.D. Cent. Code § 35-19-02 allows enforcement through sale with 10 days notice. Under § 35-19-03, any residue must be paid to the guest by the innkeeper who, if no demand is made for 6 months, must then deposit the amount held with the county treasurer; Ohio Rev. Code Ann. § 4721.05 permits public sale after 60 days retention upon giving 10 days notice by publication and mailing. Under § 4721.06, any residue must be paid to the guest by the innkeeper who, if no demand is made within 6 months, must deposit the amount held with the county treasurer; Okla. Stat. Ann. tit. 15, § 501 provides for enforcement by sale of pledged property; Or. Rev. Stat. § 87.172 requires retention of the items for 60 days after the lien attaches. Foreclosure sale is provided for in §§ 87.172-87.206; Pa. Stat. Ann. tit. 37, § 72 requires retention of the items for 30 days before sale. Notice by publication and mailing is required. Under § 73, any residue must be paid to the guest on demand within 6 months and, if none is made, deposited with the county treasurer; R.I. Gen. Laws § 34-33-2 authorizes sale after 6 months retention. Notice by publication 15 days prior to the sale is required together with notice by mail if possible; S.C. Code Ann. § 45-1-30 authorizes sale at least 10 days after departure of the guest subject to a requirement to post notices of sale; S.D. Codified Laws Ann. § 44-11-7 authorizes foreclosure and sale under the general provisions for foreclosure set forth in chapters 21-53 and 21-54; Tenn. Code Ann. § 62-7-108 authorizes sale 30 days after departure of the guest with notice by advertisement 10 days before the sale; Utah Code Ann. § 38-2-4 authorizes enforcement through sale after providing notice by mail, or by publication where mailing will not suffice; Vt. Stat. Ann. tit. 13, § 2585(b) allows enforcement through sale. Under tit. 9, § 1952, the debt must be unpaid for 3 months. 10-day notice requirements are set forth in tit. 9, §§ 1952-1953; Va. Code Ann. § 43-34 authorizes enforcement through sale if the value of the property does not exceed $5,000; Wash. Rev. Stat. Ann. § 60.66.020 authorizes sale after 10 days notice when the bill is unpaid for 3 months; W. Va. Code §§ 38-11-14-38-11-16 set forth methods for enforcement of the lien; Wis. Stat. Ann. § 779.48(1) authorizes enforcement through sale when the bill is unpaid for 3 months. When the property value exceeds $100, enforcement is by action; Wyo. Stat. § 33-17-103 authorizes sale upon 3 days notice when the amount due is not paid within 60 days.

(n29)Footnote 313. *See* Parks v. "Mr. Ford," *556 F.2d 132 (3d Cir. 1977)* relating to the possessory lien of a garage keeper which found that the initial possession was consensual and the retention lien was valid but declared the enforcement by non-judicial sale to be invalid.

Anastasia v. Cosmopolitan Nat'l Bank of Chicago, 527 F.2d 150 (7th Cir. 1975), cert. denied, 424 U.S. 928 (1976), holding that seizure of guests' property by a hotelkeeper under an innkeeper's lien statute did not involve state action.

Davis v. Richmond, 512 F.2d 201 (1st Cir. 1975) holding that no state action took place when the Massachusetts boardinghouse lien statute was enforced against the property of a guest. The statute creating the lien was repealed in 1977. *See* Mass. Ann. Laws ch. 255, § 23.

Jenner v. Shephard, 665 F. Supp. 714 (S.D. Ind. 1987) where the landlord's detention of the possessions of a mobile home park tenant was not state action.

Evans v. Harley Hotels, Inc., 315 S.E.2d 896 (Ga. 1984), app. dis., 469 U.S. 803 (1984), involved hotel lodgers whose personal belongings were seized when they failed to pay their sizable telephone bill. No state action was shown when the sole action alleged was enactment of statutes setting forth circumstances under which the courts would not interfere with the enforcement of innkeeper's liens.

CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.01

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.01 Scope of Chapter.

This chapter discusses the impacts on real property ownership occasioned by the presence of human burials, which may occur in isolated graves, family burial grounds, or recognized cemeteries. The existence of graves usually gives rise to assorted private rights of visitation or further burials, which impose concomitant restrictions and responsibilities on the occupant of the realty. Under certain circumstances, those private rights may dissipate with the passage of time, making the land available for other uses. Although private rights remain important, they are often subject to public concerns and proscriptions that require either the disinterment and removal of burials, or the protection of burials because of prohibitions on desecration or concerns for historic and cultural preservation.

When organized as a cemetery, graves and related uses of land present issues of compatibility with neighboring landowners and the community, formally addressed as matters of nuisance, but now usually treated as issues of land use regulation. n1 This chapter does not address those issues, nor those relating to the licensing and regulatory control of cemetery operations, or corporate aspects of their maintenance and management.

CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.02

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.02 Introduction.

[Go To Supp]

Our national burial customs have made a gradual transition from the use of family or neighborhood burial grounds and church graveyards to formally-organized cemeteries. Much of that change has been reflected inadequately by the case law, which continues to interchangeably draw rules and dicta from one era to another, and from one type of burial to another. The development of the law regarding graves and cemeteries reflects a continuing attempt to adjust the demands of the living for current uses of land against the desire to recognize and respect human burials. More recently, those conflicting values have been complicated by campaigns to preserve graves and cemeteries as both open space resources n2 and repositories of cultural and historic values. n3

Numerous cases have involved the conflict between protection of burials and the interests of land owners who attempted to reclaim burial areas for agricultural uses; n4 other cases have involved intrusions by mining and industrial uses, n5 or proposals for commercial n6 or residential n7 development. Other cases involve gradual changes in the urban surroundings that make a site no longer suitable or desirable as a cemetery, n8 or site alterations proposed by the religious or corporate operators of the cemetery. n9 Whereas many past controversies concerned a servient landowner's desire to obtain unencumbered utilization of the land by refusing to recognize poorly-marked graves as protected interests, more recent cases have concerned formal attempts to develop land while simultaneously recognizing and removing graves from the site. n10 The latter controversies raise issues of statutory procedures for removal and reinterment of bodies, n11 or allegations of abandonment of the burial interests. In both situations, civil n12 or criminal actions n13 for disturbance or desecration of graves may be involved, and some burial areas may be protected by modern federal n14 and state statutory systems for preservation of historic graveyards or protection of unmarked historic or prehistoric graves and their contents. n15

FOOTNOTES:
(n1)Footnote 2. Scenic and recreational values may assume major importance. *See e.g., Mayor & Aldermen of Savannah v. Radford, 401 S.E.2d 709, 710 (Ga. 1991)* (city cemetery operated "for cultural, historical, and recreational purposes for the benefit of the general public and only secondarily for the use of the paying members of the public as a burial ground"). *Kentucky Dep't of Fish & Wildlife Resources v. Garner, 896 S.W.2d 10 (Ky. 1995)* (action by relatives

of a person buried in a graveyard on federal land that is licensed to the state to enjoin the state from placing gates that prevent automobile access to the grave site). An early report urging sensitive reuse was U.S. Dep't of Housing and Urban Development, Cemeteries as Open Space Reservations (1970). Various other sources discuss the problem, *e.g.*, Ruth E. Knack, *The Ultimate Open Space*, Planning, February 1990, at 13. Some states have adopted statutory systems to "dedicate" cemeteries as open space or natural preserves, *e.g.*, 525 Ill. Comp. Stat. Ann. §§ 30/3, 30/11, 30/12.

(n2)Footnote 3. *See e.g.*, Ga. Code Ann. §§ 36-72-1-36-72-16 (protection of cultural heritage represented by abandoned cemeteries and burial grounds). The historic character of cemeteries (and the notoriety of graves therein) can become a valuable resource for a community, creating asserted "cultural, social, entertainment, tourism, and historic benefits." *See Billings v. Concordia Heritage Ass'n, 960 S.W. 2d 688 (Tex. Civ. App. 1997).* N.J. Stat. Ann. 40:10B-1 to -3 [Historic Cemeteries Act]. Special protections for Native American and Native Hawaiian gravesites were created under the Native American Grave Protection and Repatriation Act ("NAGPRA"). *25 U.S.C. § 3001* (2000). Another source of protection comes through the National Historic Preservation Act ("NHPA"). *16 U.S.C. § 470* (2000). *Yankton Sioux Tribe v. U.S. Army Corps of Engineers 194 F. Supp. 2d 977 (D.S.D. 2002)* (U.S. Army motion for dismissal was granted for Native American tribe's claim under the NHPA, but motion for dismissal was denied under the NAGPRA). Haw. Rev. Stat. § 6E-43 [prehistoric and historic burial sites]; R.I. Gen. Laws §§ 23-18-11.1, 23-18.3-1 [protection of historic cemeteries]; Va. Code Ann. § 10.1-2305.C [family graveyards with historical significance]; Wash. Code Ann. §§ 68.60.010-68.60.060 [protection of historic cemeteries].

(n3)Footnote 4. *See e.g., Whitt v. Hulsey, 519 So. 2d 901 (Ala. 1987)* (farming uses incurred on family cemetery); *Dearinger v. Peery, 387 N.W.2d 367 (Iowa App. 1986)* (markers removed, cattle grazing). *See also State ex rel. Atty. Gen. of Iowa v. Terry, 541 N.W.2d 882 (Iowa 1995); Stoker v. Brown, 583 S.W.2d 765 (Tenn. 1979)* (cemetery lands used for farming and cultivation); *Michels v. Crouch, 150 S.W.2d 111 (Tex. App. 1941)* (graves plowed over, grazed by cattle).

(n4)Footnote 5. *See e.g., Lascurain v. City of Neward, 793 A.2d 731 (NJ. Super. Ct. App. Div. 2002)* (daughter no longer had any property interest in her father's grave and city could lease the property where the grave lay for industrial purposes); *Mississippi Transportation Comm'n v. Bridgforth, 709 So. 2d 430 (Miss. 1998)* (condemnation of extensive but unmarked ancient cemetery for highway construction); *Thompson v. City of Red Wing, 455 N.W.2d 512 (Minn. App. 1990)* (gravel extraction on site of Native American burials); *Walker v. Georgia Power Co., 339 S.E.2d 728 (Ga. App. 1986)* (family cemetery condemned for construction of power plant); *Faust v. Mitchell Energy Corp., 437 So. 2d 339 (La. App. 1983)* (mineral rights); *Humphreys v. Bennett Oil Corp., 197 So. 222 (La. 1940)* (oil wells in cemetery); *Van Buskirk v. Standard Oil Co., 134 A. 676 (N.J. 1926)* (oil tanks on colonial family cemetery); *Frost v. Columbia Clay Co., 124 S.E. 767 (S.C. 1924)* (railroad spur); *Bessemer Land & Imp. Co. v. Jenkins, 18 So. 565 (Ala. 1895)* (cemetery discontinued; land reused for pipe works).

(n5)Footnote 6. *AT&T Wireless PSC, Inc. v. City of Independence, 63 S.W.3d 609 (Ky. App. 2001)* (commercial development could not be built on or adjacent to burial grounds). The decision in Callaway v. Ryckeley was reversed and vacated; *see Ryckeley v. Callaway, 412 S.E.2d 826 (Ga. 1992)* (denial of action by descendants for emotional distress absent evidence of malicious or wilful destruction of graves); *Harris v. Borough of Fair Haven, 721 A.2d 758 (N.J. Super. Ct. Ch. Div. 1998)* (court of equity declined to enjoin house construction where city likely to monitor construction to protect any human remains that may be discovered at old cemetery site); *Trinity Cemetery Assn., Inc. v. Township of Wall, 784 A.2d 52 (N.J. 2001)* (Cemetery Act preempted township ordinance and barred it from rezoning cemetery property to residential use after the Cemetery Board issued a certificate of authority allowing a purchaser to operate as a cemetery after recording the deed to the property; the purchaser recorded the deed after the ordinance was introduced, but before it was finally adopted); *Schmolke v. Highland Butterfield, Inc., 471 N.E.2d 226 (Ill. App. 1984)* (proposal for redevelopment of cemetery land as planned unit development with commercial and residential uses); *German Evangelical St. Marcus Congregation of St. Louis v. Archambault, 383 S.W.2d 704 (Mo. 1964)* (cemetery land "well suited for dwellings and business buildings").

(n6)Footnote 7. *See e.g., Callaway v. Ryckeley, 404 S.E.2d 650 (Ga. App. 1991)* (partial destruction of cemetery by

residential subdivision); *Sanford v. Vinal, 552 N.E.2d 579 (Mass. App. 1990)* (residential subdivision on colonial burial area); *Forest Home Cem. Ass'n v. Dardanella Fin. Corp., 329 N.W.2d 885 (S.D. 1983)* (planned residential development on municipal cemetery); *Wana The Bear v. Community Constr., 180 Cal. Rptr. 423 (1982)* (residential subdivision on unmarked Indian graves); *Rhodes v. Nicklas, 624 S.W.2d 504 (Mo. App. 1981)* (construction of house over family cemetery).

(n7)Footnote 8. Petition of First Trinity Evangelical Lutheran Church in *Pittsburgh, 268 A.2d 219 (Pa. 1970)* (change in surroundings dictate abandonment as a suitable burial site); *German Evangelical St. Marcus Congregation of St. Louis v. Archambault, 383 S.W.2d 704 (Mo. 1964)* (cemetery land "well suited for dwellings and business buildings," but portions continued to be well maintained).

(n8)Footnote 9. *Bellevue Masonic Temple, Inc. v. Lokken, 452 P.2d 544 (Wash. 1969)* (proposed disinterment and reconstruction of temple); *Schaeffer v. Unknown Heirs and Next of Kin, 175 N.E.2d 776 (Ohio 1961)* (church allowed to build Sunday school over occupied graves).

(n9)Footnote 10. *See e.g., Dearinger v. Peery, 387 N.W.2d 367 (Iowa App. 1986)* (township abandoned and quitclaimed small public cemetery); *see also State ex rel. Atty. Gen. of Iowa v. Terry, 541 N.W.2d 882 (Iowa 1995); Pantel v. Workmen's Circle/Arbetter Ring Branch 281, 735 N.Y.S.2d 228* (N.Y. App. Div. 3 Dept. 2001) (cemetery owner sought to move monuments). *Schmolke v. Highland Butterfield, Inc., 471 N.E.2d 226 (Ill. App. 1984)* (disinterment, annexation, and rezoning of cemetery land); Petition of First Trinity Evangelical Lutheran Church in *Pittsburgh, 268 A.2d 219 (Pa. 1970)* (disinterment and reinterment); *Ohio v. Glass, 273 N.E.2d 893 (Ohio App. 1971)* (housing developer unsuccessfully sought permits for removal; convicted of tombstone removal), *Touro Synagogue v. Goodwill Indus., 96 So. 2d 29 (La. 1957)* (agreement to sell cemetery for development after removal of remains).

(n10)Footnote 11. *See e.g.,* Arthur J. Anderson & William S. Dahlstrom, *Rural Cemeteries in Urban Environments,* Texas Bar J., January 1989, at 78-80.

(n11)Footnote 12. *See generally,* Danny R. Veilleux, Annotation, *Liability for Desecration of Graves and Tombstones, 77 A.L.R.4th 108 (1990),* and Charles E. Rounds, Jr., *Protections Afforded to Massachusetts' Ancient Burial Grounds, 77 Mass. L. Rev. 176 (1988).*

(n12)Footnote 13. *See generally,* Land owner's erection of fence, clearance of vegetation, and bulldozing of soil under claim of title to realty were insufficient to establish intent required for crime of desecration, *Mullinax v. State of Texas, 756 S.W.2d 40 (Tex. App. 1988).* A criminal conviction for removal of fence materials "enclosing a cemetery" was reversed where evidence established that body had previously been removed from grave site, which no longer could be defined as a cemetery, *State of North Carolina v. Phipps, 449 S.E.2d 450 (N.C. 1994).* J.A. Bryant, Jr., Annotation, *Construction and Application of Graverobbing Statutes, 52 A.L.R.3d 701 (1973);* John S. CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.03

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.03 Definition and Creation of Graves and Cemeteries.

[Go To Supp]

Human n16 burials might occur singularly n17 or in groups of unmarked graves, n18 as groups of family burials on private property, in organized community burial grounds or graveyards, in churchyards, in publicly-maintained cemeteries, or in corporate cemeteries established to provide "perpetual" maintenance. The distinctions among those categories frequently result in different rights claimed by heirs or relatives, or varied responsibilities imposed on the owners of the land occupied by the graves.

American burial practices and terminology underwent a rapid shift in the mid-19th century, as crowded urban "graveyards" or "burial grounds" n19 were superseded or replaced in many regions by newly-named "cemeteries." n20 The new popularity of cemeteries as "sleeping places of the dead" corresponded with the development of formally-organized cemetery associations or corporations that replaced the uncertainties of graveyards maintained by a church or community with the promised security of permanent and professional management offered by the new entities. n21 The new and spacious rural cemeteries were meticulously planned by landscape architects, and gradually evolved from naturalistic settings to broad lawn designs or memorial parks, often including mausoleums, columbariums, crematories, and related structures. n22

The law regarding cemeteries and other types of burial places reflects the piecemeal evolution of burial practices, and now presents a highly varied body of rules regarding the legal status and protection of places of human burial, usually loosely categorized within the general heading of "cemeteries." However, it is often necessary to determine carefully whether particular graves are categorized, and thus regulated or protected, as part of a "cemetery," and whether that term carries specific statutory or other legal implications. Under many modern statutes, land areas that include graves and yet do not qualify as cemeteries nevertheless may receive protection as "unmarked graves" n23 or other, less precise, n24 categories.

LEXIS: unmark! or unregist! w/10 (human w/3 burial) or grave! or cemeter!

FOOTNOTES:

(n1)Footnote 16. There is general recognition that the term "cemetery" includes only *human* burials, and that relevant concerns would not apply to so-called "cemeteries" used for household pets; *e.g., Loid v. Kell, 844 S.W.2d 428 (Ky. App. 1993)* (statutory requirements for "cemeteries" contemplated "dead persons," not pets); and *Hertle v. Riddell, 106 S.W. 282 (Ky. 1907)* (burial of dog is implied violation of contract). *Accord, Shields v. Karns, 622 N.E.2d 673, 675 (Ohio App. 1993)* (statutory definition of cemeteries contemplated only human remains, not family pets). Nor are common law legal encumbrances on realty, of the type resulting from human burials, created by a long-continued practice of burying pet animals on the grounds of a commercial veterinary hospital. *Annunziata v. Millar, 574 A.2d 1021, 1027 (N.J. Super Ct. Ch. Div. 1990).* Statutes are often explicit, *e.g.*, Haw. Rev. Stat. § 441-1 ("Cemetery" means ... any property ... used for the permanent interment of human remains"); 760 Ill. Comp. Stat. Ann. § 100/2 (a cemetery is "land dedicated to and used ... for the interment of human remains.").

(n2)Footnote 17. Legal protection might vary depending on the number of interments; *see* n.89 *infra*.

(n3)Footnote 18. More than half the American states have statutes protecting "unmarked human burials"; many of the statutory definitions are essentially identical to that of N.C. Gen. Stat. § 70-28(6): " "Unmarked human burial' means any interment of human skeletal remains for which there exists no grave marker or any other historical documentation providing information as to the identity of the deceased."

(n4)Footnote 19. The term "burial ground" is still used in many regions to describe an area, which may or may not be the legal equivalent of a "cemetery," that is devoted to and used for interment of human remains; *see, e.g.*, Ga. Code Ann. § 36-72-2(3), *Sanford v. Vinal, 552 N.E.2d 579 (Mass. App. 1990);* N.Y. Town Law § 291 ("cemetery or burial ground"). Additional states have provided special statutory protection to "unmarked human burial grounds," *e.g.*, Minn. Stat. Ann. § 307.08(2); N.M. Stat. Ann. § 18-6-11.2(1).

(n5)Footnote 20. "Cemetery" was derived from the Greek word for sleeping chamber, suggesting death merely as sleep, and a transition from life to eternal life. *See* David C. Sloane, The Last Great Necessity; Cemeteries in American History 55 (1991).

(n6)Footnote 21. *Lanham v. Franklin Township, 2004 Ohio App. LEXIS 1790* (No. CA2003-07-057, Ohio App., Apr. 26, 2004) (action against municipality by owners of a family burial plot, after a stranger was allegedly buried in the plot). For the evolution of burial practices and cemeteries, *see generally* David C. Sloane, The Last Great Necessity: Cemeteries in American History (1991), Kenneth Jackson, Silent Cities: The Evolution of the American Cemetery 20 (1990), James J. Farrell, Inventing the American Way of Death 1830-1920 (1980). One of the first "rural cemeteries" was Mt. Auburn, whose essential history is disclosed in *Proprietors of Mt. Auburn Cem. v. City of Cambridge, 22 N.E. 66 (Mass. 1889).* Evolution of the professionally-managed cemetery is reflected occasionally in judicial opinions; *see, e.g., Mansker v. City of Astoria, 198 P. 199 (Or. 1921).*

(n7)Footnote 22. *Warner v. City of Boca Raton, 887 So. 2d 1023 (Fla. 2004)* (owners of public cemetery plots challenged a prohibition against vertical grave decorations). The definitions are not mutually inclusive; thus, merely to operate a crematory, without making interments, does not constitute a cemetery. *Cemetery Bd. v. Telophase Soc'y of Am., 151 Cal. Rptr. 248 (1978).*

(n8)Footnote 23. *See* § 53.07(a)(2) *infra*.

(n9)Footnote 24. *E.g.*, statutory protection of Indian burial mounds as "burial sites"; *see Thompson v. City of Red Wing, 455 N.W.2d 512 (Minn. App. 1990).* Alaska protects certain "archaeological sites"; Alaska Stat. § 41.35.240; North Dakota protects "cultural resources" that include "burial mounds" and "unregistered graves" in N.D. Cent. Code § 55-03-00.1(1).

CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.04

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.04 Creation of Cemeteries: Setting Apart.

Bill of Rights

Early judicial attempts to define cemeteries drew on the generally-recognized meanings of the term, but emphasized that some additional factors must exist to distinguish a "cemetery" from mere graves:

> The word "cemetery,' is defined by Webster to be "a place or ground set apart for the burial of the dead,' and this is the popular idea. What creates the cemetery is the act of setting the ground apart for the burial of the dead, marking it, and distinguishing it from the adjoining ground, as a place of burial. n25

(a) Actual Use.

What might constitute "setting the ground apart" has seldom been directly examined, and the case law reflects a pragmatic awareness of the informality with which many early burial plots and cemeteries were established. n26"Set aparts" usually occurred when landowners actually used some portion of their realty for burial purposes, generally for members of the owner's family or close neighbors, with graves that were physically marked by monuments or enclosures. n27 When thus done informally, title to the land would remain in the original landowner who had instituted the "set aside." n28 Under such circumstances, the legal characterization of the burial area was uncertain, as it was generally recognized that landowners may not create for themselves a property interest on their own land that is separate from the underlying estate. n29 Nor was it necessary to carefully delineate the boundaries of the burial area, so long as the area remained subject to the landowner's direct control. Eventually, however, the physical act of demarcating, or setting apart the land, would probably be clarified by an explanation, or statement of purpose, n30 made as part of a subsequent conveyance; thus, in Boyd v. Brabham, n31 a landowner's will noted the presence of an existing "graveyard" and directed that it be "set apart and forever dedicated to the purpose of a family graveyard with rights of way to and from the same."

More commonly, the area "set apart" was reflected in a subsequent, and more conventional, creation of an implied or express reservation or exception, executed as part of a subsequent conveyance of the larger tract of realty of which it was a portion. n32 In that case, if the burial area had been reserved for the use of the grantor's family, the new grantee's title would be subject to the reservation, and members of the family would hold the reserved rights of burial and

visitation. n33 A potential problem, however, arises if the reservation were to be made for the benefit and retention not of the grantor or the grantor's descendants, but for third persons such as friends or neighbors. Some jurisdictions have invalidated attempts to reserve on behalf of third persons who are not parties to a conveyance, n34 although the majority of reported decisions appear unconcerned with that formality. Third-party reservations are now widely accepted in other areas of easement law. n35 Some courts have, instead, treated the exception of an existing burial area as a reservation "by" the grantor, but to be "held in trust" for the benefit of those persons who hold individual burial rights. n36

COMPUTER-ASSISTED RESEARCH

LEXIS: (establish! or creat!) w/5 (family or private) w/10 (graveyard or cemeter! or burial) easement w/10 (family or private) w/10 (graveyard or cemeter! or burial)

(b) Visible Evidence.

The central feature of the process of "setting apart" is the creation of a physical, visible evidence of graves, marking them by stones or other monuments and perhaps by some form of enclosure, such as a wall or fence. The physical markers serve several purposes, one of which is an aid in conveyancing; thus in Houston Oil Co. v. Williams n37 the fencing around a graveyard gave sufficient certainty to the description of a reservation in a deed, whereas in Carr v. Baldwin, n38 mention only of an "old graveyard" was held insufficient to describe an exception. Many cases involve land surveys and contests of evidence to establish accurate boundaries, n39 sometimes employing sophisticated technologies such as soil resistivity testing to locate the perimeters of a burial area. n40

COMPUTER-ASSISTED RESEARCH

LEXIS: evidence w/10 cemeter! or graveyard or (human w/3 burial)

(c) Notice.

In addition to establishing boundaries, a more important function of the markers and other visible features of graves is to provide notice to subsequent purchasers and owners of the existence of graves, thus providing the basis for trust, easement, or other theories that force a land owner to defer and conform to the presence of burials. n41 As noted in 1959 in a leading decision by the Oklahoma court in Heiligman v. Chambers:

> "[T]he plot was enclosed with a sandstone wall ... with suitable markers. There were trees planted and the entire plot was visible to the naked eye of one looking over the land with the views of purchasing. We therefore hold [the landowner] was charged with notice of the fact that this plot had been dedicated for burial purposes and took title to the ground subject to the rights of the heirs of those buried therein, even though the same was not reserved in the chain of title." n42

Conversely, the complete absence of markers or other apparent indications of graves may be a deciding factor that allows a purchaser to acquire the land in good faith and without notice of the existence of the burials, thus operating effectively to free the land of traditional property restrictions. n43 The common-law approach to poorly-marked graves, however, has been less than satisfactory, prompting many states to adopt "unmarked human burials" statutes that attempt to strike a balance between protection of old graves and appropriate activities by landowners.

(d) Devotion to Purpose.

Enclosures and monuments, however, do more than establish the existence or delimit the physical extent of the real property interest represented by a grave; they also establish the larger legal and ethical evidence that particular land has been symbolically "set apart," "devoted," "appropriated," or "dedicated" to cemetery purposes, and thus subjected to special obligations.

> Regardless of the laws and rules relating to the ownership and control of real property, when a plot of ground is set apart for cemetery purposes, and burials are made in the land, the ground changes its character in the minds and feelings of the community. "It assumes a sacred quality that overrides conveyancers' precedents and requires freedom from profanation until, by abandonment and removal of the bodies or by complete disintegration, there remains nothing to appeal to the emotions of the survivors.' n44

The act of "setting apart" or "devoting" to burial purposes demonstrates the landowner's implicit recognition that the land is to be impressed with a "sacred quality," and the owner's assumption of the restrictions and responsibilities that the new use entails. In that sense, "setting apart" is the landowner's expression of a commitment to devote the land to cemeterial purposes, and a consequential pledge to limit any inconsistent uses of the land, thus creating a restriction that is enforceable under varied theories of law or equity. n45 As noted in the early Virginia case of Benn v. Hatcher: "The present case stands ... on the solemn agreement of the parties themselves, that the lot in question should ... be devoted, in the future, as it had been in the past, to the use of the family as a place of burial for its dead." n46 A devotion of land to burial purposes requires more than friendly assurances of permanence, and must overcome legal safeguards for the protection of real property ownership before it creates a societal and legal consensus that the land is not to be disturbed for other purposes. Although judicial deference may be appropriate to protect burials of human remains, no encumbrance of private land is created by repeated burials of pet animals. n47

COMPUTER-ASSISTED RESEARCH

LEXIS: (set w/2 apart) or devot! or appropriat! or dedict! w/5 (cemeter! w/3 purpose!)

(e) Consecration.

A similar form of "solemn agreement" is represented by "consecration" of land for burial purposes. Cemeteries are often described in case law as "consecrated ground," a term that has precise meanings in ecclesiastical law, generally defined as "to make sacred, to sanctify" or "to dedicate solemnly to a sacred or religious purpose." n48 Similarly, "hallow" means to make holy, to treat as sacred. More generally, consecration is understood to invest specific objects with particular religious significance, transforming them from profane to sacred, and often involves the ritual marking off or delimiting of a place from the mundane world. n49 As used currently, consecration thus appears to be essentially synonymous with, and to reflect the larger general sense of, "devote" or "set apart"; it appears to have no additional legal consequences. ("Desecration," the antonym of consecration, has separate status as a tort, and is covered by penal statutes in most jurisdictions.) n50

FOOTNOTES:

(n1)Footnote 25. *Concordia Cem. Ass'n v. The Minnesota & N.W. R.R., 12 N.E. 536, 541 (Ill. 1887).* Although limited in its original application, *Concordia* has been cited repeatedly as a definition; *see, e.g., Village of Villa Park v. Wanderer's Rest Cem. Co., 147 N.E. 104 (Ill. 1925).*

(n2)Footnote 26. *E.g.*, Judge P. J. Graves, writing in *Wooldridge v. Smith, 147 S.W. 1019, 1021 (Mo. 1912),* lamented "the known lax methods used in the earlier days for the establishing of public burying grounds... ."; *see also Dearinger v. Peery, 387 N.W.2d 367, 368 (Iowa App. 1986); State ex rel. Atty. Gen. of Iowa v. Terry, 541 N.W.2d 882 (Iowa 1995); Castro Romero v. Becken, 256 F.3d 349 (5th Cir. 2001)* (the oral history of Lipan Apache Tribe did not establish a burial ground under Texas law).

(n3)Footnote 27. *E.g., Heiligman v. Chambers, 338 P.2d 144 (Okla. 1959)* (marked burials on unalloted land belonging to the Cherokee Nation); *Houston Oil Co. v. Williams, 57 S.W.2d 380 (Tex. App. 1933)* (succession of fences approximately enclosed family graveyard); *Morgan v. Collins Sch. House, 133 So. 675 (Miss. 1931)* (family and neighborhood burials); *Sherrard v. Henry, 106 S.E. 705 (W. Va. 1921)* (marking off a lot "in accordance with custom," using an earthen ridge and plantings, was sufficient to set apart a grave site). Under some rules, *e.g.*, Ky. Rev. Stat. Ann. § 381.710, actual use, rather than visible evidence of the use, is sufficient to constitute a "set aside."

(n4)Footnote 28. *Mingledorff v. Crum, 388 So. 2d 632 (Fla. Dist. App. 1980); Grinestaff v. Grinestaff, 318 S.W.2d 881 (Ky. 1958); Adams v. State, 97 S.E.2d 711 (Ga. App. 1957); Hines v. Tennessee, 149 S.W. 1058 (Tenn. 1911).* Such practices are well-recognized: "the owner of the freehold may devote a part of his premises to the burial of his family or friends. It is but a just exercise of his dominion over his own property." *Kingsbury v. Flowers, 65 Ala. 479, 485 (1880);* the *Kingsbury* quote has been widely repeated, *e.g., Heiligman v. Chambers, 338 P.2d 144, 147 (Okla. 1959).*

(n5)Footnote 29. Modern easement theory holds that, although a landowner while still the owner of the entire estate may not create a true easement that is distinct from that landowner's underlying fee title, the interest could be recognized as a "quasi-easement" that would form the basis for creation of an easement by implied reservation in a subsequent conveyance. *See* Restatement of Property § 473 (1944), Jon W. Bruce & James W. Ely, The Law of Easements and Licenses in Land § 4.03[2][b] (1988).

(n6)Footnote 30. *See generally*, C.T. Foster, Annotation, Statement As to Use of Lands Excepted or Reserved, Etc., 139 A.L.R. 1339, 1360-1362 (1942), and H.D. Warren, Annotation, Private or Family Cemeteries, *75 A.L.R.2d 591 (1961).* Disputed boundaries of recognized public cemetery may be resolved by execution of boundary agreement between cemetery owner and adjoining landowner. *In re St. James Meth. Church of Harnville, 666 So. 2d 1206 (La. App. 1995).*

(n7)Footnote 31. *Boyd v. Brabham, 414 So. 2d 931 (Ala. 1982), aff'd after remand, 442 So. 2d 86 (Ala. 1983); see also Goins v. Beech Bottom Baptist Church, 231 S.W.2d 23 (Ky. 1950).*

(n8)Footnote 32. *E.g., Aldridge v. Puckett, 278 So. 2d 364 (Ala. 1973)* (old deed expressly reserved previously established family burial ground); *Heiligman v. Chambers, 338 P.2d 144 (Okla. 1959)* (marked burials impliedly reserved); *Locke v. Lester, 78 So. 2d 14 (La. App. 1955)* (pre-existing "public graveyard" described in exceptions to later deeds); *Houston Oil Co. v. Williams, 57 S.W.2d 380 (Tex. App. 1933)* (long-established burial area specifically "excepted" in later conveyances); *Brown v. Anderson, 11 S.W. 607 (Ky. 1889)* ("reserving ... the old family graveyard of the grantor"); *Benn v. Hatcher, 81 Va. 25 (1885)* (area long "dedicated" for burials was "reserved" in later conveyance). *See also* C.T. Foster, Annotation, *Statement as to Use Being Made, etc.*, 139 A.L.R. 1339, 1360-1362 (1942).

The absence of a subsequent conveyance to create or define an interest was a partial cause for non-recognition of a family graveyard in *Wooldridge v. Smith, 147 S.W. 1019 (Mo. 1912);* distinguished in *Rhodes v. Nicklas, 624 S.W.2d 504 (Mo. App. 1981),* where an express deed reservation was recognized as sufficient to create a family cemetery that was reserved in all subsequent deeds in the chain of title, although additional evidence nevertheless was required to adequately describe the precise boundaries.

(n9)Footnote 33. *Mingledorff v. Crum, 388 So. 2d 632, 636 (Fla. Dist. App. 1980)* (rights are limited to those related by blood or marriage); *Stoker v. Brown, 583 S.W.2d 765 (Tenn. 1979)* (relatives of decedents may enjoin trespass to cemetery); *Stuart v. Smith, 344 So. 2d 127 (Miss. 1977)* ("heirs" of grantor); *Aldridge v. Puckett, 278 So. 2d 364, 366 (Ala. 1973)* (easement reserved for family); *Bowen v. Hooker, 372 S.W.2d 257 (Ark. 1963)* (heirs and relatives and decedents, and public); *Bradley v. Virginia Ry. & Power Co., 87 S.E. 721 (Va. 1916)* (grantor reserved family burial ground for use by grantor's family); *Hines v. State, 149 S.W. 1058 (Tenn. 1911); Brown v. Anderson, 11 S.W. 607 (Ky. 1889)* (reservation "for members of the grantor's family" excludes licensees); *Benn v. Hatcher, 81 Va. 25 (1885)* (reservation not for individuals, but "for the family as a whole.").

(n10)Footnote 34. *See e.g., Herbert v. Pue, 20 A. 182 (Md. 1890)* (invalidating an attempted reservation made in 1859 to strangers to the deed rather than to the grantor).

(n11)Footnote 35. *See* Restatement of Property § 472 (1944); Jon W. Bruce & James W. Ely, The Law of Easements and Licenses in Land § 3.06 (1988); Gerald Korngold, Private Land Use Arrangements 30-31 (1990). *Compare Locke v. Lester, 78 So. 2d 14 (La. App. 1955)* (dedication to the public can be complete without formal transfer to an entity).

(n12)Footnote 36. *Houston Oil Co. v. Williams, 57 S.W.2d 380 (Tex. App. 1933). Compare* the similar rationale in *Ritter v. Couch, 76 S.E. 428, 432-433 (1912)* (dedication to public created a charitable public trust).

(n13)Footnote 37. *Houston Oil Co. v. Williams, 57 S.W.2d 380 (Tex. App. 1933).* Existing cemetery used as starting point for fence that represented the agreed boundary between adjoining parcels of realty. *Inman v. Nutt, 1993 Tenn. App. LEXIS 153.*

CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.05

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.05 Creation of Cemeteries: Dedication.

Most judicial definitions of "cemetery" include the requirement or expectation that land be "dedicated" as a cemetery, but there are several meanings of "dedication," each giving rise to different consequences.

COMPUTER-ASSISTED RESEARCH

LEXIS: cemeter! w/25 dedicat!

(a) Dedication as Devotion to Purpose.

The phrase "dedication" often is used descriptively to indicate simply that land has been devoted to, designated for, or appropriated to, a burial use by its owner, in the same sense as the phrase occurs in decisions that recognize lands that have been "set apart" as a private cemetery or burial grounds, or reserved for that purpose in relevant deeds. n51 To devote land to burial purposes may, or may not, involve the creation or transfer of property interests. As discussed below, "dedications" may create a form of easement interests in persons other than the owner of the realty, leaving the title to the property in its owner. In those situations, "dedicate" manifestly is synonymous with "devote," and describes the landowner's intent and commitment to allow the land to be used for burial purposes.

"[I]t has long been recognized that the owner may, without using a deed, 'set apart' a portion of his land for use as a family cemetery ... . Perhaps inaccurately, this has often been referred to as a 'dedication'." n52

In that less formal sense, a dedication carries no intimation of the creation of unrestricted public rights of usage nor of a public obligation of maintenance. n53

(b) Dedication to Public Use.

The larger and more exacting definition of "dedication" involves a "dedication to public use," which usually represents a transfer of a real property interest from the owner of the land to the general public. A dedication to public use arises from the actions, and hence implied donative intent, n54 of a landowner, and a concomitant acceptance of that interest by the public at large, or by some entity representing the public. (In that sense, dedication to public use is not an

appropriate legal theory where burials are limited to friends and family members, private groups, or otherwise restricted to only a portion of the public.) n55

(1) Implied Dedication.

Classic examples of dedication to public use include "town proprietors" who laid out new towns with a "cemetery" shown on the plat maps, n56 or proprietors who either publish plans for a cemetery and offer its lots to purchasers, n57 or who simply create and record a plat of the land. n58 They also include landowners who physically "stake out" a burial area in public ceremonies, n59 or who sell to the public plots that are "laid out" in a graded area among established graves and monuments, n60 or convey by deed to a municipal n61 or religious entity. n62 Those cases arose from the common law concept of an *implied dedication* that was definitively established in 1832 by the United States Supreme Court in City of Cincinnati v. Lessees of White. n63 Later cases, in applying that doctrine, have relied on evidence of a landowner's donative intent, found in an apparent consent to use of the land for interment purposes by members of the public for a long period of time, n64 frequently employing rationales of equitable estoppel. n65

The common law of implied dedication did not require conveyance by a deed, n66 nor the existence of a specific transferee; dedications were frequently made "to pious or public purposes" where no specific public entity existed. n67 The courts have emphasized that no particular act or ceremony was required to accomplish a dedication, which frequently occurred in an informal manner:

> It is unclear exactly what arrangements were made between the (land owners) and the general public, but by the turn of the century it is estimated 10-30 graves with large, durable monuments, and other less distinctive graves were located on this one-acre piece of land. n68

The imprecision and uncertainty that resulted from implied dedicatory activity created persistent problems regarding the nature and scope of the property interest(s) thereby created. Did the landowner intend to transfer a full fee title to the entire burial ground, or to create some lesser interest in land, such as an easement, and affecting what portion of the realty? Common law dedication rules provided no firm answers, and courts were forced to rely on general rules of construction and various presumptions appropriate to the circumstances to decipher the nature of the particular interest created by a dedication.

LEXIS: dedicat! w/10 cemeter! or grave or burial

(2) Statutory Dedication.

Difficulties with the definition, scope, and extent of the common law of implied dedications have prompted most jurisdictions to enact statutory systems that established procedures and requirements for *statutory dedication*, as part of the general procedures for land subdivision. n69 By analogy, about one-quarter of the states have provided additional specific statutory procedures for the creation and dedication of cemeteries, n70 distinguishing them from the more general land subdivision procedures, n71 occasionally by direct statutory exclusion. n72

Unfortunately, often is unclear the extent to which common law and statutory dedications might continue to co-exist, or whether statutory methods were intended by a legislature to become the exclusive techniques for dedication. Some states ignore the issue, recognizing either common law or statutory methods of dedication. n73 Thus, a 1946 Missouri decision declared that defined portions of a bankrupt cemetery operation that had been actually "set apart and devoted" constituted a "cemetery," despite the failure to comply with all the elements of statutory dedication. n74 In contrast, in the 1982 California case of Wana The Bear v. Community Constr., more than 200 Miwok Indian burials had not been interred according to the later-enacted statutory procedures for dedication, and were therefore not included within

statutory protections that were available only to "dedicated" cemeteries. n75 Yet other courts have held that common law dedication was possible before enactment of exclusive statutory procedures, n76 or have regularly applied statutory protections to recognized, but non-dedicated, burial grounds. n77 At least one state has met the problem of non-dedicated ancient graves in crisp fashion; a 1990 Washington act provides: "Any cemetery, historical cemetery, or historic grave that has not been dedicated pursuant to [statutory procedures] shall be considered permanently dedicated ... ." n78

Statutory dedication of cemeteries generally requires only a few formalities. Some of the statutory procedures contemplate a formal conveyance of land title to a public donee, such as a city or county government. n79 Frequently, however, the formalities require merely the preparation and "filing" of a plat map, n80 or only the recordation of two related documents: (1) a plat map showing the subdivision of the entire tract into individual cemetery lots, with attendant streets and boundaries; and (2) a "certificate or declaration of dedication" or other written instrument that expresses the "dedication" of the land "exclusively to cemetery purposes." n81 The declaration appears to be nothing more than an expression of the land owner's intent, albeit recorded, to restrict the use of the land to cemeterial purposes. In the latter situation, it is very similar to the expression of intent implied or expressed in the "set apart" or "set aside" requirement described above, and merely provides for written evidence of devotion to long-term burial purposes. n82

A variation in the format for statutory dedication is to treat the mere acquisition of land by an incorporated cemetery company as constituting a dedication, since the company's activities are inherently restricted in scope and purpose, thus assuring that the land will remain devoted to cemetery activities. n83

A similar form of dedication might also occur "by deed" which, unlike traditional conveyances of title, is accomplished without an actual transfer to a grantee, and is essentially a recorded unilateral expression of intent to restrict the use of the land to cemeterial purposes. n84

One of the purposes of statutory systems was to reduce the uncertainties of land titles by defining more precisely the particular form of title or interest created by a dedication of cemetery land to public use. Early common law or implied dedications, particularly of streets, were sometimes thought to create qualified or defeasible fees, or perhaps only easements. n85 Dedicated cemeteries could thus revert to the donor's estate upon abandonment. n86 Under statutory systems, the statute will specify the nature of the title or interest received by the public and, by extension, whether any interest is retained by the grantor's estate. Thus, in a case arising under Oklahoma's general statutory dedication provisions, the subdivision and dedication of land by use of statutorily-required plat maps included the "donation" to a city of a tract of land "for cemetery." Under the specific statutory terms, that dedication was held to create a *fee simple interest* in the donee city, thus depriving the donor's successors from asserting any further claim to the realty comprising the cemetery. n87 That result is consistent with the general pattern involving large-scale donations of land to public entities, n88 but the effect of any particular dedication will be determined specifically by the appropriate statutes.

(n9)Footnote 59. *Tracy v. Bittle, 112 S.W. 45 (Mo. 1908); Haslerig v. Watson, 54 S.E.2d 413, 422-423 (Ga. 1949).*

(n10)Footnote 60. *Trefry v. Younger, 114 N.E. 1033 (Mass. 1917).*

(n11)Footnote 61. *Ritter v. Couch, 76 S.E. 428 (W. Va. 1912)* (1831 deed to Charleston; lots made available "by license" to the public).

(n12)Footnote 62. *Bowen v. Hooker, 372 S.W.2d 257 (Ark. 1963)* (existing cemetery deeded to church). Similarly, landowners might make common law express dedications of land for use as a public cemetery by conveying to named persons as trustees. *See, e.g.*, the 1895 deed described in *Shepherd v. Hickory Grove Cemetery Mem'l Fund, Inc., 649 So. 2d 1266 (Ala. 1994); Robinson v. Department of Transp., 364 S.E.2d 884 (Ga. App. 1988)* (burials had occurred for more than one hundred years in area "apparently" legally dedicated).

(n13)Footnote 63. *31 U.S. (6 Pet.) 431 (1832). See also Beatty v. Kurtz, 27 U.S. (2 Pet.) 566 (1829)* (a dedication "to public and pious uses" of church and graveyard).

(n14)Footnote 64. *Locke v. Lester, 78 So. 2d 14 (La. App. 1955)* (long use evidenced by reservation and continuous use is "legally sufficient to dedicate."); *Trefry v. Younger, 114 N.E. 1033 (Mass. 1917); Roundtree v. Hutchinson, 107 P. 345 (Wash. 1910).* Similar tests have been adopted by statute, *e.g.*, Nev. Rev. Stat. Ann. § 452.002: "The uninterrupted use by the public of land for a burial ground for 5 years, with the consent of the owner and without a reservation of his rights, is presumptive evidence of his intention to dedicate it to the public for that purpose."

(n15)Footnote 65. *E.g., Morgan v. Collins Sch. House, 133 So. 675 (Miss. 1931)* (established use for burial, with consent of land owners, obligates owners in equity to recognize continued burial rights); *Bessemer Land & Imp. Co. v. Jenkins, 18 So. 565 (Ala. 1895)* (corporation reported to stockholders that it had "set aside" land "for the burial of the dead."); *Benn v. Hatcher, 81 Va. 25, 29-30 (1885).*

(n16)Footnote 66. *E.g., Haslerig v. Watson, 54 S.E.2d 413 (Ga. 1949); Tracy v. Bittle, 112 S.W. 45 (Mo. 1908).*

(n17)Footnote 67. Traditional versions of the process are derived from the holding in *City of Cincinnati v. Lessees of White, 31 U.S. (6 Pet.) 431 (1832),* which in turn drew on *Pawlet v. Clark, 13 U.S. (9 Cranch) 292 (1815),* and *Beatty v. Kurtz, 27 U.S. (2 Pet.) 566 (1829),* both dealing with dedications to religious uses. Those cases established that a specific entity need not be *in esse* nor operate as a transferee for an effective dedication to occur. Thus, most jurisdictions have held a dedication to result regardless of whether the cemetery was transferred to a distinct entity; *e.g., Locke v. Lester, 78 So. 2d 14 (La. App. 1955)* (dedication is complete "without necessity of formal acceptance by a public or quasi-public corporation"), frequently based on trust theory; *see Ritter v. Couch, 76 S.E. 428, 432-433 (W.Va.*

1912) (dedication to public created a charitable public trust; no beneficiaries necessary), and *Babin v. City of Ashland, 116 N.E.2d 580 (Ohio 1953).* Occasional cases are *contra*; *see e.g., Morgan v. Collins Sch. House, 127 So. 565 (Miss. 1930)* and *133 So. 675 (Miss. 1931)* (deed made to non-existent school and graveyard was canceled as "void for want of a grantee" to quiet landowner's title, which nevertheless remained subject to burial rights); *Kansas City v. Scarritt, 69 S.W. 283, 285 (Mo. 1902)* (title can't lodge in general public). *Compare*, Note, Title to the Interest Granted Under a Common Law Dedication Pending Acceptance by the Specific Grantee, *5 Tex. L. Rev. 201 (1927).*

The absence of a specific grantee frequently means that no entity will exist that can assume the obligation and responsibilities of long-term or perpetual maintenance, with the risk that the cemetery eventually will fall into disrepair or neglect. *See* § 53.09(b) *infra*.

(n18)Footnote 68. *Dearinger v. Peery, 387 N.W.2d 367, 368 (Iowa App. 1986). See also State ex rel. Atty. Gen. of Iowa v. Terry, 541 N.W.2d 882 (Iowa 1995).* Many cases display similar facts, *e.g., Vidrine v. Vidrine, 225 So. 2d 691 (La. App. 1969).*

(n19)Footnote 69. The majority of states appear to apply statutory techniques to all forms of dedication, including cemeteries, *e.g.*, Ga. Code Ann. § 44-5-230; early examples of adoption of general subdivision processes to cemeteries occurred in *Oakland Cem. Co. v. People's Cem. Ass'n, 57 S.W. 27 (Tex. 1900);* and *Langston City v. Gustin, 127 P.2d 197 (Okla. 1942).* Dedication in traditional land subdivision situations is discussed in L.S. Tellier, Annotation, Validity and Construction of Regulations as to Subdivision Maps or Plats, *11 A.L.R.2d 524 (1950). City of Worthington v. City of Columbus, 796 N.E.2d 920 (Ohio 2003)* (the city was not authorized to use its eminent domain power to appropriate property for the proprietary function of a cemetery, especially when that use would destroy an existing public use).

(n20)Footnote 70. Examples of "statutory dedication" of cemeteries include Ariz. Rev. Stat. Ann. § 32-2194.22; Cal. Health and Safety Code §§ 8551, 8553; Haw. Rev. Stat. § 441-4; 765 Ill. Comp. Stat. Ann. § 805/1; La. Rev. Stat. Ann. § 8:302; N.J. Rev. Stat. Ann. §§ 8A:6-8A:7; N.Y. Not-For-Profit-Corp. Law § 1401 [private and family cemetery corporations]; Or. Rev. Stat. Ann. §§ 97.320-97.330; Tex. Health & Safety Code Ann. §§ 711.034-711.035; Wash. Rev. Code §§ 68.24.030-68.040.

(n21)Footnote 71. *E.g., Cedar Hill Mem. Cem. Ass'n v. Storie, 281 S.W.2d 144, 149 (Tex. App. 1955); Clark v. Sunset Hills Mem. Park, 273 P.2d 645, 648-649 (Wash. 1954).*

(n22)Footnote 72. *E.g.*, Haw. Rev. Stat. § 441-4 ("no provision of [subdivision] law ... shall be applicable to cemeteries"). *Laurel Land Mem'l Park, Inc. v. Dallas Central Appraisal Dist., 911 S.W.2d 783 (Tex. App. 1995)* (publicly dedicated cemetery was statutorily exempt from ad valorem taxation).

(n23)Footnote 73. *E.g., Parker v. Fidelity Union Trust Co., 63 A.2d 902, 914 (N.J. Ch. 1949).*

(n24)Footnote 74. *Abrams v. Lakewood Park Cem. Ass'n, 196 S.W.2d 278, 282-283 (Mo. 1946).*

(n25)Footnote 75. *Wana The Bear v. Community Constr., 180 Cal. Rptr. 423, 425 (App. 1982)* (narrow view of "dedication" as only "a land use planning concept."). *See also Winters v. State, 9 Ind. 172 (1857)* (desecration prosecution valid only where "cemetery" was created under statutory procedures).

(n26)Footnote 76. *Dearinger v. Peery, 387 N.W.2d 367, 370 (Iowa App. 1986)* (common law dedication accomplished before enactment of "exclusive" statutory system for public acquisition). *See also, State ex rel. Atty. Gen. of Iowa v. Terry, 541 N.W.2d 882 (Iowa 1995). Compare Wooldridge v. Smith, 147 S.W. 1019, 1022 (Mo. 1912)* (creation of private burying ground must comply with "exclusive" statutory procedures); *distinguished in Rhodes v. Nicklas, 624 S.W.2d 504, 506 (Mo. App. 1981)* (title to land "reserved" as private cemetery is restricted regardless of failure to satisfy statute).

(n27)Footnote 77. *E.g., Bellevue Masonic Temple, Inc. v. Lokken, 452 P.2d 544 (Wash. 1969).*

(n28)Footnote 78. Wash. Rev. Code § 68.60.020. Haw. Rev. Stat. § 441-17 provides that "existing cemeteries" that have "been lawfully established [and platted] shall be deemed to have been dedicated [as per applicable statutes]."

(n29)Footnote 79. *E.g.*, Ohio statutes vest title of dedicated cemeteries in the municipal corporation, or township in which the cemetery is located or by which it is annexed. *Ravenna Township Trustees v. City of Ravenna, 690 N.E.2d 49 (Ohio App. 1996). Langston City v. Gustin, 127 P.2d 197 (Okla. 1942). Compare* notes 65, 66, *supra*.

(n30)Footnote 80. *E.g.*, N.J. Rev. Stat. Ann. §§ 8A:6-8A:7.

(n31)Footnote 81. *E.g.*, Ariz. Rev. Stat. Ann. § 32-2194.22; Cal. Health & Safety Code §§ 8551, 8553; Haw. Rev. Stats. § 441-2; Mont. Code Ann. § 35-21-402; Or. Rev. Stat. § 97.320; Tex. Health & Safety Code tit. 8, ch. 711.034(c)(d)-711.035; Wash. Rev. Code Ann. § 68.24.030.

(n32)Footnote 82. *See Abrams v. Lakewood Park Cem. Ass'n, 196 S.W.2d 278 (Mo. 1946).*

CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.06

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.06 Nature and Duration of the Interests in Cemeteries and Graves: An Overview.

Graves or unused burial sites impose a range of potential responsibilities and liabilities on the owner of the land in which they are present. They also create a corresponding variety of potential rights and privileges in those persons who may have interests in the sites or graves themselves. Unfortunately, the analysis of property rights in burial areas is often confused by a failure to distinguish adequately between the property interest represented by the entire tract of land occupied by a burial area or cemetery, and the distinct and varied interests that may exist in the individual grave sites or cemetery lots. In both cases, the interests invariably are dependent upon each other, and the scope and duration of all of the interests are interrelated; each is defined by reference to the others.

Generally, a cemetery may exist as an independent unit of land, owned in fee title by a distinct public or private entity. That title will be subject to interests connected to the individual graves or burial sites. Alternatively, the cemetery may exist merely as a defined portion of a larger tract of land; in such cases the cemetery is usually not owned as a fee title, but, instead, held as a qualified fee or an easement. In that case as well the cemetery will be subject to separate interests in individual burial sites. Under either pattern, the individual burial interests may be in the form of trust obligations, servitudes in the form of easements of burial, or similar but less-clearly defined public rights.

CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.07

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.07 Interests in the Burial Area or Cemetery as a Whole.

[Go To Supp]

Three general patterns describe the state of an owner's title to land occupied by a burial area.

(a) Unmarked or Unauthorized Burials.

(1) At Common Law.

Where one or more n89 human burials occur on lands that do not appear to have been either set aside or reserved for burial purposes, nor formally dedicated to public use, the landowner's title may not be restricted by common law property concepts. The absence of visible markings, n90 or other evidence of demonstrated intent by the landowner (or that owner's predecessors) to set aside or otherwise devote the land to burial purposes, removes much of the basis on which a servitude or trust might be imposed. n91 Indeed, there is limited authority for the proposition that a landowner can compel the removal of human remains buried without permission on that owner's land. n92

However, the discovery of an unmarked, or previously unknown grave, although not constituting a traditional restriction on the landowner's title, may nevertheless actuate statutory or local law prohibitions on disturbance of human remains or desecration of graves n93 In many jurisdictions, the only limitation on a landowner's activities occasioned by a burial is the near-universal statutory requirement to summon a coroner or medical examiner upon discovery of human remains. Where it is evident the remains have been buried for an extended time, or do not raise criminal or forensic concerns, the coroner's interest and jurisdiction may terminate. In an increasing number of jurisdictions, however, extensive statutes now offer additional protection to any "unmarked" human burials discovered on private lands.

(2) Statutory Protection for Unmarked or Unauthorized Burials.

Approximately one-half of the states have enacted special statutes for the protection of unmarked human burials. n94 The purpose is often quite broad, as demonstrated by Montana's Human Remains and Burial Site Protection Act:

> The state and its citizens have an obligation to protect from disturbance or destruction all human

> skeletal remains, burial sites, and burial material, including those in marked, unmarked, unrecorded, registered, or unregistered graves or burial grounds located on state or private lands that are not protected as cemeteries or graveyards under existing state law. n95

The majority of the statutes declare an intention to ensure that all burials be accorded equal treatment and respect for human dignity, without reference to ethnic origin, cultural background, or religious affiliation. n96 A smaller additional group of statutes is expressly designed to protect Native American burials, n97 for which there have been extensive problems of vandalism n98 and looting of both artifacts and skeletal remains. n99 Where Native American burials are involved, both groups of statutes usually include special provisions for consultation with, permission from, or supervision by, persons from an "appropriate" present-day Indian tribe who may be affiliated with the persons whose graves are discovered. n100

Under the provisions of both types of acts, landowners will be prevented from undertaking construction or similar activities for a limited, n101 or perhaps indefinite, n102 period, until arrangements have been made variously, for archaeological or historical evaluation, excavation and study, reinterment, or other "disposition" of the remains. Some of the acts, however, specifically exclude named activities - such as farming or mining - that are allowed to continue without restraint. n103 The unmarked burial statutes are often vague about the ultimate treatment to be accorded human remains discovered on private lands - and thus unclear whether graves must remain in place as an implicit restriction on use of the land for other purposes. Although the Colorado and Montana acts allow a landowner to demand disinterment of human remains, n104 some of the other acts assume that burials ought to remain either undisturbed or be reinterred elsewhere on the land, n105 or even deny permission to disinter historically significant remains. n106 For example, Louisiana's law includes the aspirational policy that "every reasonable effort is to be made to restore the unmarked burial site and to avoid disturbing the human skeletal remains." n107 The Massachusetts act directs the state archaeologist to "consult with the site's owner and other interested parties to determine whether prudent and feasible alternatives exist to avoid, minimize or mitigate harm to the burial site." If none are found, the archaeologist will excavate the site and "recover the remains." n108

The majority of the statutes, however, appear to have adopted a position of benign ambiguity, calculated to allow a negotiated solution to be reached among the interested parties, and usually allowing some excavation and disinterment by professional archaeologists, followed either by curation or reinterment of the human remains. Thus, Florida's act imposes an extensive duty of consultation on its state archaeologist in order to achieve proper protection and disposition of the human remains found in an unmarked burial. n109 The Minnesota statute provides simply that non-Indian burials, "shall be dealt with in accordance with provisions established by the state archaeologist." n110 Under the North Carolina provisions:

> Subsequent to taking charge of the human skeletal remains, the Chief Archaeologist shall have 48 hours to make arrangements with the landowner for the protection or removal of the unmarked human burial or human skeletal remains. The Chief Archaeologist shall have no authority over the remains at the end of the 48 hour period and may not prohibit the resumption of the construction or agricultural activities without the permission of the landowner. n111

Hawaii's act overtly recognizes the need to make a reasoned evaluation of competing values, and authorizes a regional "burial council" to "determine whether preservation in place or relocation ... is warranted," following varied criteria for native Hawaiian or "other than Hawaiian" burial sites. n112

It appears likely that, under many of the provisions, human remains, and thus the graves that contain them, will be removed from private land if that is the landowner's wish. n113 The ability to do so, however, is restrained by the prohibitions on disinterment or disturbance without requisite state permits. n114

Although all of the state systems of statutory protection concern unmarked burial sites, generally including those

located on private realty, some statutes offer additional protection to the artifacts found within certain graves. The state systems should be compared to similar federal legislation, primarily the Native American Graves Protection and Repatriation Act of 1990 ("N.A.G.P.R.A."). n115 That act applies only to graves located on certain federally owned or managed lands, and is thus beyond the scope of this chapter. However, as to specific human remains or artifacts removed from graves on private lands, special federal provisions may govern their subsequent possession, curation, or transfer of title. n116 Chief among those are sections in N.A.G.P.R.A., n117 and in the Archaeological Resources Protection Act of 1979 ("A.R.P.A."), n118 that establish federal criminal liability for transactions ("trafficking") regarding artifacts obtained in violation of N.A.G.P.R.A. or excavated or removed in violation of state or local law. Under these provisions, materials acquired from private realty in, for instance, violation of local trespass laws may result in federal prosecution. n119

(b) Known Burials on Land Devoted to Burial Purposes.

A pattern of organized burials inevitably presents some restrictions on the land's title. Organized burials include those burial areas and family, neighborhood, or private cemeteries, that were not effectively "dedicated to public use," but nevertheless were "set aside" or otherwise devoted to burial purposes in any of the manners described in § 53.04 *supra*. Where fee title to a cemetery or burial area is held by a successor to the landowner who originally created the "set aside," no mention of the cemetery may appear in the chain of title, which thus appears unrestricted, and may be subject only to one or more easements of sepulture implied by operation of law. However, where the cemetery area was created by, or recognized in, an express deed, or an express reservation or exception, then standard rules of construction will determine whether the cemetery is held as an easement or a fee title. n120 The common-law restrictions on a landowner's title or possession that are presented by organized burials are supplemented in a few jurisdictions by increased recognition of cemeteries as historical resources. Under recent statutory measures, "areas with a concentration of skeletal remains," n121 or those that have "historical significance" n122 may receive additional regulatory protection similar to that accorded unmarked burials.

(c) Known Burials on Land Dedicated to Public Use.

Land that has been formally "dedicated to public use" will often have had its fee simple title either transferred to a public entity, or retained by the private owner, cemetery corporation, or religious or municipal entity that made the original dedication according to the applicable statutory requirements. n123 Whether transferred or retained, by virtue of the formal dedication the title to the land overtly became impressed with a restricted purpose of sepulture. n124 Moreover, where statutory dedication formalities have been followed, the tract will have well-defined boundaries, and the specific nature of the individual burial interests are likely to have been formally defined by statute or appropriate regulations of the cemeterial management entity. n125

Dedicated cemeteries that have fallen into neglect, whether public or private, may receive additional protection under specific state laws regarding responsibility for "abandoned" cemeteries, discussed in § 53.09(b) *infra*.

FOOTNOTES:
(n1)Footnote 89. Some jurisdictions limit statutory protection of "cemeteries" or "burial grounds" to places where a minimum number of human remains are present. *See, e.g., Town of Sudbury v. Department of Pub. Util., 218 N.E.2d 415, 424 (Mass. 1966)* (remains of one human "not sufficient" to constitute statutory "burial ground"); result *revised by* 1983 Amendment to Mass. Gen. Laws Ann. ch. 114 § 17]; Cal. Health & Safety Code § 8100 ("six or more human bodies being buried at one place constitute the place a cemetery"); Wash. Rev. Code Ann. § 68.04.04(2) ("cemetery" as

"place where five or more human remains are buried"); *but compare* Wash. Rev. Code Ann. § 68.60.010 ("Historical cemetery means any burial site or grounds which contain within them human remains buried prior to November 11, 1889."). Wash. Rev. Code Ann. 68.04.040(2). *See also, AT&T Wireless PSC, Inc. v. City of Independence 63 S.W.3d 609 (Ky. App. 2001)* (The fact that burial grounds are not visible cannot be used as evidence that the grounds were not set aside for burial purposes).

(n2)Footnote 90. Visible markings are an important aspect of the notice available to a landowner; *see* the discussion of "notice" in § 53.04(c), *supra*.

(n3)Footnote 91. *Castro Romero v. Becken, 256 F.3d 349 (5th Cir. 2001)* (lineal descendant's allegation that the oral history of the Lipan Apache tribe established city land as a burial ground was not sufficient to convert the land into a "cemetery" for purposes of a Texas statute providing protection to cemeteries, absent any evidence that the land was publicly dedicated as a cemetery, that the land was enclosed for use as a cemetery, or that the land, even if once used for burial purposes, had not been abandoned). As noted in the early case of *Hunter v. Trustees of Sandy Hill, 6 N.Y. (Hill) 407, 414-415 (1844):* "When these graves shall have worn away; ... when nothing shall remain to distinguish this spot from the common earth around, and it shall be wholly unknown as a graveyard; it may be that some one who can establish a good "paper title,' will have a right to its possession; for it will then have lost its identity as a burial-ground, and with that, all right founded on the dedication must necessarily become extinct." *See also* the discussion of notice in § 53.04(c), *supra*.

(n4)Footnote 92. *Hall v. Carney, 511 S.E.2d 271 (Ga. App. 1999)* (action against cemetery committee for excavating a grave site containing a stillborn baby who had been buried there without the family first informing the cemetery committee), R.F. Martin, Annotation, *Removal and Reinterment of Remains, 21 A.L.R.2d 472, at 530-33 (1952). Compare*, however, the substantial rights and restrictions imposed by the unmarked human burial statutes discussed, *infra*.

Stat. § 70-32(a); Utah Code Ann. §§ 9-9-403(1)(c)27.44.030 to 9-9-403(1)(c)27.44.040 ("cultural affiliation").

(n13)Footnote 101. Ariz. Rev. Stat. Ann. § 41-865(B),(C)(1) (activity must cease; 10 days for inspection); Colo. Rev. Stat. § 24-80-1302(d) (10 day injunction); Haw. Rev. Stat. § 6E-43 (90 day review period); N.H. Rev. Stat. Ann. § 227-C:8-b (1991) (48 hour cessation of activity, with exceptions); N.C. Gen. Stat. §§ 70-29-70-30 (1992) (disturbance must cease immediately, state archaeologist's subsequent control limited to 48 hours); Tenn. Code Ann. § 11-6-107(d)(2) ("immediately cease" disturbance; officials must make determinations within 5 days). Under Tenn. Code Ann. § 11-6-107(d)(7) no public right of access is created by the statutes.

(n14)Footnote 102. *E.g.*, Del. Code Ann. tit. 7 § 5405 (activity to cease immediately, may resume after approval); Fla. Stat. ch. 872.05 (1991) (activity to cease immediately, "shall not resume unless specifically authorized"); La. Rev. Stat. § 8-680 ("activity shall immediately cease"; shall not resume until permit is issued); Mo. Rev. Stat. § 194.407.3 (injunction cannot exceed 30 days); Neb. Rev. Stat. § 12-1205 (1991) (activity to cease immediately, may continue after removal of remains).State archaeologist's denial of permission to disinter historically significant human remains from Native American burial mound was not a taking of property rights where preexisting state statute authorized denial of permission. *Hunziker v. Iowa, 519 N.W.2d 367* (Iowa 1994, *cert. denied, 514 U.S. 1003 (1995)); see* Iowa Code § 263B.9.

(n15)Footnote 103. *E.g.*, 20 Ill. Comp. Stat. Ann. 3440/2 (not intended to interfere with normal enjoyment of ownership or farming, development, etc.); Tenn. Code Ann. § 11-6-107(6) ("normal farming activity"); W. Va. Code § 29-1-8a(a) (not intended to interfere with normal activities of farming, development, mining, improvement). *Compare* Or. Rev. Stat. Ann. § 97.745 (inadvertent acts still obligate actor to reinter at own expense).

(n16)Footnote 104. Colo. Rev. Stat. § 24-80-1302(4)(b) (" shall disinter (Native American remains) ... unless agree to leave *in situ*"); Mont. Code Ann. §§ 22-3-805(6), 22-3-805(7).

(n17)Footnote 105. Subsections (1) and (8) of Ga. Code Ann. § 36-72-8 contain a "presumption" in favor of leaving the cemetery or burial ground "undisturbed," and recognize "the value of the undisturbed cultural and natural environment." Under several statutes, the landowner is obliged to reinter Native American remains discovered through inadvertence and leave them on the land; *see e.g.*, Cal. Pub. Res. Code § 5097.98 ("shall reinter (Native American remains) ... on the property in a location not subject to further subsurface disturbance"); Idaho Code § 27-502 ("persons disturbing graves ... shall cause their human remains to be reinterred"); Nev. Rev. Stat. § 383.170 ("reinter (Native American remains) with appropriate dignity ... in a location not subject to further disturbance"); Or. Rev. Stat. Ann. § 97.745 (reinter at expense of person who disturbed). Idaho's act appears to prefer non-disturbance, but allows excavation for subsequent reinterment following scientific study. Idaho Code § 27-503.

(n18)Footnote 106. *See Hunziker v. Iowa, 519 N.W.2d 367* (Iowa 1994, *cert. denied*, 1995 *514 U.S. 1003 (1995)),* holding that the code's authorization of denial of permission to disinter was not an unconstitutional taking of property rights. Iowa Code Ann. § 263B.9.

(n19)Footnote 107. La. Rev. Stats. § 8:681(A)(1). Under Haw. Rev. Stats. § 6E-43, "preservation in place" is preferred for burials of important historical value, known lineal descendants, or concentration of skeletal remains.

CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.08

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.08 Interests in Individual Grave Sites or Burial Lots.

[Go To Supp]

Throughout the 19th century, American courts struggled to develop an analytical model that could explain the types of interests held in individual graves, burial grounds, and cemeteries. By the early 20th century, it had become apparent that a variety of theories were being employed by courts, many of which were indistinct and poorly understood. As noted in a thoughtful opinion of the Oregon Supreme Court in 1921:

> The right or title acquired under a conveyance of land for burial purposes is ofttimes likened to an easement ... and occasionally to both an easement and a license, but probably most frequently to a license or privilege. Although the right created by the conveyance of a lot for burial purposes ... possess[es] many of the characteristics of an easement; and it likewise possesses some of the qualities of a license ... . Occasionally the suggestion is made that a conveyance for burial purposes creates an estate in the nature of a qualified or base fee. The right with which we are now dealing is in reality sui generis ... and consequently it is difficult to define or to describe such rights when we use words which are usually employed in designating other rights possessing qualities in part similar and in part dissimilar to those inhering in the right of burial. n126

The analysis in many older cases reflected the unsettled state of property theory, and produced conclusions and terminology that are not consistent with the general revisions in nomenclature that followed the adoption of the *Restatement of Property* in 1936-1944. Unfortunately, the general inability to accord burial interests a standard terminology led some courts to suggest that ordinary incidents of real property ownership were not applicable. n127 Within a particular jurisdiction, too-close adherence to *stare decisis* might serve to entrench the older terminology and conceptual formats, thus preventing adoption of more-appropriate analysis and terminology.

The variations in nomenclature used to characterize burial sites also reflect the quite different circumstances under which the sites have been created and are maintained. Modern cases tend to adopt easement theory and terminology as the most appropriate model for analysis of burial interests, but sometimes without considering the varied ways in which those rights may have been created. Thus, where burial sites have been created by informal common law methods

typical of the private family cemeteries, or by implied dedication of neighborhood or public cemeteries, n128 formal written conveyances were rarely used to create interests in individual grave sites. n129 There was little opportunity, and perhaps no sense of necessity, to precisely define the nature and scope of the burial interest. In those circumstances, implied or oral permission by the landowner to family members or friends could be interpreted as a license; but once a burial or other actions had occurred in reliance on the permission, standard modern property theory would hold the license to have become irrevocable, and thus the "essential equivalent" of an easement. n130 Nevertheless, the use of easement theory can as easily yield opposite results, denying burial rights to family members who had previously enjoyed permissive rights. n131

Similarly, a landowner when granting land might reserve or except burial interests from the conveyance. Although occasionally construed as the exception of a full fee title, n132 the grantor's interest is usually construed as the reservation of an easement applicable to the entire cemetery. n133 The resulting easement in gross would be held collectively by a group designated by the grantor, but generally limited to members of the immediate family, who would acquire their rights merely by informal divisibility of the easement in gross, or succession. n134 Little attention appears to have been paid to formal conveyancing concerns, such as the assignability or divisibility of an easement in gross. n135

Where no formal entity existed to hold the title (whether in fee or easement form) for the entire cemetery, duties of maintenance were unspecified, n136 and often undertaken voluntarily by the community, as reflected by the annual "decoration day" custom still practiced in many neighborhood cemeteries located in rural areas. n137

(a) Interests in Individual Sites; Scope.

The scope of the burial interest created by common law techniques varies widely. At the least, it includes a right of access and visitation to existing graves, or additional rights of maintenance, n138 and often includes a vaguely-defined general privilege of making additional burials n139 for the individual or collective persons who hold the interest. The latter, of course, is consistent with the previous devotion or dedication of the land to burial purposes. n140 In contrast, the interests recognized under the unmarked burial statutory systems are considerably narrower. Those statutes provide limited rights of consultation, n141 and perhaps visitation, n142 but generally do not impose on the landowner a requirement to accept additional interments.

LEXIS: right or privilege or interest w/10 (family or private) w/5 (grave! or burial) or (burial w/3 site)

(b) Interests in Established Cemeteries.

Where individual grave sites or lots are located in established or recognized cemeteries, generally of the kind clearly dedicated to public use, the individual plots or sites usually were created by formal conveyances represented by certificates, n143 or deeds, that are acquired by purchase. Under such circumstances, there is a general recognition of the need for rules and regulations that impose uniform limitations on the use of the burial sites, and a consequential need for centralized management and maintenance. Extensive case law n144 has firmly established the general rule that the interests so created do not convey full ownership of the grave site in the form of a fee simple title, but instead represent a form of easement, leaving full title in the entity that owns the cemetery as a whole. A typical statement holds that:

> [T]he purchaser of a cemetery lot does not acquire a fee simple interest. Rather, he obtains a qualified property right or estate that is more in the nature of an easement, license, or privilege for the exclusive use of the lot for burial purposes so long as the property remains a cemetery. n145

That majority view is derived from traditional analyses of the general nature of the rights of burial, which were developed well before the advent of formally-established cemeteries and statutory dedication procedures. Part of that history is derived by analogy to church practices, and the old status of the right to a pew in church considered as an easement; n146 a larger part was the pragmatic recognition of traditional burial practices in English and American churchyards, in which individual burial spaces were used repeatedly over long periods. n147 Despite (or perhaps because of) n148 the strong tradition of license or easement theory, many turn-of-the-century conveyances of cemetery lots used deeds phrased in classic terminology of the fee simple absolute; courts were then faced with a contradiction of theory. n149 The response was essentially unanimous:

> This court has held, as have most jurisdictions, that ... the purchaser of a lot in a public cemetery, though the deed be absolute in form, does not take any title thereto. The mere privilege or license to make interments in the lot so purchased, exclusive of all other, is all that is acquired thereunder. n150

The persistent judicial inclination to view the individual property interest in a grave site narrowly, and to insist that it be treated as an easement, appears to reflect judicial acknowledgment of both the inherent restrictions on the uses to be made of the interest conveyed and the implicit limitations on its duration. Virtually all of the major discussions of the individual burial interest include language that restricts both its use and duration:

> The rights of owners in burial lots in cemeteries are well established; these rights ordinarily are in the nature of an easement; they do not convey an absolute right of property, but give the right of burial so long as the place continues to be used as a burial ground. It is a limited use for purposes of interment which gives no title to the land. n151

Certainly part of the reason for the refusal to recognize burial interests as full fee simple title is that the severe limitation on use ("for burial only") very substantially curtails the freedom of use and control otherwise characteristic of a fee simple estate; the courts thus seem to be saying that a true fee could not have been intended by the grantor. The result is curious, however, for, in different circumstances, such a narrow restriction on use would probably be invalidated as repugnant to the fee simple interest clearly described by the language of the deed. n152

The underlying reason for the limited characterization of the interest seems to be the widespread recognition that full fee ownership, and, hence, management and control, must necessarily rest in the entity responsible for the entire cemetery, and that holders individual grave sites perforce must have a lesser interest. n153 The widespread disinclination to recognize separate fee ownership in burial lots thus probably reflects pragmatic considerations, most notably the desire to have a single entity that can be held responsible for regulation and maintenance of the entire cemetery. n154 A modern example occurred in Whitesell v. City of Montgomery, n155 where the owner of an entire cemetery unsuccessfully attempted to avoid responsibility for maintenance of the individual burial plots by arguing that, because he did not own the lots in fee, he could be under no obligation to maintain them. The court held, however, that the lots were mere easements, and that as owner of the entire cemetery, he was instead ultimately liable for the condition of the land.

CHAPTER 53 REAL PROPERTY ASPECTS OF GRAVES AND CEMETERIES

7-53 Thompson on Real Property, Thomas Editions § 53.09

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 53.09 Duration of the Interests; Discontinuance and Abandonment.

[Go To Supp]

(a) Duration: Not Perpetual?

A universal qualification on the burial interest stems from the implicit limitations on its duration: " "... for burial purposes so long as the property remains a cemetery," n156"so long as it exists and is not lawfully removed or destroyed ... ," n157 and finally, "to be enjoyed so long as the place continues to be used as a burial-ground, subject to municipal regulation and control, and legally revocable whenever the public necessity requires." n158

On its face, any suggestion that a burial interest is less than perpetual seems to contradict the general cultural perception that burial is for eternity and that nothing could be more permanent. n159 As noted wryly by the South Carolina court: "[T]he places where the dead are buried have been considered sacred and inviolate... . The idea of perpetuity runs through nearly all references to the grave. Of course, as in nearly every other matter, there are exceptions." n160 The clear import of the qualifications on the burial interest is that land, although devoted to burial purposes, may nevertheless potentially be made available for other uses. n161 A famous dissent propounded the pragmatic view:

> If land, once devoted to burial purposes, could not thereafter be used for any other purpose, it would not be many centuries until the face of the earth would be wholly occupied by the dead, and there would be no place for the living. So, while it is true that the law does have tender regard for the sentiment of the living for the dust of their dead, ... still it acknowledges the earth as the only habitation for the living, and gives them a superior right to the soil. n162

(b) Duration: Disuse and Abandonment.

In truth, there is a substantial tradition of family n163 or neighborhood n164 cemeteries becoming disused over the span of decades, resulting, perhaps, in their eventual abandonment and use of the land for other purposes. Similarly, formally organized cemeteries are frequently discontinued or abandoned, often by conscious decisions to disinter the remains and move them to another site, n165 encouraged perhaps by compulsion of municipal authorities. n166 Once true "abandonment" has occurred, the land may become free of at least some, if not all, of its previous restrictions, and the full advantages of ownership can again be enjoyed by those holding the fee title. n167

Part of the concept of "devoting" or "dedicating" land to burials is that interments are expected to continue for some indefinite period of time, and that the land will remain available for that purpose. n168 Thus, many courts have held that, once land has been devoted or dedicated to burial purposes, merely to interrupt or even cease further burials, or otherwise discontinue the use, does not constitute a change of use, nor a refutation of the land's devotion or dedication. n169 Nor does the passage of time and general disuse or neglect qualify as abandonment. n170 In this respect, the burial rules are consistent with other areas of easement law, and with the general rule that non-use of an easement is not enough by itself to constitute abandonment of the easement. n171 For a cemetery to remain quiescent seems not at all inappropriate for a "sleeping place of the dead."

Deterioration or neglect that exceeds mere non-use, especially when combined with the loss of visible identity as a burial area, might, in extreme cases, suffice to constitute "abandonment." n172 Statutes, however, may provide more definitive (and relaxed) standards of abandonment, such as cessation of burials, n173 usually in the context of providing for new mechanisms for the responsibility and maintenance of neglected or abandoned burial areas. n174 Other statutes impose a maintenance duty on local governments where a cemetery is not abandoned, but merely neglected. n175

The general topic of abandonment, and the confusion that it has generated in the case law, may be addressed by several somewhat contradictory rationales.

COMPUTER-ASSISTED RESEARCH

LEXIS: cemeter! w/5 abandon!

(1) Easement Theory.

Some of the rationale of "abandonment" is a logical extension of standard easement theory, which provides a methodology for allowing the owner of the servient land to be relieved of the burden of the easement, and thus to reacquire full freedom of use of the area. Under that theory, conduct of the easement holder may in some cases operate to extinguish an easement. n176

Easement terminology was popularized in the pivotal Heiligman v. Chambers decision in 1959, n177 which held that a family burial plot existed as an easement over the servient estate in land, and remained as such so long as the easement was maintained. Such an easement in gross is held individually or collectively by persons who have no other interest in the land. It is then a small step to focus on the duration n178 and exercise of that easement.

One measure of a burial easement's duration is human memory; many cases have repeated language from Tracy v. Bittle:

> In the case at bar most of those buried there are yet there. ... [I]t is still the resting place of the dead. To this plaintiff and others sacred memories are awakened in viewing the spot... . They have a right to return to the spot, ... and do homage to their sacred memories, ... [and] no strange hand can forbid them. n179

The other measure of an easement's duration is determined by the conduct of the persons holding the easement, or perhaps of others who have undertaken duties of maintenance, and examines whether they ought be heard to complain. In one New Jersey case, "the laches of the complainants" was held to bar their requests for visitation to a long-disuse cemetery; "some of the complainants had not visited the place for over 30 years. None of them had made any effort to care for it... . They all waited before seeking any relief until the burial plot bore no resemblance to a cemetery." n180 That theme was echoed by the Massachusetts court in Sanford v. Vinal:

> where the family has ceased to visit the cemetery and where they have so long neglected to care for it that the ground is no longer recognizable as a cemetery, the family burial ground has been abandoned, and with it the private standing of the descendants [to protect it]. n181

The "abandoned easement" view had been strongly and eloquently put forth by a dissenting opinion to Frost v. Columbia Clay Co.:

> all rights connected with [a burial place] may be abandoned, as all other rights may be; and ... where the beneficiaries of the dedication of land for a graveyard have conducted themselves towards it as the plaintiff and his relatives have done in this case, the abandonment is complete, regardless of the matter of the removal of the bodies buried there. n182

Nevertheless, the majority in that case rejected a focus on the conduct of the easement holders, and held that "abandonment" could only be accomplished "by removal of the remains to a more suitable place." n183 That view is clearly supported by the majority of jurisdictions. n184

(2) Continued Presence of Remains.

The majority view acknowledges the reality of the continued presence of burials, which remain regardless of whether particular holders of an easement in gross have surrendered, waived or abandoned their rights. Here, in many ways, it could be asserted that the easement should not be terminated when its most elemental purpose is still being served. It is, after all, often termed an easement of sepulcher. In that respect, theories of abandonment of land for burial uses harmonize in many ways with theories of devotion or dedication of land for burial. Just as dedication requires both an intent to devote land to burial purposes plus an actual use by interments, n185 by analogy so would the opposite process of abandonment require both the intent to discontinue the use plus the actual cessation of the use. The latter is usually accomplished through physical removal of remains, or arguably by their complete dissolution and return to the soil. n186 Thus, a cemetery will "only lose its character as a resting place of the dead when those already interred are exhumed and removed." n187

The reality of remaining burials is evident also in several state "abandoned cemetery" acts. Those laws declare abandonment, as evidenced by neglect or the absence of responsible caretakers, in order to transfer responsibility for maintenance to a more capable entity, usually a local government. n188 Manifestly, it is precisely because the remains continue to occupy the land that intervention is necessary to assure their continued protection and maintenance.

(3) Obligation created by Devotion of Land.

To allege "abandonment of the easement," and thus allow the re-use of land in which human remains still physically persist, appears to refute or deny the elemental concept of a devotion or dedication of land to burial purposes. That "solemn agreement" n189 was to protect and maintain the burial place. Once the original location is no longer serviceable, that obligation is best absolved by exhumation and reinterment of the remains "in a careful dignified manner by qualified persons." n190 Several cases and statutes thus speak of "abandonment" as a result that can occur only after lawful disinterments. n191

Unmarked burials, of the type addressed in many modern state acts, present a situation not easily addressed by either the easement or dedication rationales. The circumstances surrounding unmarked graves prevent reliance on concepts and responsibilities of dedication, and only rarely involve the identification of still-interested descendants or other interested persons in whom the "sacred memories" endure. In that situation, the statutes generally assert the need for some protection by the state, but impose fewer obligations on the landowner than would be present under the rules of easement and dedication. That protection persists so long as human remains continue to be located on the land. n192

CHAPTER 54 RAILROAD LANDS

7-54 Thompson on Real Property, Thomas Editions § 54.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 54.01 Introduction.

This brief chapter will review the historical background of land grants to railroads, which became the single most important factor in the settlement of the American West. The types of real property interests acquired by the railroads and the ultimate disposition of those interests will be discussed, concluding with an examination of unique aspects of railroad land interests today.

CHAPTER 54 RAILROAD LANDS

7-54 Thompson on Real Property, Thomas Editions § 54.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 54.02 Brief History of Land Grants to Railroads.

As a new nation, the United States of America found itself with a relatively huge territory as a result of England's desire for reconciliation and to block further North American expansion by France and Spain. Within a few years after gaining independence, America's acquisition of the Louisiana Purchase doubled that territory and generated a sense of urgency that those territorial gains be validated by exploration and settlement. n1 This would be best promoted by construction of roads, canals and other public improvements, but it was questioned whether the national government was empowered to directly subsidize those improvements or have them installed without the cooperation of the states. In lieu of direct funding from the federal government, land grants were made to the states for canals and river improvements, especially after the spectacular success of the Erie Canal, which opened in 1825.

Railroads became the paramount form of transportation in the settled portion of the United States during the second quarter of the 19th century. Direct federal aid to railroads was still not given, but rights of way over federal lands were granted to railroads as early as 1835, and railroad construction was encouraged by the lure of mail contracts and by route surveys provided by Army engineers. The early rights of way extended 30 feet on either side of the road line, and included rights to timber for construction within 100 yards on either side of the road line. At terminal locations, rights to 10 acres were also granted. Congress acted on individual right of way requests for almost two decades, but finally enacted legislation standardizing rights of way for railroads and other surface roads. Under this legislation the right of way extended for 100 feet on either side of the road line; earth, stone and timber could be taken from adjacent lands, and land rights for depots and water tanks were also granted. n2

In 1850 a federal statute granted a right of way and made the first major land grant; this grant was made to three states "in aid of construction of a railroad from Chicago to Mobile," n3 and was for the Illinois Central, Mobile & Chicago, and Mobile & Ohio railroads. Setting the pattern for the future, the grant consisted of every alternate even-numbered section of land in a 6-mile strip on either side of the main road and of the branch roads. For land already alienated, compensatory land within 15 miles of the road line would be provided. The statute also required that the retained federal lands between the alternating granted sections not be sold for less than double the prevailing price for public lands. By this means, the political objection to a land give-away was stifled with the argument that enabling the railroad to be built would greatly enhance the value of other public lands, so that grants were really investments (of a pump-priming nature). The at least partial success of this grant opened the way in a few years for the massive grants associated with

the transcontinental railroad. n4

Although the actual construction of the continental railroad was delayed by the Civil War, preparations proceeded even during the conflict. In 1862, federal legislation incorporating the Union Pacific Railroad was approved and signed. n5 This legislation granted rights of way over federal land and made land grants to aid construction of the railway. This act and others closely following authorizing the construction of several transcontinental lines, made land grants directly to the railroads, rather than through the states, and are part of numerous enactments that have been collectively referred to as the Pacific Railroad Laws. n6

Each of these acts rather clearly identified the several separate purposes to be served by the railroad, and the legislative device intended to facilitate that purpose. Typically, the act would recite that the railroad itself would promote settlement by providing a means of transportation through public lands, that the railroad right of way would serve national defense, that the land grants and bonds would help finance the construction, and that making stone and timber available from adjacent lands would aid construction, among other recitations.

Popular opinion among western settlers rather quickly turned against the railroads as soon as it was perceived that lands were not being released for public sale as soon as had been hoped, and that transportation costs remained artificially high. The last railroad land grant was authorized in 1871 and, thereafter, homestead grants became the main means of getting public lands into the hands of settlers. After 1871, only rights of way were granted to railroads.

For a few years, Congress enacted individual laws for right of way grants to railroads, but in 1875 it passed the Railroad Right of Way Act. This act standardized railroad rights of way at 100 feet on each side of the railroad line and included the right to take certain construction materials from adjacent public lands.

FOOTNOTES:

(n1)Footnote 1. It was the accepted viewpoint that new territory could be obtained by discovery and that title to that territory could be "perfected" or "consummated" by possession:

> This principle was, that discovery gave title to the government whose subjects, or by whose authority, it was made, against all other European governments, which title might be consummated by possession. *Johnson v. M'Intosh, 21 U.S. (8 Wheat.) 543, 573 (1823).*

CHAPTER 54 RAILROAD LANDS

7-54 Thompson on Real Property, Thomas Editions § 54.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 54.03 Types of Property Rights in Railroad Lands.

[Go To Supp]

(a) Incidents of Right of Way Grants.

The incidents of the rights of way granted to railroads were not defined in the charters or the federal statutes. In 1880, the U.S. Supreme Court noted that the right of way grants exhibited no restrictions, and that they were superior to competing claims to the same land, because of the necessity of maintaining a continuous rail route. n7 Later, the Court held that right of way grants were conditioned on the continued use of the right of way land for railroad purposes. n8 Therefore, the property interest held in the right of way was "a limited fee, made on the implied condition of reverter in the event that the company ceased to use or retain the land for the purpose for which it was granted." n9 This characterization of the interest, most accurately described as a fee simple determinable, meant that the right of way could not be alienated, and also was not subject to adverse possession. n10

The repose of this property rights question was disturbed in 1957, in the case of United States v. Union Pacific Railway n11 The Court held that, by inference from other parts of the original enabling act, the Union Pacific did not obtain mineral rights in the right of way lands, and that the railroad's property interest in the right of way was in the nature of an easement, rather than a limited fee. With this easement, the railroad obtained only surface rights and any other rights incident to the use of the right of way land for railroad purposes. The court had already held that rights of way granted under the Railroad Right of Way Act of 1875 also were easements only, without rights to subsurface minerals. n12

Now, parties that wish to obtain oil and gas rights on railroad right of way lands may qualify under the Railroad Right of Way Leasing Act of 1930. n13 Even though the court cases have generated some confusion about who should be the lessor of those mineral rights, it has since been held that the procedure under the 1930 act is the exclusive procedure for obtaining oil and gas rights under railroad rights of way. n14 Obtaining rights to other minerals is still problematic, although the most secure method would be to file locations and claims in the usual manner and also to secure the cooperation of the railroad that holds the surface rights.

(b) Incidents of Other Land Grants.

The immense grants of land to the railroads did not vest immediately. They were considered present but conditional

grants, and would not vest until the location of the rail line had been fixed. However, any lands that were possibly subject to railroad claims, from the time the general location of the route was identified, were made no longer open to entry by individual private settlers. n15 These lands thus withdrawn from entry remained so until the railroad line was made definite, and then the lands that were to remain withdrawn from entry or private appropriation were definitely identified. Also at that time the railroad title vested. n16 The vesting of title was held to relate back to the time the grant was statutorily authorized. n17

For the so-called "indemnity lands," lands open to selection by the railroad in place of lands within the primary grants that had already been appropriated, no title vested until the selection was actually made, a point that was resolved when one railroad sought to select indemnity land within the area of another railroad's original grant. n18 The federal government provisionally withdrew some land for a forest reserve, before selection of indemnity lands; the withdrawal was not made permanent until after selection, and the railroad claim was held superior. n19

So-called "mineral lands" were excepted from the railroad land grants, but these were defined to mean oil and gas lands, and not coal and iron lands. n20 Eventually, because identifying mineral lands was a slow and uncertain process, and railroads were issuing patents for such lands to third parties, it was held that the mineral rights were reserved to the United States, but that a fee title to those lands could pass by patent. n21 It was also held that once a patent was issued to a railroad, presumably under the conclusion that the patented lands were non-mineral, subsequent discovery of minerals could not change the status of the land or cause rescission of the patent. n22 Also, federal legislation in 1890 subjected all patents west of the 100th meridian to reservations for ditches and canals constructed under federal authority. n23

In conflicts between railroad land grant claims and claims by settlers who acted under homestead or preemption laws, Congress eventually enacted relief or exchange laws permitting the settlers to choose other equivalent land. n24 When a railroad failed to construct the railroad for which land grants were made, it was eventually required that the land grants (but not necessarily the rights of way) be forfeited and returned to the public domain. In the judicial decisions on forfeiture issues, it was held that some manifestation of Congressional intention to assert forfeiture was required. n25 Later legislation left Congress free to declare forfeitures without a prior judicial inquiry, although subject to judicial review. n26

A somewhat inconspicuous provision of the early railroad land grant legislation granted rate concessions to the federal government when transporting troops, mail, munitions and similar goods. These rate concessions became very significant during World War II, and some relief for the railroads was provided in the Transportation Act of 1940. n27 This act offered payment of full rates by the government in exchange for the railroad releasing its claims to lands granted. Subsequently, releases of claims to more than 8,000,000 acres in the western states were filed by railroads.

(n1)Footnote 7. St. Joseph & Denver City Ry. v. *Baldwin, 103* U.S. (13 Otto) 426 (1880). *City of Auburn v. U.S. Government, 154 F.3d 1025 (9th Cir. 1998)* (the Interstate Commerce Commission Termination Act's (ICCTA) powers of federal preemption in matters of construction, acquisition, operation, abandonment, or discontinuance of spur, industrial, team, switching, or side tracks, or railroad facilities, are broadly construed to cover both economic and environmental regulation). A few courts have had to resolve the impact of the ICCTA regarding the future use of a rail right-of-way. *In re Conservation L. Found., 782 A.2d 909 (N.H. 2001)* (Congress intended the federal government to exclusively occupy the field of railroad regulation, including the preservation of railroad corridors for future rail use); *Buffalo Twp. v. Jones, 778 A.2d 1269 (Pa. Cmwlth. App. 2001)* (township not required to receive approval from ICC before transforming railroad right-of-way into recreational trail where township assumed full responsibility for management of right-of-way and for any legal or financial liability arising out of operation of the trail). *But see, Jones v. Union Pacific Railroad Co., 94 Cal. Rptr. 2d 661 (Cal. Ct. App. 2000).*

(n2)Footnote 8. *Northern Pac. Ry. v. Townsend, 190 U.S. 267 (1903).* Some state statutes also placed other burdens

on railroads in their landholdings. *Southeast Cass Water Resource Dist. v. Burlington N. R.R., 527 N.W.2d 884 (N.D. 1995)* (railroad responsible to change bridges and culverts to accommodate drainage); *Grantwood Village v. Missouri Pacific R.R., 95 F.3d 654 (8th Cir. 1996)* (right of way can be discontinued under the Trails Act, and not considered an abandonment); *Newberry v. Board of Comm'rs of Fremont County, 919 P.2d 141 (Wyo. 1996)* (a tort case discussing the use of abandoned railroad beds as trails under the National Trails System Act); *Becker v. Surface Transp. Bd., 132 F.3d 60 (D.C. Cir. 1997)* (authorizing conversion of a railroad right-of-way to a trail under the National Trails System Act, *16 U.S.C. § 1241); Nebraska Trails Council v. Surface Transp. Bd., 120 F.3d 901 (8th. Cir. 1997)* (review of a decision of the Surface Transportation Board (STB) establishing a $150 fee for requests to use or acquire proposed-to-be abandoned railroad rights-of-way for interim recreational trail use); *RLTD Railway Corp. v. Surface Transp. Bd., 166 F.3d 808 (6th Cir. 1999)* (a properly abandoned right-of-way is generally outside of the jurisdiction of the Surface Transportation Board (STB) to grant a trail condition); *Eldridge v. City of Greenwood, 503 S.E.2d 191 (S.C. Ct. App. 1998)* (abandonment extinguishes the statute-given easement of right-of-way). *But see, Burlington Northern and Santa Fe Ry. Co. v. Benson County Water Resource Dist., 618 N.W.2d 155 (N.D. 2000); King County v. Burlington Northern R.R. Corp., 885 F. Supp. 1419 (W.D.Wash. 1994)* (describing Congressional response to Northern); *Citizens Against Rails-to-Trails v. Surface Transp. Bd., 267 F.3d 1144 (D.C. Cir. 2001)* (construing National Trails System Act regarding abandonment of railroad right-of-way); *Kulmer v. Surface Transp. Bd., 236 F.3d 1255 (10th Cir. 2001)* (Surface Transportation Board (STB) could consider likelihood of continued rail freight service as factor in deciding whether to approve disputed offer of financial assistance in rail abandonment proceedings); *Chatham v. Blount County, 789 So.2d 235 (Ala. 2001)* (railroad abandoned easement by selling the rails, crossties, and track material, and, thus, the land reverted to the adjoining landowners before the railroad quitclaimed its interest to a city and county for construction of a recreational trail; the sale rendered impossible the use of the easements as a railroad right-of-way or for railroad purposes, and the railroad had unsuccessfully attempted to sell its interest in the easements for non-railroad uses); *Buffalo Twp. v. Jones, 778 A.2d 1269 (Pa. App. 2001)* (a railroad right-of-way terminates and the property interest reverts back to the property owner when the land ceases to be used for railroad purposes. National Trails Systems Act did not require township to receive approval from Interstate Commerce Commission (ICC) before transforming railroad right-of-way into recreational trail); *Chatham v. Blount County, 789 So.2d 235 (Ala. 2001)* (railroad abandoned easement by selling the rails, crossties, and track material, causing the land revert to the adjoining landowners); *Buffalo Twp. v. Jones, 778 A.2d 1269 (Pa. Cmwlth. App. 2001); Stone v. U.S.D. 222, 77 P.3d 509 (Kan. App. 2003)* (the original conveyance to the railroad was a right of way rather than a fee simple, and the land reverted to adjacent owners upon abandonment by the railroad); Moore v.*United States, 58 Fed. Cl. 134 (Ct. Cl. 2003)* (conveyance of land to a railroad for specified uses conveyed only an easement and not fee title); *Keife v. Logan, 75 P.3d 357 (Nev. 2003)* (the reversionary interest in the right of way belonged to the owner of the underlying land); *Louisville & Indiana Railroad Company v. Indiana Gas Company, 792 N.E.2d 885 (Ind. App. 2004)* (legislation allowing the railroad to hold fee simple interests was retroactive); *State Department of Natural Resources v. Hess, 665 N.W.2d 560 (Minn. App. 2003)* (deed to railroad created an easement rather than a fee simple determinable; railroad's removing tracks constituted an abandonment of the easement); *Lowers v. United States, 663 N.W.2d 408 (Iowa 2003)* ("right of way" deed to railroad conveyed a defeasible fee rather than an easement; this decision abrogrates earlier decisions); *Hash v. United States, 403 F.3d 1308 (Fed. Cir. 2005)* (a taking occurred when railroad's abandoned right of way was converted into a recreational trail).

(n3)Footnote 9. *190 U.S. at 271. Malnati v. State, 803 A.2d 587 (N.H. 2002)* (state's easement not extinguished when railroad ceased using right-of-way, despite no affirmative action by the state--the statute provided that leased right automatically reverted to state upon expiration of the lease term); *CSX Transportation, Inc. v. Rabold, 691 N.E.2d 1275 (Ind. App. 1998)* ("right-of-way" language is generally construed to convey an easement); *Consolidated Rail Corp., Inc. v. Lewellen, 666 N.E.2d 958 (Ind. App. 1996)* (the original conveyance helps determine the type of estate the railroad had in the land, which helps determine the present estate); *Illinois Cent. R.R. v. Roberts, 928 S.W.2d 822 (Ky. App. 1996); State v. Barras, 615 So.2d 285 (La. 1993)* (railroad company acquired right-of-way through General Railroad Right of Way Act and upon abandonment the right of way reverted to the United States as underlying fee owner); *Johnson v. Kansas City Southern, 224 F.R.D. 382 (S.D. Mo. 2004)* (land conveyances contiguous to a railroad easement carried the title to the center of the railroad line); *Stone v. U.S.D. No. 222, 91 P.3d 1194 (Kan. 2004)* (railroad had

acquired a fee simple absolute interest in the land); *Kershaw Sunnyside Ranches, Inc. v. Yakima Interurban Lines Association, 91 P.3d 104 (Wash. App. 2004)* (deed to railroad conveyed only an easement).

(n4)Footnote 10. *Read v. Montgomery County, 643 A.2d 476 (Md.1994)* (railroad's interest in parcels acquired by public grant through act of Congress could not be extinguished by adverse possession).

CHAPTER 54 RAILROAD LANDS

7-54 Thompson on Real Property, Thomas Editions § 54.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 54.04 Impact of Railroad Land Grants on Private Landholding.

The railroads expected to profit handsomely from their land grants, in two ways. First, revenue from the sale of the lands to settlers was to figure significantly in the railroads' ability to construct and maintain the line. Second, by bringing more people to settle along the line, railroad business would naturally be enhanced. Thus, railroads undertook ambitious programs of "colonization" along the lines. n28

FOOTNOTES:
(n1)Footnote 28. Railroads' efforts to attract settlers to their lands continued into the twentieth century, with greatest emphasis on the High Plains and the intermountain west. Most of the railroads' land suitable for farming was sold or withdrawn by the early years of the century, but they continued efforts to bring settlers to lands that were now in private hands or to the vast public lands opened for homesteading. Diminution of Indian reservations also opened up new tracts for settlement. Farming opportunities expanded further as great ranches continued a 19th-century trend to break up. As irrigation expanded in the arid west, even more territory became susceptible to settlement and farming; railroads actively sponsored many pioneer irrigation projects. In both the southern and the north central states, where less raw land was available for homesteading, the railroads promoted immigration through the appeal of available existing farmland or cultivatable land, especially in the form of abandoned farms. Roy V. Scott, Railroad Development Programs in the Twentieth Century 16-23 (1985).

This article discusses the history of railroad land grants and Supreme Court holdings that suggest federally granted rights-of-way are subject to the government's plenary power to protect interstate commerce. It equates this power with that possessed by the government in the doctrine of navigation servitudes and suggests that this doctrine should provide the basis for federal power to preserve railroad rights-of-way.

Pittman, Tim. Note, "Railroad Right of Way: The Real Property Interest in Kansas." *Washburn L.J.* Vol. 25 (1986) 327.

This article discusses the various ways a railroad's interest in its right-of-way has been described: a simple easement, perpetual easement, limited fee, fee simple determinable, and even a fee simple on condition subsequent. It discusses federal treatment of the railroads' interest and then similar treatment in Kansas. It makes mention of use and possession of the right-of-way, the railroads' interest in the subsurface, and reversionary interests.

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.01 Introduction.

The purpose of this chapter is to provide an overview of how American public domain lands were acquired, how they have passed into private ownership in the past, and - within a legal and regulatory context - how they are presently managed and administered. The chapter is based upon and provides citation to the principal sources of legal authority pertaining to public lands. This chapter will serve as an introduction to a vast subject whose full treatment requires separate treatise publications. n1

FOOTNOTES:
(n1)Footnote 1. For the Congressional declaration of Public Land Policy, *see 43 U.S.C. § 1701, Appendix. State of Alaska v. Babbitt, 72 F.3d 698 (9th Cir. 1995)* (public lands include some specific navigable waters reserved as appurtenant to reserved water rights); *Oregon v. Holloway, 908 P.2d 324 (Or. App. 1995)* ("public lands" can be broadly referred to as any land owned by a unit of government, regardless of whether the governmental unit could freely alienate the land).

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.02 History of Public Lands in the United States.

[Go To Supp]

(a) How the Public Domain Was Assembled.

The public domain, that is, the lands belonging to the American public and held and administered through the American public's national government, could not officially begin to be assembled until the Articles of Confederation were ratified in 1781, two years before the official conclusion of the War for Independence against Great Britain. The Confederation, however, opened for business mired in a deep debate over whether it, indeed, had any public lands. The vast and undelineated western holdings of several of the states in the Confederation were still formally within the jurisdiction of those states, who were taking steps to transfer those lands into private ownership, and the objections to all of that process by the other states were so serious that the very existence of the Confederation was threatened.

This dilemma had been a long time in gestation. In the one and a quarter centuries between the founding of the first successful English colony in America and the founding of the last of the thirteen colonies, England issued charters to those colonies granting vast tracts of land extending westward into regions whose geography was entirely unknown. The first grant, to the Virginia proprietors, was the most extreme. Officially the boundaries ran several hundred miles to the north and south, and to the west, from sea to sea. Although several colonies' westward boundaries extended, by their terms, all the way to the Pacific Ocean, it was then unknown how far it actually was to that westward limit. The colonies were very active in disposing of their lands into private hands, but only in those areas that had been settled or explored.

In the 1750s, French claims were extended southward into the western lands of several English colonies. English resistance was a factor in the beginning of the Seven Years War, at the conclusion of which the territorial claims of the British colonies all the way west to the Mississippi River were confirmed.

Of course, the British sovereignty did not endure and only 20 years after the end of the Seven Years War, Great Britain and its former colonies concluded a peace acknowledging that Great Britain's former sovereign title in its American lands was held by the new American government under the Articles of Confederation.

Seven of the Confederation's constituent states still held vast areas of unoccupied westward land, and this jurisdiction

had not been disturbed by the Articles of Confederation. The six states without such western lands in their domain insisted that the other seven states turn their western lands over to the Confederation as public lands. To help resolve the impasse, the Continental Congress also asked those seven states to relinquish their claims. If that were to happen, Congress expressed its intention to hold those lands for the common benefit of the United States with the ultimate goal that the lands would be settled and admitted to the United States as new states in the same status as the original states. Between 1784 and 1802, the seven states' western territories were thus ceded to the national government. Upon the first of those cessions, the final ratification of the Articles of Confederation was given and the new national government officially came into being at the same time as the new public domain of the national government. When the national government under the Articles of Confederation was replaced by the national government under the Constitution on March 4, 1789, the lands in the public domain were growing and yet to grow more. For the most part, these were lands which had not yet been in any private ownership and also which had not yet come within the jurisdiction of any state.

Some of the state cessions did not become part of the public domain, but became lands that were immediately assigned to the jurisdiction of a new state. Part of Virginia became Kentucky and then much later another part of Virginia became West Virginia. Part of North Carolina became Tennessee. The Tennessee land was formally ceded to the national government but almost all of it was already subject to private claims and very quickly was accepted as a new state. Vermont was created out of territory claimed by both New York and New Hampshire; and Maine was created from Massachusetts land in 1820. Some of the western lands ceded to the national government had already been subjected to private claims and, thus, also did not become part of the public domain.

From its beginnings with the western cessions between 1784 and 1802 the public domain was dramatically expanded by new territorial acquisitions of the United States over the next half century. National territorial additions over the next decades included the Louisiana Purchase in 1803, the cession of Florida by Spain in 1819, the annexation of Texas in 1845, acquisitions under the Oregon Compromise in 1846, the territory acquired at the conclusion of the war with Mexico in 1848, the federal purchase of public lands from Texas in 1850, the Gadsden Purchase in 1853, and the acquisition of Alaska by purchase in 1867. While some of these lands were held privately at the time they were acquired by the United States, the overwhelming majority was not held privately and was thus added to the public domain.

(b) Early Policy Developments Regarding Public Lands.

An enormously important step towards a rational policy of public land management and disposal was taken when the Continental Congress enacted the Land Ordinance of 1785. In this legislation, the rectangular governmental surveys that had been characteristic of the New England colonies were adopted as a part of the United States land policy, and all the lands then or thereafter in the public domain were subjected to that survey system. The survey was to produce townships, each consisting of an area of land six miles wide by six miles long divided into sections of one square mile each. The section numbered 16 in each township was to be reserved so that revenue from its sale would be devoted to public schools within the township. The Ordinance reserved for the public one-third of all of the gold, silver, lead and copper to be extracted from within the township. When the survey was completed, lands from within the township could be sold at auction to the highest bidder at not less than one dollar per acre. Lands within the surveyed township already occupied and improved could be purchased at minimal price by the occupants even before the auction period. The Land Ordinance of 1785 did not establish any limits on the amount of acreage that any purchaser could buy, and purchasers were not required to settle or improve the land. Under those circumstances, the attempt by means of the Land Ordinance of 1785 to create an orderly system for disposing of public lands was flawed in the failure of the ordinance to deal effectively with problems created by squatters and by purchases on behalf of large land speculators.

The Land Ordinance of 1785 was soon followed by the Northwest Ordinance of 1787. The Northwest Ordinance of 1787 defined a three-stage process by which the territories could become states of the union and which, by creating effective local government, would encourage security of land titles and ultimately enhance the sale of public lands to private parties.

Both the Land Ordinance of 1785 and the Northwest Ordinance of 1787 were enacted by the Confederation without any specific authority to do so. Concerns for this possible lack of authority and the instability of land arrangements that might result therefrom were shared by the delegates to the convention to draft a new Constitution. Ultimately, the new Constitution did address these issues with two provisions:

> New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State nor any State be formed by the Junction of two or more States, or Parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress. n2
>
> The Congress shall have power to dispose of, and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular State. n3

One of the most persistent controversies and, indeed, the first controversy to arise following passage of the Northwest Ordinance, was how to treat states equally in terms of their power over and access to public lands. The principle of equality between the states had been established by the Northwest Ordinance, which decreed that any new states would be admitted to the union "on an equal footing with the original states in all respects whatever... ."

On the one hand, the original states - especially those which had ceded their vast western lands to the Confederation - proclaimed that they had used their people and their money to help win control of the lands that were now in the public domain and they should now be able to share in the wealth emanating from the public domain. Above all, revenue from sale of the public domain should be used to retire the national debt.

Congress, however, took a different tack. From the proceeds of public lands sales, Congress directly appropriated large sums for roads in the new states. In addition, Congress turned over directly to the new states huge acreage for schools and other public institutions, ultimately returning about 19% of the public domain to the seven new states that were formed out of the Northwest Territory.

Based on the principle of equality, the old states then made claims on the public domains lands. The new states proclaimed that, for them, equality meant that they should have control of all the federal public domain lands within their boundaries, as was the case with the old states. As the controversy raged throughout the 19th century, Congress made moves to mollify both groups of states. To the new states that were formed during the 19th century, Congress granted approximately 181 million acres of public domain lands within their boundaries. Over half again that amount was given to railroads who were constructing rail lines and encouraging settlement through those states. To satisfy the older states, Congress made a number of charges against public land revenues for the benefit of public improvements in the states that no longer had large amounts of public land. Inevitably, there remained a large disparity between the public land benefits accorded the newer public lands states and those obtained by the older states.

By the end of the 19th century the sentiment of the older states had changed. And from those states came cries for the federal government to responsibly preserve and manage the remaining public domain under the so-called "public trust" doctrine. As the public trust doctrine has gained acceptance, the public land states, especially those in the West, have raised their own countervailing concerns about how much state power can be exerted over the vast federal public domain lands within their respective state boundaries. This, too, is actually an issue of equal footing illustrating again that this appealing doctrine has proved to be a problematic principle over the decades.

In addition to these public claims on the public domain, another idealistic but troublesome principle involving public lands was the commitment of the American government to honor the claims and rights of private grantees in the newly acquired public lands, including claims of foreign grantees. Many extended and acrimonious controversies were necessary to carry out this policy. In disputes over public lands between private parties, usually the speculators,

developers and other claimants of large acreage were more successful so that, in the end, 34 million acres in 19 states were confirmed to grantees of titles pre-dating American sovereignty.

(c) Disposal of Public Lands.

(1) Alienations.

Sales of lands in the public domain commenced even before the first stage of acquisitions from the old states was completed. Because the earliest cessions of western lands from the original states took place over a period of several years, it was natural that sales to private parties of parcels from those lands would commence before the cession process had run its full course. While some thought that public lands should simply be granted outright to settlers on the frontier, national necessity required that as much revenue as possible be obtained from the sale of such lands.

The first sales took place in Ohio as the Northwest Territory opened up to orderly settlement under the Land Ordinance of 1785 and the Northwest Ordinance of 1787. The surveyor general of the treasury department was responsible for surveying the lands and issuing the patents when the lands were sold. Receivers and registers at a few local land offices accepted and accounted for payments that were made. In 1812, these functions were taken over by the General Land Office under the Secretary of the Treasury, and the General Land Office was shifted to the Interior Department in 1849. Nevertheless, the early sales of public domain land to private parties remained slow because of cheap land abundantly available almost everywhere else.

Beginning about 1800 and extending to 1820, sales of lands from the public domain were made on credit. The credit arrangements called for payment of annual installments, with interest usually at 6%, unless excused, and the patents were not issued until payments were complete. Sales were to be in acreage blocks that at first encompassed entire townships but were later reduced to 640 acres, then to 320 acres and even lower. Even with smaller acreage and extended payment periods and forgiveness of interest, defaults and delinquencies were very common in the early years of the 19th century and occasionally federal legislation extended the payment period or authorized forgiveness of payments or of interest obligations.

When delinquencies did not diminish by 1820, Congress withdrew authorization for credit sales and required a full cash payment made for sales at auctions. At the same time, the minimum price was reduced from $2 per acre to $1.25 per acre.

Once the period of cash sales got under way again in 1821, many conflicts arose between well-funded groups of speculators who would usually be successful bidders at land auctions, and the settlers and squatters who had already commenced farming of public lands even before surveys had taken place. To combat the organized efforts of land speculator groups, the pre-auction settlers often formed groups of their own, and each group tried to manipulate the bidding either to preserve their farms (in the case of the settlers) or to succeed in acquiring their first choice of land (in the case of the speculators). Speculation in land was actually encouraged during the 1830s by federal land practices which extended much more public domain land into the auction process than could be bid upon and purchased by the potential buyers. Even among the lands which were purchased, mostly by speculators, much acreage was left unsettled and unimproved and thus tended to retard the development of local communities.

Along with cash sales, another prominent method of placing public domain lands into the ownership of private parties was opened up in 1841 with passage of the Preemption Acts. n4 This general preemption law and the special preemption laws that preceded it, recognized that many frontier settlers had already settled upon public domain lands, had improved the lands, and hoped then from the proceeds of their labors to have money for purchasing the lands when they officially became open for sale. This plan depended on their not having to bid competitively against other potential purchasers at a public auction. This avoidance of the public auction, then, was the preemption referred to in the titles of the bills.

The General Preemption Act of 1841 was a step toward validating the activities of these settlers and squatters, but it applied only to settlement that occurred on public lands that had been surveyed although not yet opened to auction. A settler could qualify for preemption on 160 acres by actually living on and improving the land and building a residence on it. A settler wishing to claim preemption was required to have notation of the claim made on public land records, including a written declaration of intent to improve and preempt a quarter section. Proof of meeting those qualifications and final entry had to be made within one year and paying $1.25 per acre. A person who was a head of family, a widow, or a single person over 21, and did not already own more than 320 acres, and had no previous preemptions, would be eligible under the 1841 Preemption Act. In 1862, another preemption act extended this procedure to settlers who had made their entry on public lands that had not yet been surveyed. With that legislation, preemption and homesteading became the predominant means of private acquisition of lands from the public domain. Because it eliminated competitive bidding, and gave the settlers an entire year to raise funds and to make improvements to validate their claims, it became a major means for moving lands of the public domain into the hands of small private farmers.

A highly specialized method of dispersing acreage from the public domain was the use of warrants and scrip. Warrants for claims of acreage against the public domain were issued to soldiers for their military service or to others for some other form of public service or for installing community improvements. The warrants varied in the number of acres and were often intended to draw upon lands which were still in the wild state, not yet surveyed and opened and often not very appealing for settlement. In the early days, holders of warrants often sold them for immediate cash, rather than waiting for the lands to be opened up or to be pacified. When the lands to which particular warrants pertained were insufficient to satisfy all the warrants, the government sometimes issued a scrip which gave the holder a right to claim a certain number of acres from other public lands anywhere in the public domain. Eventually large portions of the warrants and scrips issued were bought up by land speculators, n5 who were eventually able to profit from them. Land warrants were issued for military service as late as 1898. Congressional legislation in the mid-20th century imposed recording requirements for warrants, and unused and unlocated warrants were repurchased by the government. No scrip was valid after January 1, 1975. In the whole history of land warrants and scrips, several million acres of the public domain were dispensed by these methods.

Perhaps the largest blocks of public domain lands were dispensed directly to the various states under a wide variety of programs. The earliest of those programs consisted of working out the terms for the state relationship to public lands within state boundaries upon admission to statehood. The pattern for all thirty public land states was set by the procedure followed in connection with Ohio's statehood after the passage of the Northwest Ordinance and the first attempts to create states out of the Northwest Territory. The Northwest Ordinance itself required that any state created from the Northwest Territory would be bound to not interfere with the disposal of public lands by the United States, nor with federal regulations relating to securing the title to those lands. Likewise, those states would be prohibited from imposing taxes on federally-owned land within their boundaries. The procedure for Ohio's statehood, followed closely by that for other states emerging from the Northwest Territory, was detailed in the Congressional Enabling Act.

Under the Enabling Act, the inhabitants of the Ohio area were to elect representatives to a convention, according to formulas and procedures set out in the act, and the convention of delegates would then consider a number of propositions relating to the conditions under which Ohio would then be admitted as a state. The statehood convention would be required to enact an irrevocable ordinance disclaiming state rights in the federal public domain within the territory, and once such an ordinance was enacted, then the other propositions regarding other public domain lands within the state could be considered on a more or less optional basis by the state convention. If an acceptable mix of propositions or counter-proposals was tendered to Congress, then they, together with the one irrevocable proposition already enacted, would be part of the package of conditions for statehood. The "optional" proposition consisted of various programs under which public lands within the territory would be transferred to the state.

In the case of Ohio, the convention did enact the irrevocable ordinance and made counter-proposals seeking mostly to enlarge the various grants of public domain lands under the other programs. Almost all of the counter-proposals were

accepted by Congress, which then resolved to admit Ohio to statehood on what was considered to be an equal footing with the other states. The same procedure, but with varying results, was followed by other territories seeking statehood. Using the various programs for federal land grants as bargaining proposals, each state created a different mix of regulations and programs for disposal of public lands within their respective territories. All this was on the condition that they accept the one irrevocable ordinance abandoning claims to public domain within their boundaries, surrendering any right to tax federally-owned land, and agreeing also to tax residents and non-residents alike with respect to ownership of public lands. Also, all public domain lands within the state were to be exempt from local taxation for five years after transfer by sale into private ownership.

Among the other programs for transferring public domain lands into state or private ownership, was the granting of section 16 of every township to the state for the support of public schools. n6 After 1850, the program called for granting of sections 16 and 36 for that purpose. After 1896, Utah and Arizona received for public schools four sections in each township. Also, most states received 5% of the net proceeds from public domain land sales within their boundaries for the construction of roads. In the early years states were also granted lands that encompassed salt springs and some adjacent sections with the proviso that the states retain title and only lease the salt springs to private parties, thus assuring that the flow of revenue would continue to the states for those lands. Later, sale of the salt springs public lands by the states was permitted. Also, in states where specific sections were received for school purposes, and those sections were not available because of preemption or other earlier disposition, the states were given the right to select other lands in substitution.

Very soon after this process began, all states began asking for special congressional legislation for land grants devoted to special improvements. Roads such as the Cumberland Road from Baltimore to the Ohio Valley and the Erie Canal, connecting New York City with western New York, were funded in part by additional land grants to the states affected. The notion of land grants for particular special improvements had by 1841 evolved into a system of general grants to the states for internal improvements. In 1841, Congress granted 500,000 acres of the public domain to each of the public land states then in existence and to each such state admitted thereafter. Some states immediately sold the lands to be used for schools and improvements, while other states created a sort of trust arrangement for the lands, hoping to derive long-term income from them. To exercise more control over the application of proceeds from such land, after 1889 Congress made some land grants directly to specific worthy institutions within the states, rather than directly to the states.

Several Swamp Land Acts in the middle of the 19th century were the result of the states having persuaded Congress that among the public domain lands within their territories were marshy and swampy lands that were of no value to the federal government. It was also believed at the time that the federal government was without Constitutional authority to give aid to drain those swampy lands and it therefore seemed appropriate to turn them over to the states. The Swamp Land Acts immediately gave to the states the title to swamp and overflowed lands unfit for cultivation, but a specific identification of those lands had to be made later. The program was widely abused, and the states eventually obtained almost 65 million acres of so-called swamp lands under this act. An apt criticism of this program has been delivered in the following terms:

> Many of the lands granted as swamp lands were not wet except in flood stage, heavy rain, or because one part of them touched lakes or water courses. Many of them were valuable lands which sold well to farmers, and despite the intent of Congress, the proceeds were not always used to reclaim those swamps which did exist. Few public lands acts were so loosely worded, caused so much trouble in selection and conflicting claims between settlers, and achieved so little of the original purpose. n7

In 1862 Congress made available to all states grants of land to endow colleges of agricultural and mechanical arts. The resulting land grant colleges thus obtained 30,000 acres for each of their representatives and senators in Congress. If the state had no such acreage of public domain within its boundaries, then the state received scrip which could be used for claims against public domain lands elsewhere.

Because land grants of public domain lands to the states were a matter of bargaining, the bargaining frequently turned on estimates of the population in the territory applying for statehood; the more sparsely populated western states eventually had considerably more of their territories left in federally controlled public lands than was true in the older eastern states. To compensate for the consequent reduction of tax base in those states, the federal government eventually adopted a system of payments made to those states in lieu of taxes they would have otherwise received from their public domain lands, had those lands passed into private ownership. n8

In 1927, Congress confirmed that, in land grants to the states, the mineral rights, or lands designated as mineral lands, were also included in the passage of title to the states.

Beginning in 1850, the federal government undertook a specific policy of supporting and encouraging development of railroads by extending huge grants of public land to the railroads. The railroads obtained both rights of way for the actual lines and grants of other lands, the proceeds from the sale of which would help subsidize railroad construction. Also, these land sales to private settlers would help build the base of customers for the new railroad lines. The land grants to railroads, eventually amounting to many hundreds of millions of acres, were eventually deemed to be profligate, especially because they were often not used for their intended purposes. When the railroads delayed disposing of the lands to private parties, that conduct actually inhibited and delayed development of the frontier in many areas and kept the lands off the tax rolls of the state government. The creation of railroad land grants in terms of alternating sections of land have left even today a crazy quilt pattern of federal and private land ownership in the states most affected. Railroad practices have also caused some confusion as to mineral rights in the western lands. Nevertheless, as is more fully explained in Chapter 54, *supra*, the railroad land grants were a very significant element of the effort to move large tracts of public domain lands into private ownership.

At the time the railroad grants were reaching their peak, Congress introduced the Homestead Act of 1862 n9 which was the most effective method for moving public domain lands into the hands of settlers at minimal purchase prices. Persons who were 21 years of age, or were heads of families, and were citizens or were becoming citizens, could under this act, enter 160 acres of the surveyed public domain and obtain a patent for the price of $1.25 an acre. As to unsurveyed lands, settlers were also able to enter such lands on which Indian title had been extinguished, have the land entered in the land office register books and thus become protected from other entries and then perfect the title once surveying occurred. The Homestead Act of 1962, combined with the preemption practices just described, succeeded in bringing many millions of acres of the public domain lands into private ownership.

When the frontier reached the more arid desert lands, larger tracts with fewer requirements were opened up for homesteading, and improvements for irrigation became a prominent part of the required activity. However, much abuse of these land disposal practices also occurred, especially in permitting land speculators to accumulate large tracts by purchase from settlers taking improper advantage of Homestead Preemption Laws. Most of these practices were brought to a halt by Congressional legislation culminating in the General Revision Act of 1891. n10

(2) Reservations and Withdrawals.

Passage of the General Revision Act of 1891 signaled the transition from the period of disposing lands in the public domain into private ownership to a period of preserving lands in the public domain for a variety of conservation and other purposes. The General Revision Act repealed most of the statutory opportunities for obtaining lands by preemption and, in addition, made provisions for forest reservations, authorizing the president to "set apart and reserve ... any part of the public lands wholly or in part covered with timber or undergrowth, whether of commercial value or not, as public reservations." n11

After the process of forest reservations had begun, by the Organic Act of 1897 n12 the federal government was authorized to exercise protective management measures over the retained forest reservations. Within ten years after

passage of the General Revision Act of 1891, approximately 50 million acres had been withdrawn from the public domain, most of it for forest reservations. By the time of Theodore Roosevelt's administration, an additional 150 million acres had been withdrawn for forest reservations.

In addition to the withdrawals and reservations, the federal government occasionally made purchases, and even obtained property through eminent domain. In 1896, it was established that the federal government could, by eminent domain condemn private property for inclusion in the Gettysburg National Military Park. n13 Along with the withdrawals of land from the public domain for forest reservations, there had always been withdrawals for military purposes, Indian reservations, and lands deemed to be "mineral" in character.

Yellowstone National Park's creation, in 1872, represented the first withdrawal of public lands for a national park. However, the national park system was not created until 1916, and only then was a systematic administration of national park lands commenced. The National Park Service was charged with conserving "the scenery and the natural and historic objects and wild life ... and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." n14

Concurrently with the conservationist purposes embedded in the National Park Service's charter, the Forest Service had been pursuing a policy of forest *development* in those lands withdrawn from the public domain for forest reservations. The two worthy purposes were bound to clash, and they did.

Excluding Alaska, the lands of the federal public domain had once consisted of 1,446,436,106 acres. By the turn of the century, approximately one third of this acreage remained in federal hands; 258,151,044 acres of that land were surveyed, 191,347,263 acres of the land were unsurveyed, and all of it was unappropriated, not withdrawn or reserved. Over 99% of this total acreage was in the western part of the United States, west of the 100th meridian. The lands thus left for disposal into private ownership were, for the most part, less suitable for agriculture and not likely to be entered any time soon. This circumstance, combined with increasing interest in conservation and preservation, meant that momentous changes were in store for the lands of the public domain. n15

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.03 Public Lands and Mineral Resources.

[Go To Supp]

(a) Reservations of Public Domain Mineral Resources.

An axiom for most of the programs designed to pass public domain lands into private ownership was that so-called "mineral lands" were to be excluded from such disposition. Thus, public domain lands transferred by sale, homestead, preemption, grants to states and railroads, and grants under other programs were all directed to exclude lands that were deemed mineral lands.

Lands came to designated as "mineral lands" generally upon surface observation by surveyors, land office officials, the parties seeking entry, or parties opposing those seeking entry. The lack of method and thoroughness in such a system combined with the absence of incentive, so that huge acreages of public lands with mineral resources passed into private ownership. Moreover, patents to private parties for agriculture, state or railroad grants relinquished to grantees and patentees any minerals discovered on the lands after the conveyances were issued.

An early attempt at selling lands with coal at a higher price than the minimum price set for public domain lands generally had been a failure. The Coal Act of 1873 imposed acreage restrictions and higher minimum prices so that those wishing to obtain such lands typically made agricultural entries that intentionally ignored the mineral character of the land.

In 1906 President Roosevelt withdrew from such entry approximately 66,000,000 acres of land known to have coal resources on them. Other similar withdrawals were made in the next three years, so that thereafter entries on those lands could only be made under the mineral laws. Congress felt compelled to act, and finally passed the Coal Lands Acts of 1909 and of 1910, which opened the withdrawn lands for agricultural entry but reserved the minerals to the federal government. n16

Meanwhile, in the first decade of the 20th century, various acreages were withdrawn from the public domain because they were thought to contain oil. By legislation in 1910, Congress authorized major withdrawals of land from the public domain, but left those withdrawn lands subject to location for certain minerals, and closed to entry for agriculture and for extraction of petroleum. In the following decade, almost all lands still in the public domain were excluded from

entry for the purpose of withdrawing oil. However, Congress adjusted this with the Agricultural Entry Act of 1914 n17 which reopened such lands for agricultural entry but reserved to the federal government the minerals which had been the reason for the lands' withdrawal.

Mineral reservations for the federal government were even more comprehensive in the Stockraising Homestead Act of 1916, which - while enlarging the acreage amounts for homestead purposes - reserved all minerals on such lands to the federal government. n18 In patents issued under that Act, the minerals and all rights to prospect for them and remove them were reserved to the federal government. A further momentous shift occurred under the Taylor Grazing Act of 1934, n19 which resulted in withdrawing from entry virtually all public lands in the western states, making such withdrawn lands available for classification as grazing districts, and reserving all minerals in such lands to the United States.

(1) Coal.

Deposits of coal were reserved to the federal government under the same circumstances as other minerals, as described above, except that coal and iron found on land granted to railroads were available to the grantees.

(2) Metalliferous Minerals.

Metalliferous minerals were formally reserved to the federal government under the same provision of the Stockraising Act of 1916 that reserved other mineral resources; the Act reserved "all the coal *and other minerals* [emphasis added] in the lands so entered and patented, together with the right to prospect for, mine, and remove the same." n20

(3) Non-metalliferous Minerals.

Non-metalliferous minerals were formally reserved to the federal government under provisions of the Agricultural Entry Act of 1914. n21 This Act reserved phosphate, nitrate, potash, oil, gas and asphalt deposits - and later provisions added sodium and sulfur - but only as to those public lands that were identified or classified or withdrawn from entry precisely because they contained such deposits; there was no blanket reservation of those mineral deposits as to all public lands. When such lands were conveyed into private ownership, the private ownership rights were subject to rights to mine for and extract the deposits.

(b) Disposal of Public Domain Mineral Resources.

(1) Coal.

Unlike other mineral deposits, coal deposits were not subject to location procedures, but, under authority of legislation as early as 1864, could be purchased. Under 1873 legislation, the sales could be in tracts of 160 acres or 320 acres. After adoption of the 1920 Mineral Leasing Act n22 coal deposits were no longer sold, but could only be leased. Now, under provisions of the Federal Coal Leasing Amendments Act of 1975, n23 leaseholders must put the leases into production within ten years or forfeit their leases. A significant landowner protection appeared in the Surface Mining Control and Reclamation Act of 1977, n24 which prohibited creating federal coal leases without the consent of the affected landowners.

(2) Metalliferous Minerals.

The reserved rights to metalliferous minerals may be disposed of by the government in accordance with any disposal laws in effect at the time of disposal. Leasehold rights in some mineral deposits may be acquired under the Mineral Leasing Act of 1920 n25 and the Coal Leasing Amendments Act of 1975. n26 Most of the metalliferous minerals, however - especially those on stockraising homesteads - are subject to location procedures set forth in the General Mining Law of 1872. n27 Also, sections of the Stockraising Homestead Act of 1916 governing severance of minerals

are still in effect. n28

Under these severance provisions, prospectors have the right at any time to enter onto stockraising lands to prospect for minerals. Prospectors are potentially liable for surface damage, including damage to grazing resources, especially under the Open Pit Mining Act of 1949. n29

Although the basic procedures and qualifications for mineral location and extraction are still found in the General Mining Law of 1872, some modifications have been effected by the Surface Resources Act of 1955 n30 the Multiple Mineral Development Act of 1955, n31 provisions of the Federal Land Policy and Management Act, n32 and the Mining and Minerals Policy Act of 1970. n33

(3) Non-metalliferous Minerals.

The Mineral Leasing Act of 1920 n34 effectively withdrew from location procedures most of the so-called non-metalliferous minerals, the so-called fossil fuels and chemical or fertilizer minerals. The leasing procedures introduced by this act applied to the mineral rights that had been reserved to the federal government as well as to minerals remaining unsevered on lands still in the public domain.

(4) Summary of Federal Regulatory Jurisdiction.

The irrational tangle of regulatory responsibilities among federal agencies with stewardship over the public domain has been aptly described as follows:

> The authority of the various governmental agencies over the different minerals is not allocated on a logical basis. Rather, the division of authority reflects the differing moods of Congress over the years and its perception of which agency would best accomplish the goal of the moment for the minerals in question, whether the primary consideration at the time was mineral development or environmental protection.
>
> The Office of Surface Mining created by SMCRA was granted unusual authority under that law to regulate both the environmental and the mining aspects of coal mining operations. By SMCRA, coal is given unique treatment. SMCRA regulates coal mining on both public lands and private lands, a situation which applies to no other mineral. SMCRA established an entire and separate regulatory system for coal. Coal had never been subject to the Mining Law of 1872, and it was removed in 1976 by the Coal Leasing Amendments from coverage under the Mineral Leasing Act of 1920.
>
> The regulatory agencies with authority under the three systems, mineral location, leasing, and coal leasing, have conflicting ranges of authority. BLM, [Bureau of Land Management] is the mineral leasing agent for all federal lands, but there the unity ends. As to mineral locations under the Mining Law of 1872, the BLM, within the Department of the Interior, is solely responsible for supervising mineral operations although it shares authority over surface management with other federal land-holding agencies such as the Forest Service and the Fish and Wildlife Service over lands within such reserves. As to leases granted pursuant to the Mineral Leasing Act of 1920, the authority is divided between two agencies within the Department of the Interior. The BLM is the federal leasing agent, but the U.S. Geological Survey administers the mineral aspects such as engineering and the BLM has responsibility for non-mineral matters such as surface impacts. When the Department of Energy was created in 1977, *91 Stat. 565, 42 U.S.C. §§ 7101*-7352, certain economic aspects of fuel mineral leasing were transferred from the Department of the Interior to the new Department of Energy. Under the Mineral Leasing Act for Acquired Lands, *61 Stat. 913 (1947), 30 U.S.C. §§ 351*-359, and as to acquired forest lands and coal and geothermal lands, the BLM may only issue mineral leases with the consent of the federal agency to which the land is assigned and subject to such conditions as the surface management agency may include

to protect the land for the surface uses and purposes. As to coal leases issued by the BLM under SMCRA, the Office of Surface Mining, either at the federal level or through federally-approved state OSM offices created to regulate under the Act, has single and total authority over all aspects of coal mining operations. n35

(5) Overview of Mineral Location Procedures.

"Location" is the technical term signifying the procedure for establishing a right to find and remove minerals from the land. The earliest federal location laws specifically referred to rock bearing gold, silver, cinnabar, copper, lead, tin, and "other valuable deposits." This latter term was eventually interpreted to include diamonds, stone used as building materials, n36 salt deposits, petroleum deposits (until the Mineral Leasing Act of 1920), and petrified wood (until 1962).

Location procedures apply to public domain lands, principally in the western states, and to certain private lands on which federal reservations of mineral rights are held. Only the private lands entered under the Stockraising Homestead Act and the Taylor Grazing Act are currently subject to location; other lands under federal mineral reservation have not been subject to location because the necessary regulations have never been issued.

In the process of location the qualified locating party (an individual, group or association) must discover the minerals in amounts that justify the extraction effort, take possession of them, and lay out the boundaries of the claim on the surface of the land. State and local regulations may impose additional requirements, such as recording a certificate, posting notice, or actually constructing a shaft or tunnel. Claims may be classified as either lode or placer (pronounced "plasser"). Lode claims are those that consist of veins, lodes or ledges of mineral, confined to seams or fissures in the rock, usually beneath the surface, although often visible in outcroppings. Minerals in placer claims are found on the surface, often mixed with other loose materials. A placer claim may include a large surface area, and a lode claim may be located within a placer claim. A successful location confers rights of exploitation and exclusion. Under the Federal Land Policy and Management Act of 1976, holders of previously located claims were given three years to file notice of their claims or have the claims conclusively considered abandoned. n37

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.04 Public Lands and Timber Resources.

[Go To Supp]

The historically free hand wielded by federal agencies in dealing with public land timber resources is now coming under increasing restriction. Major reservations of forest land from the public domain were authorized by the Forest Reserves Amendment of 1891, n38 and guidelines for managing those reservations were enacted in the Organic Act of 1897. n39 These were further refined by the Multiple-Use, Sustained Yield Act of 1960. n40 The Forest Service was created in 1905, and exercised broad discretion in administering timber sales to private parties, working out related contract disputes, and attempting to meet the ever-increasing demands for timber production. Today, this discretion is subject to larger policy considerations of conservation and environmental protection. n41

In its management policies, the Forest Service practiced a multiple-use policy from the beginning, even though the Organic Act of 1897 referred only to managing with respect to timber and water. n42 In the Multiple-Use, Sustained Yield Act of 1960, five multiple uses were authorized: "It is the policy of the Congress that the national forests are established and shall be administered for outdoor recreation, timber, watershed, and wildlife and fish purposes." n43 Much subsequent conflict occurred over defining and prioritizing such uses, and in determining to what extent judicial or other restrictions may be imposed on the traditional broad discretion of the Forest Service.

The National Forest Management Act of 1976, n44 in effect, replaced the Organic Act of 1897 and gave much more specific guidance on forest management practices, stimulated in part by public controversies over clear-cutting. Also, many millions of acres have been administratively withheld from timber production in order that their suitability for wilderness preservation could be studied. Under the National Environmental Policy Act, environmental procedures, including use of environmental impact statements and access to judicial review, are now incorporated into Forest Service procedures. n45

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.05 Public Lands and Water Resources.

(a) Public Rights in Waters and Lands Near Waters.

The distinction between private and public waters has traditionally depended on whether the water is navigable or not, but several different standards or elements of navigability may be applied.

(1) Navigability: The English Common Law Background.

(i) Tidelands.

In the history of Anglo-American common law, the earliest documentation of public rights in water-related lands is no older than the reign of King John in the early 13th century. From his reign are still preserved royal grants of seashore lands to private parties, grants which are noteworthy for their failure to describe the seaward boundary of the granted lands with precision. Without strict limits grantees naturally exercised possessory rights of such tidelands right up to the water. n46 Until the 16th century, the monarch did not even challenge private landowners' occupancy of tidelands, lands between the highwater and low-water lines, and no such action succeeded until 1632. n47

At this time, the intellectual foundation for asserting public rights in tidelands was just emerging. The view that tidelands had not been included in the medieval shoreland grants was first expressed in the second half of the 16th century, n48 but gained influential advocates only a century later. n49 A series of English cases accepted that thesis by imposing the presumption that tidelands were crown property, unless the private claimant proved to the contrary. In the early 19th century, an English judge declared that the presumptive public ownership of tidelands was "a doctrine of ancient establishment." n50

This presumption favoring royal ownership of tidelands, even though possibly contrary to grants made anciently to private subjects, n51 was so strong that it was applied in England's American colonies without question:

> The conclusions reached by this court in several leading and well-considered cases were that the various charters granted by different monarchs of the Stuart dynasty for large tracts of land on the Atlantic coast conveyed to the grantees both the territory described and the powers of government,

> including the property and the dominion of lands under tide waters; that by those charters the dominion and propriety in the navigable waters, and in the soils under them, passed as part of the prerogative rights annexed to the political powers conferred on the patentee, and in his hands were intended to be a trust for the common use of the new community, to be freely used by all for navigation and fishery, and not as private property to be parcelled out and sold for his own individual emolument; that upon the American Revolution, all the rights of the Crown and of Parliament vested in the several states, subject to the rights surrendered to the national government by the constitution of the United States; that when the Revolution took place the people of each state became themselves sovereign, and in that character hold the absolute right to all their navigable waters, and the soils under them, for their common use, subject only to the rights since surrendered by the constitution to the general government. n52

(ii) River Lands.

Turning again to the situation in England, the presumptive ownership of lands under freshwater rivers was in the private party, just the opposite of the presumption of foreshore ownership. n53 In this matter, the historical practice was determinative, and many of the oldest charters expressly conveyed to the grantees the ownership of the river to the midstream. As stated in Hale's 17th-century treatise:

> Fresh waters of what kind soever, do of common right belong to the owners of the soil adjacent; so that the owners of the one side have, of common right, the propriety of the soil, and consequently the right to fishing, *usque filum aquae*; and the owners of the other side the right of soil or ownership and fishing unto the *filum aquae* on their side. And if a man be owner of the land on both sides, in common presumption he is the owner of the whole river, and hath the right of fishing according to the extent of his land in length. With this agrees the common experience. n54

The English ownership right of freshwater rivers extended to the lands submerged beneath the water and to certain rights in the waters themselves. In the 19th century the modern English laws as to freshwater rivers were summarized as follows:

> The natural presumption is, that a man whose land abuts on a river owns the bed of the river up to the middle of the stream, and, if he owns the land on both sides, the presumption is that the whole bed of the river belongs to him, unless it is a tidal river. There is also a presumption that the owner of the bed of the river has the right to fish in the stream, and to prevent other persons from fishing there. n55

However, whereas the English rule regarding ownership of tidelands was considered received in the American colonies, the English rules on ownership of rivers and submerged river lands were not treated as received law in America. The colonies' charters were considered to have conferred sovereign rather than private ownership over rivers and river lands:

> ... [B]y those charters the dominion and propriety in the navigable waters, and in the soils under them, passed as part of the prerogative rights annexed to the political powers conferred on the patentee, and in his hands were intended to be a trust for the common use of the new community, to be freely used by all for navigation and fishery, and not as private property to be parcelled out and sold for his own individual emolument. n56

This ambivalence among the colonies toward the traditional English rules on rights in freshwater rivers led eventually to much inconsistency among the courts in the American states:

> The decisions in respect to public fresh waters are in hopeless conflict. A considerable number of jurisdictions purport to adopt the English common law rule, but they construe it as a rule of substantive law rather than a presumption. The majority of jurisdictions have repudiated the English rule, thus construed, as to some or all of their public fresh waters. Some states have title to the beds of all their

public waters; others to the beds of their public rivers, but not of their public lakes; still others to the beds of their public lakes, but not of their public rivers. n57

(iii) River Waters.

Even if the soil submerged beneath a flowing river was acknowledged to be in private ownership, English common law recognized that royal and public rights existed in the water itself. Glanville n58 and Bracton n59 wrote of public rights in flowing waters, and the large rivers in England were subject to a public right of navigation. To interfere with either the flow or the navigability of a stream was an offense both against the monarch and against the public. n60 The common public right of passage was confirmed in the clause of the Magna Carta commanding the king to remove various obstructions from the Thames and Medway rivers, and from other rivers throughout England. n61 In England even the private rights in river beds and banks could be subject to public rights incidental to navigation. n62

(iv) Summary.

In mature form, English law governing land located beneath navigable water distinguished between ownership and rights of use and control. The ownership of such lands was in the monarch, more or less as a private right, but with a public responsibility. The rights of use and control were in the public and were exercised by Parliament. n63 In the United States, the distinction was moot, because "[t]he State has succeeded to all the rights of both crown and Parliament in the navigable waters and the soil under them, and here the *jus privatum* [private right] and *jus publicum* [public right] are both vested in the State." n64

(2) The Emergence of American Rules.

(i) State Sovereign Ownership.

American rules of water rights generally emphasize sovereign ownership by the states, but formulation of the details of those rules has been left largely to federal law. Federal case law emphasized that sovereign ownership of certain waters and water-related lands is in the states. n65 Moreover, in American jurisprudence, the English distinction between royal sovereignty and public or Parliamentary ownership was ignored because the American state was also the embodiment of the public, thereby merging sovereignty and ownership or title.

Thus the American rule developed that states have sovereign ownership of submerged lands and tidelands, n66 and this view of sovereign ownership was applied to new states as well as to the original colonies. n67 State sovereign ownership of lands beneath all navigable waters is affirmed by federal statute in the Submerged Lands Act of 1953. n68

(ii) Expansion of the Concept of Navigability.

In accordance with the old English common law, the early American courts equated navigable waters with waters subject to the tidal action of the seas, that is, "the sea, or ... waters within the ebb and flow of the tide." n69 With the opening of inland waterways for commerce, the concept of navigability had to be extended beyond seas and tidal waters. Federal admiralty jurisdiction, also tied to navigable waters, was extended to the larger rivers and Great Lakes, n70 and state sovereign ownership was similarly extended to lands under non-tidal water. n71

As navigability became the test for determining the limits of such expansion, several definitions of navigability emerged. To describe the limits of federal jurisdiction of waters under the Commerce Clause, the Supreme Court adopted an expansive concept of navigability, which included waters that are both actually and potentially "navigable in fact." Waters that are navigable in fact are waters that:

[A]re used, or are susceptible of being used, in their ordinary condition, as highways for commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on

> water. And they constitute navigable waters of the United States within the meaning of the acts of Congress, in contradistinction from the navigable waters of the States, when they form in their ordinary condition by themselves, or by uniting with other waters, a continued highway over which commerce is or may be carried on with other States or foreign countries in the customary modes in which such commerce is conducted by water. n72

Under state law, waters can be deemed navigable regardless of any connection with interstate commerce. n73 However, navigability was determined only when the state was admitted to statehood. n74 Therefore, if a state attempts to establish its sovereign ownership over non-tidal water lands, it must show that, at the time statehood was obtained, the water was capable of being used as a "highway" for travel and trade. In a few circumstances, federal authority over such state lands has been successfully imposed by a disposition of the lands prior to statehood. n75 Historically, there was some confusion about whether navigability for purposes of determining state sovereignty would be determined by a federal test, or by definitions promulgated by the individual states. Now it is settled that a federal test is the standard and, in contrast to some earlier state standards, the federal test requires that navigable waters have some potential for commercial use. n76

Specific applications of the federal test are still left to the states:

> Even in those states most receptive to public claims on ... water resources, clearly not every brook or pond found on privately owned land is subject to a public right to use water in place. There is always some threshold to be crossed before a particular body of water is deemed suitable for public use and public rights. n77

The most widely accepted standard for this threshold has been the log flotation test, by which "all streams are to be deemed navigable which are capable in their natural state and in their ordinary volume of water to transport to market the products of the fields, forests, and mines." n78 An auxiliary standard has been labeled as the "pleasure boat" test, under which waters are navigable if they will sustain "boating for mere pleasure." n79

However defined in individual jurisdictions, navigability in fact continues to be the standard for determining which waters are subject to public rights and regulations. n80

Also, state sovereignty is not absolute, but must be exercised responsibly and in keeping with the "trust which requires the government of the State to preserve such waters for the use of the public." n81 A state may alienate its water-related lands to a private grantee, but the alienation is subject to a retained public right to use the water until development by the private grantee makes such use impractical. n82 Public rights retained in conveyances of state water-related lands to private grantees may be extinguished if the private development furthers a public value or does not significantly impair the public use. n83

Most of the western states have adopted statutory or constitutional provisions that proclaim all water in place as under state ownership, and courts of those states have accordingly affirmed a public right to use those waters. n84 The statutes and constitutions of some other states directly confer a public right of use upon specified waters without addressing the issue of ownership. n85

Another source of public right is the federal Commerce Clause, which has been interpreted to confer on the general public a "navigation servitude" over navigable waters, including navigable waters on state and Indian lands. n86 The concept of navigability under the federal navigation servitude requires that the waters have a potential for use in interstate commerce. n87

The basic conclusion to be drawn from these rules and guidelines is that all navigable waters are public waters, n88 and that recognition of public rights continues to be dependent upon a finding of navigability. n89

(iii) State and Federal Regulation of Navigable Waters.

In addition to federal regulation of public navigable waters under the power of the Commerce Clause, states may also regulate navigable waters, n90 either as defined by a navigable in fact standard or by some other, state statutory standard. n91 The federal power to regulate waters as part of the power to regulate interstate commerce applies to bodies and streams of water whose navigability is such that the water is capable of sustaining some impact on interstate commerce n92 or whose navigability corresponds to a statutory definition. n93

(iv) State Police Power Regulation of Navigable and Non-navigable Waters.

A state's specific power to regulate navigable waters is separate from a state's general power to regulate all waters, whether or not navigable, as part of the state's police power. Such police power regulation may only be imposed to promote the public health, safety, morals or welfare. n94 If police power regulation of private rights in waters or water-related lands is excessive, or if direct public regulation is imposed where the water is not in fact navigable, payment of just compensation to the private property owner may be required. n95

(b) Relationship of Public and Private Rights in Waters and Water-related Lands.

(1) Common Law Public Right to Use Public Waters Over Private Lands.

If privately owned land is beneath water that is subject to a public right of use, the public right is usually considered an easement that encumbers the private land. n96 Alternatively, the private land title has also been viewed as limited by the public use right. n97 The public right to use waters over privately held beds and banks beneath those waters has been ruled as including an incidental right to use those beds and banks; however, usually no analogous right exists to use adjacent private lands, such as riparian land. Thus, there is no common law public right to cross riparian land in order to gain access to public waters or to related public land, such as a foreshore. n98

(2) Implied Public Rights to Traverse or Use Private Lands in Connection with Use of Public Waters.

Even without a recognized common law public right to cross private lands in order to gain access to public waters, a jurisdiction may recognize one or more of several other implied public rights of access. n99

(i) Prescriptive Easement.

A majority of jurisdictions hold that public access to beaches over private lands, or even use of the private area of beaches (between mean high tide line and vegetation line) is permissive and therefore not adverse. n100 However, some courts have recognized that long and consistent use by the public may result in a prescriptive easement. Even if a court agrees that such a large group as "the public" can acquire a prescriptive easement, it must also find that members of the public crossed or used private land without permission but believing that they had a right to do so, and considered the private portion of the beach a public recreation area. n101

(ii) Implied Dedication.

If a court does not recognize a prescriptive easement in the public, it may still find the functional equivalent in an implied dedication. n102 Such a dedication may be considered a dedication by "adverse use" that is not permissive and is uninterrupted for at least as long as the prescriptive period. n103

(iii) Customary Right.

A few other jurisdictions have re-introduced the medieval doctrine of customary rights to protect long, continuous use of beaches by the public. n104 In its ancient form, the doctrine of custom was said to arise from a use that had

continued for so long that "the memory of man runneth not to the contrary."

(iv) Public Trust.

New Jersey courts have found in the public trust doctrine a source for a public right to use the privately owned dry sand portions of beaches; n105 one court has proclaimed that "enjoyment of rights in the foreshore [public rights] is inseparable from use of dry sand beaches [which may be privately held]." n106 An Iowa court has also implied that public access to a river may be founded on the public trust. n107

(3) Limitations that Public Water Use Rights May Impose on Private Water Rights.

If an upstream diversion by a private water user threatens the navigability of a public stream, the private diversion may be restrained. n108 Furthermore, upstream private diversions may be enjoined if they threaten the public right to use water in place. n109 It is now being recognized that environmental preservation and protection are included within the public right to use water in place. n110

(c) Public Regulations of Water Rights Related to Land.

Landowners whose properties are bounded or traversed by natural surface watercourses are called riparian proprietors, and their rights to the waters coursing over or touching their lands are called riparian rights. n111 A landowner with property bounded or touched by a body of surface water is called a littoral owner, n112 but the term "riparian" is often used to refer to both riparian proprietors and littoral owners. n113

In some jurisdictions, especially in the more arid regions of the western United States, riparian rights have been replaced, supplemented, or revised by systems of water rights founded in the doctrine of prior appropriation. Under prior appropriation, public water resources are assigned to private users in specified quantities for specified qualified uses, referred to as beneficial uses. Those who secure their rights earlier in time have rights superior to those who are later, as is connoted by the term prior appropriation. n114

Riparian rights were recognized in the English common law and so entered into the jurisprudence of many American states, unless a state's particular circumstances required modifications. n115 Prior appropriation laws were not part of the common law, so their adoption by any state required explicit action to modify the common law riparian rights. n116 Some states accept prior appropriation rules as the exclusive law for surface waters, n117 while other states maintain riparian rules for some circumstances and prior appropriation rights for others. In some of those states, unused riparian rights can become subject to appropriation, n118 and in some states prior appropriation will be applied only to waters in the public domain. n119 In intrastate conflicts between riparian and prior appropriation rights, some states treat the riparian rights as superior, n120 while others prefer the appropriation rights, n121 and still others give priority to whichever rights were first established. n122

The surface water law systems of individual states are summarized as follows: n123

Alabama:

Riparian rights, reasonable use.

Alaska:

Prior appropriation.

Arizona:

Prior appropriation.

Arkansas:

Riparian rights, reasonable use.

California:

Both riparian and prior appropriation, with riparian rights deemed superior, unless the appropriation is earlier. California follows the "reasonable use" theory of riparianism.

Colorado:

Prior appropriation applies to streams and tributary waters. Other water, such as non-tributary groundwater, is subject to separate administrative rules.

Connecticut:

Riparian rights, natural flow.

Delaware:

Riparian rights, natural flow.

Florida:

Florida, formerly a common-law riparian state, adopted comprehensive legislation in 1972 for water use and management. Property rights in Florida water arise only upon the issuance of a consumptive use permit; these are issued by water management districts for "reasonable-beneficial" uses of water resources that will not interfere with any existing legal use of water (including non-permitted, domestic uses), and that are consistent with the public interest. The doctrine differs from both the riparian reasonable use doctrine and the prior appropriation beneficial use doctrine.

Georgia:

Riparian rights according to natural flow, modified by reasonable use provisions.

Hawaii:

Riparian rights created by statute; proprietors may not diminish the water supply of other proprietors, but may not enjoin diminution by another unless harm to reasonable use can be shown. Hawaii also recognizes "appurtenant water rights," measured by the quantity of water used in taro cultivation in 1848.

Idaho:

Prior appropriation, under a judicial recognition that a prior appropriator has a superior right over a riparian water user who subsequently applies the waters to a beneficial use.

Illinois:

Riparian rights, reasonable use.

Indiana:

Riparian rights according to a statutory "reasonable beneficial use" definition.

Iowa:

A legislative permit system has replaced common law riparian rights, but the system retains basic riparian concepts.

Kansas:

Riparian rights were in effect until 1945, and then Kansas adopted prior appropriation. Water uses in effect in 1945 are considered vested and superior to subsequent appropriation rights.

Louisiana:

Riparian rights.

Maine:

Riparian rights, reasonable use.

Maryland:

A legislative permit system of appropriation or use governed by reasonable use is in effect.

Massachusetts:

Riparian rights according to reasonable use, but a permit system was enacted in 1985. All then existing uses were preserved if registered by 1989.

Michigan:

Riparian rights, reasonable use.

Minnesota:

Riparian rights, reasonable use.

Mississippi:

Since 1956, Mississippi has had a statutory appropriation system based on beneficial use, and preserving uses begun three or fewer years before 1956. The Water Resources Act of 1985 created a permit system for acquiring rights to use water, based on beneficial use. Pre-1985 rights could be preserved by filing a notice of claim within three years after the date of the Act.

Missouri:

Riparian rights, reasonable use.

Montana:

Prior appropriation, but the 1973 Water Use Act introduced a permit system and preserved pre-1973 rights.

Nebraska:

Riparian rights according to reasonable use, coupled with a prior appropriation permit system, based

on beneficial use. Riparian rights could vest between 1855 and 1895, when the appropriation statute was enacted. No new riparian rights could be created thereafter, but vested riparian rights were preserved.

Nevada:

Prior appropriation, beneficial use.

New Hampshire:

Riparian rights, reasonable use.

New Jersey:

Riparian, natural flow with respect to most issues.

New Mexico:

Prior appropriation, beneficial use.

New York:

Riparian rights according to reasonable use, but under the Water Resources Law a permit may be obtained to take water outside the riparian watershed.

North Carolina:

Riparian rights, reasonable use.

North Dakota:

Prior appropriation, beneficial use.

Ohio:

Riparian rights, reasonable use.

Oklahoma:

Adopted riparian and appropriation systems prior to statehood. New riparian rights, according to reasonable use, may be created and have priority over appropriation rights.

Oregon:

Recognized both reasonable use riparian rights and appropriation prior to enactment of water code in 1909. Since then, only appropriation rights may be created, subject to existing riparian rights.

Pennsylvania:

Riparian rights, reasonable use.

Rhode Island:

Riparian rights, natural flow.

South Carolina:

Riparian rights, reasonable use.

South Dakota:

Before 1955, both reasonable use riparian rights and appropriation rights were recognized. After enactment of the 1955 Water Law, only appropriation rights based on beneficial use could be created, and actual pre-1955 riparian and appropriation uses were preserved.

Tennessee:

Riparian rights, reasonable use.

Texas:

Riparian rights under English common law and according to reasonable use, and riparian rights under Spanish land grants were recognized for a time. In 1889 and 1895 an appropriation system was enacted, preserving existing valid riparian claims. After 1966, riparian owners were required to file their claims or risk losing them.

Utah:

Prior appropriation, beneficial use.

Vermont:

Riparian rights, reasonable use.

Virginia:

Riparian rights, reasonable use, with some possible modification by recent water protection legislation.

Washington:

Riparian rights, reasonable use and, since 1917, permit-based appropriation as the only method of creating new water rights.

West Virginia:

Riparian rights, reasonable use.

Wisconsin:

Riparian rights according to reasonable use, and subject to statutory priorities for certain diversions.

Wyoming:

Prior appropriation, beneficial use.

FOOTNOTES:

(n1)Footnote 46. When the grants involved tidal or non-tidal lands next to rivers, they typically included lands to the midstream of the rivers.

(n2)Footnote 47. Attorney General v. Philpott (1632), *cited in* Attorney General v. Richards, (Ex. 2 Anstr. 607, *3*

R.R. 632 (1795).

(n3)Footnote 48. That tidelands were not included in the old grants of royal shorelands was expressed in *"Proofs of the Queen's Interest in Lands Left by the Sea and the Salt Shores Thereof,"* a short treatise by Thomas Digges, written in 1568-69 and reprinted in Stuart Archibald Moore, A History of the Foreshore and the Law Relating Thereto (3d ed. 1888).

(n4)Footnote 49. Specifically, the thesis was incorporated into Matthew Hale's treatise *De Jure Maris*, which, though written in about 1666, was not formally published until 1787. Hale, however, represented the monarch in tidelands cases beginning not later than 1647. Hale's treatise is reprinted in Stuart Archibald Moore, A History of the Foreshore and the Law Relating Thereto (3d ed. 1888).

Rep. 345 (Ex. 1811), aff'd*, Parmeter v. Gibbs, 10 Price 412, *147 Eng. Rep. 356 (Ex. 1813);* Attorney General v. Richards, 2 Anstr. 603, *145 Eng. Rep. 980 (Ex. 1795).* By the end of the 18th century, ownership by the monarch was beginning to be considered ownership by the public, and any specific royal grants of shorelands were subject to public rights in the tidelands. *See, e.g.*, dissent of Best, J., in Blundell v. Catterall, 5 Bard. & Adl. 268, *106 Eng. Rep. 1190 (K.B. 1821).*

(n6)Footnote 51. As declared by Stuart Archibald Moore in A History of the Foreshore and the Law Relating Thereto 24 (3d ed. 1888):

> On consideration of the charters here referred to ... it will appear that the widely prevailing notion that the Crown has scarcely ever parted with the foreshore has no foundation in fact; and as the theory of the prima facie title of the Crown rests entirely upon this assumption - viz; that the Crown has retained the foreshore as part of the waste dominions of the Crown never granted out - it would seem that this theory (the origin of which we shall shew in the time of Elizabeth) is a theory based upon a presumption of fact which is, as regards, at any rate, the greater part of the kingdom, wholly untrue. It is a theory of what might have been, but it is not a theory based upon true facts.

Mohawk Power Corp., 347 U.S. 239 (1954); Forestier v. Johnson, 127 P. 156 (Cal. 1912); Atlanta School of Kayacking, Inc. V. Douglasville-Douglas Cty. Water and Sewer Auth., 981 F. Supp. 1469 (N.D. Ga. 1997)* (Commerce Clause challenge to access restriction through county reservoir).

(n42)Footnote 87. *Kaiser Aetna v. United States, 444 U.S. 164 (1979).* The test for navigability under the federal navigation servitude considers four factors: (1) whether the waterway was navigable in its natural state and comparable to the major natural bodies to which the servitude has been applied; (2) whether the waterway was located on private property; (3) whether the waterway became navigable through the investment of private funds; and (4) whether the Army Corps of Engineers has consented to an improvement affecting navigability. *Alameda Gateway, Ltd. v. United States, 45 Fed. Cl. 757 (1999).*

(n43)Footnote 88. *See, e.g., People v. Emmert, 597 P.2d 1025 (Colo. 1979); Downes v. Crosby Chems., Inc., 234 So.2d 916 (Miss. 1970).*

(n44)Footnote 89. *Golden Feather Community Ass'n v. Thermalito Irrig. Dist., 257 Cal. Rptr. 836 (1989)* (no injunction available, under the public trust doctrine, to maintain a reservoir for public recreational use, because the

waters at issue were not navigable).

(n45)Footnote 90. *United States v. Locke, 529 U.S. 89 (2000)* (when there is concurrent federal and state regulation for maritime commerce, the Supreme Court, in effort to establish uniformity, must ask whether the local laws in question are consistent with the federal statutory structure)

(n46)Footnote 91. *See, e.g., In re Adjudication of Upper Guadalupe River Segment of Guadalupe River Basin, 625 S.W.2d 353 (Tex. Civ. App. 1981), aff'd, 642 S.W.2d 438 (Tex. 1982), aff'd, Wyoming v. United States, 492 U.S. 406 (1989).*

(n47)Footnote 92. *See, e.g., United States v. Lamastus & Assocs., Inc., 785 F.2d 1349 (5th Cir. 1986).*

(n48)Footnote 93. *See, e.g., 16 U.S.C. § 796*(8); The Wilderness Act of 1964, *16 U.S.C. §§ 1131*-36 (1994), generally prohibits the use of motorboats within any designated wilderness. *See Friends of the Boundary Waters Wilderness v. Dombeck, 164 F.3d 1115 (8th Cir. 1999)* (claim that motorboat quotas unduly limit access to Boundary Waters Canoe Area Wilderness (BWCA) by violating the APA, ADA, and NEPA). A good example comes from the statutory definition of navigable waters covered by the Clean Water Act, *33 U.S.C. § 1251 et seq. Mutual Life Ins. Co. of New York v. Mobil Corp., 1998 U.S. Dist. LEXIS 4513 (N.D. N.Y. 1998)* lists waters covered by the Clean Water Act to include: (1) "Navigable waters from any point source." *33 U.S.C. § 1362*(12). (2) Navigable waters which are "the waters of the United States, including the territorial seas." *Id.* § 1362(7). (3) Navigable waters include "not only actually navigable waters but also tributaries of such waters, interstate waters and their tributaries, and nonnavigable intrastate waters whose use or misuse could affect interstate commerce." *United States v. Riverside Bayview Homes. Inc., 474 U.S. 121, 123-124, 88 L.Ed. 2d 419, 106 S. Ct. 455 (1985)* (*citing 40 Fed. Reg. 31320 (1975)).* (4) Navigable waters include freshwater wetlands adjacent to navigable waters. *Id.* at 124. (5) "Congress intended to regulate the discharge of pollutants into all waters that may eventually lead to waters affecting interstate commerce." *United States v. Eidson, 108 F.3d 1336, 1341* (11th Cir.), *cert. denied, 139 L.Ed. 2d 177, 118 S. Ct. 248 (1997).* (6) Tributaries that are natural or man-made, intermittent or continuous, are within the CWA. *Id. at 1341-1342.* (7) Ground water not connected to navigable water is not within the CWA's coverage. *Village of Oconomowoc Lake v. Dayton Hudson Corp., 24 F.3d 962,* (7th Cir.), *cert. denied, 513 U.S. 930, 130 L.Ed. 2d 282, 115 S. Ct. 322 (1994).* (8) The CWA covers ground waters that are hydrologically connected to regulate surface waters. *Williams Pile Line Co. v. Bayer Corp., 964 F. Supp. 1300 (S.D. Iowa 1997).*

(n49)Footnote 94. *See, e.g., Weeks v. North Carolina Dep't of Nat. Resources & Community Dev., 388 S.E.2d 228* (N.C. App.), *review denied, 393 S.E.2d 890 (N.C. 1990); Coastal Petroleum v. Chiles, 701 So.2d. 619 (1997)* (affirms lower court's ruling to prevent Coastal Petroleum from exploring and drilling on sovereign land, on the basis of the public trust doctrine and the police powers of the state in protecting the public interests), *reh'g denied, 707 So.2d 1123 (Fla. 1998), cert. denied, 524 U.S. 953 (1998); Russian River Watershed Protection Comm. v. City of Santa Rosa, 142 F.3d 1136 (9th Cir. 1998)* (California North Coast Regional Water Quality Control Board has discretion to determine a method of compliance with NPDES permits under *33 U.S.C. § 1342*(b)).

(n50)Footnote 95. *See, e.g., State Eng'r v. Cowles Bros., 478 P.2d 159 (Nev. 1970). See also Stupak-Thrall v. Glickman, 89 F.3d 1269 (6th Cir. 1996)* (the federal government also has police power to regulate and the Organic Act delegated Congress' police power to the Forest Service. Forest Service regulations restricting lake use did not effect a taking or go beyond state law limitations on police power regulation, because plaintiff's riparian rights have never included the right to be immune from reasonable regulation), *cert. denied, 519 U.S. 1090 (1997).*

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.06 Public Lands and Grazing Resources.

[Go To Supp]

Grazing occurs on about 100 million acres in national forests, and about 170 million acres of BLM lands outside of Alaska. Policy issues of public range management continue to be sources of heated debate. n124 While any supposed common law right to graze livestock on the public domain was supplanted by the Taylor Grazing Act of 1934 n125 a new era of stricter controls began in the 1970's. The National Environmental Policy Act of 1969 imposed a variety of environmental controls, the Federal Land Policy and Management Act imposed new duties (including land use planning) and constraints on the BLM, and individual legislation assured that uses in competition for rangeland would be included in BLM programs. n126

FOOTNOTES:
(n1)Footnote 124. *Baca v. King, 92 F.3d 1031 (10th Cir. 1996)* (a challenge to a land exchange by the BLM which ended a public land grazing lease of over 50 years was dismissed for failure to show injury redressable by the relief sought); *United States v. Gardner, 107 F.3d 1314 (9th Cir. 1997)* (in deciding that defendant's use of public lands for grazing was unauthorized, the court provides a good discussion of the application and purpose of the equal footing doctrine), *cert. denied, 118 S. Ct. 264 (1997); Public Lands Council v. Babbitt, 154 F.3d 1160 (10th Cir. 1998) opinion amended, superseded, 167 F.3d 1287 (10th Cir. 1999)* (BLM regulations governing the administration of livestock grazing on public lands held invalid as exceeding Secretary of the Interior's authority under the TGA, FLPMA, and PRIA (Public Rangelands Improvement Act of 1978, *43 U.S.C. § 1901 et seq.*).)

(n2)Footnote 125. *43 U.S.C. §§ 315*-315r. Good overview of Taylor Grazing Act. *See Public Lands Council v. Babbit, 167 F.3d 1287 (10th Cir. 1999); United States v. Shenise, 43 F. Supp. 2d 1190 (D. Colo. 1999)* (Taylor Grazing Act prohibits grazing trespass on federal land without a permit). *See also Diamond Bar Cattle Co. v. United States, 168 F.3d 1209,* (10th Cir. 1999) (no private property right exists to graze cattle on federal public rangelands); *Public Lands Council v. Babbitt, 529 U.S. 728* (discussing the authority of the Secretary of the Interior on creating and enforcing regulations under Taylor Grazing Act).

(n3)Footnote 126. One example of such legislation is the Wild Free-Roaming Horses and Burros Act of 1971; *Rice v. United States, 211 F.R.D. 10 (D.D.C. 2002)* (personal financial information of ranchers seeking grazing permits on

public lands was released to an environmental group pursuant to the FOIA); *Kleppe v. New Mexico, 426 U.S. 529 (1976)* (holding that the Property Clause of the U.S. Constitution, Art. IV, § 3, cl. 2, permitted federal protection of burros grazing on public lands), *reh'g denied, 429 U.S. 873 (1976); Diamond Bar Cattle Co. v. United States, 168 F.3d 1209 (10th Cir. 1999)* (holding that the government's allowing private parties to use public lands is an implied license, revocable at-will by the government and vests no private property interests in individual licensees).

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.07

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.07 Public Lands and Wildlife Resources.

From the time when concerns about wildlife went no further than its availability as a food resource, a fully developed wildlife law has emerged, with concerns centered on habitat quality. As a public issue, wildlife law is still growing at the federal level, but the great weight of law and regulation is and will continue to be promulgated at the state level. Wildlife is deemed owned by the state in trust for the people, and a state may regulate the export of wildlife outside its boundaries without offending the Commerce Clause of the federal Constitution. n127 President Theodore Roosevelt's 1903 executive order creating a bird refuge on federal land commenced federal activity in wildlife matters; these federal programs were consolidated into the National Wildlife Refuge System by legislation in 1966. Other federal legislation extended protection to individual species or reinforced state efforts to control poaching and other illegal activities.

Beginning with the Endangered Species Act of 1973 n128 the federal approach toward wildlife became much more aggressive and had a more profound impact on property rights. n129 By some referred to as "the most stringent wildlife law ever enacted by any country," the act:

> applies only to species of fauna and flora officially listed as endangered or threatened, but the species so designated are legally sheltered from virtually all human acts that could tend to diminish their stock. All federal agencies are enjoined to refrain from any action that jeopardizes the continued existence of listed species or harms their critical habitat. All persons are absolutely forbidden to kill, pursue, or harass such species on or off federal lands. The ... Act has become an important limitation on federal land management agency discretion... . n130

Even with this new legislative approach, state law still governs most wildlife questions on federal lands, although federal wildlife management actions may often be taken in contravention of state law. n131

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.08

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.08 Public Lands and Resources to be Preserved.

[Go To Supp]

Laws that promote preservation for historic purposes have a longer tradition than those promoting preservation for ecological, scenic or aesthetic purposes. According to the Antiquities Act of 1906 n132 public lands could be reserved or withdrawn if they contained objects or places of historic, scientific, or scenic value. Also, commercial exploitation of such objects or places was prohibited. The Act was particularly aimed at the ransacking and vandalizing of various Indian ruins. The Act's all important definition of "object of antiquity" was struck down in 1974 as unconstitutionally vague, n133 but the Archaeological Resources Protection Act of 1979 n134 attempted to correct many of the deficiencies of the older legislation. Under this new legislation, a permit is required in order to excavate, remove or damage archaeological resources on public or Indian lands, and dealing in illegally obtained artifacts is prohibited and punished. n135

The Historic Sites Act of 1935 n136 gives the Secretary of the Interior power to designate sites and buildings of historic significance and to protect sites that are threatened by other federal activities.

No firm answers have yet been found to questions on how federal or state law can deal with threats to parks and historic sites that emanate from outside the boundaries of those areas. Parks may be threatened by off-site pollution; sites may simply wear out from too heavy visitation. In the future, lands around parks and other important sites may come under development restrictions as "buffer zones."

Preservation and regulation of rivers became important when their value for irrigation, hydroelectric power generation, and flood control became apparent. The Reclamation Act of 1902 n137 the Federal Power Act of 1920, n138 and other legislation authorizing dams and flood control measures n139 have all had huge impact on American river systems. Major projects in the eastern U.S. have been undertaken by the Army Corps of Engineers, while in the west the work has been done by the Bureau of Reclamation.

However, the loss of natural and free-flowing river systems to these other worthy purposes has generated a protracted and intense debate, the first important result of which was the Wild and Scenic Rivers Act of 1968. n140 This act is

designed to preserve selected rivers and their immediate environments if they possess "outstandingly remarkable scenic, recreational, geologic, fish and wildlife, historic, cultural, or other similar values." n141 Powers of streamflow management are conferred to protect the "free-flowing" qualities of the rivers selected for protection.

Preservation of wilderness areas was pioneered by the United States, with the establishment of Yellowstone National Park in 1872, establishment of an entire national park system, some wilderness set-asides by the Forest Service beginning in the 1920s, and then the setting aside of pristine wilderness areas under the Wilderness Act of 1964. n142 In official wilderness areas, resource development is generally prohibited. Land that is being studied for possible inclusion in wilderness areas is also protected from development during the study period. The Forest Service sometimes placed itself in opposition to the no-development wilderness proposals, because they ran counter to that agency's long standing policies of multiple use and sustained yield; some of these differences were smoothed over by the Multiple Use, Sustained Yield Act of 1960, but philosophical differences still persist. n143

Areas designated as protected wilderness are expanding directions by several separate procedures. Wilderness area designations can be made for Forest Service lands, in national parks, as part of the wildlife refuge system, and on BLM lands.

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.09

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.09 Public Lands and Recreational Resources.

[Go To Supp]

The challenges and tensions inherent in providing recreation resources within the public lands have been well described as follows:

> The single greatest demand on the public lands in terms of total user-days is from persons seeking recreational opportunities ... Recreation is a resource like the more conventional ones: Congress has recognized that recreation is a valid and sometimes preferred land use and has encouraged and subsidized it on numerous occasions. Recreation is one of the major "multiple uses" to be provided for by the Forest Service and the BLM. The Fish and Wildlife Service is also enjoined to allow recreational use on refuges when it is compatible with wildlife purposes. Congress has charged the National Park Service "to conserve the scenery and the natural and historic objects and the wildlife [in parks] and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for future generations." National Park Act of 1916, *16 U.S.C.A. § 1* ...
>
> Like other resources, intensive recreation can degrade the natural environment and pose conflicts with other resource uses. Access to hunting can be barred by mining claims; ski area proposals are fought by hikers, hunters, and bird-watchers; motorcyclists are despised by many but can find no other open country; increased sight-seeing visitations overwhelm the public use areas of Yellowstone; and so forth. As a general rule, the more mechanized or technologically advanced the form of recreation, the more potential for conflict and destruction it poses. Off-road vehicles, for example, are more dangerous to ecological stability than hikers or joggers, hunters make more of an impact than birdwatchers, and hotels cause more serious changes than tents. Quantity, too, is important: a horde of hikers will leave the terrain in worse condition than a single jeep. n144

Under provisions and money from the Land and Water Conservation Fund, n145 federal agencies purchase land to be used for specific recreational purposes. The Fund also makes grants to states for enlargement of state recreational land systems. To the extent recreational facilities and amenities are provided on public lands, the responsible federal agencies often contract out to private concessionaires to provide these services and resources. These activities and the

ordinary mishaps connected with recreation often lead private parties to seek tort compensation from the federal government. Governmental liability may be based on and subject to the restrictions of the Federal Tort Claims Act n146 or on state tort law. n147

It has been established that private persons have a license to use public domain lands for recreational purposes, but the license is revocable, according to Congressional mandate. All restrictions are controversial, but more strenuous efforts have been made to regulate use of off-road vehicles than any other form of recreation. n148

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.10

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.10 Bibliography.

[Go To Supp]

Books

Baynard, Ernest C. III. *Public Land Law and Procedure.* New York: Wiley Law Publications, 1986.

This book discusses the origins and development of public land law and then covers the present management of the public domain. It discusses acquisitions, disposals and exchanges of land, land use planning, wilderness review, withdrawals, and grazing and range management. It concludes with a look at the Department of the Interior's procedure for the management of federal public lands.

Beck, Robert E. Beck, ed. *Waters and Water Rights.* 7 vols. Charlottesville, Va.: The Michie Co., 1991-1993.

Bowes, Michael D. & John V. Krutilla. *Multiple-Use Management: The Economics of Public Forestlands.* Washington, D.C.: Resources for the Future, 1989.

This book discusses the development of the concept of multiple-use forestland management and then details some of the multiple uses of public lands: timber, range, minerals, and recreation. It also examines the economics of multiple-use forestry and the models of multiple-use management.

Clary, David A. *Timber and the Forest Service.* Lawrence: University Press of Kansas, 1986.

This book begins by showing how the struggle for conservation revealed that timber production was too high. It then discusses the subsequent regulations on timber production and the management strategies employed, with emphasis on multiple use. It also deals with difficulty and conflict surrounding multiple use and sustained yield.

Coggins, George Cameron and Robert L. Glicksman. *Public Natural Resources Law.* 2 vols. New York: Clark Boardman, 1990-1993.

Coggins, George Cameron and Charles F. Wilkinson. *Federal Public Land and Resources Law.* 2d ed. Mineola, N.Y.: Foundation Press, 1987.

Davis, Charles, ed. *Western Public Lands and Environmental Politics.* Boulder, Co.: Westview Press, 1997.

Garvin, Alexander. *Urban Parks and Open Spaces.* Washington, D.C.: Urban Land Institute, 1997.

Haugrud, Jack K. *Wilderness Preservation: A Guide to Wilderness Selection on the B.L.M. Lands.* Stanford: Stanford Environmental Law Society, 1985.

This is a 121-page handbook discussing the review process for the selection of B.L.M. lands. It analyzes the separate phases of that process: the inventory phase, the study phase, and interim management. It also discusses mining regulation in study areas, including the location of claims and mineral leasing.

Leshy, John D. *The Mining Law: A Study in Perpetual Motion.* Washington, D.C.: Resources for the Future, Inc., 1987.

This book is a study of the evolution of the 1872 Mining Law. It discusses the decline of free access and Congress' failure to adapt mining law to changing conditions in the mineral industry. It examines the evolution of the law of discovery and looks at modern discovery as well. The book also discusses the regulation of mining activities to protect the environment, and special problems associated with mining in the wilderness and federal minerals under privately owned surfaces. It concludes with a discussion of the leasing alternatives and prospects for changing present mining law.

Hildreth, Richard and Ralph W. Johnson. *Ocean and Coastal Law.* Englewood Cliffs, N.J.: Prentice Hall, 1983.

Loomis, John B. *Integrated Public Lands Management: Principles and Applications to National Forests, Parks, Wildlife Refuges, and B.L.M. Lands.* New York: Columbia University Press, 1993.

This book covers the various laws and agencies governing federal land management and the economic rationales for continued government ownership of land. It discusses multiple-use management and speaks about tailoring the cost of planning to the value of the resources at stake. It discusses wildlife planning and management, the National Park Service, and it illustrates lessons learned from current public land management regarding future ecosystem management.

Maley, Terry S. *Mining Law.* 5th ed. Boise: Mineral Lands Publications, 1992.

This book presents a historical review of federal mining law as well as present regulations and procedure. It discusses the various aspects of mineral acquisition including location of claims, patents, and mineral title examination. It also covers regulations governing mineral exploration and mining. This coverage includes discussions regarding surface protection and regulation of mining operations on national forest and B.L.M. lands.

Mall, Loren L. *Public Land and Mining Law.* 2d ed. Denver, Colo.: L. L. Mall, 1981.

Mayer, Carl J. & George Riley. *Public Domain, Private Dominion: A History of Public Mineral Policy in America.* San Francisco: Sierra Club Books, 1985.

This book begins with a discussion of lead leasing on the public domain and then covers mining law in general from the 1872 Mining Law to the "end of laissez faire." It examines the Mineral Lands Leasing Act of 1920 as it pertains to both coal and oil. Then it discusses the issue of protecting the environment on the public domain and the conflicts that

exist in administering present laws. The book is extensively documented and aimed at repealing the 1872 Mining Law, raising royalty rates for oil and gas leasing, and establishing clear guidelines for the protection of lands with wilderness or other environmental values.

Musgrave, Ruth S. & Mary Anne Stein. *State Wildlife Laws Handbook.* Rockville: Government Industries, Inc., 1993.

This is an 840-page work providing a summary of wildlife policy, agencies, funding, protected species, and other subjects in every state. It also gives an overview of wildlife law in general and contains a table with statutes from various states applicable to certain areas of wildlife law.

National Research Council. *Land Use Planning and Oil & Gas Leasing on Onshore Federal Lands.* Washington, D.C.: National Academy Press, 1989.

This is actually a 140-page report prepared on the Federal Onshore Oil &Gas Leasing Reform Act of 1987. It discusses the oil and gas resources on federal lands and analyzes leasing and planning procedures (from the Mineral Leasing Act of 1920 to the present), as well as management strategy regarding those resources. It also identifies and discusses certain areas where oil and gas leasing conflicts with other values: wilderness review and designation, wildlife habitat protection, and ecosystem management.

National Research Council. *Setting Priorities for Land Conservation.* Washington, D.C.: National Academy Press, 1993.

The majority of this work deals with federal land acquisition. It discusses the land acquisition process from various angles: funding, analysis of social effects, the role of natural sciences in the process, ecological challenges, the effect of non-profit organizations, and the techniques and tools of land acquisition (easements, dedication, regulation, and others). It is a good source for an overview of the entire federal land acquisition process.

Oberly, James W. *Sixty Million Acres: American Veterans and the Public Lands Before the Civil War.* Kent: Kent State University Press, 1990.

This book covers the early politics of public lands by pointing to the importance of the Mexican War policy of recruitment based on land grants. It discusses the obtaining of land warrants for military service and the subsequent treatment of those warrants -- some used the land themselves, some sold the warrants. The book mentions the land warrant market, land sharks, and the many hands some warrants passed through before actually being used to acquire the granted land.

Rowley, William P. *U.S. Forest Service Grazing and Rangelands.* College Station: Texas A&M University Press, 1985.

This book begins with a history of grazing on U.S. Forest Service rangeland. It discusses how the free range caused chaos and includes a section on the pioneers of grazing regulation. It then discusses the management tasks existing when the Forest Service accepted full administration of forest reserves in 1905. It also covers the role of science in rangeland management and the depleting effect of World War II. Finally, it discusses the lost opportunities in range management during the Depression, new resolves in the 1940s, and continuing challenges today.

The Next West: Public Lands, Community, and Economy in the American West. John A. Baden & Donald Snow, eds. Washington, D.C.: Island Press, 1997.

Zaslowsky, Dyan & T.H. Watkins. *These American Lands: Parks, Wilderness, and the Public Lands.* Washington, D.C.: Island Press, 1994.

This book gives specific attention to the national parks, the national resource lands of the B.L.M., the national wildlife refuge system, and the national wilderness preservation system. It gives history as well as modern insights and updates on each subject. Each chapter ends with a specific agenda for its respective topic.

Articles

Adair, John R. "The Bioprospecting Question: Should the United States Charge Biotechnology Companies for the Commercial Use of Public Wild Genetic Resources?" *Ecology L. Q.* Vol. 24 (1997) 131.

Alfers, Stephen D. et al. "Coping With Mining Law Reform." *Rocky Mtn. Min. L. Inst.* Vol. 37 (1991) 12.

This article begins with a brief history of minerals disposal policy in public lands law from the Colonial Period to the Federal Land Policy and Management Act of 1976. It then discusses the changes to mineral disposal policy effected by legislation proposed at the time it was written (Bumpers Bill -- S. 433; Rahall Bill -- H.R. 918). The article concludes with a discussion of how that legislation would change existing policy and in which areas it would require mining parties to cope with new procedure.

Andrus, Cecil D. "Policy After Politics: How Should the New Administration Approach Public Land Management in the Western States?" 21 J. *Land Res. & Envt'l. L.* 1 (2001).

Armstrong, Bob. "Our Federal Public Lands" *Nat'l Res. & Env't* Vol. 12, Summer 1997) 3.

Arruda, Karl N. & Christopher Watson. "The Rise and Fall of Grazing Reform." *Land & Water L. Rev.* Vol. 32, No. 2 (1997) 413.

Babbitt, Bruce. "Remarks to the Society of Range Management." *Land & Water L. Rev.* Vol. 29, No. 2 (1994) 381, 399.

In this article (actually a speech) Secretary Babbitt discusses the history of grazing on public lands through the Taylor Grazing Act, grazing advisory boards, and the impact of the Federal Land Policy and Management Act. He mentions the resurgence of grazing advisory boards and states that the time has come to abolish them. He advocates balanced representation in the management of rangelands and discusses the creation of local rangeland resource teams to achieve that goal.

Baldwin, Pamela. "Public Lands Study Materials" SD47 *ALI-ABA* 347 (1999) (broad overview of the planning processes of the Forest Service and the Bureau of Land Management and related issues).

Barney, Deanne M. "The Supreme Court Gives an Endangered Act New Life: Bennett v. Spear and Its Effect on Endangered Species Act Reform." *76 N.C.L. Rev. (1998) 1889.*

Barrett, Robert. "History on an Equal Footing: Ownership of the Western Federal Lands." *U. Colo. L. Rev.* Vol. 68 (Summer 1997) 761.

Blumm, Michael C. & Jonathan Lovvorn. "The Proposed Transfer of BLM Timber Lands to the State of Oregon: Environmental and Economic Questions." *Land & Water L. Rev.* Vol. 32, No. 2 (1997) 353.

Bonham, Charlton H. "Devils Tower, Rainbow Bridge, and the Uphill Battle Facing Native American Religion on Public Lands," *20 Law & Ineq. 157 (2002).*

Bourgasser-Ketterling, Sandra. "Bioprospecting on Public Lands: Should Private Companies Compensate the Government for their Use of Public Land Resources?" *8 J. L. & Pol'y 481 (2000).*

Bruff, Harold H. "Executive Power and the Public Lands." *76 U. Colo. L. Rev. 503 (Spring 2005).*

Coggins, George Cameron. "Livestock Grazing on the Public Lands: Lessons from the Failure of Official Conservation." *Gonz. L. Rev.* Vol. 20, No. 3 (1985) 749.

This article provides an overview of public rangeland management and then looks at the law behind that management. It also discusses the changes imposed by the Federal Land Policy and Management Act and the Public Rangelands Improvement Act. It concludes with a section on the failure of public rangeland management.

Comer, Robert D. "Cooperative Conservation: The Federalism Underpinnings to Public Involvement in the Management of Public Lands." *75 U. Colo. L. Rev. 1133 (Fall 2004).*

Egan, Peter. "Applying Public Trust Tests to Congressional Attempts to Close National Park Areas." *25 B.C. Envtl. Aff. L. Rev. (1998) 717.*

Epperson, Mark. "Public Lands Council v. Babbitt: Another Nail in the Coffin For Ranchers' Claims to Semi-Ownership of Federal Lands." 22 *Pub. Land & Res. L. Rev.* 147 (2001).

Feller, Joseph M. "Grazing Management on the Public Lands: Opening the Process to Public Participation." *Land & Water L. Rev.* Vol. 26, No. 2 (1991) 461, 571.

This article explains B.L.M. grazing management by discussing the Taylor Grazing Act as well as new requirements imposed by the Federal Land Policy and Management Act. It then discusses the public participation aspects of FLPMA and the National Environmental Policy Act and how the B.L.M. has actually limited such participation through its interpretation of these statutes. Finally, it discusses how Feller v. Bureau of Land Management overturned one such interpretation and how the case will affect future B.L.M. grazing management.

Fellig, Thomas J. "Pursuit of the Public Trust: Beach Access in New Jersey from Neptune v. Avon to Matthews v. BHIA." *Colum. J. Envt'l L.* Vol. 10, No. 1 (1985).

This article discusses two broad principles the author claims Borough of Neptune City v. Borough of Avon-by-the-Sea has come to stand for: first, that coastal municipalities must make their dry sand beaches available "to all on equal terms"; and second, that private owners of dry sand beaches are restricted from excluding the public at large from recreational access and use. It then discusses the role of public interest legal representation in beach access litigation. It also states, however, that Neptune's application has a drawback in that municipalities now have little, if any, incentive to build facilities on beaches. If they build them these cases suggest that the state might have power to control them.

Ferguson, Karen L. "This Land Is Our Land: Private Interests in Public Lands." *Mich. L. & Pol'y Rev.* Vol. 2 (1997) 187.

Feriancek, Jeanine. "Coal and Coalbed Methane Development Conflicts: No Easy Solution, 14-SPR Nat. *Resources & Env't* 260.

Finnell, Gilbert L., Jr. "Public Access to Coastal Public Property: Judicial Theories and the Taking Issue." *N.C. L. Rev.* Vol. 67, No. 3 (1989) 517, 627.

This article analyzes the judicial theories for establishing and preserving public rights of access and the implications of Supreme Court takings jurisprudence on such access. It argues for wide judicial recognition of public rights in this area and suggests ways for courts to implement them. It also discusses common law doctrines for perfecting public rights in private coastal lands, ways of protecting existing public interests in beaches, and the taking issue.

Flynn, Roger. "The Right to Say No: Federal Authority Over Hardrock Mining on Public Lands." *16 J. Envtl. L. & Litig. 249 (Fall 2001).*

Foley, Colin. "The Grand Staircase--Escalante National Monument: Balancing Public and Private Rights in the Nation's Lands." *25 B.C. Envtl. Aff. L. Rev. (1998) 743.*

Forrest, Steven C. "Creating New Opportunities for Ecosystem Restoration on Public Lands: An Analysis of the Potential for Bureau of Land Management Lands." *23 Pub. Land & Resources L. Rev. 21 (2002).*

Fried, Janice. "The Grand Staircase--Escalante National Monument: A Case Study in Western Land Management." *17 Va. Envtl. L.J. (1998) 131.*

Glicksman, Robert L. and George Cameron Coggins. "Hardrock Minerals, Energy Minerals and Other Resources on the Public Lands: The Evolution of Federal Natural Resources Law." *33 Tulsa L.J. (1998) 705.*

Glover, Kristen H. "Managing Wild Horses on Public Lands: Congressional Action and Agency Response." *79 N.C. L. Rev. 1108 (May 2001).*

Harrison, Sylvia L. Comment, "Disposition of the Mineral Estate on United States Public Lands: A Historical Perspective." *Pub. Land L. Rev.* Vol. 10 (1989) 131.

This article first defines the term "mineral estate" and then describes the various types of interests that may be held in mineral property. It discusses mineral owner-ship in Colonial America and the early United States and how the concept of a public mineral estate developed under the subsequent acquisition of public lands. It also discusses the effect of the major public land disposition enactments on the public mineral estate. The article then speaks directly to the disposition of that pub-lic mineral estate, covering policies and procedures employed to the present day.

Hasenstein, Ethan R. "Public Lands Management at the Crossroads: Balancing Interests in the 21st Century." *34 Envt'l. L. 1013 (Fall 2004).*

Hayes, Kevin. "History and Future of the Conflict Over Wilderness Designations of BLM Land in Utah." *16 J. Envt'l. L. & Litig. 203 (Spring 2001).*

Heisel, Edward J. "Biodiversity and Federal Land Ownership: Mapping a Strategy for the Future." *25 Ecology L.Q. (1998) 229.*

"How Did We Get Here? Looking to History to Understand Conflicts in Public Land Governance Today," 23 *Pub. Land & Res. L. Rev.* 1 (2002).

Huffman, James L. "The Inevitability of Private Rights in Public Lands." *U. Colo. L. Rev.* Vol. 65, No. 2 (1994) 193, 241.

This article traces the history of private rights in public lands from the issue of western land claims confronted by the nation's founders. It goes through the stages of acquisition, disposal, and then retention of public lands. It discusses the management of the public domain and several different understandings of the legal status of the public lands in relation

to the government and its citizens.

Iraola, Roberto. "Public Lands, Wilderness, and National Security." *109 Penn. St. L. Rev. 791 (Winter 2005).*

Keiter, Robert B. "Ecological Concepts, Legal Standards, and Public Land Law." 44 *Nat'l Res. J.* 943 (Fall 2004).

Kemmis, Daniel. "Re-Examining the Governing Framework of the Public Lands." *75 U. Colo. L. Rev. 1127 (Fall 2004).*

Lacy, Peter M. "Our Sedimentation Boxes Runneth Over: Public Lands Soil Law as the Missing Link in Holistic Natural Resource Protection." *31 Envt'l. L. 433 (Spring 2001).*

Laitos, Jan G. & Carr, Thomas A. "The Transformation on Public Lands," *26 Ecology L.Q. 140 (1999).*

This article gives the history and the scope of the government regulation of public lands. It includes topics such as timber, grazing, minerals, and recreational uses. Part I discusses how the commercial commodity development of public lands has been declining in relative importance, while the use of public lands for recreation and preservation has become predominant. Part II explores the reasons behind the reduction in commercial uses of public lands and the rise in use of these lands for recreational and preservationist purposes. Part III discusses the relevant federal agencies and how they cope with change.

Lannan, Robert W. "Anthropology and Restless Spirits: The Native American Graves Protection and Repatriation Act, and the Unresolved Issues of Prehistoric Human Remains." *22 Harv. Envt'l. L. Rev. (1998) 369.*

Mansfield, Marla E. "A Primer of Public Land Law." *Wash. L. Rev.* Vol. 68, No. 4 (1993) 753, 801.

This article first outlines the constitutional authority for public land law, specifically addressing withdrawals, reservations, and classifications of public land thereby obtained. It also examines statutory mandates for the various land management systems. It concludes by discussing the relationship between "multiple-use" and "dominant-use" as these two terms are used in the regulation of public lands.

McIntosh, Heidi. "New Highways Under an Old Law: R.S. 2477 and Its Implications for the Future of Utah's Federal Public Land." *18 Utah B.J. 16* (March/April 2005).

McClaran, Mitchel P. "Livestock in the Wilderness: A Review and Forecast." *Envt'l L.* Vol. 20, No. 4 (1990) 811, 857.

This article examines the interaction between livestock and the wilderness throughout the evolution of the wilderness concept in the U.S. It tracks grazing through certain stages: the administrative wilderness (1924-1964); the statutory wilderness (1964-1976); and the clarification of congressional intent (1977-1985). It then discusses the present status of livestock grazing management in B.L.M. wilderness and concludes with a forecast of the future.

Muhn, James. "Public Water Reserves: The Metamorphosis of a Public Land Policy." 21 *J. Land Res. & Envt'l. L.* 67 (2001).

Negris, Karen A. "Access to New Jersey Beaches: The Public Trust Doctrine." *Colum. J.L. & Soc. Probs.* Vol. 20, No. 4 (1986) 437.

This article discusses the public trust doctrine by examining Matthews v. Bay Head Improvement Ass'n (granting public right to cross privately owned dry sand areas to access beaches) and the cases which followed it. The author subjects Matthews to a constitutional analysis and reaches the conclusion that the case amounts to an unlawful taking of

property in violation of the 5th and 14th amendments. In her opinion, this decision should have been made by the legislature, not the Supreme Court.

Nie, Martin. "Administrative Rulemaking and Public Lands Conflict: The Forest Service's Roadless Rule." 44 *Nat'l Res. J.* 687 (Summer 2004).

Olinger, Todd M. "Public Rangeland Reform: New Prospects for Collaboration and Local Control Using the Resource Advisory Councils." *69 U. Colo. L. Rev. (1998) 633.*

Olson, Mitchell R. "The R.S. 2477 Right of Way Dispute: Constructing a Solution." *Envt'l L.* Vol. 27, (Spring 1997) 289.

Pariser, David B. "Current Issues Relating to Emergency Federal Coal Leasing." *W. Va. L. Rev.* Vol. 89, No. 3 (1987) 593.

This article discusses the state of coal leases at the time it was written and the federal coal management program in general. It examines the history of emergency leasing with an analysis covering the period from the Mineral Lands Leasing Act of 1920 to the Federal Coal Leasing Amendments Act of 1976. It also discusses issues related to the administration of emergency leasing and explores policy options for the Interior Department.

Pasko, Brian Scott. "The Great Experiment That Failed? Evaluating the Role of a 'Committee of Scientists' as a Tool for Managing and Protecting Our Public Lands." *32 Envt'l. L. 509 (Spring 2002).*

Powell, Frona M. "The Public Trust Doctrine: Implications for Property Owners and the Environment." *Real Est. L. J.* Vol. 25, No. 3 (1997) 255.

Powell, Frona M. "The Reserved Water Rights Doctrine." *Real Est. L. J.* Vol 25, No. 3 (1997) 306.

"Public Lands Graving Fee Reform: Welfare Cowboys and Rolex Ranchers." *10 N.Y.U. Envt'l. L.J. 403 (2002).*

Rasband, James R. "The Disregarded Common Parentage of the Equal Footing and Public Trust Doctrines." *Land & Water L. Rev.* Vol. 32, No. 1 (1997) 1.

Ruberto, Michelle A. & Kathleen A. Ryan. "The Public Trust Doctrine and Legislative Regulation in Rhode Island: A Legal Framework Providing Greater Access to Coastal Resources in the Ocean State." *Suffolk U. L. Rev.* Vol. 24, No. 2 (1990) 353.

This article begins by discussing the Roman and English common law antecedents of the public trust doctrine, its development in American law, and its present state. It then examines Rhode Island's approach to allowing public access with the doctrine and uses New Jersey law as a model. The authors point out Rhode Island's tendency to support government control of public trust rights, but they also advocate changes in the Rhode Island public trust doctrine -- stating that a recent constitutional amendment restricts coastal development, but does not empower the state to create a new access right.

Ruffatto, Steven P. & Carolyn S. Otsby. "Cohabitation of Wilderness and Mining: Can the Marriage be Saved?" *Rocky Mtn. Min. L. Inst.* Vol. 38 (1992) 11.

This article pertains to § 55.03(b)(5) with a section on establishing valid wilderness mining rights which discusses location, filing, and discovery requirements. The article also applies to § 55.03(b)(4) with a section on the regulation of mining activities in wilderness areas. This section deals with mining in both Forest Service and B.L.M. wilderness as

well as the issue created by claims existing prior to the withdrawal of the land for wilderness purposes.

Schiffer, Lois J. "Public Lands Litigation in the Geography of Hope." *1 Wyo. L. Rev. 413 (2001).*

Sheldon, Karin P. "How Did We Get Here: Looking to History to Understand Conflicts in Public Land Governance Today." 23 *Pub. Land & Res. L. Rev.* 1 (2002).

Shepard, Harold. Comment, "Livestock Grazing in B.L.M. Wilderness and Wilderness Study Areas." *J. Envt'l L. & Litig.* Vol. 5 (1990) 61.

This article examines the relationship between grazing and wilderness in light of the Wilderness Act, the Federal Land Policy and Management Act, and the National Environmental Policy Act. It discusses policy and guidelines for B.L.M. wilderness study and examines case law affecting grazing in wilderness and wilderness study areas. It also discusses the wilderness designation process under the Department of the Interior. The author concludes that grazing should be prohibited in wilderness and wilderness study areas.

Sherick, Tricia A., "A Comparison of the Coastal Zone Management Policies of the Atlantic and Pacific Coastal Regions Versus Programs Implemented in Selected Great Lakes States: The Case for Greater Application of the Public Trust Doctrine in Great Lakes States Coastal Management Policy." *U. Tol. L. Rev.* Vol. 28, (Winter 1997) 459.

Tobias, Carl. "Natural Resources and the Ninth Circuit Split." *28 Envt'l. L. (1998) 411.*

Uram, Robert. "A Critical Review of Valid Existing Rights Under S.M.C.R.A." *Nat. Res. & Env't* Vol. 5, No. 3 (1991) 19.

This article introduces S.M.C.R.A. by discussing the evolution of its basic regulatory structure. In doing so, it examines coal reclamation standards and the adoption of nationwide permanent rules. Then it treats § 522(e) of S.M.C.R.A. specifically and discusses five areas where surface coal operations were banned regardless of their compliance with those rules and regulations. It also examines the difficulty of rulemaking regarding valid existing rights under the statute.

Wilkinson, Charles F. & H. Michael Anderson. "Land and Resource Planning in the National Forests." *Or. L. Rev.* Vol. 64 (1985) 1.

This article begins with a discussion of the origin of national forest management and an examination of the legal context for planning in the national forests. It contains sections dealing specifically with rangeland regulation, timber policy and planning, and policy and regulation of minerals, wildlife, recreation, wilderness preservation, and wilderness mining.

Vaskov, Nicholas G. "Continued Cartographic Chaos, or a New Paradigm in Public Land Configuration? The Effect of New Laws Authorizing Limited Sales of Public Land," *20 UCLA J. Envt'l. L. & Pol'y 79* (2001/2002).

CHAPTER 55 PUBLIC LANDS

7-55 Thompson on Real Property, Thomas Editions § 55.11

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 55.11 Appendix.

1701. Congressional declaration of policy.

(a) The Congress declares that it is the policy of the United States that--

(1) the public lands be retained in Federal ownership, unless as a result of the land use planning procedure provided for in this Act, it is determined that disposal of a particular parcel will serve the national interest;

(2) the national interest will be best realized if the public lands and their resources are periodically and systematically inventoried and their present and future use is projected through a land use planning process coordinated with other Federal and State planning efforts;

(3) public lands not previously designated for any specific use and all existing classifications of public lands that were effected by executive action or statute before the date of enactment of this Act [enacted Oct. 21, 1976] be reviewed in accordance with the provisions of this Act;

(4) the Congress exercise its constitutional authority to withdraw or otherwise designate or dedicate Federal lands for specified purposes and that Congress delineate the extent to which the Executive may withdraw lands without legislative action;

(5) in administering public land statutes and exercising discretionary authority granted by them, the Secretary be required to establish comprehensive rules and regulations after considering the views of the general public; and to structure adjudication procedures to assure adequate third party participation, objective administrative review of initial decisions, and expeditious decisionmaking;

(6) judicial review of public land adjudication decisions be provided by law;

(7) goals and objectives be established by law as guidelines for public land use planning, and that management be on the basis of multiple use and sustained yield unless otherwise specified by law;

(8) the public lands be managed in a manner that will protect the quality of scientific, scenic, historical, ecological, environmental, air and atmospheric, water resource, and archeological values; that, where appropriate, will preserve and protect certain public lands in their natural condition; that will provide food and habitat for fish and wildlife and domestic animals; and that will provide for outdoor recreation and human occupancy and use;

(9) the United States receive fair market value of the use of the public lands and their resources unless otherwise provided for by statute;

(10) uniform procedures for any disposal of public land, acquisition of non-Federal land for public purposes, and the exchange of such lands be established by statute, requiring each disposal, acquisition, and exchange to be consistent with the prescribed mission of the department or agency involved, and reserving to the Congress review of disposals in excess of a specified acreage;

(11) regulations and plans for the protection of public land areas of critical environmental concern be promptly developed;

(12) the public lands be managed in a manner which recognizes the Nation's need for domestic sources of minerals, food, timber, and fiber from the public lands including implementation of the Mining and Minerals Policy Act of 1970 *(84 Stat. 1876, 30 U.S.C. 21a)* as it pertains to the public lands; and

(13) the Federal Government should, on a basis equitable to both the Federal and local taxpayer, provide for payments to compensate States and local governments for burdens created as a result of the immunity of Federal lands from State and local taxation.

(b) The policies of this Act shall become effective only as specific statutory authority for their implementation is enacted by this Act or by subsequent legislation and shall then be construed as supplemental to and not in derogation of the purposes for which public lands are administered under other provisions of law.

Legislative History

HISTORY: (Oct. 21, 1976, P.L. 94-579, Title I, § 102, *90 Stat. 744.)*

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.01

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.01 An Overview.

www.asoc.org

Most of the fifty states which currently comprise the United States of America were, at one time, territories. n1 Territories have been defined to include all lands acquired by the United States, whether by treaty, purchase or otherwise, which have an organized form of government, but have not become incorporated into the United States. n2 The term territory often is used to include a Commonwealth (and will be herein) though as noted *infra,* there are technical if not substantive differences. n3

This chapter will discuss the five principal territories of the United States in alphabetical order. They are: The Commonwealth of the Northern Mariana Islands, The Commonwealth of Puerto Rico, The Territory of American Samoa, The Territory of Guam, and The Territory of the Virgin Islands. Not included herein are discussions of the District of Columbia or Micronesia. n4 Nor does this chapter discuss those former territories which became either States or independent countries. n5

For each territory a brief review will note how it was acquired and its current form of government, followed by a discussion of land laws (noting especially any special restrictions regarding the ownership of land). n6

FOOTNOTES:
(n1)Footnote 1. The author wishes to acknowledge Nancy Cutler, a 1993 graduate of the Salmon P. Chase College of Law of Northern Kentucky University and a member of the Ohio Bar, for her invaluable assistance in the preparation of the original Chapter. Charles H. McLaughlin, *Territories of the United States*, 10 The Guide to American Law, Everyone's Legal Encyclopedia 59 (West Pub'g Co.) for a listing of the United States Territories and their admission as States, including therein the date of the Act Organizing the Territory and the number of years the State had been organized as a territory. The last territory to become a state was Hawaii on August 21, 1959, after 59 years as a territory.

(n2)Footnote 2. *See, e.g.,* New York *ex rel. Kopel v. Bingham, 211 U.S. 468 (1909).* Traditionally, the United States has acquired territory by conquest or treaty under the foreign affairs power of the Constitution. *See United States v. Huckabee, 83 U.S. 414 (1872).* Of the five territories discussed herein, two were acquired by treaty after the Spanish-American War (Puerto Rico and Guam); two were by voluntary cession (American Samoa and the Northern

Mariana Islands); and one was by purchase (the Virgin Islands). *See* §§ 56.11, 56.13, 56.12, 56.10, and 56.14, *infra*, respectively. Ways to acquire territories other than purchase, cession or treaty, include occupation, prescription, conquest, accession or adjudication. An unusual way to acquire territory is found in *48 U.S.C. §§ 1411*-1419 which provides for United States citizens to claim islands, rocks, and keys with guano deposits, if that island, rock, or key is not within the lawful jurisdiction of another government. After the guano is removed, the United States is not required to maintain possession. *See Jones v. United States, 137 U.S. 202 (1890)* (extending federal criminal jurisdiction over Navassa Island in the Caribbean noting that the procedures of the Act had been observed).

(n3)Footnote 3. The plea for Guam to be considered as a Commonwealth was included in the testimony of The Honorable Xavier Becerra before the House Resources Committee as reported by 1997 Federal information Systems Corrain Federal News Service, October 29, 1997. § 56.06 *infra*. Thus, the Northern Mariana Islands and Puerto Rico are both Commonwealths within the United States. Guam had asked to be so considered. As noted therein, there are differences; however, the distinctions have not always been noted by Congress, the Executive Branch, or the courts, and thus for ease of discussion (unless the context requires otherwise) the term "territory" will be used. Note the similar discussion in the Preface, of the fine work by Arnold H. Leibowitz, Defining Status (Martinus Nigjoff Publishers (1989), and the recent article by Jon M. Van Dyke, *The Evolving Legal Relationships Between the United States and its Affiliated U.S. - Flag Islands*, 14 Univ. Haw. L. Rev. 445 (1992).

(n4)Footnote 4. A good discussion regarding the five territories as well as the smaller islands of the Trust Territories may be found in the Report of the Chairman, Committee on Resources, House of Representatives by Barry R. Berick, 1997 Federal Documents Clearing House, Inc. GA Reports, November 10, 1997. Though *see* § 56.07 *infra*, for a brief discussion of the Trust Territories. Nor does it discuss the Pacific Islands without permanent populations, such as Midway or Wake Islands.

(n5)Footnote 5. For example, under the Treaty of Paris which followed the Spanish-American War, the United States acquired the Philippines in addition to Guam and Puerto Rico. *See* the Treaty of Paris, dated December, 10, 1898, and proclaimed on April 11, 1899; *30 U.S. Stat. 1754*, T.S. No. 343 (1899). The Philippines were granted independence and sovereignty in 1946. *See* Philippine Independence Act, *48 U.S.C. §§ 1221*-1226, *22 U.S.C. §§ 1391*-1394.

(n6)Footnote 6. For a new, comprehensive book please *see* Stanley K. Laughlin, Jr. The Law of United States Territories and Affiliated Jurisdictions. (Lawyers Cooperative Publishing 1995) and cited in the Bibliography. A guide to finding regulations and statutes may be found in the article by William A. Hilyerd, Using the Law Library: A Guide for Educators Part III: Oh, Statute (or Regulation), Where Are Thou? *34 J. L. & Educ. 101 (2005)* who notes, though, that the Puerto Rico Code is in Spanish. An excellent book which discusses the five territories from various perspectives is by Peter C. Stuart, Isles of Empire: The United States and Its Oversees Possessions, University Press of America, Inc., 1999 (Maryland) and also cited in the Bibliography. The chapters (each of which addresses the issue as to each territory) include economic perspectives; social perspectives; and political perspectives. Of particular interest to this author was the chapter titled "In Our Own Image" which described the effect of Americanization on the culture in each territory. Recent law review articles discussing the territories include that of Cleveland, Sarah H., "Power Inherent in Sovereignty: Indians, Aliens, Territories and the Nineteenth Century Origins of Plenary Power Over Foreign Affairs," *81 Tex. L. Rev. (November 2002) 1;* Saito, Natsu Taylor, Symposium: "Asserting Plenary Power Over the 'Other': Indians, Immigrants, Colonial Subjects, and Why U.S. Jurisprudence Needs To Incorporate International Law," *20 Yale L. & Pol'y Rev. (2002) 427;* and Roman, Ediberto & Simmons, Theron, "Membership Denied: Subordination and Subjugation Under United States Expansionism," *39 San Diego L. Rev. (Spring, 2002) 437.* For a more complete discussion, please *see* the Bibliography, and in particular Liebowitz, noted *supra*, note 3. Land restrictions are particularly noteworthy in American Samoa (where a person must have 1/2 or more native blood) and the Northern Mariana Islans (where a person must have 1/4 or more native Chamorro or Carolinian blood). *See* §§ 56.12(a) and 56.10(a) *infra* respectively. Such land restrictions are not uncommon. *See, e.g.*, Hawaii Homes Commission Act, ch. 42, § 201(a)(7), *42 Stat. 108 (1921)* which Act was subsequently incorporated into Hawaiian state law by virtue of a "compact" between Hawaii and the United States. That Act provides that certain public lands can be leased only to Native Hawaiians who were descendants of not less than one-half part of the blood of the races inhabiting the Hawaiian

Islands prior to 1778. The Alaska Native Claims Settlement Act, *43 U.S.C. §§ 1601*-1629 provides for public lands and moneys to be conveyed to "natives" of Alaska. Natives are defined as United States citizens who are of one-fourth degree or more Alaskan Indian, Eskimo or Aleut blood or a combination thereof. But note that Congress deleted a provision of the Bill of Rights to the 1950 Organic Act for Guam which would have allowed such restrictions. *See* § 56.13(a) *infra*.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.02

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.02 Authority for the Possession of Territories by the United States and Oversight Responsibility.

The only Constitutional authority regarding territories is found in art. IV, § 3, cl. 2 which provides:

> The Congress shall have the Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular State.

Under this Clause Congress manages the territories. n7 The power of Congress is broad, n8 as is that of the executive. n9 Each territory may be organized and treated separately by the Congress. n10 Although under the authority of Congress, the territories are today largely self-governing; though there is no deference to local authority as exists for the states under the Tenth Amendment. n11

At one time, the status of territory was viewed as merely a "way station" on the road to statehood and equality. n12 The Northwest Ordinance of 1787, which later was used for the development of other territorial lands, envisioned three stages: during the initial stage the territory would be governed by appointed officials; during the second stage the territory would elect a legislative body and draft a permanent constitution (at which time a non-voting delegate would be sent to Congress); and the last stage was statehood. n13 There are no legal requirements for statehood and the Constitution grants Congress the authority to admit new states. n14 Three traditional criteria for statehood were that the inhabitants of the proposed new state were sympathetic toward the principles of democracy; that the majority of the inhabitants wanted statehood; and that the proposed new state had sufficient population and resources to support state government and provide its share of the cost of the federal government. n15 With the possible exception of Puerto Rico, it is unlikely that any of the current territories will achieve statehood: they are not contiguous to the U.S.; are often far away; and are populated by persons who often speak a different language and have a different culture. n16

Today, oversight responsibility for the territories is with the Department of the Interior and, in particular, with the Office of Territorial and International Affairs. n17 In the Congress, most territorial matters are dealt with in the House Interior and Insular Affairs Committee on which committee the territorial delegates sit n18 and, in particular, by its Subcommittee on Territories.

FOOTNOTES:

(n1)Footnote 7. *See Dorr v. United States, 195 U.S. 138, 149,* (1904), where it is noted: "We conclude that the power to govern territory, is implied in the right to acquire it, and given to Congress in the U.S. Const. art. IV, § 3, to whatever other limitations it may be subject, the extent of which must be decided as questions arise...". In addition to the Territorial Clause, the power of the federal government to govern the territories also stems from the inherent sovereignty of the national government. *See American Ins. Co. v. 356 Bales of Cotton, 26 U.S. 511, 543 (1828)* ("[T]he right to govern may be an inevitable consequence of the right to acquire territory. Whatever may be the source whence the power is derived, the possession of it is unquestioned"). *See also Late Corp. of Church of Jesus Christ, etc. v. United States, 136 U.S. 1 (1890)* (results necessarily from being within jurisdiction of the United States).

(n2)Footnote 8. *See National Bank v. County of Yankton, 101 U.S. 129, 133 (1880)* ("... Congress is supreme ... Congress may not only abrogate laws of the territorial legislatures, but it may itself legislate directly for the local government."); *Simms v. Simms, 175 U.S. 162, 168 (1899)* ("In the Territories of the United States, Congress has the entire dominion and sovereignty, national and local, Federal and state, and has full legislative power over all subjects upon which the legislature of a State might legislate; and may, at its discretion, intrust that power to the legislative assembly of a territory"). Or *see 48 U.S.C. § 1423i* regarding bills passed by the Guam Legislature to the effect that "The Congress of the United States reserves the power and authority to annul the same."

Of course, the power of Congress is not without limit. *See Downes v. Bidwell, 182 U.S. 244 (1901)* (Congress holds the territories in trust for the benefit of the people and is limited by Constitutional restrictions as to personal rights). *See also* § 56.03 *infra*.

(n3)Footnote 9. The executive power is as broad as the plenary power granted Congress and derives from the foreign affairs power as well as the power of the commander-in-chief. *See, e.g., National Bank v. County of Yankton, supra* note 8 and *United States v. Angcog, 190 F. Supp. 696 (D. Guam 1961).*

(n4)Footnote 10. *See Harris v. Municipality of St. Thomas and St. John, 111 F. Supp. 63,* (D. V.I. 1953), *aff'd, 212 F.2d 323 (1954)* (government of the territories belongs primarily to Congress and secondarily to such agencies as Congress may establish for that purpose and Congress has the power to organize different territories differently and to grant to each such powers as it deems proper).

(n5)Footnote 11. Traditionally, each local government has the traditional republican format with three distinct branches of government: the executive, legislative and judicial. Generally each local legislature may enact purely local laws. Examples of local legislation have included the right to dispose of property at death in *Warburton v. White, 176 U.S. 484 (1900);* the right to enact property controls in *Water Isle Hotel & Beach Club, Ltd. v. Kon Tiki St. Thomas, Inc., 795 F.2d 325 (3d Cir. 1986);* or restrictions on the corporate ownership of land as in *Puerto Rico v. Rubert Hermanos, Inc. 309 U.S. 543 (1940). See* in addition the discussions under each territory. Nonetheless, Congress may retain the right to annul such legislation. *See* note 8, *supra*. *See also Guam v. Olsen, 431 U.S. 195 (1977)* (Supreme Court invalidated a Guam legislative enactment establishing a Supreme Court in Guam noting that absent express congressional authorization, a territorial legislature may not foreclose federal appellate review of local decisions). Perhaps there is some deference given in Puerto Rico as to local law. *See Fornaris v. Ridge Tool Co., 400 U.S. 41 (1970).*

(n6)Footnote 12. *See* among other authors on this subject Stanley K. Laughlin Jr., The Burger Court and The United States Territories, *36 U. Fla. L. Rev. 755 (1984);* Liebowitz, *supra* n. 3; Elizabeth A. McKibben, The Political Relationship Between the United States and Pacific Island Entities: The Path to Self-Government in the Northern

Mariana Islands, Palau, and Guam, *31 Harv. Int'l L.J. 257 (1990);* The Northwest Ordinance and the Principle of Territorial Evolution, The American Territorial System (John Porter Bloom, ed. 1973 Athens, Ohio University Press).

(n7)Footnote 13. Northwest Territory Ordinance of 1787, art V, full text cited in Act of August 7, 1789, ch 8, *1 Stat. 50.* This evolutionary process justified the extensive Congressional authority over the territories. *See O'Donoghue v. United States, 289 U.S. 516, 537 (1933)* (Congressionally created territorial government was necessarily limited to the "period of pupilage").

(n8)Footnote 14. The sole legal requirement is that no new state is to be admitted without the consent of a state from which it is carved if applicable. *See* U.S. Const. art. IV, § 3, ch 1.

(n9)Footnote 15. *See* Northwest Ordinance, *supra* note 13.

(n10)Footnote 16. Hawaii and Alaska are the exceptions to the non-contiguous lands. The Philippines were granted independence. *See* note 5 *supra*. The fear of the consequences of annexing such distant ocean communities of a different origin, habit and language from those of the continental people led Justice White to create the theory of territorial incorporation in *Downes v. Bidwell* , note 8, *supra* which in turn created territories that were or were not destined for eventual admission to statement. *See Balzac v. Porto Rico, 258 U.S. 298 (1922). See* § 56.03 *infra* regarding the Insular Cases of which these are two of the more prominent cases. Given the small size of most of the territories, especially when coupled with unique indigenous cultures and the use of a language other than English, it is doubtful whether statehood can be achieved or is even desired. *See also* § 56.09 *infra*.

(n11)Footnote 17. A good discussion regarding the five territories may be found in the Report of the Chairman, Committee on Resources, House of Representatives by Barry R. Berick, 1997 Federal Documents Clearing House, Inc. GA Reports, November 10, 1997 including a notation that though the Department of the Interior deals with the federal administration for CNMI, Guam, Virgin Islands and American Samoa; however, Puerto Rico is treated as if it were a state and is referred to the Office of the President. Information regarding the territories and the Department of the Interior may be found at *www.doi.gov* The Department of the Interior has the right to represent the territories before the executive and legislative branches. The Office of Territorial and International Affairs (OTIA) is now headed by an Assistant Secretary. At one time, the Department of the Navy had such responsibility.

(n12)Footnote 18. The Committee on Interior and Insular Affairs Committee was renamed the Committee on Natural Resources. See 103 H.R. REP. No. 779, Correction of Committee Names in U.S. Code, 103rd Cong., 2nd Sess., October 3, 1994. Typically, there is an Omnibus Territories bill each year.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.03

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.03 The Insular Cases.

The Insular Cases are a series of cases decided by the United States Supreme Court between 1901 and 1922 in which the role of the territories was discussed and the basis set for the current American territorial system, especially with regard to those offshore territories acquired after the Spanish-American War of 1898. The cases, in turn, follow the recommendations in a series of Harvard Law Review articles concerning the proper role of the territories. n19

In the cases heard during the 1900 term of the Court, n20 the most important of which was Downes v. Bidwell, n21 the Court began to make distinctions among the territories. In *Downes*, the U.S. Collector of Customs attempted to collect duties on trade between Puerto Rico (or Porto Rico as it was then known) and the United States, pursuant to the Foraker Act, on the basis that Puerto Rico was a foreign country. Could territorial tariffs differ from tariffs on the States? If the territory were the same as a state, the tariffs would have to be the same under the Uniformity Clause. The majority held that Congress had authority over the territories and that the Constitution applied to the territories only when Congress specifically so provided and then only to the extent indicated except as to personal rights protected by the Constitution. As a result, the Uniformity Clause of the Constitution was held not to apply and the Foraker Act was upheld.

Justice White's concurring opinion in *Downes*, however, is still applied to territorial questions and established the distinction between incorporated territories and unincorporated territories. n22 Justice White noted that though the Constitution might be applicable everywhere, its application was required only when a territory was incorporated as part of the United States. An unincorporated territory, however, was not such an "integral" part of the United States and thus the Constitution did not automatically so apply. The central issue, therefore, according to Justice White, was whether Puerto Rico, under the Treaty of Paris, n23 had become an incorporated or unincorporated territory. Justice White determined that the Treaty of Paris did not provide for incorporation, but had left that to Congress to decide, and since Congress had not so acted, Puerto Rico was an unincorporated territory. n24

Other territorial cases followed, n25 with the distinction drawn by Justice White fully accepted in Balzac v. Porto Rico. n26 In *Balzac*, the Court held that if a territory were an incorporated territory, then the territory was a likely candidate for eventual statehood and all constitutional rights applied. Nonetheless, if the territory were an unincorporated territory, then only those provisions or rights which were fundamental of the Constitution would apply. In Puerto Rico, as an unincorporated territory, only fundamental rights were required and the right to a jury trial was not such a fundamental

right. The Court reasoned it would be unjust to force the United States legal system on a territory which already had its own system. n27 An incorporated territory such as Alaska, however, was entitled to all Constitutional provisions, including the right to a jury trial. n28

The five current territories of the United States are all considered unincorporated territories. As such, many of the cases have dealt with whether a particular issue is a "fundamental" right which must be applied, or not. n29 Although the label of unincorporated is still widely used regarding the territories, other approaches have been suggested. Thus, in King v. Morton, n30 the D.C. Circuit Court noted that all safeguards of individual rights must apply except those for which implementations were "impractical or anomalous." n31

A final result of the Insular cases with their distinctions between incorporation and unincorporation is that unincorporated territories are viewed as ineligible for statehood. n32

LEXIS: insular w/1 cases w/30 territor!

FOOTNOTES:
(n1)Footnote 19. *See also* the discussion concerning these cases in the article by Gabriel A. Terrasa, The United States, Puerto Rico, and The Territorial Incorporation Doctrine: Reaching A Century of Constitutional Authoritarianism, *31 J. Marshall L. Rev. 55 (1997);* Roman, Ediberto, "The Alien-Citizen Paradox and Other Consequences of U.S. Colonialism," Fla. St. U.L. 25 (1998) 1 in which the author urges that the insular cases be overruled. A discussion of these cases may be found in the article by Monge, Jose Trias, Articulos: Plenary Power and the Principle of Liberty: An Alternative View of The Political Condition of Puerto Rico, Rev. Jur. U.P.R. 68 (1999) 1. *See also* the article by Levinson, Sanford, "Symposium: The Canon(s) of Constitutional Law: Why the Canon Should be Expanded to include the Insular Cases and the Saga of American Expansionism," Const. Commentary, 17 (Summer 2000) 241. The author notes that the material for the essay will appear in a forthcoming book from Duke University Press, by Burnett, Christina Duffy and Marshall, Burke, etc., Foreign in a Domestic Sense: Puerto Rico, American Expansion and the Constitution. The Insular Cases continue to be discussed. *See* the article by Soltero, Carlos R., "The Supreme Court Should Overrule the Territorial Incorporation Doctrine and End One Hundred Years of Judicially Condoned Colonialism," *22 Chicano-Latino L Rev. (Spring 2001) 1.* They also were discussed in the article by Hall, Daniel E., "Curfews, Culture, and Custom in American Samoa: An Analytical Map for Applying the U.S. Constitution to U.S. Territories," *2 Asian-Pacific L & Pol'y J. (Winter 2001) 69.* These cases again were reviewed in the Comment by Jose D. Roman, "Trying To Fit An Oval Shaped Island Into A Square Constitution: Arguments for Puerto Rican Statehood," *29 Fordham Urb. L. J. (2002) 1681* who concludes first that the only complete solution for citizens of Puerto Rico to vote in presidential elections is to become the fifty-first state and second that it would be difficult to overturn the Insular cases. The effects of the insular cases also were discussed in the Comment by Gutierrez, Hannah M.T., "Guam's Future Political Status: An Argument for Free Association with U.S. Citizenship," Asian-Pacific L & Pol'y J. 4 (February 2003) 5. *See also* the Student Note by Windsor, Jr., Pedro Juan "A Cry for Freedom: Boriken (Puerto Rico) & Indigenous Nations in America," Gender Race & Just. 7 (Fall, 2003) 439. The application of the principals of the Insular Cases was suggested regarding the constitutional status of the Guantanamo Bay Naval Base in Cuba in an article by Gerald L. Newman, Closing the Guantanamo Loophole, *50 Loy. L. Rev. 1 (2004). See, e.g.*, C. C. Langdell, The Status of Our New Territories, *12 Harv. L. Rev. 365 (1899)* (advocating a narrow view of the Constitution and that Congressional limitations applied only to States); Carmen F. Randolph, Constitutional Aspects of Annexation, *12 Harv. L. Rev. 291 (1898)* (advocating a broad construction with statehood in the future); Abbot Lawrence Lowell, The Status of Our New Possessions-A Third View, *13 Harv. L. Rev. 155 (1899)* (advocating territorial incorporation).

(n2)Footnote 20. The other cases include *De Lima v. Bidwell, 182 U.S. 1 (1901)* (Puerto Rico was not a foreign country and thus import duties levied on sugar were illegal); *Goetze v. United States, 182 U.S. 221 (1901)* (Hawaii and Puerto Rico were not foreign countries within the meaning of the tariff law); *Dooley v. United States, 182 U.S. 222*

(1901) (military authority to establish duties ceased with ratification of treaty ceding Puerto Rico to the United States); *Armstrong v. United States, 182 U.S. 243 (1901)* (post-treaty duties recoverable under Dooley); *Huus v. New York & Porto Rico S.S. Co., 182 U.S. 392 (1901)* (steamship operating between New York and Puerto Rico held not engaged in foreign trade). These cases were cited extensively in *United States v. Verdugo-Urquirdez, 494 U.S. 259 (1990).*

(n3)Footnote 21. *See* note 8 *supra*. (noting that the Fourth Amendment does not apply to searches by U.S. agents of property owned by nonresident aliens located outside the United States).

(n4)Footnote 22. *But see Reid v. Covert, 354 U.S. 1 (1957).*

(n5)Footnote 23. *See* note 5, *supra* regarding the Treaty of Paris which ended the Spanish-American War of 1898.

(n6)Footnote 24. In contrast, according to Justice White, were Louisiana and Florida which were territories which had been formally incorporated into the United States. *Downes, supra* note 16, at p. 311.

(n7)Footnote 25. Other significant cases included Dorr v. United States, note 8 *supra* (jury trial provision of Constitution held inapplicable in the Philippines) though held applicable in Alaska in *Rassmussen v. United States, 197 U.S. 516 (1905). See also Hawaii v. Mankichi, 190 U.S. 197 (1903)* (grand and petit jury inapplicable in Hawaii).

(n8)Footnote 26. *See* note 16, *supra*.

(n9)Footnote 27. Balzac, *supra* note 16, at 309.

(n10)Footnote 28. *See Rassmussen, supra,* note 25 which held that Alaska, having been incorporated into the United States by the treaty under which it was acquired and by subsequent congressional legislation, required a jury trial. Hawaii was incorporated by statute. *See* Act of April 30, 1900, *31 Stat. 141.*

(n11)Footnote 29. The following were held to not apply in the unincorporated territories: the right to an indictment by a grand jury under the Fifth Amendment in *Ocampo v. United States, 234 U.S. 91 (1914)* and Hawaii v. Mankichi, note 26, *supra*; a trial by jury in criminal cases under the Sixth Amendment in Balzac *supra*, note 16; Dorr, note 7 *supra* and in *Porto Rico v. Tapia, 245 U.S. 639 (1918). See also* Downes v. Bidwell, note 8 *supra*, at 277 to the effect that the First Amendment protection against bills of attainder or *ex post facto* law may not apply; *Dowdell v. United States, 221 U.S. 325 (1911)* (Sixth Amendment right to confront adverse witnesses).

On the other hand, the following have been held so fundamental as to apply to unincorporated territories. *See, e.g., Turney v. United States, 115 F. Supp. 457 (Ct. Cl. 1953)* (Fifth Amendment right to just compensation); *Feliciano v. Barcelo, 497 F. Supp. 14 (D.C.P.R. 1979)* (Eighth Amendment rights against cruel and unusual punishment); or *Fernandez v. Chardon, 681 F.2d 42 (1st Cir. 1982)* (right to a writ of habeas corpus).

Whether the Fourteenth Amendment Due Process Clause applies is not settled. *See Commonwealth of N. Mariana Islands v. Atalig, 723 F.2d 682 (9th Cir. 1984)* (held that trial by jury was not a fundamental right which was required).

(n12)Footnote 30. *520 F.2d 1140 (D.C. Cir. 1975) but compare with Commonwealth of the N. Mariana Islands v. Atalig, 723 F.2d 682 (9th Cir. 1984).*

(n13)Footnote 31. *See also Reid v. Covert, supra* note 22. This results in a balancing test requiring the government to demonstrate that not to extend the right would be impractical and anomalous in a given setting.

(n14)Footnote 32. *See* note 16, *supra. See also* Balzac, *supra* note 16, at 311 or Downes *supra* note 8, at 282. Incorporation has been bestowed by Congress only on those territories destined for statehood. *See Smith v. Government of Virgin Islands, 375 F.2d 714 (3d Cir. 1967).*

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.04

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.04 Incorporated versus Unincorporated Status.

Territories may be either incorporated or unincorporated. n33 As an incorporated territory, all provisions of the Constitution apply and the territory is awaiting statehood. n34

In an unincorporated territory only the "fundamental rights of the Constitution" apply. n35 It is not anticipated that they will become states. n36 Although the five current territories are unincorporated territories or Commonwealths, and are subject to broad Congressional and executive control, n37 each also has substantial powers of self-government. Each territory has its own legislature to enact local laws, n38 each elects its own governor, and typically each has its own Constitution. n39

COMPUTER-ASSISTED RESEARCH

LEXIS: incorporated or unincorporated w/15 territor!

FOOTNOTES:
(n1)Footnote 33. *See* discussion in § 56.03, *supra* regarding the Insular Cases. Incorporation may occur either by congressional approval of the treaty of cession which provides for eventual annexation as with Alaska (*See* Rassmussen v. United States, *supra*, note 25) or by a separate congressional act as with the Act of April 30, 1900, *31 Stat. 141* annexing the Hawaiian Islands by statue. The five territories of concern in this chapter are all unincorporated. *See* in general Gerald L. Newman, Whose Constitution? *100 Yale L.J. 909 (1991);* Stanley K. Laughlin, Jr. The Application of the Constitution in United States Territories: America Samoa, A Case Study, *2 U. Haw. L. Rev. 337* (1980-81) and Laughlin, Jr. *36 U. Fla. L. Rev. 755, supra*, n. 12.

(n2)Footnote 34. *See Rassmussen v. United States, supra* note 25. *See also* § 56.03, *supra*. All incorporated territories in fact have become states. *See* Smith v. Government of Virgin Islands, *supra*, note 32 and Balzac v. Porto Rico, *supra*, note 16.

(n3)Footnote 35. *See* note 29, *supra*.

(n4)Footnote 36. *See* dissent of Justice Harlan in Downes v. Bidwell, *supra* note 8, at 380, to the effect that:

> The idea that this country may acquire territories anywhere upon the earth, by conquest or treaty, and hold them as mere colonies or provinces - the people inhabiting them to enjoy only such rights as Congress chooses to accord to them - is wholly inconsistent with the spirit and genius as well as with the words of the Constitution.

See also § 56.09 *infra* regarding the future of the territories. Although plebiscites have been held in the various territories, it seems likely that only in Puerto Rico may statehood be a realistic possibility.

(n5)Footnote 37. *See* note 10 *supra. Note also Asiatic Petr. Co. v. Insular Collector of Customs, 297 U.S. 666 (1936)* (territorial legislature has all legislative power except as limited by the U.S. Constitution or the Organic Act or other laws of Congress).

(n6)Footnote 38. *48 U.S.C. § 1681* (regarding Northern Mariana Islands) is now *48 U.S.C. § 1801 et. seq.* A good discussion regarding the court systems in each of the territories may be found in an article by Peter Nicolas, "American-Style Justice in No Man's Land," *36 Ga. L. Rev. (Summer 2002) 895. See, e.g., 48 U.S.C. § 821* (Legislature of Puerto Rico); *48 U.S.C. § 1423* (Legislature of Guam); *48 U.S.C. § 1571* (Virgin Islands). Section 201 of the Covenant to Establish a Commonwealth of the Northern Mariana Islands in Political Union with the United States of America, Act of March 24, 1976, Pub. L. 94-241, *90 Stat. 263 as amended and reprinted at 48 U.S.C. § 1681* (hereinafter "Covenant") provided for a Constitutional Convention to be held. The Constitution was ratified by the people of the Northern Mariana Islands in March of 1977 and was approved by President Carter on October 24, 1977, which Constitution provided for a Local Legislature. The Constitution became effective on January 8, 1978. Proclamation No. 4594, *42 Fed. Reg. 56,593 (1977) reprinted in 48 U.S.C. § 1681.* American Samoa, as an unorganized territory, is under the supervision of the Secretary of the Interior; however, under their Constitution, the Samoans do elect their own legislature, though the laws enacted thereby must be submitted to the Secretary for approval. *See* § 56.12, *infra*.

(n7)Footnote 39. The Act authorizing the establishment of constitutions for the Virgin Islands and Guam is found in Public Law 94-584, 94th Congress *90 Stat. 2899 (1976), amended by* § 51 Act of Dec. 24, 1981, P.L. 96-597 *(94 Stat. 3479)* and *codified at 48 U.S.C. § 1421.* Although all are granted the authority to enact a Constitution, not all have. For example, both Guam and the Virgin Islands do not have their own Constitutions. In Guam, a draft Constitution was presented to the people in 1979 but failed to attain the necessary vote. Various reasons were attributed to its failure ranging from that it was not sufficiently pro-Guamanian to pro-American to plain confusion. On November 3, 1981 the people of the Virgin Islands rejected the proposed Fourth Constitution which had been approved by Pub. L. No. 97-21 for submission to them. One result of this defeat may have been the changes in 1984 to the Organic Act to modernize the judicial system and to make the territory more autonomous. *See* Act of Oct 5, 1984, Pub. L. No. 98-454, *98 Stat. 1732 (1984).*

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.05

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.05 Organized versus Unorganized Status.

A territory is organized when Congress has enacted an Organic Act for it. n40 The Organic Acts, enacted by Congress and not by the local legislatures, create the local legislatures and define their authority. Usually, the Acts permit the inhabitants to become United States citizens, provide for an elected governor and allow for an elected delegate to represent the territory in congressional committees. n41 Of course, the Acts may be amended by Congress. Congress may still enact local legislation, and the President may still issue broad executive orders. n42

Guam n43 and the Virgin Islands n44 are both organized, unincorporated territories. Puerto Rico and the Northern Mariana Islands, though Commonwealths, are treated as organized, unincorporated territories. n45 American Samoa, though an unincorporated territory, is unorganized. n46 Because of this status, the Secretary of the Interior has wide authority over all aspects of the Samoan government. n47

COMPUTER-ASSISTED RESEAERCH

LEXIS: organiz! or unorganiz! w/15 territor!

FOOTNOTES:
(n1)Footnote 40. The territory is organized when a civil government has been established by an organic act of congress. *See United States v. Standard Oil Co., 404 U.S. 558, reh'g denied 405 U.S. 969 (1972).* Typically, the territories were initially under the authority of the military. Today, the administration of all territories has been transferred to the Department of the Interior. *See, e.g., United States v. Borja, 191 F. Supp. 463 (D. Guam 1961).*

(n2)Footnote 41. *See* § 56.08, *infra*.

(n3)Footnote 42. *See* National Bank v. County of Yankton, *supra* note 8, at 132-33 where the court notes that the Organic Law of a territory is binding on it, Congress still is supreme and has the inherent right to amend the Acts. The Presidential powers may be found in U.S. Const., art. II, § 2.

(n4)Footnote 43. *See* Organic Act of Guam, *48 U.S.C. §§ 1421*-28. Note in particular *48 U.S.C. § 1421a* defining Guam as an unincorporated territory of the United States whose capital is Agana. Guam has an elected governor,

unicameral legislature, elected representative in Congress and a Bill of Rights. *See generally* § 56.17, *infra*.

(n5)Footnote 44. *See 48 U.S.C. § 1541 et seq. See also Government of Virgin Islands v. Bodle, 427 F.2d 521 (3d Cir. 1970).* In general, *see* § 54.19, *infra*. The Virgin Islands have an elected governor, elected unicameral legislature, elected representative to Congress and a bill of rights.

(n6)Footnote 45. *See* § 56.06, *infra*; Andorra Bruno & Garrine P. Laney, U.S. Insular Areas and Their Political Development, Congressional Research Report Oct. 1, 1996 (explores political development of the five territories). Prior to its recognition as a commonwealth by Congress on July 3, 1952, Puerto Rico was an organized unincorporated territory. *See In re Brown, 439 F.2d 47 (3d Cir. 1971). But see Cosentino v. International Longshoremen's Ass'n, Dist. Council of Ports of P.R. 126 F. Supp. 420 (D. P.R. 1954)* (after creation of the Commonwealth, Congress can no longer amend the Puerto Rican Constitution and both parties must consent to amendment of such Acts as Puerto Rico now enjoys self-government).

(n7)Footnote 46. *See Meaamaille v. American Samoa, 550 F. Supp. 1227, 1231 (D. Haw. 1982).*

(n8)Footnote 47. The authority was given by Exec. Order No. 10264, June 29, 1951, *16 F.R. 6419, reprinted in 48 U.S.C. § 1662.* American Samoa is governed under Act of February 20, 1929, ch. 281, *45 Stat. 1253*, codified at *48 U.S.C. § 1661*(c) which provides that until Congress provides for the government of the islands, all civil, judicial and military power shall be vested in such person as directed by the President.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.06

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.06 Commonwealth Status.

Currently, Puerto Rico n48 and The Northern Mariana Islands n49 are both Commonwealths rather than territories. Guam has initiated procedures to have commonwealth status considered. n50 Meanwhile, the Virgin Islands are planning a plebescite to consider their status, including commonwealth, and many in Puerto Rico prefer statehood or independence to commonwealth. n51

The difference in status between a Commonwealth and a territory is murky. n52 Certainly it can be noted that with a Commonwealth both the people of the affected area and Congress gave prior approval thereto. n53 Commonwealth status may provide additional local autonomy and may restrict federal power in a manner similar to the states, and in point of fact both commonwealth and territorial status do provide for additional local autonomy with less federal supervisory authority. The federal government has continuing responsibility for national security and foreign affairs. n54

In practice, Congress and the executive branch often continue to treat the Commonwealths as territories. n55 The courts likewise, though often noting the special status to be accorded a Commonwealth, often do not in fact accord them different treatment. n56 To date, complaints regarding such treatment have not been addressed effectively. n57

LEXIS: commonwealth w/15 status w/50 territor!

FOOTNOTES:
(n1)Footnote 48. Act of July 3, 1950, ch. 446, *64 Stat. 319*, Pub. Law 600 authorized Puerto Rico to draft its own Constitution for approval by the people of Puerto Rico and by the Congress. After the Puerto Rican people approved the Constitution on March 3, 1952, it was amended and approved by Congress by Joint Resolution on July 3, 1952, c. 567, *66 Stat. 327*, and proclaimed by the Governor of Puerto Rico to be in force and effect on July 25, 1952. *See also 48 U.S.C. § 731;* § 56.12, *infra*. On November 14, 1993, the residents of Puerto Rico voted in a nonbinding plebescite regarding its future relationship with the United States. The "enhanced" Commonwealth option received 48.6% of the votes, Statehood received 46.3% of the vote and Independence 4.4% of the votes. Reported by Larry Rohter, Puerto

Rico Votes to Retain Status as Commonwealth, N.Y. Times, No. 15, 1993 at A1. *See also* Dorian A. Shaw, The Status of Puerto Rico Revisited: Does the Current U.S.-Puerto Rico Relationship Uphold International Law?, *17 Fordham Int'l. L.J. 1006 (1994).* According to a 1997 poll, a majority now support commonwealth status (45%, with 36% for Statehood and 4% for independence). *See* 1997 Information Access Company IAC (SM) Newsletter Database, Caribbean Update, Inc., Oct. 1, 1997. ISSN: 8756-324X. Bill Number H.R. 4751 was introduced on June 26, 2000 to the 106th Congress 2nd Session which would recognize entry of the Commonwealth of Puerto Rico into permanent union with the United States as a nation.

(n2)Footnote 49. *See* The Covenant to Establish a Commonwealth of the Northern Marian Islands in Political Union with the United States of America, Act of March 24, 1976, Pub. L. 94-241, *90 Stat. 263* as *amended and reprinted* at *48 U.S.C. § 1681* (hereinafter referred to as The Covenant). The Covenant was approved by the District Legislature on February 20, 1975 and by 78.8 per centrum of the people of the Northern Mariana Islands voting in a plebiscite held on June 17, 1975. The Covenant was transmitted by President Ford on July 1, 1975 to Congress. *See* H.R. Doc. No. 2071, 94th Cong. 1st Sess. (1975) *reprinted in* S. Rep. No. 433, 94th Cong. 1st Sess. 100 (1975). President Ford signed H.R. J. Res. 549 on March 24, 1976.

(n3)Footnote 50. The Guam Legislature established a Commission on Self-Determination for Guam to ascertain the type of political relationship the populace desired with the United States. A plebiscite was held in 1982 to determine if statehood, commonwealth, incorporation, free association, independence or maintenance of the status quo was desired. Commonwealth and statehood were the preferred choices. As a result, a Draft Commonwealth Act was presented to the Guam public in August of 1987. Most provisions were approved except for those articles concerning Chamorro self-determination and immigration. The Commission reworded the failed sections and resubmitted the Draft which was approved. This draft Commonwealth bill was first introduced in Congress in the Spring of 1988 as H.R. 98 (symbolic of the 1898 Treaty of Paris which ceded Guam to the United States), which bill has been resubmitted each session. Concerns of the United States include the reservation of privileges for the Chamorros and the requirement for Guam consent before federal laws will apply to Guam. In addition, unlike the Northern Mariana Islands who first sought Congressional approval to discuss status and jointly negotiated the Covenant, Guam voted on the Commonwealth draft first and then presented it as a fait accompli to Congress. A call for commonwealth status was included in the Testimony of The Honorable Xavier Becerra before the House Resources Committee, 1997 Federal Information Systems Corrain Federal News Service, October 29, 1997. A discussion of Guam's continuing desire for commonwealth status is discussed in an article by Lansing, Paul and Hipolito, Peter, "Guam's Quest for Commonwealth Status," Asian Pacific American Law Journal 5 (1998) 1. The article addresses the need for commonwealth status for Guam's economic survival and discusses key elements of the Guam Commonwealth Act. The article also suggests that Guam's continued insistence on mutual consent and self-determination without compromise will prevent enactment of the bill.

(n4)Footnote 51. *See* § 56.09, *infra*. Once again, Puerto Rico had the opportunity to vote pursuant to H.R. 856, 105th Congress (1997). The vote, taken in December of 1998, concluded with the following vote tallies according to The Record, Bergen Record Corp. on December 18, 1998: Commonwealth: 1%; Free Association: 3%; Independence: 2.5%; Statehood: 46.5%; None of the Above 50.2%. As reported in an article by Sheila I. Velez Martinez, Copyright 1999 Interpress Service on February 1, 1999, the Puerto Rican Supreme Court declared illegal an advertisement, published on December 24, 1998 which ignored the "none of the above" vote. Commonwealth supporters disapproved of the ballot wording and thus urged the "none of the above" vote. *See also* Muniz, H. Michael, "Did the U.S. Puerto Rico Political Status Act Establish a Blueprint Leaving Puerto Rico on the Verge of Statehood?" D.C. L. J. Int'l L. & Prac. 6 (1997) 435; Hermilla, Nelson D., "Puerto *Rico 1898-1998:* The Institutionalization of a Second Class Citizenship," Dick. J. Int'l L. Vol. 16 (1998) 275. *See also* Jose Trias Monge, Articulos: Plenary Power and the Principal of Liberty: An Alternative View of The Political Condition of Puerto Rico, *68 Rev. Jur. U.P.R. 1 (1999)* and Manuel Rodriguez-Orellana, Human Rights Talk ... and Self-Determination, Too!, Notre Dame L. Rev. 73 (May, 1998).

(n5)Footnote 52. The term Commonwealth in this context is different than the Commonwealth of Kentucky or Virginia. *See also Smith v. Pangilinan, 651 F.2d 1320 (9th Cir. 1981)* (noting that the Commonwealth of the Northern

Mariana Islands is no more a foreign nation than is the Commonwealth of Puerto Rico).

(n6)Footnote 53. In Puerto Rico, it has been termed a compact. *See 48 U.S.C. § 731a. See also Mora v. Torres, 113 F. Supp. 309, 313 (D. P.R. 1953) aff'd sub nom. Mora v. Mejias, 206 F.2d 377, 382 (1st Cir. 1953).* As a compact, the consent of both the United States and Puerto Rico should be required to alter the relationship and thus the district court held that Puerto Rico was bound by the Fifth Amendment as part of the compact. On appeal, the First Circuit affirmed the lower court; however, the appeals court devoted little discussion to the concept of the compact. *See also* dicta in *Examining Bd. of Eng'rs, Archs., & Surveyors v. Flores de Otero, 426 U.S. 572, 596 (1976)* (... without parallel in history and governed by compact requiring mutual consent"). *See also United States v. Quinones, 758 F.2d 40 (1st Cir. 1985)* (creation of a Commonwealth granted Puerto Rico authority over its own local affairs; however, Congress maintained similar powers over Puerto Rico as it possess over federal states).

In the Northern Mariana Islands, the relationship has been viewed as a Covenant and Articles I, II, III and Sec. 501 and 805 may be modified only with the consent of both the Islands and Congress. *See 48 U.S.C. § 1801. See also A & E Pac. Constr. Co. v. Saipan Stevedore, 888 F.2d 68, 71 (9th Cir. 1989).*

The laws creating the Commonwealth, as with state enabling acts, were elaborate in procedure and substance. The approval of both parties were required. *See Figueroa v. Puerto Rico, 232 F.2d 615, 620 (1st Cir. 1956).*

(n7)Footnote 54. *See* for example § 104 of the Covenant with the Northern Mariana Islands which reads: "The United States will have complete responsibility for and authority with respect to matters relating to foreign affairs and defense affecting the Northern Mariana Islands."

(n8)Footnote 55. For example, Congress has unilaterally amended the Puerto Rican Federal Relations Act found in Chapter 4 of the U.S.C. The legislative history to Pub. Law 600 authorizing the drafting of the Commonwealth Constitution indicate that neither Congress nor the Executive felt that Commonwealth status would change their authority over Puerto Rico. *See, e.g.,* H.R. Rep. No. 2275, 81st Cong., 2d Sess. (1950), *reprinted in* U.S.C.C.A.N. 2681 "It is important that the nature and general scope of § 3336 be made absolutely clear. The bill under consideration would not change Puerto Rico's fundamental political, social and economic relationship to the United States." The executive branch shared that view. *See, e.g.,* H.R. Rep. No. 2275, 81st Cong., 2d Sess. 5-6 (1950), *reprinted in* U.S.C.C.A.N. 2681, 2684-2685 (letter of Secretary of the Interior Oscar L. Chapman to Senator Joseph C. O'Mahoney Chairman of the Senate Committee on Interior and Insular Affairs: it is "fundamental that the Constitution of the United States gives the Congress complete control and nothing in the Puerto constitution could affect or amend or alter that right." For a more complete discussion *see* Liebowitz, *supra* n. 3, at pp. 165 *et seq.*

See also Morene Rios v. United States, 256 F.2d 68 (1st Cir. 1958) (term territory in federal statue probably includes Commonwealth as well); *Caceres v. San Juan Barge Co., 387 F. Supp. 221 (D.P.R. 1974)* (as a Commonwealth, the government of Puerto Rico has such powers as Congress from time to time has seen fit to give it the broad power of Congress to legislate for a national territory). *See Guerrero v. Clinton, 156 F.3d 1190* (9th Cir., 1998) where the court held that mandamus relief was not appropriate when a legislator from Guam sued the Director of Insular Affairs on behalf of Guam, CNMI and Hawaii for the failure to issue the annual report to Congress as required by the Compact of Free Association Act of 1985. *See also* the Comment by Jose D. Roman, "Trying to Fit An Oval Shaped Island Into A Square Constitution: Arguments for Puerto Rican Statehood," *29 Fordham Urb. L. J. (2002) 1681, 1693* that Commonwealth Status has had no effect of its treatment under the Constitution.

(n9)Footnote 56. *See, e.g., Examining Bd. of Eng'rs, Archs. and Surveyors v. Flores de Otero, supra,* note 54 (noting that the Commonwealth was a status different from a territory, but then used traditional standards to declare unconstitutional a local government statute) or Commonwealth of the N. Mariana Islands v. Atalig, note 29, *supra* noting that though the Islands enjoy a right of self government with mutual consent which is unparalleled with territories, the court then held that trial by jury did not apply by using the traditional unincorporated doctrine with fundamental rights theory rather than the Covenant which expressly covered it).

Often Puerto Rico is treated as if it were a state; however, at other times it is treated differently. *See, e.g., Posadas de Puerto Rico Assocs. v. Tourism Co. of P.R., 478 U.S. 328 (1986)* (Commonwealth dictates application of the same rule as one of the fifty states); *Calero-Toledo v. Pearson Yacht Leasing Co., 416 U.S. 663 (1974)* (requiring a three-judge district court as with the states rather than only one as would be sufficient with a territory). *But see Harris v. Rosario, 446 U.S. 651, 651-652 (1980)* (Congress may treat Puerto Rico differently from the states so long as there is a rational basis for its actions); *Sanchez v. United States, 376 F. Supp. 239 (D.P.R. 1974)* (Puerto Rico is a duly constituted political entity but is not a state as are the other fifty states); *Nestle Prods., Inc. v. United States, 310 F. Supp. 792 (Cust. Ct. 3d Div. 1970)* (Commonwealth status was at most regulatory and did not change the fundamental political relationship to the United States). *See also* § 56.08(c), *infra*. Puerto Rico is treated as a state for purposes of the eleventh amendment. *See Puerto Rico Aqueduct & Sewer Author. v. Metcalf & Eddy, Inc., 113 S. Ct. 684 (1993); New Progressive Party v. Hernandez, 779 F. Supp. 646 (D.P.R. 1991).*

(n10)Footnote 57. Thus, many of the articles cited in the Bibliography advocate a need for the Congress to address the status of all the territories and especially what is meant by a Commonwealth. *See also Hillblom v. United States, 896 F.2d 426 (9th Cir. 1990)* where two registered voters of the Northern Marianas Islands sought an injunction to prevent the enactment or enforcement of laws which they felt violated § 103 of the Covenant. The court found that the three acts in question did not violate the Convent. Prior to filing the lawsuit, a Task Force of the Northern Marianas Islands had voiced concerns that the United States was continuing to administer the islands as if it were a territory, which concerns also were reported to the United Nations.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.07

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.07 The Trust Territories.

After the Second World War, the United States acquired the Trust Territory of the Pacific Islands (TTPI), or Micronesia, pursuant to a unique United Nations relationship. n58 Throughout the Trusteeship, sovereignty remained with the Micronesian entity. n59 The trusteeship of the United States ended as to the Northern Mariana Islands with the approval of the Covenant establishing the Commonwealth, n60 and the United Nations Trusteeship Council voted to end the United States administration of the other Trust territories when the Compacts of Free Association for them went into effect. n61

The United States entered into a Compact with The Freely Associated States of the Federal States of Micronesia (Kosrae, Pohnpei, Truck and Yap) and with the Republic of the Marshall Islands in 1986. n62 The Compact with The Republic of Palau, though executed by the United States and by Palau on January 10, 1986, n63 has not yet been approved by the people of Palau. The voters of Palau have given the requisite approval to the Compact except for the nuclear provisions which, under the Palau Constitution, required a ratification vote of 75%. In November of 1992, Palau amended its Constitution to require only 59% voter approval of the nuclear provisions as well. Until such time as the voters of Palau ratify the Compact, the United States will continue to administer the Trust Territory there. n64

A Compact, along with its subsidiary agreements, forms a unique international political relationship under which the Freely Associated States (the FAS) control their own internal affairs as well as their foreign relations; however, the United States provides a defense umbrella for them. In addition, in return for certain federal programs and funding, the United States military will have certain defined uses of the area for at least fifty years. Citizens of the FSM are not citizens of the United States, nor does the United States Constitution apply. Although it is a unique relationship, many have felt that the FAS is a good arrangement for the countries involved and may be preferable to either territorial or commonwealth status. n65

FOOTNOTES:
(n1)Footnote 58. *See* Trusteeship Agreement for the Former Japanese Mandated Islands, Approved by the Security Council on April 2, 1947, and entered into force on July 18, 1947, *61 Stat 397,* T.I.A.S. No. 1665, 8 U.N.T.S. 189. Approval by the United States was by an executive agreement approved by Congress. *See* H.R.J. Res. 233, 80th Cong., 1st Sess., 93 Cong. Rec. 8731 (1947), Exec. Order No. 9875, 3 C.F.R. 658. *See also 48 U.S.C. § 1681 et seq.* During the

forty years of trusteeship, the role of the United States was similar to though not equivalent with a territorial relationship. *See Gale v. Andrus, 643 F.2d 826 (D.C. Cir. 1980).*

(n2)Footnote 59. *See United States v. Covington, 783 F.2d 1052 (9th Cir. Haw. 1985).*

(n3)Footnote 60. Although the Commonwealth status was recognized in 1975, it was not fully implemented until the United Nations Trusteeship Council voted to end the United States administration of the Trust Territories and the President of the United States recognized them by Proclamation 5564 on November 3, 1986, *51 Fed. Reg. 40,389 (1986)* (3 C.F.R. 146). *See Holmes v. Director of Revenue and Taxation, 827 F.2d 1243 (9th Cir. 1987). See also* note 61 *infra*.

(n4)Footnote 61. *See* Resolution 2183 in Report of the Trusteeship Council to the Security Council on the Trust Territory of the Pacific Islands, May 29, 1986. The President of the United States recognized them, as well as the Commonwealth of the Northern Mariana Islands, by Proclamation 5564 on November 3, 1986, *51 Fed. Reg. 40,389 (1986)* (3 C.F.R. 146) at which time the United States also notified the United Nations that the Trusteeship Agreement had now terminated as to FSM and the Marshall Islands. Security Council Document 5/18313, October 24, 1986. Some questions have been raised as to whether there can be termination solely by the United States to the Trusteeship Council. Technically, an argument also might be made that until Palau approves its Compact, all the members of the former trust territory remain under the supervision of the United States. As noted in note 58 *supra*, a delegation from the Northern Mariana Islands petitioned the United Nations Trusteeship Council for guarantees of internal self-government; however, the position of the United States was that the Trusteeship had now been terminated (to which the Islanders noted that only the U.N. Security Council should terminate the trusteeship and only when in fact the CNMI enjoyed self-government).

(n5)Footnote 62. *See* Pub. L. No. 99-239, Jan. 14, 1986, *99 Stat. 1770, reprinted as amended in 48 U.S.C. § 1682.* The people of FSM approved their Compact by a majority vote of 79% and the people of the Marshall Islands by a vote of 58%.

(n6)Footnote 63. *See* Pub. L. 99-658, Nov. 14, 1986, *100 Stat. 3672, reprinted at 48 U.S.C. § 1681*.

(n7)Footnote 64. Palau approved the compact on the eight referendum thereon on November 9, 1993, which was approved by the United States by Public Law 99-658 on Nov. 14, 1986, and Public Law 101-219 on Dec. 12, 1989. As of Oct. 1, 1994 the Trust Territory is no longer in effect. *See* Public Papers of the Presidents dated Sept. 17, 1994. Also reported by Warren Osmund in The Christian Science Monitor on Oct. 1, 1994 at page 7. *See also* the article by Keitner, Chimene I. and Reisman, W. Michael, "Free Association: The United States Experience" in Tex. Int'l L. J. 39 (Fall 2003) 1. It is felt that the change in voter threshold, as well as other economic facts may allow the Compact now to be ratified. *See* David Judson, Official Says Compact No Choice for Palau, Gannett News Service, March 31, 1993; Floyd Whaley, Palau May Reach Comprise with U.S., Reuters Limited, April 13, 1993. A vote may be held as early as July of 1993.

(n8)Footnote 65. *See* § 56.09 *infra*. In the Comment by Gutierrez, Hannah M. T., "Guam's Future Political Status: An Argument for Free Association with U.S. Citizenship," Asian-Pacific L. & Pol'y J. 4 (February 2003), the use of a freely associated status is proposed with the addition that citizenship be retained with the United States.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.08

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.08 Selected Consequences of Being a Territory.

[Go To Supp]

(a) Citizenship.

In all territories, other than American Samoa, United States citizenship has been granted to the inhabitants. n66 Although citizens, they are not eligible to vote for the President or Vice-President of the United States. n67 American Samoans are United States nationals rather than citizens. n68

COMPUTER-ASSISTED RESEARCH

LEXIS: territor! w/15 citizen!

(b) House of Representatives.

Puerto Rico sends an elected Resident Commissioner to the House of Representatives. n69 American Samoa, Guam and the Virgin Islands all send a delegate to the House of Representatives. n70 Only the Northern Mariana Islands are not so represented in the House of Representatives. n71 Until recently, these representatives, though they participated in the Committee work of the House and in particular the House Interior and Insular Affairs Committee and its Subcommittee on Territories, did not vote. In 1993, these delegates were given voting privileges in the House of Representatives when the Committee meets as a Committee of the whole; however, if their votes would be decisive a *de novo* vote on the House Floor is required. n72

COMPUTER-ASSISTED RESEARCH

LEXIS: representative! w/30 territor!

(c) Federal Programs.

The inhabitants of the various territories are, and have been, the beneficiaries of various federal social and economic programs. It is not unusual, however, for the territories to be singled out for special treatment, often to the detriment of

the territory. For example, in Califano v. Torres n73 the United States Supreme Court upheld a set-aside formula which restricted funds for the aged, blind and disabled in Puerto Rico under the SSI program. n74 Differing funding formulas are common as is total exclusion from a particular program. n75

COMPUTER-ASSISTED RESEARCH

LEXIS: territor! w/30 federal w/2 program!

(d) Selected Federal Laws.

In general, the laws of the United States apply to the territories, unless the territories are exempted. n76 Federal income taxes either do not apply or are paid to the treasury of the Territory. n77 With the exception of Puerto Rico, the territories are outside the customs area of the United States. n78 A territory may or may not be subject to such federal laws as the United States Immigration law n79 or the coastwise shipping laws. n80

COMPUTER-ASSISTED RESEARCH

LEXIS: territor! w/30 federal w/2 law!

FOOTNOTES:
(n1)Footnote 66. *See* § 301 of the Covenant for Northern Mariana Islands. A question remained as to children of marriages between a Trust Territory citizen and another non-U.S. national which was settled by defining a citizen of a Trust Territory as including a person born in the Trust Territory who has or had one parent born in the Trust Territory in Delona Cruz v. United States, 3 Commonw. Rptr. 108 (D.N. Mar. I. 1987).

Citizenship was not granted to Puerto Ricans until 1917 when it was given collectively under the Jones Act of March 2, 1917; c. 145, *39 Stat. 961. See 48 U.S.C. § 731.* It had been withheld under both the Treaty of Paris and the Foraker Act of 1900. Some felt that a grant of citizenship might imply that Puerto Rico was now an incorporated territory awaiting statehood.

Citizenship was granted the Virgin Islands in 1927 by Pub. L. 640, February 25, 1927, Ch. 192, 69th Congress, 2d Sess.

Citizenship was granted to Guam in 1950. *See* Act of June 27, 1952, c. 477, Title III, ch. 1, § 307, *66 Stat. 237* and codified at *8 U.S.C. § 1407. See* dePassalacqua, John L.A., "Voluntary Renunciation of United States Citizenship by Puerto Rican Nationals," 66 Re. Jr. U.P.R. 269 (1997). Persons born in the Commonwealth of the Northern Mariana Islands in 1982 and 1983 qualified as citizens of the *United States. Sabangan v. Powell, 375 F.3d 818 (9th Cir. 2004).*

(n2)Footnote 67. *See* Atty. Gen. of Guam on behalf of all U.S. Citizens Residing in *Guam, etc. v. United States, 738 F.2d 1017, 1019 (9th Cir. 1984)* (right to vote in presidential election is a function of state and not national citizenship); Sanchez v. United States, note 56 *supra*. *See De La Rosa v. United States, 32 F.3d 8 (1st Cir. 1994), cert. denied, Igarta v. United States 115 S. Ct. 1426 (1995),* which held that residents of Puerto Rico had no right under Article II of the Constitution to vote in presidential elections and that failure of the Uniformed and Overseas Citizens Absentee Voting Act to guarantee citizens moving to Puerto Rico the right to vote in presidential elections did not violate due process or equal protection. For a comment thereon please *see* Amber L. Cottle, "Silent Citizens: United States Territorial Residents and the Right to Vote in Presidential Elections," U. Chi. Legal F. 315 (1995) and as noted in the Bibliography. Although residents elect delegates to the national conventions, they do not vote. *See* the article by Gold, Matea, "Campaign 2000: A User's Guide," 2000 Times Mirror Company, April 9, 2000. *See also De La Rosa v. United States, 229 F.3d 80, 2000 U.S. App. Lexis 25499 (1st Cir. 2000)* holding that citizens residing in Puerto Rico do not have the right to participate in the national election for president and vice-president. The decision by the First

Circuit Court of Appeals in De La Rosa II decided in 2000 reversed the district court. This case is reviewed in the Comment by Jose D. Roman, "Trying to Fit An Oval Shaped Island Into A Square Constitution: Arguments for Puerto Rican Statehood," *29 Fordham Urb. L. J. (2002) 1681, 1713* who concludes that the only complete solution is for Puerto Rico to become the fifty-first state. The various cases which have discussed the issue of voting in presidential elections are reviewed in the Roman Comment. *See also* Comment, Igarta, "de La Rosa v. United States: The Right of the United States Citizens of Puerto Rico to Vote for the President and the Need to Reevaluate America's Territorial Policy," *4 U. Pa. J. Const. L. (2001) 141.* The issue of who qualifies as a natural born citizen to be eligible to serve as President of the United States is discussed in an article by Sarah Helene Duggin and Mary Beth Collins, "Natural Born in the USA: The Striking Unfairness and Dangerous Ambiguity of the Constitution's Presidential Qualifications Clause and Why We Need to Fix It," *85 B.U. L. Rev. 53 (2005).* In this article the authors suggest that a person born in a territory which later becomes a state probably would so qualify. Less certain is the rule for persons born in The Commonwealth of the Northern Mariana Islands, The Commonwealth of Puerto Rico, Guam and the Virgin Islands. The authors note it is unlikely that a person who cannot vote for the Presidency would have the right to serve as President. Even less likely is American Samoa where they are viewed as "nationals" who may subsequently become citizens through an expedited naturalization process.

(n3)Footnote 68. *See 8 U.S.C. §§ 1101*(a)(29), 1408.

(n4)Footnote 69. *See 48 U.S.C. § 891.* The Commissioner serves for four year and presents his or her certificate of election through the Department of State. The qualifications of a Commissioner are that the Commissioner be a bona fide citizen of the United States, twenty-five years of age, and be able to read and write the English language. *See 48 U.S.C. § 892.*

(n5)Footnote 70. *See 48 U.S.C. § 1711* (Guam and the Virgin Islands). The delegate is to be elected every two years by majority vote, must be at least twenty-five years of age and have been a citizen of the United States for at least seven years prior to the date of the election, be an inhabitant of the territory from which elect and not be a candidate for any other office. *See 48 U.S.C. § 1731* (American Samoa) and *48 U.S.C. § 1713* provides for similar qualifications.

(n6)Footnote 71. The Covenant, in § 901, does provide for the appointment or election of a Resident Representative to the United States who presents the election certificate to the Secretary of State. The Northern Mariana Islands Constitution, Art V. was amended to allow a non-voting delegate, yet the Commonwealth has not requested the congressional legislation which would be necessary to change the status of its Resident Representative.

(n7)Footnote 72. This privilege was also extended to the non-voting delegate from the District of Columbia. The House Rules were amended in 1993. The constitutionality of the new rules was affirmed and a preliminary injunction against its enforcement denied in Michel v. Anderson, No. 93-5109 (D.C. County Appeals 1994) Lexis 1205. The case contains a good review of the history of the non-voting delegate. The challenge to this House Rule was upheld in *Michel v. Anderson, 14 F.3d 623 (D.C. Cir. 1994).* However, the 104th Congress changed the rule and the delegates no longer may cast ballots when the House meets as a Committee of the Whole. *See* 141 Cong. Rec. H23, § 212, Jan. 4, 1994, 104th Congress, 1st Sess. H.B. 2876, dealing with the rights of the non-voting delegates, was assigned to the Resources Committee on Jan. 24, 1996. *See* Andorra Bruno, "Territorial Delegates to the U.S. Congress: A Brief History, Government Division," Congressional Research Report, Jan. 23, 1997. Currently, the Resident Commissioner from Puerto Rico and the delegate from American Samoa, Guam and the Virgin Islands are present in the House of Representatives but they cannot vote. They may introduce bills, serve on and vote in committee, and may participate in debates; however, the only period of time in which they could vote was in 1993 and 1994. There still is no representative from the Northern Mariana Islands. None are represented in the Senate.

(n8)Footnote 73. *435 U.S. 1 (1978).*

(n9)Footnote 74. The court in *Califano* noting various justifications for the Congressional action including, the fact that the inhabitants do not pay income taxes; it would upset the local economy, would cost too much for treasury, etc.).

See also Harris v. Rosario, note 56, *supra* (withstanding an equal protection argument).

(n10)Footnote 75. Caps also have been placed on Medicaid, National Assistance Programs, Elementary and Secondary Education Programs, ADC, etc. A 1981 study by the Comptroller General of the United States found that Puerto Rico received less favorable treatment than it would have received as a state under approximately twenty federal spending programs. *See* Comptroller General of the U.S., "Puerto Rico's Political Future: A Divisive Issue With Many Dimensions," 120-125 (1981). *See also* Richard B. Cappalli, "Federal Financing in the Commonwealth of Puerto Rico," 39 Rev. Jr. U.P.R. 17, 103 (1970) noting that "While it is doubtful that Congress would have the constitutional power to discriminate against a particular State in the application of federal grant programs, its plenary territorial clause power authorizes such discriminations against territories and it is doubtful whether the creation of the commonwealth has affected this power."

(n11)Footnote 76. *See, e.g., Craibow Corp. v. Occupational Safety and Health Review Comm'n, 493 F.2d 1064 (1st Cir. 1974)* (under compact with Puerto Rico and the Puerto Rican Federal Relations Acts, new federal legislation requires no prior consent of Puerto Rico to be applicable there); Caceres v. San Juan Barge Co., *supra,* note 55; Hillblom v. United States of America, *supra,* note 57, holding that three federal laws applied in the Northern Mariana Islands including the Magnuson Fishing Conservation Act, the Swine Health Protection Act and the Shipping Act of 1984). Both Puerto Rico and the Virgin Islands were excluded from the settlement of a law suit regarding fees paid to travel agents as not being part of the United States, as discussed in an article by Lindsay M. Germano, Casenote: Contract Law-Interpretation of "United States" -- Eighth Circuit Holds that Settlement Agreement for "United States" Travel Agents excludes Affected Agents in Puerto Rico and the U.S. Virgin Islands, *69 J. Air. L. & Com. 195 (Winter 2004).*

(n12)Footnote 77. *See 48 U.S.C. § 734* noting that the statutory laws of the United States not locally inapplicable are effective in Puerto Rico except for the Internal Revenue Laws. *See 48 U.S.C. §§ 1421h,* 1421i providing that though the income tax laws of the United States are in force they are deemed a territorial income tax payable to the government of Guam; *48 U.S.C. § 1397* provides for a "mirror image" income tax approach in the Virgin Islands with the payment to the Virgin Island treasury. *See* Philip Joseph Deutch, "The Uniformity Clause and Puerto Rican Statehood," *43 Stan. L. Rev. 685 (1992)* regarding the effect of Statehood on income taxes paid in Puerto Rico. *See also* the Note by Deborah S. Di Piero, "Puerto Rico's Need for Corporate Incentives following the 1996 Amendment to Section 936," B.U. Int'l L.J. Vol. 15 (1997) 549. A discussion of Internal Revenue Code Section 936 and the territories is discussed in an article by Andrews, III, William Lee, "No Bull's Eye for 'Targeted' International Tax Rules," Va. Tax. Rev. 18 (Spring 1999) 781. In the case of *Specking v. Commissioner of Internal Revenue, 117 T.C. 95,* (2001), the court concluded that compensation earned by the taxpayer on Johnston Island (one of the islands in Johnston Atoll) was not foreign earned income because this island is an unorganized, unincorporated insular possession of the United States. This case also discussed the tax implementation agreement between the United States and American Samoa, *1988-1 C.B. 408.* A good discussion of the exclusion of federal taxes in America Samoa, Guam and the Northern Mariana Islands may be found in the case of *Francisco v. Comm'r, 2002 U.S. Tax Ct. Lexis 59 (1002)* in which case the court agreed that income earned while in the harbor of America Samoa may be excluded by the taxpayer but not as to income earned while in international waters.

(n13)Footnote 78. *See 48 U.S.C. § 738* which provides that all merchandise and articles coming into the United States from Puerto Rico and vice versa are free of duty. This was a part of the original Foraker Act of 1900 and thus, since July 25, 1902, trade between Puerto Rico and the Mainland has been free of tariff duties. The other territories do not have this protection, though to a limited extent they are protected by General Headnote 3(a) of the U.S. Tariff Code and the Generalized System of Preferences, *19 U.S.C. § 1202.*

(n14)Footnote 79. Under the Covenant, the Commonwealth of the Northern Mariana Islands has control over its own immigration policies and the immigration laws of the United States do not apply. Section 503(a) of the Covenant. *But see* Maybeth Herald, "The Northern Mariana Islands: A Change in Course under Its Covenant with the United States," *71 Oregon L. Rev. 127 (1992)* (in which article the author addresses the serious problems which have arisen due

in part to the open door policy of immigration in the Northern Mariana Islands which has resulted in an estimate of one-half of the population being non-resident aliens). American Samoa also has its own immigration policy. *See* Title 41 of the American Samoa Code. It is difficult to obtain permanent residency in Samoa. For a non-Samoan to qualify for such status, the person must either have established permanent residence in American Samoa prior to January 1, 1950, or have been physically and legally present in American Samoa for a continuous period of at least 20 years, be of good moral character, and a person for whom deportation would be a hardship. A person legally adopted by an American Samoan also may qualify if under the age of 21 at the time of adoption. The number of persons who may be granted such status may not exceed ten in any given year. *See* 41 A.S.C. 0403. In addition American Samoa is explicitly omitted as part of the Immigration and Nationality Act of 1952 continued in *8 U.S.C. § 1101*(a)(38). Guam, and in particular the Chamorro population, would like to control immigration. The Second Guam Constitutional Convention and the draft Guam Commonwealth Act both seek to attain immigration control. Although Congress could exempt Guam, it has not done so. *See Tiaco v. Forbes, 228 U.S. 549 (1913); 8 U.S.C. § 1101*(a)(36)(38).

(n15)Footnote 80. The Coastwise shipping laws including the Jones Act of *46 U.S.C. §§ 13,* 289, 292, 316, 808, 883 and 883-1 apply to Guam and Puerto Rico though not to American Samoa, the Virgin Islands and to large extent the Northern Mariana Islands.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.09

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.09 Future Status.

The status of each territory appears to be in question today with the possible exception of American Samoa. n81 Options include Statehood, n82 incorporated status, Commonwealth, n83 Compact of Free Association or independence. n84

FOOTNOTES:
(n1)Footnote 81. American Samoa is the only unorganized, unincorporated territory. Following the acceptance of the cessions in 1929, a Congressional Commission held hearings in 1930 which resulted in a draft of an Organic Act which would have provided citizenship and established an independent executive and judicial branch of government; however, the bill failed of passage in the House of Representatives in 1933. Samoans traditionally have distrusted any attempt to organize them, fearing an Organic Act might eliminate or erode their traditional powers over land and immigration. Thus, in 1969 the American Samoa Political Status Commission, composed of concerned citizens and legislators, recommended that Samoa remain an unorganized, unincorporated territory and reject other options including independence, union with Western Samoa, incorporation status, Commonwealth or becoming a county of the State of Hawaii. A similar recommendation was made in 1975. *See* § 56.12 *infra*.

See David Judgson, *Territorial Delegates Decry Colonialism, Gannett News Service*, February 9, 1993, noting that the territories met in Washington for a three-day conference and are in various states of redefining the status of their relationships with the United States. The article notes that they were linked by aspirations for full protection of the U.S. Constitution and fearful of losing sovereignty over native lands, language or culture. Peter C. Stuart in his book Isles of Empire: The United States and Its Overseas Possessions in Chapter 15 reviews the various positions taken. Puerto Rico has held four (with one being a procedural one) plebiscites since 1967 with the most recent being in 1998 with commonwealth receiving the most votes. Guam has held four referenda in 1982 and 1987 to have a Puerto Rican style of commonwealth which has not received approval from Washington. The Virgin Islands held a plebiscite in 1993 and reaffirmed the current arrangement. Even American Samoa has twice studied the issue. He notes that in addition to the suggestions noted in the book, the concept of merger with existing states has been discussed with a merger between Puerto Rico and the Virgin Islands; a merger of Guam and the Northern Mariana Islands, and a merger of America Samoa with the Hawaiian Islands.

(n2)Footnote 82. *See* footnote 51, *supra*, regarding the 1993 plebescite in Puerto Rico. The arguments for statehood include the political right to vote for the United States President and Vice-President and to be represented by two Senators and possible additional voting representation in the House of Representatives. Statehood would also allow full participation in federal programs, though it may require the payment of federal income taxes. *See* § 56.08(d) *supra*. At the present time, only Puerto Rico is seriously considering statehood.

(n3)Footnote 83. *See* note 51, *supra* that Guam is seeking such status. *See also* the article by Lansing, Paul and Hipolito, Peter, "Guam's Quest for Commonwealth Status" Asian-Pacific Am. L. J. 5 (Spring 1998) 1, in which the desire for Commonwealth Status for Guam is discussed and negative comparisons are made with the precedent set by the Commonwealth of the Northern Mariana Islands.

(n4)Footnote 84. *See also* the article by Keitner, Chimene I. and Reisman, W. Michael, "Free Association: The United States Experience" in Tex. Int'l L. J. 39 (Fall 2003) 1. As noted *supra* in note 57, not all residents of the Northern Mariana Islands have been pleased with Commonwealth status and feel that the United States still has too much control of local affairs. Free Association, as adopted by some of its neighbors, has looked appealing. The Virgin Islands, until recently, have been content with status as an unincorporated, organized territory.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.10

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.10 The Commonwealth of the Northern Mariana Islands.

(a) Background.

The Mariana Island Chain, with the exception of the Island of Guam, form the Commonwealth of the Northern Mariana Islands (hereinafter CNMI). n85 The islands contain under two hundred square miles of land, with the most populated island being Saipan. n86 In 1975, the islands entered into a covenant with the United States to establish a Commonwealth. n87 Prior to that time, the islands had been part of the Trust Territory administered by the United States under the auspices of the Security Council of the United Nations. n88 In 1972, the Mariana delegates to the Congress of Micronesia sought separate negotiations with the United States, and in 1975 the Covenant was signed. n89 At one time, consideration was given to having the islands join with Guam. n90 The requested status became the first acquisition of territory by the United States in fifty years. n91

Under the terms of the Covenant, an independent legislature, executive branch, and judiciary are established. n92 The Covenant provides for three areas of "special treatment": CNMI has control over its own immigration policies; n93 the right to trial by jury is not guaranteed in all cases; n94 and the Covenant allows a restraint on land. n95 The Covenant also provides that Article I (Political Relationship), Article II (Constitution of the Northern Mariana Islands), Article III (Citizenship and Nationality), § 501 (dealing with the applicability of United States Laws) and § 805 (the Land Restraint) may not be changed without the consent and agreement of both the CNMI and the United States. n96

COMPUTER-ASSISTED RESEARCH

LEXIS: commonwealth w/1 northern marina islands

(b) Land.

As with all of Micronesia, land is very important in the CNMI. n97 As noted in § 805 of the Covenant, the ownership of land is important in the culture and traditions of the people and the land restriction provided therein is necessary to protect the people against exploitation and to promote economic advancement and self-sufficiency. n98 As a result, the ability to provide for a restraint on alienation was inserted into the Covenant n99 and implemented by the Constitution of CNMI. n100

Under the terms of the restraint, the acquisition n101 of permanent and long-term interests in real property in the Commonwealth is restricted to persons who are at least one-quarter Northern Mariana Island descent. n102 A long-term interest is defined as a lease which exceeds fifty-five years. n103 The definition of Northern Mariana Island descent includes those persons who were either Chamorro n104 or Carolinian. n105 Partly because of the open immigration policy, the numbers of Chamorros and Carolinians have decreased on the islands. n106 The land restraint also limits the ability of a corporation to purchase land on the islands. n107

The land restraint described *supra* was upheld by the 9th Circuit Court of Appeals in Wabol v. Villacrusi. n108 In *Wabol*, a landowner brought action to avoid a thirty-year lease which contained an unconditional option to renew for twenty additional years. The landowner noted that the lease violated Article XII of the Constitution and was therefore void *ab initio*. The defense was that Article XII violated the Equal Protection Clause of the United States Constitution. The Court concluded that the right to acquire permanent or long-term interests in real estate was not a right protected by the United States Constitution, and upheld the land restriction. In addition, the Court noted that Article XII precluded a reformation of the lease. n109 Since the *Wabol* case upholding the land restriction, the federal courts have held the issue of the land restraint to be an issue of CNMI law, and have declined jurisdiction in several cases involving the restraint. n110

The Covenant also notes that the United States recognizes and respects the scarcity and importance of land, and if the United States must acquire any real property not transferred to it under the Covenant, it will acquire only the minimum amount necessary to accomplish the public purpose for which it is taken and will first try to use public, rather than private, real property. n111 Concerns likewise were expressed concerning the presence of the United States military. Despite such concerns, the presence of the military has not been significant. Section 8 of the Covenant also provides for lands to be leased to the United States and for the transfer of public lands to the Government of CNMI. n112

The property laws of CNMI, except for the land restraint noted *supra*, are consistent with those on the mainland, although there appear to be numerous quiet title actions. n113 If a statute or local customary law does not apply in a given situation, the applicable common law as expressed in the Restatements is used and, if not covered by the Restatements, then the common law as generally understood and applied in the courts of the United States is used. n114

COMPUTER-ASSISTED RESEARCH

LEXIS: commonwealth w/1 northern marina islands w/30 land! w/50 own!
commonwealth w/1 northern marina islands w/30 restraint! w/5 alien! or land!

FOOTNOTES:

(n1)Footnote 85. In point of fact, there is no Southern Mariana Island. The name of the Commonwealth was adopted during the Commonwealth negotiations of the early 1970's in part to distinguish these islands from Guam which had been a territory of the United States since 1899. *See* note 5, *supra*. The volcanic island chain is located approximately 1,500 miles south of Japan and approximately the same distance from the Philippines.

(n2)Footnote 86. Saipan also is the largest, most developed island and the capital of the islands. The other principal islands are Rota and Tinian. Some of the other islands are maintained as uninhabited wildlife preserves. *See* Herald, The Northern Mariana Islands: A Change in Course under Its Covenant with the United States, *supra* note 79, for population trends in the early 1990's.

(n3)Footnote 87. *See* note 38, *supra*. The Covenant to Establish a Commonwealth of the Northern Mariana Islands in Political Union with the United States of America, Act of March 24, 1976, Pub. L. 94-241, *90 Stat. 263* as *amended and reprinted at 48 U.S.C. § 1801*. The Covenant was approved by the Mariana Island District Legislature on February 20, 1975 and by 78.8% of the people voting in a plebiscite held on June 17, 1975. The Covenant was implemented by

Pub. L., No. 95-157, *91 Stat. 1266* (Nov. 8, 1977) and fully implemented in 1986 with the termination of the Trusteeship in the United Nations. Proclamation 5564 on November 3, 1986, *51 Fed. Reg. 40,399 (1986)* (3 C.F.R. 146). *See* note 61, *supra*.

(n4)Footnote 88. *See* § 56.07, *supra* and in particular note 61. The Security Council had delegated the operating supervision to the Trusteeship Council. The Covenant was fully implemented when the United Nations Trusteeship Council voted to end the United States administration of the Trust territories and the President of the United States recognized them by Proclamation 5564 on November 3, 1986 (3 C.F.R. 146).

(n5)Footnote 89. At the time, the Micronesia Congress was considering the future status of the trust territories. Disagreements arose with the other Micronesian leaders, especially concerning the ability of unilateral withdrawal from any agreement with the United States. Those Marianas leaders who supported integration with the rest of Micronesia were voted out of office in 1970 and the Marianas Island District Legislature passed a resolution declaring that the Marianas would "secede from the Trust Territory, if necessary by force of arms, and with or without the consent of the United Nations" to achieve its goal of close association with the United States. Resolution No. 30-1971 dated February 19, 1971. *See* S. Rep. No. 1, 433, 94th Cong. 1st Sess. 47 (1975). The history of the negotiations are recited in Northern Mariana Islands v. Atalig, *supra*, note 29. Prior to the United States Trusteeship, the islands had been administered by the Japanese under a League of Nations mandate. *See* Gale v. Andrus, *supra*, note 58. Prior to the Japanese, the Germans, Spanish, Carolinians and the Chamorros had populated the islands. *See also* "Comment: Congressional Colonialism in the Pacific: The Case of the Northern Mariana Islands and its Covenant with the United States," *3 Scholar (Fall 2000) 41*. Although the Commonwealth of the Northern Mariana Islands is not a state, it was held that it should be treated as such for purposes of the Quiet Title statute of *28 U.S.C.A. § 24091* because of § 502(a)(2) of the Covenant it was held in the case of *N. Mariana Islands v. United States, 279 F.3d 1070 (9th Cir. 2002)* and thus it was not subject to the twelve year statute of limitations. The Covenant is discussed in an article by Horey, Joseph E., "The Right of Self-Government in the Commonwealth of the Northern Mariana Islands," Asian-Pacific L. & Pol'y J. 4 (Summer, 2003) 180. *See also* the discussion in the article by Keitner, Chimene I., and Reisman, W. Michael, "Free Association: The United States Experience," Tex. Int'l L. J. 39 (Fall, 2003) 1.

(n6)Footnote 90. *See 48 U.S.C. § 1844* if Guam and CNMI do decide to join. The islands are geographically and culturally close to Guam. The possible linkage had the apparent support of the United States, the United Nations, as well as the Mariana islands; however, Guam rejected the proposal. *See* S. Rep. No. 433, 94th Cong. 1st Sess. (1975). Plebiscites were held on Saipan and Tinian in both 1961 and 1963 in which support was noted for the integration with Guam; however, Guam voted against it on November 4, 1969. The negative vote on Guam may well reflect a lingering bitterness on Guam toward the Chamorros who came from Saipan during World War II and served as local police and administrators for the Japanese on occupied Guam.

(n7)Footnote 91. The last acquisition of territory was the acquisition of Swain's Island in American Samoa in 1925. *See* note 142 *infra. See Fleming v. Department of Pub. Safety, 837 F.2d 401, 403 (9th Cir. 1988)* (The people of the Northern Mariana Islands in recent years have elected to enter into a closer relationship with the United States). To date, the association has been well received in general; although as noted in note 58, *supra*, some in the CNMI feel that the United States is continuing to treat them as a territory and intrudes too much in its internal affairs. Although the Resident Representative presents his or her official documentation to the Department of State under § 901 of the Covenant, the general administrative supervision is under the Secretary of the Interior. *See* Executive Order dated November 3, 1986.

(n8)Footnote 92. The Covenant is reprinted in *48 U.S.C. § 1681* and also is discussed in Northern Mariana Islands v. Atalig, note 29 *supra. See 48 U.S.C. § 1694* regarding the jurisdiction of the District Court for the Northern Mariana Islands. § 1694(a), (b) and (c) provide that in addition to the traditional jurisdiction of a district court, the Federal District Court would have appellate jurisdiction over local courts until an appellate system was adopted. In addition, for the first fifteen years after such adoption, appeals from the local Supreme Court are to be to the Ninth Circuit Court of Appeals. The judge for the District Court is appointed for a term of ten years. *See also* note 110, *infra* regarding the

establishment of a local appellate system. *See Sablan v. Manglona, 938 F.2d 970 (9th Cir. 1991)* in which case the court found it lacked jurisdiction to hear the case. In the Sablan case, the plaintiff had filed suit in the trial court of NMI to quiet title to certain land on the Island of Saipan. The plaintiff argued that the defendant's claims to the land were invalid because the defendant was not a person of NMI descent and thus could not hold title under Article XII of the Constitution. The local courts had ruled against the plaintiff. *See also Aldan-Pierce v. Mafnas, 31 F.3d 756 (9th Cir. 1994),* in which the court discussed jurisdiction under the new law and held that after the appeal from the United States District Court had been dismissed, the judgment of the CNMI Superior Court became final. *See also Santos v. Nansay Micronesia, 76 F.3d 299 (9th Cir. N.M.I. 1996),* in which the court discussed the jurisdiction of CNMI courts and noted that in this case the 9th Circuit lacked jurisdiction to review the claim as no federal question was raised until it was too late. The Court determined that it lacked jurisdiction to review a claim that a party was denied due process regarding the assessment of punitive damages. The Northern Mariana Islands' courts had held that compensatory and punitive damages were appropriate when grantors had been fraudulently induced to convey real property. After the fifteen years have passed, appeals from the CNMI Supreme Court will be by writ of certiorari to the United States Supreme Court. Likewise, the 9th Circuit lacked jurisdiction to review a case involving a lease, *Diamond Hotel Co., LTD. v. Matsunaga, 99 F.3d 296 (9th Cir. N.M.I. 1996).* The Code requires the recusal of a judge if the judge is related to an attorney in a case within the second degree of consanguinity. However, this provision was not violated the case of *Boddy v. Guerrero, 179 F.3d 714 (9th Cir. 1999). See also Oriental Crystal (Holding) Ltd. v. Lone Star Casino Corp., 1999 U.S. App. Lexis 9117 (9th Cir 1999)* (CNMI is the "ultimate expositor of local Northern Marianas law;" however, this court may examine the CNMI court's interpretation of CNMI law to determine if it is untenable).

(n9)Footnote 93. *See* § 503 of the Covenant and note 79 *supra*. The large numbers of nonresidents who have come to CNMI to work in the garment factories has attracted the attention of the press and a law suit has been filed. *See* 1999 South China Morning Post Ltd. January 25, 1999. *See also* 1998 Information Access Company, IAC (SM) Newsletter Database Global Information Network, April 1, 1988. *See* David T. Fisher, "Current Development: Legislative Branch: Commonwealth of the Northern Mariana Islands Reform Act," Geo. Immig. L. J. Vol. 12 (1997) 226. Senate bill 1052 was referred to the Senate Committee on Natural Resources on May 13, 1999 and directs the Attorney General to establish, administer, and enforce an effective program of immigration control for CMNI; currently the US Immigration and Nationality Act does not extend to CNMI. Senate Bill 1052 was adopted by the Senate on February 8, 2000; however, it met resistance in the House. *See* Whitney, David, "Alaska Allies at Odds Over U.S. Islands Abuse," Anchorage Daily News, July 31, 2000. Recent law articles discuss the plight of the nonresidents and the control by CNMI over its immigration policies and its exemption from the federal minimum wage. Each suggests a different remedy. Florke, Robert S., "Notes & Comments: Castaways on Gilligan's Island: The Plight of the Alien Worker in the Northern Mariana Islands," Temp. Int'l & Comp. L.J. 13 (Fall, 1999) 381, suggests the United States should address the alien worker problem unilaterally until the CNMI shows the ability to provide significant assistance for the alien workforce. Such measures might include the removal of CNMI's sovereignty over its wage and immigration laws; the establishment of a stronger presence of OSHA; and the threatened removal of duty free status for certain CNMI goods. Cuison, Rose Cruz, "Comment: The Construction of Labor Abuse in the Mariana Islands as Anti-American," UCLA Asian-Pacific Am. L. J. 6 (Spring 2000) 61 discusses that whereas the labor abuse in the CNMI is complex, the right of self-government and self-determination also should be retained. Karet, Deborah J., "Comment: Privatizing Law on the Commonwealth of the Northern Mariana Islands: Is Litigation the Best Channel for Reforming the Garment Industry," Buffalo L. Rev. 48 (Fall, 2000) 1047, suggests that private law suits have achieved more for the workers than has legislation. *See also* the article by Smith, Karen M., "Solving Worker Abuse Problems in the Northern Mariana Islands," 24 Boston College Int'l & Comp. L. Rev. (Spring 2001) 381, which article suggests more controls on immigration and also includes a nice history of the Commonwealth and of the garment industry. The settlement agreement as well as the history of Saipan and the garment industry was discussed in the article by Erin Geiger Smith, Note: Case Study: Does I v. The Gap, Inc.: Can a Sweatshop Suit Settlement Save Saipan?, *23 Rev. Litig. 737 (2004).*

(n10)Footnote 94. *See* § 501 of the Covenant and Northern Mariana Islands v. Atalig, *supra*, note 29, reviewing the Covenant and found that the Sixth Amendment right to a jury trial did not apply in CNMI.

(n11)Footnote 95. *See* § 56.01, *infra*.

(n12)Footnote 96. *See* § 105 of the Covenant. *See also* A & E Pac. Constr. Co. v. Saipan Stevedore, *supra*, note 53. Persons born in the Commonwealth of the Northern Mariana Islands in 1982 and 1983 qualified as citizens of the United States and are thus eligible for US passports. *Sabangan v. Powell, 375 F.3d 818 (9th Cir. 2004).* It was determined that the Longshore and Harbor Workers' Compensation Act does apply to CNMI in *Saipan Stevedore Co. v. Director, Office of Workers' Compensation Programs, 133 F.3d 717 (9th Cir. 1998).*

(n13)Footnote 97. Article 6, §§ 2-3 of the Trusteeship Agreement, *see* note 58 *supra,* directed the United States not only to promote the independence and self-government of the trust inhabitants, but also to protect them against the loss of their land. *See Wabol v. Villacrusis, 958 F.2d 1450, 1461 (9th Cir. 1992)* where the court notes that" ... there can be no doubt that land in the Commonwealth is a scarce and precious resource. Nor can the vital role native ownership of land plays in the preservation of NMI social and cultural stability be underestimated." The court notes that the legislative history of the Covenant indicates that the political union of the Commonwealth and the United States could not have been accomplished without the land restrictions. The importance of the land in the Commonwealth was discussed in the case of *Benavente v. Mariana's Public Land Corporation, 2000 N. Mar. I. Lexis 13 (S.Ct. N.M.I. 2000)* which case also discussed the role of the Mariana's Public Land Corporation. The court refused to set aside a deed because of alleged fraud. A discussion of the land registration system established by the Land Commission is found in the case of *Estate of Vicente S. Muna v. Commonwealth of the Northern Mariana Islands, 2000 N. Mar. I. Lexis 8 (S.Ct. N.M.I. 2000).* The Trust Territory Homestead Program (and its five hectare limitation) was discussed in the case of *Aguon v. Marianas Public Land Corporation, 2001 N. Mar. I. Lexis 4, Appeal No. 99-030, 2001 MP 4 (S.Ct. N.M.I. 2001).*

(n14)Footnote 98. There are only 183.5 square miles of land in the CMNI. As noted by Laughlin, *supra* n. 33, at p. 386 and as quoted in *Wabol, supra, n. 97 at 1462, n.20,* "free alienation is impractical in this situation not because it would not work, but because it would work too well."

(n15)Footnote 99. *See* § 501(b) and § 805 of the Covenant. Section 805(a) provides that the alienation of permanent and long-term interests shall exist for twenty-five years after the termination of the Trusteeship Agreement (or until 2011), although it may continue thereafter.

(n16)Footnote 100. Article XII of the Constitution, *reprinted in* Commonwealth Code (CMC) at B-301, B-334, B-335 implements § 805 of the Covenant. In 1993, the CNMI Legislature adopted CNMI Public Law 8-32 (drafted as Senate Bill 8-124, SCS2, Eighth Northern Marianas Commonwealth Legislature, 45th Sess.) in response to the cases of *Ferreira v. Mafnas, 1 F.3d 960 (9th Cir. N.M.I. 1993) aff'd, Ferreira v. Borja, 93 F.3d 671 (9th Cir. N.M.I. 1996)* (discussed in footnote 110 *infra*) and *Aldan-Pierce v. Mafnas, 31 F.3d 756 (9th Cir. N.M.I. 1994)* discussed in notes 92 and 102 herein). This legislation provided for 1) a limitation on attorney fees in Article XII cases (the land restraint); 2) assured restitution to persons who lose any interest in land which is reclaimed by an Article XII judgment; 3) notes that a resulting trust does not arise merely because the purchase price for the land is paid for by persons of non-Mariana descent; 4) sets a six-year statute of limitation for Article XII claims with certain exceptions; and 5) allows CNMI courts to sever any void terms of an agreement which violates Article XX in part. This legislation, as well as the cases, are discussed in Robert Torres, "Ferreira v. Borja: Land Transactions in the Northern Marianas," 29 New England L. R. 209 (1994) and cited in the Bibliography. *See also Diamond Hotel Co. v. Matsunaga, 99 F.3d 296 (9th Cir. N.M.I. 1996)* (court lacked jurisdiction to consider issue of whether lease violated provision of Commonwealth Constitution regarding acquisition of property from persons of Northern Mariana descent).

(n17)Footnote 101. Section 2 broadly defines the term acquisition as including transfers by sale, lease, gift, inheritance, or other means although exceptions are created for transfer by inheritance to a spouse or for foreclosure by a mortgagee so long as the interest is then disposed of within five years. The CNMI Supreme Court decided that the Commonwealth Constitution prohibited the issuance of a writ of execution on a tract of land in *Saipan v. Rasiang, 1999 N. Mar. I. Lexis 1 (N.M.I. 1999).* The CNMI Code exempts land from attachment and execution unless it is owned by

the debtor in his or her own right and the court decides that justice requires the attachment. 7 CMC § 4210. The property in question was owned as tenants in common and although each party had a separate interest, the court held it was within the trial court's discretion not to order it sold. The court also discussed Article XI, Section 5(a) of the Constitution which does not allow the freehold interest in a homestead to be transferred for ten years after acquisition though it may be mortgaged to improve the land. Such a transfer means by sale and does not include a transfer by either inheritance or mortgage. The Court noted further that homestead lots may not be transferred by judicial sale within the ten-year period after receipt of the homestead.

(n18)Footnote 102. Section 4 defines a person of Northern Mariana descent as one who is a citizen or national of the United States and who is at least one-quarter Northern Mariana Chamorro or Northern Mariana Carolinian or combination thereof, or an adopted child of a person of such descent if adopted while under the age of eighteen. A person is considered to be a full-blooded Chamorro or Carolinian if that person was born or domiciled in the Northern Mariana Islands by 1950 and was a citizen of the Trust Territory of the Pacific before the termination of the Trusteeship. *See* Aldan-Pierce v. Mafnas, footnote 92, *supra*, which case involved a suit to enforce an option agreement against allegations that it violated the land restrictions. In the case of *Milne v. Lee Po Tin, 2001 N. Mar. I. Lexis 14, Appeal No. 99-010, 2001 NP 16 (S.Ct. N.M.I. 2001),* the court determined that a lease amendment with a lessee who was not of Northern Marianas descent was void under Article XII of the N.M.I. Constitution. This court also cited *Diamond Hotel Co., Ltd. v. Matsunago, 4 N. Mar. I. 213 (1995).* In the case of In the *Matter of the Estate of Joseph Rufo Roberto v. Roberto, 2003 MP 16, 2003 N. Mar. I. LEXIS 16 (2003)* the court determined that, because of the land ownership restriction, the decedent was unable to own property because he was not of Northern Mariana descent. From the time of land purchase, however, the decedent had a right of possession which was superior to that of any other person or entity except the grantor and possibly the Government. The six-year statute of limitation had run as to the grantor. Thus, the court concluded that the title was in the name of the trust to whom the land had been transferred more than six years before.

(n19)Footnote 103. Section 3 of Article XII. This section was amended in 1985. Previously the term was forty years. *See also Diamond Hotel Co., LTD. v. Matsunaga, 99 F.3d 296 (9th Cir. N.M.I. 1996),* in which case the 9th Circuit held that it lacked jurisdiction to review a case in which the Commonwealth Supreme Court held that an unconstitutional provision of a lease (regarding the land restriction) was severable from the remainder of the lease.

(n20)Footnote 104. The Chamorros of the Northern Mariana Islands were almost destroyed by the Spanish in the 17th century. Those who survived the brutal slaughter were resettled on Guam. Only a few remained on the Island of Rota. The Carolinians began to move to the islands in the early 19th century, which move was supported by the Spanish, and became the dominant community on Saipan during that century. The Chamorros did not start to return until 1816. When the Germans acquired the Mariana Islands in 1899 by purchase, they continued the Spanish effort to introduce a patrilineal naming system and in time succeeded. The Carolinians began to follow Chamorro patterns and in the latter part of the 19th century, the demographics began to shift in favor of the Chamorros. A good history is noted in Howard P. Willens & Deanne C. Siemer, The Constitution of the Northern Mariana Islands: Constitutional Principles in a Pacific Setting, *65 Georgetown L.J. 1373 (1977).*

(n21)Footnote 105. The Carolinians are a minority today; however, they qualify as noted in note 102, *supra* for NMI descent and have a special office in the executive branch to which the governor is to appoint a person who is acceptable to the Carolinian community. *See* Mariana Constitution, Art III, § 18. The Carolinians have their own language, dances and ties to the Caroline Islands.

(n22)Footnote 106. *See Herald, n. 79, supra* who notes that the Chamorros are now the second largest ethnic group and the Carolinians now the fifth on the islands. The article notes that use of the native languages has decreased and many are leaving the islands. Article XXII, § 3 of the Northern Marisland Constitution designates the three official languages as Chamorro, Carolinian and English. In the case of *Commonwealth of the Northern Mariana Islands v. Guerrero, 2003 MP 15, 2003 N. Mar. I. LEXIS 14 (2003)* the court held that the litigant had the constitutional right to speak Chamorro in a judicial proceeding rather than English.

(n23)Footnote 107. Section 5 of Article XII notes that a corporation is considered to be a person of Northern Mariana descent so long as it is incorporated in the Commonwealth, has its principal place of business in the Commonwealth, and 100% of its directors and its shareholders are of Mariana descent. Section 5 was amended in 1985 to raise the percent of directors and shareholders from 51% to 100%. *See also Milne v. Hillblom, 165 F.3d 733 (9th Cir. 1999)* in which the court determined that the purchasing corporation did qualify under the requirements of the CNMI Constitution at the time (i.e. 51% of native peoples only required for the Board of Directors). Note also that CNMI Public Law 8-32 (2 N. Mar. I. Code §§ 4941-4992) was enacted by the CNMI legislature to deal with actions concerning Article XII of the CNMI Constitution. As noted in the case of *Milne v. Hillblom, supra at 735.* This Act appears to be a codification of the *Ferreira* line of cases. *See Ferreira v. Borja, 93 F.3d 671 (9th Cir. 1996). See also Iglesias v. Realty Trust Corp., 2003 MP 7, 2003 N. Mar. I. LEXIS 6 (2003)* in which case the entry of a summary judgment was held to be proper as the court considered the issue as to whether the corporation was of Northern Marianas descent to be a legal question and the evidence showed that the corporation had been incorporated in NMI, had its principal place of business in NMI, and the requisite percentage of directors and stakeholders were of Northern Marianas descent.

(n24)Footnote 108. *See* note 97, *supra*.

(n25)Footnote 109. Section 6 of Article XII provides that a transaction made in violation of § 1 shall be void *ab initio*. Although the court noted it was void under § 6, the case was remanded and the court noted in a footnote that the trial court might want to adjust the equities of the situation by compensating the tenant for the amount expended in improving the property.

The court also determined that it had the jurisdiction to hear the case despite the fact that the Commonwealth Judicial Reorganization Act of 1989, NMI Pub. L. No. 6-25, was enacted while the appeal was pending. This Act established a local appellate court system including a Supreme Court. *See 48 U.S.C. § 1694* regarding the District Court for the Northern Mariana Islands and note 93, *supra*.

(n26)Footnote 110. *See* Sablan v. Manglona, note 92 *supra*; *Yokeno v. Mafnas, 973 F.2d 803 (9th Cir. 1992)* (the court found no jurisdiction; however, the series of land transfers used to comply with Article XII is interesting to review). *See also In re Realty Trust Corp., 143 B.R. 920 (D.N.M.I. 1992)* (questions concerning whether land transactions violated the ethnic property ownership qualifications of XII should be considered by the local courts and thus Chapter 11 case should be dismissed). Citizenship provisions are also rigidly construed. *See Smith v. Pangilinan, 651 F.2d 1320 (9th Cir. 1981). But see Ferreira v. Mafnas, 1 F.3d 960 (9th Cir. N.M.I. 1993),* in which a purchaser of Northern Mariana Descent (NMD) brought a quiet title action. The seller of the land also was of Northern Mariana Descent. The purchaser obtained financing from persons not of such descent and, in return for the financing, entered into a partnership agreement with them in which the land was leased for forty years and the purchaser agreed to convey the land to the partnership if the law ever changed to allow such a conveyance, to purchase the improvements at the end of the lease, and to convey the land to a person of NMD if the purchaser ever withdrew from the partnership. The Supreme Court of CNMI held that this created a resulting trust for persons not of NMD and held that the transaction therefor violated the CNMI Constitution and gave the title to the land to the original seller. The 9th Circuit vacated the judgment and remanded. The court found that this had been an inappropriate use of the resulting trust doctrine as such was not the parties' intent and, even if it were their intent, a trust would not be created as it would have had the illegal purpose of avoiding the land restraint in the CNMI Constitution. The 9th Circuit noted that although the CNMI Supreme Court was the ultimate expositor of local Northern Mariana law, the United States Court of Appeals may review that court's interpretation thereof if the interpretation was untenable or amounted to a subterfuge to avoid federal review. *See also* footnote 100 *supra* discussing the CNMI legislation enacted in response to this case. After *Ferreira v. Mafnas, 1 F.3d 960 (9th Cir. N.M.I. 1993)* was decided, the Northern Mariana Commonwealth Supreme Court quieted title in favor of the purchaser. An appeal was then taken again to the Ninth Circuit. The Court held in *Ferreira v. Borja, 93 F.3d 671 (9th Cir. N.M.I. 1996)* that the Court of Appeals lacked jurisdiction to determine claims which primarily involved the Constitution and common law of the Commonwealth of the Northern Mariana Islands and that the law of

the case doctrine precluded the claim which requested the Court of Appeals to overrule its prior decision. *See* footnote 107 *supra* regarding CNMI Public Law 8-32 (2 N. Mar. I. Code §§ 4941-4992) which codifies much of the *Ferreira* case.

(n27)Footnote 111. *See* Article VIII, § 806(a) of the Covenant. Subsection (b) thereof notes that the United States will try to acquire the land by means other than eminent domain if possible. Leibowitz, *supra*, n. 3, at 352 notes that these procedures seem to work in that in 1987 the Air Force requested land on Saipan for a radar tracking station and indicated that if the request were refused it would not use eminent domain. *But see Commonwealth of the N. Mariana Islands v. United States, 399 F.3d 1057, 2005 U.S. App. LEXIS 3210 (9th Cir. 2005)* in which case the appellate court affirmed the district court's grant of summary judgment that the United States acquired the paramount interest in the seaward submerged lands found off the shores of the Commonwealth. In addition, any laws enacted by the CNMI legislature to the contrary were inconsistent with the paramountcy doctrine and were preempted by federal law.

(n28)Footnote 112. Sections 802 and 803 provide for lands to be leased to the United States and notes that the term will be for fifty years with a renewal option for fifty years. All lands held by the Government of the Trust Territory of the Pacific Islands were transferred to the Government of the Northern Mariana Islands under § 801 of the Covenant. The Marianas Pub. Land Corp., created under the CMNI Constitution, manages all public lands. *See Govendo v. Marianas Public Land Corporation, 1992 WL 62888* (Board of Directors must act in accordance with strict standards of fiduciary care).

(n29)Footnote 113. *See, e.g., Cepeda v. Hefner, 1992 WL 135905* (quiet title action involving Article XII); *Cabrera v. Cabrera, 1992 WL 62896* (quiet title action involving delivery of a deed); *Ferreira v. Borja, 1992 WL 62894* (quiet title action involving Article XII in which a resulting trust was used to rectify an impermissible land use); *Repecki v. Mac Homes, 1991 WL 70063* (quiet title action regarding improvements as well as quitclaim deed, lease and title insurance issues). *But see* Santos v. Nansay Micronesia, footnote 92, *supra*, in which the court awarded both compensatory and punitive damages when land had been conveyed due to fraud, despite the defendant's assertion that restitution was the more appropriate remedy.

(n30)Footnote 114. *See* 7 CNMI Code § 3401. *See also* Yokeno v. Mafnas, note 111 *supra*. Building codes and zoning codes have been adopted relatively recently. *See* 2 CNMI Code §§ 711(a) and 7201, 7221. The court looked to the laws of the United States when neither Commonwealth written law nor Chamorro law resolved how to adequately trace marital property was held in the case of *Santos v. Santos, 2000 N. Mar. I. LEXIS 2 (S.Ct. N.M.I. 2000).* Estoppel and gift by deed were discussed in the case of *Piteg v. Piteg, 2000 N. Mar. I. LEXIS 6 (S.Ct. N.M.I. 2000).* The Restatements of Contracts 2d was discussed in the case of *Rosario v. Camacho, 2001 N.Mar. I. LEXIS 3,* Appeal No. 99-003 & 99-013 (S.Ct. N.M.I. 2001) in which case the validity of a gift deed and accounting among cotenants were discussed.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.11

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.11 The Commonwealth of Puerto Rico.

(a) Background.

The Commonwealth of Puerto Rico consists of four islands in the Caribbean. n115 Acquired by the United States in 1898 from Spain, n116 Puerto Rico originally was under the temporary governance of the United States military. n117 The Organic Act of 1900, often referred to as the Foraker Act, provided for a civil government and established the District Court for Puerto Rico. n118 In 1917 a second Organic Act, often referred to as the Jones Act, provided for additional self-government, a bill of rights, and for U.S. citizenship. n119 Puerto Rico was an organized, unincorporated territory. n120 Puerto Rico became a Commonwealth in 1952. n121 The Spanish language and traditions remain strong. n122

Puerto Rico now elects its own legislature and governor n123 and has its own judiciary system. n124 The Federal District Court of Puerto Rico, unlike the federal district courts of the other territories, is an Article III court. n125 Although Puerto Rico is a Commonwealth, the U.S. Congress retains certain powers. n126

COMPUTER-ASSISTED RESEARCH

LEXIS: commonwealth w/5 puerto rico

(b) Land.

Puerto Rico is a civil law jurisdiction whose civil code contains elements of both the Spanish and the Louisiana Codes. n127 Mortgage laws may be found in Title 30 of the Civil Code. n128 General property laws may be found in Title 31. n129 The concept of real property is the Spanish "*immueble*" or immovable property which includes both land and buildings. n130

Puerto Rico is a community property jurisdiction. n131 Property may be registered. n132 The 1958 Condominium Law of Puerto Rico became a model for condominium laws throughout the United States. n133 Corporations may not own real estate beyond that which is reasonably necessary to carry out the purposes of the corporation, and a corporation authorized to engage in agriculture shall, by its charter, be restricted to the ownership and control of land not to exceed

five hundred acres of land. n134 The power of eminent domain is provided for in Article II, § 9 of the Constitution. n135 The first Sunday of May is "Land Day." n136

COMPUTER-ASSISTED RESEARCH

LEXIS: puerto rico w/30 land! or propert!

FOOTNOTES:
(n1)Footnote 115. The four islands are Culebra, Mona, Vieques, and the largest island, Puerto Rico. The islands are located approximately 1,100 miles southeast of Florida. The name Puerto Rico was substituted for Porto Rico pursuant to the Act of May 17, 1932, c. 190, *47 Stat. 158. See also 48 U.S.C. § 731*.

(n2)Footnote 116. Spain ceded Puerto Rico to the United States at the conclusion of the Spanish-American war under the Treaty of Paris, dated December 10, 1898, and proclaimed on April 11, 1899; *30 U.S. Stat. 1754,* T.S. No. 343 (1899). *See also* note 5, *supra. See A.S. Lascelles & Co. v. United States, 49 Ct. Cl. 382, aff'd, De Pas v. United States, 243 U.S. 625 (1914)* (Puerto Rico did not become a part of the United States until the treaty had been signed by both parties thereto and the ratification exchanged). Christopher Columbus stopped briefly on Puerto Rico in 1493. At that time, the islands were inhabited by the Taino Indians from South America. A Spanish outpost was established in 1508. Spain introduced slaves from Africa in 1510 to work the sugar cane and coffee plantations.

(n3)Footnote 117. General Davis, the commander in control of the islands, allowed the existing municipal laws to continue in effect. As a result, the Spanish Civil Code, the Spanish Mortgage Law, and other Spanish laws which had been made applicable in Puerto Rico in 1889 by a Spanish Royal Decree, survived the change in sovereignty. Laws were changed only when inconsistent with the United States Constitution or laws.

(n4)Footnote 118. Act of April 12, 1900, c. 191, *31 Stat. 77.* The Foraker Act established a civil government with a Governor appointed by the President of the United States, an elected House of Delegates, and an elected Resident Commissioner to speak for Puerto Rico in the United States House of Representatives. The Act also provided in § 40 for a Commission to study and suggest changes to the existing legal system in Puerto Rico with the intent of reconciling differences between the Spanish Civil law and traditional Anglo-American law. The commission urged the maintenance of the civil tradition. The Insular Legislative Assembly therefore left the Civil Code intact, with only minor alterations. Today, however, many of the property code statutes are derived from the Louisiana Civil Code. Other codes were adopted or modified from other jurisdictions. *See* Marvel Rodriquez Ramos, Interaction of Civil Law and Anglo-American Law in the Legal Method in Puerto Rico, *23 Tulane L. Rev. 1 (1948).*

The Foraker Act of 1900 rejected a proposal to make Puerto Ricans U.S. citizens lest by implication the Act incorporated Puerto Rico into the Union. *See* 33 Cong. Reg. 3037 (1900) at 3354. *See also* § 56.04 *supra* regarding the differences between incorporated and unincorporated status.

(n5)Footnote 119. Act of March 2, 1917, c. 145, *39 Stat. 961,* commonly known by its popular name as the Jones Act. A collective grant of U.S. citizenship was granted. *See* note 66, *supra*. The upper house, or Senate, which had been appointed by the President was now elected. The legislative system was similar to that of the U.S. Congress with the governor having a veto power and the President of the United States having an ultimate veto.

(n6)Footnote 120. *See Balzac v. People of Porto Rico, supra,* n.16. The Jones Act did not expressly incorporate Puerto Rico into the Union and it contained a Bill or Rights which would not be needed if it were so incorporated.

(n7)Footnote 121. Act of July 3, 1950, ch. 446, *64 Stat. 319,* Pub. L. 600. This bill authorized the people of Puerto Rico to adopt their own constitution and to organize a local government, which was to be republican in form and contain the fundamental civil guaranties of a bill of rights. A referendum was to be held to give the people the opportunity to accept or reject it, which if ratified was to be by a majority of the voters participating in the island-wide

referendum. Congress was to ratify any proposed Constitution before it became effective. *See 48 U.S.C. §§ 731b*-731d. *48 U.S.C. § 731b* recognizes that these sections were adopted in the nature of a "compact." *See* note 53 *supra*. The proposed Constitution was approved by a majority vote of the people of Puerto Rico in a referendum held in March of 1952. The Constitution, as amended, was approved by Congress by Joint Resolution on July 3, 1952, c. 567, *66 Stat. 327* and proclaimed by the Governor of Puerto Rico to be in force and effect on July 25, 1952. Public Law 600 also provided for the automatic repeal of a large number of sections of the pre-existing Organic Act of 1917 as amended, including the sections dealing with purely local concern such as the structure of the insular government. The remaining sections of the Organic Act continued in effect as the Puerto Rican Federal Relations Act, *48 U.S.C. § 731e. See also Cosentino v. International Longshoremen's Ass'n Dist. Council of Ports of P.R., supra*, note 44 (existing federal laws would continue to apply to Puerto Rico whenever applicable prior to the approval of the Commonwealth).

The Popular Democratic Party advocated Commonwealth status at that time as a permanent status equal in dignity to Statehood. Many felt that the Spanish language and identity would have been eroded by statehood. *But see* § 56.09, *supra*, note 82. Many in Puerto Rico today advocate statehood, including the New Progressive Party. See footnote 182, § 56.06 supra regarding recent voting on status which was held in December of 1998 and resulted in the following vote: Commonwealth: 1%; Free Association: 3%; Independence: 2.5%; Statehood: 46.5%; and None of the Above 50.2%. A good discussion of the history of Puerto Rico and the various alternatives may be found in an article by Jose Trias Monge, "Articulos: Plenary Power and the Principle of Liberty: An Alternative View of the Political Condition of Puerto Rico," Rev. Jr. U.P.R. 68 (1999) 1. The status of Puerto Rico continues to invite comment. Ingram, John D., "Puerto Rican Independence: Whose Choice? The People of Puerto Rico or The United States Government?" Mich. L. Rev. (2001) 85, discusses the various alternatives and includes a history of the Commonwealth. Declet Jr., Rafael A., "The Mandate Under International Law for a Self-executing Plebiscite on Puerto Rico's Political Status, and the Right of U.S. Resident Puerto Ricans to Participate," *28 Syracuse J. Int'l L. & Com. (Summer 2001) 19,* includes a history and concludes that Puerto Rico has never fully exercised its rights of self-determination. *See also* the Comment by Jose D. Roman, "Trying to Fit an Oval Shaped Island Into A Square Constitution: Arguments for Puerto Rican Statehood," *29 Fordham Urb. L. J. (April 2002) 1681* which comment suggests the need for statehood in order for citizens to be able to vote in presidential elections. *See also* the article by Keitner, Chimene I. and Reisman, W. Michael, "Free Association: The United States Experience," Tex. Int'l L. J. 39 (Fall 2003) 1 in which Puerto Rico is discussed.

(n8)Footnote 122. Although the political parties in Puerto Rico may disagree on whether Puerto Rico should become a state, remain as a Commonwealth, or become independent, all agree on the need to preserve the Spanish cultural identity of the islands. On April 5, 1991, the Governor signed a law making Spanish the official language, superseding P.R. Laws Ann. tit. 1, § 51 in which Spanish and English were both recognized. *See* LEXIS 1991 P.R. ALS 4; 1991 P.R. Act 4; 1991 P.R. H.B. 417. English remains the official language of the Federal District Court pursuant to *48 U.S.C. § 864.* The English language requirement was in the Foraker Act of 1900. The Court Interpreters Act of 1978 provides for bilingual interpreters. *See* Pub. L. 95-539, *92 Stat. 2042* and *codified at 28 U.S.C. §§ 1827*-1828. The legislation allows a language other than Spanish to be used when its use would be convenient, necessary or indispensable. *See also* the article by Lisa Napoli, "The Legal Recognition of the National Identity of a Colonized People: The Case of Puerto Rico," B. C. Third World L. J. Vol. 18 (1998) 159; Roman, Ediberto, "Empire Forgotten: The United States' Colonization of Puerto Rico," Vil. L. Rev. Vol. 42 (1997) 1119. Although Puerto Rico is now officially bilingual, the use of Spanish predominates as noted in the Comment by Abel, Josiane Deschamps, "Language, Nationality and the Law: What Lies Ahead for America," U. Miami Inter-Am. L. Rev. 34 (Spring 2003) 343 and the article by Alvarez-Gonzalez, Julian, "Law, Language and Statehood: The Role of English in the Great State of Puerto Rico," Law & Ineq. 17 (1999) 359.

(n9)Footnote 123. Pursuant to the Puerto Rican Constitution, the Governor and Legislature are elected; and judges are appointed. *See also 48 U.S.C. § 821. See also Garcia v. Friesecke, 597 F.2d 284 (1st Cir. 1979)* (grant to Puerto Rican Legislature of legislative power regarding local matters is considered to be as broad and comprehensive as language can make it). *48 U.S.C. § 845* notes that the Puerto Rican Legislature may amend, alter, modify or repeal the income tax laws in force in Puerto Rico. An elected governor was first provided by the Elective-Governor Act of 1947,

ch. 490, *61 Stat. 770. See* the article by Jose Julian Alvarez-Gonzalez, Law, Language and Statehood: The Role of English in the Great State of Puerto Rico, Law & Ineq. J. 17 (Summer, 1999) 359 whose author concludes that the issue of language will not disappear. Jose Trias Monge suggests that a reason that statehood has not been preferred by the people of Puerto Rico lies with concerns for its national identity, language and culture. Jose Trias Monge, Articulos: Plenary Power and the Principle of Liberty: An Alternative View of the Political Condition of Puerto Rico, Rev. Jr. U.P.R. 68 (1999) 1 at 20. *See also* the comment by Morton, Sean M., "Comment: Death Isn't Welcome Here: Evaluating the Federal Death Penalty in the Context of a State Constitutional Objection to Capital Punishment," *64 Alb. L. Rev. (2001) 1435* in which the Puerto Rican Constitution, which outlaws capital punishment, is discussed.

(n10)Footnote 124. The courts of Puerto Rico are administered as if a single district under the Constitution of Puerto Rico, Article V, § 2. At the time of acquisition in 1898, Puerto Rico had a functioning legal system which used the Spanish civil law. *See* note 118 *supra*. The Foraker Act established a Federal District Court. Until 1961, appeals from the Puerto Rican Supreme Court went to the First Circuit Court of Appeals; however, at the present time such appeals are to the United States Supreme Court, as with state courts. *See 28 U.S.C. § 1258.* The First Circuit, however, was sensitive to issues of local autonomy. *See, e.g., Marquez v. Aviles, 252 F.2d 715 (1st Cir. 1958)* (approval of the Commonwealth impliedly withdraw federal court jurisdiction over local questions).

(n11)Footnote 125. Currently, the District Court in Puerto Rico has seven judges. *See 28 U.S.C. § 133. See also 28 U.S.C. § 119.* Appeals are to the First Circuit Court of Appeals. *See 28 U.S.C. § 1291. See also 48 U.S.C. § 864* noting that the laws of the United States relating to appeals are as with the several States.

(n12)Footnote 126. *See generally* § 56.06 *supra*. Congress has never intervened directly with the Constitution nor with any law of Puerto Rico nor is intervention likely to occur. In fact, under the compact between Puerto Rico and the United States, Congress cannot amend the Puerto Rico Constitution unilaterally. *See United States v. Quinones, supra*, note 53 (Puerto Rico is no longer a federal governmental agency but is like a state. The Congressional intent behind the approval of the Puerto Rican Constitution was that the Constitution would govern the organization of local government and its adoption would in no way alter the applicability of U.S. laws such as the Omnibus Crime Control Act). *See Rodriquez v. Popular Democratic Party, 457 U.S. 1, 8 (1982),* Mora v. Mejias, *supra*, note 53. *See also Agosto v. Barcelo, 594 F. Supp. 1390 (D.P.R. 1984),* with *mandamus granted* in *Hernandez-Agosto v. Romero-Barcelo, 748 F.2d 1 (1st Cir. 1984)* (federal law governs relative rights and obligations of political branches of the Puerto Rican government when in conflict and the Puerto Rican government is restricted by federal law and federal principles). Congress and the President do, however, adopt legislation and rule on matters of concern to the residents of Puerto Rico (either by inclusion or exclusion).

48 U.S.C. § 734 provides that statutory laws of the United States not locally inapplicable are effective in Puerto Rico except for the Internal Revenue laws. *See also* Caceres v. San Juan Barge Co., *supra*, note 55 (as a commonwealth the government of Puerto Rico has such powers as Congress from time to time gives it under the broad power of Congress to legislate for national territory); Craibow Corp. v. Occupational Safety and Health Review Comm'n, *supra*, note 76 (new federal legislation does not require the prior consent of Puerto Rico to be applicable there). *See also* Jose Monge Trias, Puerto Rico: The Trials of the Oldest Colony in the World (New Haven. Yale University Press 1997); Gabriel A. Terrasa, The United States, Puerto Rico, and The Territorial Incorporation Doctrine: Reaching A Century of Constitutional Authoritarianism, *31 J. Marshall L. Rev. 55 (1997).* Puerto Rico: The Trials of the Oldest Colony in the World, has been reviewed by Juan R. Torruella, in the Yale Law Journal, Vol. 107 (1998) (1503). *See also* the reviews by Own M. Fiss, Decolonizing Puerto Rico: A Review of Jose Trias Monge, 'Puerto Rico: Trials of the Oldest Colony in the World,' Rev. Jr. U.P.R. 67 (1998) 1121 and by Christina Duffy Burnett, Puerto Rico: The Trials of the Oldest Colony in the World by Jose Trias Monge, Yale J. Int'l L. 23 (Summer, 1998) 561. *See also* the article by Levinson, Sanford, "Symposium: the Canon(s) of Constitutional Law: Why the Canon Should be Expanded to Include the Insular Cases and the Saga of American Expansion," Const. Commentary, 17 (Summer 2000) 241. The author notes that the material for the essay will be included in a book by Burnett, Christian Duffy and Marshall, Burke, eds., Foreign in a Domestic Sense: Puerto Rico, American Expansion, and the Constitution. (Duke University Press) which book contains

essays on Puerto Rico. The United States Navy's bombing exercises on the island of Vieques has generated much discussion and lawsuits. The district court dismissed the lawsuit to stop the Navy from resuming bombing exercises on the island in *Puerto Rico v. Rumsfeld, Civil Action No. 01-886, 2001 U.S. Dist. Lexis 21872 (District Ct. D.C. 2001),* and in the *United States of America v. Sued-Jimenez, 275 F.3d 1 (Appeals 1st Cir. P.R. 2001)* the trespassing convictions were affirmed. President George W. Bush has said the bombings will end by May of 2003. The debate continues regarding the status of Puerto Rico. *See also* the articles by Jason Adolfo Otano, Note: Puerto Rico Pandemonium: The Commonwealth Constitution and the Compact-Colony Conundrum, *27 Fordham Int'l L. J. 1806 (2004);* Angel R. Oquendo, Liking to be in America: Puerto Rico's Quest for Different in the United States, *14 Duke J. Comp. & Int'l L. 249 (2004);* Karina Camacho, Note & Comment: The United States-Puerto Rico Relationship: Incomplete Decolonization, *48 How. L. J. 491 (2004). See also United States v. Ayala, 289 F.3d 16* (lst Cir. 2002) (convictions affirmed); *United States v. Zenon-Rodriguez, 289 F.3d 28* (lst Cir. 2002) (trespass in surrounding waters). The National Authorization Act for Fiscal Year 2001, Pub. L. No. 106-398, Title XV, 1508 (2002) transferred parts of the Island to the Interior for administration.

(n13)Footnote 127. The Spanish Civil Code of 1888 was made applicable to Puerto Rico by Royal Decree of July 31, 1889. Basically, that Civil Code remains in force today, although more than one hundred articles of the Louisiana Civil Code also became part of the Puerto Rico Civil Code. *See* Ramos, *supra*, note 118 as well as Gonzales Tejera, Eason-Weinmann Center for Comparative Law Symposium on Reflections on the Civil-Law Tradition in Louisiana: Agenda for the Twenty-First Century: Mortis Causa Wealth Transfer and the Protection of the Family: The Spanish-Puerto Rican Experience, *60 Tulane L. Rev. 1231 (1986).* Thus, for example, in Title 31, § 1111 the term ownership is defined and the derivation is noted as being the Civil Code, 1902, § 354; Spanish Civil Code, Art. 348; and the Civil Code of Louisiana, Art. 488.

See also Porto Rico v. Fortuna Estates, 279 F. 500 (1st Cir 1922) (under the general order of November 4, 1898, and the Foraker Act, the laws of Porto Rico in force at the time continued to apply and thus a prescriptive right to land which had commenced to run under the Spanish Civil Code, Art. 1957 continued until the adoption of the Porto Rican Code on March 1, 1902). *But see United States v. Hato Rey Bldg. Co., 886 F.2d 448 (1st Cir. 1989)* noting that *Fortuna Estates* had been superseded by statute and that today adverse possession will not apply to acquire an interest in land held by the United States. *See* for example, the brief comment in *Pritzker v. Yari, 42 F.3d 53* (lst Cir. P.R. 1994) noting that the Spanish Civil Code may, at times, constitute significant authority in the interpretation of the Puerto Rico Civil Code, though not when the Puerto Rico Code is clear. As noted in the book by Peter C. Stuart, Isles of Empire: The United States and Its Overseas Possessions, on page 260, the first two organic acts for Puerto Rico contained a limitation of landholding to five hundred acres which limitation lacked enforcement provisions and was widely ignored.

(n14)Footnote 128. Title 30 was updated in 1979, replacing the Spanish Mortgage Law of 1893. *See also In re Hernandez, 244 B.R. 549 (Bankr. D.P.R. 2000)* in which case the court concluded that title to the mortgaged property was transferred to the foreclosure sale purchaser when the deed of judicial sale was executed and thus was not property of the bankruptcy estate when the title was conveyed prior to the petition for bankruptcy. The differences between an ordinary mortgage foreclosure and a summary foreclosure proceeding were discussed in the case of *In re Martinez Oritiz, 306 B.R. 727 (Bankr. D.P.R. 2004)* and it was determined that, because the statute had not been followed in the summary proceeding, the debtor still retained an interest in the property.

(n15)Footnote 129. Subtitle 2 thereof deals with Property, Ownership and Its Modification including the classification of property, ownership, common ownership, waters, possession, usufruct, servitude, homestead and the registry of property. Subtitle 3 deals with the different ways of acquiring ownership of property.

The act is to be known as The Civil Code of Puerto Rico, Civil Code, 1920 § 1. Section 10 of Chapter 1, Title 30 notes that all real property is subject to the laws of the country where situated (derived from Civil Code, 1902, § 10 Spanish Civil Code). Conveyances of real property in Puerto Rico therefore are governed by Puerto Rican laws. *See United States v. Deya, 369 F. Supp. 1113 (D.P.R. 1974); Weston v. Stuckert, 329 F.2d 681 (1st Cir. 1964). See*

Estancias La Ponderosa Dev. Corp. v. Harrington, 195 B.R. 210 (Bankr. D.P.R. 1996) in which the court discussed some of the rules regarding contracts for the sale of land and held specifically that, if the land had less than 90% of the acreage promised, the purchaser had an option of either demanding a reduction in the total sale price or rescinding the contract. *See also Santiago v. Figueras (In re Figueras), 193 B.R. 118 (Bankr. D.P.R. 1996)* (noting that the gift of residential property to their children constituted a fraudulent transfer and was void when husband grantor later filed a Chapter 7 proceeding); *Caridev, Inc. v. Stubbe (In re J. Gus Lallande, Inc.), 197 B.R. 406 (Bankr. D.P.R. 1996)* (contract by the bankruptcy trustee for the sale of land located in a flood zone was void ab initio as it was executed contrary to express requirements of Puerto Rico law). A power of attorney for the sale of land must be specially conferred pursuant to P.R. Laws Ann. tit. 31, § 4425 and thus, it was held in *Ibizarry v. Varela, 59 F Supp. 2d 358 (D.P.R. 1999)* that the power granted to the sister in connection with the settlement of the parents' estate did not extend to the conveyance of the property once the siblings acquired title. Consequently, the brother continued to own an interest in the subject property.

(n16)Footnote 130. *See* P.R. Laws Ann. tit. 31, § 1041which defines immovable as "those which cannot move themselves or be removed from one place to another." P.R. Laws Ann. tit. 31, § 1042 adds that "things may be immovable either by their own nature or by their destination or the object to which they are applicable." P.R. Laws Ann. tit. 31, § 1043 then lists items which are immovable. All three sections were derived from the Louisiana Code. *See also* P.R. Laws Ann. tit. 31, § 1027 which divides property into either corporeal or incorporeal items.

Adverse possession is recognized. *See, e.g.*, P.R. Laws Ann. tit. 31, § 5278 and *United States v. Deya, supra,* note 129. Adverse possession does not run against the United States. *See United States v. Hato Rey Bldg. Co., Inc., supra,* note 127 (U.S. may not be stripped of its recorded title to land forming part of the Caribbean National Forest by virtue of adverse possession).

Pursuant to the Treaty of Paris, *supra,* note 5, all public lands in Puerto Rico formerly held by Spain became the property of the United States. *See also Lasky v. United States, 388 F. Supp. 1036 (D.P.R. 1975)* (U.S. ownership by virtue of the Treaty of Paris continued unless the U.S. had been divested of it). *See also 48 U.S.C. § 748* noting that the President may from time to time convey such lands to the people of Puerto Rico. *See In re Lang, 191 B.R. 268 (Bankr. D.P.R. 1995)* in which the court held that when one spouse filed bankruptcy in Puerto Rico, all property of that debtor, as well as community property, became estate property. *See also* Santiago v. Figueras (In re Figueras), footnote 129 *supra,* in which the court held that the husband's debt could be paid from conjugal property.

(n17)Footnote 131. *See* P.R. Laws Ann. tit. 31, § 3621. As is traditional in a civil law system, children are also protected and cannot easily be disinherited by a parent. *See* P.R. Laws Ann. tit. 31, §§ 2453 *et seq.*

(n18)Footnote 132. *See* P.R. Laws Ann. tit. 31, §§ 1871 *et seq.* The issuance of title insurance was discussed in the case of *Sheils Title Co. v. Commonwealth Land Title Ins. Co., 184 F.3d 10* (lst Cir. 1999).

(n19)Footnote 133. Act 104, June 15, 1958 of Puerto Rico may be found in P.R. Laws Ann. tit. 31, § 1291 *et seq* . The act itself may be traced to the Spanish Civil Code, Article 396 later to become Article 300, which was derived from Article 664 of the Napoleonic Code. Act 104 was later amended in 1976 by Act 157. The essential characteristics of horizontal ownership or condominium were given in *Arce v. Caribbean Home Constr. Corp. 108 P.R. Dec. 225 (1978).* Puerto Rico also provided the impetus for § 234 of the National Housing Act authorizing the Federal Housing Authority to provide federally insured mortgages on condominiums. *See 48 U.S.C. § 1715.*

(n20)Footnote 134. Article VI, § XIV of the Constitution, Chapter 35, P.R. Laws Ann. tit. 28, § 401 *et seq.* and *48 U.S.C. § 751.* In addition, no corporation is authorized to conduct the business of buying and selling real estate. Corporations may lend money and have real estate as a security; however, if the real estate is purchased as a result of foreclosure, it must be disposed of within five years. *See* 1966 Op. Sec. Jus. No. 15 (Corporation cannot hoard land or speculate in land). The limitation of five hundred acres does not apply to non-agricultural corporations. *See* 1956 Op. Sec. Jus. No. 70 and *People v. Fajardo Sugar Co., 50 P.R.R. 156 (1936)* (fact that corporation is authorized by its

Articles of Incorporation to engage in the manufacturing of sugar does not operate as a release of these restrictions when it engages in agriculture). The five hundred acre limitation does not apply to the Commonwealth nor to governmental corporations. *See* P.R. Laws Ann. tit. 28, § 402 and *Puerto Rico v. Eastern Sugar Assocs., 156 F.2d 316 (1st Cir. 1946).* This section is not a "law of the United States" for purposes of vesting exclusive jurisdiction. *See Puerto Rico v. Rubert Hermanos, Inc. supra*, note 11.

(n21)Footnote 135. P.R. Laws Ann. tit. 28, § 1113 that no person is to be deprived of ownership unless for a just purpose and on payment of compensation. Private property is not to be taken or damaged for public use except upon the payment of just compensation and in the manner provided by law, and *see* P.R. Laws Ann. tit. 32, § 2901. *See Commonwealth v. Superior Ct., 95 P.R.R. 328 (1975)* (state cannot take without just compensation); *Sands v. Ext. Sagrado Corazon, Inc., 103 P.R.R. 826 (1975)* (property is taken when a private party of the government violates or destroys restrictive conditions imposed on two adjacent lots where a residential development was to be built. A jury is not required to determine just compensation. *See Iriarte v. United States, 157 F.2d 105 (1st Cir. 1946).* "Inverse condemnation" is used to protect an owner when the State has failed to comply with these provisions. *See Heftler Int'l, Inc. v. P.B., 99 P.R.R. 454 (1970). See also Deniz v. Municipality of Guaynabo, 285 F.3d 142* (lst P.R. 2002) that the remedy of inverse condemnation is not noted in the Code but is generally available.

(n22)Footnote 136. *See* P.R. Laws Ann. tit. 1, § 105. The day is set aside for "extolling love for land as an inexhaustible source of production and life." As part of the celebration, the Secretary of Agriculture must promote the concept of small landowners and award prizes to them.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.12

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.12 The Territory of American Samoa.

American Samoa is an unorganized, unincorporated territory of the United States, n137 consisting of seven islands located approximately half way between Hawaii and Australia. n138 American involvement with the islands began in 1839 when they were visited by Navy Lieutenant Charles Wilkes. n139 In 1872, the United States established a naval station at Pago Pago, though a proposed harbor agreement was never ratified. n140 In 1889, following the Berlin Conference, the United States, Germany, and Great Britain formed a tripartite agreement regarding the entire area, which agreement ended ten years later with the United States assuming authority over Tutulai and other islands of the Samoan group east of Longitude 171 degrees west of Greenwich. n141 In the early 1900s, the Samoans ceded their land (with the exception of Swain's Island) in two separate agreements to the United States. n142 Though the islands were acquired in the early 1900s, it was not until 1929 that Congress formally accepted the Articles of Cession. n143

As an unorganized, unincorporated territory of the United States, American Samoa's governing authority rests with the Secretary of the Interior. n144 Congress has not acted to change that status, nor have Samoans to date desired such change. n145 Consequently, all civil, judicial, and military powers of the government in American Samoa are exercised by the Secretary of the Interior. n146 Under the Samoan Constitution, n147 Samoans now elect their own Governor and Lieutenant Governor, n148 their own legislature, n149 and conduct their own court system. n150

The relationship between American Samoa and the United States is unique. Of particular significance is the traditional social structure of the Matai and the Communal Ownership of land. n151 The importance of land and the traditional means of communal ownership always have been recognized by the United States. n152 Likewise, the Matai Structure has been recognized. n153 The United States also has allowed American Samoa to have its own immigration system which applies to all, including American citizens. n154

COMPUTER ASSISTED-RESEARCH

LEXIS: territor! w/5 american samoa

(a) The Matai Structure.

The American Samoan culture is based on extended families who hold land communally. Traditionally, the extended family or "*aigra*" had rights in titles and land tenure. An extended family may consist of from eight to fifty people in a single household, at whose head is a *matai*. Typically, it is a patriarchal society where the women move to the husband's home. Each household is responsible for its members and contribute to the maintenance of the village. n155 The *matai* title represents supreme authority and responsibility within the family group. Part of the authority of the *matai* is to assign land to family members in exchange for services. n156

Matai title succession today is governed statutorily and all matai titles are to be registered. n157 To be a title holder, a candidate must meet all qualifications and be chosen by the family. n158 If the family cannot agree, the High Court has authority to select the holder of the matai title. n159

LEXIS: american samoa w/50 matai

(b) Land.

Land is very important in American Samoa. It is said to be the very fiber of the social, economic and political pattern. n160 Protection of traditional land patterns was continued in both grants of cession. n161

The American Samoan Constitution provides for land alienation restraints, n162 with implementing legislation found in Title 37 of the American Samoan Code. n163 According to the restraints it is prohibited for any *matai* of a Samoan family to alienate such lands without the written approval of the Governor of American Samoa. Only freehold lands may be conveyed to any person who has less than one-half native blood. It is prohibited to alienate any native lands to a person with non-native blood unless such person was born in American Samoa, was a descendant of a Samoan family, lives with Samoans as a Samoan, lived in American Samoa for more than five years or has officially declared intentions of making American Samoa home for life. n164 If two persons marry who have any non-native blood, their children may not inherit land unless the children are at least one-half native blood. n165 The restraints were upheld in Craddick v Territorial Registrar, n166 where the High Court of American Samoa considered and rejected equal protection challenge. n167

In American Samoa, the three basic types of land are freehold, individually owned land, and communal or native land. n168 Freehold land represents only a small portion of the land and is land which was protected by the Berlin Treaty of 1889. n169

Individually owned land is land which has been cleared by an individual person for personal use. Individually owned land arises from cultivation and continuous occupancy. n170 Although it is a possibly important source of land ownership in American Samoa (and one which may grow in significance), little land is so held today. n171

Most land in America Samoa is communal land. n172 This communal or native land is owned by the extended family, is controlled by the *matai*, and is the key to the land tenure system. n173 The *matai* assigns the land or "*pule*" for a home or cultivation and in return services are rendered to the *matai*. n174 Communal land may be conveyed by the *matai* only with the approval of the governor. n175

Communal lands n176 may be leased to any person, for a term not to exceed fifty-five years, so long as the purpose does not include mining or cutting of timber. The lease, however, must be submitted to the Governor for approval and at least one-tenth of the land must be cultivated or occupied. n177 In addition, native lands may be leased for school purposes for as long as thirty years with renewals. n178

A separation agreement allows for a structure to be separate and distinct from the real estate and is treated as personal

property. The senior *matai* in charge of communal land, the male members of a family living on communal land, or the owners of individual or freehold lands may execute separation agreements. n179 The agreement itself must be in writing and be recorded. The separation agreement enables a house to be used as collateral for a mortgage. n180

To acquire possession of the land originally, Samoan families went into the bush, took possession, cleared the land, and claimed it as their own. A mere claim to ownership, without more, was insufficient. n181 Today title to land may be registered; however, registration is not required until the title is transferred. n182 Possession of land, when disputed in American Samoa, is often difficult to ascertain. Disputes over the land may be reduced to two *matais* presenting decades worth of hearsay evidence over who had been planting what plants where and who had cleared what corner. n183 Consequently, the concept of adverse possession has become central to settling land disputes. n184

Property law in American Samoa is based on the American Samoa Constitution, the American Samoa Code, and so much of the common law of England as is suitable to the conditions in American Samoa. n185 If there is a conflict between those sources, Samoan custom will prevail. n186

The American Samoan Code contains provisions for inheritance and for intestate succession of individually held land. n187 A transfer may be made in trust for a child of a native owner of non-native land who is married to a non-native, or for the issue of such a marriage. n188 Dower rights are recognized in freehold and individually owned lands. n189

Among laws affecting land are the following:

a. If land is given as an atonement for a crime against a family member, the property becomes the communal property of the family and not the individual property of the victim's family. n190

b. Landowners can bring an action for nuisance against other landowners, such as when odors are emitted by tuna canneries. n191

c. The Rule Against Perpetuities cannot be applied to American Samoan communal property. n192

d. Land can be held communally even if they have the European surname of an ancestor. n193

e. Land may be taken by eminent domain and just compensation must be paid. n194 However, if native lands taken for governmental purposes are reconveyed or transferred, the grantees must be native Samoans. n195

FOOTNOTES:
(n1)Footnote 137. *See Meaamile v. America Samoa, supra*, note 46.

(n2)Footnote 138. The primary island is Tutuila on which Pago Pago Bay is located; however, the other volcanic islands are Annu'u, the Manu's group of Ta'u, Olosega, and Ofu; as well as the two coral islands Rose Island (which services as a wildlife refuge) and the privately owned Swains Island. Total land area is approximately seventy-six square miles. The American Samoa Bar Association now provides an Internet source for the American Samoa Code at *www.asbar.org*. This good news was reported in an article by William A. Hilyerd Using the Law Library: A Guide for Educators--Part I: Untangling the Legal System, *33 J. L. & Educ. 213 (2004).*

(n3)Footnote 139. Lieutenant Wilkes charted the islands and negotiated understandings with the various Samoan matais or chiefs.

(n4)Footnote 140. The United States Senate failed to ratify the agreement. *See* H.R. Exec. Doc. No. 161, 41st Cong. 1st Sess. 6, (1876), as noted in the American Samoa Code Annotated under Historical Documents. A Treaty of "friendship and commerce" was made January 17, 1878, and ratified on February 13, 1878, between the United States and American Samoa, which treaty was annulled by the Treaty of December 1, 1899, *see* note 141, *infra*. Several matais sought annexation with the United States as early as 1873. This early history also is retold in Leibowitz, *supra* n. 3, at pp. 412 *et seq.*

(n5)Footnote 141. *See* Convention Respecting Samoa Islands as *reprinted in* Am. Samoa Code Ann., Historical Documents. In 1899, the United States renounced all rights and claims in Western Samoa, over which Germany assumed control. *See* Convention Respecting Samoa Islands, *31 Stat. 1878*, T.S. No. 314 (1899). The Convention is also *reprinted in* Am. Samoa Code Ann., Historical Documents. Six months later, President McKinley proclaimed American authority over the islands and placed them under the control and authority of the Department of the Navy. *See* Exec. Order No. 540, dated February 19, 1900, which order continued until revoked by Exec. Order No. 10,264, June 29, 1951, *16 Fed. Reg. 6419* transferring authority to the Secretary of the Interior. Both orders and the delimitation of authority, Secretary's Order No. 2657, are *reprinted in* Am. Samoa Code Ann., Historical Documents.

(n6)Footnote 142. In 1900 the Islands of Tutuila and Annu'u were ceded by the Chief of Tutuila to the United States on April 17, and *reprinted in* Am. Samoa Code Ann., Historical Documents. On July 16, 1904, a similar cession was made by King and Chiefs of the Manau Islands of Ta'u, Olosego, Ofu and Rose Island as *reprinted in* Am. Samoa Code Ann., Historical Documents, p. 3. The seventh island, Swains Island, was made a part of American Samoa by a joint resolution of Congress on March 4, 1925. *See* Act of March 4, 1925, c. 563, *43 Stat. 1357*, and *codified at 48 U.S.C. § 1662* (noting American sovereignty over American Samoa is extended over Swains Island). With both cessions, and as more fully discussed in § 56.16, *infra*, the Samoans requested and the United States agreed to represent and protect native land ownership.

(n7)Footnote 143. *See* Act of February 20, 1929, c. 281, *45 Stat. 1253;* May 22, 1929, c. 6, *46 Stat. 4* and codified at *48 U.S.C. § 1661*.

(n8)Footnote 144. *See 48 U.S.C. 1661*(c) noting that until Congress shall provide for the government of the islands, all civil, judicial and military powers shall be vested in such person as the President of the United States shall direct. Originally that authority was given to the Secretary of the Navy; however, it was transferred to the Secretary of the Interior on July 1, 1951. *See* Exec. Order No. 10,264, *16 Fed. Reg. 6419 (1951). See also* note 141, *supra*. A good general discussion regarding the government of American Samoa may be found in Comment and Analysis, Janet Matthews Information Services, Quest Economics Database, Asia & Pacific Review World of Information, November 1998. A good general discussion of the history and culture of American Samoa may be found in the article by Hall, David E., "Curfews, Culture, and Custom in American Samoa: An Analytical Map for Applying the U.S. Constitution to U.S. Territories," *2 Asian-Pacific L. & Pol'y J. (Winter 2001) 69.*

(n9)Footnote 145. As noted in § 56.05 *supra*, American Samoa is the only unorganized territory. Following the acceptance of the cessions in 1929, a Congressional Commission held hearings in 1930, which resulted in a draft Organic Act. This Act would have provided citizenship and established an independent legislative, executive, and judicial branches of government. *See* American Samoan Commission, S. Doc. No. 249, 71st Cong., 3rd Sess. 7 (1931). The Commission recommendations were not acted on and the proposed Organic Acts died in Congress. Samoans also distrusted passage of the bill, fearing it might eliminate or erode their traditional powers over land and immigration. In both 1969 and 1975, American Samoa Political Status Commissions, composed of concerned citizens and legislators of Samoa, reviewed the political status of American Samoa and recommended that American Samoa remain as an unorganized, unincorporated territory. Note also discussion in Am. Samoa Code Ann., § 41.0201 noting that when Congress considered Organic Acts for American Samoa the Congress recognized the rights of American Samoa to

protect their "lands, customs, culture, and traditional American Samoan family organizations of persons of American Samoa ancestry."

(n10)Footnote 146. The Secretary's power, and that of the Assistant Secretary of the Office of Territories and International Affairs (OTIA) within the Secretary's office, are plenary under *48 U.S.C. § 1661*(c) and Exec. Order No. 10,264, *supra*, note 144. *See also* notes 148-151, *infra*. For example, in the *Corporation of the Presiding Bishop of the Church of Jesus Christ of Latter-Day Saints v. Hodel, 637 F. Supp. 1398 (D.D.C. 1986), aff'd,* in *830 F.2d 278 (1987) cert. denied, 486 U.S. 1015 (1988)* (hereinafter "Presiding Bishop") the plaintiff had appealed a decision of the High Court of American Samoa to the Secretary of the Interior who declined to overrule the Samoan Court. The Federal District Court noted that the Secretary exercised broad powers under Exec. Order No. 10,264, *supra*, note 144; however, the Secretary need not so review. The Secretary had noted that to review the decision would undermine a policy fostering greater self-government and self-sufficiency in American Samoa. *See also King v. Andrus, 452 F. Supp. 11 (D.D.C. 1977).*

(n11)Footnote 147. The Constitution of Samoa, through proposed by a Constitutional Convention and approved in a plebescite, still required the approval of the Secretary of the Interior to have legal force when it was originally adopted in 1960 and went into effect on October 17, 1960. The Constitution was amended in 1966 to reactivate the locally selected legislature and to limit somewhat the powers of the federally appointed governor. The amended Constitution was ratified in 1966, approved by the Secretary of the Interior on June 2, 1967, and went into effect on July 1, 1967. An amendment was made in 1971 regarding the Legislature. All amendments made to the Constitution now must be approved not only by the Secretary of the Interior pursuant to Exec. Order No. 10,264, *supra*, note 144, but may be made only by Act of Congress. *See* Pub. L. 98-213, § 12, Dec. 1983, *97 Stat. 1462,* codified at *48 U.S.C. § 1662a.*

(n12)Footnote 148. The Constitution was amended in 1977 to allow for the election thereof. Prior to that time, the Samoan people had rejected proposals to allow an elected Governor and Lieutenant Governor. *See* Dept. of Interior, Secretary's Order No. 3009 (Sept. 13, 1977) *reprinted in* Am. Samoa Code Ann., Historical Documents, p. 8. *See also* Title 4 Am. Samoa Code Ann.

(n13)Footnote 149. The Legislature is provided for in Article II of the Revised Constitution and consists of an elected House and a Senate composed of eighteen members who are selected in accordance with Samoan custom by the county councils of the county they are to represent. *See also* Title 2 Am. Samoa Code Ann. and in particular Am. Samoa Code Ann. § 2.0203 regarding the election of Senators. All laws passed by the Legislature, however, must be submitted to the Secretary of the Interior for approval. *See* Secretary's Order No. 2657 at 2(b)(4) (August 29, 1951) *reprinted as amended in* Am. Samoa Code Ann., p. 7. Note that the legislature is called Fono after the traditional council of chiefs. Any United States national at least 25 years of age who has resided in American Samoa for five years is eligible to run for the lower chamber. Am. Samoa Const. Art II, §§ 3 and 4. According to Peter C. Stuart in his book Isles of Empire: The United States and Its Overseas Possessions on page 273 the territorial legislature, the Fono, meets in a building which resembles the traditional village fale.

(n14)Footnote 150. *See* Title 3 Am. Samoa Code Ann. § 3.0101 notes that the judicial power of American Samoa is vested in a High Court, a district court and a village court in each village. The High Court is found in Title 3, Am. Samoa Code Ann. § 3.0201 *et seq.* and an excellent discussion thereof also may be found in *Presiding Bishop, supra* note 146. The court notes that the High Court System consists of three divisions: The Land and Title Division; the Trial division; and an Appellate Division. The Secretary of the Interior appoints the Chief Justice and an Associate Justice each of whom is to be learned in the law and shall sit on the High Court. *See* Am. Samoa Code Ann. § 3.1001. The Secretary may also appoint associate justices from members of Article III federal courts to serve on the appellate division court from time to time. Associate judges might not be lawyers and are appointed by the governor on the recommendation of the Chief Justice and must be confirmed by the Senate; however, they are familiar with local land law and custom (typically they are local matai). *See* Am. Samoa Code Ann. § 3.1004. On an appeal to the High Court in a land case, a majority of five judges shall prevail with a panel consisting of three justices and two associate judges. The majority can consist of two judges even though in general a majority must carry at least two justices. *See* Am. Samoa

Code Ann. § 3.0221. The court in *Hodel* noted that though the Secretary may appoint and remove justices, the Secretary in general has removed himself from overseeing the routine affairs of the High Court. The appeal from the High Court is to the Secretary of the Interior. Thus, the collateral attack in *Hodel* to ask the Federal District Court to direct the Secretary of the Interior to review the decision of the Samoan High Court. The District Court refused to so order. Another example was *King v. Andrus, supra,* note 146 (the court noted the broad authority of the Secretary of the Interior; however, it would not order the Secretary to intervene).

The district court has limited civil and criminal jurisdiction, though it may not hear land or matai title cases. *See* Am. Samoa Code Ann. § 3.0302. The village court has jurisdiction over matters arising under the regulations of the respective village. *See* Am. Samoa Code Ann. § 3.0402.

See also in general, Stanley K. Laughlin Jr., The Constitutional Structure of the Courts of the United States Territories: the Case of American Samoa, 13(b) Haw. L. R., 379 (1991).

(n15)Footnote 151. *See* §§ 56.12(a)-56.12(b) *infra*. In Title 2 of the Am. Samoa Code Ann., § 1.0201 provides that the following are declared to have the effect of law in American Samoa: The Constitution of American Samoa; those parts of the United States Constitution and laws which are in effect; the Code; so much of the common law of England as is suitable to conditions in American Samoa and not inconsistent with this section and provisions of prior codes. In § 1.0202 it is noted that the customs of the Samoan people are to be preserved, including the village councils.

(n16)Footnote 152. In both grants of cession as well as in the Samoan Constitution and the Samoan Code, all of which must be approved by either Congress or the Secretary of the Interior, the importance of land ownership is noted. Thus, for example, in the 1904 cession, *see* note 142 *supra*, it is noted "...the rights of the chiefs in each village and of all people concerning their property shall be recognized." *See* Am. Samoa Code Ann., Historical Documents, p. 4. Note also that the cessions were accepted, ratified and confirmed in *48 U.S.C. § 1661*.

(n17)Footnote 153. Note for example, the American Samoan Code limits Senators to those who are matais and provides for the registration of the matai title. *See* Am. Samoa Code Ann. § 1.0401 *et seq. See* note 158, *infra*, noting the qualifications which are necessary to be considered a matai.

(n18)Footnote 154. America Samoa is explicitly omitted from the Immigration and Nationality Act of 1952. *See 8 U.S.C. § 1101*(a)(38). *See* Am. Samoa Code Ann. § 41.0301 *et seq.* , regarding immigration registration and § 41.0401 *et seq.* , regarding the status of immigrants. It is difficult to acquire permanent resident status unless one is an American Samoan. Under Am. Samoa Code Ann. § 41.0403 permanent resident status is accorded only a person who is physically and legally present in American Samoa for a continuous period of at least twenty years, has good moral character, and for whom deportation would be a hardship. The number of such individuals is limited to ten a year. An adopted person, to so qualify after December 31, 1980, must have been adopted prior to the age of twenty-one.

(n19)Footnote 155. Note that it might be possible to belong to several "aigras" or extended families. Membership in the family is complex and some live on "aigra" land and some may live apart from it but provide economic assistance. Some may not so reside or contribute but are potential members if they can prove kinship. Currently, the "aigra" group tends to be segmented into smaller groups. *See generally* Margaret Mead, The Samoans, in Cooperation-Competition Among Primitive Peoples (Beacon Press 3d 1967); Arnold H. Leibowitz, American Samoa: Decline of a Culture, 10 Cal. W. Int'l L. Rev. 220; Laughlin, *supra*, n. 33; Robert Gardner, Justice in Lava Lava Land, L.A. Lawyer, 8 (April 1987).

(n20)Footnote 156. *See, e.g.*, Tavai v. Silao, 2 Am. Samoa 2d 1 (1983). Failure to render the required services may result in eviction from the land. A matai also serves to promote family unity and prestige, to settle disputes, to promote religious participation and to represent the family in the village. Land may be distributed for homes and cultivation. The act of assignment is a "tofi." When land is abandoned, it is returned to the family. The power of the matai to control the land was called a "pule." *See* Presiding Bishop *supra* note 146, at 1402. A good discussion of the Matai structure and

the customs of the American Samoa may be found in the article by Hall, David E., "Curfews, Culture, and Custom in American Samoa: An Analytical Map for Applying the U.S. Constitution to U.S. Territories," *2 Asian-Pacific L. & Pol'y J. (Winter 2001) 69.*

(n21)Footnote 157. *See* Am. Samoa Code Ann. § 1.0401 *et seq* . All titles were to be registered prior to January 1, 1969. A matai title may be removed for cause or if a matai is absent from American Samoa for more than one year. *See* Am. Samoa Code Ann. §§ 1.0411 and 1.0412 *et seq* .

(n22)Footnote 158. To qualify as a matai an individual must be at least one-half Samoan blood; been born on American soil; be chosen by the family for the title; and must live with Samoans as a Samoan. If born abroad, the person may still qualify by residing in American Samoa for a continuous period of not less than ten years prior to filing the application to be so registered and must have renounced the country of birth. *See* Am. Samoa Code Ann. § 1.0403. *See also Vainini v. Ala, 4 Am. Samoa 683 (1965).* The individual in general must have lived in American Samoa for one calendar year preceding date of claim. *See* Am. Samoa Code Ann. § 1.0404. The individual claiming title must then file a claim of succession with the territorial registrar, which claim is accompanied by a certificate from the chiefs of the village to which the claimed title is attached noting that the matai title is an old and traditional title of the Samoan people and that twenty-five blood members of the title signed the petition. The petition must also state that a family meeting was called and held for the purpose of selecting a successor to the title. *See* Am. Samoa Code Ann. § 1.0405. Note, however, if there are fewer than twenty-five family members, a lesser number may sign. *See In re Matai Title Fagaima, 4 Am. Samoa 83 (1973).*

(n23)Footnote 159. *See* Am. Samoa Code Ann. § 1.0409(c) where the High Court shall be guided by the follow ing considerations in the priority listed: the best hereditary right (if equal the male descendant prevails over the female), the wish of the majority or plurality of those clans of the family as customary in that family; the forcefulness, character and personality of the individual and the value of the holder of the title to the family, village and country. *See, e.g., Asuego v. Manuma, 4 Am. Samoa 616 (1965)* where there were at least eleven candidates to succeed the deceased matai, including one candidate who was not a family member. The court ranked the candidates according to the statute, though it noted that the best hereditary right was not sufficient alone. *See also Tuaolo v. Tutogi, 4 Am. Samoa 488 (1964)* (blood daughter of deceased matai had best hereditary right; however, the court did not rule in her favor because the other candidate prevailed in three out of four of the categories). *See also Presiding Bishop, supra* note 146.

(n24)Footnote 160. *See Haleck v. Lee, 4 Am. Samoa 519, 551 (1964). See also Presiding Bishop, supra* note 146, at 1401 n.2, "Every Western power that has entered the Samoan islands, not just the United States, in their official documents and treaties, has recognized what anyone who has ever visited Samoa or knows anything about Samoa knows, that the culture is integrally involved in communal ownership of land, and to upset or destroy that feature of Samoan society would ultimately destroy the society."

(n25)Footnote 161. *See* note 142, *supra*. In the 1900 Cession it is noted that "The Government of the United States of America shall respect and protect the individual rights of all people dwelling in Tutuila to their lands and other property ..." *See* Am. Samoa Code Ann., Historical Documents, p. 2.

(n26)Footnote 162. Article 1, § 3 of the Revised Constitution notes that it is the policy "... to protect persons of Samoan ancestry against alienation of their lands ... Such legislation as may be necessary may be enacted to protect the lands, customs, culture and traditional Samoan family organization of persons of Samoan ancestry." The section goes on to note that no change in the law of alienation may be made unless it is approved in two successive legislatures by a two-thirds vote of the entire membership of each house and by the Governor.

(n27)Footnote 163. *See* Am. Samoa Code Ann., § 37.0201 *et seq.* . The provisions of this Chapter 2 of Title 37 dealing with land restraints were amended in 1962, 1965 and again in 1968. Concern was expressed as to whether the requirements of the Constitution described in note 163, *supra*, had been complied with and thus the provisions were re-adopted in Pub. L. 16-88 and Pub. L. 17-31 to ensure compliance. It should be noted that a racial restriction was

upheld as early as 1900 in *Sapela v. Veevalu, 1 Am. Samoa 635 (1900)* (regulations of the Naval station prohibit the sale of native lands to a foreigner).

(n28)Footnote 164. *See* Am. Samoa Code Ann. § 37.0204(b). As used herein the term "Samoan" includes Western Samoans. *See Moon v. Falemalama, 4 Am. Samoa 836 (1975).*

(n29)Footnote 165. *See* Am. Samoa Code Ann. § 37.0204. *See* Willis v. Willis, 2 Am. Samoa 2d 102 (1986) (children of a man who was half Samoan and a wife who was full Samoan qualified). Note, that under Am. Samoa Code Ann. § 37.0205 a trust may be established of non-communal land for a child or issue of a child who is married to a non-native. Section (d) thereof notes that the section does not prohibit the transfer of native land for governmental purposes to the United States Government or to the American Samoan Government, or with the approval of the Governor, to a recognized religious society so long as on reconveyance and retransfer the land will go to native Samoans. *See* Mageo v. Viena, 1 Am. Samoa 2d 83 (1983 (matai granted use of family land "so long as" used for church purposes and the court found it reverted on the death of the pastor); Petesa C.C.C. v. Tu'inanau, 1 Am. Samoa 2d 23 (1980) (transfer to church void because the church was not a legal entity at time of transfer). Native lands means communal land under Am. Samoa Code Ann. § 37.0201(d). *See* note 176, *infra*. Subsection (e) thereof provides that true children of the present record titleholder of Swains Island who were not under the matai system shall be deemed to have heritable blood.

(n30)Footnote 166. 1 Am. Samoa 2d 10 (1980).

(n31)Footnote 167. *See Craddick v. Territorial Registrar*, note 166 *supra* noting "American Samoa has demonstrated compelling state interest in preserving the lands of American Samoa for Samoans and in preserving the Fa'a Samoa [i.e. Senate]...We find the prohibition against the alienation of land to non-Samoans to be necessary to the safeguarding of those interests." The court in *Presiding Bishop, supra*, note 146, noted even if it were to strike down § 37.0204 as unconstitutional, it would not change the ruling of a territorial court. On appeal the court found it unnecessary to discuss the racial restriction on alienation.

(n32)Footnote 168. *See Presiding Bishop, supra* note 146 at 1401. *See* Leuma v. Willis, 1 Am. Samoa 2d 48 (1980) for a concise history of land ownership in American Samoa. After the cession in 1900 and the change in political status, American Samoa and Western Samoa became two separate political entities and also diverged in their treatment of Samoan land customs. In Western Samoa, land and matai titles remained intertwined and could not be separated and thus the power of the matai was defined by the land over which he had control. In American Samoa, however, the matai title and land title began to become separate matters with the introduction of Western law with succession to the matai title being governed by statute and land succession by possession and control. As early as 1905 the English concept of adverse possession began to appear. Land surveys and title registration began to play a role in adjudicating land claims and areas not so claimed and registered generally were virgin forest. Associate Justice Murphy theorizes that these influences laid the groundwork for individual land ownership. In any event, after World War II, there was recognition that land could be held in America Samoa either as original freehold, communal land, or as individual land.

(n33)Footnote 169. *See* Am. Samoa Code Ann. § 37.0201(b). Such land may be inherited, sold, leased, is subject to dower interests and is not subject to the restraint on alienation. Of the approximately 45,500 acres in American Samoa, only about 550 to 600 acres were acquired by the "paplagis" before 1889, which land was confirmed as being freehold by the Land Commission created by the Berlin Act of 1889. The Land Commission had dealt with land matters until the cession agreements with the United States and the High Court was established to have jurisdiction over land and matai title cases. For a concise history of individual land ownership *see Leuma v. Willis, supra*, note 168.

(n34)Footnote 170. The means to acquire individually owned lands were set forth in *Taatiati v. Misi, 1 Am. Samoa 346 (1948).* In *Tiamalu v. Simaile, 1 Am. Samoa 222 (1945)* the court recognized that lack of evidence of communal ownership could then be presumed to be individually owned. *But see* Reid v. Puailoa, 1 Am. Samoa 2d 85, 87 (1985) that "since all land was once communal land, there is a presumption that all land still is. It is this presumption that any

entity asserting a given parcel is anything other than communal land must inevitably overcome." The alienation restraint of Am. Samoa Code Ann. § 37.0204 by prescribing that no lands other than freehold lands may be sold to a person of less than one-half native blood may be a tacit legislative admission that there is individually owned land. *See* note 167, *supra*.

(n35)Footnote 171. In addition there is a small amount of land which is owned by the Church as well as a small amount of government owned land. *See also* note 165, *supra*. Am. Samoa Code Ann. § 37.0204 permits the transfer to the government or to the Church on approval of the Governor. *See* note 165 *supra*. It has been suggested that individually owned land may increase if more family members want to break away from communal obligations and to have possible perpetual individual rights in the land.

(n36)Footnote 172. *See Presiding Bishop, supra,* note 146, where it is estimated at 90%. Peter C. Stuart in his book Isles of Empire: The United States and Its Overseas Possessions, on page 260 estimates that only a few acres of land are now owned by outsiders.

(n37)Footnote 173. *See* Am. Samoa Code Ann. § 37.0201(d) and § 56.15, *supra*. Persons who marry into a Samoan family do not have a say in the communal property nor do individual occupants have any greater right than another member of the family. No one has a power of appointment to pass possessory rights to others. *See* Tufele v. Mose, 7 Am. Samoa 2d 157, 159 (1988). When a family gives up possession on communal land, the land reverts to the matai and to the family. *See also Talagu v. Te'l, 4 Am. Samoa 121 (1974).* Family lands are under the jurisdiction of the matai and a young man in the family has no authority to permit strangers to live on communal lands. *See Talo v. Heirs of Seki, 4 Am. Samoa 477 (1964).*

(n38)Footnote 174. *See* note 156 *supra*. Failure to render the required services may result in eviction. It is the matai who is in charge of the property. Thus in Timalu v. Craddick, 2 Am. Samoa 2d 50 (1985) the court held that the plaintiff owned the land by quitclaim deed, despite allegations that it was communal land, in that the matai did not contest the ownership. *See also* Nauma v. Fau, 2 Am. Samoa 2d 27 (1981) to the effect that the current matai has the power to alter arrangements made by the previous matai, though the person in possession of the land does have some rights. But if a person, on learning of obligations owed the matai, renders the service to the matai, the matai may not evict that person from the communal lands. *See Fuga v. Olive, 4 Am. Samoa 664 (1962).*

(n39)Footnote 175. *See* Am. Samoa Code Ann. § 37.0204(a). *See also Haleck v. Tiumala, 3 Am. Samoa 380 (1959); Fau v. Thilson, 4 Am. Samoa 443 (1964)* (matai may not alienate communal property without written approval of the Governor). Title to communal land may pass from one family to another by conveyance or by adverse possession. *See Tufele v. Mose, supra*, note 173.

(n40)Footnote 176. *See* Am. Samoa Code Ann. § 37.0221. Whether non-communal lands may be leased or not, there is little authority. A portion of the American Samoan Code has been reserved for landlord/tenant law, Am. Samoa Code, Title 38, and Am. Samoa Code Ann. § 43.1401 *et seq.* , provide for a summary proceeding to recover possession of premises, which includes "lands covered by a lease."

(n41)Footnote 177. *See* Am. Samoa Code Ann. § 37.0221.

(n42)Footnote 178. *See* Am. Samoa Code Ann. § 37.0222.

(n43)Footnote 179. *See* Am. Samoa Code Ann. § 37.1501 *et seq.*

(n44)Footnote 180. Banks would not or could not hold mortgages on communal lands and thus the legislature established the separation agreement to provide the lending institutions with more security. *See* Tavai v. Silao, 2 Am. Samoa 2d 1, 3 (1983); *Coffen v. Mageo, 4 Am. Samoa 14 (1970).* Although the court in Tavai noted that the concept of license was inapplicable, either as a revocable or irrevocable license but rather that the homeowner could either remove the home or the matai could compensate them for it, the court in Roberts v. Sespasara, 7 Am. Samoa 2d 139 (1988)

suggested that a separation agreement might be evidence of a "license not revocable at will."

(n45)Footnote 181. *See* Craddick v. Olotoga, 2 Am. Samoa 2d 29 (1984) (land must be cleared, cultivated, and occupied). *See also* Tupuola v. Tu'ufuli, 1 Am. Samoa 2d 80 (1983) that continuous use and possession is better evidence of title than family history and tradition. *See also* Walter Tiffany, High Court Influences on Land Tenure Patterns in America Samoa, 49 Oceania 258 (1978).

(n46)Footnote 182. *See* Am. Samoa Code Ann. § 37.0210. While title registration is similar to traditional registration, Samoan culture also plays a part. Am. Samoa Code Ann. § 37.0101 *et seq.* , contains the requirements for land registration. In addition to including a metes and bounds description of the land, the description must also include a statement regarding whether the property is communally or individually owned. A certificate is needed from a surveyor as well as the village "pulenuu." If land is communal, only the matai may request to have the land surveyed. *See* Galea'l v. Ma'ae, 2 Am. Samoa 2d 4 (1984) (non-titled family member attempted to register the family land with little success since the matai had not requested the survey). Notice of the registration must be placed in the village closest to the land. Adverse claims are referred to the High Court. If there are no adverse claims, the territorial registrar shall register the land.

Title registration has been conducted since the original cession. *See, e.g., Fiu v. Sopoaga, 1 Am. Samoa 210 (1910)* noting that an alleged conveyance of land by deed was ineffectual, since the deed had not been registered.

Traditionally, only a small percentage of communal lands has been registered; however, the necessity to protect property rights, especially in view of laws which allow forfeiture of unused land, has increased the amount.

(n47)Footnote 183. *See, e.g., Mulu v. Taliutafa, 3 Am. Samoa 82, 84-85 (1953)* (dealing with title registration) in which case the court described the difficulty of ascertaining ownership for registration when the court must rely on oral renditions of family tradition. "In this case, tradition goes back hundreds of years. Each of the parties ... tried to establish ownership through the traditions of his own family with respect to the land. Consequently, the court heard four different traditions no two of which were the same." One family traced the family tradition from A.D. 839 to the 1904 cessions.

(n48)Footnote 184. Am. Samoa Code Ann. § 37.0120a contains the requirements for adverse possession as actual, open, notorious, hostile, exclusive and continuous occupancy of real estate for 30 years. *See also Tufele v. Mose, supra*, note 173; and *Presiding Bishop, supra*, note 146, that only Samoan natives may acquire native land by adverse possession and that possession must be exclusive.

(n49)Footnote 185. *See* note 151, *supra*, and Am. Samoa Code Ann. § 1.0201.

(n50)Footnote 186. *See* Tavai v. Silao, 2 Am. Samoa 2d 1 (1983) where there was a dispute concerning a separation agreement. The Silaos had been given permission to build a structure on Tavai communal land where they had lived before moving to the United States. The Silaos rented the structure without the permission of the matai and failed to provide services to the matai. They argued that a license had been created which was made irrevocable by improvements. The matai argued it was a revocable license. The court agreed with neither and applied "tofi" and held that under Samoan custom, when the land was abandoned, it returned to the family. The court noted that "We should accept Samoan customs and traditions as controlling support. Actually, common law principles which are based on private ownership of land are often the antithesis of Samoan customs and traditions, which are based on communal land." *See also* In the Matter of the Matai Title Tuiolesega, 1 Am. Samoa 2d 37 (1980) (court not bound by the Federal Rules of Civil Procedure).

(n51)Footnote 187. *See* Title 40 of Am. Samoa Code Ann. *See also Tiumalu v. Lutu, 2 Am. Samoa 222 (1945)* (individually held property descends to children of deceased owner). N. Am. Samoa Code Ann. § 37,0204(c) that if a person has any non-native blood and marries a person with any non-native blood, their children may not inherit land

unless the combined percentage is at least one-quarter Samoan blood.

(n52)Footnote 188. *See* Am. Samoa Code Ann. § 37.0205. *See also Aftufil v. Timoteo, 3 Am. Samoa 395 (1959)* (upholding a Naval Regulation permitting a grant of a trust to a son or daughter legally married to a non-native); *Sapela v. Veevalu, supra, n. 163* (a trust established for a child of a "mixed" marriage). *See also* note 165, *supra*.

(n53)Footnote 189. *See* Am. Samoa Code Ann. § 40.0103, though subject to the alienation restrictions of Title 37. *See Puluti v. Muliufi, 4 Am. Samoa 672 (1964)* recognizing the right of dower in individually held land. Dower does not apply to communal land. *See* Am. Samoa Code Ann. § 40.0106 and Tufele v. Mose, *supra*, n. 173, noting that "dower rights are non-existent in the communal land context."

(n54)Footnote 190. *See* Leota v. Faumuilna, 4 Am. Samoa 2d 111 (1987).

(n55)Footnote 191. *See* Siofele v. Van Camp, 1 Am. Samoa 2d 114 (1983).

(n56)Footnote 192. *See Tufele v. Mose, supra*, note 173.

(n57)Footnote 193. *See Willis v. Willis, supra*, note 165 (though husband was only half Samoan, his wife was full Samoan and their children were three-quarters Samoan).

(n58)Footnote 194. *See* Am. Samoa Code Ann. § 37.2001 *et seq.*

(n59)Footnote 195. *See* Am. Samoa Code Ann. § 37.0204(d). *See* Burns Philip v. Mageo, 1 Am. Samoa 2d 95 (1983) (court found this section was violated and thus the corporation to whom it had attempted to convey the land had a lease for only thirty years, at which time the property reverted to the government, and if the government no longer had a valid public purpose, it reverted to the family). *But see* Atualevao v. American Samoan Gov't, 2 Am. Samoa 2d 66 (1985) where the court held that, though leased briefly to the FAA, the land was now used as a rock crushing facility; however, by eminent domain, the government took title in fee simple.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.13

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.13 The Territory of Guam.

[Go To Supp]

(a) Background.

Guam, consisting of 217 square miles, is the largest island in the Mariana Island Chain and is located at the southern end thereof, lying approximately 210 miles from the Commonwealth of the Northern Mariana Islands and 1,500 miles east of the Philippines. n196 In 1898 the United States acquired Guam n197 from Spain, who first claimed the island as a possession in 1565. At that time, the Chamorros occupied the island. n198 From 1898 until Guam became a territory in 1950, n199 except for the Japanese Occupation during the Second World War, n200 Guam was governed by the United States Navy. n201 The United States military presence in Guam remains significant. n202

Currently Guam is an organized, unincorporated territory of the United States. n203 Guam has a unicameral legislature, n204 and elects its own Governor and Lieutenant Governor. n205 Guam has its own judiciary, and an Article IV District Court sits in Guam. n206 Guam does not have its own Constitution. n207 Many in Guam would like a change in status, probably to the status of a Commonwealth; however, no change is predicted in the near future. n208

LEXIS: territor! w/5 guam

(b) Land.

As elsewhere in the Pacific, land is scarce and valuable in Guam. Land records have been, and continue to be, somewhat chaotic. At the time the United States acquired Guam, there was no land registration system. Few surveys had been made. Even at the time of the Second World War, much land remained unsurveyed. The war further confused land holdings, as land records were destroyed. Military needs often dictated that land be taken and used. Since the conclusion of the War, the arduous process of sorting land records has proceeded. n209

After the Second World War, Congress authorized the Navy to acquire land by transfer, and to transfer land not required for military uses to the Government of Guam. n210 The Meritorious Claims Act was enacted to make payments for war

damage. n211 Disputes concerning the use of the land by the military have been many and the dissatisfaction significant. n212 Congress responded in 1977 and provided in the Omnibus Territories Act that the District Court of Guam had authority to review land claims. n213

In the original draft of the 1950 Organic Act, a provision allowed the Guam Legislature to enact legislation limiting land ownership to those of local ancestry. It was not included in the final draft. n214 Nonetheless, in 1974 the Guam Legislature did establish the Chamorro Land Trust Commission to lease certain lands only to native Chamorros. n215 A Land Management Act governs the use of governmental real property and the Land Transfer Board oversees applications to lease or purchase government land. n216

Guam's Civil Code, modeled on the California Code and California laws, applies as to private real property. n217 California decisions are used to resolve legal issues in Guam, with decisions which predate the enactment of the Guam Code noted as controlling and those subsequent thereto as persuasive, though not necessarily binding. n218 The Ninth Circuit Court of Appeals, reviewing Guam cases, often engages in a *de novo* review. n219 Guam now has a land registration system. n220 Land cases continue to be plentiful in Guam. n221

LEXIS: guam w/30 land!

FOOTNOTES:
(n1)Footnote 196. The size of the island and its location has caused Guam to have military significance. The island itself is about 30 miles long and from 4 to 9 miles wide with a "pinched" middle. The climate is tropical; however, during the rainy season the island often is hit with typhoons.

(n2)Footnote 197. Guam was acquired as part of the Treaty of Paris of 1898, and proclaimed April 11, 1899, *30 U.S. Stat. 1754*, T.S. No. 343 (1899). *See also* note 5, supra. *See also 48 U.S.C. § 1821*.

(n3)Footnote 198. The Spanish claim lay dormant until 1668, when missionaries arrived. The Chamorros openly rebelled against Spanish rule until the end of the 17th century. Spanish rule replaced the communal land rights which had been based on a caste system. Basically, the island was divided into districts headed by local chiefs known as matuas. Each chief controlled the lands of his district for the benefit of the group. On the death of the Chief, his brother or nephew ascended and took the name of the founder or chief ancestor of the family. The chiefs were organized into matrilineal clans. Others in the social class were the middle class, or atchaot and the manachang, who worked as serfs. As time passed, many persons moved to villages rather than stay on their lands. At the time the United States received Guam from Saipan, much of the land was held by descendants of the Chamorro nobility who had married the Spanish. Even before the Second World War, much of the land in Guam was held not in individual titles but in larger tracts with the family members agreeing among themselves who would work the lands. For a good discussion on this system *see* Laura Thompson, Guam and Its People (3d ed., Princeton University Press 1947); Paul B. Souder, Guam, Land Tenure in the Pacific (Ron Crocombe ed., Oxford University Press 1971).

Today, the Chamorros constitute approximately forty percent of the population according to The Economist, May 6, 1989. There have been conscious attempts to understand and preserve the Chamorro heritage. Thus, in 1966 the Guam Legislature created the Commission on the Chamorro Language which, among other things, created a Chamorro-English dictionary. The Chamorro language is to be used in the schools, and various places on the island have been given Chamorro names. *See* § 11950 *et seq.* of the Guam Gov't Code creating the Commission on Chamorro Language, §§ 11680-11681 of the Guam Gov't Code establishing a bilingual-bicultural education program, and § 13999 *et seq.* of the Guam Gov't Code establishing the Guam Place Name Commission. In the proposed Guam Constitution of 1977, a specific Article was included called "Guam Culture"; however, the Guam Constitution was not ratified. *See* note 39, *supra* and note 208, *infra*. *See also* the article by Lansing, Paul and Hipolito, Peter, Asian Pacific American Law

Journal 5 (Spring 1998), in which article the authors discuss the Guam Commonwealth Act. The Act included a provision for self-determination for indigenous Chamorro people of Guam and, as written, few individuals of non-Chamorro descent in Guam, though American citizens, would be eligible to vote for the Act if the Act were submitted for a vote. In his Comment, " 'Respeta I Taotao Tano': The Recognition and Establishment of the Self Determination and Sovereign Rights of the Indigenous Chamorros of Guam Under International, Federal, and Local Law," 3 Asian-Pacific L. & Pol'y J. (February 2002), Anthony (T.J.) F. Quan explores the history of the Chamorros in Guam and argues that the Chamorros be recognized as an indigenous people under local, federal and international law. According to Peter C. Stuart in his book Isles of Empire: The United States and Its Overseas Possessions, on page 270, concerns are raised concerning the decline in use of the native Chamorro language with an estimate of only 29.3 percent using the language at home.

(n4)Footnote 199. Although the Treaty cited in note 197, *supra* provided in Article IX that "the civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by Congress," nothing outside of executive action was done with Guam for almost fifty years. *See* note 200, *infra*. The Organic Act for Guam was enacted by Act of August 1, 1950, c. 512, § 2, *64 Stat. 384* and *codified at 48 U.S.C. § 1421 et seq.* In an article by Souki, Jesse K., "Militarization: The Forgotten Heroes: Reparations for Victims of Occupied Guam During World War II," Seattle J. Soc. Just. 1 (Spring/Summer 2003) 573, the argument is made that reparations should be paid by Congress because residents of Guam were not adequately protected during this time period.

(n5)Footnote 200. The Japanese Occupation from December of 1941, until July of 1944, was relatively brief, though painful. Chamorros from the Northern Mariana Islands were brought in to assist the Japanese, which may explain in part why Guam rejected union with those islands. *See* note 90, *supra*. Japanese discipline was rigorous, concentration camps were built and war damage was severe. After Guam was recaptured in 1944, most of the island, except for some of the South, was used for United States military purposes. The military presence remains significant. *See* note 202, *infra*.

(n6)Footnote 201. President McKinley placed Guam under the Department of the Navy by executive order, Exec. Order No. 108-A of December 23, 1898, where it stayed until 1950. By Exec. Order No. 10,077, *14 Fed. Reg. 5533 (1949)*, as amended by Exec. Order No. 10,137, *15 Fed. Reg. 4241 (1950)*, the administration of Guam was transferred from the Navy to the Secretary of the Interior, effective July 1, 1950. *See 25 Op. Att'y Gen. 292 (1904)* to the effect that the political status of Guam was "anomalous with the only administrative authority derived from the President as Commander-in-Chief." The military Governor held all legislative, executive and judicial authority over the island. *See also* note 207, *infra*.

(n7)Footnote 202. Current estimates place the military presence at one-third of the population of the island and the military is a major employer of the island. Guam always has had military significance. In 1898, Guam was important because of Germany's purchase of the Northern Mariana Islands.

Although supervision of the islands was transferred from the military to the Secretary of the Interior in 1950, note 201 *supra*, the United States military continued to control access to the Island from 1950 until 1962. During the second World War, President Roosevelt had, by Executive Order, designated a three-mile area around Guam as a Naval Defense Sea Area and Airspace Reservation. Permission of the Secretary of the Navy was required to enter this zone even if one were a United States citizen. This policy was instituted by the Navy in 1950. *See* Exec. Order No. 8683, 3 C.F.R. 894 (Comp. 1938-1943) and Exec. Order No. 11045, 3 C.F.R. 629 (Comp. 1958-1963). The Order was challenged and sustained in United States v. Angcog, note 9, *supra*. The residents of Guam, especially the Chamorros, remember this order with displeasure.

See also § 56.02, *supra*, concerning the military use of land which has caused continued displeasure in Guam. The 1986 Guam Commission on Self-Determination and the proposed Guam Commonwealth Act would require the United States to use only the minimum land necessary in a way similar to that contained in the Northern Mariana Covenant. *See* notes 50, 111, 112, *supra*. *But see* Guam Legis. E.O. 95-02 (1995), E. O. 95-17 (1995), and E.O. 95-21 (1995),

discussing the assumption of caretaker responsibility for certain naval bases. *See also* 1995 Guam Laws P.L. 23-23 (Bill 128 (LS)) adding Chapter 20, Title 1 to Guam Code Ann. regarding the creation of the Guam Repatriation Commission.

(n8)Footnote 203. The Organic Act for Guam may be found at *48 U.S.C. § 1421 et seq.* The Act was amended in 1968, primarily in the area of individual liberties. *See, e.g., 48 U.S.C. § 1421b* The Bill of Rights. As with other organized territories, the Organic Act establishes the limits for local authority. *See* §§ 56.04 and 56.05, *supra*. Thus, in Guam v. Olsen, note 11 *supra*, the court held that Guam had no authority to establish a Supreme Court. Likewise, Guam could not authorize appeals from judgments of the Federal District Court in criminal cases. *People of the Territory of Guam v. Okada, 694 F.2d 565 (9th Cir. 1982). But see* note 207, *infra*.

The Secretary of the Interior supervises Guam. The residents of Guam objected to the supervisory audit control of Guam by a government comptroller and thus, in 1978, that function was transferred to the Inspector General, Department of the Interior. *See 48 U.S.C. § 1442.*

(n9)Footnote 204. *See 48 U.S.C. § 1423.* Qualifications for office and power are noted in *48 U.S.C. § 1423a et seq. See 48 U.S.C. § 1423i,* the last sentence thereof which notes that the United States Congress reserves the right to annul all laws enacted by the Legislature. *See Bordallo v. Camacho, 416 F. Supp. 83 (D.C. Guam 1973), aff'd, 520 F.2d 763 (9th Cir. 1975)* (duty of the Governor of Guam to report to the Secretary of the Interior all laws enacted by the Guam Legislature is a non-discretionary ministerial duty).

(n10)Footnote 205. *48 U.S.C. § 1422.* This ability to elect the Governor was the result of the Act of September 11, 1968, Pub. L. 90-497, § 1, *82 Stat. 842.*

(n11)Footnote 206. *See 48 U.S.C. § 1424.* The Omnibus Territories Act of 1984 allowed the Guam Legislature to establish an appellate court system. *See* Act of Oct. 5, 1984, Pub. L. 98-454, Title VIII, § 801, *98 Stat. 1742. 48 U.S.C. § 1424-1* notes that the Guam Legislature may establish local courts with jurisdiction over all causes in Guam over which a federal court does not have exclusive jurisdiction. The appellate system held void in *Olsen* is now permitted. The district court has the traditional jurisdiction of a federal district court and also additional jurisdiction, if not vested by the legislature in another court (prior to the establishing of the local appellate system it also had appellate jurisdiction). The judge for the district court is appointed by the President for a term of ten years. *See 48 U.S.C. § 1424b.* Appeals are to the Ninth Judicial Circuit, which court will have jurisdiction to hear appeals from the Guam Supreme Court for the first fifteen years. *See 48 U.S.C. § 1424-2. See Hair v. Pangilinan, 816 F.2d 1341 (9th Cir. 1987)* (Court of Appeals must affirm decisions of the Appellate Division of the District Court of Guam on matters of local law unless manifestly erroneous). *See Eie Guam Corporation v. The Supreme Court of Guam, 191 F.3d 1123 (9th Cir. Guam 1999)* (which held that the federal court would not hear the particular case in that it did not feel it was final in the Guam Supreme Court and even if it were final and the federal court could review local Guam law, that this was a Guam statute which is more appropriately interpreted by the Guam court); *Apusento Garden (Guam) Inc. v. Superior Court of Guam, 94 F.3d 1346 (9th Cir. Guam 1996)* (Guam's statutory mandamus standard controlled the district court's disposition of a mandamus petition involving an arbitration award). The role of the courts was discussed in the case of *Guam v. Guerrero, 290 F.3d 1210 (9th Cir. Haw. 2002)* which in turn was discussed in an article by Elizabeth Myers, International Law In United States Courts: Why the Ninth Circuit Should Have Considered Self-Determination When Deciding Guam v. Guerrero, *37 U.C. Davis L. Rev. 1359 (2004). See also Haeuser v. Dep't of Law, Gov't of Guam, 368 F.3d 1091 (9th Cir. 2004).*

(n12)Footnote 207. In 1976, Congress authorized a Constitutional Convention and a draft Constitution was submitted to the electorate in 1979, but failed to attract the necessary vote for passage. *See also* note 39, *supra*.

(n13)Footnote 208. *See* § 56.09, *supra,* as well as note 50. The issue of commonwealth status was presented again to the United States Congress in 1995. *See* Guam Commonwealth Act, H.R. 1056, 104th Session lst, 141 Cong. Rec. H.3804, March 24, 1995. *See also* Van Dyke, John M., Self-Determination for Nonself-governing Peoples and for Indigenous Peoples: The case of Guam and Hawaii, U. Haw. L. Rev. 18 (1996) 623. The history of Guam as a territory

and a proposal that a free association be created with United States citizenship is discussed in the Comment by Guiterrez, Hannah M.T. "Guam's Future Political Status: An Argument for Free Association with U.S. Citizenship," Asian-Pacific L. & Pol'y J. 4 (February 2003) 5.

(n14)Footnote 209. *See* discussions contained in Thompson and Souder, note, *supra*. *See also* discussion in Leibowitz, *supra*, n. 3, at pp. 351 *et seq.* Leibowitz quotes Vice-Admiral Forrest P. Sherman in Hearings Before the House Comm. on Naval Affairs at p. 352: "When we recaptured Guam we proceeded with the development of the island without regard to ownership for the most effective and rapid prosecution of the war."

For a concise history of the land before and after the war *see Naval Gov't of Guam v. 11,825,263 Square Meters, 102 F. Supp. 427 (D.C. Guam 1952).*

(n15)Footnote 210. The Land Transfer Act, Pub. L. 225, 79th Cong. 1st sess. (1945), authorized the Secretary of the Navy to transfer to the Naval Government of Guam public lands no longer required. The Land Acquisition Act, Pub. L. 594, 79th Cong. 2nd Sess. (1946), authorized the Secretary of the Navy to acquire land in Guam to resettle the residents. Under the Organic Act, property owned by the United States in Guam, unless reserved, was to be transferred to the Guam Government. *See 48 U.S.C. § 1421f.* Some, but not all, such land was quitclaimed by the U.S. Government to Guam. Significant areas were reserved by Executive Order reserving certain property in Guam. *See* Exec. Order No. 10,178, *15 Fed. Reg. 7313 (1950),* which order is *reprinted at 48 U.S.C. § 1421f.* Some lands so transferred were accompanied by conditions such as the Brooks Amendment, Pub. L. 96-418, § 818(b)(2).

The Secretary of the Interior also may sell or lease property owned by the United States in Guam and not transferred to Guam under *48 U.S.C. § 1421f*(c), and has done so. *See Bordallo v. Camacho, 475 F.2d 712 (9th Cir. 1973)* (land so transferred). *See Yamashita v. People of Guam, 59 F.3d 114 (9th Cir. Guam 1995),* in which the court briefly discussed the transfer of land ownership from Spain to the United States to the Government of Guam. *But see Government of Guam v. United States, 179 F.3d 630 (9th Cir. 1999)* in which the court held that the Organic Act of Guam does not provide a continuing grant to the government of Guam of all land no longer used for a military purpose nor does the doctrine of aboriginal title support the Government of Guam's claim. The court noted it was a one-time grant and did not have continuing force and thus the United States did not have to transfer land condemned or found to be "excess" though occasionally it has transferred unneeded land to the government of Guam. As noted in the book by Peter C. Stuart, Isles of Empire: The United States and Its Overseas Possessions on pages 117 and 135, the land owned by the federal government in Guam, at one time substantial, has decreased to about one-third today.

(n16)Footnote 211. *See* Act of Nov. 15, 1945, ch. 483, *59 Stat. 582.* Payment was to be made for the loss or destruction of property resulting from the Japanese occupation, general hostilities of the war, or non-combat related activities. After passage of the Organic Act, the Guam Land and Claims Commission administered this Act as well as the Land Transfer Act of 1946. Payments of the claims have been slow and many felt the compensation too low. The military experience in Guam is one reason why the Guam Commission on Self-Determination, in developing the Gram Commonwealth Act, proposed language similar to that other CNMI Covenant limiting new land acquisitions by the military. *See* note 202, *supra*.

(n17)Footnote 212. *See Government of Guam v. United States, 744 F.2d 699 (9th Cir. 1984);* Naval Gov't of Guam v. 11,825, 263 Square Meters, note 210, *supra* (noting that when Guam was reoccupied, the United States took land as needed for military purposes without taking into consideration property lines and ownership). *See also* Leibowitz, *supra*, n. 5, at p. 358, that "Considerable litigation, both public and private, has resulted from both the military acquisition and failure to transfer the land back to Guam."

(n18)Footnote 213. *See* Act of October 15, 1977, Pub. L. 95-124, Title II, § 204, *91 Stat. 1162,* as *amended and codified at 48 U.S.C. § 1424c.* The district court is given authority to award fair compensation to those persons whose interests were acquired other than through judicial condemnation, where it is determined that less than fair market value was paid as a result of duress, undue influence, or other unconscionable action, or where it was unfair, unjust or due to

inequitable action by the United States. If the issue of compensation was adjudicated in a condemnation proceeding, the case is *res judicata. But see Limtiaco v. United States, 675 F.2d 1069 (9th Cir. 1982)* (even in those cases where there was a judicial condemnation procedure, the issue of fair compensation could be raised if the original owners had not made an appearance). *See also Franquez v. United States, 604 F.2d 1239 (9th Cir. 1979)* (background for the Act is discussed).

(n19)Footnote 214. *See* 5(n) of H.R. 7273, 81st Cong. 2d Sess. 1950. *See* Robert A. Katz, The Jurisprudence of Legitimacy: Applying the Constitution to U.S. Territories, 59 Univ. of Chicago L. Rev. 779, 788 (1992), which suggests that over one-half of land in Guam is now owned by non-natives. The Guam experience influenced the Northern Mariana Islands with their land restriction. *See* note 98, *supra*. *See* John M. Van Dyke, Di Amore-Siah, and Gerald W. Berkley-Coats, Self-Determination for Nonself-governing Peoples and for Indigenous Peoples: The Cases of Guam and Hawaii, *18 U. Haw. L. Rev. 571 (1996)* at 626 (noting that now less than half of the island's current population are Chamorro).

(n20)Footnote 215. *See* Guam Gov't Code § 13901 *et seq.* A "native Chamorro" is defined as a person who has at least one-fourth part of the blood of any person who inhabited the island prior to 1898. This is similar to The Hawaiian Homes Commission Act of 1920, *42 Stat. 108. See also* 1995 Guam Laws P.L. 23-38 (Bill 317 (LS)) as *amended by* P.L. 23-47 (Bill 1 (4-S)) regarding rules and regulations for the Chamorro Land Trust, which is *codified at* Chapter 75, Title 21 Guam Code Ann. §§ 75103 and 75107. *See also* E.O. 95-18 (1995) regarding the creation of the Chamorro Heritage Institute Planning Group. The Chamorro Registry Act was enacted to collect data on the residency of all Chamorros on Guam and on the registration eligibility of Chamorro families. *See* 3 Guam Code Ann. Ch. 20 (2001).

(n21)Footnote 216. *See* Title XIV of the Guam Gov't Code. Section 13003 notes that the Director is to keep records on government real property and to make suggestions regarding the allocation of that property for maximum benefit. The Department also is responsible for surveying, taking inventory and classifying lands. *See* § 13005. In addition, a Territorial Planning Commission is authorized under Chapter III, § 13200 *et seq.* to prepare a comprehensive plan for development in Guam.

(n22)Footnote 217. The Guam Civil Code was first adopted in 1953 and, though there are variations between the Guam Code and the Code of California, many sections were and are comparable. The foreword to the Guam Code notes this history. Division Second is the Property Section of the Code, which, in turn, is divided into four parts: property in general, real or immovable property, personal or movable property, and the acquisition of property. Guam is a community property state. *See* § 687. Section 755 notes that real property located in Guam is to be governed by the law of Guam. *But see* Santiago v. Estate of Quintada, No. Civ. CV-90-00053A (D. Guam A.D. Jun 12, 1991) in which the court used the Philippine Code, noting it as the applicable law at the time of the decedent's death in 1903, and which case involved the division of property at death known as "pattida." *See also Camacho v. Du Sung Corp., 121 F.3d 1315* (9th Cir. Guam, 1997) (California law regarding landlord tenant law); *Archbishop of Guam v. G.F.G. Corp., 1997 Guam 12, 1997 Guam LEXIS 2* (D. Guam) (landlord tenant code virtually identical to California's former unlawful detainer statute); In the *Matter of the Estate of Borja, 1997 WL 208982* (D. Guam) (regarding probate law). California law regarding fiduciaries was to be used in a case involving the sale of land by a client to his attorney it was held in the *Estate of Edward C. Benavente v. Maquera, 2000 WL 145041, 2000 Guam 9.* The *Benavente* case was cited in the case of *Gayle v. Hemlani, 2000 WL 1299637, 2000 Guam 25* which was another case involving real property, however the applicable statute of limitations barred the action. Ownership of real property by several persons in Guam may be as joint tenants, tenants in common, partnership interest, or as community property it was noted in the case of *Hamlani v. Nelson, 2000 Guam 20* (Guam Terr.). This case also discussed California decisions regarding the meaning of encumbrance and discussed portions of the title registration system in Guam. The issue of disposition and reimbursement for community property was discussed in the case of *Guerro v. Moylan, 2000 Guam 28* (Guam Terr.). A private power of sale for a mortgage in default is authorized by Section 2932 of the Guam Civil Code and was discussed in the case of *Paulino v. Biscoe, 2000 Guam 13* (Guam Terr.), which case held that if the sale proceeds are insufficient to satisfy the underlying debt, that the mortgagee may maintain an action to recover the deficiency.

(n23)Footnote 218. *See Guam Hakubotan v. Furusawa Inv. Corp., 947 F.2d 398 (9th Cir. 1991)* (Guam Code adopted from the Civil Code of California in 1933 and California decisions predating 1933 are binding, while later decisions are persuasive); *In re Petition of Gov't of Guam, 869 F.2d 1326 (9th Cir. 1989)* (boundary dispute and land registration case); *Hair v. Flores, 1986 WL 68520 (D. Guam 1986)* (California law controlling in case involving a fee simple on condition subsequent with a right of re-entry).

(n24)Footnote 219. *See* In re Petition of Government of Guam, *supra*, note 218 (de novo review regarding marketable title claim).

(n25)Footnote 220. *See* Guam Gov't Code § 1157.31. *See Application of Aguon, 1993 WL 128362.* The land registration system reflects the need to have surveys and to ascertain ownership. Land which is not registered is recorded under the pre-war cadastral survey and land registration act. *See Taitague v. First Island Indus. Inc., 1990 WL 320752 (D. Guam App. Div. 1990)* (discussing title registration act and noting family estates); Government of Guam v. Curz, *supra*, note 218 (noting confusion with land titles and overlapping claims); *Wells v. Lizama, 396 F.2d 877 (9th Cir. 1968). See* Yamashita v. People of Guam, note 210 herein, in which the court held: (1) in order to obtain Torrens registration, the claimant must prove title against all; (2) that adverse possession could not apply as to land owned by the United States prior to the transfer of the land to the Government of Guam in 1952; and (3) the Government of Guam was not estopped to deny title by virtue of its acceptance of property taxes for the land. *See also Guam v. Gill, 61 F.3d 688 (9th Cir. Guam 1995)* for a discussion of the process to obtain land registration. The Guam Land Title Registration Act is codified at 21 Guam Code Ann. §§ 29101-29206. *See also* In the *Matter of the Application of Rivera, 1997 WL 208990* (D. Guam) (regarding a landlocked parcel and an easement). The title registration or Torrens system is discussed in the case of *Pelouski v. Taitano, 2000 Guam 34* (Guam Terr.). Title registration was discussed in the case of *In re Application of Leon Guerrero, Slip Copy, Guam Terr. 2001, 2001 Guam 22,* noting that an aggrieved party may appeal under Title 21 GCA § 29116 (1998). The case notes that the government of Guam adopted California's system of Land Title Registration in *Wells v. Lizama 396 F.2d 877 (9th Cir. Guam 1968)* and also discusses the doctrines of boundaries by acquiescence and adverse possession.

(n26)Footnote 221. Most of the land cases involve disputes with the government of either the United States or Guam, rather than against another person. *See Franquey v. United States, supra,* note 213. This may be due to the military presence. *See also* Guam v. Gill, footnote 220 *supra* and its related case of *People of the Territory of Guam v. Cruz, 67 F.3d 176 (9th Cir. Guam 1995),* amended People of Guam v. Cruz, *95 C.D.O.S. 7697 (9th Cir. Guam 1995),* in which criminal convictions for the attempted theft of government land were obtained against persons who participated in a scheme to enlarge land ownership into government land by the use of fraudulent maps. The issue of damages for breach of the contract to convey real property was discussed in Executive View Estate, Inc. v. Kamminga, Civil Case No. 95-00125A, LEXIS 2856 (D. Guam, 1996) (in the absence of bad faith, the purchaser was entitled only to a return of monies paid and of expenses to examine the title). *See also In re Application of Leon Guerrero, 2005 Guam 1; 2005 Guam LEXIS 1 (2004)* regarding adverse possession; *Bank of Guam v. Flores, 2004 Guam 25; 2004 Guam LEXIS 30 (2004)* regarding mortgage foreclosures; and *Mobil Oil Guam Inc. V. Tendido, 2004 Guam 7; 2004 Guam LEXIS 5 (2004)* regarding preemptive rights.

CHAPTER 56 TERRITORIES AND POSSESSIONS

7-56 Thompson on Real Property, Thomas Editions § 56.14

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 56.14 The Territory of the Virgin Islands.

[Go To Supp]

(a) Background.

The Virgin Islands were first so named by Christopher Columbus in 1493, after St. Ursula and her 11,000 sea-faring virgins. n222 Today, the Territory of the Virgin Islands consists of three diverse larger islands as well as many smaller islands. n223 The capital, Charlotte Amalie, is located on St. Thomas, an island with a history of mercantile activities. n224 Often associated with St. Thomas is the small island of St. John. n225 The third large island is St. Croix, which has a tradition of being more of an agricultural island, though today its population may be the largest of the three. n226

The Danes had control over all these islands by 1735. n227 Though the United States had expressed an interest in purchasing the islands as early as the 1860s, the eventual sale did not occur until 1917, when they were purchased for twenty-five million dollars. n228 In general, the transfer was without incident, although problems did develop concerning a concession granted to "*Det Vestindiske Kompagni*," regarding a license and other interests in the harbor at St. Thomas. n229

The Virgin Islands today are an unincorporated, organized territory of the United States. n230 Initially, on purchase from Denmark, a temporary government was provided under the control of the Navy. n231 In 1931, control was transferred to the Secretary of the Interior. n232 The first Organic Act of 1936 was considered a major advance in local self-government. n233 In 1954 the Act was revised, at which time a centralized legislature was established, as well as a Bill of Rights. n234 Currently, the residents elect their own governor n235 and have an elected unicameral legislature. n236 The Islands have local trial courts, and although there is authority for creating local appellate courts, this has not occurred to date. n237 Congress has created a District Court for the Virgin Islands, appeals from which go to the Third Circuit Court of Appeals. n238 The Virgin Islands do not have their own Constitution. n239 In general, the residents of the Virgin Islands have been content with their status, though a plebiscite was held on status in 1993. n240

COMPUTER-ASSISTED RESEARCH

LEXIS: territor! w/5 virgin islands

(b) Land.

All public lands of the Virgin Islands were ceded by Denmark to the United States Government, who in turn transferred land not reserved to the local Virgin Island Government. n241 At one time the Virgin Islands Corporation managed lands for the general welfare. n242 Currently, the Revised Organic Act of 1954 grants the Secretary of Labor the right to lease or sell property which is not needed for public purposes. n243

The Virgin Islands law rests upon common law. Section 4 of the Virgin Island Code Annotated notes that "The rules of the common law, as expressed in the restatements of the law approved by the American Law Institute and to the extent not so expressed, as generally understood and applied in the United States, shall be the rules of decision in the courts of the Virgin Islands in cases to which they apply, in the absence of local laws to the contrary." n244 The Restatements are to be used, however, only if there is no applicable statute. n245 Of course, if the local law applies, it is used even if contrary to the rules stated by the Restatement. n246 In addition, the courts occasionally have used Danish law. n247

In the Virgin Island Code, Chapter 1 of Title 28 deals with estates in general and includes provisions for joint ownership, n248 descent, n249 and adverse possession. n250 Chapter 3 deals with conveyances of property and Chapter 7 with the recording of documents. Chapter 11 is the Statute of Frauds and Chapter 19 deals with condemnation of property. n251 Chapter 31 is the Landlord/Tenant chapter and Chapter 13 provides for a condominium regime. Although dower does not exist, the surviving spouse does have a right of election. n252 Of note is the rent control act first enacted in 1947 to deal with the housing shortage following the end of WWII. n253 Of all the territories, the Virgin Islands probably are the most similar to the mainland regarding property law. n254

LEXIS: virgin islands w/30 land!

FOOTNOTES:
(n1)Footnote 222. The islands at that time were inhabited by the Caribs.

(n2)Footnote 223. The lands include those islands acquired by the United States by purchase from Denmark. *See* cession of the Danish West Indian Islands by the Convention between the United States of America and His Majesty the King of Denmark, entered into August 4, 1916, and ratified by the Senate on September 7, 1916, *39 Stat. 1706. See 48 U.S.C. §§ 1405* and 1541(a). In addition to the three main islands, the territory includes hundreds of tiny islands which were an original part of the Danish West Indies. These islands, however, are to be distinguished from the nearby, but separate islands, known as the British Virgin Islands. Two treaties were signed delineating maritime boundaries in the Caribbean. *See* Treaty on The Delineation in The Caribbean of a Maritime Boundary Relating to the U.S. Virgin Islands and Anguilla and Treaty on the Delineation in the Caribbean of a Maritime Boundary Relating to Puerto Rico/U.S. Virgin Islands and the British Virgin Island with Annex, S. Treaty Doc. No. 23, agreed to resolution of notification Oct. 6, 1994 (Unpublished).

(n3)Footnote 224. *See 48 U.S.C. § 1541*(b).

(n4)Footnote 225. Approximately two-thirds of St. John's is dedicated for park purposes.

(n5)Footnote 226. Under the Danish rule, *see* note 229 *infra*, the government of the islands was split between St. Thomas/St. John and St. Croix. Still today, their views may diverge along these lines; however, they are united for greater influence with the United States. The islands are approximately twelve hundred miles southeast of Florida and forty miles east of Puerto Rico.

(n6)Footnote 227. Prior to that time, the islands had been inhabited by the Dutch, the English, the Spanish and the French. Africans were brought to the islands to work the sugar plantations. Today, the Puerto Rican presence is

growing, as is a small, though forceful, United States mainland presence.

(n7)Footnote 228. Secretary of State Stewart had suggested their purchase in order to prevent either Russian or Austrian expansion in the Caribbean, and the Navy desired the use of the harbors. Negotiations began again in the early 1900's with the final sale price nearly five times that agreed on in 1902 (when the Danish Parliament failed to ratify the sale). The primary motivations for the purchase were military considerations, including the Panama Canal and a possible sale to Germany. March 31 is still celebrated as Transfer Day. The history may be read in Dianne Russell, Some Ethical Consideration of Judicial Vacancies: A Case Study of the Federal Court System in the *United States Virgin Islands, 5 Georgetown J. Legal Ethics 697 (1992) and Leibowitz, supra n. 5, at p. 223 et seq.*

(n8)Footnote 229. The Convention entered into between the *King of Denmark and the United States, supra* note 222, may be found in Volume One of the Virgin Islands Code Annotated, Historical Documents. The Convention itself was proclaimed on January 25, 1917. According to Peter C. Stuart in his book Isles of Empire: The United States and Its Overseas Possessions on pages 276 and 334, the Virgin Islands have many celebrations including Transfer Day (when possession was transferred from Denmark) and Organic Act Day.

In Article 1 of the Convention, it is noted that the King of Denmark ceded to the United States all territory claimed by Denmark in the West Indies. Article 2 contains a warranty that the property was free from encumbrances and also seeks to protect private property rights. In Article 4, it is noted that a concession had been granted to "Det Vestindiske Kompagni," a West Indian Company or WICO, by the Ministry of Finance of Denmark on January 18, 1913, and on April 16, 1913, it was granted a license to embank, drain, deepen and utilize a certain area in the St. Thomas Harbor, as well as to receive preferential rights to commercial, industrial, or shipping establishments in the harbor, which the United States agreed to maintain. As noted in *West Indian Co. v. Government of the Virgin Islands, 844 F.2d 1007, 1009 (3d Cir. 1988),* Denmark had informed the United States at the time of signing the convention that the grant was in perpetuity and without time limitation and that rights had vested under Danish law. No further acts of significance occurred until 1968, when the Department of the Interior sued to quiet title to the harbor and to procure a declaratory judgment that the treaty rights under the Convention had lapsed. Eventually, the parties agreed to a Second Addendum to the Memorandum of Understanding in which WICO agreed to give up certain lands in return for a conveyance from the Virgin Islands government for fifteen acres and a promise to alter the coastal Management Act so that WICO could reclaim its harbor. When the Virgin Islands Legislature repealed the legislation approving the settlement, and issued a stop order on the dredging permit, the contractor sued for summary judgment. The court granted the motion and held that the Second Addendum was a binding contract and the repeal by the Government of the Virgin Islands was invalid as violative of the Contract Clause.

(n9)Footnote 230. *See* §§ 56.04 and 56.05, *supra. See also Government of Virgin Islands v. Bodle, supra* note 43 (noting this status). *See also West Indian Co. v. Government of the Virgin Islands, supra,* note 229, noting that though not having the sovereignty of a state, as an unincorporated territory it is treated as a state government regarding contractual obligations. To the same effect *see In re Estate of Hooper, 359 F.2d 569 (3d Cir. 1966).*

(n10)Footnote 231. Act of March 3, 1917, "An Act to Provide a Temporary Government for the West Indian Islands...", *39 Stat. 1132.* Basically, this government followed the existing Danish government with two separate legislatures: one on St. Croix and the other on St. Thomas for St. Thomas and St. John. All civil powers were vested in the military governor.

(n11)Footnote 232. In 1931, the President transferred jurisdiction of the islands to the Department of the Interior and appointed the first civilian Governor. *See* Exec. Order No. 5566. Today, relations between the Government of the Virgin Islands and the United States still are under the Secretary of the Interior. *See 48 U.S.C. § 1541*(c). All required reports from the Governor are made to the Secretary of the Interior. *See 48 U.S.C. § 1544.*

(n12)Footnote 233. Act of June 22, 1936, c. 699, § 41 *49 Stat. 1807. See also 48 U.S.C. § 1406m,* noting that this subchapter may be cited as the Organic Act of the Virgin Islands of the United States. The Act established a system of

civil government with an elected legislature, though it continued to have separate legislatures for St. Thomas/St. John and for St. Croix. Universal suffrage was established abolishing property qualifications and extending the vote to women.

(n13)Footnote 234. Act of July 22, 1954, c. 558, § 2, *68 Stat. 497; 48 U.S.C. § 1541 et seq.* The Revised Organic Act of 1954 superseded the Organic Act of 1936 where they were inconsistent. *See Virgo Corp. v. Paiewonsky, 384 F.2d 569 (3d Cir. 1967).* The bill of rights is in *48 U.S.C. § 1561. See also In re Brown, supra*, note 45, (inclusion of § 1561 shows intent of Congress to make Federal Constitution applicable to the Islands to the fullest extent possible, consistent with status of a territory). The Act noted in *48 U.S.C. § 1541*(a) that the Virgin Islands were an unincorporated territory of the United States. *See also Granville-Smith v. Granville-Smith, 349 U.S. 1 (1955).*

(n14)Footnote 235. *See* The Elective Governor Act of 1968, Pub. L. 90-496, which provided for the popular election of the Governor and Lieutenant Governor. This bill also removed several of the supervisory controls of the Secretary of the Interior and eliminated the Presidential veto of local legislation. Today *see 48 U.S.C. § 1591 et seq.* for the election of the Governor and Lieutenant Governor, their powers and duties and the executive branch in general.

(n15)Footnote 236. As noted *supra*, in note 234, a consolidated legislature was provided for in the Revised Organic Act of 1954. Currently the Legislature has fifteen members. *See 48 U.S.C. § 1571* regarding the Legislative Branch. *See also Port Const. Co. v. Government of Virgin Islands, 359 F.2d 663 (3d Cir. 1966)* (Virgin Island Legislature has full legislative powers limited only by the Constitution, the Revised Organic Act, and other federal statutes applicable to the Virgin Islands and thus, has legislative power similar to that of States); Water Isle Hotel & Beach Club, Ltd. v. Kon Tiki St. Thomas, Inc., *supra*, note 11 (Government has authority to enact legislation affecting property owned by United States which was leased to private entity, where local legislation was not incompatible with but rather served the federal government's interest). *See also 48 U.S.C. § 1575*(g) requiring a listing of all laws enacted each year to be transmitted to Congress.

(n16)Footnote 237. *See 48 U.S.C. § 1611*(a) noting that the judicial power is vested in a court of record designated the District Court of the Virgin Islands, established by Congress, and in such appellate and lower courts as established by the local legislature. The ability to create the appellate system was part of the Omnibus Territories Act of 1984. *See* Pub. L. 98-454. Until such time as the appellate courts are established, appeals are to the District Court. *See 48 U.S.C. §§ 1612* - 1613a. When the appellate system is established, appeals from the High Court thereof will be to the Third Circuit Court of Appeals for fifteen years. *See 48 U.S.C. § 1613.* Currently there are nine territorial judges, with four on St. Croix and five on St. Thomas.

The Virgin Island Legislature enacted Bill No. 5040 on February 1, 1985, to expand the jurisdiction of its courts. The Act was to become effective in three stages; however, it was often postponed. Nonetheless, on October 1, 1990, the first stage became effective, which provided that the local territorial courts would have concurrent jurisdiction with the district court over criminal actions where the maximum sentence did not exceed fifteen years. One year later, the territorial court was to acquire concurrent jurisdiction as to all criminal actions. Nonetheless, on August 29, 1991, the Virgin Island Legislature passed local law No. 5594, which amended V.I. Code Ann. tit. 4, § 76 to vest jurisdiction in the territorial court over all civil matters regardless of the amount in controversy, which change became effective October 1, 1991. Because of this enactment, the jurisdiction for all criminal cases was postponed until October 1, 1993. *See also Estate of Thomas Mall, Inc. v. Territorial Ct. of the Virgin Islands, 923 F.2d 258 (3d Cir. 1991)* (jurisdiction of the District Court of the Virgin Islands over local matters had not been divested by this concurrent jurisdiction in the local courts unless the law so noted). *See Isidor Paiewonsky Assocs. v. Sharp Properties, Inc., 998 F.2d 145 (3d Cir. 1993)* (regarding jurisdiction of the local courts and the district court). *See also Virgin Islands Housing Auth. v. Coastal Gen. Constr. Serv. Corp., 27 F.3d 911 (3d Cir. 1994)* in which the court held that unless there existed an independent basis for federal jurisdiction, a suit to confirm or vacate an arbitrator's award pursuant to the Federal Arbitration Act was to be brought in a territorial court. *But see Newland Moran Real Estate v. Green Cay Props., Inc., 41 F. Supp. 2d 576 (D.V.I. 1999)* in which the court notes the promulgation of the Virgin Islands Rules of Appellate Procedure. The Virgin Islands, since 1997, now has an appellate court which hears appeals from the territorial courts; however there is

still no Supreme Court. *See* V.I. Code Ann. Tit 4, § 33. A review of the court system may be found in *BA Properties, Inc. v. Gov't of the United States V.I., 299 F.3d 207 (3d Cir. 2002)* which noted it had plenary review over the local appellate court. In this court, the third circuit reinstated the verdict of the territorial court that a stamp fee must be paid on a transfer of property at a foreclosure sale.

(n17)Footnote 238. *See* § 1611 *et seq.* The court is comprised of two judicial divisions: The Division of St. Croix which is held in Christiansted and the Division of St. Thomas and St. John which is held at Charlotte Amalie. The Judges are appointed for a term of ten years. As noted in note 237, *supra* in part, the jurisdiction of the district court includes not only the traditional jurisdiction of a federal district court, but also concurrent jurisdiction with the local courts and appellate jurisdiction therefrom until such time as a local appellate system is created. The court is not an Article III court. *See Government of Virgin Islands v. Bell, 392 F.2d 207 (3d Cir. 1968).*

Unfortunately, the District Court has not been permanently staffed since the retirement of one judge and the death of the other judge in 1988 and 1989, respectively. *See* an excellent article on the crisis this has created, by Russell, *supra*, note 234. Russell notes that currently the Third Circuit is assigning judges for periods of one month at a time. The backlog is growing. As of May of 1993, no judge had been appointed. The two seats were filled when Thomas K. Moore was confirmed by the United States Senate on June 30, 1992, according to 1992 DER 126 d 41 and Raymond L. Finch on May 17, 1994, as noted in 62 USLA, both as district judges. *See Camacho v. Dodge, 947 F. Supp. 886 (D.V.I. 1996)* (District court bound by Third Circuit cases even if applied in the context of purely local, Virgin Islands substantive law regarding the judicial sale of real property). The third circuit did not have jurisdiction either by the 1917 treaty nor any federal statute regarding a quiet title action of a littoral landowner it was held in the case of *Club Comanche, Inc. v. Gov't of the V.I. 278 F.3d 250 (3d Cir. 2002).*

(n18)Footnote 239. On November 3, 1981, the people of the Virgin Islands rejected the proposed Fourth Constitution which had been approved by Pub. L. 97-21 to them for submission. Parts of the Constitution would have repealed the local government provisions of the Revised Organic Act of 1954, the territory's basic charter, and would have reformed the Organic Act to provide for an improved system of appellate review. As a result of this defeat, changes were made to the Revised Organic Act to modernize the judicial system and to make the territory more autonomous. *See* note 237, *supra*.

(n19)Footnote 240. *See* The New York Times, February 21, 1988, § 4, at 4, col. 5, to the effect that no one is more content than the Virgin Islands, though in time that may change. The Los Angeles Times, part 1; at 11, col. 1, noted on April 30, 1989 that choosing a new form of government has not aroused much enthusiasm in the Virgin Islands. Abstract, Virgin Islanders Face Referendum, N.Y. Times, January 11, 1993, reported that the votes were to begin on September 7, 1993 (an earlier vote was put-off by Hurricane Hugo). The basic choices are: the status quo (with additional local control), integration with the United States either as a State or as an incorporated territory, or independence. Neither the Legislative Political Status Commission of 1985 nor the Bill authorizing a plebiscite in 1989 called for a Commonwealth as an alternative.

(n20)Footnote 241. *48 U.S.C. § 1405c* and *48 U.S.C. § 1545. But see 48 U.S.C. § 1545*(b) to the effect that property administered by the Secretary of the Interior as part of the National Park System is retained by the United States. The military presence is not significant. The Coral Reef National Monument was established by Presidential proclamation in January 17, 2001. The area in the submerged lands off the island of St. John is a tropical marine ecosystem. The proclamation was based on the Antiquities Act of 1906 (section 2 of the Act of June 8, 1906, 34 State. 225, *16 USC 431).*

(n21)Footnote 242. The corporation was authorized by *48 U.S.C. § 1407* for the purpose of economic development. It was repealed by Pub. L. 97-357, Title III, § 308(3), October 19, 1982, *96 Stat. 1710.* § 1407i had transferred to the Corporation all property held by the Virgin Islands Company. One of the property interests transferred was all of the interest of the United States in "Bluebeard's Castle Hotel."

(n22)Footnote 243. *See 48 U.S.C. § 1545*(a).

(n23)Footnote 244. Title 1, Chapter 1, § 4 V.I. Code Ann. If the Restatement is silent, and a split of authority exists, a court is to select the sounder rule. *See also Enron Corp. v. Lawyers Title Ins. Corp., 940 F.2d 307, 310 (8th Cir. 1991)* (on appeal, it is a de novo review on issues of Virgin Island law). Motions for summary judgment were denied in the following cases related to the In re TuTu Wells Contamination Litigation: *Harthman v. Texaco, Inc., 909 F. Supp. 991, 999 and 1005 (D.V.I. 1995).* In *Harthman v. Texaco, Inc., 909 F. Supp. 991,* it was held that physical harm is not an element of the tort of trespass or nuisance, and landowners could recover for negligence or strict liability without showing that they suffered physical harm. *See also* the companion cases of *Virgin Islands Tree Boa v. Witt, 918 F. Supp. 879 (D.V.I. 1996)* and *Hawksbill Sea Turtle v. Federal Emergency Management Agency, 939 F. Supp. 1195 (D.V.I. 1996),* regarding the construction of temporary emergency housing following a hurricane. *See* Isidor Paiewonsky Assocs. v. Sharp Properties, Inc., note 237 *supra,* (involving landlord tenant law); *In re Tutu Wells Contamination Litigation v. Laga Indus., Ltd., 846 F. Supp. 1243 (D.V.I. 1993)* (contamination of water wells); and *Brandy v. Flamboyant Inv. Co., Ltd., 772 F. Supp. 1538 (D.V.I. 1991)* (tort law), all of which noted the use of the Restatements. Other cases using the Restatement include *Land Holdings v. Mega Holdings, 1999 U.S. Dist. LEXIS 17805 (D.V.I. 1999)* (doctrine of merger does not apply to mortgages); *Mahogany Run Condo. Assn. v. ICG Realty Mgmt. Corp., 1999 U.S. Dist. LEXIS 2005; 40 V.I. 404 (D.V.I. 1999)* (using the Restatements of Torts and Conflicts regarding insurance proceeds after a hurricane); *Donohue v. Lynch, 1998 U.S. Dist. LEXIS 16228 (D.V.I. 1998)* (statute and Restatement regarding adverse possession); and *Saastopunkkien Keslcus-Osake Pankki v. Allen-Williams Corp., 7 F. Supp. 2d 601 (D.V.I. 1998)* (mortgage foreclosure). The court looked for guidance to the Restatement and to the Virgin Islands Code regarding the meaning of the word "bequeath" however, no definitive description was given nonetheless, by reading the words in context of the will, the court concluded that a gift of condominium units were to pass to the takers, and the Estate was to pay the mortgages, thereon it was held in the case of In the *Matter of the Estate of Gloria Paraliticci, 42 V.I. 71, 2000 V.I. LEXIS 5 (Terr. Ct. V.I. 2000). See also Andrews v. Roberts, 42 V.I. 34, 2000 V.I. LEXIS 1 (Terr. Ct. V.I. 2000)* in which case the court construed an installment land contract as a mortgage (thus requiring foreclosure rather than forfeiture on default); discussed the requirements of adverse possession; and noted the use of the Restatements. The use of a tentative draft of the Restatement (Third) of Property was discussed in the case of *Peter Bay Owners Ass'n v. Stillman, 163 F. Supp. 2d 527 (D.V.I. 2001)* as the final draft was not enacted until 1998, which was after the applicable dates of the case. The Restatement of Property (Second) did not need to be used, given the language of the option agreement regarding the Rule Against Perpetuities, according to *Creque v. Texaco Antilles, Ltd., 43 V.I. 107, 2001 V.I. LEXIS 2 (Terr. Ct. V.I. 2001).*

(n24)Footnote 245. *See Callwood v. Virgin Islands Nat'l Bank, 221 F.2d 770 (3d Cir. 1955)* (using both the Restatement of Property as well as the Restatement of Agency and the Restatement of Conflicts to determine the validity of an assignment concerning a life estate and the attendant issue of waste). *See also Moore v. A.H. Riise Gift Shops, 659 F. Supp. 1417 (D.V.I. 1987)* (common law is that contained in the Restatement, unless preempted by the Virgin Island law). *See* 1 United States Virgin Islands Code Ann., Art 4. Real property was forfeited pursuant to *21 U.S.C. § 881*(a)(7) because it was used to facilitate the commission of a drug-related crime. United States v. The Premises and Real Property Located at No. 162-*A., 1999 U.S. Dist. LEXIS 8916 (D.V.I. 1999).*

(n25)Footnote 246. *See, e.g., West Indian Co. v. Government of the Virgin Islands, 23 V.I. 176 (D.V.I. 1987)* (Rule against Perpetuities as enunciated by the Restatement (Second) of Property inapplicable where modified by local laws to the contrary. Supp. 199 (D.V.I. 1995)* (noting that the court would look first to the Virgin Islands Code and controlling decisions of the Virgin Island Courts; and here public policy was found which noted that it was against such policy to assert against a subcontractor a defense of "pay when paid" clause in subcontract between general contractor and subcontractor).

(n26)Footnote 247. *See Smith v. de Freitas, 329 F.2d 629 (3d Cir. 1964)* (defendant's right to use a stairway passageway was affirmed either on the basis that it was an ancient "*frigang*" or by prescription); *Virgin Islands v. Price, 181 F.2d 394 (3d Cir. 1950)* (upon acquisition of the islands from Denmark in 1917, the federal court was given the

right to review all cases arising in the Virgin Islands which would have been reviewable by the courts of Denmark, it being the intent of Congress to continue in force the local law so far as it was compatible with the changed sovereignty until changed either by Congress or the local legislature). The V.I. Code Ann. tit. 1, § 4 also cites *Red Hook Marina Corp. v. Antilles Yachting Corp., 9 V.I. 236 (D.V.I. 1971)* (parties may use Danish laws as they existed in 1917 to determine land boundaries). *See* In re Tutu Wells Contamination Litigation v. Laga Indus., Ltd., note 244 *supra*, noting that contamination of water wells was a claim for damage to "real property" and used the property tort claim statute of limitation. *See Newfound Mgmt. Corp. v. Lewis, 131 F.3d 108 (3d Cir. 1997)* (containing a description of boundaries including the Danish influence in a quiet title action). In the case of *Club Comanche, Inc. v. Government of the Virgin Islands, No. 01-1717, 2002 U.S. App. LEXIS 569 (3d Cir. 2001),* the court concluded that the transfer of land from Denmark to the United States and then to the Government of the Virgin Islands was not sufficient to support a federal question for jurisdiction. In the case of *Seaver v. Seaver, 208 F. Supp. 2d 557 (2002)* the Danish law in effect in 1917 regarding the rights of non-marital children was not met and thus standing was absent.

(n27)Footnote 248. *See* 28 V.I. Code Ann. § 7. Tenancy by the entirety was introduced by 28 V.I. Code Ann. § 7(c) on September 1, 1957. It was not defined, however, and thus the majority rule of the common law regarding such an estate in those jurisdictions with a Married Woman's Property Act applies. *See Masonry Prods., Inc. v. Tees, 6 V.I. 108, 280 F. Supp. 654 (D.V.I. 1968)* (creditor of an individual spouse cannot reach the spouse's interest in the estate during their joint lives). *See Newfound Mgmt. Corp. v. Sewer, 885 F. Supp. 727 (D.V.I. 1995),* regarding a quiet title action to lands on the East End of St. John's which involved boundary disputes and surveys over many years.

(n28)Footnote 249. *See* 15 V.I. Code Ann. §§ 2, 84. *See also* the case of In the *Matter of the Estate of Austin A. DeChabert, Sr., 2000 V.I. LEXIS 14 (Terr. Ct. V.I. 2000),* which case determined that the estate of Florida resident must institute separate administration in the Territory to deal with real property in the Territory and that a resident of the Territory is to serve as the administrator.

(n29)Footnote 250. *See* 28 V.I. Code Ann. § 11 (noting a term of fifteen years if the possession is uninterrupted, exclusive, actual, physical, adverse, continuous, and notorious under claim or color of title). *See Donohue v. Lynch, 1998 U.S. Dist. LEXIS 16228 (1998)* (adverse possession discussed). Adverse possession was not shown in the case of *Netsky v. Sewer, 205 F. Supp. 2d 443 (D.V.I. 2002);* however, adverse possession was established in the case of *Burnett v. Benjamin, 44 V.I. 170 (2002)* and sufficient evidence was shown of adverse possession to deny a motion by the landowner that the roadway was private in *Hodge v. Bluebeard's Castle, Inc., 44 V.I. 242 (2002). See also DeCastro v. Stuart, 2004 U.S. Dist. LEXIS 5992, 45 V.I. 591 (2004)* (adverse possession not proven) and *Sasso v. Hackett, 45 V.I. 375, 2004 V.I. LEXIS 5 (2004)* (adverse possession proven).

(n30)Footnote 251. 28 V.I. Code Ann. § 411 provides that the public uses are those authorized by Congress or the Legislature of the Virgin Islands. *See S. & S. Servs. v. Rogers, 40 V.I. 320, (1999) 35 F. Supp. 2d 459* (requirements for a deed discussed). The Statute of Frauds rendered void any oral modification of the original lease according to *Mountaintop Limited Partnership v. Columbian Emeralds International, Inc., V.I. 193, 2001 V.I. LEXIS 11 (Terr. Ct. V.I. 2001).* Although a tenant could remove a "superficiary house" (one owned by a person other than the landowner on whose land it stands), the landowner had no duty to compensate the tenant for the house. *See Martin v. George, Civil No. 12/1999 2001 V.I. LEXIS 37 (Terr. Ct. V.I. 2001).* Because of the defendant's encroachment on plaintiff's land, a sale did not occur for three years; however, any prejudgment interest was based in tort rather than on the contract because the contract was only an oral contract it was found in *Bookworm, Inc. v. Tirado, 44 V.I. 300 (2002). See* Government of the Virgin Islands v. 0.459 Acres of land, *286 F. Supp 2d 501 (2003)* in which case arbitration was held as a permissible means to resolve issues arising under the Virgin Islands eminent domain statute. *See also Government of the Virgin Islands v. 0.459 Acres of Land, 2004 U.S. App. LEXIS 12839 (3d Cir. 2004)* (affirming an arbitration award given to landowner in a condemnation proceeding).

(n31)Footnote 252. *See* 15 V.I. Code Ann. § 83 (dower abolished September 1, 1957). Community property does not exist in the Virgin Island and the spouse has a right of election. *See* 15 V.I. Code Ann. § 10. Other chapters in title twenty-eight deal with acknowledgement of instruments, fraudulent conveyances, action for nuisance, waste or trespass,

and mortgage liens among other items. *See also Mapes Monde, Ltd. V A.H. Rise Gift Shop, Inc., 337 F. Supp. 2d 704 (D. V.I. 2004)* (landlord tenant law). The following cases decided in 2004 all involved mortgage law: *UMLIC VP LLC v. Matthias, 364 F.3d 125, 2004 U.S. App. LEXIS 6426, 45 V.I. 786 (2004)* (foreclosure sale ordered); *Bank of N.S. v. Family Broad., Inc., 121 Fed. Appx. 440, 2005 U.S. App. LEXIS 172 (2005)* (foreclosure sale confirmed); and *Barclays, Inc. v. St. Croix Estates 399 F.3d 570, 2005 U.S. App. LEXIS 3440 (3d Cir. 2005)* (mortgage did not contain a future advance clause).

(n32)Footnote 253. *See* 28 V.I. Code Ann. § 831 *et seq.* This was an emergency act which was to remain in effect only as long as the housing shortage existed. However, it has not been repealed and there is much litigation surrounding the terms. *See, e.g., Kress, Dunlap & Lane Ltd. v. Downing, 193 F. Supp. 874 (D.V.I. 1961)* (giving a summary of the Act).

(n33)Footnote 254. *See, e.g., Harris v. Lombardi, 1990 V.I. LEXIS 5* (March 8, 1990) (case involving a restrictive covenant and whether it survived a valid tax sale, if it rendered the title unmarketable, which would allow rescission of the land sale contract or set aside the warranty deed); *De Jesus v. David, 1190 V.I. LEXIS 14* (August 13, 1990) (conveyance of a fee title and improvements made on the land of another). *See also Joseph v. Henry, 958 F. Supp. 238 (D.V.I. 1997)* (regarding restrictive covenants on a life estate); *Christian v. All Persons, 962 F. Supp. 673 (D.V.I. 1997)* (judicial sales); *Hawksbill Sea Turtle v. Federal Emergency Management Agency, 126 F.3d 461 (3d Cir. 1997)* (temporary housing and the Endangered Species Act). In S. & S. Serv. v. Rogers, Case No. 91-207, LEXIS 646 (U.S. Dist. Ct. V.I. January 14, 1999) the court discussed the necessity of having a valid delivery for a deed to be effective. In the case of *Peter Bay Homeowners Ass'n, Inc. v. Stillman, 294 F.3d 524 (3d Cir. 2002),* the court noted that in general federal courts do not get involved in real property issues; however, the court did have subject matter jurisdiction in 1975 regarding the easement issue and although in 1990 such matters now will be decided by the local courts, this court had jurisdiction to interpret its 1975 decision.

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.01

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.01 Overview of Indian Land Law.

Historically, the central issue about Native American land was the terms of its acquisition by non-Indians. Although there was always governing law, and the law never endorsed seizure by force or coerced transfer, coercion was common, force was common enough, and legal remedies were inadequate to non-existent. This history raises profound questions of political morality that continue to inspire popular and scholarly interest. Many of these questions are beyond the purpose of a treatise to explain rules governing the law of real property according to the conventions of legal positivism. Some of the history is outlined in section 57.04 as relevant to the legal concepts discussed there, and citations in the chapter refer to leading authorities who address broader questions about the justness of Indian land acquisition.

During the 1920s, wholesale acquisition of Indian land ended in most of the country. n1 The Indian land base that survived the mass-transfer era has been fairly stable in its extent. It comprises over 100 million acres, 4.2% of the nation's land. n2 The law governing alienation of Indian land is essentially the same as it was while mass transfers were taking place, so important legal connections with that era remain. The modern law of Indian property centers on use of the land, its minerals, water, fish, and other valuable features, including enterprises located in Indian country.

Most Indian land is held under distinct laws that do not apply to other land. Outside Alaska, most Indian land is within one of more than 260 Indian reservations where tribes exercise powers of government. Tribal governments define property rights in tribal land among tribal members. Federal law governs the relationship between tribal land and non-members and governs some internal relationships as well. Federal law also governs the property rights of thousands of individual Indians who own land in severalty that is subject to federal restrictions, commonly called allotments. And federal law governs many other economic relations between tribal members and other persons in Indian country. As a result, tribal property law is largely internal to each tribe and its members. This chapter makes a few references to tribal property law, as it does to the occasional state law governing Indian property. Most of the chapter is devoted to federal laws and treaties governing Indian land, which dominate the field in practice.

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.02

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.02 Outline of the Chapter.

This chapter discusses treaties with the Indian nations and the distinct federal and tribal laws governing most of the Indian land in the United States. § 57.03 defines basic terms, and § 57.04 discusses fundamental concepts from an historical perspective.

The next two sections discuss the two basic classifications of restricted Indian land, land owned by Indian tribes (§ 57.05), and land owned by individual Indians (§ 57.06). Restricted Indian land is held under a unique trust controlled by the federal government, and § 57.07 describes the nature of this trust relationship. The many federal statutes that control alienation of Native American land are the subject of § 57.08.

Two sections discuss subjects that merit separate treatment: Indian hunting, fishing, and gathering rights (§ 57.09), and water rights (§ 57.10). The chapter concludes with a section relating Indian land law to the tribal sovereignty doctrine (§ 57.11).

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.03

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.03 Definitions.

(a) Indian Nation; Indian Tribe.

In federal law, Indian nation or Indian tribe means a political community that occupied part of the United States at the time of European contact. An Indian tribe is a political and legal entity that can make government-to-government agreements, exercise powers of internal sovereignty, own property corporately, and make contracts. n3 The federal government has formally recognized hundreds of tribes in treaties and statutes, and it maintains a register of tribes with whom it has a government-to-government relationship. n4 Congress and the President have broad power to recognize, define, or terminate tribes. There have been many particular disputes over legal qualification as a tribe. n5

(b) Indian; Native American.

American Indians are persons who are members of an Indian tribe or descendants of members. Native Hawaiians and some Native Alaskans are denominated separately. Many people now prefer the term Native Americans, and in this chapter it is used interchangeably with Indians or when Native Hawaiians and Alaskans are to be included. Federal and tribal law determine status as an Indian, Native Alaskan, Native Hawaiian, or tribal member for various legal purposes. n6

(c) Indian Country; Tribal Indian Country.

Indian country means territory within the United States in which the Indian country laws of the United States displace corresponding state law. It includes Indian reservations as well as terms less well known, such as allotments, rancherias, and pueblos. n7 Tribal Indian country means Indian country that is subject to a tribal government, in which the laws of Indian nations govern Indian people, further displacing state law. n8

(d) Indian Title.

Indian title refers to the land title of an Indian tribe. The term has been applied to refer to restricted land of individual Indians, but in this chapter it means only tribal title. n9 Tribal ownership is the collective right of the tribe, in which tribal members have only a derivative interest based on their membership. n10

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.04

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.04 Fundamentals.

[Go To Supp]

(a) The Federal Restraint on Alienation of Indian Title.

Only the United States can extinguish Indian title. n11 This is the most important legal rule governing Native American land. Most other rules are derived from this sovereign prerogative. Federal law governing Indian land evolved from the national and international law of the European nations that colonized the Americas. The earliest attempts to impose law on raw force were the works of Spanish Dominican jurists, particularly Las Casas and Vitoria. They opposed the claim that Native Americans had no legal rights because they were heathens and argued that native land ownership should be respected, that natives' land should be purchased in voluntary transactions, not seized by force. These principles were framed in reaction to the conquests of Hispaniola, Cuba, Mexico, and Peru, and they influenced both Crown and Church. n12 The principles were often dishonored, but they had a powerful effect on legal history. By the 19th century, Vitoria's principles had become sufficiently accepted that the U.S. Supreme Court recited them as law. n13

European sovereigns vied with each other for American territory. To govern their colonial competitions, they developed the rule that the first European power to discover new territory should have exclusive right to it against all others. This right was often transferred involuntarily as a result of the many wars among European nations, when the winner replaced the first discoverer. Or it could be transferred by purchase, as Louisiana. One of the rule's most important applications was to land transactions with Native Americans. Under this "rule of discovery," the first European sovereign (or its successor by war or purchase) claimed the right to acquire Indian land exclusive of other European sovereigns. n14

The "discovering" sovereign's exclusive right was applied as well to restrain private persons and groups who sought to acquire land from Indian nations. This served to carry out Vitoria's rule that Indian land should be honorably bought because government actions were more open. It helped the sovereign keep the peace with tribes and control the pace of European settlement. Less honorably, it gave the sovereign a convenient way to reward favorites or to resell land at a profit. n15

For property law, the sovereign patent was a certain root of title, uncomplicated by differences in property concepts between Native American and European societies. When land passed through sovereign procedures, it became an

English fee simple or other European equivalent, regardless of its status under Indian sovereignty. Had it not, there would often have been doubt about what had been sold and bought. n16

The British Crown and government observed the restraint concept. Its enforcement varied with the degree of attention London gave its American possessions. n17 Attention was at apogee during the 1760s, and in 1763, George III issued his famous Indian country Proclamation, which asserted the restraint in terms that are protective of Indian title. n18 The Proclamation is relied on by Native Canadians as a basis for their claims to land and sovereignty. n19

Upon independence of the United States, it was generally assumed that the sovereign restraint should continue. Within states, there was uncertainty because it was unclear whether the state or the United States was the sovereign successor to the Crown for purposes of Indian title. Both purported to exercise the Crown's power. n20 For federal lands outside states, the United States was the unchallenged successor. It continued the restraint, n21 and in the Northwest Ordinance, Congress enacted one of the most eloquent statements of Vitoria's principle of honorable dealing:

> The utmost good faith shall always be observed towards the Indians; their lands and property shall never be taken from them without their consent; and in their property, rights, and liberty they never shall be invaded or disturbed unless in just and lawful wars authorized by Congress; but laws founded in justice and humanity shall, from time to time, be made, for preventing wrongs being done to them and for preserving peace and friendship with them. n22

Under the Constitution, Congress reenacted the Northwest Ordinance and enacted the Nonintercourse Act, which put the restraint on alienation into the statutes. n23 Knox and Jefferson, as members of Washington's cabinet, gave the rule careful articulation. n24

The essential effects of the restraint applied to the common law of property are to reverse the common-law presumption of alienability and to vest great power over Indian land in the federal government. n25 A seller or buyer of tribal land must show clear authority in federal law to allow a transfer, while at common law, one advocating limits on alienability must prove a clear and lawful source of limits. n26

LEXIS: extinguish! w/30 indian w/2 title! or land!
restraint! w/2 alienat! w/30 indian w/2 title! or land!

(b) Indian Treaties.

Under the "discovery" rule, colonial sovereigns controlled purchases of tribal land, and the business of acquiring it was a major governmental enterprise. In many instances, governments carried out this purpose through the formal and international mechanism of treaties with Indian nations. The United States continued this policy after independence, first under the Articles of Confederation, then under the Treaty Clause of the Constitution. n27

The United States made several hundred treaties with Indian nations. n28 A principal provision in most of them was a land cession to the United States in return for payment to the tribe and recognition of tribal ownership and exclusive control of a reduced domain. For most tribes, this process was repeated to diminish tribal territory yet again. A harsh variation promoted by the Jackson Administration was the removal treaty, in which a tribe agreed, usually under duress, to relinquish its entire territory and remove to lands in the West that were remote from white settlements. n29 The principal area to which tribes removed became known as Indian Territory, now Oklahoma and part of Kansas. n30

Congress ended the making of new treaties with Indian nations in 1871, n31 but many of today's tribal land titles are guaranteed in treaties made before that date. The treaties also preserved tribal self-government within tribal territory, so

they are the source of distinct property rules grounded in tribal sovereignty. n32 After 1871, the Government continued to make agreements with tribes; these became law when ratified by Congress in statutes. n33

Under the Constitution, treaties have the same rank as federal statutes. Hence, a later statute can override a treaty, a power that Congress has exercised to abrogate aspects of Indian treaties. n34 Moreover, many tribes never made treaties or agreements with the Government, and others made treaties that were never ratified. n35 As a result, much tribal land was set aside by federal statute or by executive order of the President, rather than by treaty or agreement.

For these reasons, the legal importance of Indian treaties is not so much for their particular provisions as it is for the general policies and interpretive practices they established. Land set aside by statute or executive order, and even land purchased by or for tribes, is presumptively subject to the policies and practices established under the treaties. n36

COMPUTER-ASSISTED RESEARCH

LEXIS: indian! w/5 treaty or treaties

(c) Marshall Court Decisions.

The Marshall Court decided five major disputes that depended on the status of Native Americans or their land. n37 Only one had an Indian party, and that case was dismissed for want of jurisdiction. n38 Nevertheless, these decisions articulated legal concepts that dominate federal Indian law.

Constitutional and legislative antecedents of the court's decisions were sparse but fundamental. The Constitution implied that tribal Indians were not part of the political community of the United States, n39 and the Government had made dozens of treaties with tribes, implying their national status. The Constitution gave Congress power to regulate commerce with the Indian tribes, ranking tribes with states and foreign nations but implying that they are different from either. n40 Congress had exercised this power in statutes known as the Indian Trade and Intercourse Acts. These laws enacted the federal restraint on Indian title, regulated trade with tribal Indians, and provided for federal trial and punishment of interracial crimes. n41

(1) Indian Title Cases.

Four of the Marshall Court's decisions addressed the nature of Indian title. n42 The best known is Johnson v. M'Intosh, which is often studied in law school courses on the law of property. n43 In 1773 and 1775, Johnson and his fellow plaintiffs had bought large tracts of land in the far west of Virginia directly from their tribal owners. Their purchase violated the sovereign restraint on alienation because they did not act through the Crown. Nor did they obtain ratification by the Crown or, after independence, by Virginia or the federal government. Instead, the federal government acquired the same tracts as parts of later cessions by the tribes. The Government patented part of one tract, by then in Illinois, to M'Intosh. The court ruled that the earlier purchases were legally void and held for M'Intosh.

While this decision accorded with long-established precedents and practice, Marshall's opinion was a more thorough and complete articulation than had previously existed, and remains the best-known discussion of the subject. Moreover, in this opinion and in *Fletcher*, the court accommodated the sovereign restraint on alienation to the Federal Constitution and to other aspects of American law.

Johnson and *Fletcher* conceptualized the sovereign interest as "fee simple" ownership subject to Indian title, which

consisted of a "right of occupancy" in the tribes. n44 In *Fletcher*, this was a convenient device to recognize the State of Georgia as proprietary successor to the Crown, yet to sustain the federal restraint on alienation as a regulatory power. The issue was validity of massive, frontier land transfers by the State to private buyers. The court's opinion sustained the transfers to vest ownership in the buyers after Indian title was extinguished, but it recognized that the federal government had sole power to extinguish Indian title.

The description of Indian title as a "right of occupancy" subject to a "fee simple" interest in the state or federal government or their private successors has been the source of confusion and error. To those bent on minimizing Indian rights, the right of occupancy sounded conveniently like a common law tenancy at will, and fee simple resonated with its exalted common-law meaning. That the court meant no such thing is clear; it later described the tribal right to be "as sacred as the fee simple of the whites." n45 But other judges have occasionally succumbed to the temptation and referred to the tribal right as a "mere" right of occupancy that was unprotected in one context or another. n46 Some academic criticism of *Johnson* centers on the court's recital of the "rule of discovery" as conferring "fee simple" ownership on the discovering European power and on the states or the United States as successor sovereign. n47 The recital implies two propositions: assertion of the sovereign right to define land ownership (and other legal relationships), and definition of tribal ownership as an exercise of the sovereign right. The first, the Europeans' subordination of tribal sovereignty, raises profound political and moral issues beyond the scope of this treatise. n48 The second, the crucial question for property law, is the nature of ownership recognized in the Indian nations. The concept in federal law (though many times unenforced in practice) has consistently been that Indian title includes all rights of ownership except the right to sell to outsiders, which is subject to the federal restraint on alienation. Because the Indian right includes full and exclusive possession, use, and enjoyment, the sovereign's "fee simple" is very different from common-law possessory or future interests held in fee simple. It is more like the fee simple of a private law trustee, and this analogy has worked its way into the law. n49

The physical extent of tribal ownership has been the subject of several kinds of disputes. Original Indian title was not represented by writings or surveys, and it was described as based on possession or occupancy. This raised an important question about the intensity of possession required to support Indian title. From the earliest Spanish conquests, opponents of Native Americans argued that hunting, gathering and other uses that involved only occasional human presence, should not be recognized. Land so little used should be declared to be vacant or waste land, terra nullius, available to the first Europeans to put it to agricultural or other intensive use. This argument was made to the court and rejected in general terms in *Johnson*, n50 then more explicitly countered as part of the holding in *Mitchel*. The court specifically recognized tribal possessory title in broad terms based on any tribal use, including hunting. n51

In treaties with the United States, the limit of original tribal title usually corresponded with the limit of a tribe's exclusive possession respected by other tribes, in other words, with a tribe's national boundaries. As a result, virtually all land to which the federal government extinguished Indian title was the subject of a purchase agreement with a tribal owner. n52 Questions about the justness of these acquisitions depend mostly on tribal volition in making agreements; in many cases, coercion or fraud was manifest. n53

Another issue about the extent of tribal ownership was whether voluntary abandonment of possession constituted loss of Indian title. The Supreme Court has held that it did, n54 although this rule has seldom been the basis for extinguishment of Indian title. The concept has more often figured in disputes over which of two tribes owned disputed territory. n55

An important limit on the extent of tribal ownership relates to navigable waterways within tribal boundaries. This is discussed in connection with Indian title. n56

(2) Tribal Sovereignty Cases.

The Supreme Court's decisions in the two Cherokee cases arose out of the State of Georgia's effort to assert its jurisdiction over Cherokee territory. Cherokee Nation v. Georgia was an original action in the Supreme Court against the State seeking a ruling that the State had no jurisdiction over Cherokee country. n57 The court dismissed for want of original jurisdiction, but Marshall's opinion laid the conceptual groundwork for the trust relationship between the federal government and the Indian nations. n58

In Worcester v. Georgia, the court reviewed state court convictions of two white missionaries to the Cherokees who had refused to obey state law requiring them to apply for a state permit to be in Cherokee country and to acknowledge the primacy of state authority. The court reversed, holding that under the treaties between the United States and the Cherokee Nation, the State had no jurisdiction in Cherokee country. n59 This decision, the court's most influential in the field of Indian law, is the foundation of the tribal sovereignty doctrine. n60

LEXIS: tribal w/1 sovereignty

(d) Constitutional Power of Congress.

The Supreme Court's holding in Worcester, that Georgia had no jurisdiction over Cherokee country, rejected the claim that the federal government lacked constitutional power to oust the State's jurisdiction. n61 All other "states' rights" arguments against the validity of federal Indian treaties and statutes have been rejected by the court. n62 In recent years, equal protection attacks on federal Indian laws and treaties have also been rejected. According to the court, classification as an Indian in federal law is essentially political rather than invidiously racial. n63

The Supreme Court has consistently sustained federal legislative power to override Indian treaty rights and to restrict tribal sovereignty. n64 The only successful constitutional attacks on federal statutes applied to Indian affairs have overturned laws found to take Indian property without just compensation or to deprive Indians of property without due process. n65 This so-called "plenary power doctrine" has been criticized, n66 but the court continues to follow it. n67 The court imposes an important limit on the power by its requirement that congressional intent to invade Indian rights be clearly expressed. n68

(n28)Footnote 38. *Cherokee Nation v. Georgia, supra* note 37.

(n29)Footnote 39. U.S. Const. art. I § 2 cl. 3 defined the political community for purposes of representation in Congress and apportionment of direct taxes. It counted all free persons except "Indians not taxed," and three-fifths of other persons. The Fourteenth Amendment superseded the slavery provision but retained the exception for "Indians not taxed." In 1788 and 1868 this meant noncitizen, tribal Indians not assimilated into state societies. The Indians' original status was changed by treaty and statute, and today all Native Americans are citizens and are counted under Article I. *See infra* note 110 and accompanying text; Cohen, *supra* n. 1, at 639-640; *American Vantage Co., Inc. v. Table Mountain Rancheria, 292 F.3d 1091 (9th Cir. 2002)* (Congress extended citizenship to Indian individuals but not to Indian tribes). *United States v. Errol D., Jr., 292 F.3d 1159, 1163 (9th Cir. 2002)* (ambiguous provisions in both treaty and non-treaty matters should be "construed liberally" in favor of the Indians); *Timpanogos Tribe v. Conway, 286 F.3d 1195 (10th Cir. 2002)* (Indian reservations created by statute, agreement, or executive order generally have the same legal ramifications as those created by treaty).

(n30)Footnote 40. U.S. Const. art. I § 8 cl. 3. *See Cherokee Nation, 31 U.S. (5 Pet.) at 18-19.*

(n31)Footnote 41. The Act of Mar. 30, 1802, ch. 13, *2 Stat. 139,* was in force for the first four decisions discussed here. It had replaced similar statutes passed in 1790, 1793, 1796, and 1799. *See* Cohen, *supra* n. 1, at 109-113. The 1802 act was *superseded by* the Act of June 30, 1834, ch. 161, *4 Stat. 730* (repealed in part) (*codified as carried forward and amended at 18 U.S.C. §§ 1152,* 1160, 1165; *25 U.S.C. §§ 177,* 179, 180, 193, 194, 201, 229, 230, 263, 264).

(n32)Footnote 42. *See supra* note 37. Indian title was discussed in each cited opinion except Cherokee Nation v. Georgia.

(n33)Footnote 43. *21 U.S. (8 Wheat.) 543 (1823). See, e.g.,* Jesse Dukeminier & James E. Krier, Property 4 (3d ed. 1993); Charles M. Haar & Lance Liebman, Property and Law 3 (2d ed. 1985).

(n34)Footnote 44. *Fletcher, 10 U.S. (6 Cranch.) at 142-143; Johnson, 21 U.S. (8 Wheat.) at 585-587.*

(n35)Footnote 45. *Mitchel v. United States, 34 U.S. (9 Pet.) 711, 746 (1835), quoting Cherokee Nation v. Georgia, 30 U.S. (5 Pet.) 1,* (1831) (Baldwin, J., concurring). This was presaged by Justice Johnson's separate opinion in *Fletcher* , in which he argued that the state's interest subject to Indian title should not be characterized as a fee simple because the Indian interest was the equivalent of a fee. *10 U.S. (6 Cranch.) at 146-147.* Johnson wanted to call the state's interest a "right of pre-emption"; he did not differ about the federal restraint on alienation of Indian title.

(n36)Footnote 46. *E.g., Tee-Hit-Ton Indians v. United States, 348 U.S. 272, 279 (1955)* (discussed *infra* § 57.05(a)); *In re Wilson, 634 P.2d 363, 365 (Cal. 1981).* Another imperfect attempt to describe Indian title in common-law terms was made in *United States v. Cook, 86 U.S. (19 Wall.) 591, 593-94 (1874),* where the court said the Indian right is like that of a life tenant or tenant for years, with the United States holding the future interest in fee. The court was more accurate in *Holden v. Joy, 84 U.S. 211, 244 (1872),* where it described tribal title as "absolute, subject only to the pre-emption right of purchase" of the United States.

(n37)Footnote 47. An early example is Joseph Story, A Familiar Exposition of the Constitution of the United States (1840) at 13-14 ("It is difficult to perceive, why [the Indians'] title was not ... as well founded as the title of any other nation ... The truth is, that the European nations paid not the slightest regard to the rights of the native tribes.") *See also* Robert A. Williams, Jr., *supra* n. 5, at 287-317. *Cf.* Felix S. Cohen, Original Indian Title, *32 Minn. L. Rev. 28, 48-49 (1947)* ("Marshall's doctrine that the Federal Government and the Indians both had exclusive title to the same land at the same time" was "a fiction devised to get around a theoretical difficulty posed by common law concepts.")

(n38)Footnote 48. The rule of discovery treated Indian nations as inferior by asserting the exclusive right to deal with them, an assertion of the right to control their territory. Of course, this would have been meaningless without the power to back it up, and in North America, Indian nations in fact formed alliances in wars among French, British, and Anglo-American forces. *See* Cohen, *supra* n. 1, at 57-59. Some tribes agreed to U.S. sovereignty in treaties, but most did not or agreed only with doubtful volition; the rule of discovery and other laws were imposed on them, either by the U.S. or by a European predecessor. In Worcester v. Georgia, the court explicitly said that the rule of discovery was a rule only among Europeans and their successor governments. *31 U.S. (6 Pet.) at 542-545. See also Karuk Tribe of California v. United States, 41 Fed. Cl. 468 (1998)* (tribal rights of occupancy and enjoyment may be extinguished, abridged, or curtailed by the United States at any time without payment of just compensation).

(n39)Footnote 49. *See infra* § 57.07. A trust title concept was implied by the wording of the Royal Proclamation of 1763, *supra* note 18, which reserved all unpatented land west of the Alleghenies "under the dominion and protection" of the Crown "for the use of the ... Indians."

(n40)Footnote 50. *Johnson, 21 U.S. (8 Wheat.) at 569-570.* Counsel for defendant urged the anti-Indian view, relying on the court's opinion in *Fletcher,* which had referred to land subject to Indian title as "vacant lands." *10 U.S. (6 Cranch.) at 142,* cited at *21 U.S. (8 Wheat.) 570. See also id.* at 92 (same term in the pleadings). However, the Fletcher

court also said that Indian title to such ("vacant") land "is certainly to be respected in all courts." *Id*. at 142-143.

The anti-Indian view had support in the published views of some European writers. *See, e.g*., 3 Emmerich de Vattel, The Law of Nations or the Principles of Natural Law §§ 81, 209, pp. 37-38, 85-86 (1758, tr. C. Fenwick); John Locke, An Essay Concerning the True Origin, Extent and End of Civil Government [Second Treatise of Government], in Treatise of Civil Government and A Letter Concerning Toleration 18-33 (C. Sherman ed. 1937, orig. pub. 1689).

(n41)Footnote 51. *Mitchel, 34 U.S. (9 Pet.) at 746* ("their hunting grounds were as much in their actual possession as the cleared fields of the whites"). However, the nature of Indian land use contributed to the rule that original Indian title lacks Fifth Amendment protection. *See infra* § 57.05.

(n42)Footnote 52. *See* Indian Land Cessions in the United States, in 18th Annual Report, Bureau of American Ethnology (Charles C. Royce, ed., 1896-97); Washburn, *supra* n. 12, at 109-123; Cohen, *supra* n. 47, at 34-43. "Exclusive possession" included joint or common possession by two or a few tribes so long as it was clearly exclusive of others. *See* Pueblo of Laguna v. United States, 17 Indian Cl. Comm'n 615, 668 (1967).

(n43)Footnote 53. *See Tee-Hit-Ton Indians v. United States, 348 U.S. 272, 289-290 (1955); Choctaw Nation v. United States, 119 U.S. 1, 37-38 (1886).* The most comprehensive evidence of coercion and fraud is found in the facts of the many claims decisions of the federal courts and the Indian Claims Commission. *See infra* § 57.07(d)(4). Other evidence of coercion arises from the lengthy list of unratified treaties with tribes. *See supra* note 35.

(n44)Footnote 54. *Williams v. City of Chicago, 242 U.S. 434 (1917).* The court's opinion cited dicta in several earlier opinions, including *Johnson* and *Mitchel. 242 U.S. at 438.*

(n45)Footnote 55. *See* Cohen, *supra* n. 1, at 492. Some cases have turned on whether an abandonment was voluntary. *Id*. at 492-493.

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.05

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.05 Tribal Land.

[Go To Supp]

Tribal land ownership has many different origins. It can be held under original Indian title; a treaty; a federal statute; an executive order of the President; a purchase, gift or exchange; or a title established by a prior foreign sovereign or by a state. There are also variations in the form of titles. Some are not specifically denominated, others are explicitly in fee simple or owned by the United States in trust for a tribe. n69 Most of the important incidents of ownership are the same regardless of origin or form. All tribal land is subject to the federal restraint on alienation, including title held in "fee simple." n70 All tribal land has the same rights of possession and use. All tribal title has the same legal protection against state or private interference. All tribal land probably has the same relation to questions about tribal and state sovereignty. n71 Historically, the one important distinction in forms of tribal ownership is between Indian title that is legislatively recognized under federal treaties or statutes, and title that is not.

COMPUTER-ASSISTED RESEARCH

LEXIS: tribal w/1 land! w/2 own!

(a) Legislatively Recognized Indian Title.

"Recognized" title is protected under the Fifth Amendment against federal taking without just compensation; n72"unrecognized" title is not. Recognized title is tribal ownership recognized in a treaty or statute or based on purchase or exchange; in other words, it is title grounded in legislative recognition under federal or state law. Unrecognized title is tribal ownership based on original Indian title or on an executive order setting aside federal land for a tribe; it lacks legislative recognition. n73 Original Indian title, also called aboriginal Indian title, is the property right in land possessed by an Indian tribe at the time of European contact. The right continues until changed by positive act of the federal government or an antecedent sovereign. In most cases, original title was sold to the United States or a prior sovereign in a treaty of cession or was confirmed to the tribe in the treaty, thereby becoming recognized title. In some instances, original title was not recognized or sold, and in Tee-Hit-Ton Indians v. United States, the Supreme Court held that original title has no Fifth Amendment protection against a federal taking. n74 It is protected against a state taking or private ouster. n75

In 1855, President Pierce began the practice of setting aside tracts of land for Indian tribes by presidential order based solely on executive power over the public lands. In some cases the land set aside was occupied by tribes under original Indian title; in others original Indian title had been previously extinguished. These became known as executive order Indian reservations, and dozens of them were established. n76

For some years there was doubt about the legality of this practice, but in 1915 the Supreme Court held that Congress had ratified it by implication. n77 However, the court has also held that tribes do not have recognized title to executive order reservations. The land may be taken by federal action without payment of compensation. n78

Executive order reservations became controversial in the 1920s. In 1922, Interior Secretary Albert Fall (notorious for the Teapot Dome scandal) issued an opinion stating that executive order Indian reservations were subject to mining entry under federal laws governing the public domain, and the Indians were not entitled to payment for minerals removed. n79 Soon after, an opinion by Attorney General Stone reached the contrary conclusion. n80 Congress settled the issue by statute, expressly recognizing tribal ownership of the mineral estate in executive order reservations. n81

In 1919, Congress forbade creation of new executive order reservations. n82 But in 1934, the Indian Reorganization Act authorized the Secretary of the Interior to establish new reservations or additions to reservations by secretarial order. n83

The rule that "unrecognized" Indian title lacks Fifth Amendment protection has been strongly criticized, particularly regarding original Indian title. n84 That application does seem to conflict with Vitoria's principles and with the Northwest Ordinance. n85 The rule does not affect much land now held by tribes. Little or no land is held in original Indian title alone, and much of the tribal land in executive order Indian reservations - possibly all of it - has become recognized under one or another federal statute. n86 Even when it applies, the Fifth Amendment does not protect the essential Native American interest in the land itself, other than being paid for it. n87

LEXIS: indian! w/5 title! w/15 recognize!

(b) Indian Title in Watercourses.

Under the common law, non-navigable waterways are part of the adjoining upland property if included in its boundaries. But navigable waterways are owned by the sovereign in trust for all the people. There is a strong presumption against most kinds of private rights in navigable watercourses. Private rights in fee simple ownership usually end at the high water mark or line of mean high tide. n88

Constitutional case law divides the sovereign interest in navigable waterways between the federal government and the states. The states own the fee interest in trust for their people. The federal government owns a navigational servitude, giving it control to promote and protect navigation. Moreover, the Supreme Court has interpreted the Constitution and federal navigation acts to expand the common-law definition of navigable. Under American law, many interior waterways are navigable, contrary to English law. n89

The state proprietary interest in navigable watercourses is subject to state law. Private rights can be acquired, and rights to divert and use water are commonly available. But states are generally reluctant to create other private rights, particularly rights in beds or banks of waterways. The tradition of watercourses as commons is very strong. n90

Prior to statehood of a public land state, the federal government owned all sovereign rights in navigable watercourses. At that time, it could grant private rights in watercourses, and some conveyances have been recognized. But there is a

strong presumption against a conveyance; it must be explicit and clear. Conveyance of the adjoining upland without more was not enough, nor was inclusion within a boundary. Upon statehood, the federal proprietary interest in navigable watercourses vested in the new state. n91

Applying the law of navigable waterways to Indian land has caused difficulties, which is ironic. Most American waterways are publicly owned, either pursuant to the strong rule for navigable waterways or as a matter of title, and they are treated as commons. Tribal lands were usually held as commons, so the conflict between Native American and Anglo-American concepts of land ownership was much less with regard to waterways. When treaties were made, the waterways and their fisheries appeared endlessly abundant, and ownership of beds seemed unimportant. Whether the Indians reserved distinct rights in common as separate societies, or they were to share in the general commons, did not loom as a problem and was not addressed. But in modern times fishing is heavily regulated and ownership of beds can be valuable, so the issue of one commons or several has often come to the forefront. When non-navigable watercourses are within or on the boundaries of Indian land, the common-law rule is applied with few difficulties. When within the land boundary, Indian title includes waterways and their beds and banks, and conveyance of the upland alienates the adjacent waterway under rules of general application. n92 Distinct rules apply to water (use) rights in arid areas. n93

When navigable watercourses are within or on the boundaries of Indian land, legal rules conflict. Original Indian title was supposed to be the entire domain possessed by the tribe, including watercourses, and treaty reservations were supposed to recognize the same title in a reduced domain. Surely the Indian people thought so, and the usual rule of treaty interpretation is to carry out their just expectations. n94 On the other hand, the rules establishing state and federal control of navigable waters are policies that the Supreme Court has strongly protected against private claims. n95

Tribes have argued that they are not ordinary private claimants, but they have had limited success. The court has denied tribal claims to own navigable watercourses except in two circumstances. One is the unique situation in parts of the former Indian Territory, now Oklahoma, where removal treaties had explicitly promised that the land would never be included within the boundaries of any state or organized territory. The court held that this overcame the presumption that navigable watercourses were held by the United States in trust for the people of a future state, and the tribes own them. n96

The second situation, of more general application, is when an Indian fishery is part of a reservation. In these cases, the courts have readily inferred that the fishery was to be exclusive, and that the tribe owned the watercourse as protection for its fishery. n97 In other words, the courts have sustained the focused expectations of fishing Indians to own their fisheries, but they have denied the general expectations of other Indians to own navigable watercourses within tribal boundaries. n98

State ownership of navigable waterways may affect disputes about reservation boundaries. When the issue is whether a navigable waterway is within a reservation, the formal question is congressional intent. But in ambiguous cases, a court may be influenced by the state's claim of ownership of its beds and banks to find the waterway outside the reservation. n99 Federal dam building has generated analogous questions. When the federal government has acquired tribal land for a dam and reservoir, by purchase or eminent domain, it is often ambiguous whether the land under the reservoir and along its shore was intended to remain within the tribal reservation. n100

(c) Tribal Interests in Land Owned by Others.

Tribes can own servitudes and other interests in land owned in fee by others. n101 An important example is retained tribal rights to hunt, fish, and gather wild plants on lands ceded to the United States, discussed below. n102 A unique

right was established by the Native American Graves Protection and Repatriation Act. n103 The Act vests ownership of Native American human remains, funerary objects, and other cultural items discovered on federal land in lineal descendants or in tribes or Native Hawaiian organizations. n104

(d) Acquiring Tribal Ownership.

Congress can pass a new law establishing tribal title or transferring public land to a tribe, and this is occasionally done. Some statutes applicable only to particular tribes entitle those tribes to acquire land under various circumstances. n105 And tribes to which it applies can acquire land under Section 5 of the Indian Reorganization Act of 1934. n106 This Act applies to all tribes except those that rejected it by referendum; about four-fifths of the tribes are subject to the Act. n107 Tribes are authorized to purchase allotted land that is subject to their jurisdiction. n108 Tribal ownership can also be acquired by exchange. n109 And tribes can purchase land or receive gifts of land from other sources.

The federal restraint on alienation appears to attach to any tribal ownership, no matter how acquired. n110 This assertion is untested as applied to tribal acquisitions entirely independent of federal involvement or approval, but the statutory wording seems too clear for exceptions. In most instances, tribes seek to have acquired land held in trust for them by the United States. Federal regulations provide criteria and procedures for accepting trust title. n111 Another important issue is whether newly-acquired tribal land is Indian country subject to tribal sovereignty. This is addressed in another section of this chapter. n112
