Native Americans have the same rights as other persons to own land under state and federal law. In the last century, most Indian people were not citizens of the United States, and some states limited land ownership by noncitizens. All Native Americans born in the U. S. are now citizens, and laws forbidding ownership by noncitizens have been held unconstitutional. n113 Native Americans can own several kinds of property interests under distinct laws applicable only to them. These are the subject of this section, but they are too numerous and complex for complete coverage here. Some interests are under statutes applicable to a single tribe or to a few tribes. The purpose of this section is to discuss broadly applicable rules and to identify more local schemes with sufficient citations to allow research to continue in specialized works.

(a) Individual Rights in Tribal Property.

Tribal ownership is the collective right of the tribe, in which tribal members have only derivative interests based on their membership. Typically, a tribal member gains a derivative right at birth or enrollment and loses it at death. The member's interest cannot be transferred, inherited, or severed, and members have only such rights of use and enjoyment as tribal law grants. In general, tribal ownership is more like corporate ownership than tenancy in common. But it lacks the private corporate owner's transferable share or derivative right to sue, yet it is greater than the private interest in a municipal corporation. n114

Except in a few instances when federal law specifies individual rights in tribal property, members' rights are dependent on tribal law. Tribal law usually allocates to members use rights in tribal property, such as homesites, grazing leases, fields for farming, fishing rights, timber cutting rights, water rights, and business sites. Compared with the common law of property, use rights in tribal land are much more likely to be revocable, to be alienable only to a very limited extent, and to be of limited duration. Each tribe's law, customary and statutory, should be examined to evaluate a local issue.

(b) Allotments.

Allotment is a term of art in federal Indian law, identifying a parcel of land beneficially owned by one or more Native Americans and subject to a federal restraint on alienation. Most allotments are held in the name of the United States as trustee for their Indian owners. A smaller number, mostly in eastern Oklahoma, are held in fee simple by Indian owners subject to an explicit federal restraint on alienation. However, the purpose of the trust title is to control alienation, so the two forms of title have virtually identical legal effects in practice. On the other hand, allotments are subject to many particular statutes, and differences among these can be significant. n116

Except for alienation, allotment ownership is almost identical to common-law fee simple ownership. Multiple ownership usually results from inheritance, and heirs hold the land as tenants in common. n117

(1) Allotments of Tribal Land.

In the 1850s, federal officials decided that parceling tribal land in severalty to tribal members should be promoted as part of a policy favoring Indian assimilation into the family farm culture of Anglo-America. Beginning in 1854, most treaties and agreements with tribes included a provision that entitled tribal members to claim an individual homestead out of tribal land. These were nominally consensual agreements, but uniformity of the clauses raises a strong inference that the federal government insisted on them. n118

Parcels patented to members out of tribal land were the first of what came to be known as allotments. Advocates of allotment were dissatisfied with the limited number of allotments achieved through provisions in treaties and agreements, and in the late 1870s, they began to propose that allotment of tribal land be mandated by statute. Some members of Congress resisted any statute that did not provide for tribal consent, but eventually their opposition was overcome, and Congress enacted the General Allotment Act of 1887, also called the Dawes Act. n119 The Act authorized the President to impose allotment on tribes covered by it. In practice the Interior Department sought consent of tribes to allotment, but there was a good deal of overbearing, and the threat of compulsory allotment overshadowed negotiations. However, some tribes successfully resisted allotment, including most in the Southwest. n120

A key part of the allotment scheme was the assumption that tribes did not really need all the land they owned. An allotment should be conveyed to each tribal family for its agricultural support. Remaining tribal land was "surplus" and should be sold to homesteaders. The General Allotment Act authorized sale of surplus land with tribal consent. n121 Overbearing was again frequent, and Congress unilaterally altered the terms of some "surplus" land sale agreements. n122 Millions of acres of tribal land were sold under this plan; it was the last method of wholesale transfer of Indian land to non-Indian ownership. n123

With few exceptions, allotment was a disaster for Indian people. One historian described the policy as "an orgy of plunder and exploitation." n124 In the 1920s, the Government itself decided that the policy had failed. Compulsory allotment of tribal land was suspended in 1928 and ended in 1934. n125 Since then, allotments of tribal land have been made only in a few specific instances and with Indian consent. However, thousands of allotments made before 1928

remain under federal restrictions, and thousands of former allotments have been sold to non-Indians under the allotment laws. n126

(2) Public Domain Allotments.

The federal government's 19th century enterprise of extinguishing tribal title was followed by opening large tracts of acquired land to settlement under various public land laws such as the Homestead Act. n127 Claimants had to be eligible for citizenship, so most Indians did not qualify for homesteads. But in the allotment era after the Civil War, the Government wanted to encourage Indians to take public domain homesteads as part of its assimilation policy. Accordingly, Congress passed statutes that allowed individual Indians to obtain restricted homesteads, which are usually called public domain allotments. Section 4 of the General Allotment Act and several other statutes were enacted to this end. n128 In some instances, officials of the Bureau of Indian Affairs used these statutes to acquire several, proximate public domain parcels as a reservation for homeless tribes. n129

Some statutes authorizing public domain allotments remain in force, and claims under them can still be made. n130 But successful claims are difficult because regulations require that a new allotment be sufficient for self-support of the claimant, a standard difficult to meet under modern conditions. n131

(3) The General Allotment Act.

The General Allotment Act governs most allotments made out of tribal land and located outside eastern Oklahoma. The Act also applies to public domain allotments. n132 Sections 1 through 3 of the Act, now suspended, governed the making of allotments out of tribal land. n133 Section 4 authorizes public domain allotments. Section 5 provides that an allottee shall receive a patent declaring that the United States holds the allotment in trust for the allottee and the allottee's heirs for 25 years. n134 The trust period is now indefinite. n135 Section 7 entitles allottees to a "just and equal" share of water available for irrigation. n136

Section 6 of the Act governs the making of unrestricted fee patents when the allotment trust period ends. n137 Under the original act, this occurred automatically after 25 years and could occur earlier in the Secretary's discretion, whether or not the allottee consented. Under current law, the trust can end only upon application by the allottee and approval of the Secretary. n138 There has been much litigation over the effects of Section 6 on jurisdictional issues. n139

Many special allotment acts were passed for particular tribes. n140 These statutes are mostly patterned after the General Allotment Act, and the general act continues to apply except for conflicting provisions. Special allotment acts were also passed for tribes in eastern Oklahoma that are not subject to the general act. n141

LEXIS: general allotment act

(4) Adjudicating Allotment Rights.

Federal law grants jurisdiction to federal district courts over actions involving title to or possession of allotments outside eastern Oklahoma. n142 The statute confers exclusive jurisdiction over actions by Indians who claim a right to obtain an allotment in the first instance. It makes the United States an indispensable party defendant and waives its sovereign immunity to suit. This part of the statute is now confined largely to claims to public domain allotments because rights to allotments out of tribal land are suspended by more recent statutes. n143 The statute also confers jurisdiction over suits "in relation to" allotment rights, authorizing actions to contest rights in allotments previously made. In these actions, the United States is not indispensable, and its immunity is not waived. n144 Whether federal court jurisdiction under the latter part of the statute is exclusive of or concurrent with state courts is uncertain. n145 Actions against the United States that are not within the statutory waiver are barred by sovereign immunity. n146

Actions under the statute are subject to federal statutes of limitations. Actions to quiet title against the United States must be brought within twelve years after a claim accrues. n147 Other actions must be brought within six years. n148

(5) Allotments in Eastern Oklahoma.

President Jackson's removal scheme centered on the major tribes in the southeast, the Cherokees, Choctaws, Chickasaws, Creeks, and Seminoles (the "Five Civilized Tribes"). These tribes were forcibly moved to Indian Territory during the 1830s under removal treaties. Although made under duress, the treaties did grant the tribes a fee simple interest and promised that their new territory would never be included within a state or organized territory without their consent. n149 The tribes established strong governments and enjoyed substantial prosperity during the 1850s. But the Civil War had a devastating effect. Two tribes formally sided with the Confederacy as did sizeable factions of the others. All the tribes suffered huge losses in the War. Afterward, the federal government treated them as vanquished parts of the Confederacy. New treaties were negotiated under conditions in which the tribes had little bargaining power. The Cherokees ceded their western lands, and all tribes agreed to allotment. n150

Despite these treaties, the Five Tribes persuaded Congress to except them from the General Allotment Act, and their reduced territory was excluded from Oklahoma Territory when it was established in 1890. n151 But the respite was temporary, and allotment was agreed to, again with manipulation and some duress, in a series of agreements made at the turn of the century. Their territory became part of the State of Oklahoma in 1907. n152

The allotment laws applying to the Five Tribes differ from other allotment statutes in many details. A formal difference previously mentioned is that title is held by allottees in fee simple subject to a federal restraint on alienation. Of more practical importance, probates of the estates of deceased allottees are in the Oklahoma state courts, and many other incidents of ownership are subject to state court jurisdiction. n153

Osage Indian lands in Oklahoma were also excepted from the General Allotment Act and in 1906 were made subject to a distinct allotment statute that differs in many respects from both the General Allotment Act and the statutes applicable to the Five Tribes. The statute, enacted after discovery of oil on Osage lands, severed the Osage mineral estate from the surface and divided the mineral estate into allotments granted to members on the 1906 tribal roll as tenants in common. n154

(c) Lands of Native Hawaiians.

The original land ownership of Native Hawaiians was largely extinguished under the laws of the Kingdom and Republic of Hawaii, although Americans were heavily involved in later stages. When U. S. sovereignty attached in 1898, much land that had been part of the royal domain, then public land of the republic, became public domain of the United States. n155

In 1921, Congress enacted the Hawaiian Homes Commission Act, intended to provide homesteads to persons of at least half Native ancestry. n156 However, few grants were made, and in 1959, the federal government transferred control of the Act and lands subject to it to the State of Hawaii. The State has also made few grants, and the Act is a continuing source of controversy. n157

(d) Lands of Native Alaskans.

Native Alaskans own public domain allotments, and there is one Indian reservation in the state, but most Native land is held under the Alaska Native Claims Settlement Act of 1971 (ANCSA). n158 In scope, ANCSA was the most significant settlement with Native Americans in U. S. history. Based on extended negotiations with Natives and other interested parties, ANCSA extinguished original Native title to most of Alaska, about 365 million acres. In return, Natives agreed to accept 44 million acres in fee, to be conveyed to Native corporations established under Alaska law and to individuals, and payments into a trust fund in the Treasury of up to $962.5 million. Title to land conveyed is in unrestricted fee simple, but ANCSA restricts alienation of shares in the Native corporations established under it according to complex provisions of the statute and its many amendments. n159 The Ninth Circuit recently held that Native Alaskan applicants were not entitled to land allotments under Alaska Native Allotment Act. These applicants failed to show that they had made use of the land on which they resided while minors, and that prior to withdrawal of the land from the public domain, that they had personally used or occupied the land. n160

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.07

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.07 The Federal Trust Relationship and Indian Property.

[Go To Supp]

Many statutes explicitly provide for the federal government to hold land or money in trust for tribes or for individual Indians. n161 A few statutes and much scholarly and popular writing refer to a broader concept of trust relationship between Indian tribes and the United States. n162 These two sets of authorities relate to two strains of "trust law" in the legal and political system. The elaborate law of private trusts and other fiduciary relationships is a branch of property law that arose in the English Court of Chancery. n163 In the 17th century, political thinkers began to borrow the trust concept to express the ideal of government as the people's servant, the concept of the public trust as a basis for government's accountability to the governed. Both strains had a common purpose in harnessing of power, private trust to restrain the power of common-law feoffees to uses, guardians, and other fiduciaries; public trust to limit governmental power. n164

In federal Indian law, trust concepts center on the relationship between the federal government and both Indian property and Indian people. The disparity in power is enormous. The Government controls alienation of all tribal land and much individual land. Congress has nearly plenary power to enact statutes to govern Indian people, property, and territory. Yet in the last century Native Americans could not vote, and now that they can, their numbers are too few to restrain Congress by direct political action. n165 However, the Supreme Court and Congress have circumscribed federal power to some extent. These limits are the subject of this section.

(a) The Concept of Federal Obligation.

In his Cherokee Nation opinion, Chief Justice Marshall said that the Indian nations' "relation to the United States resembles that of a ward to his guardian." n166 Many consider this dictum demeaning to Indians, and indeed it led to the bureaucratic practice of referring to Indians who own restricted property as "incompetent." n167 Although Marshall's phrase was demeaning in popular and political usage, its legal analogy was both apt and significant. It was

apt because the federal government had sweeping powers over tribes like the broad authority of a guardian. It was significant because the court implied that the power should be limited by a correlative duty akin to the fiduciary duty that a guardian owes a ward. Coming at the height of President Jackson's drive to strip eastern tribes of their lands, this was a strong challenge to the political establishment. n168 The next year in Worcester, Marshall analogized the status of tribes to that of protectorates under international law. n169 This conveyed a similar message by a more dignified analogy, although again associated with colonialism. n170

(b) Canons of Construction as Judicial Limits on Federal Power.

In his concurring opinion in Worcester, Justice McLean said, "The language used in treaties with the Indians should never be construed to their prejudice," and he recognized the Indians' disadvantage in agreeing to treaties written only in a foreign language. n171 In time, the full court adopted his view as a rule of construction. n172 Moreover, the court adopted an analogous rule for federal statutes applied to tribes and Indians, holding that statutory ambiguities should be construed in favor of Indians' unique rights. n173 These canons of construction temper congressional power to impair the interests of tribes and Indians by requiring that the power be exercised clearly and openly. The canons are thus an important, inertial protection for previously recognized Indian rights. n174

(c) Treaty and Statutory Trusts.

Many Indian treaties obliged the Government to hold land or money for tribes. Most did not specify on what basis, but a few expressly described the relationship as a trust. n175 After the Civil War, Congress began to adopt the trust concept in statutes, inviting judicial supervision of government management. n176 By the end of the 19th century, the trust usage had become routine. n177

The courts have tended to generalize the trust concept to apply to all federal control over Indian property, whether or not formally designated as a trust. n178 It is common to refer to tribal land as "trust land," even when there is no legislative use of the word trust. n179 The courts have treated the power represented by the federal restraint on alienation of tribal property to imply a correlative duty to exercise the power according to fiduciary standards. n180

There is an important distinction between trusts over Indian money and securities held by the federal government, and trusts over restricted Indian land. In the case of money and securities, the trustee is in possession and control of the corpus, and it is assumed that interest will be paid or the corpus invested. n181 Private trust law can be applied by analogy, subject to the sovereign immunity of the United States. n182 Federal trusts over land are less like private trusts. The Indian beneficiaries have possession and use of the land. For purposes relating to alienation, the federal trustee has control of the property, but for other purposes, its control is limited. The Supreme Court has expressly held that the Government owes no general duty to manage the property productively. The court said that the trust ownership is simply to hold the title, akin to a common-law use or dry trust. n183

In some modern statutes, Congress has referred explicitly to the trust relationship between the United States and Indian nations, a concept broader than property trusts. n184 It is uncertain whether this usage will have coercive effects at law. It does provide indirect statutory approval of the Supreme Court's canons of construction.

(d) Breach of Trust Remedies.

Private trusts are subject to close judicial supervision. Trust beneficiaries have strong remedies against trustees for breach of trust, although judicial redress of wrongs against a private trust by outsiders must normally be sought by the trustee, not by a beneficiary. The latter rule does not limit the legal rights of Indians; third-party wrongs against Indian property may be enforced either by the United States, the Indian owners, or both. n185 But judicial authority over the federal government as trustee of Indian property is much more limited than the power of courts of equity over private trustees. In some respects the limits are inherent. The trustee cannot be removed by a court, and the duty of undivided loyalty required by the private law of trusts cannot be directly required of a national government serving all its people. n186

COMPUTER-ASSISTED RESEARCH

LEXIS: breach w/1 trust w/5 remed! w/30 indian! or native american!

(1) Interpretation of Treaties and Statutes.

Other limits result from judicial deference to the role of Congress. The federal trusteeship arises from treaties with Indian nations and from acts of Congress. The trusts are creatures of the treaties or statutes that establish them. The treaties and statutes are of equal dignity with other laws; they are not higher law. Whether a statute or treaty provides for a trust expressly or by implication, it must be construed with other statutes and competing interests of other persons. The Supreme Court's canons of construction in favor of Indian interests are an important protection, but the canons are limited to cases of ambiguity. n187

Many Indian claims fail because courts decide that a competing statute or policy outweighs the Indian claim. The most fundamental example has been explicit in federal statutes since the founding of the Nation. A private trustee cannot acquire property from its beneficiary, while the Nonintercourse Act established the United States as the exclusive buyer or broker of tribal trust land. n188 In countless instances, the federal government has directly benefited from dubious transactions with Indian nations. Post hoc review of these transactions confines judicial remedies to money damages, such as the award for the Black Hills, a remedy Indian people often find inadequate. n189

Another prominent example is Nevada v. United States. n190 This action, filed by the United States in 1973, sought to reopen a 1944 federal court decree that had quantified water rights in the Truckee River basin in Nevada. The United States had brought the original suit and had appeared in it as trustee for the Pyramid Lake Paiute Tribe. The Government had also represented its interest as owner and operator of a reclamation project with claims directly opposed to those of the Tribe. In the original action, the Government had favored its reclamation interests, which had powerful political backing in the state, over those of the Indians. Yet the court unanimously rejected the Government's bid to reopen and upheld the decree, based on res judicata. It is difficult to imagine anything less consonant with fiduciary duty as customarily understood in courts of equity than the Government's behavior in the original action. Private trust law might confine the remedy to an action against the trustee, but for tribes, that confronts sovereign immunity and limits on remedies. n191

Other decisions in which breach of trust claims failed because of competing rights or statutory abrogation have involved such diverse subjects as federal invasion of Indian holy places, n192 punishment of trust beneficiaries for killing eagles, n193 and prosecution of beneficiaries for trespassing on their ancestral lands. n194 In general, the courts sustain trust claims against officials in control of Indian property unless statutes clearly defeat the claim, or competing reliance interests of long standing would be overturned. n195

COMPUTER-ASSISTED RESEARCH

LEXIS: interpret! w/30 indian! w/15 statute! or treaty or treaties!

(2) Sovereign Immunity and Statutes of Limitations.

Judicial enforcement of the federal trust relationship is limited in two other significant ways. One is by the doctrine of sovereign immunity of the United States. Prospective enforcement is not impaired because of the rule that allows officials to be enjoined against future violations of the law without regard to sovereign immunity. n196 Moreover, there are strong rules against conflicts of interest on the part of government officials. n197 But retroactive enforcement against the Government itself, such as suits for damages or to quiet title to land, requires waiver of immunity. n198

Congress has expressly waived immunity to adjudicate damages claims for certain past wrongs to tribes. n199 Other claims can be brought under waivers of immunity in general statutes such as the Federal Tort Claims Act. n200 In many instances, no explicit waiver applies. Litigants can claim an implicit waiver, but the Supreme Court rarely accepts such claims. In Indian cases, the court has refused to imply a waiver from statutory use of the word trust without more. n201 However, the court has been willing to imply a waiver from specific statutory schemes for federal control of Indian property. The court's leading decision implying a waiver is United States v. Mitchell. n202 Indian allottees sought damages for mismanagement of the timber resource on their allotments. The court refused to imply a waiver from the trust title to the allotments, but it did imply a waiver from the timber management statute, even though the latter did not use the word trust. n203 The Mitchell litigation shows that the crucial issue is not use of the word trust in a statute, but the nature of federal control and duty under a statutory scheme. Where executive officers control Indian property like a private trustee, a breach-of-trust claim is more likely to succeed.

The second obstacle to Indian enforcement of the federal trust is statutes of limitations. Because many wrongs that are the subject of Indian claims occurred long ago, statutes of limitations have been a major barrier. Congressional acts that have expressly waived immunity for Indian claims have also set aside this defense. Absent an express waiver, Indian claims are usually barred by the same statutes as those of other plaintiffs. n204 Even with a waiver, remedies are confined to those provided in the waiving statute. Courts may award only damages, and awards are usually limited to simple interest or are without interest prior to judgment. n205

LEXIS: indian! or trib! w/30 sovereign immunity
indian! or trib! w/30 statutes w/1 limitation!

(3) Appeals to the Constitution and to Congress.

Litigants on both sides of Indian rights cases sometimes claim that a federal statute or treaty is unconstitutional, but they have had very little success. The only constitutional arguments that have succeeded are a few modest claims that Indian property has been taken without compensation or deprived without due process. n206

Because the court defers broadly to Congress on Indian rights, many appeals for redress are made directly to that body, rather than to the courts. Like any appeal to a discretionary forum, this has varied outcomes. As a result, the federal trust concept strikes observers differently. It has been both lauded as a "cornerstone" of federal Indian law, and disparaged as "weak," subject to "political whim or caprice." n207

(4) Indian Claims.

Until the recent past, the largest share of litigation about Native American interests was claims cases against the United States. Although not real property and thus beyond the immediate scope of this treatise, most claims were (and are) based on wrongs involving Indian land.

Because of sovereign immunity, claims cases are necessarily based on statutes in which the United States consents to suit. Until 1946, consent statutes for Indian claims were mostly enacted case-by-case. The statutes typically set aside defenses based on statutes or limitations or laches. n208 With immunity and limitations waived, the Supreme Court responded with very strong opinions about trust duties of the Government. n209

In 1946 Congress attempted to regularize Indian claims litigation by establishing the Indian Claims Commission to hear all previously accrued claims according to common statutory standards. Cases before the Commission had to be filed by 1951, although some of them are not yet final. n210 The 1946 Act also provided for jurisdiction in the Court of Claims over Indian and tribal claims accruing thereafter. n211

(e) Tax and Regulatory Immunities.

The federal trust over Indian property is closely related to immunities from federal and state taxes of the property and of income derived from it, and of land use regulations. These are discussed in section 57.11(b) of this chapter.

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.08

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.08 Alienation of Interests in Indian Land.

[Go To Supp]

(a) Scope of the Federal Restraint on Alienation.

This section discusses the rules applicable to alienation of Indian land that is subject to a federal restraint on alienation. The concept and history of the federal restraint are explained above. n212 It applies to any form of alienation that federal or state law can recognize as valid. The restraint alone does not limit the right of tribes to allocate interests in their land to their members, so long as the interests are internal to tribal society. Tribal interests can be for exclusive use and be made inheritable, but they depend entirely on tribal law, for definition and enforcement. n213

Dozens of specific federal statutes, discussed in this section, have been enacted to govern alienation of interests in tribal land. The purpose of each of these statutes was to authorize and control conveyances to non-members of the tribal owner. It is uncertain if these statutes restrict internal tribal authority to allocate land interests to members. In practice, tribes control allocation of homesites and of hunting and fishing rights among members. Other land use allocations are regulated by the Interior Department with varying levels of tribal involvement and control. n214

The federal restraint restricts all tribal land categorically. n215 The status of land owned in severalty by individual Indians depends on the title to each parcel. Conveyance of restricted land requires clear authority in federal law. Numerous federal statutes consent to alienation in specified circumstances. Most of these statutes require administrative approval of the Secretary of the Interior for a valid transfer. The federal restraint does not permit any valid transactions in restricted Indian land except those specifically authorized. An unauthorized transfer is void and may not be enforced even after restrictions are subsequently removed. n216 Proceeds from the lawful sale of allotted land that are held by the Secretary may not be reached to satisfy antecedent debts of the allottee except with the Secretary's approval. n217 Nominally, it is a federal crime to induce a restricted owner to attempt to convey any interest except as authorized by law, although this statute has seldom been applied in practice. n218 The federal restraint applies to land, but not to chattels on the land. Common-law rules are usually applied to determine whether property is part of the land and thus subject to the restraint. n219 However, archeological resources on Indian land are subject to special statutory restrictions whether or not classified as part of the land. n220

(b) Conveyance of Fee Simple Ownership; Mortgages.

No statute of general applicability authorizes conveyance of fee simple interests in tribal land. A few statutes authorize conveyance of specific classes of land. n221 There is broad authority for exchanges of tribal land for land of equal value when approved by the Secretary of the Interior, applicable to tribes covered by the Indian Reorganization Act. n222 During the years when allotment was a favored federal policy, a basic part of the scheme was to have federal restrictions come to an end, usually within one generation. The land would become subject to state law, including law governing voluntary and involuntary alienation. n223 This policy was carried out in several ways. First, restrictions on Indian allotments expired automatically after a specified number of years, most commonly 25. Second, a few specific statutes removed restrictions from an entire class of allotments. n224 Third, the allotment statutes authorize the Secretary of the Interior to remove restrictions from allotment owners who are capable of managing the land, and some Interior Secretaries claimed authority to remove restrictions without an allottee's consent. There were periods before 1921 in which the Secretary issued unilateral patents in fee to large numbers of allottees. This led to lawsuits claiming that restrictions were improperly removed, which had mixed results. n225

When federal policy changed, each of these practices was altered. Under present law, removal of restrictions is largely a choice of each Indian owner. Time limits for automatic trust expiration have been extended indefinitely, and few allotment restrictions are expiring automatically. n226 The Secretary no longer claims general authority to remove restrictions without Indian consent. n227 However, these changes did not affect land from which restrictions had previously been removed.

Adult allotment owners may apply for removal of federal restrictions from their land. The Secretary makes a discretionary determination whether the applicant is competent to manage the land. n228 If restrictions are removed, the land becomes subject to local property law and may be sold. n229

An allotment may be sold directly by its Indian owners with approval of the Secretary, or may be sold by the Secretary with consent of the Indian owners. When Indian owners are minors or adults under a guardian, the land may be sold by the guardian or with the guardian's consent. Normally, the Secretary has the land appraised. Under certain conditions, a negotiated sale may be made for not less than the appraised price. Otherwise, there must be an advertised sale based on sealed bids. n230

When allotment owners apply to have restrictions removed or to sell, Interior regulations authorize the Secretary to give other Indians or tribes who may be adversely affected by a sale "a reasonable opportunity to acquire the land from the applicant." n231 With Secretarial approval, Indian allotment owners may give allotted land to their close relatives in trust, n232 or sell allotted land to other Indians in trust. n233 Allotments held in multiple ownership can be partitioned in kind by the Secretary according to the partition laws of the state, with or without allottees' consent. n234

A federal statute authorizes allotted land to be mortgaged with consent of the Secretary. Allotted land that is lawfully mortgaged is subject to foreclosure or sale as if the owner had an unrestricted fee simple interest. n235 No general statute authorizes tribal land to be mortgaged, but there is specific authority to mortgage tribal land acquired with Farmers Home Administration loans to secure their repayment. n236

Like mortgage foreclosures, other forms of involuntary transfer of restricted Indian land are void unless specifically authorized by federal law. In some parts of the country, particularly eastern Oklahoma, there were many attempts to have restricted Indian land seized and sold at tax sales. Federal courts invalidated thousands of transactions. n237 The doctrine of adverse possession also does not apply without specific authority. n238

(c) Succession to Allotments by Will or Inheritance.

When the Indian owner of a restricted allotment dies, succession to allotted land is governed by federal statutes. When an allottee dies and the person who succeeds to the property is not an Indian qualified to own restricted property, an unrestricted fee patent may issue. When the successor is qualified, restrictions usually continue in force. n239

Adult allottees may make wills according to Interior regulations. n240 Intestate succession is governed by several federal statutes, which incorporate state laws on basic definitions of heirs. They also incorporate tribal marriage laws and specify standards for heirs by adoption and for escheat. n241 Probate of estates of deceased Indians who owned allotments, and of their trust personalty, is under the exclusive jurisdiction of probate judges in the Department of the Interior. n242

Restricted estates of deceased owners of restricted land who are Indians of the Five Civilized Tribes or Osage Tribe are governed by special statutes. Substantive state law defines inheritance and governs the making of wills. Osage Indians require approval of their wills by the Secretary of the Interior, Five Tribes Indians do not. Oklahoma state courts have probate jurisdiction over estates that include restricted land. n243

(d) Conveyances of Leaseholds and Servitudes.

(1) Leaseholds; Power Project Easements.

All restricted Indian land, tribal and allotted, may be leased by its owners for any useful purpose with approval of the Secretary of the Interior. n244 Leases cannot exceed 25 years, with numerous exceptions. Grazing leases have shorter time limits. n245 Leases for most purposes can include renewal rights for up to 25 more years. And leases on several reservations may be made for up to 99 years, the economic equivalent of transferring the fee. n246 The Secretary must also approve lease cancellations. n247

The Federal Power Act authorizes the Federal Energy Regulatory Commission and the Secretary of the Interior to license the use of Indian reservation land for dams and other power project works for as much as 50 years. n248 The Act does not require Indian consent, and licenses have been made or renewed despite Indian opposition. n249 However, in recent years federal regulations have required a greater voice for tribes in license proceedings. n250

LEXIS: lease! or easement! w/50 indian! w/5 land!

(2) Rights-of-Way.

Under a 1948 statute, the Secretary of the Interior may grant rights-of-way for any purpose across any restricted Indian land. n251 Consent of tribal owners is required, and consent of allottees is required unless owners are too numerous or are unavailable. n252

Several older statutes authorize the Secretary to grant rights-of-way for specified purposes without tribal or Indian

consent. n253 These statutes were expressly saved by the 1948 statute, so statutory authority to grant rights-of-way without Indian consent remains. However, Secretarial regulations require consent for rights-of-way under departmental control, so statutory authority to act without Indian consent is not being exercised. n254

(3) Mining and Oil and Gas Leases and Sales.

Much Indian land has valuable mineral deposits. Congress first authorized tribes to alienate mineral interests in 1891, and additional authority has been enacted several times, so that most tribal land is subject to at least three mining statutes. n255 Older statutes authorize only a typical mining lease, which allows the lessee to remove all commercially valuable minerals subject to a reserved royalty interest in the tribe. The most recent statute, the Indian Mineral Development Act of 1982, n256 is more comprehensive. It authorizes tribes to make any kind of agreement for mining and sale of minerals, including agreements that involve tribes in mining operations. It appears to allow a mineral deed, in which the full mineral interest is sold outright without a reserved royalty. n257 Many new mining agreements are being made under the 1982 Act, while older leases continue to be governed by the statute under which they were made.

Mining leases on allotted land outside eastern Oklahoma are authorized under a 1909 statute. n258 Allottees must approve leases, but the Secretary has detailed control and can approve leases for allottees who are minors, mentally incompetent, contingent remaindermen, or for heirs who are not yet determined or cannot be located. n259 Allottees may also be included in a tribal leasing scheme under the 1982 Act. Mining leases on most allotments in eastern Oklahoma are governed by distinct statutes and regulations. n260

Management of royalty interests in Indian mining leases is under the Minerals Management Service (MMS) of the Interior Department. Its most important function is monitoring and collection of royalties under oil and gas leases. n261 There has been some controversy about MMS diligence in this function. n262 Aside from royalties, Indian oil and gas leases are managed by the Bureau of Land Management. n263

(4) Timber Sales.

A 1910 statute authorizes sale of timber from tribal or allotted land. n264 In general, sales may authorize only sustained-yield logging. n265 The Secretary must approve all sales, and Interior regulations include provisions to encourage Indian timber enterprises and to authorize cutting for personal use by tribal members. n266

(5) Fishing, Hunting, Gathering, and Water Rights.

These rights are the subject of separate sections of this chapter. n267 Permitting, leasing, and sale of rights to outsiders, and allocation to tribal members, are discussed in those sections.

(e) Condemnation of Indian Land.

The United States can condemn Indian land under its power of eminent domain. n268 The courts have required that congressional authority to condemn restricted Indian land be clear. In several instances, executive attempts to condemn under statutes not clearly intended to encompass Indian land have been held invalid. n269

States and public utility companies lack power to condemn restricted Indian land except when authorized by Congress. Federal law grants states and utilities no general authority to condemn tribal land, although there is specific authority to condemn certain rights-of-way. n270 By contrast, federal law authorizes allotted Indian land to be condemned for any public purpose under state law to the same extent as unrestricted land. n271 Condemnation actions must, however, be brought in Federal District Court, and the United States is an indispensable party defendant. n272 Moreover, these statutes authorize only judicial condemnation. States and utilities cannot claim title to Indian land by physical occupation under the theory of "inverse condemnation." n273

The sovereign powers of Indian nations over their members in Indian country presumably include the power of eminent domain, but exercise of that power over allotted land is doubtful because of federal restrictions. However, Congress has authorized tribes to take undivided minority interests in allotments within tribal jurisdiction when a majority of the owners consent to sell to the tribe, subject to Interior approval. n274

(f) Involuntary Alienation.

Involuntary alienation of Indian land is restricted by the federal restraint on alienation and by the federal trust title. Suits to quiet title against claims of Indian trust ownership are barred by sovereign immunity of the United States unless brought under an explicit statutory consent. n275 The trust title has been held to preempt state commercial law in a bankruptcy proceeding. n276 State laws providing for attachment of liens by judgment creditors, materialmen, and the like are also preempted. n277

(n15)Footnote 226. *25 U.S.C. § 462; 25 U.S.C. § 478-1;* 25 C.F.R. Appendix to Chapter I (1992). Restrictions on allotted land expire to the extent that a deceased allottee's heirs or devisees are not Indians qualified to own restricted property. *See infra* note 233 and accompanying text.

(n16)Footnote 227. Present law authorizes involuntary removal of restrictions in partitions of allotments (*see infra* note 228 and accompanying text) and for Indians who take allotted land by will or inheritance *(25 U.S.C. §§ 372,* 373). Interior regulations authorize use of the latter power only to sell interests of multiple heirs who are not competent to manage the property. 25 C.F.R. § 152.20 (1992). Involuntary removal is also authorized for Indians of the Five Civilized Tribes in Oklahoma who take allotments by will or inheritance. Act of Aug. 11, 1955, ch. 786, *69 Stat. 666;* 25 C.F.R. §§ 152.14-152.15 (1992).

(n17)Footnote 228. *See* 25 C.F.R. §§ 152.1-152.16 (1992). *See also id*. pt. 153 (Crow allottees). The allotment statutes vary in form, so removal can involve issuance of an unrestricted fee patent to the land, or of a certificate of competency to the allottee. The statutes do not limit the removal right to adults, but the Secretary's regulations require applicants to be at least 21 years old. Minors can apply to have allotted land sold. *See infra* note 221 and accompanying text.

(n18)Footnote 229. State law applies if the land is outside tribal Indian country. Within Indian country, tribal law applies to tribal owners except when a federal statute provides otherwise. *See County of Yakima v. Yakima Indian*

Nation, 502 U.S. 251 (1992); Moe v. Confederated Salish & Kootenai Tribes, 425 U.S. 463, 477-79 (1976). Whether the allotment laws allow tribes to limit alienation of former allotments has not been determined; no tribe has imposed limits more restrictive than state law.

(n19)Footnote 230. 25 C.F.R. §§ 152.17-152.32 (1992); 43 C.F.R. § 4.301 (1992). Inherited and devised allotments belonging to Indians of the Five Civilized Tribes in Oklahoma who are of at least one-half Indian ancestry may be sold with approval of an Oklahoma Probate Court under statutes unique to those tribes. *See* Vollmann & Blackwell, *supra* n. 150, at 3-4, 20-42.

(n20)Footnote 231. 25 C.F.R. § 152.2 (1992). *See also id*. §§ 152.3, 152.27(b). No specific statute authorizes these regulations. They may be within the Secretary's implied powers under allotment and trust statutes.

(n21)Footnote 232. *25 U.S.C. § 408* & 25 C.F.R. pt. 156 (1992) authorize an allottee to relinquish allotted land to the allottee's unallotted children. 25 C.F.R. § 152.25(d) (1992) authorizes restricted gifts to an allottee's spouse, sibling, lineal ancestor, or lineal descendant. Both provisions require discretionary approval of the Secretary. For gifts to be restricted, the recipient probably must be an Indian qualified to own restricted property. *See id*. § 152.6. Restricted gifts may be to life tenants and remaindermen. *Id*. pt. 179.

(n22)Footnote 233. Restricted sales are not explicitly authorized by a single regulation, but restricted land can be sold and fee land placed in trust. *See* 25 C.F.R. §§ 151.4, 152.17-152.28 (1992).

(n23)Footnote 234. *25 U.S.C. §§ 348*, 378; 25 C.F.R. § 152.33 (1992). *See Sampson v. Andrus, 483 F. Supp. 240 (D.S.D. 1980)* (interpreting *25 U.S.C. § 483* also to authorize partition). *See also 25 U.S.C. 355;* Cohen, *supra* n. 1, at 787-788, 795 (partition of allotted lands of Indians of Five Civilized Tribes and Osage Tribe).

(n24)Footnote 235. Act of Mar. 29, 1956, ch. 107, *70 Stat. 62* (*codified as amended at 25 U.S.C. § 483a).* The statute covers deeds of trust as well as mortgages. Foreclosure is under applicable tribal law, or if there be none, state law. Foreclosure removes federal restrictions unless the tribe acquires the land, in which case restrictions continue.

(n25)Footnote 236. *25 U.S.C. §§ 488*-494.

(n26)Footnote 237. *E.g., Heckman v. United States, 224 U.S. 413 (1912). See* Debo, *supra* n. 121, at 205.

(n27)Footnote 238. *Compare South Carolina v. Catawba Indian Tribe, Inc., 476 U.S. 498 (1986)* (federal statute imposed state statutes of limitations on tribal land claim), *with County of Oneida v. Oneida Indian Nation, 470 U.S. 226 (1985)* (no statute bars land claim that arose in 1795). A 1926 statute subjects restricted lands of the Five Civilized Tribes in Oklahoma to state adverse possession law. *See* Vollmann & Blackwell, *supra* n. 150, at 18-19.

(n28)Footnote 239. *25 U.S.C. § 372;* 25 C.F.R. § 152.6 (1992); 43 C.F.R. § 4.240(a)(4) (1992). Indian heirs and devisees can apply for patents in fee or sale under the rules discussed in § 57.08(b), and the Secretary can sell land of multiple heirs who are incapable of managing their interests. 25 C.F.R. § 152.20 (1992). *See supra* note 219 and accompanying text.

When an Indian of the Five Civilized Tribes in Oklahoma dies owning restricted land, restrictions end for heirs or devisees who are not of at least one-half Indian ancestry under statutes unique to those tribes. *See Vollmann & Blackwell, supra n. 150.*

(n29)Footnote 240. *25 U.S.C. § 373;* 43 C.F.R. § 4.260 (1992) (owners of trust property who are at least 18 years old may make a will). *See also id*. § 4.233(a)-(b) (authorizing self-proved wills, codicils, and revocations); § 4.261 (anti-lapse provision); § 4.262 (killers may not take); 25 C.F.R. pt. 179 (1992) (life tenants and remaindermen). The statute requires secretarial approval of wills, and Interior officials formerly reviewed Indian wills substantively. *See Tooahnippah v. Hickel, 397 U.S. 598 (1970)* (limiting secretarial authority). Current regulations authorize

administrative approval only as to form.

(n30)Footnote 241. *25 U.S.C. §§ 348,* 371, 372, 372a, 373a, 373b, 2205-2207; 43 C.F.R. § 4.205 (1992). *See Hodel v. Irving, 481 U.S. 704 (1987).* In *Hodel*, the Supreme Court held that a provision of the Indian Land Consolidation Act that provided for the escheat of any undivided fractional interest comprising less than two percent of the total tract and that had brought in less than one hundred dollars to the owner in the past year, was unconstitutional. Congress amended the provision so that it applied to interests that hadn't earned one hundred dollars in the past five years, but even that provision was held unconstitutional. *See Babbitt v. Youpee, 519 U.S. 234 (1997). But see* Lindo, Michelle M., "The Indian Land Inheritance Problem Revisited," *22 Am. Indian L. Rev. 223 (1998). See also* Schwab, C.A., "Constitutional Law: Fifth Amendment Just Compensation Clause B Escheat of Indian Trust Lands," *65 Tenn. L. Rev. 805 (1998).*

(n31)Footnote 242. *25 U.S.C. §§ 372,* 373, 374; 25 C.F.R. pt. 15 (1992); 43 C.F.R. pt. 4, subpt. D (1992). Interior probate judges are article I "administrative law" judges. Their decisions can be reviewed by federal district courts under the Administrative Procedure Act. *See Tooahnippah v. Hickel, supra* note 234, at 605-607. Special statutes and regulations apply only to certain reservations. 43 C.F.R. §§ 4.300-4.308 (1992) (Yakima, Warm Springs & Nez Perce Res. & environs); *id.* §§ 4.350-4.357 (White Earth Res.).

(n32)Footnote 243. *25 U.S.C. §§ 375*-375d; 25 C.F.R. pts. 16, 17 (1992). *See* Vollmann & Blackwell, *supra* n. 150, at 11-23; Cohen, *supra* n. 1, at 787-788, 795.

(n33)Footnote 244. Act of Aug. 9, 1955, ch. 615, *69 Stat. 539* (*codified as amended at 25 U.S.C.A. §§ 415*- 415d); *Utah v. U.S. Dept. of Interior, 45 F. Supp. 2d 1279 (D. Utah 1999)* (statutory requirement of Secretarial approval is primarily concerned with protecting Native Americans by insuring that their land transactions with third parties are advantageous to the Native American); *Skull Valley Band of Goshute Indians v. Leavitt, 2002 U.S. Dist. LEXIS 15125* (D. Utah July 30, 2002) (state lacked standing in claim alleging that tribe had not lawfully approved lease of its land to company for nuclear waste storage). *See Seva Resorts, Inc. v. Hodel, 876 F.2d 1394 (9th Cir. 1989)* (sustaining Secretary's discretion). The statute specifically lists the purposes for which leases may be made, but the list is so comprehensive that it encompasses all useful purposes. The statute in terms covers all restricted Indian land, but it is not exclusive, and several other statutes authorize more specific kinds of leases. Some statutes apply only to one tribe or reservation. *E.g., 25 U.S.C. §§ 380,* 393-395, 397, 402-403c, 416-416j, 477, 635. Some of these statutes became practically obsolete upon adoption of the 1955 Act. *See generally* Robert N. Clinton, Nell Jessup Newton & Monroe E. Price, American Indian Law: Cases and Materials, 946-66 (3d ed. 1991).

(n34)Footnote 245. *See generally* 25 C.F.R. pts. 166-168 (1992) (grazing regulations) and statutes cited therein. Statutory authority limits grazing leases to ten years. *E.g., 25 U.S.C.A. § 415.* The Secretary's general grazing regulations limit grazing leases without improvements to five years. 25 C.F.R. § 166.14(a) (1992). Allottees need no permit to graze their own animals on their own land. *Id.* § 166.8.

The Secretary's Navajo Grazing Regulations, *id.* pt. 167, in practice apply only to tribal members because tribal grazing land is not leased to outsiders. Interior claims legal authority for these regulations based on the general concept of avoidance of waste. *Id.* § 167.1. The regulations require members to have permits approved by the Superintendent; permits are for one year but renew automatically. *Id.* § 167.9. Because the Secretary's authority is uncertain and many Navajos dispute it, Navajo permits in practice are of indefinite duration. *See also* 3 Navajo Tr. C. ch. 3, 5 (1977).

(n35)Footnote 246. 25 C.F.R. pt. 162 (1992). Particular provisions apply only to specific reservations. *Id.* §§ 162.15-162.20.

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.09

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.09 Fishing, Hunting, and Gathering Rights.

[Go To Supp]

(a) Origins.

The traditional economies of many Native American societies relied substantially on fishing, hunting, trapping, and harvesting wild plants. This fact is reflected in treaty negotiations and provisions in which the tribal party often sought to protect these activities. Protection was accomplished directly by reserving land. Indian title, or tribal ownership, includes all possessory uses of the land and the right to exclude others. n278 In other negotiations, tribes reserved rights to hunt, fish, and gather from their cessions of land to the Government. These include off-reservation fishing rights in the Pacific Northwest and Great Lakes regions that are of great economic and social importance. When the federal government established Indian reservations by statute or executive order, fishing interests have been significant in deciding the extent of the area reserved. n279

Native Americans also control taking of wildlife within tribal Indian country because of the Indian sovereignty doctrine. Within Indian country, Indians are immune from most state laws even for activities on land that is not Indian-owned. n280 And federal laws of general applicability are often interpreted not to apply to reservation Indians. Absent any of these distinctive rights to take wildlife, Indians have the same rights and duties as other citizens. n281

(b) Federal Regulation.

Congress has power to regulate Indian hunting, fishing, and gathering. This authority is exercised in three forms. The most direct is administrative regulation of Indian fishing or hunting in a few specific situations where effective tribal regulation is lacking. n282 No federal statute explicitly authorizes these regulations. The courts have sustained them based on general statutes that authorize the Executive to manage Indian affairs, and on the specific treaty or law setting aside a reservation or reserving a right to fish or hunt. n283 Selling or transporting wildlife taken in violation of the regulations is a federal crime under the Lacey Act. n284

The second form is federal support of tribal regulation. Selling or transporting wildlife taken in Indian country in violation of tribal law is a federal crime, again under the Lacey Act. The Act applies to Indians, as well as to outsiders, who violate tribal law. n285

The third form of federal regulation of Indian hunting, fishing, and gathering is general statutes and international treaties imposing conservation and environmental restrictions on all persons. In United States v. Dion, the Supreme Court held that congressional intent to override distinctive Indian rights to take wildlife must be "clear and plain." n286 Dion reviewed convictions of Sioux Indians for killing and selling birds in violation of the Eagle Protection Act, the Migratory Bird Treaty Act, and the Endangered Species Act. n287

The Eagle Protection Act bans killing eagles and commerce in eagle parts, with a limited exception for Indian religious use. n288 The Supreme Court sustained Dion's conviction under the Act for killing eagles, rejecting his treaty right claim. The court held that the Eagle Protection Act met the "clear and plain" standard to override Indian rights. n289

The Migratory Bird Treaty Act and the Endangered Species Act have broader impact than the Eagle Protection Act, so their application to Indians is important. The Supreme Court has not decided whether either statute overrides Indian treaty and other rights, and lower courts have reached varying interpretations. n290 Several statutes and international treaties affect Native hunting and fishing in Alaska. n291

LEXIS: regulat! w/30 indian! w/15 hunt! or fish! or gather!

(c) Tribal and State Regulation.

Tribal and state regulation of Indian and Indian country hunting, fishing, and gathering are usually exclusive of each other rather than concurrent. In other words, regulatory authority over a particular activity is either in the tribe or in the state but not both.

(1) Regulation on Indian Trust Land.

When land held in Indian trust ownership is subject to a tribal government, the land is tribal Indian country. The Indian sovereignty doctrine bars most state regulation of Indians unless a federal statute explicitly authorizes state regulation. And no federal statute consents to state regulation of Indian hunting, fishing, or gathering. n292

The Supreme Court has recognized one important exception to this pattern. The court has held that states can impose conservation limits on reservation fishing when it threatens off-reservation fish runs. However, enforcement of this power is probably confined to federal and tribal courts. n293

In most ordinary situations, hunting, fishing, and gathering rights based on Indian title are subject to exclusive authority of tribal owners. Tribes routinely allocate the resource among tribal members and regulate their activities. They also have jurisdiction, backed by federal penalties, to regulate non-members by conditioning access to the resource. n294 In New Mexico v. Mescalero Apache Tribe, the Supreme Court held that tribal regulation of non-members bars concurrent regulation by the state. n295

Indian title may not encompass ownership of navigable waterways within tribal boundaries. The courts have recognized tribal ownership only under certain circumstances. Most important is when reservations were set aside for fishing tribes prior to statehood. n296 In other cases, the state owns the waterway, and its proprietary interest must be considered in analyzing fishing rights. n297

COMPUTER-ASSISTED RESEARCH

LEXIS: regulat! w/30 indian! w/5 trust w/5 land!

(2) Regulation on Other Land in Indian Country.

Non-Indian fishing and hunting on land or waterways not held in Indian trust is under exclusive jurisdiction of state governments, even if the land is located within an Indian reservation. n298 As already noted, states often own the beds and banks of navigable streams within reservations. Other land has gone out of tribal ownership in various ways. Tribes lack authority to regulate wildlife on these lands. n299

On the other hand, all land within reservation boundaries is tribal Indian country, regardless of ownership. The Indian sovereignty doctrine bars most state jurisdiction over Indians. It is generally assumed that states cannot regulate hunting or fishing by Indians anywhere in Indian country. n300 Whether and to what extent a state can assert jurisdiction over Indians when it owns the land or waterway has not been determined. n301 Any landowner can restrict access to the land, but when a state grants access to the public, it may be precluded from conditioning Indian access on submission to state jurisdiction. n302

LEXIS: indian w/1 sovereignty w/1 doctrine

(3) Regulation of Reserved Indian Rights to Fish, Hunt, or Gather on Ceded Lands.

This subject concerns servitudes akin to common-law profits a prendre, rights to remove natural resources from land owned in fee by other persons or governments. n303 It is mostly about "off-reservation" rights, although issues can arise regarding land within reservations that has gone out of tribal ownership. Rights of this nature usually depend on an explicit provision in a treaty or statute, although when a provision exists, it is interpreted favorably to the Indians. n304 Moreover, in Menominee Tribe v. United States, the Supreme Court held that a federal statute terminating federal supervision over a reservation did not extinguish the tribe's treaty right to hunt and fish free from state regulation. n305

Fishing servitudes reserved by tribes in the Pacific Northwest and Great Lakes regions have been a significant source of litigation and social friction. n306 State governments and non-Indian interests argued that the Indians' reserved rights are no greater than those of other persons, in other words, that the Indians have no servitudes but only guarantees against discrimination. The courts rejected these claims and held that the Indians have substantive rights to take fish.

The rights most frequently litigated are those reserved in treaties with tribes in the Pacific Northwest "of taking fish, at all usual and accustomed grounds and stations ... in common with all citizens of [Washington] Territory." n307 The Supreme Court has held that these treaties allocated the fishing right into treaty and non-treaty shares. They entitle tribal members to take a share of the fish that pass through tribal fishing areas, a share defined by the Indians' reasonable needs or half the fish run, whichever is less. n308 Commercial fishing is included in the tribal right, and hatchery-bred fish are subject to allocation under the treaties. n309 The Indian right includes easements of access to fishing stations. n310

No federal statute subjects these reserved rights to state regulation. Nevertheless, the courts have held that states can regulate in the interest of conservation. n311 State authority is limited to that necessary for conservation of a species, and the state cannot discriminate against the Indians or against their fishing methods. n312

Other forms of state regulation have been struck down. The courts have held that the state may not require Indians to obtain a state fishing license, n313 and that tribal members are not confined to fishing technology in use when the treaties were made. n314 Many other aspects of these treaties have been subjects of litigation. n315 In other respects, tribes have authority to allocate the fishing right and to regulate their members. n316

Some hunting or gathering servitudes were reserved only for "unoccupied" federal land, and at times grazing rights have

been reserved in the same form. n317 Many of these rights have expired because of the limitation. n318 Where a right survives, disputes can arise when Indian uses conflict with interests of other persons. In Wisconsin treaty cases, the federal courts have held that hunting rights guarantee an Indian right to take game, again measured by the lesser of half the harvest or a moderate living. n319

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.10

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.10 Indian Water Rights.

[Go To Supp]

(a) The *Winters* Decision.

In Winters v. United States, the Supreme Court held that an agreement between two tribes and the United States reserving land in Montana for the tribes' home had implicitly reserved the right to divert enough water from a boundary river to carry out the reservation's agricultural purposes. n320 Winters established the reserved water rights doctrine as an important part of water law in the arid western states. The English common law of water rights, known as the riparian doctrine, was applied in the eastern states, where water is abundant. The doctrine is based on riparian access to water and on reasonable sharing of a plentiful resource. n321 Indian water rights have not been in serious dispute in riparian states. n322 The common law could not have served as the water law of arid states without adjustment to take account of scarcity. Farmers and miners in arid regions wanted to divert surface water to land away from rivers, which would have required legislative authority under the common law. Western settlers simply took water supplies without regard to common-law claims of other landowners. Because most of the land was owned by the federal government, which was subject to political control, this practice was highly successful. It was adopted in territorial and state legislation and evolved into the prior appropriation doctrine that is in force in every western state. Under it, the first person to divert water and apply it to beneficial use owns the right to continue diverting the same supply. Water not beneficially used has no owner; it is unappropriated and available to claimants who first put it to use. n323

Settlers brought the family farm culture to the arid West, and irrigated agriculture was of central importance. In most places, water use for crops has dwarfed other uses. Some Indian tribes in the Southwest irrigated crops before European contact, and their paramount right to continue has been recognized by the courts as part of their Indian title. n324 A few other tribes in arid areas were dependent on fishing, and their water rights have also been recognized, although unevenly. n325

The traditional economies of most tribes used very little water, but the reservation system required hunting tribes to give up their traditional means of support. The federal government's policy was to convert their economies to farming and grazing. n326 For farming in arid areas, large amounts of irrigation water would be needed. But under the prior appropriation system, settlers would often divert water before an Indian reservation could begin farming use. Moreover, the prior appropriation system was in severe conflict with the Indians' reasonable expectations in making treaties and in

occupying their lands under Indian title. Under prior appropriation, water supplies that had served tribal land since time immemorial could be diverted by upstream appropriators, leaving reservations completely dry. n327

The water conflict came to a head in Winters. The Fort Belknap Reservation in Montana had begun to irrigate from the Milk River, but in a dry year, upstream settlers took all the water. The United States sued as trustee for the tribes, claiming water rights for the reservation under several theories. Priority of diversion was unclear, but the federal courts bypassed that question to establish the rule that setting aside the reservation for agricultural purposes implicitly reserved a water right for the tribe on that date. The right is paramount to claims of subsequent appropriators regardless of who irrigated first. n328

(b) Sources of *Winters* Rights.

The Winters decision has been consistently followed in other surface water cases. Its theory has been applied to all Indian reservations that meet its criteria of purposes and need, whether set aside by treaty, statute, executive order, or other action under federal law, and whether or not the watercourse is navigable. n329

There is some uncertainty about reserved rights to groundwater. In Cappaert v. United States, the Supreme Court sustained the federal government's claim to a reserved water right for a federal wildlife reservation, water needed to sustain a desert fish. n330 The fish lived in deep pools that were surface sources but sustained from hydrologically-connected groundwater, and the decision enjoined defendants from groundwater pumping that lowered the pools. Based on Cappaert and some lower court decisions, it is likely that the Winters holding extends to groundwater in appropriate cases. n331 However, at least one court has largely rejected a tribal claim to reserved rights in groundwater. n332

State groundwater law is less uniform than the prior appropriation law governing surface supplies in the West. n333 This complicates questions about the relation between rights claimed under state and federal law. Also, some groundwater sources are hydrologically connected to surface supplies ("tributary" groundwater), others are not. Some sources are local to the land of one owner, others extend under the land of many owners. n334 Indian rights surely include local sources, and their surface rights are protected against tributary pumping. n335 Other rights are less certain.

(c) Purposes for Which Water Is Reserved.

The Winters court held that setting aside a reservation implicitly reserved water for reservation purposes. Reservation purposes include preserving the Indians' previous water uses, although these were modest in most circumstances. The two important uses were irrigated agriculture by tribes who practiced it, and fisheries, most of which were not in arid areas. n336

Reservation purposes also include the new purposes explicit or implicit in setting aside a reservation. During the period when most reservations were established, the essential federal plan was to convert Indians from hunting and gathering, which required very large amounts of land for support, to agriculture on much reduced domains. In arid areas such as eastern Montana, this purpose required water. This was the essential chain of reasoning in Winters. n337

In litigation over the extent of their water rights, tribes have claimed reserved water rights for other purposes, such as mining, recreation, manufacturing, and non-traditional fishing. Their theory is that the purpose of a reservation is a homeland for the residence and support of the tribe, so any use that contributes to that purpose carries out a reservation purpose. The Supreme Court has not addressed this question. However, one lower court has rejected the theory and confined reservation purposes to agricultural: farming, grazing, domestic and municipal use, and agricultural power production. n338 Other decisions seem to be based on the same assumption. n339 On the other hand, the Winters opinion more generally held that tribes are entitled to enough water for their needs, n340 a standard uncertain enough that this issue cannot be regarded as settled.

(d) Extent of Irrigation Rights.

In Winters, the Supreme Court held that setting aside a tribal reservation implicitly reserved enough unappropriated water for the reservation's needs. Under this standard, the size of the tribal right is uncertain. Owners of junior rights on the same stream are in doubt about the extent of senior Indian rights not in use. Moreover, tribal needs can change with changes in population, irrigation technology, and other factors.

The uncertainty is only slightly lessened by development of reservation uses. Irrigation projects have been built to serve many reservations in the West, but all were built by the Interior Department, and most were influenced by its Bureau of Reclamation. As a result, Indian water rights were seldom asserted for these projects. For some of them, water rights were obtained under state law, as required by the Reclamation Act. n341 As a result, the extent of *Winters* irrigation rights has seldom been tested by actual water development to serve Indian lands.

However, the extent of *Winters* irrigation rights has been tested extensively in lawsuits to quantify all water rights in a particular watershed, known as general stream adjudications. These lawsuits do not depend on actual water development; they seek to specify all entitlements, whether or not based on actual use. n342

Prior to 1952, the sovereign immunity of the United States barred adjudications of federal or Indian water rights except when the Government decided to bring an action as plaintiff. In several cases, the United States did sue on its own behalf and as trustee for tribes. The claims made for tribes in these cases were modest and often far less than an advocate for the tribes should have made. Irrigation claims tended to be based on actual use, and other claims were ignored. The Government's trust over Indian land was severely compromised by conflict with its interest in reclamation projects. n343

This pattern changed in the Colorado River case, Arizona v. California. n344 The State of Arizona brought an original action in the Supreme Court against California to determine the states' respective water rights in the lower Colorado River. The United States intervened to assert its interests, and it made trustee claims for the five Indian reservations in the basin. This time, irrigation claims for tribes were extensive and consistent with what the Winters decision had appeared to recognize.

The Supreme Court's decision adopted a solution to the uncertainty of the "needs" standard of Winters. The court awarded the tribes enough water to irrigate all reservation land that was practicably irrigable. This standard sought to award tribes as much water as the needs standard could within practical limits and according to information available at the time of the adjudication. In exchange for this present award, the tribes were foreclosed from seeking to increase the award later based on new facts or changed circumstances, and other parties were foreclosed from seeking to decrease the tribal award. n345 By converting the tribal right from an uncertain right looking to the future into a fixed, present quantity, the court attempted to give other rights a more certain basis.

In 1952, Congress enacted a statute commonly known as the McCarran Amendment. n346 It consents to suits against the United States in any general stream adjudication brought in a state or federal court. n347 In 1976, the Supreme Court interpreted the consent to include water rights owned by the United States in trust for Indian tribes. n348 Under this statute, several western state governments have filed general stream adjudications that encompass Indian lands and name the United States as defendant in its capacity as trustee for tribes. In these actions the United States, and tribes who intervene in their own right, have asserted irrigation water claims based on practicably irrigable acreage, the standard in Arizona v. California, as well as claims for other purposes. n349 Opposing parties have challenged the standard in various ways, and many questions about the extent of Indian irrigation rights remain open. n350

(e) Applying Agricultural Water Rights to Other Uses.

The reserved rights doctrine entitles tribes to substantial amounts of water for irrigation and fisheries in appropriate cases. In recent years the question has arisen whether a tribal irrigation right can be applied to other uses, uses that do not define the right in the first instance. There are several judicial dicta saying that tribes have this right for uses within but not without tribal reservations. n351 But one court denied a tribe's claim to convert its irrigation right to an instream-flow right for fisheries and recreation. n352 All the decisions appear to assume that the tribal right is in some sense appurtenant to the land, so that its use cannot be entirely divorced from use of the land.

(f) Alienation and Regulation of Indian Water Rights.

(1) Sale of Tribal Water Rights.

Tribal *Winters* rights are probably not alienable for use apart from tribal land, absent statutory consent, because of the federal restraint on alienation of the land. This may be so either because *Winters* rights are inherently appurtenant to the land and thus restrained with it. Or if *Winters* rights are a separate interest, they are nonetheless a form of real property subject to the restraint. n353 No general statute consents to alienation. Several statutes applicable to particular reservations consent to alienation, implying that consent is necessary. n354

Under the prior appropriation system, water rights are unique. When a senior owner is not using its entitlement, junior owners can enjoy the resource without payment. It has been assumed that *Winters* water rights are subject to the same rule. n355 For other kinds of Indian resources, political forces commonly advocate alienability to non-Indians. For water rights, the politics are reversed. Junior owners who enjoy the water resource oppose alienability of Indian water rights, fearing that buyers would put the rights to use. n356

COMPUTER-ASSISTED RESEARCH

LEXIS: sale! or sell! w/30 water! w/2 right! w/15 indian! or trib!

(2) Allotment Water Rights.

When tribal land was allotted in severalty to tribal members, each allotment implicitly received a proportionate share of the tribe's *Winters* water right. n357 The right is held in trust appurtenant to the land; while the trust period continues, it is essentially the same as the tribal water right. Like the tribal right, the allotment right is probably not alienable for use apart from the allotted land in the absence of specific statutory authorization. n358

When allotted land is transferred, the *Winters* right generally accompanies the transfer. The right passes with transfers in

trust, whether inter vivos or at death. n359 Allotments can go out of trust in various ways. Most directly, allottees can sell their land with approval of the Secretary of the Interior. n360 When this occurs, the courts have held that the allotment's share of the *Winters* water right continues as an appurtenance to the former allotment. n361 But when the land is purchased by a non-Indian, the water right also becomes subject to state law. In states that have the prior appropriation doctrine, water rights must be perfected by being put to a beneficial use. Most tribal *Winters* rights are defined by irrigation, which is a beneficial use. Thus when irrigation begins during the trust, the right continues unabated after sale to a non-Indian. In most cases, allotments go out of trust entirely undeveloped. When this occurs, non-Indian purchasers must begin to irrigate with due diligence after acquiring the land, or the *Winters* water right is lost. n362

(3) Leasing Water Rights.

No general statute consents to leases of tribal or allotted water rights apart from the land to which they are appurtenant. Several statutes applicable to particular reservations do consent to leases for as long as 100 years. n363

A federal court has held that *Winters* water rights can be leased in conjunction with leases of allotted land. n364 The reasoning of the decision applies as well to leases of tribal land, and some leases can be made for 99 years. n365 However, this market is much more limited than the general right to sell or lease a water right for use on other land; many potential buyers, such as municipalities, are excluded.

(4) Regulating Water Rights.

Water rights are closely regulated by state governments in the arid western states. Most states rely on systems administered by a state engineer, while Colorado relies heavily on water courts. Regulatory systems control recognition of new water rights, administration of existing rights, and transfers of rights to new points of diversion, to new uses, or to new owners. n366 Indians and Indian property in Indian country are generally immune from state regulation, and this rule has been assumed to apply to water rights. n367 Some state water regulators have attempted to obtain jurisdiction over Indian water rights as an adjunct to water quantification decrees. On their part, several Indian nations have asserted jurisdiction over all water rights in their territory, including those appurtenant to unrestricted land owned by non-Indians. Lower court decisions on validity of these competing claims are inconclusive. n368

(g) Indian Irrigation Projects.

The federal government has built a number of irrigation projects that serve restricted Indian lands. Many were financed with tribal trust funds held in the Treasury. In some instances, Indian lands are within Reclamation projects subject to the Reclamation Act. More often, Indian irrigation projects are separately administered by the Bureau of Indian Affairs. As Indian allotments within irrigation projects were sold or leased, many non-Indians became landowners served by the projects. n369

Lands within an Indian irrigation or Reclamation project are subject to Interior regulations. n370 Generally, lands within a project are treated equally, sharing ratably in shortages. When project lands are sold, buyers acquire project water rights that the seller owned. These aspects of projects are the same for unrestricted land and for restricted Indian

land. n371

CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions § 57.11

AUTHOR: Professor Richard B. Collins School of Law University of Colorado

§ 57.11 Property and Tribal Sovereignty.

[Go To Supp]

(a) The Tribal Sovereignty Doctrine.

(1) Recognition.

The parties to early treaties between the United States and the Indian nations intended that tribes continue to exercise internal sovereignty over land reserved to them except for limited federal jurisdiction over interracial matters. In Worcester v. Georgia, the Supreme Court held that Georgia had no jurisdiction over Cherokee territory under the Cherokee treaties and federal statutes, and the court's reasoning applied to most or all of the early treaty reservations. n372 The treaty policy articulated in Worcester is the point of departure for decisions about jurisdiction over all Indian country, whether established by treaty, statute, executive order, or other means, and whether before or after statehood. n373 Congress can alter Worcester's jurisdictional rules by statute. It can limit tribal authority, impose federal standards, or authorize state jurisdiction. The Supreme Court requires that congressional intent to limit tribal authority be clear, and this is an important restraint on the power. For example, federal statutes of general application are often held not to apply to tribes or to reservation Indians. But the court has characterized Congress's substantive power as plenary and has rejected claims of constitutional limits to the power. n374

LEXIS: sovereign! or jurisdiction! w/15 trib! w/15 land! or country

(2) Sovereignty over Indians in Indian Country.

Jurisdiction over Indians in Indian country continues to be governed by the Worcester precedent. States have authority only when federal law clearly authorizes it. Congress has imposed federal authority in a number of important areas, notably jurisdiction over serious crimes by and against Indians. It has subjected some reservations to state law and courts. But most tribes are left free to govern their members in broad areas that are part of ordinary state jurisdiction outside Indian country. n375

In the 1930s, the federal government undertook to revitalize tribal governments. The Indian Reorganization Act and Courts of Indian Offenses provided standard forms that were promoted to the tribes and widely adopted by them. In the intervening years, many tribes have substantially altered these forms to establish more diverse governmental structures. n376

(3) Sovereignty over Non-Indians in Indian Country.

The most important change in federal law since Worcester involves the status of non-Indians in Indian country. At the time of Worcester, the only non-Indians who could lawfully enter Indian country were government agents or persons admitted by the tribe. Thereafter, Indian country was opened successively to non-Indian passage, presence, residence, and land ownership. In a series of cases, the Supreme Court decided that states have jurisdiction over non-Indians in Indian country in matters not directly affecting Indians. n377 In recent years, tribal governments have sought to exercise greater authority over non-Indians in tribal territory. The Supreme Court has rejected tribal jurisdiction to punish non-Indians criminally. In civil cases, tribes lack general authority over non-Indians based solely on presence within tribal boundaries. n378 But the court has sustained tribal jurisdiction over non-Indians who use tribal land or enter into commercial relations with Indians. n379

LEXIS: sovereign! or jurisdiction! w/15 non-indian! w/15 indian! w/2 country

(4) Indian Title and Tribal Sovereignty.

The tribal sovereignty doctrine crucially depends on whether a place is or is not Indian country. This in turn bears some connection to tribal title. Originally the issue was straightforward; land in Indian title, and only such land, was Indian country. But allotting and opening of reservations complicated the question. So did the practice of restoring land to tribes, rather than simply reserving part of their original holdings. Statutory anomalies arose, and judicial decisions were not always consistent. n380

In 1948 Congress enacted a comprehensive definition of Indian country. n381 This statute and its judicial interpretations have resolved most major problems that had arisen under prior law. The statute defines Indian country as reservations, allotments, and "dependent Indian communities." It specifies that reservations established after statehood are included and that all land within reservation boundaries, regardless of ownership, is Indian country. Application of the statute continues to present courts with disputes about whether a particular location is a reservation or a dependent Indian community. n382

COMPUTER-ASSISTED RESEARCH

LEXIS: title! w/15 sovereign! w/5 indian! or trib! w/5 country

(5) Tribal Sovereign Immunity.

Tribes have governmental immunity from suit in federal or state courts unless lawfully waived by the tribe or overridden by Congress. The immunity is similar to that of the federal and state governments, except that tribes have enacted few waivers to suit in their own courts, many tribes none at all, in contrast to the broad internal waivers in federal and state law. n383 Immunity protects against remedies that operate retroactively against the tribe, such as judgments for money damages and adjudications of land title. It does not bar injunctions against tribal officials that operate in the future, by analogy to the doctrine of *Ex parte Young*. n384

COMPUTER-ASSISTED RESEARCH

LEXIS: trib! w/5 immunity

(6) Rights of Persons Under Tribal Jurisdiction.

While Indian nations are subject to authority of Congress, they are not directly limited by most of the personal rights guarantees in the Constitution. The original Bill of Rights limited only the federal government, and the Fourteenth Amendment expressly applies only to states. n385 However, in 1968 Congress passed the Indian Civil Rights Act, which imposed on tribal governments most of the personal rights guarantees found in the Bill of Rights and Fourteenth Amendment. n386 The statute gave federal courts jurisdiction to issue writs of habeas corpus to persons in tribal custody. But Congress did not give federal courts jurisdiction to hear civil actions brought to enforce the Act; tribal governments have exclusive authority over civil remedies. n387 Federal civil rights statutes of general application have been accommodated to Indian country in a variety of ways. n388

(b) Effects of Tribal Sovereignty on the Law of Real Property.

Particular jurisdictional rules applicable to Indian country are complex, and many are only distantly related to land law. Tribal law can define internal property rights of tribal members and can govern some disputes between members and non-members. However, Indian land is subject to so much federal control that tribal law plays a fairly small part in the Indian country law of real property. Similarly, tribal institutions have had only a minor role in enforcement of Indian country land law. Present federal policy favors increasing the authority of tribal governments, so this pattern may change. n389

There are two important effects of tribal sovereignty on real property law in Indian country. When an activity is heavily regulated or taxed under state or federal law, Indian immunity or exemption can significantly increase property values. One subject already addressed is fishing rights. Immunity from state regulation makes Indian fishing rights more valuable. n390 On the other hand, when tribal governments impose taxes or regulations, they can limit property values. This section discusses important kinds of Indian immunities and tribal impositions.

LEXIS: trib! or indian! w/15 law! w/30 real w/1 property

(1) State and Federal Taxes.

Immunity of restricted Indian land from state and local land taxes has been a basic federal policy from the nation's founding. Many statutes expressly provide that restricted Indian land shall not be taxable. Courts have also found exemption based on the trust title to Indian land. Unrestricted land owned by Indians in tribal Indian country is non-taxable based on the general immunity of reservation Indians from state law. Other federal statutes expressly authorize state taxation of restricted Indian land, reflecting the assumption that express consent is necessary. n391

Indians have no inherent immunity from federal taxes, but exemptions from taxation appear in the tax laws. The most important is exemption of tribes (but not of individual Indians) from federal income tax. The Tax Code defines taxable entities as persons, corporations, trusts, and estates. State and local governments are not taxable entities, nor are Indian tribes. However, federal laws taxing and regulating all employers probably apply to Indian tribes acting as employers. n392

The express tax exemption of Indian allotments also bars federal income taxation of income derived directly from allotted land. The exemption does not extend to business activities conducted on the land that are not inherently connected to it, and the exemption does not apply to income of Indians from tribal land. n393

Indian immunities from personal taxation by states derive mostly from the general Indian country immunity from state jurisdiction. When the incidence of a state tax falls on Indians or tribes in Indian country, the state lacks jurisdiction to tax unless a federal statute explicitly consents. Most litigation has arisen over state income and sales taxes, but the rule generally applies to all state taxes. n394

In recent years the most frequent source of litigation over state taxes has arisen from taxation of Indian country transactions between Indians and non-Indians. When the incidence of the tax is on the Indian party, the state lacks jurisdiction to tax based on the rule stated above. When the incidence of the tax is on the non-Indian party, state jurisdiction is not preempted by Indian country immunity without more. But the Supreme Court has interpreted some federal statutes governing Indian land use to bar state taxation more specifically. In general, the court has found state authority lacking when commercial activity relates to "reservation value," such as harvesting tribal timber or hunting on tribal land. When commercial activity is transitory, the court sustains state jurisdiction. n395 But the court has also sustained state power to tax the "reservation value" of mineral production from Indian land, and the court has invalidated state taxation of the transitory activities of non-Indians selling most kinds of goods and chattels to Indians. n396 Each statutory scheme must be analyzed according to the court's criteria. A prominent application of these rules is to cigarette taxes, where the level of state taxation is so high that sales free of state taxes enjoy a significant competitive advantage. Indian country sales to Indian buyers are exempt, whether the tax incidence is on sellers or buyers. Sales by Indian sellers to non-Indian buyers are exempt when the tax incidence is on sellers. When the tax incidence is on non-Indian buyers, the state tax is lawful, and the state can compel Indian and tribal sellers to collect and remit the tax. n397

LEXIS: state or federal w/2 tax! w/30 indian! w/5 land!

(2) Tribal Taxes.

Tribal governments may be barred from taxing allotted land and its income by the express tax exemption of allotments. n398 Otherwise, tribes have broad authority to tax their members, but reservation poverty limits the effectiveness of doing so. Also, many tribes get substantial income from tribally-owned resources. Tribes can tax non-Indians in tribal territory who use tribal land or enter into commercial relations with Indians. Notably, tribal taxation of mineral and business lessees of tribal land has been sustained. n399 This authority is less attractive when states have concurrent jurisdiction to tax the same transaction; double taxation deters investments. Some tribes and states have made tax compacts to divide tax resources and avoid double taxation. n400

LEXIS: trib! w/2 tax!

(3) Gambling and Alcohol.

The possession, manufacture, and sale of alcoholic beverages in Indian country is governed by federal statutes. Federal law bans alcohol completely except to the extent that the governing tribe consents. But if a tribe consents, sales must also comply with state law. Hence, tribes and states have concurrent jurisdiction to license and tax transactions allowed by federal law. n401

Regulation of gambling in Indian country involves significant regulatory values. Traditionally, most states allowed bingo but forbade other kinds of gambling. In the 1970s, Indians and tribes began to operate bingo games in Indian country, and the Indian games operated without state licenses and offered higher stakes than states allowed. Most state efforts to suppress the games were rejected by the courts. n402 But Indian and tribal attempts to operate other kinds of gambling establishments were suppressed under federal law. n403 In 1988, Congress passed the Indian Gaming Regulatory Act. n404 The Act establishes a National Indian Gaming Commission. It confirms tribal authority over Indian country bingo and related games but also subjects them to federal oversight by the Commission. The Act establishes a complex procedure for tribes to enter into compacts with states to govern other kinds of gambling in Indian country. Many compacts have been made, and some tribes operate extensive gambling enterprises. n405 Other state governments have refused to enter into compacts, and tribes have sued to compel good faith negotiations under the statute. Courts have reached conflicting results. n406 The Act bans gaming on Indian lands acquired after 1988, but provides for a waiver of that ban by the Secretary of the Interior, subject to the concurrence of the Governor of the State in which the gaming is to occur. This requirement of gubernatorial concurrence has been the subject of controversy and at least one lower court has held it to violate the Appointments Clause, because it encroahes on the authority of the executive branch. n407

LEXIS: indian! w/30 statute! w/15 gambling or alcohol

(4) Environmental Regulation.

Indian land in Indian country is generally subject to tribal and not state regulation, and tribes regulate less than states. However, the field of environmental regulation is dominated by federal law. As noted above, application of federal law to reservation Indians is a question of congressional intent for each statute. n408

Earlier federal laws regulating the environment did not expressly address application in Indian country, and courts had to decide by implication. The most important statute is the National Environmental Policy Act. One court held that secretarial approval of the leasing of Indian land is an event governed by the act. n409 The Secretary of the Interior applies the act, producing a complex body of administrative law. n410 The Clean Air Act does not mention Indian country, but regulations under it delegate important authority to tribes, which has been sustained. n411 In more recent statutes, Congress has expressly provided a role for tribal governments. n412

(c) Hawaii and Alaska.

The tribal sovereignty doctrine has not been recognized for Hawaiian Natives. n413 In Alaska, the doctrine applies to the one reservation in the state, but its application to other Native lands is uncertain. Native Alaskan villages claim inherent sovereignty and claim statutory powers under the Indian Reorganization Act, but many aspects of Native sovereignty are limited by federal statutes and by lack of recognized Indian country in the state. n414

(d) Tribal Sovereignty and International Law.

In the formative years of the United States, many Indian nations asserted sovereign rights greater than those recognized by the law of the United States. n415 Under the United Nations, international recognition of distinct national rights of indigenous peoples has increased, and some Indian nations are again asserting greater sovereignty. n416 These efforts

have not yet affected domestic law, but it is possible that more international norms will become enforceable domestically in the future.

gaming device that required tribal-state compact for its legal operation). *See also United States v. The Spokane Tribe of Indians, 139 F.3d 1297 (9th Cir. 1998)* (portions of IGRA remaining in effect, after the Supreme Court declared portions of IGRA permitting tribes to bring suits against states that refused to negotiate gaming compacts were unconstitutional, could not form basis for injunction prohibiting Indian Tribe from engaging in gaming after state allegedly refused to negotiate compact in good faith). *See also* Jeremy P. Pisca, "Betting a Future: The Debate Over the Statutes of Indian Gaming in the State of Idaho," *34 Idaho L. Rev. 651 (1998);* Gregory Elvine-Kreis, "The Effect of the Indian Gaming Regulatory Act on California Native American's Independence," *35 San Diego L. Rev. 179 (1998).*

(n34)Footnote 405. *Artichoke Joe's California Grand Casino v. Norton, 2002 U.S. Dist. LEXIS 14300* (E.D. Cal. July 29,2002) (California compacts allowing tribes to exercise exclusive class III gaming rights on Indian land did not violate due process or equal protection clauses of Constitution). *Confederated Tribes of Siletz Indians of Oregon v. State of Oregon, 143 F.3d 481 (9th Cir. 1998)* (tribal-state compacts regulating class III gambling devices under Indian Gaming Regulatory Act (IGRA) on reservation did not bar state from releasing report under its public record laws). *See also Keweenaw Bay Indian Community v. United States, 136 F.3d 469 (6th Cir. 1998)* (IGRA generally prohibiting gambling on certain Indian lands acquired after October 17, 1988, applied to class III gaming devices authorized by valid tribal-state compact). *See also* N.J. Bride, "Seminole Tribe v. Florida: The Supreme Court's Botched Surgery of the Indian Gaming Regulatory Act," J. Legis. 21(1), p.149-63, 1998; *Miami Tribe of Oklahoma v. United States, 5 F. Supp. 2d 1213 (D. Kan. 1998)* (National Indian Gaming Commission refused Indian tribe's class III gaming management because the proposed operation did not constitute "Indian land" under IGRA). *Confederated Tribes of the Chehalis Reservation v. Johnson, 958 P.2d 260 (Wash. 1998)* (Indian Gaming Regulatory Act did not preempt application of state records act to require disclosure of state gaming commission records of "community contribution" paid by tribes to defray costs of the impact of Indian gaming operations on non-tribal government agencies, under the terms of tribal-state gaming compacts). *See generally* Bennett Cooper, III, "What's in the Cards for the Future of Indian Gaming Law?" *5 Vill. Sports & Ent. L.J. 129 (1998). But see Alabama-Coushatta Tribes of Texas v. Texas, 208 F. Supp. 2d 670 (E.D. Tex. 2002)* (tribes governed by Restoration Act may not conduct gambling operations on reservation lands). *See, e.g., Mashantucket Pequot Tribe v. Connecticut, 913 F.2d 1024 (2d Cir. 1990), cert. denied, 499 U.S. 975 (1991). See generally* I. Nelson Rose, "Gambling and the Law - Update 1993," *15 Hastings Comm. & Ent. L.J. 93 (1992).*

(n35)Footnote 406. *Compare Kickapoo Tribe of Indians v. Kansas, 818 F. Supp. 1423 (D. Kan. 1993), app. pending, with Sault Ste. Marie Tribe of Chippewa Indians v. Michigan, 800 F. Supp. 1484 (W.D. Mich. 1992) vacated and remanded, 517 U.S. 1129 (1996).* Mechoopda Indian Tribe of Chico Rancheria v. Schwarzenegger, 2004, U.S. Dist. LEXIS 8334 (No. CIV. S-03-2327, March 12, 2004) (tribal attempt to force arbitration over gambling license failed because of lack of standing). *See Seminole Tribe of Florida v. Florida, 517 U.S. 44 (1996). See also United States v. Santa Ynez Band of Chumash Mission Indians of Santa Ynez Reservation, 33 F. Supp. 2d 862 (C.D. Cal. 1998)* (state's refusal to negotiate with Indian tribes, which commenced class III gambling in face of legal disputes concerning what kinds of gaming were subject to tribal-state compacts, was not bad faith).

(n36)Footnote 407. *See Confederated Tribes of Siletz Indians of Oregon v. United States, 841 F. Supp. 1479 (D. Or. 1994);* Jason D. Kolkema, "Federal Policy of Indian Gaming on Newly Acquired Lands and the Threat to State Sovereignty: Retaining Gubernatorial Authority Over the Federal Approval of Gaming on Off-Reservation Sites," *73 U. Det. Mercy L. Rev. 361 (1996); Passamaquoddy Tribe v. Maine, 75 F.3d 784 (1st Cir. 1996)* (Maine not subject to Indian Gaming Regulatory Act).

(n37)Footnote 408. *See supra* notes 363, 380 and accompanying text. *See* Judith V. Royster, "Of Surplus Lands and Landfills: The Case of the Yankton Sioux," *43 S.D. L. Rev. 283 (1998). Miccosukee Tribe of Indians v. United States, 2003 U.S. Dist. LEXIS 2255* (No. 02-22778-CIV, February 5, 2003) (clear Congressional intent to protect endangered species allows application of ESA to tribal lands without specific mention of tribal land in the statute.)

(n38)Footnote 409. *Norvell v. Sangre de Cristo Dev. Co., 519 F.2d 370 (10th Cir. 1975); Davis v. Morton, 469 F.2d 593 (10th Cir. 1972). See also* Dean B. Suagee, "Tribal Self-Determination and Environmental Federalism:

Cultural Values As A Force for Sustainablity," 3-Fall Widener L. Symp. J. 229 (1998); M.V.R. Gouda and D. Easterling, "Nuclear Waste and Native America: The MRS Siting Exercise," 9(3) Risk Health Safety & Env't 229 (1998).

(n39)Footnote 410. *See* 25 C.F.R. § 163.27 (1992) (NEPA for forest leases); *57 Fed. Reg. 48430 (1992)* (typical NEPA notice); Dean B. Suagee, "The Application of the National Environmental Policy Act to "Development" in Indian Country," *16 Am. Indian L. Rev. 377 (1991).*

(n40)Footnote 411. 40 C.F.R. § 52.21(g)(4) (1992). *See Nance v. Environmental Protection Agency, 645 F.2d 701 (9th Cir. 1981)* (sustaining earlier version). *Cf. Lyon v. Amoco Prod. Co., 923 P.2d 350 (Colo. App. 1996)* (tribe had exclusive jurisdiction over environmental claims concerning the drilling of wells and production of natural gas on Indian trust lands within Indian reservation).

(n41)Footnote 412. *30 U.S.C.A. § 1300* (strip mining); *33 U.S.C. § 1362*(4) (Water Pollution Control Act; tribes equated with municipalities); *42 U.S.C. § 300f*(10) (Safe Drinking Water Act; same); *id*. §§ 9601(36), 9604(d)(1)(A), 9607(f)(1) (Superfund). *See generally* Mark E. Chandler, *supra* note 357; Walter E. Stern, "Environmental Compliance Considerations for Developers of Indian Lands," *28 Land & Water L. Rev. 77 (1993). See State of Montana v. U.S.E.P.A, 137 F.3d 1135 (9th Cir. 1998)* (Indian tribe retains inherent civil authority over conduct of non-Indians of fee lands within its reservation when that conduct threatens or has some direct impact on health and welfare of that tribe).

Supp. To CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions Supp. to § 57.04

Supp. to § 57.04 Fundamentals.

[Go To Main]

§ 57.04(a) The Federal Restraint on Alienation of Indian Title. [Go To Main]

Add:

For a modern case regarding alienation of Indian land see *Yankton Sioux Tribe v. Podhradsky, 577 F.3d 951 (8th Cir. 2009)* where the court was faced with the issue whether all land not ceded to the United States remained part of the Indian tribe's separate reservation.

§ 57.04(c) Marshall Court Decisions. [Go To Main]

§ 57.04(c)(1) Indian Title Cases.

Add:

For a discussion of how the Supreme Court has looked at federal Indian law since the 1980's see Mathew L. M. Fletcher, "The Supreme Court and the Rule of Law: Case Studies in Indian Law," 55 *Fed. Law.* 26 (April, 2008).

§ 57.04(d) Constitutional Power of Congress. [Go To Main]

Add:

Mathew L. M. Fletcher, "The Supreme Court and the Rule of Law: Case Studies in Indian Law," 55 *Fed. Law.* 26 (2008) (arguing that the Supreme Court has consistently ruled against tribal interests since the late 1980's, creating confusion in the area of Indian law Jurisprudence.)

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions Supp. to § 57.05

Supp. to § 57.05 Tribal Land.

[Go To Main]

Add the following cases to the list of cases where there is a trust relationship between the US and a tribe:

Confederated Tribes and Bands of the Yakama Nation v. United States, 89 Fed.Cl. 589 (2009) ; *Miami Tribe of Oklahoma v. United States, 679 F. Supp. 2d 1269* (D. Kan., 2010) ; *Wilkinson v. United States, 564 F.3d 927 (8th Cir. 2009)* .

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions Supp. to § 57.06

Supp. to § 57.06 Individual Interests in Land.

[Go To Main]

§ 57.06(a) Individual Rights in Tribal Property. [Go To Main]

Add

Spota ex rel. Unkechaug Indian Nation v. Jackson, 10 N.Y.3d 46, 883 N.E.2d 344 (N.Y. 2008) (a tribal member's wife, who was not a member of the tribe but was residing on a reservation allotment, became an "intruder" when the husband transferred the allotment to a brother).

Cermak v. U.S., 478 F.3d 953 (8th Cir. 2007) (action by descendants of tribal member claiming deprivation of rights assigned to the member through issuance of Indian Land Certificates).

§ 57.06(b) Allotments. [Go To Main]

§ 57.06(b)(4) Adjudicating Allotment Rights.

Add:

DuMarce. v. Scarlett, 446 F.3d 1294 (Fed. Cir. 2006) (action by heirs to allotted Indian lands for declaration that returning lands in trust for the tribe was an unlawful taking).

Add:

Spota *ex rel. Unkechaug Indian Nation v. Jackson, 853 N.Y.S.2d 520 (2008)* (a tribal member's wife, who was not a tribal member, resided on a reservation allotment and was an "intruder" by definition of the applicable statute).

§ 57.06(c) Lands of Native Hawaiians. [Go To Main]

Add:

In *Hawaii v. Office of Hawaiian Affairs, 129 S.Ct. 1436 (2009)* , the Supreme Court was faced with the question of whether the Apology Resolution could prevent the State of Hawaii from alienating public lands which the United States acquired when U.S. sovereignty attached to Hawaii. The Supreme Court held that the Apology Resolution did not strip the State of Hawaii of its power to alienate the land ceded to it.

§ 57.06(d) Lands of Native Alaskans. [Go To Main]

Add:

Under ANSCA, the $962.5 million was to be distributed to thirteen "Regional Corporations" which were groups of natives unified by a "common heritage and sharing common interest" and an unspecified number of "Village corporations." *Stratman v. Leisnoi, Inc., 545 F.3d 1161 (9th Cir. 2008)* . To qualify as a village for the purposes of ANSCA the Secretary of the Interior must find that "(A) twenty-five or more Natives were residents of an established village on the 1970 census enumeration date as shown by the census or other evidence satisfactory to the Secretary, who shall make findings of fact in each instance; and (B) the village is not of a modern and urban character, and a majority of the residents are Natives." *43 U.S.C. § 11610(b)(2)*.

Supp. To CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions Supp. to § 57.07

Supp. to § 57.07 The Federal Trust Relationship and Indian Property.

[Go To Main]

§ 57.07(b) Canons of Construction as Judicial Limits on Federal Power. [Go To Main]

Add:

See Guidiville Band of Pomo Indians v. NGV Gaming, LTD, 531 F.3d 767 (9th Cir. 2008) (citing *Montana v. Blackfeet Tribe of Indians, 471 U.S. 759, 766 (1985)* ("One of those canons of construction is that federal statutes relating to Indian Tribes must be 'construed liberally in favor of the Indians.' ").

§ 57.07(c) Treaty and Statutory Trusts. [Go To Main]

Add:

Navajo Nation v. U.S., 501 F.3d 1327 (Fed. Cir. 2007) (action against U.S. for breach of trust in leasing tribal lands for coal mining).

Add:

Yankton Sioux Tribe v. Podhradsky, 529 F. Supp. 2d 1040 (D. S.D. 2007) (land within the original exterior boundaries of the reservation and thereafter taken into trust by the federal government was "Indian country").

§ 57.07(d) Breach of Trust Remedies. [Go To Main]

§ 57.07(d)(2) Sovereign Immunity and Statutes of Limitations.

Add:

See Cheyenne-Arapaho Tribes of Oklahoma v. United States, 80 Fed. Cl. 197 (2007) (holding that Indian tribe action seeking an accounting for mining rights was barred by the statute of limitations.)

Supp. To CHAPTER 57 INDIAN LAND

7-57 Thompson on Real Property, Thomas Editions Supp. to § 57.08

Supp. to § 57.08 Alienation of Interests in Indian Land.

[Go To Main]

§ 57.08(c) Conveyances of Fee Simple Ownership: Mortgages. [Go To Main]

Add:

In re Schugg, 384 B.R. 263 (D. Ariz. 2008) (claim by Ch. 11 bankruptcy trustee to land acquired by debtor within boundary of an Indian reservation).

Add:

Courts generally defer to tribal law to determine tribal membership and what constitutes an "intruder." *Spota ex rel. Unkechaug Indian Nation v. Jackson, 883 N.E.2d 344, 349 (N.Y. 2008)* .

§ 57.08(d) Conveyances of Leaseholds and Servitudes. [Go To Main]

§ 57.08(d)(3) Mining and Oil and Gas Leases and Sales.

Add:

United States v. Navajo Nation, 129 S. Ct. 1547 (2009) (action by tribe alleging that the Secretary of the Interior breached fiduciary duties to the tribe in connection with royalties on a coal mining lease); *In re Natural Gas Royalties, 562 F.3d 1032 (10th Cir. 2009)* (action alleging that natural gas companies underpaid royalties on gas purchased from

Indian lands).

Add:

But see U.S. v. Navajo Nation, 129 S.Ct. 1547 (2009) (Where the Supreme Court rejected an Indian tribe's suit against the Secretary of the Interior for breaching his fiduciary duties with respect to coal mining royalties.).

§ 57.08(f) Involuntary Alienation. [Go To Main]

Add:

Oneida Tribe of Indians of Wisconsin v. Village of Hobart, Wisconsin, 542 F. Supp. 2d 908 (E.D. Wis.) (land within the original boundaries of the reservation was conveyed to tribal members in fee simple, then to third parties, and then reacquired by the tribe; such land was subject to the village's condemnation power).

Supp. to § 57.11 Property and Tribal Sovereignty.

[Go To Main]

§ 57.11(a) The Tribal Sovereignty Doctrine. [Go To Main]

§ 57.11(a)(2) Sovereignty over Indians in Indian Country.

Add:

Meyer & Associates, Inc. v. Coushatta Tribe of Louisiana, 992 So. 2d 446 (La. 2008) .

§ 57.11(a)(3) Sovereignty Over Non-Indians in Indian Country.

Add:

In re Schugg, 384 B.R. 623 (D. Arizona 2008) (bankruptcy trustee who acquired land of debtors located within the boundary of an Indian reservation claimed access to the land).

Add:

Garcia v. Gutierrez, 192 P.3d 275 (N.M. App. 2008) (fee land within the exterior boundaries of tribal land is part of the tribe's territory for jurisdictional purposes under the Parental Kidnapping Prevention Act).

§ 57.11(a)(4) Indian Title and Tribal Sovereignty.

Add:

Hydro Resources, Inc. v. U.S. E.P.A., 562 F.3d 1249 (10th Cir. 2009) (determination that land intended for a uranium mine fell with a dependent Indian community).

§ 57.11(a)(6) Rights of Persons Under Tribal Jurisdiction.

Add:

Plains Commerce Bank v. Long Family Land and Cattle Co., 128 S. Ct. 2709 (2008) (challenge by a non-Indian bank to tribal court judgment); *Garcia v. Gutierrez, 192 P.3d 275 (N.M. App. 2008)* (under the Parental Kidnapping Prevention Act, Indian tribes are United States territories that are treated as states).

Add:

See, e.g., Sweet v. Hinzman, 634 F. Supp. 2d 1196 (W.D. Wash. 2008) (Indian tribe members sought writs of habeas corpus under the Indian Civil Rights Act.); *State v. Madsen, 760 N.W.2d 370 (S.D. 2009)* (The *Fourth Amendment* standards applied by virtue of the Indian Civil Rights Act to a search conducted in a hotel room in an Indian casino).

§ 57.11(b) Effects of Tribal Sovereignty on the Law of Real Property. [Go To Main]

§ 57.11(b)(1) State and Federal Taxes.

Add:

For a further discussion on Taxation on Indian land see "Taxation in Indian Country After Carcieri v. Salazar," *36 Wm. Mitchell L. Rev. 590 (2010).*

§ 57.11(b)(3) Recognition.

Add:

Miami Tribe of Oklahoma v. U.S., 198 Fed. Appx. 686 (10th Cir. 2006) (Indian tribe action against U.S. Dept. of Interior for approval to conduct gaming on Indian land).

See "Indian tribes and Casinos: 9th Circuit Tax Ruling Helps Chip Away at Tribal Sovereignty," 35 *Mont. Law.* 5 (November, 2009); *Barona Band of Mission Indians v. Yee, 528 F.3d 1184 (9th Cir. 2008)* (the 9th Circuit held that state sales taxes applied to the materials purchased for casino expansions on tribal lands).

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.01

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.01 An Overview.

Antarctica has been described physically as a cold and barren place, a cruel and inhospitable land, yet one whose beauty defies description. Over the years it has lured explorers, adventurers, business people and scientists, and though many return for visits, few spend an entire year there, and no person calls it a permanent domicile.

Antarctica has inspired the national interests of many countries, and great patriotic dreams in some; however, it also has been called a sovereignless continent, n1 while others say it is a foreign land. n2 Though seven nations claim sovereignty over portions of the continent, such claims have been held in abeyance for the past 30 years and probably will continue to be so held for the foreseeable future. n3 Today, over 20 nations have permanent bases on the continent, and the men and women of many nations work in peace. Scientific research is the primary activity on this continent. n4

Private ownership of land in Antarctica is unknown. n5 The moratorium placed on sovereignty claims, especially when coupled with the inhospitable living conditions, insure that real property ownership claims will not be made in the near future; however, future events may change that status. This chapter, therefore, will discuss the Antarctic Treaty System and the traditional sovereignty claims, as well as differing rationales for the ownership of the continent.

FOOTNOTES:
(n1)Footnote 1. *See Beattie v. United States, 756 F.2d 91 (D.C. Cir 1984)* in which the majority held that Antarctica was not a country at all. *But see* Judge Scalia's dissent, noting that it is not accurate to call Antarctica a "large continent which has never been and is not now subject to the sovereignty of any nation," but more properly described as "an entire continent of disputed territory," quoting F. M. Auburn, Antarctic Law and Politics (1982). *But see Smith v. United States, 113 S. Ct. 1178, 1179 (1993),* in which Justice Rehnquist referred to Antarctica as a "sovereignless region" and held that the exception to the Federal Tort Claims Act waiver of sovereign immunity for any claim arising in "foreign country" included a claim arising in Antarctica. *See also Environmental Defense Fund, Inc. v. Massey, 986 F.2d 528, 529 (D.C. Cir. 1993),* where Antarctica was described as "not only a unique continent, but somewhat of an international anomaly." For an interesting discussion regarding the Smith case, *see* Bederman, David J., "First Arguments At The Supreme Court of the United States: A Chilly Reception at the Court" J. App. Prac. & Process 5 (Spring 2003) 51. In the case of *Smith v. Raytheon Co., 297 F Supp. 2d 399 (D. Mass 2004),* the court determined that since Antarctica was a "foreign country" the employer did not have to pay overtime under the Fair Labor Standards Act.

(n2)Footnote 2. *See, e.g., Smith v. United States, 953 F.2d 1116 (9th Cir. 1991)* noting that as a foreign country the claim fell into the exemption to the Federal Tort Claims Act *aff'd* in *Smith v. United States, 113 S. Ct. 1178, 122 L. Ed. 2d 548 (1993). But see Larry Martin v. Commissioner of Internal Revenue, 50 T.C. 59 (1968)* noting that Antarctica was not a foreign country for purposes of exemption under § 911(a)(2), I.R.C. 1954.

(n3)Footnote 3. *See* § 58.13 *et seq., infra*. A succinct and interesting discussion of the history of territorial claims and current activities may be found in the Australian Financial Review, Concord in a Cold Climate, by David Mcgonigal and Julia Green, October 20, 2001. An excellent book that discusses all the various concerns regarding Antarctica is by Christopher C. Joyner, Governing the Frozen Commons: The Antarctic Regime and Environmental Protection. Columbia: University of South Carolina Press, 1998.

(n4)Footnote 4. *See* §§ 58.04 and 58.05, *infra*. As noted in § 58.04, note 27, tourism is becoming increasingly popular.An ancient meteorite taken from Antarctica may prove that there was once life on Mars. *See, e.g.*, the article by Tim Radford in The Guardian, "New evidence of life on Mars: Scientists say meteorite shows conclusive evidence, but others disagree," February 27, 2001.

(n5)Footnote 5. *See, e.g.*, discussion in Francisco Orrego Vicuna, Antarctic Mineral Exploitation -- The Emerging Legal Framework 103 (Cambridge University Press 1988) to the effect that the question of private property in the Antarctic has "received very little consideration." Vicuna notes that the State of Chile opened a register of Antarctic property in Punta Arenas, the first inscription of which noted that the State was the owner of all land within the limits of the claimed Antarctic area. The need for private international law for Antarctica is growing. *See* § 58.12 *infra*. *Note also* the quote from Beverly May Carl, The Need for a Private International Law Regime in Antarctica, The Antarctic Legal Regime 68 (Christopher C. Joyner & Sudhir K. Chopra eds., Martinus Nijhoff Publishers, 1988) to the effect that "property will have to be ascertained as fishing increases, development begins, and human activity grows."

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.02

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.02 Physical Description.

Antarctica is the fifth largest continent and covers over five million square miles. n6 It is asymmetrically placed around the south geographical pole with 2 indentations for the Ross and Weddell seas and with the projection of the Antarctic Peninsula. Only 2 to 4% of the area is ice-free and over 97% is covered by a permanent ice cap. The land is surrounded by thick and relatively permanent fields of ice known as ice shelves, which, because they are relatively fixed, often are treated as land. During the winter months, additional surface area is added by the sea ice. The continent is surrounded by the Southern or Antarctic Ocean, which is a continuation of the Atlantic, Pacific and Indian oceans. The Antarctic Convergence, a belt of water approximately 40 kilometers wide, is formed by the northerly flowing Antarctic cold currents meeting the warmer sub-Antarctic waters.

The Antarctic Treaty, in Article VI, defines Antarctica as the area south of 60 degrees South Latitude including all ice shelves. n7 This definition was expanded by the Convention on the Conservation of Antarctic Marine Living Resources to include the area within the Antarctic Convergence. n8

It is now believed that at one time Antarctica was part of a super-continent known as Gondwana which included South America, Africa, Australasia and India. This theory, first proposed by Alfred Wegener in 1912 has been supported with recent fossil finds. n9

The continent itself is divided into two portions commonly known as East or Greater Antarctica and West or Lesser Antarctica. The large eastern side, lying south of the Indian Ocean and facing Africa, the Indian Ocean and Australia, is a dry, high-altitude, deserted, ice-covered plateau comprised of stable Precambrian rocks. Glaciers and mountains surround it, and included therein are both the geographic South Pole, which is the earth's southernmost point and where all lines of longitude meet, and the south magnetic pole, which is the farthest point on the earth in the direction of magnetic south (though this pole does move).

In places, the weight of the ice has caused the land to drop below sea level. On the Western side is the Transarctic Mountain Chain, a chain of mountains which stretch for almost five thousand kilometers and is composed of tall peaks and dry valleys. West Antarctica, in contrast, faces the Pacific Ocean and South America. Much of its land is well below sea level and is comprised of an archipelago of mountainous islands joined by the ice. Two large bays, Weddell

and Ross, are located here as well as the Antarctic Peninsula which is a long, narrow, mountainous ridge. n10

Antarctic has been described as the "coldest, driest, windiest, least accessible, worst known and generally the most unpleasant" area in the world. n11 Mean temperatures generally are about 20 degrees colder than those in the equivalent latitude of the Arctic. Average temperatures range from 40 degrees below zero Fahrenheit to 94 degrees below zero Fahrenheit during the winter months and from 0 degrees Fahrenheit to 31 degrees below zero Fahrenheit during the warmest summer months. n12 In addition, strong and violent winds blow, often without warning. From October until March, Antarctica receives little to no sunlight. The annual precipitation, usually in the form of snow, is only 3 to 7 centimeters and generally only on the coast where it is also warmer. n13 In the mid-1980's, atmospheric studies revealed that an ozone "hole" developes every spring. n14

FOOTNOTES:

(n1)Footnote 6. Much of the information contained herein came from Patrick T. Bergin, Antarctica, The Antarctic Treaty Regime, and Legal and Geopolitical Implications of Natural Resource Exploration and Exploitation, *4 Fla. J. Int'l L. 2 (1988);* Jonathan Chester, Antarctica -- Beauty in the Extreme (Michael Friedman Publishing Group, Inc. 1991); The Antarctic Legal Regime (Christopher C. Joyner & Sudhir K. Chopra eds., Martinus Nijhoff Publishers, 1988); John May, The Greenpeace Book of Antarctica (Doubleday 1989); Todd Jay Parriott, Territorial Claims in Antarctica: Will the United States Be Left Out In The Cold, *22 Stanford J. Int'l L. 67 (1986);* The Antarctic Treaty Regime (Gillian Triggs ed., Cambridge University Press 1987); Encyclopedia Americana Gillian Triggs ed., Grolier, Inc. 1991); The World Book Encyclopedia 1992.

(n2)Footnote 7. Antarctic Treaty, Dec. 1, 1959, art. 6, *12 U.S.T. 794*, T.I.A.S. No. 4780, 402 U.N.T.S. 71 (entered into force June 23, 1961). Note that the Treaty does not affect the right of any State under international law regarding the high seas within that area. The area does include the ice shelves. The questions remain, however, concerning the water under the ice shelves and the effect of the 1982 United Nations Convention on the Law of the Sea with its 200 mile exclusive economic zones. As to the latter, it has been suggested that the high seas are included now in the ambit of the Antarctic Treaty. *See* Christopher C. Joyner, The Exclusive Economic Zone and Antarctica, *21 Va. J. Int'l. L. 691 (1981);* Donald R. Rothwell, The Antarctic Treaty; 1969-1991 and Beyond, 14 Sidney L. R. 62, 70 (March, 1990). See Environmental Information Networks, Inc., Global Warming Network Online Today, Dec. 4, 1995 which notes that from Jan. 17 until Feb. 27, 1995, three large ice pieces broke off from the Larsen Ice Shelf, including one the size of Rhode Island. The history of the Antarctic Ice Sheet, including the sections of floating Larsen Ice Shelf which have detached and floated out to sea is discussed in the article by Wise, Jr., Sherwood Willing, "The Antarctic Ice Sheet: Rise and Demise?" J. Land Use & Envtl. Law 15 (Summer 2000) 383.

(n3)Footnote 8. *See* The Convention on the Conservation of Antarctic Marine Living Resources, May 20, 1980, art. 4, *33 U.S.T. 3746*, T.I.A.S. No. 10240 (entered into force April 7, 1982) which notes that the Convention applies to the Antarctic marine living resources of the area south of 60 degrees South Latitude and "the marine living resources of the area between that latitude and the Antarctic Convergence which form part of the Antarctic marine ecosystem." The Antarctic Convergence is a meandering line joining points along parallels of latitude and meridians of the longitude.

(n4)Footnote 9. *See, e.g.*, Joyner, The Evolving Minerals Regime for Antarctica, The Antarctic Legal Regime 130 (Christopher C. Joyner & Sudhir K. Chopra., eds.) *See also* Chester *supra*, n. 6, at 37. *See* the article in The Southland Times (New Zealand), January 27, 2001, "Gateway to Antarctica," which describes some of the common characteristics shared by New Zealand and Antarctica when they both were part of Gondwana.

(n5)Footnote 10. The Antarctic Peninsula at one time was divided into 2 sections called Graham Land and Palmer Land named for the British and American explorers; however the Chileans called the northern portion O'Higgins Land for its national hero and Argentina called it the Argentina Antarctic. Thus, the use of the common term today of Antarctica Peninsula. *See* May *supra* n. 6, at 154-155.

(n6)Footnote 11. *See* Mitchell & Tinker, Antarctica and Its Resources, Earthscan Press Briefing Document No. 21

at 1 (1979). It has been called a "white desert." *See* Auburn, The White Desert, 19 Int'l. and Comp. L. Q. 229 (1970).

(n7)Footnote 12. *See, e.g.*, Parriott, *supra*, note 6.

(n8)Footnote 13. Thus, despite all the ice, Antarctic is one of the driest deserts on Earth. *See* Daniel & Sally Grotta, "Antarctica, Whose Continent is It Anyway?" Popular Science, January 1992 at 63.

(n9)Footnote 14. In 1987, the loss of ozone climbed to 50 percent during the spring. *See* Ned P. Nanda, International Environmental Law & Protection of the Atmosphere, Beijung Conference on the Law of the World, April 22-27, 1990 (published by The World Peace Through Law Center). Ozone in the stratosphere protects the earth from the sun's ultraviolet rays. Preliminary findings during the 1990-91 season note that ozone loss in the upper atmosphere is linked to the use of CFCs (chlorofluorocarbons commonly used as refrigerants and propellants in spray cans) and that the hole was larger than before. *See* Grotta, *supra*, note 13. *See also* the articles by Jennifer S. Bales, Transnational Responsibility and Recourse for Ozone Depletion, *19 B.C. Int'l & Comp. L. Rev. 259 (1996);* William C. Burns, Global Warming: The United Nations Framework Convention on Climate Change and the Future of Small Island States, *8 Duke Envt'l L. & Pol'y F. 81 (1997).* The United States Board on Geographic Names named de Zafra Ridge, located on Longhurst Plateau in the Cook Mountains of Antarctica, after Robert L. de Zafra who, with his colleagues showed that chlorine from chlorofluorocarbons was responsible for the seasonal ozone hole over Antarctica as reported in The New York Times, "A Name in a Cold Continent," by Karen W. Arenson, January 23, 2002.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.03

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.03 Plant and Animal Life in Antarctica.

The harsh climate, coupled with the ice-covered terrain, prevent the successful survival of most land flora and fauna. Only two species of flowering plants are present and then only near the shore on the west coast of the Antarctic Peninsula: a single hair grass and a small pearlwort; however, over 400 types of lichens and more than 80 types of mosses have been identified. They grow slowly and it is said that a boot print on the moss carpet may be seen for years. n15 There are no land vertebrates, although there are some microscopic invertebrates, with the largest being a half-inch, wingless midge.

The major fauna include seabirds, penguins, seals and whales. The seabirds include 6 species of Albatross and 4 types of petrels. Penguins are abundant, with over 7 species represented. The Southern or Antarctic Ocean is ideal for seals and whales. Krill, rich in protein, are abundant and serve as a vital link in the food chain. n16 In addition, the Ocean is home to over a hundred types of fish and the seabed is rich in flora and fauna.

In 1964, the Treaty members adopted The Agreed Measures for the Conservation of Antarctic Fauna and Flora, n17 the Convention for the Conservation of Antarctic Seals was adopted in 1972, n18 and The Convention on the Conservation of Antarctic Marine Living Resources was adopted in 1982. n19 All of these measures were adopted to protect the flora and fauna of Antarctica. n20

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.04

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.04 Current Activities.

The primary activity in Antarctica has been, is, and will continue to be, scientific research. n21 Currently there are approximately 65 bases, of which approximately 35 are year long bases, all of which engage in such research. n22

In the past, whaling and sealing interests were strong. Currently, the Convention for the Conservation of Antarctic Seals (CCAS), formally ratified on March 11, 1978, provides protection for the seals. Three types of seals (the fur, elephant and Ross seals) are protected, and limits are set for the killing of leopard, crabeater, and Weddell seals. n23 The International Whaling Commission, established in 1946, also regulates the whaling industry. n24 Much large-scale fishing has occurred in Antarctica, including the harvesting of krill. n25 The Convention on the Conservation of Antarctic Marine Living Resources (CCAMLR), effective April, 1982, attempts to conserve and manage the Antarctic ecosystem as a whole. n26

Tourism is a growing industry and is the only commercial activity on the continent. Initially tours were by plane; however, since 1958 cruises have become popular. n27

At one time, many felt that mining would become popular; however, what minerals exist are difficult to extract. In addition, the recent Protocol signed in Madrid prohibits mining for the next 50 years. n28

FOOTNOTES:
(n1)Footnote 21. *See* The Antarctic Treaty, December 1, 1959, *12 U.S.T. 794*, T.I.A.S. No. 4780, 402 U.N.T.S. 71 (entered into force June 23, 1961) discussed in depth in § 58.08 *infra*. The preamble thereto acknowledges the substantial contributions to scientific knowledge by international cooperation and that freedom of scientific investigation should continue. Article II and III provide for the freedom of scientific investigation and cooperation.

(n2)Footnote 22. Bases are noted in May, *supra*, n. 6. *See also* § 58.05 regarding the human presence; *but see* the article of Wall St. J., Friday, December 27, 1991, at B4 to the effect that many nations are reducing their Antarctica research for economic reasons at the present time.

(n3)Footnote 23. *See* Convention for the Conservation of Antarctic Seals, June 1, 1972, *29 U.S.T. 441*, T.I.A.S. No. 8826 (entered into force March 11, 1978). In addition, the seals are to be killed quickly and humanely with no kills

from March 1 to August 31 of each year. Zones also are rotated where no killings are to occur. Nonetheless, seals may be taken for scientific research. *See also* Parriott, *supra* note 6, at 73 (1986) noting that the economic value of the Antarctic seals lies primarily in their pelts but also in the value of their blubber for oil and their meat for pet food.

(n4)Footnote 24. A whaling moratoria has been imposed at times. *See* R. Tucker Scully, "The Marine Living Resources of the Southern Ocean," *33 U. Miami L. Rev. 341 at 346 (1978).*

(n5)Footnote 25. *See* Parriott, *supra*, note 6, who notes that in addition to krill, fish, cephalopods (squid and octopus) crab and lobsters also may be harvested.

(n6)Footnote 26. *See* § 58.07 *infra*. Note, however, krill fishing continues and quotas on other fish are often difficult to enforce. *See* Rothwell, *supra* note 7, at 77.

(n7)Footnote 27. *See*, Grotta, *supra* note 13, at p. 67, noting that while the National Science Foundation cannot forbid anyone from going to Antarctica, the agency's unofficial attitude is that all tourists are unwanted interlopers who interfere with research, and if they get into trouble, must be rescued. *See also* J. A. Heap, "Current and Future Problems Arising from Activities in the Antarctic," The Antarctic Treaty Regime (Gillian Triggs ed., Cambridge University Press 1987) noting that accidents do occur which require massive diversion of science logistics. New Zealand now requires cruise ships to have suitably qualified government representatives aboard to prevent environmental damage. *See* Chester, *supra* n. 6, at 125 noting as well that the number of tourists increased greatly and Chile now has a hotel. Private yachts also visit the continent, often without the guides. *See* Nigel Sitwell, "Worth Seeing Getting to the Bottom of the World," Travel & Leisure, Dec. 1992 at 56. *See also* § 58.22, note 194 *infra*. *See also* the following articles which discuss the increase of tourist activity as well as of environmental concerns: Robert N. Andersen, "Leading International Efforts To Improve Environmental Controls in Antarctica While Navigating National Politics," *6 Geo. Int'l Envt'l L. Rev. 303 (1994);* Jennifer Angelini & Andrew Mansfield, "A Call for U.S. Ratification of the Protocol on Antarctic Environmental Protection," *21 Ecology L.Q. 163 (1994). See also* the discussion regarding tourism in Paul Lincoln Stoller, "Protecting the White Continent: Is the Antarctic Protocol Mere Words or Real Action?" *12 Ariz. J. Int'l & Comp. Law 335 (1995). See also* Note, A Right to Ice? The Application of International and National Water Laws to the Acquisition of Iceberg Rights, Mich. J. Int'l L. 19 (1997) 277. The continued growth of tourism is described in an article by Keran Mulvaney, "The Last Wild Place: Antarctica," Vol. 8, No. 6, p. 36, as reported by 1997 Information Access Company on Nov. 21, 1997. *See* Christopher C. Joyner, "Recommended Measures Under the Antarctic Treaty: Hardening Compliance with Soft International Law," Mich. J. Int'l L. 19 (1998) 401; Stokke, Olav Schram and Vidas, Davor eds., "Governing the Antarctic: The Effectiveness and Legitimacy of the Antarctica Treaty System," Cambridge, New York, Melbourne, Cambridge University Press 1996. Both note the concern with the increased numbers of private parties and commercial tourists visiting Antarctica and thus the need may arise to draft a legally binding annex specifically regulating tourism. An article by Joanna Hunter, The Times (London), December 12, 1998 describes various ways to reach Antarctica. *See also* Kyodo News Service, Japan Economic Newswire, November 3, 1998 which describes the Croydon Travel flights to Antarctica which are now in their fifth season. The Protocol, which is now effective, requires permits for visitors. *See* § 58.07. The increase in tourism is discussed as well as the EPA's Interim Rule in an article by Woodruff A. Polk, "Welcome to the Hotel Antarctica: The EPA's Interim Rule on Environmental Impact Assessment of Tourism in Antarctica," Emory Int'l L. Rev. 12 (Fall, 1998) 1395. An excellent review of tourism may be found in the article by Kees Bastmeijer and Ricardo Roura, "Current Development: Regulating Antarctic tourism and the Precautionary Principle," 98 American Journal International 763 (2004). In this article the authors note that from 1991-2003 tourism was viewed as a legitimate use, although some consultative members felt that it should be regulated. At the Twenty-seventh ATCM meeting, tourism was made an integral part of the agenda and the subject of a separate working group. As noted on page 775, the need for some regulatory action was recognized. Such regulations might include the need for an accreditation system for tour operators; the establishment of a tourism database; the prohibition of structural tourism facilities; safety and self-sufficiency and the development of site-specific guidelines. The authors also note that questions may arise concerning property rights by private individuals or commercial entities by long-term use of a site or by the construction of structural tourism facilities. The authors note that all measures, decisions, and resolutions that were adopted by the twenty-seventh Consultative Meeting may be found at

www.asoc.org.

(n8)Footnote 28. The Protocol on Environmental Protection to the Antarctic Treaty, signed June 22, 1991 Doc. [11th Antarctic Treaty Special Consultative Meeting] XI A.T.S.C.M./2, text of Final Act, Oct. 4, 1991, *reprinted in 30 I.L.M. 1455 (1991)*, which Protocol was ratified by the United States Senate during the final legislative days of the 102nd Congress. CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.05

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.05 The Human Presence.

The harsh climate and inhospitable terrain limit the human presence; however, at the same time these circumstances create a high level of interaction and cooperation among those present, who unite against the common foe: the elements. Scientific bases have replaced the explorers and adventurers of former years, though from time to time private adventurers (who are not bound by the treaty) still come. Currently there are more than 60 bases (approximately 35 of which are year round), from 20 nations. n29 The bases tend to be concentrated on the Antarctic Peninsula, although some bases are strategically placed around the continent. Usually, the bases are built on rocky outcrops on the coast or on snow-free oases. Some are built on the ice shelves which shift and at times must be replaced. In the past, the United States and the former USSR have had the largest presence. n30

Generally, the bases are staffed by research personnel, who are assisted by military personnel. n31 Each base attempts to provide a variety of activities for its inhabitants. Transportation is difficult. Usually travel to Antarctica is by air or ship, while on land, over-snow vehicles are vital. n32

FOOTNOTES:
(n1)Footnote 29. Bases are noted in May, *supra*, n. 6. The New York Times, January 1, 1991, Science Desk, The Environment Page, at A36, reported that the United States and the former U.S.S.R. had agreed to establish their first joint research station on the drifting ice of the Weddell Sea. *But see* "As the Cold War Ends, Many Nations Are Cutting Their Antarctica Research," Wall St. J., Friday, December 27, 1991, at B4, to the effect that many nations are reducing their Antarctica research for economic reasons. Greenpeace, a non-governmental organization, operates a year-round station. *See* Ronald W. Scott, "Protecting United States Interests in Antarctica," *26 San Diego L. Rev. 575 (1989)* noting at 599 that in addition to Greenpeace, 13 nations "winter over." In 1997, Norway's Boerge Ousland became the first person to cross Antarctica alone and unaided, it was reported in AP Newsfeed, Jan. 16, 1998.

(n2)Footnote 30. *See generally* Chester, *supra*, n. 6, chapter entitled Against the Elements, May, *supra*, n. 6, or Scott, *supra*, n. 29. King George Island, close to South America, is home to at least nine bases. The United States' base at the South Pole, Amundsen-Scott, shifts from time to time and must then be rebuilt. The United States has 4 permanent bases with McMurdo being the largest having its own theater, chapel, radio station, bar and labs (it is also only 2 miles from the New Zealand's Scott Base). The bases of the United States and the former U.S.S.R are

strategically placed around the continent.

(n3)Footnote 31. Often the French, Chilean and Argentinean bases are staffed only by the military. *See* Scott, *supra* n. 29, at 598. At the Chilean base, a hotel, bank, post office, school, and hospital have been built to bolster its claims; and Argentina has had 8 children, starting with Emilio Marcos Palma in 1978, born at its bases. *See* §§ 58.13 and 58.15 *infra*. The United States Antarctic Program (USAP) is administered and funded by the National Science Foundation, an independent government agency. The National Science Foundation funds all operation, maintenance and personnel costs. *See also* § 58.20 *infra*, note 175.

(n4)Footnote 32. Air travel tends to be from New Zealand or South America though the Soviets also had a comprehensive air-support system. Many countries are trying to minimize the amount of vehicular traffic due to the damage caused to the local ecology and the pollution created. Fewer and fewer dogs are being used.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.06

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.06 Background to the Antarctic Treaty.

During the early 1900's, explorers, adventurers, whalers and sealers visited Antarctica. As a result, seven countries made territorial claims on the continent. n33 Prior to the 1900's the ancient Greeks suggested a landmass to the south with which to balance Europe, Asia, and the north and thus named it Antarktikos, meaning opposite the bear or the constellation above the North Pole. Arktos subsequently was modified to Arctic for the north and thus Antarctica for the South. Columbus's map-makers noted it as Terra Australis Incognita. Polynesian legends note that in the 7th century an explorer sailed south to a place of "bitter cold where white rocklike forms grew out of a frozen sea." n34

The age of exploration on Antarctica left a legacy of interlocking rivalries and competing territorial claims. Antarctica was a continent without a government, with no recognized national property rights, and, as a result no one to politically manage the continent or to assign private property rights. n35 Thus, in 1948 the United States proposed that Antarctica be ruled by a United Nations Trusteeship or by a form of condominium control. n36 Chile also suggested that all sovereignty claims be held in abeyance for 5 years. n37 Then in 1959, the International Geophysical Year, embracing the dual objectives of exploring outer space and Antarctica, led to the drafting of the Antarctic Treaty. n38 The original treaty was signed by 12 countries, n39 and to date they have been joined by other countries representing approximately 80% of the world population. n40

The Treaty also led to the formation of the Scientific Committee for Antarctic Research, or SCAR, which is a non-governmental organization of scientists coordinating research activities and the sharing of information in Antarctica. n41

FOOTNOTES:
(n1)Footnote 33. The seven countries include Argentina, Australia, Chile, France, New Zealand, Norway and the United Kingdom. *See* § 58.13 *et seq. infra* for a discussion of each country and its claim.

(n2)Footnote 34. *See* Chester, *supra* n. 6, at 44.

(n3)Footnote 35. *See* Bernard Herber, "Mining or World Park? A Politico-Economic Analysis of Alternative Land Use Regimes in Antarctica," 31 Nat. Resources J. 839, 840 (1991). Thus, although the United Kingdom, France, Australia, New Zealand and Norway recognize each other's claim, Chile and Argentina dispute the claims of the United

Kingdom as well as each other's claims. The United States and the former USSR, while not asserting a claim and while maintaining a large presence in Antarctica, do not recognize the claims of others and reserve the right to make a claim in the future. Approximately 80 to 85% of Antarctica has been claimed, leaving one sector unclaimed. At one time, it was felt that the United States would claim that portion. *See* § 58.20 *infra*, note 169. The area lies between 150 degrees and 90 degrees west. In fact, even the question of who first discovered the continent of Antarctica is in doubt with claims being made by Palmer of the United States, Bransfield of the United Kingdom and Bellingshausen of the former Soviet Union. *See* Auburn, *supra*, n. 1.

(n4)Footnote 36. *See* Bush, *supra*, n. 17, (Vol. I at 461-468). This followed the conflict among Argentina, Chile and the United Kingdom regarding the Antarctic Peninsula. *See* § 58.08, *infra*, note 71.

(n5)Footnote 37. *See* Bush, *supra*, n. 17 (Vol. II, p. 385).

(n6)Footnote 38. The International Council of Scientific Unions sponsored the International Geophysical Year which was held from July 1, 1957 until December 31, 1958 (the dates fixed to take advantage of the intense solar activity at that time). More than sixty research stations were utilized. The United States Naval Support played an extensive and invaluable role. The countries involved feared that possible territorial claims might retard the scientific research and thus agreed that the research would continue, information would be shared, and that movements would not be hindered. In addition, by this time several countries were now interested in Antarctica or in having United Nations control there. Some, and in particular the United States and the former USSR, had substantial interests in Antarctica. These factors all contributed to a resolution of the "Antarctica problem." Some may have felt a treaty was better than a UN Trustship to preserve their sovereignty claims. The United States took the lead and called a conference. The treaty itself was drafted quickly after the preliminary negotiations were accomplished. The Treaty was signed on December 1, 1959 and became effective June 23, 1961. *See* § 58.02, *supra* note 7.

(n7)Footnote 39. The twelve members were Argentina, Australia, Belgium, Chile, France, Japan, New Zealand, Norway, The Republic of South Africa, The Soviet Union, The United Kingdom, and the United States (using the names of countries in effect at that time). One difficulty during the time between signature and ratification was in the United States where some members of the Senate opposed the Treaty due to the failure of the United States to assert a sovereignty claim prior to entry into the treaty.

(n8)Footnote 40. *See* § 58.09 *infra* noting the current parties who are Antarctic Treaty Consultative Parties (ATCPs) and thus entitled to vote and those countries who have acceded to the Treaty, but may not vote.

(n9)Footnote 41. SCAR is located in Cambridge, England and is affiliated with the International Council of Scientific Unions. It has played such a vital role in the coordination and monitoring of Antarctic activities that it has been described as serving a secretariat function. *See* Rothwell, *supra*, n. 7, though a formal secretariat is still advocated.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.07

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.07 The Antarctic Treaty System (ATS).

The Antarctic Treaty forms the basis of the Antarctic Treaty System (or ATS as it is commonly known). n42 Agreed measures and recommendations are joined with the Treaty to form The Antarctic Treaty System. Since the effective date of the Treaty, treaty members have met every 2 years to discuss issues of concern. n43 Since 1961, almost 200 formal recommendations have been made ranging from mineral resources to tourism, although most have dealt with the environment and the ecosystem. n44 Special meetings may be called to discuss a single issue. n45 At the ATM meetings, consultative parties may vote; however, acceding members may not. n46

In 1964, at the ATM meeting in Brussels, the document known as The Agreed Measures for the Conservation of Antarctic Fauna and Flora was adopted. n47 The Agreed Measures document declares Antarctica to be a special conservation area and seeks to protect the flora and fauna thereon from the impact of the human presence. n48 Specially Protected Areas are created in Article VIII of the Agreed Measures to protect unique natural ecological systems. n49

In 1972, the Convention for the Conservation of Antarctic Seals (CCAS) was adopted although it did not go into force until 1978. n50 This Convention applies to six species of seals; prohibiting the killing or catching of the Ross, Southern Elephant and Fur seals and setting limits each year for the Crabeater, Leopard and Weddell seals. n51

The Convention on the Conservation of Antarctic Marine Living Resources (CCAMLR), adopted in 1980, was the result of a recommendation first made at the 1975 Antarctic Treaty meetings and again at subsequent meetings. n52 The primary objective of the CCAMLR is to preserve all Antarctic marine living resources, including fish, crustaceans, creatures on the continental shelf and bird life. It was adopted with a single ecosystem approach to the conservation of the marine living resources. Its coverage extends not only to the traditional area included within the Treaty itself but also beyond the 60 degree South latitude to the area between that latitude and the Antarctic Convergence which forms part of the Antarctic marine ecosystem. n53 A Commission for the Conservation of Antarctic Marine Living Resources has been established, a Secretariat is located in Hobart, and a Scientific Committee provides assistance. n54

The Convention attempts to regulate the marine ecosystem as a whole and allows "rational" use of such resources. It thus forms an important part of the environmental efforts in Antarctica. n55

Regulating mineral resource activities in Antarctica has been a concern for a number of years. n56 After 6 years of negotiations, The Convention on the Regulation of Antarctic Mineral Resources Activities (CRAMRA) opened for signature on November 25, 1988, and was to enter into force after ratification by all ATCPs, including the original 7 claimants. n57 This Convention sought to preserve the environment while at the same time regulating its mineral exploitation. n58 The Convention was to apply to all mineral resource activities on the continent of Antarctica, all Antarctic islands and in the seabed and the subsoil of the adjacent offshore areas up to the deep seabed. n59 The Convention called for a variety of institutions to regulate mineral activities in Antarctica, including the establishment of a Commission, a Secretariat, and an advisory committee. n60 Nonetheless, both France and Australia noted that they would not ratify the Convention, n61 and CRAMRA never came into force.

In October of 1991, The Protocol on Environmental Protection to the Antarctic Treaty was signed. n62 Under this Protocol (sometimes referred to as the Madrid Protocol), mining is banned for 50 years. n63 The Protocol and its Annexes (and more may be needed) provide environmental protection for Antarctica as well as banning mining activities. A Committee for Environmental Protection is created in Article 11, whose functions include monitoring environmental impact assessment procedures concerning scientific research, tourism, and other governmental and non-governmental activities. Four Annexes were appended to the original Protocol and are considered an integral part of it. These 4 Annexes deal with environmental impact assessment, the conservation of Antarctic fauna and flora, waste disposal and waste management, and the prevention of marine pollution. The Protocol was ratified by the United States Senate on October 7, 1992. n64

FOOTNOTES:

(n1)Footnote 42. *See* § 58.08 for a discussion of the Treaty terms. The Treaty, was signed in Washington on December 19, 1959 and entered into force on June 23, 1961. *See 12 U.S.T. 794*, T.I.A.S. No. 4780, 402 U.N.T.S. 71. Originally twelve countries signed the treaty. Argentina, Australia, Belgium, Chile, France, Japan, New Zealand, Norway, the Union of South Africa, the Union of Soviet Socialist Republic, the United Kingdom and the United States of America. The Treaty provides the framework for international activity and is the basis for stability. Membership in the system, either as a Treaty Consultative Party (ATCP) or as an acceding member have grown. *See* § 58.09 *infra*. There have been few incidents of international conflict. *See* Piotroutz Blay, et al., "Antarctica After 1991: The Legal and Policy Options," ASOLP Occ. Paper 2 (1989). The Antarctic Treaty System is thoroughly discussed in a new book by Christopher C. Joyner, Governing the Frozen Commons: The Antarctic Regime and Environmental Protection. Columbia: University of South Carolina Press, 1998. This book was reviewed by Bilder, Richard B. in 95 American Journal of International Law (April 2001) 481. The Antarctic Treaty System provides a "...brilliant and extremely successful model of international environmental law" it was noted in a Note by Verhaag, Melissa A., "It Is Not Too Late: The Need for a Comprehensive International Treaty to Protect the Arctic Environment," Geo. Int'l Envtl. L. Rev. 15 (2003) 555 at 571 *et seq.* The Antarctic Treaty was suggested as a possible model for peace in Jerusalem in an article by Roy Balleste, The International Status of Jerusalem: The Legacy of Lasting Peace, *43 Rev. D. P. 249 (2004).*

(n2)Footnote 43. Article IX (2) of the Treaty required a meeting at the City of Canberra within two months after the Treaty was effective and thereafter "at suitable intervals and places, for the purpose of exchanging information, consulting together on matters of common interest pertaining to Antarctica, and formulating and considering, and recommending to their Governments, measures in furtherance of the principles and objectives of the Treaty... ." In practice they meet every two years at a conference hosted by one of the ATCPs. At the 16th A.T.M. meeting in Bonn, it was determined to hold meetings every year and thereby eliminate the need for preparatory meetings.

There is no standing secretariat nor a central agency for information. All is very decentralized. Many have suggested the need for such Secretariat with its organizational infrastructure. Likewise the cost of hosting the meetings is high. The meeting was held in Antarctica in January of 1999, for the first time. *See* IAC (SM) Newsletter Database, Kyodo News International, Inc., Japan Pol'y & Politics, September 14, 1998. *See* Christopher C. Joyner, "Recommended Measures Under the Antarctica Treaty: Hardening Compliance with Soft International Law," Mich. J. Int'l L. 19 (1998) 401.

(n3)Footnote 44. The recommendations become binding only if adopted unanimously and are not binding on a non-ATCP unless such parties accept them, nor are they binding on any state which is not a party to the treaty.

(n4)Footnote 45. For example, special meetings were used significantly during the 1980's regarding the mineral regimes. The 11th special A.T.M., which met in Chile during November/December of 1990 and later in Madrid during April and June of 1991 resulted in the 1991 Protocol on Environmental Protection to the Antarctic Treaty. *See* note 62 *infra*.

(n5)Footnote 46. Non-consultative parties now are invited and may listen. This was partially a result of criticism that the A.T.C.P.s or Atlantic Treaty Consultative Party constituted an selective exclusive club. *See also* note 86.

(n6)Footnote 47. Agreed Measures for the Conservation of Antarctic Fauna and Flora, June 2-13, 1964, *17 U.S.T. 991,* T.I.A.S. No. 6058 (1966), *modified in 24 U.S.T. 1793, 1802,* T.I.A.S. No. 7693 (1973) *reprinted in* Bush, Vol. I at 146-160. *See* § 58.07, *supra,* note 17. *See also* The Antarctic Conservation Act of 1978, *16 U.S.C. § 2401 et seq.*

(n7)Footnote 48. The Agreed Measures, in Article IV, seek to bind Antarctic Treaty members and non-members such as a member of an expedition. *See* W. M. Bush, Antarctica and International Law (1982). Note, however, the comment in Sitwell, *supra,* note 27.

(n8)Footnote 49. Specially Protected Areas are given special protection and differ from Sites of Special Scientific Interest (S.S.S.I.), Sites of Historic Interest (S.H.I.), Specially Reserved Areas (S.R.A.) and Multiple-Use Planning Areas (M.P.A.), all of which were adopted as recommendations to implement the Agreed Measures. Restrictions are relaxed in an S.S.S.I. area where the purpose is to safeguard scientific research rather than the site itself. *See* May, *supra* n. 6, at 141, which notes the sites.

(n9)Footnote 50. This Convention was the result of a conference held outside of the Treaty framework so that non-Treaty participants could be involved. It opened for signature on June 1, 1972 and went into effect in 1978. Convention on the Conservation of Antarctic Seals, June 1, 1972, *29 U.S.T. 441,* T.I.A.S. No. 8826 (entered into force March 11, 1978), *see also* note 18 *supra*. This Convention was adopted to protect the seals from commercial exploitation in anticipation of the problem rather than in reaction thereto.

(n10)Footnote 51. Article 2. The seals may be taken for scientific study, if indispensable for food for dogs or humans, or as a specimen for educational institutions and museums so long as a permit is received. Any killing is to be humane. Zones for the killing are rotated and no kills are permitted from March 1 to August 31. Although no regulatory body has been established, SCAR does provide scientific advice under Article 5. CCAS has been relatively successful even though enforcement is by the flag state under Art 2(2) and Art 5 (5); with perhaps the former U.S.S.R. taking the most seals. *See* Piotroutz Blay, "New Trends in the Protection of the Antarctic Environment: The 1991 Madrid Protocol," *86 Am. J. Int'l L. 377, 381 (1992),* Rothwell, *supra* n. 7, at 75, May, *supra,* n. 6.

(n11)Footnote 52. The Convention on the Conservation of Antarctic Marine Living Resources, May 20, 1980, *33 U.S.T. 3476,* T.I.A.S. NO. 10240 (entered into force on April 7, 1982) *reprinted in 19 I.L.M. 89. See also* note 8. The series of meetings among the ATCPs culminated in a special Conference in Canberra in May of 1980 where the Conference was successfully concluded the next month. *See* Rothwell, *supra* n. 7, at 76. *See* the article by William C. Burns, "The International Whaling Commission and the Future of Cetaceans: Problems and Prospects," *8 Colo. J. Int'l Envt'l L. & Pol'y 31 (1997).* The effectiveness of this Treaty is debated in the article by Kieran Mulvaney, "The Last Wild Place: Antarctica," Vol. 8. No. 6, p. 36, as reported by 1997 Information Access Company on Nov. 21, 1997. This Convention is discussed in Note, Brad L. Bacon, "Enforcement Mechanisms in International Wildlife Agreements and the United States: Wading Through the Murk," Geo. Int'l Envt'l L. Rev. 12 (Fall, 1999) 331.

(n12)Footnote 53. The line, fixed by Article I (1) and (4), is a meandering biological boundary, joining certain points along the parallels of latitude and meridians of longitude and may extend as far north as the 45 degree south latitude.

(n13)Footnote 54. *See* Article 7, Article 13, and Article 17 thereof respectively.

(n14)Footnote 55. *See also* the Comment by Popick, Ian J., "Are There Really Plenty of Fish in the Sea? The World Trade Organization's Presence Is Effectively Frustrating the International Community's Attempt to Conserve the Chilean Sea Bass," Emory L.J. 50 (Summer 2001) 939 in which article the scheme to assist in the overfishing of the Patagonian toothfish or Chilean sea bass pursuant to CCAMLR's Catch Documentation Scheme is discussed. Rothwell, *supra*, n. 7 who notes, however, that the convention has received mixed reviews in that quotas are often not enforced, krill harvesting continues to be too great, and there remains uncertainty regarding offshore jurisdiction.

(n15)Footnote 56. *See* Note, *supra* at note 28, at 836. A discussion of the environmental initiatives of the Antarctic Treaty System is included in the article by Gray, Kevin R., "International Environmental Impact Assessment: Potential for a Multilateral Environmental Impact Assessment: Potential for a Multilateral Environmental Agreement," Colo. J. Int'l Envtl. L. & Pol'y 11 (Winter 2000) 83, 114.

(n16)Footnote 57. CRAMRA was signed June 2, 1988, Doc. AMR/5CM/88178, *reprinted in 27 I.L.M. 589*, (1988). Plans for the Convention started in 1982 at the 11th A.T.M. in Buenos Aires in July of 1981.

(n17)Footnote 58. For example, a set of environmental conditions that a prospective operation must meet were stipulated in Article 4(1), impact statements were required prior to any activity under Article 2(3), and any activity approved was not to affect global or regional weather patterns, in Article 4(3). As noted, mining was permitted; however these conditions were "tough conditions," but they were not stated in absolute terms. *See* Blay, *supra* note 51, at 382.

(n18)Footnote 59. Article 5(2).

(n19)Footnote 60. Article 18 (Commission), Article 23 (Advisory Committee), Article 33 (Secretariat).

(n20)Footnote 61. The Convention opened for signature at Wellington on November 25, 1988 and was to be open until November 25, 1989. The Convention would enter into force under Article 62 thereof only upon the ratification or agreement of all States referred to in Article IV(1)(a)(b) of the Antarctic Treaty and at least four states referred to in paragraph 1(c) of that Article including at least three developing countries. Consequently, when France and Australia, as original claimants and signatories under the Treaty refused to ratify the Treaty, the Treaty could not enter into force. At the time, many other countries supported CRAMRA including the United States, the former Soviet Union and the United Kingdom. France and Australia advocated a Wilderness Park, though Australia noted that it might accede if alternate strategies could not be found and Antarctica would otherwise be unprotected. Prior to the October 1990 meeting in Paris, France and Australia circulated a joint proposal calling for comprehensive measures to protect the environment and dependent ecosystem. *Reproduced as* XV ATCM/WP/2 and SV ATCM/WP/3 respectively in the Final Report of Fifteenth Antarctic Treaty Consultative Meeting 202-13 (1989).

(n21)Footnote 62. It was signed June 22, 1991, Doc. [11th Antarctic Treaty Special Consultative Meeting] XI A.T.S.C.M./2, text of Final Act, October 4, 1991 *reprinted in 30 I.L.M. 1455 (1991)*, which Protocol was adopted by the ATCPs and opened for signature on October 4, 1992. The Protocol provides that it will be opened for signature on October 4, 1991 and will remain open until October 3, 1992. *See also* note 28 *supra*. *See also* the address by Mackay, Don, "International Law Weekend Proceedings: The Proposed Antarctic Treaty on Environmental Damage," published in ILSA J. Int'l & Comp. L 6 (Spring 2000) 473, which discussed the various agreements for dealing with liability to the Antarctic environment.

(n22)Footnote 63. Article 7 prohibits any activity relating to mineral resources other than scientific research; however under Article 25 the Protocol may be amended at any time in accordance with Article XII(1)(a) and (b) of the Antarctic Treaty which requires the unanimous agreement of the consultative parties or, Article 7's prohibition on mining may be amended at a review conference after fifty years, though such an amendment must be accompanied by a legally binding regime specifying agreed means to determine which activities on the continent are acceptable and under

what conditions permitted.

(n23)Footnote 64. *See* S. Ex. Rept. No. 102-54, 9/22/92, ratified on 10/7/92 as Treaty Document No. 102-22. Although ratified by the Senate in 1993, the State Department determined that the Protocol was not self-implementing and thus legislation is needed to deposit the United States instrument of ratification and make the United States a party to the Protocol. *See* Hearing on Antarctic Scientific Research, Tourism and Marine Resources Act of 1993 before the Senate Comm. on Commerce, Science and Technology, 103rd Cong., 1st Sess. (1993) (Statement of R. Tucker Scully, Director, Office of Oceans, Department of State). Four separate bills were introduced into the 103rd Congress, 1st Sess. (1993): H.R. 964, H.R. 3532, H.R. 1066 and S. 1427. *See also* Andersen, *supra* note 27, as well as Angelini and Mansfield, note 27, and Elaine F. Forman, "Protecting the Antarctic Environment: Will a Protocol Be Enough?" *7 Am. U. J. Int'l L. & Pol'y 843 (1992). See* footnote 28 of § 58.04 regarding the current status of the Protocol. The Protocol became effective on January 14, 1998. A critique of the Madrid Protocol may be found in an article by Kathleen T. Mulville, "How the Antarctic Science, Tourism, and Conservation Act of 1996 Fails Antarctica," Wm. & Mary Envt'l L. & Pol'y Rev. 23 (Spring, 1999) 649. The author is especially concerned with the coordination of international joint projects.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.08

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.08 Provisions of the Antarctic Treaty.

The Antarctic Treaty, signed at Washington, D.C., on December 1, 1959, by 12 countries, is the basis for the Antarctic Treaty System. n65 The Preamble and Article I of the Treaty note that Antarctica is to be used for peaceful purposes only. Military bases are prohibited, although military personnel and equipment may be used for scientific research or for any other peaceful purpose. n66

Articles II and III of the Treaty provide for freedom of scientific investigation in Antarctica and for cooperation toward that end. Article III also notes that information regarding scientific programs shall be exchanged to permit maximum economy and efficiency of operations; scientific personnel as well as scientific observations and results are to be exchanged. Parties are encouraged to work with agencies of the United Nations and other international organizations having a scientific or technical interest in Antarctica. n67

Article IV deals with the difficult issue of sovereignty; however, it did so in such a way as to allow the parties to come together without prejudice to their particular claims. n68 Article IV(1)(a) notes that the Treaty is not to be interpreted as a renunciation by any of the parties as to previously asserted rights or claims to territorial sovereignty. n69 Provision 1(b) of Article IV notes that the treaty is not to be interpreted as prohibiting any future claim to Antarctica; the provision was inserted for the benefit of the United States and the former Soviet Union, as both nations had extensive interests in Antarctica but had never made formal claims; n70 and 1(c) was inserted to deal with the conflicting claims of Argentina, Chile and the United Kingdom, n71 and notes that the Treaty does not prejudice any party's recognition or non-recognition of another's claim. Paragraph 2 of Article IV notes that activities occurring while the Treaty is in force will not constitute a basis for either asserting, supporting, or denying a claim to territorial sovereignty. n72

Nuclear explosions and the disposal of radioactive waste materials are prohibited in Article V. n73 The area covered by the Treaty is set forth in Article VI and is noted as all areas south of 60 degree South Latitude, including all ice shelves. n74 Nonetheless, the area was expanded somewhat by the Convention on the Conservation on Antarctic Marine Living Resources to include the marine living resources between that latitude and the Antarctic Convergence. n75

Inspections are authorized by Article VII to assure compliance with the provisions of the Treaty. n76 Article VIII attempts to deal with jurisdiction over nationals, which often is difficult because of not recognizing sovereignty claims.

Under paragraph 1 thereof, inspectors and scientific personnel who are exchanged under the terms of the Treaty and members of their staffs are subject only to the jurisdiction of the Contracting Party of which they are nationals regarding all acts or omissions which occur while in Antarctica and exercising their functions. Under paragraph 2 thereof the Contracting Parties agree to consult together to reach a mutually acceptable solution. n77

Article IX(1) notes that contracting parties shall meet from time to time to exchange information, to consult on matters of common interest, and to formulate recommendations in furtherance of the goals and objectives of the Treaty, including the peaceful use of Antarctica; the facilitation of scientific research and scientific cooperation; the facilitation of inspection, to formulate recommendations regarding the exercise of jurisdiction; and for the preservation and conservation of living resources in Antarctica. n78 Article IX, paragraph 2 notes that an acceding Party may become a Contracting Party by conducting substantial scientific research in Antarctica. n79 Article X notes that the parties are to work in a manner consistent with the Charter of the United Nations and Article XI notes that if any dispute arises between 2 or more of the parties concerning the interpretation or application of the Treaty, the parties shall consult among themselves to have it resolved by negotiation, inquiry, mediation, conciliation, arbitration, judicial settlement or any other peaceful means, and if not so resolved, with the consent of the parties involved be referred to the International Court of Justice for settlement. n80

Modifications and amendments are discussed in Article XII. Section 1(a) provides that the Treaty may be modified or amended at any time by the unanimous agreement of the Contracting parties. Any such modification or amendment is subject to ratification by the appropriate governments and enters into force upon the receipt of the document of ratification. n81 Thirty years from the effective date of the Treaty, or after June 23, 1991, any Contracting Party may request a Conference of all Contracting Parties in order to review the operation of the Treaty. At such a Conference, a majority of the Contracting Parties may approve a modification or an amendment. n82 Thus, contrary to popular opinion, the Treaty did not end in 1991, nor could a party withdraw at that time; however, after this date a contracting party may now ask for a review, and modifications or amendments now require only a majority vote rather than the prior unanimous vote. n83

Article XII provides for ratification of the Treaty. Paragraph 1 thereof notes that the Treaty shall be open for accession by any state which is a Member of the United Nations or by any other State which may be invited to accede to the Treaty with the consent of all the Contracting Parties. n84 Instruments of ratification and accession are to be deposited with the United States of America as the depository Government and the present Treaty registered with the United Nations. Finally, Article XIV notes that the Treaty was written in English, French, Russian and Spanish.

FOOTNOTES:

(n1)Footnote 65. The twelve countries were Argentina, Australia, Belgium, Chile, The French Republic, Japan, New Zealand, Norway, The Union of South Africa, The Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America (using the 1959 names for the countries). *See 12 U.S.T. 794*, T.I.A.S. No. 4780, 402 U.N.T.S. 71. The Treaty was proclaimed by the President of the United States on June 23, 1961, ratified by him on August 18, 1960 and ratification advised by the Senate on August 10, 1960. *See also* § 58.07.

(n2)Footnote 66. *See* § 58.05 at note 31 that the research bases on Antarctica are staffed by research individuals who are assisted by the military, though some bases are staffed only by the military who are engaged in scientific research.

(n3)Footnote 67. SCAR has been particularly effective. *See* § 58.06 and note 41. Some have suggested, however, that not all research results are shared and thus duplicate research may occur. Others have noted that not all research is equally valid.

(n4)Footnote 68. *See* § 58.10 regarding sovereignty claims and § 58.13 *et seq.* regarding individual countries' claims. *See also* Gillian Triggs, The Antarctic Treaty Regime: A Workable Compromise or a "Purgatory of

Ambiguity?" *17 Case W. Res. J. Int'l L. 195 at 201 (1986)* who notes the Article was so drafted to enable each state to adopt differing views as to its meaning.

(n5)Footnote 69. This provision was included for the seven claimant states: Argentina, Australia, Chile, France, New Zealand, Norway, and the United Kingdom.

(n6)Footnote 70. *See* §§ 58.20 and 58.21 *infra*.

(n7)Footnote 71. These claims conflict in the Antarctic Peninsula. The British claims based on discovery and occupation conflict with the claims of Chile and Argentina, both of whom use contiguity as well as other claims. *See* § 58.10 *infra*. The United Kingdom offered to have its title adjudicated through the International Court of Justice in 1947, 1951 and again in 1953 and finally submitted a unilateral application to the Court. However, Argentina and Chile refused to accept the jurisdiction of the Court and the petition was removed from the Court's consideration. *See* I.C.J. Pleadings Antarctic Cases (1955) 38 and 75; I.C.J. Reports** (1956) at 13-17. *See also* Christopher C. Joyner, "Anglo-Argentine Rivalry After the Falklands/Malvinas War: Laws, Geopolitics, and the Antarctic Connection," 15 Lawyer of the Americans 457, 490 (1984).

(n8)Footnote 72. Of course, the Treaty is binding only on those who have acceded to it. A non-signatory party may make a claim. Although claims are frozen in § 2 of Article 4, what might be the effect when and if the Treaty ever ends? Is it a return to 1959? For a discussion thereon *see* Parriott, *supra,* note 6.

(n9)Footnote 73. The use of nuclear energy is not prohibited, however, and the United States did use such energy in the 1970's.

(n10)Footnote 74. By including ice shelves, the status as to these formations, which are neither land nor water, was clarified; however, it leaves open the question as to claims under the ice shelves. Also in question is the effect of the 1982 United Nations Convention on the Law of the Sea which recognizes a 200 mile exclusive economic zone. *See also* note 7 *supra*.

(n11)Footnote 75. Article 4 of C.C.A.M.L.R., *see* note 8 *supra*. This creates a meandering biological boundary which may extend as far north as the 45 degree south latitude.

(n12)Footnote 76. Some commentators have noted that only the United States performs inspections on a regular basis. *See* Rothwell, *supra* n. 7, at 70, n. 46. Greenpeace also performs inspections. *See* May, *supra* n. 6, at pp. 159 and 169.

(n13)Footnote 77. *See* § 58.12 *infra* in general regarding jurisdiction.

(n14)Footnote 78. *See* § 58.07, and note 45 regarding these meetings. The recommendation process was discussed in the article by Christopher, C. Joyner, "Recommended Measures Under the Antarctic Treaty: Hardening Compliance with Soft International Law," Mich. J. Int'l L. 19 (Winter, 1998) 401.

(n15)Footnote 79. *See* § 58.09 which discuss the differing memberships within the ATS.

(n16)Footnote 80. Note, however, that neither Argentina nor Chile consented to have the jurisdiction of the International Court of Justice settle the conflicting claims in the Antarctic Peninsula. *See* note 71 *supra*. The mere fact that a dispute has been so referred does not remove the requirement that the parties continue to seek to resolve it. *See, e.g.,* David Colson, "The Antarctic Treaty System: The Mineral Issue," *12 Law & Pol'y Int'l Bus., 841 (1980).* During the Falklands/Malvinas War, the two warring parties (Argentina and The United Kingdom) continued to cooperate with regard to Antarctic matters. *See* Joyner, *supra* note 71, at 499.

(n17)Footnote 81. If the government does not ratify it within two years from when the modification or amendment

went into force, such party is deemed to have withdrawn from the treaty. *See* Article XII(1)(b). The 1991 Madrid Protocol was the first such amendment to the Treaty. *See* § 58.07 *supra*, note 62.

(n18)Footnote 82. *See* Article XII 2(a) and (b). If such modification or amendment has not entered into force within two years after communication to all contracting parties, such party may give notice of its withdrawal from the present Treaty, which withdrawal shall take effect two years after the receipt of the notice. *See* Article XII 2(c).

(n19)Footnote 83. If a member does opt out of the Treaty under this provision (the earliest time would be June 21, 1993), query the effect of its sovereignty claims under Article IV ? Will the legal status of the parties revert to the status quo as it existed in 1959 as suggested by Chile? What about the substantial activities of some parties during the time when the Treaty was in effect (granted, under Article IV(1)(c) such activities are not to prejudice the rights of the parties, but can they be used to bolster a claim)? *See* Parriott, *supra* note 6 at 90-93. *See also* Blay et al., "Antarctica after 1991: The Legal and Policy Options," ASOLP Occ Paper 2 at 3-5 (1989). Of course, a non-member state is not bound by the Treaty at all.

(n20)Footnote 84. *See* § 58.09 which lists the current acceding members.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.09

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.09 Parties to the Antarctic Treaty.

The parties to the Antarctic Treaty fall into 3 groups: original signatories to the Treaty; Antarctic Treaty Consultative Parties (ATCPs) n85 and Antarctic Treaty Non-Consultative Parties (non-ATCPs). Those members entitled to vote under the Treaty include the original signatories and the ATCPs. The non-ATCPs are acceding members who have agreed to the terms of the Treaty, but who have not engaged in the substantial scientific research required under Article IX of the Treaty to become a voting member.

Article XIII of the Treaty provides that any State which is a Member of the United Nations, or any other State invited to accede to the Treaty by all Contracting Parties, may accede to the Treaty. Acceding members may attend sessions of the Antarctic Treaty members, although they have no vote. n86 An acceding member may become an Antarctic Treaty Consultative Party by conducting substantial scientific research in Antarctica. n87

Current voting members include the original 12 signatories: Argentina, Australia, Belgium, Chile, France, Japan, New Zealand, Norway, the Republic of South Africa, the former Soviet Union, the United Kingdom, and the United States. Additional Antarctic Treaty Consultative Parties include Brazil, the People's Republic of China, Ecuador, Finland, Germany, n88 India, Italy, the Netherlands, Peru, Poland, South Korea, Spain, Sweden, and Uruguay.

Current acceding members who are non-voting members (non-ATCPs) include Austria, Bulgaria, n89 Canada, Columbia, Cuba, Czechoslovakia, Denmark, Greece, Hungary, North Korea, Papua, New Guinea, Romania, and Switzerland.

FOOTNOTES:
(n1)Footnote 85. The term ATCPs often includes both the original signatories and the new consultative parties. The current parties are noted in the article by Joyner, Christopher C., "Recommended Measures under the Antarctica Treaty: Hardening Compliance with Soft International Law," Mich. J. Int'l L. 19 (1998) 401. Current acceding members are noted as now including Guatemala, Turkey and the Ukraine. Czechoslovakia is now represented by the Czech Republic and the Republic of Slovakia.

(n2)Footnote 86. Such members have attended regularly since 1984. The invitation to attend became routine as

part of Contracting Parties' attempts to address the issue that their discussions were conducted in secret. A.T.M. meetings now also include various international organizations and more documents are now available. *See* Recommendation XII-6, Final Report of the Twelfth Antarctic Treaty Consultative Meeting 40 (1983).

(n3)Footnote 87. *See* Article IX (2). Many states have become ATCPs, even though the cost of research is substantial. As a result, many countries have not become ATCPs, and those who do conduct research tend to build bases close to existing bases. The amount of research required and the difficulty of attaining ATCP status has changed over the years. For example, Poland was the first to accede, however it did not achieve ATCP status until 1979, whereas many recent ATCPs have been admitted in a relatively short time with perhaps not the same amount of research as required of poland. It has been suggested that the inclusion of India and Brazil as ATCPs was due more to the pressure of the non-aligned resolution in the United Nations than the research conducted. *See* Sudhir K. Chopra, "Antarctica as a Common Regime: A Conceptual Framework for Cooperation and Coexistence," The Antarctic Legal Regime 184 (Christopher C. Joyner & Sudhir K. Chopra eds. 1988). Some of the research progress is slow. Norway and Belgium's research efforts are almost non-existent, but as original signatories they remain as active voting members. *See also* § 58.21 note 193, *infra*. There are few, if any, representatives as either an ATCP or an acceding member from the Middle East or from black Africa.

(n4)Footnote 88. The Federal Republic became an ATCP in 1981 and the German Democratic Republic in 1987.

(n5)Footnote 89. Bulgaria became a voting member as an Antarctic Treaty Consultative Party in 1998 as reported by Christopher C. Joyner in his book, Governing the Frozen Commons, on page 269. Czechoslovakia is now the Czech Republic and the Republic of Slovakia. In addition, Guatemala, Turkey and the Ukraine are now acceding members. *See* Christopher, C. Joyner, "Recommended Measures Under the Antarctic Treaty: Hardening Compliance with Soft International Law," Mich. J. Int'l L. 19 (1998) 401 at note 2.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.10

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.10 Types of Sovereignty Claims.

Traditionally, Antarctica has been viewed as *res nullius* (or land owned by no one, according to Roman law). n90 If the continent was *res nullius* then it was susceptible to acquisition by a state. Various theories have been advanced as a means of acquisition including discovery, sector, contiguity, geological affinity, Pan-American primacy, and primarily, effective occupation.

Seven countries have made territorial claims to approximately 85% of the continent, n91 leaving approximately 15% of the continent unclaimed. n92 The territorial claims are "frozen" under the Treaty. n93

Some have based claims of sovereignty on the fact of discovery. n94 The fact of discovery alone, however, is insufficient and more is needed than visual apprehension or the flying of a flag, though such acts of symbolism often accompany the acts of discovery. n95

Argentina and Chile base their claims in part on historic right or the theory of *uti possidetis*. In 1493, Pope Alexander VII issued 4 Papal Bulls in which he divided the New World between Spain and Portugal. Under these Papal Bulls, which were followed by the Treaty of Tordesillas, Spain obtained rights to the New World and obtained all lands west of the 46th meridian "from the Arctic to the Antarctic Poles" (Portugal was awarded the other half). As a result, Argentina and Chile, upon succession from Spain, claim Antarctica as theirs. This theory has not been well received. n96

Contiguity and proximity claims are based on 2 similar theories which refer to the extension of sovereignty from a state over lands which are contiguous to the state. Argentina and Chile also claim sovereignty based on the proximity of their states to Antarctica, n97 particularly as to their overlapping claims with Great Britain. n98 This theory has not been well received especially in that it involves extending sovereignty from one continent to another and involves great geographic distances.

Geological affinity, a theory very similar to contiguity/proximity, has been used by Chile and Argentina to argue that the Antarctic Peninsula and Ellsworth Land are a continuation of the Andes Mountains and thus belong to them as a natural extension. n99 The relatively close proximity of Antarctica to Argentina and Chile also has led to the

"Pan-American" primacy theory for asserting sovereignty. When the United States' bases were planned in 1939, President Franklin D. Roosevelt noted that United States activities in the area would be conducted on behalf of all American Republics. n100 In 1948, Chile and Argentina mutually proclaimed an intent to exercise exclusive rights over the "South American Antarctic" and later enacted the Inter-American Treaty of Reciprocal Assistance. n101

The sector theory notes that lines are drawn to the South Pole either from the country's mainland or from a portion of the Antarctic coast which had been discovered or occupied by the claimant. n102 Although the claimant states have all advocated this theory, the United States, as well as most scholars, reject it. n103

The primary theory used by all claimant states is that of effective occupation. Discovery, though insufficient by itself, provides a title which remains inchoate until there is effective occupation by the state. Effective occupation requires the state to show not only actual possession but also administration of the area (including the control over the territory, its people and its resources). The state then must show some display of authority. Of course, difficulties with the theory include uncertainty on the tasks required, the time periods involved, and the fact that large areas of vacant hostile land are involved in Antarctica. n104

FOOTNOTES:

(n1)Footnote 90. If land is viewed as *res nullius*, then customary international law prescribes various methods for its acquisition. It is land which has no owner or possessor or it has been abandoned by its owner. If, on the other hand, the land is incapable of being possessed, then it is generally referred to as *res communis* or *terra publica*. If it is *res communis*, then it is not subject to appropriation by any state and instead allows free access to all. Traditionally, Antarctica has been viewed as *res nullius* and the seven claimant states have asserted sovereignty claims on that basis. It has been argued, moreover, that the doctrine of occupation with regard to *res nullius* land must be "the applicable rule with respect to Antarctica because the comity of nations is not willing to adhere to any other rule." *See* Parriott, *supra* note 6, at 78. On the other hand, those who argue it is *res communis* note that much of Antarctica is not even land, or that it is land which is above sea level, and thus should be considered *res communis* or some other concept which is more realistic. *See, e.g.*, Chopra, note 87; Note, Thaw in International Law? Rights in Antarctic under the Law of Common Space, *87 Yale L.J. 804, 907 (1978)* noting that exclusive territorial claims in Antarctica are untenable for they violate the historical pattern of international practice and agreement in Antarctica, rest on inadequate application of various doctrines of international law, and rely on outmoded assumptions. The opportunity to have the sovereignty claims under *res nullius* adjudicated was lost when Argentina and Chile refused to consent to the jurisdiction of the International Court of Justice when the United Kingdom raised the issue. *See* note 71, *supra*. *See also* § 58.11.

(n2)Footnote 91. Only New Zealand and the United Kingdom might have been willing to relinquish their sovereignty claims at the time of the treaty. Of the seven claimant states, only five of them recognize each other's claims (Australia, France, New Zealand, Norway and the United Kingdom). Their claims have been legally untested and remain in limbo under the protection of the Antarctic Treaty. An opportunity to have the claims judged was lost when jurisdiction was refused by Argentina and Chile when the United Kingdom brought the issue to the International Court of Justice. *See* note 71, *supra*. It has been suggested that some claimants may be willing to forego sovereignty claims if the ATS can be protected otherwise, or for another rational management system be installed. *See* Bergin, *supra*, note 6. At times, New Zealand's interest in Antarctica has been lukewarm. *See* § 58.17. *See* Comment: Joseph J. Ward, Black Gold in a White Wilderness-Antarctica Oil: The Past, Present and Potential of a Region in Need of Sovereign Environmental Stewardship, J. Land Use & Env. 13 (1998) 517 in which the author calls for the recognition of sovereign rights as a way to answer concerns regarding mining.

(n3)Footnote 92. The area known as Ellsworth Land and Byrd Land lies between 150 and 90 degrees West. *See also* notes 156 and 169, *infra*. The seven countries claiming a portion of Antarctica and the date of first making such claims are Argentina (1942), Australia (1933), Chile (1940), France (1924), New Zealand (1923), Norway (1939) and the United Kingdom (1908). The claims of Argentina, Chile and the United Kingdom overlap in the Antarctic Peninsula as noted, and as a result, these countries do not recognize the claims of each other. The other claimants recognize each

other; however, countries such as the United States and the former Soviet Union do not recognize the claims of the others, but reserve the right to claim an interest in the future. *See* § 58.08 and note 71, *supra*.

(n4)Footnote 93. *See* § 58.08, *supra*. *See also* the comment made by then Judge Scalia in the dissent in *Beattie v. United States, 756 F.2d 91, 106 (D.C. Cir. 1984) aff'd Smith v. United States, 113 S. Ct. 1178, 122 L. Ed. 2d 548 (1993)* that "it is also wrong to conclude that under the Antarctica Treaty of 1969 the signatory nations agreed not to exercise sovereignty in Antarctica," Maj. op. at 93. Article IV(1) of that Treaty merely provides that the treaty does not *prejudice* any nation's claim or basis for a claim to Antarctica; and Article IV(2) merely provides that while the Treaty is in force no activities shall constitute a basis for asserting a claim in Antarctica and no new claim shall be asserted. (emphasis included).

(n5)Footnote 94. Antarctica was the last continent to be discovered and was not actually sighted until 1820 when three explorers so sighted it: Palmer of the United States, Bransfield of the United Kingdom, and Bellingshausen of the Soviet Union. Discovery alone is not enough and often it is very difficult to ascertain who did what and when. Joyner, *supra* note 7, at 707. An example noted by Joyner, was the mountains "found" by an Argentinean flight in 1955, which were "discovered" by the United States in 1956, and again by the United Kingdom in 1957.

(n6)Footnote 95. Flags are often erected, documents or plaques buried, postage stamps are issued. In 1909, Shackleton though near death, took symbolic possession of the polar plateau by raising flags and burying a cylinder of stamps and documents. Though never making a formal claim to Antarctica, the United States Navy did erect bronze pipes and buried brass plates in 1948 and dropped flyers. *See* § 58.20, *infra*. Symbolic acts create confusion, are questionable and are not practical.

(n7)Footnote 96. It is particularly difficult to defend when Antarctica was unknown, to Spain at the time of the Bulls and even at the time of succession by Argentina and Chile from Spain.

(n8)Footnote 97. South Africa also may have made a claim for special entitlement based on proximity according to the Note, Thaw, *supra* note 89, at 815.

(n9)Footnote 98. *See* Phillip W. Quigg, A Pole Apart: The Emerging Issue of Antarctica, 115 (1983). *See also* note 71 *supra*.

(n10)Footnote 99. *See, e.g.*, Parriott, *supra* note 6, at 88, note 150. Again, this theory has received little recognition.

(n11)Footnote 100. Reported in Quigg, *supra* n. 97, at 117. The support by the United States for this theory soon diminished.

(n12)Footnote 101. *See* Robert D. Hayton, "The 'American' Antarctic," *50 Am. J. Int'l L. 583 (1956)*. This argument also is used to bolster their claims on the Antarctic Peninsula as against the United Kingdom. *See* note 71, *supra*.

(n13)Footnote 102. The sector theory originally was applied to the Arctic Ocean claims by Canada and the former Soviet Union. *See* Parriott, *supra* note 6, at 87.

(n14)Footnote 103. Norway may not advocate this theory in that Norway rejected the sector theory in the Arctic region. *See* Quigg, *supra* n. 97, at 115. If actually applied, the claims of Chile and Argentina would be very small and the Australian claim would not correspond with what is claimed. It is not a recognized customary international law principle for Antarctica. *See* J. Peter A. Bernhardt, "Sovereignty in Antarctica," *5 Cal. W. Int'l L.J. 297 at 332, 338 (1975).*

(n15)Footnote 104. Usually 3 cases are cited to support the concept of effective occupation and that something less

may be required in Antarctica, in that the land is unoccupied or cannot be so occupied. The most similar is the Legal Status of Eastern Greenland, 1933 P.C.I.J. (Ser. A/B) No. 53 which case involved a dispute between Norway and Denmark. In 1931, Norway proclaimed Eastern Greenland to be *terra nullius* and placed it under her sovereignty. Denmark based its prior claim to the area on its continuous and peaceful exercise of sovereign rights over a long period of time, dating back to 1381. The International Court of Justice found for Denmark and noted that Denmark's intent to exercise sovereignty had been sufficient (the Court noted as relevant, legislation enacted in Denmark, the issuance of permits to visitors, coastal inspections, etc., even though Denmark's physical presence did not extend into the many inaccessible areas).

In Clipperton Island, Affaire d'Iile de Clipperton, *26 A.J.I.L. 274, 282,* UN Rep. Vol. II, p. 1105, 2 R. Int'l Arb. Awards 1105 (1932) between France and Mexico, the Arbitrator Victor Emmanuel III noted that the island was *res nullius* in 1858 when the French naval officer saw it from the ship, proclaimed it for France, and so notified the Hawaiian government, where it was published. The arbitration held these were sufficient acts of occupation, though symbolic, as the island was uninhabited.

In the Island of Palmas (Neth. v. U.S.), Award of 4 April 1928, Max Huber Arbitrator, United Nations, R.I.A.A. UN Rep. Vol. II, 829-871, 2 R. Int'l Arb. Awards 829 (1929), the issues regarding occupation were clarified regarding an island that had a substantial population. The acts of Holland at different periods between the middle of the 17th century and 1898 were sufficient to acquire sovereignty as against the United States, whose claim was based on discovery or contiguity. Acts of sovereignty may be intermittent.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.11

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.11 Antarctica If Not Viewed as *Res Nullius.*

The issue of sovereignty, discussed in the prior section, presupposes that the continent was *res nullius* or owned by no one. Although widely supported, some have suggested that Antarctica should be viewed as either *res communis, res publica or terra communis*. n105 If viewed as *res communis* or a form thereof, the land cannot be possessed and sovereignty claims would not be recognized; however, all states would have free access to conduct research, to send expeditions, and to harvest the resources. n106 In recent years, some have suggested that the principles of the common heritage of mankind should be applied in Antarctica. n107

If viewed as *res communis*, perhaps a format other than the current Antarctic Treaty System should be utilized. Some have suggested an International Convention to create a new Antarctic Treaty initialed by the United Nations General Assembly; others a form of International Trusteeship under the Charter of the United Nations. n108 The concept of a United Nations trusteeship is not novel. n109 In 1948 the United States had suggested such a trusteeship. Nonetheless, beginning in 1982 each session of the General Assembly has involved discussions concerning Antarctica. The areas of concern include: that the consultative parties provide information to the United Nations so that it may serve as the central repository for data about Antarctica; that the Secretary General be invited to general and special ATS meetings; that a moratorium be placed on minerals negotiations until all can participate; that there be an equitable sharing of resources; n110 that the consultative parties take steps to exclude South Africa from participation in consultative meetings. n111 Another possibility is assimilation of all or part of the area by the International Seabed Authority. n112 A world park or wilderness reserve has been suggested. n113 Another suggestion has been a form of condominium structure in which 2 or more parties, acting collectively, would share authority and sovereignty over Antarctica. n114 Of course, other modes include the proposal that all states should have free access to Antarctica and its resources n115 or that states should assert independent territorial claims. n116

FOOTNOTES:
(n1)Footnote 105. The opportunity to have the sovereignty claims under *res nullius* adjudicated was lost when Argentina and Chile refused to consent to the jurisdiction of the International Court of Justice when the United Kingdom raised the issue. *See* § 58.10 *supra*. *See also* the discussion by Brilmayer, Lea and Klein, Natalie, Land and Sea: Two Sovereignty Regimes in Search of a Common Denominator, N.Y.U. J. Int'l. L. & Pol'y 33 (Spring 2001) 703 (noting that Antarctica more nearly resembles maritime assets than land-based assets). In his book, Governing the

Frozen Commons: The Antarctic Regime and Environmental Protection, Christopher C. Joyner discusses Antarctica as a global commons.

(n2)Footnote 106. Proponents of *res communis* note that it is consistent with the practice of cooperation under the ATS, that it is an acceptable principle of customary international law, and that it rejects the colonial nature of *res nullius*. *See, e.g.,* Note, Thaw, *supra*, note 89.

(n3)Footnote 107. The common heritage of mankind typically involves four characteristics as indicated in Note, A World Park in Antarctica: The Common Heritage of Mankind, *10 Va. Envtl. L.J. 109 (1990):* 1. that the territory is not subject to appropriation; 2. all share responsibility; 3. all share benefits; and 4. all committed to peaceful use. The concept may be seen with the deep seabed in the 1982 U.N. Convention on the Law of the Sea (U.N. CLOS III) U.N. Doc. A/Conf/62/122 (1982) *reprinted in 21 I.L.M. 1261 (1982)* and with outer space in the Agreement Governing the Activities of States on the Moon and Other Celestial Bodies, A/SPC/34/L 12 and Treaty on Principles Governing the Activity of States in the Exploration and Use of Outer Space, including The Moon and other Celestial Bodies, Vol. 610 *(1967) 18 U.S.T., 2410* U.N.T.S. 205. *See also* the article by Frakes, Jennifer, "Notes and Comments: The Common Heritage of Mankind Principle and the Deep Seabed, Outer Space, and Antarctica: Will Developed and Developing Nations Reach a Compromise?" Wis. Int'l L.J. 21 (Spring 2003) 409.

(n4)Footnote 108. Beginning in 1982, several developing nations, led by Malaysia, initiated a Debate on Antarctica in the General Assembly of the United Nations, which debate has been continued since that time. *See* U.N. GAOR, 37th Sess., U.N. Doc. A/37/PV 10 (1982).

(n5)Footnote 109. *See* § 58.06, note 36 *supra*. 19 Dep't St. Bull. 283, 301 (1948). New Zealand and the United Kingdom made similar overtures in 1956 and 1958 respectively. Triggs, *supra* n. 68, at 197 suggests that the reason the trusteeship was rejected was due to the sovereignty issue.

(n6)Footnote 110. The Consultative Parties have now agreed to furnish reports of the regular meetings to the Secretary General and have acquiesced to the U.N. role as a central depository for information regarding Antarctica. *See* Question of Antarctica: Reports of the Secretary-General, 42 U.N. GAOR (Agenda Item 70) at 5, U.N. Doc. A/42/586 (1987).

(n7)Footnote 111. The Consultative Parties have not excluded South Africa, although this issue has split the unanimity of the regime in the United Nations. In the 43rd session of the U.N., five consultative parties (Argentina, Brazil, China, the German Democratic Republic and India) as well as acceding members Cuba, Ecuador, Peru and Romania voted for the exclusion of South Africa (many of the ATCS use ATCPs did not participate in the vote).

(n8)Footnote 112. *See* suggestion in Blay et al., *supra*, n. 83 noting that many middle eastern states have suggested this. *See also* Triggs, n. 68 at 217. China has also suggested this.

(n9)Footnote 113. Many conservation groups have advocated a world park to preserve the unique environment of Antarctica per se and as a scientific laboratory for monitoring international environmental problems. The concept may be traced to the Second World Conference on National Parks held in Yellowstone in 1972. The suggestion by Australia and France supporting this concept in the late 1980's was the first major split among the ATCPs. Whether an organization separate from the current Antarctic Treaty System would be needed for such a park is questioned. If the ATS managed such a concept, it would need something similar to an Antarctic Environmental Protection Agency with an Infractions Committee as suggested in May, *supra*, n. 6, at 159.

(n10)Footnote 114. *See* discussion in Parriott, *supra*, n. 6, at 98 to the effect that under this model the consultative parties, acting together, would share authority and sovereignty over Antarctica. The advantages noted included political stability to encourage commercial interests; allow the area to be considered a coastal state for purposes of applying the LOS Convention; and to dissuade the rest of the international community from attempting to impose an international regulatory regime on Antarctica.

(n11)Footnote 115. *See* Note, Thaw, *supra*, note 89, at 841 that Antarctica is analogous to the "high seas."

(n12)Footnote 116. *See* Parriott, *supra*, note 6, at 98 noting that this would resolve the question of sovereignty and reward those states which have taken an active position in Antarctica in the past.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.12

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.12 Jurisdiction in Antarctica.

In addition to sovereignty concerns, questions of jurisdiction may arise. n117 Under Article VIII(1) of the Treaty, scientific personnel present under subparagraph (1)(b) of Article III as well as observers under paragraph (1) of Article VII and their respective staffs, are subject only to the jurisdiction of the contracting party of which they are nationals regarding all acts or omissions occurring while in Antarctica for the purpose of exercising their functions. As to all other persons, the contracting parties concerned in any dispute are to consult together immediately with the view to reaching a mutually acceptable solution concerning jurisdiction. n118 If the parties fail to settle the dispute, then by consent the parties may take the issue to the International Court of Justice. n119

Currently, there are no courts in Antarctica. The human presence has increased, however, and so has the need for private law. n120 To date, however, the nations have refrained from enforcing their laws on persons from other countries in the claimed sectors and thus conflict has been avoided. All seven claimant states have enacted legislation concerning criminal conduct. n121 Likewise, each of the states has enacted legislation regarding claims in its sector of Antarctica. n122 South Africa has special legislation for South African citizens in Antarctica. n123 The United States has implicitly added Antarctica to the special maritime and territorial jurisdiction of the United States in 1984. n124

FOOTNOTES:
(n1)Footnote 117. Jurisdiction, in contrast to sovereignty, is positive and allows a state to make and enforce laws. Of course, once jurisdiction is reserved there still may be a choice of law's problem.

(n2)Footnote 118. *See* Article VIII(2) of the Treaty. The Treaty, of course, does not apply to nationals of countries who are outside the Treaty system, nor does it seem to cover non-governmental personnel such as Greenpeace nor families of the scientists or private tourists or explorers. *See also* note 77, *supra*.

(n3)Footnote 119. *See* Article XI(1) which notes that the parties are to consult among themselves with a view to having the dispute resolved by either negotiation, inquiry, mediation, conciliation, arbitration, judicial settlement or another peaceful means; however if the dispute is not so resolved the parties, by consent, may go to the International Court for settlement under Article XI(2). The parties, of course, might not consent. *See* note 71 *supra*, regarding the refusal of Chile and Argentina to consent regarding sovereignty of the Antarctic Peninsula.

(n4)Footnote 120. Issues of concern, while not of great international importance, are of concern to the individuals involved. Such issues include marriages, deaths, crimes, civil actions, etc. *See, e.g.,* Carl, *supra*, note 5 who suggests at page 69 that " "... jurisdiction remains one of the unsolved problems of the Antarctic system." *See Smith v. United States of America, 113 S. Ct 1178, 1179, 122 L. Ed. 2d 548 (1993)* where Chief Justice Rehniquist notes " "...Antarctica, a soverignless region without civil tort law of its own."

(n5)Footnote 121. *See* dissent of then Judge Scalia in *Beattie v. United States, 756 F.2d 91, 106 (D.C. Cir. 1984), quoting* Richard B. Bilder, "Control of Criminal Conduct in Antarctica," *52 Va. L. Rev. 231, 260 (1966).*

(n6)Footnote 122. *See, e.g.,* Australia conferred jurisdiction of its courts for claims in Antarctic Territory Act 1954, Act No. 42 of 1954, Art. 6(1) *reprinted in* Bush, *supra* n. 17, at Vol. 2, p. 179 as well as Australia, Antarctic Treaty Act of 1960, Act No. 48 of 1960, Art. 4 *in* Bush at 192. Argentina by Decree Law No. 2,191 of Feb. 28, 1957 *reprinted in* Bush, at 15. Chile by Law No. 11,846 of July 17, 1955, 78 Diario Oficial 1321 (June 21, 1955) *reprinted in* Bush at 402 and Statute of the Chilean Antarctic Territory Decree No. 298, July 17, 1956, 79 Diario Official 1922-23 (Oct. 3, 1956) *reprinted in* Bush at 407. France by Law No. 55-1052 of August 6, 1955 (1955) *reprinted in* Bush at 531 and 71-569 *reprinted in* Bush at 574. New Zealand by New Zealand Antarctic Act of 1960 *noted in* Carl, *supra* note 5, at note 50 as being *reprinted in* 11 Polar Rec. 303 (1962). Norway, Law of Feb. 27, 1930, No. 3 Norges Lover 1682-1963 & 1247-48 (1964) *as amended* Law of June 2, 1960, No. 17, Norges Lover 1847-48 as *noted in* Carl, *supra* note 5, at 50. United Kingdom, The British Antarctic Territory Order in Council, Stat. Instr., 1962, No. 401 *reprinted in* 11 Polar Rec. 306-13 (1962) *as noted in* Carl, *supra* note 5, at note 50.

(n7)Footnote 123. *See* Carl, *supra* note 5, at note 50a noting the South Africa Citizens in Antarctica Act, Act No. 55 of 1962 promulgated by Government Notice No. 826 in 4 Gazette Extraordinary, No. 249 (May 25, 1962) and *reprinted in* 11 Polar Rec. 313 (1962).

(n8)Footnote 124. *18 U.S.C. § 7*(7). This means that there is jurisdiction over certain felonies committed by United States nationals or by foreign nationals against United States nationals in Antarctica. *See also United States v. Escamilla, 467 F.2d 341 (4th Cir. 1972)* (holding that a homicide committed by a U.S. civilian contractor on free-floating ice was within the special maritime and territorial jurisdiction of the United States). United States nationals are also subject to civil and criminal penalties for violations of the Agreed Measures for the Conservation of Antarctic Fauna and Flora and for violations of the Convention on the Conservation of Antarctic Marine Living Resources. *See 16 U.S.C. §§ 2407*-08, 2437-38. United States' military personnel are under the Uniform Code of Military Justice *codified at 10 U.S.C. § 805.*

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.13

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.13 Claim by Argentina.

Argentina, along with Chile, is probably the most ardent supporter of territorial sovereignty in Antarctica. n125 Argentina bases its claims of sovereignty on a variety of theories, including discovery, n126 *uti possidetis,* n127 propinquity or contiguity, n128 geological and geographical grounds, n129 sector, n130 Pan-American primacy, n131 and effective occupation. n132 Argentina claims an area containing approximately 400,000 square miles. n133

During the 20th century, Argentina has been very active in showing acts of administration and occupancy over its claimed area in order to demonstrate good effective occupation. To that end, in 1978 a pregnant woman was flown in and gave birth to the first child born on the continent. n134 The Argentina stations at Marambio and Esperenza are active outposts. n135 In 1977 Argentina proclaimed its base a capital. n136 Visits have been made by the Argentinean President, Argentinean flags have been flown and it has been formally incorporated into Argentina. n137 Argentina has also been active with other symbolic actions to show effective occupation. n138

FOOTNOTES:
(n1)Footnote 125. *See, e.g.,* Hayton, *supra* n. 100, at 587 (1956) in which it is noted that Antarctic claims in Argentina have been propagandized with a "dedication verging on fanaticism." *See also* N.Y. Times, Feb. 19, 1964, at 3, col. 3, noting that Feb. 22 was declared Antarctic Day in Argentina and celebrating "unrenounceable" sovereignty over the area so claimed. Argentina and Chile are both adamant supporters of their respective claims; however, Argentina has been the more conservative and inflexible of the two. *See also* Bryan Hodgson, "An Island of Isolation No More. Antarctica," 177 Nat'l Geo. No. 4 at 3 (April 1990).

(n2)Footnote 126. An Argentinean Admiral named Guillermo Brown claimed to have seen ice-covered islands at a latitude 65 degrees south at least four years before Bellingshausen, Palmer and Bransfield Smith discovered the Antarctic Peninsula. Prior to 1900, Argentina showed little interest in the continent; however, in 1904, Argentina accepted the invitation of the Scottish National Antarctic Expedition to assume official control over the meteorological observatory on Laurie Island, which maintenance continues to this day. At that time an Argentinean flag was raised as a gesture of national ownership, and an Argentinean citizen performed a stamp cancellation. A radio transmitter was installed in 1927 and postal service was extended. Since establishing this base, Argentina has attempted to appear sovereign in its sector by establishing bases, stations, refuges, lighthouses, buoys, post offices, etc.

(n3)Footnote 127. *See* § 58.10 and note 95, *supra*.

(n4)Footnote 128. *See* § 58.10 and note 96, *supra*.

(n5)Footnote 129. *See* § 58.10 and note 98, *supra*. Strategically, Antarctica has been important to Argentina as protection on her southern flank and could be in the future if the Panama Canal ever were to close.

(n6)Footnote 130. *See* § 58.10 and note 101 *supra*.

(n7)Footnote 131. *See* § 58.10 and notes 99 and 100 *supra*.

(n8)Footnote 132. *See* § 58.10 and note 103, *supra*.

(n9)Footnote 133. *See* May, *supra* n. 6, at p. 115.

(n10)Footnote 134. Emilio Marcos Palma was born and immediately declared an Argentinean citizen. Since that time other children have been born to members of the Argentina military at Esperenza, and Argentina attempts to winter over. *See* N.Y. Times, April 20, 1982, A26 at Column 4. The suggestion often has been made that Argentina wants to colonize Antarctica and that its bases at Esperenza and Marambio are more like frontier settlements than scientific bases. Argentinean scientific research tends to be small, considering the number of staff present.

(n11)Footnote 135. *See* Chester, *supra* n. 6, at 103, or May, *supra*, n. 6 who notes also that plans include the installation of hotels, banks, and shops.

(n12)Footnote 136. Marambio was declared to be a provisional seat of government and the entire Argentine Cabinet conducted their daily business there in August of 1973.

(n13)Footnote 137. Joyner, *supra,* note 71 indicates that the flag was first raised in 1904 on Laurie Island, a permanent National Commission on the Antarctic established in 1940, and in 1942 tablets were deposited proclaiming Argentina's annexation of all lands within the area south of latitude 60 degrees south and between longitudes 25 degrees west and 68 degrees 43 minutes west. In 1951 the Antarctic Institute was created and placed under the Ministry of the Army. In 1955 national legislation was promulgated to formally incorporate the South Atlantic territories into the provinces of the national federal domain.

(n14)Footnote 138. For example, a stamp was cancelled in 1904, postal service extended to the continent in 1927 with postmasters designated from time to time; coroners and local magistrates have been designated. In 1964, February 22 was declared a national Antarctic holiday by decree in Decree No. 1,032 (Feb. 18, 1965) 21 Bef. 1964, as reported by Scott, *supra*, n. 29, who also reports that by 1946 publicity programs were established to make the Argentinean people more Antarctic conscious.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.14

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.14 Claim by Australia.

The current portion of Antarctica claimed by Australia was first received in 1933 by Australia from the United Kingdom. n139 It is the largest claim in Antarctica, composed of almost 1/3 of the continent, and lies between the latitudes of 45 degrees and 160 degrees east (south of Australia), but excluding the territory claimed by France. n140

Although Australian activity may have been limited initially, its interests have grown, and now Australia is often classified with Argentina and Chile as one of the more ardent claimants. n141 Currently, Australia's priorities appear to include the maintenance of its sovereignty claim; to strengthen the Treaty's consultative framework, and to maintain a balanced scientific program.

FOOTNOTES:
(n1)Footnote 139. Although there is some history of Australian explorers, Australia's claims originated in the cession of rights from Britain in 1933. Order in Council placed certain territory in the Antarctic Seas under the Authority of the Commonwealth of Australia, February 7, 1933, Australia 2 Statutory Rules and Orders commonwealth Statutory Rules revised, *reprinted in* Naval War College, 46 Int'l. L. Doc. 236 (1948-49). *See also* I Austl. C. Acts 27 (1901-1950). *See also* note 165.

(n2)Footnote 140. Basically, this is the land south of Australia, excluding the wedge for Adelie Land which is claimed by France. The Australian claim is approximately one-third of Antarctica, a claim which some note is too large to be credible or to surrender. The exclusion of Adelie Land is tacit recognition of the French claim.

(n3)Footnote 141. However, Australia joined with France in 1988 to stop the ratification of CCAMLR and to suggest that Antarctica be made a World Park. *See* § 58.11, note 112. Note the article by Christy Collis, The Proclamation Island moment: making Antarctica Australian, *8 LTC 39 (2004),* in which it is observed that almost half of Antarctica is in the Australian claim.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.15

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.15 Claim by Chile.

Although Chile did not make a formal claim in Antarctica until 1940, it, along with its sometime rival Argentina, is one of the most ardent claimants on the continent. n142 The claim itself lies between 53 degrees and 90 degrees West between the unclaimed portion on the West and overlaps the Argentina and United Kingdom claims on the East. n143

The sovereignty claim of Chile is based on discovery, n144 effective occupation, n145 the sector theory, n146 *uti possidetis*, n147 continuity and proximity, n148 geological and geographical grounds, n149 and Pan-American primacy. n150

Chile has been very active in Antarctica to strengthen its claim of effective occupation. For example, the President of Chile visited bases in 1951. n151 Additions to its permanent settlement at its Teniente Marsh Station on King George Island in 1984 have made it a frontier town with facilities for up to 100 families including schools, telephones, radios, televisions and a hotel for tourists. n152

FOOTNOTES:
(n1)Footnote 142. *See* § 58.13, *supra*, note 124. *See also* Note, Thaw, *supra* note 89, at note 32 indicating that Chile has been adamant concerning its Antarctic claim, noting that it is part of Chile's "metropolitan territory" and a "southernmost province" citing Conference on Antarctica 6-7 (1959) (U.S. Dep't of State Publication No. 7060). *See also* the comment in Hodgson, "An Island of Isolation No More. Antarctica," 177 National Geographic No. 4 at 3 (April 1990) that both Chile and Argentina saw the actions of France and Australia at the 15th biennial treaty meeting revoking approval of CRAMRA as an attack on the treaty and to their claims.

(n2)Footnote 143. *See* Allen A. Boraiko, Acts of Faith in Chile, 174 No. 154 Nat'l Geo. No. 154 (July 1988). *See also* note 71 *supra*.

(n3)Footnote 144. *See* May, *supra* n. 6, at p. 117 who noted that a Chilean sailing ship made discoveries in 1820 and a whaling station was established on Deception Island in 1906. Nonetheless, there is no substantial record of a direct entry by Chile into Antarctica prior to its delineation of its territorial claim in 1950.

(n4)Footnote 145. *See* § 58.10 and note 113 *supra*. The colonization of its portion is an attempt to strengthen its

effective occupation claim. Note also that Chile opened a Register of Antarctic Property in Punta Arenas, the first inscription of which noted that the State of Chile was the "owner of all land, island, islets, reefs within the limits of the claimed Antarctic area. *See* Vicuna, *supra* n. 5, at page 103 citing Register of Antarctic Property, Punta Arenas, inscription No. 1, page 1, 9 March 1961.

(n5)Footnote 146. *See* § 58.10 and note 101 *supra*.

(n6)Footnote 147. *See* § 58.10 and note 98 *supra*.

(n7)Footnote 148. *See* § 58.10 and note 96 *supra*. As noted therein, Chile along with Argentina often use this claim *vis-a-vis* the claim of the United Kingdom in the Antarctic Peninsula. *See* note 71 *supra*.

(n8)Footnote 149. *See* § 58.10 and note 98 *supra*.

(n9)Footnote 150. *See* § 58.10 and notes 99 and 100 *supra*.

(n10)Footnote 151. *See* May, *supra* n. 6, at page 117 who notes that the settlement is known as "Villa Las Estrellas" or the Town of the Stars. The various activities of Chile in Antarctica were detailed in an article by Colin Woodard in "Endless Detente; Various Claims In Antarctica Regions," 1999 Educ. Found. for Nuclear Sci. Bull., Atomic Scientists, January 1999.

(n11)Footnote 152. *See* the general discussion in May, *supra* n. 6, at page 117 or Scott, *supra*, at 604 who notes in addition that in 1983 the Director of the Chilean Antarctic Institute publicly rejected the internationalization of Antarctica and asserted Chile's view of the Treaty as merely deferring its sovereign territorial rights. Haydon, *supra* n. 100, at 595 (1956) relates of officials who speak of "national patrimony" in Chile with special instruction on Chilean rights in Antarctic given in the schools.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.16

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.16 Claim by France.

France may have the most dubious territorial claim in Antarctica. In 1840, a French explorer named Dumont d'Urville sighted from his ship what is now known as Adelie Land. As a result, years later in 1924, the French issued a decree claiming an undefined stretch of land in Antarctica, and placed it under the administration of the French colony of Madagascar. n153 The United States Government refused to recognize the French claim. n154 The first French base was established in 1957 although 17 men wintered over in 1951. n155 Although the French claim is small, and its scientific research somewhat limited, France always has been a strong defender of its national interest. n156

FOOTNOTES:
(n1)Footnote 153. *See* F. M. Auburn, "The Ross Dependency -- An Undeclared Condominium," Auckland U. L. Rev. 103 (1970). It defined its claim in 1938 according to Green Haywood Hackworth, 1 Digest of Int'l Law 459 (1940).

(n2)Footnote 154. Of course, the United States does not recognize any sovereignty claims while reserving the right to make its own in the future. However, Hackworth, *supra*, note 152 who notes at 460 that the United States, in 1939, refused to recognize the French claim since the explorer did not even visit the land. Australia noted that its own Mawson had charted Adelie land in 1912; however, by its later claims in Antarctic which remove the wedge for Ad'elie land there is implicit recognition of the French claim. *See* note 139 *supra*.

(n3)Footnote 155. *See* May, *supra* n. 6, at page 118. Concern in recent years has centered on the French plans to build an airstrip at its base.

(n4)Footnote 156. *See* J. R. Rowland, "The Treaty Regime and the Politics of the Consultative Parties," The Antarctic Legal Regime 20 (Joyner and Chopra, eds. 1988). Note, however, that France was a leader in the movement regarding opposition to CRAMRA. According to an article by Piers Akerman in The Daily Telegraphy (Sydney), January 24, 2002, France has decided not to collect a territorial tax on those who set foot or anchor within its Antarctic territory as it was claimed such a tax would be in violation of the Antarctic Treaty; however, changes to the legislation may be made especially to gain greater control over the tourist industry in Antarctica.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.17

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.17 Claim by New Zealand.

In 1923, Great Britain ceded to New Zealand, the Ross Dependency, which contains approximately 170,000 square miles of land and 130,000 square miles of permanent ice shelf. n157 It was unclear when first ceded whether New Zealand was merely administering British claims in the area or whether New Zealand had its own independent claim. n158 For many years, New Zealand's interest in Antarctica was lukewarm and twice it implied that it might relinquish any claim it had. n159 Today, however, New Zealand conducts an active program of scientific research and works closely with the United States. n160 In addition to the research bases, New Zealand appoints magistrates and a coroner, and prints stamps. n161

FOOTNOTES:
(n1)Footnote 157. The claim, lying between 160 degrees east longitude and 150 degrees west longitude, is based on a 1923 Order in Council by the United Kingdom to the Governor of New Zealand. Order in Council No. 974 of 30 July 1923 New Zealand Statutory Rules and Orders 712-13 (1928), New Zealand Gazette (Wellington) Aug. 6, 1923, at 22, *reprinted in* U.S. Naval War College, 46 Int'l L. Docs. 236-37 (1948-49). *But see* Auburn, Antarctic Law and Politics (1982) at 294 who notes there is no evidence of acceptance by New Zealand. Australia formally accepted its claim from the United Kingdom. *See* note 138 *supra*. If the sector principal discussed in § 58.10 *supra* at note 101 were adopted, New Zealand would have an independent claim in that the area claimed is longitudinally immediately below New Zealand. Likewise, the claim might be based on the theory of geographical proximity or continuity discussed in § 58.10 at note 96 *supra*. *See* dissent of then Judge Scalia in *Beattie v. United States, 756 F.2d 91, 107 (D.C. Cir. 1984). See also* Auburn, *supra,* note 152, at 5; Joyner, "Antarctica and the Law of the Sea: Rethinking the Current Legal Dilemmas," *18 San Diego L. Rev. 415, 417, n. 8 (1981).*

(n2)Footnote 158. *See* dissent in *Beattie, supra* note 156, at 107 n.2 *quoting* Auburn, Ross Dependency, at 70-73.

(n3)Footnote 159. *See, e.g.,* Auburn, *supra* note 11 at 247 noting that there was little human activity to which laws could apply and that the government recognized that it held no accepted authority; Auburn, note 152 at 102 that claim "shakey."

(n4)Footnote 160. *See*; May, *supra* n. 6, at 121 to the effect that New Zealand works closely with the U.S. and that the American McMurdo station is within sight of Scott base. *See* the article by Bernie, NAPP, "Keeping the Flag Flying

on Our Slice of the Ice," The Evening Post (Wellington), January 8, 2001 in which the writer reviews the claims of New Zealand, the posting of stamps, and the addition of an artists' program to the science-dominated menu of activities.

(n5)Footnote 161. *See* Auburn, *supra* note 152, at 62 noting that a New Zealander must apply for a permit to export money from New Zealand if he or she wants to get U.S. dollars to spend at McMurdo base. In addition, although a coroner is appointed, Auburn noted that an inquest for a death in the area was held in Wellington in 1970. Note the somewhat caustic comment of then Judge Scalia, in the *Beattie* dissent at 109 to the effect that New Zealand had issued stamps in more than one denomination for The Ross Dependency compared with only a zip code for the *U.S. Beattie v. United States of America, 756 F.2d 91 (D.C. Cir. 1984).*

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.18 Claim by Norway.

Norway's interest in Antarctica began when Norwegian whalers operated in the Southern Ocean starting at the end of the 19th century. A Norwegian, Roald Amundsen, became the first person to reach the South Pole. n162 Norway claimed sovereignty over the area between the claims of the United Kingdom and Australia, commonly known as Queen Maud Land, in 1939. n163 After discontinuing the whaling expeditions in the 1960's the role of Norway has been somewhat limited; however, Norway continues to be active in the ATS. n164

FOOTNOTES:
(n1)Footnote 162. *See* May, *supra* n. 6, at 122.

(n2)Footnote 163. The claim lies between 20 degrees West longitude and 45 degrees East longitude between the Australian and United Kingdom claims. It has been suggested that the claim was made after Nazi Germany announced territorial motives of the Schwabenland expedition, especially when coupled with possible Soviet expansion. *See* § 58.21, note 182.

(n3)Footnote 164. Norway abandoned its one station it had within the claimed sector in 1958-1960. Conference on Antarctica (1959) (U.S. Dep't of State Publication No 7060) at 20 and no new year-round station has been established since then, although summer expeditions have occurred. The absence of a substantial scientific research program, while remaining a voting member of the ATS, has caused some tensions. Generally the role of Norway in the ATS has been a liberal one. Norway's lack of presence in Antarctica also raises issues concerning its sovereignty claims.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.19

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.19 Claim by the United Kingdom.

British explorers were among the first to arrive in Antarctica as well as being among the more active explorers. n165 The first formal British claim was made in 1908. n166 Much of the British claim was later ceded to New Zealand and Australia. n167 The United Kingdom maintains an active scientific program. n168

FOOTNOTES:
(n1)Footnote 165. Captain Cook visited Antarctic waters in 1772-1775 and claimed it for King George III (naming the island South Georgia). The first British sighting of the coast was by Edward Bransfield in 1920, although the American Palmer and Russian Bellingshausen also share that honor.

(n2)Footnote 166. The United Kingdom bases its claim on discovery and subsequent effective occupation as noted in the Antarctica Cases, note 71 *supra*. The claim was by Letter Patent of July 21, 1908, *reprinted in* 101 Brit. Foreign & St. Papers 76 (1909). A second Letter Patent of Mar. 28, 1917 *reprinted in* 111 Brit. Foreign & St. Papers 16 (1919) was necessary in that the former included portions of the Argentine and Chilean Patagonia. According to the second Letter Patent, the claim lies between 20 degrees west longitude and 50 degrees west longitude. The current claim overlaps the claims of Chile and Argentine on The Antarctic Peninsula. *See* note 71 *supra*.

(n3)Footnote 167. *See* § 58.14, *supra* note 138 and § 58.17, *supra* note 156.

(n4)Footnote 168. May, *supra* n. 6, at page 125 notes that The British Antarctic Survey maintains five bases as well as extensive summer field operations. The emergence of the resource questions and the aftermath of the Falkland Island/Malvinas war with Argentina has strengthened British interests in Antarctica.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.20

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.20 Position of the United States.

[Go To Supp]

Despite having had and maintaining an active presence in Antarctica, the United States has never made a formal claim on the continent. n169 At one time, many felt the United States would make such a claim on the last remaining unclaimed portion of Antarctica, but that did not occur. n170 The United States, as well as the former Soviet Union, recognize no claim in Antarctica; however, both reserve the right to state a claim in the future. n171

American interest in Antarctica began with American sealers in the early 19th century, among whom was Nathaniel Brown Palmer, who claimed he had seen new lands south of the South Shetland Islands in 1820. n172 Subsequently Charles Wilkes made important discoveries along the coastline, especially along what is now known as Wilkesland. In the 20th century, Richard Evelyn Byrd made 2 unofficial expeditions, and in 1935 Lincoln Ellsworth explored Antarctica under the sanction of the U.S. Department of State. Although unofficial claims were made for the United States, the United States made no official claim. n173

The United States maintains an active research program in Antarctica and often works closely with other countries. n174 The research program is supported by the United States military, which provides needed logistical support. n175 United States policy is set by the Antarctic Policy Group, which is chaired by the Secretary of State. n176

At the end of the 102nd Congress, the U.S. Senate ratified the 1991 Protocol on Environmental Protection to the Antarctic Treaty, which provides environmental protection in Antarctica and bans all mining for the next 50 years. n177 The Conte Bill, signed on November 16, 1990, prohibited United States companies from carrying out any mineral activities in Antarctica, including prospecting. n178

Only 3 cases in the United States have dealt with Antarctica. The question raised in all 3 cases have been whether Antarctica is a foreign country. In Larry R. Martin, n179 the Tax Court concluded that Antarctica was not a foreign country which would qualify under the tax code for an exemption on income earned there. In 1984, the Appeals Court for the District of Columbia found Antarctica to be an "international anomaly" which would not qualify as a foreign country, for the purpose of an exemption under the Federal Tort Claims Act. n180 In 1991, the 9th Circuit held just the

opposite, that Antarctica was a foreign country which qualified as an exemption under the Federal Tort Claims Act. n181

FOOTNOTES:
(n1)Footnote 169. It was the United States who proposed in 1948 that the Antarctic region be placed under a United Nations trusteeship or, in the alternative, under a condominium regime. *See* note 36 *supra*. It was also the United States who organized and advocated the Treaty itself in 1959. *See* note 40 *supra*.

(n2)Footnote 170. The unclaimed portion lies between the New Zealand Claim and the Chilean Claim. This also may be the most uninviting portion of Antarctica. *See* Auburn, *supra* note 156, at 126. If the Treaty is ever renegotiated, some have suggested that the United States may then make a claim. The U.S. position has fluctuated over the years. For example, in 1924, the Secretary of State noted that no territorial claims could be valid in Antarctica because discovery must be followed by an actual settlement. *See* Hackworth, *supra* note 152, at 399. Prior to W.W. II, however, the United States did strengthen its bases in Antarctica and there is some evidence that President Franklin Roosevelt wanted to occupy Antarctica in 1939. *See* Parriott, *supra* note 6, at 102 where it is noted that in 1938 U.S. aircraft were instructed to drop claim papers over the Antarctic territory. Since the Treaty has been in force, the United States Antarctic policy also has oscillated between attempts to preserve U.S. individual interests and international cooperation in Antarctica. The most recent example was the support of the United States for CRAMRA which allowed mining in Antarctica (though regulated), which later changed when the United States ratified the Madrid Protocol position which bans all mining for the next fifty years.

(n3)Footnote 171. *See* Article VI (1)(b) and § 58.08 *supra*, note 70. Although some scholars have been critical of the United States for not making a formal claim, it has had the advantage of allowing the United States the option to locate bases of operation wherever desired. As a result, both the United States and the former Soviet Union have strategically placed bases around the continent. *See* § 58.05. The U.S.'s Amundsen-Scott base is at the South Pole.

(n4)Footnote 172. This was the Antarctic Peninsula seen by Palmer in 1820 as well as the Englishman Smith and the Russian Bellingshausen.

(n5)Footnote 173. Both Byrd and Ellsworth claimed Antarctica on behalf of the United States, however, the U.S. never ratified either claim. Byrd, for example, planted the United States flag and placed flyers in cairns to show occupation. Likewise the United States made no formal claims with subsequent explorations or while establishing scientific bases there.

(n6)Footnote 174. The U.S. operated Operation Deep Freeze I from 1955-56, which was the first permanently manned base in Antarctica. Currently the United States has four year-round bases with McMurdo being the largest, which has its own theater, chapel, radio station, bar and labs. McMurdo has also been issued a zip code. Note the comment and somewhat caustic opinion by then Judge Scalia in the dissent of *Beattie*, at 109 to the effect that "In any case, I personally feel that as a display of sovereign epistolary power, the assignment of a zip code is topped by New Zealand's seizure of the philatelic monopoly; it has issued Ross Dependency postage stamps, in more than one denomination." *Beattie v. United States of America, 756 F.2d 91 (D.C. Cir 1984)*. The United States works closely with many countries, and especially with New Zealand (McMurdo is the Ross Dependency). Wilkes Station is in the sector claimed by Australia and the Ellsworth Station is in the area claimed by Argentina. The N.Y. Times, Jan. 1, 1991, at A36, reported that the U.S. and the U.S.S.R. had agreed to establish their first joint scientific effort in Antarctica. But note many nations are now cutting their Antarctic Programs. *See* Wall St. J., Dec. 27, 1991 at B4.

(n7)Footnote 175. The superior air operational reach provided by the United States allows aerial photographic mapping, reconnaissance support for research transportation missions, and search and rescue missions.

(n8)Footnote 176. The Antarctic Policy Group was established in 1965 by President Lyndon Johnson. Members include the Secretary of State, Secretary of Defense and the Director of the National Science Foundation. The

Department of State makes the overall policy, whereas the National Science Foundation administers and funds the entire U.S. Antarctic Program. *See* Scott, *supra* n. 29, at 598 *et seq.* for a detailed discussion.

(n9)Footnote 177. *See* note 28 *supra*. The Protocol imposes strict limitations on waste disposal and discharge of pollutants into Antarctic waters, requires the protection of Antarctic fauna and flora, requires the application of environmental impact assessment procedures for activities undertaken in Antarctica and calls for the development of an environmental emergency response. A Committee for Environmental Protection will be established. *See also* § 58.07 *supra*, note 63.

(n10)Footnote 178. The Antarctic Protection Act of 1990, Pub. L. 101-594, *104 Stat. 2975 (1990).*

(n11)Footnote 179. *See Larry Martin v. Commissioner of Internal Revenue, 50 T.C. 59 (1968).*

(n12)Footnote 180. *See Beattie v. United States of America, 756 F.2d 191 (1984).* Note the dissent of then Judge Scalia to the effect that Antarctica was in fact a foreign country. On remand, *690 F. Supp. 1068 (1988)* the Court found that the United States was not guilty of negligence under the Act and had no legal duty to furnish air traffic services on a routine basis to civilian aircraft. The disaster that befell the flight involved was the fault of Air New Zealand and of the flight crew.

(n13)Footnote 181. *See Smith v. United States, 953 F.2d 1116 (9th Cir. 1991).* The Smith case was affirmed by the United States Supreme Court in *Smith v. United States, 113 S. Ct. 1178 (1993).* The Court held that the exception to the Federal Tort Claims Act's waiver of sovereign immunity for any claim arising in a "foreign country" includes a claim arising in Antarctica, thus resolving the conflict between the D.C. and 9th Circuits. The Court felt that the plain meaning of the word "country" included Antarctica, even though it has no recognized government. *See also* James C. Conley, Recent Decisions, *32 Duq. L. Rev. 167 (1993);* Mark Dean, Smith v. United States: Justice Denied Under the FTC "Foreign Country" Exception, *38 St. Louis U. L.J. 553* (1993/1994). The position adopted by the United States Supreme Court in Smith was discussed in an article by Lauren S.B. Bornemann who concluded that the case will probably prevent tort claims arising in outer space. She then proposes legislation to allow Federal Tort Claims Act coverage. *See* Lauren S.B. Bornemann, "This is Ground Control to Major Tom ... Your Wife Would Like to Sue But there's Nothing We Can Do ...The Unlikelihood that the FTCA Waives Sovereign Immunity for Torts Committed by United States Employees in Outer Space: A Call for Preemptive Legislation," J. Air. L. & Com. 63 (February-March, 1998) 517. In *Environmental Defense Fund, Inc. v. Massey, 986 F.2d 528 (D.C. Cir. 1992),* the court held that the presumption against extraterritorial application of statutes did not apply where the conduct regulated by the statute occurred primarily, if not exclusively, in the United States and the alleged extraterritorial effect of the statute will be felt in Antarctica. The allegation in Massey was that the National Science Foundation violated the National Environmental Policy Act by failing to prepare an environmental impact statement before going forward with plans to incinerate food wastes in Antarctica. The Court was careful to note that the decision was limited to the facts and did not address how other statutes might apply to Antarctica. As a result, environmental review of activities in Antarctica must be in compliance with the National Environmental Policy Act as well as the measures adopted in the Madrid Protocol. The Clinton Administration decided not to appeal the ruling. *See* U.S. Dep't of Just., Press Release No. 93-070 (March 15, 1992). Thomas, "Space Tourism: Fanny Packs, Ugly T-Shirts, and the Law in Outer Space," Suffolk U.L. Rev. 36 (2003) 695. *See also* Murphy, Sean D. "Contemporary Practice of the United States Relating to International Law: State Jurisdiction and Immunities: Extraterritorial Application of NEPA," A.J.I.L. 97 (October 2003) 962.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.21

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.21 Other Interests in Antarctica.

The former USSR has a significant presence in Antarctica and, like the United States, makes no claim of sovereignty, and recognizes none while reserving the right to make a claim in the future. n182 The Russian explorer von Bellingshausen may have been the first to discover Antarctica in 1820, although Russian interest in Antarctica thereafter waned until the mid-20th century. n183 Significant scientific research has been conducted at the Soviet bases; however, this may well decrease in the future. n184

Antarctic Treaty Consultative Parties (ATCPs) maintain or have maintained bases on Antarctica as a condition of becoming an ATCP. n185 Generally these countries do not claim to have territorial aspirations. n186 Also involved in Antarctica are the non-claimants who were original signatures to the Treaty. n187 Although the ATCPs and the original signatories may not agree on sovereignty claims, in general, they have worked well together. n188

FOOTNOTES:
(n1)Footnote 182. *See* Peter A. Toma, "Soviet Attitude Towards the Acquisition of Territorial Sovereignty in the Antarctic," *50 Am. J. Int'l L. 611 (1956). See also* note 170 *supra*.

(n2)Footnote 183. The Englishman Bransfeld and the American Palmer also claim that honor. Its first base was established in 1956. Possible Soviet expansion claims, with the possibility of a sovereignty claim over Peter I Island, helped Norway to declare sovereignty over Dronning Maud Land. *See* § 58.18 *supra*, note 162. In the 1950's, the United States was concerned with a possible Soviet claim, which in part led to the calling of the conference which resulted in the Antarctic treaty. By 1959, the Soviets had six bases on Antarctica placed over a large geographical area. Soviet interests have been political and scientific. *See* May, *supra* n. 6, at 122 and 130.

(n3)Footnote 184. *See* Wall St. J., Friday, December 27, 1991 in which it notes that the signing of the Madrid Protocol banning mining for 50 years, along with the end of the cold war, has caused many nations to cut their Antarctica research, including the Soviets. It notes that at one point the Soviets were so strapped for cash that they asked France to pay the salaries of the Soviet workers at the Vosto K. station. *See also* note 173 *supra*.

(n4)Footnote 185. *See* § 58.09, *supra*, listing the current ATCPs. *See also* Article IX (2) of the Treaty, as *discussed in* § 58.08, *supra*, which requires a party to conduct substantial scientific research as a condition of becoming an ATCP.

See in particular § 58.09, *supra*, note 87 of noting that some of the bases are small and the quality of research has varied among the countries. Norway's program is limited. *See* note 193 *infra*.

(n5)Footnote 186. Brazil is a Consultative Party member and maintains bases on Antarctica. Some Brazilian writers have advocated a "frontage" theory for sovereignty which would grant sovereignty claims in Antarctica only to those countries whose south-facing coastline would project onto Antarctica. Under this theory, Brazil would claim a sizeable sector at the expense of Chile and Argentina.

(n6)Footnote 187. These countries include Belgium, Japan and the Republic of South Africa. Belgium does not maintain an active base, though it does exchange scientists with other countries, especially in the area of marine biology and oceanography. Japan cannot be a claimant under the Treaty of Peace signed by Japan in September 8, 1951, however, it does maintain bases on Antarctica. South Africa maintains bases on Antarctica and has enacted special legislation for South African citizens in Antarctica. *See* § 58.12, *supra*, note 122.

(n7)Footnote 188. The Treaty has allowed a diverse group of nations to work together. Differences did arise regarding the U.N. and the mining agreements; however, in general, relations have been good. *See* notes 110, 112 *supra* and note 188 *infra*.

CHAPTER 58 ANTARCTICA

7-58 Thompson on Real Property, Thomas Editions § 58.22

AUTHOR: Professor Caryl A. Yzenbaard Salmon P. Chase College of Law Northern Kentucky University

§ 58.22 Current and Future Status of the Antarctic Treaty System.

As a general statement, the Antarctic Treaty System has worked very well and all indications are that it will continue to thrive. It has been notable for allowing freedom of scientific research in a non-militarized, denuclearized environment. n189 In general, the members of the ATS work well together. n190 There has not been a successful protest against the system to date. Nonetheless, there have been and continue to be both internal and external strains on the system.

Differences between claimant members states and non-claimant member states continue to exist, despite the "freezing" of claims under the Treaty. The sovereignty issue has not disappeared, especially with non-member states. n191 Many states have not acceded to the Treaty and are not bound thereby. n192 The desire of many states (including France and Australia prior to the Madrid Protocol) calling for Antarctica to be a Wilderness Park or another form involving the common heritage of mankind is strong. n193

Among treaty members conflicts have arisen between industrialized members and less developed member states, with the latter often wanting a greater sharing of information, the opportunity for joint ventures and transfers of technology. n194

The need for a permanent Secretariat continues to grow. The impact of tourism must be addressed. n195 Scientific research will continue even if at a reduced rate; however, better coordination and sharing of information may be needed. n196 A body of private international law must be developed for the resolution of a variety of private issues. n197

Last, but not least, will private real property interests ever exist on the continent? Probably not. n198

FOOTNOTES:
(n1)Footnote 189. In fact, some have suggested the system has worked so well that it has become legitimized under customary international law either by acquiescence or estoppel. *See also* Rothwell, *supra* n. 7, at 85 who notes that "The Antarctic Treaty during its first 30 years has indeed proved to be a remarkable document." The resolution of the mineral issue, freezing all such claims for the next fifty years, retained the unity of the System. A review conference was not called as some had feared. *See* Governing the Antarctica: The Effectiveness and Legitimacy of the Antarctic Treaty System (Olav Schram Stokke and Davor Vidas, eds. Cambridge. New York. Melbourne: Cambridge Univ. Press. 1996).

The book by Stokke and Vidas, cited above, as well as the book by Francesco Francioni & Tullio Scovazzi, International Law for Antarctica (2d ed), The Hague, London, Boston, Kluwer Law International 1996, were reviewed by Donald R. Rothwell in *92 A.J.I.L. 92 (1998)* 170. In a thoughtful article, Professor David J. Bederman reviews and compares the books written by Joyner and Theis, Eagle Over the Ice: The U.S. in the Arctic, The Polar Regions and the Development of International Law, by Rothwell and Governing the Antarctic: The Effectiveness and Legitimacy of the Antarctic Treaty System, by Stokke and Vidas. Professor Bederman concludes at 190 that "With the publication of the three books considered here, ATS scholarship is in the envious position of needing less theory and more elaboration of creative legal solutions to vexing practical problems. That is a happy circumstance and the credit goes entirely to the authors of the three volumes considered in this essay." Book Review, David J. Bederman, "Theory on Ice: Antarctica in International Law and Relations," Va. J. Int'l L. 39 (Winter, 1999) 467.

(n2)Footnote 190. The system has provided stability and allowed peaceful coexistence. Even during the Falklands/Malvinas war the two warring parties (Argentina and the United Kingdom) cooperated in Antarctica.

(n3)Footnote 191. The potential use of Exclusive Economic Zones under the Law of the Sea may renew the sovereignty issue.

(n4)Footnote 192. For example, CLAMRA responded to concerns regarding krill harvesting; however, it does not bind non-member states such as Taiwan. A non-member state, Pakistan, has indicated it will establish a base on Antarctica. In addition, in general most of Africa and many Southern Asian and Middle Eastern countries are not acceding members and in fact are often vitriolic in condemnation of the system. Many non-member states feel a moral obligation to participate in Antarctica especially when coupled with the common heritage of mankind principal. Buenos Aires appears to have the support of all but Great Britain among the original twelve signatories as the site for administrative headquarters, according to an article in "La Nacion" web site Buenos Aires, as reported by the BBC Summary of World Broadcasts on April 12, 2000.

(n5)Footnote 193. *See* § 58.11 and note 191, *supra*. *See* Jost Delburch, "The Role of the United Nations in Dealing with Global Problems," *4 Ind. J. Global Legal Stud. 277 (1997);* William R. Moommaw, "Sovereignty Challenged," *21 Fletcher F. World Aff. 7 (1997);* International Law for Antarctica (Francesco Francioni and Tullio Scovazzi, eds., 2nd ed. The Hague, London, Boston: Kluwer Law Int'l. 1996).

(n6)Footnote 194. In addition, the costs involved with becoming an A.T.C.S. are great and thus it is difficult for many acceding states to become A.T.C.S. which carries with it the voting privilege. On the other hand, some ATCPs or original signatories to the Treaty are permitted to participate fully in the process while not engaged in substantial scientific research, if any at all.

(n7)Footnote 195. Some cruise ships now have suitably qualified government representatives on board to prevent environmental damage; however, private yachts are not so governed. *See, e.g.,* a recent article by Gillian Triggs Sitwell, "Worth Seeing, Getting to the Bottom of the World," Travel & Leisure, Dec. 1991 at 56 in which the author notes that approximately 6,400 people visited Antarctica in the 1991-92 season. It is noted that though a symposium was held in Colmar, France regarding tourism, which brought considerable consensus, problems remain, including the fact that yachtsmen often ignore regulations regarding protected areas. In 1992 the major operators established the International Association of Antarctic Tour Operators.

(n8)Footnote 196. *See*, for example, the discussion in Chester, *supra* n. 6, noting that not all scientific research is equally valid nor evenly distributed. At times the research is ill-conceived and poorly managed. Scientific logistics need to be improved.

(n9)Footnote 197. *See* § 58.12 *supra*, note 119.

(n10)Footnote 198. Though note the private international law should address concerns dealing with personal property or with the leasing of buildings or stations.

CHAPTER 59 PROPERTY ISSUES IN SPACE LAW

7-59 Thompson on Real Property, Thomas Editions § 59.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 59.01 Introduction.

Neither the federal nor the state governments in the United States have any appreciable amount of formal law addressing issues of outer space and related activities. Almost all of the considerable literature on space law is expressed hypothetically, making suggestions for legislation, raising issues that will eventually need legal solutions, and discussing the various international treaties by which nations take tentative steps toward addressing those issues in the international arena. n1

CHAPTER 59 PROPERTY ISSUES IN SPACE LAW

7-59 Thompson on Real Property, Thomas Editions § 59.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 59.02 The International Framework of Space Law.

As a subject of international law, space law is being formed by international conventions, individual rules recognized by various countries, international customs recognized so broadly as to have the force of law, general principles of international law, decisions of tribunals, and writings of legal scholars and experts. n2

(a) The United Nations Treaties.

The United Nations, in 1958, approved a resolution calling for the peaceful use of outer space, expressing the need for international cooperation, and declaring the sovereign equality of countries engaging in outer space activities. n3 At the same time, an *ad hoc* Committee on the Peaceful Uses of Outer Space (C.O.P.U.O.S.) was established, which eventually became a permanent committee and drafted several treaties for adoption by the General Assembly and ratification by member states. Of these treaties, the most important are the Outer Space Treaty of 1967, the Rescue Agreement of 1968, the Liability Convention of 1972, and the Registration Convention of 1975. The Moon Treaty of 1979 is also of potential importance but has not been widely accepted. n4

(1) The Outer Space Treaty.

The Outer Space Treaty provides that outer space, the moon, and other extraterrestrial bodies are the province of all peoples, are free for exploration and use by all countries, and are not subject to national appropriation or claims of sovereignty: n5

No. 8843. TREATY ON PRINCIPLES GOVERNING THE ACTIVITIES OF STATES IN THE EXPLORATION AND USE OF OUTER SPACE, INCLUDING THE MOON AND OTHER CELESTIAL BODIES. OPENED FOR SIGNATURE AT MOSCOW, LONDON AND WASHINGTON, ON 27 JANUARY 1967

The States Parties to this Treaty,

> Inspired by the great prospects opening up before mankind as a result of man's entry into outer space,

Recognizing the common interest of all mankind in the progress of the exploration and use of outer space for peaceful purposes,

Believing that the exploration and use of outer space should be carried on for the benefit of all peoples irrespective of the degree of their economic or scientific development,

Desiring to contribute to broad international co-operation in the scientific as well as the legal aspects of the exploration and use of outer space for peaceful purposes,

Believing that such co-operation will contribute to the development of mutual understanding and to the strengthening of friendly relations between States and peoples,

Recalling resolution 1962 (XVIII), entitled "Declaration of Legal Principles Governing the Activities of States in the Exploration and Use of Outer Space," which was adopted unanimously by the United Nations General Assembly on 13 December 1963,

Recalling resolution 1884 (XVIII), calling upon States to refrain from placing in orbit around the earth any objects carrying nuclear weapons or any other kinds of weapons of mass destruction or from installing such weapons on celestial bodies, which was adopted unanimously by the United Nations General Assembly on 17 October 1963,

Taking account of United Nations General Assembly resolution 110 (II) of 3 November 1947, which condemned propaganda designed or likely to provoke or encourage any threat to the peace, breach of the peace or act of aggression, and considering that the aforementioned resolution is applicable to outer space,

Convinced that a Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies, will further the Purposes and Principles of the Charter of the United Nations,

Have agreed on the following:

Article I

The exploration and use of outer space, including the moon and other celestial bodies, shall be carried out for the benefit and in the interests of all countries, irrespective of their degree of economic or scientific development, and shall be the province of all mankind.

Outer space, including the moon and other celestial bodies, shall be free for exploration and use by all States without discrimination of any kind, on a basis of equality and in accordance with international law, and there shall be free access to all areas of celestial bodies.

There shall be freedom of scientific investigation in outer space, including the moon and other celestial bodies, and States shall facilitate and encourage international co-operation in such investigation. n6

Article II

Outer space, including the moon and other celestial bodies, is not subject to national appropriation by claim of sovereignty, by means of use or occupation, or by any other means.

Article III

States Parties to the Treaty shall carry on activities in the exploration and use of outer space, including the moon and other celestial bodies, in accordance with international law, including the Charter of the United Nations, in the interest of maintaining international peace and security and promoting international co-operation and understanding.

Article IV

States Parties to the Treaty undertake not to place in orbit around the earth any objects carrying nuclear weapons on celestial bodies, or station such weapons in outer space in any other manner.

The moon and other celestial bodies shall be used by all States Parties to the Treaty exclusively for peaceful purposes. The establishment of military bases, installations and fortifications, the testing of any type of weapons and the conduct of military maneuvers on celestial bodies shall be forbidden. The use of military personnel for scientific research or for any other peaceful purposes shall not be prohibited. The use of any equipment or facility necessary for peaceful exploration of the moon and other celestial bodies shall also not be prohibited.

Article V

States Parties to the Treaty shall regard astronauts as envoys of mankind in outer space and shall render to them all possible assistance in the event of accident, distress, or emergency landing on the territory of another State Party or on the high seas. When astronauts make such a landing, they shall be safely and promptly returned to the State of registry of their space vehicle.

In carrying on activities in outer space and on celestial bodies, the astronauts of one State Party shall render all possible assistance to the astronauts of other States Parties.

States Parties to the Treaty shall immediately inform the other States Parties to the Treaty or the Secretary-General of the United Nations of any phenomena they discover in outer space, including the moon and other celestial bodies, which could constitute a danger to the life or health of astronauts.

Article VI

States Parties to the Treaty shall bear international responsibility for national activities in outer space, including the moon and other celestial bodies, whether such activities are carried on by governmental agencies or by non-governmental entities, and for assuring that national activities are carried out in conformity with the provisions set forth in the present Treaty. The activities of non-governmental entities in outer space, including the moon and other celestial bodies, shall require authorization and continuing supervision by the appropriate State Party to the Treaty. When activities are carried on in outer space, including the moon and other celestial bodies, by an international organization, responsibility for compliance with the Treaty shall be borne both by the international organization and by the States Parties to the Treaty participating in such organization.

Article VII

Each State Party to the Treaty that launches or procures the launching of an object into outer space, including the moon and other celestial bodies, and each State Party from whose territory or facility an object is launched, is internationally liable for damage to another State Party to the Treaty or to its natural or juridical persons by such object or its component parts on the Earth, in air space, including the moon and other celestial bodies.

Article VIII

A State Party to the Treaty on whose registry an object launched into outer space is carried shall retain jurisdiction and control over such object, and over any personnel thereof, while in outer space or on a celestial body. Ownership of objects launched into outer space, including objects landed or constructed on a celestial body, and of their component parts, is not affected by their presence in outer space or on a celestial body or by their return to the Earth. Such objects or component parts found beyond the limits of the State Party to the Treaty on whose registry they are carried shall be returned to that State Party, which shall, upon request, furnish identifying data prior to their return.

Article IX

In the exploration and use of outer space, including the moon and other celestial bodies, States Parties to the Treaty shall be guided by the principle of co-operation and mutual assistance and shall conduct all their activities in outer space, including the moon and other celestial bodies, with due regard to the corresponding interests of all other States Parties to the Treaty. States Parties to the Treaty shall pursue studies of outer space, including the moon and other celestial bodies, and conduct exploration of them so as to avoid their harmful contamination and also adverse changes in the environment of the Earth resulting from the introduction of extraterrestrial matter and, where necessary, shall adopt appropriate measures for this purpose. If a State Party to the Treaty has reason to believe that an activity or experiment planned by it or its nationals in outer space, including the moon and other celestial bodies, would cause potentially harmful interference with activities of other States Parties in the peaceful exploration and use of outer space, including the moon and other celestial bodies, it shall undertake appropriate international consultations before proceeding with any such activity or experiment. A State Party to the Treaty which has reason to believe that an activity or experiment planned by another State Party in outer space, including the moon and other celestial bodies, would cause potentially harmful interference with activities in the peaceful exploration and use of outer space, including the moon and other celestial bodies, may request consultation concerning the activity or experiment.

Article X

In order to promote international co-operation in the exploration and use of outer space, including the moon and other celestial bodies, in conformity with the purposes of this Treaty, the States Parties to the Treaty shall consider on a basis of equality any requests by other States Parties to the Treaty to be afforded an opportunity to observe the flight of space objects launched by those States.

The nature of such an opportunity for observation and the conditions under which it could be afforded shall be determined by agreement between the States concerned.

Article XI

In order to promote international co-operation in the peaceful exploration and use of outer space, States Parties to the Treaty conducting activities in outer space, including the moon and other celestial bodies, agree to inform the Secretary-General of the United Nations as well as the public and the international scientific community, to the greatest extent feasible and practicable, of the nature, conduct, locations and results of such activities. On receiving the said information, the Secretary-General of the United Nations should be prepared to disseminate it immediately and effectively.

Article XII

All stations, installations, equipment and space vehicles on the moon and other celestial bodies shall

be open to representatives of other States Parties to the Treaty on a basis of reciprocity. Such representatives shall give reasonable advance notice of a projected visit, in order that appropriate consultations may be held and that maximum precautions may be taken to assure safety and to avoid interference with normal operations in the facility to be visited.

Article XIII

The provisions of this Treaty shall apply to the activities of States Parties to the Treaty in the exploration and use of outer space, including the moon and other celestial bodies, whether such activities are carried on by a single State Party to the Treaty or jointly with other States, including cases where they are carried on within the framework of international inter-governmental organizations.

Any practical questions arising in connection with activities carried on by international inter-governmental organizations in the exploration and use of outer space, including the moon and other celestial bodies, shall be resolved by the States Parties to the Treaty either with the appropriate international organization or with one or more States members of that international organization, which are Parties to this Treaty.

Article XIV

1. This Treaty shall be open to all States for signature. Any State which does not sign this Treaty before its entry into force in accordance with paragraph 3 of this Article may accede to it at any time.

2. This Treaty shall be subject to ratification by signatory States. Instruments of ratification and instruments of accession shall be deposited with the Governments of the United Kingdom of Great Britain and Northern Ireland, the Union of Soviet Socialist Republics and the United States of America, which are hereby designated the Depositary Governments.

3. This Treaty shall enter into force upon the deposit of instruments of ratification by five Governments including the Governments designated as Depositary Governments under this Treaty.

4. For states whose instruments of ratification or accession are deposited subsequent to the entry into force of this Treaty, it shall enter into force on the date of the deposit of their instruments of ratification or accession.

5. The Depositary Governments shall promptly inform all signatory and acceding States of the date of each signature, the date of deposit of each instrument of ratification of and accession to this Treaty, the date of its entry into force and other notices.

6. This Treaty shall be registered by the Depositary Governments pursuant to Article 102 of the Charter of the United Nations.

Article XV

Any State Party to the Treaty may propose amendments to this Treaty. Amendments shall enter into force for each State Party to the Treaty accepting the amendments upon their acceptance by a majority of the States Parties to the Treaty and thereafter for each remaining State Party to the Treaty on the date of acceptance by it.

Article XVI

Any State Party to the Treaty may give notice of its withdrawal from the Treaty one year after its entry into force by written notification to the Depositary Governments. Such withdrawal shall take effect one year from the date of receipt of this notification.

Article XVIII

This Treaty, of which the English, Russian, French, Spanish and Chinese texts are equally authentic, shall be deposited in the archives of the Depositary Governments. Duly certified copies of this Treaty shall be transmitted by the Depositary Governments to the Governments of the signatory and acceding States.

In witness whereof the undersigned, duly authorised, have signed this Treaty.

Done in triplicate, at the cities of London, Moscow and Washington, the twenty-seventh day of January, one thousand nine hundred and sixty-seven.

(2) The Rescue Agreement.

The Rescue Agreement concerns the return and rescue of astronauts and the return of spacecraft and component parts of the launching country: n7

AGREEMENT ON THE RESCUE OF ASTRONAUTS, THE RETURN OF ASTRONAUTS AND THE RETURN OF OBJECTS LAUNCHED INTO OUTER SPACE

The Contracting Parties,

Noting the great importance of the treaty on Principles Governing the Activities of States in the exploration and Use of Outer Space, including the Moon and Other Celestial Bodies, which calls for the rendering of all possible assistance to astronauts in the event of accident, distress or emergency landing, the prompt and safe return of astronauts, and the return of objects launched into outer space,

Desiring to develop and give further concrete expression to these duties,

Wishing to promote international co-operation in the peaceful exploration and use of outer space,

Prompted by sentiments of humanity,

Have agreed on the following:

Article I

Each Contracting Party which receives information or discovers that the personnel of a spacecraft have suffered accident or are experiencing conditions of distress or have made an emergency or unintended landing in territory under its jurisdiction or on the high seas or in any other place not under the jurisdiction of any State shall immediately:

(*a*) notify the launching authority or, if it cannot identify and immediately communicate with the launching authority, immediately make a public announcement by all appropriate means of communication at its disposal;

(*b*) notify the Secretary-General of the United Nations, who should disseminate the information without

delay by all appropriate means of communication at its disposal.

Article II

If, owing to accident, distress, emergency or unintended landing, the personnel of a spacecraft land in territory under the jurisdiction of a Contracting Party, it shall immediately take all possible steps to rescue them and render them all necessary assistance. It shall inform the launching authority and also the Secretary-General of the United Nations of the steps it is taking and of their progress. If assistance by the launching authority would help to effect a prompt rescue or would contribute substantially to the effectiveness of search and rescue operations, the launching authority shall co-operate with the Contracting Party with a view to the effective conduct of search and rescue operations. Such operations shall be subject to the direction and control of the Contracting Party, which shall act in close and continuing consultation with the launching authority.

Article III

If information is received or it is discovered that the personnel of a spacecraft have alighted on the high seas or in any other place not under the jurisdiction of any State, those Contracting Parties which are in a position to do so shall, if necessary, extend assistance in search and rescue operations for such personnel to assure their speedy rescue. They shall inform the launching authority and the Secretary-General of the United Nations of the steps they are taking and of their progress.

Article IV

If, owing to accident, distress, emergency or unintended landing, the personnel of a spacecraft land in territory under the jurisdiction of a Contracting Party or have been found on the high seas or in any other place not under the jurisdiction of any State, they shall be safely and promptly returned to representatives of the launching authority.

Article V

1. Each Contracting Party which receives information or discovers that a space object or its component parts has returned to Earth in territory under its jurisdiction or on the high seas or in any other place not under the jurisdiction of any State, shall notify the launching authority and the Secretary-General of the United Nations.

2. Each Contracting Party having jurisdiction over the territory on which a space object or its component parts has been discovered shall, upon the request of the launching authority and with assistance from that authority if requested, take such steps as it finds practicable to recover the object or component parts.

3. Upon request of the launching authority, objects launched into outer space or their component parts found beyond the territorial limits of the launching authority shall be returned to or held at the disposal of representatives of the launching authority, which shall, upon request, furnish identifying data prior to their return.

4. Notwithstanding paragraphs 2 and 3 of this Article, a Contracting Party which has reason to believe that a space object or its component parts discovered in territory under its jurisdiction, or recovered by it elsewhere, is of a hazardous or deleterious nature may so notify the launching authority, which shall immediately take effective steps, under the direction and control of the said Contracting Party, to eliminate possible danger of harm.

5. Expenses incurred in fulfilling obligations to recover and return a space object or its component parts under paragraphs 2 and 3 of this Article shall be borne by the launching authority.

Article VI

For the purposes of this Agreement, the term "launching authority" shall refer to the State responsible for launching, or where an international intergovernmental organization is responsible for launching, that organization, provided that organization declares its acceptance of the rights and obligations provided for in this Agreement and a majority of the States members of that organization are Contracting Parties to this Agreement and to the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies.

Article VII

1. This Agreement shall be open to all States for signature. Any State which does not sign this Agreement before its entry into force in accordance with paragraph 3 of this Article may accede to it at any time.

2. This Agreement shall be subject to ratification by signatory States. Instruments of ratification and instruments of accession shall be deposited with the Governments of the United Kingdom of Great Britain and Northern Ireland, the Union of Soviet Socialist Republics and the United States of America, which are hereby designated the Depositary Governments.

3. This Agreement shall enter into force upon the deposit of instruments of ratification by five Governments including the Governments designated as Depositary Governments under this Agreement.

4. For States whose instruments of ratification or accession are deposited subsequent to the entry into force of this Agreement, it shall enter into force on the date of the deposit of their instruments of ratification or accession.

5. The Depositary Governments shall promptly inform all signatory and acceding States of the date of each signature, the date of deposit of each instrument of ratification of and accession to this Agreement, the date of its entry into force and other notices.

6. This Agreement shall be registered by the Depositary Governments pursuant to Article 102 of the Charter of the United Nations.

Article VIII

Any State Party to the Agreement may propose amendments to this Agreement. Amendments shall enter into force for each State party to the Agreement accepting the amendments upon their acceptance by a majority of the States Parties to the Agreement and thereafter for each remaining State Party to the Agreement on the date of acceptance by it.

Article IX

Any State Party to the Agreement may give notice of its withdrawal from the Agreement one year after its entry into force by written notification to the Depositary Governments. Such withdrawal shall take effect one year from the date of receipt of this notification.

Article X

This Agreement, of which the English, Russian, French, Spanish and Chinese texts are equally authentic, shall be deposited in the archives of the Depositary Governments. Duly certified copies of this Agreement shall be transmitted by the Depositary Governments to the Governments of the signatory and acceding States.

In witness whereof the undersigned, duly authorised, have signed this Agreement.

done in triplicate, at the cities of London, Moscow and Washington, the twenty-second day of April, one thousand nine hundred and sixty-eight.

(3) The Liability Convention.

The Liability Convention establishes principles of liability for property damage and personal injury caused by space-related activities: n8

CONVENTION ON INTERNATIONAL LIABILITY FOR DAMAGE CAUSED BY SPACE OBJECTS

The States Parties to this Convention,

Recognizing the common interest of all mankind in furthering the exploration and use of outer space for peaceful purposes,

Recalling the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies,

Taking into consideration that, notwithstanding the precautionary measures to be taken by States and international intergovernmental organizations involved in the launching of space objects, damage may on occasion be caused by such objects,

Recognizing the need to elaborate effective international rules and procedures concerning liability for damage caused by space objects and to ensure, in particular, the prompt payment under the terms of this Convention of a full and equitable measure of compensation to victims of such damage,

Believing that the establishment of such rules and procedures will contribute to the strengthening of international co-operation in the field of the exploration and use of outer space for peaceful purposes,

Have agreed the following:

Article I

For the purposes of this Convention:

(*a*) The term "damage" means loss of life, personal injury or other impairment of health; or loss of or damage to property of States or of persons, natural or juridical, or property of international intergovernmental organizations;

(*b*) The term "launching" includes attempted launching;

(*c*) The term "launching State" means:

(i) a state which launches or procures the launching of a space object;

(ii) a State from whose territory or facility a space object is launched;

(*d*) The term "space object" includes component parts of a space object as well as its launch vehicle and parts thereof.

Article II

A launching State shall be absolutely liable to pay compensation for damage caused by its space object on the surface of the earth or to aircraft in flight.

Article III

In the event of damage being caused elsewhere than on the surface of the earth to a space object of one launching State or to persons or property on board such a space object by a space object of another launching State, the latter shall be liable only if the damage is due to its fault or the fault of persons for whom it is responsible.

Article IV

1. In the event of damage being caused elsewhere than on the surface of the earth to a space object of one launching State or to persons or property on board such a space object by a space object of another launching State, and of damage thereby being caused to a third State or to its natural or juridical persons, the first two States shall be jointly and severally liable to the third State, to the extent indicated by the following:

(*a*) If the damage has been caused to the third State on the surface of the earth or to aircraft in flight, their liability to the third State shall be absolute;

(*b*) If the damage has been caused to a space object of the third State or to persons or property on board that space object elsewhere than on the surface of the earth, their liability to the third State shall be based on the fault of either of the first two States or on the fault of persons for whom either is responsible.

2. In all cases of joint and several liability referred to in paragraph 1 of this Article, the burden of compensation for the damage shall be apportioned between the first two States in accordance with the extent to which they were at fault; if the extent of the fault of each of these States cannot be established, the burden of compensation shall be apportioned equally between them. Such apportionment shall be without prejudice to the right of the third State to seek the entire compensation due under this Convention from any or all of the launching States which are jointly and severally liable.

Article V

1. Whenever two or more States jointly launch a space object, they shall be jointly and severally liable for any damage caused.

2. A launching State which has paid compensation for damage shall have the right to present a claim for indemnification to other participants in the joint launching. The participants in a joint launching may conclude agreements regarding the apportioning among themselves of the financial obligation in respect of which they are jointly and severally liable. Such agreements shall be without prejudice to the right of a State sustaining damage to seek the entire compensation due under this Convention from any or all of the launching States which are jointly and severally liable.

3. A State from whose territory or facility a space object is launched shall be regarded as a participant in a joint launching.

Article VI

1. Subject to the provisions of paragraph 2 of the Article, exoneration from absolute liability shall be granted to the extent that a launching State establishes that the damage has resulted either wholly or partially from gross negligence or from an act or omission done with intent to cause damage on the part of a claimant State or of natural or juridical persons it represents.

2. No exoneration whatever shall be granted in cases where the damage has resulted from activities conducted by a launching State which are not in conformity with international law including, in particular, the Charter of the United Nations and the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies.

Article VII

The provisions of their Convention shall not apply to damage caused by a space object of a launching State to:

(*a*) nationals of that launching State;

(*b*) foreign nationals during such time as they are participating in the operation of that space object from the time of its launching or at any stage thereafter until its descent, or during such time as they are in the immediate vicinity of a planned launching or recovery area as the result of an invitation by that launching State.

Article VIII

1. A State which suffers damage, or whose natural or juridical persons suffer damage, may present to a launching State a claim for compensation for such damage.

2. If the State of nationality has not presented a claim, another State may, in respect of damage sustained in its territory by any natural or juridical person, present a claim to a launching State.

3. If neither the State of nationality nor the State in whose territory the damage was sustained has presented a claim or notified its intention of presenting a claim another State may, in respect of damage sustained by its permanent residents, present a claim to a launching State.

Article IX

A claim for compensation for damage shall be presented to a launching State through diplomatic channels. If a State does not maintain diplomatic relations with the launching State concerned, it may request another State to present its claim to that launching State or otherwise represent its interests under

this Convention. It may also present its claim through the Secretary-General of the United Nations, provided the claimant State and the launching State are both Members of the United Nations.

Article X

1. A claim for compensation for damage may be presented to a launching State not later than one year following the date of the occurrence of the damage or the identification of the launching State which is liable.

2. If, however, a State does not know of the occurrence of the damage or has not been able to identify the launching State which is liable, it may present a claim within one year following the date on which it learned of the aforementioned facts; however, this period shall in no event exceed one year following the date on which the State could reasonably be expected to have learned of the facts through the exercise of due diligence.

3. The time-limits specified in paragraphs 1 and 2 of this Article shall apply even if the full extent of the damage may not be known. In this event, however, the claimant State shall be entitled to revise the claim and submit additional documentation after the expiration of such time-limits until one year after the full extent of the damage is known.

Article XI

1. Presentation of a claim to a launching State for compensation for damage under this Convention shall not require the prior exhaustion of any local remedies which may be available to a claimant State or to natural or juridical persons it represents.

2. Nothing in this Convention shall prevent a State, or natural or juridical persons it might represent, from pursuing a claim in the courts or administrative tribunals or agencies of a launching State. A State shall not, however, be entitled to present a claim under this Convention in respect of the same damage for which a claim is being pursued in the courts or administrative tribunals or agencies of a launching State or under another international agreement which is binding on the States concerned.

Article XII

The compensation which the launching State shall be liable to pay for damage under this Convention shall be determined in accordance with international law and the principles of justice and equity, in order to provide such reparation in respect of the damage as will restore the person, natural or juridical, State or international organization on whose behalf the claim is presented to the condition which would have existed if the damage had not occurred.

Article XIII

Unless the claimant State and the State from which compensation is due under this Convention agree on another form of compensation, the compensation shall be paid in the currency of the claimant State or, if that State so requests, in the currency of the State from which compensation is due.

Article XIV

If no settlement of a claim is arrived at through diplomatic negotiations as provided for in Article IX, within one year from the date on which the claimant State notifies the launching State that it has

submitted the documentation of its claim, the parties concerned shall establish a Claims Commission at the request of either party.

Article XV

1. The Claims Commission shall be composed of three members: one appointed by the claimant State, one appointed by the launching State and the third member, the Chairman, to be chosen by both parties jointly. Each party shall make its appointment within two months of the request for the establishment of the Claims Commission.

2. If no agreement is reached on the choice of the Chairman within four months of the request for the establishment of the Commission, either party may request the Secretary-General of the United Nations to appoint the Chairman within a further period of two months.

Article XVI

1. If one of the parties does not make its appointment within the stipulated period, the Chairman shall, at the request of the other party, constitute a single-member Claims commission.

2. Any vacancy which may arise in the Commission for whatever reason shall be filled by the same procedure adopted for the original appointment.

3. The Commission shall determine its own procedure.

4. The Commission shall determine the place or places where it shall sit and all other administrative matters.

5. Except in the case of decisions and awards by a single-member Commission, all decisions and awards of the Commission shall be by majority vote.

Article XVII

No increase in the membership of the Claims Commission shall take place by reason of two or more claimant States or launching States being joined in any one proceeding before the Commission. The claimant States so joined shall collectively appoint one member of the Commission in the same manner and subject to the same conditions as would be the case for a single claimant State. When two or more launching States are so joined, they shall collectively appoint one member of the Commission in the same way. If the claimant States or the launching States do not make the appointment within the stipulated period, the Chairman shall constitute a single-member Commission.

Article XVII

The Claims Commission shall decide the merits of the claim for compensation and determine the amount of compensation payable, if any.

Article XIX

1. The Claims Commission shall act in accordance with the provisions of Article XII.

2. The decision of the Commission shall be final and binding if the parties have so agreed; otherwise the

Commission shall render a final and recommendatory award, which the parties shall consider in good faith. The Commission shall state the reasons for its decision or award.

3. The Commission shall give its decision or award as promptly as possible and no later than one year from the date of its establishment, unless an extension of this period is found necessary by the Commission.

4. The Commission shall make its decision or award public. It shall deliver a certified copy of its decision or award to each of the parties and to the Secretary-General of the United Nations.

Article XX

The expenses in regard to the Claims Commission shall be borne equally by the parties, unless otherwise decided by the Commission.

Article XXI

If the damage caused by a space object presents a large-scale danger to human life or seriously interferes with the living conditions of the population or the functioning of vital centers, the States Parties, and in particular the launching State, shall examine the possibility of rendering appropriate and rapid assistance to the State which has suffered the damage, when it so requests. However, nothing in this Article shall affect the rights or obligations of the States Parties under this Convention.

Article XXII

1. In this Convention, with the exception of Articles XXIV to XXVII, references to States shall be deemed to apply to any international intergovernmental organization which conducts space activities if the organization declared its acceptance of the rights and obligations provided for in this Convention and if a majority of the States members of the organization are State Parties to this Convention and to the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies.

2. States members of any such organization which are States Parties to this Convention shall take all appropriate steps to ensure that the organization makes a declaration in accordance with the preceding paragraph.

3. If an international intergovernmental organization is liable for damage by virtue of the provisions of this Convention, that organization and those of its members which are States Parties to this Convention shall be jointly and severally liable; provided, however, that:

(*a*) any claim for compensation in respect of such damage shall be first presented to the organization;

(*b*) only where the organization has not paid, within a period of six months, any sum agreed or determined to be due as compensation for such damage, may the claimant State invoke the liability of the members which are States Parties to this Convention for the payment of that sum.

4. Any claim, pursuant to the provisions of this Convention, for compensation in respect of damage caused to an organization which has made a declaration in accordance with paragraph 1 of this Article

shall be presented by a State member of the organization which is a State Party to this Convention.

Article XXIII

1. The provisions of this Convention shall not affect other international agreements in force in so far as relations between the States Parties to such agreements are concerned.

2. No provision of this Convention shall prevent States from concluding international agreements reaffirming, supplementing or extending its provisions.

Article XXIV

1. This Convention shall be open to all States for signature. Any State which does not sign this Convention before its entry into force in accordance with paragraph 3 of this Article may accede to it at any time.

2. This Convention shall be subject to ratification by signatory States. Instruments of ratification and instruments of accession shall be deposited with the Governments of the United Kingdom of Great Britain and Northern Ireland, the Union of Soviet Socialist Republics and the United States of America, which are hereby designated the Depositary Governments.

3. This Convention shall enter into force on the deposit of the fifth instrument of ratification.

4. For States whose instruments of ratification or accession are deposited subsequent to the entry into force of this Convention, it shall enter into force on the date of the deposit of their instruments of ratification or accession.

5. The Depositary Governments shall promptly inform all signatory and acceding States of the date of each signature, the date of deposit of each instrument of ratification of and accession to this Convention, the date of its entry into force and other notices.

6. This Convention shall be registered by the Depositary governments pursuant to Article 102 of the Charter of the United Nations.

Article XXV

Any State Party to this Convention may propose amendments to this Convention. Amendments shall enter into force for each State Party to the Convention accepting the amendments upon their acceptance by a majority of the States Parties to the Convention and thereafter for each remaining State Party on the date of acceptance by it.

Article XXVI

Ten years after the entry into force of this Convention, the question of the review of this Convention shall be included in the provisional agenda of the United Nations General Assembly in order to consider, in the light of past application of the Convention, whether it requires revision. However, at any time after the Convention has been in force for five years, and at the request of one third of the States Parties to the Convention, and with the concurrence of the majority of the State Parties, a conference of the States Parties shall be convened to review this Convention.

Article XXVII

Any State Party to this Convention may give notice of its withdrawal from the Convention one year after its entry into force by written notification to the Depositary Governments. Such withdrawal shall take effect one year from the date of receipt of this notification.

Article XXVIII

This Convention, of which the English, Russian, French, Spanish and Chinese texts are equally authentic, shall be deposited in the archives of the Depositary Governments. Duly certified copies of this Convention shall be transmitted by the Depositary Governments of the signatory and acceding States.

(4) The Registration Convention.

The Registration Convention establishes a registry for space objects: n9

CONVENTION ON REGISTRATION OF OBJECTS LAUNCHED INTO OUTER SPACE

The States Parties to this Convention,

Recognizing the common interest of all mankind in furthering the exploration and use of outer space for peaceful purposes,

Recalling that the Treaty on principles governing the activities of States in the exploration and use of outer space, including the moon and other celestial bodies, of 27 January 1967 affirms that States shall bear international responsibility for their national activities in outer space and refers to the State on whose registry an object launched into outer spaced is carried,

Recalling also that the Agreement on the rescue of astronauts, the return of astronauts and the return of objects launched into outer space of 22 April 1968 provides that a launching authority shall, upon request, furnish identifying data prior to the return of an object it has launched into outer space found beyond the territorial limits of the launching authority,

Recalling further that the Convention on international liability for damage caused by space objects of 29 March 1972 establishes international rules and procedures concerning the liability of launching States for damage caused by their space objects,

Desiring, in the light of the Treaty on principles governing the activities of States in the exploration and use of outer space, including the moon and other celestial bodies, to make provision for the national registration by launching States of space objects launched into outer space,

Desiring further that a central register of objects launched into outer space be established and maintained, on a mandatory basis, by the Secretary-General of the United Nations,

Desiring also to provide for States Parties additional means and procedures to assist in the identification of space objects,

Believing that a mandatory system of registering objects launched into outer space would, in particular, assist in their identification and would contribute to the application and development of international law governing the exploration and use of outer space,

Have agreed on the following:

Article I

For the purposes of the Convention:

(a) The term "launching State" means:

(i) A State which launches or procures the launching of a space object;

(ii) a State from whose territory or facility a space object is launched;

(b) The term "space object" includes component parts of a space object as well as its launch vehicle and parts thereof:

(c) The term "State of registry" means a launching State on whose registry a space object is carried in accordance with article II.

Article II

1. When a space object is launched into earth orbit or beyond, the launching State shall register the space object by means of an entry in an appropriate registry which it shall maintain. Each launching state shall inform the Secretary-General of the United Nations of the establishment of such a registry.

2. Where there are two or more launching States in respect of any such space object, they shall jointly determine which one of them shall register the object in accordance with paragraph 1 of this article, bearing in mind the provisions of article VIII of the Treaty on principles governing the activities of States in the exploration and use of outer space, including the moon and other celestial bodies, and without prejudice to appropriate agreements concluded or to be concluded among the launching States on jurisdiction and control over the space object and over any personnel thereof.

3. The contents of each registry and the conditions under which it is maintained shall be determined by the State of registry concerned.

Article III

1. The Secretary-General of the United Nations shall maintain a Register in which the information furnished in accordance with article IV shall be recorded.

2. There shall be full and open access to the information in this Register.

Article IV

1. Each State of registry shall furnish to the Secretary-General of the United Nations, as soon as practicable, the following information concerning each space object carried on its registry:

(a) name of launching State or States;

(b) an appropriate designator of the space object or its registration number;

(c) date and territory of location of launch;

(d) basic orbital parameters, including:
(i) nodal period,

(ii) inclination,

(iii) apogee,

(iv) perigee;

(e) general function of the space object.

2. Each State of registry may, from time to time, provide the Secretary-General of the United Nations with additional information concerning a space object carried on its registry.

3. Each State of registry shall notify the Secretary-General of the United Nations, to the greatest extent feasible and as soon as practicable, of space objects concerning which it has previously transmitted information, and which have been but no longer are in earth orbit.

Article V

Whenever a space object launched into earth orbit or beyond is marked with the designator or registration number referred to in article IV, paragraph 1 (b), or both, the State of registry shall notify the Secretary-General of this fact when submitting the information regarding the space object in accordance with article IV. In such case, the Secretary-General of the United Nations shall record this notification in the Register.

Article VI

Where the application of the provisions of this Convention has not enabled a State Party to identify a space object which has caused damage to it or to any of its natural or juridical persons, or which may be of a hazardous or deleterious nature, other States Parties, including in particular States possessing space monitoring and tracking facilities, shall respond to the greatest extent feasible to a request by that State Party, or transmitted through the Secretary-General on its behalf, for assistance under equitable and reasonable conditions in the identification of the object. A State Party making such a request shall, to the greatest extent feasible, submit information as to the time, nature and circumstances of the events giving rise to the request. Arrangements under which such assistance shall be rendered shall be the subject of agreement between the parties concerned.

Article VII

1. In this Convention, with the exception of articles VIII to XII inclusive, references to States shall be deemed to apply to any international inter-governmental organization which conducts space activities if the organization declares its acceptance of the rights and obligations provided for in this Convention and if a majority of the States members of the organization are States Parties to this Convention and to the Treaty on principles governing the activities of States in the exploration and use of outer space, including the moon and other celestial bodies.

2. States members of any such organization which are States Parties to this Convention shall take all appropriate steps to ensure that the organization makes a declaration in accordance with paragraph 1 of this article.

Article VIII

1. This Convention shall be open for signature by all States at United Nations Headquarters in New York. Any State which does not sign the Convention before its entry into force in accordance with paragraph 3 of this article may accede to it at any time.

2. This Convention shall be subject to ratification by signatory States. Instruments of ratification and instruments of accession shall be deposited with the Secretary-General of the United Nations.

3. This Convention shall enter into force among the States which have deposited instruments of ratification on the deposit of the fifth such instruments with the Secretary-General of the United Nations.

4. For States whose instruments of ratification or accession are deposited subsequent to the entry into force of this Convention, it shall enter into force on the date of the deposit of their instruments of ratification or accession.

5. The Secretary-General shall promptly inform all signatory and acceding States of the date of each signature, the date of deposit of each instrument of ratification of and accession to this Convention, the date of its entry into force and other notices.

Article IX

Any State Party to this Convention may propose amendments to the Convention. Amendments shall enter into force for each State Party to the Convention accepting the amendments upon their acceptance by a majority of the States Parties to the Convention and thereafter for each remaining State Party to the Convention on the date of acceptance by it.

Article X

Ten years after the entry into force of this Convention, the question of the review of the Convention shall be included in the provisional agenda of the United Nations General Assembly in order to consider, in the light of past application of the Convention, whether it requires revision. However, at any time after the Convention has been in force for five years, at the request of one third of the States Parties to the Convention and with the concurrence of the majority of the States Parties, a conference of the States Parties shall be convened to review this Convention. Such review shall take into account in particular any relevant technological developments, including those relating to the identification of space objects. n10

Article XI

Any State Party to this Convention may give notice of its withdrawal from the Convention one year after its entry into force by written notification to the Secretary-General of the United Nations. Such withdrawal shall take effect one year from the date of receipt of this notification.

Article XII

The original of this Convention, of which the Arabic, Chinese, English, French, Russian and Spanish

texts are equally authentic, shall be deposited with the Secretary-General of the United Nations, who shall send certified copies thereof to all signatory and acceding States.

In Witness whereof the undersigned, being duly authorized thereto by their respective Governments, have signed this Convention, opened for signature at New York on the fourteenth day of January one thousand nine hundred and seventy-five.

(5) The Moon Treaty.

The Moon Treaty has not been widely accepted, especially by the major nations, for reasons related to property rights and summarized as follows:

Article XI of the Moon Treaty declares that "the moon and its natural resources are the common heritage of mankind." This concept entails an "equitable sharing" by all parties in the benefits derived from these natural resources, whereby the interest and needs of the developing countries, as well as the efforts of those countries which have contributed either directly or indirectly to the exploration of the moon, shall be given special consideration. Further, when exploitation of these resources becomes feasible, the Moon Treaty requires the establishment of an international regime, including appropriate procedures to govern the exploitation of these resources. Developing countries argue that the "common heritage of mankind" principle amounts to a theory of common property for all the nations and peoples of the world. Consequently, if the Moon Treaty were widely accepted, there could be significant legal ramifications regarding the taking of "common heritage of mankind" property, such as mineral resources, without consent of all the "owners." n11

The text of the Moon Treaty is as follows: n12

Agreement Governing the Activities of States on the Moon and Other Celestial Bodies

The General Assembly,

Reaffirming the importance of international cooperation in the field of the exploration and peaceful uses of outer space, including the moon and other celestial bodies, and of promoting the rule of law in the field of human endeavor,

Recalling its resolution 2779 (XXVI) of 29 November 1971, in which it requested the Committee on the Peaceful Uses of Outer Space and its Legal Sub-Committee to consider the question of the elaboration of a draft international treaty concerning the moon, as well as its resolutions 2915 (XXVII) of 9 November 1972, 3182 (XXVIII) of 18 December 1973, 3234 (XXIX) of 12 November 1974, 3388 (XXX) of 18 November 1975, 31/8 of 8 November 1976, 32/196 A if 20 December 1977 and 33/16 of 10 November 1978, in which it, *inter alia*, encouraged the elaboration of the draft treaty relating to the moon,

Recalling, in particular, that in resolution 33/16 it endorsed the recommendation of the Committee on the Peaceful Uses of Outer Space that the Legal Sub-Committee at its eighteenth session should continue as a matter of priority its efforts to complete the draft treaty relating to the moon,

Having considered the relevant part of the report of the Committee on the Peaceful Uses of Outer Space, in particular paragraph 62, 63, and 65,

Noting with satisfaction that the Committee on the Peaceful Uses of Outer Space, on the basis of the deliberations and recommendations of the Legal Sub-Committee, has completed the text of the draft

Agreement Governing the Activities of States on the Moon and Other Celestial Bodies,

Having considered the text of the draft Agreement Governing the Activities of States on the Moon and Other Celestial Bodies,

1. *Commends* the Agreement Governing the Activities of States on the Moon and Other Celestial Bodies, the text of which is annexed to the present resolution;

2. *Requests* the Secretary-General to open the Agreement for signature and ratification at the earliest possible date;

3. *Expresses its hope* for the widest possible adherence to this Agreement.

89th plenary meeting

5 December 1979

ANNEX

Agreement Governing the Activities of States on the Moon and Other Celestial Bodies

The States Parties to this Agreement,

Noting the achievements of States in the exploration and use of the moon and other celestial bodies,

Recognizing that the moon, as a natural satellite of the earth, has an important role to play in the exploration of outer space,

Determined to promote on the basis of equality the further development of cooperation among States in the exploration and use of the moon and other celestial bodies,

Desiring to prevent the moon from becoming an area of international conflict,

Bearing in mind the benefits which may be derived from the exploitation of the natural resources of the moon and other celestial bodies,

Recalling the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies, the Agreement on the Rescue of Astronauts, the Return of Astronauts and the Return of Objects Launched into Outer Space, the Convention on International Liability for Damage Caused by Space Objects, and the Convention on Registration of Objects Launched into Outer Space,

Taking into account the need to define and develop the provisions of these international instruments in relation to the moon and other celestial bodies, having regard to further progress in the exploration and use outer space,

Have agreed on the following:

Article I

1. The provisions of this Agreement relating to the moon shall also apply to other celestial bodies within the solar system, other than the earth, except in so far as specific legal norms enter into force with respect to any of these celestial bodies.

2. For the purposes of this Agreement reference to the moon shall include orbits around or other trajectories to or around it.

3. This Agreement does not apply to extraterrestrial materials which reach the surface of the earth by natural means.

Article II

All activities on the moon, including its exploration and use, shall be carried out in accordance with international law, in particular the Charter of the United Nations, and taking into account the Declaration on Principles of International Law concerning Friendly Relations and Cooperation among States in accordance with the Charter of the United Nations, adopted by the General Assembly on 24 October 1970, in the interest of maintaining international peace and security and promoting international cooperation and mutual understanding, and with due regard to the corresponding interests of all other States Parties.

Article III

1. The moon shall be used by all States Parties exclusively for peaceful purposes.

2. Any threat or use of force or any other hostile act or threat of hostile act on the moon is prohibited. It is likewise prohibited to use the moon in order to commit any such act or to engage in any such threat in relation to the earth, the moon, spacecraft, the personnel of spacecraft or man-made space objects.

3. States Parties shall not place in orbit around or other trajectory to or around the moon objects carrying nuclear weapons or any other kinds of weapons of mass destruction or place or use such weapons on or in the moon.

4. The establishment of military bases, installations and fortifications, the testing of any type of weapons and the conduct of military manoeuvre on the moon shall be forbidden. The use of military personnel for scientific research or for any other peaceful purposes shall not be prohibited. The use of any equipment or facility necessary for peaceful exploration and use of the moon shall also not be prohibited.

Article IV

1. The exploration and use of the moon shall be the province of all mankind and shall be carried out for the benefit and in the interests of all countries, irrespective of their degree of economic or scientific development. Due regard shall be paid to the interests of present and future generations as well as to the need to promote higher standards of living and conditions of economic and social progress and development in accordance with the Charter of the United Nations.

2. States Parties shall be guided by the principle of cooperation and mutual assistance in all their activities concerning the exploration and use of the moon. International cooperation in pursuance of this Agreement should be as wide as possible and may take place on a multilateral basis, on a bilateral basis or through international intergovernmental organizations.

Article V

1. States Parties shall inform the Secretary-General of the United Nations as well as the public and the international scientific community, to the greatest extent feasible and practicable, of their activities concerned with the explorations and use of the moon. Information on the time, purposes, locations, orbital parameters and duration shall be given in respect of each mission to the moon as soon as possible after launching, while information on the results of each mission, including scientific results, shall be furnished upon completion of the mission. In the case of a mission lasting more than sixty days, information on conduct of the mission, including any scientific results, shall be given periodically, at thirty-day intervals. For missions lasting more than six months, only significant additions to such information need be reported thereafter.

2. If a State Party becomes aware that another State Party plans to operate simultaneously in the same area of or in the same orbit around or trajectory to or around the moon, it shall promptly inform the other State of the timing of and plans for its own operations.

3. In carrying out activities under this Agreement, States Parties shall promptly inform the Secretary-General, as well as the public and the international scientific community, of any phenomena they discover in outer space, including the moon, which could endanger human life or health, as well as of any indication of organic life.

Article VI

1. There shall be freedom of scientific investigation on the moon by all States Parties without discrimination of any kind, on the basis of equality and in accordance with international law.

2. In carrying out scientific investigations and in furtherance of the provisions of this Agreement, the States Parties shall have the right to collect on and remove from the moon samples of its mineral and other substances. Such samples shall remain at the disposal of those States Parties which caused them to be collected and may be used by them for scientific purposes. States Parties shall have regard to the desirability of making a portion of such samples available to other interested States Parties and the international scientific community for scientific investigation. States Parties may in the course of scientific investigations also use mineral and other substances of the moon in quantities appropriate for the support of their missions.

3. States Parties agree on the desirability of exchanging scientific and other personnel on expeditions to or installations on the moon to the greatest extent feasible and practicable.

Article VII

1. In exploring and using the moon, States Parties shall take measures to prevent the disruption of the existing balance of its environment, whether by introducing adverse changes in that environment, by its harmful contamination through the introduction of extra-environmental matter or otherwise. States Parties shall also take measures to avoid harmfully affecting the environment of the earth through the introduction of extraterrestrial matter or otherwise.

2. States Parties shall inform the Secretary-General of the United Nations of the measures being adopted by them in accordance with paragraph 1 of this article and shall also, to the maximum extent feasible, notify him in advance of all placements by them of radioactive materials on the moon and of the purposes of such placements.

3. States Parties shall report to other States Parties and to the Secretary-General concerning areas of the moon having special scientific interest in order that, without prejudice to the rights of other States Parties, consideration may be given to the designation of such areas as international scientific preserves for which special protective arrangements are to be agreed upon in consultation with the competent bodies of the United Nations.

Article VIII

1. States Parties may pursue their activities in the exploration and use of the moon anywhere on or below its surface, subject to the provisions of this Agreement.

2. For these purposes States Parties may, in particular:

(a) Land their space objects on the moon and launch them from the moon;

(b) Place their personnel, space vehicles, equipment, facilities, stations, and installations anywhere on or below the surface of the moon.

Personnel, space vehicles, equipment, facilities, stations and installations may move or be moved freely over or below the surface of the moon.

3. Activities of States Parties in accordance with paragraphs 1 and 2 of this article shall not interfere with the activities of other States Parties on the moon. Where such interference may occur, the States Parties concerned shall undertake consultations in accordance with article 15, paragraphs 2 and 3, of this Agreement.

Article IX

1. States Parties may establish manned and unmanned stations on the moon. A State Party establishing a station shall use only that area which is required for the needs of the station and shall immediately inform the Secretary-General of the United Nations of the location and purposes of that station. Subsequently, at annual intervals that State shall likewise inform the Secretary-General whether the station continues in use and whether its purposes have changed.

2. Stations shall be installed in such a manner that they do not impede the free access to all areas of the moon of personnel, vehicles and equipment of other States Parties conducting activities on the moon in accordance with the provisions of this Agreement or of Article I of the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies.

Article X

1. States Parties shall adopt all practicable measures to safeguard the life and health of persons on the moon. For this purpose they shall regard any person on the moon as an astronaut within the meaning of article V of the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies, and as part of the personnel of a spacecraft within the meaning of the Agreement on the Rescue of Astronauts, the Return of Astronauts and the Return of Objects Launched into Outer Space.

2. States Parties shall offer shelter in their stations, installations, vehicles and other facilities to persons in

distress on the moon.

Article XI

1. The moon and its natural resources are the common heritage of mankind, which finds its expression in the provisions of this Agreement, in particular in paragraph 5 of this article.

2. The moon is not subject to national appropriations by any claim of sovereignty, by means of use or occupation, or by any other means.

3. Neither the surface nor the subsurface of the moon, nor any part thereof or natural resources in place, shall become property of any State, international intergovernmental or non-governmental organization, national organization or non-governmental entity or of any natural person. The placement of personnel, space vehicles, equipment, facilities, stations and installations on or below the surface of the moon, including structures connected with its surface or subsurface, shall not create a right of ownership over the surface or the subsurface of the moon or any areas thereof. The foregoing provisions are without prejudice to the international r'egime referred to in paragraph 5 of this article.

4. States Parties have the right to exploration and use of the moon without discrimination of any kind, on the basis of equality and in accordance with international law and the provisions of this Agreement.

5. States Parties to this Agreement hereby undertake to establish an international r'egime, including appropriate procedures, to govern the exploitation of the natural resources of the moon as such exploitation is about to become feasible. This provision shall be implemented in accordance with article 18 of this Agreement.

6. In order to facilitate the establishment of the international r'egime referred to in paragraph 5 of this article, States Parties shall inform the Secretary-General of the United Nations as well as the public and the international scientific community, to the greatest extent feasible and practicable, of any natural resources they may discover on the moon.

7. The main purposes of the international r'egime to be established shall include:

(a) The orderly and safe development of the natural resources of the moon;

(b) The rational management of those resources;

(c) The expansion of opportunities in the use of those resources;

(d) An equitable sharing by all States Parties in the benefits derived from those resources, whereby the interests and needs of the developing countries which have contributed either directly or indirectly to the exploration of the moon, shall be given special consideration.

8. All the activities with respect to the natural resources of the moon shall be carried out in a manner compatible with the purposes specified in paragraph 7 of this article and the provisions of article 6, paragraph 2, of this Agreement.

Article XII

1. States Parties shall retain jurisdiction and control over their personnel, space vehicles, equipment,

facilities, stations and installations on the moon. The ownership of space vehicles, equipment, facilities, stations and installations shall not be affected by their presence on the moon.

2. Vehicles, installations and equipment or their component parts found in places other than their intended location shall be dealt with in accordance with article 5 of the Agreement on the Rescue of Astronauts, the Return of Astronauts and the Return of Objects Launched into Outer Space.

3. In the event of an emergency involving a threat to human life, States Parties may use the equipment, vehicles, installations, facilities or supplies of other States Parties on moon. Prompt notification of such use shall be made to the Secretary-General of the United Nations or the State Party concerned.

Article XIII

A State Party which learns of the crash landing, forced landing or other unintended landing on the moon of a space object, or its component parts, that were not launched by it, shall promptly inform the launching State Party and the Secretary-General of the United Nations.

Article XIV

1. States Parties to this Agreement shall bear international responsibility for national activities on the moon, whether such activities are carried out by governmental agencies or by non-governmental entities, and for assuring that national activities are carried out in conformity with the provisions of the Agreement. States Parties shall ensure that non-governmental entities under their jurisdiction shall engage in activities on the moon only under the authority and continuing supervision of the appropriate State Party.

2. States Parties recognize that detailed arrangements concerning liability for damage caused on the moon, in addition to the provisions of the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies, and the Convention on International Liability for Damage Caused by Space Objects, may become necessary as a result of more extensive activities on the moon. Any such arrangements shall be elaborated in accordance with the procedure provided for in article 18 of this Agreement.

Article XV

1. Each State Party may assure itself that the activities of other States Parties in the exploration and use of the moon are compatible with the provisions of this Agreement. To this end, all space vehicles, equipment, facilities, stations and installations on the moon shall be open to other States Parties. Such States Parties shall give reasonable advance notice of a projected visit, in order that appropriate consultations may be held and that maximum precautions may be taken to assure safety and to avoid interference with normal operations in the facility and to avoid interference with normal operations in the facility to be visited. In pursuance of this article, any State Party may act on its own behalf or with the full or partial assistance of any other State Party or through appropriate international procedures within the framework of the United Nations and in accordance with the Charter.

2. A State Party which has reason to believe that another State Party is not fulfilling the obligations incumbent upon it pursuant to this Agreement or that another State Party is interfering with the rights which the former State has under this Agreement may request consultations with that State Party. A State Party receiving such a request shall enter into such consultations without delay. Any other State Party which requests to do so shall be entitled to take part in the consultations. Each State Party participating in

such consultations shall seek a mutually acceptable resolution of any controversy and shall bear in mind the rights and interests of all States Parties. The Secretary-General of the United Nations shall be informed of the results of the consultations and shall transmit the information received to all States Parties concerned.

3. If the consultations do not lead to a mutually acceptable settlement which has due regard for the rights and interests of all States Parties, the parties concerned shall take all measures to settle the dispute by other peaceful means of their choice appropriate to the circumstances and the nature of the dispute. If difficulties arise in connection with the opening of consultations or if consultations do not lead to a mutually acceptable settlement, any State Party may seek the assistance of the Secretary-General, without seeking the consent of any other State Party concerned, in order to resolve the controversy. A State Party which does not maintain diplomatic relations with another State Party concerned shall participate in such consultations, at its choice, either itself or through another State Party or the Secretary-General as intermediary.

Article XVI

With the exception of articles 17 to 21, references in this Agreement to States shall be deemed to apply to any international intergovernmental organization which conducts space activities if the organization declares its acceptance of the rights and obligations provided for in this Agreement and if a majority of the States members of the organization are States Parties to this Agreement and to the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, including the Moon and Other Celestial Bodies. States members of any such organization which are States Parties to this Agreement shall take all appropriate steps to ensure that the organization makes a declaration in accordance with the provisions of this article.

Article XVII

Any State Party to this Agreement may propose amendments to the Agreement. Amendments shall enter into force for each State Party to the Agreement accepting the amendments upon their acceptance by a majority of the States Parties to the Agreement and thereafter for each remaining State Party to the Agreement on the date of acceptance by it.

Article XVIII

Ten years after the entry into force of this Agreement, the question of the review of the Agreement shall be included in the provisional agenda of the General Assembly of the United Nations in order to consider, in the light of past application of the Agreement, whether it requires revision. However, at any time after the Agreement has been in force for five years, the Secretary-General of the United Nations, as depository, shall, at the request of one third of the States Parties to the Agreement and with the concurrence of the majority of the States Parties, convene a conference of the States Parties to review this Agreement. A review conference shall also consider the question of the implementation of the provisions of article 11, paragraph 5, on the basis of the principle referred to in paragraph 1 of that article and taking into account in particular any relevant technological developments.

Article XIX

1. This Agreement shall be open for signature by all States at United Nations Headquarters in New York.

2. This Agreement shall be subject to ratification by signatory States. Any State which does not sign this

Agreement before its entry into force in accordance with paragraph 3 of this article may accede to it at any time. Instruments of ratification or accession shall be deposited with the Secretary-General of the United Nations.

3. This Agreement shall enter into force on the thirtieth day following the date of deposit of the fifth instrument of ratification.

4. For each State depositing its instrument of ratification or accession after the entry into force of this Agreement, it shall enter into force on the thirtieth day following the date of deposit of any such instrument.

5. The Secretary-General shall promptly inform all signatory and acceding States of the date of each signature, the date of deposit of each instrument of ratification or accession to this Agreement, the date of its entry into force and other notices.

Article XX

Any State Party to this Agreement may give notice of its withdrawal from the Agreement one year after its entry into force by written notification to the Secretary-General of the United Nations. Such withdrawal shall take effect one year from the date of receipt of this notification.

Article XXI

The original of this Agreement, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic, shall be deposited with the Secretary-General of the United Nations, who shall send certified copies thereof to all signatory and acceding States.

In witness whereof the undersigned, being duly authorized thereto by their respective Governments, have signed this Agreement, opened for signature at New York on... .

(b) Other Rules of International Law.

In addition to these multilateral treaties emanating from the United Nations, international legal custom has also emerged to deal with other legal problems connected with activity in outer space. Some of these have only indirect impact on property rights.

Widely accepted custom has confirmed the right to launch satellites and other space objects into orbit over the territory of other nations of the world. This right may be exercised without prior permission or authorization of the countries over whose territories the launches occur. This custom with regard to outer space is in contrast with the custom with respect to air space, as attested by the numerous attacks on aircraft that have intentionally or unintentionally violated another nation's sovereign air space. Additionally, there is no international consensus treating launching vehicles the same as reentering vehicles or satellites. Many countries regard reentry as a violation of airspace n13

Another significant component of international space law is that of telecommunication, regulated to some degree by the International Telecommunication Union of the United Nations. n14

Yet to be addressed are issues of space debris and nuclear contamination. n15"It is estimated that there are already four million pounds of debris in low earth orbit and that the accumulation of small debris increases at a rate in excess of ten percent per year." n16

All nations are concerned about possible militarization and "weaponization" of outer space. n17

CHAPTER 59 PROPERTY ISSUES IN SPACE LAW

7-59 Thompson on Real Property, Thomas Editions § 59.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 59.03 American Property Law Issues Posed by Outer Space.

Probably the most vexing of these issues for the United States is the approach of the Moon Treaty, which declares outer space natural resources as free from exploitation by individual nations. This has been widely criticized as unhelpful in a world where these new deposits of natural resources may be badly needed, and incentives for - rather than prohibitions against - their exploitation should be included in the legal regime. n18 One writer has suggested, alternatively, that outer space natural resources should be made available in accordance with a reasonable use doctrine, familiar in the riparian rights of American water law. n19

Closer to home, another persisting issue is establishing the actual delineation between air space and outer space. According to presently accepted legal doctrine, a private landowner or a government may exercise "sovereignty" over air space; as exhibited in the various multilateral treaties, however, the usual approach toward outer space is to declare it free from exercise of national sovereignty. If this distinction persists and is universally recognized, then it will be necessary to create some universal standard on the physical extent of airspace rights over land and territory. n20 In addition to property law issues, other rather ordinary legal disputes, such as those centered on contract issues, inevitably rise in connection with efforts to explore and exploit outer space. n21

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions 60.syn

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.syn Synopsis to Chapter 60: THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

www.law.upenn.edu/bll/ulc/ulc_frame.htmIntroduction.

§ 60.02 Easement Defined.

(a) Use of the Land of Another.

(b) Easements as Property Rights.

(c) Nonpossessory Interest: Easement Contrasted With Fee or Leasehold.

(d) Incorporeal Interest.

(e) Positive and Negative Easements.

(1) Only Four Negative Easements Generally Recognized.

(2) Easements of View, Light or Air.

(3) Solar Easements.

(4) Conservation Easements.

(5) Reciprocal Negative Easements.

(f) Easements Appurtenant and in Gross.

(1) Easements Appurtenant.

(2) Easements in Gross.

(3) The Dominant Tenement.

(4) The Servient Tenement: Common to Both Easements Appurtenant and Easements in Gross.

(5) Distinguishing Easements Appurtenant and In Gross.

(g) Profits a Prendre.

§ 60.03 Creation of Easements.

(a) Express Easements.

(1) Easements by Grant or Devise.

(2) Easements by Reservation and Exception.

(i) Distinguishing Reservation and Exception.

(ii) Creating Grants by Reservation or Exception in Third Persons.

(3) Easements by Dedication.

(i) Statutory Dedication.

(ii) Common Law Dedication.

(iii) Common Law Dedication by Reference to Map or Plat.

(4) Who May Create Express Easements.

(5) Creation of Express Easements Subject to Statute of Frauds.

(6) Easements by Agreement, Written or Oral.

(i) Oral Easements and the Doctrine of Part Performance.

(7) Contents of the Writing.

(i) To Distinguish from a Fee Simple Absolute.

(ii) To Distinguish from a Defeasible Fee.

(iii) Railroad Rights of Way.

(iv) To Distinguish an Easement from a License.

(8) Recording a Prerequisite for Validity or Enforceability.

(b) Easements Without Express Agreement.

(1) Easements by Public Condemnation.

(2) Easements by Private Condemnation.

(3) Easements by Estoppel.

(4) Easements by Implication from Prior Use; the Quasi-Easement.

(i) The Traditional Elements.

(ii) The Restatement Approach to the Implied Easement.

(5) Easements by Necessity.

(i) Justified by Implied Intent or by Public Policy?

(ii) The Easement by Necessity May Run Over Either the Land Retained or that Conveyed Away.

(iii) Elements to Establish the Easement by Necessity.

(6) Prescriptive Easements.

(i) Compared to Adverse Possession.

(ii) Historical and Theoretical Bases for Easements by Prescription.

(iii) Interests Subject to Prescription.

(iv) No Prescriptive Easements Against Government or Public Interests.

(v) Prescription by the Public.

(vi) The Elements of the Prescriptive Easement.

(vii) Burden of Proof.

(viii) Adverse, Under Claim of Right or Hostile.

(7) The Doctrine of Custom.

§ 60.04 Scope of the Easement.

(a) Rights of the Easement Owner or of the Dominant Tenement.

(1) Overburdening the Servient Tenement.

(i) Subdividing the Dominant Tenement.

(ii) Using the Eeasement to Benefit a Different Piece of Land Than the Dominant Tenement.

(iii) Increasing the Frequency or Changing the Type of Use of the Servient Tenement.

(b) Rights of the Servient Tenement Owner.

(1) The Non-exclusive Easement.

(2) The Exclusive Easement.

(c) Location and Size of the Easement.

(1) By the Terms of the Grant.

(i) Establishing the Location.

(ii) Changing the Location.

(2) Easement by Implication from Prior Use or by Necessity.

(3) Prescriptive Easement.

§ 60.05 Responsibility for the Easement.

(a) Maintenance and Repair.

(b) Responsibility for Harm Due to Deficiencies in Maintenance or Repair.

(c) Improvements.

§ 60.06 Remedies for Harm Involving Easements.

(a) Redress for Harm Suffered by the Servient Owner.

(b) Redress for Harm Suffered by the Easement Holder.

§ 60.07 Change of Ownership of Easements.

(a) Transfer of the Servient Tenement and the Requirement of Notice.

(b) Transfer of Easements Appurtenant.

(1) Benefits Remain With the Dominant Tenement.

(2) Severability of Easement Appurtenant.

(3) Divisibility of the Dominant Tenement and Access to the Easement Appurtenant.

(c) Transferability of Easements in Gross.

(1) Transferability of Commercial Easements in Gross.

(2) Transferability of Personal Easements in Gross.

(3) Statutory Developments.

(4) Apportionability of Easements in Gross.

§ 60.08 Termination of Easements.

(a) Expiration by Terms of the Agreement or Nature of the Easement.

(1) Termination by Date.

(2) Termination by Fulfilled Conditions.

(3) Termination Because of Changed Conditions.

(4) Easements by Necessity.

(b) Termination by Action of the Parties.

(1) Termination by Merger or Unity of Ownership.

(2) Termination by Release.

(3) Termination by Abandonment.

(i) Non-use Alone Usually Not Proof of Abandonment.

(ii) Affirmative and Unambiguous Indications of Intent to Abandon.

(iii) Adverse Act by Servient Party.

(4) Termination by Estoppel.

(5) Laches.

(6) Termination by Forfeiture for Misuse.

(7) Termination by Adverse Possession.

(i) Inconsistent With the Use Permitted by the Easement.

(ii) Finding of Inconsistency Dependent on Type of Use Easement Owner Makes.

(iii) Cannot Adversely Possess a Government Body's Easement.

(c) Termination by Action of Third Parties.

(1) Termination by Eminent Domain.

(i) Condemnation of the Servient Tenement.

(ii) Condemnation of the Dominant Tenement.

(2) Extinguishment by Operation of Marketable Title Act.

(3) Foreclosure of the Servient Estate.

(4) Tax Deeds.

(d) Effect of Termination of Easements.

(1) Ownership of Roadbeds or Railroad Beds Upon Termination of an Easement.

(2) Rights Surviving Termination of Roadway Easement.

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions § 60.01

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.01 Introduction.

Interests akin to easements have existed in one form or another from medieval and back to Roman times, though easements were not placed into a separate category in English law until the 19th century. n1 Because very few pieces of land exist in total isolation from any other, it flows from the very nature of the world we live in that property schemes include some methods to control the effects neighboring pieces of land have on one another. Because owners will want themselves to have some control over the arrangements benefitting and burdening themselves and their land, it is predictable that those mechanisms will permit private agreements. And because the owners on each side of an agreement governing use of their land will want to be able to count on the agreement surviving the transfer of the counterpart's property, a private land use system has to have the ability to benefit and burden the parties' successors in interest.

Partly by design and partly by historical serendipity, the property system in this country has three very closely interrelated mechanisms to make it possible for landowners to regulate the effects their properties have on one another. The easement is the oldest of the forms in effect today. The other two forms, the real covenant and the equitable servitude, developed to solve problems caused by limitations that English and American judges placed on the reach and validity of easements. n2

The similarities among the three mechanisms and the rules governing them (and, more critically, the subtle differences that serve as traps for the unwary) have led to a very strong movement in many jurisdictions and among property scholars completely or partially to unify the easement, real covenant and equitable servitude. Those working for that unification, and perhaps most people studying or working with these mechanisms, find it ludicrous and perhaps unconscionable that these three tools performing almost entirely identical functions can exist simultaneously and frustrate property owners (and their lawyers) in their desire to create lasting structures for their land relationships. n3

In a number of jurisdictions, one of the major functional distinctions between the real covenant and the equitable servitude has in large part disappeared with the abolition of horizontal privity. n4 The American Law Institute, in its new *Restatement (Third) of Property (Servitudes)* , now in the process of adoption, goes further and proposes to replace all three with one single servitude. n5 These movements to merge, partially or completely, the three forms of servitude will be dealt with in some detail in a later chapter. n6 Most property transactions still occur in places where the

distinctions among the easement, the real covenant and the equitable servitude retain greater or lesser vitality. Even in jurisdictions that have somewhat streamlined their systems of servitudes, many of the disputes that will arise over previous property dealings may require application of the traditional categories. This chapter examines the easement and the next several the real covenant and the equitable servitude.

FOOTNOTES:

(n1)Footnote 1. *See, e.g.,* Susan French, Toward a Modern Law of Servitudes: Reweaving the Ancient Strands, *55 S. Cal. L. Rev. 1261, 1262 (1982)* (similar arrangements at least since medieval times); Restatement (Third) of Property (Servitudes), Introduction at xxii, xxiv (Tent. Draft No. 1, 1989) (Rights of Way and other forms of servitudes in the Twelve Tables of Rome). In the Twelve Tables of Rome, long thought of as the most ancient reasonably extant source of Roman law, there is a requirement of a five-foot passage way between each cultivated field to provide all farmers access to their fields. This right of way could not be lost by prescription. This sounds like a very strong version of what we now would call an easement by necessity. The Twelve Tables, in 1 The Civil Law, Table VIII, Law IV (Samuel Parsons Scott, trans. Central Trust 1932).

(n2)Footnote 2. The distinctions among these three forms of servitude are by no means always clear, nor are they necessarily consistent from jurisdiction to jurisdiction. Their development in American law does not follow a clear and consistent path. *See generally* Uriel Reichman, Toward a Unified Concept of Servitudes, *55 S. Cal. L. Rev. 1179, 1186-1230 (1982).*

(n3)Footnote 3. For a handy compendium of some of the insulting epithets (*e.g.,* unspeakable quagmire) used by scholars to describe the state of American servitude *see* Susan F. French, Toward a Modern Law of Servitudes: Reweaving the Ancient Strands, 55 S. Cal. Rev. 1261, 1261 n.1 (1982).

(n4)Footnote 4. Restatement (Third), Property (Servitudes), § 1,4 cmt. a at 29 (2000). Introduction § 4 at xxv (Tent. Draft No. 1, 1989).

(n5)Footnote 5. The American Law Institute, in its recently completed Restatement (Third), Property (Servitudes) goes further and replaces the traditional categories with those of easement, profit and covenant, governed by much simplified rules. Introduction § 4 at xxiii-xxvi (Tent. Draft. No. 1, 1989).

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions § 60.02

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.02 Easement Defined.

[Go To Main]

(a) Use of the Land of Another.

An easement is one of several ways in which one may obtain rights in the land of another, for the benefit of one's own property or for one's own personal benefit. n7 According to the 1944 *Restatement of Property* , an easement is "an interest in land in the possession of another" that entitles the easement owner to "limited use or enjoyment" of that land, protects the easement owner from interference of third parties in that use, is not subject to the will of the landowner, is not a normal incident of ownership of land that the easement owner already possesses and "is capable of creation by conveyance." n8 Consistent with the Restatement's definition of an easement as an interest in land "in possession of another," an easement may be obtained against one who has less than a freehold interest in land, such as a leaseholder, subject to divestment if the property passes to the holder of a future interest. n9 One court puts it that an easement "is the right to use the land of another for a specific purpose that is not inconsistent with the general use of the property owner." n10 Similarly stated, it is "an interest in land which grants to one person the right to use or enjoy land owned by another." n11 The easement may involve the right to act upon the land of another or, more rarely, to compel another landholder to perform or to refrain from some specific action on the landholder's own land. n12 The most easily recognized example of an easement is the right of one person to pass over the land of another.

(b) Easements as Property Rights.

Courts agree that easements are treated as property rights, rather than mere contract rights, though they differ dramatically in the names they give those rights. n13 Most courts describe easements as interests in land; a few do not. n14 Most courts, but not all, describe them as real property interests subject to the Statute of Frauds. n15 Because easements are treated as property rights, American law gives them status and protection similar to that accorded the outright ownership of land. Easements cannot, for example, be taken by the government except with the same eminent domain protections and processes given to other property rights. n16 As property rights or interests in land, easements may be subject to tax. n17 Because they are property rights, the same formalities generally must be observed to create them as for other property rights, including satisfying the Statute of Frauds. n18

(c) Nonpossessory Interest: Easement Contrasted With Fee or Leasehold.

The right in land held by an easement owner differs from the fee interest or even the leasehold interest in that it is a "use" interest, but not a "possessory" interest in the land. n19 Thus the easement holder has neither the permanent possession of even a single molecule of the land itself, nor the exclusive time-bounded possession granted by a lease. n20 Instead the easement holder has the right to make or control a particular use of the land that remains owned by another. Terminological confusion arises from the non-possessory nature of the easement. That the interest is not possessory leads courts to say that it is not an *estate* in land, but an *interest* in land. n21 A few courts, however, reintroduce the confusion between estates and interests in land by saying that the easement interest itself may be held in fee, even as a defeasible fee. n22 Another court distinguishes ownership of land as an estate from an easement, which, the court says, more resembles a claim or an encumbrance against the title to the land. n23 To further complicate the matter, some courts will refer to the easement as a mere right of use and *not* an interest in land. n24 This distinction between possession and use can have significant consequences. In some jurisdictions, for example, the requirement for "exclusive use" in creating a prescriptive easement differs from that for adverse possession because of the non-possessory nature of an easement. n25

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/15 Fee or Leasehold W/10 Compar! or Contrast! or Distin! or Differ! W/15 Interest

(d) Incorporeal Interest.

Courts will sometimes make the above point that easements do not involve the right to possess land itself by describing them as "incorporeal," n26 an "incorporeal interest in the land of another," n27 or an "incorporeal hereditament." n28 Though pointing out that the "aggregates of legal relations" that make up property interests in the traditional lawyer's definition are incorporeal whether possessory or not, the *Restatement* notes that the corporeal-incorporeal distinction "corresponds to a fundamental difference between possessory and non-possessory interests" and remains useful. n29 The fee or leasehold owner of the land to which an easement applies retains all the incidents of ownership in the land that do not contradict the particular rights of the easement holder. Thus if the easement holder has the right to cross over the land of another at a certain point, the owner of the underlying property ordinarily has the right to use the exact same part of the property in any way that does not prevent the easement holder from the actions which the easement grants. n30 The owner of the underlying fee may, for example, herself cross that particular strip of land but may not construct a building on it. Crossing it would not interfere with the easement holder's rights; placing a building on it would obviously make it difficult for the easement holder to cross at the spot specified in the easement.

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/15 Incorporeal W/10 Interest

(e) Positive and Negative Easements.

A positive easement grants to the easement holder the right to perform some action on the land of another. The vast majority of easements recognized in this country are positive easements. A negative easement grants to the easement holder "the right to prevent the possessor of the land from doing acts upon it which, were it not for the easement, he would be privileged to do." n31 The Virginia Supreme Court notes that a negative easement does not bestow a right to travel physically on the servient estate, but rather prohibits the servient owner from activities on the servient estate "which the owner would otherwise be entitled to perform." n32 It is important to note that the terms "positive" and "negative" are used differently in real covenants and equitable servitudes. Real covenants or equitable servitudes are positive when they require the *burdened landowner* to do something on the land (as opposed to the positive easement which permits the *easement holder* to do something on the land) and negative when they prohibit the burdened landowner from some action on the land. n33 Restrictive covenants are "also commonly categorized as negative

easements," n34 though they have more of the character of equitable servitudes.Thus, the Florida Supreme Court states that restrictive covenants on use are defined not as true easements but as "negative easements or equitable servitudes. Such so-called easements are basically not easements in the strict sense but are more properly classified as rights arising out of contract. n35

(1) Only Four Negative Easements Generally Recognized.

Courts in the United States seldom recognize negative easements. Four traditional negative easements have passed into our jurisprudence from the English courts: the duty of an adjoining landowner not to remove support from the easement holder's building, not to block the easement holder's windows, not to interfere with air flowing to the easement holder's land in a defined channel, and not to interfere with water flowing to easement holder's land in a defined channel. n36 The English courts refused to recognize further negative easements, in part because they could be created by prescription, and their nature makes them difficult to see and defend against. n37 The difficulty in seeing physical evidence of the existence of negative easements causes a serious notice problem for purchasers of land in the absence of a recording system. This objection loses its force in the United States because in this country negative easements generally cannot be established by prescription and recording systems are universal. The English courts also had difficulty conceptualizing a duty to refrain from acting on one's own land. American courts have generally accepted the English limitations and, with some significant exceptions noted below, will not recognize purported negative easements beyond the traditional four. n38 One exception is Virginia, which recognizes two classes of easement: (1) the privilege to use the land of another and (2) the right to demand of the owner of the land to refrain from certain uses of his or her land for the benefit of the easement holder. n39

(2) Easements of View, Light or Air.

A few jurisdictions recognize the negative easement of view, which serves to prevent the servient tenement from interfering with the view from the dominant tenement. The Alaska Supreme Court notes that a landowner cannot recover from a neighbor just for blocking the view: "The only way to prevent a neighbor from constructing a building which would block one's view is to buy an easement of view." n40 In other words, the right cannot be won by prescription, but only by express grant. The same court noted, though, that if the State condemned part of a parcel abutting a road, "an easement of visibility across the taken parcel is reserved to the owner of the remaining parcel." n41 The Iowa Supreme Court refused to use nuisance law to prevent a neighbor from erecting a building that would block the view of plaintiff's property from the road; in the court's view, to do otherwise would be to recognize a prescriptive negative easement, something it was not willing to do. n42 New York has recognized an easement of view since at least the 19th century. n43 In California, while there is no natural right to unobstructed air, light or view, for example, "[s]uch a right may be created by private parties through granting of an easement". n44 Similarly, Illinois courts refuse to imply an easement for light or air in a lease, and, in a case where a lessee tried to prevent the lessor from building a tall building on its neighboring lot, a federal court analogized that principle to refuse to recognize an easement for radio waves to be implied in a lease. n45 Other jurisdictions, New Jersey and Vermont, for example, use equitable servitudes or restrictive covenants, rather than easements, to the same end. n46

(3) Solar Easements.

Wisconsin has used nuisance law to, in effect, recognize a negative easement to force a landowner to refrain from blocking a neighbor's solar panels, n47 as has New Hampshire. n48 The Supreme Court of Iowa refused to use the nuisance doctrine to recognize an easement of view, where plaintiff alleged defendant's building blocked passing motorists' view of plaintiff's building, but in doing so emphasized that express solar easements were justified by other arguments and expressly permitted by Iowa statute. n49 By the Iowa court's logic, easements of view would also be permissible only if authorized by statute, and use of nuisance law to create them would, objectionably, recognize negative prescriptive easements. Other jurisdictions also expressly recognize solar easements, e.g., Indiana: "Any solar easement shall be created in writing and shall be subject to the conveyancing and recording requirements" applied to

other interests in land. n50

(4) Conservation Easements.

Many jurisdictions have used conservation easements to preserve historic districts and scenic areas from development or change. n51 The conservation easement is a negative easement that prevents the fee owner from making use of the land in ways that would compromise its preservation. n52 The conservation easement is a very popular tool because it involves far less cost in reaching its goal than would the purchase of the fee interest in land and because the easement's purchase from willing sellers avoids legal challenges that accompany attempts to reach the same goal through regulation. n53 Because of doubt over the common law validity of this latter form of negative easement, most jurisdictions have enacted statutes explicitly permitting them. Indiana, for example, states that "a conservation easement may be created, conveyed, recorded, assigned, released, modified, terminated, or otherwise altered or affected in the same manner as other easements." n54 Maryland authorizes conservation easements, making them enforceable in law or equity, either appurtenant or in gross, and if in gross fully inheritable and assignable. n55 Colorado authorizes conservation easements as fully transferable and emphasizes that the conservation easement constitutes an interest in real property "notwithstanding that it may be negative in character." n56

(5) Reciprocal Negative Easements.

There are frequent references in the cases to the negative reciprocal easement. Where a landowner subdivides a single piece of property and sells a substantial number of those lots with restrictive covenants meant to further the owner's plan of development, the owner's remaining lots will be bound by the same restrictions. Those who purchase lots with such restrictions in their deeds gain an equitable right to enforce them on later purchasers "with actual or constructive notice of the restrictions and covenants." n57 The fact that defendant purchasers deliberately asked that the restriction be eliminated from their deeds was itself evidence that they did indeed have the notice necessary to support this equitable right of enforcement. n58 This right is variously called "an implied reciprocal negative easement, or an implied equitable servitude, or negative implied restrictive covenant." n59 Similarly, where a common grantor has subdivided property pursuant to a general plan or scheme of development and sold a substantial number of lots subject to restrictions benefitting retained land, a Missouri court identifies the equitable interest as "a reciprocal negative easement or implied reciprocal servitude, to enforce a similar restriction against the purchaser of the unrestricted lots who has actual or constructive notice of the restrictions." n60 In a lengthy discussion of the history, development and meaning of the "negative reciprocal easement doctrine," the Court of Appeals of Maryland notes that they have variously been "called reciprocal negative easements, implied equitable reciprocal servitudes or merely equities attached to land. n61 While some jurisdictions refer to this doctrine as an easement, many scholars treat it as a form of equitable servitude, and it will be treated fully in a later chapter with equitable servitudes. n62

LEXIS: Reciprocal W/10 Negative W/10 Easement

(f) Easements Appurtenant and in Gross.

Easements that benefit a piece of land have some different characteristics than easements that benefit a person or organization. Easements benefitting a piece of property are "appurtenant"; those benefitting a person directly, rather than indirectly in the person's status as the owner of benefitted property, are "in gross."

(1) Easements Appurtenant.

An easement is appurtenant when the right to use the easement benefits another piece of land, no matter who owns that land. n63 An easement appurtenant is imposed on corporeal property, not on the owner of it, for the benefit of corporeal property, not of the owner of it. n64 In a real sense then, the easement appurtenant defines the relationship of two pieces of land, rather than that of one person with a piece of land of another. Those two pieces of land are the dominant and the servient tenement. Easements appurtenant must have both a dominant tenement and a servient tenement. n65 Thus, in Connecticut, a claimed easement of way failed because "the grant to Gardner in the 1886 deed does not identify which of the two parcels owned by Gardner" was the dominant estate, even though only one was contiguous to the land over which the way was claimed n66 n67 Easements in gross will have no dominant tenement, but will have a servient tenement.

(2) Easements in Gross.

If an easement benefits a particular person or persons (or business or organization) whether or not they own another piece of land, the easement is in gross, i.e., personal. n68 The easement in gross benefits a person as a person, rather than because the person owns land benefitted by the easement. n69 It is personal to the parties and ends with the life of the parties; a statement in a will that a driveway was to be kept open for the use of the four devisees was a statement that the right was to be personal and not a right that runs with the land. n70 The holder of an easement in gross benefits "only personally, not in connection with his ownership or use of any specific parcel of land." n71 The following example illustrates the difference. Imagine that Able lives in a congested urban area in which parking is at a premium. She approaches neighbor, Baker, across the street for permission to park on his property. Baker sells her that right in perpetuity. That right to park is an easement. If that easement were appurtenant, and Able were to move to a new house down the street, she would no longer have the right to use the easement-burdened property, while whoever came into ownership of the land which she had occupied would have the right to benefit from the easement parking right. It is the land across the street from the easement-burdened land that benefits from an appurtenant easement, not the owner of the land except in the role as its owner. If the easement were in gross, i.e., personal to Able herself, n72 she would still have the right to use the parking easement no matter where she would move, down the street or across town; whoever moved into the property she had vacated, however, would have no right to use the parking easement. By contrast with the easement appurtenant, here where the easement is in gross, it benefits Able personally, and the right to use it travels with her down the street or across town.

(3) The Dominant Tenement.

An easement appurtenant is imposed for the benefit of corporeal property; it serves a parcel of land. n73 The property for the benefit of which the easement is imposed is called the dominant tenement. n74 Because, in contrast, an easement in gross benefits a person rather than a piece of land, the easement in gross does not have a dominant tenement. The property upon which the easement is imposed is called the servient tenement. The owner or possessor of the dominant tenement benefits from the easement only indirectly, "in a way that cannot be separated from the land." n75 An Arkansas court held the "rule of general application to be that a lessee of the dominant estate is entitled to the use of its appurtenant easements in connection with the use and enjoyment of his leasehold interest." n76 This right is not limited to the lessee of all the rights in the dominant estate; thus, the Arkansas court held that a lessee of hunting rights could use an appurtenant easement. n77 The owner benefits only because of being the owner or possessor of that land. Easements are appurtenant to a dominant tract of land if they benefit the owner in the use and enjoyment of that dominant tract. n78 In some jurisdictions, an easement appurtenant cannot come into existence absent unity of title between the easement and the dominant tenement; thus in a Connecticut case, a described easement could not have been appurtenant to a particular tract of land, because the easement owner only had half the fee ownership of that tract. n79 An easement is appurtenant if "exercised in connection with the occupancy of other land." n80 If the holder of the dominant tenement ceases to own or possess that land, she receives no continuing benefit from the easement.

(4) The Servient Tenement: Common to Both Easements Appurtenant and Easements in Gross.

By definition (an easement is an interest in land, and the servient tenement is the land) both easements appurtenant and easements in gross must have a servient tenement. The servient tenement is the property over which the easement holder has rights. n81 In an easement appurtenant, the servient tenement need not necessarily be adjacent to the land it serves (for example, there might be an easement over servient tenement parcel a, through servient tenement parcel b, to reach dominant tenement parcel c). n82 To use the traditional property lawyer's image, the bundle of rights that make up the servient property has been divided between the easement holder and the servient tenement owner. The particular right represented by the easement now is either attached to the dominant tenement (in the case of an easement appurtenant) or is owned by the easement holder (in the case of an easement in gross). The owner of the servient tenement retains the ownership only of a bundle of rights diminished by the easement rights that now reside elsewhere and therefore has the power to transfer away only that limited bundle of rights.

(5) Distinguishing Easements Appurtenant and In Gross.

In the absence of specific language identifying whether an easement is appurtenant or is in gross, courts are forced to make an interpretation of the likely intent of the parties to the agreement. The conveying instrument not only often fails to specify whether the easement is appurtenant or in gross, but, further, the answer to that query "cannot be determined by the nature of the rights granted because easements for right of way ("ingress and egress') may be either appurtenant or in gross." n83 Some courts find a presumption rebuttable by surrounding circumstances that an easement in gross was intended where "the easement makes no mention of the heirs and assigns of the grantee." n84 Other courts hold that unless an easement possesses all the elements necessary to be an appurtenant easement, it will be considered a "mere" easement in gross, and that where language bears more than one construction that "which least restricts the property will be adopted." n85 Generally, however, where the documentation or surrounding circumstances do not make clear the intent of the parties, courts presume that the easement is appurtenant. n86 The Nebraska Supreme Court states that an easement in gross is "never presumed when it can fairly be construed as appurtenant to some other estate." n87 Pointing out that in Missouri an easement is never presumed to be a mere personal right when it can fairly be construed to be appurtenant to another estate, the Missouri Court of Appeals found that the existence of a potential dominant and servient tenement and of the termination point of the questioned right-of-way on that dominant tenement sufficed to show the existence of an easement appurtenant. n88 Other considerations evidencing the existence of an easement appurtenant include the continuing value of the easement to the dominant tenement no matter who owns the dominant tenement, recognition by successors to the servient estate of the right of dominant estate owners to use it and use of language "appurtenant to my other land." n89 If one intends that an easement is to be considered in gross, therefore, one must carefully specify that the easement is for one particular person's use. If one intends that a court certainly interpret an easement to be appurtenant one should use language that ties the easement to a dominant tenement, language stating that the easement is to benefit a particular piece of land no matter who is its owner.

LEXIS: Easement W/10 Appurteant or in Gross W/15 Compar! or Contrast! or Distin! or Differ!

(g) *Profits a Prendre*.

Under English law, there was an interest separate from the easement called the *profit a prendre*. The profit still exists in American law, but the law governing it for all practical purposes has merged into that governing easements. The right to enter another's land and take away minerals, or other things of value such as timber or game, is a *profit a prendre*. n90 The *profit a prendre* is a non-possessory interest in land that consists "of a right to take the soil or substance of the soil, such as the right to take wild game or fish." n91 Another court defines the profit as a privilege to acquire, "by severance or removal from another's land, some thing or things previously constituting a part of the land or pertaining to the land." n92 It is a "right exercised by one person in the soil of another, accompanied with participation in the profits of the soil,

or in a right to take part of the soil or produce of the land." n93 Because English law did not recognize the existence of the easement in gross, and the *profit a prendre* could exist in gross, the profit had a good deal of importance under English law. The easement in gross does exist in the United States, and, therefore, the *profit a prendre*, in the mind of some, has very little importance here. The 1944 *Restatement* found no need to treat the profit separately on the ground that rules governing it were identical with those governing easement. n94 The *Restatement (Third)*, however, has resurrected the profit from the oblivion into which it was consigned by the 1944 Restatement, because it serves different purposes and can involve different considerations than other servitude devices. n95 For those reasons, the profit receives full treatment later in this treatise. n96

FOOTNOTES:

(n1)Footnote 7. Restatement (Third), Property (Servitudes) Other forms include profits, licenses, real covenants, and equitable servitudes (sometimes called restrictive covenants). In Louisiana, a civil law jurisdiction, easements are referred to as predial servitudes.

(n2)Footnote 8. *Price v. Eastham, 73 P.3d 1051, 1057 (Alaska 2003)* (*citing Ludwig v. Gosline, 465 A.2d 946, 947 (N.J. Super. App. Div. 1983))* (prescriptive easement).

(n3)Footnote 9. Restatement (Third), Property (Servitudes) Restatement of Property § 450 (1944). That the right given in an easement is not a normal incident of land ownership distinguishes the easement from rights inherent in land ownership, *e.g.*, the right to lateral support. *See* § 69.01, *supra.*

(n4)Footnote 10. *Abbott v. Nampa Sch. Dist. No. 131, 808 P.2d 1289, 1293 (Idaho 1991).*

App. 1988)* (interest in property), *cert. denied, 790 P.2d 843 (Colo. 1990); Burris v. Cross, 583 A.2d 1364, 1377 (Del. Super. Ct. 1990)* ("property or an interest in land").

(n8)Footnote 14. *E.g., Hayes v. Gibbs, 169 P.2d 781 (Utah 1946)* (not an interest in land but a servitude treated as though it were a separate parcel).

(n9)Footnote 15. *Darsaklis v. Schildt, 358 N.W.2d 186, 190 (Neb. 1984)* (subject to statute of frauds), *contra, Conn. Super Ltd. P'ship v. Plan & Zoning Comm'n, 588 A.2d 624, 629 (Conn. 1991)* (easement can be freehold, various types of fee interest, term of years or chattel interest according to its duration) (*citing Rosenblum v. Eisenhauer, 280 A.2d 537 (Conn. Super. 1971).*

(n10)Footnote 16. United States v. 10.0 Acres, 533 F.2d 1092, 1095 (9th Cir. 1976).

(n11)Footnote 17. *Salt Lake City S. Ry Co. v. State Tax Comm'n, 987 P.2d 594, 597-598 (Utah. 1999)* (easement is tangible property for tax purposes).

(n12)Footnote 18. *See* § 60.03(a)(5), *infra*.

(n13)Footnote 19. *Boucher v. Boyer, 484 A.2d 630, 635 (Md. 1984)* ("nonpossessory interest in the real property of another"); *Thurston Enters., Inc. v. Baldi, 519 A.2d 297, 300 (N.H. 1986)* (easement grants "only a non-possessory interest in land").

(n14)Footnote 20. In the Matter of Tideland's License 96-0114-*T, 740 A.2d 1125, 1130 (N.J. Super. Ct. App. Div. 1999)* (quoting this sentence in determining inland owners' easement to river and right to build dock).

(n15)Footnote 21. *E.g., Concord & Bay Point Land Co. v. City of Concord,280 Cal. Rptr. 623, 626 (Ct. App. 1991)..*

(n16)Footnote 22. *E.g., Conn. Super Ltd. P'ship v. Plan & Zoning Comm'n, 588 A.2d 624 (Conn. 1991)* (*citing Rosenblum v. Eisenhauer, 280 A.2d 537 (Conn. Super. 1971)); Erie-Haven, Inc. v. First Church of Christ, Scientist, 292 N.E.2d 837, 841 (Ind. App. 1973).*

(n17)Footnote 23. *Dean v. MOD Props., Ltd., 528 So. 2d 432, 433* (Fla. App.) *rev. denied, 534 So. 2d 400 (Fla. 1988).*

(n18)Footnote 24. *Department of Transp. v. English, 218 S.E.2d 134, 138 (Ga. App. 1975)* (properly speaking, an easement is a right of use and not an interest in land... ."). Other courts use almost identical language as the definition of a license. *See, e.g., Dotson v. Wolfe, 391 So. 2d 757, 759 (Fla. Dist. App. 1980)* (as opposed to easement, license is "merely a personal right to use the property of another for a specific purpose, is not an interest in land and, therefore, may not be assigned or conveyed.").

(n19)Footnote 25. *See* § 60.03(b)(6)(ix), *infra*. The point, simply put, is that since an easement expressly created by deed does not necessarily involve exclusive use, the "exclusive use" requirement imported into easements won by prescription (similar to adverse possession) must have some different meaning than it does in the law of adverse possession. That different meaning is explored in the citation with which this note begins.

(n20)Footnote 26. *Belle Fourche Pipeline Co. v. State, 766 P.2d 537, 543 (Wyo. 1988)* ("[easements] are incorporeal).

(n21)Footnote 27. *Tract Dev. Serv., Inc. v. Kepler, 246 Cal. Rptr. 469, 476* (Ct. App.), *rev. denied* (Cal. 1988).

(n22)Footnote 28. *Voltmer Family Farms, Inc. v. Board of Equalization, 343 N.W.2d 755, 757 (Neb. 1984)* (an "incorporeal hereditament which permits use of another's land for a specific purpose.")

(n23)Footnote 29. Restatement of Property § 450, cmt. c at 2903-2904.

(n24)Footnote 30. *Mueller v. Hoblyn, 887 P.2d 500, 504 (Wyo. 1994)* (quoting this treatise). An easement may occasionally exclude even the servient owner, as for example, railroad easements. The more exclusive the easement, however, the more likely a court will find it to be a fee interest rather than an easement. *See* §§ 60.03.(a)(7)(i), 60.03.(a)(7)(iii), *infra*.

(n25)Footnote 31. Restatement of Property § 452 (1944).

(n26)Footnote 32. *Prospect Dev. Co. v. Bershader, 515 S.E.2d 291, 299 (Va. 1999)* (granting such an easement by estoppel).

(n27)Footnote 33. *See* § 60.02(e), *infra*.

(n28)Footnote 34. *Witter v. Taggart, 577 N.E.2d 338, 339 (N.Y. 1991).*

(n29)Footnote 35. *Palm Beach County v. Cove Club Investors Ltd., 734 So. 2d 379, 385 n.8 (Fla. 1999)* (*citing Board of Public Instruction v. Town of Bay Harbor Islands, 81 So. 2d 637 (Fla. 1955).*

(n30)Footnote 36. Colin Sara, Boundaries and Easements 174 (Sweet & Maxwell 1991) ("the two main negative easements are the right of light and the right of support. Apparently, negative rights which have been accepted as

easements such as a right to receive a flow of air through a defined channel, *e.g.*, through a cellar vent, and a right to receive water in an artificial stream, both have positive elements since in each case there is a defined channel which the servient owner could block should he so wish").

(n31)Footnote 37. *See id.* 174-176 (outlining courts' rejection of new negative easements).

(n32)Footnote 38. For a pithy explanation of the English courts' difficulty with negative easements, *see* Jesse Dukeminier & James E. Krier, Property 851-54 (3d ed. Little, Brown & Co. 1993).

(n33)Footnote 39. *Prospect Development Co. v. Bershader, 515 S.E.2d 291, 298-299 (Va. 1999)* (granting a negative easement by estoppel over objection of dissent that would have imposed a restrictive covenant). A Lexis search of Virginia appellate cases revealed that the term is almost always used in the context of the reciprocal negative easement. *See infra*, § 60.02(e)(5).

(n34)Footnote 40. 8,960 *Square Feet, More or Less v. State Dep't of Transp. and Pub. Facilities, 806 P.2d 843, 845-846 (Alaska 1991)* (dispute over state-constructed berm blocking view). This is consistent with the idea expressed earlier that negative easements must be express and may not be prescriptive.

(n35)Footnote 41. *Id. at 846 n.6.* If the state used the condemned property in a way that blocked visibility to or from the remaining portion of the previously undivided property, the owner of the remaining property would be due additional compensation for the loss of this reserved easement. The idea is that the remaining property has already lost part of its value by being divided; it can lose further value if the property taken away is so used as to block the remaining property's view of the road, a value deserving recompense. This appears to be a narrow exception to the standard position that a negative easement cannot be implied.

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions § 60.03

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.03 Creation of Easements.

[Go To Supp]

(a) Express Easements.

(1) Easements by Grant or Devise.

Persons in possession of property may create express easements by grant, for a consideration or by gift, transferring away the right or rights represented by the easement to another. Easements are "as likely to appear in independent instruments as they are to appear in deeds or contracts for the transfer of a fee simple estate." n97 Persons may also create easements by will, for example, willing an easement in a piece of land to one person, and the land to another. The person creating the easement must intend to create such an interest and observe the proper formalities in the local jurisdiction for transferring property by grant or by devise. n98

(2) Easements by Reservation and Exception.

One may also reserve an easement for oneself, and in some jurisdictions for others, over a piece of property when transferring away that property, or one may except an already-existing easement from a transfer of the servient property. A grantor may reserve an interest out of the granted land appurtenant to the retained land, and such an interest will be transferable with the dominant tenement just like any other easement appurtenant. n99 It is not necessary to use the words "reserve," "reserving," or "reserved" to create an easement by reservation; in a Missouri case, reference in a deed to conveying property "subject to" an easement was interpreted to reserve an easement in the grantor. n100 In Maine, courts routinely construe a deed provision purporting to reserve an easement for the benefit of land retained by the grantor "as the creation of an easement appurtenant to that land and have obviated the requirement of the technical words "heirs' to preserve and interest of perpetual duration." n101 Where land is subdivided, an easement may be reserved for remaining parcels through reference to a plat or subdivision plan showing the easement. n102 In determining the existence of an easement by reservation from the documents conveying a piece of land it is "necessary that the grantee of the property being burdened by the servitude have knowledge of its use or its necessity." n103 To avoid arguments in court, and the danger that a court will misinterpret the grantor's intention, one should take great care to use the proper term to create the interest one desires.

(i) Distinguishing Reservation and Exception.

Under old English law, when one transferred away property, one could reserve an interest in the property, like an easement, to oneself, or one could except a portion of the piece of land or a previously existing interest in it (an easement, for example) from the conveyance. A reservation, then, dealt with incorporeal interests and an exception usually with corporeal interests and sometimes with *previously existing* incorporeal interests. A reservation "creates a new right in the grantor from the subject of the conveyance, something which did not exist as an independent right before the grant and which is originated by it." n104 Conceptually, reservation was thought to involve "an express grant of the easement by the grantee" back to the grantor of the property. n105 By contrast, an exception involves withdrawing some pre-existing interest from that which would be conveyed away, an interest that without that exception would be part of the conveyance. n106 In sum, a reservation involves grantors creating and reserving a right or interest that had no existence previously, while in an exception the grantor excepts from the conveyance something already in existence. n107 The distinction between reservations and exceptions has disappeared in many jurisdictions, and, in fact, many conveyances and court decisions use the terms interchangeably or as a matched pair. n108 Because of their interchangeable use, the two terms "are not treated as conclusive as to the nature of the provision, but must yield to manifest intent." n109

(ii) Creating Grants by Reservation or Exception in Third Persons.

Under an old common law rule, still valid in the majority of jurisdictions, one was not permitted to reserve or except an easement in a third person while conveying property to another. Thus, in New York, the "long-accepted rule in this State holds that a deed with a reservation or exception by the grantor in favor of a third party, a so-called "stranger to the deed', does not create a valid interest in favor of that third party." n110 In Arkansas the rule is worded that an exception or reservation in favor of a stranger to the deed is void except to confirm a right which the stranger already had. n111 In Maine, a reservation "benefitting one not a party to the deed cannot create any interest not previously existing ..." n112 The conceptual problem underlying the existence of the rule was that the easement one wished to convey to a third person did not exist before the property was conveyed away. n113 To reach the desired result under the common law rule, one could first create and convey away an easement in one action and then convey away the servient tenement in another, excepting from the conveyance that now pre-existing easement. n114 A number of jurisdictions have in recent times disposed of the common law rule as an antiquity with no real justification in modern property regimes, thereby making it possible to reserve or except an easement for a third party in the same transaction as the servient tenement is conveyed away to a different party. California did so in 1972. n115 Noting that the majority of states forbid reservation of easements in third parties and the validity of the reasons for doing so, the Montana Supreme Court noted that "in the proper case, where the intent of the grantor to reserve an interest in property to a stranger is clearly shown," the court would give effect to that intent. n116 The long-accepted rule forbidding such transactions was abolished in Wyoming when it adopted "the enlightened approach that the intent should control and that archaic and inappropriate feudalistic principles should no longer apply." n117 In rejecting the rule, the court recognized "the potential of a granting interest to create interests in several people and even different interests among the several people." n118 The Alaska Supreme Court aligned itself with the California courts and rejected the rule as conflicting with their view that a deed should be construed to give effect to the donor's intent. n119 The Connecticut Supreme Court abolished the unity of title doctrine, forbidding the reservation of an easement in a third party (to reserve an easement there must be unity of title between the property served and the dominant way), concluding that the "intent of the deed creating an easement should be effectuated even if no unity of title exists between the servient estate and the dominant estate the easement is intended to serve," thus now permitting reservation of an easement in a third party. n120

LEXIS: Easement W/20 Creat! or Grant! W/20 Reserv! or Except! W/20 Third W/5 Person or Party

(3) Easements by Dedication.

Persons may create easements by dedication, either statutory or common law. In dedicating an easement, one places a form of ownership of the property or of an easement in the public at large, as in a street or a park. A dedication of real estate "has been defined as a landowner's giving of a right or easement for public use." n121 The Wyoming Supreme Court analogizes the acknowledgment and recordation of a subdivision plat setting aside property for public use to a deed in fee simple to the public of that portion of the property. n122 Thus, an easement claimed to have been dedicated solely for the benefit of the members of a subdivision was not properly a dedication, because an easement may only be dedicated "to the public and not to a part of the public." n123 While a landowner may dedicate land for a specific or limited purpose, the landowner "cannot retain discretion to alter or control future use of the property once it has been accepted by the public." n124 Comparing the act of dedication to a contract between two parties, the South Dakota Supreme Court states that there "must be an unconditional offer by the grantor to create a public highway and there must be an unconditional acceptance by the appropriate public authority that it becomes one. n125 For the easement to be valid, the public must accept the dedication. This requirement in part exists to prevent landowners by simply conveying land from "compelling the authorities to assume the burdens of maintaining or repairing property offered for dedication." n126 There are two commonly recognized forms of dedication, statutory and common law, that differ in the type of interest owned by public through their governmental body.

(i) Statutory Dedication.

Statutory dedication often occurs as part of the process by which subdivision plats are filed and approved. It requires strict adherence to specific statutory requirements and "results in a conveyance of the title of the subject property to an ascertainable grantee." n127 Some of the typical requirements for a highway dedication, for example, are: "preparation of a plat by a surveyor which is certified by the surveyor and acknowledged by the owner of the land, the recording of the plat, the certificate, and the acknowledgment in the recorder's office of the county in which the land is situated." n128 The Wyoming Supreme Court noted that the critical elements to a statutory dedication are the "intention of the owner to dedicate and acceptance thereof by the public..." n129 A California court held that an offer of dedication "which is accepted on the condition that the proffered property be improved does not result in a completed dedication, no more than does a conditional acceptance of an offer create a valid contract." n130 So long as the statutory requirements are fulfilled, some jurisdictions find that there need not always be a formal acceptance of the dedication. n131 Statutory dedication traditionally is defined to give some form of a limited, defeasible fee interest. The description of the fee varies, from a conditional fee to a trustee interest n132 in such of the property as necessary for use as a road. One phrasing is that by statutory dedication, the landowner "granted title to the street or roadway in fee so long as used for public purposes, but upon condition that should the street or roadway be vacated, then the title would pass to the then owners of the lots abutting thereon." n133 If the grant were of an easement rather than a form of fee, upon abandonment the land would return to the grantors or their successors, who often also turn out to be the abutting landowners. Under the interpretation that there is a limited fee, for example, a village would have no ownership rights in minerals beneath a street, but would have some right to the minerals to the degree they were "of practical utility for the use or maintenance of the property as a street or alley." n134 Such a dedication transfers "only the surface and so much of the subsurface as is necessary for street construction and municipal services," with no interest in the oil and minerals lying under the streets and alleys." n135

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/10 Dedicat! W/20 Statut!

(ii) Common Law Dedication.

Traditionally, common law dedication grants to the public an easement in a roadway that will cease when use of the roadway ceases; some courts require that for a developer to convey fee interest in a road there must be an express grant to the governmental authority. n136 This contrasts with the grant by a statutory dedication of a form of limited fee interest to the statutory grantee. When the roadway ceased to be used, the property used for the easement by common law dedication would then return to those from whom it had been dedicated, rather than to the abutting landowners. n137 It would not be unreasonable, though, for courts to assume that the fee ownership would have passed with the adjoining land absent an explicit statement to the contrary, in the same way as is done with railroad right of way easements. n138 In one case, for example, where an 1872 statute created public highways from all section lines in specified counties, those highways granted only an easement to the public; the fee title continued to be vested in the abutting landowners, in that case the original owners. n139 Attempted statutory dedications that fail some requirement sometimes will still fulfill the requirements to be considered a common law dedication. n140 One description of the requirements for such a dedication is "(1) the party platting the land intended to create an easement, and (2) the public accepted the easement." n141 In Texas, mere failure to object to use by the public will not establish a common law or implied dedication; there must be some clear and unequivocal declaration by an owner of an intention to set the road apart for public use. n142 An easement by implied or common-law dedication and a public easement by prescription are sometimes difficult to distinguish, and the cases do not always do so successfully. n143

(iii) Common Law Dedication by Reference to Map or Plat.

One may dedicate land to the public by express language, by reservation, or by conduct showing an intent to dedicate. Such conduct intending a dedication may exist "where a plat is made showing streets and the land is sold either by express reference to such a plat or by a showing that the plat was used and referred to in negotiations for the sale." n144"A developer's sale of lots in a subdivision according to a recorded plat creates private easement rights in favor of purchasers in any area set apart for their use." n145 Those rights include areas like streets and parks, and exist whether or not there has ever been acceptance by public authorities or the public generally, on the ground that the purchasers have given consideration for the property's higher value by paying a higher price. n146 Even where the dedication by plat or map is not formally accepted by the appropriate authorities, persons who rely on the plat in making a purchase acquire an interest akin to an easement appurtenant in the rights of way. n147 Though the public may be foreclosed after the passage of sufficient time without acceptance by the governmental unit or general public use, those who have purchased in reliance on the roads shown in a plat or plan retain a private easement that cannot be abridged by the governmental body absent compensation. n148 This right applies to all members of the subdivision who purchased in reliance on the plat or plan, not merely those with property abutting the easement. n149 Use by the public can itself constitute acceptance even in the absence of formal acceptance by public authorities. n150 Where a deed of dedication could not be found, reference to the dedicated street in a recorded plat served to establish the easement. n151 Simple mention of the existence of a road in a deed without the requisite offer to and acceptance by the public authorities, however, may not suffice to create a dedication. n152

(4) Who May Create Express Easements.

Because an easement is an interest in land, anyone who is the possessor of the land may burden it with an easement; that easement cannot last any longer than the possessor's possessory estate in the land. n153 Thus, in Texas, a life estate holder may grant an easement over the life estate, "but the easement lasts only as long as the life tenant is alive." n154 The consent of all the owners of the servient estate is required to create an easement binding that estate. n155 One cannot grant an easement in what one does not own; thus all of the co-owners of a piece of land "must join in the deed

before an easement in their jointly owned property will arise ... ." n156 The common law rule is that "a deed representing one cotenant's attempt to grant an interest in a distinct portion of property held in cotenancy is voidable by the non-consenting cotenant." n157 Thus, a cotenant who had neither consented to nor ratified her cotenant's quitclaim deed of an easement successfully voided it; the court reasoned that an easement granted to a stranger inevitably interfered with the non-granting cotenant's undivided right to full enjoyment of her cotenancy. n158 If one is co-owner of land, one may not grant an easement over the land that interferes with the rights of the other co-owners. n159 The interest can become valid, however, by the ratification of the other cotenants. n160 The interest is at least voidable as to the other co-owners, though valid against the grantor and successors, and perhaps against the other cotenants by principles of estoppel or on partition. n161

LEXIS: Easement w/10 Grant or Create or Deed w/25 Tenant or Lessee or Joint Owner or Co-owner or Coowner

(5) Creation of Express Easements Subject to Statute of Frauds.

Because easements are almost universally treated as property interests rather than contractual, most courts insist that easements, like other property interests, must be created in writing. n162 Thus, an oral contract to create an easement is within the statute of frauds and itself is not valid. n163 An easement will not be "directly enforceable unless in writing." n164 Because it creates an "interest in real estate" permitting use of another's land, an easement is the type of interest in land subject to the Statute of Frauds. n165 The grant of an express easement must satisfy the Statute of Frauds to be valid. n166 As interests in land, easements "cannot be created or transferred except by a written instrument." n167 The writing, just as with a deed, must be signed by the person granting the easement; the parties must be named, and the easement described as to location and any limitations placed on use. The writing "must identify 'the seller and the buyer, their respective intention to sell and to purchase, a description of the subject matter of the sale, the purchase price, and terms of payment.' " n168

(6) Easements by Agreement, Written or Oral.

Easements may in some situations arise by agreement rather than by grant "where from the nature of the subject matter it is evident that the parties intended that privileges designed for the permanent use of the property should form an incident of the principal contract," no particular type of language being necessary. n169

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/20 Grant! or Creat! W/20 Written or Oral W/5 Agreement

(i) Oral Easements and the Doctrine of Part Performance.

Generally speaking, easements cannot be created orally, any more than land can be sold without a deed. Courts will, however, sometimes enforce agreements or contracts to grant an easement, and treat the easement as though it had been granted, even if the contract or agreement were oral. Thus, two parties in 1949 had agreed orally to jointly construct, maintain and use a driveway constructed along the boundary line between the lot. This arrangement worked until 1987, when the successor to one of the parties built a fence blocking the others' use. The Alabama Supreme Court upheld a lower court decision that this was a trespass against an "easement by contract," and refused to overrule Alabama precedent that "an easement can be created by contract and that such easements are alienable." n170 Some states have

created an exception to the Statute of Frauds "and have allowed the creation of easements by oral contract where the contract has been relied upon and acted upon." n171 The Connecticut Supreme Court has said that oral easements "may be created, and thus taken out of the Statute of Frauds, by part performance by one of the parties." n172 Recognizing this type of easement, a court is, in essence, using estoppel with a different label to prevent a party from denying an easement, the promised existence of which has been relied on. n173

By permitting the enforcement of an easement where a written description is entirely lacking, the doctrine of part performance, a fortiori, applies in the case of a written easement containing an inadequate description that would not otherwise satisfy the Statute of Frauds. n174 Recognition of part performance sufficient to take an agreement, purportedly granting an easement out of the statute in Washington, requires proof of the essential terms of the contract as well as consideration of several factors specific to conveyance of estates in real property. n175

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/5 Oral or Contract W/25 Part Performance

(7) Contents of the Writing.

No magic words or particular words of art are required to demonstrate the creation of an easement. n176"[A]ny words which clearly show the intention to give an easement, which is by law grantable, are sufficient to effect that purpose, providing the language is sufficiently definite and certain in its terms." n177 So long as the words make clear the intention to create an easement, the law does not require perfection in its description; thus the Georgia Supreme Court upheld an easement, where its description in a recorded and an unrecorded plat disclosed the grantors' intention "with regard to the quantity and location of the right of way." n178 Neither words of limitation, n179 nor words of inheritance, n180 nor technical terminology are necessary to create an easement. n181 If the language of the grant is free from ambiguity, it is not the subject of interpretation, "and no resort to extrinsic facts and circumstances may be made to modify the clear terms of the grant." n182 To determine whether an easement is the intention of the parties, courts will examine the language of the grant, the circumstances surrounding its creation and the property involved, with construction in favor of the grantee. n183 Indeed, the writing establishing the easement may not even formally do so. Thus, the Delaware Supreme Court held that a petition and counter-petition to partition land held as tenants in common, both of which referred to an easement over one of the parcels benefitting the other, sufficed to establish the existence of the easement and left only its location at issue. n184 A statement that a conveyance is "subject to" an easement does not necessarily create one because the language usually refers to already existing easements. n185 Some states are very strong in their unwillingness to let the words "subject to" be interpreted to create an easement; one court states that nothing in those words "would even hint" at the creation of affirmative rights or connote a reservation or retention of property rights. n186 Other courts will read surrounding language for aid in determining whether "subject to" is intended to create an easement. n187 Thus, arguing in favor of creating an easement was that it earlier had provided the only access to the property and that the easement was explicitly described rather than simply a prophylactic clause reciting that the conveyance was subject to easements of record; arguing against was the failure to identify the dominant estate or to identify whether the easement was appurtenant or in gross. n188 The choice of proper language can be very important, however, to demonstrate the intention to create an easement and the type of easement to be created. n189 To phrase the problem in another way, it is important to be clear in one's intention to avoid the possibility of a court misinterpreting that intention. The language of the grant should express as clearly as possible the duration of the easement, its location and size, and any limitations of purpose or use.Courts often construe the scope and meaning of an ambiguously worded easement against the grantor, or, in the situation where an easement has been reserved, against the one who reserved it. n190 All this is important to prevent disputes and, if disputes do arise, to make sure that the desires of the parties are not subject to future incompatible interpretations by a court. For example, noting that a deed which accurately and correctly describes the land and interest conveyed is not subject to a variant construction, the Colorado Court of Appeals specifically enforced a grant of an easement against arguments of reasonableness of use, stating that if "the width, length, and location of an easement for ingress and egress have been

specifically and definitely set forth in the grant, the expressed terms thereof are controlling, and what is reasonable or necessary is not decisive." n191 Following are several common problems caused by the wording of easements.

(i) To Distinguish from a Fee Simple Absolute.

Where it is not certain whether a fee simple or an easement interest was intended, courts rely on several types of phrases to help their decision. Thus, where a deed grants "only a right" in a parcel of land, one court states that an easement is conveyed. n192 Deeds that in the granting clause state they are conveying a "right of way over, across, or upon certain land" generally are construed to grant an easement. n193 Terms such as "right of way," "road" or "roadway" bring a "strong, almost conclusive, indication that the interest conveyed is an easement." n194 Thus, for example, a Missouri court found a "strong, almost conclusive" presumption that the terms "road" or "roadway" meant an easement interest while the term "strip of land" indicated the conveyance of a fee simple absolute. n195 Some courts find no such conclusive presumption: "It should be noted at the outset that the use of the term "right of way' in a deed does not determine whether the interest so described constitutes an easement or a fee." n196 One court stated that a reference to a certain narrow strip "without expressing any intention to limit the grant to an easement" created a fee simple. n197 Where the granting document referred to "the limited right to go on to the land of the grantor adjacent to the land conveyed," this granted an easement on the adjoining property. n198 Some courts find the presence of a warranty clause to suggest a fee simple absolute and the absence an easement. n199

(ii) To Distinguish from a Defeasible Fee.

It is sometimes difficult to distinguish between an easement and a fee simple determinable or a fee simple subject to condition subsequent. The latter two estates refer to the granting of a fee interest subject to a condition upon the failure of which the property either automatically or upon the grantor's action returns to the grantor's ownership. If the language of the grant appears to grant a fee and then later states that if certain conditions are not met the property will either revert to the original owner or be subject to reentry by the original owner, a court may refuse to interpret the grant to be an easement. Thus the Nebraska Supreme Court interpreted such language. n200 It was fatal to the easement claim that the granting clause conveyed "the entire estate, with no exceptions, reservations, or specifications for the use of the land," and only later placed conditions on its use, thus comporting exactly with the definition of a fee simple subject to condition subsequent in the *Restatement of Property* . n201 The same court, by contrast, held there to be an easement rather than a defeasible fee where the grant specifically limited use of the land conveyed "for the purpose of constructing a Rail Road there on" and for all uses and purposes connected with its construction and use. n202

(iii) Railroad Rights of Way.

Because rights of way grant a railroad exclusive use of a strip of land, courts have long divided over whether they should be considered fees simple or easements. Most courts have considered them to be easements, the decision often turning upon the language used in the grant. n203 One court puts it that the general rule is that if the grant refers to a "strip, piece, or parcel of land," without language as to its use or purpose or other limitation to the estate it is to be construed as a fee estate, but "reference to a right of way in such conveyance generally leads to its construction as conveying only an easement." n204 The Indiana Supreme Court has set out two further rules for construing grants to railroads. First, deeds prepared by the railroads are construed in favor of grantors of the land, and, second, where there is ambiguity in the deed, absence in a railroad-prepared deed of language specifying that conveyance of strip of land is in fee simple will be evidence of parties' intent that the conveyance not be in fee simple. n205 The use of the term "right of way" generally suggests the creation of only an easement. n206 The easement grants the right of way to the railroad; absent specific language to the contrary, the easement does not grant a reciprocal right of continuing rail service to the

abutting property owners. n207 Courts first attempt to resolve ambiguity from within the four corners of the document and, failing that, look at outside circumstances. n208 The importance of the distinction arises when the railroad abandons use of the right of way. If the interest is a fee simple, the railroad can do what it will with the land; if it is an easement for railroad purposes, when the railroad abandons it, the land will return to the control of the fee owner. There is a presumption in many jurisdictions that the fee lies in the adjoining property, unless a grantor of that adjoining land has explicitly excepted the fee interest upon conveyance. n209

Examples. The Tennessee Supreme Court found an easement for railroad purposes only rather than a fee interest where the term "right of way" was used in the conveyance without evidence of any intention to convey more. n210 The Arkansas Supreme Court, by contrast, found there to be a fee interest where the term "right of way" was used only in companion deeds identifying property in the first deed (in which the term was not used), where no language limited use to railroad purposes, where the railroad was granted rights to use of water, earth and gravel from outside the property conveyed, and where the grantor's wife surrendered dower and homestead rights, something not necessary for granting only an easement. n211 In another case the same court held that the term "right of way" was used to identify the tract, not specify its use, and, given that the deed contained a habendum clause (used in the grant of an estate), dower and curtesy were relinquished, the deed was entitled simply "quitclaim," and there was no statement of permission to remove stone and gravel or borrow earth from within the conveyance, and the railroad previously already had an easement, the grantor conveyed a fee interest and not an easement. n212 In affirming a finding that one such right of way was a fee simple, the Illinois Supreme Court noted that a deed conveying a definite "parcel" or "strip" of land without language limiting the estate granted a fee simple and that use of the words "convey and warrant" suggest an intention to convey a fee simple, whereas words granting only a "right" in a parcel of land convey an easement. n213 The Idaho Supreme Court held there to be a fee simple where the grantors "did 'grant, sell and convey' " their land to the railroad " 'to have and to hold ... forever' " without any limitation over to railroad purposes. n214 Where, by contrast, the grant conveying the right of way provided that if the railroad abandoned the route "the land shall revert and become the property of the grantor, his heirs, or assigns", the Iowa Court of Appeals held that the railroad received a fee simple determinable interest in the land. n215 Where a railroad attempted to prevent a landowner who owned land adjoining both sides of its right of way, the South Carolina Supreme Court held that, despite use of phrases often interpreted to create a fee simple determinable, a statutory grant of " 'good and right title ... so long as the same shall be used only for the purposes of said road and no longer' " did not grant a fee interest but an easement and therefore could not prevent the landowner from crossing so long as it did not interfere with the railroad's business. n216 An Ohio court found a fee interest where the granting clause conveyed all the real estate without words condition or forfeiture, without a reverter clause or provision for right of re-entry, and where the words limiting to railroad use appeared only in a prefatory clause describing the purpose of the conveyance. n217 In a case construing two deeds granting strips of land to railroads, the Alabama Supreme Court held the grants to be in fee simple on the principle that every estate in land is to be construed to be a fee simple absent unambiguous language to the contrary n218 and that the use of the term "right of way" appears after and not as part of the granting clauses, and that the reference to "strips" of land is "merely a description of the property's configuration, not an indication that only an easement was intended to be conveyed." n219

LEXIS: Railroad W/20 Right-of-Way or Right of Way W/20 Fee And Easement

Rails to Trails. Which type of interest the railroad owns in these rights of way is potentially very significant where many abandoned railroad rights of way are being turned into recreational pathways in the well-known rails to trails movement. If the rights of way are easements for purpose of running a railroad over them, if the railroad ceases to do so, they would revert to the original owners. The railroad may not have the right to turn them over to local government for rails to trails conversion. n220 If they are fee interests, the railroads would be free to do so. Congress has passed a statute defining rails to trails use as being within the definition of a railroad right of way; this statute is under attack in the courts as working a taking of the property of the underlying fee owners. n221 When given the opportunity, the Supreme Court did not definitively determine whether there was the taking of a compensable property right in the

conversion of railroad rights of way for public trail use. n222 A federal court has since then refused to find that the owners of the adjoining fee had sufficient expectation of receiving the abandoned easement to have suffered a taking, and that the railroad easements had not yet been definitively abandoned, but were being kept available in case of need for future railroad purposes. n223 The Federal Circuit en banc has since reversed the Preseault panel's decision, found there to be a taking and remanded for proceedings to determine the appropriate compensation. n224 Note that the court has not held the National Trails System Act to be unconstitutional; it has held that the owners of the underlying fee deserve compensation when the conversion authorized by the act takes place. The court held that because in this case the use for which the easement was granted could not by its terms be stretched to include rails-to-trails conversion, the fee owners had the right to possession and deserved compensation for the loss of that right. n225 The court notes that the outcome could be different, depending on whether the scope of the easement could be interpreted to include wider uses, such as rails-to-trails. n226 The Court of Appeals of Maryland, in response to a question certified from the Fourth Circuit, has done just that, interpreting the railroad easement to include such uses, n227 while the Federal Court of Claims notes Chevy Chase but interprets Missouri law to opposite effect. n228 While other courts continue to deal with challenges to this act on other grounds, generally holding for the government, n229 it seems obvious that if this court's interpretation stands, the act will become much less important because the expense of making use of it in many cases will be very high.

(iv) To Distinguish an Easement from a License.

While an easement is an interest in land whereby one person acquires rights over the land of another, a license is permission to do something on another's land without having an interest in the land. n230 An easement "is distinguished from a license because a license is not an interest; a license is merely a privilege to do some act on the land without possessing an interest in the land." n231 The *Restatement* defines a license as an interest in land that entitles its owner to a use of the land arising from the consent of the one whose use of the land is affected by the licensee's actions, but it is "not incident to an estate in the land, and ... is not an easement." n232 The use is, for the *Restatement*, one that *could* be privileged as an easement, but "its creation lacks a formal requirement necessary to the creation of an easement, or ... it is created to endure at the will of the possessor of the land subject to the privilege." n233 As an interest in land, an easement generally is subject to the Statute of Frauds, while a license may be oral. n234 A license is revocable; an easement is not. n235 Thus, that an agreement gave someone access to another's land as long as the grantor owned the land and the grantee permitted the other access to water demonstrated that there was an easement rather than a license: it was not revocable at the servient tenement's will. n236 The license is a personal privilege that expires with the death of either party. n237 A license is terminable at the will of either party, cannot be assigned, does not pass at death, terminates upon conveyance of the land, is an agreement binding only upon the parties. n238 In declaring that, under Michigan law, an oral license could not be rendered irrevocable by estoppel alone, without being coupled to a separate interest in land, the state Supreme Court noted that the grantor of such an intended oral license "in effect, orally conveys an easement," an interest that, under the Statute of Frauds, can be granted only in writing. n239 Ordinarily a license cannot ripen into an easement. The rights granted in easements and licenses often closely resemble one another, and the documents establishing them sometimes fail adequately to distinguish them. Courts say that they look to the intent of the parties to distinguish an easement from a license. n240 If a court cannot distinguish an easement from a license, it will interpret the interest as a license due to a concern for the unrestricted usability of property. n241 The creation of an easement requires a writing with plain, direct and unequivocal language evincing the grantor's intent to create a right in the nature of an easement rather than a revocable license. n242 Courts will look for language speaking of an "interest," language of grant, language suggesting permanence, or language reserving the rights of the fee owner, to help guide them in cases of ambiguity.

(8) Recording a Prerequisite for Validity or Enforceability.

Easements are subject to the same requirements of the recording acts as are other interests in land. In order to protect oneself from losing one's easement to a bona fide purchaser of the servient tenement, the easement must be recorded. Jurisdictions differ over whether failure to record affects the easement's validity, or its enforceability against one purchasing without notice. n243 In many cases, that may be a distinction without a difference, where the challenge to the easement is placed by that bona fide purchaser: the use of the easement will be lost. Even where a failure to record does not affect the basic validity of the easement as between the original grantor and grantee, the bona fide purchaser without notice will take free of the easement. "A bona fide purchaser of the servient estate without actual or constructive notice of an easement takes title free from its burden." n244 In a case concerning the state highway department, the North Carolina Supreme Court held in favor of a bona fide purchaser for value against a claim by the State Department of Transportation to an unrecorded highway easement. n245 A purchaser of real property has constructive notice of the existence of properly recorded instruments: thus, "an instrument that is properly recorded in the proper county is notice to all persons of its existence." n246 In some jurisdictions, however, where an easement, even though unrecorded, is open and visible, "notice ... may be imputed to a purchaser," requiring inquiry to be made. n247 In a title registration state, that an easement does not appear on the certificate of registration means that "the subsequent purchaser of registered land taking a certificate of title for value and in good faith, shall hold the same free from all encumbrances except those noted on the certificate ... ." n248 The Massachusetts Supreme Judicial Court in that case validated easements not appearing on the registration because the servient property owners had actual notice of their existence at the time of the property registration, and thus fit under an exception applying to purchasers with actual notice. n249

(b) Easements Without Express Agreement.

Easements may come into existence without the express agreement of the owner of the servient tenement. They most commonly come into existence by implication by estoppel, from prior use, or by necessity, or they may come into existence by prescription, a process similar to adverse possession. Some courts tend to speak of easements by implication from prior use and easements by necessity as subsets of the same category. n250 Thus, recognizing that the common law has long distinguished between easements by necessity and those implied from prior use, the South Dakota Supreme Court noted that their prior cases had "not mentioned the distinction" between them. n251 Governmental or private entities may obtain them through a form of eminent domain.

(1) Easements by Public Condemnation.

Governmental units may condemn easements over property for public purposes, following the same rules as their condemnation of fee interests. For constitutional reasons, the condemnation must be for a public purpose, and there must be the payment of appropriate compensation. n252 Compensation for the condemnation of easements can be rather complex, involving not only the diminished usefulness of that part of the land over which an easement runs, but also severance and other damages to the unaffected land. Thus, where an unrestricted, permanent sewer easement bisected the property on which a tavern sat, damages had to be calculated for the most injurious effect the easement might have, in that if the utility desired, it could completely cut off access to half of the property. n253 Examples of other rights, besides the expected rights of way, that have been acquired by condemnation include: conservation easements, scenic views, drainage and flooding, the rights to impose nuisances, air rights and development rights. n254 A government may condemn easements for highway purposes. n255

(2) Easements by Private Condemnation.

Many jurisdictions delegate to certain private parties the right to seize land, with proper compensation, for purposes that

are deemed to be public. Thus, some jurisdictions have authorized railroads to condemn easements for their rights of way. Other jurisdictions authorize privately owned public utilities to condemn easements needed, for example, for electric, water or sewer lines. n256 In Missouri, a corporation forced to relocate its pipelines by the Army Corps of Engineers placed them on another's property rather than its own; the court said that their right of private condemnation shielded them from having to remove the pipes. n257 In that state the condemning authority itself has the right to determine necessity. n258 Still other jurisdictions explicitly authorize private parties whose property is landlocked to condemn private ways of necessity, partially on the ground that it is not in the public interest for land to be useless. In Washington, for example, a statute "authorizes private condemnation of land for a right of way for the construction of roads, ditches or other structures necessary for the proper use and enjoyment of landlocked property." n259 In Mississippi, one seeking to condemn such a private way must show an inability to obtain a reasonable right of way from neighboring owners and must show that the private way is reasonably, not absolutely, necessary, but "there must be a real necessity not just mere convenience at stake before private property can be taken." n260 The Alabama Supreme Court interprets Alabama's statute granting landlocked private parties the ability to condemn a right-of-way over a neighbor's property to require the condemning party to prove there to be no other way out or that to create one would be prohibitively expensive because "after all, this is a condemnation proceeding. We are taking the property of one man and giving it to another." n261 Note the difference from the easement of necessity, treated below, that compensation must be paid in the case of private condemnation.

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/20 Public or Private W/5 Condemnation

(3) Easements by Estoppel.

If a person has exercised a right that looks like an easement, relying reasonably on an oral or other promise that would not in itself satisfy the statute of frauds, and has reasonably changed position based on that reliance, a court may find that person to possess an easement, despite the failure to satisfy the ordinary requirements to establish an express easement. A Texas court, for example, affirmed that there was no easement by estoppel where a property owner failed to inform appellant that his use was permissive, thereby precluding his gaining an easement; where there is a duty to speak, silence can be a form of representation, but there was no duty to speak without some special relationship between appellant and the landowner. n262 Having held that a developer had defrauded, both actually and constructively, a land purchaser by describing neighboring property as "preserved" from development and would never be built on, and by having charged a premium price based upon that description, the Virginia Supreme Court held that the land purchaser had an easement affirmative over the neighboring "preserved land" preventing development. n263 A representative listing of the elements of equitable estoppel applied by courts to a dispute over easement rights, is (1) conduct, acts, language or silence amounting to a representation or concealment of material facts; (2) the party to be estopped either knows the facts or the circumstances require the facts to be imputed to that party; (3) the truth about the facts must be unknown to the party claiming benefit of the estoppel at the time they were acted upon; (4) the conduct must occur with the intention or expectation that it will be acted upon, or under the circumstances that it is both natural and probable that it will be acted upon; (5) the conduct must be relied upon by the other party, and, thus relying, the other party must be led to act upon it; and (6) the other party must in fact act upon the conduct and change position for the worse. n264 The doctrine of estoppel is generally not applicable to government in the carrying out of its duties. Thus, that a village had not prevented a neighboring landowner from crossing land previously invested with an easement was not an action sufficient to invoke the estoppel doctrine. n265

(4) Easements by Implication from Prior Use; the Quasi-Easement.

Where a property owner has used one part of a single piece of property for the benefit of another part of the property, and then divides the property, the possessor of the previously benefitted portion of the land may also possess an easement over the previously burdened part of the property. The Rhode Island Supreme Court puts it that when a

previously unified piece of land is severed, a grant will be implied of all continuous and apparent easements used in fact during unity, " 'though they have no legal existence as easements.' " n266 Many courts call the pre-severance use of one part of the property for the benefit of another a "quasi-easement." n267 Where property is divided and part conveyed away, the easement may be implied on either the retained or the conveyed away property. n268 Most courts presume such an easement must rest on "the implied intent of the parties gathered from the circumstances surrounding the conveyance." n269 One court justifies the existence of easement by implication from prior use on the grounds that the conveyance of a piece of property, on principle, "imparts all the benefits and burdens which exist at the time of the sale." n270 In Virginia, absent restrictions imposed by the grant, the easement comes into existence because "a grantor of property conveys everything that is necessary for the beneficial use and enjoyment of the property." n271 The easement by implication is a " 'true easement having permanence of duration,' " and thereby differs from an easement by necessity that disappears when the necessity bringing it into existence disappears. n272 Once the elements were proven to exist at the time of the easement's creation, it becomes an easement appurtenant, and "the elements for creation are no longer relevant to a determination of the continued existence of that easement upon a subsequent conveyance." n273 In other words, in Nebraska, one terminates an easement by implication in the same ways one terminates an express easement, whereas an easement by necessity may disappear with the necessity creating it. n274

(i) The Traditional Elements.

A common statement of the elements of an easement implied from prior use is (1) common ownership followed by a conveyance separating the unified ownership; (2) before severance, the common owner used part of the property for the benefit of the other part, a use that was apparent, obvious, continuous and apparent; (3) and the claimed easement is necessary and beneficial to the enjoyment of the parcel previously benefitted. n275 Some states recognize both this traditional standard and an eight-factor balancing test arising from the *Restatement of Property* . n276

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/10 Impli! W/10 Element or Requir! W/10 Creat! or establish! or prov!

One piece of land divided. Courts have uniformly required that to imply an easement from prior use, the property must have originally been unified under the same owner. Unity of ownership is a prerequisite to a finding of an implied easement. n277 If there has been "no unity of ownership, there can be no implied easement." n278 There must be severance of a previous unity of title between the dominant and the servient estate. n279 The previously existing use becomes an easement only at the severance of the property. Thus, a quitclaim land deed to the United States did not extinguish an easement by implication or necessity to preserve access to grantor's retained land; the easement would not have existence until the deed became operative. n280 The severance necessary to create this type of easement usually is voluntary, but need not be. Thus, where property is severed by the foreclosure of a mortgage, if the other requirements are met, one of the pieces of property may be benefitted by an easement implied from prior use. n281 Where a portion of a piece of land is leased out, a Texas court held that "a written lease agreement for a term of years creates a sufficient separation of title to support an implied easement appurtenant. n282 The severance can occur when husband and wife divorce and split their property. n283

Previously existing "servitude" -- the Quasi-Easement. The easement by implication from prior use requires that one part of the property have been used for the benefit of the other during the time the property was unified. For example, an owner runs a sewer line from one end of the property over the other to the public sewer line on the adjacent road; when the property is divided, in certain cases the owner of the one parcel will retain an easement to continue to run the sewer line over the other parcel. n284 During the time of unity of title, the owner of the property imposes "an apparently obvious and permanent servitude on part of his property in favor of another part"; if reasonably necessary to the enjoyment of the property benefitted, "the servitude survives the severance and becomes an easement by implication." n285 Some courts will describe the pre-existing use as a quasi-easement, "existing conditions on the retained land that are apparent and observable and the retention of which would clearly benefit the land conveyed." n286 The easement

might also run the other direction, benefitting the land retained. n287 It is called a "quasi-easement," of course, because one cannot own a genuine easement over one's own property. Courts may even refer to the quasi-dominant and the quasi-servient estate to describe the benefitted and burdened portions of the previously undivided property. n288 A statement of the "permanence" of the servitude is that the common owner must have used the premises in this altered condition "long enough before the conveyance to show that the change was intended to be permanent." n289 Before an easement may be granted, the use must be "apparent and continuous" at the time the dominant owner acquires the land; this requirement to confirm the intent of the original owner to use part of the land for the benefit of another part. n290 Where a husband and wife, for example, regularly used a parking lot for customers renting storage sheds on their adjoining lot, after their divorce and the property division, an easement over the husband's land, since sold, was implied to benefit the lot with storage sheds retained by the wife. n291 The use of the easement "must have been continuous so that the parties must have intended that its use pass by the grant ... ." n292 To demonstrate permanence, some courts will describe the use as "longstanding." n293

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/10 Former Use or Previous Use or Pre-existing Use or Preexisting Use W/25 Quasi-Easement or "Quasi-Easement"

Degree of Necessity Required. It does not usually suffice that there be a pre-existing use in an undivided piece of property. Before courts will imply from that pre-existing use an easement to which the servient owner has not agreed, the court will require that there be some necessity that it do so. For some courts, the focus is on the probable intent of the parties. n294 The necessity is not the same degree as that required for an easement by necessity, but some courts will require that there be "reasonable necessity" before implying the easement. n295 Though some courts require strict necessity, the "general rule" requires a finding of reasonable necessity, "such as will contribute to the convenient enjoyment of the property, other than a mere temporary convenience." n296 Although a strong finding of necessity will argue for finding an easement by implication, this necessity "need not always be strict and absolute," but is "only a circumstance resorted to show the intention of the parties." n297 The degree of necessity may be described as "highly convenient and beneficial to the land conveyed." n298 When "the circumstance of prior use is present, the elements of the grantor's necessity for and benefit from the easement need not be as strong in order to prove an easement as when necessity is the sole circumstance inferring an intent for an easement." n299 In Virginia the finding of reasonable necessity to justify an easement by implication from prior use "requires a showing of need which, by definition, may be less than that required for establishing an easement by necessity, but must be something more than simple convenience." n300 Some courts require a lesser or no finding of necessity at all. n301 Following this understanding that the purpose for the necessity requirement is to show that the parties would likely have made the easement explicit had they thought about it, some jurisdictions hold that a later disappearance of the necessity does not lead to the disappearance of the easement. n302 Thus, the Alaska Supreme Court pointed out that the necessity required for an implied easement is measured at the time of severance, and the easement so created will not disappear even if that necessity disappears. n303

Differing Degrees of Necessity When the Dominant Tenement is the Retained rather than the Conveyed Parcel. n304 Some courts demand a higher finding of necessity when the dominant tenement is the portion of the property retained. One justification of that distinction is that the seller will be the one with more sure knowledge of the existence of a pre-existing use and the one with the duty to inform the buyer that the property being purchased may be burdened with an easement. n305 In order to burden the purchaser this way and lessen the value of the property, these courts will demand proof of strict necessity. If the seller retains the servient tenement, such a court will require the purchaser of the dominant tenement to prove only reasonable necessity; the seller has superior knowledge that the property being sold has previously benefitted from such a quasi-easement and more appropriately bears the burden of its continuance when reasonably necessary for the enjoyment of the sold parcel.

LEXIS: Easement W/10 Impli! W/20 Former Use or Previous Use or Pre-existing Use or Pre-existing Use W/30 Necess! or Degree W/3 Necessity

(ii) The Restatement Approach to the Implied Easement.

The *First Restatement* treats the implied easement from prior use and the easement by necessity as members of the same class, the degree of necessity being one of the relevant factors in determining whether an implied easement is granted. The Restatement factors to be considered are: (a) "whether the claimant is the conveyor or the conveyee, (b) the terms of the conveyance, (c) the consideration given for it, (d) whether the claim is made against a simultaneous conveyance, (e) the extent of the necessity of the easement to the claimant, (f) whether reciprocal benefits result to the conveyor and the conveyee, (g) the manner in which the land was used prior to its conveyance, and (h) the extent to which the manner of prior use was or might have been known to the parties." n306 No one of those factors is dispositive. The factors in both of these tests are ways to determine whether the parties would have intended an easement had it been thought of at the time the property was divided.

(5) Easements by Necessity.

Where a piece of land has been divided, and the result is that one piece is useless without an easement, the owner of that piece may possess an easement over the other. n307 An easement by necessity may also come into existence when a parcel is divided and sold to two or more grantees, and one ends up landlocked. n308 It arises however the severance occurs, for example, by foreclosure or the exercise of eminent domain. A court may find that logic suggests that claims for an easement of necessity have more force between simultaneous conveyees than when the claim is against the conveyor, because it is reasonable to infer that the conveyor dividing land among simultaneous conveyees "intends that very considerable privileges of use shall exist between them." n309 The *Restatement* notes that such situations often arise in family distributions of land. n310

(i) Justified by Implied Intent or by Public Policy?

One justification for the easement by necessity is that the grantor is "presumed to have intended" to retain or to have conveyed to grantees "a means of access to the property in question, so that the land may be beneficially utilized." n311 The intent presumed in this conception of the way of necessity contradicts the required finding of adversity with the result that one with a way necessity will never be in the position to prove a prescriptive easement. n312 It arises "by implied grant" when property is severed in a way that leaves part of it landlocked. n313 Some jurisdictions have enacted into statute that a grant of a way of necessity will be implied where landlocked property is conveyed or retained. n314 Similarly, the same statutory scheme provides for a statutory way of necessity in situations where the parcels do not come from the same grantor. n315 Other jurisdictions, however, refuse to permit condemnation of a private way or implied reservation of an easement by a grantor, because the grantor has caused the problem by failing to reserve an easement. n316 Another, and perhaps the better, justification is that public policy prohibits land from being conveyed away in a manner that renders it useless, and the easement by necessity arises to cure that problem. n317 The public policy justification for the way of necessity often contravenes the intent of the original grantor or grantee; it "arises "to meet a special emergency ... in order that no land be left inaccessible for the purposes of cultivation." " n318 Some courts mix the two justifications: "[A] way of necessity is an easement arising from an implied grant or implied reservation; it is of common law origin and is supported by the rule of sound public policy that lands should not be rendered unfit for occupancy or successful cultivation... ." n319 The same court further notes that the way of necessity "rests on public policy often thwarting the intent of the grantor or grantee," noting that the demands of our society prevent "man-made efforts to hold land in perpetual idleness" by making it landlocked. n320

(ii) The Easement by Necessity May Run Over Either the Land Retained or that Conveyed Away.

The easement usually arises when an inner portion of land, either conveyed away or retained, is entirely surrounded by

lands owned by the grantor or by the grantor plus strangers. n321 An easement by necessity may also run the other way, permitting a grantor a way of necessity over the land conveyed away. n322 Some jurisdictions, however, do not recognize an implied reservation of easement by a grantor "simply because it sold the land that provided the only access to the landlocked parcel." n323 Presuming that a vendor would not knowingly convey part of a parcel in a way that deprived the remainder of any value, the North Carolina Court of Appeals read its state's law to place it in the majority of jurisdictions that recognize an easement of necessity in favor of the grantor over the grantee's new lands. n324 The easement arises unless the granting document explicitly disclaims any right of access. n325 It is a generally accepted common law principle that easements by necessity are appurtenant to the dominant tenement (obviously since they exist to benefit landlocked land) and benefit successors to the dominant tenement. n326 The defense of laches in some jurisdictions can bar an easement of necessity. n327

(iii) Elements to Establish the Easement by Necessity.

The necessary elements to establish an easement by necessity are commonly stated to be: (1) unity of title; (2) the dominant tenement has been severed from the servient, thereby curtailing access from the dominant estate to a public roadway; and (3) that a reasonable necessity existed for such a right of way at the time the parcels were severed. n328 In this context most courts will define reasonable necessity as strict necessity. The burden of proof is on the one attempting to establish the easement, in some jurisdictions "by clear and convincing proof." n329 Under the *Restatement* , an easement by necessity is treated under the same heading as an implied easement from prior use, and the eight-part test applies. n330

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/10 Necessity W/10 Element or Requir! W/10 Creat! or Establish! or prov! But not use W/5 Prior or Pre-existing

Unity of Title. As with easements implied from prior use, an easement by necessity cannot be created unless the dominant and servient tenements were originally one piece of property. Original unity of title in dominant and servient tenements is required. n331 Thus, an easement by necessity was granted where a common grantor conveyed land that was "entirely surrounded by the land from which it was severed." n332 The unity of title required for an easement by necessity must be complete, that is, both the dominant and servient tenements must have belonged to the same person. n333 Thus the South Carolina Supreme Court held in a case where a man owned a landlocked tract in fee simple and the neighboring tract as tenant in common with his wife, there could not be an easement by necessity because holding one tract in fee simple and the other as a tenant in common does not meet the requisite unity of title. n334 The State of Colorado failed to establish a private way of necessity over railroad tracks because there was "nothing in the record to show unity of ownership prior to any division, nor is there evidence indicating that such an easement has ever existed." n335

Severance Leading to Lack of Access. For an easement by necessity to be implied, the severance creating the dominant and servient tenement must have created a situation in which there was no access for the dominant tenement to some public roadway. Thus, the Montana Supreme Court affirmed a summary judgment that the successor to the original owner of land and condominium complex developer had an easement of necessity over roads through the complex to reach a main road. n336 The severance creating an easement by necessity may also arise from forced sale of some or all of the land in question, as through tax sale, eminent domain, or mortgage foreclosure. n337 The lack of access must be "the result" of the severance. n338 The necessity must exist at the time of the severance of the two estates; it cannot arise later. n339 Thus where landowners rendered their own property landlocked by selling off their access, they could not claim an easement by necessity over property from which their land was originally carved out; their landlocked status resulted "not from a grant of property to them but by their own acts in conveying away their highway access." n340

Necessity. There must be a reasonable necessity for the right of way sought by the creation of the easement by necessity. Most courts will be quite strict in the degree of necessity they will demand, stricter than with an easement implied by prior use. For an easement by necessity, there must be "a genuine necessity; mere convenience is not enough." n341 The easement must be "absolutely necessary;" it must exist "in fact and not as a mere convenience." n342 The rule of strict necessity is "not limited to one of absolute necessity, but to reasonable necessity, as distinguished from mere convenience." n343 Showing of alternative access across navigable water can sometimes defeat a claim for an easement of necessity, but access over a marshy tidal flat that would require expensive dredging and which sometimes froze was not sufficient. n344 The proponent of an easement by necessity must prove its necessity. Thus, in a Maine case involving access to property fronting on the Atlantic Ocean, though there was evidence of a rather steep bank above a ledge and cobblestone beach and that there were no docks, wharves or moorings, the supreme court affirmed denial of an easement by necessity because "no evidence on the record establishes that a dock or wharf could not be built at reasonable expense to provide continuing and readily available access from the water." n345 When landowners claimed their property was "effectively" landlocked because of geographical barriers inhibiting access, the Wisconsin Supreme Court noted that Wisconsin courts had never previously "recognized geographical barriers alone as circumstances warranting an easement by necessity," and held that it was not enough that the grantor had "difficulty" with access so long as there was access. n346 The Virginia Supreme Court identifies the "modern view" to be that a way of necessity may exist even when the property borders on a waterway, "if the water route is not available or suitable to meet the requirements of the uses to which the property would reasonably be put." n347 Where a river adjoining property was navigable, there was insufficient evidence of the necessity required for this type of easement. n348 The *Restatement* treats the easement by necessity under the heading of implied easements, using the degree of necessity as the most important of the factors to be considered whether to imply that an easement exists. n349

Easement Extinguished When Necessity Ceases. If some other means of access should arise after the easement by necessity has been created, some jurisdictions will declare the easement to be abolished. n350 Thus, an easement by necessity would cease to exist when an alternate public road was built and accepted by authorities. n351 Such easements by necessity "last as long as the necessity lasts and terminate when other access to the landlocked parcel becomes available." n352 This is different than the case of the easement implied from prior use, where some jurisdictions hold that the easement will survive the end of the necessity required for its creation. n353 The logic for this distinction lies in the role of necessity in the two types of easements. For the easement implied from prior use, necessity serves as evidence of the intent of a grantor to continue a pre-existing easement; if that intent is there, the easement should be treated like any other easement and so survive the termination of the necessity. An easement of necessity does not depend on the existence of a pre-existing easement, and courts split over whether necessity serves simply as an indicator of intent, or the public policy justification for implying the easement. Because the necessity is so much more crucial to the creation of, and is fundamentally the only reason for, this type of easement, and because courts often demand a higher degree of necessity than for creating a prior use easement, the courts view the expiration of the necessity as terminating the easement also.

(6) Prescriptive Easements.

(i) Compared to Adverse Possession.

Gaining easements by prescription bears many similarities to adverse possession, and courts often mix up their characteristics. In adverse possession one may succeed to ownership in fee of a piece of property by acting openly as though one were the owner against the interests of the real owner for a period of time defined as sufficient in the particular jurisdiction. n354 Similarly, one may gain easement rights over the property of another by exercising those rights for a sufficient period of time without the permission of the fee owner who has had sufficient notice. The fundamental difference is that in adverse possession one acquires a possessory interest in land which, when proved, leads to a change in title n355 while in prescription, the fee owner retains ownership of the underlying property and the prescriptive easement claimant succeeds to a new, limited right to make use of that property. n356

(ii) Historical and Theoretical Bases for Easements by Prescription.

There have been, according to the American Law Institute's new *Restatement (Third) of Property (Servitudes)* , four theories underlying the American jurisprudence of prescriptive easements. The first two provide the foundation for modern acquisitive prescription theory: (1) sufficiently long-term use or enjoyment of property may create an entitlement to it, a property right, and (2) such use or possession may perfect a flawed title. A third theory, little used these days, sees long-continued use or possession as evidence of an entitlement created at some time lost in the mists of the past: the fiction of the lost grant. The fourth theory is the basis for extinctive prescription and statutes of limitation: there should be but a limited time for the asserting legal claims. n357 The English gradually abandoned acquisitive prescription theory and relied on statutes of limitation to confirm adverse possession of use rights; because the statute of limitations for proving uses required harking back to 1189, courts eventually compensated for the increasingly difficult task of proving a long enough prescription period and adopted the theory of the lost grant which allowed acquisition of servitudes after twenty years after certain requirements were met. Twentieth century American courts have largely abandoned the lost grant theory and rely on a combination of statutes of limitation (defining the prescriptive period) and acquisitive prescription theory (creates a property right in the prescriptive user). n358 The abandonment is not total, however. While recognizing that it is a doctrine "under siege" and that the Restatement (Third) calls for its eradication, the Vermont Supreme Court refused the opportunity to abandon the theory of the lost grant, though it redefined it as a rebuttable "bursting bubble" evidentiary presumption. n359 In Minnesota, a farmer claimed the prescriptive right to flood his neighbor's fields by increasing the size of his dam and the pond behind it. The court found insufficient evidence that the flooding was frequent enough to create a prescriptive flood easement, and that if there had been one it had been abandoned for many years. n360 This confused historical and conceptual basis for prescriptive easements has led to some uncertainties in requirements to create interpretations of the scope of easements.

(iii) Interests Subject to Prescription.

Generally speaking, any positive easement n361 that may be expressly created may also be acquired by prescription. n362 The right most commonly won by prescription is a right of way over neighboring land. If one wins an easement by prescription over a right of way, the easement encompasses the whole right of way, not merely that part of it actually used. n363 Other types of rights may be created. For example, a right to discharge pollution was won by prescription, n364 as were drainage rights, n365 irrigation ditch rights, n366 swimming rights, n367 and the right to use a fire escape on a neighboring building. n368 A Missouri case was remanded to see if a prescriptive easement had been established to pump sewage from a private residence into a steel company sewage system. n369 In South Dakota, for time reasons, a farmer failed in preventing county from correcting drainage that was flooding neighbors' land, a correction that would flood his own land; "plaintiff was claiming a prescriptive flood right." n370 Some, but not all, jurisdictions will recognize avigation, or air navigation, easements (the right to fly low over another's land) by prescription. n371 Prescriptive easements may be either appurtenant or in gross. n372 More than one easement may be won over the same property. Thus, one person was able to acquire a prescriptive easement over the same property over which another had purchased an easement, just as the fee owner could have sold to two parties the right to pass over the same right of way. n373 The type of use by which one establishes a prescriptive easement determines the type of easement won. Thus, it was a matter for the trial court to decide whether parties had proved that they had used an easement in an exclusive enough manner to establish an exclusive easement by prescription, one that no one but they would be able to use. n374

(iv) No Prescriptive Easements Against Government or Public Interests.

Just as with adverse possession, a prescriptive easement may not be won against government property held for a public use or when it is made inalienable by grant or statute; where the property is held in a proprietary capacity, and its alienability is not restricted, prescription is available in some jurisdictions. n375 Thus, an Alaskan statute provides that no prescription or statute of limitations runs against title by the state, nor may any title or interest to land under the state's jurisdiction be acquired by adverse possession or prescription, or in any other way except by conveyance from the state. n376 Nor may a prescriptive right of way be acquired in property not government owned but affected with a

public interest or dedicated to a public use; thus it could not be acquired over the property of a railroad (a public utility) if that property was being used for a public purpose. n377

(v) Prescription by the Public.

In some jurisdictions the general public may acquire an easement over a right of way with the result that a private road can become a public road against the will of the owner. In Illinois, for example, a private road can become a public highway through prescriptive use by the public for fifteen years, fulfilling the same requirements necessary to establish a private prescriptive easement. n378 The Montana Supreme Court puts it that the evidence must be convincing that, for the statutory period, "the public have pursued a definite, fixed course, continuously and uninterruptedly, and coupled with it an assumption of control and right of use adversely under a claim or color of right, and not merely by the owner's permission... ." n379 In Maine, where the easement sought is a public recreation easement in wild, uncultivated land there is an assumption of permissive use. n380 While Maine retains its presumption of permissive use in wild, uncultivated land when a public prescriptive recreational easement is sought, the presumption is the opposite in the case of a private prescriptive easement of way. n381 The primary test is not necessarily the number of people to use the road, but the nature of the use, "namely, whether or not the public, generally, have had the free, unrestricted right to use the road." n382 Before a county can be become owner of a prescriptive easement, thereby avoiding the duty to condemn and pay for it, some jurisdictions will require special procedural steps, including filing of a plat showing the road. Without this special form of notice, prescription will not occur. n383 To the requirement of public use for five years, Idaho adds that the road must be "worked and kept up at the expense of the public.' n384 In quotation in the last sentence on the page, change the fourth word from the end to "uninterrupted."

(vi) The Elements of the Prescriptive Easement.

To create a prescriptive easement one must prove facts similar to those required to prove adverse possession of land. n385 For one to gain ownership of a piece of property by adverse possession one must be in exclusive actual possession of the property in a manner that is adverse, hostile under a claim of right and for a sufficient length of time under the law of the particular jurisdiction. n386 To gain a prescriptive easement over someone else's land, one's use must be "adverse, under claim of right, exclusive, continuous, uninterrupted, and with the knowledge and acquiescence of the servient owner for at least 20 years" n387 in one jurisdiction, while in another the claimant must "establish an open, notorious, continuous, uninterrupted use for the five-year statutory period, under a claim of right, with the actual or imputed knowledge of the property owner," n388 and in still another one must prove a use that is "adverse, exclusive and interrupted ... for 20 years." n389 The treatment in the following sections will underline how these various requirements shade into one another. This melange of redundant terms, the *New Restatement* suggests, reflects the divergent theoretical strata underlying American prescription theory, and, as boiled down in modern American doctrine, "requires only that a prescriptive use be maintained in a manner that is open or notorious and continued without effective interruption for the prescriptive period." n390 The *New Restatement* gives a state-by-state survey of the stated requirements to establish prescription. n391

(vii) Burden of Proof.

Most courts place the burden of proof for each of the elements of a prescriptive easement on the party seeking the easement, under varying but usually quite strict standards because prescriptive rights are disfavored as necessarily working a forfeiture of existing property rights. n392 In New York, the law is "settled" that one must prove the elements by "clear and convincing evidence." n393 Missouri has a standard of clear and convincing evidence because the law does not favor the establishment of prescriptive easements. n394 Noting that it had never "explicitly stated that the

elements of a prescriptive easement must be established by clear and convincing evidence," the Minnesota Supreme Court stated, "that they must be so proved was implicit in our adoption of the rules of adverse user for prescriptive easements." n395 The Idaho Supreme Court requires the claimant to present "reasonably clear and convincing proof" of the elements. n396 In Vermont, the burden is "strict proof, that is, by clear and satisfactory evidence." n397 In Connecticut and the District of Columbia, by contrast, the burden of proof is on the proponent of the prescriptive easement under the standard of preponderance of the evidence. n398 In New Hampshire, one must prove the elements by a balance of probabilities. n399

(viii) Adverse, Under Claim of Right or Hostile.

These requirements suggest with varying emphases that the use of the property must contradict the rights of the owner.

Adversity, Hostility, and Claim of Right - Acting Against Owner's Interest. The terms "adverse use" and "hostile use" are often used interchangeably. n400 In like manner, "[e]vidence to show hostility and claim of right to satisfy the requirements of a prescriptive easement is of a similar nature" n401 The prescriptive user is not acting under the aegis of the owner, but under the prescriptive user's own authority. To describe a use as hostile is not to say that anger or enmity need be shown; for these purposes a "hostile" use is one "of such nature and exercised under such circumstances as to manifest and give notice that the use is being made under a claim of right." n402 In California, adversity can occur when the use occurs by mistake. n403 In Maine, by contrast, not only must the act be of the type that could be called hostile or adverse, but the person claiming the prescriptive easement must possess the correct state of mind; the claimants "had no intent to use adversely to an owner because they believed they were using a public road to which all members of the public had rightful access." n404 A use of a neighbor's land based on mere neighborly accommodation is not adverse and cannot ripen into a prescriptive easement. n405 Use of land permissive at its beginning cannot ripen into an adverse use without a distinct and positive assertion of a right hostile to the owner. n406 A claim for a prescriptive easement over a circular driveway that fronted two lots failed because the previous owners had given each other permission to use the portion in front of their respective lots; adversity did not begin until permission was withdrawn. n407 A condominium owner in Maryland failed to establish the right to a particular parking space, because all were common owners of the parking area, and simple use of one space for no matter how long was not hostile to the rights of other owners, since the owner had permission to use any of the development's parking spaces. n408 An adverse use is a use inconsistent with the rights of the true owner, such that if the owner discovers it, the owner will find cause to prevent it. Thus, where a parcel of land was the subject of a claimed easement, a court affirmed a finding that a prescriptive easement had been created against the tenant in possession, but not against the reversioner, because the reversioner, not in possession, was "legally unable to bring an action to prevent plaintiff from gaining the easement by prescription." n409 It is a use not made in subordination to the owners. n410 An adverse use is a use "without license or permission, for an adverse right of an easement cannot grow out of a mere permissive enjoyment, the real point of distinction being between a permissive or tolerated use, and one which is claimed as a matter of right." n411 Where a town had vacated a road across private property connecting two highways in exchange for $2,000, future uses were considered permissive in that the owners had posted the property as private but "as a good neighbor in the community in which it was situated" permitted people use of the road. n412 Some courts define adverse use as made with the knowledge and acquiescence but without the permission of the owner. n413 In South Dakota, once the person claiming a prescriptive easement has proven open, visible, continuous and unmolested use of property for 20 years, the use will be presumed to be under a claim of right and the landowner will have the burden to rebut "this presumption by showing that the use was permissive." n414 The Restatement (Third), Property (Servitudes) § 2.17 cmt. g (2000) considers this definition to be a remnant of the lost grant fiction that makes no sense for modern prescription doctrine, which depends on theories of acquisitive prescription and the running of statutes of limitations. n415 Worse yet is the difficulty in distinguishing acquiescence of the owner from permission of the owner, which destroys a claim of prescriptive use. n416

Presumption of Permissive Use or of Adverse Use. Some jurisdictions have a presumption that use of an existing roadway is permissive. n417 In Idaho, where an owner of property constructs a way over it for convenience, mere use of it by others that does not interfere with the owner's will be presumed to be permissive. n418 Another common presumption is that if a use once was permissive, it is presumed to continue permissive unless the proponent can show evidence to the contrary, including evidence that the owner was made aware of the proponent's attempt to convert the use into an adverse one. n419 Because prescriptive easements are not favored, the person seeking to establish one has the burden of proof, and "such use is presumed permissive, absent evidence of hostile entry." n420 For fear that mere neighborly consideration may result in an owner's loss of control over land, some jurisdictions presume mere use without more to be permissive and incapable of ripening into a prescriptive easement absent rebuttal of the presumption. n421 In a Montana case involving landlocked property, where testimony showed that early homesteaders commonly let each other cross their lands, the evidence showed a use permissive in its inception and, therefore, not a claim of right. n422 In Wyoming, one claiming a prescriptive easement in an unimproved road crossing a neighbor's land, faces a presumption of permissive use and must prove that intention to make hostile use was brought home to the neighbor in "a clear and unequivocal way." n423 In others, however, there is no presumption of permissive use. n424 In the District of Columbia, adversity may be presumed from proof of a prima facie case of open and continuous use for the appropriate statutory period "in the absence of contrary evidence." n425 In South Dakota, once the person claiming a prescriptive easement has proven open, visible, continuous and unmolested use of property for 20 years, the use will be presumed to be under a claim of right and the landowner will have the burden to rebut "this presumption by showing that the use was permissive." n426 In Illinois, there is a rebuttable presumption of adverse use "where the use of the land or way occurred normally, or in other words, has been used openly, uninterruptedly, continuously and exclusively for more than 20 years, and the origin of such way is not shown." n427 In Idaho, where there is evidence of how the use of the road began, the presumption of adverse use does not apply. n428 In a Mississippi case involving a landlocked property owner, the Mississippi Supreme Court noted that when one is trying to prove the elements of a prescriptive easement, "requiring a litigant to prove a lack of permission is unreasonable because the law typically frowns upon requiring a party to prove a negative." n429 In New York, where the other elements are proven, the first element of hostile use will be presumed, shifting the burden to the record owner "to produce evidence rebutting the presumption of adversity." n430 Thus, where plaintiffs had established that use of an access way was open, notorious and uninterrupted for more than the required period, a presumption arose that the use was adverse. n431 In Idaho the test is similar, but if the use is by the general public, the presumption reverses to a rebuttable one of permissive use. n432 The Oklahoma Supreme Court states that the presumption of adversity arises only against someone who does not show a superior right and where there is no evidence to explain how the use began. n433 In Missouri, open, continuous, visible and uninterrupted use for the statutory period raises a presumption that the use is adverse, but when facts appear in the evidence to show permission, the presumption loses all force and vanishes, and whether the use must be shown as if no presumption had ever operated. n434 Evidence of friendly relationships between families when meeting served to rebut that presumption. n435 Simple testimony of permissive use will not serve to rebut the presumption of adverse use, if the court does not believe the testimony. n436 Another New York case points out that the presumption also disappears, and the proponent must come forward with affirmative facts that the use was adverse where "it is shown that the user and landowner are related by blood or part of a select group of friends." n437 In some jurisdictions, there is no presumption of adversity where the land over which an easement is sought is wild, uncultivated or unenclosed because of the theory of neighborly accommodation and problems of notice. n438 Pennsylvania law is even stronger; the Pennsylvania Supreme Court states that a prescriptive easement "may not be acquired through unenclosed woodland," in order to "protect owners of woodland property from unknown and undesired encroachment of their property." n439 The Maine Supreme Court has held public recreational uses of unposted open fields or woodlands and the ways through them to be permissive and has broadened the definition beyond the "wild" lands of old cases to state that "it is the public recreational uses of land, not the nature of the land alone, that triggers application of the rebuttable presumption of permissive use in public prescriptive easement cases." n440 In the first line of the first LEXIS paragraph, delete "8m." When an easement is claimed over such land, "the better rule is regard the use as permissive until affirmatively shown to be adverse." n441

Under a Claim of Right or Claim of Title. One translation of "adversity" is that the prescriptive easement claimant acts as though the use being made were already owned, that is, it is not with the permission or by the grant of the owner. The Mississippi Supreme Court describes the use as being "under claim of ownership." n442 The Illinois Court of Appeals describes the requirement as "under claim of right or title inconsistent with that of the true owner." n443 The determination of a claim of right in the District of Columbia focuses on "factual manifestations of claimed ownership." n444 Nevada identifies claim of title with exclusivity: "For a use to be adverse it must be exclusive, that is, held under a claim of title exclusive of any other right, as one's own." n445

Color of Title. A few jurisdictions recognize that making a claim under color of title can affect winning an easement by prescription. n446 Thus, in Wyoming, a prescriptive easement requires either a claim of right or a claim of right under color of title. n447 Color of title means having documentary claim to the easement through a deed or some other document that would grant it but for some defect. The way that the color of title affects adverse possession of land is that in some jurisdictions there will be a shorter statute of limitations, and in some jurisdictions, taking by adverse possession some part of a piece of property under color of title will win the entire property described in the document. n448 Color of title works similarly for prescriptive easements in those jurisdictions that apply it to prescription. In Washington, proof of color of title in adverse possession means that the adverse possessor is deemed to have possession of the entire tract described in the deed; applying the same principles to a prescriptive easement resulted in a county having a full forty-foot right of way easement the parties had "arguably intended" in the defective documentation, though the county had "never exercised ownership of the road banks until recently." n449 Holding that, as a matter of law, the issue of color of title should not have been presented to a jury due to an adversity period of only 4.5 years, the North Carolina Supreme Court declined to decide whether a prescriptive easement could have been acquired under color of title in seven years rather than the usual twenty. n450 A Florida court held that where a servient owner was attempting to extinguish part of an existing easement by adverse possession, the fee owner's claim is a claim of right under color of title and, therefore, ripens in seven years rather than twenty. n451 The difference justifying the latter case, however, appears to be that the Florida court is talking about a possessory action against an already existing easement rather than an attempt to create one by prescription.

Open and Notorious or With Knowledge of the Owner. The requirement that the use be open and notorious, however it is phrased, is for purpose of notice. n452 If the owner has actual notice, one need not worry about openness or notoriety of the use. n453 Knowledge of adverse use shown by the statements of one co-owner may be considered against other co-owners. n454 The use must have been "open and notorious such that the true owner had notice of the claim." n455 Thus, the New Mexico Court of Appeals held that an electric cooperative had established a prescriptive easement for existing electric lines and the safety zone around them, but had not established an easement as wide as it wished for new larger lines, because there was nothing visible to put the landowner on notice. n456 The adverse use must be with the owner's "knowledge and acquiescence, n457 or by a use so open, notorious, visible and uninterrupted that knowledge and acquiescence will be presumed," each of the elements being essential and open to contradiction. n458 Notice must

be actual or from "known facts of such nature as to impose a duty to make inquiry which would reveal the existence of an easement." n459 Thus, a property owner had the required "express notice" when a road had been rerouted through its land after a train crash and for decades the County had maintained the road and had even installed a culvert. n460 Open and notorious means "a distinct and positive assertion of a right hostile to the rights of the owner;" it must be brought to the attention of the owner. n461 An owner should not be deprived of the right to exclude without being put on sufficient notice that there has been an invasion of the property and that the owner should take action. n462 An owner is charged with notice of an easement where its existence is apparent upon an ordinary inspection of the premises; notice can be constructive or implied from circumstantial evidence. n463

LEXIS: Easement W/5 Prescript! W/25 Open or Notorious W/25 Notice

Exclusivity. This is one of the more difficult of the requirements for establishing an easement by prescription. If exclusivity is read to mean that the prescriptive easement seeker must use the property to the exclusion of its owner, it would demand something of the person attempting to establish an easement by prescription that is not required of any other easement owner. If one is trying to gain ownership of all the rights to a piece of land, a requirement of exclusivity as to the fee owner makes very good sense; it results in the owner being displaced, and therefore the fee owner has every good reason to be placed on notice that ownership rights are at risk. An exclusivity requirement of that type makes little sense when applied to an easement by prescription, because the use made by an ordinary easement holder is not necessarily exclusive to the rights of the fee holder. The servient owner in an ordinary non-exclusive easement has the right to make use of the property along with the easement holder, as well might other easement holders; it should be similarly so for prescriptive easements. n464 Most courts, therefore, will interpret the exclusivity requirement to mean something different than making the prescriptive easement holder use the property to the exclusion of anyone else. n465 In Illinois, for example, exclusivity as a requirement for a prescriptive easement "does not require a showing that only the claimant made use of the way, but that the claimant's right to use the lane does not depend upon a like right in others." n466 Similarly, in Montana, the use must be "independant of a like right of way in another." n467 In Alabama, the claimant's rights must "rest upon its own foundations and not depend upon a like right in any other person ... ."; a prescriptive easement of way can come into existence if the owner passes over the same way is shared by the owner. n468 According to the *Restatement (Third)* , the exclusivity requirement is most often used to deny the creation of a prescriptive easement where the use cannot be distinguished from that of the general public (that distinction is better made by the open or notorious requirement), or in cases where one uses rights concurrently with the owner, thus creating an inference of permissive use. n469 In some states exclusivity is not a requirement for establishing an easement by prescription. Thus, that others had used a road in Rhode Island did not defeat a claim of prescription: the claimant need not have been the only one to make use of a road, so long as the use was made independently of others, under a claim of right. n470 In New York, the elements to find prescription are similar to those for adverse possession, save that "demonstration of exclusivity is not essential." n471 In Missouri, the adverse use does not need to be exclusive; one seeking such an easement claims only the right to make a certain use of the land and "does not claim to possess the whole title and exclude the owner from it for all purposes." n472

Continuous for the Statutory Period. To obtain a prescriptive easement, one must prove that the appropriate type of use was continuous and uninterrupted for the statutory period.

Continuity of the Use. For a use to be "continuous" does not mean that it must be "constant"; it is necessary, however, that "there be no break in the essential attitude of mind required for adverse use." n473 Continuity requires use often enough to provide notice to the potential servient owner, and "uninterrupted" means that use is "not interrupted by the

act of the owner of the land or by voluntary abandonment by the party claiming the right." n474 The use needs to be more or less frequent "according to the purpose and nature of the easement, a use often and regular enough to give notice that the users were asserting a claim of right." n475 Some jurisdictions find continuity in seasonal use. Thus, in Rhode Island, seasonal use of a rural path did not defeat continuity, because even under the stricter standards for finding adverse possession, it is only necessary to show that "the claimant has acted toward the land in question 'as would an average owner, taking properly into account the geophysical nature of [the] land.' " n476 In North Carolina, placing fish traps in a river during fishing season, and use of a road during growing season for a number of years were sufficient to provide continuity of use. n477 A New York court held that use of a roadway every other weekend between Memorial Day and Labor Day and at Thanksgiving, for the prescriptive period was appropriate seasonal use to satisfy the continuity requirement. n478

Interruption During the Prescriptive Period. An easement must be used without effective interruption during the prescriptive period. n479"Either an interruption from an act of the owner of the servient estate or a voluntary abandonment by the adverse user may prevent the easement from ripening." n480 Effective interruption means that the owner must cause the prescriptive user to stop the use, resort to a statutory procedure that produces an interruption or "bring a legal action that results in establishing the landowner's right to terminate the use." n481 Where a property owner's gradual escalation of attempts to interrupt a prescriptive use was met by escalation in acts by the public to keep the way clear, there was no interruption but further proof of the adverse and hostile nature of the public's acts. n482 Suing an airport for nuisance would interrupt the continuity necessary to establish a prescriptive avigation easement. n483 By contrast, in Maine, oral, written or public notice will suffice to interrupt the running of the statutory period, in that in Maine's law a prescriptive easement can only be established with the acquiescence of the property owner. n484 In a dispute over whether beach access also included the right to place a pier, the Indiana Court of Appeals found a two-year intermission while their pier was in disrepair did not effectively interrupt the twenty years required for a prescriptive easement: "[M]ere intermissions in use of reasonable duration" do not necessarily equal an interruption; abandonment "denotes the subjective element of intent as well as mere non-use." n485 Interruption can also occur when the one seeking an easement acts in a way inconsistent with gaining prescription, e.g., by submitting oneself to the owner's title by asking and gaining permission. Asking permission once the prescriptive period has run, however, "does not obliterate a vested prescriptive right." n486

Length of the Statutory Period. Statutory periods vary widely from state to state, both in length and in the source for the chosen length, some states, for example, basing their limit on the limit for adverse possession and others on a limit specifically established for prescription. n487 It is, for example, ten years in Missouri, n488 fifteen years in Connecticut, n489 and twenty years in North Carolina. n490

Tacking. Those attempting to obtain a prescriptive easement may rely on tacking successive periods of use to reach the statutory period, so long as there is privity of title between successive users. n491 The Maine Supreme Court refused to permit tacking between dominant landowners and visitors to their predecessors in title, due to lack of privity. n492 In Missouri, one can satisfy the ten-year prescription period "by the tacking together of successive owners" prescriptive use. n493 Another way to put it is that continuity of use is not broken by change in ownership of the dominant tenement. n494 The Mississippi Supreme Court overruled older precedent and held that tacking could be used to establish a prescriptive easement in the same way as for adverse possession. n495 The *New Restatement* defines privity

to be a transfer, formal or informal, between the prescriptive users of "the inchoate servitude or the estate benefitted by it." n496

(7) The Doctrine of Custom.

Closely related to the prescriptive easement as a source of public access particularly to shorelines is the ancient doctrine of custom. The State of Oregon has used this doctrine to preserve to the public access to the dry sand portions of ocean beaches. n497 The Oregon Supreme Court paraphrases the common law doctrine of custom as follows:

> (1) The land has been used in this manner so long "that the memory of man runneth not to the contrary"; (2) without interruption; (3) peaceably; (4) the public use has been appropriate to the land the usages of the community; (5) the boundary is certain; (6) the custom is obligatory, i.e., it is not left up the individual landowners as to whether they will recognize the public's right to access; and (7) the custom is not repugnant or inconsistent with other customs or laws. n498
>
> The doctrine has been found to apply to classic dry sand areas abutting the ocean, but not to inland, freshwater coves with no history of customary use by the public. n499 The Oregon Supreme Court has held that the regulation of development on dry sand areas based on this doctrine is not a taking because anyone purchasing ocean-front land is on notice that their bundle of rights does not include exclusive control over dry sand areas. n500 Hawaii and Texas are among other jurisdictions recognizing this doctrine. n501

(n198)Footnote 294. *Frederick v. Consolidated Waste Servs., Inc., 573 A.2d 387, 389-390 (Me. 1990)* (circumstances at time of conveyance denote grantor's intent to subject the retained land to an easement); *O'Connell v. Larkin, 532 A.2d 1039, 1042-43 (Me. 1987).*

(n199)Footnote 295. *Monte v. Di Marco, 596 N.Y.S.2d 253, 254 (1993)* (necessity need only be reasonable, not absolute); *Cheever v. Graves, 592 N.E.2d 758, 763 (Mass. App. 1992)* ("reasonably necessary for the enjoyment of the land retained"); *McConnell v. Satterfield, 576 N.E.2d 1300, 1302 (Ind. App. 1991); Hallock v. Wear, 551 N.E.2d 712, 719-720 (Ill. App. 1990)* (level of necessity required is "reasonable necessity").

(n200)Footnote 296. *Koestel v. Buena Vista Pub. Serv. Corp., 676 P.2d 6, 9 (Ariz. App. 1984).*

(n201)Footnote 297. *O'Connell v. Larkin, 532 A.2d 1039, 1042-43 (Me. 1987).*

(n202)Footnote 298. *Evanik v. Janus, 458 N.E.2d 962, 969 (Ill. App. 1983).*

(n203)Footnote 299. *Koehler v. Price, 562 N.E.2d 370, 374 (Ill. App. 1990).*

(n204)Footnote 300. *Carter v. County of Hanover, 496 S.E.2d 42, 45-46 (Va. 1998).*

(n205)Footnote 301. *Mann-Hoff v. Boyer, 604 A.2d 703, 706 (Pa. Super. 1992), app. denied, 613 A.2d 560 (Pa. 1992)* (*quoting Burns Mfg. Co., Inc. v. Boehm, 356 A.2d 763, 767 (Pa. 1976))* (easement by implication "notwithstanding that the easement is not essential for the beneficial use of the property"). The *Mann-Hoff* court interprets this in light of other Pennsylvania opinions to mean that the easement does not require a showing of absolute necessity but that the claimed easement be convenient or beneficial to the dominant estate. *Id.* at 708 n.4.

(n206)Footnote 302. *Proper v. Greager, 827 P.2d 591, 593 (Colo. App. 1992)* (a true easement having permanent duration, to be distinguished from easement by necessity which lasts only so long as the necessity does).

(n207)Footnote 303. *Norken Corp. v. McGahan, 823 P.2d 622, 631 (Alaska 1991)* (That there is a convenient alternate access at time of court's ruling "does not resolve the question of whether an implied easement arose in 1967, the date of ... severance").

(n208)Footnote 304. *E.g., Beck v. Mangels, 640 A.2d 236, 243-244 (Md. App. 1994), cert. dismissed, 655 A.2d 370 (Md. 1995).* Where, however, there is a simultaneous conveyance of both servient and dominant parts of a piece of land, "the more liberal implied grant rule applies and not the more strict implied reservation test." *Id. at 243. See also Barrett v. Hill, 1999 Tenn. App. LEXIS 879,* *10 (Tenn. App. 1999) (*citing* this section as identifying an easement by implication for underground sewer lines as a "recognized application" of general rule).

(n209)Footnote 305. *See* Restatement of Property § 476 and cmt. c (1944).

(n268)Footnote 364. *Anneberg v. Kurtz, 28 S.E.2d 769 (Ga. 1944).*

(n269)Footnote 365. *Nagel v. Emmons County, 474 N.W.2d 46 (N.D. 1991)* (*citing* statute); *Miiller v. County of Davison, 452 N.W.2d 119, 121 (S.D. 1990)* (*citing* statute); *National Props. Corp. v. Polk County, 386 N.W.2d 98, 105 (Iowa 1986).*

(n270)Footnote 366. *Mildenberger v. Galbraith, 815 P.2d 130, 134-135 (Mont. 1991).*

(n271)Footnote 367. *Miller v. Lutheran Conference & Camp Ass'n, 200 A. 646 (Pa. 1938).*

(n272)Footnote 368. *Brooks, Gill & Co. v. Landmark Prop., 503 N.E.2d 983 (Mass. App. 1987).*

(n273)Footnote 369. *Kollmeyer v. Stupp Bros. Bridge & Iron Co., 824 S.W.2d 438 (Mo. App. 1991).*

(n274)Footnote 370. *Steiner v. County of Marshall, 568 N.W.2d 627, 631 (S.D. 1997).*

(n275)Footnote 371. An avigation easement is an easement of right to navigation in airspace over designated land. *County of Westchester v. Town of Greenwich, 629 A.2d 1084, 1085 n.1 (Conn. 1993)* (*citing Sticklen v. Kittle, 287 S.E.2d 148, 153 (W. Va. 1981)).* Cases recognizing prescriptive avigation easements include: *Baker v. Burbank-Glendale-Pasadena Airport Auth., 270 Cal. Rptr. 337, 340 (App. 1990); Christie v. Miller, 719 P. 2d 68, 70 (Or. App. 1986)* (same; planes not continously taking off and landing not sufficient to defeat prescription); *contra, Sticklen v. Kittle, 287 S.E.2d 148, 155 (W. Va. 1981)* (no recognition of prescriptive avigation easement). Answering a question certified to it by the Second Circuit, the Connecticut Supreme Court refused to decide whether a prescriptive avigation easement was possible in the state because the facts of the particular case did not support prescription. *County of Westchester v. Town of Greenwich, 629 A.2d 1084 (Conn. 1993).* Westchester County's effort to gain such an easement, therefore, failed in the *Second Circuit. County of Westchester v. Commissioner of Transp., 9 F.3d 242 (2d Cir. 1993).* Avigation easements are in question only when flights are low enough to interfere significantly with the owner's use of property. *Baker, 270 Cal. Rptr. at 371* (noise, vibration, fumes, fuel particles and incovenience so interfere with the underlying property that it amounts to a taking).

(n276)Footnote 372. *E.g., Bova v. Vinciguerra, 585 N.Y.S.2d 125, 127 (App. Div. 1992)* (one easement affirmative; because another proponent did not hold real property, she was "entitled to a prescriptive easement in gross and not appurtenant"); *Miller v. Lutheran Conference & Camp Ass'n, 200 A. 646 (Pa. 1938)* (in gross swimming right).

(n277)Footnote 373. *Preshlock v. Brenner, 362 S.E.2d 697, 698 (Va. 1987).*

(n278)Footnote 374. *Hoffman v. Skewis, 668 P.2d 1311, 1313-1314 (Wash. App. 1983), rev. denied, 101 Wash. 2d 1001 (1984).*

(n279)Footnote 375. *City of Tonawanda v. Ellicott Creek Homeowners Ass'n, 449 N.Y.S.2d 116, 121-22 (App. Div. 1982).*

(n280)Footnote 376. *Price v. Eastham, 75 P.3d 1051, 1056-1057 (Alaska 2003)* (*citing* Alaska Stat. § 38.95.010).

(n281)Footnote 377. *Norfolk and W. Ry. v. Waselchalk, 421 S.E.2d 424, 425 (Va. 1992).*

(n282)Footnote 378. *Town of Deer Creek Rd. Dist. v. Hancock, 555 N.E.2d 1147-1149 (Ill. App. 1990)* (maintenance by public authorities is a strong indication road is public highway, *id*. at 571, 555 N.E.2d 1149). Similarly, the Maine Supreme Court states that the requirements for the creation of a public way "by prescriptive use parallel those for the creation of a prescriptive easement." *Stickney v. City of Saco, 770 A.2d 592, 601 (Me. 2001)* and must be proved by a preponderance of the evidence. Id.

(n283)Footnote 379. *Leffingwell Ranch v. Cieri, 916 P.2d 751, 755 (Mont. 1996)* (holding use was permissive) (citation omitted); *Swandal Ranch Co. v. Hunt, 915 P.2d 840, 844-845 (Mont. 1996)* (owner failed to show neighborly accommodation to show public use was permissive).

(n284)Footnote 380. *S.D. Warren Co. v. Vernon, 697 A.2d 1280, 1284 (Me. 1997)* (holding there to be private, but not public easement).

(n285)Footnote 381. *Lyons v. Baptist Sch. of Christian Training, 804 A.2d 364, 370 (Me. 2002).*

(n286)Footnote 382. *Town of Deer Creek, 555 N.E.2d at 1149-1150; S.D. Warren Co. v. Vernon, 697 A.2d 1280, 1284 (Me. 1997)* (test not frequency or number but use by people who are not separable from the public generally).

(n287)Footnote 383. *E.g., Steplock v. Board of County Comm'rs, 894 P.2d 599, 606 (Wyo. 1995).*

(n288)Footnote 384. *Floyd v. Board of Comm'rs, 52 P.3d 863, 869 (Idaho 2002)* (*citing* I.C. § 40-202(3)).

(n289)Footnote 385. The most significant difference is in exclusivity. As will be seen below, courts disagree over how exclusive must be the easement owner's use and, indeed, over the meaning of exclusivity within the easement context.

(n290)Footnote 386. *See* Ch. 87 (adverse possession).

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions § 60.04

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.04 Scope of the Easement.

[Go To Supp]

(a) Rights of the Easement Owner or of the Dominant Tenement.

The owner of easement rights can make reasonable use of them. The new Restatement defines the easement holder's rights of any reasonable use to include the proviso that "manner, frequency, and intensity ... may change over time to take advantage of developments in technology and to accommodate normal development of the dominant estate or enterprise benefited by the servitude," so long as the changed use does not unreasonably damage or interfere with the enjoyment of the servient estate. n502"A grantor of an easement may create an extensive or a limited easement." n503 The extent of the easement is regulated by the "by the intent of the parties as manifested by the language of the grant." n504 Where the grant is silent, courts look "to the surrounding circumstances to determine the intention of the grantor and the grantee." n505 To determine the nature of the easement "created by deed, [the court] must discern the intention of the parties to the deed by considering the language of the deed, the situation of the property and the surrounding circumstances." n506 An easement is to be construed "in connection with the intention of the parties, as evidenced by the language employed and the circumstances in existence at the time the easement was granted." n507 The easement's use must be "in accordance with and confined to the terms and purposes of the grant." n508 Thus, an express easement of way, on its face created without limitation, that provided access to an otherwise landlocked parcel remained in effect even after the parcel was no longer landlocked; the court refused to consider parol evidence that the easement was granted for that specific purpose and thus should vanish when alternate access became available. n509 The burden "may not be increased beyond that reasonably contemplated by the parties at the time of creation." n510 Where there is a dispute over the reasonableness of a proposed use, the Oklahoma Supreme Court notes that the reasonableness of a use is a question of fact and places upon the person proposing the use the burden of proving that the "rights granted by the easement are sufficiently extensive to justify the proposed use." n511 If the grant contains no limitations, the court will attempt to discern what the parties would have reasonably expected, and will usually be generous in its interpretation. n512 The language of the easement can grant to the easement holder a good deal of discretion in the use of the easement or limit the use very narrowly; if the grant is not clear, the court will interpret the scope of the easement in favor of "free and untrammeled use of the land." n513 The generous reading of unlimited easements can extend also to use of other land necessary to the fruitful enjoyment of the easement. Thus, in Alabama, the power company had the right to move equipment over an existing road to safely access a utility easement to construct and maintain transmission lines. n514 Holders of separate easements over the same piece of land must "exercise their rights so that they do not unreasonably

conflict with one another," and, in case of conflict, earlier-created easements have priority over later ones. n515

(1) Overburdening the Servient Tenement.

Courts strike a balance within the language of the grant between the freedom given to the dominant tenement to make use of the grant and the right of the servient tenement not to be adversely affected in the use of the land over which the easement lies. n516 The following sections present several different situations in which that balance has to be struck.

(i) Subdividing the Dominant Tenement.

Courts generally consider that subdividing is a reasonable use for a dominant tenement served by an appurtenant easement the terms of which do not limit its use. Subdivision and conveying away of portions of a dominant estate "does not, in and of itself, mean that an additional burden is imposed upon the servient estate." n517 Distinguishing between an increase in the degree of burden and an additional burden, the former being something to be expected absent restrictions, the Virginia Supreme Court let stand the expansion of a marina from 84 to 280 boat slips. n518

LEXIS: Easement W/10 Subdivi! W/5 Dominant Tenement W/25 Increase W/2 Burden

(ii) Using the Eeasement to Benefit a Different Piece of Land Than the Dominant Tenement.

An easement appurtenant cannot be used to benefit land other than that to which it is appurtenant. n519 An easement owner could not use an easement intended by express grant to provide access to a 77 acre plot to manage a 4764 acre forest: "An easement can be used only in connection with the estate to which it is appurtenant and cannot be extended by the owner to any other property which he may then own or afterward acquire, unless so provided in the instrument by which the easement is created ... ." n520 An easement owner was completing a shopping center on two lots, only one of which was served by an express easement. The court enjoined use of an easement appurtenant to only one of two lots making up the shopping center, where plans showed the intention to use the easement for both, stating that an easement may not be used to benefit another non-dominant parcel of land even though the two parcels are adjacent and under common ownership. n521 All use of the easements was enjoined because the authorized and unauthorized uses could be so intermingled as to require enjoining any use until a way could be found to prevent intermingling. n522 A private roadway granting access to all lots within a subdivision gave rights to all lot owners but could not be used to access a lot outside the subdivision: "An easement appurtenant must bear some relation to the use of the dominant estate and is incapable of existence separate from it; any attempted severance from the dominant estate must fail." n523 The purchaser of several lots, however, could use a right of way easement along the lots' boundary even though the easement was not appurtenant to all the lots; the general rule prohibiting use of an easement for after-acquired lots applied, but these lots were being joined to the others for a single residential lot, and the servient tenement suffered no additional burden. n524 Similarly, the Washington Supreme Court held that use of an easement to benefit a second lot joined to that to which the easement was appurtenant was indeed a misuse of the easement, but that an injunction was inappropriate given that the two lots were limited to use for a single dwelling and no additional burden was placed on the servient tenement; the "actual and substantial injury" necessary for injunctive relief was lacking. n525 An easement providing access to an asphalt plant did not permit an expansion in the number of daily crossings by large trucks because the excess was not required for the development of the dominant land and interfered with enjoyment of the servient estate; the court found the excess use to be for the development of other parcels. n526

LEXIS: Easement W/10 Benefit W/5 (Nondominant Tenement or Non-Dominant Tenement or Servient Tenement) W/25 Increase W/2 Burden

(iii) Increasing the Frequency or Changing the Type of Use of the Servient Tenement.

A common complaint arises when the owner of the dominant tenement heavily increases the use of that land or changes the type of use, thereby increasing the burden on the servient tenement. Whether courts will consider the resulting additional burden on the servient tenement to be acceptable depends on what can be gleaned of the intention of the parties at the time of the grant and whether the additional burden can be characterized as "reasonable." The result of that reasoning process can differ depending whether the easement is express, implied from prior use, by necessity or by prescription.

Express Easement Granted or Reserved for a Limited Purpose. If the grant states a specific purpose for the easement, courts are usually chary about expanding that use. Thus, where a railroad had permitted the laying of telephone cable not used for railroad purposes on an easement granted only for railroad purposes, there was an additional burden on the servient tenement for which the fee holders deserved compensation. n527 The owner of an easement of way over an existing dirt road could not build poles and run electric wires over the easement. n528 Where the easement was not so limited, the stringing of coaxial cable by a television cable company along an easement owned by a public utility constituted no additional burden on the owner of the servient estate. n529 A city could convert an easement along the boundary of a subdivision expressly granted "for roadway purposes" into an equestrian trail over the objection of subdivision owners because the change in use was not "dramatically different" and posed no additional burden on the servient land. n530 A grantee exceeded the rights created by an easement for the express purpose of moving cattle and equipment by using the easement for recreational and personal purposes. n531 An easement granted for "agricultural purposes" did not include the right to use it for big game hunting access, n532 nor did a parking easement include the right to store cars for sale on a used car lot. n533 Stating that the use "must be reasonable and as little burdensome to the servient estate as the nature of the easement and the purpose will permit." The Connecticut Court of Appeals permitted docks necessary to launch boats but refused to permit the holder of an easement for boating purposes to build racks to store them. n534 Under an express easement granting business access, a servient owner could not prevent persons with the permission, "express or implied" of the dominant owner from using the easement for business access. n535

Express Easement Granted or Reserved with No Limitation of Purpose. If the grant or reservation states no limitation on the use of easements, courts will be rather generous in their interpretation, though the degree of that generosity varies from state to state. The Idaho Supreme Court held that a lower court acted improperly by limiting use of an easement to daylight hours and setting other conditions for its use, which, if violated, would result in its forfeiture. n536 When an easement is created in general terms, courts construe it as "broad enough to permit any use which is reasonably connected with the reasonable use of the land to which it is appurtenant." n537 Where the instrument creating the easement "does not limit its use, the easement may be used for 'any purpose to which the dominant estate may then, or in the future, be reasonably be devoted.' " n538 There is the qualification that no use "may be made of the easement, different from that established when the easement was created, which imposes an additional burden on the servient estate." n539 Thus, construction of a sewer beneath a highway easement "is a proper and contemplated public use of the easement." n540 Adding additional customers to an existing sewer line would create no greater disruption to the easement. n541 Running power and telephone lines above an easement and pipelines underneath "do not increase the burden on the servient estate and are permissible uses." n542 In Maine, by contrast, even when an easement is unrestricted by its terms, its purposes are to be determined by the presumed intent of the parties at the time; so where an easement of way was granted into a farm field, its later development into a homesite does not automatically result in the easement owner having the right to install utility lines on or under the surface. n543 An easement creating a public walkway could also be used by "wheelchairs, baby carriages, and watercraft which are transportable on foot." n544 Easements "may be expanded as 'the passage of time creates new needs and the uses of the property change.' " n545 A road easement sixteen feet wide could be expanded to eighteen to twenty feet in order to accommodate farm equipment, because this was a foreseeable reasonable use based on past use. n546 Where, however, an easement was specifically defined to be twenty feet wide, and defendants increased its width to fifty feet, paved it and ran large trucks over it, the court enjoined the misuse and required the easement holder to restore the servient tenement to its original condition. n547 Even where the courts would otherwise refuse to expand an express easement, the right to make a "new and

different use of an express easement" may also be established by prescription. n548

LEXIS: Easement W/10 Increase or Expand or Change W/5 Use or Burden W/5 Servient Tenement or Servient Estate

Easements by Implication from Prior Use. Courts are more strict in regulating new and increased uses of an easement implied from prior use. As might be suggested by the name of the interest, courts will pay very close attention to what form the use took before the severance of property took place. These easements, as well as those of necessity and by prescription, more resemble easements the use of which is restricted by the grant than they do unrestricted easements. The use the property is being put to at the time the easement arises supplies limits to the use of the easement in the future, not absolute limits, "but a normal development of the use of the property." n549 The court in that case limited the implied easement to agricultural, forestry and personal use. n550

Easements by Necessity. The uses of an easement implied by necessity must reflect the necessity which justifies the easement's existence. Since there is no express agreement, courts will be careful in interpreting how far the use of such an easement may go. One determines whether an easement by necessity exists from the circumstances when the landlocked parcel was severed; one should define the scope, however, "with reference to the reasonable enjoyment of the land and all lawful uses to which it may be put ... ." n551 The court, therefore, held that a landlocked dominant tenement owner could install underground utilities on the easement and refused to limit future use to a single family; such uses had to be considered in their context. n552 By contrast, where a dominant owner had a private way of necessity granted by statute, the owner was limited to use the road as a way of ingress and egress and could not use it as an easement for water, sewage and electricity to serve a proposed development. n553 A dominant tenement owner could construct a new home because the extent of an easement by necessity was to be gleaned from the circumstances surrounding the conveyance and it was to be "assumed that they anticipated such uses as might reasonably be required by a normal development of the dominant tenement." n554

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/5 Impli! or (Impli! W/3 Necessity) W/10 Increase or Expand or Change W/5 Use or Burden W/5 Servient Tenement or Servient Estate

Easements by Prescription. Courts will look with care at attempts to change or increase the burden placed upon the servient tenement by a prescriptive easement. Whether an easement was established by grant or by prescription can be critical to the test of whether the new use of an easement is proper; the extent of a prescriptive easement "is fixed by the use through which it was created." n555 Thus, a prescriptive recreational easement later written down could not be used for residential subdivision purposes; the court found the writing not to be an express grant but only the confirmation of a prescriptive easement. n556 Similarly, in a Pennsylvania case, a document acknowledging rights under a prescriptive easement was not evidence of a party deliberately limiting its rights but the recognition of limitations imposed by the use by which the easement was won. n557 Permissible uses for a prescriptive easement, in contrast to those for an easement by grant, "are necessarily defined by the use of the servient land during the prescription period." n558 Even an exclusive easement can occur by prescription, though perhaps rarely. n559 The "common and ordinary use which establishes the prescriptive right also limits and qualifies it," but does not fix it eternally. n560 Logic does not require that courts limit prescriptive easements that severely, lest with the passage of time the easements become useless. A Maryland court found that a prescriptive easement holder had the right to repair, maintain, and even improve the easement, because those improvements resulted from the evolution of the dominant estate and did not unreasonably burden the servient estate. n561 A prescriptive easement "must encompass some flexibility of use, and adapt to natural and foreseeable developments in the use of the surrounding land"; an increase in vehicular traffic due to residential development did not unreasonably burden the servient estate. n562 If a change in use is a change in degree, it can be permissible, if a change in quality it will be impermissible. n563 The beneficiary of a prescriptive easement "may vary

the use of the easement to a reasonable extent," a flexibility "limited, however, by concern for the degree to which the variance further burdens the servient estate." n564 A federal court refused to permit an employer-lessee to expel peaceful union organizers from adjacent shopping-center sidewalks in a shopping center over which it had "something akin to an implied easement of necessity ... to ensure access to its leased property" because such expulsions were not necessary to the use of leased property. n565 Thus, to change from a single large agricultural enterprise to a residential development owned by several individuals would substantially alter the prescriptive easement. n566 The prescriptive easement can itself be enlarged even to the extent that the servient estate is injured, but only by a further prescription. n567

LEXIS: Easement W/3 Prescript! W/10 Increase or Expand or Change W/5 Use or Burden W/5 Servient Tenement or Servient Estate

(b) Rights of the Servient Tenement Owner.

(1) The Non-exclusive Easement.

While the dominant tenement owner has the right to use the servient tenement according to the terms of the easement, the fee owner retains whatever uses do not interfere with the rights of the dominant owner. n568"The owner of the servient estate is entitled to use the estate in any manner not inconsistent with, or which does not materially interfere with, the use of the easement by the owner of the dominant estate." n569 A servient tenement shopping center operator could make parking lot improvements that diminished the number of spaces available to a parking easement holder because the grant did not specify how the lot was to be accessed, did not guarantee a particular number of spaces and stated that easement would be subject to the regulation of the shopping center. n570 Unless the grant establishing the easement specifically states that the easement is exclusive, the servient estate owner "retains the right to use the property in common with the grantee." n571 Thus, an agricultural easement can co-exist with recreational uses by the fee owners. n572 The holder of a non-exclusive easement may not interfere with the servient owner's use of the freehold, so long as the servient owner's use does not interfere with the right granted in the easement. The owner of a servient estate must "abstain from acts interfering with or inconsistent with the proper enjoyment of the easement by the owner of the dominant estate." n573 If it is necessary for reasonable use of the servient tenement and does not interfere with the easement, a servient owner may place a gate across the easement. n574 Grant of a right of way for ingress and egress "without any limiting language" does not prevent the owner of the servient estate from constructing gates or fences. n575 In West Virginia, a servient owner, absent contractual provision to the contrary, by statute may maintain an unlocked gate across an easement. n576 The Mississippi Supreme Court permitted a servient owner to keep gates on a private way of access; absent language in the grant either way, where the locked gate was important to the servient owner's use and not overly burdensome on the dominant owner's use, the gate was acceptable. n577 In Idaho, absent a showing that it was "unreasonable" or "unduly restrictive," the servient owner of land burdened by a prescriptive easement was permitted to maintain a gate. n578 The Illinois Appellate Court, however, noted a modern increase of respect for an easement owner's rights and held that placing a gate or fence across a right-of-way, even though the gate was accessible to the dominant owner, is an unreasonable interference with the dominant owner's use of the easement absent demonstration of necessity by the servient owner. n579

(2) The Exclusive Easement.

An exclusive easement grants unfettered rights to the owner of the easement to use the easement for purposes specified in the grant "to the exclusion of all others"; because the exclusive easement, in effect, strips the servient owner of the right to use the land for certain purposes, thus limiting the fee, and itself has been called almost a conveyance of the fee, this type of easement is generally not favored by the courts. n580 Where the exclusive easement grants to the easement holder exclusive use for *all* purposes, the easement more closely resembles a fee interest and, some courts say, should

not be considered an easement. n581 Absent language in the grant showing a specific intention to create an exclusive easement, a Florida court states that the resulting easement must be construed as non-exclusive. n582 When confronted with an "exclusive easement of way," the Virginia Supreme Court cited this section in interpreting the easement as non-exclusive, leaving to the owner of the servient tenement the right to use the easement in any way "not inconsistent with the uses granted to the owner of the easement," access to the highway. n583

(c) Location and Size of the Easement.

(1) By the Terms of the Grant.

(i) Establishing the Location.

Ordinarily the placement of an easement is established by the grant, as to specific width, length and location. This location usually cannot be changed without the agreement of both parties, no matter arguments of necessity and reasonableness: the grant controls. n584 If the grant does not specify the location of the easement, courts grant either party the right to locate the easement, so long as the location is reasonable. In New York, for example, a servient owner could designate a route that avoided the easement owners crossing the center of the land while crops were growing, even thought the route was a little longer: it had only be "reasonable and convenient under all the circumstances." n585 In Tennessee, a court allowed the dominant tenement owner to clear a path on the servient estate for ingress and egress: "If the servient owner does not place the pathway, and no prior use had been made of the easement, the dominant owner may place it, 'having due regard to the convenience of the landowner.' " n586 In Delaware, in a dispute over partition of land held as tenants in common, the court upheld location of an easement proposed by one of the parties, which location needed only be "reasonable and convenient under all the circumstances." n587 A court protected a beach easement even though no exact location was mentioned: "The mere fact that the precise location is undefined does not negate the existence of the right of access." n588 If there is "language in the deed sufficient to serve as a pointer or guide to the ascertainment of the location of the land," the North Carolina Court of Appeals considered the easement valid and was willing to use parol evidence to resolve any ambiguity on the location. n589 Some jurisdictions recognize the possibility of a "floating" easement that does not define its placement; in deciding location the court will look at, among other things, the actual practice of the parties. n590 By contrast, some jurisdictions have statutes requiring specific location of an easement. In a dispute over the location of an easement in Wyoming, the court referenced a statute that a recorded express easement that did not specifically describe its location is void unless a valid description is also recorded within a year after the easement's creation. n591

LEXIS: Easement W/10 Establish or Place or Set W/5 Location or Location W/5 Specific

(ii) Changing the Location.

Unless both parties agree, courts will generally not allow one party to relocate an easement. A Florida appellate court, for example, refused to permit the trial court relocate an express easement for beach access to lessen the impact on the servient estate. n592 The Virginia Supreme Court held that a lower court could not order an easement relocated from one section of property to another part of the land that had come into the ownership of the Park Authority. n593 The Maine Supreme Judicial Court held that a right of relocation explicitly retained in the grant of the easement was personal to the original servient owner and did not pass to future owners, thus rejecting the attempt of the current servient owner to relocate an easement of way. n594 The new Restatement, by contrast, adopts the rule that the servient owner may relocate the easement at the servient owner's own expense so long as that relocation does not interfere with the utility of the easement, frustrate the purpose of the easement or increase the burden on the easement holder. In so holding, the new Restatement rejects the majority rule in the United States and adopts a rule used in Louisiana and a few other states. n595 Citing the Restatement, the New York Court of Appeals calls for a balancing test where there is an easement without a specifically defined placement, holding that absent evidence of intent to the contrary the servient

landowner may, at his or her own expense, move a right-of-way "so long as the change does not frustrate the parties' intent or object in creating the right-of-way, does not increase the burden on the easement holder, and does not significantly lessen the utility of the right of way." n596 In a dispute over a ditch easement, where agreement had not been reached and the servient owner made changes in and around the ditch, the Colorado Supreme Court held that the servient owner had committed trespass against the easement and stated that the servient owner had no right to alter or change a drainage ditch without permission of the dominant tenement or without first obtaining a declaration of a court that the alteration would not harm the dominant owner. n597 Following a substantial discussion of the rights of ditch easement owners, the court noted that traditional easement law as applied also to ditches would not permit the servient owner to move a ditch, but that modern situations called for the development of a doctrine of accommodation to help reconcile competing land uses. The court did not go so far as to accept the Restatement's giving to the servient owner the right to move the easement where it does not impinge on the rights of the dominant owner, but instead chose to require the servient owner to seek a declaratory judgment that, according to the Restatement's test, the change will not harm the rights of the easement owner. n598 The parties can, of course, agree to change the location of an easement, and despite the controlling power of the grant, circumstances also can sometimes lead a court to imply the parties' agreement to changing the easement's location. In some jurisdictions that placement may be changed by long use. Thus, in Washington State, an easement owner encroached on the platted position of a road in which she owned an easement and constructed a new road a short distance away. Since this new road and the encroachment had lasted a long time, the Washington Court of Appeals declared the easement moved and the land upon which the original easement had been platted to have been successfully adversely possessed by the encroacher. n599 Where parties had used for many years an easement differently placed than on the original grant, consent to the change of location could be implied from the acts and acquiescence of the parties, "and an estoppel to claim a former location to be the true one arises from acquiescence in the change." n600 The Oregon Court of Appeals implied the agreement of a servient owner, when the dominant owner spent considerable time and money in the improvement of a roadway placed differently than the grant stated, and the servient owner failed to object. n601 In New Hampshire, where a deeded easement has been obstructed or blocked by the actions of the servient owner, "the owner of the dominant estate may deviate from the deeded right of way in order to preserve the right granted as long as the proposed deviation is not unduly burdensome to the servient estate." n602 Where a servient owner changes the location of an easement for the benefit of the servient tenement, the dominant owner, of course, retains the right to use the new path. n603

LEXIS: Easement W/20 Locat! or Relocat! or (Change W/5 Locat!)

(2) Easement by Implication from Prior Use or by Necessity.

Since one must have an established and visible quasi-easement in use for a considerable time prior to severance, the location of an easement implied from prior use is necessarily established at its creation. n604 There do not seem to be any special rules governing relocation of this type of easement, once established. If a way of necessity has been determined to exist, if there was a way in use at the time of separation, "plainly visible and known to the parties, the plainly visible and known way will be held to be the location of the way granted unless it is not reasonable and convenient for both parties." n605 The right to select the location of the easement "belongs initially to the owner of the servient estate at the time the dominant estate is created," a right to be exercised "in a reasonable manner, having due regard for the rights and interests of the dominant estate owner"; if the servient owner fails to do so, the dominant owner may, with the same concern for the convenience of the parties. n606 In some jurisdictions, the court may place the easement absent agreement of the parties. n607 Once the easement has been located, it will not be changed without the consent of both parties, "even though the use of the easement where located becomes detrimental to the use of the servient estate." n608

LEXIS: Easement W/5 Necessity or Easement W/5 (Impli! W/7 Use W/5 Prior or Former or Preexisting or Pre-existing) W/20 Relocat! or Reposition (Change W/5 Locat! or Site or Position or Placement)

(3) Prescriptive Easement.

The placement and size of a prescriptive easement is that which has been appropriated by the dominant owner in winning the prescriptive easement. The Connecticut Supreme Court remanded a case because the court declaring a prescriptive easement did not establish the boundaries of the right of way. n609 An electric cooperative had not established a prescriptive easement fifteen feet on either side of its existing lines, but only so much as was needed for safety and maintenance; nothing in the existing use put the landowner on notice that a wider easement was being claimed for future, larger towers. n610 Once that placement has been established, it is no more changeable than that of any other easement. Thus, the Georgia Supreme Court did not permit the *servient* owner to relocate a driveway easement won by prescription. n611 The West Virginia Supreme Court, by contrast, refused to permit the purchasers of the *dominant* tenement of a prescriptive easement from relocating the access to their property from the servient estate. n612 The general location of a prescriptive easement can be changed either by oral consent or by acquiescence, but the owner of the easement cannot extend it beyond the actual use or "beyond such width as is reasonably necessary for the purpose for which it was created or acquired." n613 Thus, the Mississippi Supreme Court held that relocating a cow path and paving it without the consent or acquiescence of the fee owner impermissibly changed its character and use. n614 The Pennsylvania Superior Court held that the possessor of land subject to a prescriptive easement could not change the easement location when the proposed change materially interfered with the holders' use of their easement; the new placement made maneuvering of farm equipment difficult and provided more dangerous highway access. n615

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions § 60.05

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.05 Responsibility for the Easement.

[Go To Supp]

(a) Maintenance and Repair.

The general principle governing maintenance is that duty follows privilege. Ordinarily, therefore, the owner of an easement has the duty to repair and maintain, and the right to do so. The new Restatement imposes a duty on the beneficiary of the easement to maintain and repair "to the extent necessary to (a) prevent unreasonable inter-ference with the enjoyment of the servient estate, or (b) avoid liability of the servient estate owner to third parties." n616 The owner of the dominant interest has the duty to maintain the easements and make reasonable improvements, "so long as the improvements do not unreasonably increase the burden upon the servient estate"; paving a roadway was reasonable. n617 Reasonableness is a question of fact. n618 Building a road on an ingress/egress easement is one of the things reasonably necessary for the use of the easement that the easement owner is entitled to do. n619 Protection against interference in the use of an easement often results in a secondary easement of access for necessary maintenance and repairs. n620 A power company's right to trim trees was limited to that necessary for safety and had to be done in a reasonable manner. n621 Servient owners, according to the New Restatement, have no duty to the dominant owner to "repair or maintain the servient estate or the facilities used in the enjoyment of the easement or profit." n622 Because the duty to maintain an easement ordinarily rests on the easement owner, servient owners had no duty to construct stairs to the beach for the benefit of a dominant estate owner. n623 A court required an easement owner, by contrast, to grade and improve a roadway for the transportation of farming machinery and equipment, because "the owner of an easement has not only the right but the duty to keep the easement in repair." n624 The servient owners are not responsible for costs for maintenance and repair of a roadway easement. n625 Joint use of an easement by the dominant and servient owners, or joint use by separate easements of the same facility or portion of the servient tenement gives rise to a duty of contribution to the reasonable costs of maintenance and repair. n626 These duties of maintenance and repair or of contribution may be varied by agreement. Thus, where a grant stated that the grantee would "contribute, pro rata to maintain and keep in good repair the road" until its acceptance as a public road, the Connecticut Supreme Court determined that the dominant owner would bear all costs of repair because the servient owner's land was not developed and thus contributed nothing to the deterioration of the road. n627 Where multiple parties, in this case the lot owners in a subdivision, share in the use of roadway easements, they must also share in the cost of maintenance and repair. n628 The rule governing proportional responsibility for maintenance arising from use of an easement by multiple parties in some jurisdictions has been made statutory. Thus, in California, maintenance is to be shared either according to

agreement or proportionally to use, with provision made for an arbitrator in cases of disagreement. n629

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/10 Maintenance or Repair W/5 Responsib! or Duty

(b) Responsibility for Harm Due to Deficiencies in Maintenance or Repair.

Dominant owners are responsible not only for the repair and maintenance of an easement, but also for any damage occurring from failure to maintain and repair. Because the servient landowner had no responsibility "to maintain or repair, or to warn or to barricade dangerous conditions on the easement that are in the sole control of the holder of the easement," the servient owner was not liable for the electrocution of a worker on such an easement. n630 The parent of a child injured by electric wires on an exclusive easement could not hold the servient estate owner liable for maintenance of the easement absent an express agreement allocating that duty. n631 Holders and sole users of a non-exclusive easement which they had the right and duty to maintain were not liable to a trespassing motorcyclist who was killed by striking a chain they had strung against trespassers; the easement holders, as the responsible parties in the place of the fee owner, were subject only to the very limited duty of care owed a trespasser by a fee owner. n632 A servient owner who had no right of possession and control over a private roadway was not responsible for injury, but that fell on those of the multiple dominant owners abutting the portion of the easement where the injury occurred: each "is responsible for the maintenance and repair of the portion of the private right of way which abuts his or her land." n633 Often in establishing easements, the grant will specify who will have the duty for easement upkeep. Where an agreement existed reallocating common law maintenance responsibilities, the City, the dominant land-owner, did not have to repair erosion damage to lakes (a duty it would ordinarily have had). n634

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/10 Maintenance or Repair W/5 Responsib! or Duty W/25 Injur! or Damage or Tort!

(c) Improvements.

Courts often permit dominant estate owners to make improvements to the easements so long as there is no detriment to the servient owner. For a power company with an underground easement to expand and place its transformers above ground violates the general rule that the use of an easement may not be enlarged to the injury of the servient estate. n635 Because the dominant owner has the right to make reasonable improvements to an easement, "so long as the improvement does not unreasonably increase the burden upon the servient estate," paving an easement was appropriate. n636 Substitution by the dominant owner of cattle guards for gates over an easement "was a permissible improvement of the easement and did not materially increase the burden on the servient estate." n637 To be permissible, the improvements must not unreasonably increase the burden on the servient estate, must be a change of degree rather than of kind, and must have been reasonably foreseeable by the parties at the time the easement was established. n638 A dominant owner could not construct a swale and curtain drain on a septic field because it increased the servient estate's burden; easement owners may make material alterations only if they do not increase the burden or interfere with the servient owner's enjoyment of the servient property. n639

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions § 60.06

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.06 Remedies for Harm Involving Easements.

(a) Redress for Harm Suffered by the Servient Owner.

Where an easement has been inappropriately claimed, the purported easement holder may be guilty of a continuing trespass. This follows naturally from one characteristic of an easement as permitting the holder to do on someone else's property what would otherwise be a trespass. "[I]njunctive relief may be awarded for unlawful use of an easement." n640 The Virginia Supreme Court, noting that that principle protects a landowner from someone establishing prescriptive rights over the land, upheld an order requiring removal from an easement of brick columns placed by the dominant tenement owner. n641 The servient tenement owner also may recover money damages, both compensatory and punitive, for harm suffered by the servient tenement due to misuse of the easement. In a Texas case, a gas company that had begun construction of a pipeline was found not to have an easement because the person from whom the easement was purchased could not convey it. The gas company was held to be a trespasser as a matter of law and liable for damages, including those for mental anguish, and further was ordered to correct deficiencies in the pipeline. n642 In a New York case, where both compensatory and punitive damages were sought for misuse of an easement, the parties stipulated the withdrawal of all requests for money damages, and the trial court awarded punitive damages, the appellate court reversed on the ground that punitive damages were included within the stipulation. n643 As seen above, n644 The remedies spoken of above are all civil law remedies; but logically in some situations the criminal law can be invoked, though unwisely. Courts from time to time warn of the danger of disputes over easements and other land-use problems escalating to the point that people bring criminal charges. Thus in Arizona, a servient owner brought criminal trespass charges against a minor for walking down a driveway to get access to her property; the court adjudged it to be really a property dispute over the validity of an easement and that it was improper to apply the criminal trespass statute to it. n645 The Supreme Court of Nevada reversed a finding of malicious prosecution against a servient owner who had prosecuted a criminal trespass charge, but refused to comment "on the social utility of resorting to the criminal courts in this manner ... ." n646 Civil remedies may also be abused, as in a California case where parties in a dispute over an easement invoked a harassment statute, the passage of which was motivated by the experience of a young woman being stalked. n647 an easement properly granted may be extinguished if it is overused or misused to the damage of the servient tenement, or the easement holder may be enjoined from the overuse.

(b) Redress for Harm Suffered by the Easement Holder.

Most of the cases examined in this study have involved demands by the easement holder that the easement be respected. Courts usually grant an injunctive remedy of specific performance. For example, the Illinois Appellete Court affirmed an injunction prohibiting a shopping center operator from building a restaurant that would interfere with a parking easement, n648 the Colorado Court of Appeals affirmed a summary judgment granting an injunction against building of a fence that intruded into the area of an easement, n649 and the Arkansas Court of Appeals affirmed an injunction prohibiting interference with an easement by necessity. n650 The Tenth Circuit Court of Appeals applying Kansas law reversed the district court's finding that a damage remedy was adequate for the building of an automobile race track over a gas pipeline easement and held that because of the continuing nature of the injury the gas company was clearly "entitled to a mandatory injunction requiring the removal of materially interfering structures above its pipeline." n651 The court noted that in Kansas law where the nature of the violation of the easement is continuing, as in the existence of a building, damage remedies are usually inadequate and injunctive remedies appropriate. n652 Some courts will balance the relative burdens, balance the equities, in deciding whether to grant injunctive relief, but are much more reluctant to do so if the encroachment on the easement was deliberate. Thus, a Florida court required a servient owner to remove all of a wall that encroached on a fifty-foot wide easement area; it refused to balance the equities, because the servient owner knew it was encroaching when it built the wall. n653 The Alabama Supreme Court contrasted a case in which the comparative injury doctrine permitted a court to substitute a land swap (which would be a form of damages) for removing a house minimally encroaching on a flood easement from a case involving encroachment by a shopping center owner of a parking easement in which the injury was too serious to permit application of the doctrine. n654 If the easement holder has suffered harm not fully recompensed by a decree of specific performance, the easement holder may also receive an award of money damages, both compensatory and punitive, in whatever way the court views as appropriate. Thus, the Indiana Court of Appeals refused to reverse a refusal of damages for interference with a prescriptive easement when it held that the easement holders had failed to sustain their burden of proof of the amount of damages. n655 The New Hampshire Supreme Court, by contrast, upheld an award of damages for loss of rental income caused by interference with a beach access easement. n656

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions § 60.07

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.07 Change of Ownership of Easements.

[Go To Supp]

(a) Transfer of the Servient Tenement and the Requirement of Notice.

The very nature of an easement, and a major point justifying its existence, is to guarantee that an arrangement for the non-possessory use of land survives the transfer of that land into the hands of another. The basic rule is that "an easement, once created and recorded, runs with the land and is a burden or benefit for all successors in the chain of title." n657 Whenever the servient tenement is transferred, it remains burdened by any easement in existence at the time of its transfer, whether the easement be appurtenant or in gross. Under old English law, a person purchasing the servient tenement would do so at the purchaser's own risk; if a valid easement existed, it remained valid, whether or not the servient purchaser was aware of its existence. The risk of being bound by an easement of which one was ignorant was one of the reasons for the old English suspicion of negative easements. n658 One was much less likely to be put on notice by a property owner's failure to do something on the property in response to an easement, than by signs of someone else's use of the property: a person with an easement of way was likely to leave tracks. American law, however, has long ago transported the requirement of notice into easement law for those who purchase a servient tenement for value. n659 Those who do not purchase land for value, e.g., who receive it by gift generally are not protected by recording systems. n660 To be bound by an easement, a servient purchaser must have some form of notice: record notice, actual notice, or inquiry notice. n661 In some states, easements, as interests in real estate, must be recorded to give constructive notice to subsequent purchasers of the servient tenement. n662 The servient purchaser has the full protection of the state's recording system, whether the easement in question is express, n663 by implication n664 or by prescription. n665 Thus, the bona fide purchaser for value of a servient tenement, that is, the purchaser without notice according to the type of recording system, will not be bound by the easement of which there was no notice. n666 One purchasing land with knowledge of facts that would put a prudent person upon inquiry which, if prudently pursued, would lead to "actual notice of rights claimed adversely by another, is chargeable with the actual notice he or she would have received." n667 For terms of an easement to bind servient owners, "they must have had either notice of record, actual notice, or constructive notice"; purchasers were put on notice of easement by existence of a boat dock and the footpath leading to it. n668 Treatises and "the overwhelming majority of case law" agree that an easement will not bind the subsequent bona fide purchaser of a servient tenement who purchases "without notice, either actual or constructive, of the easement." n669 Actual and inquiry notice are particularly important when dealing with implied or prescriptive easements that may not be recorded. Thus, in a case dealing with a prescriptive drainage

easement in Iowa, the purchaser would be bound if a reasonable inspection of the property would have revealed the existence of the easement. n670

(b) Transfer of Easements Appurtenant.

(1) Benefits Remain With the Dominant Tenement.

As an interest in land that is part of the dominant tenement, an easement appurtenant is automatically alienated; it "attaches to, passes with and is an incident of ownership of the particular land." n671 An easement by necessity, by definition, is an appurtenant easement, to which the ordinary rules apply. n672 Ownership of the appurtenant easement "follows ownership of the dominant estate." n673 It passes "by conveyance of the land to which it is annexed." n674 The easement appurtenant "is presumed to be conveyed with the property to which it is appurtenant," n675 and it cannot be alienated separately from it. n676 The new Restatement similarly states that the original party or successor to a benefit that runs with an interest in property "is entitled to the benefit only during the time the party or successor holds the benefited property interest," n677 and that the benefit of an appurtenant servitude (here an easement) is transferable only with the benefited interest or estate. n678 The easement right has, in sum, become one out of the bundle of rights attached to the dominant tenement, and until it is terminated, cannot be separated from the dominant tenement. Unless expressly excepted, a transfer of real property includes all easements appurtenant to it, "although not referred to in the transfer, and whether the transfer is voluntary or involuntary." n679 Because the easement is attached to the dominant tenement, future transfers of the tenement will carry the easement with them, even if unmentioned, because language "is not necessary to convey the easement with these deeds because the easement is one appurtenant." n680 Use of the term "appurtenances" is not necessary to transfer an appurtenant easement. n681 Some jurisdictions recognize the same result through statute. n682

LEXIS: Easement W/20 Benefit W/15 Dominat W/5 (Estate or Tenement) W/20 Transfer! or Convey! or Assign! or Devis!

(2) Severability of Easement Appurtenant.

The above section and the rhetoric of most courts appear to make it clear that easements appurtenant, by their very nature, cannot be severed from the dominant tenement they serve. Some scholars urge that if the intention is clearly enough expressed, courts ought to permit such severance, i.e., the easement going to one person and the dominant tenement to another. n683 Add to text following callout for The new Restatement agrees: "[A]ppurtenant benefits may not be severed and transferred separately from the benefitted property unless otherwise provided by the terms of the servitude." n684 A severance like this could be conceived to transform the easement appurtenant into an easement in gross, n685 or to substitute a different piece of land for the original dominant tenement. If a prime motivation of modern servitude law is to give effect to the intention of landowners, then surely these scholars are correct, and the ability to make such a severance ought to exist. However, a transformation of this type would require convincing courts to venture a more creative reading of their precedents than many would be willing to make. Perhaps, at least in those jurisdictions permitting transfer of easements in gross, the same end could be reached with less risk of adverse actions by courts and less risk to the clarity of the distinctions between easements appurtenant and in gross by structuring the original conveyance to create an easement in gross whose owner happens at the time of transfer to own neighboring land, rather than to create an easement appurtenant. To reach this end would require careful wording in the document

creating the easement to state clearly the desire to create an easement in gross, and to overcome the presumption that many courts have in face of ambiguous language that the existence of a potential dominant tenement is strong proof of the intention to create an easement appurtenant rather than an easement in gross. n686

(3) Divisibility of the Dominant Tenement and Access to the Easement Appurtenant.

If the dominant tenement served by an easement should be subdivided, courts will generally hold that each of the pieces resulting from the subdivision of the dominant tenement continues to have the right to use the easement. Subject to limitations imposed on an easement at its creation or by the terms of the transfer of the dominant tenement, those who succeed to the parts into which a dominant tenement may be subdivided, "thereby succeed to the privileges of use of the servient tenement authorized by the easement." n687 If the dominant tenement is transferred in separate parcels to different persons, "each grantee acquires a right to use easements appurtenant to the dominant estate, provided the easements can be enjoyed as to the separate parcels without any additional burden on the servient tenement." n688 The presumption here seems to be that since the original dominant tenement, absent some limitation in the grant, can use the easement to serve whatever development may naturally occur, permitting the parcels resulting from dividing that tenement to use it should not unreasonably worsen the burden on the servient tenement. Subdivision is an entirely foreseeable use of land, and the servient tenement owner would be expected to understand that in granting the easement, and the servient owner who did not wish the easement to be so heavily used could condition the original grant.

(c) Transferability of Easements in Gross.

An easement in gross, by contrast to an easement appurtenant that was transferred whenever the dominant tenement was, traditionally was severely limited in alienability. It could not be conveyed, devised or inherited. Courts retained great suspicion of easements in gross, n689 Some courts retain that reluctance to permit alienability. n690 and limiting their alienability was one way of limiting their effectiveness and their duration. By contrast, despite the fact that easements in gross are "personal to the grantee only, and are generally not assignable or transferable," Texas courts permit parties "to create an assignable easement in gross through an express assignment provision." n691 Abandoning the longstanding principle ("no proposition ... more firmly settled") n692 that easements in gross were not transferable, the Maine Supreme Court has held that easements in gross are assignable when the parties clearly express "that intent in the language of the deed." n693 The new Restatement continues the trend towards alienability of easements in gross by stating that benefits in gross are freely transferable, unless they are personal. n694 Some states achieve the same result by statute. n695 Where easements in gross are transferable, the formal requisites for their transfer by inter vivos conveyance or by devise are the same as those for the creation inter vivos or by devise of an easement of like duration. n696

(1) Transferability of Commercial Easements in Gross.

Many jurisdictions have in later days adopted a distinction between commercial and personal easements in gross, holding commercial easements in gross to be fully alienable while retaining limitations on personal easements. n697 Thus, the *Restatement* has it that commercial easements in gross are alienable property interests, with the same restrictions on alienability as imposed on an estate in land of like duration. n698 The parties may provide that commercial easements are not alienable in the agreements creating them. n699 A commercial easement in gross does not mean that the easement is held by an organization rather than an individual. The distinction is whether the easement benefits the holder for commercial purposes or for personal purposes. Thus, an easement in gross permitting swimming in a private lake would be commercial if it were for the purpose of permitting an individual to run a swimming club on the lake, rather than to provide swimming facilities for the individual and family.

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement in Gross W/15 Commercial W/40 Transfer! or Alienab! or Convey! or Devis! or Sell or Sale

(2) Transferability of Personal Easements in Gross.

While most courts currently permit the transfer of commercial easements in gross, many still refuse to permit the transfer of personal easements in gross. Among the reasons for this dichotomy is that granting a personal right presumably involves a personal relationship. These courts, then, do not permit such easements to extend to someone who was not part of the original relationship; to do so may burden the servient tenement beyond the contemplation of the parties. The *Restatement's* position is more generous: that the alienability of non-commercial easements in gross is "determined by the manner or terms of their creation." n700 Some courts will permit a non-commercial easement in gross to be transferred, if its transferability has been made part of the agreement. n701 A few courts consider them to be of their very nature not transferable; in that case the intention of the parties will not suffice to make them so. n702

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement in Gross W/15 Personal or Noncommercial or Non-Commercial W/40 Transfer! or Alienab! or Conver! or Devis! or Sell or Sale

(3) Statutory Developments.

Most law in the area of easements is court-made, but a few states have enacted statutory provisions making some easements in gross transferable. Indiana uses a limited definition of an "easement in gross of a commercial character" and then declares that those easements created after June 30, 1989 are alienable unless the instrument creating them says otherwise, amending the statute that held this type of easement created after July 6, 1961 was alienable only if the instrument creating it so specified. n703 California courts, by contrast, interpret a tissue of Civil Code sections concerning the definition and alienability of property to say that all easements, whether commercial or non-commercial, are presumed to be alienable absent something in the conveyance to the contrary. n704 A Virginia statute simply says: "Any estate or interest in or claim to real estate, including easements in gross, may be disposed of by deed or will." n705 Statutes in most other states dealing with this question are limited to specific types of easements, like conservation or solar easements. n706

(4) Apportionability of Easements in Gross.

Courts differ about the permissibility of apportioning an easement in gross. The fear in permitting apportioning is that it will lead to overburdening of the servient tenement. The *Restatement* position is that apportionability depends on the manner or terms of the easement's creation. n707 The divisibility of the easement in gross will depend on its terms. Where the easement is exclusive, permitting someone sole use of the easement or the right to take all of a substance from the land, the holder may transfer as much as desired because no matter how many people attempt to use the easement, the measure is "all." n708 One court interprets the exclusivity of the easement to mean exclusive as to the fee owner, but not forbidding more than one easement; thus, two overlapping easements in gross were apportionable, thereby permitting an electric company to lease its poles to a cable television operator. n709 Where the easement is not exclusive or there is no absolute measure, the problem is more difficult, leading some courts to say the easement is not divisible, and others to say that whether the easement or profit may be divided depends on the grantor's intent. n710

CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions § 60.08

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 60.08 Termination of Easements.

[Go To Supp]

Easements are hardier creatures than are real covenants and equitable servitudes, which can be terminated for considerably more legal and equitable reasons than can easements. The primary means by which parties seek to terminate easements include expiration, merger, release, abandonment, forfeiture for misuse, changed conditions, laches and adverse possession.

(a) Expiration by Terms of the Agreement or Nature of the Easement.

Easements may in their grant specify that they will terminate at a specific date or on the occurrence of specific events, or their nature, e.g., easements by necessity, may determine that they terminate on the occurrence of certain events.

(1) Termination by Date.

Courts must determine the clarity with which the terminating events are defined. Where the easement is due to expire at a clearly specified date certain, there is little problem and little room for dispute.

(2) Termination by Fulfilled Conditions.

The grant creating an easement may itself set up conditions other than a date, the fulfillment of which will cause the automatic termination of the easement. n711 Some jurisdictions permit both determinable easements and easements subject to conditions subsequent. n712 Where the terminating event is differently defined than by a date, courts will examine the agreement carefully, because clauses providing for "termination of an interest in real property upon discontinuance of the use of such property for specific purposes are not favored in the law and will be strictly construed against the grantor." n713 Where, for example, the dominant owner of a driveway easement, providing that the easement would terminate upon building new or expanding old buildings on the dominant tenement, built a 230-square-foot addition to the house, the easement terminated: such limitations or conditions will be enforced unless not sufficiently definite, or contrary to law or public policy. n714 An easement of access to repair an antenna system terminated when the repair agreement did. n715 Railroad rights of way, where they are interpreted to be easements,

terminate when the railroad ceases using them for that purpose. n716 By contrast, in an easement granted an electric company for transmission towers "for such period of time as it may use the same or until use thereof is abandoned," the fact that the power company had de-energized the lines was rebutted by the fact that it still patrolled and maintained the lines, that the grant included the right to replace and rebuild them, and that the power company had submitted plans to replace them upon obtaining adjacent easements. n717

(3) Termination Because of Changed Conditions.

Termination for changed conditions is a very important tool when dealing with real covenants and equitable servitudes. It is less important, but still has application to easements, mostly to those implied by law and to express easements with conditions built into the grant.

If changed conditions make it impossible for an easement to fulfill its purpose, the easement may terminate. Where two dominant landowners equally owned a public utilities easement on the boundary of their properties and one of them built a building that went up to the property line and rendered the easement useless, the court terminated the easement, thereby preventing the offending owner from using that half of the easement that ran on the other party's property. n718 An easement "granted for a particular purpose terminates as soon as the purpose ceases to exist, is abandoned, or is rendered impossible of accomplishment." n719 By contrast, where a dominant owner purchased two non-adjoining lots from a grantor who had created an easement across servient land separating them and then purchased an additional lot connecting them, the court refused to terminate the easement. Noting the general rule that an easement given for a specific purposes "terminates as soon as such purpose ceases to exist," but that the intent of the parties was dispositive, the court construed the grant in favor of the dominant party and found insufficient proof that termination was intended. n720

LEXIS: Easement W/20 (Terminat*** or Forefeit*** or Extin!) W/10 Change W/3 Condition*

(4) Easements by Necessity.

Easements by necessity generally terminate upon the removal of the necessity that caused their creation. The possessor of a driveway easement by necessity lost use of the easement upon the availability of other access to the property; such easements "have the implied purpose to make possible the use of the dominant land, and therefore will terminate when the necessity for their existence disappears." n721 A dominant owner's easement by necessity did not terminate, however, by refusal of offers of alternative access over the servient estate because of public policy against penalizing the landlocked property owner in case a court later determined the offer was reasonable; the dominant owner should not be so coerced into accepting whatever offer was made. n722

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement! W/3 Necessity W/20 (Terminat*** or Forfeit*** or Extinguish!) W/10 Change W/3 Condition*

(b) Termination by Action of the Parties.

(1) Termination by Merger or Unity of Ownership.

Because one cannot own an easement in one's own land, when servient and dominant estates come into the same ownership, the easement between them disappears, is merged into the possessory right. n723 As the *Restatement of Property* puts it, if the dominant and servient tenements of an appurtenant easement come into ownership of the same person, the easement terminates to the extent that the estate right in the servient tenement permits the uses previously permitted only because of ownership of the dominant estate. n724 In other words, if x owns an easement permitting her

to cross over y and comes into ownership of y, the easement terminates if x can now cross y because of her estate ownership right and no longer needs the easement to be permitted to do so. If the owner of an easement in gross comes into ownership of an estate in the servient tenement, the easement terminates to the extent that the ownership of that estate permits the uses authorized by the easement. n725 Before merger will occur, "[t]he ownership of the two estates must be co-extensive and equal in validity, quality and all other circumstances of right." n726 Whether the easement is extinguished will be affected by the degree of merger between the two estates; complete merger brings extinguishment, partial merger may not. There must be complete unity of title for merger to occur; n727 that one is only a joint owner of one of the parcels will prevent merger from occurring. n728 Where easements in a subdivision serve all members of the subdivision, there can be no merger and extinguishment of the easement unless the entire subdivision comes into one ownership. n729 A partial merger insufficient to extinguish easements may occur when, for example, a party owns one lot individually and the other jointly. n730 Courts may, however, look behind apparent differences in degree of ownership to see if there should be merger. Thus, in a Nevada case, presumptions in community property law overcame statements in a deed that land was owned by two men as separate property; since their other parcel was also owned as community property, merger extinguished an apparent easement over one of the parcels. n731 If the owner of a dominant tenement becomes leaseholder of the servient tenement there is no merger; merger will occur only when there is unity of title as well as unity of possession. n732 The easement will not be extinguished in this situation, or in other situations of limited ownership (e.g., life estates), because there will come a time when the tenancy for years or the life estate will terminate and the parcels of property once again will be completely separate, leaving the dominant owner still in need of the easement. When a dominant tenement owner or the owner of an easement in gross is a remainder or reversionary owner of the servient estate, the easement will be extinguished only when that owner comes into both possession and ownership of the full estate. n733 Again, this result makes complete sense, because until the easement owner comes into full possession of the estate, the usefulness and value of the easement remains intact. The reason for this outcome grows out of the definition of an easement as the ownership of rights of use in the land of another and from the underlying principle that one cannot own an easement in one's own land. The formerly dominant owner still has rights over the servient tenement, but they are now incidents of ownership rather than of an easement, and if the ownership of the properties is once again severed, easement rights do not automatically revive, but ordinarily will have to be established anew. n734 Where an easement owner purchased the servient tenement and then reconveyed to the sellers, the easement over the servient tenement was extinguished. n735 If only one of the cotenants in a dominant tenement comes into ownership of the servient tenement, the other cotenant retains easement rights at the same time as the first cotenant loses them. If the lessee of the dominant tenement becomes owner of the servient tenement, the lessee will not operate under easement rights, but the dominant tenement owner will retain easement rights.

An easement extinguished by merger has ceased to exist. It does not come back into existence when the estates are once again separated without the same type of action required to bring an easement into existence in the first place. n736 If an easement by necessity is required by the re-severance of the parcels, it is treated as a new easement by necessity under normal rules. n737 An easement by implication from prior use (the prior use often called a quasi-easement) may arise upon reseparation, again following the ordinary rules for creating such an easement. n738 There also exists a mortgage exception to the merger doctrine. Where a dominant tenement benefitting from an easement is mortgaged and then merged with the servient tenement and the servient tenement re-severed from the dominant tenement, the easement will survive to benefit the mortgagee if the mortgagee's interest should become possessory, to protect the mortgagee "from losing the full value of its security interests, including the benefit of any easement." n739

(2) Termination by Release.

Any easement, no matter how created, may terminate by the agreement of both the dominant and servient parties,

through a formal release. It may occur through either an inter vivos conveyance or a devise. n740 Since this is, in a sense, the conveyance back to the servient owner of those parts of the bundle of rights contained in the easement, in the ordinary course of affairs, the release must be in writing sufficient to satisfy the Statute of Frauds and fulfill the same type of formalities as the original conveyance. n741 Just as with abandonment, the effectiveness of a release depends upon a finding of intention: in a release the intention is to give up the easement for the benefit of the servient owner, while abandonment has no reference "to any resulting benefit to anyone else." n742 Because it operates to increase the alienability of land, some courts will require less formality to release an easement than to create one. n743 This can go rather far; thus, the Maine Supreme Court, reversing the trial court, found that a party released a statutorily created constructive easement, of which it was unaware at the time, by entering into a lease for an easement which included a larger area, required payment and permitted the state agency to take possession on default. "By entering into a lease that contained terms and conditions that were inimical to the property interest it enjoyed pursuant to its statutorily created constructive easement, AHI clearly and unequivocally manifested an intention to release the constructive easement." n744 The use of the word "abandon" in a document does not suffice to make the agreement an abandonment: "A bilateral transaction through which an easement is extinguished by the concurrence of both the owner of the easement and owner of the servient tenement is properly termed a "release,' not an abandonment." n745 Release of part of an easement does not necessarily extinguish the entire easement. n746

LEXIS: Easement W/25 Terminat*** or Forfeit*** or Cancel! W/25 Release W/10 Writing or Oral

(3) Termination by Abandonment.

A dominant party may terminate an easement by abandoning it. Abandonment is an intentional relinquishment of the easement "indicated by conduct respecting the use authorized thereby." n747 Abandonment is a question of intent, and the burden of proof "is on the person asserting abandonment." n748 Mere non-use does not suffice to prove abandonment, any more than failing to make use of fee ownership has any effect absent adverse possession. There must be other evidence of a clear intent to abandon.

(i) Non-use Alone Usually Not Proof of Abandonment.

Courts will ordinarily not find an easement to have been abandoned because of simple non-use, even when the non-use is for a long duration. The Nebraska Supreme Court distinguishes between easements created by grant or deed and those that arise by prescription or implication. Mere nonuse for any period of time cannot extinguish an easement acquired by deed, while for prescriptive or implied easements, nonuse for a period sufficient to create a prescriptive easement raises a rebuttable presumption of abandonment. n749 The Maine Supreme Court has it that abandonment of a private easement requires proof of " '(1) a history of nonuse coupled with an act or omission evincing a clear intent to abandon, or (2) adverse possession by the servient estate.' " n750 Statutes may control the abandonment of public easements. Thus, the Idaho Supreme Court held that a statute requires that a public, prescriptive road easement can only abandoned by "ordinance" or formal action. n751"A claim of abandonment can be upheld only where non-use is accompanied by affirmative and unequivocal acts indicative of an intent to abandon and is inconsistent with the continued existence of the easement." n752 In that case even though the easement holder put in place flood control measures that made the easement unusable for periods of time, that act did not supply evidence of intent to abandon. n753 The West Virginia Supreme Court extended this rule to prescriptive easements in keeping with public policy considerations "which revere vested property rights." n754 Where the easement is publicly owned, there may be additional requirements of explicit official action to prove abandonment. "The conduct must be some affirmative official act, and not mere implication." n755 One court holds, however, that there can arise "a presumption of a public intent to abandon a road ... raised by evidence of nonuse for twenty years or more, intentional or voluntary desertion of a road, or acquiescence, even for a few years, in the discontinuance of an old road combined with use of a new road. n756 A state did not abandon a borrow pit easement for road building purposes by failing to use it for twenty-four years. n757 Lot purchasers in a

subdivision did not abandon road easements when the roads were never developed. n758 Even coupling non-use of an easement with use of a more convenient right of way does not deprive the easement holder of the rights to use the easement whenever desired. n759 That "a right of way no longer serves its intended purpose of access is irrelevant to the issue of abandonment"; thus, in one case, use of an equally convenient means of island access was not evidence of intent to abandon. n760

(ii) Affirmative and Unambiguous Indications of Intent to Abandon.

The intention to abandon need not be shown by express declaration but may be read from acts inconsistent with continuing existence of the easement n761 or with continuing "the use of the property for the purposes for which it was acquired." n762 Although non-use itself does not prove abandonment, it can be evidence of it in combination with other facts and circumstances. n763 Thus, an easement for the use of a stairway was held abandoned when it had been bricked and sealed for a period of twenty-nine years and no use had been attempted for at least fifteen years. n764 An ingress-egress easement was held abandoned after better than two decades of non-use and the erection without objection to numerous improvements interfering with its use, including garage, patio, stone barbecue, retaining wall, etc., "the pervasiveness and permanency" of which distinguished it from other cases. n765 The evidence for abandonment must be "clear and convincing." n766 A dominant owner's failure to object to a dumpster that obstructed his driveway easement for fifteen years did not terminate the easement: the owner retained the right to enjoyment, and the servient owner had no right to obstruct the easement. n767 Failure to object to the construction of a pond that submerged a portion of a right of way did not prove abandonment. n768 Where a wooden fence had been erected in 1933 over a portion of an easement granted in 1882 and two large elm trees allowed to grow, the court affirmed a finding of no abandonment, noting that permanence of structures is relevant to an intent to abandon, and that the fence and trees could easily be removed. n769 Nonuse of a private easement for decades, allowing overgrowth and acquiescing in the parking of old cars over the easement did not provide prima facie evidence of abandonment. n770 A railroad's abandonment of track use and attempt to convey away property over which a prescriptive easement had been won was itself evidence of an intent to abandon the easement and the property returned to the adjoining landowners. n771

(iii) Adverse Act by Servient Party.

Confusion has existed over whether, before abandonment will be found, there must also be an adverse act by the servient party. The Maine Supreme Court, for example, recognized an inconsistency in its own cases on the question, but decided against any such requirement. n772 In Maine, however, establishing adverse possession of an existing easement by the servient estate may serve as an alternative means to make a prima facie showing of abandonment. n773 The majority rule is that it is not necessary to prove reliance by the servient owner to demonstrate abandonment. n774

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/5 (Terminat! or Forefeit*** or Extinguish!) and Abandon! or Nonuse or Non-Use

(4) Termination by Estoppel.

Very similar to termination by abandonment is termination by estoppel. A servient tenement owner may cause extinguishment of an easement by taking action inconsistent with the existence of the easement, if it is done in reliance on conduct of the easement owner, if the easement owner reasonably should have foreseen such reliance and action, and if the servient owner would suffer unreasonable harm by restoring the easement. n775 The same standards and arguments would presumably apply for the extinguishment of an easement by estoppel as for the creation of an easement by estoppel, n776 though the *Restatement* suggests that there is no necessity of misstatement of fact as in other applications of the doctrine of estoppel. n777 The Alaska Supreme Court defines estoppel necessary to extinguish an easement as coming from taking a position inconsistent with one previously taken where circumstances "render assertion of the second position unconscionable." n778 The court will consider both the advantage gained by the one

making the inconsistent statements, whether the inconsistency was significant enough to make the assertion unconscionable and whether the earlier assertion was based on full knowledge of the facts. n779 The Georgia Supreme Court affirmed a summary judgment that landowners had lost recreational easements over land designated as parks, because of the servient developer's reliance on the dominant tenement owner's actions. n780 The Utah Supreme Court held that a city was not estopped from enforcing the full width of an easement that rendered driveway, retaining walls and a proposed fence in violation of setback requirements, where informal representations made for a small fee on the city engineer's own time about the placement of the easement were not the type upon which plaintiff could reasonably rely. n781 A nice illustration of the operation of the factor requiring consideration of harm to the servient owner by revival of an easement otherwise potentially subject to estoppel comes from a Pennsylvania case. The court refused to estop the owner of an easement over church lands because the easement could be revived in limited form without harming the church whose building encroached on part of the easement. n782 The difference between the two doctrines is sometimes stated to be that termination by abandonment in most jurisdictions does not require reliance by the servient tenement owner while termination by estoppel does. n783 Finding termination by estoppel may be appropriate, then, where weakness in the unambiguous evidence of intent to abandon may be counterbalanced by reliance by the servient owner. n784

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement! W/25 (Extin! or Terminat!) W/10 Estop!

(5) Laches.

Another method similar to abandonment and estoppel by which easements are attacked is the equitable defense of estoppel. Servient owners who wish to have disputed easements terminated will sometimes invoke laches if the dominant owner has not responded to actions challenging the easement and the servient owner has been harmed by the delay. For the laches defense to succeed, a court must find that "the plaintiff unreasonably delayed seeking relief and that prejudice to the defendant resulted from the plaintiff's delay." n785 Laches is an affirmative defense to the enforcement of an easement, with the burden of proof belonging to the one proposing the defense. n786 The period of delay sufficient to establish laches is fact-specific. "The period of delay for laches begins to run when the party discovers or could have discovered the wrong of which he complains, or where, in light of any resulting prejudice to the defendant, it became reasonable to expect the plaintiff to act upon the wrong." n787 A Massachusetts court found plaintiffs who waited two years to file suit guilty of laches in attempting to prevent construction of a house that was well under way, though slowly, and had cost considerable money; plaintiffs retained other beach rights, however, because as to them defendants were not harmed by their delay in protecting their rights. n788 A servient owner failed to demonstrate laches where the dominant owner had failed to bring suit for four years, and the improvements made were done after the dispute had already arisen and so were at his own peril. n789 A pipeline company was not barred by laches where a hog farmer erected four buildings over the easement because the company had warned the farmer at the outset; the court ordered the buildings removed. n790 By contrast, where a servient owner erected an obstruction to an easement, and the dominant owner waited three years to bring suit, the court terminated the easement due to laches because the dominant owner had the right and authority to have the obstructions removed as soon as they went up and sat on their rights, not even taking action when the servient owner made further improvements. n791 The Delaware Supreme Court held that laches was not an appropriate defense to an easement of necessity even after a very long period, because an easement of necessity could lie dormant and be activated by a remote grantee: the necessity did not create the easement but merely created the need for an easement for as long as the necessity continued. n792 Another court found no limitations period appropriate to bar claims which establish easements by necessity. n793

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/50 Terminat! and Laches

(6) Termination by Forfeiture for Misuse.

Servient tenement owners sometimes attempt to have an easement forfeited on the grounds that the dominant tenant has overused it. n794 Courts frequently back away from the forfeiture remedy. n795 A court enjoined use of a roadway by traffic which benefitted parcels other than the dominant tenement but refused to terminate the easement despite overuse. n796 An Arizona court enjoined all use of an easement and distinguished that remedy from forfeiture by providing that use could resume when steps were taken to prevent the non-dominant parcel from benefitting from the easement. n797

COMPUTER-ASSISTED RESEARCH

LEXIS: Easement W/15 (Terminat! or Forfeit*** or Extinguish!) W/30 (Excess*** W/5 Use***) or Overuse! or Misuse!

(7) Termination by Adverse Possession.

Just as an easement can be won by prescription, similar to adverse possession, so can it be lost. The *Restatement* states that an easement can be extinguished by action that would be permitted only if the easement did not exist, provided "(a) the use is adverse to the owner of the easement and (b) the adverse use is, for the period of prescription, continuous and uninterrupted." n798 To be adverse, "the use must be made without submission to or without being in subordination to the owner of the easement ... and must be open and notorious ... ." n799 Stating that "hostility or adversity" meant that a claimant possessed property "intending to be its owner and not in subordination to the true owner," the Oregon Supreme Court held that where a party claimed adverse possession of a twenty-foot wide easement which he thought actually lay elsewhere, that mistake itself provided the element of hostility; "[n]o further inquiry into the claimant's state of mind" was necessary. n800 In describing elements for the loss of easements by adverse possession, courts name elements very similar to those necessary for the adverse possession of land: n801 actions, for example, that are "actual, continuous, adverse, visible, notorious, and hostile" for the requisite amount of time. n802 The principles governing extinction of an easement by adverse possession are those governing "acquisition of a title by adverse possession and acquisition of an easement by prescription: open, notorious, exclusive, adverse, continuous and uninterrupted use for the full statutory period." n803 To extinguish an easement by adverse possession, "the possessor must prove, by clear and convincing evidence, an exclusive, actual, hostile, open, and continuous possession for the statutory fifteen year period." n804 That the servient owner already possesses the land over which an easement runs creates an analytical difference that requires that the showing of adversity and hostility be stronger than that required to take possession of land by adverse possession. To terminate an easement by adverse possession, "one must take an action that would be permitted only if the easement did not exist." n805

(i) Inconsistent With the Use Permitted by the Easement.

A major issue in the discussion of loss of an easement by adverse possession is whether the use by the adverse possessor is sufficiently contrary or hostile to the easement owner's use. The difficulty arises because there is no easily drawn definition of what use is adverse to an easement holder's rights; the easement holder often has rights to use the same land as does the servient owner. A clearer showing of adversity is necessary to extinguish an easement than to create one by prescription. n806 The servient owner already has the right to use the servient tenement in any way that does not obstruct the easement; thus what might look like a use that would create a prescriptive easement may be a use that is still within the servient owner's rights. The adverse possessor must show that the use interferes significantly enough with the easement owner's enjoyment of the easement to give notice that the easement is under threat. So, unless the servient owner's use so interferes that the easement owner cannot get use of the easement, proving adverse possession of an existing easement is problematic. Though the elements are similar, therefore, "conduct that is sufficient to acquire title over land may not be sufficient to extinguish someone else's easement over (or use of) that land;" there must be use made of the land that is "inconsistent with the use made and rights held by the easement holder, not merely possession which is inconsistent with another's claim of title." n807 Maintenance of a fence and a gate that was only

occasionally locked did not suffice for adverse possession extinguishing an easement. n808 In another case a house, garage, stone patio, barbecue, retaining wall and other improvements materially blocking the easement were sufficient to extinguish it by adverse possession. n809 A servient owner successfully terminated an easement by maintaining a six-foot chain link fence blocking off use of the easement for the prescriptive period: no actual hostile intent was needed, but only action inconsistent with the easement. n810 A short 15-39 inch wall built on a four-foot wide easement strip, though built by mistake, sufficed to terminate an easement by adverse possession. n811 When a tenant adversely possessed against an easement over the landlord's property, the easement was extinguished for the benefit of the landlord's reversion; the adverse possession could not defeat the landlord's fee interest in the land over which the easement ran because the tenant's possession was with the landlord's permission. n812

(ii) Finding of Inconsistency Dependent on Type of Use Easement Owner Makes.

Where an easement owner did not attempt to use a roadway easement acquired in 1959 until 1991, there was no adverse possession even though the servient owner had planted trees down the center and elsewhere in the easement path. n813 Thus, when no occasion has arisen for the use of an easement, the action of the servient owner in fencing the land will not be adverse to the easement until "(1) the need for the right of way arises, (2) a demand is made by the owner of the dominant tenement that the easement be opened and (3) the owner of the servient tenement refuses to do so." n814

(iii) Cannot Adversely Possess a Government Body's Easement.

As in ordinary law of adverse possession, adverse possession of an easement could not be maintained against a municipality. n815 That a *previous* easement holder had been a municipality did not rescue an easement from adverse possession where the servient owner had sealed off a roadway for exclusive use. n816

LEXIS: Easement and (Terminat*** or Forfeit*** or Extinguish!) and "Adverse** Possess***

(c) Termination by Action of Third Parties.

(1) Termination by Eminent Domain.

Just as may a possessory interest, an easement may be taken by eminent domain.

(i) Condemnation of the Servient Tenement.

"An easement is extinguished by a taking of eminent domain of the servient tenement, or of an interest therein, to the extent to which the taking permits a use inconsistent with the continuance of the use authorized by the easement." n817 An eminent domain taking of the servient tenement "extinguishes all other interests in the subject property," more specifically, the easement rights of the dominant estate. n818 So, if a governing body seizes a servient tenement, and the easement is no longer usable, the easement owner deserves compensation. The easement is treated like other property rights. Because the easement is a valuable property right, of course, the easement owner will be eligible for payment for its loss. Compensation must put the easement owner in a position equivalent to that before the condemnation. If, for example, an easement by necessity is extinguished by the condemnation of the servient tenement, compensation must be sufficient to provide the dominant owner with an alternative access. An appurtenant easement's value is typically measured by the loss in value to the dominant tenement, the more severe the loss in the dominant tenement's value, the higher the compensation; courts have found this a more appropriate measure than an increase in the value of the servient tenement through the termination of the easement. n819 Appurtenant easement owners may receive payment for a drop in value of the dominant tenement, called severance damages. n820 Where the government took a private road over which parties had exclusive easements and opened it up the public, the easement holders had the right to demonstrate the difference between the market value of their dominant property when the roads were private and when they were

made public. n821 Where a dominant tenement suffers no diminution in value, it is possible for a court to find that no compensation is due the easement owner. n822 Just as a leaseholder receives compensation for the condemnation of a leasehold, so also where a leasehold in a dominant tenement is not itself condemned but loses value through the condemnation of an easement that benefitted it, the leaseholder may receive severance damages. n823 The owner of an easement in gross also deserves compensation for the seizure of the servient tenement. Measurement is more difficult, there being no dominant tenement to value. Courts attempt to value what a person in a free market would pay for such an easement to determine what recompense the owner of an easement in gross should receive. n824

(ii) Condemnation of the Dominant Tenement.

Where a dominant tenement is condemned, by contrast, any easements appurtenant to it are also condemned, because of their essential connection to the dominant tenement; when the dominant tenement is forcibly transferred away, the easement survives with it. n825 The dominant owner deserves compensation also for the value of the easement over neighboring property; this is part of the value of the dominant tenement itself.

(2) Extinguishment by Operation of Marketable Title Act.

Marketable Title Acts can work to extinguish easements in much the same way they do with other property interests. An easement that does not appear in the record within the time required by the Marketable Title Act will be extinguished unless the easement is visible in a way that provides notice. n826 This rule also can apply to governmental subdivisions, thus costing a Minnesota township a roadway right of way. n827 The Act is irrelevant to easements that come into existence after the root title specified by the Act; their validity will be decided by the standard rules. n828 Because Marketable Title Acts generally except interests in possession or use from being extinguished by the Act, a prescriptive easement may survive attack under the Act. n829 Ways of necessity may also come within the exception generally existing in the Act for an interest "the existence of which is clearly observable by physical evidence of its use." n830 Where a way of necessity had not been used for more than thirty years nor any notice filed of its existence, however, the Florida Supreme Court held that it was subject to the Marketable Record Title Act and therefore extinguished. n831 Concerning property registered under a Torrens system, the Minnesota Supreme Court held that the certificate of title of the property owner contesting an easement was itself the source of title and less than the statutory forty years old, thereby preserving a previously unused easement that had been created in 1950. n832

(3) Foreclosure of the Servient Estate.

When a creditor forecloses the mortgage on a servient estate, the status of any easements in existence on the estate comes into question. The general rule is one of timing: " "First in time, first in right' certainly applies to this situation." n833 If the easement were in existence before the property was mortgaged, it will survive the foreclosure. If the easement were created after the property was mortgaged, the mortgage will have priority and the easement will be extinguished. n834 In a Texas case, an easement granted after the execution of a deed of trust to secure payment of a promissory note was invalidated by the bank's foreclosure on its deed of sale, absent evidence of ratification of the easement by the bank. n835 One court states the rule that to protect the mortgagee, "upon foreclosure of a mortgage and after the redemption period, title to the mortgaged property vests in the purchaser at the foreclosure sale and relates back to the date of the mortgage, extinguishing intervening rights and claims," and this applies also to ways of necessity

arising after the mortgage date. n836 The Wyoming Supreme Court stated that for the post-mortgage easement holder's rights to be extinguished, the easement holder should be joined as a party to the foreclosure if the mortgagee has actual or constructive notice of the existence of the easement. n837 One exception to those rules is that if the mortgagee granted the mortgage with no actual or constructive knowledge of the existence of the easements, the easement may be extinguished upon foreclosure. Thus, in a New Hampshire case, an unrecorded purchase and sale agreement promised an easement over a piece of property if the sale of that property to the one seeking the easement failed; the promised easement was an equitable interest in land and survived because the foreclosing mortgagee had actual knowledge of the agreement to grant it. n838

(4) Tax Deeds.

A question may arise whether an easement is extinguished upon a forced sale of the servient tenement due to nonpayment of taxes. Does the purchaser of a servient tenement under a tax deed take the property burdened or not? As has been seen elsewhere, sale under eminent domain generally leads to the extinguishment of any easement interest attached to the land (and an appropriate payment for such interests). The result under the somewhat analogous tax sale deeds varies more by jurisdiction. The *Restatement of Property* has it that an easement in gross is extinguished by a tax sale, whereas an easement appurtenant is not, partly because the lost value in the servient tenement due to the burdening of the property by easement can be recouped in valuation of the dominant tenement. n839 In a case of first impression, the Maine Supreme Court noted that in a substantial number of states "a tax sale does not extinguish an easement appurtenant where its value or burden is included in the assessed value of the properties" and held that since such interests are included in the tax valuation of property in Maine "an easement is not extinguished upon a tax sale." n840 In Washington, a purchaser at a tax foreclosure sale generally takes the property free from all encumbrances, except that a statute "protects recorded appurtenant easements from extinguishment." n841 In a Michigan case, property sold under a tax deed was taken free of a railroad right of way easement despite a statute mandating the opposite because the court held that the statute should be applied only prospectively. n842 Noting that most jurisdictions have held that appurtenant easements survive tax sales, the Mississippi Supreme Court held that to be the law in Mississippi, noting the nature of easements as interests in land and noting that whatever value is lost to the governmental body by the property being encumbered by an easement is balanced by the taxable gain in the value of the dominant tenement. n843 Where tax deeds extinguish easements, they usually do so when the tax levy predates the establishment of the easement. n844 An easement that could have been extinguished may be preserved under the terms of sale. n845 As to an easement by prescription, if the prescription period has not run before tax delinquency occurs, the court in an Ohio case stated that "a purchaser of forfeited lands at auditor's sale ... acquires a new and perfect title free of any claim of an easement by prescription." n846

(d) Effect of Termination of Easements.

The result of a finding that an easement has been terminated is that the complete control of the land will ordinarily return to the owner of the underlying fee or servient tenement. This applies also where easements are determinable or have been granted subject to a condition subsequent, with the necessary variance that upon violation of the condition the easement returns to the then owner of the servient tract "rather than to the original grantor or his heirs." n847

(1) Ownership of Roadbeds or Railroad Beds Upon Termination of an Easement.

Where roadbeds or railroad easements are terminated, ownership of the underlying fee usually is presumed to vest in the adjoining landowners, with each taking to the center line of the easement, unless there is evidence that the easement was taken from property on one side more than from property on the other. n848 Thus where a road is dedicated to public use, once the road is abandoned, the adjoining landowners will usually have the right to regaining control over the easement. Railroad easements are similar, with certain exceptions, for example, that one adjoining owner may be given ownership of an additional portion of the property hosting the easement sufficient to access a public roadway adjoining the easement. n849 The Delaware Supreme Court recently joined the "majority of the jurisdictions which have considered this issue" in holding that land adjoining a railroad right of way easement will presumptively carry with it ownership of the fee interest in the right of way when the land is conveyed, unless the grantor explicitly excepts ownership of that fee. n850 Where adopted, this presumption has been held strong enough to control even where a metes and bounds description in a grant appears to extend ownership of land only to the boundary of the abandoned railroad right of way, though the contrary has also been held. n851

(2) Rights Surviving Termination of Roadway Easement.

When a governing body abandons a public right of way over a road, what happens to people living along that road? We have already seen that adjoining landowners usually take ownership to the centerline of the roadway; that outcome can leave people along the road stranded. In many jurisdictions a private easement for those adjoining it remains over the roadway that survives government abandonment of the road. n852 In a jurisdiction so holding, even if the adjoining landowners take possession of the underlying fee of an abandoned road right of way, none will be able to prevent any of the others adjoining that roadway from using it, though it is no longer open to the general public.

(n109)Footnote 819. *Redevelopment Agency v. Tobriner, 200 Cal. Rptr. 364, 370, cert. denied, 469 U.S. 882 (1984);* Restatement of Property § 508 cmt. c (1944).

(n110)Footnote 820. *United States v. 57.09 Acres of Land, 706 F.2d 280, 281 (9th Cir. 1983).*

(n111)Footnote 821. United States v. 10.0 Acres, 533 F.2d 1092, 1095-1096 (9th Cir. 1976) (*en banc*) (loss of value through loss of exclusivity and being made more accessible to trespassing and other harms).

(n112)Footnote 822. *Redevelopment Agency v. Tobriner, 264 Cal. Rptr. 481 (1989), rev. denied,* (Cal. 1990).

(n113)Footnote 823. *United States v. 57.09 Acres of Land, 706 F.2d 280, 282 (9th Cir. 1983).*

(n114)Footnote 824. Restatement of Property § 508 cmt. d (1944).

(n115)Footnote 825. *Schwartz v. Castleton Christian Church, 594 N.E.2d 473, 475-476 (Ind. App. 1992)* (construing Ind. Code § 32-11-1-11).

(n116)Footnote 826. *Zimmerman v. Cindle, 548 N.E.2d 1315, 1318 (Ohio App. 1988)* (easement last mentioned in

documents in 1872).

(n117)Footnote 827. *Township of Sterling v. Griffin, 244 N.W.2d 129 (Minn. 1976)* (decision did not, however, bar individuals along roadway from establishing private easements by prescription. *Id.* at 134-135).

(n118)Footnote 828. *E.g., Spring Lakes, Ltd. v. O.F.M. Co., 467 N.E.2d 537 (Ohio 1984)* (Marketable Title Act irrelevant; easement not binding on purchaser because recorded outside chain of title).

(n119)Footnote 829. *E.g., Schulz v. Syvertsen, 591 A.2d 804 (Conn. 1991)* (while Marketable Title Act extinguished deeded easements, some plaintiffs proved prescriptive easements that survived Act); *Davis v. Havana Mineral Wells, Inc., 363 N.E.2d 856, 859-860 (Ill. App. 1977)* (covenants in deeds barred by Act, but prescriptive easement recognized).

(n120)Footnote 830. *Traders, Inc. v. Bartholomew, 459 A.2d 974, 979 (Vt. 1983)* (preserving way of necessity in continuous use, leaving physical evidence of its existence).

(n121)Footnote 831. *H & F Land Co. v. Panama City-Bay County Airport and Indus. Dist., 736 So. 2d 1167 (Fla. 1999)* (case of first impression).

(n122)Footnote 832. *Hersh Properties, LLC. v. McDonald's Corp., 588 N.W.2d 728, 735-737 Minn. 1999)* (signage easement: to allow MTA to trump Torrens title would effectively destroy the purpose of the Torrens Act, an "absurd result." *Id.* at 737).

(n123)Footnote 833. *United States v. Roberts, 788 F. Supp. 555, 557 (S.D. Fla. 1991)* (extinguishing easement created three years after notes and mortgage executed).

(n124)Footnote 834. *Accord Massey Assocs. v. Whitehorse Inns, Inc., 454 S.E.2d 513, 514-515 (Ga. 1995)* (sign easement extinguished at foreclosure because mortgage predated grant of easement). *Bush v. Duff, 754 P.2d 159, 164 (Wyo. 1988)* (easements created after execution of mortgage "eradicated by foreclosure of the mortgage"), *disapproved on other grounds by Ferguson Ranch, Inc. v. Murray, 811 P.2d 287, 289 (Wyo. 1991).*

(n125)Footnote 835. *Motel Enters., Inc. v. Nobani, 784 S.W.2d 545, 546-547 (Tex. App. 1990)* (reversing summary judgment because issue of material fact as to ratification).

(n126)Footnote 836. *Bush v. Duff, 754 P.2d 159, 164 (Wyo. 1988), disapproved on other grounds by Ferguson Ranch, Inc. v. Murray, 811 P.2d 287, 290 (Wyo. 1991).*

(n127)Footnote 837. *Id.*

(n128)Footnote 838. *Hawthorne Trust v. Maine Sav. Bank, 618 A.2d 828 (N.H. 1992).*

(n129)Footnote 839. Restatement of Property § 509 & cmt. e (1944).

(n130)Footnote 840. *Stickney v. City of Saco, 770 A.2d 592, 609 (Me. 2001).*

(n131)Footnote 841. *Lake Arrowhead Community Club, Inc. v. Looney, 770 P.2d 1046, 1047 (Wash. 1989)* (*citing* Wash. Rev. Code § 84.64.460). *Accord, Thirteen South Ltd. v. Summit Village, Inc., 866 P.2d 257, 260 n.2 (Nev. 1993), citing* Lake Arrowhead.

(n132)Footnote 842. *City of Boyne City v. Crain, 446 N.W.2d 348, 352 (Mich. App. 1989).*

(n133)Footnote 843. *Hearn v. Autumn Woods Office Park Property Owners Ass'n, 757 So. 2d 155, 160-161 (Miss. 1999).*

(n134)Footnote 844. *See, e.g., Smith v. Gwinnett County, 286 S.E.2d 739 (Ga. 1982)* (easements in subdivision recreation areas recorded before action forcing sale of property for taxes protected); Genesee, *Inc. v. Firstline Inv., Inc., 740 P.2d 367, 370 (Wash. App. 1987)* (easement protected so long as established of record prior to year for which tax foreclosed), *rev. denied, 109 Wash. 2d 1012 (1987).*

(n135)Footnote 845. *E.g., Pagano v. Kramer, 236 N.E.2d 858, 859 (N.Y. 1968)* (easement that would otherwise have been extinguished was preserved to purchaser of tax-deed property from city because deed from city stated that it was sold subject to such an easement).

(n136)Footnote 846. *Cookston v. Box, 160 N.E.2d 327, 332 (Ohio App. 1959)* (applying general rule to prescriptive easements).

(n137)Footnote 847. *E.g., Higdon v. Davis, 337 S.E.2d 543, 548 (N.C. 1985)* (easement granted on condition that driveway be constructed and maintained by easement holder).

(n138)Footnote 848. *Buffington v. Buffington, 568 A.2d 194, 196-197 (Pa. Super. 1989)* (construing Pennsylvania statute presuming ownership to each adjoining landowner to center line absent evidence easement taken unevenly).

(n139)Footnote 849. *Nelson v. Battle Forest Friends Meeting, 436 S.E.2d 122, 124-125 (N.C. 1993)* (holding that statute does not apply to facts of case in that roadway did not adjoin railroad easement).

(n140)Footnote 850. The Alabama Supreme Court has followed Smith in adopting the majority position. *Ex Parte Jones, 669 So. 2d 161, 165 (Ala. 1995). Smith v. Smith, 622 A.2d 642, 647 (Del. 1993)* (adopting majority position).

(n141)Footnote 851. *Vaughn v. Fitzgerald, 511 P.2d 1148, 1151-1152 (Okla. App. 1973);* more usually such a description will rebut the presumption, *see Roeder Co. v. Burlington N. R.R., 716 P.2d 855, 861 (Wash. 1986)* (presumption rebutted when "metes and bounds provisions in a deed describe property that extends up to, but does not include, a railroad right of way... .") (*en banc*).

(n142)Footnote 852. *E.g., Gillmor v. Wright, 850 P.2d 431, 437-438 (Utah 1993).*

Supp. To CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions Supp. to § 60.02

Supp. to § 60.02 Easement Defined.

[Go To Main]

§ 60.02(b) Easements as Property Rights. [Go To Main]

Add:

Oliver v. State ex rel. Com'r of Transp., 760 N.W.2d 912 (Minn. App. 2009) (easement as property right protected by the Minnesota constitution)

§ 60.02(e) Positive and Negative Easements. [Go To Main]

§ 60.02(e)(1) Only Four Negative Easements Generally Recognized.

At the end of the first sentence of the subsection, add new Note 35.1 n35.1

§ 60.02(e)(4) Conservation Easements.

Add:

See Gerald Korngold, "Solving the Contentious Issues of Private Conservation Easements: Promoting Flexibility for the Future and Engaging the Public Land Use Process," *2007 Utah L. Rev. 1039);* Nancy A. McLaughlin and Mark Benjamin Machlis, "Protecting the Public Interest and Investment in Conservation: A Response to Professor Korngold's Critique of Conservation Easements," *2008 Utah L. Rev. 1561.*

§ 60.02(e)(5) Reciprocal Negative Easements.

Add:

Patch v. Springfield School Dist., 989 A.2d 500 (Vt. 2009) (reciprocal negative easements not adopted everywhere)

§ 60.02(f) Easements Appurtenant and in Gross. [Go To Main]

§ 60.02(f)(3) The Dominant Tenement.

Add:

Rosen v. Keeler, 986 A.2d 731 (N.J.Super. 2010) (easement in gross belongs to its owner independently of his ownership or possession of land)

§ 60.02(g) Profits a Prendre. [Go To Main]

Add:

Christopher Meredith, "Imputed Abandonment: A Fresh Perspective on Adverse Possession and a Defense of the Objective Standard," *29 Miss. C. L. Rev. 257 (2010)* (profit a prendre also called "an easement 'plus' ").

FOOTNOTES:
(n1)Footnote 35.1. *Ashby v. Maechling, 229 P.3d 1210 (Mont. 2010)* (negative easements viewed "with extreme caution")

Supp. To CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions Supp. to § 60.03

Supp. to § 60.03 Creation of Easements.

[Go To Main]

§ 60.03(a) Express Easements. [Go To Main]

§ 60.03(a)(1) Easements by Grant or Devise.

Add:

Gold Creek North Ltd. Partnership v. Gold Creek Umbrella Ass'n, 177 P.3d 201 (Wash. App. 2008) (documents did not grant an express easement, but only expressed an intent to create such an interest); *Gray v. Osborne, 739 N.W.2d 855 (Iowa 2007)* (easement created by subdivision plat); *Hernandez v. Whittemore, 651 S.E.2d 180 (Ga. App. 2007)* (express easement created by plat); *Vander Heide v. Boke Ranch, Inc., 736 N.W.2d 824 (S.D. 2007)* (an oral agreement to modify an easement was barred by the statute of frauds)

§ 60.03(a)(2) Easements by Reservation and Exception.

Add:

Blazer v. Wall, 183 P.3d 84 (Mont. 2008) (a statement in the deed that the conveyance was "subject to" a road easement did not expressly create or reserve an easement).

§ 60.03(a)(3) Easements by Dedication.

Add:

K & A Acquisition Group, LLC v. Island Pointe, LLC, 682 S.E.2d 252 (S.C. 2009) (Easements by dedication can be lost by abandonment).

§ 60.03(a)(3)(iii) Common Law Dedication by Reference to Map or Plat.

add:

Jackson v. Board of Com'rs of County of Monroe, 916 N.E.2d 696 (Ind.App. 2009) (dedication typically involves deed or plat)

§ 60.03(a)(7) Contents of the Writing.

Add:

Williamson v. River Crest Plantation, LLC, 687 S.E.2d 318 (N.C.App.2009) (contents of writing can be proven only by writing, not extrinsic evidence)

Add

Smith v. Tolar, 636 S.e.2d 112 (Ga. App. 2006) (purported express easement was void for vagueness).

§ 60.03(a)(7)(iii) Railroad Rights of Way.

Add:

Lake CDA Investments, LLC v. Idaho Dep't. of Lands, 2010 Ida. LEXIS 98 (Idaho 2010) (RR rights of way distinguished from others such as canals)

§ 60.03(b) Easements Without Express Agreement. [Go To Main]

Add:

William Smith, "Florida Premises Liability on Easements of Way: Liability for Injuries to Third Parties," *62 Fla. L. Rev. 829 (July 2010)* (though a servient owner usually does not have an obligation to perform maintenance on the easement absent express agreement, "arguably the servient owner may be liable in tort for injuries suffered by third parties in the easement area").

Add:

Inlet Harbour v. South Carolina Department of Parks, Recreation and Tourism, 659 S.E.2d 151 (S.C. 2008) (reference to a plat in a deed did not create a presumption of implied easement); *H.S. Farrell, Inc. v. Formica Construction Co., Inc., 838 N.Y.S.2d 628 (2007)* (filling of subdivision map was insufficient to establish an implied easement).

§ 60.03(b)(1) Easements by Public Condemnation.

Add:

Wymberley Sanitary Works v. Batliner, 904 N.E.2d 326 (Ind. App. 2009) (public utility easements for extension of sewer line acquired by condemnation); *Winkel v. Miller, 205 P.3d 688 (Kan. 2009)* (easement for asphalt mixing strip used in highway repair condemned by highway authority); *Wagler v. West Boggs Sewer Dist., Inc., 898 N.E.2d 815 (Ind. 2008)* (sewer district had authority to condemn easements).

§ 60.03(b)(3) Easements by Estoppel.

Add

Kienzle v. Myers, 853 N.E.2d 1203 (Ohio App. 2006) (sewer easement by estoppel over adjacent landowner's property).

§ 60.03(b)(4) Easements by Implication from Prior Use; the Quasi-Easement.

Add

Perbix v. Verizon North, Inc., 919 N.E.2d 1096 (Ill. App. 2009) (defines a quasi-easement); *West End Properties Ass'n of Camp Mineola, Inc. v. Anderson, 823 N.Y.S.2d 412 (2006)* (implied easement arising from pre-existing use when the title was severed).

§ 60.03(b)(5) Easements by Necessity.

§ 60.03(b)(5)(i) Justified by Implied Intent or by Public Policy?

Add:

Ashby v. Maechling, 229 P.3d 1210 (Mont. 2010) (easements by necessity are considered with extreme caution because they deprive the servient tenement owner of property rights through mere implication).

§ 60.03(b)(5)(iii) Elements to Establish the Easement by Necessity.

Add:

Wolf v. Owens, 172 P.3d 124 (Mont. 2007) (strict necessity required for easement by necessity).

Add

Rau v. Collins, 891 A.2d 1175 (Md. App. 2006) (no implied easement of necessity when the necessity did not exist while the properties were under common ownership or at the time of severance).

§ 60.03(b)(6) Prescriptive Easements.

§ 60.03(b)(6)(vi) The Elements of the Prescriptive Easement.

Add:

Burke v. Pierro, 986 A.2d 538 (N.H. 2009) (the claimants must show that they or their predecessors have achieved twenty years of "adverse, continuous, and uninterrupted" use)

Add:

Mierzejewski v. Brownell, 925 A.2d 1126 (Conn. App. 2007) (a septic tank could not be used to establish a prescriptive use that would extinguish an easement, because the tank was not open and visible).

§ 60.03(b)(6)(viii) Adverse, Under Claim of Right or Hostile.

Add

Miller v. Harris, 945 So. 2d 1072 (Ala. App. 2006) (claimed easement use was open, visible, and continuous).

§ 60.03(b)(7) The Doctrine of Custom.

Add:

Timothy M. Mulvaney, "Instream Flows and the Public Trust," *22 Tul. Envtl. L.J. 315 (Summer 2009)* (discussing the effects of the doctrine used in the Halverson case).

Supp. To CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions Supp. to § 60.04

Supp. to § 60.04 Scope of the Easement.

[Go To Main]

§ 60.04(a) Rights of the Easement Owner or of the Dominant Tenement. [Go To Main]

Add

McFarland v. Kempthorne, 464 F. Supp. 2d 1014 (D. Mont. 2006) (appurtenances language in deed or patent did not create express easement).

§ 60.04(a)(1)(iii) Increasing the Frequency or Changing the Type of Use of the Servient Tenement.

Add:

Brannon v. Boldt, 958 So. 2d 367 (Fla. App. 2007) (an implied easement for ingress and egress could not also be used for fishing or scenic viewing).

§ 60.04(b)(2) The Exclusive Easement.

Add:

Gray v. McCormick, *84 Cal. Rptr. 3d 777 (2009)* (easement precluded the owner of the servient tenement from making any use of the easement area).

§ 60.04(c) Location and Size of the Easement. [Go To Main]

§ 60.04(c)(1) By the Terms of the Grant.

§ 60.04(c)(1)(i) Establishing the Location.

Add:

Beery v. Shinkle, 193 S.W.3d 435 (Mo. App. 2006) (action by owners of dominant estate to establish location of a permanent easement).

Add:

Brumbaugh v. Mikelson Land Co., 185 P.3d 695 (Wyo. 2008) (lot owners had "floating easements" for utilities and access).

§ 60.04(c)(1)(ii) Changing the Location.

Add

Sheppard v. Justin Enterprises, 646 S.E.2d 177 (S.C. App. 2007) (relocation of easement denied because it would increase the burden on the servient estate).

Sweezey v. Neel, 904 A.2d 1050 (Vt. 2006) (Vermont rejects new Restatement's position allowing servient owner to unilaterally relocate the easement).

Supp. To CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions Supp. to § 60.05

Supp. to § 60.05 Responsibility for the Easement.

[Go To Main]

§ 60.05(a) Maintenance and Repair. [Go To Main]

Add:

Shikner v. Stewart, 2010 Ohio App. LEXIS 1244 (Ohio App., Ottawa County Mar. 19, 2010) (Deeds creating easement evinced a clear intention to create an obligation on the parties for maintenance and improvement of the entire easement, as there was nothing in the deeds to suggest that the easement area within a named lot should be treated any differently than the remainder of the easement.).

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions Supp. to § 60.07

Supp. to § 60.07 Change of Ownership of Easements.

[Go To Main]

§ 60.07(a) Transfer of the Servient Tenement and the Requirement of Notice. [Go To Main]

Add:

John W. Fisher, "The Scope of Title Examinations in West Virginia Revisited," *111 W. Va. L. Rev. 641 (Spring 2009).*

§ 60.07(c) Transferability of Easements in Gross. [Go To Main]

Add:

Borek Cranberry Marsh, Inc. v. Jackson County, 773 N.W.2d 522 (Wis. App. 2009) (transferable unless the deed shows intent to limit transferability)

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 60 THE LAW OF EASEMENTS: RIGHTS IN THE PROPERTY OF ANOTHER

7-60 Thompson on Real Property, Thomas Editions Supp. to § 60.08

Supp. to § 60.08 Termination of Easements.

[Go To Main]

§ 60.08(b) Termination by Action of the Parties. [Go To Main]

§ 60.08(b)(3) Termination by Abandonment.

Add:

Seven Springs, LLC v. Nature Conservancy, 855 N.Y.S.2d 547 (2008) (the town's abandonment of a public highway did not extinguish private easements).

Add:

Spencer v. Kosir, 733 N.W.2d 921 (Wis. App. 2007) (abandonment of express easement not established).

§ 60.08(b)(3)(i) Non-use Alone Usually Not Proof of Abandonment.

add:

Luciani Realty Partners v. North Haven Academy, LLC, 988 A.2d 930 (Conn. App. 2010) (must show "unequivocal and decisive acts clearly indicating an intent on the part of the owner of the easement to abandon the use of it.").

§ 60.08(b)(7) Termination by Adverse Possession.

Add:

McGinley v. Postel, 830 N.Y.S.2d 588 (2007) (easement not extinguished by adverse possession).

CHAPTER 61 REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

7-61 Thompson on Real Property, Thomas Editions 61.syn

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 61.syn Synopsis to Chapter 61: REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

§ 61.01 Introduction.

§ 61.02 Definition.

(a) A Tool for Private Land-Use Planning.

(b) A Promise Binding on the Parties' Successors.

(c) Enforceable Both at Law and in Equity.

(d) Positive or Negative Covenant.

§ 61.03 History.

(a) Reasons for the Rise of the Real Covenant in Property Law.

(b) Limitations on the Creation and Use of the Real Covenant.

(c) Unified Servitudes.

(d) Property Right or Contractual Interest.

§ 61.04 Creation of the Real Covenant: What Must Be Demonstrated?

(a) Horizontal Privity to Make the Burden Run: Who May Create a Real Covenant?

(1) Mutual Privity.

(2) Instantaneous Privity.

(3) Abolition of Horizontal Privity.

(4) Horizontal Privity Not Necessary for Benefit of Covenant to Run.

(b) The Promise Must Be Express, and Cannot Be Implied.

(1) The Promise Must Be Clearly Delineated.

(i) The Presumption in Favor of Untrammeled Use.

(ii) Grantor May Retain Right to Change Covenants.

(iii) Covenant May Be Limited or Unlimited in Duration.

(2) The Promise Must Be in Writing.

(3) The Statute of Frauds.

(c) The Parties Must Intend That the Benefit and Burden of the Promise Run with the Land.

(1) Intent May be Gleaned from the Language of the Conveyances Alone or from That Language Compared with Other Evidence of Intent.

(2) No Particular Language Is Required to Demonstrate the Required Intent.

(d) The Touch and Concern Requirement: What Type of Promise Will be Enforced as a Real Covenant?

(1) Definitions: When Does a Covenant "Touch and Concern" Land?

(2) Touch and Concern: the Burden Side.

(3) Touch and Concern: the Benefit Side.

(4) Affirmative Covenants.

(i) In General.

(ii) Covenants to Pay Money.

(5) Negative Covenants.

(6) Power to Enforce and Obligation to Obey a Real Covenant.

(e) Vertical Privity: Who May Enforce or Benefit from the Real Covenant?

(1) Vertical Privity Between the Promisor and Successors: Is the Successor Bound?

(2) Vertical Privity Between the Promisee and Successors: May the Successor Enforce?

(i) Homeowners Associations.

(f) Notice Requirement.

(1) Actual Notice.

(2) The Recording Acts.

(3) Constructive Notice.

§ 61.05 Type of Redress Available: Injunction or Damages.

(a) Injunction Where Damages Insufficient.

(b) Equitable Remedies Require Balancing of Hardships.

§ 61.06 Transferability of Real Covenants.

(a) On Transfer, the Burden Automatically Runs at Law with the Estate and in Equity with Possession.

(1) In General.

(2) Continuing Obligation of the Original Promisor upon Transfer.

(b) The Benefit Runs with the Possession of the Benefited Land.

§ 61.07 Termination of the Covenant or of the Right to Enforce It.

(a) By Terms of the Agreement.

(b) By Action of Those Party to It.

(1) Unified Ownership or Merger.

(2) By the Promisee.

(i) By Release or Rescission.

(ii) Termination Inferred from Actions by Promisees Inconsistent with the Continuation of Covenants.

(iii) Abandonment.

(iv) Acquiescence.

(v) Estoppel.

(vi) Laches.

(vii) Unclean Hands.

(c) By Action of Third Parties.

(1) By Statute.

(i) Specific Time Limits.

(ii) Statutes of Limitation.

(iii) Marketable Title Acts.

(iv) Codifying Common-Law Relief.

(2) By Eminent Domain or Condemnation.

(3) By Foreclosure or Tax Sale.

(d) Public Policy.

(1) Constitutional Rights.

(2) Fair Housing Act.

(3) State Law.

(e) By Events Independent of the Parties.

(1) Changed Circumstances.

(i) Purpose Accomplished or Impossible to Accomplish.

(ii) Loss of Benefit.

(2) Balancing of Hardships.

§ 61.08 Bibliography.

CHAPTER 61 REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

7-61 Thompson on Real Property, Thomas Editions § 61.01

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 61.01 Introduction.

Private land-use planning involves the use of several tools that in many ways are identical in appearance and in function. All of them involve agreements among neighboring landowners concerning the use of their respective pieces of land, and all of them purport to control those uses even after those pieces of land pass out of the ownership of those making the agreements. Accident of history, the inherently conservative tendencies of common-law judges, and the ongoing struggle between those wanting freedom for owners to define the use of land into the future and those wanting freedom of alienation have delivered to us an almost incomprehensible muddle in which the easement, the real covenant and the equitable servitude in many ways look alike, act alike and serve almost identical purposes. In many jurisdictions the differences among them have been so worn away that one is often not certain which among these labels best describes the arrangement controlling any given piece of land. That result could be viewed as just one of the charming anomalies of a common-law system but for the fact that in some jurisdictions there remain significant enough differences in the nature of the interests that disaster can strike the unwary landowner attempting to use them in planning for the future. Of those three interests, the easement, the real covenant and the equitable servitude, this chapter will examine the real covenant. n1 To do so, we will have to indulge in the fiction that the real covenant exists as a clearly distinct interest governed by clearly distinct rules. The underlying truth is that for the reason given above, anyone wishing to make use of any of these planning tools must consult the law of a local jurisdiction with great care to make certain how that jurisdiction governs attempts to control the use of parcels of land when they pass from the hands of the original promisor and promisee.

FOOTNOTES:
(n1)Footnote 1. Easements are discussed in Chapter 60 and equitable servitudes in Chapter 62 of this treatise. As part of its mission to harmonize, rationalize and otherwise simplify these three interests, the new Restatement proposes to abolish the terms "real covenant" and "equitable servitude" because they "describe servitudes encompassed within the term 'covenant that runs with land.' " Restatement (Third) of Property (Servitudes) § 1.4 (2000).

CHAPTER 61 REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

7-61 Thompson on Real Property, Thomas Editions § 61.02

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 61.02 Definition.

[Go To Supp]

(a) A Tool for Private Land-Use Planning.

A real covenant n2 is a promise governing the use of land made by one property holder usually for the benefit of another property holder, n3 the benefit and burden of which are intended to and do pass to certain successors n4 of the original parties. It is "a promise to do or to refrain from doing certain things with respect to real property." n5 A real covenant is a tool for private land-use planning by which landowners may structure the relationship between their parcels of land. It is the functional equivalent of an easement in situations in which courts have traditionally refused to recognize easements. n6

(b) A Promise Binding on the Parties' Successors.

The real covenant is a device contractual in origin that has taken on most of the qualities of an interest in land and is enforceable against people who would not be bound under traditional contract law. What differentiates the real covenant from a simple contractual promise is that it is enforceable *on* the original promisor's successors in interest without any action on their part to assume the burden, and it is enforceable as a matter of course *by* the original promisee's successors in interest; in other words, the real covenant "runs with the land." n7 Not all covenants entered into by neighboring landowners are real covenants; landowners may also enter into personal covenants, binding only the original parties. "Intent is not enough to make a running covenant out of one which is by its nature personal." n8 The real covenant is one "that 'touches or concerns' the land, as opposed to a 'personal' covenant, which is merely a promise made by a grantor to a grantee generally concerning use of the land." n9"The primary distinction between real and personal covenants is that real covenants run with the land, binding the heirs and assigns of the covenanting parties, and personal covenants do not." n10 That court maintains that even a personal covenant is enforceable on the purchaser of burdened land, if the land was purchased with notice and the covenant restrictions "concern land or its use." n11 The real covenant is "a covenant so connected with realty that either the right to enforce or the duty to perform passes to assigns of the land ... ." n12"A covenant running with the land is one relating to the land, or as more commonly said one which touches and concerns n13 the land itself, so that its benefit or obligation passes with the ownership." n14 One court illustrated the difference between a personal and a real covenant by holding that a covenant to return a security deposit did not run with the land unless the landlord were required to use the money, if forfeited, for the benefit of the

land. n15 In that situation, if the forfeited money was required to be used for the benefit of the land, the burden of the covenant would have run, and a new owner of the fee interest would be responsible for the return of the security deposit; if there was no such requirement, the original landlord would be responsible for the security deposit's return as a personal covenant.

(c) Enforceable Both at Law and in Equity.

While real covenants traditionally were enforceable only at law, the general situation today in the United States is that real covenants may be enforced both at law and in equity, whichever better serves to vindicate the rights of the promisee. n16

(d) Positive or Negative Covenant.

A real covenant can be positive or negative. It can bind the promisor and successors to perform some particular deed that benefits the promisee's land or burdens the promisor's land or it can prohibit the promisor or successor from performing some particular action on the land. n17 Most states draw no distinction between positive and negative obligations for a real covenant; a few will not permit positive obligations to run with the land. n18 A covenant may contain both positive and a negative elements, *e.g.*, a covenant to operate a department store in a mall and not to subdivide the space. n19 Some types of promises that, if all requirements for formation are met, courts have found enforceable as real covenants have included promises to construct a road and lay water and sewage lines, n20 to supply reciprocal parking privileges, n21 to use property only for permanent residential construction, n22 to build upon land or, upon failure to do so, to grant the original seller the right to repurchase the land at the original purchase price. n23

FOOTNOTES:
(n1)Footnote 2. A "real covenant" is so called because it is a covenant concerning real property. From late Middle English "real" has taken the meaning "consisting of or pertaining to immovable property, such as lands or buildings," 2 The New Shorter Oxford English Dictionary 2493 (Oxford 1993). Real property received its name from the Latin "res" or thing, referring to permanent, unmovable property to be distinguished from moveable chattels. Only real actions, those causes dealing with this type of property, arising primarily from disputes among lords and their tenants, were, from at least the 12th century and increasingly thereafter, eligible for adjudication in the King's courts. For an accessible treatment of the development of the early real actions, *see* A.W.B. Simpson, A History of the Land Law, 25-46 (Oxford 2d ed. 1986).

(n2)Footnote 3. In certain situations the benefit may flow to an individual other than as an owner of land. *See* § 61.04(d)(3), *infra*.

(n3)Footnote 4. There are certain required relationships between the original parties and their successors before the covenant will be deemed to run with the land. *See infra*, § 61.04(c) (vertical privity).

(n4)Footnote 5. *Suffolk Bus. Ctr., Inc. v. Applied Digital Data Sys., Inc., 581 N.E.2d 1320, 1322 (N.Y. 1991).*

(n5)Footnote 6. *See infra*, § 61.03(a).

(n6)Footnote 7. *See* Restatement of Property Ch. 45, Introductory Note, Topic A (1944) (real covenant unique in that, under circumstances, benefit and burden may run with the land). More precisely, the burden, at least, runs with the estate in land of the promisor; in the Restatement view, to be bound one must possess at the very least an estate of equal duration to that of the promisor. In an equitable servitude, by contrast, the obligation is said to run with possession of the land itself; it is a feature of the land that comes with possession.

CHAPTER 61 REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

7-61 Thompson on Real Property, Thomas Editions § 61.03

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 61.03 History.

(a) Reasons for the Rise of the Real Covenant in Property Law.

Why can interests that are in most ways equivalent be variously called easements, real covenants or equitable servitudes? The reason lies in history. n24"Confusion results from the fact that essentially the same interest may be treated under some circumstances as any one of these things." n25 Each of these interests resembles the other, but all have subtle differences that can lead to disaster for the unwary person involved in the ownership of land and for the person's attorney. The latter two devices maintain their importance in large degree due to struggles in courts over the limits to be placed on land-use agreements that would bind future owners, reflecting the struggle between keeping land free of encumbrances, and therefore more easily alienable, and "the belief, confirmed by experience in many cases, that realty may be most advantageously developed when the owner is able to subject it to such conditions and restrictions as his customers may desire." n26 Courts have often found themselves on the free alienability side of the argument, viewing too easy enforcement of servitudes as dangerous. "From the beginning, courts have controlled servitude use by refusing to enforce a variety of arrangements freely entered into by landowners and occupiers." n27 The real covenant has become an important tool in private land use planning primarily because of the reluctance of English courts to enforce either negative easements or those requiring positive action on the part of the servient landowner. n28 Landowners felt the need to be able to enforce agreements by which neighbors would refrain from using their property in ways that harmed that of the landowners or by which neighbors would do certain things on their property that would benefit the landowners in their ownership of their own property. Courts refused to permit easements to perform that function, with a limited number of exceptions, and so the landowners turned to contract law to enable them to reach their goal. Contract law was a useful tool because persons customarily would bind themselves to perform positive actions or to refrain from some action, and those promises would be enforced as a matter of course by the courts. n29 A conventional rendition of that scenario involves the English courts further burdening the real covenant, an event leading to the development of the equitable servitude. n30 Some scholars argue that the above scenario does not necessarily reflect the way in which the use of the real covenant developed in this country, that various homegrown versions of it popped up in the law without any specific connection to actions of English courts or the law of easements, n31 but to whatever degree that is correct, the real covenant and its cousin, the equitable servitude, have come to serve in this country to fill in the gaps caused by limitations placed on easement law, as they have in English law. n32

(b) Limitations on the Creation and Use of the Real Covenant.

This new tool required a stretch of ordinary conceptions of contract law, because the real covenant would require binding future owners of the burdened property, persons who were not parties to the original agreement. Contract law traditionally would not bind persons who were not parties to the contract at its inception, unless they assumed the contractual obligations. The English courts soon acted to put serious limitations on this new tool, which had itself come into use to overcome courts' limitations on the use of easements. n33 Because the real covenant purported to bind persons not originally party to the agreement binding the use of land, the courts required a special relationship between those original parties before they would bind or benefit their successors; they would enforce such agreements only if the original parties were related as landlord and tenant. n34 The tenant's successor, therefore, could be bound by the agreement, but no one else. n35 The English courts would only enforce the burden of a negative covenant, both in law and equity if the proper privity existed, and in equity alone if it did not: "It is well established that the burden of a covenant does not run with the land of the covenantor at common law, except where the original contracting parties are lessor and lessee. Nor does the burden of a positive covenant run with freehold land in equity." n36 The burden of a positive covenant, thus, "never runs with freehold land either at common law or in equity." n37 Besides limiting who could make an agreement enforceable on successors in interest, the courts also limited the type of activity that could be controlled by this type of agreement: the activity had to touch and concern land, to involve or affect its use. n38 These requirements so severely limited the usefulness of the real covenant that property owners and their attorneys found another tool to enable them to do what they would with their land, the equitable servitude. n39 American courts, too, recognized the real covenant, but widened the required relationship between the original parties sufficiently enough that the real covenant became a significant tool in private land-use planning. n40 Many more landowners, therefore, could take advantage of the real covenant to reach the goals denied them under easement law. American courts also generally came to enforce positive covenants, thereby making the real covenant a useful tool in many more types of land transactions. n41 American courts, however, also imported some of the limitations of English law, an attitude frequently expressed in language that courts disfavor restrictions on the use of land. n42"Not every covenant binds subsequent owners or users of the land, even though the covenant purports to be a covenant that runs with the land." n43 American law has imported the requirements of horizontal privity and touch and concern with varying definitions and varying degrees of enforcement.

(c) Unified Servitudes.

There are significant movements both in courts and academia to rationalize the current situation of three different but similar instruments of private land use control. n44 Forces in academia are pushing for the recognition of a single servitude that would encompass the easement, real covenant and equitable servitude into one single servitude governed by a single, modernized and rationalized set of rules. n45 The movement in the courts has been to remove many of the differences between the real covenant and the equitable servitude such that, for all practical purposes, if not formally, in those jurisdictions one has, in effect, only easements and a form of servitudes encompassing the other two. n46 The California Supreme Court, for example, traced the history of the development of real covenants and equitable servitudes in that state and stated puzzlement as to whether fusion had already been accomplished. n47 In a Georgia case involving payment of homeowners' assessments, the state supreme court noted that covenants relating to land are enforceable "against subsequent grantees with notice ... . It is immaterial in such cases whether the covenant runs with the land or not, the general rule being that it will be enforced according to the intention of the parties." n48 Language quoted in a Florida case illustrates that either fusion of the interests has occurred or that terminology has become so confused that it *should* occur: "Restrictive covenants are private promises or agreements creating negative easements or equitable servitudes which are enforceable as rights arising out of contract." n49 The Washington Supreme Court notes that there are essentially two kinds of covenants running with the land, real covenants and equitable covenants and that Washington courts generally do not distinguish between them. n50

(d) Property Right or Contractual Interest.

Real covenants were originally conceived to be entirely creatures of contract rather than property interests. The vast

majority of jurisdictions these days consider them to be interests in land and therefore of necessity created in writing and beneficiary of the same protections given to fee interests, easements and other interests in land. Thus, for example, government's ability to condemn covenant rights generally is believed to be governed by the Fifth Amendment: Covenant rights cannot be condemned except for public purpose, and if government condemns the burdened property, the owner of the benefited property must be compensated for the loss of the covenant rights. n51 This is one area where it makes a very real difference whether a covenant right be considered a property right or interest in property; if the right sounded only in contract, the protections would be considerably less. n52 That covenants are so widely considered property rights does not, however, change their essentially contractual origin and nature. Thus, courts frequently state that one must construe covenants by ordinary principles of contract interpretation. n53 This stands witness to the hybrid creature covenants have become, mixing aspects of land use and contractual law.

FOOTNOTES:

(n1)Footnote 24. For an interesting and accessible presentation of the very complex development of servitudes law in general and the real covenant in particular in this country, *see* Uriel Reichman, Toward a Unified Concept of Servitudes, *55 S. Cal. L. Rev. 1179 (1982).*

(n2)Footnote 25. Charles E. Clark, Real Covenants and Other Interests Which "Run with Land" 5 (2d ed. 1947). In some situations, courts find that it does not matter; *e.g.*, a given set of "parking restrictions cannot be cancelled or modified, whichever label -- easements or restrictive covenants -- is placed upon various of the agreement's provisions." *AC Assocs. v. First Nat'l Bank, 453 So. 2d 1121, 1125 (Fla. App. 1984).*

(n3)Footnote 26. Clark, *supra* note 24, at 7.

(n4)Footnote 27. Susan F. French, Servitude Reform and the New Restatement of Property: Creation Doctrines and Structural Simplification, *73 Cornell L. Rev. 928, 928 & n.6 (1988)* (noting that both Roman and English law refused to permit servitudes that imposed affirmative obligations or created benefits in gross).

(n5)Footnote 28. "[N]o right, except the right of support, of immunity against the doing on servient land of some otherwise lawful act (not involving interference with the flow of something), appears to have been accepted as an easement, and it is thought that the class of negative easements is now closed." Spencer G. Maurice, Gale on Easements 25 (15th ed. London: Sweet & Maxwell, 1986); "A right to have something done is not an easement, nor is it an incident of an easement, and an obligation to do something on one's own land can only arise, speaking generally, by statute or contract." *Id.* at 39; Susan F. French, Servitudes Reform and the New Restatement of Property: Creation Doctrines and Structural Simplification, *73 Cornell L. Rev. 928, 938 (1988)* (English law creates spurious easements to enforce affirmative burdens; otherwise they are enforceable neither in law nor in equity).

(n6)Footnote 29. English courts eventually permitted the burden of these contractual arrangements to run if there was privity of estate and if the covenant were negative. In England, where a contractual arrangement has been entered into obligating the servient landowner to do something positive on his or her land, "the burden of a contractual obligation of that kind does not run with the land." Spencer G. Maurice, Gale on Easements 39 (15th ed. London, Sweet & Maxwell, 1986).

(n7)Footnote 30. *See, e.g., Davidson Bros., Inc. v. D. Katz & Sons, Inc., 579 A.2d 288, 291, 292 (N.J. 1990)* (development in English courts); *see also* Ch. 62, *infra* (equitable servitudes).

(n8)Footnote 31. *See generally* Uriel Reichman, Toward a Unified Concept of Servitudes, *55 S. Cal. L. Rev. 1177 (1982).* In the historical sections of his article, Reichman argues that much American servitude law developed relatively independently of English law and that it was only in the latter part of the nineteenth century that American jurisdictions began to classify servitudes under a tripartite system of easements, real covenants, and equitable servitudes like that existing in many jurisdictions today. In Professor Reichman's analysis, part of the attractiveness of the real covenant to American law lay in the then fascination with contract theory as a "potential mechanism whereby the notion of contract

might be injected into the law of real estate," with a whole series of practical advantages for new mechanisms of land-use control. *Id. at 1217.*

(n9)Footnote 32. Professor Reichman traces the first discussion of modern real covenant theory to *Norman v. Wells, 17 Wend. 136 (N.Y. 1837)* and its true beginning to Judge Hare's 1852 analysis of *Spencer's Case, 5 Co. 16a, 77 Eng. Rep. 72 (1583)* in J. Smith, 1 A Selection of Leading Cases 179 (1866). Uriel Reichman, Toward a Unified Concept of Servitudes, *55 S. Cal. L. Rev. 1177, 1212-16* and accompanying notes (1982).

(n10)Footnote 33. *See* Restatement of Property Part III, Introd. Note at 3158 (1944).

(n11)Footnote 34. *See infra* § 61.04(a) (horizontal privity).

(n12)Footnote 35. *See* Restatement of Property Part III, Intro. Note at 3158 (1944).

CHAPTER 61 REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

7-61 Thompson on Real Property, Thomas Editions § 61.04

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 61.04 Creation of the Real Covenant: What Must Be Demonstrated?

[Go To Supp]

The law requires a number of things to be demonstrated before it will deem a promise made between two individuals to benefit or burden their successors. The promisors in some jurisdictions must be in a special relationship to one another (horizontal privity) at least to make the burden run; the promise must be express and will ordinarily not be implied; the intent that the promise be binding upon successors must be clear; the promise in some jurisdictions must be in writing at least sufficient to satisfy the Statute of Frauds; the promise in some jurisdictions must be recorded; the subject matter of the promise must be of a particular type affecting persons in their ownership of land (touch and concern).

(a) Horizontal Privity to Make the Burden Run: Who May Create a Real Covenant?

Any neighboring landowners may enter into contracts, may covenant, concerning the use of land, and those contracts will be enforced upon the original promisee subject to ordinary rules of contract law. The real covenant does more than that, however. It purports to benefit and bind not just the promisee and the promisor, but also their successors. By entering such covenants, landowners attempt to define the relationship of pieces of land in a way that will remain stable until future owners can agree to change it. As noted above, the desire to so control land relationships pits a challenge to contract law as well as against the bias of Anglo-American courts toward the free alienability and usability of land. n54 English courts, therefore, were very reluctant to enforce real covenants, meant to bind and benefit those not parties to the original agreement, and eventually limited their enforcement to covenants entered into by parties who, at the time the covenant was entered into, were in a special relationship, generally called horizontal privity. The only parties who could demonstrate the required horizontal privity in English law were the landlord and the tenant. American courts, too, imported the limitation of horizontal privity. Generally, American courts widened the definition in several very significant ways, and, indeed, some would say the doctrine has little remaining force in American law; a real covenant can be "created in any transaction involving conveyance of some other interest in land." n55 The new *Restatement*, in its argument to unify servitudes, would abolish the horizontal privity requirement entirely; in its opinion, the doctrine is so attenuated that its abolition has largely already occurred. Professor Susan French, the Reporter for the new *Restatement*, has noted: "Since the doctrine has little support in modern case law and none among scholars of servitude law, its elimination should not prove controversial." n56 The result would be that the class of those able to enter into agreements binding and benefiting their successors in interest will be widened to included all neighboring landowners.

Be that as it may, American courts that still hold to the horizontal privity doctrine recognize several relationships beyond the landlord-tenant relationship that can give rise to privity sufficient to support an enforceable real covenant.

COMPUTER-ASSISTED RESEARCH

LEXIS:real w/2 covenant! W/25 horizontal w/2 privity

(1) Mutual Privity.

American courts, led by Massachusetts, broadened the concept of horizontal privity to include persons who when they entered into a contract concerning the use of their neighboring land already shared some interest in the land, usually that one party already held an easement in the land of the other. That shared interest gained the label "mutual privity." Some courts hold that "parties are in privity where one has an easement in land owned by the other, so long as the covenant concerns the easement." n57 Another defines mutual privity to exist in a "covenant arising from simultaneous interests in the same land." n58 If the parties were to enter into an agreement governing the use of one another's land, land that was already related, those courts would enforce that agreement on successors to the original parties. It might be put that the already existing relationship suffices to support enforcement beyond normal contract boundaries. Even with this widening, however, the class of landowners able to take advantage of the real covenant remained severely limited. Some courts went further still and widened the potential class of those able to enter into an enforceable real covenant by recognizing a third type of horizontal privity generally called instantaneous privity.

(2) Instantaneous Privity.

Very frequently, when parties wish to convey land to another, they wish to do so on condition that they can have some control over the future relationship of the conveyed and the retained property. One may wish, for example, to convey part of a piece of land but ensure that the conveyed portion is used in a way that will increase the value of the retained piece. The majority of jurisdictions requiring horizontal privity to establish an enforceable real covenant find privity to come sufficiently into existence "when the original covenanting parties make their covenant in connection with the conveyance of an estate in land from one of the parties to the other." n59 That form of horizontal privity commonly is called "instantaneous privity." n60 The very conveyance of the property itself supplies the relationship sufficient to stretch traditional contract rules and justify binding to the covenant the successors to the original parties; thus the notion that the privity arises instantaneously. The recognition of instantaneous privity significantly widened the class of those able to enter into a real covenant. It did not, however, widen the class to include the very large number of landowners who have no relationship to one another other than that of neighbor and who would wish to control the use of their respective properties by their successors. Those persons are still limited to the equitable servitude, for violation of which damages are not ordinarily an available remedy, or else must indulge in legal sleight of hand to create instantaneous privity by one conveying property to the other and the other reconveying that property to its original owner. n61 To alleviate that situation would require widening the definition of horizontal privity to a point that it had no meaning. Some jurisdictions have desired to make the real covenant available to neighbors and so have simply abolished the requirement of horizontal privity as being an antiquated remainder of ancient law with no support in modern policy needs, an action supported by the new *Restatement* and many other scholars.

(3) Abolition of Horizontal Privity.

A number of jurisdictions have completely abolished horizontal privity as a condition necessary to the enforceability of real covenants. In fact, the new *Restatement* argues that the abolition of the horizontal privity requirement is strongly supported in the case law, and that in only a few states does it retain much vitality. n62 One example of those few states where the doctrine appears to have continuing vitality is Virginia, where the supreme court in recent cases refers to the fulfillment of the doctrine as evidence of the validity of real covenants. n63 The same court also points to the presence of horizontal privity to validate a restrictive covenant enforceable at common law, where an equitable servitude could

not be demonstrated because of lack of a common scheme. n64 Stronger evidence of continuing vitality of the doctrine would be use of it to invalidate a covenant. Courts do, at least occasionally, invoke horizontal privity to deny agreements the status of real covenants. The Washington State Court of Appeals, for example, held that a right of refusal was a personal contract and not a covenant running with the land because neither was there horizontal privity nor did the agreement touch and concern land. n65 Some jurisdictions still formally have the requirement, but their courts doubt its continuing validity. The Indiana Court of Appeals, for example, held that horizontal privity had been proved in a given case, but, given the widespread exceptions to it and objections to it, "doubt[ed] whether this requirement has much vitality in Indiana." n66 In these jurisdictions even simple neighbors may create real covenants, and courts will enforce them on the successors to the original parties. Jurisdictions doing so have removed one of the primary factors distinguishing the real covenant from the equitable servitude. Virtually all promises giving rise to a real covenant also create an equitable servitude, thus making the equitable servitude a popular means to circumvent the technical requirements necessary to create a real covenant, including that of horizontal privity. n67 If there need no longer be any relationship preexisting or caused by a conveyance between neighboring landowners, the only difference of real significance remaining is whether courts will enforce at law, or only at equity, agreements that fail the other formalities necessary for the creation of a real covenant. There may be genuine policy reasons for courts to be reluctant to do so. Equitable servitudes, for example, may be implied in certain circumstances and will be enforced if there is notice; real covenants must be expressly entered into. n68 Courts would have to consider seriously whether they would be willing not only to require a successor party to abide by such a covenant but also make the party liable to money damages absent an explicit acceptance of that burden. n69

(4) Horizontal Privity Not Necessary for Benefit of Covenant to Run.

While some American jurisdictions may still require a demonstration of horizontal privity before they will enforce a covenant on the successor of the promisor, horizontal privity is not necessary for the successor of the promisee to have the benefit of the covenant against the original promisor. The Restatement puts it that the only privity required to support running of the benefit, as opposed to running of the burden, is that privity arising out of the promise itself. n70 Thus, where two neighbors enter into a promise concerning the use of the land of one of them, the successor to the promisee may enforce the promise against the original promisor, and lack of privity between promisor and promisee is no defense. n71 If the promisor had conveyed the land to a successor, however, the promise would not be enforceable against the successor because the burden would not have run absent horizontal privity.

(b) The Promise Must Be Express, and Cannot Be Implied.

Most jurisdictions will require that the covenant be expressly made. While courts will, under the right conditions, imply an equitable servitude, the general rule is that real covenants must be expressly made. Covenants can be expressed as modern contracts or expressed in deeds; they can be created both by inter vivos and testamentary transfers. n72 They can be "created by donative transfers, as well as by contracts and transfers for consideration." n73

(1) The Promise Must Be Clearly Delineated.

Courts historically have a prejudice against enforcing real covenants for the reasons given above n74 and will sometimes go out of their way in giving the covenant the most restricted reading possible, but they will enforce the clearly stated and unambiguous covenant. "Where the terms of an agreement are clear and unambiguous, it is the duty of the court to construe them as written." n75 Strict construction is at issue only where there is ambiguity. n76 In order to determine whether a provision of a covenant is ambiguous, the Idaho Supreme Court says that it "must determine whether the provision is reasonably susceptible to conflicting interpretations." n77 When there is ambiguity, the Idaho court states that it will attempt to ascertain the intent of the parties "from the language of the covenants, the existing circumstances at the time of the formulation of the covenants, and the conduct of the parties." n78 The Oregon Supreme Court lays out a threefold inquiry: (1) examine the text of the provision in the context of the document as a whole; (2) if ambiguity remains after that step, then examine extrinsic evidence of the parties' intent; (3) if that fails, then rely on

"appropriate maxims of construction." n79 If the language is unambiguous, extrinsic evidence will not be admissible in construing a covenant. n80 Even where language is undefined and may be ambiguous, courts remain quite free in determining the weight and admissibility of extrinsic evidence. Thus, the Georgia Supreme Court states that where words are not defined in a restrictive covenant they are to "construed as to carry into effect the intention of the parties, which is to be collected from the whole instrument, and the circumstances surrounding its execution," with the judge authorized to find the meaning of undefined words "in accordance with their 'common everyday sense... .' " n81 The court then held that the testimony of the drafter of the covenant that the intention of a provision requiring only "site-built" construction was only to exclude factory-built and mobile homes from the subdivision did "not require a different conclusion" than the court's contrary analysis of the intention of the parties, which derived a more restrictive meaning of "site-built" from the common meaning of words and from the four corners of the document. n82 Stating that the interpreting court's goal is to seek the "real intention of the parties" and that restrictions in a residential subdivision must be interpreted to "increase the desirability of [the] lots as residences," the South Dakota Supreme Court sustained an injunction against a sandblasting business in a subdivision not explicitly prohibiting businesses, even though less obtrusive businesses had not been objected to. n83 In creating a covenant, therefore, it is important to be very clear in expressing the nature and extent of the promise defined in it. The Supreme Court of Virginia, for example, refused to enforce a restrictive covenant in a lease forbidding the *construction* of a second supermarket in a shopping center against someone *remodeling* an already existing department store for use as a supermarket. n84 Noting that in cases of ambiguity, covenants were to be interpreted in a way leading to free use of land and in the absence of a specific definition of family in a subdivision single-family residence covenant, the New Mexico Supreme Court held that a group home for AIDS patients was not in violation because the persons lived together in a way that a family would. n85 The Arkansas Supreme Court, noting that when "there is uncertainty in the language by which a grantor in a deed attempts to restrict the use of realty, freedom from restraint will be decreed," did exactly that in holding that a covenant requirement that "all chimneys and foundations below siding shall be constructed with brick or stone" did not forbid use of metal insert fireplace box or metal pipes through the chimney. n86 After distinguishing covenants forbidding commercial, industrial or business uses from covenants forbidding non-residential uses, the Michigan Supreme Court upheld banning a family day-care home because of its nature as a business despite its burdening the neighborhood no differently than a residence would. n87 The Nebraska Supreme Court interpreted a covenant forbidding non-residential use as one meant to prevent commercial use, and therefore held that the owner of a lot could use a neighboring lot to provide access to the lot on which his home was to be built; such a use enhanced the residential nature of the neighborhood. n88 The South Carolina Supreme Court interpreted a covenant forbidding construction of any residence costing less than $10,000 to permit construction of a mobile home because the terms of the covenant "do not prohibit mobile homes and thus we will not enlarge the restriction by construing the words beyond their clear meaning." n89 The Hawaii Supreme Court held that, where the purpose of a covenant limiting houses to two stories was to limit the height of buildings, the covenant was ambiguous for failure to state the maximum height of the stories, and therefore not enforceable against the builder of a three-story house. n90 The Washington Court of Appeals, noting that restrictions were not to be interpreted to extend "by implication to any use not clearly expressed," interpreted a covenant forbidding placement of trailers not to forbid placing of a mobile home. n91 The Washington Supreme Court, by contrast, accepted a use of the word "family" as used in its ordinary context rather than explore the many possible dictionary uses of the word in upholding a single-family covenant's exclusion of an adult care home. n92 Similarly, the Alabama Supreme Court used the ordinary notion of "dwelling" to determine that neither a carport or a storage room can be considered part of a dwelling to satisfy the minimum size required by a covenant. n93 These examples demonstrate that, unless one enjoys the thrill of allowing a court to interpret the meaning of one's covenant, it is critically important to be precise in one's choice of words. Apparently precise words used imprecisely court disaster, as do vague words carelessly used.

(i) The Presumption in Favor of Untrammeled Use.

It has been a virtual truism that in cases of ambiguity, a covenant will be interpreted in the way least burdensome to the free use of land. In Michigan, for example, noting that restrictive covenants are interpreted strictly against grantors and those enforcing them, "and all doubts are resolved in favor of the free use of property," the state's supreme court pointed out that their decisions are based on two apparently "inconsistent" principles: the broad freedom of landowners to make

legal use of their property and the requirement that courts normally "enforce unwaived restrictions on which the owners of other similarly burdened property have relied." n94 The Idaho Supreme Court notes that while contract principles are generally used in construing covenants, because "restrictive covenants are in derogation of the common law right to use land for all lawful purposes" the court will not extend by implication any "restriction not clearly expressed." n95 That traditional presumption is giving way in some jurisdictions, however. The Washington Supreme Court, for example, after noting the traditional presumption, states that the time has arrived "to expressly acknowledge that where construction of restrictive covenants is necessitated by a dispute not involving the maker of the covenants, but rather among homeowners in a subdivision governed by the restrictive covenants, rules of strict construction against the grantor or in favor of free use of land are inapplicable." n96 The court notes that this is not an entirely new development, pointing to decades-old cases from Kentucky and New Hampshire. n97 While restating the traditional presumption, the Montana Supreme Court softens it by cautioning that the "free use of property must be balanced against the rights of the other purchasers in the subdivision." n98 The new *Restatement of the Law of Property* also distinguishes between the drafter and the successors to the drafter who are residents of a subdivision in deciding whether to apply the traditional rule construing language against the drafter. n99 It would be premature to suggest, however, that there is an irresistible tide against use of the traditional presumption against the drafter in interpreting ambiguous covenants. The Supreme Court of Oregon, for example, has explicitly resisted the invitation to do so, citing concerns for protection of purchasers, certainty and the reduction of litigation and allowing full use of property. n100

(ii) Grantor May Retain Right to Change Covenants.

Jurisdictions generally permit a grantor to retain the right to change, revoke or make exceptions to covenanted restrictions so long as that right is explicitly retained in the creating instrument, construing the document most strongly against its author. n101 The power to make some types of changes might be vested in an architectural control committee or the Homeowners Association. A Texas subdivision covenant, for example, forbade use of a certain type of roofing material, but granted to the Architectural Control Committee "the right to waive" that requirement under certain conditions. n102 The Louisiana Supreme Court, in interpreting that state's version of a subdivision scheme of covenants and servitudes, noted the possibility of permitting them to be released by less than all of those bound by them but required unanimous approval for an increase in the burden. n103 If the covenants permit it, new properties may be joined to a subdivision and gain the right to participate in changing covenants. In an Idaho case where a neighboring property owner consented to a subdivision's covenants, the state Supreme Court held that the consenting owner thereby gained the right to vote on amending covenants and thus provided the majority required to permit one of the other owners to continue keeping hogs on his property. n104 In some jurisdictions, the power to make such changes is subject to review under a reasonableness standard whether the changes are consistent with the "intent stated in the declaration of purpose." n105 The exercise of the right must be reasonable, with due regard for the property rights and investments of those who relied on the covenants in full force at the time of purchase. n106 In those jurisdictions, courts must determine whether the exceptions were "reasonably exercised or whether they essentially destroyed the covenants," a factual matter inconsistent with summary judgment. n107

(iii) Covenant May Be Limited or Unlimited in Duration.

A real covenant may specify by its terms its duration. It may be by its terms permanent; it will then be subject to termination under rules discussed later. n108 It may be created to exist for a specific period of time, at the end of which it will expire, or it may be created to last until the occurrence of a specified event. A real covenant may have an original limited term with provisions for renewal, either automatic or requiring action by the parties. n109 Covenants will sometimes state specific times at which they will automatically renew themselves, unless terminated or altered. Thus, in Arkansas, an attempt to revise covenants so as to prevent the building of an apartment building failed because the revision was recorded after the automatic renewal of the original covenants; it should have been recorded in advance, to take effect as of the date of the original's expiration. n110 It is important that the covenants be crafted so that there will be no dispute over what term the parties intend.

(2) The Promise Must Be in Writing.

Courts will also require that the covenant be in writing. Underlying the necessity that a covenant be written, the Arkansas Supreme Court notes that while existence of a general plan of development might be used to argue for the continuing validity of a *written* covenant contained in a chain of title, they "have no case in which a restriction has been *created* as the result of a general development scheme." n111 Oral real covenants generally will not be enforced, absent estoppel, part performance or other such doctrines. A writing requirement serves all the purposes generally put forth for the Statute of Frauds, both evidentiary and formal. The writing requirement removes many of the dangers of relying on contradictory oral testimony. It also serves to underline the seriousness of what the parties are entering into. Finally, it makes it more likely that someone purchasing land bound by a real covenant will do so knowingly; there will exist evidence of its existence that increases the likelihood of notice. Where the promise is made as part of another document, as in a deed evidencing the transfer of land or in a will, the writing required is that which is necessary to make the underlying transaction valid. The *Restatement* had it that the successors to title of land burdened by a promise were not bound unless the promise were "in writing under seal." n112 At the time the first *Restatement* was issued, in 1944, about three-fourths of the states had already abolished the seal requirement. n113 Recognizing that most other states have since also done so, the new *Restatement* would totally abolish the requirement that the writing creating the real covenant be under seal and would require no other writing than that required to create an estate of like duration. n114 Beyond the signed writing or memorandum satisfying the Statute of Frauds or the Statute of Wills, a few jurisdictions still require formalities like the use of the seal, witnesses or acknowledgments. n115 In California, a statute has it that for a covenant to run with the land, there must be a writing containing the covenants that particularly describes the benefited and burdened land and that states that the parties' successors in interest shall be bound for the benefit of the land owned by, granted by, or granted to the covenantee. n116 The California Supreme Court has clarified that the writing necessary may not appear in any of the deeds involved but may be separately recorded, and so long as it is recorded before the contracts of sale, describes the property and states the intent to bind all purchasers, those who take with the constructive notice provided by the recording system will be bound. Separate mention in deeds is not required. n117 The Montana Supreme Court held that where covenants were contained in the contract for sale but not the deed, where the deed made no reference to restrictive covenants and where no separate declaration of covenants was ever filed, the covenants merged into the deed and were extinguished by it and, therefore, could not be enforced. n118

(3) The Statute of Frauds.

The writing memorializing a real covenant must at the very least satisfy the Statute of Frauds or the Statute of Wills as to the transaction of which it is a part. If it stands alone, it must satisfy the Statute of Frauds. It must identify what the promise is and must identify the parties to it. It must identify the land to be bound and, perhaps, where the benefit lies. It must be signed at least by the party to be bound. Thus the Arkansas Supreme Court found invalid a covenant signed by only one of the co-owners of the property to be bound because "all of the parties did not sign the covenants." n119 Acceptance of a deed poll (one signed only by the grantor), however, has been found to satisfy the Statute of Frauds and place burdens upon the grantee. n120 The writing requirement for a Real Covenant often goes beyond those requirements, however.

(c) The Parties Must Intend That the Benefit and Burden of the Promise Run with the Land.

Besides sometimes requiring a particular relationship between the original promisor and promisee, courts universally require that the parties have *intended* that the promise run with the land. It is not enough that a promise be made between people in the transfer of land; that promise may still be only personal and will not then be binding upon or enforceable by successors. The courts require evidence that the parties *intended* that the promise entered into be enforceable by and on their successors. n121

COMPUTER-ASSISTED RESEARCH

LEXIS: real w/2 covenant w/50 inten! w/50 run w/3 land

(1) Intent May be Gleaned from the Language of the Conveyances Alone or from That Language Compared with Other Evidence of Intent.

Intent is a "question of fact to be discovered by reference to the instrument in its entirety and the manifest meaning of the language used by the parties." n122 One discovers the intent of the parties "from the governing instrument itself and from the particular language selected to reflect the goals and understandings of the parties." n123 The circumstances to be considered in case of ambiguity of language are those in existence at the time the promise was made; those in existence at the time enforcement is sought are irrelevant to solution of the ambiguity. n124

(2) No Particular Language Is Required to Demonstrate the Required Intent.

While the use of particular words is "not determinative and no particular words need be used," the terminology chosen is highly significant and launches the legal analysis. n125 Certain expressions will, however, be read by courts to strongly evidence that intent. "[L]egal terms of art in a conveyance are presumed to have been used with their accustomed meaning, especially where the context and circumstances reveal no contrary direction." n126 An agreement to "permanently maintain" a tile drain across the promisor's piece of property, for example, evidenced an intent to bind not only the promisor "but later grantees of the burdened property as well." n127 A statement that all covenants "are intended to be and shall be construed as covenants running with the land, binding upon, inuring to the benefit of and enforceable by the parties hereto and their successors and assigns" sufficiently "indicates that the parties intended" the covenants to run with the land. n128 The use of the words "heirs" or "assigns" in deeds for property "tend to support the conclusion that the covenants were intended to run with land rather than that they were personal ... ." n129 The Maryland high court also noted that the presence of language binding "Successors and assigns" is virtually conclusive on intent, lacking intent to the contrary. n130 Where a deed employed the phrase "heirs, successors and assigns" after other covenants in a deed, but not after the clause in question, it appeared that the parties did not intend the clause to run with the land. n131 In one case, language that parties "bind themselves" to a covenant that failed to provide that the parties "bind their heirs and successors" was evidence of no intent to create a covenant running with the land. n132 Language speaking "in terms of perpetuity," the fact that the land originally retained in the conveyance in which the covenant was created "necessarily benefited from the covenant," and mention of the covenant in later conveyances are all evidence the covenant was intended to run with the land. n133 Where a repurchase provision in a deed was characterized in the deed as a covenant and lacked a reentry authorization or forfeiture effect, the provision was intended by the parties to create a covenant enforceable in equity rather than a future interest enforceable only under statutory restraints. n134

(d) The Touch and Concern Requirement: What Type of Promise Will be Enforced as a Real Covenant?

Just because a promise is made by two parties in horizontal privity with one another does not suffice to make it an enforceable real covenant. English courts early on demanded that the promise be one that seriously impacted on the use of land. It had to "touch and concern" the use of land, before a court would find that the promise had to be kept by future owners of the promisor's land. If the promise did not touch and concern the land, it was personal to the promisor, and would follow the promisor even after the land was conveyed away, rather than run with the land. American courts generally also maintain the touch and concern requirement. n135 According to Professor Susan French, Reporter for the new *Restatement*, while the courts generally speak of the touch and concern requirement as though it were necessary for the creation of a real covenant, it often functions as a termination tool to relieve the successors of promisors of burdens that courts find unwise or pernicious. n136 Many scholars believe that the touch and concern requirement is a tool without any real content of its own that is used by courts when they perceive that, for public policy or other reasons, a promise ought not bind successors to the promisor. Cutting the "Gordian knot bind[ing] this state's jurisprudence regarding covenants running with the land," the New Jersey Supreme Court relegated the touch and concern requirement to the status of one factor among many to "consider in determining the reasonableness of the covenant."

n137 The new *Restatement* shares the opinion of the lack of necessity for a touch and concern requirement and urges that it be abolished because other doctrines like restraints on trade and competition, restraints on alienation, and unconscionability much more directly and satisfactorily assist the courts in policing servitudes. n138

(1) Definitions: When Does a Covenant "Touch and Concern" Land?

Courts and commentators find it very difficult to tell. "It has been found impossible to state any absolute tests to determine which covenants touch and concern land and which do not." n139 Courts have "consistently relied upon rather general statements in their analyses of the touch and concern requirement." n140 To touch and concern land, a covenant must "relate to the use of both the benefited and burdened land." n141 A covenant restricting use touches and concerns land if it increases the value of the unrestricted land and decreases the value of the restricted land by limiting its use. n142 In Mississippi, for example, a covenant concerning payment of royalties was found to personal rather than real because while it burdened land, it benefitted only an individual. n143 While some older cases have required that the covenant have a physical effect on land, other courts have eschewed that requirement. n144 It suffices that "the covenant have some economic impact on the parties' ownership rights by, for example, enhancing the value of the dominant estate and decreasing the value of the servient estate." n145 A covenant granting a laundry company possession of premises within a condominium complex for its washers and driers touched and concerned the land because it clearly benefited the company and, besides burdening the property, benefited the condominium owners and increased the value of the property. n146 In Colorado, to touch and concern land, a covenant must "closely relate to the land, its use, or its enjoyment." n147 In Maryland, for example, from the promisee's point of view, a covenant touches and concerns land when it tends necessarily to enhance its value "or render it more convenient or beneficial to the owners or occupants." n148 Conversely, from the covenantor's point of view, the covenant touches and concerns land if the land is rendered less valuable due to the burden placed upon it. n149 These two citations suggest one fairly common test to see if a covenant touches and concerns land: does it change the value or legal rights of land; does it benefit or burden it? "What is essential is that the burdens and benefits created must relate to the land and the ownership of an interest in it; the burdens and benefits created are not the personal duties or rights of the parties to a covenant that exist independently from the ownership of an interest in the land." n150 After holding that a family day-care home violated a covenant restricting commercial uses, the Michigan Supreme Court refused to hold that enforcing such a covenant violated public policy in the absence of definite indications in Michigan "constitutions, statutes or common law that supports" the view that enforcing such covenants is contrary to the state's public policy. n151 Similarly, the Idaho Supreme Court refused to find a covenant that would prohibit a group home for the elderly to be against public policy, despite statutes overruling similar *zoning* statutes. n152 Does the covenant "in purpose and effect substantially alter" legal rights "which otherwise would flow from ownership of land and which are connected with land"? n153 The touch and concern requirement is met "when the covenant affects the legal relations -- the advantages and the burdens -- of the parties to the covenant, as owners of particular parcels of land and not merely as members of the community in general, such as taxpayers or owners of other land." n154 It is essential that the covenant in some way affect the legal rights of the covenanting parties as landowners: "Where the burdens and benefits created by the covenant are of such a nature that they may exist independently from the parties' ownership interests in land, the covenant does not touch and concern the land and will not run with the land." n155

(2) Touch and Concern: the Burden Side.

Many jurisdictions will not enforce a covenant unless it touches and concerns both benefited land and burdened land. n156 The 1944 Restatement has the burden running *either* if the enforcement of the promise benefits the promisee in the physical use of the land *or* if the consummation of the transaction of which the promise is part similarly benefits the promisor. n157"It will be noted that 'benefit' and 'burden' tests are stated in the alternative; if either is met, the covenant

may be one running with the land." n158 The use must benefit the promisor or the promisee in the *physical* use of the respective land. n159 There are a few exceptions in which the burden may involve actions off the land that enhance the land of the promisee, and the promise will be enforced by the courts because the promisee's use of land is benefited. A prime example is the covenant not to compete; many jurisdictions will permit the benefit to run with the land, even though the burden be personal to the covenantor. n160 If no benefit can be demonstrated to the land of the promisee, however, courts will not enforce such a covenant; thus, in Illinois, the Appellate Court refused to enforce a covenant not to operate a currency exchange n161 within two blocks of the spot defendants previously operated such an exchange, because plaintiffs were themselves not in the currency exchange business, and the building where the previous exchange had been housed had been torn down and not yet replaced. n162

(3) Touch and Concern: the Benefit Side.

Many jurisdictions will require that the covenant affect legal relations to land not only on the burden side but also on the benefit side. They will, therefore, not enforce covenants "in gross." Thus, the Restatement has it that the "benefit of a promise can run with land only if it is a promise respecting the use of land of the beneficiary of the promise." n163 Thus, while courts will recognize that a covenant restricting the use of the promisor's land will touch and concern that land, the North Carolina Supreme Court noted that such a use restriction, however, does not always touch and concern the dominant estate. n164 That court held that, in the particular case, "the close proximity of the lands involved" and the "relatively secluded nature of the area" where the properties were located showed that restricting the promisor's use of lands would "affect plaintiff's ownership interests in the property owned by them, and therefore the covenants touch and concern their lands." n165 In Virginia, the degree of change necessary to defeat the "purpose of the restrictive covenant rendering it null and void" must practically " 'destroy the essential objects and purposes of the [covenant].' " n166 The Indiana Court of Appeals, enforcing a promise to "permanently maintain" a tile drain, notes that the successor to a "covenantee's property interest may enforce the covenant if it is logically connected to his property." n167 A covenant granting a laundry company the right to place washers and driers on the premises of a condominium development ran with the land because possession was necessary to its enjoyment of its leasehold estate, and the covenant both burdened and benefited the residents of the condominium complex. n168 A person who held no land in the county in which land had been granted to build a courthouse would have no standing in Arizona to enforce such a covenant because one "must retain an interest in land which the promise was intended to benefit at the time it was made." n169 In Hawaii, a grantor was held not to have established a "restrictive covenant enforceable at law" because there was no reference to a dominant estate or parcel, nor did the grantor retain any interest in the plot expected to benefit from the restriction at the time the restriction was created. n170 The Mississippi Supreme Court held a covenant to be personal rather than real because, though it burdened land, it did not benefit land but an individual and therefore failed the "touch and concern" test. n171 In effect, courts taking that point of view require, to borrow language from the world of easements, that the covenant be "appurtenant" to land before they will enforce it. Some courts do recognize real covenants in gross, even if reluctantly. The Hawaii Supreme Court, for example, notes that covenants in gross are disfavored in the law because of deleterious effects on the market value of land due to the difficulty of finding the owner of such a covenant; because they make possible a larger number of people who could control property from afar; because they allow outsiders owning no land in the community to impose their views on it; and because appurtenant covenants promote flexible consensual land use arrangements. n172 That court, therefore, will find a covenant in gross only when the intention to create one is unambiguously present in the creating documents. n173 One commentator points out that while in the ordinary case there is both a dominant and a servient piece of land involved in a real covenant, the question of whether the benefit runs and the burden runs should be considered separately, thereby making it possible for one holding the benefit in gross to enforce it against the promisor's successors. n174"Although there is some authority in American law that a blanket prohibition on covenants in gross exists, the cases show that covenant benefits in gross are recognized and enforced in a variety of contexts." n175 Courts have permitted developers to enforce covenants after selling all their

land, if the developers intended that they have the power to do so. The new *Restatement* would have it that neither the benefit nor the burden of a servitude "is required to touch or concern land in order for the covenant to be valid as a servitude." n176

(4) Affirmative Covenants.

(i) In General.

While English law will not enforce affirmative covenants n177 requiring action on the part of the owner of a piece of property, partly on the ground that such covenants do not burden or change the value of the property but place a personal burden on the owner of the property, most American courts will enforce such covenants. The "majority American view ... makes no distinction between affirmative and restrictive covenants for the purpose of determining whether a covenant runs with the land." n178 The general rule regarding "affirmative burdens imposed by covenants is that they run with the land where the necessary requirements are satisfied." n179 Thus, the Court of Appeals of Maryland held that a covenant requiring lessee to restore property to its former condition was a covenant that ran with the land, for which compensation was due when the property was condemned. n180 The Alabama Supreme Court enforced as a covenant running with land a vendor's lien requiring a city, the purchaser of property, to reserve 50 acres for 40 years for a golf course and to construct the golf course; if the provision was "reserved for the benefit of adjacent land retained, and not merely for personal advantage, covenants are said to touch and concern (the land)." n181

(ii) Covenants to Pay Money.

Courts historically have shown a special reluctance to enforce covenants for the payment of money, with the justification that the duty to pay money did not touch and concern land itself. Courts in latter days have been more willing to recognize and enforce covenants to pay money. Though a "covenant for the payment of money may at first blush appear to be a personal covenant," it may touch and concern land "if its purpose is to benefit the covenantor's interest in the land." n182 Covenants to pay money might, for example, include money as dues to homeowners' associations or contributions to the upkeep of common areas. "The covenant to pay maintenance assessments for the purpose of repairing and improving the common areas and recreational facilities of [a subdivision] touches and concerns the land." n183 Noting that as a matter of law, covenants for payment of annual assessments for property owners' associations run with the land, the Mississippi Supreme Court held that "the underlying right of having the capacity to form a [mandatory] homeowners association is one that will run with the land." n184"Nearly every jurisdiction that has reviewed the question of assessments for condominium recreational facilities has held them to be binding covenants running with the land." n185 Despite the force of that 1983 statement, the question continues to reappear. In one 1996 example, the Georgia Supreme Court reversed a lower court decision that a covenant to pay assessments to a homeowners association did not pertain to land use: the purpose "is to maintain the common property in the subdivision for the use and enjoyment of all owners." n186 Where only the owners of land in a subdivision had the right to use the common facilities, as contrasted to the public using them at sufferance, and the availability of the facilities increased the value of the property within the assessment area, the covenant to pay an upkeep assessment touched and concerned land. n187 In Ohio, the obligation to return tenants' security deposits, by contrast, is personal to the landlord and does not run with land because it is not "so connected with, attached to and inherent in land that the assignee of the reversion would have the right to take advantage of it or be obligated to perform it." n188 A court in Oregon recognized that,

generally, covenants to pay costs for common property have been held to satisfy the touch and concern requirement, but refused to recognize an initiation fee as touching and concerning land when the property owner was not an automatic member of the golf club that was the Association's only land, and the owner's contribution would, therefore, have "no necessary connection" either to the purchaser's own property or the right to use any common property. n189 In contrast, where membership in the golf course was mandatory, the Nebraska Supreme Court held that the existence of a special class of public nonresidential members did not negate the fact that the required dues benefited the dues payers' property and so sufficiently touched and concerned land to be enforced as a real covenant running with the land. n190

(5) Negative Covenants.

A negative, or restrictive, covenant binds the promisor to refrain from a given activity on the promisor's own land. Restrictive or negative covenants are the most common encountered in the United States and the only ones that will be enforced in England, and then only in equity unless the promisee and promisor are in a landlord-tenant relationship. "Generally, the purpose behind a restrictive covenant is to maintain or enhance the value of land, often times by controlling the nature and use of surrounding lands." n191 Restrictions on land based on covenants are enforceable at both law and equity in the United States. Some states will note a historical disfavor for enforcing restrictive covenants, "based on the view that the best interests of society are advanced by the free and unrestricted use of land." n192 The result of that disfavor is that restrictive covenants will be interpreted strictly and the proponent must demonstrate that the covenant applies to the property "either by its express language or by a plain and unmistakable implication." n193 Despite their doctrinal dislike for restrictive covenants, courts will still enforce their clear and unambiguous language even in the face of arguments that the words themselves are unreasonable. Thus, the Montana Supreme Court reversed a lower court decision that a ban on tv satellite dishes in a subdivision's restrictive covenants did not apply to modern 18-inch dishes that were no more obtrusive than were the antennas permitted under the covenants. n194 Examples of negative restrictive covenants include those prohibiting the placing of house trailers on the land, n195 restricting the use of property to the raising of minks, n196 and imposing setback lines for building. n197

(6) Power to Enforce and Obligation to Obey a Real Covenant.

There is a good deal of rhetoric in the cases that courts enforce covenants only reluctantly because of their negative effects upon the alienability of property; because of those effects, covenants are strictly construed against those who would enforce them. n198 Despite that rhetoric, covenants are enforced routinely either in law or equity so long as they meet certain requirements as to who may enforce them and as to which type of enforcement, legal or equitable, is appropriate.

(e) Vertical Privity: Who May Enforce or Benefit from the Real Covenant?

Even after posing the question of the relationship required between the original promisors necessary to support enforcement by and on successor parties answered by the horizontal privity requirement, there remains the question if any special relationship is required between the promisor and the promisor's successor in interest and between the promisee and the promisee's successor in interest before courts will enforce a real covenant. The answer comes in the development of the concept of vertical privity. Vertical privity "requires a showing of succession in interest between the

original covenanting parties and the current owners of the dominant and servient estates." n199 One definition is that vertical privity is established "where the party seeking to enforce the covenant and the party against whom it is to be enforced are successors in title to the property of the covenantee and covenantor respectively." n200 In New York, to enforce a real covenant, one must show that one's property "derives from the original grantor who imposed the covenant and whose property was benefited thereby, and concomitantly, that the party to be burdened derives his property from the original grantee who took the property subject to the restrictive covenant"; one seeking to enforce such a covenant demonstrates this privity by showing title that comes through a "continuous lawful succession from the original grantor." n201 Now, the party seeking enforcement must show only that "he held property descendant from the promisee which benefited from the covenant and that the owner of the servient parcel acquired it with notice of the covenant." n202 Vertical privity is a very loose and somewhat inconsistent term with a meaning for the relationship between the promisor and the promisor's successor that in some jurisdictions is different than that required for the promisee and the promisee's successor. This looseness and inconsistency has made the new *Restatement's* rejection of the doctrine and replacement of it by rules differing according to the nature of the covenant a welcome change. n203

COMPUTER-ASSISTED RESEARCH

LEXIS: real covenant* w/50 (vertical w/2 privity) or (privity w/2 estate)

(1) Vertical Privity Between the Promisor and Successors: Is the Successor Bound?

For the successor of the promisor to be bound, the successor traditionally must legitimately succeed to the entire estate of the promisor; if the successor has some lesser estate, the promisor is the one bound to see that the promise is carried out. The Restatement of Property has it that successors in title to the promisor are not bound unless they hold "(a) the estate or interest held by the promisor at the time the promise was made, or (b) an estate or interest corresponding in duration to the estate or interest held by the promisor at that time." n204 This meaning of vertical privity suggests that it is more accurate to refer to the burden of the covenant running with the *estate* in land rather than with the land itself. To be burdened, one must succeed to the promisor's estate or at least to an estate or interest of equal duration. The new *Restatement* abolishes the concept of vertical privity and replaces it with a series of specific rules that can be changed by agreement. In sum, the burden of a covenant runs to successors except that it does not run to someone of superior title to the promisor and the burden of an affirmative covenant does not run to one holding an estate of lesser duration except for lessees and life tenants whose situations are covered by separate rules. n205

(2) Vertical Privity Between the Promisee and Successors: May the Successor Enforce?

The relationship required between the *promisee* and the promisee's successors, however, in some jurisdictions is much looser, and some would think hardly qualifies as a privity requirement at all. Vertical privity in this situation means "little more than a succession to some interest in the benefited parcel." n206 Thus, for example, where a subdivision is platted with restrictions, "any one of the plat owners may seek judicial assistance to compel compliance by another lot owner with the restrictive covenants." n207 The Restatement has it that the meaning of the requirement that, to be beneficiary of a real covenant, one must succeed to the estate held by the original promisee has been broadened so that the benefit of a real covenant can "run with the land only to one who succeeds to some interest of the beneficiary in the land respecting the use of which the promise was made"; not included, therefore, are those who claim the land by paramount title or hold adversely to the successors in interest. n208 The Restatement defines "some interest" to mean that the benefit "will run with any part of the interest of the beneficiary of the promise if the part succeeded to is of such a character that performance of the promise will be of benefit to the owner of it." n209 To enforce a real covenant, the holder "need show only ... that the owner of the servient parcel acquired it with notice of the covenant." n210 The new *Restatement* explicitly abolishes the requirement of vertical privity before a successor can benefit from a covenant and replaces it with a default rule that benefits appurtenant to land run to all subsequent owners and possessors of the benefited property. n211 The benefit of affirmative covenants may not run, however, to those who hold estates of lesser duration than the original parties to the covenant nor to those holding adversely to the original owner of property

benefited by the promise. n212

(i) Homeowners Associations.

A special problem arises with subdivisions and the duty to pay assessments for their upkeep. As the section on Covenants to Pay Money n213 suggests, courts these days have very little difficulty considering the duty to pay for amenities and for the enforcement of covenants to be a duty that runs with the land because it seems so clearly to touch and concern land; the assessment burdens each lot and what it purchases increases their value. The problems arises when one asks who has the right to enforce that covenant. The original developer who may have no continuing interest in the development? Must some individual member of the community personally take the initiative and bear the cost of enforcement? In early days there was some problem with considering homeowners associations to have the right of enforcement of that and other obligations. If the covenant to pay is a real covenant and privity remains important, where does the association gain its privity? The problem generally went away for some jurisdictions when their courts held that associations, even when they owned no land of their own, either succeeded to the rights of the developer who established the covenant or were agents of the current lot owners within their developments. n214 The Mississippi Supreme Court reasoned back from the accepted idea that the right to collect assessments for the upkeep of the amenities was a covenant that ran with the land to the idea that the right to create a mandatory association to do so, even when the original developer did not, also was a covenant that ran with the land. n215 These association-friendly solutions to the problem are by no means unanimous, however. By contrast, the Florida Supreme Court refused to adopt a rule of associational standing n216 to permit suit by a homeowners association that was not itself a property owner or the explicit assignee of the developer's rights, though the individual owners clearly had standing. n217

(f) Notice Requirement.

One traditional difference between real covenants and equitable servitudes is that one could be bound by a valid real covenant even if one had no notice of its existence, while the enforceability of an equitable servitude depended entirely on notice to the party to be bound. American jurisdictions generally have imported the notice requirement also to real covenants, though cases can be found to the contrary. Thus, the Missouri Court of Appeals states: "A real covenant 'runs with the land' and is binding on all successors in interest, regardless of whether they had any actual or constructive notice of such covenant when they acquired title." n218 Ordinarily, however, one cannot be bound to a real covenant attached to land one obtains unless one has actual or constructive notice of its existence. The Texas Supreme Court, for example, states that a covenant runs with the land when, the other requirements having been met, "the successor to the burden has notice." n219

COMPUTER-ASSISTED RESEARCH

LEXIS: (real covenant* w/10 (notice or record!)) Or (real covenant w/50 (actual notice or constructive notice))

(1) Actual Notice.

If one has actual notice of the existence of an otherwise valid real covenant at the time of acquiring a piece of property, one will, of course, be bound by it, except possibly in those jurisdictions that make recording a prerequisite for validity. n220 In one case, constructive notice existed because of the original recorded subdivision declaration, and signature of the parties or their predecessors in title to an amendment constituted "actual notice of the restrictions and liability for assessments." n221

(2) The Recording Acts.

States treat the effects of the recording acts differently. Generally, a failure to record does not affect validity of a real covenant between the original parties. In a few jurisdictions, including some using land registration systems (Torrens Act), a real covenant may not be valid even between the original parties unless properly recorded. Thus, in North

Carolina, an assignment of pier rights did not bind a subsequent purchaser because of failure to record, even if the purchaser had actual notice. n222 In Kentucky, a restrictive covenant "will be enforced only when the instrument is placed in a recorded instrument, actual notice of a purported restriction notwithstanding." n223 The effect of a failure to record in most jurisdictions is that future purchasers of the land subject to the covenant will not be bound unless they possessed actual notice. n224 If the real covenant has been recorded at the time a piece of property is acquired, the purchaser will be deemed to have notice whether or not the purchaser actually did. In North Carolina, for example, a purchaser is "conclusively presumed" to know the contents of any documents within the chain of title "and is put on notice of any fact or circumstance affecting his title which is disclosed by such instruments." n225 When covenants are on file in the county's deed records, "subsequent purchasers would have constructive notice of the restrictions and be bound by them." n226

(3) Constructive Notice.

Notice can be ascribed to a purchaser of a property burdened by an expressly created real covenant if there is evidence on the property that a court finds should have put the ordinarily prudent purchaser on notice of its existence. If one has "sufficient information to stimulate inquiry which would lead to knowledge of adverse or hostile and superior claim or title, and fails therein, the injury is the result of his own folly," and a court of equity will offer no protection. n227 In that case, not only were the purchasers charged with constructive notice because they had been told of the restrictions not mentioned in their deed, they were "charged with constructive notice of that which appears on the face of the conveyances in their chain of title." n228

(n30)Footnote 83. *Prairie Hills Water & Dev. Co. v. Gross, 653 N.W.2d 745, 751-752 (S.D. 2002)* (preamble referred to subdivision for purpose of residential building and development).

(n31)Footnote 84. *Foods First, Inc. v. Gables Assocs., 418 S.E.2d at 890 (Va. 1992)* (erecting building does not include "interior remodeling of an existing structure"; parties could have specified otherwise).

(n32)Footnote 85. *Hill v. Community of Damien of Molokai, 911 P.2d 861, 867-870 (N.M. 1996).*

(n33)Footnote 86. *Ray v. Miller, 916 S.W.2d 117, 118, 119 (Ark. 1996).*

(n34)Footnote 87. *Terrien v. Zwit, 648 N.W.2d 602, 606 (Mich. 2002)* (refraining to reach whether covenant forbidding non-residential use would have been breached).

(n35)Footnote 88. *Lake Arrowhead, Inc. v. Jolliffe, 639 N.W.2d 905, 912-913 (Neb. 2002).*

(n36)Footnote 89. *Taylor v. Lindsey, 498 S.E.2d 862, 864 (S.C. 1998)* (also refusing for same reason to recalculate $10,000 limit into today's dollars: if grantor wanted to index for inflation, he could have done so).

(n37)Footnote 90. *Hiner v. Hoffman, 977 P.2d 878, 881-882 (Haw. 1999)* (drafters chose "ambiguous and ineffectual language" to restrict homes' height); *Fong v. Hashimoto, 994 P.2d 500, 505 (Haw. 2000)* ("one-story in height" restriction held ambiguous, following *Hiner*).

(n38)Footnote 91. *Parry v. Hewitt, 847 P.2d 483, 484-486 (Wash. App. 1992).*

(n39)Footnote 92. *Mains Farm Homeowners Ass'n v. Worthington, 854 P.2d 1072, 1074, 1075 (Wash. 1993)* (giving language ordinary and common use and not reading so as to defeat plain and obvious meaning).

(n40)Footnote 93. *Carpenter v. Davis, 688 So. 2d 256, 258 (Ala. 1997).*

(n41)Footnote 94. *O'Connor v. Resort Custom Builders, Inc., 591 N.W.2d 216, 219-220 (Mich. 1999)* (holding timeshares to be barred by "residential use" covenants though short-term rentals are not). The Hawaii Supreme Court similarly resolves all doubts in favor of free and unrestricted use of property. *Hiner v. Hoffman, 977 P.2d 878, 885-886 (Haw. 1999),* as does the *Colorado Supreme Court. Buick v. Highland Meadows Estates at Castle Peak Ranch, Inc., 21 P.3d 860, 863 (Colo. 2001)* (yet holding that single-family covenant precludes road construction). The Arkansas Supreme Court also maintains the presumption in favor of untrammeled use, *Forrest Constr, Inc., v. Milam, 43 S.W.3d 140, 145 (Ark. 2001)* (all doubts to be resolved in favor of free use of land, save by plain meaning to the contrary of language employed in covenant), as does the *South Carolina Supreme Court. South Carolina Dep't of Natural Res. v. Town of McClellanville, 550 S.E.2d 299, 302 (S.C. 2001).*

(n42)Footnote 95. *Pinehaven Planning Bd. v. Brooks, 70 P.3d 664, 667 (Idaho 2003)* (covenants forbidding commercial buildings or commercial ventures do not cover rental of residential property).

(n43)Footnote 96. *Riss v. Angel, 934 P.2d 669, 677 (Wash. 1997). See also* Riss v. Angel: Washington Remodels the Framework for Interpreting Restrictive Covenants, *73 Wash. L. Rev. 433 (1998).*

(n44)Footnote 97. *Id.* at 676 (*citing Highbaugh Enter. Inc., v. Deatrick & James Const. Co., 554 S.W.2d 878 (Ky. 1977)* and *Joslin v. Pine River Dev. Corp., 367 A.2d 599 (N.H. 1976).*

(n45)Footnote 98. *Toavs v. Sayre, 934 P.2d 165, 167 (Mont. 1997).*

(n46)Footnote 99. Restatement (Third) of Property (Servitudes) § 4.1 & ct. 500, Reporters Note at 513 (2000).

(n47)Footnote 100. *Yogman v. Parrott, 937 P.2d 1019, 1023 (Ore. 1997)* (traditional maxim serves to avoid imposing restrictions that cannot reasonably be known, to allow full use of property, to reduce litigation by promoting certainty, and to promote uniform interpretation of covenants).

(n48)Footnote 101. *Levitt Homes, Inc. v. Old Farm Homeowners' Ass'n, 444 N.E.2d 194, 200 (Ill. App. 1982)* (developer's retention of right held valid, citing cases that similarly hold).

(n49)Footnote 102. *Pilarcik v. Emmons, 966 S.W.2d 474, 478-479 (Tex. 1998).*

(n50)Footnote 103. *Brier Lake, Inc. v. Jones, 710 So. 2d 1054, 1059.*1060 (La. 1998). Though Louisiana is the only civil-law (as opposed to common-law) state in the Union, its law on this particular subject seems comparable to that of the common-law states. *See also Hudson v. Morrison Heights Baptist Church, 782 So. 2d 726, 728 (Miss. 2001)* (covenants by their terms bind for initial 25 years and renew every ten years unless instrument of change signed by majority of lot owners has been recorded).

(n51)Footnote 104. *Nordstrom v. Guindon, 17 P.3d 287, 290-291 (Idaho 2000).*

(n52)Footnote 105. *E.g., Perry v. Bridgetown Community Ass'n, 486 So. 2d 1230, 1234 (Miss. 1986)* (upholding assessment for reasonable maintenance).

(n53)Footnote 106. *Moore v. Megginson, 416 So. 2d 993 (Ala. 1982).*

(n54)Footnote 107. *Appel v. Presley Cos., 806 P.2d 1054, 1056 (N.M. 1991)* (reversing defendants' summary judgment and remanding to see if exceptions power reasonably exercised).

(n55)Footnote 108. *See infra* § 61.07.

(n56)Footnote 109. *E.g., Perry v. Bridgetown Com. Ass'n, 486 So. 2d 1230, 1231 (Miss. 1986)* (covenants for 30 years followed automatically by 10-year terms absent actions by owners); *Scholten v. Blackhawk Partners, 909 P.2d 393 (Ariz. Ct. App. 1995)* (when the duration of the restrictive covenant is not found in the terms of the covenant itself, courts will often construe the duration to continue for a "reasonable time").

(n57)Footnote 110. *Barber v. Watson, 953 S.W.2d 579, 582 (Ark. 1997)* (25-year covenants automatically renewed in 1993; 1995 revisions thus unavailing).

(n58)Footnote 111. *Ray v. Miller, 916 S.W.2d 117, 119 (Ark. 1996)* (emphasis added). The point seems to be that while other evidence, such as a general plan of development, might serve to place one on notice of the existence of a written restriction, it cannot take the place of the writing.

(n59)Footnote 112. Restatement of Property § 532 (1944).

(n60)Footnote 113. Restatement of Property § 532 cmt. b, Statutory Note, at 3201 (1944).

(n61)Footnote 114. Restatement (Third) of Property (Servitudes) § 2.7 (2000). The Reporter notes, *id.*, cmt. b at 116: "The seal has become functionally obsolete and is no longer required as a matter of common law."

(n62)Footnote 115. For a list of those thirteen states and the District of Columbia *see* Restatement (Third) of Property (Servitudes) § 2.7, Statutory Note at 89-90 (Tentative Draft No. 1, 1989).

(n63)Footnote 116. *Scaringe v. J.C.C. Enters., Inc., 253 Cal. Rptr. 344, 348 (App. 1988)* (*citing* Cal. Civ. Code § 1468). The section also requires that the covenant touch and concern land and that the document containing it be recorded. *Id*.

(n64)Footnote 117. *Citizens for Covenant Compliance v. Anderson, 906 P.2d 1314, 1325-1329 (Cal. 1995), reh'g denied*, (Cal. Mar. 28, 1996).

(n65)Footnote 118. *Urquhart v. Teller, 958 P.2d 714, 720 (Mont. 1998)* (this despite statement in the contract of sale that the covenants were to run with the land. *Id.* at 716). *Accord, Knock v. Kirschoff, 2002 Iowa App. Lexis 1347,* *3-7 (Iowa App. Dec. 30, 2002).

CHAPTER 61 REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

7-61 Thompson on Real Property, Thomas Editions § 61.05

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 61.05 Type of Redress Available: Injunction or Damages.

A real covenant is enforceable either at law or in equity "by the owner of the dominant estate against the owner of the servient estate." n229 While a personal covenant creates a personal obligation or right enforceable at law only between the original covenanting parties, "a real covenant creates a servitude upon the land subject to the covenant ('the servient estate') for the benefit of another parcel of land ('the dominant estate')." n230 It has been traditional to state that a real covenant could be enforced at law only, while an equitable servitude could be enforced at equity only. The current state of the law in the United States generally is that both legal and equitable remedies are available for the violation of a real covenant. n231 The difference from the redress available for violation of an equitable servitude might be stated that money damages are the primary redress for violation of a real covenant, with equitable relief only available where money damages are insufficient. n232 As will appear below, however, courts routinely find money damages to be insufficient. Other more indirect forms of redress may also flow out of the existence of a covenant; thus, in North Carolina, a homeowner was able to rescind the purchase of a home on land subject to a covenant restricting it to residential use when it was discovered that the property could not support a septic system and was thus impossible to use as restricted. n233 In another example, this one from Missouri, a lessor was found liable for over a million dollars in damages for violating the covenant of quiet enjoyment in a grocery store lease; the lessor did so by violating a covenant restricting it from leasing any other of its property within a mile for use as a grocery store. n234

(a) Injunction Where Damages Insufficient.

Because the real covenant is at its foundation a contract device, in theory it should be as difficult to award injunctive relief as it is to obtain specific performance in standard contracts. Language exists stating that specific performance is available only when damages are inadequate. Injunction in North Carolina is "a proper equitable remedy to enforce a restrictive covenant when the plaintiffs show that their remedy at law is inadequate and that they will suffer irreparable damage if the violation is allowed to continue." n235 The nature of the obligations contained in real covenants, however, means that equitable relief will often, perhaps almost routinely, be necessary. In Alabama, mere breach of the covenant "is a sufficient basis for interference by an injunction." n236 In Texas, a restrictive covenant may routinely be enforced by injunction without necessity to show any particular amount of damages or that the injury will be irreparable; a remedy at law is inadequate if damages "cannot be determined with some precision." n237"Where clear violations of restrictive covenants are involved, however, the irreparable harm requirement is considerably relaxed";

though a remedy as severe as removal of a building requires further consideration whether the order will result in economic waste. n238 Blocking a view in violation of a covenant is the type of injury for which monetary damages are very difficult to determine and an injunction is an appropriate remedy; if modifying the offending addition did not restore the view, it would have to be removed in its entirety. n239 So routinely are money damages found inadequate, that they are sometimes discussed more as supplements when *injunctive relief* proves inadequate. In Alabama, for example, where specific performance of a covenant running with the land has been granted, damages also may be available, but only if specific performance would not be a complete remedy. n240 Damages can also be awarded to the *defendant* where a temporary restraining order to prevent violation of a covenant turns out to have been improperly sought, though jurisdictions disagree on the type of damages to which one might be liable. n241 Perhaps it would be fair to say that if one seeks only an equitable remedy one is trying to enforce the agreement not as a covenant but as an equitable servitude. n242

(b) Equitable Remedies Require Balancing of Hardships.

Courts often state that they require courts to balance the hardships between promisor and promisee parties before awarding equitable relief. "In determining whether to grant an injunction, the court must consider the relative convenience-inconvenience and the comparative injuries to the parties." n243 While some courts will refuse to balance the equities in cases where the defendant has deliberately, rather than inadvertently, violated the covenant, the South Dakota Supreme Court held that an injunction requiring removal of a $100,000 cabin deliberately placed in violation of a covenant was "simply too harsh considering the intangibility of the harm," and thus was an abuse of discretion. n244 The Arkansas Supreme Court, by contrast, held that it was improper to examine the surrounding circumstances when a landowner had built a deck in contravention of a clear and unambiguous covenant and remanded for enforcement of the covenant by "removal of the encroachment." n245 While Hawaii law will not apply the relative hardship test where a property owner "deliberately and intentionally" violates a restriction, the test will be applied where a subsequent purchaser "who took no action regarding the initial violation is asked to bear the burden of a mandatory injunction to remove the violation." n246

CHAPTER 61 REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

7-61 Thompson on Real Property, Thomas Editions § 61.06

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 61.06 Transferability of Real Covenants.

The transferability of real covenants raises different questions depending upon whether one is discussing the burden or the benefit. Clearly when the covenant is one attached to land, the burden will be transferred when the burdened land is transferred and the benefit will transfer when the benefited land is transferred.

(a) On Transfer, the Burden Automatically Runs at Law with the Estate and in Equity with Possession.

(1) In General.

Where the burden of a covenant involves land, as do most, when the land is transferred, whether by conveyance or devise, by gift or for consideration, the burden runs with the estate transferred. It need not be specifically mentioned in the documents of transfer; if it is mentioned anywhere in the chain of title in a way to give effective notice, the burden will run. This is a difference from the old law under which the burden would run whether or not there were notice. n247 The covenant will be enforceable at law against whoever succeeds to the *full estate* of the original promisor. When equitable or injunctive relief is sought, it may be had against whoever is the possessor of the land whether or not that person has the full estate of the original covenantor. Thus, the degree of identity with the original covenantor's estate will determine whether both legal and equitable relief is available for violation of the covenant or only equitable relief. In other words, if the appropriate identity with the estate on the part of the promisor's successor is missing, one may be limited to that equitable relief available against land burdened by an equitable servitude. n248 The new *Restatement*, by contrast, lessens the importance of what estate is held by the person in deciding whether a benefit or burden passes to a successor party, and in so doing rejects the doctrine of vertical privity. n249 Its default rule is that, with specified exceptions, "an appurtenant benefit and burden runs to all subsequent owners and possessors of the benefited and burdened property, including a lessee, life tenant, adverse possessor, and person who acquires title by a lien-foreclosure proceeding." n250 The distinctions are that the burden of a servitude does not run to a person with title superior to the one who created it; that, except for lessees and life tenants, benefits and burdens of affirmative covenants do not run to persons with estates of lesser duration; and that, with some exceptions, the benefits of affirmative covenants do not run to persons holding property adversely to the owner of the property. n251 The particular distinctions in the new *Restatement* concerning when the burdens and benefits of affirmative covenants run track to some degree what would be the outcome under the old rules, especially in a jurisdiction where the category of covenant applies only to affirmative covenants and equitable enforcement is available only to negative covenants enforced as equitable

servitudes. They operate more rationally, however, by distinguishing according to the content of the covenant rather than to its form.

(2) Continuing Obligation of the Original Promisor upon Transfer.

When a piece of land burdened by a real covenant is transferred, the original promisor is not necessarily relieved of the burden of the promise. Whether the promisor will be relieved of that burden "depends upon the intention manifested in the making of the promise," n252 an intention that may be explicitly stated or inferred from the nature of the act promised. n253 The original promisor is not necessarily relieved of the obligation upon transfer of the land burdened because the real covenant is a creature of contract, and under the law of contracts, one may not necessarily transfer one's burden to another without the permission of the promisee. The new *Restatement* states the rule that, absent intention to the contrary and subject to some exceptions, if the burden is appurtenant to land, it will run with the land to the next possessor. n254 Whether the burden will run depends significantly on whether fulfillment of the promise requires the cooperation of the possessor of the land. n255

(b) The Benefit Runs with the Possession of the Benefited Land.

Where a parcel of land is benefited by a covenant, the benefit runs to whoever is in possession of the land whether or not that person is in possession of the full estate that belonged to the original promisee. Common sense commends imposing a lesser requirement of ownership to have the right to enforce a covenant than to be bound by it. Since a real covenant benefits a piece of land, it follows that whoever is rightfully in possession of the land ought to be able to enforce the covenant for the benefit of the land. The new *Restatement* maintains, except as otherwise intended by the creators, "an appurtenant benefit or burden runs to subsequent owners and possessors of the benefited and burdened property ... ." n256

FOOTNOTES:

CHAPTER 61 REAL COVENANTS: PROMISES CONCERNING THE USE OF LAND

7-61 Thompson on Real Property, Thomas Editions § 61.07

AUTHOR: Professor John H. Pearson Notre Dame Law School University of Notre Dame

§ 61.07 Termination of the Covenant or of the Right to Enforce It.

As may an easement, a real covenant may be perpetual, though there are probably more mechanisms by which a real covenant may be terminated than with easements. n257 Absent any limitation in the agreement or countervailing policies, as described below, covenants "may exist for so long as the estate to which they are annexed endures." n258 Because a currently effective real covenant involves a right already vested in the holder, it is not subject to the Rule against Perpetuities. n259 A real covenant may be terminated by terms of the agreement creating it, by action of those party to it or their successors, by action of third parties or by action of law. It may be terminated completely, or a particular party may simply lose the right to enforce it because of defenses available to a violator of the covenant. Sometimes the right to specific enforcement of the covenant may be lost, but a right to collect damages still remain. The cases concerning equitable enforcement of a covenant do not always clarify whether the covenant in question is a genuine real covenant or simply an equitable servitude. When equitable enforcement is sought, some jurisdictions appear to treat the agreement in question as an equitable servitude, and when legal enforcement is sought they treat it as a real covenant. In those jurisdictions, one would ask the additional questions necessary to establish any additional factors when one needed enforcement at law, that is to collect damages. Traditionally, however, real covenants were only enforced at law, and equitable servitudes only in equity. n260 As seen above, that distinction in large part no longer holds, and equitable enforcement is available for real covenants. This chapter will, therefore, necessarily deal with forms of termination or refusal to enforce that in some jurisdictions would apply only to equitable servitudes.

(a) By Terms of the Agreement.

A real covenant may by its terms specify a particular date or period of time n261 or a particular occurrence at which the covenant will expire. The obligation "terminates in accordance with the intentions manifested in the making of the promise." n262 Presuming the date or the occurrence is clearly specified, the covenant will automatically expire, without any action by the parties, unless the agreement requires some action. When the covenant terminates by the terms of the agreement, it will completely cease to exist, and after that event no right to enforcement either specifically or in damages will remain. n263 The agreement may also specify recurring times at which the covenant may be either cancelled or amended. Thus, one covenant stated that it would be binding until a date certain and then "be automatically extended for successive periods of ten years unless by a vote of the majority of the then owners of the building sites covered by these covenants it is agreed to change said covenants in whole or in part." n264

COMPUTER-ASSISTED RESEARCH

LEXIS: (terminat! or expir! or extin! or cancel! or aboli!) w/5 covenant w/10 (agreement or date)

(b) By Action of Those Party to It.

Courts have recognized a series of doctrines by which those party to a covenant may cause its extinguishment. In some cases the extinguishment is total; in others, only equitable enforcement is prohibited while the possibility of receiving damages for the violation remains.

(1) Unified Ownership or Merger.

If the piece of property benefited and the piece of property burdened by the same covenant come completely under the same ownership, the covenant will be extinguished. n265 Any rights that would have belonged to the covenant's beneficiary because of the covenant will instead belong to the holder because of ownership of both pieces of property. Because a promise presumes the existence of two parties, one a promisor and the other a promisee, if by one party coming into possession of interests in both the benefited and burdened land, "both the benefit and the burden of a promissory obligation come into the hands of one person, the obligations ceases to exist." n266 Transfer of the previously benefited or burdened parcel into new hands does not automatically revive the covenant or servitude; it must be created anew. n267

(2) By the Promisee.

(i) By Release or Rescission.

Those benefiting from a covenant may enter into an agreement (rescission) or act unilaterally (release) in terminating fully or partially the covenant. n268 Formalities required to release or rescind a covenant are similar to those required to create it; it must be in writing sufficient to satisfy the Statute of Frauds and any particular formalities required in the jurisdiction. n269 Before a covenant will be extinguished by release, the release must be entered into by all who are promisees. A release by one beneficiary will be effective as to that beneficiary but leave the rights of others undisturbed. n270 Though a developer or successor party may specifically retain the right to release covenants and restrictions placed on particular lots, some jurisdictions will honor those releases only when they are consistent with any existing scheme of development meant to benefit and relied upon by other purchasers of land within the development. n271 One whose lease over property may expire before the scheduled expiration of a covenant over it does not have the power to release or modify the covenant in a way that will bind the interests surviving after the end of the lease. n272 If the parties instead enter into an agreement to extinguish the covenant, whether it need be in writing or not depends on the nature of contract and whether the Statute of Frauds requires it. n273

LEXIS: (terminat! or expir! or extin! or cancel! or aboli!) w/5 covenant w/25 (releas! or resci!)

(ii) Termination Inferred from Actions by Promisees Inconsistent with the Continuation of Covenants.

A whole series of very closely related doctrines completely terminates or at least prevents the equitable enforcement of

covenants because of behavior by the promisee that is inconsistent with their continued efficacy. The doctrines do not demand explicit renunciation of the covenants in question but infer renunciation from some action by the promisee.

(iii) Abandonment.

The promisee may abandon the benefits of the promise by actions sufficiently contradictory to it. Abandonment may be explicit, *e.g.*, through a written statement abandoning claim to benefit of the promise. Abandonment may also be implied by a court, usually by clear and convincing evidence, from actions that the court reads to show a definite, specific intent to abandon the covenant. A court may refuse to enforce a covenant that has "been habitually and substantially violated so as to create a impression that it has been abandoned ... ." n274 The Utah Supreme Court puts it that "case law is uniform that before an abandonment of a covenant may be found there must be 'substantial and general noncompliance' with the covenant." n275 Where the promise is deemed abandoned, it may not be enforced either in law or in equity.

COMPUTER-ASSISTED RESEARCH

LEXIS: (terminat! or expir! or extin! or cancel! or aboli!) w/5 covenant w/50 abandon!

(iv) Acquiescence.

Very similar to abandonment is the doctrine of acquiescence. Where the distinction is made, abandonment prevents enforcement in either law or equity, while acquiescence will prevent enforcement at equity while preserving the possibility of enforcement at law. n276 Acquiescence presumes a level of violation not so great as to call the covenant abandoned, and will be read to apply only to activities similar to the previous violations. That covenant beneficiaries have acquiesced in one type of violation does not necessarily mean that they will be found to have acquiesced in violations of a different type. "Restrictive covenants will not be enforced when property owners have acquiesced in prior violations of the covenants"; acquiescence in minor violations, however, may not prohibit subsequent enforcement. n277 The court may find that the promisee may no longer enforce the promise in equity as to other instances of the particular violation involved, but retains the right of enforcement against other violations. n278 A Florida court, for example, permitted enforcement of a covenant requiring use of property for single-family residences against a developer's plan to put in a road carrying 1,500 cars a day, though property owners had acquiesced in occasional, limited use of the property for access to feed cattle. n279 The promisee may still, however, be able to collect damages for violations of like kind, though the right to equitable enforcement is lost. A primary factor in determining whether to apply the doctrine of acquiescence is "the effect of the prior violations upon the ability of the proponent of the restriction to enjoy the benefits of the covenant compared to the potential abridgement of the proponent's enjoyment of the covenant's benefit caused by the violation sought to be enjoined." n280 One statement of the factors to be used in determining whether the doctrine should be applied includes:

> (1) the relative nearness of the objecting landowners to both the use which they are attempting to prevent and the use which has been allowed;
>
> (2) the similarity of the previous nonconforming use to that which the landowners now seek to prevent; and
>
> (3) how many previous nonconforming uses have been permitted. n281

Another court lists the criteria for determining acquiescence to include:

> (1) whether those seeking enforcement had notice of the violations;
>
> (2) the length of the period of inaction;

(3) the extent and kind of violation;

(4) the proximity of violations to those who complained of them;

(5) any affirmative approval of violations;

(6) whether the violations were temporary or permanent; and

(7) the amount of investment involved. n282

Courts will sometimes refuse to find acquiescence in the failure of a landowner to object to behavior in violation of a covenant "by other property owners in a different portion of the restricted area, which were not consequential or, if consequential, did not materially and adversely affect him in the use and enjoyment of his own property." n283 Acquiescence may in some jurisdictions be healed by a duly recorded reaffirmation of the covenants by those bound by them. Thus in West Virginia, the Supreme Court held that in face of such a reaffirmation, one challenging the covenant must prove that there have been further violations of the covenants after the recordation and that they were acquiesced in for a "protracted period." n284

COMPUTER-ASSISTED RESEARCH

LEXIS: (terminat! or expir! or extin! or cancel! or aboli!) w/5 covenant w/50 acquiesc!

(v) Estoppel.

If the promisor acts contrary to the promise in reasonable reliance on representations made by the promisee, a court may find the promisee estopped to prevent or collect damages for the violation in question. A common statement of the requirements to show estoppel is that: "1) the party to be estopped made a representation of material fact and later took a position contrary to that representation; 2) the party claiming estoppel relied upon this representation; and 3) that party suffered a detrimental change in position as a result of this reliance." n285 The New Restatement has it that the reliance must be foreseeable. n286 When a party induces such reliance by assertions made or by "silence when he ought to speak out," either "intentionally or through culpable negligence," the party may be estopped to deny that "the state of facts does in truth exist, over a different or contrary state of facts as existing at the same time, or deny or repudiate his acts, conduct or statements." n287 In Georgia, for example, a property owner who received permission, later rescinded, to build a commercial garage on land restricted to residential use, failed to establish the detrimental reliance necessary to an estoppel defense where the permission had already been appealed before he began construction and the down-payment could be recovered. n288 The doctrine is applied with great caution, where to refuse to do so would, practically speaking, sanction a fraud. n289 Estoppel cannot be based on silence where both parties have equal knowledge of or access to the facts. n290

(vi) Laches.

Closely related to estoppel is the doctrine of laches. n291 If a promisee unreasonably delays too long a time to act on a violation of a covenant, and injustice would be done to the promisor by then enforcing the covenant, a court may in its discretion declare it unenforceable in equity due to laches. n292 There must have been a delay, and the delay "must have been unreasonable under the circumstances." n293 The doctrine is based on the "assumption that the party to whom laches is imputed has knowledge of his rights and the opportunity to assert them, that by reason of his delay some

adverse party has good reason to believe those rights are worthless or have been abandoned, and that because of a change of conditions during this delay it would be unjust to the latter to permit him to assert them." n294 It is an affirmative defense that must be pleaded, and the burden is on the party who asserts it. n295 The delay must prejudice specifically the party seeking to invoke laches; if it does not it is irrelevant. n296 Courts are reluctant to invoke the doctrine, and will do so only to prevent injustice; it will not be used to "defeat justice." n297 Before laches will be found, courts will require that the delay be found unreasonable and unexplained and must be shown to have caused "disadvantage and prejudice" to the defendant. n298 Laches is not a favored defense and "will be sustained only if the litigant has been guilty of inexcusable neglect in enforcing a right, to the prejudice of his adversary." n299 Thus, where the architectural committee of a homeowners' association contacted a homeowner before offending construction was completed and a representative of the association was turned away from the property (thereby demonstrating that the property owner was warned of the association's position), where suit was filed eight months after completion of the construction, and there was little expenditure of money on the construction, the Nebraska Supreme Court held a claim of laches to be without merit. n300 Delay alone is not usually sufficient to trigger a finding of laches, and where actions of the persons claiming protection of the doctrine have contributed to the delay or the violation of the covenant was deliberate, courts will not invoke the doctrine. n301 Where the defendant's actions in apparently forging a waiver misled the plaintiff into delaying court proceedings, a New York appellate court refused to find the plaintiff barred by laches. n302 The length of delay that would trigger a laches defense is often difficult to ascertain in a given jurisdiction. n303 One factor considered is whether the delay is severe enough practically to "preclude the court from arriving at a safe conclusion as to the truth of the matters in controversy," thus hindering the determination of the equities of a situation. n304 In Florida, an appellate court barred enforcement of a residential-use-only covenant under a laches statute that bars any equitable action "unless it is commenced within the time provided for legal action concerning the same subject matter" and dispenses with the provision requiring that the promisor be harmed by the delay in enforcement of rights and the provision that the promisee not have unclean hands. n305 Though the right to injunctive relief be lost, the promisee may still retain the right to an award of damages at law. Because damages are seen to be less severe a remedy than injunctive relief, action that bars "the latter kind of relief may not be sufficient to bar the former." n306

LEXIS: terminat! or expir! or extin! or cancel! or aboli! or enforc! w/25 covenant w/10 laches

(vii) Unclean Hands.

Courts will sometimes recognize that a covenant ought not be enforced because the plaintiff comes to the action with "unclean hands"; the plaintiff is, in other words, guilty of the same actions of which the defendant is accused. Unclean hands is an affirmative defense invoked to prevent enforcement of a covenant. Courts sometimes say that the doctrine has force only when the party seeking shelter under it has been harmed by the inequitable activity of the plaintiff. In other words, not any violation of a covenant by a party will necessarily bar that party from enforcing covenants on another; the plaintiff's violation must have had some harmful effect on the defendant against whom enforcement is sought. n307 A plaintiff's car restoration on residential property, for the most part a hobby, was held not to bar that plaintiff's enforcement of a residential-use covenant against operation of a beauty shop, "essentially a store with regular activities and traffic," in a neighbor's house. n308

(c) By Action of Third Parties.

(1) By Statute.

Perhaps as a reflection of the historic discomfort with planning devices perceived to interfere with the easy alienability of land, a number of states have various statutory tools to extinguish real covenants, most of which seem to function to place specific time limits on their survival. These tools act to put time limits on their survival, or provide statutes of limitation for their enforcement in the face of particular violations, or subject them to Marketable Title Acts in the same way as are other challenges to clean title. A final category of statutes codifies some of the traditional common-law termination tools.

(i) Specific Time Limits.

Jurisdictions may have statutes specifically terminating real covenants after the passage of a given amount of time. Georgia statutes, for example, have it that "covenants restricting lands to certain uses" cannot run for more than 20 years in municipalities or counties in which zoning laws have been adopted, with separate rules for scenic easements and covenants and for subdivisions of a minimum size. n309 The effect of the special rules is to permit the scenic and subdivision covenants to exist for potentially much longer periods of time. n310 A Minnesota statute, with some specific exceptions, states that "all private covenants, conditions, or restrictions created by which the title or use of real property is affected" cease to be valid and may be disregarded 30 years after the effective date of the document creating them. n311 A Massachusetts statute limits covenants to thirty years, except where a different expiration period, longer or shorter, is given in the covenant; thus when a covenant was amended to remove a fifty-year expiration date, the statutory thirty-year period began to run from the date of amendment. n312

(ii) Statutes of Limitation.

Restrictive covenants can also lose their enforceability in face of a particular breach through statutes of limitation. Thus, in Georgia, besides the 20-year limitation, there is a two-year statute of limitations on the enforcement of a covenant that has been breached. n313 Missouri applies a ten-year statute to the breach of restrictive covenants generally, n314 and a two-year statute to those breaches involving building size, cost, location or improvements. n315 New York, also, has a two-year statute for enforcement of "a covenant or agreement restricting the use of land or to recover damages for breach thereof ... ." n316

(iii) Marketable Title Acts.

A number of jurisdictions terminate easements unless they are periodically rerecorded, by operation of specific Marketable Title provisions or through the general operation of their Marketable Title Act. In Wisconsin, for example, actions to enforce easements or covenants other than conservation easements will be barred if there has not been a timely recording of an instrument expressly referring to them within 40 years; n317 the North Carolina act uses a period of 30 years. n318 It does not matter for the applicability of the Act in Florida if the one attacking a restriction not rerecorded within thirty years had actual notice of the restriction. n319 The Illinois statute employs a forty-year period, n320 with an exception for any easement or interest in the nature of an easement, the existence of which "is apparent from or can be proved by physical evidences of its use ... ." n321 Ohio, too, uses a forty-year period, n322 as does Utah. n323 Massachusetts statutes under the heading "Protection of Land Titles from Uncertain and Obsolete Restrictions" use a 30-year period with 20-year extension periods and impose particular recording requirements. n324 In Minnesota, by contrast, rights arising from certain covenants governed by a specific statute are specifically exempted from the Marketable Title Act and made subject to their own harsher equivalent. n325

(iv) Codifying Common-Law Relief.

Jurisdictions may also codify some of the same relief available elsewhere by common law. Thus, in New York a statute "authorizes a court in any action seeking relief against a restrictive covenant or a declaration with respect to its enforceability to cause its extinguishment 'if the court shall find that the restriction is of no actual and substantial benefit to the persons seeking its enforcement or seeking a declaration or determination of its enforceability, either because the purpose of the restriction has already been accomplished or, by reason of changed condition or other cause, its purpose

is not capable of accomplishment, or for any other reason' but requires payment to the party who would otherwise be entitled to enforcement of the covenant of such damages as he will sustain from its extinguishment.' " n326 A Minnesota statute states that when any covenants or similar interests have become "merely nominal, and of no actual and substantial benefit to the party or parties to whom or in whose favor they are to be performed, they may be wholly disregarded ... ." n327 Before equitable relief instead of money damages will be granted, a Massachusetts statute requires that even properly recorded and otherwise valid covenants be determined to be of "actual and substantial benefit" to the person claiming rights of enforcement. It further codifies common-law extinguishment tools like change of circumstances and requires that the covenants not interfere with growth in the public interest. n328

(2) By Eminent Domain or Condemnation.

In the majority of states, real covenants running with the land are compensable property rights for eminent domain purposes, at least to the extent they add measurable value to the land to which they are attached. n329 For calculating the statute of limitations when the dominant owner seeks redress under an inverse condemnation theory, the Maryland high court has held that the taking occurs when the servient property is condemned, not when some action incompatible with the covenant occurs on the servient property; if the facts permit, an action for ejectment or to quiet title may still remain. n330 The method used to evaluate a real covenant subject to condemnation is the same as that used for appurtenant easements. n331 The method used for "every reported eminent domain case in the United States involving the condemnation of easements appurtenant," and, therefore, the one used for evaluating real covenants, requires an analysis (derived from an appraisal of the dominant estate before and after the taking) of the "decrease in value of the dominant estate (or dominant tenement) resulting from the taking of the easement." n332 Where an alternative measure of damage is permitted (the actual value of what is taken plus severance or resulting damages to the remaining land), it is an alternative and not cumulative to the decrease in market value of the remaining land. n333

(3) By Foreclosure or Tax Sale.

One who takes a burdened estate due to a foreclosure or tax sale may take it free of any real covenant, depending on when the debt causing the foreclosure or tax sale was incurred. In a bankruptcy case, for example, a bank was held to have a lien on the amenities (golf course, etc.) of a subdivision that remained in the hands of the bankrupt developer, but that lien was subject to a restrictive covenant that pre-existed establishment of the lien and benefitted the property owners within the subdivision. n334 Thus, if the real covenant was entered into before the property was mortgaged, the property will remain subject to the covenant; if the real covenant was entered into after the property was mortgaged, the property will be taken free of the covenant, assuming proper notice is given the owner of a properly recorded real covenant.

(d) Public Policy.

Courts may hold real covenants to be unenforceable facially or as applied for violation of public policy, expressed constitutionally or in federal statute. They will frequently attempt to find other reasons for their decisions than public policy or constitutional rights to avoid having to pass on that type of question. n335

(1) Constitutional Rights.

The Supreme Court has found that covenants that forbid the sale of housing on racial grounds were unenforceable; n336 the courts, however, have been less than willing to expand that rationale to discrimination against other groups or to other constitutional rights. The major reason that this control on covenants has not spread more is that in theory covenants are private, contractual arrangements that do not involve state action. In *Shelley*, the Court found state action in the recourse to the courts to enforce the offending covenants. Courts have been very leery about expanding that reasoning to encompass other constitutional rights. The Illinois Court of Appeals, for example, avoided an attempt to argue that enforcing covenants forbidding billboards violated rights to free speech by noting that the billboards also violated height restrictions of the covenant, and thus could be forbidden on grounds applicable to all structures. n337

There are federal and state statutes that may serve to prevent the enforcement against particular groups of covenants that might otherwise be valid.

(2) Fair Housing Act.

A promising but not yet widely used tool to overcome covenants that would forbid group homes for the retarded, the elderly, or other groups that might qualify as handicapped, at least as reported cases show, is the Fair Housing Act. Thus, a federal district court granted a summary judgment as to liability in a case involving neighbors who tried to invoke restrictive covenants to prevent sale of a home for use as a group home for disabled individuals. n338 The House Committee on the Judiciary has stated that the Act "is intended to prohibit special restrictive covenants or other terms or conditions, or denials of service because of an individual's handicap which ... exclude, for example, congregate living arrangements for persons with handicaps." n339 The First Circuit Court of Appeals reversed a Puerto Rico district court's similar action on procedural grounds, but preserved to the residents of an elder-care facility the right to pursue their claim under the Fair Housing Act. n340 The Texas Court of Appeals found the Fair Housing Act and the Americans with Disabilities Act applicable to situations where covenants were relied on to the detriment of group homes. n341 The New Mexico Supreme Court, having already held that a home for AIDS patients qualified as a single-family residence because the residents functioned as a household in the same way that a family would, reviewed the Fair Housing Act claim of the group home "in order to correct the trial court's erroneous ruling on the legal effect of the FHA." n342 The court concluded that enforcement of the covenants in question violated several prongs of the Act. n343 There is, as yet, very little case law to render it certain that the Act will be able to trump existing covenants. n344 The United States Supreme Court, however, in a case involving zoning and not covenant restrictions, held in 1995 that a zoning statute limiting unrelated persons living together to five was not rescued by the Fair Housing Act's exemption for maximum occupancy restrictions. n345 This decision may, and this is conjecture, suggest the reception that a challenge to similar covenant restrictions may face in the Supreme Court.

(3) State Law.

Several state courts and legislatures have acted to overcome the effects of real covenants in preventing group homes for the handicapped. The Indiana legislature, for example, passed a statute declaring such covenants to be unenforceable against such groups. The Indiana Supreme Court, in response, declared that the statute violated the State Constitution's Contracts Clause when it voided already existing covenants. n346 The court was silent as to the prospective reach of the covenant, but the legislature in its next session repealed the entire statute. The Arkansas Supreme Court has refused an invitation to rule on whether such covenants violate the Fourteenth Amendment. n347 The Washington Court of Appeals has noted that even if the state's zoning statutes defined adult homes as residential uses of property, it remained unanswered "whether zoning may override the constitutional contractual right of parties to covenant ... ." n348 The Washington Supreme Court answered that question in the negative and refused the invitation to consider whether public policy required interpreting such covenants to permit adult care homes because they deemed the record inadequate to decide "due to the lack of any comprehensive presentation of governmental goals, efforts, needs and successes existing in fact." n349 After holding that a family day-care home violated a covenant restricting commercial uses, the Michigan Supreme Court refused to hold that enforcing such a covenant violated public policy in the absence of definite indications in Michigan "constitutions, statutes or common law that supports" the view that enforcing such covenants is contrary to the state's public policy. n350 Similarly, the Idaho Supreme Court refused to find a covenant that would prohibit a group home for the elderly to be against public policy, despite statutes overruling similar zoning statutes. n351

(e) By Events Independent of the Parties.

(1) Changed Circumstances.

If circumstances surrounding the land burdened or benefited or the covenant itself have sufficiently changed, a court may find that the covenant is terminated. Originally, changed circumstances such as the change in the character of a

neighborhood benefited by covenants operated only as an equitable defense to injunctive relief but was not a defense to the covenant at law; the modern trend is to invalidate the covenant itself. n352 The changed circumstances that may justify removing restrictions must occur after the person seeking removal of the restrictions has purchased the burdened property. n353 The right to terminate covenants because of changed circumstances sometimes is statutory, and its definitions and rules statutorily controlled. n354

(i) Purpose Accomplished or Impossible to Accomplish.

Courts may extinguish covenants if, due to changes in the character and environment of the property, the purpose for which they were established can no longer be accomplished or if it would be unreasonable or oppressive to enforce them. n355 Change of conditions must have "frustrated the object of the covenant without fault or neglect on the part of the party who seeks to be relieved from the restrictions." n356 The changes must be so radical as practically to destroy the essential objects and purposes of the agreement; thus, the presence of occasional car restoration activity and of one neighbor's tax preparation activity did not so change the neighborhood as to prevent enforcement of a residential-use covenant against parties who wished to operate a beauty shop with its stream of traffic in their home. n357 Where, despite the changes that have occurred, the restriction "is for the benefit of and is still of substantial value to the dominant lot ..., a court of equity will restrain its violation." n358 This extinguishment will normally entitle the holder to an award of damages measured by the loss in value to the benefited land. The aggrieved party must plead and prove those damages; thus, in New York, the Court of Appeals upheld the extinguishment of a restrictive covenant on the grounds of impossibility of accomplishment but upheld the refusal to award damages because defendant failed to establish damages in quantifiable terms to his remaining land from the extinguishment of the covenant. n359 A covenant may be terminated if there is no one entitled to enforce it. n360

COMPUTER-ASSISTED RESEARCH

LEXIS: extin! or expir! or aboli! or cancel! or terminat! or enforc! w/10 covenant w/25 (changed circumstance or impossib!)

(ii) Loss of Benefit.

In Arizona, equity will enforce covenants unless "the changes in the surrounding area are so fundamental or radical as to defeat or frustrate the original purposes of the restrictions." n361 In that case, in which a cemetery owner wanted to use part of its restricted land for a residential development, the court held that a zoning change merely was an indication of the most profitable use to which land could be put, and "a mere change in value [of burdened land] does not justify removal of a restrictive covenant." n362 Similarly, an Indiana court states that public policy requires the invalidation of restrictive covenants when changes in the character of the subject land are "so radical as practically to destroy the essential objects and purposes of the agreement." n363 Changes in conditions must be "so great or radical as to neutralize the benefits of the restriction and destroy its purpose." n364 The law does not permit termination or modification of the burdens of restrictive covenants just to provide for the best or most profitable use of a piece of affected property. In Virginia, the degree of change necessary to defeat the "purpose of the restrictive covenant rendering it null and void" must practically " 'destroy the essential objects and purposes of the [covenant].' " n365 A Florida court n366 stated that if a restriction was imposed for the benefit of and still benefits the dominant estate, it will be enforceable despite changed conditions. n367 That court held that even though beneficiary property lessees had never made use of parking rights on burdened property, the restrictions remain because there is no proof that they could not be of value in the future. n368 Courts tend to weigh changes occurring within a neighborhood more than those occurring in the immediately surrounding area. n369 Courts will require the person seeking to avoid enforcement of the covenant to prove not only that changes have occurred but to show how the changes have "adversely affected the purpose of the covenant." n370 There is a dispute over whether it is true that "equity will not enforce a restrictive covenant in the absence of any benefit to party seeking enforcement of the restriction." n371

COMPUTER-ASSISTED RESEARCH

LEXIS: extin! or expir! or aboli! or cancel! or terminat! or enforc! w/10 covenant w/25 (loss of value or loss of benefit)

(2) Balancing of Hardships.

In determining whether to enforce a real covenant by injunctive relief, courts will sometimes balance the hardship worked on the promisor by enforcement with the hardship on the promisee of a violation, and if the hardship suffered by the promisor is greater will relegate the promisee to a damages remedy. The balance may be also put in terms of harm versus benefit. n372 Thus, injunctive relief will be denied "if the harm done by granting the injunction will be disproportionate to the benefit secured thereby." n373 If the enforcement of a restriction will harm the promisor without substantially benefiting the promisee's land, it may be held unenforceable. n374 Not any imbalance in the equities will suffice, the Restatement notes, when an imbalance is the only reason for denying equitable enforcement; the "disproportion must be one of considerable magnitude... ." n375

Wilhelm, 665 P.2d 407, 411* (Wash. App.), *rev. denied, 100 Wash. 2d 1025 (1983)* (holding requirement to gain permission of architectural committee to have been abandoned because committee had not existed in several years and much building had gone on without its permission).

(n19)Footnote 275. *Swenson v. Erickson, 998 P.2d 807, 813 (2000)* (small storage sheds on 19 of 52 lots not abandonment so as to permit building of large woodshop).

(n20)Footnote 276. *See* Restatement of Property § 561 cmt. d (1944) (acquiescence not a bar to relief at law though it may affect the measure of damages).

(n21)Footnote 277. *See, e.g., City of Rolling Meadows v. National Adver. Co., 593 N.E.2d 551, 558 (Ill. App. 1991)* (erection of water tower too tall not proven to violate anti-billboard covenant, and even if so would not prove city acquiescence sufficient to extinguish covenant), *app. denied, 602 N.E.2d 475 (Ill. 1992), cert. denied, 113 S. Ct. 1385 (1993); Goforth v. Smith, 991 S.W.2d 579 (Ark. 1999)* (a landowner's neighbor had a communications tower on the neighbor's property in violation of a restrictive covenant. The neighbor built two subsequent towers in 1965 and 1988. When the neighbor started to build a third tower, the landowner brought suit to enforce the restrictive covenant action against his neighbor; the action was dismissed because the landowner had acquiesced in his neighbor's activity for the past 30 years).

(n22)Footnote 278. *See* Restatement of Property § 561 (1944).

(n23)Footnote 279. *Siering v. Bronson, 564 So. 2d 247, 248-249 (Fla. App. 1990).*

(n24)Footnote 280. *Hrisomalos v. Smith, 600 N.E.2d 1363, 1368 (Ind. App. 1992).*

(n25)Footnote 281. *Id.*

(n26)Footnote 282. *Vaughn v. Eggleston, 334 N.W.2d 870, 873 (S.D. 1983)* (*quoting Pool v. Denbeck, 241 N.W.2d 503, 507 (Neb. 1976)).*

(n27)Footnote 283. *Miller v. Bolyard, 411 S.E.2d 684, 687 (W. Va. 1991)* (plaintiff did not waive objection to neighboring garage that violated covenant by failure to object to similar violation in a distant part of the subdivision).

(n28)Footnote 284. *Carr v. Michael Motors, Inc., 557 S.E.2d 294, 302 (W. Va. 2001).*

(n29)Footnote 285. *Killearn Acres Homeowners Ass'n v. Keever, 595 So. 2d 1019, 1022 (Fla. App. 1992)* (no estoppel because no evidence that representation was made).

(n30)Footnote 286. Restatement (Third) of Property (Servitudes) § 7.6 (2000).

(n31)Footnote 287. *Grasso v. Thimons, 559 A.2d 925, 929 (Pa. Ct. 1989)* (*quoting Blofsen v. Cutaiar, 333 A.2d 841, 843-844 (Pa. 1975)), app. denied, 577 A.2d 544 (Pa. 1990).*

(n32)Footnote 288. *Parker v. Peaceful Valley Property Owners Ass'n, 519 S.E.2d 440, 442 (Ga. 1999).*

(n33)Footnote 289. *Pelican Island Property Owners Ass'n, Inc. v. Murphy, 554 So. 2d 1179, 1181 (Fla. App. 1989)* (no estoppel because no proper proposal made, consent to which properly could be found in association's lack of response: no estoppel by silence unless proponent was ignorant of truth.)

(n34)Footnote 290. *Id.*

(n35)Footnote 291. Courts sometimes use the terms laches, estoppel, waiver and acquiescence in ways that do not always keep the doctrines distinct. *See, e.g., Stepanek v. Roth, 418 So.2d 74, 75 (Miss. 1982)* (appellees are "estopped by the doctrine of laches.").

(n36)Footnote 292. *See, e.g., City of Rochelle v. Suski, 564 N.E.2d 933 (Ill. App. 1990)* (trailer homes erected under city permits encroached on city property nearly twenty years; remanded to see if laches would bar city's attempt to remove them when they were expensive to move and city demonstrated no need for property).

(n37)Footnote 293. *Pelosi v. Wailea Ranch Estates, 985 P.2d 1045, 1057-1058 (Haw. 1999)* (delay not unreasonable) (interior quotation marks omitted).

(n38)Footnote 294. *Goforth v. Smith, 991 S.W.2d 579, 586-587 (Ark. 1999)* (telecommunications tower; other towers standing for 30 years).

(n39)Footnote 295. *Williamson v. Pope, 299 S.E.2d 661, 662 (N.C. App. 1983).*

(n40)Footnote 296. *City of Rolling Meadows v. National Adver. Co., 593 N.E.2d 551, 558 (Ill. App. 1991)* (delay affecting this defendant was only six weeks; delay affecting other defendant "could not have prejudiced" this defendant), *app. denied, 602 N.E.2d 475 (Ill. 1992), cert. denied, 113 S. Ct. 1385 (1993).*

(n41)Footnote 297. *Blackburn v. Richardson, 849 S.W.2d 281, 289-90 (Mo. App. 1993).*

(n42)Footnote 298. *Id., 849 S.W.2d at 289.*

(n43)Footnote 299. *Beaver Lake Ass'n v. Sorenson, 434 N.W.2d 703, 706 (Neb. 1989); see also New Hampshire Donuts, Inc. v. Skipitaris, 533 A.2d 351, 356-57 (N.H. 1987)* (laches based on injustice of allowing recovery when no excuse is given for delay that has worked an injustice; no laches because negotiations were continuing while defendant was constructing offending building).

(n44)Footnote 300. *Sorenson, 434 N.W.2d at 706.*

(n45)Footnote 301. *E.g., New Hampshire Donuts, 533 A.2d at 351, 356.*

(n46)Footnote 302. *Goodfarb v. Freedman, 431 N.Y.S.2d 573, 578 (1980)* (laches not available because of defendants' "own conduct in misleading their neighbors into inaction").

(n47)Footnote 303. *See Port Perry Marketing Corp. v. Jenneman, 982 S.W.2d 789 (Mo. Ct. App. 1998)* (former owner had failed to enforce restrictive covenants for 19 years. The new owner who recently purchased the property tried to enforce the covenants within 1 year of acquiring the property. However, the new owner can be charged with the delay of the old owner and therefore laches is not precluded as a defense to the new owner's enforcement attempts); *Stepanek v. Roth, 418 So. 2d 74, 75 (Miss. 1982)* (court notes that times as long as 12 years have not resulted in laches while times as short as five weeks have, depending on circumstances; violations here had lasted three to ten years without

protest).

(n48)Footnote 304. *Sea Island Bank v. First Bulloch Bank & Trust Co., 267 S.E.2d 12, 13 (Ga. 1980)* (*quoting Citizens & S. Nat'l Bank v. Ellis, 156 S.E. 603 (Ga. 1931)).*

(n49)Footnote 305. *Engle v. Acopian, 432 So. 2d 113, 115-16 (Fla. App. 1983)* (*quoting* Fla. Stat. § 95.11(6)).

(n50)Footnote 306. Restatement of Property § 562 cmt. c (1944).

(n51)Footnote 307. *See, e.g., Blackburn v. Richardson, 849 S.W.2d 281, 290 (Mo. App. 1993)* (no unclean hands found where plaintiff's minor violation did no harm to defendants and would be easily remedied upon request).

(n52)Footnote 308. *Miller v. Bolyard, 411 S.E.2d 684, 687 (W. Va. 1991).*

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.01

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.01 Overview of the Law of Servitudes.

[Go To Supp]

A servitude is a right to affect another's use and enjoyment of a property interest. The new *Restatement of Servitudes* defines a servitude as "a legal device that creates a right or an obligation that runs with land or an interest in land." n1 This latter definition, perhaps inadvertently, does not compass benefits of a servitude held in gross or burdens running with an interest less than an estate such as an easement. n2

"American Law has recognized between five and fourteen different devices ... which are treated as servitudes." n3 *The Restatement of Servitudes* attempts to "restructure servitudes law as an integrated body of doctrine." n4 Chapter 63 addresses "Unified Servitudes."

Among those devices which have achieved significant doctrinal elaboration are:

1. *Rights to Use Property in the Possession of Another: Profits, Licenses, Easements.*

   A. The profit is a right to exploit resources on land possessed by another. *The Restatement of Property* concluded that American analysis of profits was indistinguishable from American analysis of easements and folded profits into easements; n5 in *The Restatement of Servitudes* , "the term profit has been resurrected from the oblivion into which it was consigned by the 1944 *Restatement*." n6 The old *Restatement's* decision cost the legal lexicon some of its most colorful words such as turbary, n7 piscary, n8 and estovers. n9 Courts have continued using the term "profit" in any event. n10 *See* Chapter 65.

   B. A license is a right, revocable at the will of the possessor, to use property possessed by another. Common examples include a ticket for a seat at a baseball game and the brass plates in Chicago sidewalks identifying plazas opened through zoning bonuses. Misuses of the word "license" include the "irrevocable license" more properly called an

"easement" and as a shorthand designation for "nonpossessory" interests in the dichotomy "lease or license." n11 *See* Chapter 64.

C. The easement includes all rights to use property possessed by another with a duration not subject to revocation at will by the possessor. *See* Chapter 60.

2. *Real Covenants at Law Running with the Land.*

A Real Covenant is a promise respecting the use of land which can bind a successor to the promisor as if the successor were the promisor and benefit a successor to the promisee as if the successor were the promisee. The successor to the promisor can be held liable for damages. The bewildering elements for real covenants and the fuzzy boundary between real covenants and equitable interests are responsible for the tag "unspeakable quagmire" applied to covenants. n12 *See* Chapter 61.

3. *Equitable Servitudes/Equitable Liens*

Courts sometimes treat Equitable Servitudes as merely an equitable remedy for the Real Covenant. n13 The singular development of Equitable Servitudes makes them analogous to trusts because they are distinct rights enforceable at equity, not necessarily recognized at law. n14 The elements of the Equitable Servitude and their differences from the elements of the Real Covenant are the focus of the first section of this Chapter.

Equitable Liens originate in a distinct and relatively simple set of rules for equitable charges. n15 Cases regularly treat the lien as an aspect of equitable servitudes. n16 Equitable liens are integrated into this chapter's review of Equitable Servitudes.

4. *Environmental Servitudes: Scenic Easements, Facade Easements, Preservation Easements and Solar Easements.*

Notwithstanding the name "easement" for these interests, this class of devices is akin to the equitable servitude in restricting actions by the land's possessor and imposing affirmative obligations on the possessor. The elements of these "Easements" and their differences from the elements of Equitable Servitudes are the focus of the second section of this Chapter.

5. *Transferable Development Rights.*

This technique of compensable public regulation creates an in-kind currency system linking the windfalls of those benefitted by regulation with the wipeouts of those impaired by regulation. The junction with regulation makes this topic an apt one for consideration in Chapter 74 [Land Use Regulation], Chapter 75 [Historic Preservation] or Chapter 81 [Regulatory Taking]. The long-term restriction on use of parcels sending Development Rights make this Chapter's final section an equally apt place for analysis.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.02

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.02 The Rise of the Private Restrictive System.

Systems of covenants and restrictions have become a common, and in some markets nearly universal, feature of residential and large-scale commercial development in the United States. "A recent study estimates that in California, alone, there were 1,400,000 units in common interest developments, and between 12,000 and 16,000 common interest community associations in existence in June, 1986." n17 For one flourishing type of privately restricted development, the "gated community," a recent monograph estimates 4,000,000 residents in 30,000 developments. n18

The spread of Planned Unit Developments, Condominiums and Office Parks where common elements, interdependence and governance mechanisms demand systems of restrictions is only a partial explanation for the floodtide. n19 Even conventional residential subdivisions are bound by declarations of restrictions. The invisible hand of the market of homebuyers is not the primary explanation for what planner Daniel Lauber describes as "capitalism pressing its citizens to live in socialist collectives." n20 The preferences of government and financing institutions are robust factors in the legal form of development.

At the local level, subdivision review, P.U.D. approval and site plan review may be occasions for the imposition of a wide variety of governmental compulsions. The exercise of discretion has its price. Permit-granting behavior is linked to covenants as a part of the "contract zoning game," usually in an arrangement with neighbors to mitigate externalities or to limit uses available under a broad zoning category. n21 When common areas such as playgrounds or streets are not dedicated to the government, local governments will want clear, enforceable systems to insure maintenance of those private commons; without such systems for maintenance, the homebuyers will gather to demand government repair for the first pothole. Blanket imposition of use restrictions by covenants and servitudes can obviate difficult zoning issues for the future. n22 The mechanisms for imposed restrictions in subdivision review are not ordinarily explicit in the subdivision law. n23 One treatise observes that deed restrictions can be imposed as conditions of subdivision approval. n24 Practical handbooks for local planners unobtrusively promote mandated declarations of restrictions; one such handbook includes "proposed restrictive covenants" on its "Technical Check List for Use in Subdivision Review" without any other mention of the issue. n25

At the national level, the federal government and private markets operating under federal influence dictate the form and substance of restrictions. The federal "new communities" program of the 1970's promoted gargantuan declarations n26

of restrictions that were unenforceable through sheer complexity. n27 The role of F.H.A. in setting standards for development is well documented. n28"The national standards of the FHA are ... influential even beyond the development it insures. In Houston one appraiser of property referred to [FHA Bulletins] on his shelves as "Bibles." n29

User-friendly enforcement of restrictions depends on equitable remedies. Although members of the Chicago-School view of Law & Economics sometimes criticize equitable remedies because the costs of enforcement can exceed the benefits of enforcement, n30 that unbalanced calculus is precisely what appeals to homeowners in protected developments. n31 The classic "single-family only" restriction would be obliterated without equity. Few qualified appraisers would testify to any measurable economic damage if duplexes were built in single-family areas. Courts specifically enforce the "single-family only" rules without proof of economic damage n32 and thereby satisfy the American dream of isolation from creeping multifamily dwellings. n33 Other types of restrictions, where damages are quantifiable, would present simple cost-benefit issues for violators and could produce incentives for the greatest feasible violation. If a restriction setting height limits to preserve views were violated, damages would reach their acme when the view is entirely blocked; the sensible tactic is to build the largest building possible to maximize return on the damages paid. n34

Systems of restrictions are pervasive in the development business. Those systems are a consequence of top-down leverage, not bottom-up demand. n35 Those systems would be empty gestures to homebuyers without equitable enforcement of the restrictions. n36

COMPUTER-ASSISTED RESEARCH

LEXIS: private w/30 restrict! w/5 system! system! w/5 restrict! or covenant!

FOOTNOTES:

(n1)Footnote 17. Restatement of Servitudes, *supra* note 1, Tent. Draft #1, xxii-xxiii (1989), *citing* S. Barton & C. Silverman, Common Interest Homeowners' Association Management Study 3, California Department of Real Estate (Oct. 1987). As restrictions and homeowners' association have expanded to most of the new development in some markets, the need for rules for governance of the associations has produced a generation of statutes under the neologism, "Common Interest Development." *See, e.g.*, 2004 Cal. ALS 346, 2004 *Cal. AB 2376,* Stats. 2004 ch. 346 (effective 1/1/2005); Md. Real Property Code Ann. § 11B-113.4 (2004); Colorado Revised Statutes 38-33-3-101 & 102 (2004). Such community associations may have a quasi-municipal status subjecting them to constitutional limitations pertaining, for example, to expressive rights. *See e.g., Comm. for a Better Twin Rivers v. Twin Rivers Homeowners' Assoc., 2006 N.J. Super. LEXIS 29* (No. A-4047-03T2, Apr. 19, 2005).

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.03

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.03 Elements of the Real Covenant.

Spencer's Case, n37 is "the parent case for covenants running with the land." n38 Tulk v. Moxhay, n39 is "the progenitor of equitable servitudes." n40

The elements entailed in Real Covenants are present in *Spencer's Case*: privity between original parties, privity between original parties and their successors, intent to run, and touch and concern the land. Only the definitions for those elements have changed. Some scholars add "form" to the listed elements, n41 although the form is often the routine form for conveyances which satisfy the Statute of Frauds and the needs of the recording acts. The evolution of those elements has been a classic application of the case method to answer the question: "What are the legally relevant facts of *Spencer's Case*?" n42

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.04

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.04 The Required Relationship Between Original Parties: Horizontal Privity.

Judge Charles Clark was adamant that the term "privity" applied to the original promisor and promisee was not a "proper sense," but "an entirely unjustifiable meaning"; n43 however, Judge Clark conceded that the concept "expresses a restriction perhaps justifiable from the standpoint of public policy." n44 Current scholarship would not admit this justification. n45

In evolving from English law, American horizontal privity has moved from a relationship justifiable by medieval metaphysics, to a formalistic loophole easily satisfied n46 and, ultimately, to nothingness.

In his superb article, "A Policy Analysis of Promises Respecting the Use of Land," Lawrence Berger created convenient labels for the manifestations of horizontal privity analyzed by Charles Clark. n47

A. The English horizontal privity, "tenurial privity," limits Real Covenants to certain future estate/present estate divisions of ownership; "tenurial privity" is the narrowest reading of *Spencer's Case* where the relationship was reversion/estate for years.

B. The first American easing of privity was Massachusetts' "simultaneous privity," requiring both parties to have a "continuing and simultaneous interest in the same piece of property." n48"Simultaneous privity" covered the future estate/present estate relationship in *Spencer's Case* and added easements [and concurrent estates by the terms of the definition].

C. In 1944, *Restatement of Property* bowed to Massachusetts n49 but sided with the American majority of its time in "instantaneous privity." n50 The "instant" in question is the moment when the promisor and promisee each have one hand on a deed transferring an interest in property; for that instant, they are in privity. n51 The transfer of an estate for years in *Spencer's Case* satisfies "instantaneous privity."

D. The final view is "promise alone" privity, in reality no horizontal privity test. The new *Restatement of Servitudes* eliminates horizontal privity. n52

There is universal agreement that Tulk v. Moxhay eliminated the horizontal privity element from equitable servitude doctrine. Under the English rule of tenurial privity, *Tulk* could not run as a real covenant although the facts satisfied the three less restrictive views of horizontal privity in the United States. *Restatement of Servitudes* § 2.4 brings real covenants in line with equitable servitudes.

Oliver Wendell Holmes foresaw the current state of horizontal privity:

> "According to the general opinion there must be privity of estate between the covenantor and covenantee ... . Some have supposed the privity to be tenure; some, an interest of the covenantee in the land of the covenantor; and so on. The first notion is false, the second misleading, and the proposition to which they are applied is unfounded. Privity of estate, as used in connection with covenants at common law, does not mean tenure or easement; it means succession to a title. It is never necessary between covenantor and covenantee, or any other person, except between the present owner and the original covenantor." n53

COMPUTER-ASSISTED RESEARCH

LEXIS: horizontal w/1 privity

(n2)Footnote 44. *Id.*

(n3)Footnote 45. *See* Sources collected in Restatement of Servitudes, *supra* note 1, *Reporter's Note* to § 2.4 at 97-99.

(n4)Footnote 46. Criticizing the Restatement of Property's retention of some horizontal privity, Charles Clark said, "only at small residue of occasional covenants, prepared either by naive and trusting laymen or by the dumbest of lawyers, can be upset." Clark, *supra* note 33, at 218, reproducing *52 Yale L.J. 699 (1943).*

(n5)Footnote 47. For a summary of state law on horizontal privity, *see* Covenants Respecting the Use of Land, Richard R. Powell, The Law of Real Property P 673 [2] (Patrick J. Rohan ed., 1991), [hereinafter Powell on Real Property].

(n6)Footnote 48. Berger, *supra* note 34 at 180-181.

(n7)Footnote 49. Restatement of Property § 534(b): "the promise is made in the adjustment of the mutual relationship arising out of the existence of an easement ..."

(n8)Footnote 50. Restatement of Property § 534(a): "the transaction of which the promise is a part includes a transfer of an interest either in the land benefitted by or in the land burdened by the performance of the promise." *See, e.g., Wayne Harwell Properties v. Pan Am. Logistics Ctr., 945 S.W.2d 216 (Tex. App. 1997)* (applies the "instantaneous" test for horizontal privity and holds that the transfer of a 15% cash-flow interest in land does not satisfy horizontal privity). *Fong v. Hashimoto, 1998 Haw. App. LEXIS 8* (2/20/98), held that the interest of a seller after executing a contract of sale was sufficient to permit the seller to impose restrictions on another parcel for the benefit of the sold land. *Sonoma Development, Inc. v. Miller, 258 Va. 163, 515 S.E.2d 577 (1999)* reaffirms Virginia's commitment to the "instantaneous privity" requirement, citing Chapter 61 of this treatise; *Peters v. Nelson, 1999 Ohio App. LEXIS 3991 (1999),* applies "estoppel by deed" to pass title to property when deeds were recorded out of order but refuses to enforce a covenant in the first-recorded deed because there could be no privity with no title passing at the time of the first deed's

recording.

(n9)Footnote 51. Even this form of Horizontal Privity is inapplicable when only the benefit of a real covenant has passed to a successor. Privity may also be omitted in the relationship between the covenantor and a third-party beneficiary of the covenant. *See The Nature Conservancy v. Congel, 233 A.D.2d 248, 689 N.Y.S.2d 317 (App. Div. 1999)* (rejecting the "stranger to deed" doctrine for equitable easements and covenants). Restatement of Property § 548.

(n10)Footnote 52. Restatement of Servitudes, *supra* note 1, § 2.4: "No privity relationship between the parties is necessary to create a servitude."

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.05

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.05 The Required Relationship Between Promisor and Successor: Burden Vertical Privity.

One authority tersely concludes that "vertical privity exists in all covenant situations except where a successor ... is an adverse possessor or a disseisor." n54 *Restatement of Property* § 535 presents a more complex picture in its demand that the burden exist only when there has been succession to the "same estate or interest" or "an estate or interest corresponding in duration." The commonest example of failure to satisfy vertical privity is the subtenant; unlike the assignee, who succeeds to all the remaining interest of a predecessor tenant, n55 the subtenant receives some lesser interest. Similarly, a transfer of a life estate from a promisor who had a fee simple absolute would not transfer the burden of a real covenant at law. There is a division in the cases on whether a mortgagee is bound by real covenants with cases distinguishing between lien and title theories of mortgage. n56 The use of the word "succession" in *Restatement of Property* § 535 indicates that a chain of transfers must connect promisor to the new party to be burdened. *Restatement of Property* § 539 uses the word "successor" for "Running of the Burdens in Equity" but does not require a connecting chain of conveyances. n57 Elimination of vertical privity allows equity to bind adverse possessors and disseisors. n58 It is likely that the *Restatement of Servitudes* will apply the vertical privity rules for equitable servitudes to real covenants as it has for horizontal privity. n59

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.06

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.06 The Required Relationship Between Promisee and Successor: Benefit Vertical Privity.

On the benefit side, the phrasing of *Restatement of Property* § 547 requiring succession to "some interest" opens huge classes of potential plaintiffs. The new Restatement of Servitudes § 5.2, Comments b & d, ease even this requirement of succession. n60 While § 535 permits expansion of the class of burdened parties through subdivision into many parcels, so long as each receives an estate with the same duration as the promisor's, § 547 extends even to those with easements permitting minor incursions. The class of plaintiffs is further extended by third-party beneficiary theory "... and by allowing Homeowners' Associations to sue on behalf of members who satisfy traditional privity." n61 A short answer to the problem of multiplying plaintiffs is that the law of damages would sort out the varying amounts of money, if any, available to each potential plaintiff. n62 The holder of an easement to pick a single rose each year would find litigation unprofitable. n63 As with the burden side, vertical privity on the benefit side is eased at equity. General principles of equity afford protection against the plaintiff with minimal interest in the benefit. n64

FOOTNOTES:
(n1)Footnote 60. *Dingle v. Anna Hilldick Revocable Living Trust, 2001 Ohio App. LEXIS 5717* (12/20/2001), follows the new Restatement's view.

(n2)Footnote 61. *Neponsit Property Owners' Ass'n v. Emigrant Indus. Sav. Bank, 15 N.E.2d 793 (N.Y. 1938),* is the widely followed leading case on this principle. *See, e.g., Woodson v. Okanagan River Ranches Homeowners Ass'n, 1997 Wash. App. LEXIS 1987* (12/2/1997). *Cf. Palm Point Property Owners v. Pisarski, 626 So.2d 195 (Fla. 1993). Dogwood Valley Citizens Association, Inc. v. Winkelman, 590 S.E.2d 358 (Va. 2004)* (a non-stock corporation with no duty to maintain common areas had no authority to conduct non-judicial sales of lots for nonpayment of assessments because it was not a "property owners' association" under the relevant statute). Restatement of Property § 541: "The persons initially entitled to enforce the obligation of a promise respecting the use of land are the promisee and such third persons as are also beneficiaries of the promise."

(n3)Footnote 62. Restatement of Property § 551: "The benefit of a promise ... can be separately enforced by the successor to each or any part except in so far as such enforcement presents an unsolvable problem of computation or imposes an undue burden on the obligor."

(n4)Footnote 63. A revocable licensee would need to expedite litigation to avoid Restatement of Property § 549:

"one entitled to the benefit of a promise ... ceases to be entitled to the benefit of the promise when he no longer has in the land an interest... ."

(n5)Footnote 64. *See, e.g.*, Restatement of Property § 563: "Injunctive relief ... will be denied if the harm done by granting the injunction will be disproportionate to the benefit secured thereby."

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.07

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.07 An Intent to Bind and Benefit Successors.

[Go To Supp]

Spencer's Case and all subsequent authorities n65 demand a manifestation of intent that a real covenant should run with the land. *Spencer's Case* dictated ritualistic, thaumaturgic language [the magic phrase "and his assigns"] to show intent where the promise involved a thing not in being [tenant's promise to build a new wall on the leased property]. Later sources allow intent to appear in a range of evidence. n66 The most difficult problems of implied intent arise when consumer expectations in a common scheme of development clash with the parole evidence rule, the statute of frauds, and title-search methodology. Those are considered *infra* at § 62.14.

FOOTNOTES:
(n1)Footnote 65. Restatement of Property § 544: "The benefit of a promise respecting the use of land ... runs with the land only in so far as it was intended by the parties to the promise that it should run." *Well-Built Homes, Inc. v. Shuster, 2003 Mass. Super. LEXIS 445 (2003),* found the language conveying properties "subject to restrictions to be determined later" in a series of deeds from a divorcing husband and wife to create purely personal contracts and not enforceable servitudes.

(n2)Footnote 66. Restatement of Servitudes, *supra* note 1, § 2.2: "The intent to create a servitude may be express or implied. No particular form of expression is required."

Calling it a "salutary tendency," Berger, *supra* note 34, at 173-174, says: "The more modern approach is to infer intent by viewing the 'entire instrument as a whole.' " Changes in the paradigm of rules of construction can assist in reaching true intent. *See, e.g., Riss v. Angel, 934 P.2d 669 (Wash. 1997),* replacing a narrow construction based on a preference for the unfettered use of land with a liberal construction to achieve a general scheme's collective goals. Little, "Liss v. Angel: Washington Remodels the Framework for Interpreting Restrictive Covenants, *73 Wash. L. Rev. 433 (1998). Hollis v. Garwall, Inc., 974 P.2d 836 (Wash. 1999),* continues the liberalization of rules of construction by applying the "context rule of interpretation" to introduce extrinsic evidence for real covenants. *Canyon Meadows Home Owners Ass'n v. Wasatch County, 2001 Utah App. LEXIS 115 (2001),* uses both the express language of restrictions and a multi-factor analysis of context to determine an intent to run. *See also* Rohan, "Preparing Community Associations for the Twenty-First Century: Anticipating the Legal Problems and Possible Solutions," *73 St. John's L. Rev. 3 (1999)*

(urging enforcement of restrictions "whenever reasonably possible"). Developer's retention of dispensing power over covenants presented jury question on whether promises were intended to be "covenants running with the land," as the recorded declaration stated, or personal to the developer. *Roach v. West Indies Inv. Co., 94 F. Supp. 2d 634 (D. V.I. 2000).* The intent of the parties should be expressed as precisely as possible. *See Keene v. Elkhart County Park and Recreation Board, 2000 Ind. App. LEXIS 2033* (12/14/2000). The Park Board's 1924 promise to build and "maintain" a bridge "to provide safe and secure crossing ... for all farming operations..." required the agency to upgrade the bridge to meet the needs of contemporary farming. The bridge was not locked in to the simpler needs of the farm in 1924. Doctrines favoring expansive use of the dominant tenement in the case of legal easements are transplanted to equitable easements; as with the legal easements, the potential for changes in use highlights the need for drafting with express limits. David Johnson, "One Step Forward, Two Steps Back: Construction of Restrictive Covenants after the Implementation of Section 202.003 of the Texas Property Code," *32 Tex. Tech. L. Rev. 355 (2001). See also* M. Madison, The Real Properties of Contract Law *82 B. U. L. Rev. 404* AT 445-459. *Compare* F. Parisi, Entropy in Property, *50 Am. J. Comp. L. 595, 629 (2002),* urging judicial property rules that counter fragmentation of ownership by rejecting Epstein's freedom of contract model.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.08

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.08 Defining "Touch and Concern the Land."

The thorniest scholarly disputes on real covenants arise from attempts to define "touch and concern the land." There are nearly as many definitions as commentaries. It is tempting to conclude that the concept should be discarded because it cannot be applied with integrity. n67 *Spencer's Case* makes no definition of touch and concern; instead, the Queen's Bench catalogues covenants which had been held to run or not run with land. The catalogue in *Spencer's Case* evokes a suggestion by Kenneth Culp Davis to soften "the extravagant version of the rule of law." n68 Noting the hazards and difficulties of "abstract generalizations," Davis concludes:

> "Seeing all around a complex subject is not a prerequisite to making a sound rule, because *a rule need not be in the form of an abstract generalization; a rule can be limited to resolving one or more hypothetical cases, without generalizing*." n69[italics in original]

The distillation of "abstract generalizations" may be a fixation of scholars, especially those charged with Restatements, and of some judges. n70 Despite the diversity of scholarly views, judges have been able to apply the concept to cases before them. n71 Relatively few restrictions unrelated to land development are written and enforced. n72 Those courts attempting a precise definition often fill the reporters attempting to overrule an unfortunate confluence of abstract language and hard facts. New York's history is instructive. In Miller v. Clary, n73 a precise rule to resolve a sticky case produced a holding that affirmative covenants do not touch and concern the land. n74 New York agonized through three generations of cases attempting to explain *Miller* n75 before reducing the affirmative nature of a covenant to one of several factors balanced in applying "touch and concern." n76

"Touch and concern" is really one approach to the question: "Should there be any limit on the type of promises which run with the land?" Current Scholarship contains several sorts of answers: *no* limits other than those which may apply generally to contracts, *ex ante* limits on promises [for which "touch and concern" is the prototype]; and *ex post facto* limits on promises [for which the *Restatement of Servitudes* is the model]:

> *A. No Limits*. This point of view has one vocal spokesman, Richard Epstein. Working from "freedom of contract" dogma, Epstein opposes limits on promises unless he can identify externalities which justify intervention in the marketplace. n77 Because Epstein believes that title recordation already provides protection from his only externality [lack of notice to innocent purchasers], he opposes further

legal doctrine limiting promises. n78 Epstein's contractarian model posits a type of freedom of choice in creating restrictions and in purchasing land bound by restrictions unseen in real life. n79 Gregory Alexander n80 and Stewart Sherk n81 are among those scholars challenging Epstein's views.

B. Bigelow/Clark Test. Characterizing it as a "scientific method of approach to the problem which seems to afford the most practical working tests," Charles Clark advocated Bigelow's analysis of "touch and concern." n82 The "science" in the test is real estate appraisal. On the burden side, the appraiser must determine if the promisor's "legal interest [is] rendered less valuable by the promise"; on the benefit side, the appraiser must conclude that the promisee's "legal interest as owner [is] rendered more valuable." Courts as well as scholars endorsed the approach. n83"The infirmity of the *Bigelow* test is its circularity." n84 Using the promise to provide permanent housing for the grantor's children in Schaefers v. Apel, n85 an appraiser could find that the obligation to house someone else's children reduced the value of the burdened property and increased the value of the benefitted property. n86 Yet, the Alabama Supreme Court had no difficulty in rejecting the promise as a real covenant. The *Bigelow/Clark* test measures the effect of certain promises without regard to whether the promises violate some underlying policy of "touch and concern." n87 The test also requires a duplex analysis of the benefit side and the burden side to determine "touch and concern." Other contending tests create a unitary test.

C. Reichman's "Land Utilization" Test. "Promoting the efficient utilization of land is more than a common characteristic of servitudes, it is the overriding policy governing these rights." n88 Reichman's approach predicts the decisions reached in most real cases. n89 Similarly without reference to Reichman's writing, the Oregon courts required that a covenant "somehow respect the use of the land" in holding that System Development Credits earned by a landowner who provided necessary infrastructure did not run with the land. n90 Reichman's claim that the test is "objective" n91 is criticized because it presupposes a "collective vision of what that [private land holding system] is supposed to do." n92 That criticism is equally applicable to most of the judge-made rules on common law property. Judges assume that they understand what the system is designed to accomplish and freely make rules according to that understanding.

D. Berger's Expectations Test. "The expectation that promises must either run with the land or be personal ... is based on an ostensibly logical but actually unsound policy foundation ... . [T]he normal expectations of society is the test." n93 Because it provides less predictability and greater flexibility than other tests, Berger's approach shades into *ex post facto* approaches, despite its billing as "touch and concern." The test interacts with Notice concepts and transforms the validity question into a fact issue for juries rather than a legal question for judges. Specialized communities with bold-face disclosure of expectations could form under this approach. A condominium targeted at single-parent families might include a real covenant to contribute four hours per week of cooperative child care if the condominium gave proper notice [more than recorded declarations might be needed to satisfy a jury].

E. Multi-factor Balancing Tests. Eagle Enterprises v. Gross n94 and Davidson Bros. v. D. Katz & Sons, Inc. n95 are leading cases employing multi-factor balancing tests. *Eagle Enterprises* finesses earlier New York analyses of "touch and concern" by discounting former mandates to factors; instead of a rule banning affirmative covenants outside of leases, the balancing considers affirmative nature of the covenant and the duration of the covenant as factors. The reporter of the *Restatement of Servitudes* classifies *Eagle Enterprises* as an *ex ante* approach, asserting that the balancing is based on circumstances at the time of litigation, rather than at the effective date of the covenant. n96 *Davidson Bros.* extends the usual rules for non-competition covenants in employment contracts to real covenants; "touch and concern" becomes one of eight factors in establishing "reasonableness." n97 Some of the factors are set *ex ante* by the creation of the servitude; n98 some emerge and change over time; n99 and one is only an *ex post facto* determination at the time of litigation. n100 One commentator asserts the multi-factor approach in *Davidson Bros.* "unnecessarily clutters the inquiry" of covenants' running. n101

The collected cases cited in *Davidson* n102 and the further adoption of multi-factor balancing tests n103 suggest an emerging rule that could become a majority, especially with Reichman's concerns for land utilization blended effectively into the balancing.

F. *Restatement of Servitudes*. Many elements of the new *Restatement* could be equated with *Eagle Enterprises* or *Davidson Bros.* were it not for the *Restatement'* s insistence that "touch and concern" is no longer required. n104 while the judges believe that they are simply embellishing "touch and concern." n105 In some instances, tests which are merely factors to be balanced in the cases n106 become hard rules in the new *Restatement*. n107 The bulk of the new *Tentative Draft #2* inventoried the public policies applicable or not applicable to the validity of servitudes. n108 Additional public policies will appear in *Tentative Draft #3*. n109 Essential to the elimination of "touch and concern" is the Reporter's conclusion that cases applying the doctrine are either using it as a guise for other substantive policies [those listed in §§ 3.3 to 3.10] or are making a determination that a once-valid covenant has become obsolete. n110

(n5)Footnote 71. In response to a lexis search for "Touch and Concern the Land" in documents with covenant or servitude, 165 cases appear. Most of the 165 actually turn on issues such as intent or interpretation of the scope of the restrictions; "touch and concern" is ritually recited with all elements. In those cases with a holding on "touch and concern," judges evince little difficulty in resolving most cases. For example, Alabama's supreme court had little struggle in concluding that a promise by a grantee to "provide a permanent home" for the grantor's daughter and son did not touch and concern the land, *Schaefers v. Apel, 328 So. 2d 274 (Ala. 1976),* or in concluding that a promise not to subdivide land did touch and concern the land, *Little v. Hunter, 265 So. 2d 441 (Ala. 1972).*

(n6)Footnote 72. *Taormina Theosophical Community, Inc. v. Silver, 190 Cal. Rptr. 38 (1983),* stretches the bounds of "touch and concern" with covenants requiring adherence to certain beliefs. That case turned on California statutory interpretations and reached a result which would no longer be possible for new restrictions after statutory amendments, *190 Cal. Rptr. 38.*

(n7)Footnote 73. *103 N.E. 1114 (N.Y. 1913).*

(n8)Footnote 74. The most common affirmative covenant is the promise by a tenant to pay rent. New York's rule does not apply to that affirmative covenant. Miller v. Clary's holding did not apply to the largest class of instances covered by the generalization: as fully described, *Miller v. Clary* held that affirmative covenants, other than those in

leases, do not touch and concern the land, except for several instances in which affirmative covenants do touch and concern the land.

(n37)Footnote 103. *Hotz v. Rich, 6 Cal. Rptr. 2d 219 (1992). Cf., Portola Hills Community Ass'n v. James, 8 Cal. Rptr. 2d 580 (1991). Regency Homes Ass'n v. Egermayer, 498 N.W.2d 783 (Neb. 1993)* (applying the *Bigelow/Clark* test from Neponsit Property Owners' Assn. v. Emigrant Indus. Sav. Bank, *supra* n.65, the Nebraska court adds a multifactor balancing test to determine the validity of a lien for unpaid dues to a recreational facility).

(n38)Footnote 104. Restatement of Servitudes, *supra* note 1,§ 3.2. James Winokur, "Ancient Strands Rewoven, or

Fashioned out of Whole Cloth?: First Impressions of the Emerging Restatement of Servitudes," *27 Conn. L. Rev. 131, 140 (1994),* concludes that "contrasts between the old touch and concern rule and the new Restatement replacement fade a bit upon closer examination." Dan Tarlock finds continued vitality in the old law in "Touch and Concern Is Dead, Long Live the Doctrine," *77 Neb. L. Rev. 804 (1998),* Susan French defends the new Restatement in "The Touch and Concern Doctrine and the Restatement (Third) of Servitudes: A Tribute to Lawrence E. Berger," *77 Neb. L. Rev. 653 (1998).*

(n39)Footnote 105. "We do not abandon the "touch and concern' test ..." *Davidson Bros.* at 295. *Garland v. Rosenshein, 649 N.E.2d 756, 758 at n.4,* (Mass. 1995), declines an opportunity to adopt the new Restatement's approach to touch and concern in holding that a covenant prohibiting development of a parcel is personal where the promisee owns no benefitted land. Notwithstanding the new Restatement, ex ante "Touch and Concern the Land" is alive and well in the American judiciary. *See, e.g., Mapleton Utils., Inc. v. Foxcliff S. Assocs., 673 N.E.2d 5 (Ind. App. 1996)* (a 1985 agreement granted easements to a utility company in exchange for "utility rebates" in a newly developed adjoining area. Requiring that a promise must have a "relation to the interest or estate granted, and the act to be done must concern the interest granted or conveyed," the court held that the promise may have benefitted the new adjoining development but did not "touch and concern" the easements actually conveyed); *Vulcan Materials Co. v. Miller, 691 So. 2d 908 (Miss. 1997)* (Miller transferred his options to purchase limestone deposit in return for royalties on limestone production on the transferred tracts and on any other land operated by the buyer. This arrangement, described as "a virus running with the land" by a lower court, was found not to "touch and concern" the land; however, it was enforced against a purchaser who had expressly assumed the obligation. Query: What is this case, clearly about the payment of money, doing in a chancery court?). *Paloma Investment Limited Partnership v. Jenkins, 1998 Ariz. App. LEXIS 181, 280 Ariz. Adv. Rep. 3* (10/13/98) (a Water Rights Agreement that entitled Jenkins to 20% of all net proceeds from the transfer of a ranch's water rights was not a covenant because the promise did not "touch and concern the land." *280 Ariz. Adv. Rep at 20.* The agreement was enforceable as a royalty). *Workman v. Brighton Properties, Inc., 976 P.2d 1209 (Utah 1999),* eased or perhaps eliminated the "touch and concern" element for covenants by enforcing a promise to pay for a water system in one subdivision against property in a second noncontiguous subdivision a mile away.

(n40)Footnote 106. "6. Whether the covenant imposes an unreasonable restraint on trade ...";

"7. Whether the covenant interferes with the public interest." *Davidson Bros., 679 A.2d at 295.*

(n41)Footnote 107. "A servitude that imposes an unreasonable restraint on trade or competition is invalid." Restatement of Servitudes, *supra* note 1, § 3.6.

"A servitude ... is valid unless ... [it] violates public policy." Restatement of Servitudes, *supra* note 1, *T.D. #2,* § 3.1.

(n42)Footnote 108. § 3.3. "The Rule against Perpetuities does not apply ..."

§ 3.4. "Direct Restraints on Alienation ..."

§ 3.5. "Indirect Restraints on Alienation ..."

§ 3.6. "Unreasonable Restraints on Trade or Competition ..."

§ 3.7. "Unconscionability ..." Restraints on alienation in covenants have received increased attention in both cases and law reviews. *Indian River Colony Club, Inc. v. Bagg, 727 So. 2d 1142, 24 Fla. Law W.D. 757 (Fla. App. 5th Dist. 1999)* (upholds a covenant requiring forced sell-back to development by departing residents in a closely knit community of former warrant officers who enjoy club privileges comparable to those experienced during military service); *Prieskorn v. Maloof, 1999 N.M. App. LEXIS 104, 1999 NMCA 132, 38 N.M. St. B. Bull. 48 (1999)* (a forfeiture clause prohibiting immorality and the sale of liquor does not become an "unreasonable restraint" simply because the unavailability of title insurance stifles sales); Brophy and Ghosh, "Whistling Dixie: The Invalidity and Unconstitutionality of Covenants

against Yankees," X Villanova Envt'l L. J. 57 (1999).

(n43)Footnote 109. "Interests in privacy, personal autonomy, freedom of speech, expression and association, and freedom from various forms of discrimination." Restatement of Servitudes, *supra* note 1, *T.D. #2, Introduction* at xvi. In 1998, the A.L.I. approved a reworked completion of Chapter 3 concluding that servitudes are valid unless illegal, unconstitutional or in violation of public policy. The original provisions were thought too controversial in 1991, and the final versions still raised concerns about vagueness. "Completed Restatement of Servitudes Adapts Ancient Law to Modern Times," *supra* Note 4. For one of the additional policy concerns, "freedom from various forms of discrimination," the judiciary has moved ahead dramatically without guidance from the Restatement of Servitudes. In implementing the Fair Housing Act, judges have enjoined enforcement of "single-family only" restrictions. *See, e.g., Martin v. Constance, 843 F. Supp. 1321 (E.D.Mo. 1994); Hill v. Community of Damien of Molokai, 911 P.2d 861 (N. Mex. 1996); Deep East Texas Regional Mental Health and Mental Retardation Servs. v. Kinnear, 877 S.W.2d 550 (Tex. App. 1994). Cf. Terrien v. Zwit, 648 P.2d 602 (Mich. 2002)* (in an opinion advocating a limited role for the judiciary in defining "public policy," enforces covenant prohibiting "commercial, industrial or business uses" to exclude "family day care center" and rejects trial court and dissenting judges claim of public policy invalidating the restriction as applied). *But see* M. Duncan, "Reconceiving the Bundle of Sticks: Land as a Community-Based Resource," *32 Envt'l Law 773, 803 (2002).* A covenant prohibiting buyers from opposing a developer's future attempts to rezone property was invalidated based on public policies expressed in Georgia's "anti-SLAPP suit" law. *Providence Construction Co. v. Bauer, 494 S.E.2d 527 (Ga. App. 1997).* Conducting religious services in a home violated a single-family covenant and could be enjoined without violating state or federal policy. *Tien Tao Ass'n, Inc. Kingsbridge Park Community Ass'n., 953 S.W.2d 525 (Tex. App. 1997).* In the *Matter of Holliday, 14 FCC 17167, 1999 FCC LEXIS 5039* (10/8/99), finds FCC preemption of architectural review of plans for five 30' masts with five television antennas and three satellite dishes. The FCC finds a one-dish limit "arbitrary" because the limit relies on aesthetics and "not a valid safety basis." *Reagan Nat. Advertising of Austin, Inc. v. Capital Outdoors, Inc., 96 S.W.3d 490 (Tex. Ct. App. 2002)* (cites Restatement of Property for policy against restraints on alienation).

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.09

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.09 Applicability of Touch and Concern to Equitable Servitudes.

[Go To Supp]

> "The common law requirements of "privity' and "touch and concern' are weighted with fine distinctions and are the subject of much disagreement among courts and legal scholars ... .[T]he numerous demands ... can be reduced to the two requirements for the creation of equitable servitudes: *viz.*, intent and notice." n111
>
> "American courts probably apply the same touch and concern requirement to the burdens of equitable servitudes as they do to real covenants." n112

The perception that "touch and concern" does not apply in equity arises partly from the historical fact that early equitable servitudes were negative promises that did not raise the "affirmative covenant" bugaboo which preoccupied 19th century cases on "touch and concern." n113 Lawrence Berger accurately identifies an "underlying (and perhaps unconscious) assumption that the covenant must be land-related or "touch and concern' the land before a subsequent purchaser would be bound" in the language of Tulk v. Moxhay. n114 At the very least, the flexible canons of equity offer opportunities to consider the varying policies identified in § 62.07 as support for "touch and concern." n115

(n4)Footnote 114. *Id.*

(n5)Footnote 115. *Nahrstedt v. Lakeside Village Condominium Ass'n, 878 P.2d 1275 (Cal. 1994),* interprets Cal. Civil Code § 1354 providing that use restrictions are "enforceable equitable servitudes, unless unreasonable." In a suit by a cat lover to prevent enforcement of a no-pet restriction, the court rejected a lower court's requirement that such covenants could be enforced "only upon proof that plaintiff's cats would be likely to interfere with the right of the homeowners to 'peaceful and quiet enjoyment of their property." Rejecting a lot-by-lot evaluation of reasonableness, the court supported uniform enforcement of a restriction unless the burdened owner "can show that the burden it imposes on affected properties so substantially outweighs the benefit of the restriction that it should not be enforced against any owner." (emphasis added)

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.10

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.10 A Problem at the Boundary of Elements: Servitudes in Gross.

Servitudes in gross present two kinds of issues: first, the static benefit held in gross while the burden purportedly binds successors and, second, possible attempts to assign the benefit. The initial creation of a servitude in gross presents difficulties under some "touch and concern" tests, especially the *Bigelow/Clark* test analyzing the impact of the servitude on interests in land on both sides of the transaction. At law, servitudes in gross run afoul of some concepts of privity. n116 Even in equity, where privity is not directly applicable, a servitude in gross may not be protected under chancery rules relegating suits to ordinary contract remedies unless property interests are directly threatened. n117

Professor French, reporter for the new *Restatement*, identified several policy reasons against servitudes in gross, besides the ritualistic favor for "free alienation and unfettered use." Without a fully-developed recording system, as in English common law, an appurtenance requirement enhances "notice" because servitudes can be discovered through neighborhood inquiry. n118 In effective recording systems, the fact of a servitude in gross may be discoverable; but the current location of its owner will not necessarily be a public record. When landowners seek relief from obsolete servitudes, nearby land with appurtenant servitudes may rise in value when the burdened land is properly developed; n119 the holder of a benefit in gross may act as an obstructionist hold-out for windfall greymail.

Professor French also saw advantages to servitudes in gross, particularly for the categories of Environmental Easements treated in later sections of this chapter. n120 Statutes often address the right of enforcement in gross for facade easements, conservation easements and the like. n121 Many servitudes in gross can be legitimated under current law by bundling the promise with an additional interest. n122

Restatement of Servitudes § 2.6 declares that "the benefit of a servitude may be created to be held personally, in gross... ." The policies objections identified by the reporter in her earlier articles are addressed directly in other sections or treated as *de minimis*. n123 Assignment of benefits in gross was "a subject for another day" in 1982; pending the tentative drafts on succession, guidance may be found in the fact that "benefits in gross are *freely* permitted." n124

Balatsos, 113 A.2d 492 (N.H. 1955); 132 A.2d 142 (N.H. 1956);* Zecharia Chafee, "The Music Goes Round and Round: Equitable Servitudes and Chattels," *69 Harv. L. Rev. 1250 (1955),* would have no difficulty as a legal easement with a seal added or as a lease with a particular location possessed by the juke box.

(n8)Footnote 123. Restatement of Servitudes, *supra* note 1, § 2.6, Reporter's note to Comment d.

(n9)Footnote 124. Restatement of Servitudes, Tent. Draft #4 (1994), § 4.6 (1) provides: "Except where application of the rules stated in § 4.1 [Interpretation of Servitudes] leads to a different result, a servitude benefit that is not personal is transferable as follows ... . (b) A benefit in gross is freely transferable." § 8.1 of the Restatement of Servitudes eliminates ownership of benefitted land as a prerequisite to enforcement of servitudes. Harm to some legitimate interest is still required to show standing. Restatement of Servitudes, supra note 1, *T.D. #1,* § 2.6, Comment d.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.12

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.12 Some Theories of Equitable Servitudes.

While transparent on utility, Tulk v. Moxhay was cryptic on theory. Sections of the opinion pose contract as the underpinning of equitable servitudes. n129 Other sections suggest a property interest such as an easement. n130 Professor Reno's exhaustive analysis offers historical support for both contract and property theory. n131

The contract theory traces to the consequential litigation occasioned by Ms. Wagner's failure to sing in Mr. Lumley's auditorium. Mr. Lumley's right to specific performance against Ms. Wagner imposes a duty on third parties not to interfere with the equitable remedy. n132 The modern descendant of Lumley's remedy appears in the suit by the Boston Patriots against University of Colorado boosters for enticing Chuck Fairbanks when Fairbanks had a contract to coach the Patriots. An advantage of the contract theory is that it supports affirmative obligations and personal liability for damages for interference to the equitable right. *In personam* liability attaches for meddling with *in rem* rights. The contract theory can effectively circumnavigate from equity back to remedies at law associated with real covenants. An implied assignment passes the benefit from promisee to successors. The contract theory more clearly avoids the issue of legal privity in the creation of equitable rights. n133

The property theory elongates the legal doctrine of equitable easements to a new situation, begetting an equitable property interest like the use or trust. The property/easement theory more easily explains why the original promisor can be relieved of an obligation after transferring the affected land, provides a ready explanation for passing of the benefit to the purchaser of benefitted land, and is more likely to produce just compensation when the affected land is condemned for uses which violate the servitude. n134 Affirmative obligations present greater challenges which are sometimes met by equitable analogies to "spurious easements." n135

Both property n136 and contract theories n137 have illustrious supporters. In the parallel development of contract and property theories in common schemes of development, *infra* at § 62.14, Justice Kenneth O'Connell typifies a pragmatic approach to theory:

> Some courts have regarded the prior grantee as a third-party beneficiary of a contract ... . A second theory, recognized by some courts, recognizes the creation of an implied reciprocal servitude ... . We feel free to employ either of these theories, as the case may demand... n138

Legal theory has moved from attempts to explain equitable servitudes by some exogenous source like contract or easements. After integrating equitable servitudes and real covenants, n139 scholars now attempt to integrate all servitudes into one system. n140 Cases like Davidson Bros. indicate judicial progress in justifying results on servitudes because of the legitimate needs of a system of restrictions, without limits imposed by systems of contract and easements created to meet different needs.

FOOTNOTES:

(n1)Footnote 129. "This court has jurisdiction to enforce a contract between the owner of land and his neighbor purchasing a part of it ... . Here there is no question about the contract ... . [T]he question is, not whether the covenant runs with the land, but whether a party shall be permitted to use the land in a manner inconsistent with the contract entered into by the vendee, and with notice of which he purchased." 2 P-H. 777-778.

(n2)Footnote 130. "For it an equity is attached to the property by the owner, no one purchasing with notice of that equity can stand in a different situation from the party from whom he has purchased." *Id.* The servitude is kin to an iron pin used for boundary markers.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.13

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.13 The Notice Element of Equitable Servitudes.

The imposition of an additional "notice" stricture for equitable servitudes is comprehensible in light of the redundant emphasis on the word "notice" in Tulk v. Moxhay. n141 French ascribes the element to Britain's lack of an effective recording system. n142 The independent "notice" element can furnish either more or less protection for the burdened successor than already exists in law. n143 As less protection, one may consider the rights of burdened parties under common schemes discussed in the next section.

FOOTNOTES:
(n1)Footnote 141. "Covenants Respecting the Use of Land," 5 Powell on Real Property, *supra* note 39, P 673[2][d] (Rohan ed., 1991). Quotations from Tulk v. Moxhay, *supra* notes 87, 88.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.14

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.14 Common Schemes of Development.

[Go To Supp]

A well-designed system of covenants will establish the geographic, temporal and substantive limits of the restrictions applicable to the development. Implementation of such a system may include: filing a plat describing the land within the development, simultaneously filing a declaration of restrictions establishing the restrictions applicable to the various segments described in the plat and selling property by reference to the plat and declaration. n144

Where a developer has established uniform restrictions with clear physical boundaries, the restrictions are described as a "Common Scheme of Development." n145 The concept of a common scheme is useful even where proper procedures are followed in drafting and recording the system of restrictions. For example, restrictions phrased as personal obligations of the developer can be construed to bind and benefit all buyers within the subdivision where a common scheme is demonstrated. n146

The common scheme can provide guidance for discretionary functions performed by boards and committees, n147 although a well-drafted document cannot eliminate all of the risks of such discretionary functions. n148 The right to "change or modify" restrictive covenants includes the power to impose assessments secured by liens to maintain facilities and infrastructure. n149 Wise v. Harrington Grove Community Association, Inc., n150 held that planned community under state statute had no right to impose fines for violating restrictions in the absence of express authority in articles and bylaws.

The more challenging and problematic use of the common scheme is in establishing implied intent and notice where a developer has not followed careful procedures. For instances of inadequate documentation and notice, the presence of widespread - although not necessarily universal - similar restrictions on lots sold by a single developer can raise an inference that development-wide, mutually enforceable restrictions are intended. n151 Moreover, the presence of such widespread restrictions can give notice of the existence of an intent to mutually bind and benefit all lots within the development. n152

Two theories are advanced for the inferences raised by the existence of a common scheme. As with the theories for

equitable servitudes generally, n153 either a property model or a contract model can support those inferences:

> 1. The property theory, reciprocal negative easement, posits an implied mutual intent to bind and benefit all property held by the developer when the developer first extracts a promise from a buyer. n154 The first express restrictions set the pattern for implied restrictions on all remaining unsold lots. The presence of similar express restrictions in later transfers provides evidence of the implied intent in the first restrictive transfer. A pattern of development in accordance with the implied restrictions creates "notice" of the implied intent to bind all lots, even those not expressly restricted. n155 The reciprocal negative easement has no retroactive power to bind lots sold before the first express covenant by a buyer. n156
>
> 2. The contract theory is essentially an extension of third-party beneficiary theory to an entire development. n157 The theory relies on an implied intent that an express covenant was intended to benefit all buyers within the development. n158 The contract theory can bestow retroactive benefits on lots sold before the first express restriction. Retroactive burdens would require some peculiar extension of mutuality or innovative third-party burden theory. n159 The contract-based common scheme of development in modern practice may include mixed-use developments with non-uniform restrictions. n160

The common scheme can impose unforeseen burdens on some purchasers of property which is apparently unrestricted. The rights of those unexpectedly burdened buyers are balanced against the rights of the majority of buyers who purchased restricted lots in expectation of a uniformly restricted development. Common scheme cases may represent a primitive type of land-buyer consumer protection making utilitarian balancing in favor of the expectations of the greatest number at the expense of the rights of a few. Developers who sell lots restricted individually, rather than restricted in bulk by methods such as filing of a declaration, may be engaged in their own "scheme" to maintain flexibility to abort a pattern of restrictions if market conditions change or were ill-judged initially. n161

Conservative interpretative canons of construction - such as construction against a grantor, interpretation fixed at the moment of delivery and constructional preference for unfettered use of land - undercut the implied intent and notice for incomplete common schemes. California's cases represent a consistent line of precedent against implied common schemes. n162

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.15

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.15 Changed Conditions as a Defense to Enforcement.

Obsolete restrictions are a concern in the development market. n163

For covenants at law where only damages are available as a remedy, obsolescence is solved by the inability to prove monetary harm when restrictions cease to serve their function. For equitable servitudes, where injunctions may be available to complainants unable to prove any real damages, obsolescence is not a self-solving problem. n164

Courts have developed two doctrines under the rubric of "changed conditions" to remove equitable enforcement of outmoded servitudes:

1. Trustees of Columbia College v. Thacher n165 is the root of the earlier theory of changed conditions. After an elevated railroad was built through an area restricted to residential uses, the court concluded that "the land in question furnishes an ill seat for dwelling houses." The original purpose of the restrictions could no longer be fulfilled under the el tracks. New York's approach to changed conditions is a precursor of the contract doctrine of frustration of purpose. n166 In the absence of an express statement of purpose in the restrictions, the court will determine the purpose. n167 After a trial court found changed conditions relieved enforcement of a non-compete clause protecting an original lessee who was not currently operating a grocery store in the shopping center, the appellate court ruled that the absence of a competing grocery store could still be an important motive for renting retail space used for another store. n168 In another application of frustration of purpose, *River Heights Associates v. Batten*, n169 limited evidence of change to those occurring inside the subdivision; a widened highway and strip commercial abutting the undeveloped lots at the periphery of the subdivision were not relevant where the only changes within the boundaries of the subdivision were aging homes and maturing trees.

2. Downs v. Kroger n170 is the fundamental precedent for the second theory for changed conditions. Rather than consider the functionality of the restrictions over the whole development, *Downs* weighs the hardship of enforcement against individual lots, particularly those lots at the perimeter of the restricted area. *Downs* is analogous to the rules for variances in zoning. n171 Hardship on the perimeters of restricted areas is an entirely predictable outcome. If there were no pressures in the marketplace for uses other than those to which the restrictions limit the land, there would be no need for the restrictions.

> Those pressures for other uses are inevitably experienced strongly where the restricted development abuts other unrestricted land. Intelligent buyers of perimeter lots should discount appropriately in anticipation of those difficulties. The hardship approach to changed conditions may offer relief from the normal forces in the land market, not from unique unanticipated conditions. n172

In practice, the two theories may be discussed interchangeably without regard to their different underpinnings and implications. Burden v. Lobdell n173 quotes *Annot., 4 A.L.R.2d 1114 (1949):* "Consequently, for a change in neighborhood conditions to relieve against enforcement ... such change may be so radical as to render the restrictions unreasonable, confiscatory, and discriminatory [*Downs*], or as practically to destroy the purpose for which the restriction was originally imposed [*Thacher*] ... ." [bracketed notations added]. n174

COMPUTER-ASSISTED RESEARCH

LEXIS: change! w/2 condition! w/30 restrict! or easement! or servitude! or covenant!

FOOTNOTES:

(n1)Footnote 163. Servitudes are not terminated by the Rule against Perpetuities that may erase obsolete development limits enforced by forfeiture. *See* R. Link & K. Licata, Perpetuities Reform in North Carolina: The Uniform Statutory Rule against Perpetuities, Nondonative Transfers, and Honorary Trusts, *74 N. C. L. Rev. 1783, 1837 (1996):*

> The better view is that restrictive covenants are not subject to the common-law Rule or the USRAP. *See* Restatement (Third) of Property (Servitudes) 3.3 (Tentative Draft No. 2. 1991), Hess, *supra* note 32, at 275, n. 40. The duration of restrictive covenants is regulated by the doctrine of changed conditions whereby an outmoded covenant becomes unenforceable.

Cf. J. Mahoney, "Perpetual Restrictions on Land and the Problem of the Future," *88 Va. L. Rev. 739 (2002),* expressing concern about the unlimited duration of Conservation Easements. See, infra, at § 61.28.

(n2)Footnote 164. Although the origin of the doctrine was in equity as a defense to specific relief, some cases use the doctrine to bar legal actions for damages. *See* cases collected in Gerald Korngold, Private Land Use Arrangements § 11.07 at n. 137 (1990). *See* Michael Heller, "The Boundaries of Private Property," *108 Yale L. J. 1163 (1999),* which expresses concern about potential risks from fragmentation of property interests that may, among other problems, lock common interest associations "into low-value uses resulting in a tragedy of the anticommons." *Id. at 1185.*

(n3)Footnote 165. *87 N.Y. 311 (1882).*

(n4)Footnote 166. *Whitling v. Snyder, 659 N.E.2d 423 (Ill. App. 1996),* quotes Roscoe Pound, The Progress of the Law, 1918-19, Equity, *33 Harv. L. Rev. 813, 821 (1920):* "The duration of the servitude is determined by its purpose."

(n5)Footnote 167. *Chesterfield Meadows Shopping Center Assoc. v. Smith, 568 S.E.2d 676 (Va. 2002)* gave great weight to testimony by the original promissee of the covenant in concluding that the essential objects and purposes of a restriction protecting an historic structure had been practically destroyed by general change to a commercial area

(n6)Footnote 168. *Tippecanoe Associates v. Kimco Lafayette 671, Inc., 811 N.E.2d 438 (Ind. App. 2004).*

(n7)Footnote 169. *591 S.E.2d 683 (Va. 2004).*

(n8)Footnote 170. *254 P. 1101 (Cal. 1927).*

(n9)Footnote 171. *See generally* Daniel R. Mandelker, Land Use Law §§ 6.35-6.45 (2d ed. 1988).

(n10)Footnote 172. *Cf. Klefstad Companies, Inc. New Boston Allison Ltd. Partnership, 2000 U.S. Dist. LEXIS 14637* (S.D. Ind. 9/29/2000). As a matter of law, restrictions setting up mixed-use common scheme did not violate public policy and were not subject to changed conditions defense simply because current market conditions diminished value of a project complying with the original plan for "a twelve-story Office Tower with small floor plates."

(n11)Footnote 173. *235 N.E.2d 660, 663 (Ill. App. 1968).*

(n12)Footnote 174. *Smith v. Chesterfield Meadows Shopping Center Associates, 523 S.E.2d 834 (Va. 2000),* allows extrinsic evidence to show the purpose of restrictions challenged under the changed conditions doctrine.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.17

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.17 Statutory Reforms: Time Limits and Obsolescence.

Legislation terminating servitudes may address the broad public policy implications of antiquated restrictions that obstruct beneficial development patterns or it may serve narrow private interests of influential politicians. n181 The laws enacted have been of varying complexity.

Georgia's original statute represents the simplest model of legislation: a twenty-year time limit on the enforcement of covenants restricting use in zoned areas. n182 The twenty-year limit happened to coincide with the age of covenants preventing the development of Lenox Square Shopping Center by a well-connected builder. As condominium and other development forms have created a demand for more durable restrictive agreements, n183 especially to counter the judiciary's pro-development standards for review of zoning, n184 the legislature has retreated from the time limit. House Bill 556 of the 1993 Legislative Session amended O.C.G.A. § 44-5-60 to provide automatic renewal of covenants for an indefinite series of twenty-year periods. n185

Massachusetts General Laws c. 184, § 30, inserted by St. 1961, c. 448, § 1, is a more intricate approach to removing restrictions. Unlike Georgia's old law, which provided no compensation for eradicated servitudes, the Massachusetts law removes equitable enforcement while paying damages for servitudes which retain value. n186 Several of the provisions of the Massachusetts law merely track existing equity doctrines. n187 The innovative provisions of the statute allow a court to deny equitable relief when enforcement is "not in the public interest." Under traditional judicial rules, "a restrictive covenant cannot be construed according to the results of a local election or plebiscite as to whether it should be enforced. It is individual and specific and intended to be enforced by anyone who entered into it in good faith and wishes to retain its benefits for his own property." n188 In Massachusetts, private property interests in servitudes are now subject to the public's iron whim. Targeted state laws may "reinterpret" specific types of restrictions to change their effect. n189 Federal bankruptcy law may "launder" real property from covenants and servitudes when a trustee conveys property "free and clear of all liens, charges and encumbrances." n190

FOOTNOTES:
(n1)Footnote 181. *See* dissenting opinion of Quirico, J., in *Blakeley v. Gorin, 313 N.E.2d 903 (Mass. 1974),* recounting legislative accommodations for a site owned by Cabot, Cabot & Forbes.

(n2)Footnote 182. O.C.G.A. § 44-5-60, old Code § 29-301, upheld as constitutional against a taking challenge in *House v. James, 207 S.E.2d 201 (Ga. 1974). Cf. Palm Beach County v. Cove Club Investors Ltd., 734 So. 2d 379,* (Fla. 1999), finds a taking of a club's rights to dues payable from assessment on lot condemned by County.

(n3)Footnote 183. *See* Seth G. Weissman & Clara L. Fryer, "Recommended Changes in the Law Affecting Condominium and Homeowner Associations in Georgia," 1 Ga. St. L. Rev. 185 (1985).

(n4)Footnote 184. James S. Altman, Paul Bolster & James L. Bross, "Judicial Review of Georgia Zoning: Cyclones & Doldrums in the Windmills of the Mind," 2 Ga. St. L. Rev. 97 (1986).

(n5)Footnote 185. *Appalachee Enters. v. Walker, 463 S.E.2d 896 (Ga. 1995),* found an impermissible interference with vested property rights in the new act's attempt to extend those existing covenants whose twenty-year time limit had not yet expired. The holding limits the application of the statute to those covenants created after the effective date of the statute and leaves a ticking time-bomb of doubt about the status of use restrictions in preexisting condominiums. Although Georgia's new procedure for renewal of covenants did not apply to pre-existing restrictions, a property owner who participated in an ineffective attempt to renew older restrictions could be bound by promissory estoppel. *Canterbury Forest Ass'n v. Collins, 532 S.E.2d 736 (Ga. App. 2000).*

(n6)Footnote 186. *Blakeley v. Gorin, supra n.7,* upheld the Massachusetts law against a taking challenge. The case supplied two alternative rationales:

> 1. If there was a taking, just compensation was paid under the damages remedy and the taking was for a public use under urban renewal precedent.
>
> 2. There was no taking because only the remedy, not the substantive property right, was removed. This second rationale appears difficulty under *Riverbank Improvement Co. v. Chadwick, 117 N.E. 244 (Mass. 1917),* which invalidated an earlier Massachusetts law as a taking. *Blakeley* does not overrule *Riverbank.*

(n7)Footnote 187. "Changes in the character of the properties affected ..." mirrors changed conditions. Another section describes waiver, laches and estoppel.

(n8)Footnote 188. *Cordogan v. Union Nat'l Bank of Elgin, 380 N.E.2d 1194 (Ill. App. 1978). Hostler v. Green Park Development Co., 986 S.W.2d 500 (Mo. App. 1999),* holds that "zoning ordinances cannot defeat the rights of a landowner in a covenant because zoning is not a proper condemnation action."

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.18

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.18 Introduction to Environmental Easements.

For certain purposes to which equitable servitudes are otherwise suited, two characteristics are consequential flaws: lack of durability over long periods of time n191 and lack of assurance that equitable servitudes can be enforced in gross by individuals and organizations without land clearly benefitted by the servitude. n192 New categories of statutory servitudes have arisen to address those two flaws for specified classes of restrictions, primarily restrictions serving environmental purposes. n193 Iowa immunizes scenic easements from the changed conditions doctrine n194 while Georgia excepted scenic easements from its old statutory time limit on servitudes limiting use. n195 Montana, a Field Code state, lists easements "conserving open space to preserve park, recreation, historic, cultural and natural values" under both "easements attached to land" n196 and "easements not attached to land." n197 In their ambidextrous capacity to be either appurtenant or in gross, Montana's preservation easements are classified with the right to a particular seat in a church under the Code.

FOOTNOTES:
(n1)Footnote 191. Primarily as a result of the defenses discussed in §§ 62.15-62.17. Jeffrey Tapick, Student Note: "Threats to the Continued Existence of Conservation Easements," *27 Colum. J. Envtl. L. 257 (2002).*

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.19

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.19 Conservation Easements: Natural Areas.

"A conservation easement is designed to preserve the servient land in an undeveloped or natural state." n198 Conservation easements for natural areas were the thrust of the first wave of statutes creating environmental easements. The impetus for those statutes were two of the strangest bedfellows in environmental law: Highway Departments and the Nature Conservancy. State Highway Departments, "encouraged" by federal policy and the threat of lost federal funding, lobbied for easements conserving the views from and natural ambiance around highways; n199 there is no evidence of any sense of irony in the lobbying by highway builders. Among the non-highway conservation easements are those for Columbia River Gorge, n200 the Connecticut River, n201 natural areas, n202 scenic easements, n203 scenic urban waterways, n204 trails, n205 wild & scenic rivers, n206 and the Willamette River Greenway. n207 Donations of conservation easements to non-profit organizations like the Nature Conservancy or to governments n208 are often tax-motivated. n209 Expanded taking rules applicable to stringent limits on development may spur government interest in environmental easements. n210

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.22

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.22 Introduction to Solar Access.

Solar access would be simple if the sun pointed directly downwards toward all points on the earth's surface. Solar access would be relatively simple if the earth were flat enough and stable enough for sunshine to strike all points at a relatively high angle during all seasons. Unfortunately, the earth is an oblate spheroid; and the spheroid tilts its beltline in relation to the sun through seasonal precession. In the Northern Hemisphere, the sun strikes the earth at a high angle during the summer and at a low angle during the winter. The change from summer to winter is largest in the most Northern latitudes where solar heating is most useful in the winter. As the following illustration demonstrates, natural and man-made objects can easily interfere with solar access during the winter. Without legal control over land south of the solar installation, the user of solar energy may find substantial investments rendered meaningless. The most straightforward control of the obstructing land is through merger, i.e., by buying enough land south of the collector to prevent all possible interference. The sections which follow present methods of protecting solar access other than merger.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.23

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.23 Some History of Light & Air Easements: Ancient Lights and Spite Fences.

American common law rejected those aspects of English law inconsistent with our more rambunctious and utilitarian view of land. Among the rejected precepts of English law was the Doctrine of Ancient Lights, a form of prescription which permitted gawking across another's land to ripen into a permanent right to gawk across another's land. n218 Because English law allowed prescription by staring, English landowners were entitled to erect walls to obstruct views before they could ripen into immutability; without the need to interrupt prescription, n219 American law might consider some useless, but spiteful, wall-building tortious. n220 American cases resolutely uphold a landowner's right to build useful structures, even where those structures obstruct, block views, light and air for neighboring properties. n221 Under spite fence doctrine, the owner of a solar collector could enjoin an barrier only if the barrier were useless for any purpose other than obstructing sunlight.

FOOTNOTES:
(n1)Footnote 218. Gerald Korngold, Private Land Use Arrangements § 2.02, at 7-9 (1990).

(n2)Footnote 219. Recent statutes on solar access have reaffirmed the doctrine that an easement for light cannot be prescribed. *See e.g.,* Ky. Rev. Stat. Ann. § 381.200(2); Mo. Ann. Stat. § 442.012(2). *Palomeque v. Prudhomme, 664 So. 2d 88 (La. 1995),* recognizes a form of prescriptive right to light or view against the K-Paul Restaurant.

(n3)Footnote 220. *Sundowner v. King, 509 P.2d 785 (Idaho 1973)* (enjoining grotesquely large billboard blocking light & air to neighboring motel); *Great Atl. & Pac. Tea Co. v. New York World's Fair 1964-1965, Inc., 249 N.Y.S.2d 256 (1964)* (enjoining huge plastic shrubbery obscuring view of A. & P.'s sign from World's Fair parking lot); *Fontainbleau Hotel Corp. v. Forty-Five Twenty-Five, Inc., 114 So. 2d 357 (Fla. App. 1959)* (reversing injunction against Fountainebleu's addition blocking winter sunlight onto Eden Roc's pool). The positions taken by American law (allow tort action, prohibit prescription) and English law (allow prescription, prohibit tort action) on light & air access mirror the positions taken by America and England on lateral support. *See* Bognuda v. Upton & Shearer Ltd. (1972) N.Z.L.R. 741 (C.A.).

(n4)Footnote 221. *Kruger v. Shramek, 5 Neb. App. 802, 565 N. W.2d 742 (1997),* adopts the "general rule that a lawful building or structure cannot be complained of as a private nuisance because it obstructs the view of neighboring property." *Chatsworth Realty 344 LLC v. Hudson Waterfront Company, 2003 N.Y. Slip Op. 50601U, 2003 N. Y. Misc.*

LEXIS 166 (New York County, 2003) (no protected right to light and air even for units which would become legally classified as unsuitable for living use under relevant codes).

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.24

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.24 Solar Protection Through Nuisance Law.

Except under spite fence rules, access to sunlight has not been a protected property right for nuisance actions in traditional American law. In ordinary nuisance actions, unlike spite fence suits, activity may be enjoined even when the activity is useful. Beginning in 1982, with Prah v. Maretti, n222 a few judges have reevaluated their long-standing reluctance to protect access to sunlight under nuisance law. Prah erected a passive solar house near the southern boundary of his property; in compliance with all applicable laws and restrictions, Maretti later built a house which interfered with Prah's solar access. In its decision, the Wisconsin Supreme Court did not hold that Maretti's house constituted a nuisance; the court simply classified solar access as a protectable property right under nuisance law. Prah still had the burden of proving that Maretti engaged in intentional and unreasonable conduct by interfering with Prah's protected property right. By building close to his southern property line, Prah may have created a hypersensitive use; Maretti's conduct may have been reasonable under the circumstances.

The nuisance model is unsatisfactory in several respects. It does not provide certain, predictable protection of solar access. It does not delineate clearly the rights of adjoining property owners to develop or landscape their tracts. It entails the expense of litigation. n223 Finally, it has not received widespread acceptance. n224

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.26

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.26 Privately-negotiated Solar Access Servitudes.

The most conventional statute on solar access merely authorizes privately negotiated solar easements. n230 The label "easement" skirts defenses available against enforcement of equitable servitudes. For example, the doctrine of changed conditions is not generally applied to legal easements. Statutes do not specify that solar easements, unlike other classes of environmental easements, may be held in gross because solar access is useful only as an appurtenance to a particular solar collector. Iowa initiated a method for private eminent domain to compel neighbors to sell solar easements. n231 The Iowa procedure compares to statutes authorizing private eminent domain for access n232 or other infrastructure; n233 Iowa may even recognize that private solar collectors are part of a state's energy supply entitled to public utility rights. By contrast with the Iowa model, Missouri expressly prohibits *any* use of eminent domain by anyone to create solar access. n234

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.27

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.27 Local Government Roles in Solar Access.

Enabling legislation delegating solar access powers to local governments display a range of governmental involvement:

1. placing solar access on the laundry list of permissible purposes for land use laws; n235

2. making solar access a mandatory element of comprehensive plans; n236

3. actively protecting solar access in local land use regulations. n237

4. Solar access can be factor relevant to impact analysis required for land use decisions under SEPA laws. n238

FOOTNOTES:
(n1)Footnote 235. Conn. Gen. Stat. 8-25 (subdivision regulations); Utah Code Ann. § 10-8-901 (1992) (city zoning enabling); Wis. Stat. § 59.97 (zoning).

(n2)Footnote 236. A.R.S. § 9-461.05; C.R.S. 30-28-106.

(n3)Footnote 237. Mass. Ann. Laws ch. 40A, § 9B, allows local governments to grant special solar permits that create easements protected from defined impermissible interference. The section authorizes a Solar Map for the locality. Wis. Stat. Ann. § 66.032 lets local governments implement a solar easement system like that in Iowa. For examples of the application and interpretation of municipal solar access laws, *see Arndt v. City of Boulder, 1994 Colo. App. LEXIS 291* (Oct. 9, 1994) (to claim the protection of a solar access permit under city law, the applicant must build precisely the solar system described in the permit application); *Sullivan v. Ashland, 882 P.2d 633 (Or. App. 1994)* (reversing a ruling by the state Land Use Board of Appeals, the court remands to the city for interpretation of setback calculations under the city's Solar Access ordinance). *Kucera v. Lizza, 69 Cal. Rptr. 2d 582 (1997)* (Tiburon ordinance that preserves view and sunlight access by restricting tree growth upheld as a valid exercise of the police power and not preempted by state statutes on servitudes. In its defense of the ordinance, Tiburon was joined by 71 other California cities).

(n4)Footnote 238. *See e.g., Gastineau v. City of Bothel, 1998 Wash. App. LEXIS 1785 (1998),* where a landowner complained of obstructed solar access to his greenhouse in Fall, Winter, and Spring.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.28

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.28 An Introduction to Transferable Development Rights.

There are several common elements to any system of Transferable Development Rights. Every TDR problem begins with a site restricted by regulation to density substantially less than normal market demands. That severe restriction of development exists because the site serves some defined policy objective in its low-density configuration; that objective may be preservation of historic sites and structures, conservation of natural areas such as wetlands, or preservation of a current use to which the land is particularly suited, such as agriculture.

Usually for reasons of equity or politics, but sometimes out of necessity to avoid a finding of taking in the severe restriction of use, the government wishes to provide compensation to the severely restricted landowner. Government wishes to provide this compensation without spending its own money. The compensation is marketable units of density that the owner of the restricted lot can sell to someone in an area where increased density will not damage the policy objectives of the TDR system. The marketable units represent the difference between the restricted density and some concept of "normal" development. n239

Servitudes play an important function in this system because they reify the density being moved. Servitudes restrict the land that has surrendered density and memorialize the added density at the receiving site. The difficulties in harnessing density to policy objectives without a permanent record of the transaction can be seen in Fred F. French Investing Co. v. New York. n240 As originally built, Tudor City was a four-acre residential complex with substantial open space. The city approved Tudor City with the open space shown as "parks" on the plans; however, the developer made no formal arrangement restricting the use of the open space or dedicating it to public use. Consequently, a later developer was free to make development plans for the open space and successfully sue the city for a categorical taking when the City "zoned" the open space as public parks. Neither governments nor landowners can depend on unwritten, unrecorded "understandings" about limits on use in return for density incentives. n241

FOOTNOTES:
(n1)Footnote 239. *See e.g., Heffington v. City of Austin, 1996 Texas App. LEXIS 3274,* (Tex. App. 1996), where Austin granted TDR for the difference between the previous height limit (generally 200', although only 60' for the claimant's property) and a new 45' height limit imposed to preserve views of the Texas Capitol. *But see Bella Vista Apartments v. Bennett, 89 N.Y.2d 465, 678 N.E.2d 196 (1997),* requiring approval of the Board of Standards and Appeals before a

property that had been given a variance for a movie theater could donate unused density to an adjoining property that needed extra F.A.R. for a 14-story building.

(n2)Footnote 240. *350 N.E.2d 381, app. dismissed, 429 U.S. 990 (N.Y. 1976).*

(n3)Footnote 241. The gravity of a recorded TDR is illustrated in *Gordon v. Flamingo Holding Partnership, 624 So. 2d 294 (Fla. 1993),* finding prejudice to a mortgagee in the transfer of development rights from a parcel securing a mortgage.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.29

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.29 Early Concepts of Flexible Density: The Floor/Area Ratio.

Land Use laws began flexible use of density when regulations changed from "Envelope Zoning" specifying the precise form of buildings to Floor/Area regulations allowing flexibility in the use of density on a building site. n242 Floor/Area ratio [FAR] limits the total floor space in the building to some multiple of the area of the site. It is the normal method of regulating density for commercial and institutional development in urban areas.

When the flexible density of FAR is combined with a broader definition of the "building site" for "Area" is calculated in the ratio's denominator, greater density is available for flexible allocation. This system, which can extend the site over several blocks separated by streets, permits "borrowing" of density from one block to another. Such a system resulted in a particular surprise for residents of Portland, Oregon, in the early 1970's when a bank with a two-block site borrowed density from one block to construct a tapering tower on the second block. The tower occluded the view of Mt. Hood from some of the most valuable hillside houses in the city. City residents confused FAR regulations with height regulations. The FAR matched the density of a leading department store, Meier & Frank; that store did not block views. However, without a height limit, other uses of the same FAR could block views.

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.30

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.30 Flexible Density with Flexible Locations: The PUD.

Even in suburbs, when large commercial structures are unknown, flexible density can be harnessed to policy objectives. The very essence of the Planned Unit Development is flexible use of density. Clustering development to conserve open space, irregularly shaped lots to conform to natural features, and mixing of uses so that conventional dwelling units/acre measures lose their meaning are normal in the P.U.D. In urban settings, the P.U.D. can achieve objectives associated with more elaborate TDR systems. In Dupont Circle Citizens Ass'n v. D.C. Zoning Comm'n n243 four landowners applied for P.U.D. approval. Two owners participated solely to satisfy the one-acre minimum size requirement for P.U.D. applicants; those owners did not change their buildings as part of the process. Two owners were the active participants; the owner of the historic Christian Heurich Mansion transferred the unused density from its historic site to the owner of an adjacent developable lot. The overall P.U.D. complied with the density regulations for the area; the new building was at a much greater density than it could have achieved without the P.U.D. to reallocate the density.

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.31 Emergence of Transferable Development Rights.

Today's TDR systems can cover vast regions of restricted and receiving zones to achieve great public objectives. Norman Williams describes the Montgomery County, Maryland, system to preserve agricultural uses and open space. n244 In the Rural Density Transfer zone containing 89,000 acres, 11,000 acres have transferred 2,200 development rights to receiving areas designated in the County. After litigation that clarified the allocation of responsibility between the elected officials and the appointed Planning Commission, n245 the system has continued implementation. Williams also describes another large-scale TDR system operating in the 1,000,000-acre Pine Barrens of New Jersey. n246

CHAPTER 62 SERVITUDES

7-62 Thompson on Real Property, Thomas Editions § 62.32

AUTHOR: Professor James L. Bross College of Law Georgia State University

§ 62.32 Judicial Responses to TDR.

Fred F. French Investment Co. n247 makes clear one judicial limit on TDR: marketable development rights do not constitute just compensation when a categorical taking has occurred. TDRs do perform a function in deciding whether a taking has occurred in non-categorical cases. *JSS Realty Co. v. Town of Kittery, Me.*, n248 provides a legal caution to governments tinkering with TDR systems. A contract-clause claim and a substantive due process allegation were allowed to proceed to trial when the Town of Kittery reduced the developable area on a site and also eliminated TDR from the same site. In Penn Central Transportation Co. v. New York, n249 the value of marketable development rights was an element in the calculation of the return available to the landowner. For analysis of whether a landowner has been deprived of "all economically viable use" under Lucas v. South Carolina Coastal Council n250 TDR will be an aspect of economic viability. n251

So long as proper lines of authority are recognized and fair procedures exist, TDR systems will meet the generally favorable response represented by City of Hollywood v. Hollywood. n252 The transfer of development rights from beachfront to uplands in that case is shown in the final illustration to this chapter.

COMPUTER-ASSISTED RESEARCH

LEXIS: tdr! or transferable w/1 development w/1 right!

(n4)Footnote 250. *112 S. Ct. 2886 (1992).*

(n5)Footnote 251. In *Suitum v. Tahoe Regional Planning Authority, 117 S. Ct. 1659, 137 L. Ed. 2d 980 (1997),* a Stream Environment Zone, applicable to Mrs. Suitum's lot, essentially banned private development. Rejecting the 9th

Circuit's holding that Mrs. Suitum had not exhausted her administrative remedies under a TDR program, the court remanded for a judicial determination of the TDRs' effect on the taking claim. The case sparked a dispute on the meaning of *Lucas v. South Carolina Coastal Council, 505 U.S. 1003 (1992),* between Justice Souter and Justice Scalia. Premised on the trial court's finding that Lucas' land was "valueless," *505 U.S. at 1007,* Souter's majority opinion implicitly recognizes that TDRs may be used to shovel "value" onto unbuildable land to avoid takings. Relying on an additional aspect of the trial court's finding that the Council "deprived Lucas of any reasonable economic use of the lots," *Id. at 1009,* and his own characterization of the issue as loss of "all economically beneficial or productive use of the land," *Id. at 1015,* Scalia concluded that the Stream Environment Zone was a categorical taking under Lucas. For Scalia, TDRs are relevant only as part of the just compensation issue. Scalia's opinion in Lucas reiterates three findings by the trial judge: that the regulations "deprived Lucas of any reasonable economic use... eliminated the unrestricted right of use, and rendered them valueless." A conventional application of elementary case analysis to Lucas would suggest that, until a holding of categorical taking to some new case lacking one or more of those facts, all three statements must be present for Lucas to apply. Among post-Suitum cases, *see Good v. United States, 39 Fed. Cl. 81, 45 ERC (BNA) 1518 (1997),* considering the impact of TDR on a taking claim; *Dittmer v. County of Suffolk, 975 F. Supp. 440 (E.D.N.Y. 1997), supra* note 210 of this Supplement chapter, finding unresolved TDR issues relevant to federal abstention. *Palazzolo v. Rhode Island, 121 S. Ct. 2448, 150 L. Ed. 2d 592,* removes one prong of the Lucas holding. The acquisition of land after the enactment of regulations is not a bar to a claim under Lucas. T. Bongard, "Does Palazollo v. Rhode Island's Upholding of the Transferability of Takings Claim Require a Rethinking of Takings Jurisprudence," *81 N.C. L. Rev. 392 (2002).*

(n6)Footnote 252. *432 So. 2d 1332 (4th D.C.A. Fla. 1983), pet. for rev. denied, 441 So. 2d 632 (Fla. 1982). Fisher v. Giuliani, 280 A.D.2d 13, 720 N.Y.S.2d 50 (N.Y. App. Div. 2001),* upholds an expansion of the potential receiving sites for Transferable Development Rights in the Manhattan Theater District but remands new rules on discretionary density bonuses for further environmental impact analysis.

CHAPTER 63 The Concept of a Unified Servitude

7-63 Thompson on Real Property, Thomas Editions § 63.01

AUTHOR: by David A. Thomas Rex E. Lee Chair and Professor of Law J. Reuben Clark Law School Brigham Young University

§ 63.01 Introduction to the Chapter.

[Go To Supp]

To conclude the several chapters in this volume covering the major forms of servitudes recognized in American property law, n1 it is appropriate to add this chapter on the concept of a unified servitude. Proponents of the unified servitude depict it as a cure for the various doctrinal deficiencies of current servitude law. Those doctrinal deficiencies arise from a history of fractured and piecemeal development of the law pertaining to the several varieties of servitudes and from rules based on historical circumstances that no longer exist. Reform, however, is restrained by the usual factor that inhibits all attempts to correct perceived problems in American property law. That factor is that most aspects of property law are assigned to the jurisdiction of the individual American states, which are under no obligation to coordinate their legal reforms with those of any of the other states. Even the most thoughtful and urgent invitations to adopt reforms, such as in the latest Restatement effort promoting the unified servitude, can be and often are considered without action or even completely ignored by state lawmakers and judges. In view of that, it should be no surprise that the Restatement proposals will likely have almost no impact on the everyday activities of practicing lawyers and their clients. n2

Nevertheless, it is still possible that some or all of the proposed corrections could be embodied in one or more uniform laws or model codes which, over time, could be adopted by a large number of state legislatures. Uniform laws and model codes relating to property law do not have a record of numerous adoptions, n3 but that could change if the need for reform is pressing and the proposed reforms are obviously meritorious.

CHAPTER 63 The Concept of a Unified Servitude

7-63 Thompson on Real Property, Thomas Editions § 63.02

AUTHOR: by David A. Thomas Rex E. Lee Chair and Professor of Law J. Reuben Clark Law School Brigham Young University

§ 63.02 History and Status of the Unified Servitude Movement

[Go To Supp]

At this time, the culminating event in the history of the movement promoting the adoption of a unified servitude is the issuance in the year 2000 of the Restatement of the Law of Property Third (Servitudes). In describing the background for this effort, the Restatement authors give only a brief history of servitudes, a review of ways that servitudes are still valuable in modern real estate law and practice, and a description of the major areas of reform addressed in the Restatement. n4

The best example of servitudes in ancient times is, not surprisingly, found in Roman law and practice:

> Rights of way appear in the Twelve Tables of Rome, and later Roman Law recognized a variety of servitudes including rights of dig and burn lime, pasture cattle, draw and transport water, encroach on a neighbor's airspace, and rights to light, view, and support. n5

In the history of Anglo-American property law, a covenant running with the land appears in an English Year Book case dated 1368. The owner of a manor, whoever the owner happened to be, was entitled to have religious singing performed in the manor chapel. Medieval English law recognized various servitudes categorized all together as incorporeal hereditaments. Over two centuries after running covenants were recognized in England, Spencer's Case of 1583 n6 was the first to address touch -and-concern and privity issues in real covenants. In 1834, the decision in *Keppel v. Bailey* n7 announced a ruling that led to recognizing a distinction between covenants enforceable at law and those enforceable only in equity. This distinction was further enlarged in the well-known English Chancery case of *Tulk v. Moxhay*, n8 considered the foundation of equitable servitude doctrine.

The emergence of servitude law in the United States has focused on the three principal servitudes of easements, covenants and equitable servitudes. It is not too simplistic to say (1) that covenants arose because of courts' reluctance to recognize certain--generally newer--types of easements; n9(2) that judicial recognition of covenants was restrained unless certain strict requirements were met; and (3) that equitable servitudes emerged from that class of covenants denied enforcement because of failure of some technical restrictions.

The English courts' refusal to recognize new--especially negative--easements persisted because, among other reasons, England had until 1925 no effective public record system for land titles. This meant that a prospective purchaser's best protection against unknown encumbrances would be to inspect the land, but negative easements encumbering land were less likely to be discovered by inspecting the land.

The English judges' refusal to recognize new types of negative easements inexplicably carried over into American jurisdictions, which did enjoy more or less reliable land record systems. While occasionally a few new negative easements were recognized in individual states, and many states authorized new types of easements through legislation, the basic restrictions on new negative easements remained in place. n10

The irrationality perpetuating the old restrictions, and the anachronistic nature of the restrictions themselves, have given rise to several specific criticisms of contemporary servitude law. The main criticisms are described in the next section.

CHAPTER 63 The Concept of a Unified Servitude

7-63 Thompson on Real Property, Thomas Editions § 63.03

AUTHOR: by David A. Thomas Rex E. Lee Chair and Professor of Law J. Reuben Clark Law School Brigham Young University

§ 63.03 Problems That Can Be Addressed by a Unified Servitude

(a) A Basic Overview of Servitudes in American Property Law.

The following section is a seriously simplified description of the servitudes recognized in American property law, along with their basic components and requirements for validity or enforceablity. In order to present such a description, it is necessary to set aside the huge number of doctrinal differences in respective states' jurisprudence. While those differences are part of larger problem addressed by the very concept of a Restatement, it is possible to present a more generalized description of servitudes which will reveal the problems intended to be addressed by the concept of a unified servitude. As the following paragraphs will explain, covenants can be seen as servitudes that couldn't qualify for treatment as easements, and equitable servitudes are servitudes that couldn't qualify for treatment as covenants. The unified servitude is premised on the notion that these conceptual disabilities in the these interests are caused by imposing requirements for validity that no longer make sense.

(1) *Easements*. An easement is a right to use or affect the use of land owned by someone else. Easements are usually classed as affirmative easements, such as a right of way, and negative easements, such as a right to prohibit an adjacent owner from building something on the land that would block sunlight. If the easement benefits land, the easement is termed an appurtenant easement and the land benefitted is called a dominant tenement. The land burdened by the easement is called the servient tenement. If the easement right does not pertain to land, such as a right to use a neighbor's swimming pool, the easement is considered personal in nature and called an easement in gross. Easements are real property interests and may be created and conveyed by the usual instruments used in real estate transactions. A landowner may create and convey an easement by deed, or retain an easement by means of a deed conveying land that will be the servient estate of the easement. Easements "run with the land," meaning that whoever owns the dominant and servient estates also have the easement benefits and burdens, respectively. For historical reasons, courts have resisted recognizing new or novel types of easements, especially negative easements.

(2) *Covenants*. Covenants have arisen at least partly in response to courts' reluctance to recognize new varieties of easements. While an easement is created by conveyancing language, a covenant is created by contracting language. A covenant arises from an agreement respecting the use of land. For example, one landowner may agree with a

neighboring landowner not to build a two-story house that would block the neighbor's view. The covenantor has a duty not to so build, and the covenantee has a right to enforce observance of that duty. Those agreement or contractual rights attach themselves to the land and affect successor owners if certain additional conditions. If those conditions are met, then the covenant that originated in contract is considered an interest in the affected land, and closely resembles the easement. Just as the appurtenant easement is divided according to its dominant and servient estates, the land benefitted by the covenant is distinguished from land burdened by the covenant. It is often important to know whether the burdened land when held by a successor owner continues to be burdened; this question is often phrased as whether the burden of the covenant "runs with the land." Similarly, it may be important to know if the benefitted land when held by a successor owner continues to be benefitted; this question is often phrased as whether the benefit "runs with the land." A covenant whose burden and benefit both run with the land is similar to appurtenant easement and is considered an interest in land; such covenants are often referred to as real covenants. Several arcane requirements have arisen regarding whether covenant benefits and burdens run with the land. Not all jurisdictions impose all the requirements, so the following description is intended, for purposes of this chapter, to some of the doctrinal complexity that gives rise to suggestions for reform.

(A) *The Running of the Burden*. If the burden of a covenant is to be recognized as "running," and therefore being an encumbrance on the burdened land, courts have imposed several different requirements, although not all requirements are imposed in all jurisdictions. These requirements may be labeled as horizontal privity, vertical privity, both the benefit and burden must "touch and concern" the land, and the parties must have intended for the burden to run.

(B) *The Running of the Benefit*. If the benefit of a covenant is to be recognized as "running," and therefore subject to enforcement by whoever owns the benefitted land, courts have also imposed several different requirements, although not the same requirements as govern the running of covenant burdens. These requirements may be labeled as the parties' intent that the benefit run and that the benefit must touch and concern the land. Only a few jurisdictions impose either horizontal or vertical privity requirements.

(C) *Explanation of the requirements*.

Horizontal privity. Horizontal privity is a form of privity of estate that exists between the original covenanting parties when they enter into the covenant in connection with their roles as landlord and tenant or as grantor and grantee. In other words, in order for the burden of a covenant to run, the covenant must be entered into in connection with a conveyance of a property interest between covenantor and covenantee.

Vertical privity. For vertical privity to exist, a successor to either covenanting party must succeed to the same estate as that held by the predecessor party.

Touch and concern. For either the benefit or burden to "touch and concern" the land, usually means that the covenant must affect the nature, quality or value of the land or its use. If the benefit of a covenant is in gross, that is, it is personal to the covenantee and does not affect the covenantee's land in any way, then the benefit does not touch and concern the land.

Intent. Usually the parties' intent that the benefit and burden run is indicated by language in the covenant to the effect that the covenant pertains to the parties and their "heirs and assigns," or equivalent language. In the absence of such language in the covenant itself, intent may be inferred from parties' words or conduct or even from the nature of the covenant itself. A covenant to preserve open space or a view hardly makes sense if it pertains only to the immediate covenanting parties.

(D) *Summary of Running Requirements*.

Recognizing numerous differences between jurisdictions, it can be said that the running of the burden of a covenant (allowing a successor to the original covenantor to be required to observe the covenant) requires that the covenant be created under circumstances of horizontal privity (between the original covenanting parties), vertical privity (between covenantor and successor), both the burden and benefit must touch and concern land, and the parties' intent that the burden run. The running of the benefit (allowing a successor to the original covenantee to enforce the covenant) requires that the benefit of the covenant touch and concern the land and that the parties have intended for the benefit to run.

A strong case can be made for the conclusion that many of these requirements and the differences in their application (as between burdens and benefits, and as between covenants and easements) are no longer justified or rational under modern law. The unified servitude advanced in the Restatement of Property (Third) (Servitudes) adopts this conclusion and presents a less complex and more rational uniform set of requirements governing both easement and covenants.

(3) *Equitable Servitudes*.

The most straightforward explanation of equitable servitudes is that they are like covenants--that is, promises respecting the use of land--that cannot be enforced as covenants running with the land because one or more of the requirements described in the preceding section does not exist. The core requirements for enforceability of an equitable servitude differ somewhat from state to state, but usually consist of (1) an intent of the original parties that the obligation of the promise run to successors in interest, and (2) that the promise touches and concerns the land. From some cases it may also be inferred that some element of consideration for the promise be present.

(4) *Profits a Prendre*. Usually shortened in modern American legal writing as profits, these interests consist of rights to take something of value, such as minerals or timber, from the land of another. Profits are relevant to larger issues of servitudes because a right to take something from the land of another often necessarily includes a right of entry for that purpose, and that right is or is very similar to an easement.

(5) *Licenses*. License is a right to go on to the land of someone else for a particular purpose. Much discourse has taken place on the notion of whether a license is actually an interest in land, because the license can be created orally and can be unilaterally revoked by the licensor. That question becomes moot (in favor of the license being indeed an interest in real property) if the licensee comes into a position of justifiable reliance on the continuance of the license or if the license is "coupled with an interest." This latter situation would arise, for example, if the licensee is authorized a car on the licensed land; the license cannot be revoked until the license is able to retrieve the car. A license that becomes irrevocable under either type of situation is generally indistinguishable from an easement, and thus irrevocable licenses are, like profits, relevant to larger issues of servitudes.

(b) Major Issues of Discontent with the Contemporary American Law of Servitudes.

(1) Horizontal privity.

The Restatement authors opined that

> in the United States, the rule [requiring horizontal privity for the running of a covenant burden] served only to prevent covenants among neighbors from running, and could easily be circumvented by using a straw person. As a practical matter, the horizontal privity requirement had little effect after 1848, because covenants could be enforced against successors in equity whether or not there was privity between covenantor and covenantee. n11

(2) Restrictions on Enforcement of Affirmative Covenants.

The refusal of English courts to accept new types of negative easements and accompanied by a similar reluctance to

accept new types of affirmative covenants, a position also adopted in some U.S. jurisdictions. New York and New Jersey adopted rules that affirmative covenants would not run, and the "situation was not as clear in other states, but substantial doubt remained whether affirmative covenants could be enforced in equity. n12 The restriction became completely obstructive and worthless in real estate developments during the twentieth century.

(3) Restrictions on Benefits in Gross.

In U.S. servitude jurisprudence, courts did not adopt the English position refusing to enforce easement benefits in gross, but did refuse to recognize covenant benefits in gross. This was not compatible with the rise of historic preservation and conservation servitudes.

(4) The Touch and Concern Requirement.

The touch and concern requirement for running of covenant burdens and benefits helped exclude harmful or frivolous covenants, but eventually

> the doctrine interfered with innovative development techniques and financing arrangements ... [T]he doctrine failed to address the serious threats to the public good posed by restrictions designed to discriminate on racial or religious grounds, or designed to impose substantial limits on freedom of speech or association. n13

(5) Vertical Privity.

The intended function of vertical privity was to identify the covenant benefits and burdens that should run not only to grantees (as successor owners in fee), but also to life tenants, lessees and adverse possessors. The Restatement authors believed the vertical privity requirement was inadequate to this task, and proposed a set of rules addressing those tasks directly, rendering the vertical privity requirement itself obsolete.

Beyond these specific discontents with individual servitude doctrines, the Restatement authors believed that maintaining all of the traditional distinctions between the different types of servitudes was no longer necessary. Therefore, the new Restatement proposes a consolidation, simplification and unification of easement rules, described in the next section.

CHAPTER 63 The Concept of a Unified Servitude

7-63 Thompson on Real Property, Thomas Editions § 63.04

AUTHOR: by David A. Thomas Rex E. Lee Chair and Professor of Law J. Reuben Clark Law School Brigham Young University

§ 63.04 The Restatement's New Easement Rules.

The essence of the Restatement unified easement concept is in this statement from the Reporter: "Instead of treating easements, profits, and covenants as separate and independent bodies of law, the Restatement treats them as different types of servitudes governed by a single body of law." n14

Thus, in the Restatement, a servitude is defined as "legal device that creates a right or obligation that runs with land or an interest in land." n15 The Restatement servitudes are placed in three categories, n16 distinguished by the function of the servitude.

"An easement creates a nonpossessory right to enter and use the land in the possession of another and obligates the possessor not to interfere withe uses authorized by the easement." n17

"A profit a prendre is an easement that confers the right to enter and remove timber, minerals, oil, gas, game, or other substances from land in the possession of another. It is referred to as a profit in this Restatement." n18

In the Restatement, not all covenants are servitudes. n19"A covenant is a servitude if either the benefit or the burden runs with the land. A covenant that is a servitude 'runs with the land.' " n20 An affirmative covenant requires the covenantor to do something, a negative covenant requires the covenantor to refrain from doing something, and a restrictive covenant is a negative covenant that restricts or limits permissible uses of land. n21

The Restatement Reporter summarized this simplification as follows:

> Profits create affirmative rights to enter and remove natural resources or other substances from another's land. Easements create affirmative rights to use another's land or common property. Covenants create rights to receive money or services or rights to have other landowners abide by use restrictions or other obligations. n22

This unification of servitudes necessarily eliminates some of the traditional forms of servitudes and distinctions between

them:

> The Restatement sweeps away negative easements, equitable servitudes, and executed parol licenses, because the doctrinal differences that formerly distinguished these servitude categories have been eliminated. In the modernized law of servitudes there are no significant differences between negative easements and restrictive covenants, between equitable servitudes and covenants, or between executed parol licenses and easements. n23

The Restatement next adopts a single set of rules for these interests it calls servitudes:

> 1. Rules for creation of a servitude. n24
>
> 2. Intent to create a servitude (which intent may be express or implied, with no particular form of expression required). n25
>
> 3. Necessary parties to creation of a servitude. n26
>
> 4. Elimination of the horizontal privity requirement. n27
>
> 5. Benefits and burdens of servitudes pertaining to estates or other servitudes. n28
>
> 6. Recognition of servitude benefits in gross and benefits granted to third parties. n29
>
> 7. Requirements for creation of an easement (the same as for creation of estates in land of like duration, including statute of frauds requirements). n30

These rules and a few other miscellaneous rules found scattered about in the Restatement enable the Reporter to state the following basic rules for the unified servitudes:

> 1. A servitude is created by a contract or conveyance intended to create rights or obligations that run with the land if the servitude complies with the Statute of Frauds.
>
> 2. The beneficiaries of a servitude are those intended by the parties.
>
> 3. Servitude benefits held in gross are assignable unless contrary to the intent of the parties ...
>
> 6. Servitude benefits and burdens run to all subsequent possessors of the burdened or benefitted property ...
>
> 7. Servitudes may be enforced by any servitude beneficiary who has a legitimate interest in enforcement, whether or not the beneficiary owns land that would benefit from enforcement.
>
> 8. Servitudes that have not been terminated may be enforced by any appropriate legal or equitable remedies. n31

CHAPTER 63 The Concept of a Unified Servitude

7-63 Thompson on Real Property, Thomas Editions § 63.05

AUTHOR: by David A. Thomas Rex E. Lee Chair and Professor of Law J. Reuben Clark Law School Brigham Young University

§ 63.05 Potential Benefits of Unified Servitude Rules.

[Go To Supp]

Law students who are usually required to master the arcane, complex and irrational traditional rules governing the various types of servitudes usually do so without pausing to exercise critical analysis. Later on, many thoughtful lawyers, judges and legal scholars are able to strenuously question the perpetuation of many of these doctrines. The Restatement's promulgation of proposals for a unified servitude is a thoughtful and hopeful attempt to improve this area of the law. One scholar sounded the note of optimism that many will share:

> The doctrines should no longer be dependent on diverse historical origins of the traditionally recognized categories of servitudes. There should be no distinctions made based on the type of remedy--legal or equitable--that may be sought. It should not matter whether the interest was based on an agreement or a conveyance. All servitudes should be property interests to be tested under a uniform set of requirements. n32

The Restatement work on servitudes will have no direct impact on property jurisprudence unless state legislatures enact some or all the Restatement provisions as state statutes. An occasional state court judge could decide, in an appropriate case, to adopt some or all of the Restatement provisions in exercise of inherent judicial powers in a common law system. Until either of those events occurs, this work will remain mostly for study.

CHAPTER 64 LICENSES

8-64 Thompson on Real Property, Thomas Editions § 64.01

AUTHOR: Professor Ronald W. Polston School of Law Indiana University, Indianapolis

§ 64.01 Introduction to the Chapter.

This chapter treats the somewhat elusive concept of license. Licenses are often confused with easements and are usually considered as interests in land. However, because most licenses share the common characteristic of revocability, they are more ephemeral than most interests in land. The chapter consists of a discussion of license definitions, characteristics and incidents (§ 64.02), the historical development of the legal concept of licenses (§ 64.03), the scope, transfer and termination of licenses (§ 64.04), and how licenses are treated in the courts (§ 64.05). This last section highlights cases in which licenses are treated much like easements, are treated as irrevocable because of being coupled with other interests, and are adjudicated in contractual situations.

CHAPTER 64 LICENSES

8-64 Thompson on Real Property, Thomas Editions § 64.02

AUTHOR: Professor Ronald W. Polston School of Law Indiana University, Indianapolis

§ 64.02 Definitions of Licenses.

[Go To Supp]

§ 64.02(a) In General.

License is defined as a relationship between two or more persons with respect to the use of a tract of land in which there is nothing more than a revocable privilege by one of them to be upon the land, which presence would, in the absence of the privilege, be actionable by the other. n1 Some writers have objected to such a definition of license because it includes revocability. n2 The objection is based upon the argument that such a definition fails to distinguish between the operative facts that create the relationship and the legal content of the relationship. This argument ignores the fact that the license is a *legal* relationship and that the courts that created it have always defined it as a revocable. Even if the definition were to be restricted to the operative facts, however, it would seem proper to include revocability in the definition. In such a situation the usual understanding would seem to be that, when one has done nothing more than extend permission to another to enter one's land, the permission can be withdrawn at any time. If more was intended, or if there were other facts that would indicate an intention to limit the right to withdraw the permission, the situation would amount to more than a simple extension of permission to enter.

A license, being a simple permission to enter land, may be extended by any person who has a right to be on the land even though that person's interest in the land may amount to less than fee simple ownership. In fact, it may be true that the presence on the land of both of the parties to a license relationship may be a trespass in relation to one who has an interest superior to that of the licensor. Thus, one who has nothing more than a possessory interest in the land may give a license to another and the only effect of the granting of the license is that the licensee's presence on the land will not be a wrong as to the licensor. n3

§ 64.02(b) As an Interest in Land.

Licenses are by definition revocable and because they are always revocable it is sometimes said that licenses do not represent interests in land. n4 Such a statement is quite obviously not correct. n5 While the revocability of the interest means that it will never prevail as against the creator of the license, and while the fact of revocability may mean that the interest is of little or perhaps no value, it is undeniably a legal interest in the land to which it relates. n6

The statement that a license is not an interest in land is sometimes said to be proven by those decisions which deny the license holder a share of a condemnation award. n7 However, it is obvious that a licensee should not be given a share of such an award if the result would be to reduce the amount to be received by the licensor since the licensor could at any time revoke the license. n8 Furthermore, it is generally held that a transfer of the land by the licensor terminates the license and a condemnation action results in a transfer of the property. n9

Further support for the proposition that a license is not an interest in land is said to come from the fact that the creation of a license does not require compliance with the Statute of Frauds. n10 Since the Statute of Frauds applies to any situation in which an "interest in land" is transferred, its inapplicability to the license transaction would seem to require the conclusion that the license is not an interest in land. However, the mere fact that the Statute of Frauds has been construed to apply only to interests in land which are more substantial and valuable than licenses does not mean that a license is not an interest in land. n11

While there are numerous cases holding that a licensee cannot maintain an action for interference with the license by third persons, n12 thus tending to lend additional support to the proposition that the license is not a legally protected interest in land, there are several cases to the contrary. For example it has been held that licenses to maintain a millrace, n13 or to run a water line, n14 or a sewer line, n15 would be protected against interference by third persons. It may be that these latter cases only stand for the proposition that such an action will be allowed when the licensee has made a considerable investment in reliance on the license and there appears little likelihood of it being revoked, n16 and that they do not detract greatly from the more general proposition which would deny any such protection. The original Restatement of Property seemed to take this position. n17 On the other hand, the general lack of protection afforded the licensee against third persons does not detract from the fact that the licensee's interest is protected by law. Whatever may have been held with respect to the right against third persons, the fact that the licensee is immune from an action of trespass by the licensor, so long as the license remains unrevoked, n18 requires the conclusion that it is a legally protected interest in land.

COMPUTER-ASSISTED RESEARCH

LEXIS: licens! w/3 interest w/3 land or property and possess! and revoc! or irrevoc!

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

FOOTNOTES:

(n1)Footnote 1. A simple definition of license comes from *Thiokol Chem. Corp. v. Morris County Bd. of Taxation, 197 A.2d 176 (N.J. 1964),* where the permission to make a transitory use of property is the hallmark of a revocable license. *See also Wehby v. Turpin, 710 So. 2d 1243 (Ala. 1998)* (a license is the giving of one's consent to do a specified activity, a personal privilege which is generally revocable at the will of the licensor); *Milbrook Hunt, Inc. v. Smith, 670 N.Y.S.2d 907 (App. Div. 1998)* (a license is a mere personal privilege to commit some act or series of acts on the land of another without possessing any estate therein); *Hennebont v. Kroger Co., 289 A.2d 229 (Pa. Super. Ct. 1972)* (a license is a personal and initially revocable privilege to perform an act or series of acts on land of another).

(n2)Footnote 2. *See* Powell on Real Property(R) § 34.24 (Michael Allan Wolf ed., Matthew Bender), for a list of articles on the subject. *But see Gasparo v. City of New York, 16 F. Supp. 2d 198 (E.D. N.Y. 1998)* (a license is cancelable at will, without cause); *Millbrook Hunt, Inc. v. Smith, 670 N.Y.S.2d 907 (App. Div. 1998)* (fox hunting club obtained judgment declaring that agreement was a lease not a license, based primarily on the fact that agreement had a specified term, which distinguished it from a revocable license).

(n3)Footnote 3. *See Metcalf v. Hart, 27 P. 900 (Wyo. 1891), appeal dismissed, 31 P. 407 (1892),* in which licenses were created by one who had only a "desert land" entry. The status of a guest with whom the landowner has a relationship has been held to be that of a licensee. *See Bennett v. Rogers, 519 N.W.2d 808 (Iowa 1994),* in which it was

held that a "live-in party" was not a tenant at will and therefore not entitled to notice prior to eviction, *distinguished by Petty v. Faith Bible Christian Outreach Center, Inc., 584 N.W.2d 303 (Iowa 1998). See also Loren v. Marry, 600 N.Y.S.2d 369 (1993).*

Merry v. Clark, 2002 Ohio 4204, 2002 Ohio App. LEXIS 4341 (2002) (license agreement concerning use and maintenance of a lane across the licensor's land). *Riverton Associates v. Harvey, 772 N.Y.S.2d 199 (2003)* (summary eviction proceeding against licensee of tenant upon death of tenant); *Dejesus v. Rodriguez, 768 N.Y.S.2d 126 (2003)* (license holdover proceeding against owner's ex-girlfriend; court held that ex-girlfriend was not mere licensee).

(n4)Footnote 4. Raleigh C. Minor, The Law of Real Property 160 (Andersen Bros. 1908). In the *Matter of Niagara Mohawk Corp. v. New York State Dep't of Transp., 637 N.Y.S.2d 505 (1996)* (fees for the licenses of a utility to erect electrical power transmission lines and gas transmission pipelines across lands of the state canal system were changed, and the court held that the licensee did not have a sufficient property interest in the amount of fee it paid for its due process rights to be violated by the change). *Forge v. Smith, 580 N.W.2d 876 (Mich. 1998)* (licenses are generally revocable at will, a license coupled with an interest is not, but to be irrevocable, the license must constitute an easement appurtenant), *distinguished by Kitchen v. Kitchen, 607 N.W.2d 425 (Mich. App. 1999).*

(n5)Footnote 5. Restatement of Property § 512 (1944); Charles E. Clark, Covenants and Interests Running with Land 30 (2d ed. 1947). Continued possession of a license "may become essential in the pursuit of a livelihood. This creates a property interest, revocation of which cannot be achieved without procedural due process as required by the 14th Amendment." *Gee v. Professional Practices Comm'n, 491 S.E.2d 375 (Ga. 1997). See also Goldrush II v. City of Marietta, 482 S.E.2d 347 (Ga. 1997), cert. denied, 118 S. Ct. 70 (1997). But see Federal Lands Legal Consortium v. United States, 195 F.3d 1190 (10th Cir. 1999)* (holders of livestock grazing allotments in forests did not have property rights, even though the defendant's customary practice was to renew grazing permits, creating a unilateral expectation of continued practice); *Markstein v. Countryside I, L.L.C. 77 P.3d 389 (Wyo. 2003)* (property owners' fishing rights were in the form of an easement, while their recreational use rights were in the form of a license); Care Ambulance-Paramedics, Inc. v. Stow, Ohio App. 2003 (ambulance service operator through its city license did not have a constitutionally recognized and protected property interest).

(n6)Footnote 6. In *Brooklyn E. Dist. Term. v. City of New York, 139 F.2d 1007, 1012 (2d Cir. 1944),*the court stated: "Respondent's power of termination after ten years ... and the possibility of its exercise do not prevent award for later periods though it is a proper subject for consideration in fixing value." In regard to value it has also been held that a licensee does not have an insurable interest. *Smith v. Royal Ins. Co. Ltd., 111 F.2d 667 (9th Cir. 1940); Chevy Chase Land Co. of Montgomery County, Md. & Columbia Country Club v. United States & Montgomery County, Md., 37 Fed. Cl. 545 (1997)* (land company conveyed a 12-acre parcel as a railroad right of way, which the railroad later conveyed to the city for a hiker/biker trail; the land company claimed unsuccessfully that it had conveyed only an easement, rather than a fee simple), *distinguished by Eldridge v. City of Greenwood, 503 S.E.2d 191* (S.C.App. Jun 15, 1998).

(n7)Footnote 7. *Clapp v. City of Boston, 133 Mass. 367 (1882). But see Brooklyn E. Dist. Term. v. City of New York, 139 F.2d 1007, 1012 (2d Cir. 1944),* discussed in the footnote above, where the issue was discussed and an award allowed. The interest of the condemnee was probably more than a license, however. *Tricker v. Pennsylvania Turnpike Comm'n, 717 A.2d 1078 (Pa. Commw. Ct. 1998)* (where state constructed expressway over licensed right-of-way, property owner possessed no real property interest subject to condemnation or taking, because licensee had not spent money in reliance on license to use right-of-way).

(n8)Footnote 8. The facts in *Brooklyn E. Dist. Term. v. City of New York, 139 F.2d 1007, 1012 (2d Cir. 1944)* illustrate this proposition. In that case the total value of the condemned property was paid into court and the litigation was between those claiming interests in the property as to the division of that award. Any amount given to the licensee was subtracted from that due the fee owner.

(n9)Footnote 9. *See* §64.04(b), *infra*.

(n10)Footnote 10. Actually the statement more often found is that the license is not an interest in land and therefore the Statute of Frauds does not apply to its creation. For example, the court in *Sweeney v. Bird, 292 N.W. 506, 508 (Mich. 1940),* stated: "Where nothing beyond a mere license is contemplated and no interest in the land is proposed to be created, the statute of frauds has no application." *Forge v. Smith, 580 N.W.2d 876 (Mich. 1998)* (because a license is not considered an interest in land, licenses do not have to comply with the requirements of the statute of frauds); *Eileen T. Quigley, Inc. v. Miller Family Farms, Inc., 629 A.2d 110 (N.J. Super. App. Div. 1993)* (a parol consent to enter upon land amounts only to a license).

(n11)Footnote 11. *See* Charles E. Clark, Covenants and Interests Running with Land 26 (2d ed. 1947), where it is stated "... the Statute of Frauds ... is properly not applicable to many simple and limited activities performed on the land." *But see Lodestar Tower North Palm Beach, Inc. v. Palm Beach Television Broadcasting, Inc., 665 So. 2d 368 (Fla. Dist. App. 1996)* (a license confers no interest in land, may be created orally, and merely gives one the authority to do a particular act on another's land); *Hill v. Eads, 970 S.W.2d 882 (Mo. App. 1998)* (a license is the privilege to enter land for a stated purpose which does not vest one with title, interest, or an estate in the licensee); *Cutter Flying Serv. v. Property Tax Dep't, 572 P.2d 943 (N.M. App. 1977)* (a license does not create an interest in land but is similar to a tenancy at will).

(n12)Footnote 12. *See, e.g., Taft v. Bridgeton Worsted Co., 141 N.E. 119 (Mass. 1923).* A plaintiff who owned land over a lake was using the lake as a source of ice for his business. He took ice not only from over his own land but also from over that of his neighbors by virtue of licenses from them. The defendant tortiously interfered with the level of the water in the lake and was sued for damages to the plaintiff's ice business. The court held that the plaintiff could recover only for the damage to his right to take ice from over his own land. For citation of other cases to the same effect, *see* Charles E. Clark, Covenants and Interests Running with Land 28 (2d ed. 1947).

(n13)Footnote 13. *Case v. Weber, 2 Ind. 108 (1850).*

(n14)Footnote 14. *Moundsville Water Co. v. Moundsville Sand Co., 19 S.E.2d 217 (W.Va. 1942).*

(n15)Footnote 15. *Miller v. Inhabitants of Greenwich Twp., 42 A. 735 (N.J. 1899).*

(n16)Footnote 16. Indeed, the licenses in such cases may have become irrevocable and therefore may have become easements as a result of such expenditures. *See* §64.05(b), *infra*.

(n17)Footnote 17. Restatement of Property § 521(1) cmt. c (1944).

(n18)Footnote 18. *Clifford v. O'Neill, 42 N.Y.S. 607 (1896); Kremer v. Chicago M. & St. P. Ry. Co., 52 N.W. 977 (Minn. 1892); Schiffman v. Hickey, 200 P. 1035 (Or. 1921); Kimack v. Adams, 930 S.W.2d 505 (Mo. App. 1996)* (licenses and leases distinguished); *Utah v. Hawkins, 967 P.2d 966 (Utah App. 1998)* (where licensee exceeded scope of license by coming in the middle of the night, kicking in door of shop, and removing his own equipment and that of licensor, license was exceeded and criminal trespass resulted).

CHAPTER 64 LICENSES

8-64 Thompson on Real Property, Thomas Editions § 64.03

AUTHOR: Professor Ronald W. Polston School of Law Indiana University, Indianapolis

§ 64.03 Historical Background of Licenses.

[Go To Supp]

§ 64.03(a) In General.

The license concept in our legal system is a simple recognition that one who is on land with the permission of the landowner cannot be committing a wrong as to such landowner, and it is implicit in such a situation that the permission can be revoked at any time. n19 The origin and development of this idea in the Anglo-American legal system and in the Roman Law has been obscured, however, because of a failure, perhaps due to its simplicity, to differentiate it from other more substantial or more complex, relationships.

§ 64.03(b) Roman Origin.

Whether the license concept was recognized as a separate legal relationship in Roman Law has been the subject of some disagreement. n20 Arguably, the modern license can be traced to the Roman doctrine of *precarium*, which was not often dealt with by scholars as a concept separate from contract and only occasionally mentioned. n21 One author suggests that the *precarium* was similar to a tenancy at will in the English Law. n22 Unlike the usufruct n23 or other servitudes which were recognized interests in land, the *precarium* was a gratuitous grant of possession and right of use of property which remained revocable at will regardless of the agreement between the parties. n24 The tenant *precario* was liable to the grantor only for *dolus*, or willful misuse, and remedies were available to the tenant against third persons who interfered with the tenant's possession. n25 As with mere license the *precarium* terminated upon the death of the holder. n26 The *precarium* thus had many of the characteristics of the license, but was probably a broader concept which included more substantial interests, some of which are dealt with in our system under landlord/tenant law.

§ 64.03(c) Early Anglo-American Authority.

In early English cases the license, as presently conceived, seems to have also been merged with other more substantial interests. The evolution of licenses as a doctrinal concept apart from other incorporeal hereditaments can be observed by the late 15th century, although the lines of distinction were not clearly marked. n27

In many cases, a claim of privilege, license or liberty was made, though not always successfully, as a matter of defense

to an action. n28 But while these cases illustrate the existence of such a concept (i.e., a privilege without any other interest in land), for centuries the courts continued to grapple with the problems of determining the specific nature of various types of licenses and whether a particular arrangement constituted a license, lease, easement, or something else. One scholar maintained that even into the early 19th century "judicial uses of the term *easement*... were substantially synonymous with *license*." n29 He cites, for example, Wood v. Lake, decided in 1751, in which the court used the terms easement, license, and liberty interchangeably to describe a seven-year parol agreement for stacking coal on another's land, and, inexplicably, stated that "the agreement in the present case was only for an easement, and not for an interest in the land." n30 As a further illustration he used Parker v. Staniland, n31 in which the court described the right of one to enter the land of another to remove potatoes as "only an easement, a right to come upon the land, for the purpose of taking up and carrying away the potatoes; but that gave him no interest in the soil." n32 There were earlier English cases, however, which dealt with the license concept in terms similar to those used today. Webb v. Paternoster, n33 for example, decided in 1629, discussed licenses and held that mere licenses were revocable, while those coupled with an interest were irrevocable. Arguably, it was the 1845 case of Wood v. Leadbitter n34 which defined the modern license relationship and distinguished it from the easement. n35 Wood v. Leadbitter involved the ejection of a ticket-holding patron of a racetrack. When the patron refused to leave he was forcibly ejected, and he brought suit for false imprisonment. The court found for the defendant, stating that the transaction created a mere license which, by its nature, was revocable. n36 Noting the distinction between a mere license and a license coupled with an interest, the court stated that the former were revocable while those licenses coupled with an interest were not. n37 Further, the opinion differentiated between easements and licenses in terms of creation by holding that "no incorporeal inheritance affecting the land can either be created or transferred otherwise than by deed." n38 As a result of this case the license concept became distinguishable from other property relationships and began to acquire its modern form.

§ 64.03(d) Confusion of the License Concept.

While the decision in Wood v. Leadbitter may have articulated the modern license concept, it dealt with a fact situation that would probably not be disposed of within that concept today. For many years, however, the rights of the purchaser of a ticket to an amusement event received a great deal of attention and, in the United States, resulted in law review commentaries by the most distinguished scholars n39 and a Supreme Court decision by Mr. Justice Holmes. n40 The issue was whether the ticket created a license or a more substantial interest in the place where the event was occurring. If it created a license only, then the proprietor could eject the patron arbitrarily even though doing so might constitute a breach of contract. If it created a property interest, either an easement or a leasehold estate, in the theater, or place where the event was being held, then any effort to eject the patron would give rise to an action of trespass in favor of the patron. While there were cases going both ways, the result usually reached was that there was a right of ejection and it was usually rationalized on the basis that the patron had only a license. n41 The more thoughtful commentators recognized, however, that property concepts had little to do with the result in those cases. The issue which should have been discussed was the policy question of the need to maintain order at such events as opposed to the rights of the individual patron. n42

Another group of license cases that are probably only of historic interest are those sometimes described as a situation in which one has a license to do an act on one's own land. Those were cases in which a dominant owner gave a permission, or license, to the servient owner to obstruct the easement in such a way as to require the conclusion that the easement had been extinguished. In rationalizing that the easement right had terminated, the courts determined that the license had become irrevocable.

In one of the prominent English cases dealing with this situation a building was allowed to be constructed on the servient estate which obstructed an easement for the passage of light and air, and it was held that the easement was extinguished. n43 One of the problems with this line of authority is that it utilizes the concept of an irrevocable license, a contradiction in terms, and another is that it arose out of the English law which recognized the prescriptive easement for light and air, an idea which has not been widely adopted in the United States. n44 The most important reason why the cases should be regarded as only of historical interest, however, is that they represent only situations in which an

easement has been abandoned. n45 In fact, in most of the instances where this line of reasoning has been used in the United States it was an alternative line of reasoning in which the opinions were based primarily upon the theory of abandonment of easements. In one case, for example, a landowner, through whose land a railroad ran, gave the railroad company permission to close a railroad crossing. Acting upon the consent, or license as it was called, the company closed the crossing and built another at a different location. The court held that any easement the landowner had at the old railroad crossing site was extinguished. Although the court discussed the theory and line of authorities dealt with herein, the decision was primarily based upon the idea of abandonment. n46 The same kind of reasoning has been used with respect to a line of cases involving the diversion of a stream with the consent of a downstream owner who later seeks to revoke the consent. n47

§ 64.03(e) Current Status of the License Concept.

Although it has been recognized that the license concept is not the proper basis for disposing of the disputes between theater owners and their patrons or those involving abandonment of easements, the concept nevertheless continues to be used in many situations where it is not appropriate. It may be used, for example, as a means of explaining the result in a case that was actually based upon an unarticulated policy decision, n48 or it may be as a means of expressing a negative result in a dispute in which a party has failed to establish the existence of another relationship. n49 In the latter situation the analysis will typically be devoted to the question of the existence or nonexistence of the contended-for relationship, and when it is found that such a relationship does not exist, the license label will be applied with little consideration being given to whether it accurately describes the relationship between the parties.

There also continues to be a tendency to confuse the license concept with easements in some situations with the result that there are many inconsistent and misleading statements made concerning the nature of the license relationship. This is particularly apparent in those situations in which the word license is used, usually in conjunction with other language, to describe relationships that have become, or were in their origin, irrevocable. The result is a contradiction in terms if the license is defined as a revocable relationship. Examples are the license coupled with an interest, n50 and the executed parol license. n51 In some of these situations the function of the license-plus reasoning may be to avoid the effect of the Statute of Frauds and in others to explain the application of the estoppel doctrine. In all of such situations, however, the relationship, despite the label, is something other than license and in the case of the license coupled with an interest or the executed parol license it is, in fact, easement. Those relationships will nevertheless be discussed herein, despite the fact that they are actually easements.

FOOTNOTES:

(n1)Footnote 19. While this definition would seem elementary, *see* §64.03(a) *infra* for a discussion of the controversy that it would have once evoked.

(n2)Footnote 20. *See* 7 Sir William Holdsworth, A History of English Law, 326 (2d ed. Little Brown 1937), where it is suggested that the distinction between licenses and other real property relationships "had been obscured by changes in the forms of action and by a forgetfulness of the Roman rules which Bracton had stated." *But see* Charles E. Clark, Covenants and Interests Running with Land 13, 18 n.17 (2d ed. 1947), stating that "In Roman or civil law there seems to be no defined legal interest of this character, there being no lesser *iure in re aliena* than servitudes...."

(n12)Footnote 30. *Sayer 3, 96 Eng. Rep. 783 (K.B. 1751).*

(n13)Footnote 31. 11 *East 362, 103 Eng. Rep. 1043 (K.B. 1809).*

(n14)Footnote 32. 11 *East 362, 103 Eng. Rep. 1045 (K.B. 1809).*

(n15)Footnote 33. (1629) Palmer 71; 2 Rolle 143, 152; Noy 98; Golbolt 282. In this case, Sir William Plummer gave Webb a license to put hay on his land until it could be sold. The hay remained on the property for two years. Plummer subsequently leased the land to Paternoster who, in turn, placed his cattle on the pasture. Webb brought an action of trespass when the cattle ate his hay. The court stated that as a matter of law, Webb had more than a reasonable amount of time to sell the hay and therefore the license was revocable. Later cases such as *Wood v. Leadbitter, 153 Eng. Rep. 351, 13 M. & W. 838.* (Ex. 1845), *infra*, point out that the two real points decided in *Webb* were that the question of reasonable time was for the court, not the jury, and that two years was more than a reasonable amount of time. Therefore, the revocability distinction was merely dictum, although it was certainly a rule with which the court entirely agreed.

§ 64.04 Scope, Transfer and Termination of Licenses.

[Go To Supp]

§ 64.04(a) Scope of the License.

The rights of the licensee are fixed by the agreement creating the license, if there is one. If there is no agreement, or the agreement does not fix the rights of the parties with respect to the matter in issue then it becomes a question of the reasonableness of the expectations of the parties. n52 The question is seldom raised in litigation between the licensor and licensee because, the license being revocable, the licensor can, by revoking, terminate all rights of the licensee. It is occasionally raised in situations where the licensee has acted pursuant to the license and the question is the extent to which the acts exceeded the authority given by the license. n53 Transformed into an easement, such questions depend upon the scope of the easement thereby acquired and should be dealt with in the same way as those arising out of other easement relationships. n54

§ 64.04(b) Transfer and Termination.

Licenses are inherently revocable and will be considered revoked by any act that is inconsistent with the continued existence of the relationship. Since most licenses are a result of a relationship of trust and confidence, a transfer of license rights will normally be considered to be inconsistent with the intention of the parties, and there are numerous cases stating that any attempt to assign such rights will result in the termination of the license. n55 Furthermore, it is frequently said that the death of either of the parties to the license relationship will terminate it. n56 However, in many of these decisions that question was not directly in issue, or the statement provided only an alternative basis for the decision in the case. Rather, in many cases, while the litigation was between transferees or successors of the original parties, the license had obviously been revoked as a result of the dispute between them. Instead of so holding, it may be

stated that the license was revoked upon the transfer by one of the parties. n57

Whether the license is transferable or has been terminated should depend upon the intention of the parties, or, if they have not expressed their intentions, the reasonableness of their expectations. n58 The fact that the license is to be the basis for a commercial enterprise to be conducted by the licensee may be some basis for concluding that the license is transferable, but there are many such cases holding that such licenses are nontransferable. n59 No single fact should be dispositive of this question. In fact, in one class of cases in which the relationship has been generally characterized as that of licensor/licensee, the amusement event ticket cases, the license is nearly always assumed to be transferable. In fact, large businesses have grown up around the transaction involved in transferring such tickets and this act has been given a common name (scalping) and the business or practice of transferring amusement tickets is often regulated by statute. n60 While some of the concession cases contain statements supporting the idea of non-transferability, or termination upon an attempted transfer, n61 the relationships in those cases are generally based upon contract and the outcome should depend upon the extent to which the contracting parties have developed expectations on that question.

Executed parol licenses which have become irrevocable because of the expenditure of money or labor by the licensee are, of course, no longer licenses. They are easements and are subject to the rules relating to termination of easements generally including those relating to release and abandonment. They may also be terminated by the fact that the improvement which was the basis for transforming them into easements has run its useful life. n62

The license coupled with an interest is also something more than a license. It is a form of easement and as such it is clearly irrevocable. It too will have a duration based upon factors involved in the creation of the relationship. Since it generally involves the right to retrieve items of personal property from the land of the licensor, its duration will be measured by the needs and expectations of the parties with respect to the particular personal property. If no time has been fixed by the parties, the licensee will generally be given a reasonable time within which to remove the property.

CHAPTER 64 LICENSES

8-64 Thompson on Real Property, Thomas Editions § 64.05

AUTHOR: Professor Ronald W. Polston School of Law Indiana University, Indianapolis

§ 64.05 Judicial Enforcement of Licenses

[Go To Supp]

§ 64.05(a) In General.

There are few legal relationships that consist of nothing other than a simple privilege to enter the land of another. In most cases in which the license concept is at issue, many other legal interests are present and a complex fact situation must be measured against the expectations of the parties. A resolution of issues unrelated to the license privilege may result in the decision that the relationship between the parties has terminated, and the result may be phrased in terms of a license that has been revoked. However, a slight variation in the facts could change the decision to one of irrevocability, in which case it is apparent that the relationship has become something other than license, or that at least the license privilege has not been dispositive of the issues involved in the litigation.

Therefore, while the license concept remains constant, its use in the various lines of authority, in which it regularly appears, does not. There are several distinct lines of authority involving the license concept, and dealing with commonly recurring fact situations, in each of which, the cases, while bearing a close relationship to each other, may have little in common with those in other lines of authority. Still, there are some generalizations that can be made about the license relationship. As a result, the organization used herein will be based upon a separate discussion of each of the major fact patterns while at the same time making some effort to generalize about the entire area.

§ 64.05(b) Licenses Treated As Similar to Easements.

Parties frequently deal with each other on an informal basis in situations in which their activities would be characterized as easement if more formality attended the entry into the relationship. Thus, a landowner may allow another to make some limited use of the land without any effort being made to embody the arrangement in a document. For example, the landowner may permit another to lay a water pipe across the land, or build a road, or divert a stream that crosses the land of both the parties. The fact situations range from those in which the arrangement is begun with nothing being said by either party although by their actions it is clear the landowner assents to what is being done, to those in which it begins with an express, but oral, understanding of exactly what is to be done and how long it is to be allowed. In between, of course, are many possibilities such as those in which there is an oral permission to engage in the activity with nothing being said concerning duration, or those in which the parties anticipate that the arrangement will be

formalized later but they fail to do so. In all of these situations the Statute of Frauds, or lack of conveyancing formalities, or perhaps a failure to clearly express, even orally, the intent to do so, prevents the relationship from becoming an easement, at least at the outset. The assent of the landowner to the activities, however, protects the actor from being treated as a trespasser and the arrangement is characterized as a license.

If the landowner attempts to terminate the relationship and the licensee objects, the courts will frequently intervene on behalf of the licensee to convert the license relationship into an irrevocable right that can only be called easement. The result is to dispense with the Statute of Frauds, or conveyancing formalities, or even the necessity for an adequately expressed intent, to reach a result that recognizes and gives effect to justifiably formed expectations. The courts will not do so in the absence of compelling reason, however, because the effect is to impose a permanent or long lasting burden upon the land of one who may not have anticipated such an effect, and that result is contrary to the Statute of Frauds. The recurring fact patterns that have led the courts to reach such results usually include some action on the part of the landowner that causes the other party to develop expectations concerning the right of use, and conduct on the part of the permittee. These expectations typically include the expenditure of substantial amounts of money or labor, which can be characterized as detrimental reliance. This is the kind of situation that has typically been said to trigger the equitable doctrine of estoppel; frequently the doctrine is invoked in these cases even though its application is based upon conduct that is often promissory rather than being representational or indicative of fraud or concealment.

While many intricate theories have been advanced to explain the result in these cases, such as variations upon the part performance doctrine, executed parol license, etc., n63 the fact is that all of these cases are simple illustrations of the broad principle outlined above, n64 and such cases bear a close resemblance to those in which restrictive covenants are imposed upon lands because of oral promises or representations made at the time of purchase. n65

The principle has been applied in many fact situations. In an Illinois case, n66 permission was given to an adjoining landowner to build a driveway on the land of the person extending the permission. As a result the licensee constructed his house with an attached garage that could only be reached by use of the permissive way. If the permission was allowed to be revoked the licensee would have been required to build a new garage and driveway on the other end of the house. The court held that the license had become irrevocable. In other words, it had become an easement because of the unfairness that would result from allowing it to be revoked. The doctrine has been applied to water pipes, n67 irrigation ditches, n68 drains, n69 and other easement-like uses. n70

While most courts recognize and apply these principles, n71 there are occasional statements that no amount of reliance can render an oral license irrevocable. n72 There are also decisions that permit revocation despite the fact that there has been claimed reliance, but they simply illustrate that the court, in these cases, is required to balance the interest of the parties and the policy of the Statute of Frauds. The unfairness to the claimant must be of such magnitude as to justify imposing the burden upon the landowner and thwarting the operation of the Statute of Frauds. If, for example, the expenditures were not great, n73 or the reliance not reasonable, n74 or the conduct of the landowner not calculated to induce reliance, n75 the balance may be struck against the claimant.

When the reliance has reached the point where it will justify imposing a burden upon the landowner, the relief will usually take the form of elevating the license to the status of easement. n76

Yet there is some disagreement among the courts and writers as to the duration of the easement thus created. It has been argued that it should be of perpetual duration and thereby given the same status as if it had been created by a written grant. n77 On the other hand, it has been contended that the duration should only be of such length as to enable the licensee to recover the investment that justified the decision to make the license irrevocable. The argument here is that the interest is created only to avoid the unfairness of depriving the claimant of an investment. n78 The latter position has been criticized on the basis that it creates uncertainty in land titles. n79 The older cases which recognized a limit on the life of the interest tended to base it upon the useful life of the improvement when kept in a good state of repair, and the disputes involved the extent to which the licensee's maintenance amounted to renewal as opposed to repairs. n80

That standard seems to have given way to the more current amortization of investment idea.

Although the usual relief when the licensee has expended money in reliance upon the license is in the form of rendering the license irrevocable, it is sometimes said that the only relief to which the claimant is entitled is restitutionary. Under such reasoning the landowner would be allowed to revoke but would also be required to make restitution to the claimant at least to the extent that the landowner was benefitted by the improvement made by the claimant. n81 In those situations where the licensee has erected a removable structure and the license has been held to be revocable, the licensee will generally be permitted to remove it. n82 The licensee may not be required to restore the premises to their former condition upon revocation of the license, however. n83

Even though the license is held to be irrevocable it may still be lost if the property is sold to a bona fide purchaser. Thus in the case of buried water line it was held that the sale of the burdened property to a party who had no notice of its existence resulted in the termination of the interest. n84 Such decisions should be compared to those involving easements created by implication where it is held that such interests, not being embodied in a recordable document, are not subject to the recording acts. It could be argued that the same reasoning should be applied to the easements created when a license is rendered irrevocable. n85

LEXIS: oral or parol w/10 licens! and easement and land or property and statute w/1 frauds

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 64.05(c) License Coupled with an Interest.

In some situations a license will be implied as a part of another transaction between the parties. Thus, if a party owns personal property that is on the land of another with permission, a license will be implied to permit the removal of the same. n86 It may not even be necessary that the licensee have title to the personal property. A contract right to acquire it may be an adequate interest. Thus, in one case the plaintiff sold several lots of land to the defendant. One of the lots contained a building that plaintiff had leased to a third person. The sale terms also provided for the plaintiff to demolish the leased building and in an unrelated transaction the plaintiff agreed to build a new building on other land for the tenant of the building being demolished. Plaintiff needed the materials from the demolished building in the construction of the new building. The sale contract provided that the title to the demolished building was to remain in the defendant until demolition was completed. Before the demolition the defendant changed his mind about demolishing the building and notified plaintiff that he would not permit the demolition. Plaintiff proceeded to demolish it anyway to obtain the materials needed in the construction of his new building. The court held that plaintiff had a license coupled with an interest which justified his entry onto the premises. n87

The license in such cases is generally held to be irrevocable for a reasonable period of time. That result is accomplished by calling the interest a license coupled with an interest. n88 Such an interest is quite obviously different from the simple license relationship as defined herein. In fact it more nearly resembles the easement by necessity, n89 or the easement implied in favor of mineral developers to enable them to obtain access to the mineral deposit through the surface of the land. n90 The similarity to these easement relationships lies in the extent to which the interest is being created to satisfy policy objectives relating to the efficient and economic use of property rather than any actual perceived intent on the part of the parties.

Interestingly, while the Statute of Frauds is not a problem in the easements implied from necessity or for the removal of minerals because of the theory that the easement is being implied into a written grant, apparently no problem is perceived in the fact that the license coupled with an interest may rest entirely in parol. n91 The license is being implied here simply from the need to have access to one's property, and there may be no document between the parties from

which the right can be implied. In Ingalls v. St. Paul M. & M. Ry. Co., n92 the plaintiff's house was built on defendant's land pursuant to an oral license and the license was made irrevocable to permit the plaintiff to remove the house. There was never any writing between the parties into which it could be implied. n93

A series of timber cases illustrates the creation of this kind of license arrangement. In those cases it was held that if the contract for the sale of timber does not create an interest in the standing trees it nevertheless gives the vendee a revocable license to enter the land and cut the trees. Once the trees are cut an irrevocable license arises to enter and remove the cut trees. n94 A revocation after some but not all of the trees have been cut therefore terminates the right of the vendee to enter to cut any more trees but leaves unaffected the vendee's irrevocable license to remove the cut trees. This is explained on the basis that a contract for the sale of timber is a contract for the sale of real estate and while it is unenforceable unless in writing, a contract for the sale of trees that have been cut relates only to personal property. Once the contract is executed by the cutting of the trees and reducing them to personal property they become the property of the vendee. n95

It has been held that the failure of the licensee to act within the life of the license, be it a time fixed by agreement or a reasonable time, n96 will result not only in termination of the license but also loss of the asset to which the existence of the license relates. n97

LEXIS: licens! w/5 coupled and interest or grant

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 64.05(d) Licenses Arising in Contractual Situations.

§ 64.05(d)(1) In General.

Licenses may also be created as an incident of contracts. If a contract calls for the entry upon the land of one of the contracting parties by the other, but the relationship between the parties makes it clear that they were not dealing primarily for the land use right, a license may arise. Since specific performance will not be required of most contracts and the parties therefore have the power to breach and thereby terminate the right of the other to performance, the privilege of entry conferred by such a contract, even if it is in writing, is revocable and the right of entry onto the real estate which it created must, therefore, be characterized as license. n98 This is true even though the revocation of the license might constitute a breach of contract for which damages may be had. n99 On the other hand, if the parties were primarily interested in conferring a right of entry upon the land, and the transaction is reflected in a writing, the interest will be called an easement or lease and the right will be deemed to be irrevocable and binding upon successors.

LEXIS: licens! w/5 interest w/5 land or property and possess! and contract or agreement and revoc! or irrevoc!

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 64.05(d)(2) Theater Ticket Cases.

The results in the theater ticket cases n100 are frequently explained on the basis outlined in the previous paragraph. Thus, a ticket holder is generally held to have only a revocable license and can be ejected by the proprietor of the theater at will, even though such an ejection may result in a breach of contract for which damages may be recovered by the patron. In such cases, the patron is entitled to recover only if the theater proprietor uses more force than necessary in

ejecting the patron. n101 However, it is doubtful whether the result in those cases can be explained on the basis of property concepts alone. The more thoughtful cases recognize that the ultimate question is one of policy in which the extent to which a theater proprietor should have the power to maintain order is balanced against the patron's the right to view the event. n102

COMPUTER-ASSISTED RESEARCH

LEXIS: licens! and ticket and eject! and revoc! or revok!

EXPLANATION: With a Lexis search, the"States" database appears to be more useful than the "Realty" database. With a Westlaw search, it is generally best to use the Key Number system wherever possible, however in this case adding the "licens!" term helps avoid extraneous material.

§ 64.05(d)(3) The Concession Cases.

Another line of cases in which a contractual relationship may give rise to a license is that in which the owner of an establishment gives another a concession to operate a business on the premises. The fact situations are typified by those in which a hotel or department store allows another to conduct a particular type of business such as a gift shop n103 or music department n104 on a part of the premises, or those in which an apartment building owner contracts for another to install coin-operated laundry machines in the building. n105 Such a relationship does not clearly fit into any of the customary categories of property interests. It resembles easement in that the concessionaire is given a right of access for a limited purpose. It resembles a lease in that the parties may anticipate that a particular space be used and there is usually a periodic payment required which may resemble rent. While it has aspects of both easement and lease it may also look like a simple business relationship which only incidentally involves the use of land.

The courts are frequently called upon to determine disputes between the parties to such a relationship and also to determine the rights between one of the parties to the relationship and a third person, perhaps a governmental agency, and the result may depend upon whether the relationship is categorized as lease, easement, or license. In disputes between the parties the question may be whether the relationship extends to successors in interest, n106 whether the concessionaire became a holdover tenant after expiration of the original agreement, n107 whether there is tort liability of the landowner to the concessionaire, n108 or the right of the landowner to terminate the relationship, n109 or to a summary eviction remedy. n110 The relationship of the concessionaire to third persons may also sometimes depend upon the characterization of the interest as lease, easement, or license. Tax questions, for example, may be different if the concessionaire is characterized as lessee than if characterized as dominant owner or licensee. n111 Tort liability to third persons may also depend upon such a characterization n112 and various governmental relationships impact differently upon leases than upon the other two possible characterizations. n113

In such cases, a court is asked to render a specific kind of relief and the entitlement to such a remedy is said to depend upon whether a particular relationship, usually a lease, n114 exists. While there is sometimes an underlying policy question that has an influence on the decision, the result will ordinarily depend upon how much the facts resemble those that are typical in the contended-for relationship. Thus, to the extent the concessionaire is given exclusive control of a specific area and rent is reserved on a periodic basis, the relationship is apt to be called landlord/tenant with the result that the relationship will survive a transfer by the landlord, n115 and the tenant will be entitled to rights and remedies available to those similarly situated. n116

Unfortunately, for the rational and logical development of the law of licenses, if the contended-for relationship is found not to exist, or if the claimant is found not to be entitled to the relief requested, the result is usually called license with little thought being given to the implications of attaching such a label. For example, the operator of a gift shop in a hotel attempted to avoid the termination of its interest upon the sale of the hotel in a situation in which the document establishing the relationship provided for termination in the event the hotel was sold. It also provided for the kind of

rent that might be found in a lease, but gave the hotel owner the right to move the gift shop around in the hotel, thus creating an ambiguous relationship. An attempt was made to give additional weight to the claim by asserting that the document created a lease and that the gift shop owner was a tenant.

In denying the relief the court characterized the gift shop owner as a licensee rather than simply relying upon the provision for termination in the event of sale. n117 The implication of the decision is that the relationship could have been terminated at the will of the licensor at any time. One wonders, however, if the characterization would have been the same if the dispute had arisen as a result of the licensor's arbitrary attempt to terminate the relationship prematurely.

Similarly, the concessionaire in an arrangement for the installation of coin-operated laundry machines in the "laundry room in basement" sought to avoid eviction after the written agreement had expired by claiming to be a "statutory tenant." The court held for the apartment house owner and characterized the interest as a license n118 even though the arrangement in this case designated a specific area for the licensee to occupy, and therefore more nearly resembled the typical lease arrangement, in contrast to the previous case in which the gift shop owner's space was subject to being changed by the hotel owner. There is therefore even more doubt as to whether the decision would have been the same if the dispute had arisen during the term created by the document.

Occasionally, the characterization possibilities open to the court in such cases include "easement" as well as "lease" and "license." In one case n119 the City was attempting to cancel a contractual arrangement with a Landfill Authority on the basis that the Authority, by accepting trash from another municipality, had sublet or assigned in violation of the express terms of the agreement. The court avoided the problem by saying that the arrangement amounted to an easement in gross rather than a lease or license. The decision seemed to be as result oriented as the previous cases and it is doubtful that it provides any insight into analyzing the license cases.

The cases involving tort liability, either between the landowner and the concessionaire or between the concessionaire and third persons, were, in an earlier era in which the existence of the landlord/tenant relationship was held to insulate the landlord from liability to either the tenant or third persons, n120 more dependent upon the property classification system than at present. If the concessionaire was called a licensee it might have implications with respect to the liability of the landowner to the concessionaire and it might also have implications with respect to the liability of the concessionaire to other persons. The lessening of the importance of the property classification system has followed from developments in both tort law and property law. Thus, as property law has abandoned the doctrine of caveat emptor in the landlord/tenant situation, and has come to view the landlord/tenant relationship as a contractual one in which the landlord has a continuing obligation to proved adequate housing, n121 the liability of the landlord to the tenant for injuries received by the tenant has come to depend upon the same principles of negligence or absolute liability as are applied in other tort situations. n122 Similarly tort law has abandoned the rules that made liability depend upon the property label applied to the parties. n123 These developments have tended to reduce the importance of the license concept in the concession cases, but there are still occasionally cases in which the result in a tort case is stated in terms of whether or not the occupant of land is said to be a licensee. n124

Additionally, in many situations the rights and liabilities of the concessionaire with respect to third persons will still depend upon the extent to which the relationship is characterized as license. Real estate tax liability may depend upon such a determination in some situations. Thus, in one case the federal government allowed a private company to use federal land in carrying out contracts with the government. There was no charge for the use of the land, and the right of use was limited to the period of defense contracts between the U.S. Government and the contractor. The state in which the property was located sought to tax the land under a state statute that taxed otherwise exempt property that was leased to a nonexempt user. The arrangement between the federal government and the user had to be characterized as either a lease or something else. When it was determined not to be a lease and, therefore, not taxable, it was said to be a license arrangement. n125

Similarly, when a taxpayer challenged an arrangement between a publicly owned park and the operator of a water slide

located in the park, it was necessary to characterize the transaction in order to determine if the public body was justified in entering into it without having advertised for competitive bids. The waterslide operator was given the use of specific space in the park for a specific term and was required to pay a percentage of profits to the public body. If the transaction was a lease, bids would have been required to prevent the arrangement from violating a statute relating to the disposition of public property. The transaction was upheld by characterizing it as a license arrangement. n126 While the arrangement resembles the typical lease arrangement in many ways, the case was undoubtedly influenced by an unarticulated position concerning the policy behind the statute being construed. n127

Thus while the concession cases have ostensibly been the source of much of the law regarding the creation of licenses, there is some question as to the extent to which those cases have actually been based upon, or have contributed to, the body of law relating to the license relationship. In many of them the license characterization is simply a way of stating a negative result in litigation involving the existence or nonexistence of another relationship. n128

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 64.05(d)(4) Advertising Sign Cases.

Agreements for the maintenance of advertising signs on the land of another have frequently been held to create only a license, n129 despite the fact that they may be in writing and for consideration. n130 Sometimes they are held to create an easement in gross. n131 The lack of uniformity as to the treatment to be accorded such arrangement is no doubt due in part to the fact that the transaction does not fit readily into any of the customary categories of property law. Thus, while they seem to involve a payment for the use of specific space for a stated period of time and would therefore resemble the landlord/tenant situation, the space that is utilized may be no more than a coat of paint thick and it is not anticipated that human access be had except for the purpose of posting and maintaining the sign. For these reasons it is difficult to conclude that the transferee has received the possessory right necessary to characterize the transaction as a lease arrangement. Easement is perhaps the most appropriate characterization since the transaction involves access to property for a limited purpose. There may, however, be a personal element involved in the relationship since the purpose is to deliver a message and the location may be on premises used by the transferor as a residence or business. As a result the arrangement may be more appropriately designated as contractual with the result the property interest is called license. Furthermore the consideration paid for the privilege may be small in comparison to the extent to which the sign may interfere with the use of the property for other purposes. Since the question as to the kind of relationship is a matter of intent, and all such factors may bear upon intent, inconsistency in the decisions involving this relationship is not surprising.

In the most frequently cited case of this kind, Baseball Publishing Co. v. Bruton, n132 in which the question was the right to a remedy in kind, the court struggled with the characterization possibilities of lease, license, and easement, and concluded that the relationship was an easement in gross. To the same effect is a New York case in which the question was the extent to which the advertiser was entitled to a condemnation award when the signs were required to be removed for the purpose of widening a highway. n133 An Ohio case, however, denied the advertiser the right to participate in a condemnation award on the basis that such an agreement creates only a license. n134

It has also been held that a written agreement giving a church the right to maintain a large lighted sign created only a license which could be revoked. n135 The agreement in that case, which provided for an annual payment, did not indicate the duration of the right, but designated it as easement. The appellate court upheld the lower court decision on the basis that there was sufficient evidence to support the finding that the intent was to create only a license. n136 Such an agreement was also held to create only a license in a case in which the transferor attempted to hold the advertiser as a

holdover tenant for another term. n137 The latter holding would also be consistent with the conclusion that the agreement created an easement even though the court called it a license.

FOOTNOTES:
(n1)Footnote 63. One writer found it necessary to use six different theories to explain the results in the cases. Five of his theories related to the cases being here discussed. The sixth is related to the easement coupled with an interest. *See* Alfred E. Conard, *Unwritten Agreements for the Use of Land*, 14 Rocky Mt. L.R. 153, 294 (1942).

The Restatement (Third) of Property deals with these situations in §§ 2.9 and 2.10. § 2.9 creates an exception to the Statute of Frauds in situations in which the transferee "in reasonable reliance on the existence of the servitude has so changed position that injustice can be avoided only by giving effect to the parties' intent to create a servitude." § 2.10 provides as follows:

> § 2.10 Creation by Estoppel
>
> If injustice can be avoided only by establishment of a servitude, the owner or occupier of land is estopped to deny the existence of a servitude burdening the land when:
>
> (1) the owner or occupier permitted another to use that land under circumstances in which it was reasonable to foresee that the user would substantially change position believing that the permission would not be revoked, and the user did substantially change position in reasonable reliance on that belief; or
>
> (2) the owner or occupier represented that the land was burdened by a servitude under circumstances in which it was reasonable to foresee that the person to whom the representation was made would substantially change position on the basis of that representation, and the person did substantially change position in reasonable reliance on that representation.

Hoffman v. United Iron & Metal Co., 671 A.2d 55, (Md. App. 1996) (in an action against the owners of an automobile shredding facility for nuisance and trespass, among other counts, the court held that the shredding facility had acquired a prescriptive easement to maintain a nuisance for excessive noise, explosions, and air pollutants against persons who owned property and lived in the area for a continuous 20-year period), *distinguished by Johnson v. Indresco, Inc., 124 F.3d 197 (6th Cir. 1997).*

See e.g., Dance v. Tatum, 629 So. 2d 127 (Fla. 1993) (A license in land is generally revocable at the pleasure of grantor, but there is an exception. The exception exists where permission is granted to use property for a certain purpose, and in that use the permittee has expended large sums or incurred heavy obligations for its permanent improvement.); *Tricker v. Pennsylvania Turnpike Comm'n, 717 A.2d 1078 (Pa. Commw. Ct. 1998)* (a license becomes irrevocable when the licensee, in reliance upon license, treats land differently than if there were no license, by spending money for changes in land).

(n2)Footnote 64. Efforts are sometimes made to isolate and give controlling significance to particular facts in these cases. *See, e.g.*, Charles E. Clark, Covenants and Interests Running with Land 62 (2d ed. 1947), where the author, who labeled those who are given the benefit of this doctrine "land grabbers" and the landowners who are burdened thereby as "neighborly," says: "... unless the licensor has stated that his permission is ... to last permanently or for a stated time, he should be entitled to extinguish the privilege at any time."

(n3)Footnote 65. Thus, in *Miller v. Lawlor, 66 N.W.2d 267 (Iowa 1954),* the same kind of reasoning was used to create a right to a view across defendant's land with the result that defendant was prohibited from building in such a way as to obstruct the view. Prior to plaintiff's purchasing the house from a third person a promise was obtained from the

defendant that the view would not be obstructed. The result here could be phrased either in terms of a land use covenant, an easement for light and air, or an executed parol license, and it was created because of reliance by plaintiff on defendant's oral assurances. Interestingly, the court discussed different theories that might be used to justify the result such as part performance, equitable estoppel and promissory estoppel and said, as to such theories, "We deem the difference ... more apparent than real." *Id. at 271.*

(n4)Footnote 66. *Mercer v. Strum, 293 N.E.2d 457 (Ill. App. 1973). See also Dupont v. Whiteside, 721 So. 2d 1259 (Fla. App. 1998)* (irrevocable license to use roadway based on expenditures in constructing a home).

(n5)Footnote 67. *Monroe Bowling Lanes v. Woodfield Livestock Sales, 244 N.E.2d 762 (Ohio App. 1969); Hallauer v. Spectrum Props., Inc., 1999 Wash. App. LEXIS 1540* (Wash. App. Aug. 24, 1999) (water line diverting warm water to fish hatchery was not easement but license that was extinguished when property foreclosed).

(n6)Footnote 68. *Stoner v. Zucker, 83 P. 808 (Cal. 1906). Kitchen v. Kitchen, 641 N.W.2d 245 (Mich. 2002)* (irrevocable oral license for placement of an irrigation system across licensor's property).

(n7)Footnote 69. *Eppling v. Guentzens, 117 N.W.2d 820 (Iowa 1962).*

(n8)Footnote 70. *See, e.g., Russell v. Hubbard, 59 Ill. 335 (1871); Coumos v. Transcontinental Garage, 230 P.2d 748 (Wyo. 1951).* In both cases the owner of a building, built near the boundary, permitted the adjoining landowner to utilize a wall of the building in constructing a new building on the adjoining tract. It was held that the oral license to use the wall could not be revoked. It should be noted that in *Kamphouse v. Gaffner, 73 Ill. 453, 461 (1874),* the court stated that Russell "must either be limited to cases of party walls or be considered as overruled." *Tusher v. Gabrielsen, 68 Cal. App. 4th 131, 80 Cal. Rptr. 2d 126 (1998)* (license to use pond revocable); *Morning Call, Inc. v. Bell Atlantic-Pennsylvania, Inc., 761 A.2d 139 (Pa. Super Ct. 2000)* (Telephone service provider had an irrevocable license to keep its equipment on an apartment building. The equipment had been attached to the building for over 50 years, but neither side could produce a document that allowed the phone company to place its equipment on the apartment building).

(n9)Footnote 71. The cases are somewhat confusing and sometimes contradictory. For a citation of cases, see Charles E. Clark, Covenants and Interests Running with Land 62 n.146 (2d ed. 1947). The author of that work expresses some hostility to the operation of this doctrine.

(n10)Footnote 72. *See Mayor of Baltimore v. Brack, 3 A.2d 471 (Md. 1939); Belzoni Oil Co. v. Yazoo & M.V. Ry., 47 So. 468 (Miss. 1908).*

(n11)Footnote 73. In *Keck v. Scharf, 400 N.E.2d 503 (Ill. App. 1980),* the claim was to a roadway upon which the claimant had spread some rock and it was held that the expenditure was not great enough to justify imposing a burden upon the land. To the same effect is *Rouse v. Roy L. Houck Son's Corp., 439 P.2d 856 (Or. 1968).* In *Loid v. Kell, 844 S.W.2d 428 (Ky. 1993),* the purchasers of burial rights in a pet cemetery were held to be entitled to no relief against a purchaser of the cemetery burial ground who refused to recognize such burial rights and to use the cemetery for other purposes. The court stated that an easement by estoppel would not be binding on a subsequent purchaser with notice. While the decision may not be defensible on that ground, the court also held that the interest was a license and that the purchasers of the burial rights had not "erected valuable improvement in reliance on the license."

(n12)Footnote 74. *In Reed v. Horne, 187 So. 2d 316 (Miss. 1966),* both parties understood that no rights were to accrue until a writing was executed. The writing finally submitted by the landowner was rejected by the claimant, and it was held that the license was revocable. To the same effect is *Brown v. Eoff, 530 P.2d 49 (Or. 1975),* where the parties were aware that the license was only to last until the parties negotiated a formal easement. However, the fact that the parties anticipate the execution of a writing at a later time is only one of the factors bearing upon the reasonableness of the expectations of the parties. For example, in *Hunter v. Slater, 49 N.W.2d 33 (Mich. 1951),* the parties anticipated that defendant would later reduce their arrangement to a writing to be drafted by the defendant. Defendant nevertheless told

plaintiffs to go ahead and build their road. Defendant never produced the writing. The court held for the plaintiffs and prevented defendant from revoking the license.

(n13)Footnote 75. *Bieber v. Zellner, 220 A.2d 17 (Pa. 1966).* And *see Ewing v. Rhea, 62 P. 790 (Or. 1900),* which held that silent acquiescence by the landowner did not raise an estoppel.

(n14)Footnote 76. *See* Charles E. Clark, Covenants and Interests Running with Land 59 (2d ed. 1947), where the author stated:

> ... executed license or irrevocable license is a misnomer. What we are dealing with is an easement for that is what the licensee gets ... and hence a case ... was quite correct in granting a decree quieting title to an easement... .

See also Alfred E. Conard, *An Analysis of Licenses in Land, 42 Col. L.R. 820 (1942),* where it is said:

> When the parties have so acted that an unwritten license becomes irrevocable, an easement has arisen. To call it an irrevocable license is to imply a difference which does not exist... .

See also Industrial Disposal Corp. of Am. v. City of E. Chicago Dep't of Water Works, 407 N.E.2d 1203 (Ind. App. 1980).

In an unusual fact situation in which the licensee acquired the burdened property subject to a purchase money mortgage, the license, which had become irrevocable prior to that time because of the expenditure of money in reliance upon its continued existence, did not terminate, or merge into the fee title, so that when the mortgage was foreclosed and the property reacquired by the mortgagee it was still subject to the irrevocable license. The court thought it was necessary to its decision to hold that the license had never become an easement. The reasoning was that if the license became an easement it was subject to the doctrine of merger and would have ceased to exist when the licensee acquired the burdened estate. There are, obviously, other grounds available for the decision, and it, therefore, does not detract from the proposition that an irrevocable license is, in effect, an easement. *Dance v. Tatum, 629 So. 2d 127 (Fla. 1993).*

(n15)Footnote 77. In 3 Herbert T. Tiffany, The Law of Real Property, 417 (3d ed. Callaghan 1939) it is said:

> There is no more reason that the privilege should in such a case be restricted to the life of the improvements than that a decree specifically enforcing a contract for the sale of land, based on part performance involved in the making of valuable improvements, should call for a conveyance of an estate to endure only as long as the improvements endure.

He is obviously referring to cases in which an unwritten transfer of an easement is being given effect and the owner of the burdened land intended to create a perpetual interest. In such cases the function of the doctrine is simply to remove the bar of the Statute of Frauds. There are many cases, however, in which no such intent appears. In such cases the landowner may have simply failed to object to the activities or may have given a permission which was not intended to be perpetual, but upon which the licensee relied in making improvements. Tiffany's reasoning would not appear to be applicable to such cases.

(n16)Footnote 78. The Restatement took this position in § 519(4). In Alfred E. Conard, *An Analysis of Licenses in Land, 42 Col. L.R. 820 (1942),* the author criticized the Restatement position and that of another writer as follows:

> Burby suggests that it lasts until the licensed improvement decays without repair; the Tentative Restatement suggests that it lasts until the licensee has had a fair opportunity to realize upon his

expenditures. Apparently there is one case for the former view and none for the latter.

The Restatement seems to have prevailed, however, in that the recent cases have tended to adopt its position. *See Eliopulos v. Kondo Farms, Inc., 643 P.2d 1085 (Idaho 1982)*where it was held that six years was a sufficient time to recover a $500 investment. *See also Brusco Towboat Co. v. State by Straub, 567 P.2d 1037 (Or. App. 1977) aff'd in part, rev'd in part, 589 P.2d 712 (Or. 1978)*and *Belmont County Water Dist. v. State, 135 Cal. Rptr. 163 (1976).* One case, however, stated the duration in terms of the licensee's right to enter to maintain the structure "for so long as the nature of it called for." *Cooke v. Ramponi, 239 P.2d 638, 641 (Cal. 1952).*

(n17)Footnote 79. In Alfred E. Conard, *An Analysis of Licenses in Land, 42 Col. L.R. 821 (1942),* it is said:

> The Restatement's test of duration is even more objectionable; land titles will not gain in certainty by injecting the question of reasonable realization on expenditures.

(n18)Footnote 80. *Clark v. Glidden, 15 A. 358 (Vt. 1888); Phillips v. Cutler, 95 A. 487 (Vt. 1915).* Some cases denied access for the purpose of making repairs, however, and limited the duration to the life of the improvement without repairs. *Grimshaw v. Belcher, 26 P. 84 (Cal. 1891).*

(n19)Footnote 81. *See Mayor of Baltimore v. Brack, 3 A.2d 471, 475 (Md. 1939),* but the right to restitution may not be available against a successor to the original licensor. *See Shipley v. Fink, 62 A. 360 (Md. 1905). See also* 120 A.L.R. 549 (1939).

(n20)Footnote 82. The situations in which structures are erected may not be easement-like situations at all. They are more likely to be situations in which the licensee is given possession. To render the license irrevocable under those circumstances would in effect give the fee simple title to the claimant. Occasionally such a decision is made, however, and it is rationalized as an executed parol gift of land. *See Greiner v. Greiner, 293 P. 759 (Kan. 1930). See also* William E. Burby, Handbook of the Law of Real Property § 28, at 149 (3d ed. West 1965).

When the licensor is allowed to revoke after the licensee has erected a building upon the premises, the fixtures doctrine would seem to give title to the structures to the landowner, but, despite that doctrine, the licensee is generally allowed to remove the improvements. *See* § 46.02(g), *supra.*

(n21)Footnote 83. In *North Amber Meadows Homeowners Ass'n, v. Haut Enters., 647 A.2d 127 (Md. 1994),* it was held that when a landowner revoked the license of a homeowners' association to maintain a "storm water management pond" there was no obligation on the part of the licensee to restore the property to its former state.

(n22)Footnote 84. *Industrial Disposal Corp. of Am. v. City of E. Chicago Dep't of Water Works, 407 N.E.2d 1203, 1206 (Ind. App. 1980).*

(n23)Footnote 85. This would result in the apparent anomaly that the easement derived from an irrevocable license was entitled to more protection than one embodied in a grant. The anomaly is only apparent, however, because in the case of the easement embodied in a written grant the owner has a recordable document and if the interest is lost to a bona fide purchaser it is due to the failure of the easement owner to record.

(n24)Footnote 86. *See Ingalls v. St. Paul M. & M. Ry., 40 N.W. 524 (Minn. 1888),* in which the plaintiff, pursuant to an oral license, erected a house on land that was later sold to the defendant. Defendant refused to permit plaintiff to remove the house. The plaintiff elected to sue for conversion of the house. In finding for the plaintiff the court stated: "But if the licensee has erected ... a building which continues to be his property, he is entitled upon revocation to a reasonable opportunity to remove it." *Id. at 525. See also Rogers v. Cox, 96 Ind. 157, 158 (1884),* where the court stated: "An owner of land who sells property which can only be taken possession of by an entry upon the land, cannot

deny the vendees right to enter the land for that purpose." The court went on to hold that the implied license was irrevocable. To the same effect is *Carey v. Glenco Citrus Products Corp., 45 Cal. Rptr. 365 (1965),* where it was held that the purchaser of a growing crop had a license to enter to harvest the crop.

Sammons v. American Auto. Ass'n, 912 P.2d 1103 (Wyo. 1996) (The Supreme Court of Wyoming held that a third party against whom the licensor expressly suspended its consent to entry can still enter into the premises to remove the personal property of the licensee provided that its egress is done in reasonable manner and time. The court followed Restatement (Second) of Torts 2d § 176 (1965));*Hill v. Eads, 970 S.W.2d 882 (Mo. App. 1998)* (The landowner failed to enjoin licensee's removal of building constructed on land in what was deemed to be a license agreement. Permission from owner of land to erect and occupy a building on premises, even if not given in writing, will make the building property of the builder. The inference springing from a license agreement is that the land will be left as it was found [without the building]).

(n25)Footnote 87. *Bomberger v. McKelvey, 220 P.2d 729 (Cal. 1950).*

(n26)Footnote 88. *Bomberger v. McKelvey, 220 P.2d 729, 736 (Cal. 1950).*

(n27)Footnote 89. *See* 25 Am. Jur. 2d *Easements and Licenses*, § 29 at 530 for a discussion of easement by necessity.

(n28)Footnote 90. The policies behind the surface access easement for mineral developers has been the subject of reexamination by both courts and legislators and the resulting relationship more nearly resembles eminent domain than easement in that the mineral developer is being given the right to buy surface access rights. *See* Ronald W. Polston, *Redefining the Relationship Between the Surface Owner and the Mineral Developer,* 12 Eastern Min. Law Foundation § 22.01 (1991).

(n29)Footnote 91. *See, e.g., Ingalls v. St. Paul M. & M. Ry., 40 N.W. 524 (Minn. 1888).*

(n30)Footnote 92. *Ingalls v. St. Paul M. & M. Ry., 40 N.W. 524 (Minn. 1888).*

(n31)Footnote 93. Of course the same is true of the executed parol license cases, see § 64.05(b) *supra*, and both situations have been held to be exceptions to the Statute of Frauds, *see* Conard, Alfred E. "Easements, Licenses and the Statute of Frauds." Temp. Q. Vol. 15 (1940-1941) 294 but the similarity of these cases to the implied easement cases provides a new perspective on the implied easement cases.

(n32)Footnote 94. *See Drake v. Wells, 93 Mass. (11 Allen) 141 (1865); Giles v. Simonds, 81 Mass. (15 Gray) 441 (1860); Ross v. Hamilton, 113 A. 781 (Vt. 1921). See also 26 A.L.R.2d 1194 (1952).*

(n33)Footnote 95. *See* 2 Herbert T. Tiffany, The Law of Real Property, 528 (3d ed. Callaghan 1939). The Uniform Commercial Code now covers contracts for the sale of timber. U.C.C. §2-107(2). In the original version such contracts were covered only if the timber was to be cut by the vendor, but the current version covers them regardless of whether the timber is to be cut by the vendor or vendee. U.C.C., 1990 Official Text, Appendix II, 2-107(1) & (2).

(n35)Footnote 97. *See Lange & Christ Box & Lumber Co. v. Haught, 52 S.E.2d 695 (W. Va. 1949).*

(n36)Footnote 98. *Marrone v. Washington Jockey Club, 227 U.S. 633, 636 (1913). See also Richfield Oil Co. v. Hercules Gasoline Co., 297 P. 73 (Cal. App. 1931)* in which an oil and gas lessee contracted to sell his products to the plaintiff. The lessee then transferred the lease to the defendant who refused to sell to the plaintiff. Although the contract allowed the plaintiff to enter the land to make a pipeline connection, the plaintiff was denied relief and the interest was called a license. *Village of Wagon Mound v. Mora Trust, 62 P.3d 1255 (N. M. App. 2003)* (licensees had a right to

operate a water line in connection with a contractual right to receive and use spring water).

(n37)Footnote 99. *Marrone v. Washington Jockey Club, 227 U.S. 633, 636 (1913). See also May v. Breunig, 120 N.Y.S. 98 (1909).*

(n38)Footnote 100. *See* § 64.03(d), *supra.*

(n39)Footnote 101. *See Marrone v. Washington Jockey Club, 227 U.S. 633, 636 (1913).*

(n40)Footnote 102. *See* § 64.03(d), *supra*.

(n41)Footnote 103. *Union Travel Assoc. v. International Assocs., 401 A.2d 105 (D.C. 1979). Mandia v. Applegate, 708 A.2d 1211 (N.J. Super. App. Div. 1998)* (Lessee of commercial space was given permission to display merchandise on boardwalk, and year after year lessee extended use of boardwalk. The court deemed the boardwalk relationship to be that of licensor to licensee, and licensor was awarded damages for unauthorized use of boardwalk along with an injunction against further use by former licensee).

(n42)Footnote 104. *R.H. White v. Jerome H. Remick & Co., 84 N.E. 113 (Mass. 1908).*

(n43)Footnote 105. The coin-operated laundry cases are legion. *See, e.g., Polner v. Arling Realty, 88 N.Y.S.2d 348 (1949),* which has a fairly typical fact situation.

(n44)Footnote 106. *Reliable Washer Serv. v. Delmar Assocs., 267 N.Y.S.2d 419 (1966),* in which it was held that the transaction was a license and therefore not binding on a purchaser from the licensor; *but see Weiman v. Butterman, 260 N.E.2d 321 (Ill. App. 1970),* where the purchaser was bound on the basis of a finding that the transaction constituted a lease.

(n45)Footnote 107. *BeWigged by Suzzi, Inc. v. Atlantic Dep't Stores, Inc., 359 N.E.2d 721 (Ohio App. 1976); Lordi v. County of Nassau, 198 N.E.2d 33 (N.Y. 1964).*

(n46)Footnote 108. *Simons v. Murray Realty Co., 112 N.E.2d 264 (Mass. 1953).*

(n47)Footnote 109. *Ulan v. Vend-a-Coin, 558 P.2d 741 (Ariz. App. 1976).* An attempt by the state of Iowa to lease a portion of the bed of the Mississippi River to a pleasure boat operator was held to have created only a license because of the public trust doctrine. *Roberts River Rides, Inc. v. Steamboat Dev. Corp., 520 N.W.2d 294 (Iowa 1994).*

(n48)Footnote 110. *Jo Mark Sand & Gravel Co. v. Pantenella, 96 A.2d 217 (Conn. 1953).*

(n49)Footnote 111. *See Wenner v. Dayton-Hudson Corp., 598 P.2d 1022 (Ariz. 1979),* in which the plaintiff had a contract with a retailer by which the plaintiff would maintain departments in the stores of the retailer and would receive a percentage of the retailer's gross profit on the entire retail operation. The local taxing authorities characterized the plaintiff's income as being from leased property. It was held that the plaintiff had only a license and the income was therefore not taxable.

(n50)Footnote 112. *Di Renzo v. Cavalier, 135 N.E.2d 394 (Ohio 1956).*

(n51)Footnote 113. *See Metroweb Corp. v. County of Lake, 474 N.E.2d 900 (Ill. App. 1985),* in which it was held that the arrangement was not a lease and, therefore, the transferee did not have the possessory interest that would entitle it to challenge a zoning ordinance.

(n52)Footnote 114. As indicated, however, the options are sometimes limited to license and easement. *Senrow Concessions, Inc. v. Shelton Prop., Inc., 178 N.E.2d 726 (N.Y. 1961). Hill v. Eads, 970 S.W.2d 882 (Mo. App. 1998)* (For a landlord-tenant relationship to exist, the agreement must give tenant exclusive possession of premises, or a

portion thereof, but if evidence shows that the agreement conferred a non-exclusive privilege to use or occupy the premises, then the agreement is deemed a license); *Gasparo v. City of New York, 16 F. Supp. 2d 198 (E.D.N.Y. 1998)* (in holding that the City may not terminate newsstand agreements because of the First Amendment, the court states that a document titled a "license" may still be a lease if it grants not only a revocable right but the exclusive right to use and occupy that land).

(n53)Footnote 115. *See Polner v. Arling Realty, 88 N.Y.S.2d 348 (1949). But see Timmons v. Cropper, 172 A.2d 757 (Del. 1961),* holding a pinball concession to be a license because of the failure to allocate specific space, among other reasons.

(n54)Footnote 116. *See Weiman v. Butterman, 260 N.E.2d 321 (Ill. App. 1970),* where laundry machine concessionaire successfully sued apartment complex owner for breach of lease. *See also Nahas v. Local 905, Retail Clerks Int'l Ass'n, 302 P.2d 829 (Cal. 1956),* where an arrangement was characterized as a license rather than a lease. The court held that the tenant storeowner was not entitled to maintain a trespass or ejectment action against union picketers and at the most could only "maintain an action to enjoin or to redress a violation of his right to exercise the license." *Id. at 830.*

In a case in which the City of Anaheim sought to build an office complex, in a part of the parking lot of the stadium "leased" to the California Angels baseball team, it was held that the City was not limited to a particular area of the tract in regard to its obligation to provide 12,000 ground-level parking spaces. The "lease" gave the City control of the premises except to the extent necessary to provide the spaces, and it could, therefore, rearrange the parking lot in order to make room for the office complex regardless of where the parking was located when the arrangement began. The court said: "Arrangements between landowners and those who conduct commercial operations upon their land are so varied that it is increasingly difficult and correspondingly irrelevant to attempt to pigeonhole these relationships as 'leases', 'easements', 'licenses', 'profits' or some other obscure interest in land devised by the common law in far simpler times." *Golden West Baseball Co. v. City of Anaheim, 31 Cal. Rptr. 2d 378 (1994), vacated, California v. Wiley, 25 Cal. App. 4th 11 (1994).*

(n55)Footnote 117. *See Union Travel Assoc. v. International Assocs., 401 A.2d 105, 108 (D.C. 1979).*

(n56)Footnote 118. *Greenbro Coin Meter Corp. v. Basch, 132 N.Y.S.2d 876 (1954).*

(n57)Footnote 119. *Town of Kearney v. Municipal San. Landfill Auth., 363 A.2d 390 (N.J. 1976).*

(n58)Footnote 120. *See, e.g., Simms v. Kennedy, 76 So. 739 (Fla. 1917),* where the court stated:

> ... prima facie where the lessee is in entire possession, occupancy and control of the premises under a lease, and the premises were in good condition when leased, the lessor is not liable in damages for injuries to third persons caused by defects in the premises. And where action for damages is brought against the lessor, he may plead specially the lease to and the possession, occupancy, and control of the premises by another in bar of the action... .

See also Kalis v. Shattuck, 11 P. 346 (Cal. 1886).

(n59)Footnote 121. *Javins, Saunders, and Gross v. First Nat'l Realty Corp., 428 F.2d 1071 (D.C. Cir. 1970). See* Uniform Residential Landlord and Tenant Act §2.104, 7b U.L.A. 49 (Supp. 1993).

(n60)Footnote 122. *Trentacost v. Brussel, 412 A.2d 436 (N.J. 1980). Ruiz ex rel. Ruiz v. Kaprelian, 731 A.2d 118 (N.J. Super. Ct. App. Div. 1999).*

(n61)Footnote 123. *See Rowland v. Christian, 443 P.2d 561 (Cal. 1969),* as the first case to abolish the

classification scheme for licensees, invitees, and trespassers as determinative of the standard of care owed by a landholder. *See also Mile High Fence Co. v. Radovich, 489 P.2d 308 (Colo. 1971)* but see, *Bath Excavating & Const. Co. v. Wills, 847 P.2d 1141 (Colo. 1993)* (stating that the Colorado legislature intended to supercede *Mile High* by statute); *Pickard v. City of Honolulu, 452 P.2d 445 (Haw. 1969).*

(n62)Footnote 124. *See Di Renzo v. Cavalier, 135 N.E.2d 394, 396 (Ohio 1956). See also Younce v. Ferguson, 724 P.2d 991 (Wash. 1986),* declining to follow *Rowland* and its progeny and explicitly reaffirming the use of the common-law distinctions. *Calvillo-Silva v. Home Grocery, 968 P.2d 65,* (Cal. 1998) (stating that the California legislature intended to partially reverse *Roland* by enacting section 847), *distinguished by Jenkins v. County of Los Angeles, 74 Cal. App. 4th 524* (Cal. App. 2 Dist. Aug. 23, 1999).

(n63)Footnote 125. *Thiokol Chem. Corp. v. Morris County Bd. of Taxation, 197 A.2d 176 (N.J. 1963). See also Application of Rosewell, 387 N.E.2d 866 (Ill. App. 1979),* where Cook County attempted to put a city-awarded parking garage on the tax rolls on the theory that it was leased to a private party. The court held that operation of the garage by third parties constituted a license.

(n64)Footnote 126. *See Charlton v. Champaign Park Dist., 442 N.E.2d 915, 919 (Ill. App. 1982). But see Miller v. City of New York, 203 N.E.2d 478 (N.Y. 1964),* for an opposite holding in which a contract allowing the construction of a golf course was held to be a lease and beyond the power of the park commissioner to make.

(n65)Footnote 127. For a similar case with an opposite holding *see Mason v. Carroll, 269 So. 2d 879 (Ala. 1972),* where the concessionaire was given the right to build and maintain a par three golf course. The court held the arrangement to be a lease and therefore the concessionaire was not liable for the death of a child in a lake built by the concessionaire. If the arrangement had been held to be a license the child would have been an invitee in a public park and the concessionaire would have been liable.

(n66)Footnote 128. *Quantum Corp. v. Taxation & Revenue Dep't, 956 P.2d 848 (N.M. App. 1998)* (In case involving the rental of bingo halls to non-profit organizations, the court analyzes "bingo lease" agreements, discusses leases and licenses, and determines that agreement at issue is a lease because of issues of revocability and control) *overruling recognized by State v. Simpson, 32 P.3d 1226 (Kan. App. 2001) Gasparo v. City of New York, 16 F. Supp. 2d 198 (E.D. N.Y. 1998)* (although a license is terminable at will, without cause, the City of New York may not revoke newsstand licenses because that would be an impermissible intrusion on protected First Amendment activity).

(n67)Footnote 129. *Lewis v. Baxter Laundries, Inc., 236 N.W. 239 (Mich. 1931); Cooper v. Boise Church of Christ, 524 P.2d 173 (Idaho 1974). See also* 119 A.L.R. 1523 (1938); *Keller v. Southwood North Med. Pavilion, Inc., 959 P.2d 102 (Utah 1998)* (addendum to lease agreement gave only license to place sign on monument).

(n68)Footnote 130. *See Cooper v. Boise Church of Christ, 524 P.2d 173 (Idaho 1974).*

(n69)Footnote 131. *Baseball Pub'g Co. v. Bruton, 18 N.E.2d 362 (Mass. 1938).* In that case the court emphasized that the contract gave the advertiser the exclusive right to maintain a sign on the wall of a building. Previous Massachusetts cases had held that agreements for the maintenance of signs created only a license. *See Baertner v. Donnelly, 5 N.E.2d 419 (Mass. 1936); Taylor v. Maxwell Co., 31 F.2d 711 (1st Cir. 1929),* citing Massachusetts cases.

(n70)Footnote 132. *Baseball Pub'g Co. v. Bruton, 18 N.E.2d 362 (Mass. 1938).*

(n71)Footnote 133. *Rochester Poster Advertising Co. v. State, 213 N.Y.S.2d 812 (1961).* The court held that the claimant had an easement in gross. Statutes may require compensation in some situations. *See, e.g.,* Ind. Code Ann. § 8-23-20-12.

(n72)Footnote 134. *Ohio Valley Advertising Corp. v. Linzell, 152 N.E.2d 380 (Ohio App. 1957), aff'd, 153 N.E.2d 773 (Ohio 1958).*

(n73)Footnote 135. *Cooper v. Boise Church of Christ, 524 P.2d 173, 176 (Idaho 1974).*

(n74)Footnote 136. *Cooper v. Boise Church of Christ, 524 P.2d 173, 175-76 (Idaho 1974).*

(n75)Footnote 137. *Goldsmith v. Outdoor Adv. Co., Inc., 264 N.Y.S. 189 (1933).* To the same effect is *Lewis v. Baxter Laundries, Inc., 236 N.W. 239 (Mich. 1931),* in which the licensee removed the sign and the landowner was denied the right to recover the monthly payments as rent.

Supp. To CHAPTER 64 LICENSES

8-64 Thompson on Real Property, Thomas Editions Supp. to § 64.02

Supp. to § 64.02 Definitions of Licenses.

[Go To Main]

§ 64.02(a) In General. [Go To Main]

Add:

Dewey Beach Lions Club, Inc. v. Longanecker, 905 A.2d 128 (Del. Ch. 2006) (owner gave public a license to traverse land; neighbor could not obtain a prescriptive use of the land).

Lally v. Fasano, 875 N.Y.S.2d 750 (2009) (a daughter-in-law as a licensee on her father-in-law's property was subject to summary eviction).

Add:

By the Stem, LLC v. Optimum Properties, Inc., 862 N.Y.S.2d 756 (2008) (license created by oral agreement).

§ 64.02(b) As An Interest in Land. [Go To Main]

Add:

Hanks v. Spann (Ala. App. 2009) (property owner exceeded the scope of an implied license to use a road).

Add:

Green v. Genovese, No. 23472, Apr. 23, 2008, Ohio App. (licensee of marina could recover compensation for a taking of part of the land for a road widening project).

CHAPTER 65 PROFITS A PRENDRE

8-65 Thompson on Real Property, Thomas Editions § 65.01

AUTHOR: Professor Ronald W. Polston School of Law Indiana University, Indianapolis

§ 65.01 Definitions of *Profits A Prendre*.

[Go To Supp]

§ 65.01(a) Definition.

The term "*profit a prendre*" describes an interest that consists of a right of access to land for the limited purpose of removing some naturally occurring substance from the land. n1 It thus includes both an interest in the substance to be removed and the right of access to the land for that purpose. This collection of legal interests has traditionally been classified, along with easements and other servitudes, as incorporeal, or non-possessory. n2

§ 65.01(b) *Profits A Prendre* As Incorporeal Interests.

The terms "incorporeal" and "non-possessory" are both relics of a prior era. Neither accurately describes the qualities that are supposed to differentiate easements and profits from the more substantial interests with which they are thereby contrasted: the corporeal or possessory interests. n3 These terms suggest that while the fee interest is tangible and confers the exclusive possessory right, easements and profits are intangible and confer no possessory rights. Thoughtful examination of these concepts reveals the fallacy of such a classification system.

All such interests in land represent relationships between people and are, of course, intangible. The fee simple absolute and lesser interests, such as easements and profits, are customary groupings of interests and are themselves intangibles. The common law distinction between corporeal and incorporeal, which is equivalent to tangible/intangible, does not, therefore, accurately describe the difference between the fee simple estate and the easements and profits. n4 The possessory/non-possessory dichotomy also fails to isolate a difference. A possessory interest is one that includes access to and control over the land or some part of it. The owner of an easement also has such an interest, and the same is true of those who own profits. In fact, the owners of some easements and profits have almost complete control over the land to which their interest relates. n5 Examples include railroad rights of way and coal owners who engage in strip mining.

Most courts and writers have come to accept the rationale that the essential difference between incorporeal interests and the residual corporeal interest out of which they were created is that the incorporeal interests are limited in scope to the accomplishment of the purpose for which they were created. n6 Such a definition does not, however, seem to accurately describe those situations, such as a railway right of way or a coal owner who is allowed to strip mine, in which the

servitude owner clearly has the major share of control, and, in an effort to explain this seeming incongruity, such servitudes have been said to involve ownership of the surface. n7 There would seem to be no justification for creating such a new classification of ownership, however. There is no inconsistency in describing such interests as limited when compared to the fee ownership. Such interests have a single purpose; when that purpose is accomplished or abandoned they will cease to exist, and the entire interest in the property will revert to the fee owner. Furthermore, the creation of a new category of ownership of the surface would only create an unnecessary uncertainty. It would be difficult to determine when the control had reached the point where the interest was converted from a servitude into ownership of the surface.

COMPUTER-ASSISTED RESEARCH

LEXIS: "*profit a prendre*" and right w/3 take or remove and land or property

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.01(c) Historical Anomalies in the *Profit a Prendre* Definition.

The combination of an outmoded classification system with the fact that it attempts to make a distinction between possessory and non-possessory interests in a situation where there is little factual basis for doing so has tended to result in an irrational system. In addition, since many of the interests that would have historically been classified as incorporeal *profits a prendre* became bases for governing relationships between those involved in extracting from the earth those substances that produced most of the energy needed by a developing industrial society, the strain on the system was increased. The courts felt a need to protect the developing energy industries in a way that seemed impossible under a classification system with its attendant procedural and substantive rules designed for a medieval agricultural society. The result is that the classification system today is almost incomprehensible and sometimes seems irrelevant to the bodies of law developed to govern the relationships between those involved in the activities within their scope.

If the bodies of law governing the various industries where the relationship is, or should be, that of a *profit a prendre* are functioning fairly smoothly, and if they appear to be doing so, why is there a need for concern about the classification system itself? Such a query becomes particularly appropriate when one considers the fact that the classification under consideration is a relic of an outmoded system of thought. One need only examine the many cases, n8 however, that struggled with this irrational classification system in a vain effort to find guidance in resolving the disputes in these industries to realize that there is a need to bring order to the system.

While the term "*profit a prendre*" is a product of an outmoded classification system, there would seem to be no problem with continuing to use it, as long as it is understood to mean an interest in land which is created for the limited purpose of permitting the removal of some naturally occurring substance from the land. When so understood, it becomes clear that the *profit a prendre* is a temporary title fragment which should be reunited with the residual fee upon completion of the contemplated activity or upon abandonment of the efforts of the developer.

CHAPTER 65 PROFITS A PRENDRE

8-65 Thompson on Real Property, Thomas Editions § 65.02

AUTHOR: Professor Ronald W. Polston School of Law Indiana University, Indianapolis

§ 65.02 Historical Background.

[Go To Supp]

§ 65.02(a) Incorporeal Interests in General.

Despite the fact that the corporeal/incorporeal distinction, insofar as it assumes that only some interests in land are intangible (or possessory), makes no sense today, it made a great deal of sense to lawyers of the Middle Ages. At that time land ownership was equated with physical possession, and transfers of land were by physical livery of seisin. In the ceremony of livery of seisin, the entire tract of land, from the center of the earth to the heavens, was symbolically delivered by the grantor to the grantee, and the grantee was deemed to have physically received it, but since it was not possible to physically deliver an easement or a *profit a prendre* to the grantee, the medieval lawyer could not conceive of the transferee of one of the limited interests as having a physical, or possessory, interest in the land. n9 Such interests were considered to be intangible or incorporeal. n10 They could not be transferred by livery but only by grant under seal.

These concepts were formed before contract law had developed, and grants of incorporeal interests were sometimes used in situations that would later be covered by contract law. n11 As a result, there were many kinds of incorporeal interests which could only with difficulty be considered as incidents of real property today. There were offices, annuities, patronage rights, and many other kinds of rights which were considered to be incorporeal interests in land. At the time Blackstone wrote he was able to reduce the incorporeal interests to ten different kinds. n12 Interestingly, for our purposes, he does not include *profits a prendre*. The incorporeal interest that he called commons, however, is the one from which our modern concept of *profit a prendre* evolved.

§ 65.02(b) The Commons.

While the commons of Blackstone's time and earlier included interests we would recognize as *profits a prendre* today, it also included many relationships peculiar to the English land holding patterns of the Middle Ages and for which there is no modern counterpart. Thus, it included many customary rights which neither depended upon nor were created by transfer; rather, they depended upon custom arising out of the strip cultivation system of the Middle Ages. n13

The commons also included some interests that were, however, created by transfer, and in which the resulting

relationships existed between the landowner and another. In fact, the transferee might not even be an owner of land because, contrary to the rules with respect to easements, there was no requirement that the transferee's interest be appurtenant. *Profits a prendre* could be held in gross. n14 The difference between easements and profits in this regard was simply a matter of remedies available for the protection of the interests, n15 under the procedural system of that day.

While there were many kinds of commons, the four principal kinds were pasture, turbary, piscary, and estovers. n16 Pasture was simply the right to allow one's animals to graze on the lands of another. Turbary was the right to remove turf, piscary the right to fish, and estovers the right to remove wood from the affected land. All of these involved a right to remove something from the burdened land. Pasture, for example, was said to involve the right to remove grass by the mouth of the cattle. n17 There are also occasional references to commons of coals and to commons *sans nombre*. n18 This collection of incorporeal interests was called "commons" because the interests were generally held in common with the owner of the burdened land and sometimes with other dominant owners. They could be exclusive, however, and in such cases they were referred to as "several rights" rather than "commons." n19

The four principal kinds of commons reflected the needs of the agricultural society of the Middle Ages, but they did not very well serve the emerging industrial society of the 18th and subsequent centuries. As the function of the incorporeal interest changed to reflect changing times, the words used to describe the concept also changed. In describing the kinds of rights held by owners of the various kinds of commons, English texts of the 18th and 19th centuries used the phrase "*profit a prendre*," sometimes with the addition of the words "*in alieno solo*." n20 The American cases, while still referring to the English authorities which used the word "commons" as the category under which these kinds of interests were grouped, adopted the phrase "*profit a prendre*" as the classification heading for such interests. n21 The appearance of the *profit a prendre* as a new and separate heading in property texts was short lived, however. Writers and courts began to assert that there was no substantive difference between profits and easements, and the two areas began to be described under the single heading of servitudes. n22 The observation that there was a lack of difference between the two was based upon the realization that the only difference that had caused the two to develop separately in the first place was that previously, under the English cases, only profits were capable of being created in gross; by that time, however, both profits and easements had that quality. n23

CHAPTER 65 PROFITS A PRENDRE

8-65 Thompson on Real Property, Thomas Editions § 65.03

AUTHOR: Professor Ronald W. Polston School of Law Indiana University, Indianapolis

§ 65.03 Incidents of *Profits A Prendre*.

§ 65.03(a) In General.

As has been indicated, the substantive rules governing the *profit a prendre* relationship are generally the same as those governing easements. An exception exists with regard to those relationships covered by the Uniform Commercial Code. If the substance is to be extracted by the buyer, however, the code will only govern relationships involving the extraction of fossil fuels. n24 Few such relationships, therefore, are governed by the code because fossil fuels are nearly always removed by professional developers who purchase that right from landowners. The code will, however, cover most arrangements relating to growing crops, timber, and "other things attached to the realty and capable of severance without material harm thereto ...," n25 "because arrangements with respect to such substances are covered, whether such things are to be removed by the seller or the buyer; the possible exceptions with respect to timber have already been noted." n26

While most arrangements for the extraction of fossil fuels will not be governed by the UCC, that does not mean that they will be left to be governed by the general rules relating to easements. Very specialized bodies of law have developed to govern relationships relating to the extraction of coal. n27 and oil and gas. n28 Those subjects are covered elsewhere in this treatise.

There are some aspects of the relationship that require special treatment, and those areas will be touched upon here.

§ 65.03(b) Creation.

The documents that create *profits a prendre* are frequently called leases by the parties. This seems to be true not only with respect to those relating to the extraction of oil and gas and coal, but also with respect to those involving most other kinds of profits. Thus, there are judicial decisions in which arrangements that have extended the right to hunt, n29 take turpentine from pine trees, n30 and take geothermal steam, n31 timber, n32 sand, gravel, and stone, n33 have utilized a form entitled "Lease." Many such arrangements will be for a term of years and will often include a secondary term beyond the fixed term, which will be measured by the continuance of production of the named substance. When considered along with the title of the document, the fact that the duration is measured in years sometimes results in an effort to characterize the relationship as landlord/tenant and to attempt to apply rules applicable to such tenancies. n34

Such efforts are quite obviously mistaken. The relationship created by such a document does not confer the general possessory right that is a part of the landlord/tenant relationship. It gives only a right of access to land for the purpose of removing the designated substance and leaves the landowner's general right of possession undisturbed, except to the extent necessary to accomplish that purpose.

In Kennecott Corp. v. Union Oil Co., n35 for example, the court correctly rejected the argument that landlord/tenant law should be applied to a "Lease" that was for the purpose of extracting geothermal steam. n36 In doing so, the court, relying mostly on cases from the oil and gas area, said, "A profit interest in geothermal resources is not an ordinary leasehold interest at all. Rather it is a means by which a party may explore for and extract resources until it chooses in its sole discretion to surrender the right to do so. Upon ... surrender ... the ... interest automatically extinguishes and merges into the estate out of which it was carved." n37

There are also occasional decisions construing written transfers of the right to take a substance from the land of the transferor as creating nothing more than a license that is revocable at the will of the transferor. n38 There is no apparent justification for such a characterization, and such decisions have been criticized by the commentators. n39

COMPUTER-ASSISTED RESEARCH

LEXIS: "profit a prendre" and right w/3 take or remove and land or property and lease and creat!

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.03(c) Transferability and Divisibility.

Most questions concerning transferability and divisibility will be covered either by the same rules as govern easements or by those that come from specialized bodies of law designed for specific industries. However, there are some problems relating to profits that require special treatment. Such problems result from the fact that the profit includes the right to take some substance from the land. Attempts to transfer or divide the right will have a different impact upon the servient estate than would transfer or division of an easement. The results in these cases, however, are based upon a determination of the scope of the right, and that, in turn, depends upon the intent of the parties. n40 To that extent, the approach is the same as in the easement cases.

Although there is not a large number of cases involving such questions, it is said to be the general rule that a non-exclusive profit is transferable but not divisible. n41 If a transfer is to more than one person, the new owners must work the profit as a common stock. n42 They must, in other words, work it jointly and take no more than would have been taken by a single owner. The reason for the rule is obviously to give effect to the presumed intent of the parties. In the non-exclusive situation, in which the right is to be exercised in conjunction with the servient owner, to permit new users to be introduced into the situation would tend to diminish the amount of the substance available for the servient owner.

When the profit is exclusive, however, it is generally said to be the rule that it is completely transferable and divisible. n43 That is particularly true in those situations in which the servient owner is compensated on the basis of a payment of a specific amount per unit of substance removed. n44 In such situations, the more of the substance that is taken, or the more quickly it is taken, is a benefit to the owner of the servient estate and will be presumed to be within the contemplation of the parties.

Since the question of transferability and divisibility is a matter of intention the facts of each case must be examined. If it appears that the parties did not intend either transferability or divisibility, those qualities will not exist. In one case, for example, the court held that an exclusive boating and fishing privilege was not transferable or inheritable because the parties failed to expressly extend the right to heirs and assigns. n45

CHAPTER 65 PROFITS A PRENDRE

8-65 Thompson on Real Property, Thomas Editions § 65.04

AUTHOR: Professor Ronald W. Polston School of Law Indiana University, Indianapolis

§ 65.04 Current Jurisprudence on the Profits Concept.

[Go To Supp]

§ 65.04(a) In General.

Despite the fact that profits are now considered by most writers to be governed by the same rules as govern easements, n46 there continues to be a separate discussion of the cases dealing with *profits a prendre*. n47 It is also clear that functionally the two areas deal with distinctly different kinds of transactions. In fact, highly specialized bodies of law have developed governing transactions in industries where the basic relationship is that of a *profit a prendre*. The oil and gas industry n48 is the chief example. The harvesting of timber n49 and the removal of coal n50 and other minerals are other examples of industries in which the basic relationship is, or may arguably be, that of a *profit a prendre*. While no effort will be made here to discuss in detail those separate bodies of law (which are dealt with elsewhere in this treatise), there are many aspects of the *profit a prendre* relating to those areas that require separate discussion.

COMPUTER-ASSISTED RESEARCH

LEXIS: "*profits a prendre*" and land or property and coal or timber or oil w/5 right and owner!

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.04(b) The Coal Cases.

§ 65.04(b)(1) The Early Decisions.

As the early disputes involving the extraction of coal began to reach the courts, the classification of the developer's interest as a *profit a prendre* (and therefore incorporeal) seemed to create problems that might hinder the development of coal as a major energy source. There was some question, for example, concerning the extent to which an incorporeal interest, particularly one in gross, could be transferred and divided among several owners. n51 Since complete transferability and divisibility were deemed essential to the industry, the classification system seemed to pose an obstacle to the development of the industry. While this problem could have been overcome simply by holding that exclusive *profits a prendre* were freely transferable and divisible, as, indeed, later did occur, n52 the reaction of an early

Pennsylvania case, Caldwell v. Fulton, n53 was instead to change the classification system with respect to coal. It was reasoned that when the ownership of the coal itself was transferred, a separate corporeal fee simple estate was created underground. Interestingly, the deed in that case only purported to give the "full right and privilege of digging and taking away stone coal," n54 and did not contain language of transfer with respect to the coal itself. The deed was consistent, in other words, with the idea that a traditional incorporeal interest was created. While it may have been an exclusive right that was transferred, the law with respect to incorporeal interests at that time recognized such a possibility and referred to it as a several right. n55 The trial court, while uncertain whether to call the transferees' interest a "common in gross, or appurtenant, or a license," held that it was an incorporeal interest. n56

The Pennsylvania Supreme Court, however, went to great lengths to explain that the rights of the coal owner were more substantial than would be indicated by calling it an incorporeal interest; in doing so, the court created the concept of coal ownership which still dominates industry thinking today. It is a concept, however, that is inconsistent with most of property law generally, contains internal inconsistencies and has been largely repudiated both legislatively and judicially. It is the idea that when the title to solid minerals is severed from the surface, a new -- but buried -- tract of land is created that is owned by the mineral owner in a fee simple possessory estate. Those who describe it seem to think in terms of layers of ownership. The surface owner is considered as owning the top layer, but the mineral owner is considered as owning everything below it. In fact, the reference to the residual fee owner as the "surface owner" is a part of that thinking.

The analysis used by the Pennsylvania Supreme Court in *Caldwell* was, first of all, based upon some misconceptions about incorporeal rights. The Court says, for example, that "common of estovers, of turbary, and of coals, are not, strictly speaking, incorporeal, for they are not so much the produce of the lands annually renewable as they are part of the land itself. But these are always appendant or appurtenant... ." n57 That statement, of course, is incorrect with respect to both of the points made because, as has been shown, the commons, including those mentioned by the court, were clearly considered to be incorporeal n58 and were permitted to be held in gross in the English Common Law. n59 Several other statements by the court in *Caldwell*, and from other cases of that era, take an extreme position with respect to the rights of the coal owner that is difficult to reconcile both with the law existing at that time and with subsequent developments. One court, for example, referred to a conveyance reserving the minerals as a conveyance in which the grantor "severs his estate vertically, i.e. he grants out his estate in parallel horizontal layers, and the grantee gets only the parallel layer granted to him." n60 In *Caldwell* the court said, "... it is more incongruous still to treat the surface as a corporeal hereditament, and the mine right ... as incorporeal... It would be more according to analogy to consider the surface as incorporeal...." n61 To the same effect, in a subsequent Pennsylvania case the court said, "... there would be no more propriety in claiming a title in the grantor [who conveyed the coal] to the space it [the coal] occupies than there would be in claiming a similar right in a vendor of the surface to the space developed by the vendee in digging the cellar and foundation of a house." n62 The *Caldwell* court also stated, "... there is no more reason for considering the coal an incorporeal hereditament, because it has not been opened, than there is for considering the soil as such because it has not been plowed." n63 Yet another Pennsylvania court said, "... a mine right severed from the ownership of the soil, may be regarded as a separate close, and compared to the lower story of a building." n64

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.04(b)(2) Ownership in Place.

Such extreme statements almost seem to take the view that a severance of the minerals results in the drawing of an imaginary line beneath the surface at a depth that would give the surface owner only enough soil to cultivate or build

upon, while the mineral owner would receive the rest. Of course, neither this position nor the extreme statements that gave rise to it can be justified. The person referred to as the "surface owner" does not just own a layer of soil but is the owner of the residual fee simple estate to which temporary title fragments, such as mineral ownership, should ultimately return. n65 The estate of such a person extends from the center of the earth to the heavens. n66 The only exception is with respect to those substances to which the mineral owner has a right of removal. If there are no mineral substances or if those substances have been mined out, then the mineral ownership amounts to nothing. The mineral owner's right is nothing other than the right to remove whatever mineral substances may be present under the ground, and it is a right that is by nature temporary, for when the owned substance is removed, the right ceases to exist. n67 Nor does it make any difference whether the mineral interest is created by a grant of the minerals or by a grant of the surface reserving or excepting the minerals. In either case, because of the temporary nature of the mineral interest, the residual fee must be in the person who holds or receives the right to the surface of the land. n68

The courts in the early coal cases seem to have been misled by the fact that the word "incorporeal" refers to an intangible right or an asset lacking physical substance, and they could not conceive of coal, a physical substance, in this manner. Since the coal occupied space, according to the Pennsylvania Court n69 it must therefore be considered corporeal, and if one owned the thing itself, one must be considered as having a corporeal interest. n70

There are several problems with this reasoning. n71 The first is the idea that coal is owned in place. It is difficult to see how that is any different from owning the exclusive right to remove the coal. In either case, the owner of the right is the only person who can remove it, sell it, and otherwise enjoy the benefits of ownership while the right exists. The ownership-in-place theory is obviously only important for the purpose of reaching the further conclusion that the interest must be classified as corporeal, which in turn is only important in that it requires the still further conclusion that certain substantive rules that have heretofore only been applied to corporeal interests must be applied to the interest in the coal. Among those rules are rules relating to transferability and divisibility, acquisition by adverse possession, use of the space left by removal of coal, and susceptibility to loss by abandonment. The application of these rules, theretofore applied only with respect to corporeal estates, meant that the interest in the coal included the right to use mined out space, n72 was freely transferable and divisible, n73 was subject to rules of adverse possession, n74 and was not subject to loss by abandonment. n75

§ 65.04(b)(3) The Corporeal Classification.

Even if it is accepted that coal is owned in place, it does not necessarily follow that the interest must be classified as corporeal. The phrase "corporeal interest in real estate" is a product of an era when ownership was called seisin and property was conveyed by livery of seisin. Ownership of land was considered to be a tangible physical thing. The physical thing was the land, but in another sense, it was the title to the land. The fee simple interest in real estate was a corporeal interest, and it was, of course, transferred by livery of seisin. The interests called servitudes, however, were not regarded as corporeal because they could not be transferred by livery of seisin. n76 It was impossible to conceive of only a part of the ownership of land being physically handed to another. These interests were thought of as intangible or non-possessory. It is also clear that the *profit a prendre*, which included the right to take part of the substance of the land, was considered to be incorporeal. n77

By the time the first coal case made the link between ownership-in-place and corporeal classification, the ownership concept of seisin and the practice of conveying land by livery of seisin had been replaced by a more abstract notion of land ownership, in which title was conveyed by a deed. The corporeal/incorporeal classification system, which was based upon the idea of seisin, was obsolete. The words "corporeal" and "incorporeal" continued to be used, but their meanings were changing. They were acquiring their modern meanings, in which corporeal is the residual fee interest and incorporeal is a right of access for a limited purpose. Coal ownership could not have qualified as a corporeal interest under the old meaning of corporeal because it could not have passed the test for inclusion in that class; it was not capable of transfer by livery of seisin. Nor could it be classified as corporeal under the emerging modern meaning of the word, which was being used to describe a residual interest in land. The coal owner has a limited right of access to land

for the purpose of removing the coal. The ownership-in-place theory apparently was viewed as a means of circumventing this fact. By reasoning that the coal was owned in place, it was possible to treat that ownership as unlimited and then to transfer without articulation that unlimited, or residual, quality to the land in which the coal was located.

Viewed in another way, the court was retroactively inserting the coal interest into a classification system in which it would not have fit at the time the rules the court was seeking to apply were formulated. One of the early Pennsylvania cases seemed to recognize the fallacy involved in this reasoning when it said that if the mined out space belonged to the residual owner, then it follows that the interest must be classified as incorporeal. n78 That case argued, however, that the mined out space belonged to the coal owner. Later Pennsylvania cases, however, recognized that the space belonged to the residual owner.

It is clear, then, that the concept of ownership-in-place does not require the conclusion that the interest is corporeal. Ownership-in-place is irrelevant to the tests for inclusion within either the old or new meaning of corporeal. However, even if it were to be accepted, however, that the ownership of coal was to be classified as corporeal, it would not necessarily follow that the rules theretofore applicable to corporeal interests should be applied to it. The rule relating to susceptibility to loss by abandonment provides an illustration.

§ 65.05(b)(4) Abandonment.

The rule that corporeal interests are not subject to loss by abandonment comes from the era in which title to land was regarded as a physical thing. Title, as a physical thing, had to have a continuous existence; there could be no gap in seisin. Title had to be somewhere in someone all the time. Quite obviously, it could not be abandoned because that would involve the impossible (i.e., a situation in which it didn't exist). This rule was only applicable to corporeal interests such as the fee. Even though the reason for the rule relating to abandonment has ceased to exist, the rule continues to be applied to the interests that were classified as corporeal at the time the rule was adopted. n79 It does not make sense, however, to insert coal ownership into that system and apply to it rules that were based upon the existence of a quality coal ownership was not deemed to possess at the time the rules were adopted. Nor does it make any sense, viewed at the time the rule was applied to coal ownership, to apply a rule that is based upon reasons that have ceased to exist.

The newer meaning of "corporeal," in which it simply referred to the residual, or general, possessory right and did not require that the interest be capable of transfer by livery of seisin, may seem to have enabled the court to label coal ownership corporeal. But it borders on the absurd to then give that ownership the qualities of the old corporeal interest and apply to it the rules that grew out of those old qualities.

It is also clear that in the modern mineral cases other than coal, the rules relating to abandonment have little to do with the classification of the interest as corporeal or incorporeal, n80 so there is no necessary link between them. In the area of oil and gas, for example, while it has been held in one jurisdiction that oil and gas interests are subject to loss by abandonment because of their classification as incorporeal interests, n81 other jurisdictions hold otherwise. n82 Furthermore, some of the jurisdictions that classify oil and gas interests as corporeal hold some of those interests to be susceptible to loss by abandonment and others not, and the distinction seems to have little to do with the classification system employed. n83

LEXIS: abandon! w/5 lease or agree! and coal or mineral and "*profit a prendre*"

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.04(b)(5) Legislative Rejection of Corporeal Classification.

While courts have been fairly uniform, n84 in refusing to apply rules of abandonment to solid minerals n85 (and even occasionally to migratory ones), n86 legislative enactments have worked towards the opposite effect. Dormant minerals statutes, which have been enacted in several states, n87 have the same effect as applying rules of abandonment to solid minerals, except that their operation is based upon the mere lapse of time rather than upon the finding of an intent to abandon. One such statute n88 is expressly based upon a conclusive presumption of abandonment which becomes effective upon the lapse of the prescribed number of years from the time of last activity. With this widespread legislative rejection of the one key issue for which the corporeal/incorporeal distinction has been responsible, there seems to be little reason for continuing to insist that the interest in solid mineral is corporeal, and it should once again be recognized that such ownership is an incorporeal interest known as a *profit a prendre*.

§ 65.04(b)(6) Ownership of Space.

Most of the other decisions that have been said to follow from the classification of coal interests as corporeal have actually had little to do with their classification and would have been equally consistent with an incorporeal classification. One such example is the decision with respect to the right of the coal owner to use the mined out space in the coal mine. The first Pennsylvania case to consider this question was Lillibridge v. Lackawanna Coal Co., n89 in which the residual owner sought to prevent the coal owner from using the mined out space for transporting coal that had been mined from beneath other lands. The residual owner argued that the situation was similar to that in which a mineral owner was not permitted to use the surface of the land to transport coal mined from other lands. The court in that case reasoned that while the coal owner has an implied easement to use the surface to obtain access to the coal mined from beneath the servient tract, it would go beyond the scope of the easement to use such easements to serve non-dominant property. n90 The court in *Lillibridge* could see no difference between using the surface and using the mined out tunnels for the purpose of prohibiting the use of the easement to serve non-dominant property. It therefore concluded that if the coal owner was to have a right to use the mined out tunnels, it must base that right on something other than easement. It held that right to be based upon ownership of the space left by mining out the coal. While the *Lillibridge* opinion contains some equivocal language, n91 it apparently held that the space occupied by the coal was owned in fee by the coal owner. Subsequent cases in Pennsylvania n92 and elsewhere have, however, held that the ownership of the space exists only until the coal mining operation is completed, n93 and the *Lillibridge* opinion is now cited in support of that position. n94 Until the mining operation is completed the coal owner has the exclusive right to use the tunnels. A New York case n95 applied the rule to a salt mine operation and held that the surface owner could not lease the mined out tunnels as a waste disposal site so long as the salt owner was using the space for conducting a mining operation in the salt deposit, even if the major part of the operation was on other lands. That decision also recognized that when the salt mining operation was completed the space would belong to the residual fee owner. n96

The results in the cases involving use of mined out space quite obviously do not depend upon the classification of the interest as corporeal. In fact, to the extent that they recognize the ultimate ownership of that space by the residual fee owner, they are inconsistent with such a classification, because they recognize that the coal owner has the limited right to use the space in connection with the coal mining operation. Thus, they are more logically explained on the basis that the coal owner's incorporeal interest in the underground space is broader in scope than the surface rights which are included as a part of it. That incorporeal interest includes the exclusive but temporary right to use the mined out space. Such a result also makes as a matter of sense policy. It is consistent with the needs of the underground mining operation, and it does not interfere with any reasonable expectations of the servient owner. The surface owner has no reasonable expectation of using that space while the mining operation continues, and it is difficult to see how its use by the coal owner could be said to increase the burden on the servient estate.

§ 65.04(b)(7) Other Decisions Based on Corporeal Classification.

The other decisions with regard to coal ownership that have supposedly been based upon the corporeal/incorporeal

distinction, such as divisibility and transferability, n97 application of the rules relating to adverse possession, n98 and separate assessability for taxation purposes, n99 are also consistent with the interest being classified as incorporeal.

There is seldom a contention today that the kind of exclusive profits involved in the extraction of fossil fuels are indivisible or non-transferable; this is true whether the ownership interest being transferred is classified as corporeal or incorporeal. n100 Such a result does not, therefore, depend upon the interest being classified as corporeal. The questions involved in transferability and divisibility are questions relating to the scope of the right; when transfer or division increases the burden on the servient estate, it will be prohibited. n101

It might seem that the rules relating to adverse possession would only be applied to corporeal or possessory interests and that incorporeal interests would be subject to prescription. That distinction has not been made in the oil and gas cases, however. In those cases the rules of adverse possession are applied in jurisdictions that consider the interest in oil and gas as incorporeal, and those rules are the same as those applied to interests in coal. n102 The same thing is true with respect to the separate assessment for real estate tax purposes. n103

Therefore, none of the decisions that supposedly depend upon the corporeal classification would change, except perhaps those relating to susceptibility to loss by abandonment if coal ownership is recognized as a *profit a prendre*. While such a change might prompt a review of those decisions that shield coal ownership from the application of rules relating to abandonment, and ultimately a change in such rules, the result would be more consistent with the balance of property law and would reflect better policy.

LEXIS: "*profit a prendre*" and corporeal or incorporeal

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.04(c) Oil and Gas.

§ 65.04(c)(1) The Corporeal/Incorporeal Distinction.

The oil and gas cases have generated even more discussion in judicial opinions and the law reviews n104 concerning ownership theories than have the coal cases, and while the coal discussion may contain many internal inconsistencies and erroneous conclusions about the law of real property, its commentators have at least been fairly uniform in their approach. The oil and gas discussion, on the other hand, has had even more glaring inconsistencies and errors and, in addition, has spawned a literature that is chaotic. Decisions in this area seldom seem to have any relationship to the discussion of ownership theory upon which they purport to be based.

The early Pennsylvania case n105 that first considered the ownership theory concluded that the coal cases did not provide an appropriate analogy. That was true because of what the court perceived to be the natural state in which oil and gas existed. At that time, it was thought that oil and gas flowed beneath the surface in rivers. Since oil under any given tract at one moment might be beneath a neighboring tract the next moment, it was thought impossible to use the corporeal (or ownership-in-place) theory that the coal cases had utilized. An analogy was therefore made to the body of law relating to wild animals which were referred to as animals *ferae naturae*. Such animals were not owned while in a state of nature but became the property of the first person to reduce them to possession. Building on this analogy, the court referred to oil and gas as minerals *ferae naturae* and held that they were not subject to being owned until reduced to possession. Such a holding would seem to require the conclusion that interests in oil and gas, when severed from the surface, were incorporeal.

Several other courts adopted the reasoning of the Pennsylvania court with its incorporeal classification, n106 but at a

very early time a possessory, or corporeal approach, began to gain acceptance. In fact, Pennsylvania joined the movement and reversed its position. n107 Some of the courts adopting the corporeal approach pointed out that the original Pennsylvania decision had been based upon erroneous conclusions about the manner in which oil and gas exist in their natural states. n108 They do not flow around beneath the earth but are trapped under pressure in air tight formations and remain fixed in place until a low pressure point is introduced into the formation. According to the courts adopting it, this new information made it possible to base the law of oil and gas upon an ownership-in-place, or corporeal, theory. n109

The corporeal approach was still required to cope with the fact that oil and gas do, in fact, move within the formation when a low pressure point is introduced. As a result, oil or gas that is produced in a well near a boundary may have come from beneath the adjoining tract. The ownership-in-place theory was required to make an accommodation for that fact, and it did so by accepting the rule of capture, under which ownership of any given quantity of oil or gas may be lost if it is produced through a well bottomed under an adjoining tract. n110

This approach is invalid for several reasons. First of all, if the coal cases that utilize a corporeal theory of ownership are of questionable validity, as has been indicated, n111 then it would seem clear that such a classification cannot be appropriate when applied to oil and gas. The very fact that the theory must be modified by the rule of capture is an indication of its inappropriateness. How much difference can there be between an approach that holds the substances to be unowned and one that takes the position that they are owned but the ownership is subject to being lost if produced by a neighbor? The most damning evidence of the unsoundness of this approach, however, is the fact that neither the writers nor the courts can agree on whether the decisions of a given state place that state in one or the other of the camps. n112 Furthermore, in an effort to explain the decisions, the writers have come up with even more dubious distinctions such as the "qualified ownership-in-place" theory n113 and the "ownership of strata" theory. n114

Not only is it difficult to determine which theory a state is following (one court recited both theories in succeeding paragraphs, apparently without realizing that they are different), n115 but also the decisions in a given state are sometimes opposite to what should supposedly follow from the theory that the state purports to follow. n116 The leading writers in the field have concluded that the results in decided cases do not seem to depend upon the theory that the state has adopted. n117

COMPUTER-ASSISTED RESEARCH

LEXIS: oil or gas w/5 lease or agree! and right and profit and corporeal or incorporeal

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.04(c)(2) Abandonment.

If the theories of ownership were to make a difference, it would seem that the principal difference between the corporeal and incorporeal jurisdictions should be with respect to whether the interest is subject to being lost by abandonment, but the decisions on that question cannot be explained on that basis. In fact, it is difficult to find any unifying factor in those decisions. It is true that the California courts, which have identified that state with the incorporeal holding in their more definitive statements on that subject, n118 have held that the interest is subject to loss by abandonment. n119 Other jurisdictions that have classified the interest as incorporeal, however, have held that it is not subject to loss by abandonment. n120 The Texas decisions, which represent the clearest statement of the ownership-in-place, or corporeal, position, n121 have held that, when transferred by deed, the mineral fee is not subject to loss by abandonment, n122 but when transferred by an oil and gas lease, is subject to loss by abandonment. n123 Other states, both corporeal and incorporeal, have reached the same result as Texas. n124 There would seem to be no basis for the distinction made in the Texas cases between transfers by deed and by lease, or if a distinction is to be made, based on the method of transfer, it should be to the opposite effect.

The distinction between transfers by deed and by lease is invalid because both kinds of transfers generally give to the transferee the entire interest in the oil and gas in fee. The duration of the interests in the two situations may differ, but not always. The oil and gas lease always creates a fee simple determinable, n125 and while the mineral conveyance or reservation may be perpetual, it also frequently utilizes a fee simple determinable with the same kind of conditions as the oil and gas lease. n126 It is true that the transactions are functionally different in that the oil and gas lease contemplates development by the transferee, while the transfer, or reservation, by deed does not. That difference would not seem to justify treating the mineral transferee as a corporeal owner and the oil and gas lessee as an incorporeal owner, however. In fact, since the distinction is supposedly based upon possession or lack of possession, the oil and gas lessee would seem to be the one (if either is) treated as a possessor because the oil and gas lessee is the one who will actually remove the minerals from the ground. It will be recalled that in much of the reasoning in the coal cases in which the corporeal/incorporeal distinction had its beginning, there was an emphasis on the extent to which the coal owner would have physical possession of the substance. n127 The mineral transferee, on the other hand, is the owner of a speculative interest, who will never possess anything other than a share of the money realized from development.

COMPUTER-ASSISTED RESEARCH

LEXIS: abandon! w/5 lease or agree! and oil and "*profit a prendre*"

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.04(c)(3) Adverse Possession.

As in the coal cases, one of the areas in which it might be thought that the corporeal/incorporeal distinction would have an impact is the law of adverse possession. If the jurisdiction regards the interest as incorporeal, the rights of an adverse user should be dealt with under the doctrine of prescription, while the corporeal jurisdictions should utilize doctrine of adverse possession. n128 All jurisdictions, however (except perhaps Louisiana), n129 describe the implications of adverse use under the heading of adverse possession. n130 Further, the rules relating to the rights of adverse users vary little from jurisdiction to jurisdiction, and where there are differences, those differences have nothing to do with the ownership theory of the jurisdiction. n131

§ 65.04(c)(4) Other Issues.

It might be thought necessary to classify the interest as corporeal in order to permit the transfer of undivided interests because of a supposed rule against divisibility, but there does not exist a single oil and gas case, in either kind of jurisdiction, which prohibits transfers that divide the interest. n132

One of the leading Texas cases in which the result was supposedly based upon the ownership-in-place theory is Elliff v. Texon. n133 In that case the question was the extent to which a landowner on whose land there was a gas well could recover from an adjoining owner who negligently wasted much of the gas in the common formation. The Texas court held that there was liability for wasting the gas. It was argued that the plaintiff owned the gas that was wasted and that recovery could be based upon a conversion theory. The implication was that the decision would be different in a non-ownership state, and even if recovery was allowed, the measure of damages would be different in a non-ownership state. In fact, similar results have been reached in states that classify oil and gas as incorporeal. n134

Similar to the coal cases, the issue of the ownership of the space occupied by the oil and gas has been litigated, and the result has been much the same; it is owned by the residual fee owner rather than by the mineral owner. The issue has been raised in the gas storage cases. It becomes material in determining whether the oil and gas owner or the residual fee owner is entitled to be paid for the gas storage rights. In both corporeal and incorporeal states, the residual fee owner is generally successful in such litigation. n135 The one state that held for the mineral owner in this situation was

Kentucky, n136 which is generally classed as an incorporeal state. n137 If the ownership theory were to have any impact on this issue, it would seem that Kentucky would take the opposite position. In this area, as in the coal area, the fact that the residual fee owner is regarded as owning the space occupied by the minerals is a clear indication that the mineral owner's interest is nothing more than a right to remove a substance and must be considered a temporary interest. It should therefore be classified as an incorporeal interest known as a *profit a prendre*.

§ 65.04(c)(5) Legislative Rejection of Corporeal Classification.

As was true with respect to the coal cases, Dormant Mineral Statutes, which have been adopted in many states, n138 have the effect of applying a statutorily defined doctrine of abandonment to severed interests in oil and gas. To the extent that this is true, it represents a legislative repudiation of the corporeal classification which has been adopted by some courts, or, what amounts to almost the same thing, a repudiation of the refusal of the courts to apply the rules of abandonment to such interests. Such statutes have been adopted in states that adopt a corporeal theory, as well as in those that utilize the incorporeal theory.

§ 65.04(d) The Timber Cases.

§ 65.04(d)(1) Corporeal/Incorporeal Classification.

The cases dealing with the rights to standing timber have dealt with many of the same ownership issues as have the mineral cases. There is, in fact, a great deal of similarity between the areas. Standing timber is a substance with commercial value occurring naturally on the land, and the rights in or to it are frequently transferred separately from the residual rights in the land. In order to realize any value from the separate interest in the standing timber, the transferee must enter the land and sever the timber. Just as in the mineral cases, courts have had to address the question of the nature of the transferee's interest in the substance and in the land to which it is attached.

There is no question that at the early common law the right to enter land and remove timber was considered to be an incorporeal right, similar to the servitudes, and it was called the common of estovers. n139 The modern cases, however, have tended both to emphasize the ownership of the substance itself and to conclude that such ownership must necessarily result in a corporeal, possessory interest in the land. n140 To that extent, they have followed the path taken by the mineral law cases. Since timber occupies the surface of the land, however, and therefore interferes with surface use prior to removal, there are different issues presented than there are with respect to minerals. The overall treatment of the timber cases, however, when compared to the mineral cases, provides a great deal of insight into the operation of the classification system in both areas.

Since use of the land for timber growth precludes almost any other use of the property, most cases have held that while the timber grantee owns the timber in place and has a corporeal and possessory interest in the land, there is an implied obligation to remove it in a reasonable time. n141 It is also generally held that a failure to remove it in a reasonable time, or within the time provided in an express provision, results in loss of any interest in the timber, rather than just loss of the right of removal. n142 The result of the majority approach is to create an interest that substantively has more resemblance to an incorporeal *profit a prendre* than do the interests of mineral owners. The fact that the interest in the timber itself terminates if it is not removed within the time provided, or within a reasonable time if none is provided, makes it clear that the interest consists of nothing more than a right of removal. The imposition of a time limit on the right of removal is also consistent with the interest being a temporary one.

COMPUTER-ASSISTED RESEARCH

LEXIS: "*profit a prendre*" and land or property and right w/3 take or remove w/3 timber and not oil and not gas

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

§ 65.04(d)(2) The Uniform Commercial Code.

A jurisdiction's adoption of the Uniform Commercial Code, particularly the 1972 amendment to §2-107(2), n143 would seem to represent a statutory repudiation of the position that severed timber interests are corporeal interests in the real estate. The original §2-107(2) provided that a contract for the sale of timber to be cut was a contract for the sale of goods, if the timber was to be cut by the seller. n144 The 1972 amendment defines all contracts for the sale of timber to be cut as contracts for the sale of goods, regardless of who is to cut it. While the code refers only to contracts -- and it might therefore leave open the question of the effect of a timber deed -- it would seem that all timber transactions would be covered by the code. The litigated transactions typically involve a single document in which the landowner "give[s] and grant[s] ... the right, privilege and option to purchase ... the standing timber," n145 or similar language. One court, construing such a document, said that it could see no difference between a contract for the sale of timber and a conveyance of the timber. n146 Furthermore, even if the transaction involved both a contract and a conveyance in separate documents, it would seem irrational to hold that the contract was for the sale of goods but the subject matter became real estate when the time arrived for performance.

The code provision only applies to timber "to be cut," n147 and that too would seem to leave room for the operation of previous law with respect to conveyances or contracts for the sale of timber that was not to be cut. Such a transaction would seem to be based on a contradiction in terms, however. The value of timber can be realized only if it is cut. While it might be possible to envision a transfer of timber that was to be left standing in perpetuity or a transfer of all timber now standing or germinating for growth in the future, n148 such a transfer would more properly be regarded as a transfer of the residual fee interest in the land on which the timber stood. That would be true because there would be little other use to which the property could be put by the residual owner and also because the renewal of the timber resource does not depend upon human activity. Such an interest would therefore seem to be perpetual. For these reasons, in fact, most courts (as has been noted) have construed such conveyances as requiring that the timber be cut within a reasonable time. n149

The code would therefore seem to classify timber as goods, for purposes of all transactions involving it. The fact that it does so is a repudiation of the attempt by the courts to apply the mineral law approach to transactions which sever the timber interest from the residual fee. Superficially, this approach would seem, however, to incorporate the same fallacy found in the mineral law cases, in that it seems to place emphasis upon the rights in the substance being conveyed. The problem with the reasoning in the mineral law cases, however, was not just with the conclusion that the substances were owned in place, but that such ownership seemed to require the further conclusion that the interest was therefore a corporeal, or unlimited, interest in the land itself. The code's treatment of timber rights would seem to take the opposite direction and deemphasize the interest in the land. n150 That there is an interest in the land which must accompany the ownership of the timber, however, cannot be denied. n151 Even if the timber is classified as goods, the timber owner must have a right of access to the land for the purpose of removing it. That access right would seem to be a *profit a prendre*, and to the extent the code gives content to that right, the code is simply regulating rights in land.

§ 65.04(e) Other *Profits a Prendre*.

The *profits a prendre* can include the rights to remove many substances from land in addition to those already mentioned. n152 In fact, almost any transaction extending the right to remove any naturally occurring substance from the land of another results in the creation of a *profit a prendre*. Other examples are transactions creating the rights to take stone, n153 sand and gravel, n154 wild animals, n155 fish, n156 fill dirt, n157 turpentine from pine trees, n158 ice, n159 apples, n160 seaweed, n161 waste slate, n162 and geothermal steam, n163 and to take forage by grazing cattle. n164 There is some question as to whether the right to remove water is to be treated as a profit. Such a right is sometimes said to amount to only an easement. n165 The rule apparently applies only to water flowing naturally in a stream or to percolating or ground water, however. If the water has been confined in a cistern or pond, the right to remove it when transferred to another will be called a profit. n166 There would appear to be little in the way of logic or policy to justify such a distinction, but it may amount to nothing more than a semantic problem, since the same

substantive law governs both the easement and profit relationships.

COMPUTER-ASSISTED RESEARCH

LEXIS: "*profit a prendre*" and right w/3 take or remove and land or property and not oil and not gas

EXPLANATION: With a Lexis search, the "States" database appears to be more useful than the "Realty" database.

FOOTNOTES:
(n1)Footnote 46. *Figliuzzi v. Carcajou Shooting Club of Lake Koshkonong, 516 N.W.2d 410 (Wis. 1994)* (Stating that under Wisconsin law no distinction is made between profits a prendre and easements).

(n2)Footnote 47. In the Restatement (Third) of Property (Tentative Draft No. 1, 1989) the American Law Institute has recognized this fact. In the Introduction to that document at page xxvi it is said: "The term profit has been resurrected from the oblivion into which it was consigned by the 1944 Restatement because it describes a device that is used for a purpose quite different from the other servitude devices, and occasionally calls for somewhat different considerations, if not different rules." *See, e.g., In re Minitz, 192 B.R. 313, 320 (Bankr. D. Mass. 1996)* (explaining that profits are divided into *profits a prendre* and *profits a rendre*), *distinguished by Johnson v. Cottonport Bank, 259 B.R. 125* (W.D.La. Dec 28, 2000); *Magraw v. Dillow, 671 A.2d 485, 490 (Md. App. 1996)* (*profits a prendre* briefly noted).

(n13)Footnote 58. *See* Blackstone, *supra* note 12, at 32, where it is said: "Common, or right of common, appears from its very definition to be an incorporeal hereditament." And at page 34 where it is said:

> There is also a common of digging for coal, minerals, stones, and the like. All these bear a resemblance to common of pasture in many respects; though in one point they go much further: common of pasture being only a right of feeding on the herbage and vesture of the soil, which renews annually; but common of turbary, and the rest, are a right of carrying away the very soil itself.

(n21)Footnote 66. 2 William Blackstone, Commentaries 18 (Fac. of 1st ed., Univ. of Chicago Press 1979).

(n22)Footnote 67. The Virginia Dormant Minerals Statute, Va. Code Ann. §55-154 (1986), operates upon the theory that when there has been no mining activity for a period of 25 years there is a conclusive presumption that there are no minerals under the land. The operative section of that Statute provides: "... it shall be presumed that there are no commercial minerals ... in or on the land, and the court shall enter a decree declaring the claim or right to be a cloud on the title and releasing the land therefrom ..."

(n23)Footnote 68. Interestingly, the traditional approach to coal ownership when carried to the extreme has seemed to suggest that if the owner of the fee were to convey off the surface only, while retaining everything else, the result would leave the residual interest in the mineral owner. Indeed, regarding the surface owner as having only a layer of soil, as was said in *Eardley v. Granville, 3 Ch. Div. 826 (1876),* would seem to lead to such a conclusion. While no such express statements can be found there is a statement in *Caldwell v. Fulton, 31 Pa. 475 (1858),* which suggests such a conclusion. The court there said: "Now as his whole interest was corporeal before the sale, and by his deed only the surface passed, that which remains ungranted must be corporeal." *Schultz v. Consolidation Coal Co., 475 S.E.2d 467 (W. Va. 1996), distinguished by Antco, Inc. v. Dodge Fuel Corp., 550 S.E. 2d 622* (W.Va. Jun 29, 2001).

If this kind of thinking were accepted as valid it would make the application of the dormant mineral statutes to such mineral interests problematic. This is particularly true of the prototype dormant mineral statute which was first adopted by Indiana. §32-5-11-1 Ind. Code. That statute provides for the terminated mineral interest to revert to "the owner of the estate out of which it was carved." Regarding the mineral estate as the residual interest out of which the surface layer was carved would seem to disrupt the operation of such a statute. Since the reserved interest in such a conveyance will only exist if there are minerals under the land, however, it is impossible to regard that interest as the residual interest in the land. Thus in *Shell Oil Co. v. Moore, 48 N.E.2d 400 (Ill. 1943),* the court held that a deed conveying the surface only was, in effect, a reservation of the minerals. It seems clear that the Dormant Minerals Statute would operate to terminate the interest reserved in such a conveyance.

(n24)Footnote 69. *Caldwell v. Fulton, 31 Pa. 475, 481 (1858).*

(n25)Footnote 70. The Court was confusing the profit produced by the right with the right itself, something Blackstone had cautioned against when he said:

> And indeed if we would fix a clear notion of an incorporeal hereditament, we must be careful not to confound together the profits produced, and the thing, or hereditament which produces them. An annuity for instance, is an incorporeal hereditament; for though the money, which is the fruit or product of this annuity, is doubtless of a corporeal nature, yet the annuity itself, which produces that money, is a thing invisible...

(n26)Footnote 71. In another respect, however, the courts were correct in their analysis. They were correct in finding no difference between coal ownership and residual ownership with respect to the extent to which ownership

interests were tangible or intangible, and they were correct in their conclusion that both kinds of ownership include the right to possession. The problem lay in their treating all property rights as tangible, including coal. Furthermore, as a result of their inept handling of the changing meaning of these terms, they were led to attribute to coal ownership the residual, or unlimited, quality that had always been included in the corporeal or possessory concept, which they now applied to coal. They should have recognized that, in view of the new meanings of these phrases, in which incorporeal and non-possessory no longer meant intangible and non-possessory, but intangible and with a right to possession for a limited purpose, coal ownership must be classified as incorporeal and non-possessory.

(n27)Footnote 72. *Lillibridge v. Lackawanna Coal Co., 22 A. 1035 (Pa. 1891).*

(n28)Footnote 73. *Caldwell v. Fulton, 31 Pa. 475 (1858).*

(n50)Footnote 95. *International Salt Co. v. Geostow, 697 F. Supp. 1258 (W.D.N.Y. 1988).*

(n51)Footnote 96. A similar situation was presented in *Cassinos v. Union Oil Co. of Cal., 18 Cal. Rptr. 2d 574 (1993), distinguished by N.L.R.B. v. Calkins, 187 F.3d 1080 (9th Cir. 1999),* in which an oil and gas lessee, pursuant to permission from the surface owner, pumped waste water from an adjoining lease into one of the oil wells on the property. The mineral owner/lessor objected on the basis that the waste water was encroaching upon the producing strata and damaging the oil production operation. The lessor was allowed to recover damages from the lessee. The court declined to rule on the question of the right of the surface owner to use the underground strata for disposal of waste water because, even if such right existed, it could not be used in such a way as to injure the rights of the mineral owner.

(n52)Footnote 97. *Caldwell v. Fulton, 31 Pa. 475 (1858).*

(n53)Footnote 98. *Caldwell v. Copeland, 37 Pa. 427 (1860)* (involving the same parties and the same land as was involved in *Caldwell v. Fulton, 31 Pa. 475 (1858)).*

(n54)Footnote 99. *Sanderson v. City of Scranton, 105 Pa. 469 (1884),* involved the separate assessment of coal.

(n55)Footnote 100. *See* note 132, *infra.*

(n56)Footnote 101. William B. Soebuck and Dale A. Whitman, The Law of Property 462 (3d ed. West 2000).

(n57)Footnote 102. *See, e.g., Brockman v. Jones, 610 S.W.2d 943 (Ky. App. 1980)* where authorities from the two areas are considered to be interchangeable. The extent to which that is true is a commentary on the validity of the corporeal/incorporeal in both areas. If oil and gas is considered an incorporeal interest then the law of prescription, not adverse possession, should be used. In *Lillibridge v. Lackawanna Coal Co., 22 A. 1035, 1036 (Pa. 1891),* for example, it is said "... that possession of the mineral may be recovered by ejectment, and title to it may be acquired by adverse possession under the statute of limitations, though not by prescription, because it is not an incorporeal right." In Louisiana where interests in oil and gas were always considered to be incorporeal, and therefore subject to loss by the code provisions relating to liberative prescription, any doubt as to whether solid minerals would be treated the same way was removed with the adoption of the Mineral Code in 1975. It is now clear that both solid minerals and oil and gas are considered to be incorporeal and subject to liberative prescription. 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 216 (Matthew Bender).

(n58)Footnote 103. Oil and Gas interests are also generally assessed separate from the surface. *See, e.g., Bilby v. Wire, 77 N.W.2d 882 (N.D. 1956).*

(n59)Footnote 104. *See* 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 203 (Matthew Bender), for a listing of cases and law review articles.

(n62)Footnote 107. *See 4 U. Pitt. L. Rev. 274 (1938)* for a citation of authorities.

(n63)Footnote 108. *4 U. Pitt. L. Rev. 274 (1938),* where it is said: "The earlier courts with a knowledge as yet imperfect of the true characteristics of oil and gas, place too great an emphasis on their fugitive characteristics." To the same effect is *Elliff v. Texon Drilling Co., 210 S.W.2d 558 (Tex. 1948),* where the court said: "In the light of modern scientific knowledge these early analogies have been disproven, and courts generally have come to recognize that oil and gas, as commonly found in underground reservoirs, are securely entrapped in a static condition ..."

(n64)Footnote 109. *See Stephens County v. Mid-Kansas Oil and Gas Co., 254 S.W. 290 (Tex. 1923).*

(n65)Footnote 110. *Elliff v. Texon Drilling Co., 210 S.W.2d 558 (Tex. 1948),* where it is said: "This migratory character of oil and gas has given rise to the so-called rule or law of capture."

(n66)Footnote 111. *See* §65.05(b)(2), *supra*.

(n67)Footnote 112. In 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 203 (Matthew Bender), the leading authority in the field, the authors have prepared a table in which they compare how they and six other writers have classified each of the states which have considered the question. There is disagreement as to seven of the 24 states that have been classified, and in many of the other states, on which there is agreement, the cases contain inconsistent statements on the subject. For example, while the authors all agree that Kentucky is a non-ownership state, there are cases such as *Hammonds v. Central Ky. Nat. Gas Co., 75 S.W.2d 204, 205 (Ky. 1934), overruled*, *Texas American Energy Corp. v. Citizens Fidelity Bank & Trust Co., 736 S.W.2d 25 (Ky. 1987),* in which the court, in successive paragraphs, adopted both the ownership and non-ownership theories.

(n68)Footnote 113. 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 203.2 (Matthew Bender).

(n69)Footnote 114. 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 203.4 (Matthew Bender).

(n70)Footnote 115. *See* n. 112, *supra*.

(n71)Footnote 116. *See* 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 204.5 (Matthew Bender), where, after discussing the holding of Texas and Oklahoma on a particular issue said: "If the theory held in these states were significant in this context, the opposite results would have been expected."

(n72)Footnote 117. 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 204.9 (Matthew Bender) where it is said: "... the theory held by the state is of little importance apart from its influence on the classification of mineral, royalty and leasehold interests as corporeal or incorporeal..." Those authors then consider the importance of the corporeal/incorporeal distinction and conclude at § 211 that it, too, is of "little importance."

(n73)Footnote 118. *Callahan v. Martin, 43 P.2d 788 (Cal. 1935),* but for a discussion of the California decisions which have taken the opposite position *see* Wm. E. Colby, *The Law of Oil and Gas, 31 Cal. L. Rev. 357, 386 (1943). Wells Fargo Bank v. Goldzband, 53 Cal. App. 4th 596 (1997)* (the oil and gas lease granted the lessee a profit a prendre, which is defined as an interest in real property in the nature of an incorporeal hereditament).

(n74)Footnote 119. *Gerhard v. Stephens, 442 P.2d 692 (Cal. 1968).*

(n75)Footnote 120. *See* 82, *supra*.

(n76)Footnote 121. *See Stephens County v. Mid-Kansas Oil and Gas Co., 254 S.W. 290 (Tex. 1923).*

(n77)Footnote 122. *Loomis v. Gulf Oil Corp., 123 S.W.2d 501 (Tex. App. 1938).*

(n78)Footnote 123. There are a number of Texas cases which so hold, but some writers argue that those cases are applying a special limitation contained in the oil and gas lease. *See* 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 210.1 (Matthew Bender). *See also* A. W. Walker, Jr., *The Nature of Property Interests Created by an Oil and Gas Lease in Texas, 7 Tex. L. Rev. 565 (1929)* for a list of cases. The Texas case on which the proposition that an oil and gas lease can be lost by abandonment was based was *Texas Co. v. Davis, 254 S.W. 304 (Tex. 1923).* The Texas Supreme Court in *Rogers v. Ricane Enters., 884 S.W.2d 763 (Tex. 1994)* refused to apply the rule to a partial assignment of an oil and gas lease. In doing so, the court created some doubt about the continued validity of the proposition. In that case the lease had been assigned, as to a portion of the acreage covered by it, to a corporation. The corporation had engaged in no activity on the assigned portion for many years and had, in fact, been dissolved. It was contended that the assignment had been abandoned. The trial court and the *Texas Court of Civil Appeals, Rogers v. Ricane Enters., 852 S.W.2d 751 (Tex. 1993)* held, in reliance on Texas Co. v. Davis, that the interest created by the assignment had been abandoned. The Texas Supreme Court, in a 5-4 decision, reversed, holding that an interest in real estate cannot be abandoned unless the interest is created for a specific purpose which is described in the document creating the interest. The *Davis* case was not expressly overruled, however.

(n79)Footnote 124. (In Arkansas, an ownership state) *Bodcaw Lumber Co. v. Goode, 254 S.W. 345 (Ark. 1923);* (In Kentucky, a non-ownership state); *Cameron v. Lebow, 366 S.W.2d 164 (Ky. 1960).*

(n80)Footnote 125. Oil and gas leases are typically for a fixed primary term and as long thereafter as oil and gas are produced. *See* Richard W. Hemingway, The Law of Oil and Gas 263 (3d ed. West 1991).

(n81)Footnote 126. *Id.* at 109.

(n82)Footnote 127. Furthermore, in the first of the Pennsylvania coal cases, *Caldwell v. Fulton, 31 Pa. 475 (1858),* the document was similar to an oil and gas lease, in that it appeared to give only the developmental right rather than to transfer the fee in the coal. The court there held that the exclusive right to develop the mineral amounted to ownership.

(n83)Footnote 128. *See* note 102, *supra*. *See also* 1 P. Martin & B. Kramer, Williams & Meyers Oil and Gas Law Ch. 2, § 210.7 (Matthew Bender), where it is said: "Theoretically the classification of an interest in oil and gas as corporeal in character would mean that such interest might be extinguished by adverse possession whereas if classified as incorporeal in character it could be extinguished by prescription." *Rogers v. Ricane Enters., 930 S.W.2d 157 (Tex. App. 1996).*

(n84)Footnote 129. *See* note 102, *supra*.

(n85)Footnote 130. *See* note 128, *supra*. Following the material quoted in that note, the authors continue: "it suffices to note at this point that no differences in results are found to depend upon the classification of the interest as corporeal or incorporeal." *Central Oregon Fabricators v. Hudspeth, 977 P.2d 416 (Ore. Ct. App. 1999)* (stating that adverse possession can, but in this case does not, extinguish a *profit a prendre*).

(n86)Footnote 131. *Id.*

(n87)Footnote 132. The only case found in which such an argument was made is *Cowling v. Deep Vein Coal Co., 183 F.2d 652 (7th Cir. 1950),* and the issue was not decided. *See* 1 P. Martin & B. Kramer, Williams & Meyers Oil and

Gas Law Ch. 2, § 210.6 (Matthew Bender). *See, e.g., Enron Oil & Gas Co. v. Worth, 947 P.2d 610 (Okla. App. 1997)* (an exclusive right, in the nature of a profit a prendre, if granted in gross, may be transferred in gross; divisibility is permissible so long as the servient estate is not burdened beyond the terms of the grant).

CHAPTER 66 CONSTITUTIONAL IMPACTS ON REAL PROPERTY

8-66 Thompson on Real Property, Thomas Editions § 66.01

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 66.01 Introduction to the Chapter.

This chapter deals with selected elements of the Federal Constitution that impact on real property. These include property impacts under the Fourth Amendment, under the First Amendment, and under the equal protection provisions of the U.S. Constitution. The constitutions of the several states often provide specific provisions regarding property ownership and use, generally within declarations of individual rights, such as privacy, or in prohibitions on government activity, such as those regarding uncompensated "takings" and eminent domain. Separate chapters (Chapters 80 and 81) directly address aspects of eminent domain and regulatory takings inherent in the Federal Constitution's Fifth Amendment, and another (Chapter 74) deals with a variety of federal constitutional matters involved in public regulation of land use. This chapter does not address federal statutory provisions, such as those in § 1983 of United States Code Title 42, which provide protections against and remedies for invasion of property rights. n1

CHAPTER 66 CONSTITUTIONAL IMPACTS ON REAL PROPERTY

8-66 Thompson on Real Property, Thomas Editions § 66.02

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 66.02 Federal Constitutional Recognition and Protection of Property Interests.

The United States Supreme Court has repeatedly asserted that American constitutional law and common law regard real property ownership as encompassing an inherent "bundle of rights." n2 That bundle of rights is variously described as including the right to sole and exclusive possession of property, n3 the right to exclude others, n4 and the rights to possess, use, or dispose of the property. n5 The "bundle of rights" terminology occasionally results in mixed metaphors and peculiar phrasing, n6 and is not itself of constitutional origin, but rather adapted from early theoretical analyses of property ownership. n7 The various "rights" asserted among the "bundle" are in reality simply collective attributes of the many rights, interests, and privileges recognized under general 20th century property theory. n8

The character, scope, and extent of individual rights in property are traditionally derived from state law rather than created by the United States Constitution. n9 Additional definition of property rights occurs in application of the prohibitions within both the Fifth and Fourteenth Amendments against governmental actions that would deprive any person of "life, liberty, or property without due process of law." Further, several aspects of both the First, Fourth, and Fifth Amendments to the U.S. Constitution limit the extent to which states may infringe on the bundle of rights called property.

§ 66.03 Fourth Amendment Impacts.

[Go To Supp]

The Fourth Amendment to the United States Constitution protects "the right of the people to be secure in their persons, houses, papers and effects, against unreasonable searches and seizures... ." n10

§ 66.03(a) Property-Based Definition of Fourth Amendment Rights.

Early Supreme Court decisions used common law property concepts to define the extent of the Fourth Amendment prohibition against unreasonable search and seizure. In Olmsted v. United States n11 the Court, in upholding the use of telephone wiretaps, had suggested that the Fourth Amendment limited only searches and seizures of material, tangible property when those actions occurred by physical entry, thus foreclosing further Fourth Amendment inquiry in the absence of common law trespass or "actual physical invasion of [a] house." n12 However, the premise that property concepts either control or limit the Government's power of search and seizure has since been discredited. The Supreme Court instead has recognized that a principal objective of the Fourth Amendment is a concern with broader issues of privacy, and has increasingly discarded "fictional and procedural barriers" based only on property concepts. n13

§ 66.03(b) The Reasonable Expectation of Privacy Standard.

In its 1967 Katz v. United States n14 decision, the Supreme Court abandoned the "trespass to realty" restriction of *Olmsted.* The Court declared unconstitutional the placing of electronic listening and recording devices on the outside of public telephone booths to obtain incriminating evidence. Although there was no physical entrance into the area occupied by the suspect, or any ownership claims to the location, the Court nevertheless held that the suspect had a legitimate "expectation of privacy" within the telephone booth. In a broadly principled decision, the Court held that the Fourth Amendment "protects people, not places," and that "the correct solution of Fourth Amendment problems [would no longer be determined by the] incantation of the phrase 'constitutionally protected area.'" n15

The *Katz* decision held that a governmental intrusion qualifies as a "search" within the meaning of the Fourth Amendment's ban on unreasonable searches and seizures when the government violates an individual's "reasonable expectation of privacy." n16 Justice Harlan wrote that the *Katz* standard rests on two separate requirements: "first, that a person have exhibited an actual (subjective) expectation of privacy and, second, that the expectation be one that society is prepared to recognize as 'reasonable.'" n17 The "reasonable expectation" formulation has since become accepted as the principal test of intrusion; thus, in California v. Greenwood, n18 the contents of garbage bags placed on the street curb were held not protected from search, because a trash collector or other persons might easily have sorted through the material. Under such circumstances, the defendant could not have had a "reasonable" expectation that the contents of the bags would remain private. n19

§ 66.03(b)(1) Open Fields and Curtilage. n20

Adoption of the "reasonable expectation of privacy" test established by *Katz* in 1967 did not produce a definitive answer to the question of what constitutes an unlawful search of real property for Fourth Amendment purposes. Departure from the *Olmsted* concept of "intrusion as trespass" meant paradoxically both that enclosed realty could nevertheless be subjected to warrantless search, and that areas not categorized as private realty potentially could receive Fourth Amendment protection. In Oliver v. United States, n21 the Supreme Court held that government agents' disregard of a locked gate and intrusion into a privately owned but "open" field was neither a "search" in the constitutional sense nor an invasion of privacy merely because such an intrusion would be a technical trespass at common law. Reaffirming that an entry onto "open" fields was not subject to Fourth Amendment protection, n22 the Court regarded a purpose of the Amendment as protecting instead the privacy and sanctity of the home, utilizing the ancient concept of "curtilage" to define the protected and intimate space that includes and surrounds a home. n23

The definition of curtilage was more closely focused three years later, in United States v. Dunn, n24 when government drug enforcement agents crossed several fences surrounding the defendant's ranch house to discover a drug laboratory concealed within a barn. The Court held the intrusion was not a search under the Fourth Amendment because the barn was not within the curtilage of the ranch house. Declining to adopt a "bright-line rule" based on physical structures such as fences, the Court instead set out a four-factor test to determine the extent of a home's curtilage umbrella:

(1) the proximity of the area to the home;

(2) whether the area is within an enclosure surrounding the home;

(3) the nature of the uses to which the area is put; and

(4) the steps taken by the resident to protect the area from observation by passers-by. n25

The Court maintained that those factors were useful analytical tools "only to the degree that, in any given case, they bear upon the centrally relevant consideration -- whether the area in question is so intimately tied to the home itself that it should be placed under the home's 'umbrella' of Fourth Amendment protection." n26

The degree to which a person has a protected and "reasonable" expectation of privacy within the curtilage of the home is subject to further qualification in situations involving aerial surveillance, described below.

LEXIS: (curtilage w/5 privacy or private) or (search w/5 seizure) or (privacy or private)

§ 66.03(b)(2) Aerial Surveillance. n27

Several cases have addressed the extent to which private owners of real property can reasonably expect to be free from aerial surveillance. In California v. Ciraolo, n28 and Florida v. Riley, n29 the Court held that local police had not violated the Fourth Amendment by flying over and observing a home owner's realty, and in Dow Chemical Co. v. United States, n30 the Court held unreasonable an expectation that a heavily secured outdoor industrial plant would not be the subject of sophisticated aerial photographic surveillance.

Utilizing the expectation of privacy doctrine established in *Katz*, the Supreme Court held in the 1986 *Ciraolo* opinion that aerial observation of a home was not a violation of the Fourth Amendment. The Court assumed, but did not decide, that the defendant home owner had a subjective expectation of privacy in his fenced suburban yard, while assuming as well that the yard was within the curtilage of his home, "where privacy expectations are most heightened." n31 Despite the assumptions of curtilage protection, the Court concluded that the aerial surveillance did not constitute a Fourth Amendment search, because the homeowner's subjective expectation that his backyard activities would be shielded from aerial observation was unreasonable and "not an expectation that society is prepared to honor." n32 The Court relied almost entirely on the assertion that Ciraolo had waived his expectations of privacy by knowingly exposing his backyard to the plain view of outsiders in an era of routine air travel. n33 A vigorous dissent by Justice Powell argued that the owner's expectation of privacy was reasonable because his yard was within the curtilage of his home, where an individual's expectation of privacy "virtually always will be legitimate," and because the actual danger to privacy posed by passengers on commercial airliners is "virtually non-existent" and "too trivial to protect against." n34 Nonetheless, three years later in Florida v. Riley, n35 the Court held that a landowner could not reasonably have expected that the interior of a partially covered greenhouse in a residential backyard was protected from low-level aerial observation. In a plurality opinion, the Court found that even though the defendant had taken precautions against ground-level observation by leaving the roof and side windows partially open, the contents of the greenhouse were open to public view from the air. The Court cautioned, however, that observation of "intimate details connected with the use of the home or curtilage," or creation of "undue noise,... wind, dust, or threat of injury," could cause an otherwise legal observation to violate the Fourth Amendment. n36

In *Dow*, a precision aerial camera was used by the EPA to photograph the petitioner's 2,000-acre chemical plant from high altitudes after Dow had refused the agency's request to conduct an on-site inspection of the plant. The Supreme Court concluded that the warrantless aerial surveillance of the chemical complex did not constitute a Fourth Amendment search. It held that the open area of an extensive industrial plant was not analogous to the historically protected curtilage of a dwelling, but instead was "more comparable to an open field." n37 It also suggested that "the [g]overnment has greater latitude to conduct warrantless inspections of commercial property." n38 The Court concluded that the particular technical methods of surveillance employed by the EPA were not sufficiently intrusive to violate that reduced expectation of privacy. n39

§ 66.03(c) The Warrant Requirement. n40

The Fourth Amendment also provides that "no warrants shall issue, but upon probable cause... ." n41 The law of search and seizure regards a search as reasonable if it is pursuant to a warrant, which itself is based on a showing of probable cause. However, warrantless searches are also considered reasonable in certain circumstances.

§ 66.03(c)(1) Administrative Searches Generally.

The primary exception to the warrant and probable cause requirement concerning searches of real property is found in the so-called "administrative" or "regulatory" searches, applicable generally to "relatively unintrusive" governmental activities. Mid-20th century cases generally upheld the right of government sanitary, fire, or other inspectors to enter private homes without a warrant for these searches. n42 By 1967, however, in Camara v. Municipal Court n43 and See v. City of Seattle, n44 the Court began to place restrictions on warrantless inspections of both homes and businesses. The Court pointed out that inspections by city officials were not merely "civil" in nature, as the consequences might render the occupant or owner subject to criminal process. Unless an emergency required immediate access, owners or occupants of homes or businesses therefore had a constitutional right to insist that inspectors first obtain a search warrant. The warrant, however, need not conform to the full Fourth Amendment standard of probable cause, n45 and a "reasonable" or a "suitable" warrant would suffice. n46

LEXIS: administrative w/5 (fourth pre/2 amendment) or (search w/5 seizure) or (warrant w/5 search or inspect!)

§ 66.03(c)(2) Administrative Searches: Pervasively Regulated Businesses. n47

Certain "closely" or "pervasively" regulated businesses are susceptible to warrantless inspections, escaping even the relaxed requirement of a *Camara-See* warrant. Thus, based on "the long history of the regulation of the liquor industry during pre-Fourth Amendment days," the decision in Colonnade Catering Corp. v. United States n48 upheld warrantless entry of liquor store premises by federal inspectors. The Court recognized that Congress "has broad authority to fashion standards of reasonableness for searches and seizures" in the liquor industry, n49 as Congressional statutes have "repeatedly granted federal agents power to make warrantless searches and seizures of articles under the liquor laws." n50

In 1972, the Supreme Court in United States v. Biswell n51 upheld the validity of warrantless searches of firearms stores during business hours. Although the Court noted that federal regulation of interstate traffic in firearms is not as "deeply rooted in history" as the government's control of the liquor industry, it recognized both the need for close scrutiny of firearms traffic within state borders and that inspection was a crucial part of the regulatory scheme. n52 The Court concluded that if the statute was to be properly enforced and inspections made effective, "inspections without warrant must be deemed reasonable official conduct under the Fourth Amendment," when in contrast, the requirement of a warrant "could easily frustrate inspection." n53

Similarly, in Donovan v. Dewey, n54 the Court upheld the constitutionality of warrantless inspections made pursuant to the Federal Mine Safety and Health Act. There again, justification was based on the pervasive regulation of an industry with a "notorious history of serious accidents and unhealthful working conditions," and deference to the congressional finding that unannounced, warrantless inspections were essential to ensure compliance with the Mine Safety Act. n55

Six years later, in New York v. Burger, n56 a case reviewing the constitutionality of a state statute that authorized the warrantless inspection of an automobile junkyard, the Supreme Court established specific guidelines governing administrative inspections of pervasively regulated businesses: n57

> (1) there must be a "substantial" governmental interest that informs the regulatory scheme pursuant to which the inspection is made,
>
> (2) the warrantless inspection must be "necessary to further the government scheme," and

(3) the certainty and regularity of the statute's inspection program must provide a constitutionally adequate substitute for a warrant. "In other words, the regulatory statute must perform the two basic functions of a warrant: it must advise the owner of the commercial premises that the search is being made pursuant to the law and has a properly defined scope, and it must limit the discretion of the inspecting officers." n58

LEXIS: administrative w/5 (fourth pre/2 amendment) or (search w/5 seizure) or (warrant w/5 search or inspect!)

§ 66.03(c)(3) Administrative Searches: Statutorily Authorized Programs.

Unlike businesses that traditionally have been closely regulated, other business enterprises that lack the history of pervasive or intensive governmental control are probably protected from warrantless inspections. Thus, in Marshall v. Barlow's, Inc., n59 the Court held unconstitutional a provision in the Occupational Safety and Health Act (O.S.H.A.) that permitted warrantless inspections of the work area of any employment facility within O.S.H.A.'s jurisdiction. n60 In distinguishing its previous decisions that had upheld warrantless inspections of liquor and firearms dealers, the Court held that when such "an entrepreneur embarks upon such a business, he has voluntarily chosen to subject himself to a full arsenal of governmental regulation." n61 In contrast, OSHA applied to a vast number and variety of enterprises, n62 not selected because of previous pervasive regulation.

New York, 445 U.S. 573, 601 (1980), New York v. Harris, 495 U.S. 14 (1990). State v. Campbell, 640 So. 2d 622 (La. 1994)* (underneath area of raised house is "curtilage" protected by Fourth Amendment); *State v. Maxfield, 886 P.2d 123 (Wash. 1994),* distinguished by *State v. Porter, 942 P.2d 974 (Wash. 1997).*

Central Oregon Fabricators, Inc. v. Hudspeth, 977 P.2d 416 (Or. Ct. App. 1999) (Grantees of a profit a prendre that allowed them to hunt on another person's land did not abandon their right to hunt by lack of use since there was no verbal expression or other conduct that showed intent to abandon their interests). *United States v. Barajas-Avalos, 359 F.3d 204 (9th Cir. 2004)* (having no dishes, food, clothing, bedding, electricity, or water, a trailer was not a permanent or temporary home, so curtilage doctrine did not apply); *United States v. Hatfield, 333 F.3d 1189 (10th Cir. 2003)* (officer's walking in defendant's pasture along fence did not constitute a search because the fact the defendant owned the pasture did not create a reasonable expectation of privacy from observations of his curtilage made from the pasture); *United States v. Gerard, 362 F.3d 484 (8th Cir. 2003)* (that information used to obtain a search warrant was based on an officer's smelling marijuana while climbing a ladder to look into defendant's locked garage did not invalidate warrant, as the garage lay outside the curtilage of defendant's dwelling); *United States v. Romero-Bustamente, 337 F.3d 1104 (9th Cir. 2003)* (statute that authorized Border Patrol, without warrant, to access private lands, but not dwellings, within 25 miles from any external boundary of United States, did not extend to backyards, as curtilage was part of home itself under Fourth Amendment).

(n15)Footnote 24. *United States v. Dunn, 480 U.S. 294 (1987). See also State v. Johnson, 879 P.2d 984 (Wash. 1994)* (Although under Fourth Amendment a person's expectation of privacy in open field, even if subjectively manifested, is not deemed objectively reasonable or legitimate, person is not precluded from protecting that person's private affairs in open field under State Constitution. Federal agents' intrusion onto "open fields" owned by defendants was unreasonable intrusion into defendants' private affairs under State Constitution, such that evidence resulting from intrusion should have been suppressed; defendants posted multiple signs manifesting desire to exclude others from open fields, placed chain link gate and fence around property and closed gate); *State v. Poppe, 883 P.2d 905 (Or. 1994)* (In area where it is difficult to tell where one piece of property ends and another begins, person who wishes to maintain protected privacy interest must take steps such as erecting fence or posting signs to exclude intruders); *Atkins v. State, 882 S.W.2d 910 (Tex. 1994)* (Determining whether particular area is included within "curtilage" of home is determined by whether occupant of home had reasonable expectation of privacy in area; there is no reasonable expectation of

privacy if activity viewed by officer is visible from street, or curtilage of home is open to public); *United States v. Santa Maria, 15 F.3d 879 (9th Cir. 1994)* (Fourth Amendment protects structures other than dwellings from unreasonable searches and seizures, and structure need not be within curtilage in order to have Fourth Amendment protection.); *United States v. Wright, 991 F.2d 1182 (4th Cir. 1993)* (Defendant's barn was outside curtilage of his home and was thus like "open field," which included any occupied or undeveloped area outside curtilage, for purposes of deciding Fourth Amendment protection, and as an open field, government's intrusion was not unreasonable search proscribed by Fourth Amendment).

(n16)Footnote 25. *480 U.S. 294, 301. State v. Rodriguez, 65 P.3d 181 (Haw. 2003)* (officer's presence on curtilage was not justified, so marijuana plants observed from there were not in plain view); *State v. Goebel, 654 N.W.2d 700 (Minn. App. 2002)* (street at the end of the driveway was not in the curtilage of the home); *People v. Riddle, 649 N.W.2d 30 (Mich. 2002)* (the castle doctrine that a landowner need not retreat and may use deadly force in self-defense does not extend to outlying areas in the curtilage of the home); *Jones v. State, 564 S.E.2d 220 (Ga. App. 2002)* (a back-yard shed was within the curtilage of the home).

See also State v. Gabbard, 877 P.2d 1217 (Or. 1994) (State Constitution protects privacy interest in land outside curtilage of person's dwelling, if person manifests intent to exclude public by erecting barriers, such as fences or signs. Although person has privacy interest in curtilage of dwelling, person impliedly consents to visitors going to front door of person's house, provided that person has not manifested intent to forbid intrusion of casual visitors onto property) distinguished by *State ex rel. Juvenile Dept. of Coos County v. Reeves, 988 P.2d 433 (Or. App. 1999); State v. Graffus, 871 P.2d 1115 (Wash. 1994)* (Officer with legitimate business may enter areas of curtilage which are impliedly open, such as access routes to house, without warrant; officer is free to keep his or her eyes open but may not substantially or unreasonably depart from such area or engage in particularly intrusive method of viewing) distinguished by *State v. Ross, 959 P.2d 1188 (Wash. App. Div. 1998); State v. Hornback, 871 P.2d 1075 (Wash. 1994)* (Curtilage of home enjoys heightened Fourth Amendment protection; however, person does not have reasonable expectation of privacy in areas of curtilage impliedly open to the public. Entry by law enforcement officials onto those areas of home's curtilage, such as driveways, walkways or access routes leading to residence, does not constitute search and does not implicate Fourth Amendment. "No trespassing" sign alone does not withdraw permission to enter access routes to house or other portions of curtilage impliedly open to the public and thus presence of "no trespassing" sign is not dispositive of homeowner's reasonable expectation of privacy for Fourth Amendment purposes); *State v. Espinoza, 442 S.E.2d 911 (Ga. 1994), rev'd, 454 S.E.2d 765 (Ga. 1995).* (For search warrant purposes, concept of curtilage is more easily applied to land surrounding single-family dwelling than to common areas surrounding multifamily dwelling; when area in question is common area serving multiple dwellings, it is less likely that residents of any one unit have expectation of privacy or reasonably consider area to be extension of dwelling); *United States v. Ishmael, 843 F. Supp. 205 (E.D. Tex. 1994), rev'd, 48 F.3d 850 (5th Cir. 1995).* Although metal building constructed on resident's property was not within curtilage of home, court held it was not "open field" for Fourth Amendment purposes; to allow government to intrude up to very windows of building simply because it was outside of curtilage of home would eviscerate Fourth Amendment); *State v. Hoke, 866 P.2d 670 (Wash. 1994)* (Officer substantially and unreasonably departed from area of curtilage impliedly open to public. Homeowner need not take overt steps signalling that area of curtilage is private; such burden would be inconsistent with law and seriously weaken constitutional protection against unreasonable searches); *State v. Mierz, 866 P.2d 65 (Wash. 1994)* (Defendant's backyard, which was enclosed by six-foot fence and a gate which was secured by a padlock, was part of curtilage of his house and Department of Wildlife agents' warrantless intrusion into yard without permission violated Fourth Amendment); *State v. Chaussee, 866 P.2d 643 (Wash. 1994)* (Although police officers on legitimate business may enter area of curtilage which is impliedly open to public, substantial or unreasonable departure from the area exceeds scope of implied invitation and intrudes upon constitutionally protected expectation of privacy); *United States v. Hopper, 58 Fed. Appx. 619 (6th Cir. 2003)* (denial of motion to surpress evidence affirmed with regard to curtilage where that area of the home was not enclosed, was not put to special use, and was not protected from open observation).

(n17)Footnote 26. *480 U.S. 294, 301. United States v. Mooring, 137 F.3d 595 (8th Cir. 1998)* (a barn was not

within the curtilage of the farmhouse); *United States v. Soliz, 129 F.3d 499 (9th Cir. 1997)* (a parking area is not within the curtilage of the home), *overruled by U.S. v. Johnson, 256 F.3d 895 (9th Cir. 2001); United States v. Jenkins, 124 F.3d 768 (6th Cir. 1997)* (the back yard is not within the curtilage of the house); *State v. Burston, 693 So. 2d 600 (Fla. App. 1997)* (a carport is part of the curtilage of the dwelling) *distinguished by Small v. State, 710 So. 2d 591* (Fla. App. 4 dist. Feb 18, 1998); *State v. Webb, 943 P.2d 52 (Idaho 1997)* (a marijuana garden is not within the curtilage of the residential property); *Commonwealth v. Butterfield, 691 N.E.2d 975 (Mass. App. 1998)* (a driveway adjacent to the driveway, and a walkway from the driveway to the back door of the residence, are not part of the curtilage of the residence); *State v. Carter, 569 N.W.2d 169 (Minn. 1997), rev'd, 525 U.S. 83 (1998)* (observation of interior constituted a search whether or not made from curtilage); *State v. Jackson, 937 P.2d 545 (Utah App. 1997)* (garbage set out for collection is beyond the curtilage of the home); *United States v. Van Damme, 48 F.3d 461 (9th Cir. 1995)* (the greenhouses in which marijuana was growing were not within the curtilage of the defendant's residence); *United States v. Hall, 47 F.3d 1091 (11th Cir. 1995)* (seizure of shredded documents from dumpster on defendant's business premises did not violate the Fourth Amendment); *United States v. Dufour, 43 M.J. 772 (Ct. Crim. App. 1995)* (investigator's walking along sidewalk in front of accused's residence and observing drug activity in plain view from that location was not intrusive or unreasonable); *State v. Bullock, 901 P.2d 61 (Mont. 1995)* (defendant had reasonable expectation of privacy in a section of a private driveway even though that section was not located within the curtilage of the defendant's cabin); *Alward v. Nevada, 912 P.2d 243 (Nev. 1996)* (legitimate expectation of privacy in tent), *rev'd, 58 N.E. 879 (N.Y. 1900) distinguished by Lincoln v. State, 988 P.2d 305* (nev. Nov 29, 1999).

("Curtilage" protected by Fourth Amendment is land immediately surrounding and associated with home -- that area associated with intimate activity of home and privacies of life. If law enforcement officer or agent does not go beyond area of residence that is impliedly open to public, no privacy interest is invaded.); *United States v. Conley, 856 F. Supp. 1010 (W.D. Pa. 1994)* (open areas outside the curtilage of the house are not included within Fourth Amendment coverage because those areas do not qualify as persons, houses, papers, or effects); *State v. Rogers, 638 A.2d 569 (Vt. 1993) See also Hagan v. Delaware Anglers' & Gunners' Club, 655 A.2d 292 (Del. Ch. 1995)* (police officer's observation of defendants' garden from wooded area surrounding curtilage of their home was not a search. Officer could conduct constitutional, warrantless search in woods between road and cleared area behind defendant's house). *Daughenbaugh v. City of Tiffin, 150 F.3d 594 (6th Cir. 1998)* (unattached garage within 50 or 60 yards of a house is within the curtilage). *Bond v. United States, 120 S. Ct. 1462, 1464 (2000). But see, State v. Costin, 720 A.2d 866 (Vt. 1998); State v. Hall, 719 A.2d 435 (Vt. 1998).*

CHAPTER 66 CONSTITUTIONAL IMPACTS ON REAL PROPERTY

8-66 Thompson on Real Property, Thomas Editions § 66.04

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 66.04 First Amendment Impacts.

[Go To Supp]

Various cases have examined the interaction of real property rights and the free speech and freedom of religion clauses of the First Amendment. Cases based on free speech have arisen in areas such as the right to picket or petition on private property, zoning controls of adult businesses, and the display of signs and billboards. Other cases have involved challenges to zoning ordinances based on the religion clauses of the First Amendment.

§ 66.04(a) Freedom of Speech.

§ 66.04(a)(1) The Landowner's Right to Exclude Persons Exercising First Amendment Freedoms. n63

The Supreme Court has addressed a mixed group of cases involving the inevitable conflicts that occur when persons attempt to exercise various First Amendment freedoms on land that is held in private ownership, while private owners of the real property attempt to exclude such persons from their land.

One of the first cases to raise the issue also framed the subsequent debate.In Marsh v. Alabama n64 a person who attempted to distribute religious literature on the premises of a company-owned town violated the wishes of the town's management. Marsh, a Jehovah's Witness, was warned that she could not distribute her literature and was later arrested and convicted under state laws penalizing trespass to realty. The Court held that the town, although owned by a private corporation, otherwise had "all the characteristics of any other American town," thus serving as the functional equivalent of a public area, or in speech terms, a public forum. The Court thus balanced "the constitutional rights of the owners of property against those of the people to enjoy freedom of press and religion," n65 and held that the state could not impose criminal sanctions on the defendant.

The "public function" test of Marsh v. Alabama was at first followed, n66 but eventually abandoned, n67 in subsequent decisions involving private shopping centers and various types of activity, such as peaceful union picketing or distribution of antiwar handbills. In a concluding case in the series, Hudgens v. National Labor Relations Board, the Court permitted shopping mall owners to ban picketing on private property, apparently on the theory that state action is not involved, and the First Amendment is not violated, by private restrictions imposed on private realty. n68

By 1980, the Court had returned to a pre-*Marsh* position that property "does not lose its private character merely because the public is generally invited to use it for designated purposes." n69 Nevertheless, as established in Pruneyard Shopping Center v. Robins, n70 there may be situations where specific provisions of a state constitution protect "speech and petitioning, reasonably exercised, in shopping centers, even [when] privately owned." n71 In that case, the Court affirmed a California Supreme Court decision, based on state constitutional provisions, that allowed the public to have access to a private shopping center's central courtyard in order to solicit signatures for political petitions. As a related matter, the *Pruneyard* decision noted concern for potential First Amendment rights of the landowners themselves, and a fear that they might be identified with, or subjected to, the views expressed by members of the public on their realty. The Court suggested that the views expressed by members of the public in passing out pamphlets or seeking signatures for a petition would not likely be identified with those of the owner, and that the owners could expressly disavow any connection with the message by simply posting signs in the area where the speakers or handbill distributors stand. n72

The character of land as a public forum can also be affected by the status of the land's owner. Under the holdings of *Lloyd* and *Pruneyard*, privately owned lands frequented by members of the public appear categorically to be exempt under federal rules from public forum status. However, land owned by public agencies and open to public use will often qualify as a public forum. As described in International Society for Krishna Consciousness v. Lee, n73 publicly owned realty is not automatically subjected to forum status. Rather, on land that "has traditionally been available for public expression," such as streets or parks, or that has been designated as a forum, public expression can be restricted only with narrowly drawn regulations that achieve a compelling state interest. n74 All other categories of lands owned by public agencies, however, may be subjected to reasonable limitations on expressive activity. Thus, airport terminals owned by public agencies, although widely accessible to the general public, are neither by tradition nor purpose made available for speech activity, and do not qualify as public fora, although they are still not able to unreasonably ban all First Amendment activities. n75

LEXIS: property w/10 (first pre/2 amendment) or (free! w/2 speech) or (free! w/2 religion)

§ 66.04(a)(2) Restrictive Zoning of Adult Entertainment Businesses. n76

Local land use and zoning ordinances, enacted to protect a locality's interest in preserving the quality of its neighborhoods, occasionally conflict with the First Amendment communication rights exercised by an owner or occupant of land. The question arose directly in Young v. American Mini Theatres, n77 where a local ordinance forced the dispersal of adult theaters by requiring that they be at least 1000 feet apart. A plurality of the Court upheld the ordinance, both because society's interest in protecting the free flow of sexually explicit materials was "of a wholly different, and lesser, magnitude" than its interest in protecting political debate, and because the city's desire to protect the quality of life within its neighborhoods was sufficiently compelling to justify the regulation. n78 The *Young* rule was reinforced in City of Renton v. Playtime Theatres, n79 upholding a zoning ordinance aimed exclusively at adult theaters.

Under those opinions, local governments may generally single out adult entertainment businesses for special regulatory treatment in the form of "time, place, and manner" regulations, thus restricting the locations where such businesses can operate, so long as the government can show it has a substantial interest in regulating the businesses, and that the regulations allow for reasonable alternative avenues of communication.

In both cases the Court treated the local ordinances' effect on speech as content-neutral, characterizing the predominate intention of the local governments as being to control the undesirable secondary effects of adult theaters -- street crime, decline of property values, decrease in retail trade, and general urban decay -- rather than suppression of the messages of the films shown in those theaters. n80 The inquiry then became whether such an ordinance "is designed to serve a

substantial governmental interest and allows for reasonable alternative avenues of communication." n81 In both cases, the necessary "governmental interest" existed in the local government's desire to "preserve the quality of urban life." n82 As to "reasonable alternate avenues," however, the *Renton* Court merely cautioned that "the First Amendment requires only that *Renton* refrain from effectively denying respondents a reasonable opportunity to open and operate an adult theater within the city."

The *Renton* caveat regarding a "reasonable opportunity to operate" may be relevant whenever cities attempt to exclude all adult businesses, whether through an outright ban, overly restrictive locational restrictions, or by giving officials undue discretion over special use or licensing provisions. Such a situation was presented in Schad v. Borough of Mount Ephraim, n83 in which the Court invalidated a zoning restriction that effectively excluded all live entertainment, including nude dancing, from the Borough of Mt. Ephraim. n84 The overt rationale of the holding was unclear, however, as the Court's majority opinion simply concluded that the ordinance was facially overbroad and that the Borough had not justified it.

§ 66.04(a)(3) Local Regulation of Signs and Billboards.

Ordinances that regulate signs or billboards located on private realty raise free speech problems because such messages, whether commercial or non-commercial in content, are forms of speech protected by the First Amendment.

The Supreme Court has taken a restrictive view of ordinances that attempt to ban residential "for sale" and "for lease" signs located directly on the premises of the real property advertised. In Linmark Associates v. Township of Willingboro, n85 a township banned on-premise "for sale" signs in the community, ostensibly in order to reduce residential turnover and prevent panic selling by homeowners, thus impairing efforts to achieve racial integration. The Court struck down the ordinance, rejecting a claim that it was constitutional as a "time, place, and manner" regulation. The Court ruled that the ban impermissibly restricted the content of expression on a matter of vital concern to the community, and held that other means of communicating information on the sale of homes did not offer a satisfactory alternative.

In contrast to the *Linmark* position, which effectively allows land occupants to erect certain categories of signs, the general rule now appears to be that controls may be imposed on signs as a matter of aesthetic regulation. The 1984 decision of Members of the City Council of Los Angeles v. Taxpayers for Vincent n86 inhibits many theoretical free speech objections to sign ordinances because the Court reasoned that the "substantive evil" of visual blight was not merely a "possible byproduct" of the form of speech, but was created inherently by signs as a medium of expression, thus justifying their aesthetic regulation. n87

The case arose with a Los Angeles ordinance that prohibited the posting of signs on public property, and was brought by a candidate for public office whose political signs were removed by the city. The Court held the ordinance did not violate the free speech clause, both because it was a viewpoint-neutral "time, place, and manner" regulation, and because the prohibition on signs on public property was no greater than necessary to advance these interests. The Court held that the city was not required to adopt a less restrictive alternative than the prohibition, such as an exemption for political signs, because such exemptions might create an unconstitutional discrimination against the content of speech and because exemptions could defeat the objective of combatting visual blight.

Similar concerns regarding ordinances that categorize based on the content of signs had arisen earlier in Metromedia, Inc. v. City of San Diego, n88 in which a sign ordinance applicable to private realty that prohibited off-premises commercial billboards generally, but exempted on-premises business identification signs. The ordinance also exempted

twelve categories of signs, including governmental and temporary political signs. A plurality opinion held unconstitutional the provision that limited on-premises signs to commercial messages, stating that it improperly regulated the content of speech by preferring commercial over non-commercial speech. The plurality also invalidated the twelve exemptions contained in the ordinance because they constituted discrimination on the basis of content. Further precedential value of the opinion was compromised by its variety of opinions and holdings.

Broad regulatory prohibitions on signs that are based on aesthetic concerns remain valid, but it would be insufficient to exempt only "for sale" signs of the type protected by the 1984 *Vincent* decision. In the 1994 case of City of Ladue v. Gilleo, n89 a municipal ban on almost all signs on private residential realty was held by a unanimous Court to violate the First Amendment, because private residential signs "have long been an important and distinct medium of expression." n90

An ordinance of the City of Ladue, Missouri, prohibited residential signs except those falling within specified exemptions. A homeowner posted an anti-war sign on her front lawn, later replacing it with a similar message inside her window. Both were prohibited by the sweeping terms of the ordinance, as they were not included within the various specified exceptions, such as identification or for sale signs.

The *Ladue* opinion reflected both an elemental concern for freedom of expression on issues of pivotal political importance and a "special respect for individual liberty in the home." n91 Both factors came together in the context of residential signs, which the court described as a "venerable means of communication that is both unique and important." n92

> Displaying a sign from one's own residence often carries a message quite distinct from placing the same sign someplace else, or conveying the same text or picture by other means. Precisely because of their location, such signs provide information about the identity of the "speaker."... Furthermore, a person who puts up a sign at her residence often intends to reach *neighbors*, an audience that could not be reached nearly as well by other means. n93

The *Ladue* opinion strongly suggests that there are few practical substitutes for a residential medium of communication, but the Court cautioned that "more temperate" forms of regulation, short of a total ban, might nevertheless remain available. n94

§ 66.04(b) Freedom of Religion. n95

The First Amendment's ban on laws "respecting an establishment of religion, or prohibiting the free exercise thereof," has had only a tangential impact on real property ownership, generally by creating a sphere of religious activity that is somewhat insulated from unwanted interference by private or governmental sources. Thus, some localities have acted to protect religious land users by delegating to them an approval power over the activities of neighboring land users. One such case reached the Supreme Court in the 1982 decision of Larkin v. Grendel's Den, Inc. n96 The Court in that case held that a Massachusetts law giving churches and schools the power to veto applications for liquor licenses violated the Establishment Clause, stating that the statute enmeshed churches in the processes of government and created the danger of "political fragmentation and divisiveness along religious lines." n97

Although local governments possess the power to regulate the environment in the vicinity of churches, the Court held that the statute was not simply a legislative exercise of zoning power, but instead delegated discretionary governmental powers to religious bodies without sufficient standards. Thus, because the churches' power under the statute could have

been used by churches for explicit religious goals, the statute invalidly advanced religion.

By far the more common interaction between First Amendment religious concerns and interests in real property occurs with the widespread state practice of offering special consideration to religious users in matters of local land use controls. There, the "free exercise" clause is frequently employed in state courts to insulate religious users of land from too-burdensome governmental regulation. The Supreme Court confronted such an issue in Church of the Lukumi Babalu Aye v. City of Hialeah, n98 where it voided a city ordinance that prohibited the ritual slaughter of animals. The Court invalidated the ordinance as having "targeted" a church that practiced animal sacrifice as a form of devotion, and failed to demonstrate either the requisite compelling governmental interest or that the ordinance had been narrowly tailored to advance that interest. n99

The lower federal appellate courts, however, have demonstrated a general willingness to uphold various zoning regulations as applied to religious structures and activities. In Lakewood, Ohio Congregation of Jehovah's Witnesses v. City of Lakewood, n100 the Sixth Circuit upheld a restriction on churches in residential districts as applied against a congregation that planned to build a church on land they had acquired. The Circuit Court held that the right to build a church was not protected by the First Amendment's free exercise clause because construction was not a "fundamental tenant" or "cardinal principle" of the religion's faith. Further, the restriction did not result in an undue burden on religious observance because the ordinance permitted churches in non-residential districts covering ten percent of the city, and the church potentially could build in these districts even though this would be more expensive and "less conducive to worship." n101

In Grosz v. City of Miami Beach, n102 the Eleventh Circuit agreed that while the "government may never regulate religious beliefs, the [First Amendment] does not prohibit absolutely government regulation [that burdens religious practices]." n103 Nevertheless, it proposed a two-part test, asking first whether the government sought to regulate religious beliefs or opinions rather than merely placing a burden on religious conduct, and second, requiring that the ordinance have both a secular purpose and effect. n104 Only if a government regulation passes both of these threshold tests should a court balance the burden of the city's legitimate interests in maintaining its zoning objectives against the burden on the plaintiff's right to free exercise of religion. In *Grosz*, the circuit court found that the city's substantial interests in maintaining certain wholly residential zones free of the noise and crowds associated with religious worship did not unduly burden freedom of religion since more than half the city was available for religious institutions. n105 However, where zoning ordinances appear to place more than an incidental burden on the free exercise of religion, courts may invalidate the application of the ordinance where it appears to have been based on dissimilar treatment of religious institutions. Thus, in Islamic Center of Mississippi, Inc. v. City of Starkville, n106 the Fifth Circuit found that an ordinance which was applied to deny a special permit for establishment of a mosque at numerous proposed sites had "advanced no rational basis other than neighborhood opposition to show why the exception granted all other religious centers was denied the Islamic Center." n107

CHAPTER 66 CONSTITUTIONAL IMPACTS ON REAL PROPERTY

8-66 Thompson on Real Property, Thomas Editions § 66.05

AUTHOR: Professor Richard B. Cunningham Hastings College of the Law University of California

§ 66.05 Equal Protection.

Zoning and other land use regulations that classify land uses inevitably raise an equal protection problem. Landowners can make two types of equal protection objections to zoning ordinances, making either an attack on the ordinance on its face, or against the ordinance as applied.

In the 1974 case of Village of Belle Terre v. Boraas, n108 a zoning ordinance defined a "family" as no more than two unrelated individuals. Plaintiffs, who rented their home in a single-family zoning district to six unrelated college students, challenged this definition on several constitutional grounds, including substantive due process and equal protection. Applying the rational relationship standard, the Court upheld the ordinance, finding a rational basis in the city's desire to maintain a quiet residential environment. n109

The Supreme Court qualified the holding in Belle Terrein Moore v. City of East Cleveland, n110 which had struck down a local housing code restricting the number of related individuals who could live together. The plurality opinion noted that the restriction on related individuals living together did little to meet legitimate community objectives, such as the prevention of overcrowding and traffic congestion. Thus, the ordinance was struck down essentially because it interfered with the sanctity of the family.

The Supreme Court has also adopted a middle-tier judicial review standard in equal protection cases when classifications are quasi-suspect. The middle-tier standard requires a legislative classification to bear a substantial, rather than a necessary, relationship not to an important, but rather to a compelling, governmental interest.

In City of Cleburne v. Cleburne Living Ctr., n111 the Supreme Court reviewed a city's denial of a special use permit for a group home for the mentally retarded. The group home planned to locate in an "apartment house" district where the zoning ordinance required a special use permit for residence housing the "insane or feeble-minded" and for alcoholics and drug addicts. It did not require a special use permit in this district for hospitals, sanitariums, nursing homes, or homes for convalescents or the aged.

The Court held that the mentally retarded were not a quasi-suspect class that required middle tier equal protection review. It found there were legitimate reasons to distinguish the mentally retarded from other groups. The Court also

noted that federal and state legislation protected the mentally retarded, and that this legislation indicated they were not politically powerless.

Although the Court did not invalidate the special permit requirement for the group home, it held the permit denial unconstitutional under the rational relationship standard. It pointed out that the zoning ordinance did not require a permit for similar uses in the district, but that the differences between these uses and a home for the mentally retarded were largely irrelevant to the city's legitimate zoning interests. Neither were the reasons for denying the permit acceptable. The city denied the permit because of neighborhood fears, e.g., that nearby junior high school students might harass the group home residents. The Court held that "mere negative attitudes" are not a sufficient reason to deny a permit. Objections that the group home would be overcrowded and located in a floodplain were not acceptable because the same objections applied to similar group homes the ordinance allowed without a permit.

Supp. To CHAPTER 66 CONSTITUTIONAL IMPACTS ON REAL PROPERTY

8-66 Thompson on Real Property, Thomas Editions Supp. to § 66.03

Supp. to § 66.03 Fourth Amendment Impacts.

[Go To Main]

§ 66.03(b) The Reasonable Expectation of Privacy Standard. [Go To Main]

Add:

State v. Bryant, 950 A.2d 467 (Vt. 2008) (expectation of privacy in yard and airspace above yard).

Add:

Grant v. State, 978 So. 2d 862 (Fla. App. 2008) (evidence found using a search warrant was tainted by a prior illegal warrantless search).

§ 66.03(b)(1) Open Fields and Curtilage.

Add:

Walls v. State, 944 A.2d 1222 (Md. App. 2008) (reference to "premises" in search warrant did not limit the search to the defendant's house).

Add:

Ornelas v. U.S., 576 U.S. 690 (1996) (standard of review for curtilage decisions).

Add

Wilson v. State, 952 So. 2d 564 (Fla. App. 2007) (a greenhouse containing marijuana was not within the curtilage of the house); *United States v. Taylor, 458 F.3d 1201* (11th Cir. 2006) (a pond was not within the curtilage of the house); *United States v. Cousins, 455 F.3d 1116 (10th Cir. 2006)* (the sideyard area of the house was not within the curtilage of the house); *Phillips v. State, 630 S.E.2d 844 (Ga. App. 2006)* (a vehicle parked in back of the house was not within the curtilage).

Add:

U.S. v. Quintant, 594 F. Supp. 2d 1291 (M.D. Fla. 2009) (driveway area near the front of the residence was part of the curtilage); *State v. Hoffman, 196 P.3d 939 (Kan. App. 2009)* (seized trash was within curtilage of defendant's home); *Quintana v. Commonwealth of Kentucky, 276 S.W.3d 753 (Ky. 2008)* (back yard was protected curtilage); *U.S. v. Conrad, 578 F. Supp. 2d 1016 (N.D. Ill. 2008)* (deck at the back of the house was part of the curtilage); *U.S. v. Davis, 530 F.3d 1069 (9th Cir. 2008)* (areas that were 180-200 feet away from the residence, outside the chain link fence of the workshop, and that bore no evidence of domestic activity were not part of the curtilage).

State v. Peterson, 879 N.E.2d 806 (Ohio App. 2007) (detective trespassed on curtilage, rendering warrantless search of residence unlawful).

Add:

United States v. Struckman, 603 F.3d 731 (9th Cir. 2010) (back yard was curtilage); *Commonwealth v. Perez, 922 N.E.2d 855 (Mass. App. 2010)* (area of disturbed earth near the house was in the curtilage); *State v. Olm, 224 P.3d 245 (Ariz. App. 2010)* (front yard was part of the curtilage); *State v. Perkins, 222 P.3d 1198 (Ut. App. 2009)* (back patio was not part of the curtilage); *Ruiz v. State, 23 So. 3d 208 (Fla. App. 2009)* (unenclosed parking lot was not part of the curtilage); *U.S. v. Dobbs, 357 Fed. App'x 767 (9th Cir. 2009)* (driveway was not within the curtilage); *Thomas v. State, 684 S.E.2d 391 (Ga. App. 2009)* (detached garage was within the curtilage of the apartment); *Commonwealth v. Gibbs, 981 A.2d 274 (Pa. Super. 2009)* (front porch did not constitute curtilage); *U.S. v. Rey, 663 F. Supp. 2d 1086 (D. N.M. 2009)* (power-line easement was not within the curtilage of a yurt located on the defendant's property).

§ 66.03(b)(2) Aerial Surveillance.

Add:

U.S. v. Nichols, 248 Fed. Appx. 105 (11th Cir. 2007) (court found that curtilage on the property ended short of the first

marijuana plant that was observed from a state patrol helicopter).

§ 66.03(c) The Warrant Requirement. [Go To Main]

Add

United States v. Hayes, 209 Fed. Appx. 548 (7th Cir. 2006) (contraband that was visible during post office processing provided probable cause for search of the residence).

State v. Leffler, 165 P.3d 386 (Wash. App. 2007) (the emergency exception to the warrant requirement did not justify this warrantless search); *State v. Fisher, 154 P.3d 455* (officer's off-property open view of a trash bag did not justify seizure of the trash bag under the plain view doctrine).

§ 66.03(c)(1) Administrative Searches Generally.

Add:

Washington County Health Department v. White, 878 N.E.2d 224 (Ind. App. 2008) (mobile home owners could enjoin county from searching their mobile homes without a warrant).

§ 66.03(c)(2) Administrative Searches: Pervasively Regulated Businesses

Add:

Davis v. State, 907 N.E.2d 1043 (Ind. App. 2009) (exigent circumstances permitted a warrantless search of the curtilage).

CHAPTER 67 THE PROPERTY LAW ASPECTS OF PRIVATE NUISANCE

8-67 Thompson on Real Property, Thomas Editions § 67.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 67.01 Introduction and Early History.

[Go To Supp]

Private nuisance is not only a distinct area of property law, but is also a subject for tort law, and law students will typically hear references to the same leading cases in both the first year property class and the first year torts class. As with other sources of conflict between adjoining landowners, enormous amounts of litigation are conducted over issues of private nuisance. The substantive legal rules for private nuisance are not particularly complicated, but the factual settings in which those rules must be applied are infinitely varied, and seldom can the decision in one case be relied on as a sure guide for similar cases in the future. Stability in private nuisance litigation is further undermined by the carelessness with which some courts invoke private nuisance legal concepts, which has produced a jurisprudence permeated with inconsistency and confusion. n1

Nuisance is one of the most ancient concepts in the Anglo-American common law. From the corrupted Latin term "nocumentum," meaning "harm," the Norman French term "nuisance" arose. Early common law records show courts acting to protect landholders from the most serious type of harm, that of dispossession. In Anglo-Saxon times complainants brought their actions in the principal Anglo-Saxon local courts, the hundred courts. After the Norman Conquest in 1066 A.D., the Norman kings recognized that threats to property rights also threatened the peace, and so it was in the king's interest to resolve such disputes with dispatch. This interest they pursued by establishing a royal court, whose justices traveled to court sessions throughout the realm to hear and decide cases important enough to endanger the peace. Private disputants could request a hearing before a royal justice, or the justices could assert "jurisdiction" on their own initiative. The cases were opened by writ, and the general writ seeking access to the king's court was known as the Writ of Right. In 1166, during the reign of Henry II (1154-1189), judges created a procedure especially for dealing with wrongful dispossession from land, the Assize n2 of Novel Disseisen. n3

When a complainant alleged no dispossession but that the accused interfered with the use of the land, the allegation was phrased as a harm or nuisance to the land, n4 a variant of the Assize of Novel Disseisin that eventually became known as the Assize of Nuisance. n5 Nuisance thus attained the special meaning of harm to land. Judges later developed a new form of action known as "trespass on the case," or "case," to cover a wide variety of injuries resulting from wrongful acts, and to replace the assize of nuisance. For a time this new action was actually called an "action on the case for

nuisance," and over time it was used for complaints of conduct that was not so serious as to render the complainant's land uninhabitable, but which rendered occupancy less convenient. n6

For Bracton, writing in the 12th century, the most common example was obstructing a private right of way. By easy analogy he was able to conclude that when a *public* way was obstructed, the remedy of removing the obstruction could be justified for the common good, or the good of the public, even though no private land was affected. n7 This reasoning was followed a century later by the writer known as Britton, n8 and by others who wrote about private nuisance. When writing about nuisance, they typically referred to conduct that offended the community in general as "common" nuisances and then as "public nuisances." n9

During the reign of Henry II in the late twelfth century, public nuisance cases were heard in the main royal court, or by royal justices sent out to the principal regional courts. Eventually, minor offenses were heard in courts leet or sheriff's tourns, successor tribunals to the old Anglo-Saxon hundred courts. This assignment of jurisdiction became official in the late fourteenth century by a statute enacted during the reign of Richard II, the first known statute dealing with public nuisances. n10 Considered criminal, such conduct was prosecuted through use of a presenting jury, and of presentment and indictment for offenses.

The private remedy implicit in this statute had been recognized even earlier. Although the earliest mentions of remedies for public nuisances, or purprestures, did not recognize a private right of action, n11 a case as early as 1411 suggested that a private plaintiff could sue on a public nuisance. n12 Some writers and judges believed that a public offense should not give rise to a private right, but such actions were included regularly in the expansion of actions for trespass on the case, because those actions lay when adequate remedies were not available under the other standard writs. With the English antipathy to overlapping remedies, private nuisance actions were brought under the Assize of Nuisance, and private actions for public nuisance were brought as actions for trespass on the case, all as mutually exclusive categories. The logical consistency of this arrangement was confirmed in the requirement that a plaintiff in a private nuisance action had to be seized of a free tenement; no such requirement existed for actions on the case.

FOOTNOTES:

(n1)Footnote 1. Traditionally, most of the scholarly discourse in private nuisance has been carried on by torts professors rather than property professors; however, the torts discourse has not been particularly helpful. Prosser thought that nuisance was surrounded by the most "impenetrable jungle in the entire law" and that nuisance was "incapable of any exact or comprehensive definition." In his view, courts considering nuisance cases tended to use the labels from nuisance terminology rather than to apply any real analysis of the problem. W. Page Keeton, Prosser and Keeton on the Law of Torts 616-617 St. Paul, MN: West Pub. Co. (5th ed. 1984).

(n2)Footnote 2. An assize is best described as a decree, edict or ordinance issued by a medieval legislative body; the term assize also denotes a legislative session.

CHAPTER 67 THE PROPERTY LAW ASPECTS OF PRIVATE NUISANCE

8-67 Thompson on Real Property, Thomas Editions § 67.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 67.02 Private Nuisance Distinguished from Other Acts Against Property.

[Go To Supp]

§ 67.02(a) Distinctions Between Private Nuisance and Public Nuisance.

Every aspect of *private* nuisance relates to the use of land: the essence of private nuisance is unreasonable conduct by the defendant in the use of land, which causes a substantial interference in the plaintiff's use and enjoyment of land. n13 By contrast, no aspect of *public* nuisance necessarily relates to land, although commonly a public nuisance does involve land use. A public nuisance is unreasonable conduct that interferes with a right common to the general public, n14 and a public nuisance may occur whether the source or the result of that interference relates to the use of land.

By way of illustration, a private nuisance may occur when a landowner hosting loud parties at a house may cause a private nuisance against the rights of nearby residents, who find that they are disturbed in the use of their land by the loud noises coming from the land of the party host. A public nuisance, on the other hand, would be created by one riding a loud motorcycle through a quiet community; the disturbing noise is not produced by the use of private land, and it may be a public nuisance even if private landowners do not complain, because the disturbance would be against "a right common to the general public."

It is possible and even common for certain conduct to constitute both a public nuisance and a private nuisance simultaneously. If unreasonable use of land produces substantial interference with another's use of land, but also violates a right common to the general public, then both types of nuisances exist simultaneously. n15 A livestock feed lot or a refinery may produce pests or odors over such a wide area that the rights of the general public are affected and, at the same time, nearby private landowners may suffer extraordinary interference with the use and enjoyment of their own lands.

A private landowner usually has no cause of action against one who produces a public nuisance unless the plaintiff can show extraordinary interference with private land use. n16 This common law principle is modified in some states whose statutes defining and prohibiting certain public nuisances also create a concurrent private right of action for private nuisance. n17 Without such special authorization, most public nuisance actions are pursued by public authority rather than by private landowners.A landowner seeking relief under either or both nuisance and trespass theories is not required to also establish that a taking has occurred. n18

§ 67.02(b) Distinctions Between Private Nuisance and Trespass.

Private nuisance and trespass are deceptively similar, because they both involve interference with the rights of private landowners. Conceptually, however, the two concepts are mutually exclusive. Nuisances are, by definition, non-trespassory. They are interferences with the use and enjoyment of land, but are not invasions onto the land. n19 Typical examples of land use interferences that are non-trespassory nuisances are bright lights, loud noises and offensive odors. n20

Trespasses, on the other hand, are typically physical, tangible invasions onto the land of another. A trespass could be committed by a person or some other animate entity, or by any tangible thing which is moved onto the property of another. Despite the seemingly clear distinctions between trespass and nuisance, some situations give rise to nuisance-like activities that may also produce a form of tangible invasion on another's properties. For instance, one landowner's wood-burning stove may drop soot and other particles onto the land of another; a landowner who pollutes a stream as it flows through the land may be responsible for the damage done by the polluted stream as it flows through a neighbor's land. In either instance, a complaint could be grounded in both nuisance and trespass.

In some respects, the trespass actions are easier for plaintiffs, who need only prove an invasion of their land. However, if there is any doubt that an actual physical invasion of the land occurred, then the plaintiffs are better advised to rely on a nuisance theory, even though nuisance plaintiffs have the additional burdens of showing unreasonable conduct on the part of the defendant and an interference with plaintiff's land use that is substantial. Even in a trespass action, some sort of substantial harm must be shown, if the plaintiff wishes to obtain more than nominal damages. The subject of trespass is treated in Chapter 68, *infra.* n21

§ 67.02(c) Distinctions Between Private Nuisance and Attractive Nuisance.

The problem of attractive nuisance is actually more closely related to trespass than it is to private nuisance. An attractive nuisance occurs if a landowner maintains on the land a condition dangerous to children, but nevertheless attractive to them, which condition in fact causes injury to the child, if the landowner has not exercised reasonable care to provide protection against the occurrence. n22 It is similar to private nuisance in that it requires that the defendant landowner have been negligent, which is analogous to the private nuisance requirement that the defendant have acted unreasonably; attractive nuisance actions do not require that there have been any interference with the use and enjoyment of the plaintiff's land. n23

FOOTNOTES:

(n1)Footnote 13. *Mayor and Council of Borough of Rockaway v. Klockner & Klockner, 811 F. Supp. 1039 (D.N.J. 1993)* (under New Jersey law, a private nuisance applies only to interference with use of neighboring or adjoining land).

(n2)Footnote 14. 44 *Plaza, Inc. v. Gray-Pac Land Co., 845 S.W.2d 576 (Mo. App. 1992)* (planting of trees that blocked motorists' view); *Brown v. Scioto County Board of Comm'rs, 622 N.E.2d 1153 (Ohio App. 1993)* (a public nuisance is the invasion of public rights which are common to all members of the public and was historically criminal in nature, with recovery limited to those who could show harm different from that suffered by the public generally; a private nuisance is interference with an interest in land). *People ex. rel. Gallo v. Acuna, 929 P.2d 596* (Cal)., *cert. denied, 117 S.Ct. 2513 (1997)* (An alleged "criminal street gang" is deemed a public nuisance and enjoined from further occupation of the streets, lawns, and sidewalks of the urban community which they terrorize. This case provides a good discussion of public nuisance, standing, harm, remedies, and also discusses why the injunction is proper over objections citing the First, Fifth, and Fourteenth Amendments to the U.S. Constitution). *People ex rel. Gwinn v. Kothari, 100 Cal.Rptr.2d 29 (Cal. Ct. App. 2000)* (Motel owners were enjoined from allowing prostitution or use of illegal drugs at their motel under California statutes that defined prostitution and illicit drugs as public nuisances. The lower court issued the injunction to apply in perpetuity to all future owners of the motel; however, the appellate court reversed, holding that an injunction of this type did not run with the land); *Goldhirsch v. Majewski, 87 F. Supp. 2d 272 (S.D. N.Y.*

2000) (A spectator at a paintball contest was injured by a stray pellet and sued the paintball game contestants and the parents of minor contestants, alleging strict liability and negligent entrustment. The District court in New York held, *inter alia,* that the paintball game was not an abnormally dangerous activity, and the paintball game was not a public nuisance).

See Restatement (Second) of Torts §821B (1979) ("a public nuisance is an unreasonable interference with a right common to the general public").

(n3)Footnote 15. *Friends of H Street v. City of Sacramento, 24 Cal. Rptr. 2d 607 (1993)* (impairing a landowner's rights of ingress and egress to and from an adjacent public street is both a public and private nuisance).

See Mayor of Detroit v. Arms Technology, Inc., 669 N.W.2d 845 (Mich. App. 2003) (*private* nuisance is related to the use of land but public nuisance is not similarly limited).

(n4)Footnote 16. *Blair v. Anderson, 570 N.E.2d 1337 (Ind. App. 1991)* (private landowner bringing public nuisance claim must demonstrate special injury that is distinct in kind from the injury suffered by the public).

(n5)Footnote 17. This approach is illustrated in 4 Restatement (Second) of Torts § 821D.

(n6)Footnote 18. *Brown v. Scioto County Board of Comm'rs, 622 N.E.2d 1153 (Ohio 1993)* (action against odor from sewage treatment plant).

(n7)Footnote 19. 4 Restatement (Second) of Torts § 821B; *Ravan v. Greenville County, 434 S.E.2d 296 (S.C. App. 1993)* (trespass is an intentional invasion of the plaintiff's exclusive possession of the property, and nuisance is a substantial and unreasonable interference with the plaintiff's use and enjoyment of the property). However, *see Lamb v. Martin Marietta Energy Systems, Inc., 835 F. Supp. 959 (W.D. Ky. 1993),* holding that, under Kentucky law, a valid nuisance claim requires a physical invasion or physical touching of the plaintiff's land; and *In re Bloomingdale Partners, 160 B.R. 101 (N.D. Ill. 1993),* holding that, under Illinois law, an invasion of another's land need not be physical for purposes of establishing a private nuisance. *Kitsap County v. Allstate Ins. Co., 964 P.2d 1173 (Wash. 1998); But see, Cle Elum Bowl, Inc. v. North Pacific Ins. Co., Inc., 981 P.2d 872 (Wash. Ct. App. 1999)* ("nuisance" is an unreasonable interference with another's use of land; "trespass" is an invasion of the interest in exclusive possession of property). *See Rogers v. Hicks, 2004 Me. Super. LEXIS 6* (No. RE-02-25, May 8, 2004) (difference between nuisance and trespass is that trespass directly interferes with another's property while nuisance interferes with another's right to use his or her property); *Williams v. King, 860 So. 2d 847 (Miss. Ct. App. 2003)* (claim for private nuisance does not require proof of an actual physical invasion).

(n8)Footnote 20. *Brown v. Scioto County Board of Comm'rs, 622 N.E.2d 1153 (Ohio App. 1993)* (complaint in nuisance and trespass for odors from sewage treatment plant).*Baumann v. Snider, 532 S.E.2d 468 (Ga. Ct. App. 2000)* (discussing the differences between nuisance and trespass in the context of the "uphill neighbors" who caused increased runoff of rain-water on the "downhill neighbor's" property).

(n9)Footnote 21. *Petsey v. Cushman, 788 A.2d 496 (Conn. 2002)* (same four-factor test applied to both private and public nuisance).

(n10)Footnote 22. *Thunder Hawk v. Union Pac. R. Co., 844 P.2d 1045 (Wyo. 1992)* (elements of attractive nuisance). *See Fritts v. Clover Park Sch. Dist. No. 400, 2003 Wash. App. LEXIS 2895* (No. 30323-0-II, Dec. 9, 2003) (discussing the elements of attractive nuisance: (1) the instrumentality or condition must be dangerous in itself, that is, must be an agency which is likely to, or probably will, result in injury to those attracted by, and coming in contact with it; (2) it must be attractive and alluring, or enticing, to young children; (3) the children must be incapable, by reason of their youth, of comprehending the danger involved; (4) the instrumentality or condition must be left unguarded and exposed at a place where children of tender years are accustomed to resort, or where it is reasonably to be expected that

they will resort, for play or amusement, or for the gratification of youthful curiosity; and (5) it must be reasonably practicable and feasible either to prevent access to the instrumentality or condition, or else to render it innocuous, without obstructing any reasonable purpose or use for which it was intended); *Mason v. City of Mt. Sterling, 122 S.W.3d 500 (Ky. 2003)* (outlining the Restatement (Second) of Torts factors for attractive nuisance: (a) the place where the condition exists is one upon which the possessor knows or has reason to know that children are likely to trespass, and (2) the condition is one of which the possessor knows or has reason to know and which he realizes or should realize will involve an unreasonable risk of death or serious bodily harm to such children, and (c) the children because of their youth do not discover the condition or realize the risk involved in intermeddling with it or in coming within the area made dangerous by it, and (d) the utility to the possessor of maintaining the condition and the burden of eliminating the danger are slight compared with the risk to children involved, and (e) the possessor fails to exercise reasonable care to eliminate the danger or otherwise protect the children).

(n11)Footnote 23. Attractive nuisance appeared in § 339 of the Restatement of Torts (1934), and then was slightly modified in the Restatement (Second) of Torts (1965). As modified, the doctrine eliminated the requirement that the rule applied only to "young" children and the requirement that the condition on the defendant's land be attractive or enticing to children.

CHAPTER 67 THE PROPERTY LAW ASPECTS OF PRIVATE NUISANCE

8-67 Thompson on Real Property, Thomas Editions § 67.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 67.03 Principles of Private Nuisance Law.

[Go To Supp]

A private nuisance is the unreasonable conduct of one landowner in using the land that causes a substantial interference with another landowner's use and enjoyment of land. Private nuisance liability is grounded on a very ancient concept of the common law and of the pre-Norman English Law, which teaches that one should not use one's land so as to injure the property of another, expressed in the Latin maxim, "*Sic utere tuo ut alienum non laedas.*" n24

Because landowners typically live in close proximity to one another, it is axiomatic that not all activities on one owner's land that annoy or irritate the owners of other land constitute actionable nuisances. The annoyance is not a private nuisance, unless the interference with the plaintiff's land use is substantial and unless the defendant's conduct that produced the annoyance is considered unreasonable. Accordingly, conduct that is unreasonable and harm that is substantial under some circumstances may not be unreasonable conduct or substantial harm under all circumstances. Smells, lights, and noise that would seriously annoy inhabitants of a residential subdivision development may be only negligible conditions in the vicinity of a large manufacturing facility. n25

Nevertheless, certain uses of land are so unreasonable that they are deemed to constitute actionable nuisances at all times and under any circumstances. These are termed nuisances as a matter of law, or nuisances per se. A lawful business, such as a quarry operation, that is permitted and regulated by the state, cannot be a nuisance at law and becomes a nuisance in fact only because of the manner in which it is conducted. n26

§ 67.03(a) Private Nuisances as a Matter of Law.

Conduct that is considered a nuisance as a matter of law is theoretically conduct that is a nuisance under any circumstances. n27 A plaintiff who successfully proves a nuisance per se, or a nuisance as a matter of law, does not need to prove the individual elements of unreasonable conduct by the defendant or substantial harm to the plaintiff's land use n28 A nuisance as a matter of law is deemed certain to result in injury and the plaintiff is entitled to abatement of that type of nuisance simply by showing its existence, without regard to whether damages are proved.

Nuisances as a matter of law may be caused by land uses that are motivated by malice toward the plaintiff landowner,

are forbidden by law, or are flagrantly contrary to generally accepted standards of conduct. Successful private nuisance claims of nuisances as a matter of law are relatively rare in any of these categories. Frequently, conduct that would constitute a private nuisance as a matter of law in one of those categories is conduct that also constitutes a public nuisance and in many circumstances is more likely to be prosecuted and abated as a public nuisance. A number of reported cases announce the principles pertaining to nuisances as a matter of law while holding, in the immediate case, that such a nuisance as a matter of law has *not* been shown in that case.

It should also be noted that a few courts have delivered troublesome decisions labeling certain conduct as a nuisance as a matter of law, but only under certain circumstances or in certain locations. n29

§ 67.03(a)(1) Private Nuisances Forbidden by Law.

When a statute or local ordinance prohibits *as a nuisance* specific conduct in the use of land, then such conduct is a nuisance as a matter of law because it has been specifically prohibited by law. n30 In other words, if the conduct is by law labeled a nuisance and prohibited as such, it is a nuisance as a matter of law; if the conduct is simply declared illegal, without being labeled as a nuisance, it will be considered a nuisance as a matter of law only if that conduct interferes with others' use and enjoyment of their lands. By way of illustration, a fireworks business that attempted to locate in an area prohibited to it by local land use regulation would not, by that fact alone, have been a nuisance as a matter of law; however, if its attempt to become established in the wrong area posed a threat to the safety of nearby landowners, then the illegality of its conduct would have made it a nuisance as a matter of law. n31 Another business operating illegally without a license and in violation of building and safety codes was not enjoined as a nuisance as a matter of law, because none of these illegalities posed immediate threats to nearby landowners. n32 For the same reason another enterprise located in violation of a fire district ordinance also was not treated as a nuisance as a matter of law, because no immediate threat was posed to nearby landowners. n33

Private landowner conduct that violates a statute or ordinance is usually the type of conduct that might be offensive to the rights of the public generally and therefore may also be attacked as a public nuisance. In fact, in such cases where either private nuisance or public nuisance is an appropriate theory of the case, courts have shown a preference for pursuing the case as a public nuisance and approving a private nuisance right of action only if the plaintiff can show special injury. n34

It should also be noted that certain types of landowner conduct which would ordinarily be private nuisances may be validated and authorized by statutory authority. n35

Although a rather wide range of landowner activity could conceivably be declared illegal and thus considered nuisances as a matter of law because forbidden by law, in fact only a few distinct categories of such conduct have emerged from the cases. A nuisance as a matter of law has been found when a landowner has blocked a public road by constructing a fence across the road or placing a structure on the road, with that barrier also interfering with access to and from private land. Such conduct is usually both a public nuisance and a private nuisance, and as a private nuisance is treated as a nuisance as a matter of law. n36

Also common are violations of land use regulations, such as a business enterprise in an exclusively residential area. n37 Other conduct that may be illegal and cause a private nuisance would be activities that create pollution. A landowner whose oil wells polluted the water wells on neighboring land was liable to the neighbor under a theory of nuisance as a matter of law, because the polluting of water wells was illegal. n38

Another common category of nuisance as a matter of law arises from certain business activities that are illegal. An illegal gambling establishment may be a private nuisance as a matter of law when it prompts a neighboring landowner to complain of noise, litter and increased traffic. n39 A gambling house that is illegal as a matter of common law may give rise to a private nuisance as a matter of law, even if it is not the object of a specific statutory prohibition. n40 A

house of prostitution may be considered a nuisance as a matter of law, either because it is illegal or because it is a land use contrary to public standards of conduct. n41

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/10 (matter of law or illegal or forbid! or prohib!)

§ 67.03(a)(2) Private Nuisances Contrary to Public Standards of Conduct.

Some land uses are considered nuisances as a matter of law, even if they are not specifically prohibited by statute as nuisances, if those uses represent conduct that falls below public standards; typically these are land uses which by their nature seriously threaten the morals, decency and safety of the community or of individual landowners. n42 In this category, houses of prostitution are the most common examples. n43

It is also possible to classify certain extremely dangerous activities as private nuisances as a matter of law. n44 However, usually such extremely dangerous or ultra-hazardous activities are treated as nuisances principally because of the location or timing of the conduct, which is a more typical analysis for nuisances in fact than for nuisances as a matter of law.

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/10 (matter of law or moral! or decen! or safe! or public standard)

§ 67.03(a)(3) Private Nuisances Motivated by Malice.

Almost any conduct that would constitute merely a nuisance in fact can be treated as a nuisance as a matter of law, if it is motivated solely by malice toward a neighboring landowner. n45 Conduct that is motivated partly by malice and partly by non-malicious motives will not be treated as a private nuisance as a matter of law and will usually be considered a private nuisance in fact, even if the dominant motivation is malicious. n46

Understandably, cases in which defendants have been shown to have acted out of exclusively malicious motives are relatively rare. In one English case, a landowner's gunfire was intended to disrupt the fox breeding on a neighbor's property; n47 in another English case a landowner fired a gun in order to frighten ducks from a neighbor's duck pond. n48 In both cases the conduct was treated as a nuisance as a matter of law. In an American case, the defendant pursued a deliberate course of conduct for more than three years in operating a lawn mower at early hours in the vicinity of the plaintiff's nearby bedroom, and creating additional noise by playing a radio at a high volume and stimulating a dog to bark excessively. This conduct of creating excessive noise was exacerbated by use of bright lights and occasionally making obscene gestures. This nuisance as a matter of law was ordered abated and the defendant also paid monetary damages. n49

In another domestic conflict involving malicious conduct, an occupant of a room in a building deliberately cooked onions to produce an offensive smell to irritate the occupant of another room in the same building. The outcome of the case was inconclusive because of the plaintiff's retaliatory activities. n50

A landowner may also require the clearing away of adjacent structures or other items that block the flow of light and air, if the placement of the obstructions is shown to have been malicious in motive. n51 This relief is available even though American courts reject the English doctrine of ancient lights and do not permit landowners to claim a prescriptive right to the free flow of light and air. n52

The best known instances of structures treated as nuisances as a matter of law because of malicious motivation are the

so-called "spite fences." If a landowner builds a fence next to the boundary of adjoining property, and the structure is of no use to the landowner and has as its sole purpose the annoyance of the neighboring landowner, it may be treated as a "spite fence" and be subject to abatement as a nuisance as a matter of law. n53 Indeed, most courts consider it never acceptable to use one's property maliciously in any way to annoy another landowner. n54 In some states, statutes have declared spite structures illegal and some of those statutes confer a specific private right of action for nuisance. n55 Against challenges that such legislation effectively takes property without due process of law, those statutes have been uniformly upheld. n56

It is not easy for the plaintiff to prevail in a spite fence case, because the plaintiff is required to prove, with clear and convincing evidence, n57 that the fence is of no value to the defendant and that its purpose is to annoy the plaintiff. n58 Malicious intent need not be shown subjectively, but may be manifested by its objective effect on the plaintiff's property and a showing that there is no benefit to the defendant. n59

In earlier times, spite fences were not enjoined as nuisances as a matter of law, because the structures were confined entirely to the defendant's own property. n60 This view has now yielded to the more modern view that it is never acceptable to use one's land specifically for the purpose of injuring or irritating another landowner.

§ 67.03(b) Private Nuisances in Fact.

All private nuisances that are not nuisances as a matter of law are classed as nuisances in fact, or sometimes referred to as nuisances *per accidens*. A private nuisance in fact is a private nuisance which, in its particular setting, constitutes a nuisance, although the conduct might not be a nuisance in another locality or at another time or under some other circumstances. The smoke and smells of a manufacturing enterprise would probably not be a nuisance in the middle of an industrial district, but in closer proximity to a residential district might very well constitute a private nuisance in fact.

Conceptually, a cause of action for private nuisance is rather simple and straightforward, being composed of only two elements: the defendant's conduct in use of land must be shown to be unreasonable, and the interference with the plaintiff's use and enjoyment of land must be shown to be substantial. Both of these evaluations should be made on an objective basis, especially so that a defendant landowner's use and enjoyment of land is not unduly restricted because of the complaints of a hyper-sensitive neighboring landowner. n61

§ 67.03(b)(1) Unreasonableness of Defendant's Conduct in the Use of Land.

A private nuisance plaintiff may show that the defendant landowner's conduct in the use of land was unreasonable because it was either intentional, negligent, or abnormally dangerous. n62 No private nuisance liability resulted when formaldehyde gas from a nearby manufacturing plant damaged food in the plaintiff's grocery store, when the plaintiff was not able to show that the defendant's conduct was either negligent or intentional. n63 However, for certain activities to be considered unreasonable, neither negligence nor intent need be shown, if the activities are considered inherently dangerous. Thus a quarry owner was liable in private nuisance for concussion damage caused on nearby land by blasting operations, even though the operations were carried out in a non-negligent manner. n64

A condition that occurs naturally on the defendant's property that interferes with the use and enjoyment of plaintiff's land will usually not be actionable as a private nuisance, because it cannot be shown that the defendant's conduct was unreasonable. Thus, if the defendant fails to abate insects on the defendant's land, the annoyance caused to the nearby plaintiff landowner will not be a private nuisance, unless it is made so by a statutory requirement to abate the insects. n65

Apart from these negligent, intentional or abnormally dangerous activities, there are few keys as to which aspects of the whole range of landowner's conduct may be open to a charge of unreasonableness. There are, in fact, no firm rules as to when a defendant's use of land is unreasonable. Enormous numbers of cases have struggled with this problem, n66 and out of those cases a few criteria have emerged with which to evaluate the reasonableness of the defendant's conduct. These criteria include the character of the area in which the conduct occurs; the nature and relative utility of the use complained of, especially as balanced against the harm allegedly caused; whether the activity can be carried out in a less harmful manner; and whether the offending use preceded or followed the use that the complainant alleges was disrupted. n67

The judicial holdings on what is reasonable conduct and what is not reasonable conduct offer no sure guide applicable to future cases. A use that is lawful under a municipality's zoning ordinance may nevertheless be the subject of a private nuisance action. n68 Defendant's conduct which at one time would not have been considered a nuisance may later be considered a private nuisance if circumstances in the area have changed. n69

In most cases the element of the reasonableness of defendant's conduct in a private nuisance action is a question of fact, n70 although in some older cases it was treated as a question of law. n71 When the trier of fact, either the jury or the court, attempts to assess reasonableness, usually the most difficult judgment is that which compares the utility of defendant's land use that causes the harm with the substantiality of the interference with the plaintiff's land use.

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/30 (in fact or per accidens)

§ 67.03(b)(2) Substantiality of Harm to Plaintiff's Use and Enjoyment of Land.

The second principle element for establishing a nuisance in fact is that the harm to or interference with the plaintiff's use and enjoyment of land must be substantial. n72 The evaluation of substantiality must necessarily be somewhat relative and subjective; however, courts have declared that a substantial interference is one that makes the plaintiff's use of the land unhealthy, n73 uncomfortable or inconvenient. n74 A plaintiff is more likely to succeed in a private nuisance action, if the alleged harm relates to objective or tangible physical injury or property damage rather than to less tangible, more subjective discomforts and inconveniences. n75 Certain types of alleged harm or interference with land use are more likely to be found not substantial enough to sustain a private nuisance action. For instance, when the only harm the plaintiff can show is diminution in property value, n76 or rental value, n77 the plaintiff will generally not succeed. Likewise a plaintiff who alleges only that the defendant's conduct interferes with an illegal enterprise or produces increased traffic or offends aesthetic tastes will usually not succeed. n78 However, more commonly today, some aesthetic disturbances, such as debris, may qualify for abatement relief. n79 Whatever the particular type of interference alleged by the plaintiff, courts agree that mere annoyances or slight inconveniences are not sufficient to sustain the cause of action for private nuisance. n80

Courts also agree that whether an alleged nuisance is substantial should be judged from the objective perspective of a reasonable person, rather than from the subjective perspective of the particular plaintiff; this guards against over-zealous complaints from hyper-sensitive plaintiffs. n81 An important presumption in these matters, however, is that plaintiffs are persons of ordinary sensitivities; this presumption can be rebutted by contrary evidence. n82 Not only may the hyper-sensitive plaintiff be an unsure basis for a nuisance action, but a land use by the plaintiff which is unusually vulnerable to or susceptible to interference from reasonable use of the defendant's land may also not be the basis for a private nuisance action. n83 For instance, an outdoor movie theater operator may not be able to sustain a nuisance claim against the bright lights of a nearby baseball field or race track which legitimately operates at night. n84

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/30 ((in fact or per accidens) or (substantial! w/3 harm!))

Occasionally, even a reasonable plaintiff who legitimately complains of substantial harm will not succeed against conduct of the defendant that is not necessarily unreasonable but may also be perceived as being especially valuable. This was perhaps best illustrated in the well-known case of Boomer v. Atlantic Cement Co., n85 where a cement plant which emitted extremely annoying particulate pollution over a widespread area was permitted to continue in operation, because plant closure would severely harm the area's economy and its operations were considered reasonable in view of the limited means for pollution control then available.

§ 67.03(b)(3) Defendant's Conduct as Proximate Cause of Plaintiff's Complaint.

Although the unreasonableness of defendant's conduct and the substantiality of the interference with plaintiff's use of land are the two major elements of a private nuisance cause of action, a third issue arises in some cases, and that is whether the defendant's conduct or the conduct which the defendant controlled or could have controlled was the proximate cause of the alleged nuisance. n86 This issue has arisen in public intoxication cases, for instance, in which a brewery was not restrained, on the basis of private nuisance, from shipping products into a county where complaints of unruly and intoxicated citizens had been filed. n87 Likewise, if persons come onto an owner's property without permission or knowledge of the owner and then create a nuisance, the owner will not be held liable. n88

The plaintiff's contributory negligence may be a factor in determining the amount of damages for which the defendant is liable in a private nuisance action, n89 but will not affect whether injunctive relief is appropriate. n90

Proximate cause also arises as an issue in cases where natural causes have combined with the defendant's conduct to create a nuisance. Natural causes alone will usually not qualify for nuisance relief, n91 but if the nuisance on the plaintiff's land is also partly caused by defendant's conduct, the plaintiff may qualify for relief. n92 Thus a landowner who maintained a row of tall trees was liable for damages and the costs of removing the trees when some blew down during a windstorm and damaged the plaintiff's house on adjacent land. n93

App. 1996)* (municipality liable for damages caused by diverting storm water through plaintiff's residential property). *Pope v. Ohio Dep't of Transp., 698 N.E.2d 536 (Ohio Ct. Cl. 1998)* (nuisance per se consists of an intentional act resulting in harm, or act involving unlawful conduct causing unintentional harm; absolute liability attaches, even without fault); *Tiegs v. Watts, 954 P.2d 877 (Wash. 1998)* (nuisance per se is something that in and of itself is a nuisance and therefore is not permissible or excusable under any circumstances). *See Luensmann v. Zimmer-Zampese & Associates, Inc., 103 S.W.3d 594 (Tex. App. 2003)* (nuisance per se may be proven either by showing that the activity is a nuisance at all times, under all circumstances, and in any location, or by showing that the activity violated a law).

(n6)Footnote 29. *See, e.g., De LaHunta v. City of Waterbury, 59 A.2d 800 (Conn. 1948),* in which the court declares that a finding of absolute nuisance "does not depend merely upon the inherent nature of the condition, but involves also a consideration of all relevant facts." *59 A.2d at 802-803.*

(n7)Footnote 30. *Lew v. Superior Court (Byrd), 25 Cal. Rptr. 2d 42 (1993)* (statute declaring that drug houses are nuisances, whether the unlawful activity is carried on by the landowner or by others; statutory abatement scheme does not preclude private action); *State ex rel. Pizza v. Carter, 622 N.E.2d 1194 (Ohio 1993)* (liability under a nuisance statute requires that the defendant had knowledge of and participated in the nuisance activity); *Gill v. LDI, 19 F. Supp. 2d 1188 (W.D. Wash. 1998)* (if conduct is lawful it only becomes nuisance if it unreasonably interferes with a person's use or enjoyment of property, but nuisance per se if the conduct is illegal and interferes with someone's use and enjoyment of property).

See Luensmann v. Zimmer-Zampese & Associates, Inc., 103 S.W.3d 594 (Tex. App. 2003) (nuisance per se may be proven by showing that the activity violated a law).

(n8)Footnote 31. *Alpha Enters. v. City of Houston, 411 S.W.2d 417 (Tex. Civ. App. 1967), cert. denied, 389 U.S. 1005 (1967), reh'g denied, 390 U.S. 913 (1968).*

(n9)Footnote 32. *Olson v. Platteville, 251 N.W. 245 (Wis. 1933).*

(n10)Footnote 33. *Knight v. City of Riverton, 259 P.2d 748 (Wyo. 1953).*

(n29)Footnote 52. *Fontainebleau Hotel Corp. v. Forty-five Twenty-five, Inc., 114 So. 2d 357 (Fla. App. 1959) . See Dowdell v. Bloomquist, 2004 R.I. LEXIS 48* (No. 2002-630-Appeal, Mar. 15, 2004) (the act of blocking the passage of light and air does not constitute a private nuisance in and of itself; rather it is the act paired with malicious intent).

(n30)Footnote 53. *Welsh v. Todd, 133 S.E.2d 171 (N.C. 1963)* (spite fence as a private nuisance); *Burris v. Creech, 17 S.E.2d 123 (N.C. 1941); Wilson v. Handley, 119 Cal. Rptr. 2d 263 (2002)* (under the spite fence statute, a fence need not interfere with anything more than light and air; intent to annoy need be only the dominant, not the exclusive, motive).

(n31)Footnote 54. *Sundowner, Inc. v. King, 509 P.2d 785 (Idaho 1973).* (no right to erect spite fence).

(n32)Footnote 55. *See, e.g.*, Cal. Civ. Code § 841.4;Conn. Gen. Stat. § 52-570; Mass. Gen. Laws Ann. c. 49, § 21; N.H. Rev. Stat. Ann. § 476:1; Wis. Stat. Ann. § 844.10.

(n33)Footnote 56. *Horan v. Byrnes, 54 A. 945 (N.H. 1903).*

(n34)Footnote 57. *Hornsby v. Smith, 13 S.E.2d 20 (Ga. 1941)* (evidence for spite fence must meet the clear and convincing standard).

(n35)Footnote 58. *Racich v. Mastrovich, 273 N.W. 660 (S.D. 1937)* (fence built with no apparent benefit, solely to injury plaintiff); *Norton v. Randolph, 58 So. 283 (Ala. 1912).* Some courts may distinguish between a fence with no benefits (to anyone, from an "objective" perspective) and one with no value (to the defendant, "subjectively").*See Dowdell v. Bloomquist, 2004 R.I. LEXIS 48* (No. 2002-630-Appeal, Mar. 15, 2004) (fence found to be private nuisance where evidence of malicious intent plainly outweighs the discounted benefit claimed by the defendant).

(n36)Footnote 59. *Rapuano v. Ames, 145 A.2d 384 (Conn. App. 1958)* (maliciously raised fence impaired neighbor's land enjoyment).

(n37)Footnote 60. *Scharlack v. Gulf Oil Corp., 368 S.W.2d 705 (Tex. App. 1963)* (billboard on adjoining property held to be not a nuisance); *Cohen v. Perrino, 50 A.2d 348 (Pa. 1947).*

(n38)Footnote 61. *T.K. Stanley, Inc. v. Cason, 614 So. 2d 942 (Miss. 1992)*(hydrogen sulfide gas from a salt-water disposal well that interferes with use of neighboring property can still constitute a prima face case of nuisance, even though neighboring owner was especially susceptible to the adverse effects of the gas).

(n39)Footnote 62. *Turnbaugh v. Anderson, 793 P.2d 939 (Utah App. 1990); Bily v. Omni Equities, Inc., 731 S.W.2d 606 (Tex. 1987); Osborne v. Power, 908 S.W.2d 340 (Ark. 1995)* (massive Christmas light display was a nuisance); *Espinosa v. Rowell Tower, Inc., 910 P.2d 940 (N.M. App. 1995)* (knowledge that the activity violated the law was not an essential element of a cause of action for nuisance); *Kopecky v. National Farms, Inc., 510 N.W.2d 41 (Neb. 1994)* (citing Restatement (Second) of Torts §826, the court declared that an intentional nuisance is unreasonable if the gravity of the harm outweighs the utility of the defendant's conduct, or if the harm caused is serious and the burden of compensating for the harm is so great as to make it not feasible to allow the conduct to continue). *See In re Bloomingdale Partners, 160 B.R. 101 (N.D. Ill. 1993)* (noise pollution from air-conditioning equipment was considered intentional if the defendant knew that the noise was a substantial interference with land use, even if no invasion or interference was intended; Illinois law requires intent to create the consequences, not merely engage in the conduct, but this intent is established by merely showing defendant's knowledge of the consequences of the conduct). Prior conduct barred by the statute of limitations may still be admitted in evidence to show intent of current conduct. *Finlay v. Finlay, 854 P.2d 315 (Kan. App. 1993). Jamail v. Stoneledge Condo. Owners Ass'n., 970 S.W.2d 673 (Tex. App. 1998)* (liability

for nuisance may rest on intentional conduct that causes invasion of enjoyment of another's land).

See Jupin v. Kask, 2004 Mass. Super. LEXIS 161 (No. 02-0997, May 4, 2004) (storage of firearms in a locked cabinet in a homeowner's basement cannot be said to be unreasonable).

(n40)Footnote 63. *Wright v. Masonite Corp., 368 F.2d 661 (4th Cir. 1966),cert. denied, 386 U.S. 934 (1967); Bargmann v. Soll Oil Co., 574 N.W.2d 478 (Neb. 1998)* (if a defendant's conduct unavoidably results in interference with use and enjoyment of another's property, the interference is "intentional," for purposes of nuisance, because interference was substantially certain to result); *Iglesias v. Dazi, 677 N.Y.S.2d 158 (N.Y. App. Div. 1998)* (neighbors were not liable for nuisance or trespass without a showing that the neighbors intentionally created the nuisance).

(n41)Footnote 64. *Opal v. Material Serv. Corp., 133 N.E.2d 733 (Ill. App. 1956)*

(n42)Footnote 65. *Ken Cowden Chevrolet, Inc. v. Corts, 316 N.W.2d 259 (Mich. App. 1982)* (no nuisance when land left uncultivated). *But see White v. Louviere, 664 So. 2d 603 (La. App. 1995)* (cause of action for injury caused by roots of tree on defendant's adjacent land).

(n43)Footnote 66. *See, e.g., Rodrigue v. Copeland, 475 So. 2d 1071 (La. 1985), cert. denied, 475 U.S. 1046 (1986), vacated by 479 So. 2d 356 (La. 1985) and vacated by Klein v. Copeland, 482 So. 2d 613 (La. 1986); Padilla v. Lawrence, 685 P.2d 964 (N.M. App. 1984); Nissan Motor Corp. v. Maryland Shipbuilding & Drydock Co., 544 F. Supp. 1104 (D. Md. 1982), aff'd, 742 F.2d 1449 (4th Cir. 1984); Rose v. Chaiken, 453 A.2d 1378 (N.J. Super. 1982); People v. Cifarelli, 454 N.Y.S.2d 525 (1982); People v. Mason, 177 Cal. Rptr. 284 (1981); Sandifer Motors, Inc. v. City of Roeland Park, 628 P.2d 239 (Kan. App. 1981); Wood v. City of Huntsville, 384 So. 2d 1081 (Ala. 1980); Jewett v. Spokane-Portland Cement Co., 248 P.2d 380 (Wash. 1952), overruled, Bradley v. American Smelting and Refining Co., 709 P.2d 782 (Wash. 1985); Young v. Brown, 46 S.E.2d 673 (S.C. 1948)* ; *Rose v. Socony-Vacuum Corp., 173 A. 627 (R.I. 1934), abrogated, Splendorio v. Bilray Demolition Co., Inc., 682 A.2d 461 (R.I. 1996); Sprague v. Sampson, 114 A. 305 (Me. 1921); Scheufler v. General Host Corp., 126 F.3d 1261, 45 ERC (BNA) 1346,* (10th Cir. 1997) (continuing groundwater polluter loses again in private nuisance action for failing to curb polluting activities); *McEneaney v. Chestnut Hill Realty Corp., 650 N.E.2d 93* (Mass. App.), *cert. denied, 652 N.E.2d 146 (Mass. 1995)* (nuisance action by condominium unit owner against the condominium association for a nuisance on the common areas); *H. Wayne Palmer & Assocs. v. Heldor Indus., Inc., 839 F. Supp. 770 (D. Kan. 1993)* (storing of chemicals on defendant's property was not unreasonable conduct for nuisance purposes, simply because a single, isolated fire later occurred on plaintiff's premises and damaged plaintiff's property); *City of Lawrenceville v. Macko, 439 S.E.2d 95 (Ga. App. 1993)* (a one-time occurrence does not amount to a nuisance).

(n44)Footnote 67. *Kopecky v. National Farms, Inc., 510 N.W.2d 41 (Neb. 1994)* (in a nuisance action against a swine-raising operation, evidence offered on the social utility of the operation, going to the reasonableness of the activity, should have been admitted, following Restatement Second of Torts §826). Whether a use of property is unreasonable depends on the locality, the character of the neighborhood, the nature of the use, the extent of the injury, and the effect upon the enjoyment of life. *Williams v. Monsanto Co., 856 S.W.2d 338 (Mo. App. 1993).* Whether conduct constitutes a nuisance may depend on the type of neighborhood, the nature of the thing or wrong complained

of, its proximity to those alleging the injury or damage, the frequency, continuity or duration, and the resulting damage or annoyance. *Finlay v. Finlay, 854 P.2d 315 (Kan. App. 1993)*

(n45)Footnote 68. *Krueger v. Mitchell, 317 N.W.2d 155, aff'd, 332 N.W.2d 733 (Wis. 1983)* (private airport, even though lawfully operated, may still cause a nuisance); *Borton v. Forest Hills Country Club, 926 S.W.2d 232 (Mo. App. 1996)* (landowner can sue for private nuisance, despite golfers' easement to enter property to retrieve errant golf balls, if the extent of use exceeds the intended level).

(n46)Footnote 69. *Herrin v. Opatut, 281 S.E.2d 575 (Ga. 1981)* (agricultural operation may become a nuisance under changed conditions). *Concerned Area Residents for the Environment v. Southview Farm, 834 F. Supp. 1410 (W.D.N.Y. 1993)* (a farmer accused of causing a nuisance by using manure for fertilizer has the burden of showing that it is a sound and reasonable agricultural practice).

(n47)Footnote 70. *Filisko v. Bridgeport Hydraulic Co., 404 A.2d 889 (Conn. 1978);Sandifer Motors, Inc. v. City of Roeland Park, 628 P.2d 239 (Kan. App. 1981); Briscoe v. Harper Oil Co., 702 P.2d 33 (Okla. 1985). Kopecky v. National Farms, Inc., 510 N.W.2d 410 (Neb. 1994); Whitehouse v. Lead Industries Ass'n, 2003 R.I. Super. LEXIS 50* (No. 99-5226, Mar. 20, 2003).

(n48)Footnote 71. *Frost v. Berkeley Phosphate Co., 20 S.E. 280 (S.C. 1894)* (escape of noxious gas).

(n49)Footnote 72. *Tarzia v. Town of Hingham, 622 N.E.2d 1372 (Mass. App. 1993).*

See Smith v. Muellner, 2004 Conn. Super LEXIS 633 (No. CV030102009S, Feb. 9, 2004) (reasonableness of interference depends upon a balancing of circumstances; fact finder must take into consideration all relevant facts, including the nature of both the interfering use and the use and enjoyment invaded, the nature, extent, and duration of the interferences, the suitability of the locality of both the interfering conduct and the particular use and enjoyment invaded, whether the defendant is taking all feasible precautions to avoid any unnecessary interference with the plaintiff's use and enjoyment of his or her property, and any other factors that the fact finder deems relevant). *Tarzia v. Town of Hingham, 622 N.E.2d 1372 (Mass. App. 1993).*

See Smith v. Muellner, 2004 Conn. Super LEXIS 633 (No. CV030102009S, Feb. 9, 2004) (reasonableness of interference depends upon a balancing of circumstances; fact finder must take into consideration all relevant facts, including the nature of both the interfering use and the use and enjoyment invaded, the nature, extent, and duration of the interferences, the suitability of the locality of both the interfering conduct and the particular use and enjoyment invaded, whether the defendant is taking all feasible precautions to avoid any unnecessary interference with the plaintiff's use and enjoyment of his or her property, and any other factors that the fact finder deems relevant).

(n50)Footnote 73. *Sandifer Motors, Inc. v. City of Roeland Park, 628 P.2d 239 (Kan. App. 1981)* (flood damages).

(n51)Footnote 74. *Kolstad v. Rankin, 534 N.E.2d 1373 (Ill. App. 1989)* (firing range); *Marsland v. Pang, 701 P.2d 175 (Haw. 1985). In re Tutu Wells Contamination Litig. v. Texaco, Inc., 909 F. Supp. 991 (D. Virgin Islands 1995)* (interference constituting a nuisance need not cause physical harm to the land); *Osborne v. Power, 908 S.W.2d 340 (Ark. 1995)* (massive Christmas light display was a nuisance); *Stiglianese v. Vallone, 637 N.Y.S.2d 284 (1995)* (nuisance caused by neighbor's son who practiced with heavy metal rock band and played amplified home stereo and guitar music over a three-year period of time), *rev'd, 666 N.Y.S.2d 362 (1997)* (reversed because the court concluded that the holding had been based on extraneous factors, including trial court's acceptance of unverified decibel reading from plaintiff while excluding similar reading from defendant and the court's consideration of the son's status as an amateur musician), *rev'd, 680 N.Y.S.2d 224 (N.Y. App. Div. 1998)* (reversing the appellate court and reinstating the trial court in part.).

(n52)Footnote 75. *Haas v. Lavin, 625 F.2d 1384 (10th Cir. 1980); Citizens for Preservation of Waterman Lake v.*

Davis, 420 A.2d 53 (R.I. 1980); Sigma Fin. Corp. v. Investment Loss Recovery Servs., Inc., 673 So. 2d 572 (Fla. Ct. App. 1996)(publication of defamatory statements against plaintiff's company is not a cognizable nuisance claim); *St. David's Episcopal Church v. Westboro Baptist Church, Inc., 921 P.2d 821 (Kan. App. 1996), cert. denied, 117 S. Ct. 765 (1997)* (defendant church picketed outside plaintiff church and created fear of violence that infringed religious worship in plaintiff's church); *San Diego Gas & Elec. Co. v. Superior Ct., 920 P.2d 669 (Cal. 1996)* (no standing for claim that electromagnetic fields from power lines caused physical harm); *Lucero v. Trosch, 904 F. Supp. 1336 (S.D. Ala. 1995)* (anti-abortion activist's statements to physician on television that he would kill an abortion doctor if he had a gun did not constitute actionable private nuisance); *Jordan v. Georgia Power Co., 466 S.E.2d 601 (Ga. App. 1995), reh'g granted, 1996 Ga. LEXIS 592* (Ga. Apr. 12, 1996) (alleged electromagnetic fields were not deemed to be a nuisance). *Anglado v. Leaf River Forest Products, Inc., 716 So. 2d 543 (Miss. 1998)* (owners could not recover for nuisance due to unwarranted public perception of danger).

(n53)Footnote 76. *City of Newport v. Emery, 559 S.W.2d 707 (Ark. 1977)*(mere diminution in property value insufficient to establish nuisance); *Borenkind v. Consolidated Edison Co. of N.Y., 626 N.Y.S.2d 414 (1995)* (loss of property value because of proximity to high voltage power lines was not actionable in nuisance). *Golen v. The Union Corp., 718 A.2d 298 (Pa. Super. Ct. 1998)* (hazardous waste contamination that only impacted owner's ability to sell and not their use had not remedy at law).

But see Lewis v. General Elec. Co., 254 F. Supp. 2d 205 (D. Mass. 2003) (recognizing a stronger jurisprudential trend upholding private nuisance claims based on diminution in property value).

(n54)Footnote 77. *Tortorella v. H. Traiser & Co., 188 N.E. 254 (Mass. 1933)* (no nuisance from loss of business because of noise).

(n55)Footnote 78. *United States v. County Bd. of Arlington County, 487 F. Supp. 137 (E.D. Va. 1979)* (no nuisance because of unsightly buildings); *Allison v. Smith, 695 P.2d 791 (Colo. App. 1984); Aldridge v. Morgan, 912 S.W.2d 151 (Tenn. App. 1995)* (recovery allowed for residential lot strewn with lumber, clothes locker, and old refrigerator; conditions were found to be "fertile breeding ground for vermin" in addition to being aesthetically offensive).

(n56)Footnote 79. *Allison v. Smith, 695 P.2d 791 (Colo. App. 1984)* (accumulation of debris can be a nuisance); *Swanson v. Warner, 865 P.2d 493 (Or. App. 1993)* (complaint alleged obstruction of view by planting of trees).

CHAPTER 67 THE PROPERTY LAW ASPECTS OF PRIVATE NUISANCE

8-67 Thompson on Real Property, Thomas Editions § 67.04

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 67.04 Procedural Principles of Private Nuisance Law.

[Go To Supp]

§ 67.04(a) Proper Parties.

The plaintiff in a private nuisance action must have a presently possessory land interest which is affected by the alleged nuisance. Such a presently possessory estate may include a fee simple, a life estate, a tenancy for years, an easement, or some other servitude interest. n94 When the property in question has been recently transferred, the transferee may have standing to sue those who cause the nuisance. n95

As for the defendants, at common law the property owner was always liable for any nuisance originating on the owner's land, but in modern times liability is not determined by ownership or occupancy alone. n96 A more accurate statement of the principle of defendant responsibility is that the proper defendant in a nuisance action is the party in control of the cause of the nuisance. Thus, liability attaches to the party who, personally or through an agent, n97 creates or continues a nuisance, or otherwise fails to abate the nuisance. n98 If a nuisance originating on defendant's land has been caused or created by trespassers, tenants or natural causes, and without the control or affirmative act or negligence of the defendant landowner, liability for such nuisances may not be imposed on the defendant landowner. n99

Other questions concerning proper defendants arise when, after a nuisance is created on defendant's land, the land is conveyed to another. The landowner who creates the nuisance on the land and then transfers the land to another is usually liable for any continuing damage caused by the nuisance, especially if the nuisance continues without the active involvement of the grantee of the land. n100 Developers who installed a faulty drainage system on the land before transferring their interest in the development remained liable for the continuing damage caused by the system after they no longer had an interest in the property. n101 Also a successor in interest to the land on which a nuisance exists may be liable for damage occurring after acquiring an interest in the land, if the nuisance is continued with the successor's knowledge. n102 If the successor in interest to the land is the personal representative of the now deceased party who created the nuisance, the liability of the decedent's estate is usually governed by state law on survival of causes of action. It is also possible for a nuisance plaintiff, in occupancy of a parcel of land, to sue a former occupant of the same land under a nuisance claim, such as when former lessees of the plaintiff's land permit gasoline contamination of the soil. n103

Principles are usually liable for nuisances caused by their agents. In the case of a corporation, the corporation may be held liable for a private nuisance created or continued by an agent of the corporation who is conducting the business of a corporation. n104 Employers generally are liable for nuisances created by their employees--even if the creation of those nuisances is outside the scope of the employment--if the employers know of their employees' activities and fail to restrain them. n105 In the case of a corporate employer, personal liability for creating the nuisance may be imposed on persons who direct the affairs of the corporation as well as on those who personally participate in creating the nuisance. n106 Also, parents can be held liable for the nuisances caused by their children. n107

If the defendant in a private nuisance action is a governmental entity enjoying some degree of sovereign immunity, that defendant will usually be subject at least to equitable relief for the nuisance activity. n108 Under the rule that no governmental entity has the inherent power to create and maintain a nuisance, a school board was subject to a legal action seeking to have a defective school parking lot repaired. n109

§ 67.04(b) Notice Requirements.

In most private nuisance actions, it is not necessary for the plaintiff to give any sort of prior notice to the defendant before commencing the action. This principle applies to a defendant who has created the private nuisance, n110 as well as to one who actively continues a private nuisance created by another. n111 A defendant may be considered as actively continuing the nuisance either because of affirmative conduct or because of negligent failure to stop the nuisance. n112

By contrast, notice is required for a defendant who comes into possession of land that has previously been used to create a continuing nuisance, and which possessor then passively and non-negligently continues a private nuisance created on the land by the preceding possessor; such a person is entitled to notice of the existence of the nuisance and also a request and opportunity to abate it, before legal action may be commenced. n113 For instance, if a property owner places on the land a structure that causes a nuisance, then conveys the land, and the grantee is aware of the structure but not aware that it causes a nuisance, the grantee is deemed to be passively continuing the nuisance and would be entitled to notice of the nuisance and has an opportunity to abate it before legal action could be commenced. Once such a grantee receives notice of the nuisance and an opportunity to abate, continuing the condition thereafter is deemed purposeful or negligent, and no subsequent notice is necessary before the action may be commenced.

In situations where notice is normally required, n114 the requirement does not arise if the defendant already has actual knowledge of the nuisance or later waives the notice requirement by failing to object to lack of notice. n115 Also, if under the circumstances it is clear that a notice of the nuisance and a request to abate would go unheeded, then no such notice and request are necessary before commencing legal action. n116 In some states, notice requirements for private nuisance causes of action are prescribed by statute, although in those states where the statutes merely codify the common law, the usual common law exceptions as described above are also applicable. n117

Notice, once required, need be in no particular form n118 and may be either written or oral. n119 The essential elements of the notice are a statement that nuisance exists and a statement or request that it be abated. n120 For a defendant to whom such a notice is the first indication that defendant's land is causing a nuisance, liability for that nuisance would not begin until after a reasonable time for acting in response to the notice. n121

A special type of notice requirement is imposed on a party intending to use self-help to abate the nuisance. Such a party must indicate in the notice that self-help is intended n122 and, if the proposed self-help abatement requires the prospective plaintiff to go onto the land of the defendant, the notice must include a demand on the defendant to abate the nuisance before such self-help is undertaken, n123 unless there is an urgent reason for more immediate abatement

by means of self-help. n124

§ 67.04(c) Statutes of Limitations and Laches.

§ 67.04(c)(1) Statutes of Limitations in Actions for Damages.

A cause of action for damages resulting from private nuisance is subject to the defense of statute of limitations. n125 In applying the appropriate statute of limitations, a most important question is determining when the period of the statute begins to run, which is usually marked by when the plaintiff's cause of action accrues. If the nuisance is deemed an occasional or temporary nuisance rather than constant and permanent, the cause of action for damages accrues, and the statute of limitations therefor begins to run, only when an injury first occurs, not when the nuisance itself first arises. n126 This point is illustrated in a case where water carried through a municipal sewer system occasionally damaged the plaintiff's land, so that the cause of action for purposes of the statute of limitations accrued when the water damage first occurred, not when the sewer system was first constructed and began operation. n127 It should also be noted that the statute of limitations in damage actions for temporary or recurring nuisances begins running anew with each successive occurrence or injury, although damages may be recovered only for those injuries actually incurred up to the time of the action. n128

A different statute of limitations rule applies where the nuisance is considered permanent rather than temporary or continuing; in such cases the cause of action is deemed to accrue when the condition arises which will cause the nuisance, not later when the injury first occurs. n129 Thus, a plaintiff whose land was damaged from water pollutants carried continuously to the land by an upstream city sewer system was held to have acquired the cause of action at the time the sewer system began to operate, not later when the damage to the land first occurred. n130

Procedurally, then, it becomes occasionally very important to distinguish between a permanent nuisance and a temporary or continuing nuisance. A permanent nuisance is rather generally defined as a constant and continuous nuisance which is unabatable and produces all of its identifiable damage at once; an example of such one-time damage is diminution in property value. n131 If the cause of the nuisance is permanent, and the damages can be anticipated and estimated with reasonable certainty, then the nuisance will likely be considered permanent. n132 Accordingly, only one action for recovery of damages is permitted against the party responsible for a permanent nuisance.

The contrast between permanent and temporary nuisances may be illustrated by the example of a sewer and drainage system which is properly constructed and maintained but may cause a permanent nuisance if for some reason its structures lower property values or otherwise cause the environment or quality of life to deteriorate. However, if damage occurs specifically from the negligent operation of the sewer and drainage system, that nuisance would be considered temporary, with the cause of action accruing upon the occurrence of the damage rather than upon the installation of the system. If a landowner seeks to establish a private nuisance cause of action against one whose conduct also constitutes a public nuisance, the private action may be barred by the statute of limitations, even though the running of the statute will not legalize the public nuisance aspect of the conduct. n133

§ 67.04(c)(2) Laches in Actions for Equitable Relief.

In some states actions to *recover damages* from private nuisances are governed by specific statutes of limitations, and in some states even an action to *abate* a private nuisance may be governed by a specific statute of limitations. n134 Usually, however, actions to abate a nuisance, as matters for equitable relief, are not subject to the same limitations periods as actions at law to recover damages. Equitable actions can become time-barred under the equitable doctrine of laches, which denies relief to a suitor who has been guilty of unconscionable delay in pressing the demand or the suit.

No exact formula governs the application of laches. In general, the principles of laches are that the suit must be commenced with reasonable promptness, n135 but even an unreasonable delay will not bar the action if the delay has not caused the defendant's situation to change for the worse. n136 Laches will not bar an action to abate a continuing nuisance. n137 In reported litigation, the defense of laches is seldom raised and seldom sustained. However, the presence of this restraint sometimes places potential plaintiffs in a dilemma. If a potential plaintiff observes activity on the defendant's land that threatens to create a nuisance for the plaintiff, the doctrine of laches may prompt the plaintiff to act early to abate that activity. A potential plaintiff may not want to passively stand by and observe the construction of an improvement that will cause a nuisance and then act to remove the construction only after it is completed, n138 yet an action may not be permitted that is based merely on fear that the structure will likely cause a nuisance. n139 Occasionally a suit will be permitted under those circumstances, if the plaintiff shows a reasonable certainty that the structure, when completed, will result in a nuisance. n140

LEXIS: Private w/5 nuisance w/50 laches

§ 67.04(d) Right to Jury Trial.

Under the common law an action to recover money damages for private nuisance was triable by jury. n141 In modern American jurisdictions the right to a jury trial in such actions is constitutional n142 and cannot be defeated by legislation. n143 Individual litigants, however, may waive the right to a jury trial in such actions. n144

The right to jury trial does not extend to suits in equity seeking to abate a nuisance and where no damages are sought. n145 Occasionally, a state statute will authorize a jury trial for even these equitable actions. In some states, when the plaintiff seeks both the legal relief of money damages and the equitable relief of injunction, the parties may have a jury trial only on the legal issues, such as the existence of the nuisance and the amount of the damages, n146 while in other states neither party has a right to a jury trial on any of the issues in such a case. n147

CHAPTER 67 THE PROPERTY LAW ASPECTS OF PRIVATE NUISANCE

8-67 Thompson on Real Property, Thomas Editions § 67.05

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 67.05 Trial Issues in Private Nuisance Actions.

[Go To Supp]

§ 67.05(a) Prima Facie Case; the Plaintiff's Burden of Proof.

In a private nuisance action the plaintiff has the burden of going forward to show that a nuisance exists, that an injury has occurred, and that the nuisance caused the injury. n148 If the private nuisance plaintiff is attacking conduct that also constitutes a public nuisance, the plaintiff must additionally show some special injury resulting from the public nuisance. n149 An example of such a public nuisance would be a business establishment that produces smells annoying the entire community, but a nearby landowner whose own business is adversely affected by the smells may also have a private nuisance right of action. n150

If the plaintiff's theory of the case rests upon nuisance in fact, rather than on nuisance as a matter of law, then, in addition to proving the existence of the nuisance, the plaintiff must show that the defendant's conduct in using property was unreasonable n151 and that the injury to the plaintiff's use of property was substantial. n152 Also, if the defendant did not create the nuisance, but only continued it, the plaintiff must show that adequate notice of the nuisance and opportunity to abate were given to the defendant before the action was filed. n153

If the relief sought by the plaintiff is for damages resulting from the nuisance, then, of course, the plaintiff must show the nature and extent of damages, usually in monetary terms, or at least in terms of how the plaintiff's use and enjoyment of land has been disturbed. n154

The plaintiff's burden of proof must be carried by a preponderance of the evidence. n155

§ 67.05(b) Defenses Available to Defendants.

Most of the defenses available to defendants in private nuisance actions are affirmative defenses that, in effect, concede

that a nuisance has occurred, but represent that no liability should flow from that nuisance because of one or more good reasons for the defendant's conduct. n156 In addition to those affirmative defenses described below, defendants also have available to them the various standard procedural defenses, such as defective service of process, improper jurisdiction, expired statute of limitations, and others. n157 Defendants have the burden of raising and establishing their various defenses. n158

§ 67.05(b)(1) Acquiescence, Consent, License.

The defense of acquiescence is closely related to and in some cases virtually indistinguishable from the doctrine of laches. Laches emphasizes the element of delay in showing that the plaintiff failed to oppose or object to the defendant's alleged nuisance; acquiescence emphasizes the plaintiff's knowledge of defendant's activities and their consequences while failing to object to them. In some cases the two doctrines are virtually merged because they are complementary: if a delay is unreasonable for purposes of a laches defense, the evaluation of reasonableness may be affected by whether the plaintiff had either actual or constructive knowledge of the defendant's activities; whether the plaintiff's knowledge of the defendant's activities is considered acquiescence may be affected by how long the awareness persisted.

If a prospective plaintiff knows of the defendant's activity on the defendant's land, and is or ought to be aware of the potential of that activity for causing a private nuisance, and yet the potential plaintiff raises no objection until the defendant's activity actually results in the nuisance, the plaintiff may, by acquiescence, be estopped from seeking relief against the defendant. Such a defense, however, will not be allowed unless the plaintiff's inactivity influenced or prompted the continuing of the defendant's conduct. n159 This point is illustrated by a case in which a landowner sold part of her property to the defendant, knowing that the defendant intended to build a carbon-black plant on the land; neither the seller nor her lessee could later complain about the soot and smoke from the plant's operation. n160

The defense of acquiescence is, in some states, available only against the party who actually engaged in acquiescence, but not against any successor in interest. n161

The defense of acquiescence is also not available against a defendant who knew of the conduct or activity that would eventually cause the nuisance, but did not know or could not have known that a nuisance would result from such conduct. n162 Thus, a plaintiff who acquiesces in certain activities conducted on the defendant's property, which activities then sometime later result in a nuisance, may not be vulnerable to the defense of acquiescence. n163

If an affirmative defense may rest upon the passivity of plaintiff's acquiescence, then naturally such a defense would be available where the plaintiff affirmatively permits the activity that results in the private nuisance. n164 If this permission or consent is in the form of a license, the defense for the defendant is complete, n165 especially if the defendant's activity cannot be carried on in any other way that does not create a private nuisance for the plaintiff. Some such licenses have been construed to permit the activity only if it can be carried on without creating a nuisance, in which case the existence of the license is not a defense. n166 A common setting in which consent or license may arise is where the plaintiff obtains a title to land already burdened with an easement or already subject to mineral rights held by another. When mineral rights are severed and the holder of the rights attempts to extract the minerals, the prior severance of the mineral rights often carries with it a consent or license to employ reasonable extraction techniques, and the landowner must endure activities on the surface of the land that would otherwise constitute both a nuisance and a trespass. n167 Another type of license also provides a defense to the defendant. When by zoning ordinance or other statutory authorization a city allows the construction of a potential public and private nuisance, a license permitting the nuisance is sometimes created. The plaintiff must meet a higher threshold to show actionable impact on his property. n168

§ 67.05(b)(2) Prescription.

It is possible for a landowner to have carried on activities on the land that create private nuisances on other land for such a long time that the landowner obtains a prescriptive right to continue the nuisance activity. Such prescriptive rights are gained in the same way as prescriptive rights generally. The use must be exclusive, adverse to the landowner against whom it is asserted, under a claim of right (which means, essentially, that the user intends to assert the use), with the knowledge or acquiescence of the landowner against whom the use is exercised (meaning that the use must be openly conducted), and continuous for the prescriptive period. In the context of private nuisance, the alleged prescriptive use, throughout the entire prescriptive period, must have produced substantially the same harm. n169

The prescriptive right to engage in conduct that produces a public nuisance is broadly recognized, n170 unless the public nuisance is also a private nuisance. However, because one may not normally gain adverse possession title or prescriptive use rights against a governmental entity, prescription is usually not a defense against a charge of public nuisance. n171 In one older case whose decision would probably not be upheld today, a cannery operator who openly and continually dumped refuse into a non-navigable stream for more than thirty years obtained a prescriptive right to continue doing so over the protest of downstream landowners. n172 A few states allow the defense of prescription even if the private nuisance also constitutes a public nuisance. n173

As summarized above, in establishing a prescriptive right to continue use of land that constitutes a nuisance against some other landholder, a defendant must show n174 the usual elements that such a prescriptive right is exclusive, adverse n175 to the plaintiff, continuous and uninterrupted n176 for the prescriptive period, with the actual or constructive knowledge or the acquiescence n177 of the plaintiff. The prescriptive period begins to run from the time the plaintiff is injured. n178

LEXIS: Private w/5 nuisance w/50 prescript!

§ 67.05(b)(3) Necessity.

Occasionally, a private nuisance defendant may claim that the continuation of the nuisance is compelled by a necessity, which term in its broader sense includes all of the self-interests of the defendant prompting the creation or the continuation of the nuisance, including necessity, convenience, and economic interest. Necessity is not a valid defense in an action for damages, n179 but in an action to abate a nuisance, necessity may be considered as one of the factors in achieving a balancing of the conveniences or assessing the comparative injury to the parties. n180 For instance, the operator of a chemical phosphate fertilizer plant was able to keep the plant in operation over complaints of nearby private landowners, because the plant emissions had already been reduced as much as technically possible. n181

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/50 necessity

§ 67.05(b)(4) Legislative Authority.

Occasionally, certain activities conducted on real property are specifically authorized by legislation. A few courts have held that such specific legislative authorization for conduct that would normally create a private nuisance is a valid defense to an action for damages n182 or for abatement. n183 However, the majority of courts hold that even specific legislative authority for particular conduct on land does not authorize such conduct if it creates a private nuisance. n184 Occasionally, the statute which authorizes the specific activity also prohibits the activity being conducted in any way that creates a nuisance, and imposes nuisance liability if a nuisance arises. n185 It has also been held that, if an activity

conducted under specific legislative authority also creates a nuisance, the victim of the nuisance may have a claim for a compensable regulatory taking. n186 Thus, a property owner near a railroad tunnel that had been constructed under federal authority was compensated for damage caused by emissions from trains while they were in the tunnel. n187 An action in state court under state law may not be brought if the field has been properly preempted by federal legislation. n188

LEXIS: Private w/5 nuisance w/100 legisl! w/5 author!

§ 67.05(b)(5) Priority.

That the plaintiff has "come to the nuisance," otherwise known as the defense of priority, has only limited life today. If the defendant's conduct becomes a private nuisance for the plaintiff, but only because the plaintiff moved to the area after the defendant's conduct began, this circumstance today is usually not deemed significant enough to constitute a defense, either against actions for damages n189 or for abatement. n190 However, even if not a complete defense, "coming to the nuisance" is still sometimes a significant factor in determining whether the defendant's conduct was reasonable. n191 "Coming to the nuisance" may also be a factor in acquiescence, if it shows that the plaintiff not only came to the area after defendant's conduct had commenced, but also had knowledge of the nuisance condition before arriving at the troubled site. n192

CHAPTER 67 THE PROPERTY LAW ASPECTS OF PRIVATE NUISANCE

8-67 Thompson on Real Property, Thomas Editions § 67.06

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 67.06 Remedies in Private Nuisance Actions.

[Go To Supp]

One who complains of a private nuisance may obtain relief in the form of money damages, or abatement of the nuisance, or some combination of both.

§ 67.06(a) Damages.

§ 67.06(a)(1) Permanent and Temporary Damages.

In a private nuisance action where money damages are sought, the plaintiff must determine whether to request "permanent" or "temporary" damages. Permanent damages should be requested if the nuisance itself is permanent; permanent nuisances have been defined as nuisances that are constant and continuous, unabatable, and that produce all the identifiable damages at once. n193 A nuisance is permanent if the damage produced by the nuisance is permanent in nature and the damage can be anticipated and estimated with reasonable certainty. n194 In other words, the entire injury results all at once from the creation and continuance of the nuisance. n195

Permanent nuisances are typically caused by structures or activities that themselves are lawful and therefore cannot be abated. n196 Permanent nuisances have resulted from such legitimate structures or activities as dams, n197 sewer and drainage systems, n198 a lakeside loading dock, n199 a cement plant, n200 a public dump, n201 a railway embankment, n202 a concrete products plant, n203 gasoline and storage tanks, n204 an oil refinery, n205 and mining facilities. n206 Although a permanent nuisance may be created by an otherwise proper or legitimate structure or activity, the mere negligent construction or operation of an otherwise lawful structure or activity constitutes a temporary rather than a permanent nuisance. n207

Once it has been determined that a nuisance is permanent and that permanent damages are to be recovered, it must be remembered that such damages may be recovered only once. This single recovery consists of all damages which have been suffered up to the time of the action as well as of damages which will foreseeably occur in the future as a result of the nuisance. n208 Damages for temporary nuisances, on the other hand, consist only of those incurred up to the time of the action and do not include prospective damages. n209 Additional legal actions would be necessary to recover

damages resulting from recurrences of a temporary nuisance. n210 Damages for mental anguish resulting from a continuing nuisance may be recovered. n211

LEXIS: Private w/5 nuisance w/100 (permanent or temporary w/3 damage)

§ 67.06(a)(2) Recovery for Harm to Property.

When a plaintiff recovers permanent damages for harm to property, those damages are measured by depreciation in the market value of the property. Those damages are measured by whatever depreciation in the market value of the property has been caused by the nuisance. n212 Loss of rental value may be the appropriate measure of damages, if the property itself is not harmed but its usefulness has been impaired. n213 A plaintiff may not recover permanent damages for both the loss of market value and loss of rental value. n214

If temporary damages are recovered for harm to property, those damages are measured by the loss of the rental value or loss of use value of the property as a result of or during the continuance of the nuisance. n215 A few courts have held that lost profits may be recovered for harm to real property, if the nuisance affects a business enterprise being conducted on the plaintiff's property. n216

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/100 damages w/30 (harm or value) w/5 property

§ 67.06(a)(3) Recovery for Personal Injury and Inconvenience.

In addition to harm to property, the plaintiff may also recover money damages for personal injury, and for personal and family discomfort, annoyance and inconvenience, suffered because of the nuisance. In most jurisdictions, n217 personal injury for which money damages are recoverable may include sickness, stress, and injury to health. Even if no physical illness or monetary loss is shown, n218 a plaintiff may still qualify for damages as a result of discomfort, annoyance or inconvenience caused by the nuisance. n219 If a plaintiff occupies residential rental premises, some courts have denied recovery of money damages for loss of rental value and for personal discomfort, believing that this constitutes a double recovery. n220

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/100 person! w/3 injur! w/50 damages

§ 67.06(a)(4) Recovery of Exemplary Damages.

A plaintiff may recover exemplary damages if it is shown that the nuisance was maintained willfully and maliciously. n221 These conditions may be shown circumstantially, as in the case where a turkey processing plant was required to pay adjacent landowners $25,000 in actual damages and $15,000 in punitive damages, when plaintiffs showed that the defendant's sewage treatment lagoons were overloaded to more than twice their capacity, which caused odors and significant infestation to interfere with the plaintiffs' use and enjoyment of their land. n222

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/100 damages w/10 exemplary

§ 67.06(a)(5) Mitigation of Damages.

Most courts do not require mitigation of damages by the plaintiff, n223 but a plaintiff who failed to avoid the damage at a time when it was possible to do so may obtain only a reduced recovery. n224 If a plaintiff does attempt to avoid or mitigate the harm caused by a temporary nuisance, reasonable expenditures made in such attempts may be recovered as damages. n225 In a typical case showing that mitigation of damages is not usually required, a business plaintiff damaged by flooding from an inadequate municipal culvert was held under no duty to mitigate. n226

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance and mitigat! w/10 damages

§ 67.06(a)(6) Pleading and Proof of Damages.

Damages may be awarded even if the plaintiff's complaint has included only a prayer for general relief. n227 Of course, a plaintiff seeking private nuisance damages from conduct that is a public nuisance must also allege special damage. n228 Also, if a plaintiff seeks special damages for stress, inconvenience, or discomfort caused by the alleged nuisance, those must be specifically pleaded. n229 Pleading of special damages does not require that specific dollar amounts be pleaded, only that the specific types of damages be pleaded and proved. Determination of the precise amounts of those types of damages may be left to the trier of fact. n230 As in other issues in private nuisance cases, the plaintiff is required to prove these matters by a preponderance of the evidence. n231 Parties can also recover for damages that accrue during court proceedings. n232

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/100 (proof or pleading) w/3 damages

§ 67.06(b) Judicial Abatement of the Nuisance.

Plaintiffs are often more interested in obtaining the abatement of an existing nuisance than they are in recovering money damages therefor. A court's power to abate a nuisance may also be extended to abate a prospective nuisance, either if the alleged nuisance is a nuisance as a matter of law or if the alleged nuisance in fact will inevitably occur if not abated. n233

§ 67.06(b)(1) Abatement of Continuing or Recurring Nuisances.

The relief of abatement is unavailable for permanent nuisances, which are by definition unabatable. Temporary nuisances, sometimes referred to as continuing or recurring nuisances, are subject to abatement. n234 If a temporary nuisance occurs only sporadically or in isolated incidences, a court may not grant the relief of abatement. n235

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/50 abate! (relief or remedy)

§ 67.06(b)(2) Requirement of Substantial Injury.

Not only will a court not enjoin a sporadic nuisance, a court will also not enjoin a trivial nuisance. n236 Nuisances whose injury to the plaintiff are prospective or only threatened will be enjoined only if the threatened damage is an inevitable consequence of the condition if continued, and not merely a possibility of future injury. n237 A retail shoe store owner did not qualify for an injunction against the construction of a canopy and sign over a movie theater on adjacent property, because the plaintiff could not prove presently diminished rental value of the store and the court also deemed the interference with the light, air and view as insubstantial and immaterial. n238

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/100 substantial w/3 injury

§ 67.06(b)(3) Requirements of Irreparable Harm or Inadequate Remedy at Law.

As with other forms of equitable relief, to qualify for abatement a plaintiff in a private nuisance action must show either that failure to abate will result in irreparable harm to the plaintiff or that there is no adequate remedy at law. n239 The harm is considered irreparable if the injury is a continuing or a repeated injury producing inconvenience or damage, even though it may not be subject to a precise standard of measurement. n240 The irreparable injury that is shown as a qualification for injunctive relief need not be a large injury n241 nor an injury that is absolutely irremediable. n242

That the remedy at law is inadequate is usually easy to establish in many nuisance cases, because the plaintiff is only required to show that, without abatement, legal relief alone will recover damages only up to the time of the action, and this will probably result in a succession of law suits to obtain damages from the future continuance or repeated occurrences of the nuisance. n243

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance and (irreparable or inadequate) w/3 (injury or remedy)

§ 67.06(b)(4) The Requirement of "Clean Hands."

The equitable character of injunctive relief requires that any plaintiff seeking such equity must also have conducted its affairs equitably. Under the so-called "clean hands" doctrine, a court will not grant equitable relief to the plaintiff or to just one party if it appears that both parties are at fault. n244 Familiar maxims have long expressed this point: "he who seeks equity must do equity," and "he who comes into equity must come with clean hands." There are limits to the application of this restraint, however: for instance, plaintiffs who were connected to a city sewer system were not therefor precluded from complaining about the city's discharge of sewage into a stream, which discharged pollution then interfered with the plaintiff's enjoyment of their land. n245

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance and (clean hands or must do equity)

§ 67.06(b)(5) The Possibility of Election of Remedies.

Under some circumstances, a private nuisance plaintiff may be limited in the relief sought by the doctrine of election of remedies. Of course, both legal and equitable forms of relief arising out of the same private nuisance action are concurrent and not exclusive, and may be sought together or separately. n246 If legal and equitable forms of relief are pursued in separate actions, such as in a court of law and in a court of equity, a situation that would seldom arise today, they should be pursued in concurrent actions, because an action for abatement which is not joined with a claim for damages precludes a later action for damages relating to the same period of time. n247 However, recovering damages in one action does not bar a later action for injunction. n248

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance and elect! w/3 remedy

§ 67.06(b)(6) Pleading and Proof of Entitlement to Equitable Relief.

A complaint seeking abatement of the nuisance as a form of relief should allege enough factual details to show the existence of the type of nuisance that warrants equitable relief. n249 Such allegations should not be merely conclusory, n250 but should be allegations that effectively show irreparable injury and an inadequate remedy at law. n251 As in other aspects of nuisance litigation, a plaintiff seeking equitable relief usually is held to a standard of proving these matters by a preponderance of the evidence, n252 but some courts that are concerned about the seriousness of the remedy of injunctive relief require that plaintiffs meet the higher standard of proof by clear and satisfactory evidence. n253

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/100 (proof or pleading) w/20 equit!

§ 67.06(b)(7) Enforcement of Decrees.

A court that issues a decree for abatement of a private nuisance may empower specific persons to carry out or supervise the execution of the decree. n254 A defendant or other person who disobeys the injunction can be held guilty of contempt of court. n255 Appropriate punishments for such contempt are fines or jail time. n256

COMPUTER-ASSISTED RESEARCH:

LEXIS: Private w/5 nuisance w/100 (abate! or enjoin) w/20 (execute! or enforce!)

§ 67.06(c) Self-help or Non-judicial Abatement of the Nuisance.

Only in rare circumstances is a prospective plaintiff in a private nuisance action permitted to use self-help in carrying out the abatement of a nuisance. The party intending to use self-help must give prior notice to the person causing the nuisance, n257 and this is especially necessary if the party intends to enter onto the property where the nuisance is caused. n258 Any self-help abatement must be accomplished without breach of the peace. n259 In a few circumstances, especially emergencies, both notice and the peacefulness requirement may be excused if abatement is urgently necessary to protect health, life, or property. n260

CHAPTER 67 THE PROPERTY LAW ASPECTS OF PRIVATE NUISANCE

8-67 Thompson on Real Property, Thomas Editions § 67.07

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 67.07 Land Uses That Have Been Held to Be Private Nuisances in Fact.

[Go To Supp]

This section contains brief summaries of cases in which particular land uses have been held to be private nuisances in fact. The cases summarized are divided into broad subject headings, and the summaries describe the activity or condition that caused the nuisance along with any features of fact, proof, defense, or relief granted that are worthy of note.

The case summaries are arranged into the four major categories of agricultural use and commercial animal activities, commercial uses, industrial uses, and residential uses; within each of those categories the summaries are organized according to the particular activity or condition that caused the nuisance. If more than one case appears in such a sub-category, the cases are arranged chronologically, with the more recent listed first. If a group of cases from one state appears within a sub-category, the case summaries for that entire group will appear together in the chronological order determined by the most recent case in that group.

§ 67.07(a) Agricultural Uses and Commercial Animal Activities.

This section summarizes cases involving land uses related to agricultural uses and livestock and other commercial animal activities that have been challenged as private nuisances. In general, these activities that have been found to be nuisances have created conditions intolerable for human habitation, including insects, vermin, odors, dust and noise. The activities described in the cases are set forth in an alphabetical order of sub-categories, as follows: cotton gin, dog kennel, farm, feed factory, gristmill, hog farm and feed lot, livestock, poultry operations, rendering plant, rice farm, slaughterhouse, stockyard, meat packing plant, and stable and horses.

§ 67.07(a)(1) Cotton Gin.

A homeowner obtained a permanent injunction against a cotton gin being built or operated on adjoining land. The jury found that the land was unsuitable for the gin, and that the noise, traffic, smoke and odors to be created by the gin would make the use of the land for that purpose unreasonable. n261 Earlier Texas cases ruling on the same issue have reached varied results depending on the court's view of whether the gin operation generates a nuisance. In one case plaintiffs

could obtain an injunction against gin construction if they could prove it would be a nuisance when operated. n262 In another case, the court held that it would be a nuisance even if operated prudently. n263 And in a third case, the court believed the gin would be operated in a way that would not create a nuisance, but would permit a later action if a nuisance actually was created. n264

A cotton gin emitted seeds, lint, dirt, dust and trash into the yard, bed and furniture of a neighboring property owner. The gin owner was held subject to a nuisance action, even if the gin was operated in careful and prudent manner. n265 A similar earlier case also claimed that the cotton gin caused damage to the plaintiff property owner's nerves and health, and that the debris caused depreciation in property value. The gin owner was held subject to action for abatement, damages claims having been waived by plaintiff. n266

Nearby residential and business property owners sought to enjoin the construction of a cotton gin, complaining of the noise, waste, unsightliness, and odors it would cause. Abatement was denied because a gin is not a nuisance as a matter of law and cannot be enjoined before it actually causes a nuisance. n267

§ 67.07(a)(2) Dog Kennel.

A homeowner who complained of barking, odors, flies and crowds from a dog kennel, causing loss of property enjoyment and inability to sell or rent the house, obtained a permanent injunction against operation of the kennel. n268

A property owner near a dog kennel alleged that the howling and barking of the dogs, and the odors and flies from the kennels and kitchens caused annoyance, inconvenience, discomfort, loss of sleep and mental and physical suffering. The court granted an injunction against keeping the dogs in such a way as to cause a nuisance. n269 A permanent injunction was upheld against a dog kennel as source of barking, resulting in lack of quiet enjoyment of property. n270 Kenneling of numerous sled dogs on defendant's property could be a private nuisance. Because the nuisance was abatable, it was temporary as a matter of law. n271

§ 67.07(a)(3) Farm.

A farmer left piles of manure on the farm, which caused odors and flies to bother farmers residing across the road. The court required that the nuisance be enjoined, although the farming operation could continue. n272

§ 67.07(a)(4) Feed Factory.

An adjacent homeowner complained of loud and unusual noises, vibrations, noxious odors, dust and trucks blocking an alley, all from a feed grinding business. An injunction was denied on appeal, but plaintiff was awarded $3,605 in special damages for diminished rental value of plaintiff's premises. n273

A residential owner complained of the stench from the chicken and hog entrails processed at defendant's feed factory, alleging that they caused deprivation of peace, comfort, happiness and enjoyment of the residences in the area. No injunction was granted, but a new trial was permitted if a procedural defect were cured. n274

§ 67.07(a)(5) Gristmill.

Plaintiff's family suffered sickness because defendant's nearby gristmill included ponds from which diseases such as malaria were spread. The court ordered the mill pond destroyed. n275

§ 67.07(a)(6) Hog Farm and Feed Lot; Cattle Feed Lot.

Summer camp owners complained of an adjacent hog farm in which the stench from hogs kept within ten feet of the property line impaired their camp operation. They obtained a permanent injunction, but not compensatory damages. The

court, in granting the injunction, found that the gravity of harm to the plaintiff outweighed the utility of the defendant's conduct. n276

A nearby farmer sought an injunction against defendant's pig farm because of flies and odors, but the trial court judge monitored the farm and found that the nuisance was abated. The appellate court remanded for more thorough fact-finding. n277 Another farmer plaintiff was similarly unsuccessful after the trial judge inspected the hog feed lot and found that it was operated in a sanitary manner, that it was a necessary business in connection with the livestock market of Omaha, and that odors were carried to the plaintiff only in the summer. n278

Farm owners obtained an injunction and damages against a nearby hog feed lot, alleging odors, rodents and insects. Damages were measured by injury to use and diminished rental value of the property. n279

A nearby farmer sought an injunction and damages because the odors from hog waste reduced the value of his home. The court granted damages equal to the reduced value of the property, and if the money were not paid in 30 days, an injunction. The court, however, was prepared to allow the nuisance to continue in recognition of the "comparative nuisance doctrine," which weighs the injury to either party and to the public by granting or refusing the injunction. n280 An earlier case granted an injunction against a hog farm that was within the city limits, when it was shown that odors and flies from the hogs interfered with the use and enjoyment of property. n281

A landowner claimed that the nearby hog ranch polluted the water, ruined a garden, and caused diminished health and property value from odors, flies, maggots and garbage. In an action for injunction and general and exemplary damages, the defendant obtained a summary judgment. The appeals court remanded on the damages issue, particularly to determine if defendant's earlier disregard of a temporary injunction justified exemplary damages. n282

The trial court denied a plaintiff landowner an injunction against a hog farm, because the plaintiff had moved into the area with full knowledge of the hog farm and for many years had taken no action, and the hog farm operated according to all sanitation requirements. The appellate court noted that those factors were not a defense, but could be taken into consideration. n283

Residence owners obtained an injunction against a pig farm which was in the area before the residences, claiming that the odors impaired their enjoyment of the property and diminished property values. The court declared that the pig farm would have been a nuisance even if the plaintiffs had been farmers instead of homeowners. n284 In an earlier case, farmers obtained an injunction restraining piggery operators from hauling garbage to feed the pigs. However, the piggery could continue in operation if normal feed methods were used. n285

Property owners complained of sickness from the odors of the garbage used to feed nearby hogs. The feeding practice was enjoined. n286 Others complained that a hog farm polluted a stream that flowed through their property and obtained $1,000 damages for discomfort and annoyance. n287

A cattle feed lot constituted a private nuisance despite rights under the Right to Farm Act. The court imposed an injunction but did not close the feed lot. n288

A landowner began keeping hogs in his front yard much to the chagrin of the home owner on the other side of the road. The plaintiff claimed that moving the hogs worsened the smell and number of flies and diminished plaintiff's property value. Noting that the defendant owned land which was more suited to raising hogs, the court ordered the hogs be taken elsewhere. n289 Although a new trial was ordered, in an action against a hog farm for maintaining an open pit lagoon in which waste from the hogs was stored for future use as fertilizer, the court held that the defenses of non-negligence and use of state-of-the-art technology would not be valid defenses to a private nuisance action. n290

§ 67.07(a)(7) Livestock.

Proceeding on a nuisance theory, a plaintiff obtained an injunction against the "destructive and obnoxious" invasion by hogs, dogs and chickens kept by his neighbor. n291

A homeowner complained of an adjacent homeowner who kept livestock on the property for commercial purposes. Noise and odors from cows, horses, dogs and chickens deprived the plaintiff's family of sleep and comfortable enjoyment of their home. Defendant was required to abate the noise, odors and drainage of waste onto plaintiff's land, and to reduce the numbers of livestock. n292 A private nuisance claim for damages could be brought against dairy farm operators, and a neighboring owner's opinion that odors emanating from the dairy operation caused diminished value in property was admissible. n293

§ 67.07(a)(8) Poultry Operations.

Property owners who lived within a mile of defendant's poultry business complained of odors and insects from the chicken coops. The defendants were required to clean out the manure more frequently; plaintiffs were permitted to sue for damages if they wished. n294

Operators of a chicken farm were enjoined from dumping chicken waste in a manner that caused discomfort to the plaintiff adjoining landowners. The method of spreading chicken manure was both a private and public nuisance. n295

Property owners next to a poultry plant lost sleep and comfort from the noise and smell produced by the plant's slaughter and waste removal activities. The plant was required to remove the offal only in closed containers and to cease other improper practices. n296 Property owners' request for a permanent injunction against construction of two chicken houses on adjoining property was a question for the jury. n297

Fighting cocks are not included within the definition of poultry in the Texas statute, and therefore the landowners raising the cocks are not entitled to benefits of the statute which allow poultry owners to recover attorney's fees in defending nuisance claims. n298

§ 67.07(a)(9) Rendering Plant.

Residential landowners near a rendering plant complained that odors from the plant interfered with their enjoyment of life and property and obtained a temporary injunction. The plant, however, was given time to reduce its emissions to non-offensive levels and avoid a permanent injunction. n299

A rendering plant was permanently enjoined, because it omitted noxious odors and attracted flies and maggots, causing loss of enjoyment of property to nearby plaintiff homeowners. The trial court retained the right to review and modify the injunction if the defendant could show changed circumstances in which operation of the plant would not be a nuisance. n300

Landowners near a rendering plant complained of odors and flies "when the wind was right." The trial court's injunction against plant operation was dissolved on appeal, the appellate court stating that a permanent injunction was not appropriate for only an occasional nuisance. That court balanced the utility and need of the plant against the plaintiffs' peaceful enjoyment of their land. n301

Landowners near a rendering plant under construction sought to enjoin the construction and operation, citing threats to health and property values. The trial court granted the injunction, but the appeals court reversed, noting that the plant was to be built in a rural area and the damages were speculative. n302

Owners of houses and small businesses obtained an injunction and revocation of building permit against a rendering

plant under construction. After issuing the permit, the county zoning board became convinced the plant would be a public nuisance once it began operating. The permit was revoked despite substantial expenditures by the defendant. n303

§ 67.07(a)(10) Rice Farm.

The months of standing water on defendant's rice farm caused property damage from percolating water to plaintiff's nearby land. The court required the defendant to contain the water seepage and granted damages of $1,600. n304

§ 67.07(a)(11) Slaughterhouse, Stockyard, Meat Packing Plant.

An owner of apartment buildings was unsuccessful in enjoining the proposed construction of a slaughterhouse on nearby property. The equity court refused to interfere before the nuisance actually arose and where the injury was doubtful or contingent. n305

Defendant operated a slaughterhouse, stockyard and storage facility, all on the same "block" as plaintiffs. Animal parts were left outside, which dogs dragged to the neighbors' lands; flies, odors and rodents abounded. The defendant was permanently enjoined from using the land for slaughtering or for a stockyard. n306

Residents complaining of mosquitos and odors obtained an injunction against a nearby stockyard. n307

A hospital requested a permanent injunction against a meat packing plant as a nuisance per se, complaining that the convalescence of the patients was threatened. However, because a temporary injunction had stopped defendant from even starting up, evidence against the defendant was all anticipatory, and the permanent injunction was denied. n308

Declaring that there was no legitimate excuse for the location of a slaughterhouse in a residential district, this court permanently enjoined defendant's slaughterhouse, which was afflicting residential neighbors with noise, odors and flies. n309

A residential owner sought to enjoin a nearby slaughterhouse, because of stench and noise from the animals, but the court allowed the defendant to continue in business if it could eliminate the noise and smell. n310

§ 67.07(a)(12) Stables, Horses.

Defendant was enjoined from keeping one or two horses in her back yard, as permitted by a local zoning ordinance, when the nearby plaintiff proved that the flies and odors interfered with peaceful enjoyment of plaintiff's land. n311

An improperly maintained stable was enjoined from operation when it was proved that flies, rats and stench spread to the surrounding residential area. n312

A permanent injunction was ordered against defendant's stable and riding academy, which was located in a residential area. Plaintiffs complained of flies, odors, and noise. n313

Residents near a riding academy alleged that riders endangered children and pedestrians, trespassed, and used loud and insulting language. The trial court enjoined the operation of the academy, modified on appeal to give the academy time to be disassembled. n314

An apartment tenant near a horse barn complained of odors and flies from accumulated manure and was awarded an injunction against the defendant keeping horses in the barn. n315

Adjoining landowners who had experienced discomfort from the smells, flies, noise and waste of defendant's stable before it burned down, sought an injunction against construction of a new stable. The injunction was denied on the ground that there was no evidence that the new stable would be a nuisance. n316

Foul smells from an unsanitary stable on adjoining property made plaintiff's wife ill and diminished the value of plaintiff's property. Plaintiff sought $1,000 in damages and was awarded $225 for reduced property value. n317

A horse and mule market across the street from the plaintiff resident was enjoined, when it was shown that the market typically had 50-150 animals, and accumulated waste, stench, flies and noise. n318

A homeowner on property adjoining a stable sought damages and an injunction because of noise from horses and customers, dust, flies and removal of waste during mealtimes. Plaintiff was awarded $75 damages for discomfort and depreciation of property value and defendant was enjoined from operating the stable in that locality. n319

Odors and waste products from a livery stable caused annoyance to customers and loss of business to commercial establishments across the street. The trial court denied an injunction because the livery stable was not negligent, but the appellate court correctly ordered an injunction even without a showing of negligence. n320

A breeding stable surrounded by a high fence was nevertheless enjoined from breeding activities at the suit of neighbors 200-400 feet away, because the noises were deemed offensive, especially to women and small children. n321

A homeowner complained that breeding noises in an adjacent stable caused loss of quiet enjoyment of the residential property. The court agreed that such sounds offended the sensibilities of ordinary women and children, and in such proximity to the residences the defendant was enjoined from using the stables for breeding. n322

The owner of an apartment building constructed after a nearby stable went into operation complained that odors, unremoved waste and noise interfered with tenants' sleep, caused illness and reduced rental values. The stable was enjoined from operating in a way that interfered with sleep or allowed odors to affect their health. n323

In one case a stable next to plaintiff's property was altogether enjoined from operating. n324 In another case the plaintiff obtained damages and a limited injunction requiring the stable to not operate in a manner that would be a nuisance to the plaintiff. The damages were determined by the difference in rental value of plaintiff's property before and after the nuisance. n325

Plaintiff became feverish and nervous and lost rest because of odors from accumulated hay and manure at the stable on the adjacent lot, within 20 feet of plaintiff's house. The stable was enjoined from operating unless it could be placed differently on defendant's land to minimize plaintiff's suffering. n326

A feed stable in which breeding activities took place in plain view of plaintiff homeowner across the street was enjoined from permitting the breeding in view of the plaintiff. n327

A hotel owner obtained an injunction against the future construction of a stable nearby, alleging the unhealthy proximity of waste products and flies. n328

§ 67.07(b) Commercial Uses.

This section summarizes cases involving land uses related to commercial enterprises and establishments which have been challenged as private nuisances. The activities described in the cases are set forth in an alphabetical order of sub-categories, as follows: airport; bakery; eating establishment; entertainment establishment; explosives storage; fish market; gas station; grain business; hospital; ice cream business; laundry; lead company; meat market; music store;

printing establishment; prostitution; radio sales; soap business; supermarket; trapshooting club, gun club, rifle range; travel agency; used car lot; and welding business.

§ 67.07(b)(1) Airport.

Homeowners located in the flight path but 6,000 feet from the runway of an airport brought action against the airport owner for inverse condemnation through substantial interference with enjoyment of property. The trial court denied relief, but the appellate court reversed, holding that whether a noise nuisance created a taking was a question of fact to be decided by the jury, not the judge. n329

A resident sought to enjoin a city from condemning land for a municipal airport, anticipating noise and loss of property value. Relief was denied partly because the airport was declared to be not a nuisance per se. n330

A landowner near a municipal airport complained of danger, noise, and dust from flights over the land, seeking an injunction and damages of $52,500. The trial court denied all relief, but the appellate court said the allegation of dust was sufficient, if proved, to sustain an injunction. n331

Landowners obtained a limited injunction against neighbors using their property as an airfield. Planes were flying over plaintiffs' property at altitudes of less than 500 feet, causing noise, dust and other disturbance. The airfield continued to function, but limits were placed on approaches over plaintiffs' property. n332

§ 67.07(b)(2) Bakery.

A homeowner who, with tenants, lived next door to a bakery complained of the noise from the bakery's ventilating fan, alleging resultant nervous disorders and loss of rental value. Plaintiff sought an injunction and $15,000 damages. Relief was denied because of "a total failure" of proof of actual damages. n333

A bakeshop across an alley from plaintiff allegedly caused annoyance, loss of sleep and interference with plaintiff's enjoyment of property through its smoke, excessive noise and trash cans in the alleyway. Plaintiff sought an injunction against the entire operation of the bakery, but the defendant was only enjoined from boisterous talking, from using the alley for garbage cans, and from operating the machinery without first closing windows. n334

A boarding house owner adjacent to a large bakery complained of noise and vibration from the baking machines and disturbance from the loading and unloading of goods. Alleged damages included lost boarders, loss of sleep, and illness. The trial court denied an injunction and damages believing that there would be no such cause of action against a business so conducted in a city. The appellate court reversed and remanded for trial. n335

§ 67.07(b)(3) Eating Establishment.

Residents in the neighborhood of a drive-in cafe complained of loud, disturbing and obscene noises from the customers. The trial court granted $1,500 in damages and an injunction restricting the operation and hours of the drive-in. n336

A drive-in restaurant, separated from plaintiff's apartment and motel by a vacant lot, was accused of disturbing the quiet enjoyment of the plaintiff's property through operation of a jukebox and radio, emptying trash late at night and loud noises from customers' cars. The trial court's injunction against operating in a way that constituted a nuisance was remanded by the appellate court for clarification. The injunction was required to be specific enough to let the defendants know what is proper action. n337

The illumination of the street sign on defendant's drive-in property shone through plaintiff's window, disrupting sleep. The court's injunction required removal of the sign. n338

A homeowner near a restaurant and swimming pool complained of loud noises and bright lights late at night. Private relief from this public nuisance was granted through an injunction against the restaurant playing music or giving outside car service after midnight and requiring it to close from 2:00 a.m. to 7:00 a.m. Also electric lights were required to be dimmed so as not to annoy the plaintiff. n339

A resident adjacent to a 24-hour drive-in restaurant complained of excessive noises from loud speakers and mechanical devices, and sought abatement and $250 in attorney's fees. The court granted an injunction against unreasonable and excessive noise from the drive-in restaurant. n340

A drive-in and soft drink stand located near the plaintiff homeowner caused loss of sleep through the shouting, honking and other noises late at night, in addition to trash thrown in the plaintiff's yard and smoke and odors from the defendant's incinerator. The trial court granted an injunction against noise from the defendants' business late at night, but the appellate court held that the injunction was too broad and that it prohibited some legitimate aspects of conducting the business. n341

A landowner about 350 feet from a root beer stand complained of lights from the stand, late night noises from the cars, and odors from the cooking. The court denied the injunction because of insufficient evidence of substantial discomfort to the plaintiff. n342

A homeowner across the street from a root beer stand complained of lights, noise and odors from the stand, and requested damages and an injunction against operating the stand. The trial court permanently enjoined the radios and required defendant to use only low wattage bulbs in colored globes. The appellate court remanded for clarification because the injunction regarding lights was confusing and contradictory. n343

The owner of a refreshment stand near the plaintiff homeowner was accused of emitting offensive odors and loud and disturbing noise at night from the stand, depriving the plaintiff of the comfortable use and enjoyment of the premises. Defendant's stand, located in a mainly residential area, was enjoined from creating noises between 10:00 p.m. and 3:00 a.m. n344

§ 67.07(b)(4) Entertainment Establishment.

Property owners near a nightclub complained of loud noises, fights, offensive language and increased traffic from nightclub patrons. The defendant nightclub was enjoined from playing loud music and entertaining unruly patrons and was required to provide off-street parking and litter cans outside the premises. n345

An auto racing track under construction threatened to disrupt church services on nearby property. Further construction on the racetrack was temporarily enjoined, but the appellate court said that a permanent injunction would depend on a finding that the racetrack would be a nuisance per se if built. n346

A residential owner near a racetrack complained of loss of chinchillas from disturbances by the racetrack operations. The court granted an injunction and $9361 in damages, the value of the chinchillas. n347 Residents brought action to enjoin the construction of a nearby amusement park. The injunction was granted because the court believed that the location of the proposed park meant that great disturbance to the plaintiffs would be unavoidable. n348

Residential owners brought action against a municipality because night lights from a baseball field owned by the city disrupted their rest. The requested injunction would have banned night games, but instead the city was ordered to erect a screen to keep the lights from shining in plaintiffs' houses. n349

Landowners near a gambling resort complained of lost property values and decreased enjoyment of property from

operation of the resort. Traffic, honking horns, drinking and litter were among the complaints, for which they sought an injunction against operation of the resort and $40,000 damages for deprivation of enjoyment of property. The court granted a permanent injunction and assessed costs to the defendant. Although this was a public nuisance, the proximity of the resort to the plaintiffs made the harm to the plaintiffs more intense than the harm to the general public. n350

Landowners about four blocks from a theatre complained of loudspeaker announcements from the theatre publicizing coming attractions. An injunction prohibited the theatre from use of the loudspeaker system. n351

Residents less than two blocks from a stadium owned by a non-profit corporation complained that the noises from the racing, loud speakers and other stadium activities caused children to lose sleep and made people unable to carry on ordinary conversations. Cars also blocked driveways, and property values generally decreased. No injunction was issued when the jury failed to find that the stadium's operation was a nuisance. n352

The owner of a drive-in theatre near a racetrack complained of lights shining on the movie screen. A trespass cause of action was rejected and an injunction for the nuisance was denied when the court found that excess light has rarely been considered an actual nuisance and both the track and the theatre were constructed about the same time. n353

Residents complaining of disturbance from operation of the state fairgrounds were denied an injunction on the ground that a racetrack is not nuisance per se. n354

Residential owners near a municipal playground brought action against the city because of loss of sleep and destruction of fences, vegetables and fruit trees. The injunction was denied because playgrounds are not nuisances per se. n355

Residential owners near a clubhouse complained of lost sleep because of disturbance caused by dances, drunk patrons, and "indecent trespass." The clubhouse was enjoined from conducting dances after 9:00 p.m. n356

The trial court denied an injunction to land owners near a dance pavilion who complained of the music, dancing and noise of the people traveling to and from the pavilion. The appellate court reversed on the belief that the noise was continuous and loud enough to affect normal persons living near the dance pavilion. n357

A hotel operator complained of an illuminated sign on an adjacent building, which was disturbing hotel guests. The defendant was enjoined from operating the sign after midnight. n358 Residents near a ballpark were disturbed by traffic noise, cheering, shouting and profane language during the games. The ballpark was temporarily enjoined from operating on Sundays, until a final hearing could be held on the matter. n359

Homeowners near a dancehall complained of noise from the dancehall operation and obtained an injunction against the conduct of the dancehall activities. n360

A bystander who was injured by a ricocheting bullet from a shooting gallery leased to a tenant obtained personal injury damages from the owner of the shooting gallery on a nuisance theory. n361

A tenant in a building complained of business losses caused by operation of a shooting gallery and musical machines by another tenant in the same building. The court granted an injunction, but no money damages, limiting legal relief because the plaintiff tenant was not the freeholder. n362

After 20 years in and out of court, with one permanent injunction granted against racetrack that it not operate at a noise level that amounted to a nuisance, neighborhood sued for additional injunction to stop prospective nuisance of new stock car races at racetrack. Upon review, the injunction was vacated as overbroad, and the parties once again sent to court to determine whether the racetrack may even exist, and if so, what levels of noise and activity reasonably constitute a nuisance. n363

Fraternal society continually rented its lodge to fraternities, wedding receptions, nightclub operators, etc., and the frequently blocked access to plaintiff's property and resulting debris were enough to sustain an action for an injunction and damages in the amount of $25,000. n364

Plaintiffs alleged that noises from racetrack constituted private nuisance. The court refused to enjoin the racetrack from operating, however, based on the fact that the plaintiffs failed to show that their losses outweighed the adverse economic impact that the defendant would bear. n365

§ 67.07(b)(5) Explosives Storage.

Dynamite stored on defendant's property exploded during a fire, damaging plaintiff's adjacent store property. Plaintiff sued in nuisance, but obtained no relief when the court held that storing explosives was not a nuisance per se and that negligence would have to be proved to establish a nuisance in fact. n366

§ 67.07(b)(6) Fish Market.

A merchant near a neighboring fish market complained of the odors from the fish market, seeking damages for devaluation of property and detriment to his business. The trial court held that the fish market was not a nuisance, but the appellate court remanded for a new trial and instructions to award such damages as could be ascertained. The defendant had moved by this time, so the only relief at issue was damages for lost business. n367

§ 67.07(b)(7) Gas Station.

A church brought action to enjoin the proposed construction of a gas station, complaining that the fumes and noise from the station would disturb religious activities. Plaintiff was granted a permanent injunction against the construction of the gas station. n368 Nuisance action against owners and operators of a gas station because of leaks from their underground storage tanks was barred by statute of limitations. n369

§ 67.07(b)(8) Grain Business.

Homeowners on land adjoining defendant's grain business complained that dust and noise from the grinding of corn prohibited them from carrying on ordinary activities in their home. The children could not study and the laundry was soiled while on the line. The defendant was permanently enjoined from grinding corn within 150 feet of plaintiff's property and was required to pay $350 damages, representing the diminution of rental value caused by the noise. n370

§ 67.07(b)(9) Hospital.

Homeowners on land adjoining a hospital complained of moans, shrieks and groans from hospital rooms, which impaired plaintiffs' health, damaged their nerves and depreciated the property values. The court granted an injunction requiring the hospital to refrain from operations until the surgery and emergency rooms were moved farther away from plaintiffs' land. n371

§ 67.07(b)(10) Ice Cream Business.

Homeowners near the site of a proposed ice cream drive-in business obtained an injunction against the building of the drive-in in their residential area. Plaintiffs feared loud and unusual noise, exhaust fumes, lights or headlights, dangerous additional traffic, and violation of certain zoning ordinances. n372

§ 67.07(b)(11) Laundry.

A laundry and dry cleaning business made nearby homeowners sick and nervous and caused damage to the houses from vibrations caused by the laundry equipment. The court enjoined the business and awarded damages for property damage and personal injury. n373

The owners of a church near a laundry complained that the laundry was located in violation of city ordinance and sought an injunction against the laundry as a nuisance per se. The court, noting that the city ordinance forbade any laundry within 150 feet of the church, granted the injunction. n374

§ 67.07(b)(12) Lead Company.

Owners of agricultural land across the street from a lead company complained that dangerous accumulations of lead particles and deposits made their land unusable for raising cattle or growing crops. The trial court refused relief because the company complied with state law, but the appellate court said that such compliance would not relieve the defendant of liability for harm caused by their actions. n375

§ 67.07(b)(13) Meat Market.

Plaintiffs near a meat market complained of smoke and foul odors resulting from smoking meats and making sausage. The defendant was enjoined from conducting its business in such a way as to be offensive. n376

§ 67.07(b)(14) Music Store.

The owner of a medical clinic complained of a music store across the street, because noise from the store's amplifiers disturbed clinic patients. An injunction was granted against playing music over the loudspeakers. n377

§ 67.07(b)(15) Printing Establishment.

Noise and vibration from the defendant's printing establishment caused cracked walls in the plaintiff's nearby residence. The court granted an injunction against operation of the printing establishment. n378 However, in another case nearby residents complaining of noise and vibration from defendant's printing establishment obtained no injunction because the court believed that causing some noise and vibration in a city did not constitute a substantial and unjustifiable nuisance to the plaintiffs. n379

§ 67.07(b)(16) Prostitution.

The owner of a block on which were located businesses, storehouses and residential buildings, complained of prostitution being conducted on defendant's nearby property. The residents were being disturbed and the property values diminished. The court granted a permanent injunction against defendant's enterprise. n380

§ 67.07(b)(17) Radio Sales.

Defendant's radio sales business produced continuous music or noise which disturbed the employees of plaintiff's retail business across the street from the defendant. The defendant was enjoined from playing the radios so loud that they could be heard by the business personnel across the street. n381

§ 67.07(b)(18) Soap Business.

The owner of a subdivision complained that a nearby soap business produced unbearable odors, flies, and unsanitary conditions which were dangerous to health and harmful to property values. The court withheld an injunction while further evidence concerning defendant's efforts to correct the problem was taken and evaluated. n382

§ 67.07(b)(19) Supermarket.

Nearby residents sought an injunction and $5,000 damages against the operation of a supermarket. The trial court granted damages but no injunction. The Supreme Court reversed and remanded for new trial, noting that the supermarket was not a nuisance per se but could become a nuisance by reason of location or manner of operation. n383 A trial court granting an injunction against construction of a supermarket, at the request of nearby homeowners, was reversed by the Supreme Court because the anticipated nuisance was doubtful, contingent or conjectural. There was insufficient evidence to show that a nuisance would necessarily result from the operation of the supermarket. n384

Early morning deliveries to the defendant supermarket and odors from decaying vegetables caused nearby residential owners to complain of loss of sleep and of reduced enjoyment of property. The appellate court reversed an overly broad injunction issued by trial court and ordered the lower court to place specific limits on the injunction to minimize injury to the defendant. Excessive noise, for example, could be abated without enjoining all early morning deliveries. n385

A nearby homeowner sought to enjoin the further construction of a supermarket, fearing noise, lights and traffic to be generated by the defendant. Relief was denied as the court stated that neither the supermarket nor the parking lot would constitute a nuisance per se, even in a residential area. Possible depreciation of property values would not be a ground for relief. n386 On identical facts, the trial court in another case permanently enjoined the construction of a supermarket, but the injunction was dissolved and the action dismissed by the Pennsylvania Supreme Court. The Court stated that a community grocery store in a residential district is not a nuisance per se. n387

Employees in defendant's grocery store were shooting a rifle in the basement of the store, when a stray bullet killed a nearby homeowner. The decedent's administratrix sued on nuisance and negligence theories for damages. In reversing a dismissal by the trial court, the appellate court discouraged use of the nuisance theory by stating that nuisance generally requires continuity or recurrence and that a solitary act of negligence will not usually constitute a nuisance. n388

A residential owner across the street from a wholesale grocery company sued for $900 in damages because of odors from garbage and decayed vegetable and animal matter. The court granted $250 in damages for diminished value and use of property. n389

§ 67.07(b)(20) Trapshooting Club, Gun Club, Rifle Range.

The owner of a trailer park sought an injunction against a nearby rifle and pistol range, claiming possible loss of business. The court found that the rifle range caused no actual physical discomfort, and that it could be operated safely and therefore denied the injunction. n390 Similarly, the owner of a trailer court near a gun club could not obtain an injunction against the operation of the gun club by allegations that it interfered with plaintiff's reasonable enjoyment of property and created fears for safety. The court noted that the gun club was run according to strict safety requirements and was located in an agricultural area which created a higher tolerance for noise levels. n391

Farmers adjacent to a gun club obtained an injunction against the club because pellets from skeet shooters at the club damaged produce and created a danger to farm employees. The case was treated as a trespass action, or, alternatively, a possible prescriptive easement by defendants. n392

The owners of a trapshooting club were accused of creating a danger to passersby on the nearby road and causing annoyance from the noise of the guns. A permanent injunction against operation of the shooting club was denied. The case was a public nuisance action brought by the Attorney General but raised issues that would pertain to a private nuisance action. The jury did not find that public health or safety was injured by the trapshooting club. n393

A lessee of residential land and farmland obtained an injunction against the state National Guard's operation of a rifle range, claiming danger to life and property. n394

Owners of land adjacent to a firearm range brought action to enjoin range owner from operating the range. The court found that, under a state statute, the plaintiffs were barred from obtaining injunctive relief for private nuisance. n395

Bullets straying from a gun range onto landowner's property were found to be a temporary nuisance. n396

Operators of a shooting range were protected from an injunction by a new state statute that essentially gave immunity to certain gun ranges from nuisance suits, even though the statute was passed after the original injunction was issued. n397

A shooting range was held to be not a public or a private nuisance. n398

§ 67.07(b)(21) Travel Agency.

An appliance store owner across the street near the defendant travel agency could not get appliances to work properly because a computer in the agency leaked radiation. Although the trial court granted $71,000 actual damages and $150,000 exemplary damages, the appellate court reversed and remanded because the jury did not determine if the plaintiff's business was particularly sensitive to defendant's activities. n399

§ 67.07(b)(22) Used Car Lot.

The lights, noise and unsightliness connected with defendant's used car lot interfered with the quiet enjoyment of the property by plaintiffs located across the street from defendant. Plaintiffs obtained an injunction against defendant conducting its business in this residential area. n400

§ 67.07(b)(23) Welding Business.

Homeowners complained of a welding business being carried on by defendant on nearby property in an otherwise residential area. Plaintiffs asserted that the violation of the residential restrictive covenant caused a nuisance in that they lost the benefits of a purely residential neighborhood. The court granted an injunction against defendants using their land in violation of the restrictive covenant. n401

§ 67.07(b)(24) Golf Course.

Ninth hole of golf course contained an embankment that caused flooding on plaintiff's property. Hole was determined to be a permanent nuisance, not an abatable nuisance, barring plaintiff's claim under applicable statute of limitations. n402

§ 67.07(c) Industrial Uses.

This section summarizes cases involving land uses related to industrial enterprises and establishments which have been challenged as private nuisances. The activities described in the cases are set forth in an alphabetical order of sub-categories, as follows: brick plant; cement plant; chemical works; coal operations; construction operations; dairy operations; electric power plant; fertilizer operations; furniture factory; gas and oil works; ice and cold storage plant; metal and steel fabrication works; miscellaneous factories; railroad operations; salvage and junk operations; sand and gravel operations; saw mill and lumber operations; stone and quarry operations; textile mill; trucking and freight operations.

§ 67.07(c)(1) Brick Plant.

A greenhouse owner complained of decreased property value because of the noise, dust and odors emitted by a nearby brick company. The court granted nominal damages and no injunction, finding neither a public nor a private nuisance. The damages apparently resulted from the fact that the brick company was a nonconforming use. n403

Residential owners obtained a permanent injunction against nearby kilns, complaining that the smoke and soot from the kilns affected health and property. The injunction prohibited the defendant from operating the kilns in a way that caused dense smoke or soot to fall on the plaintiff's property, and the kiln directly adjacent to the plaintiff could only use smokeless fuel. n404

A landowner near a brick plant complained that trees were killed and other damage occurred from the smoke, dust and cinders thrown from the brick plant onto the plaintiff's land. The requested relief of injunction and damages was denied because the court found the defendant was operating in a reasonable manner and that the inconvenience and injury were not unreasonable. n405 A brick company which leased land from the plaintiff burned its bricks, emitting toxic fumes, which killed or blighted crops on plaintiff's adjacent land. The trial court denied the requested injunction and $2,000 damages, but the appellate court determined that the defendant was not operating in a careful and prudent manner and reversed. n406

Crops on a ten-acre plot located 75 feet south of a brick kiln were destroyed through the smoke, noise and toxic fumes emitted by the kiln. The owner of the crops obtained damages for injury to the crops through a private nuisance action. n407

A brick and tile manufacturer proposing to drill a gas well on the company property was enjoined by the trial court because the plaintiff homeowner, located 150 feet from the defendant's property, feared the threat of loud noise, stench, corroded household goods and depreciation of property value. The appellate court reversed and denied the injunction. n408

§ 67.07(c)(2) Cement Plant.

Landowners less than 400 feet from a cement plant complained of annoyance and physical discomfort from the noise and dust of the plant. The trial court denied an injunction, but the appellate court reversed, because the defendant's operations were an abatable nuisance, even though they were in a commercially zoned area and the plant was being lawfully operated. n409 Other plaintiffs similarly situated with the same complaints obtained an injunction and damages from the trial court, the damages being reduced on appeal to about $3,000 for decrease in the rental value of the property.

Homeowners near a large cement plant, complaining of dirt, smoke and vibrations, were awarded permanent damages but no injunction against the operation of the plant. In this important and leading case, the court held that the benefits of plant operation to the public outweighed the harm of the private nuisance. n410

A motel owner complaining of loss of rental value and patronage because of noise from a nearby concrete plant was denied relief by the trial court, which ruled that the statute of limitations had run on any action for permanent nuisance. The appellate court reversed and directed that a jury decide whether the nuisance was permanent or temporary. n411

A homeowner near a cement plant who obtained $500 in damages had his action dismissed by the appellate court which pointed out that the plaintiff had knowingly moved into this industrial area and that the smoke and dust complained of could not be separated from the other businesses in the area. n412

During construction of a cement batch plant, the nearby businesses sought a temporary restraining order, and preliminary and permanent injunctions against further construction, but no injunctions were awarded, although affidavits showed that businesses nearby anticipated future damages under certain conditions. n413

Plaintiffs sought to enjoin the construction of a new asphalt plant in an area that had been rezoned to allow such use nine years earlier. The trial court found for the defendant asphalt company on all accounts, but nonetheless imposed

restrictions on the permit to install the plant. On appeal the court found that the evidence did not support a claim of anticipatory nuisance, and the court could not set aside a permit to construct the plant that had been legally issued by the proper governing body. n414

§ 67.07(c)(3) Chemical Works.

Railroad workers injured by chemicals and gasses escaping from a nearby chemical and insecticide factory brought action for injunction on a nuisance theory. Relief was denied because the plaintiffs had no property right on which to base a nuisance action. n415

A residence owner sued a nearby neighboring chemical works for destruction of vegetation, damage to the residence, and loss of rents caused by odors and gasses emitted by the defendant's chemical works. The damages judgment by the trial court was remanded by the appellate court as excessive, with instruction to the plaintiff to prove the actual amount of any damages suffered. n416

Chemical company did not have the staff or motivation to dispose of waste materials off-site and instead kept drums stored in warehouse. Resulting leaks contaminated ground water and plaintiff's well water. Nuisance claim prevailed in court and defendant was ordered to remediate own property, reimburse plaintiff if plaintiff expended funds in remediation, but no damages were awarded as plaintiff failed to show either diminution in property value or loss of rental value. n417

§ 67.07(c)(4) Coal Operations.

The owner of a farm 3,000 feet from a coal plant complained that water and land were polluted, vegetation was killed and land values diminished from the coal dust and waste products emitted by the plant. The trial court denied damages, but the appellate court reversed because the jury instructions for determining damages were confusing and misleading. n418

A court granted $5,700 damages plus an additional sum for loss of property value because of physical annoyance and discomfort to homeowners located near an operating coal mine. The plaintiffs had suffered nausea, headaches, and irritation of nose and throat from the gases connected with the defendant's refuse dumps. n419 A farmer who owned land adjoining the defendant's coke company, complete with mines and factories, complained of crop and soil damage from the coke oven smoke and gasses. The trial court granted damages for diminished land value, but the appellate court reversed because the plaintiff had rented out the farm at full value for the entire period complained of. n420

A coal tipple and crusher business did not have to pay damages to landowners located 150 feet away when it was determined their business was run in a responsible way, that no negligence was involved, and that negligence was a proper standard for the jury to consider in determining that a nuisance had been created. With this unusual ruling, the plaintiff, who suffered coal particles in the home, furnishings, and clothing from the operation of the coal tipple ultimately obtained no relief. n421

Plaintiff with property next to a coal tipple was awarded $1,250 damages because of coal dust falling onto plaintiff's land from the coal tipple. n422 The owner of a coal ramp next to a general merchandising store was permanently enjoined from operating the coal ramp and a crushing machine. The dust, noise and traffic congestion interfered with the plaintiff's business. n423 A plaintiff property owner near a coal company, complaining of lost property value and dirty food and clothing, sought $20,000 in damages for interference with use of land and loss of property value. Witness evidence was contradictory, the jury found that there was no nuisance, and the court denied relief. n424 A homeowner near a coal business complaining of coal dust and noises obtained an injunction which required the defendant to wet down the coal in order to diminish the dust. The plaintiff's request for more extensive relief was denied because the company had operated for many years before plaintiff complained and had expended large amounts of money on

development of the business. n425

Homeowners near a coal yard operation obtained an injunction prohibiting the coal yard from operating in a way that caused a nuisance to the plaintiffs. The coal yard operations were causing dust from the coal piles to blow over to the plaintiff's property. n426

A homeowner near a coal company complained that the odors and traffic at unreasonable hours interfered with enjoyment of the property. Trial court damages of $282 were reduced to $50, equal to the diminished rental value of the property and reflecting that the nuisance occurred only for short periods of time. n427 Owners of lots and houses only a few feet from lots on which coal was stored complained of environmental damage and decreased rental value from gasses, sparks, smoke, soot, cinders, coal dust and dirt from the coal operations. Plaintiffs were granted $500 damages for loss of rental value to their property extending over a four-year period. n428

When the defendant planned to build a coal yard, the owner of adjoining property sought a permanent injunction against that construction. The injunction was denied when the court found no clear and convincing evidence that the plaintiff would suffer a substantial harm from coal dust. n429

Residential lot owners sought an injunction against construction of a coal yard on unrestricted land at the edge of the residential area, complaining that their property values would be reduced. The appellate court reversed an injunction granted by the trial court, noting that there was not enough evidence that the coal yard would be a nuisance per se. n430

In a public nuisance action, the owner of a coal washery was accused of allowing waste matter to pile up which, through burning and smoldering, gave off noxious gases and polluted the water. The requested injunction was denied when the court determined that an action at law was first necessary to establish the existence of the nuisance before an injunction could issue. n431 Defendant's operation of a coal hopper caused dust, smoke and cinders to fall onto the plaintiff's adjacent property. The court issued an injunction against the defendant piling coal against the plaintiff's wall and from operating the hopper in a way that caused particles to fall on plaintiff's property. n432 A court granted damages to a homeowner whose neighbor maintained a coal shed on adjoining property, with noise, dust and dirt from machinery in the coal shed impairing plaintiff's health and property enjoyment. Even though this was a public nuisance, the proximity of the plaintiff to the defendant's coal shed gave rise to special damages. n433

§ 67.07(c)(5) Construction Operations.

Plaintiff's building near a highway construction operation was damaged and pipes and tiles were cracked, while the defendant was driving piles to support a bridge. The plaintiff was awarded damages, the court noting that pile driving is considered an intrinsically dangerous activity, so no negligence is required to prove the nuisance. n434

The owner of a residence near a lot from which a road construction business was conducted, including tractors and trailers on the lot, complained of disturbance caused by smoke, vapors, noise and vibrations. An injunction was granted; the existence of other nearby similar nuisances was not a valid defense. n435

A construction company operated its crusher 24 hours a day, which interfered with the sleep of nearby homeowners. The company was enjoined from using the rock crusher between 7:00 p.m. and 7:00 a.m. n436 A developer could be liable for creating a private nuisance by filling in a drainage ditch, which action caused damage to plaintiff's property; such a nuisance action would be based on unreasonable use rather than on negligence. n437

§ 67.07(c)(6) Dairy Operations.

Damages and permanent injunction were awarded to homeowners who complained of a nearby dairy operation which produced odors, flies, mosquitoes, dust and noise. n438 However, a dairy operation near other landowners was only

prohibited from operating in a manner which caused a nuisance, the court concluding that there was sufficient space for such a business to be conducted without liability. The complaint against this dairy related to odors from manure piles and to loud noises. n439

A dairy and garage near a subdivision caused subdivision residents loss of sleep by noise and odors from its trucks and dairy activities. The court issued an injunction restricting conduct of the truck activities to the daytime hours. n440 A creamery which disturbed nearby residents through its noise, smoke and traffic congestion was enjoined against night operations. n441 Residents near a creamery plant claimed loss of sleep from nighttime noise. The court granted time for the creamery to reduce its noise, especially at night, or else have its operations completely enjoined. n442 The owners of an apartment building near a dairy with stables complained of rats, garbage, flies, odors and noise. However, failing to prove any injury, they obtained no relief. n443

A creamery plant located in the city polluted underground water, which killed the farm animals of the plaintiff who leased farmland outside the city. Plaintiff, even though only a tenant, was granted actual and punitive damages, because the defendant overloaded the sewage treatment plant. n444 Homeowners suffering loss of sleep and property damage from the operation of a nearby creamery, which emitted noise, odors and vibrations, obtained an injunction against the defendant's operation. n445

Drainage from a creamery destroyed vegetation and caused foul odors on the property of a nearby farmer. The trial court denied the requested injunction and damages, but the appellate court remanded for a trial, stating that the plaintiff was entitled to some relief. n446 The noise from the operation of an ice crusher connected with a dairy and ice cream business caused nearby residents loss of sleep. Plaintiffs were awarded $200 for discomfort and loss of health, and obtained an injunction against the defendant operating so that the noise disturbed the plaintiffs. n447

A landlord complaining of noise from a nearby dairy obtained $875 damages for loss of rental value and an injunction. Defendant was liable even though it was operating at the time plaintiff purchased the property. n448

The operations of a milk distributing plant disturbed nearby residents, but the court denied relief because the noise was not unreasonable and the plant was located in an industrial district. The defendant had taken reasonable measures to reduce the noise by building a high fence. n449 A defendant landowner who processed milk in the basement of the house caused noise which interfered with the neighbors' enjoyment of their homes and damaged their health. The court granted damages and an injunction. n450 The operations of an ice cream factory caused noise from machinery and trucks and water from spray to be blown onto plaintiffs' houses and onto pedestrians, which resulted in an injunction against the defendant's use of the spray pond and any machinery between 9:00 p.m. and 7:00 a.m. The business was found to be conducted in a manner that was materially detrimental to the reasonable use or value of plaintiffs' property. n451

Residence owners who complained of smoke, soot and cinders from the operation of a nearby creamery were ruled to have stated a cause of action. n452

A homeowner downstream from a dairy complained of water pollution from dairy operations. The trial court awarded $200 damages; the appellate court limited the judgment to abatement only. n453

Smoke, foul odors and noise from a dairy operation caused owners of nearby residences to lose sleep and enjoyment of property. The plaintiff sought an injunction, but the defendant was first given an opportunity to abate through its own actions. n454 A creamery which dumped refuse into a stream which flowed through plaintiff's land was ordered to pay $100 damages. The plaintiff's contribution to the pollution affected the amount of recovery, but not the right of recovery. n455

§ 67.07(c)(7) Electric Power Plant.

A fuel oil business adjacent to an electric power plant was damaged by the fumes, noise, smoke and vibrations emitted by use of the defendant's spur railroad track. The trial court ruled for the defendant, but the appellate court held that the question of the existence of a nuisance should have been submitted to the jury. n456

A homeowner near a transformer was disturbed by noise from the vibrating and humming of the transformer. The defendant was required to pay $500 in damages. n457 However, another homeowner adjacent to an electric plant, complaining of soot, smoke, and vibrations, was denied damages for injury to the house, a judgment that was reversed by the appellate court because the court's viewing of the property was distorted and unduly influenced the jury. n458

An electrical substation near the plaintiff's residence gave out a constant hum or noise and exploding balls of fire during electrical storms. The trial court awarded damages for the reduced value of plaintiff's land, and was reversed on the ground that the damage award should only have included depreciation in value caused by the noise and the fire-balls, not by other more general circumstances. n459 A homeowner who claimed lessened value of land and house from proximity to an electric power company, which emitted smoke, soot, steam, vibrations, and noise, was ruled entitled to damages equal to the lessened value of the property. n460

Homeowners near land on which the defendant proposed to construct an electric transforming station did not succeed in obtaining an injunction against the building and operating of the plant. The court found that the substation was not a nuisance per se and that the defendant had every intention of operating so as not to bother the plaintiffs. An injunction would not be appropriate until an actual nuisance could be shown. n461 An electrical plant accused of disrupting plaintiff's peaceful enjoyment of nearby land, and diminishing the property value of the land, escaped liability because the plant was run reasonably and because the plaintiff had failed to give defendant a chance to abate any nuisance. Damages, if awarded, could only relate to diminished property value, and the defendant could be enjoined only from operating in such a way as to cause a nuisance. n462 A lessor of property adjoining the defendant's electric power plant sought damages and injunction because of the noise, vibration, soot and steam emitted by the plant. Plaintiff represented that the rental value of the property was thus diminished, but the appellate court denied relief when it was shown that the same lessee had twice renewed the lease, with no proof that there was any lessened rental value relating to the conditions caused by the defendant's power plant. n463 Noise, vibrations and steam were the causes of the complaint from the lessor of property on which were situated a hotel and a Turkish bathing place. The plaintiff requested $80,000 in damages and an injunction because of decreased rental value of the property, and the trial court awarded $16,000 for injury to the property. n464 A tenant in possession of property adjoining the defendant's electric power plant obtained $4,000 damages and an injunction, but the appellate court held that only the lessor could recover damages for depreciation of rental value of the property. n465 A homeowner adjacent to the defendant's electrical power plant was disturbed by noise, vibrations, steam and soot. After the trial court granted injunction and damages, the appellate court reversed and remanded on the finding that the evidence introduced so far indicated only a slight inconvenience to plaintiff, making an injunction improper. n466

A resident in a partially industrial area located 150 feet from the city's operating power plant complained of the noise and vibrations from operation of the plant's gas engine compressor. The trial court refused relief, but the appellate court ruled that damages should be awarded, because the injury to the plaintiff was appreciable. n467

A homeowner near a power plant obtained damages for injuries to property caused by the negligent operation of the plant. Defendant claimed a bar by the statute of limitations, but the court ruled that the nuisance was occasional and only the damage occurring within the period of statute of limitations had been awarded. n468 A defendant claiming statutory permission to operate its power plant prevailed in the trial court against owners of a nearby lot, who complained of smoke, dust, cinders, sparks and soot emitted by the defendant's operation. The appellate court reversed judgment for the defendant in holding that permission to operate the plant was not permission to maintain a nuisance. n469

A property owner near a power plant complained of noises and vibrations from the plant's machinery. The trial court granted permanent damages, but the appellate court reversed because the nuisance was not necessarily permanent. n470 Another power plant, which emitted smoke, soot, noise and vibrations from operation of heavy machinery escaped an injunction because defendant had substantially decreased the injurious affects of its operation on the adjacent homeowner plaintiff. n471

A jury award of $700 in damages was granted to homeowners who lived within 15 feet of property on which a power plant was located. Their homes were vibrated and shaken, damaged by smoke and soot, and suffered decreases in property values. The case was reversed and remanded on appeal because of a procedural error in taking testimony. n472

Two thousand dollars damages for decreased property value was awarded to a homeowner near an electrical power plant which caused noise and vibrations. n473 The identical amount of damages, $2,000, was awarded another homeowner plaintiff in a similar setting with similar complaints. Despite the fact that most of the damage was done before the defendant bought the plant, the court held that the plaintiff had a right to recover all the damages from the present source of the nuisance. n474

Improper jury instructions which implied that shaking and vibrations from a power plant were only slight annoyances, caused an appellate court to reverse a trial court which had awarded no relief to owners of three houses near a power plant. Plaintiffs alleged that the noise and vibrations damaged the houses and destroyed their rental value. n475

A homeowner near the defendant's electric plant, located in an industrial area, obtained no relief against the operation of the plant, despite complaints of noxious vapors, cinders, soot and noise. The evidence conflicted over whether the operation of the plant actually caused any discomfort or material harm. n476

An owner of an office building located near transmission lines was unsuccessful in alleging that electromagnetic fields generated by the transmission and which allegedly affected computer monitors constituted a nuisance. n477

§ 67.07(c)(8) Fertilizer Operations.

The owner of a manufacturing plant complained that dust from a factory making fertilizer from castor beans caused asthma and allergic reactions in plaintiff's employees. Relief was denied because the injury to non-allergic persons was not substantial and allergic persons were considered extra-sensitive to the defendant's emissions. Also, both plaintiff's and defendant's operations were considered equally vital to the war effort in this heavily industrialized zone. n478 Property owners near a plant producing ammonium nitrate fertilizer claimed that the noises, dust and fumes from the plant restricted the use of their property and impaired their physical and mental well-being. Plaintiffs obtained a total of $43,600 in damages, measured by their loss of use or loss of rental value from this temporary nuisance. n479

A residential plaintiff was held to have a cause of action against a nearby fertilizer plant for deprived enjoyment and devaluation of property caused by noxious odors from the plant. n480 A landowner near a fertilizer and acid factory suffered destruction of crops, vegetation and habitation through gases escaping from the defendant's factory. The court granted an injunction and damages, holding that liability would exist even if the defendant was reasonably careful and even though some of plaintiff's damages came from other causes. n481

An owner of several residential properties near a guano factory obtained no relief for claimed devaluation of property caused by odors from the defendant's factory. n482

Homeowners near a fertilizer plant obtained an injunction against the operation of the plant, the odors from which were in violation of a local ordinance. n483

The owner of a farm near a newly constructed fertilizer factory obtained an injunction against the operation of the

factory because the stench made the plaintiff's farmhouse unfit for habitation. n484

Even though the plaintiff had the only residence in a mostly manufacturing district, judgment for damages was granted against a fertilizer factory near plaintiff's property for discomfort, sickness and damage to structures caused by vapors, smoke and gases emitted by the defendant's factory. The court said use of care, skill and prudence still would not prevent recovery by the plaintiff. n485 Although the relief granted was not described in the case report, a residential plaintiff near a fertilizer factory obtained a favorable verdict and judgment on a complaint for injury to health and property caused by fumes and gases from the defendant's plant. n486

§ 67.07(c)(9) Furniture Factory.

The incinerator of a furniture factory emitted smoke, dust and fumes onto plaintiff homeowner's adjoining property. An action for damages and injunction was unsuccessful after a jury's decision that the evidence supported a finding of no significant damage. n487

Noise from furniture factory machinery disturbed nearby homeowners, who obtained an injunction from the trial court. The appellate court dismissed and remanded so that a jury could decide whether the noise from the factory would have disturbed a person of ordinary sensitivities. n488

§ 67.07(c)(10) Gas and Oil Works.

A landowner used property to hold waste water from an oil drilling operation, but the water seeped into the plaintiff's nearby water supply. The trial court awarded $8,050 damages for pollution of well water, $700 damages for trespass, $10,000 damages for mental discomfort and annoyance, and $13,000 punitive damages. n489

Water flood operations by an oil company caused salt water and oil to migrate to the plaintiff's adjoining land. Plaintiff obtained a judgment of $12,000 for damages to a water well and property. Although the defendant was not negligent, water flood operations were deemed abnormally dangerous. n490 Noise and vibrations from defendant's compressor gas station resulted in an injunction for nearby residents after trial. However, a retrial was ordered for more evidence to determine if the defendant did all it could to reduce noise and vibration, after which damages could still be awarded. n491 Machines connected with a pipeline transport system caused violent shaking, quaking and trembling of the ground around the nearby plaintiffs' residence. The plaintiffs obtained a judgment for damages to the value of their property caused by the defendant's actions. n492

Salt water and oil from the defendant's oil well were permitted to run onto the plaintiff's land, ruining 15-20 acres of farm land. The trial court granted an injunction and $485 damages for injury to land and crops. n493

Plaintiff homeowner, an artist who worked at home, complained of dense smoke, noxious gas fumes and loud noises from the operation of a nearby gas works. The court enjoined the nuisance and granted $750 damages for lost enjoyment of plaintiff's home. n494

A gas compressing plant emitted smoke, soot, fumes and noise, which were carried by winds to plaintiff's land 135 feet away. Damages were denied because there was no evidence that the rental value of plaintiff's property had diminished; however, defendant was enjoined from operating the plant's boiler without a muffler. n495

A landowner complaining of odors from a nearby gas company was permitted to go to trial, even though no negligence was alleged and the defendant's business was lawful. n496

Saltwater disposal pit for oil, gas, and mineral operations claimed to be a nuisance by landowners. Plaintiffs' claims did not survive defendant's defenses of statute of limitations, privity, and consent, because pit had been constructed on

property in 1936, used until 1953, and plaintiffs' claim was not made until after 1992. n497

Explosion at underground salt-dome storage facility, with an estimated force of a three-kiloton bomb, created a permanent nuisance, and trial court awarded over $100 million in actual and punitive damages. Damages were reduced on remand, but the case gives a good discussion of malice, negligence, exemplary damages, and the standard of care regarding oil storage. n498

Gasoline leaked out of defendant's well 1000 feet from plaintiff's property. No evidence was found that the gas leak contaminated plaintiff's property. The court held that under Massachusetts law, "plaintiffs [must] show proof of actual contamination in order to maintain a private nuisance claim." n499

§ 67.07(c)(11) Ice and Cold Storage Plant.

The exhaust from a machine in defendant's ice and cold storage plant, which faced plaintiff's adjoining property, caused plaintiff's house to shake and rattle and the noise interfered with plaintiff's sleep and conversation. Plaintiff was granted $500 damages and an injunction prohibiting the defendant from operating the plant between 6:00 p.m. and 7:00 a.m. The money judgment apparently related to damage to the house. The injunction was dissolved on appeal. n500 Another owner adjacent to an ice plant also complained of noise and vibration from the plant, but obtained no relief when the evidence showed little or no noise or vibration from the plant. n501

§ 67.07(c)(12) Metal and Steel Fabrication Works.

A steel factory's heavy machinery operating 24 hours a day interfered with the sleep of property owners on adjacent land. Damages based on a trespass theory were denied, but the appellate court remanded for trial on a nuisance theory. n502

Fumes emitted by a steel works caused plaintiff's acute illness, killed trees and other plants and destroyed nails and paint on plaintiff's house. Plaintiff obtained an injunction against the defendants maintaining a nuisance with their steel works and which compelled the defendants to make reasonable efforts to abate the nuisance. Plaintiffs were also entitled to an unspecified amount of damages. n503 The owner of an inn complained that the dwelling was damaged and its use rendered uncomfortable from the noise, vibrations, smoke and cinders produced by a nearby rolling mill. The court held that a cause of action was stated. n504

An iron and steel plant whose operations damaged the residence of a nearby landowner through noise and vibrations was ordered to pay damages and was given a reasonable time to make changes in the effects of its operations. n505

A metal treatment business's demolition of barium-tainted furnaces was found to be intentional and unreasonable conduct resulting in contamination of a neighbor's land. The company continued its practices, even though it was substantially certain to contaminate. n506

Electroplating facility left barrels of hazardous substances on property and was sued under public and private nuisance claims. The release and continued threat of hazardous substances was not a public nuisance under Georgia law since it did not affect a common right of all members of the public, and the abandoned barrels were insufficient in themselves to constitute a continuing nuisance. n507

§ 67.07(c)(13) Miscellaneous Factories.

Noise and vibrations from the loading, unloading and processing of logs by the manufacturer of utility poles disturbed a nearby homeowner, causing loss of sleep, shaken and cracked walls, and interference with normal conversation. The trial court denied relief, but the appellate court reversed because the defendant had introduced hearsay evidence and

because the evidence sustained a finding of nuisance. n508 Homeowners near a factory were disturbed by the factory whistle. Their requested injunction against use of the whistle was denied by the trial court, but granted by the appellate court. n509

A lessee of a warehouse was situated near land used to receive and store bulk sulfur. The sulfur injured warehouse employees and rusted and pitted the steel kept in the warehouse. The plaintiff's private nuisance action resulted in a judgment of $500,000 damages related to the lost market value of the steel. n510 Homeowners who lived near where the defendant tested rocket engines complained of noise and vibrations and obtained a judgment of $25,605 compensatory and $75,000 punitive damages. The appellate court reversed the punitive damage judgment because no malice or wanton or willful disregard was shown by the defendants. n511 Defendant operated a steam cable used to pile up stones, the noise from which disturbed nearby homeowners. They were granted a temporary injunction until the defendant could find a way to muffle the noise. n512

A car dealership complained that its cars were damaged when lime dust from a nearby processing plant settled on the cars. A money award for damages to the cars was not upheld because of defects in the method of calculating damages. n513

A tavern operator in the light industrial area complained of fumes, smoke and gas from a nearby plant. The trial court's grant of $4,500 damages was reversed when the appellate court held that the trial court erroneously refused to instruct jurors to take locality into account in determining if the plant was a nuisance. n514 Discomfort and damage to shrubbery and trees in plaintiff's yard were complaints brought against a nearby glycerine factory. The complaint stated a cause of action, but a new trial was ordered because of procedural errors. n515

A homeowner situated 80 feet from a cigar factory complained of noise from the factory. No injunction was granted after plaintiff failed to show unreasonable loss of property value. n516

Landowners located 9 miles away from a smelter lost crops when gas, fumes and smoke were carried by wind from the smelter. The smelter paid damages of $3,553 for lost crops and lost rental value to the property. n517

A homeowner who complained that white paint on the tanks of defendant's neighboring mill reflected the afternoon sun toward plaintiff's front porch was unable to obtain relief. The court held that the plaintiff failed to show a cause of action. n518

A manufacturing plant on property next to plaintiff homeowner had placed its largest and heaviest machinery on the part of the property nearest to the plaintiff's land. The appellate court granted plaintiff an injunction against operation of that machinery until it was removed to a different part of defendant's property in order to minimize the disturbance to plaintiff. n519

Hammers from defendant's jewelry manufacturing factory caused noise and vibrations which disturbed neighboring homeowners. They obtained a temporary injunction which, when modified, allowed the defendant to use the hammers only four hours a day. n520

Landowners proposing to build a steam mill in a residential area were blocked by homeowners who claimed the proposed construction would violate a city ordinance. The trial court granted an injunction, but the appellate court reversed with instructions for the jury to determine the reasonableness of the ordinance which prohibited the construction. n521

Some operations of a machine shop and boiler works were conducted on defendant's lots between the shop and nearby homeowner. The plaintiff homeowner complained of interference with the family's rest and comfort and of vibrations jarring the house. Plaintiff obtained an injunction preventing defendant from working on the lots between the shop and

the plaintiff's property, plus $500 damages. n522

A boarding house operator located next to a plant was unable to use the back yard for laundry, resulting in loss of use of two rental units, because of vibrations, noise, smoke and gases from the defendant's plant. Plaintiff was awarded a judgment of $777 for loss of rental value. n523 The owner of several dwelling houses located near a city-owned pumping station could not rent out three houses because of noise and vibrations from the pumps and machinery in the station. The court awarded damages for loss of property value. The city was advised to place its pumping stations in areas not so close to residential property. n524

A prison dumped large quantities of waste materials into a stream which polluted the water flowing through a downstream dairy operation. The appellate court held that this public institution was liable for nuisance when it failed to take due precautions to guard against the consequences of its operation. n525

Brewery machinery caused offensive noise and vibrations, damaging the structure of plaintiff's nearby house. The plaintiff obtained a restraining order. n526

Although a corporate landowner had ceased the activity which caused salt pollution to freshwater on plaintiff's land, the damage continued and nuisance liability could still be imposed. n527

A tire factory caused leak of petroleum naptha into soil and groundwater of plaintiff's land. Judgment on nuisance claim was overturned at Court of Appeals. n528

A paper mill and pulp factory polluted well water used by potato farmers. The contaminated water caused poor crop yield, plaintiffs lost their lease option, and they recovered damages for lost profits, including the lost lease option. n529

A landowner was permitted to bring a private nuisance action against a corporation on the allegation that the defendant had dumped soil contaminated with PCBs on or near the plaintiff's property. n530

§ 67.07(c)(14) Railroad Operations.

Defendant had owned and operated a railroad line and coal bins near plaintiff's property for over 50 years before the plaintiffs built a residence. However, at the time of that construction, the tracks and property were used only very little, and when the use increased, the noise, dust and smoke from loading and unloading cars deprived the plaintiffs of the comfortable enjoyment of their home. Plaintiffs obtained an injunction against the defendant allowing loud noises and noxious fumes from their operations. n531

A homeowner near a railroad tunnel complained when trains passing through and stopping in or near the tunnel poured out smoke, dust, cinders and gases onto plaintiff's property. Plaintiff was awarded damages that related to emissions from the tunnel. n532 Church activities were disturbed by noise, smoke, cinders, ashes and vapors from locomotive repair operations on defendant's property, and access to plaintiff's property was sometimes blocked. Plaintiff was awarded damages of $6,000 for the preceding three years and $7,000 for the continuing nuisance. n533 An earlier nuisance action between these same parties produced a judgment of $4,500 damages for depreciation of the value of property and injury to its use. n534 A ditch created by the defendant railroad was blocked and the resultant flooding on plaintiff's land made the land marshy and boggy. Plaintiff obtained no relief when the court concluded that the defendant had not wrongfully maintained the nuisance and that plaintiff had contributed to the damage. n535 The plaintiff's church attendance and donations were diminished by the train passenger station owned and operated by the defendant on adjacent property. The operation caused smoke, soot, noise and obnoxious vapors and odors to come into the church and ruined furnishings and clothes, as well as rattled the buildings. Plaintiff was awarded damages for a taking of property. n536

The owner of a lot near defendant's railroad right of way complained of disturbance from cars being moved in the middle of the night and from locomotive exhaust. The question of liability was submitted to a jury. n537

Owners of property abutting defendant's railroad company suffered discomfort and diminished property value from the noise, smoke and smell of the engines coming into the station. Plaintiffs were awarded damages of $1,995 for diminished property value or rental value. n538

In this public nuisance action, the owner of a railroad station did not restrain its noisy and boisterous employees from shooting firearms in the streets and highways. The neighborhood was alarmed and disturbed and the defendant was convicted of maintaining a common nuisance. n539

The plaintiff's property value was decreased because of a railroad track running through property near the plaintiff's lot. No relief was granted because the property itself was not physically harmed. n540

A railroad company which left a dead animal in its right of way, the odors from which disturbed the plaintiff and his family on their nearby property, was required to pay damages of $150. The plaintiff could not reach the animal to remove it without destroying the defendant's fence and trespassing. n541 The defendant railroad built a track 37 feet from the plaintiff's property and the running trains produced disturbance which lowered the plaintiff's property value. Damages equal to the diminution of property values were granted. n542

A railroad culvert was too small to handle the water from heavy rains, which water then flooded the plaintiff's nearby land, being used as a brickyard. An injunction was refused because the court found that the plaintiffs had placed their brickyard where they knew it would be flooded and so were contributorily negligent. n543

When homeowners brought a nuisance action for noise emissions from the railyard, the court held that the common law nuisance claims were preempted by the Noise Control Act of 1972 and the Federal Railroad Safety Act, §17, *42 U.S.C. §4916.* This case only deals with a partial summary judgment motion. n544

A railroad loading facility built on property leased from railroad was built in violation of the county zoning code and deemed a nuisance; however, violation of an ordinance (county development code) as opposed to violation of a statute does not constitute nuisance per se. n545 Homeowners near railroad tracks sued for nuisance and negligence, claiming that railroad employees had sounded train horns and harassed them after the employees discovered that the homeowners had made complaints about the noise. The court held that neither the Interstate Commerce Commission Termination Act (ICCTA), nor the Federal Railroad Safety Authorization Act (FRSAA) preempted the homeowner's suits, since the homeowners claims were not safety related. n546

§ 67.07(c)(15) Salvage and Junk Operations.

In this due process case, landowners adjacent to a proposed sanitary landfill were awarded the right to have a public hearing before a permit to operate the sanitary landfill would be granted. n547

Plaintiff homeowners who complained of mosquito infestation from defendant's nearby junkyard obtained an injunction leading to abatement of the mosquito problem. n548 An automobile salvage yard disturbed nearby plaintiffs with the noises, dust, smoke, and stench from towing and dismantling wrecked cars. Defendant was enjoined from operating the salvage business in a way that produced excessive noise, dust or odors. n549

In this public nuisance case, homeowners were disturbed in their occupancy by the operations of the defendant company in reconditioning and salvaging used pipe. The noise, dust and odors from that operation had spread over the entire city. Defendants were enjoined from operating that particular business on the property. n550

Residents attempted to block the expansion of the defendant's auto wrecking business, fearing depreciation of property values and loss of quiet enjoyment from the noise of the wrecking facilities. No injunction was granted because the appellate court held the plaintiff had failed to prove that the business as practiced constituted a nuisance. n551

An abandoned quarry used as a dump harbored an infestation of cockroaches, diminishing the rental value of nearby residential property. Because the defendant did not introduce the species and was making reasonable efforts to abate the problem, no relief was granted to the plaintiff. n552

Plaintiffs who owned business property in the vicinity of a junkyard complained that the junkyard emitted offensive odors and was a breeding ground for mosquitos and other unhealthy and dangerous conditions. Plaintiffs obtained an injunction giving the defendant a period of time to clean up and cover up the junkyard and, if not done within that time, to remove it. n553 Owners of an auto shredding facility had acquired by prescription a right to maintain a nuisance consisting of excessive noise, explosions and air pollutants against persons who owned land or lived in the area for a continuous 20-year period. n554

Cleaning solvents leaked from defendant's landfill and contaminated pond and groundwater located on plaintiff's property. Nuisance claim overcame statute of limitations as a continuing nuisance, and defendant was ordered to pay compensatory damages (based on evidence at remanded trial), but no special damages or punitive damages were awarded. n555

Although a landfill may be a nuisance in fact, adjoining landowner's nuisance suit based on construction and operation of landfill failed where court held that county exercised reasonable care in location, construction, and operation of landfill. n556

Sewage treatment facility's composting operation constituted a nuisance where operation had been added to plant after most residents' occupancy and where residents complained of frequent and unbearable odors which brought about nausea. After weighing hardship to sewage treatment district against hardship to nearby residents, enjoining operation was appropriate remedy. n557

A waste transfer station filed a private nuisance suit against the neighboring property where industrial recycling of transformers had left environmental contamination resulting in the neighboring property being listed on the National Priorities List of CERCLA. Although the waste transfer station argued value diminution of property or even inalienability because of its proximity to the NPL site, no nuisance was found because the alleged nuisance only damaged ability to sell, not use of property. n558 Mountrail County brought an action against a landowner claiming his junkyard was a public nuisance and enjoining the storage of junk automobiles on the property. The Supreme Court of North Dakota held that the junkyard was a public nuisance and that County was authorized to bring the suit seeking to abate a public nuisance. The court further decided that the County was not estopped from bringing this claim even though the landowner had operated this junk business for the past 20 years. Additionally, the landowner was not allowed any compensation. n559

§ 67.07(c)(16) Sand and Gravel Operations.

Residential owners near a sand excavation complained of loss of sleep and enjoyment of the property from the noise, odors and vibrations of the excavation. In granting an injunction, the court discussed the "comparative injury rule," which comes into effect only after a nuisance has been found, and plays no part in deciding whether a nuisance exists. n560

A rock crusher in defendant's gravel pit disturbed adjacent residents. However, insufficient evidence of a nuisance resulted in no relief for the plaintiff. n561

Homeowners near a sand and gravel processing plant also complained of dust, noise, and flashes of light and obtained an injunction against the plant operating as a nuisance. When the defendants complained on appeal that the restraining order did not specify how they should operate their plant so as not to be a nuisance, the Supreme Court replied that the defendants never offered any evidence of their own as to how they might use the plant without creating a nuisance. n562

Owners of land used as a sand and gravel processing facility, an asphalt plant and a concrete plant could use a "coming to the nuisance" defense against plaintiffs who sought damages under nuisance and trespass theories. n563

Dirt excavation pits located near residences held to be private nuisance because of excessive noise, fumes, and dirt, as opposed to being mere inconveniences. n564

§ 67.07(c)(17) Saw Mill and Lumber Operations.

The owner of a private lake complained of water pollution from a nearby wood treating plant which discharged its waste into the water. The appellate court upheld an injunction against further pollution and remanded for damage determinations. The trial court determined that if the injury was permanent then damages based on the diminished property value would be granted. If the injury were temporary, then the plaintiff would qualify for decreased rental value of the property and any special damages related to annoyance, discomfort, inconvenience and sickness. n565 A homeowner across the street from a sawmill complained of sawdust blown into the home, but was unable to obtain an injunction because the nuisance had been abated by the end of the trial. n566

Landowners near a sawmill complained of shavings, sawdust and noise from the operation of the mill, and obtained an injunction requiring the mill to cease operations within 71/2 months. n567

A sawmill owner was accused of failing to provide proper sanitation facilities, which caused employees to deposit human waste on the plaintiff's land, which seeped into their residence. Also, the sawmill operation caused debris, soot and sawdust to fall on plaintiff's land. In a nuisance action, plaintiff obtained $1,750 damages as compensation for mental suffering, inconvenience, and depreciation of property value. n568

The owner of a plant nursery complained that the fine wood particles from a nearby sawmill adversely affected the appearance and growth of the nursery's plants. However, no injunction was granted when the court found no evidence that the operation of the sawmill was excessive, unreasonable, or produced actual physical discomfort and annoyance to a reasonable person. n569 Owners of a grocery store and residences across the highway from a sawmill complained of discomfort, annoyance and inconvenience, and damage to a roof, gutters and a paint job caused by emissions from the sawmill. The trial court granted damages equivalent to 10% of the costs of the paint job and the gutter damage, but did not grant an injunction, believing that the defendant had already abated the nuisance. The appellate court granted injunctive relief so the defendant would not resume the nuisance. n570

An action by homeowners against a nearby sawmill resulted in a contempt of court citation against the defendant. The defendant had failed to obey an earlier injunction to abate the nuisance, even though defendants asserted they had done everything they could to significantly decrease the noises which were the basis of the plaintiffs' complaints. n571

Farmers near a sawmill complained of particles, smells and noise from the sawmill, and obtained $1,000 in damages and an injunction against the unreasonable noise. The damages were to compensate for loss of enjoyment of property. The action was remanded to determine whether the cost of abating the fallout emission would force the mill to close, implying that injunctive relief would not be allowed to actually shut down the mill. n572 Likewise, a residential owner near a sawmill complained of burning cinders, sawdust and other deposits on land, houses, vegetables, trees and wooden fences, and obtained $100 in damages and a perpetual injunction restraining the defendant from burning waste within 500 feet of plaintiff's property. The money damages reflected the actual damage to plaintiff's property. n573

A homeowner near a planing mill was disturbed by the smoke, charred sawdust and soot carried by wind from the mill and its incinerator to plaintiff's property. Also, noise and vibrations contributed to plaintiff's disturbance. The court, however, found that the operation of the mill and incinerator was neither a public nor a private nuisance. n574

A homeowner near a planing mill complained that the mill's machinery operated too loudly at night and on Sundays. The action resulted in an injunction against the defendant operating the mill on Sundays and after 6:00 p.m. on weekdays. The defendant had been granted a nonconforming use in the neighborhood before the area was zoned for residential uses, but the business had since expanded well beyond the nonconforming use. n575

The owner of a fruit farm near a sawmill alleged damage to fruit trees, house and clothes from the smoke, sawdust and burning embers emitted by the mill and deposited on plaintiff's farm. The court refused to give an injunction because it found the sawmill was operating with care and prudence and the loss to plaintiff's property was relatively small. However, damages for injury and inconvenience were granted. n576

A resident near a saw and planing mill complained of noise, shavings, dust and smoke from the mill and obtained an injunction against the mill operating as a nuisance. n577

Owners of residential lots near a lumber yard and planing mill complained of noise and sawdust and blocking of roads and sidewalks because of loading and unloading operations. The offensive noises consisted of the shrill and penetrating noise from the saws and other machines and the noise of the factory whistle. These plaintiffs obtained an injunction against the offensive features of defendant's business. n578

The owner of a dwelling near a sawmill complained of smoke, soot, odors, noise, and vulgar language. Plaintiff obtained an injunction against the sawmill's operation and also indicated that damages could be awarded if the proper proof were forthcoming. n579

Loud noise, smoke and soot were the complaints of a homeowner against a nearby planing mill. Plaintiff obtained a judgment for damages to property and for inconvenience and discomfort. n580

Noise, smoke, soot, and dust from a planing mill resulted in a nuisance action by an owner/landlord of several lots, complaining of distress, discomfort, and decreased rental value. The court granted damages measured by the diminution in rental value of plaintiff's premises. n581 Noise, vibrations and dust from defendant's planing mill operations caused plaintiff's family nervous distress and allegedly destroyed the value of plaintiff's home. Plaintiff was ruled to have stated a cause of action. n582

A homeowner situated near a planing mill complained of smoke, ashes and cinders from burning sawdust and burnt shavings being blown onto plaintiff's property. Damages of $250 awarded by the trial court were reversed on appeal because they were equal to the entire value of the property. On remand, the court was instructed to determine the proper amount of compensatory damages based on the loss in property value caused by the nuisance. n583 Also, homeowners within a few blocks of a planing mill were unsuccessful in their action for an injunction because the court found that persons of ordinary sensibility would not be made uncomfortable by the noise, smoke, soot and cinders emitted by the mill. n584

Plaintiff homeowner, with only one set of windows in the house, complained that the defendant had piled lumber on the adjacent lot, obstructing light and air flowing to the plaintiff through those windows. The trial court denied the injunction on the ground that plaintiff had no easement for light and air, but the appellate court found that the conditions for an implied easement were met because both parties' lots were once owned by the same person and that person had intended that both parties have full use of their land. n585

A chute from the defendant's sawmill blew sawdust onto plaintiff's adjacent land. The sawdust drifted into the house,

clothes, furniture, and food of plaintiff, and was so thick that the plaintiff breathed it. Plaintiff's garden was killed and the home became almost uninhabitable. Plaintiff was awarded $500 for damage to the house, lot, trees, garden and furniture. The court noted that the chute was operated in willful disregard of plaintiff's rights and comfort. n586

A planing mill to be built within 90 feet of plaintiff's home would allegedly force the plaintiff to keep doors and windows closed and, if built, would render plaintiff's home unfit to live in. Plaintiff was adjudged entitled to bring an action for a permanent injunction against construction of the planing mill. n587

A steam planing mill was located only 21 feet from a homeowner/landlord. The mill operation produced smoke, cinders and vibrations which rattled windows, shook dishes, soiled furniture and carpets, injured health and made conversation difficult. The plaintiff obtained judgment for $1,000 in damages, reflecting the lost rental value and the inconvenience. An injunction was not granted, because in the meantime the defendant had modified the operation of its planing mill. n588

§ 67.07(c)(18) Stone and Quarry Operations.

After one test blast, residence owners near a limestone quarry sought an injunction against future blasting. The court denied the injunction, believing there was not enough evidence that future blasting would be a substantial invasion of plaintiffs' property. If a nuisance did in fact develop, the plaintiff would be entitled to return to court. n589

Blasting in a limestone quarry caused loss of land use for crops and damage to the water supply and grazing land of a nearby farmer. The farmer obtained an injunction and damages against the quarry. The injunction ordered the defendant to cease operating in a way that caused rocks and dust to be thrown and blown onto the plaintiff's land. n590 A hospital obtained an injunction against the use of explosives by a nearby rock quarry. n591 The vibration from two large diesel engines used in a plant where stone was cut and dressed interfered with the enjoyment and use of property owned by nearby residents. Those residents obtained an injunction against the operations which produced the vibrations. n592

Rock crushing operations which included blasting caused great quantities of "obnoxious dust" to damage the property, health and land use of nearby homeowners. Plaintiffs obtained damages in the amount of $3,691. n593 Homeowners on land adjoining defendant's limestone products plant complained of limestone dust, gases and other materials being blown onto their lands. Although they sought damages amounting to $31,850, they were awarded only $750. However, the appellate court remanded because the trial court permitted inflammatory remarks about the plaintiff to be introduced over plaintiff's objection so the amount of damages awarded was prejudiced against the plaintiff. n594

A limestone rock quarry caused dust, noise, vibration and rock propulsion by use of explosives and by rock crushing and loading. Nearby landowners who suffered property damage and interference with peaceful enjoyment of their property obtained an injunction ordering abatement of the operations after the quarry owner was given a time to reduce the adverse effects of its operations. During this time, the court visited the quarry site twice and, on finding no substantial improvements, shut down the quarry. A "coming to the nuisance" argument was rejected because most plaintiffs had bought their property before the quarry began operations or during the years it was dormant. n595

Blasting, dust and fumes from a quarry damaged the homes and health of nearby residence owners, who obtained an injunction against quarry operations. n596

A homeowner near a rock quarry complained of structural damage, injured health and frightened children caused by the quarry's blasting. The homeowner obtained an injunction against the blasting and also damages for discomfort, annoyance and lost property value. Continual fear of danger was also an element in those special damages. n597

The blasting and stone crushing activities at a quarry caused property damage, annoyance and distress to nearby landowners, who obtained an injunction and money damages for injury to property. n598 The noise and vibration of

machinery used in a stone and marble yard caused building damage at, and drove tenants away from, three nearby apartment houses. The appellate court refused to uphold an injunction, but did grant compensation for lost rentals. n599

Homeowners near a stone quarry and rock crusher who complained of injury to houses and health from the vibration and dust of explosives obtained a temporary injunction against the quarry. n600

Nearby homeowners complained of drilling, blasting and noises from defendant's stone crushing plant. The plaintiffs obtained an injunction which ordered the quarry to control its effect on the neighborhood, but the court refused to close the plant. n601

Machines used by the owner of a granite quarry and finishing plant to process the granite caused loud penetrating noises which disturbed summer residents in the area. The machines used air compressors and were located outdoors. Plaintiff summer residents obtained an injunction prohibiting defendant from using the machines in such a way that interfered with plaintiffs' reasonable comfort and enjoyment of property. n602

An owner of land on which were piled loads of broken stone used an engine and cable to pile the rocks, the noise from which disturbed occupants of nearby residences. The residents obtained a temporary injunction restraining the defendant from operating at a noise level that disturbed the neighborhood. The injunction was temporary because the defendant maintained that the use of the lot for that purpose was temporary. n603

Machinery used in a marble factory caused jarring and shaking which damaged buildings and annoyed nearby residents. The defendants were enjoined from conducting their business. n604

A rock quarry polluted nearby landowner's pond and came under summary judgment where its pollution was in violation of National Pollutant Discharge Elimination System (NPDES) permit, making the nuisance a nuisance per se in violation of the Clean Water Act (CWA). n605

Neighbors of a quarry operation succeeded in having the operation declared a nuisance and obtained damages and a permanent injunction limiting quarry activities (although permitting some of those activities to continue). n606

§ 67.07(c)(19) Textile Mill.

A textile mill produced noise and vibrations from use of heavy machinery and air conditioning, which caused loss of property value to a nearby homeowner. The court granted $1,200 damages for actual physical damage to the house. However, a new trial was ordered because of prejudicial jury instructions. n607 The plant whistle of a cotton mill, when blown between 9:00 p.m. and 6:30 a.m., startled a family who lived nearby. However, the court granted no relief when a jury determined that there was no special damage to the plaintiff. n608

§ 67.07(c)(20) Trucking and Freight Operations.

Homeowners disturbed by the operations of a nearby freight terminal obtained an injunction against trailers being hitched or unhitched between 11:00 p.m. and 7:00 a.m. Even though the defendants' land was zoned for commercial uses, the zoning did not give the defendant the right to create a nuisance with business operations. n609

Property owners near other property used by diesel trucks were disturbed by revving of truck engines at all hours of the day and night. They obtained a temporary injunction against revving of truck engines on defendant's property between 8:30 p.m. and 7:00 a.m. n610

The owner of an apartment building complained that a freight forwarding business on adjoining land interfered with the sleep of the plaintiff's tenants because of nighttime operations. Plaintiff obtained an injunction requiring defendant to

decrease or eliminate the noise at night. n611 A truck park near a residential area disturbed the sleep of residents through the noise of coupling and uncoupling of trailer trucks, revving of engines, vibration and fumes. Plaintiffs were granted an injunction against the defendant conducting business on the property between 8:00 p.m. and 7:00 a.m. The property had been zoned residential one year after the defendant had established the truck park. n612

Homeowners adjacent to a truck terminal complained of noise (shouting, engines, radios, compressors), vibrations, and floodlights shining in windows between 7:00 p.m. and 1:00 a.m. every night. The plaintiffs were disturbed in their sleep and restricted in the use of their porch and swimming pool. They obtained an injunction and $2,000 in damages to compensate them for the impaired use and enjoyment of their homes. n613

Property owners alleged that cracks in their walls were caused by the noise, vibrations and odors from a nearby trucking terminal. However, neighbors testified that odors and noise from the terminal were not bothersome, so the action was dismissed with no relief for plaintiffs. n614

Neighbors of a trucking and contracting business complained of dirt, dust, noise and fumes, but obtained no injunction based on nuisance in fact. n615 An oil, coal and trucking business produced acrid fumes, loud noises and vibrations from trucks operating late at night and early in the morning, which disturbed the sleep and health of nearby residents. Plaintiffs obtained an injunction prohibiting the trucking business from operating between 8:00 p.m. and 6:00 a.m. Although the defendant was in the oil and coal business before the area became residential, the trucking business was added later. n616

Homeowners near the proposed site for a truck terminal succeeded in obtaining an injunction against such construction, on the ground that the enterprise in that location would necessarily create a nuisance. n617

Homeowners sought to enjoin the construction of a motor freight terminal nearby, claiming that the enterprise would destroy the value of their property and make their homes unlivable because of noise, vibrations and pollution. Plaintiffs obtained no relief on the basis of nuisance; however, further proceedings were required on a zoning question. n618

Homeowners near a truck terminal obtained $2,500 in damages because of the inconvenience, discomfort, humiliation, worry, mental anguish, pain and suffering, and injury to health caused by the noise and disturbance from the operation of the truck terminal. One plaintiff's recovery was slightly less than the other because that plaintiff lived 50 feet farther away from the defendant terminal. n619

A lot owner who parked trucks and stored asphalt on the lot was accused of creating a nuisance for nearby homeowners. The plaintiffs complained of noise and smells which injured their health and affected their enjoyment of the property. They obtained an injunction against parking or operating trucks or storing asphalt on the lot. n620

The owner of a trucking business which required loading and unloading of heavy steel plate at night disturbed nearby homeowners in their sleep and prevented the quiet enjoyment of their property. The court enjoined the defendant from operating between 12:00 midnight and 6:00 a.m. in a way that would create such disturbing noise. n621 A hotel owner had business disturbed by the operation of a trucking business and freight terminal on adjacent land. Even though such an enterprise was permitted by zoning ordinances, the defendant was still liable for any private nuisance created. The court granted an injunction prohibiting the trucking and freight terminal from operating between 8:00 p.m. and 7:00 a.m. n622

§ 67.07(c)(21) Sewer Pumping Station.

A town's operation of a sewer pumping station on town property amounted to a private nuisance, but could continue to operate as long as plaintiffs were paid $400 a month in damages. n623

A private nuisance action could be based on odors emanating from the operation of a sewage treatment plant on adjacent property. n624

§ 67.07(c)(22) Pulp and Paper Mills.

A pulp and paper mill's discharge into a river was considered the likely source of dioxin in the fish that were caught and eaten forty miles downstream at plaintiff's riverside property. Summary judgment was granted for the defendant because plaintiff was unwilling to submit to medical tests to determine dioxin levels. n625

§ 67.07(d) Residential Uses.

This section summarizes those cases involving residential or other nonagricultural, noncommercial and nonindustrial activities which have been challenged as private nuisances. The activities described in the cases are set forth in an alphabetical order of subcategories, as follows: abandoned vehicles; barn; construction activities; defective buildings; dogs; embankment; garbage; lawnmower; open toilets; radio noise; roosters; shrubs; solar interference; trees; vegetation; vacant lot; wall; windmill.

§ 67.07(d)(1) Abandoned Vehicles.

A landowner kept trailers and old abandoned cars on land in violation of a restrictive covenant. A neighboring landowner sued on a private nuisance theory and obtained an injunction against keeping of the cars, found to be unsightly and obnoxious. n626 Plaintiff owned an apartment complex with an unobstructed view of the Hudson River. Defendant acquired the strip of property between the plaintiff's property and the river and planned to construct a new apartment complex. Plaintiff brought suit to enjoin the defendant from building. The court found that the construction of the building did not fall within the scope of a private nuisance claim. n627

§ 67.07(d)(2) Barn.

A landowner who maintained a barn which harbored flies, vermin and noxious odors, all of which disturbed the nearby plaintiff landowner on windy days, was enjoined from use of the barn within city limits. n628

§ 67.07(d)(3) Construction Activities.

Construction of a condominium apartment building, including driving of piles and other activities causing vibration, disturbed a nearby apartment building owner in enjoyment of property, for which a judgment for damages was obtained. n629

From construction activity on the defendant's land, smoke, sand and cement blew onto the nearby plaintiff's property, discoloring plaintiff's building and destroying paint. Plaintiff obtained $278 for damage to property. n630

§ 67.07(d)(4) Defective Buildings.

The defendant condominium association maintained an uninsulated and uncovered corridor, which allowed noises to invade apartments in the condominium building. Plaintiff apartment owners obtained an injunction against the noise. n631

Defendant had permitted a vacant building to deteriorate and become unsightly. The plaintiff owned a building across the street from defendant's building, and obtained a judgment for damages representing the difference between the market value of plaintiff's building before and after the deterioration. The court noted that the defendant's neglect of his building in an area where other property owners were working to improve their buildings made defendant's building a nuisance. n632

Defendant's house settled and leaned on plaintiff's house, resulting in an injunction for plaintiff. The court ruled that encroachment upon space by a leaning building is a nuisance, not a trespass. n633

Defendant's building collapsed onto the adjacent building of plaintiff. While the occurrence was clearly a nuisance, the city had already assumed liability, so the defendant was not liable. n634

Defendant maintained a building without gutters, and when rainwater ran off the roof, it ran onto the adjacent building of plaintiff. Plaintiff obtained an injunction against such damage. n635

§ 67.07(d)(5) Dogs.

Defendant kept and bred dogs on property next to the plaintiff's. The barking, smells and pollution of a stream running through plaintiff's land gave rise to an action based both on nuisance and on violation of a restrictive covenant. An injunction was denied because of the narrow construction of the restrictive covenant and insufficient evidence, in the view of the court, to show that keeping the dogs would offend a person of reasonable sensibilities. n636

A permanent injunction was upheld against a dog kennel as source of barking, resulting in lack of quiet enjoyment of property. n637

Barking dogs were held to be cause of sleep loss to group home patient. n638

Dispute between neighbors over barking dogs results in injunction forcing dog owner to abate. n639

Homeowner sued to prevent the noise from 12-18 barking dogs on neighbor's property. The lower court denied the injunction, but the appellate court reversed the decision. n640

§ 67.07(d)(6) Embankment; Dock.

An embankment on defendant's land caused flooding on the adjoining farmland. Damages were denied the plaintiff because the dam had been built by a previous owner and the defendant had not used it. The plaintiff, on the other hand, had previously used the trapped water for his own purpose and had not notified the defendant of the nuisance nor requested that it be removed. n641

A boat dock interfered with adjacent landowners' property rights and was held to be a private nuisance. n642

In a property boundary dispute, owner below ceased destroying beaver dams, resulting in the flooding of a portion of land belonging to owner above. This was held to be a private nuisance cause of action. n643

City conducted restoration project along canal, removing subsoil and large boulders between feed mill and water's edge. Gradual collapse of that portion of mill and ongoing damage to foundation deemed to be continuing nuisance, not time-barred, and proper remedy was both damages and an injunction ordering city to abate the nuisance. n644

After river authority released water from reservoir into river by raising floodgates on dam, resulting property damage led private property owners to sue for nuisance. Court held that there was no tort claim against the river authority in spite of damages. n645

§ 67.07(d)(7) Garbage.

Defendant property owner had filled a well behind the house with rubbish, with no provision for drainage. A tenant of

the defendant complained of bad odors, disease and filth, annoyance, and the death of a child. The appellate court held that the pleading disclosed an action in tort and defects in the property amounting to nuisance. n646

§ 67.07(d)(8) Lawnmower.

A defendant who operated a lawnmower at early hours had to pay $500 damages and refrain from early mowing at the complaint of a neighbor. In this case, the husband was held liable for the actions of the wife. n647

§ 67.07(d)(9) Open Toilets.

The defendant constructed open toilets on land next to plaintiff's property, which created offensive odors and attracted rats. The plaintiff obtained an injunction against the open toilets and piles of concrete kept near the property line. n648

§ 67.07(d)(9.5) Obstruction of Public Road.

The State of Kansas brought an action of criminal damage to property against the defendant for mowing over wheat planted on a public road/right of way. The court dismissed all claims against the defendant, stating that growing wheat on a public right of way constituted a nuisance per se and the defendant was justified in abating the nuisance. n649

§ 67.07(d)(10) Radio Noise.

Defendant played loud, blaring radio music intentionally and maliciously for several hours a day over several years. The plaintiff, a neighbor, complained on a nuisance theory and received $3,500 in punitive and compensatory damages. n650

Landowners' son who practiced with a heavy metal rock band and played amplified home stereo and guitar music caused a private nuisance over a three year period. Damage award of $25,000 was augmented by $5,000 punitive damages. n651

(This holding was reversed because the court concluded that the holding had been based on extraneous factors, including trial court's acceptance of unverified decibel reading from plaintiff while excluding similar reading from defendant and the court's consideration of the son's status as an amateur musician).

§ 67.07(d)(11) Roosters.

A homeowner who complained about the crowing of roosters in the morning on the neighbor's property was denied an injunction by a court, which believed a reasonable person would not be disturbed by "the cheerful and gallant qualities of the big red rooster." n652

Keeping 25 to 50 roosters at the defendant's house constituted an animal nuisance; keeping the roosters as a commercial enterprise for food purposes could be a defense or an exception to the animal nuisance law's general prohibition, but the defendant has the burden of coming within the exception. n653

Homeowners complained of new neighbors starting a gamecock operation on their property, alleging private nuisance and violation of state cock-fighting statutes. The Mississippi court of appeals held that the rooster-raising part of the operation was a nuisance and should be permanently enjoined, and issued an injunction limiting the neighbors to having two roosters on their property at any given time. n654

§ 67.07(d)(12) Shrubs.

The shrubbery on defendant's land grew to such height and with such overhanging branches that it deprived the

plaintiff's adjacent property of light and air. Plaintiff was denied an injunction, but was entitled to cut any branches which hung over his land. n655

A passenger injured in a motor vehicle accident allegedly caused by overgrown shrubs brought action based on private nuisance theory. n656

§ 67.07(d)(13) Solar Interference.

The owner of a solar heated residence brought action to restrain the adjoining landowner from building a house that would interfere with plaintiff's access to sunlight. In determining that plaintiff had stated a cause of action, the appellate court said that the factual circumstances and social priorities which have restricted the right to sunlight are now obsolete. Sunlight as a source of energy is more important now and sunlight cases should be subject to the reasonableness test for determining nuisance. n657

§ 67.07(d)(14) Trees.

Defendant's landscaping activities on hillside property resulted in erosion of land and exposure of the roots of a large tree. The plaintiff on adjacent land obtained an injunction requiring removal of the tree, because of the danger that the tree would collapse. The court held that an unsound tree standing near a property boundary line is a nuisance which a landowner on whose land the tree stands may be required to eliminate, regardless of whether it was planted or it grew naturally. n658

A tree planted on defendant's property hung over and interfered with plaintiff's property. Defendant was required to abate the nuisance. n659

Insects from defendant's tree impaired the adjacent plaintiff's comfortable enjoyment of property. However, no injunction was granted because the condition was a natural occurrence. n660

Trees on defendant's property were blown over and left lying across the boundary line with plaintiff's property. Plaintiff's legal action resulted in an order requiring defendant to remove the trees. n661 A branch of defendant's tree overhanging plaintiff's property broke off and damaged plaintiff's fence and garage. The defendant was ordered to cut off the overhanging branches, but no damages were allowed, because actual damages had been paid by an insurance company. n662 Roots from defendant's trees were stunting the growth of plaintiff's walnut trees. An injunction was issued requiring defendant to remove the harmful root growth. n663

The roots of a tree planted on the common boundary between plaintiff and defendant caused structural damage to the basement of plaintiff's residence. Defendant was required to remove the offending tree. n664

The roots of a tree on defendant's property were alleged to have clogged a sewer pipeline affecting the neighboring residential lot. No relief was granted to the plaintiff, but a new trial was ordered to determine with certainty whether the roots indeed caused the damage to the sewer line. n665

A tree infested with bugs and insects on defendant's property interfered with the plaintiff's use of adjoining land. The court denied an injunction because the tree had been pruned and sprayed, thus abating the nuisance, but the court required the defendant to maintain proper pruning and spraying as often as necessary to prevent the infestation. According to this court, if a tree is in such a condition as to actually threaten physical injury to persons or property on the adjoining premises, it is abatable as a nuisance. n666

Roots on plaintiff's land from a tree on defendant's land caused plaintiff to trip and suffer injury, which supported a cause of action for nuisance. n667

Defendant planted 40-foot trees that partially blocked plaintiff's view of the ocean. Despite defendant's claim that the trees were primarily planted for privacy, the court ordered the trees to be cut off at 6 feet or removed entirely. n668

Trial court found unconstitutional an ordinance authorizing the cutting of trees blocking views. Appeals court reversed. n669

§ 67.07(d)(15) Vacant Lot.

Plaintiff complained that a vacant lot owned by the city was used for dumping garbage and refuse collected from cleaning the streets. No injunction was granted because the plaintiff did not prove that any actual injury had been suffered. n670

§ 67.07(d)(16) Vegetation.

When the defendant removed sagebrush and natural growth from land, sand and dust blew onto the property of an adjoining landowner. No injunction was granted, because the court said the defendant would have difficulty in stopping the wind or replacing the sagebrush, and equitable principles could do no better. n671

Effluent from sewage treatment facilities was claimed to have caused excessive growth of vegetation in the river channel, creating a potential for flooding to plaintiff's land. Lower court rejected, appeals court affirmed. n672

§ 67.07(d)(17) Wall.

A wall on defendant's property caused soil on plaintiff's land to wash away, leaving a 6- to 12-inch fall next to the wall. Because of the dip, plaintiff's wife fell and was injured. Damages granted by trial court were reversed on appeal, because evidence of contributory negligence by the plaintiff should have been presented to the jury. Plaintiff was making use of the wall at the time she was injured. n673

A seawall raised to protect against flooding was not a private nuisance, despite the fact that it made adjoining landowners' property more susceptible to flooding. n674

§ 67.07(d)(18) Windmill.

A windmill operating on defendant's property caused noise levels from which the adjacent plaintiff landowners suffered stress and loss of comfortable enjoyment of their homes. The court held that the plaintiffs stated a cause of action in their attempt to obtain an injunction against the operation of the windmill. n675

§ 67.07(d)(19) Wood Stove.

The owners of a wood-burning stove were ordered to raise their chimney and burn only clean, dry wood. n676

§ 67.07(d)(20) Others.

A sewage treatment plant was held to have created a nuisance when the plaintiff proved the odors caused loss of a prospective purchaser, plaintiff's nausea and limitations on the plaintiff's use and enjoyment of the land. n677

A landlord was held liable, under a nuisance theory, for neighboring plaintiffs' mental distress caused by activities of non-tenant drug dealers and their customers conducted off the landlord's premises, because the landlord's apartments had become the hub of the activities and the landlord had not acted responsibly to deal with the problem. n678

Noise and dust from a motor speedway caused inconvenience and distress among neighboring landowners. Plaintiffs were entitled to an injunction limiting dust and noise and to pre-injunction damages. n679

Noise pollution emanating from air-conditioning equipment caused a substantial invasion of neighbors' use and enjoyment of their land and thus constituted a common law private nuisance. n680

Allegations that material containing asbestos flaked off buildings and interfered with railroad tracks beneath the buildings were sufficient to allege a private nuisance. n681

Developer built a pier into a lake on an easement across a parcel that according to one means of measuring riparian rights is acceptable. Buyer of lot affected sued under nuisance and trespass and won, using another method of measuring riparian rights. n682

Stray voltage from electrical service to a dairy barn causing unusual behavior in cows constitutes an unintentional invasion and therefore is actionable under private nuisance. n683

A class action was brought by landowners alleging that a speeding ferry produced large wakes that damaged the plaintiffs' shoreline property. A preliminary injunction limiting ferry speed was entered. n684

A city was liable to an infant for nuisance when it failed to enforce lead paint abatement regulations. n685
