Metro Group Const. Corp. v. Town of Hempstead, 808 N.Y.S.2d 393 (N.Y.A.D. 2005) (parties' undertakings were "collateral"; survival clause in contract as well); *NVR, Inc. v. Edwards, 801 N.Y.S.2d 878 (N.Y.A.D. 2005)* (employee discount agreement deemed collateral); *Bolen v. Bolen, 169 S.W.3d 59 (Ky. App. 2005)* (contract not executed before the deed);

Beck v. Smith, 538 S.E.2d 312 (Va. 2000) (provision in sales contract regarding impact of utility easements deemed collateral); *Neppl v. Murphy, 736 N.E.2d 1174 (Ill. App. 2000)* (warranty provision in sales contract relating to "operating condition at possession" deemed collateral); *Waterville Industries, Inc. v. Finance Authority of Maine, 758 A.2d 986 (Me. 2000)* (agreement to provides notices as to violations of rules and regulations deemed collateral); *Murphy v. Stowe Club Highlands, 761 A.2d 688 (Vt. 2000)* ("dirt work obligation" deemed collateral); *Bedard v. Martin, 100 P.3d 584 (Colo. App. 2004)* (fee-shifting provision not extinguished by merger); *Archambault v. Ogier, 95 P.3d 257 (Or. App. 2004)* ("collateral terms" not merged); *Wills v. Whitlock, 139 S.W.3d 643 (Mo. App. 2004)* ("collateral obligations" not merged); *Engle Homes, Inc. v. Jones, 870 So. 2d 908 (Fla. App. 2004)* (arbitration clause survived closing; language of purchase agreement negated merger). *West America Housing Corp. v. Pearson, 171 P.3d 539 (Wyo. 2007)* (a collateral obligation is one that is not "deed-related"; deed-related provisions are those concerning 'title, possession [and] quantities or emblements of the land ... .'); *Hastetter v. Fetter Properties, LLC, 873 N.E.2d 679 (Ind. App. 2007)* (doctrine of merger had no application to extinguish rights collateral and independent to the conveyance of title, such as those concerning the quality of improvements).

Add:

See also Juniata Valley Bank v. Martin Oil Co., 736 A.2d 650 (Pa. Super. 1999) (purchaser at foreclosure sale sued for damages under various theories due to discharge of fuel oil on property; merger not applied as "quality of title is not in issue"). *Bell v. Turner, 874 N.E.2d 820 (Ohio App. 2007)* (merger not applied as deed was never accepted thus no transfer of title occurred).

Panos v. Olsen and Associates Const., Inc., 123 P.3d 816 (Utah App. 2005) (merger doctrine is an "admittedly harsh rule of law").

Bixler v. Oro Management, L.L.C., 86 P.3d 843 (Wyo. 2004) (it is "conclusively presumed that the deed represents the final agreement of the parties").

Add [after Hansen v. Stichting Mayflower citation]:

See also Pavoni v. Nielsen, 999 P.2d 595 (Utah App. 2000) (abrogation clause limited; merger not applied). *Chapdelaine v. Sochocki, 635 N.W.2d 339 (Mich. App. 2001)* (easement reserved by agreement not capable of fulfillment until after deed was delivered; merger not applied). *But see Failes v. Lichten, 37 P.3d 301 (Wash. App. 2001)* (attorney fee provision not merger; contract contained "anti-merger" clause).

Blair Const., Inc. v. McBeth, 44 P.3d 1244 (Kan. 2002) ("whether merger occurs ultimately depends the intention of the parties"); *Albrecht v. Clifford, 767 N.E.2d 42 (Mass. 2002)* (warranties that did survive closing were only to last for one year per express agreement of the parties). *See also Crowley Marine Associates v. Nyconn Associates, Inc., 738 N.Y.S.2d 681 (App. Div. 2002)* (parties did not *intend* property tax provision to survive closing); *Kunker v. Isle Harbour Estates Inc., 738 N.Y.S.2d 740 (App. Div. 2002)* (merger doctrine does not apply "where there is a clear intent evidenced by the parties that a particular provision will survive closing or where there is a collateral undertaking").

Savage v. KGE Associates Ltd. Partnership, 580 S.E.2d 591 (Ga. App. 2003) (application of merger doctrine depends upon "intention of the parties"); *Home and Land Owners, Inc. v. Angel Fire Resort Operations, L.L.C., 69 P.3d 243 (N. M. App. 2003)* (merger doctrine discussed in "unique context of Chapter 11 bankruptcy proceedings").

Ladas Land & Development, Inc. v. Merritt and Walding Properties, L.L.P., 978 So.2d 55 (La. App. 2007) ("implicit consent" to the merger of the contract into the deed); *DiPrima v. Croce, 842 N.Y.S.2d 173 (N.Y. Sup. App. 2007)* (merger applied as the court found that "the parties did not *intend* the contract provision regarding the repair to the roof leak to survive delivery of the deed").

Deep Water Brewing, LLC v. Fairway Resources Ltd., 215 P.3d 990 (Wash. App. 2009) (intent of the parties controls; extrinsic evidence admissible); *Sunset Beach Development, LLC v. AMEC, Inc., 675 S.E.2d 46* (N.C. App.) .

Wade v. Huston, 877 A.2d 464 (Pa. Super. 2005) (parties did not intend merger of property settlement agreement arising out of divorce); *Schlup v. Bourdon, 105 P.3d 720 (Kan. App. 2005)* (merger is not absolute and whether merger occurs depends on the intention of the parties; parties did not intend merger and court so found).

§ 82.13(e) Policy Considerations in Deed Construction. [Go To Main]

Add:

The trend toward utilizing a "contracts" approach to deed construction appears to be accelerating. *See, e.g., Old Serverna Park Improvement Ass'n v. Barry, 982 A.2d 905 (Md. App. 2009)* ("In construing a deed, the basic principles of contract interpretation apply."); *Mattson v. Montana Power Co., 215 P.3d 675 (Mont. 2009)* ("The construction of a writing granting an interest in real property is governed by the rules of contract interpretation."); *Cassidy v. Pavlonnis, 205 P.3d 58 (Or. App. 2009)* ("A deed is subject to the ordinary rules of contract construction.").

But see Utsch v. Utsch, 565 S.E.2d 345 (Va. App. 2002) (parol evidence rule *not* applicable where issue is one of donative intent to make a gift).

Syversen v. Hess, 665 N.W.2d 23 (N.D. 2003) (parole evidence rule applied in context of alleged mistake). *See also Utsch v. Utsch, 581 S.E.2d 507 (Va. 2003)* (parol evidence rule applies where issue is one of donative intent to make a

gift).

Stonybrook Condominium Ass'n v. Jocelyn Properties, Inc., 862 A.2d 721 (Pa. Cm. 2004) (absent fraud, accident, mistake, parol evidence rule bars extrinsic evidence as to what parties to deed intended); *Caballo Coal Co. v. Fidelity Exploration & Production Co., 84 P.3d 311 (Wyo. 2004)* (construction of mineral rights reservation in deed; court referred to "*contracts*" conveying mineral interests in discussing constructional rules).

Department of Transp. v. Meadow Trace, Inc., 617 S.E.2d 246 (Ga. App. 2005) ("a deed is a contract").

CHAPTER 83 DONATIVE TRANSFERS

9-83 Thompson on Real Property, Thomas Editions § 83.01

AUTHOR: Professor Ronald R. Volkmer Creighton University School of Law

§ 83.01 Overview of the Law of Donative Transfers.

Donative transfers of real property typically present different legal issues than sales of real property. Whether the transfer is by gift or sale, the instrument of transfer is the deed, the basic elements of which are examined in the preceding chapter.

Proof of delivery, essential to all transfers by deed, has proven troublesome in gift cases. Especially troublesome are those situations in which the grantor has attempted to retain some ownership interest until death. The dividing line between inter vivos and testamentary transfers looms large in these types of cases.

Conditional delivery issues have been problematic in gift cases. In the context of sales of real property, the conditional delivery issue is far less likely to arise.

Least problematic of all the requirement of acceptance. To the extent the issue arises at all, it arises in conjunction with gifts of real property.

§ 83.03 Delivery.

[Go To Supp]

§ 83.03(a) Introduction and Background.

The delivery requirement has been a part of the common law of deeds from the beginning. Sir William Blackstone, in stating that one of the requisites for a "good deed" is that "it be delivered," was simply reiterating the common law rule laid down by Coke. n1 In 1830 Chancellor Kent stated that delivery was "another incident essential to the due execution of a deed, for it takes effect only from the delivery." n2 There has never been a debate regarding the necessity of delivery; where the controversy arises is in regard to the legal test for delivery, which, otherwise stated, is a matter of definition -- giving substantive legal content to the term "delivery." Whether or not one considers "delivery" as an incident of "due execution," as Kent treated it, is, in the main, a semantical distinction that does not play a significant role in modern day case law. From a theory standpoint, however, the delivery requirement poses a fundamental questions as to how one defines the term "deed" and when an instrument becomes a "deed."

In order for an instrument to be a "deed," it must meet certain formalities requirements -- rules of law -- imposed by state statute or the common law. n3 If these requirements are met, the common understanding is that there is "deed," which, in order to be legally effective, must be delivered. The implicit understanding is that delivery can take place only *after* the execution of an instrument complying with common law and statutory formalities. n4 The deed, as instrument of conveyance which transfers legal title, is legally effective "upon delivery," which implies that delivery is the final step in making the transfer of title effective. n5 Otherwise stated, the question of delivery is not reached if the instrument in question is fatally defective for failing to meet statutory and common law requirements for what must be contained in a "deed." Once those requisites have been met, the second test must be satisfied, that of delivery of the "deed."

The conceptual difficulty of making "delivery" an element of due execution has an analogue in the law of wills: A person signs an instrument denominated as that person's will. If the person signing is purporting to execute an attested will, the instrument is not a "will" until the witnesses sign the instrument as witnesses. The "will" which the maker asks the witnesses to sign is not technically a "will" until the witnesses sign. Once the will is signed the instrument is referred to as a "will," even though the instrument does not take effect as a dispositive instrument until the testator dies. n6 There is a clearly defined time gap between the execution of the will and the date of the testator's death. Similarly a time gap

exists between the execution of a deed and delivery. The undelivered "deed" is analogous to the "will" of a living person. Both are potentially legally effective instruments of transfer.

Treating delivery as separate and distinct from the elements of due execution is further justified by careful examination of *when* a deed is deemed legally effective as a transfer. Chancellor Kent noted that a deed "takes effect *only from the delivery*." n7 This statement accurately reflects the law as it has always been understood n8 and as it exists today. n9 Some state statutes codify this rule. n10 If indeed a deed is effective as of "date of delivery" rather than date of execution, the distinction between execution of a deed and its delivery is more clearly brought into focus. There is some evidence that modern day courts are consciously separating the elements of execution and delivery; n11 if this trend would continue, there would be greater clarity in the case law discussing the delivery requirement.

§ 83.03(b) Definition -- The Legal Test.

The definition and meaning to be given to the term "delivery" determines whether, in a given instance, a deed is legally ineffective. In spite of the fact that literally hundreds of cases involve the issue of delivery, courts have generally either glossed over the definitional problem or have provided tests that are fundamentally inconsistent. The confusion surrounding the delivery issue is understandable in light of the primary meaning the law has given to the term "delivery."

The first and primary legal definition of "delivery" is an act by which the res or subject matter is placed within the actual or constructive possession or control of another. n12 Both Coke n13 and Blackstone, n14 in discussing delivery, used the term "tradition," a civil law term that emphasizes a transfer of possession. n15 The use of the term "tradition" implies that delivery of a deed connotes a change of possession with regard to the deed, which in the ordinary case, is a handing over of the deed by the grantor. Chancellor Kent's initial discussion of delivery likewise emphasizes the act of delivery as a handing over of the deed to the grantee or to a third party. n16 If "delivery" is indeed the common law equivalent of "tradition," the legal test for delivery will be formulated in terms of the grantor's physical relationship to, or power over, the written instrument. n17

A critical examination of the case law pertaining to the delivery of deeds reveals that the definition of delivery, as applied to deeds, is not the same as the "traditional" concept of delivery. The touchstone for delivery in deed cases is the intent of the grantor -- the intent to pass title immediately to the grantee. n18 As so formulated, the test for delivery involves a mental process, not a physical one. n19 The term "delivery," with its accompanying baggage of "tradition," the handing over of the thing, is ill-suited to describe the essence of what is involved -- the passage of legal title from the grantor to the grantee. n20 It is understandable that the law of delivery is muddled and confused, given the fact that the touchstone term (delivery) does not accurately describe what the law requires.

Whether or not the delivery requirement has been met is, in most cases, an extremely fact-sensitive issue. Oftentimes the evidence is conflicting as to what was the grantor's actual intent with regard to the passage of title. The evidentiary issues will be considered in the next subsection.

The two most recurrent delivery problems that arise in a modern day context are: (1) the significance of grantor's retained control over the deed and (2) the grantor's intention to have the deed take effect at the death of the grantor. A discussion of the former issue will follow; the next subsection will take up the latter issue.

There has been a great deal of unnecessary confusion as to the grantor's retained possession or control over the deed and the issue of delivery. If one goes back to the origins of the common law, an often-cited passage of Lord Coke reveals that the handing over of the deed is not required for delivery to be effective. Coke wrote that "as a deed may be delivered to a party without words, so may a deed be delivered by words without any act of delivery." n21 While a grantor's physical relationship to the deed may shed some light on the grantor's intention to pass title immediately, the legal test of delivery is *not* inextricably linked to the grantor's handing over of the deed or placing it beyond the

grantor's control. Blackstone's brief exposition of the delivery requirement equated "delivery" with "tradition," a term implying a handing over, a change of possession. n22 Chancellor Kent did not define "delivery"; his discussion of a deed being "delivered" to a grantee or a third party strongly suggests that delivery is accomplished by a handing over. n23 As these influential common law writers emphasized the physical relationship of the grantor to the deed, as opposed to the grantor's intention, it is not surprising that courts began to utilize a "tradition" approach in defining delivery. As an example of this approach, consider the following statement from a decision of the United States Supreme Court in 1865: "To constitute such delivery the grantor must part with the possession of the deed, or the right to retain it." n24 This statement glosses over the importance of ascertaining the grantor's intent and focuses upon the grantor's physical relationship to the deed. This statement, and many others like it, confuse the legal test for delivery with the evidence supporting the legal conclusion that the deed was delivered, i.e., that the grantor intended it to be presently operative.

Each jurisdiction formulates its own test of delivery; the variations existing in those formulations makes it difficult to make blanket pronouncements as to whether courts will require, as an element of delivery, that the grantor surrender physical possession or control over the deed. n25

As indicated above, modern day judicial decisions which have gone into some depth in discussing and determining the legal test for delivery tend to return to the original understanding of Lord Coke: delivery is a matter of the grantor's intent; manual transfer of the deed is not indispensable to delivery but is evidence of delivery. n26

This is not to say, however, that modern day judicial decisions emphasizing the importance of the grantor's intention as the critical inquiry in delivery case ignore manual tradition. Decisions are still being handed down which emphasize the importance of manual tradition, some of which can be read as imposing a requirement that a deed must be "handed over" in order to satisfy the delivery requirement. n27 It is submitted that the true significance of a deed being "handed over" lies not in the test for delivery, but the proof of delivery, a topic to be discussed in the next section.

§ 83.03(c) Deeds Testamentary in Nature.

As previously noted, the touchstone of delivery is the grantor's intention *to effectuate a present transfer*. Focusing upon the "present transfer" aspect of delivery highlights the well-recognized distinction the law has always made between transfers inter vivos and transfers testamentary. The former are transfers "among the living"; the passage of legal title occurs when the grantor effectively manifests that intention. The "words of conveyance" of a deed, the verbs which are necessary for a deed to be in proper form, n28 are usually written in the present tense. The operative words become effective when delivery occurs, but this must occur prior to the grantor's death. The reason for this requirement is that transfers of real estate at death must take place by will, not by deed. A transfer taking place at the death of the owner is said to be "testamentary." Testamentary transfers are governed by the statutes of wills, which impose differing formalities requirements than the law of deeds. Owners of real estate desiring to give away their property at death need to comply with the statute of wills. The law of deeds is concerned with conveyances, which, by definition, are transfers by the owner while alive. n29

In theory the inter vivos testamentary distinction is sharp and clear; in practice it is murky and blurred. In theory at least the courts have articulated a test for determining whether a purported transfer is inter vivos or testamentary: Was there a passing of an interest from the transferor to the transferee during the transferor's lifetime? If so, the transfer is not testamentary and not subject to the statute of wills. n30 Despite the apparent clarity of this test, difficulties have arisen in applying this test in the modern era. Whether the source of this difficulty is the law of future interests, the modern day phenomenon of non-probate transfers, or other factors, is hard to say. What the present inquiry is concerned with is how the law of delivery and the rules pertaining to testamentary transfers become entangled and how the courts have addressed such issues.

For a variety of reasons, hundreds of cases deal with the general topic of deeds testamentary in nature. n31 Owners of

property are not keenly aware of the sharp division between inter vivos and testamentary transfers. Grantors of deeds may have some notion that they want to convey the property, but may be extremely vague about when this transfer is to take place. Grantors may be desirous of revoking their transfers later on, if, for whatever reason, they change their minds. Grantors may have conflicting motives and desires, for one purpose intending a transfer now and, for other purposes, a transfer later. Grantors may perform some actions consistent with immediate passing of title, and others inconsistent with the passing of title. Grantors may say certain things indicative of immediate passage of title and later contradict these statements. Grantors may want to attach conditions to the transfer though not expressed in the deed. As it is generally true in cases involving a disputed delivery issue, the cases involving deeds testamentary in nature are extremely fact sensitive. As might be expected the judicial decisions are not models of consistency, even in the same jurisdiction. Given these caveats as to the legal morass now being entered, we proceed to analyze the state of the law pertaining to this topic.

In at least three identifiable types of cases it might be claimed that the grantor's purported conveyance fails for lack of delivery because the grantor was attempting to utilize a deed to effectuate a testamentary transfer:

> (1) The deed contains language which, by its terms, either states directly or implies that the grantor intends that the transfer take effect at the grantor's death;
>
> (2) The deed contains no language suggesting the title is to pass at the grantor's death, but the extrinsic facts and circumstances strongly imply this to be the grantor's true intention;
>
> (3) The deed, regular in form, is handed over to a third party with instructions that it be "delivered" to the grantee upon the grantor's death.

In the present discussion, the first type of case will be examined. The second category might be described as the "failure of delivery" cases, wherein the proof of delivery is lacking. Situations of this type will be discussed in the next section. The third category, the so-called "death escrow," will be taken up in § 83.05, *infra*.

Deed language that raises the issue of a purported testamentary transfer can take various forms. The most blatant example is a deed which states that "This deed is not to take effect until the death of the grantor" or equivalent language. This language can be taken literally: the grantor intends that title does not pass immediately, but only upon the grantor's death. So viewed the transfer is testamentary and subject to the statute of wills. As a *deed*, the instrument fails since there has been no interest presently transferred. n32 The trend in the more recent cases has been to sustain the validity of the deed in such type of case. n33

In so doing the courts have approached the problem as a constructional issue: the intent of the grantor is to be effectuated if at all possible. The legal test for finding the present transfer of an interest is the doctrine of estates. The courts construe the instrument as a transfer of a remainder to the grantee, with the grantor retaining a life estate. n34 By such construction, the deed is construed and validated all at once. n35

The case law reveals that there is other language contained in deeds which has engendered debate over whether the grantor is attempting a testamentary transfer. Some of the other types of provisions contained in deeds which have been challenged are: (1) the grantor reserves the power to revoke the deed; (2) the deed is effective only if the grantee survives the grantor; (3) the grantor reserves a power of sale. n36 Although there are conflicting decisions regarding the validity of each of these types of provisions, the modern trend in the case law is to sustain the validity of these provisions. n37 One court has interpreted a section of the Uniform Probate Code as effectively eliminating the delivery requirement in the case where the grantor intends to vest title at death. n38 The courts no doubt will continue to struggle with the concept of delivery in cases involving disguised testamentary transfers for the line between inter vivos and testamentary transfers is literally being assaulted in the light of the non-probate transfer "revolution." n39

(n3)Footnote 3. *See* §§ 82.06, 82.08, *supra*.

(n4)Footnote 4. Chancellor Kent, though proclaiming that delivery was an element of "due execution," was aware of the anomaly of considering delivery an element of due execution. Kent wrote that "It [the deed] must be delivered." Kent, *supra* note 2, at 446.

(n5)Footnote 5. R.G. Patton, the author of the section on "Deeds" in the American Law of Property, recognized this chronology in stating that in order for there to be a transfer by deed, an instrument had to be drafted satisfying local requirements, followed by due execution, "following which there must be a proper and sufficient delivery of the instrument." R.G. Patton, *in* 3 American Law of Property § 12.64 (A.J. Casner ed. 1952).

(n6)Footnote 6. For certain purposes, primarily relating to revocation, the will upon execution is deemed to be presently legally operative.

(n7)Footnote 7. Kent, *supra* note 2, at 446.

(n8)Footnote 8. Blackstone, *supra* note 1, at *307.

(n9)Footnote 9. *Jacobs v. Hafen, 875 P.2d 559 (Utah App. 1994).* A further illustration of the distinction between execution and delivery is the presumption that a deed is delivered on the date of its execution. See text at note 63 *infra* and cases cited. The Georgia Court of Appeals has, however, applied the test of delivery to a "security deed." *See Jones v. Phillips, 227 Ga. App. 94, 488 S.E.2d 692 (1997). Fisher v. Poole, 453 A.2d 408 (Va. 1982); Hicks v. Loveless, 714 S.W.2d 30 (Tex. App. 1986); Boteilho v. Boteilho, 564 P.2d 144 (Haw. 1977).* Whether acceptance is necessary to complete the transfer will be considered in § 83.07, *infra*. Once delivery has taken place and title has vested in the grantee, subsequent alteration of the deed does affect the title of the grantee. *See Lindley v. Lindley, 991 P.2d 202 (Okla. 1998); Julian v. Petersen, 966 P.2d 878 (Utah App. 1998).*

(n10)Footnote 10. *See* N.D. Cent. Code § 47-09-06; N.Y. Real Property Law § 244; Ariz. Rev. Stat. § 33-401.

(n11)Footnote 11. An example is the following statement from the Wyoming court: "To effect a conveyance transferring title, a deed must be both executed and delivered." *Lenhart v. Desmond, 705 P.2d 338 (Wyo. 1985).*

(n12)Footnote 12. Black's Law Dictionary 428 (6th ed. 1990).

(n13)Footnote 13. Coke, *supra* note 1, at 35b.

(n14)Footnote 14. Blackstone, *supra* note 1, at *307.

(n15)Footnote 15. Black's Law Dictionary 1495 (6th ed. 1990).

(n16)Footnote 16. Kent, *supra* note 2, at 446.

(n17)Footnote 17. This approach would parallel the development in the law of gifts of personal property, with its "delivery" requirement that emphasizes a change of possession of the subject matter of the gift. *See* Ray Brown, Ch. VII *Gifts of Chattels in* The Law of Personal Property (Walter Rausenbush ed. 3d ed. 1975).

The law of delivery applicable to gifts sometimes sneaks into the law of delivery of deeds. One example is the notion of "constructive delivery," well recognized in gift law cases, but inappropriate for deed delivery cases. The reason is that the duly executed deed is a classic example of symbolic delivery, which under the circumstances, is the only method by which one can transfer an intangible. Title to real estate, which is what is being conveyed by deed, is certainly an intangible. (The only possible exception might be a so-called registered or Torrens title). Some judges, in deed delivery cases refer to "constructive" delivery in situations where the deed is not handed to the grantee. *See, e.g., Lenhart v. Desmond, 705 P.2d 338 (Wyo. 1985).* North Dakota statutory law provides for "constructive delivery" in deed delivery cases. *See* N.D. Cent. Code § 47-09-09.

Stranger still is the utilization of the term gift "causa mortis" in deed delivery cases. *See e.g., Dalia v. Lawrence, 627 A.2d 392 (Conn. 1993).* The standard definition of the term gift causa mortis restricts its applicability to personal property. *See* R. Brown, *supra*, § 7.15.

A bankruptcy court, applying Tennessee law, has applied the delivery test to a deed of trust. *In re Cohee, 178 B.R. 154 (M.D. Tenn. 1995).* There is no precedent, it would appear, for applying the delivery requirement to a security instrument.

(n18)Footnote 18. *Matter of Estate of Rohrer, 646 N.E.2d 17,* (Ill. App. 1995) (modern view is that question of delivery is one of the grantor's intentions, citing New York case law); *West v. West By & Through West, 620 So. 2d 640 (Ala. 1993); Estate of Blettell v. Snider, 834 P.2d 505 (Or. App. 1992); Estate of O'Brien v. Robinson, 749 P.2d 154 (Wash. 1988)* (referring to delivery requirement as "fictional"); *Yunghans v. O'Toole, 581 P.2d 393 (Kan. 1978). See also* Roger Cunningham et al., The Law of Property, § 11.3 (2d ed. 1993) (hereinafter Cunningham) ("Delivery is a question of the grantor's intent"); Olin Browder, *Giving or Leaving -- What is a Will? 75 Mich. L. Rev. 845 (1977)* ("Deliver" defined as "objective manifestation of the grantor's intention that the conveyancing transaction has been concluded") (hereinafter cited as Browder).

(n19)Footnote 19. *Halleck v. Halleck, 337 P.2d 330 (Or. 1959).*

(n21)Footnote 21. Coke, *supra* note 1, 36a.

(n22)Footnote 22. Black's Law Dictionary 1495 (6th ed. 1990).

(n23)Footnote 23. Kent, *supra* note 1, at 446.

(n24)Footnote 24. *Younge v. Guilbeau, 70 U.S. 636, 641 (1865).*

(n25)Footnote 25. The case of *Brtek v. Cihal, 515 N.W.2d 628 (Neb. 1994),* illustrates the confusion in this area. The court in two different places in its opinion emphasizes the importance of the grantor's parting with dominion over the instrument. However, in the court's syllabus to *Brtek* the court stated that "it is not necessary, to effectuate delivery, that a deed actually be handed over to the grantee" and that the intention of the grantor controls. It is one thing to have contradictory statements from the same court in two different cases; it is quite another to have contradictory statements in the same opinion. UnfortuNat'ly *Brtek* does not stand alone in this regard. *See also First Union Nat. Bank v. Shealy, 479 S.E.2d 846 (S.C. App. 1996)* (effective delivery contains two parts -- intention and stripping of control).

A 1963 annotation deals specifically with this topic. *See* Annotation, *Sufficiency of Delivery of Deed Where Grantor Retains, or Recovers, Physical Possession, 87 A.L.R.2d 787 (1963).* The following two statements appear in this annotation under the heading "Essential elements of legal delivery":

> All the cases in this annotation support the proposition that it is not essential to legal delivery of a deed that physical possession of the instrument be transferred from grantor to grantee, but there is sufficient (that is, legal) delivery where the grantor by his acts, or words, or both, expresses his intention to relinquish all dominion and control over the instrument and to have become presently effective as a transfer of title.

87 A.L.R.2d at 793 (citations omitted).

> In determining whether there was a sufficient legal delivery where the grantor has retained, or regained, physical possession of the deed, the courts expressly held in the following cases, and tacitly recognized in all others in this annotation, that it is essential that the grantor lose dominion and control over the instrument.

87 A.L.R.2d at 795.

> Similar contradictory statements may be found in the legal encyclopedias.

(n26)Footnote 26. In addition to the cases cited in notes 18 and 19 *supra, see Hanson v. Harding, 429 S.E.2d 20 (Va. 1993)* (manual transfer of deed not always conclusive; grantor's intent makes delivery operative); *Shroyer v. Shroyer, 425 S.W.2d 214 (Mo. 1968)* (not necessary for delivery that deed be actually handed over the grantee). An excellent discussion of the delivery issue and its relationship to manual transfer is contained in *McMahon v. Dorsey, 91 N.W.2d 893 (Mich. 1958)* ("The modern inquiry places but little emphasis on manual tradition.")

(n27)Footnote 27. *Poling v. Northrup, 652 A.2d 1114 (Me. 1995)* (conveyance of title to property requires "manual transfer of the deed"); *McCook v. Coutu, 626 A.2d 1321 (Conn. App. 1993)* (delivery of deed includes act by which grantor parts with possession of it); *Sims v. Sperry, 835 P.2d 565 (Colo. App. 1992)* (delivery requires proof that grantor parted with possession and control over the deed); *Crowder v. Crowder, 798 S.W.2d 425 (Ark. 1990)* (grantor must lose dominion over the deed); *Estate of Atkinson v. Allied Fence & Imp. Co., 746 S.W.2d 709 (Tenn. App. 1988)* (though manual delivery is not necessary, delivery complete where grantor loses power to recall or reclaim deed).

As noted above, Arkansas is a state which has traditionally emphasized the grantor's relinquishment of power and control over the deed as an element of delivery. The Arkansas Court of Appeals decision in *Grimmett v. Estate of Beasley, 777 S.W.2d 588 (Ark. App. 1989)* did not impose this requirement in a deed delivery case. This aspect of the case is criticized in Note, *44 Ark. L. Rev. 219 (1991).*

Texas is another state which has defined delivery in terms of the grantor's intent and control over the deed. A representative example is *Jones v. Young, 539 S.W.2d 901 (Tex. App. 1976)* ("In order to constitute delivery, a deed of conveyance must be placed in the hands of the grantee, or within his control."). The *Jones* case is the only case cited to in the definition of "Delivery -- Deed" in Black's Law Dictionary. *See* Black's Law Dictionary 429 (6th ed. 1990). This case, while representative of one view of delivery, tends to mislead inasmuch as this definition of delivery implies that handing over of the deed is essential.

(n28)Footnote 28. *See* § 82.08(b), *supra*.

(n29)Footnote 29. The present discussion draws heavily upon the analysis of Professor Browder, *see* Browder, *supra* note 18.

(n30)Footnote 30. *Id.* at 847-54.

(n31)Footnote 31. *See* the sixty-seven page annotation, Annotation, *Effect on Validity and Character of Instrument in Form of Deed of Provisions Therein Indicating an Intention to Postpone or Limit the Rights of Grantee Until After the Death of the Grantor, 31 A.L.R.2d 532 (1953),* covering the general topic of "Deed Postponing Rights at Death." This annotation covers only testamentary deed cases wherein the deed language raises the issue of a testamentary transfer.

(n32)Footnote 32. *Gardner v. Thames, 154 S.E.2d 926 (Ga. 1967); Wheeler v. Rines, 375 S.W.2d 48 (Mo. 1964); Coulter v. Coulter, 26 So. 2d 344 (Miss. 1946). See* cases cited in Annotation, *Effect on Validity and Character of Instrument in Form of Deed of Provisions Therein Indicating an Intention to Postpone or Limit the Rights of Grantee Until After the Death of the Grantor, 31 A.L.R.2d at 585-93.* The state of Missouri has a unique statute which validates the testamentary deed provided the deed is recorded. Mo. Rev. Stat. § 461.025, as modified by S.B. 701 (1994).

(n33)Footnote 33. *Grimmitt v. Estate of Beasley, 777 S.W.2d 588 (Ark. 1989); Vigil v. Sandoval, 741 P.2d 836 (N.M. App. 1987); Ford v. Hegwood, 485 So. 2d 1044 (Miss. 1986). See cases cited in* Annotation, *Effect on Validity and Character of Instrument in Form of Deed of Provisions Therein Indicating an Intention to Postpone or Limit the Rights of Grantee Until After the Death of the Grantor, 31 A.L.R.2d 556-570.*

(n34)Footnote 34. The retention of a life estate by the grantor is not inconsistent with the passage of legal title to a grantee. This is elementary in the law of future interests.

(n35)Footnote 35. Professor Browder appears to favor this approach, calling it "enlightened construction." Browder, *supra* note 18, at 860. Professor Atkinson called this a "reasonable interpretation." Thomas Atkinson, the Law of Wills 187 (1953).

Viewing this matter solely as an issue of construction brings up the "construe to validate" phenomenon. In the law of wills, construction of a will is not possible until a court has found the instrument in question is, indeed a will. For an instrument to be declared a will, it must meet certain formalities requirements. An instrument is offered for probate, then admitted to probate, and the instrument is truly and legally a "will." At this point, because of ambiguity *in the will*, construction may be necessary. With regard to deeds, there is nothing exactly comparable to admission to probate. A court is asked to "construe" a deed in order that it might find that the instrument is, in fact, a deed. Courts invalidating testamentary deeds do so on the basis of a violation of a rule of law -- what the grantor intends cannot be given effect because to do so would transgress a rule of law. There is something of a sleight-of-hand approach in "construing" a deed to validate it, "enlightened" or not.

(n36)Footnote 36. The Annotation, *Effect on Validity and Character of Instrument in Form of Deed of Provisions Therein Indicating an Intention to Postpone or Limit the Rights of Grantee Until After the Death of the Grantor, 31 A.L.R.2d 532* exhaustively lists the various types of challenged provisions and how courts have construed them. These issues are addressed as well in 1 William Page, The Law of Wills §§ 6.5., 6.6. 6.7. (W. Bowe-D. Parker rev. 1960).

(n37)Footnote 37. The power of sale and power to revoke issues have been more prominent in the modern case law that the other issues. For a discussion of the validity of the power to revoke, *see* John Garvey, *Revocable Gifts of Legal Interests in Land, 54 Ky. L.J. 19 (1965).* Two modern day cases involving the validity of the grantor's reserved power of sale are: *Harris v. Neeley, 359 S.E.2d 885 (Ga. 1987)* (power sustained); *Wright v. Husky, 592 S.W.2d 899 (Tenn. App. 1979)* (power rendered deed testamentary and void).

(n38)Footnote 38. *Estate of O'Brien v. Robinson, 749 P.2d 154 (Wash. 1988)* (construing R.C.W.A. 11.02.090, the Washington equivalent of § 6-201 of the Uniform Probate Code as it existed before the 1989 revision of Article VI).

The Washington court's interpretation had been rejected by the Supreme Court of North Dakota. *See First Nat'l Bank v. Bloom, 264 N.W.2d 208 (N.D. 1978).* The Joint Editorial Board of the Uniform Probate Code agrees with the interpretation of the North Dakota court. *See* Uniform Probate Code § 6-101 (Comment) (Official 1991 Text 10th ed).

(n39)Footnote 39. For the details of this "revolution," *see* John Langbein, *The Non-probate Revolution and the Future of the Law of Succession, 97 Harv. L. Rev. 1108 (1984).* The blurring of the line between inter vivos and testamentary transfer will force the courts to re-evaluate the concept of delivery and its purpose in the modern day world.

CHAPTER 83 DONATIVE TRANSFERS

9-83 Thompson on Real Property, Thomas Editions § 83.04

AUTHOR: Professor Ronald R. Volkmer Creighton University School of Law

§ 83.04 Proof of Delivery: Presumptions.

[Go To Supp]

As indicated in the previous subsection, a deed may contain language which a court may conclude renders the deed "testamentary" and void for failure to comply with the statute of wills. Such a type of case is not the prototypical deed delivery case inasmuch as the determination is made without consideration of evidence extrinsic to the deed. The deed language is not the focal point in ascertaining whether the delivery requirement has been met. The touchstone for delivery in the grantor's intention, which is not revealed so much by what the deed says, but by the actions and words of the grantor. n40 The grantor's words and actions, n41 as well as the circumstances surrounding the execution of the deed, n42 are what the courts look to in ascertaining what the grantor intended. The overwhelming majority of cases state that the question of delivery is a factual issue. n43 Because the cases involving delivery are extremely fact-sensitive, precedent does not usually play a significant role in delivery cases.

The burden of proof in deed delivery cases is allocated by the courts in accord with the presumptions that courts apply in cases involving disputed delivery. Certain fact patterns give rise to a presumption of delivery. These presumptions, which might more accurately be referred to as inferences, shift the burden of going forward with the evidence. n44 The fact that a deed is acknowledged, does not, in and of itself, give rise to presumption of delivery. n45

The courts recognize and apply the following presumptions in deed delivery cases: (1) a presumption of non-delivery arising from the grantor's possession of the deed; (2) a presumption of delivery arising from the grantee's possession of the deed; and (3) a presumption of delivery arising from the recordation of the deed. n46 The presumption arising from possession is the most significant since it is arises in the vast majority of deed cases. Delivery to a third party for the benefit of a grantee, conditionally or unconditionally, occasionally occurs and will be addressed in § 83.05(b), *infra*. Recordation of deeds is the norm for commercial transactions; however, when it comes to gifts of real estate, the deed often goes unrecorded for some period of time.

With regard to all of the presumptions mentioned in this section, it is important to recognize that the presumptions are rebuttable, meaning that the parties against the presumptions operate to have the opportunity to present evidence to rebut the inference of delivery or non-delivery. As might be expected, in the vast majority of cases litigated, the

presumption is not rebutted. This fact simply points out the overriding significance of the role of presumption: the allocation of the burden of proof significantly affects the outcome of cases. n47

The significance of the grantor's retained possession of a deed was adverted to above in the discussion pertaining to the legal meaning of delivery. When an appellate court *defines* "delivery" in a fashion so as to imply a manual "tradition," the legal significance of such approach becomes obvious: The grantor's continued possession of a deed fails to fulfill the court's notion of the legal test for delivery. When a court emphasizes the grantor's intention as the touchstone, the court is more likely to then engage in the process of determining where the presumption lies, given the facts in the case relating to possession. The latter approach is more consistent with the historical and accepted meaning of "delivery," if not the popular meaning of the term. When courts emphasize the grantor's control over the deed as an element of delivery, they are mixing up the test for delivery with the proof of delivery.

An unrecorded deed, possession of which is retained by the grantor, raises a presumption of non-delivery. n48 This is the classic failure of delivery scenario, with the prototypical case being the deed found among the grantor's personal effects n49 or in the grantor's safety deposit box after death. n50 There are two circumstances where a court might not apply this presumption: (1) where the grantee had access to the deed, such as in a safety deposit box to which the grantee had access; n51 (2) where the grantor of the deed reserved a life estate. n52

A grantee's possession of the deed gives rise to presumption of delivery. n53 However, this presumption is rebuttable, by showing, for instance, that the deed was handed over for inspection, n54 or that possession of the deed was obtained without the grantor's consent. n55

A presumption of delivery arises from the fact that the deed is recorded, n56 but this presumption is rebuttable upon a showing of satisfactory evidence. n57 The fact that a deed is not recorded during the grantor's lifetime does not give rise to a presumption of non-delivery. n58 For this presumption to come into existence, the recording should have taken place during the grantor's lifetime, but this limitation is not always observed. n59 The fact that the grantee returns the deed to the possession of the grantor does not create a presumption of non-delivery. n60 When the grantee has possession of the deed and the deed has been recorded during the grantor's lifetime, the inference of delivery is exceptionally strong. n61

Delivery of a deed may be effectuated by handing the deed over to a third party for the benefit of the grantee. If the court is willing to consider the third party as the grantee's agent, there is no difference, legally speaking, between handing the deed over the grantee or the grantee's agent. n62

When a deed is dated, it presumed that the deed was delivered as of that date. n63 If the date of signing and date of acknowledgment are different, the courts are not in agreement as to which date should have priority. n64

(n3)Footnote 42. West v. West by & through *West, 620 So. 2d 640 (Ala. 1993)* (delivery to be ascertained "from all the surrounding circumstances"); *Estate of O'Brien v. Robinson, 749 P.2d 154 (Wash. 1998)* (look to "facts and

circumstances"); *Estate of Atkinson v. Allied Fence & Imp. Co., 746 S.W.2d 709 (Tenn. App. 1988)* (delivery may "inferred from the circumstances").

(n4)Footnote 43. *E.g., McCook v. Coutu, 626 A.2d 1321 (Conn. 1993); West v. West By & Through West, 620 So. 2d 640 (Ala. 1993); Estate of Dittus, 497 N.W.2d 415 (N.D. 1993); Brtek v. Cihal, 515 N.W.2d 628 (Neb. 1994)* (mixed question of law and fact); *UT Communs. Credit Corp. v. Resort Dev., 861 S.W.2d 699 (Mo. App. 1993)* (mixed question of law and fact). According to *Burgess v. Easley, 89 S.W.2d 87 (Tex. App. 1994), what* constitutes delivery is a "question of law," *whether* there has been delivery is a "question of fact." *Accord Markham v. Markham, 909 P.2d 602 (Haw. App. 1996)* (concurring and dissenting opinion).

(n5)Footnote 44. *See* 20*th Century Plumbing Co. v. Sfregola, 179 Cal. Rptr. 144 (1981)* (presumption arising from grantee's possession of deed is "prima facie" evidence of delivery; burden of proof shifted).

(n6)Footnote 45. *Matter of Estate of Shedrick, 462 N.E.2d 581 (Ill. App. 1984).*

(n7)Footnote 46. Annotation, *Sufficiency of Delivery of Deed Where Grantor Retains, or Recovers, Physical Possession, 87 A.L.R.2d 787, 792 (1963).*

(n8)Footnote 47. In some cases the courts seem to accord almost persuasive effect to the presumption raised. The fact that a court may say that a presumption "merely shifts the burden of proof onto the party questioning delivery," (*Energetic, Ltd. v. Whitmill, 497 N.W.2d 497, 505 (Mich. 1993)),* should not overshadow the reality of how presumptions operate: Allocating the burden of proof in deed delivery cases goes a long way in determining the outcome of the vast majority of deed delivery cases. This is not to say, however, that this judicial approach is illegitimate.

In many cases it is the lack of evidence what the grantor intended, or a bewildering mixture of facts as to what the grantor truly intended, that leaves a court guessing as to what the true intent of the grantor was. The rules pertaining to presumptions are common sense default rules which courts employ because the grantor's intent has not been clearly expressed. In an individual case the burden of proof is either on the grantee or the contestant challenging the deed. The presumptions are simply reflective of how the courts attempt to bring order to an oftentimes muddled situation, made more difficult by the fact that the person whose intent is in question, is oftentimes deceased at the time the controversy arises.

(n9)Footnote 48. Cunningham et al., *supra* note 18, § 11.3. The foregoing authority does not refer to this as a "strong" presumption, although this authority does state that a grantee's possession of a deed raises a "strong" presumption. When it comes to rebutting the presumption in either case, the cases are few and far between, especially when it comes to rebutting the presumption when the grantor retains possession of the deed. Authority for this statement may be found in cases *cited in* Annotation, *87 A.L.R.2d 796-818.* Things change dramatically, however, when the fact of recordation enter into the equation. As will be shown in note 58, *infra*, the presumption arising from recordation "trumps" the non-delivery presumption arising from the grantor's retained possession of the deed.

(n10)Footnote 49. *Brtek v. Cihal, 515 N.W.2d 628 (Neb. 1994)* (no satisfactory evidence that grantee had access to deed in grantor's dresser drawer; other testimony, including direct statement of grantee, indicated testamentary nature of transaction); *In re Estate of Darlington, 527 A.2d 159 (Pa. Super. 1987); Jones v. Jones, 470 So. 2d 1207 (Ala. 1985).*

(n11)Footnote 50. *First Nat'l Bank v. Bloom, 264 N.W.2d 208 (N.D. 1978). See also* cases *cited in* Annotation, *Sufficiency of Delivery of Deed Where Grantor Retains, or Recovers, Physical Possession, 87 A.L.R.2d 809-818 (1963).* If the grantor placed a deed in a safety deposit box to which the grantor had sole access, and there are no other facts supporting delivery, the purported deed could be said to fail for either (1) lack of delivery or (2) a purported testamentary transfer violative of the statute of wills. Delivery must occur during the grantor's lifetime, of course, so it could be argued that all "failure of delivery" cases are failed attempts at testamentary dispositions. That conclusion is

not justified by existing case law. Nor is it accurate to say that all testamentary deed cases are disguised failure of delivery cases. *See, e.g., Matter of Estate of Dittus, 497 N.W.2d 415 (N.D. 1993)* (court held deed in safety deposit box not legally effective because grantor intended testamentary transfer thus making it "unnecessary" for court to discuss delivery issue). *Chaney v. Waddell, 624 So. 2d 545 (Ala. 1993)* (eight deeds in grantor's safety deposit box post death; no delivery even though one grantee had access to box).

(n12)Footnote 51. The judicial decisions are conflicting in the situation where the deed was placed in a safety deposit box to which the grantee had access. *See* Cunningham et al., *supra* note 18, § 11.3 n.10. It is understandable that the results are varied: some courts might view the grantee "in possession" of the deed (with a resulting presumption of delivery) while courts might emphasize the fact that the grantor has not been stripped of dominion or control of the deed. Of course, other factors might enter, such as the statements of the grantor and others with regard to *when* the deed was to take effect (possible testamentary intent). *See Matter of Estate of Dittus, 497 N.W.2d 415 (N.D. 1993)* (grantee received key to safety deposit box; delivery failed because grantor intended a testamentary transfer). The surrounding circumstances might include other factors as well, such as control over the property, payment of taxes, etc. If the grantor is alive and able to testify, the person whose intent is in question can be asked directly what that intent was. *See Lenhart v. Desmond, 705 P.2d 338 (Wyo. 1985)* (grantor's testimony accepted).

(n13)Footnote 52. *Barker v. Nelson, 812 S.W.2d 477 (Ark. 1991); Grimmett v. Estate of Beasley, 777 S.W.2d 588 (Ark. App. 1989).* The same theory would apply to a deed naming the grantee as a joint tenant. *First Nat'l Bank & Trust Co. of Rogers v. Estate of Hummel, 758 S.W.2d 418 (Ark. App. 1988). See also Rhodes v. Hunt, 913 S.W.2d 894 (Mo. App. 1995)* (grantor's tenants by entirety reserved life estates to themselves); *Estate of Sabbs v. Cole, 57 Ark. App. 179, 944 S.W.2d 123 (Ark. App. 1997)* (reserved life estate; no requirement that deed pass beyond grantor's control).

(n14)Footnote 53. *Waxler v. Waxler, 699 A.2d 1161 (Me. 1997)* (transfer of physical possession of deed; presumption that title immediately passes); *Hanson v. Harding, 429 S.E.2d 20 (Va. 1993); Estate of Blettell v. Snider, 834 P.2d 505 (Or. App. 1992); Estate of Atkinson v. Allied Fence & Imp. Co., 746 S.W.2d 709 (Tenn. App. 1988); Matter of Estate of Williams, 496 N.E.2d 547 (Ill. App. 1986).*

(n15)Footnote 54. *Jorgensen v. Crow, 466 N.W.2d 120 (N.D. 1991); Walter v. Grover, 540 A.2d 120 (Me. 1988); Romero v. Romero, 611 P.2d 1119 (N.M. 1980).*

(n16)Footnote 55. *Lenhart v. Desmond, 705 P.2d 338 (Wyo. 1985). See also McCaslin v. Hamilton, 726 S.W.2d 713 (Ky. App. 1984)* (deed was conditioned upon entry of divorce decree, which never occurred).

(n17)Footnote 56. *Jacobs v. Hafen, 875 P.2d 559 (Utah App. 1994)* (citing Utah Code Ann. § 57-4a-4(1)(d)); *UT Communs. Credit v. Resort Dev., 861 S.W.2d 699 (Mo. App. 1993); Giefer v. Swenton, 928 P.2d 906 (Kan. App. 1996)* (recordation creates presumption); *Gross v. Gross, 781 P.2d 284 (Mont. 1989); Dinius v. Dinius, 448 N.W.2d 210 (N.D. 1989); Baker v. Pattee, 684 P.2d 632 (Utah 1984); Boteilho v. Boteilho, 564 P.2d 144 (Haw. 1977).*

(n18)Footnote 57. *In re Estate of Tucker, 881 S.W.2d 226 (Ark. App. 1994)* (presumption rebutted); *Johnson v. Ramsey, 817 S.W.2d 200 (Ark. 1991); Crowder v. Crowder, 798 S.W.2d 425 (Ark. 1990); Odom v. Forbes, 500 So. 2d 997 (Miss. 1987); Lenhart v. Desmond, 705 P.2d 338 (Wyo. 1985).*

(n19)Footnote 58. *Cantrell v. Henry, 696 S.W.2d 12 (Tenn. App. 1985).* What this means as a practical matter is that the presumption arising from the grantee's possession of the deed is not somehow "trumped" by the grantee's failure to record the deed.

(n20)Footnote 59. *Sargent v. Baxter, 673 So. 2d 979 (Fla. App. 1996)* (deed not recorded before grantor's death; no presumption of delivery obtained); *Jones v. Jones, 470 So. 2d 1207 (Ala. 1985)* (deed recorded six weeks after grantor's death; no presumption). *Compare Farrell v. Stinson, 11 N.W.2d 701 (Iowa 1943)* (deed recorded post-death gave rise to presumption of delivery). Delivery must take place during the grantor's lifetime. How can anything that occurs after the grantor's death prove the grantor's intent to make the conveyance presently operative? The *Farrell* holding regarding

post-death recording is not the only bizarre ruling in this area. In *Bulifant v. Slosjarik, 277 S.E.2d 151 (Va. 1981),* the court stated that a presumption would not arise from the "mere fact" of recordation where the deed was recorded for many years after its execution and "no satisfactory explanation accounts for its whereabouts during the intervening period."

(n21)Footnote 60. *Payne v. Carver, 534 So. 2d 566 (Ala. 1988); Meadows v. Brich, 606 S.W.2d 258 (Mo. App. 1980); Yunghans v. O'Toole, 581 P.2d 393 (Kan. 1978).*

(n22)Footnote 61. Despite the fact the grantor continues to live on the property, pay the taxes, and generally act as owner until death is not as significant as the "double" presumption obtaining from the grantee's possession of the deed and the recording of it during the grantor's lifetime. Even if the grantor made statements to the effect that the grantee was to receive the property at the grantor's death, the court may still find a delivery during the grantor's lifetime. *See, e.g., Dalia v. Lawrence, 627 A.2d 392 (Conn. 1993).* A court desirous of sustaining such arrangements might, in candor, simply state that the grantor intended to reserve a life estate and convey a remainder and that is how the deed will be construed despite the fact that the deed does not say that. As will be shown in § 83.05(b), *infra*, in so-called "death escrow" cases, the courts have had no difficulty in reaching that conclusion despite the fact that the deed language itself is not susceptible of that construction.

(n23)Footnote 62. *Buckley v. Chevron, U.S.A., Inc., 565 N.Y.S.2d 419 (1991); Vigil v. Sandoval, 741 P.2d 836 (N.M. 1987); Morelos v. Morelos, 631 P.2d 136 (Ariz. App. 1981); Arwe v. White, 381 A.2d 737 (N.H. 1977). Compare Poling v. Northrup, 652 A.2d 1114 (Me. 1995)* (no "per se rule" prohibiting delivery "to one's own agent." emphasizing intent of grantor as controlling criterion).

(n24)Footnote 63. *Braun v. Consolidated Rail Corp., 551 N.Y.S.2d 946 (1990); Hicks v. Loveless, 714 S.W.2d 30 (Tex. App. 1986).* This presumption is rebuttable. *D'Urso v. Scuotto, 489 N.Y.S.2d 294 (1985); Mackiewicz v. J.J. & Assocs., 514 N.W.2d 613 (Neb. 1994). Mizell v. Deal, 654 So. 2d 659 (Fla. App. 1995)* (presumption stated). *See also Graves v. Hutchinson, 659 N.E.2d 1212 (Mass. App. 1996)* (presumption rebutted); *Burgess v. Easley, 893 S.W.2d 87 (Tex. App. 1994)* (presumption rebutted); *Whalen v. Harvey, 1997 WL 17918 (App. Div. 1997).* Montana has a statutory presumption that the date of execution is the date of delivery. Mont. Code Ann. § 70-1-509.

(n25)Footnote 64. *See Keith v. Keith, 599 S.W.2d 214 (Mo. App.1980)* (deed presumed delivered on date of acknowledgment); *Watson v. Watson, 497 A.2d 794 (Md. 1985)* (statutory presumption of date of acknowledgment, citing Md. Code Ann., Real Prop., § 3-301). *Compare Fetzer v. Cities Serv. Oil Co., 572 F.2d 1250 (5th Cir. 1978)* (date of execution presumed delivery date even though later acknowledged). In the usual case the date of execution and acknowledgment are one and the same and that date is presumptively the date of delivery. *Matter of Laue's Estate, 589 P.2d 558 (Kan. 1979).* If the property involved is such that local law requires an acknowledgment for the deed to be valid, as in the case of homestead property, it would seem logical that in such case the date of acknowledgment should be governing.

CHAPTER 83 DONATIVE TRANSFERS

9-83 Thompson on Real Property, Thomas Editions § 83.05

AUTHOR: Professor Ronald R. Volkmer Creighton University School of Law

§ 83.05 Conditional Delivery.

[Go To Supp]

Delivery upon a condition has been a part of the common law of deeds from its origins. In their writings on this topic, the common law authorities drew a distinction between a delivery to the grantee and a delivery to a "stranger," n65 i.e., someone other than the grantee. By and large, this distinction survives in modern day law.

§ 83.05(a) Between Grantor and Grantee.

The deed language may create a conditional estate in the grantee, but according to the common law, the grantor may not make delivery to the grantee upon a condition not expressed in the deed. n66 Otherwise stated, the rule is that the deed cannot be delivered in escrow to the grantee. Invalidating the oral condition leaves the grantee with title free of the condition expressed, in derogation of the grantor's intent. Since the expressed intention of the grantor is not being given effect, the rule being applied is a rule of law. Given the modern trend toward effectuation of the grantor's intent and away from rules of law that have feudal origins, n67 what modern day justification exists for the common law rule?

Viewed solely from the standpoint of the grantor and the grantee, the vitality of the common law rule depends upon how much one is concerned with evidentiary considerations. n68 When it comes to the policy of protecting the rights of innocent third parties, the common law rule makes good sense, inasmuch as the policies implicated here are the stability of land titles and the protection of bona fide purchasers under the recording acts. n69 There are a few cases in which the courts have enforced the oral condition, but it is difficult to determine whether this is an emerging trend. n70

§ 83.05(b) Third Party Delivery -- Death Escrow.

Blackstone wrote that delivery may be "to a third person, to hold till some conditions be performed on the part of the grantee, in which case it is not delivered as a deed, but as an escrow." n71 Thus the term "escrow" originally referred to the deed which was conditionally delivered. In modern day practice it is usually said that the deed is delivered "in escrow" to the third party, who is known as the escrow agent. This person is to hand the deed over to the grantee upon the happening of the stated event or condition. The modern day escrow is typically found in commercial real estate transactions, not donative transfers. n72

The prototypical conditional delivery case in the donative transfer area is the so-called "death escrow": the grantor handing over a deed to a third party with instructions to deliver the deed upon the grantor's death. n73 This transaction has overtones of a disguised testamentary transfer for it appears that the transfer of title from the grantor to the grantee takes place at the grantor's death without compliance with the statute of wills. In short the arrangement appears as intended as a substitute for a will. The same considerations that were present in the previous discussion n74 relating to "Deeds Testamentary in Character," are relevant to the death escrow. n75

The first difficulty with the death escrow is the nature of the condition: the death of the grantor. This is not a true condition; it is not a question whether the grantor will die, but when. If, however, there are other conditions which the grantor places on the transfer, such as survivorship by the grantee, a true condition is present, i.e., one over which the grantor has no control. Courts have generally refused to recognize the death escrow when these additional conditions are present, n76 but these decisions have been criticized on the grounds that the courts are laboring under a misconception as to the delivery requirement. n77

The validity of the death escrow will depend upon the finding the court makes with regard to the transfer to the third party: If the delivery to the third party is deemed irrevocable, with the grantor having no power of recall, the death escrow will be held valid. On the other hand, if the court finds that the grantor retained a power to recall the deed, the death escrow will fail. n78 Placing the emphasis on the grantor's ability to recall is consistent with: (1) the gift theory of the transaction, i.e., grantor has made an *irrevocable* transfer during lifetime; (2) the idea that delivery encompasses a manual transfer of the deed itself (the "tradition" theory of delivery). As might be expected death escrow cases are extremely fact sensitive in that the grantor and third party might have had different understandings with regard to the grantor's right to recall the deed. n79 From a policy standpoint, the question whether a court ought to sustain a death escrow even though the transfer to the third party is revocable is debatable. Given the fact that courts sustain *express* powers to revoke in deeds and given the proliferation and acceptance of non-probate devices, it might be argued that the death escrow should be sustained even if the grantor reserves a right of recall. It might be argued that the transaction bears essential similarity to a revocable inter vivos trust. On the other hand, the express right to revoke and the revocable inter vivos trust are memorialized by writings. Due respect for the wisdom of the policies underlying the Statute of Frauds and the parol evidence rule suggest that the law's traditional treatment of death escrows is justified and salutary, based on firm public policy bases. n80

If a court sustains a death escrow, subsidiary questions ensue: (1) when does the transfer of title take place?; (2) what estates are created in the grantor and grantee? As to the former issue, the common law authorities stressed the fact that the transfer of title actually takes place upon the "second delivery," i.e., from the escrow agent to the grantee. n81 On the other hand there is a well-established legal fiction to the effect that the transfer of title will "relate back" to the first delivery when, in the words of Kent, "justice requires a resort to fiction." n82 Predictability is hard to come by with such a guideline. On the other hand, resort to the fiction may become unnecessary in light of how courts have responded to the second issue. When sustaining the validity of the death escrow, some courts explicitly state that the effect of such transaction is to transfer a future interest to the grantee, with the grantor retaining a life estate. n83 This is, of course, not what the deed states but given the court's tendency to sustain the death escrow as another form of a "poor man's will," the result is not surprising. This construction conveniently explains the grantor's possession of the property until death, payment of taxes, receipt of income, etc. On the other hand, the life estate-remainder construction runs roughshod over the deed language, which is more than slightly problematic in view of the Statute of Frauds. Moreover, the deed is "construed" in a factual setting where the deed language is not ambiguous. There is a theoretical and conceptual difficulty with this as well. n84

CHAPTER 83 DONATIVE TRANSFERS

9-83 Thompson on Real Property, Thomas Editions § 83.06

AUTHOR: Professor Ronald R. Volkmer Creighton University School of Law

§ 83.06 Acceptance.

[Go To Supp]

There are semantical n85 and conceptual issues pertaining to acceptance by the grantee. Happily enough, these issues arise infrequently because the number of cases relating to acceptance by the grantee pale in comparison to the number of cases relating to deed delivery.

When the problem of delivery was first discussed the question arose as to whether "delivery" was to be regarded as a part of "due execution" of a deed. A similar issue arises as to whether "delivery" includes "acceptance." Recall from prior discussion relating to delivery the clearly accepted principle that a deed takes effect, or becomes operative, "upon delivery." In other words, passage of legal title takes place "upon delivery." If this is literally true, then acceptance by the grantee is not necessary to complete the transfer of legal title. The question now becomes: what is acceptance? Is the final act in the conveyancing process required before the conveyance is deemed legally effective? Is it simply a method by which a grantee is allowed to disclaim title to property previously vested in the grantee? These theoretical issues are seldom discussed in the case law; the prototypical deed acceptance case revolves around the question of whether the grantee accepted or not. n86 The traditional analysis pertaining to acceptance follows upon the same lines as the delivery issues: (1) how does one define the term, or otherwise stated, what is the legal test for acceptance? and (2) how does one go about proving acceptance? and (3) what presumptions exists in law pertaining to acceptance?

The rule in England was that delivery of the deed was sufficient for passage of legal title. The title passed to the grantee, with the right of the grantee to disclaim. n87 The American courts treat acceptance differently, however, stating as a general rule that in order for the title to be transferred to the grantee, acceptance by the grantee must be shown. n88 The basis for this general rule is the idea that the grantor cannot unilaterally "force title" upon the grantee. n89 When it comes to establishing proof of acceptance, the grantee's intention is paramount, for it is the intention of the grantee to take title that is controlling. n90 Proof of that intent is supplied by the acts, conduct or declaration of the grantee. n91 Any words or conduct of the grantee in acquiescing to the transfer are legally sufficient to prove acceptance. n92 Proof of delivery is aided greatly by the well-recognized presumption of acceptance: It is assumed that the grantee would accept a beneficial interest and thus acceptance will be presumed, absent a showing of contrary intention. n93 The presumption of acceptance is especially helpful when the grantee is capable of legally taking title, but can only act

through a fiduciary, such as cases involving minors and persons under a disability. n94 The grantee, in accepting the property may impose conditions to the acceptance. n95

The grantee's ability to refuse acceptance of a gift is comparable to the ability of a devisee or heir to refuse acceptance of a testamentary gift. This body of law has traditionally been subsumed under the title of "disclaimers" or "renunciation." The trend in recent years has been a statutory codification of this law, as well as an expansion of the applicability of disclaimers. One of the effects of this legislation is to clarify how one disclaims and the placing of time limits on the filing of disclaimers. The latest version of the Uniform Probate Code contains a provision setting forth rules for disclaimers of real property interests under a deed. n96 These provisions set forth specific rules for the procedure, the time limits and legal effects of the disclaimer. Enactment of legislation similar to the Uniform Probate Code provisions would greatly clarify the law pertaining to non-acceptance of gifts of personal property and inter vivos transfers of real estate.

It is likely that more and more donees of real estate will be extremely cautious in accepting gifts of real estate. There are a variety of reasons one might cite for refusing to take title in modern day law. These reasons include: (1) concern over liability issues relating to tort liability and potential environmental hazards, n97 (2) uncertainty over the legal effect of using a "deed in lieu of foreclosure," n98 and (3) taking title to a "white elephant." n99 Under existing law there is little guidance as to how one goes about refusing to accept a gift of real property and what time limitation governs.

When the grantee of a deed is a governmental entity, special considerations might apply. Local statutory law might require that the entity take formal action to accept a gift of real estate before such transfer is legally effective.

FOOTNOTES:

(n1)Footnote 85. One court, in discussing the differing theories of acceptance, referred to the debate as "mostly over semantics." *Arwe v. White, 381 A.2d 737 (N.H. 1977). See also* Cunningham et al., *supra* note 18, § 11.3, referring to the concept of acceptance as a "highly artificial one."

(n2)Footnote 86. The two relatively modern cases which go into some detail with regard to the theoretical issues are: *Halleck v. Halleck, 337 P.2d 330 (Or. 1959)* and *Arwe v. White, 381 A.2d 737 (N.H. 1977).* The issue of acceptance gets troublesome in cases involving transfers taking effect at the grantor's death -- the problem, once again, of deeds testamentary in character. If acceptance by the grantee takes place after the death of the grantor (the grantee being unaware of the deed), there is the very problematic issue of transfer of grantor's title post-death. It is not surprising that the two decisions cited, *supra* examine the problem of acceptance in the context of facts raising a testamentary transfer issue.

(n3)Footnote 87. American Law of Property, *supra* note 5, § 12.70 n.3. This approach has an analogue in trust law in this country -- title vests in the trustee subject to disclaimer. *Adams v. Adams, 88 U.S. 185 (1874).*

(n4)Footnote 88. *See generally* Cunningham et al., *supra* note 18, § 11.3, n.29; Annotation, *What Constitutes Acceptance by Grantee, 74 A.L.R.2d 992 (1963).* The Oregon Supreme Court adopted the English rule in *Halleck v. Halleck, 337 P.2d 330 (Or. 1959).*

(n5)Footnote 89. *County of Worth v. Jorgenson, 253 N.W.2d 575 (Iowa 1977).* This rationale might be dubbed the "looking a gift horse in the mouth" theory. Besides this very practical oriented rationale, the courts have probably been influenced, *sub silentio*, by the rule pertaining to gifts in personal property -- acceptance being treated as one of the three "elements" of a gift. *See, e.g., Gruen v. Gruen, 496 N.E.2d 869 (N.Y. 1986).*

(n6)Footnote 90. Annotation, *What Constitutes Acceptance by Grantee, 74 A.L.R.2d 992, 996 (1963).* The term "acceptance" has a legal meaning as distinct from its popular meaning. A jury instruction as to that legal meaning is required. *B-T Ltd. v. Blakeman, 705 P.2d 307 (Wyo. 1985); Langman v. Alumni Ass'n of the Univ. of Va., 442 S.E.2d 669 (Va. 1994)* (acceptance not determined by presence or absence of grantee's signature on deed but by factual

evidence of the grantee's actions tending to prove acceptance or renunciation).

(n7)Footnote 91. *Id.* at 996-998.

(n8)Footnote 92. *UT Communs. Credit Corp. v. Resort Dev., 861 S.W.2d 699 (Mo. App. 1993)* (subsequent actions of grantee in dealing with property showed acceptance); *Arwe v. White, 381 A.2d 737 (N.H. 1977).*

(n9)Footnote 93. *Langman v. Alumni Ass'n of the Univ. of Va., 442 S.E.2d 669 (Va. 1994); Collins v. Columbia Gas Trans. Corp., 425 S.E.2d 136 (W. Va. 1992);* Cunningham et al., *supra* note 18, § 11.3 n.30; American Law of Property § 12.70; Annotation, *What Constitutes Acceptance by Grantee, 74 A.L.R.2d 992 (1963).* If the grant is not beneficial to the grantee, the presumption does not obtain. *C.U.N.A. Mortg. v. Aafedt, 459 N.W.2d 801 (N.D. 1990).* This statement elaborates upon the idea that the presumption of acceptance is rebuttable and indicates under what circumstances the presumption might automatically disappear.

(n10)Footnote 94. In addition, the presumption might be applied in situations where the grantee was unaware of the deed. Cunningham et al., *supra* note 18, § 11.3, n.31.

(n11)Footnote 95. *Sun Exploration & Prod. Co. v. Benton, 728 S.W.2d 35 (Tex. 1987).*

(n12)Footnote 96. For further discussion, *see* § 82.07, *supra*.

(n13)Footnote 97. Federal and state legislation may impose personal liability on the title holder for clean-up of environmental hazards.

(n14)Footnote 98. *See C.U.N.A. Mortg. v. Aafedt, 459 N.W.2d 801 (N.D. 1990); Martin v. Uvalde Sav. & Loan Ass'n, 773 S.W.2d 808 (Tex. App. 1989).*

(n15)Footnote 99. *County of Worth v. Jorgenson, 253 N.W.2d 575 (Iowa 1977).*

CHAPTER 83 DONATIVE TRANSFERS

9-83 Thompson on Real Property, Thomas Editions § 83.07

AUTHOR: Professor Ronald R. Volkmer Creighton University School of Law

§ 83.07 Drafting Considerations.

Because issues of donative transfers of real estate usually focus on the question of delivery, the problems associated with donative transfers do not generally raise drafting problems. Many of the delivery issues encountered in this Chapter are caused by the transferor's attempt to utilize a deed as a will substitute. In certain instances the language of the deed evidences that intent. The lawyer drafting a deed must determine whether the transferor is in fact attempting a disguised testamentary transfer. Language in a deed which states that title passes at the grantor's death is an invitation to litigation and should be avoided. If the grantor desires to convey and retain an interest at the same time, the drafting lawyer needs to be conversant with the law of future interests in order to accomplish what the grantor desires. While some courts may be willing to construe an instrument so as to imply a reserved life estate in the grantor, the drafting attorney should not assume that all courts will act in such fashion. From an estate planning standpoint, there may be advantages and disadvantages to a reserved life estate. If the grantor wants to simultaneously transfer an interest and retain an interest, the life estate-remainder option should be explored. If this option is selected, the language of the deed should make it clear that those estates are being created. If a lawyer discovers that what the client actually wants is a transfer taking place at the transferor's death, the lawyer should advise the client that a will is the appropriate instrument, not a deed. To the extent that a client desires to deed property and reserve a power of revocation or sale, the lawyer should ascertain whether, under local law, such provisions are valid.

Death escrow cases usually do not involve a writing. It is certainly advisable that in all escrow situations, death or commercial, that the escrow agreement be in writing. The escrow agreement should make it clear under what conditions the deed is to be handed over to the grantee. A well-drafted written escrow agreement is usually present in cases involving commercial escrows. Unfortunately, in death escrow cases, the typical scenario is a deed absolute in form being handed over to a third party for delivery upon death of the grantor. In most cases of this type, lawyers are not even involved. If lawyers are involved in the planning stage, the transferor would likely be advised to employ some other legal option.

Acceptance by the grantee does not ordinarily bring into play any special drafting considerations. From the standpoint of the grantor, it is ordinarily assumed that the grantee will accept the gift of real estate. This approach ignores, however, the possibility that a grantee may disclaim. Whether a grantee under a deed is permitted under local law to disclaim is governed by local law. Section 2-801 of the Uniform Probate Code n100 allows disclaimer by a person "to

whom an interest in or with respect to property or an interest therein devolves by whatever means." This language permits a grantee under a deed to disclaim. This section of the Uniform Probate Code goes on to state that the transferor may not defeat the right to disclaim. n101 However, the creating instrument can specify who takes in the event of disclaimer. n102 Thus a lawyer drafting a deed might consider the possibility of the grantee disclaiming and if this happens, who the alternative taker should be. The topic of disclaimer has traditionally been associated with devisees and trust beneficiaries, not grantees. However, the potential liability that might exist in becoming the legal titleholder of land might cause more and more grantees to consider refusing a gift of real estate. n103

Supp. To CHAPTER 83 DONATIVE TRANSFERS

9-83 Thompson on Real Property, Thomas Editions Supp. to § 83.03

Supp. to § 83.03 Delivery.

[Go To Main]

§ 83.03(a) Introduction and Background. [Go To Main]

The Supreme Court of Mississippi has echoed the sentiments of Coke and Blackstone in stating that "*such instrument is not a deed until delivery*," presumably conveying the notion that "delivery" is a constitutive element of a "good deed." *In re Estate of Hardy, 910 So. 2d 1052 (Miss. 2005)* .

Add:

Watson v. Tipton, 274 S.W.3d 791 (Tex. App. 2008) (title vests upon execution of the deed and delivery); *Ligon v. City of Detroit, 739 N.W.2d 900 (Mich. App. 2007)* (deed takes effect from time of delivery); *Stone v. Jetmar Properties, LLC, 733 N.W.2d 480 (Minn. App. 2007)* (effective day of deed is usually stated to be date of delivery).

Whether a deed is effective as of the date of delivery has been the subject of recent court rulings pertaining to Medicaid eligibility and the so-called "look back" period. The discussion in these recent cases is whether the deed's effective date is the *date of recording*, rather than the date of delivery.

Compare H.K. v. State, Dept. of Human Services, Div. of Medical Assistance and Health Services, 877 A.2d 1218 (N.J. 2005) (delivery date was governing) *with Kinasz-Reagan v. Ohio Dept. of Job & Family Servs., 842 N.E.2d 1067 (Ohio App. 2005)* (date of recording was governing).

Walls v. Click, 550 S.E.2d 605 (W. Va. 2001) (deed takes effect "from its actual delivery or constructive delivery").

Add:

On the other hand, some modern day decisions continue to stress that "delivery" is a definition component of "deed." *See, e.g., In re Estate of Hardy, 805 So. 2d 515 (Miss. 2002)* ("such instrument is not a deed until delivery").

§ 83.03(b) Definition--The Legal Test. [Go To Main]

Add [at end of the Cohee case discussion]:

See also Defendant A v. Idaho State Bar, 978 P.2d 222 (Idaho 1999) (discussing delivery requirement in regard to a deed of trust).

Cook v. Hall, 778 N.W.2d 744 (Neb. App. 2009) .

Barmore v. Perrone, 179 P.3d 303 (Idaho 2008) (A deed "does not take effect as a deed until delivery with intent that it shall operate")

Orud v. Groth, 652 N.W.2d 447 (Iowa 2002) (delivery determined by grantor's "acts or words or both").

Add:

Ward v. Ward, 874 N.E.2d 433 (Mass. App. 2007) (manual delivery of the deed is not necessary to effectuate a transfer of title when the grantor has indicated his intention to deliver by executing and recording the deed).

Hogg v. Wolske, 130 P.3d 1087 (Idaho 2006) (delivery established even though grantor retained possession of deed).

Kerr v. Fernandez, 792 So. 2d 685 (Fla. App. 2001) (physical handing over of deed not required); *Schmidt v. Feikert, 631 N.W.2d 537 (Neb. App. 2001)* ("There is a vital distinction between the use of the word 'delivery' as simply designating the transfer of physical custody or possession of a deed, and the use of the term in its legal sense"). The Schmidt court's sensitivity to the use of the term "delivery" is all too rare in judicial decisions, as illustrated in the discussion in note 25. *See also In re Estate of Deschenes, 818 A.2d 1026 (Me. 2003)* (key to whether grantor delivered deed is whether grantor "intended to relinquish control *over the property*").

Add to the first paragraph:

In re Hardy, 805 So. 2d 515 (Miss. 2002) (citing rule from Am. Jur. 2d).

§ 83.03(c) Deeds Testamentary in Nature. [Go To Main]

Kansas likewise has a "TOD" deed statute. See: *In re Estate of Roloff, 143 P.3d 406 (Kan. App. 2006)* (construing *K.S.A. 59* 3501).

Add:

A reserved power to appoint has been held as inconsistent with the granting of the fee simple. *See Lucareli v. Lucareli, 614 N.W.2d 60 (Wis. App. 2000)* (repugnancy theory relied upon).

Supp. to § 83.04 Proof of Delivery; Presumptions.

[Go To Main]

Spielvogel v. City of Kansas City, 302 S.W.3d 108 (Mo. App. 2009) ; *Cook v. Hall, 778 N.W.2d 744 (Neb. App. 2009)* .

Riley v. W.R. Holdings, LLC, 138 P.3d 316 (Idaho 2006) ("[T]he real test of the delivery of a deed is this: Did the grantor by his acts or words, or both, intend to divest himself of title? If so, the deed is delivered").

Add:

But see Salter v. Hamiter, 887 So. 2d 230 (Ala. 2004) (grantor's retention of possession and control thirty-three years after handing over deeds did not negate delivery).

Add:

Barmore v. Perrone, 179 P.3d 303 (Idaho 2008) (parol evidence must necessarily be admitted when the question of delivery arises).

Add:

Deakle v. Childs, 939 So. 2d 936 (Ala. App. 2006) (delivery a "question of fact")

Walls v. Click, 550 S.E.2d 605 (W. Va. 2001) ("What constitutes a delivery of a deed is a question of law, but whether there has been a valid delivery generally presents a mixed question of law and fact").

But see: *Adams v. First Nat. Bank of Bells/Savoy, 154 S.W.3d 859 (Tex. App 2005)* (what constitutes a delivery is a question of law; whether there has been a delivery of a deed is a fact question).

Cavanaugh v. Richichi, 918 A.2d 290 (Conn. App. 2007) ("the delivery of a deed includes not only an act by which the grantor parts with the possession of it, but also a concurring intent on the part of the grantor that it shall vest the title in the grantee ... . Both elements involve questions of fact for the trier of fact").

Robinson v. Williams, 635 S.E.2d 120 (Ga. 2006) (deed in safety deposit box).

Add:

Cook v. Hall, 778 N.W.2d 744 (Neb. App. 2009) (grantor was also a cotenant grantee).

Johannes v. Idol, 181 P.3d 574 (Ks. App. 2008) (possession by co--grantees).

Morgan v. Lawrence, 909 So. 2d 99 (Miss. App. 2005) (deeds handed over to grantee).

Barmore v. Perrrone, 179 P.3d 303 (Idaho 2008) .

James v. Mabie, 819 So. 2d 795 (Fla. App. 2002) (grantee "merely holding the deed"; other evidence, including failure to record, showed failure of delivery).

Troxel v. Bishop, 201 S.W.3d 290 (Tex. App. 2006) (proof that a deed was filed of record establishes a prima facie case of delivery and the accompanying presumption that the grantor intended to convey the land according to the terms of the deed).

Hall v. Lofton, 563 S.E.2d 128 (Ga. 2002) (presumption not rebutted); *Williams v. Ross, 716 N.Y.S.2d 756 (App. Div. 2000)* ; *Rausch v. Devine, 80 P.3d 733 (Alaska 2003)* .

Ward v. Ward, 874 N.E.2d 433 (Mass. App. 2007) ; *Bank of New York v. Harvey, 928 A.2d 325 (Pa. Super. 2007)* .

Watson v. Tipton, 274 S.W.3d 791 (Tex. App. 2008) .

Greuter v. Wetekamp, 172 S.W.3d 822 (Mo. App. 2005) (presumption rebutted).

Burmeister v. Richman, 76 S.W.3d 912 (Ark. App. 2002) (presumption *not* rebutted even though plaintiff *grantor* was challenging the delivery of the deed).

Everett v. Everett, 912 So. 2d 151 (Miss. App. 2005) (post-death recording; no presumption arose).

Add:

Caruso v. Parkos, 637 N.W.2d 351 (Neb. 2002) (person to whom delivered deemed agent of grantees). If delivery is made to a third party and the right of recall is reserved by the grantor, no delivery has occurred. *Smith v. Smith, 820 So. 2d 64 (Ala. 2001)* ; *Estate of Gabbett v. Ray, 817 N.E.2d 924 (Ill. App. 2004)* (deed in possession of third party; no delivery during grantor's lifetime). *In re Padezanin, 937 A.2d 476 (Pa. Super. 2007)* (mere handing of the executed deed, without more, to a third person who is an agent of the grantee is ineffective; there must, furthermore, be "express and definite" instruction to the third party holder of the deed).

Add:

Martin v. Martin, 720 N.W.2d 732 (Ia. 2006) ("There is a longstanding presumption that delivery occurs on the date the deed is signed."); *Orud v. Groth, 708 N.W.2d 72,* (Ia. 2006) (presumption rebutted).

Lennar Northeast Partners Ltd. Partnership v. Gifaldi, 695 N.Y.S.2d 448 (App. Div. 1999) ; *Gold v. New York State Business Group, Inc., 724 N.Y.S.2d 102 (App. Div. 2001)* .

After See also add:

Healy v. Arp Cable, Inc., 687 N.Y.S.2d 101 (App. Div. 1999) (presumption rebutted).

CHAPTER 84 THE IMPACT OF BANKRUPTCY LAW ON REAL PROPERTY INTERESTS

9-84 Thompson on Real Property, Thomas Editions § 84.01

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 84.01 Introduction.

This brief chapter is intended to point out aspects of federal bankruptcy law that have particular impact on real property interests. Detailed and definitive treatises on American bankruptcy practice abound, and this chapter will not give a lengthy description of general bankruptcy law and procedure. However, a general overview is provided, followed by a discussion of aspects of bankruptcy law that particularly affect real property interests.

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 84 THE IMPACT OF BANKRUPTCY LAW ON REAL PROPERTY INTERESTS

9-84 Thompson on Real Property, Thomas Editions § 84.02

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 84.02 Overview of Current Bankruptcy Law.

[Go To Supp]

§ 84.02(a) The Code and the Rules.

The starting point for current bankruptcy law is the Bankruptcy Reform Act of 1978, n1 which became effective for all bankruptcy cases commenced on or after October 1, 1979. Any cases still pending that were commenced before that date are governed by the Bankruptcy Act of 1898.

Of the four titles constituting this Act, Title I is substantively the most important, as it contains all the provisions currently found in Title 11 of the United States Code, and which may be referred to as the Bankruptcy Code. Within this title or code are described four kinds of bankruptcy proceedings, designated by and usually referred to as chapter numbers. Chapter 7 proceedings are intended to accomplish the liquidation of debtor's estates, using available estate assets to provide at least partial payment to creditors, and discharging the unpaid portions of indebtedness. Chapter 9 proceedings are used to adjust indebtedness of municipalities. Chapter 11 proceedings enable business debtors to reorganize and then resume reduction of debts after reorganization. Under Chapter 13, debtors may obtain adjustments of their debt structure, which may enable them to pay off the debts. Other chapters in this first title of the Bankruptcy Act have procedural and other provisions that govern all of the individual proceedings just described. Individual debtors would usually proceed under Chapter 7 if they have little or no assets to apply to their debts and are essentially seeking a discharge of debts in order to make a fresh start. Other individual debtors may seek relief under Chapter 13, hoping that a relaxation of payment schedules and collection proceedings will enable them to reorganize their affairs and eventually pay the debts without relying on discharge.

The United States Supreme Court has also promulgated Rules of Practice and Procedure in Bankruptcy, many of which simply incorporate relevant provisions of the Federal Rules of Civil Procedure n2 and the Federal Rules of Evidence. n3

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy reform act bankruptcy w/1 code rules w/1 practice w/1 procedure w/1 bankruptcy

§ 84.02(b) The Bankruptcy Courts.

The jurisdictional arrangements for adjudication of bankruptcy matters has given rise to controversy and uncertainty ever since the law was enacted in 1978. Presently, while the ultimate and residual local power to adjudicate bankruptcy matters rests in each district court, bankruptcy courts also exist in each district as units or appendages of the district court. These bankruptcy courts, however, exercise some powers that constitutionally should perhaps be exercised only by the district court. As a practical matter, even while that uncertainty persists, federal district courts immediately refer virtually all bankruptcy matters to the bankruptcy court. n4 District courts also may and do refer individual issues from pending district court cases to bankruptcy courts.

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/1 court!

§ 84.02(c) Typical Case Procedure.

§ 84.02(c)(1) Filing the Petition; Creating the Estate.

A case is commenced either by a debtor filing a voluntary petition n5 or by one or more creditors filing an involuntary petition for relief. n6 When a case is commenced, an estate is created, n7 which estate includes all of the debtor's legal and equitable interests in property at the time the petition was filed and any property interest acquired after filing. The estate will also include property acquired by the debtor within 180 days of filing the petition, if such property was acquired by bequest, devise or inheritance, property settlement in connection with a divorce, or benefits from a life insurance or death benefit plan. The estate also includes proceeds, products, offspring, rent, and profits from property of the estate, unless those items result from debtors' services performed after commencement of the case.

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/15 estate w/5 creat!

§ 84.02(c)(2) Appointment of the Trustee or Other Executive.

In a Chapter 7 case, a trustee is appointed automatically. n8 In Chapter 11 cases, a trustee may be appointed after notice and hearing; n9 otherwise, the debtor remains in possession of the estate and serves as the executive of the estate. The executive, whether trustee or debtor-in-possession, owes fiduciary duties to the creditors of the estate.

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/15 trustee w/5 appoint!

§ 84.02(c)(3) Gathering the Assets of the Estate.

The first duty of the executive is to gather the assets of the estate, and to that end a trustee has broad powers to compel turnover of property. This power extends to property in the hands of entities such as receivers, trustees, and assignees for the benefit of creditors. n10 Also, in some cases, even property held by a secured party must be turned over to the estate, especially if the secured party can be otherwise protected. If the security interest consists of a so-called "floating lien" that attaches, for example, to new merchandise as old merchandise is sold, the new merchandise may be brought into the estate, unless the new merchandise consists of proceeds, products, offspring, rents or profits of protected property. n11

The debtor is entitled to exempt certain property from being turned over to the estate, and also to redeem certain property. n12

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/30 gather! w/5 asset! w/2 estate

§ 84.02(c)(3)(i) Avoiding Preferences.

An important element of the trustee's power to gather assets into the estate is the power to negate certain transfers of the debtor's property that took place prior to the filing of the petition. If a transfer is deemed a preference, it may be "avoided" by the trustee. A "preference" is any transfer of the debtor's property to or for the benefit of a creditor, for or on account of an antecedent debt owed by the debtor before the transfer, made while the debtor was insolvent (under a rebuttable presumption of insolvency for a 90-day period preceding filing, made on or within 90 days of the filing or between 90 days and one year of the filing if the preferred creditor at the time of the transfer was an insider who had reasonable cause to believe the debtor was insolvent, or which transfer enables the creditor to receive more than the creditor would have received if the case were a liquidation case under Chapter 7, if the transfer had not been made, and if the creditor received payment of the debt to the extent provided by Title 11). n13

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/30 avoid! w/2 preference!

§ 84.02(c)(3)(ii) Avoiding Fraudulent Conveyances.

The trustee may also avoid pre-petition transfers deemed to be fraudulent conveyances. Such fraudulent conveyances are, in general, transfers made within one year before bankruptcy if made with actual intent to hinder, delay, or defraud creditors, or if the debtor received less than a reasonably equivalent value for the transfer under certain circumstances where the financial solvency of the debtor was impaired or the transfer was made to a general partner of a debtor partnership if the debtor was or was rendered insolvent thereby. n14

This avoidance power means, of course, that the transferee in most cases must turn the property or its value over to the trustee and seek recovery from the debtor's estate as a creditor in the bankruptcy proceeding.

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/30 avoid! w/2 fraudulent w/1 conveyance!

§ 84.02(c)(4) The Automatic Stay.

When the petition is filed, an automatic stay arises to suspend certain proceedings against the assets of the estate or against the debtor. n15 This effectively prohibits collection actions or proceedings to perfect or enforce liens or other claims against the debtor or against the property of the debtor's estate. The automatic stay provisions are extended to non-bankrupt co-debtors, either by statute for Chapter 12 and Chapter 13 proceedings, n16 or by court decision, for Chapter 11 proceedings. n17

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/30 automatic w/1 stay

§ 84.02(c)(5) Operation of the Debtor's Business.

The trustee may operate the debtor's business under a Chapter 11 proceeding, n18 but usually will not do so under

Chapter 7, which is intended to achieve liquidation. If the trustee does operate the business, the power of operating also includes the power to use, sell or lease the property, n19 obtain credit, n20 and accept or reject executory contracts and leases. n21

In a Chapter 11 proceeding to reorganize the business, the debtor in possession will be responsible for that reorganization, unless the creditors or other interested parties have had a trustee appointed to manage the estate.

COMPUTER-ASSISTED RESEARCH

LEXIS LEXIS: bankruptcy w/30 operat! w/5 debtor! w/2 business!

§ 84.02(c)(6) Filing a Plan.

The first step in the reorganization is to file a plan, n22 accompanied by a disclosure statement enabling interested parties to evaluate whether the plan is in their best interests. n23 The contents of the plan, both mandatory and optional, are prescribed by law, and the plan may call for sale of all or most of the estate assets. n24 Plans are subject to the approval vote of creditors, but if the plan does not impair the claim of a creditor, that creditor has no vote and is by law presumed to have approved of the plan. The Act defines under what circumstances a claim may be considered impaired. n25 Under certain circumstances where entire classes of claims -- usually unsecured -- are impaired, the plan will be accepted even over creditors' objections (known as the "cram down"). n26

When the plan is confirmed, the property vests in the debtor (subject to protection of various creditors' interests in the property as described in the plan), the automatic stay is lifted, and the plan should then be carried out. n27

CHAPTER 84 THE IMPACT OF BANKRUPTCY LAW ON REAL PROPERTY INTERESTS

9-84 Thompson on Real Property, Thomas Editions § 84.03

AUTHOR: Professor David A. Thomas J. Reuben Clark Law School Brigham Young University

§ 84.03 Aspects of Bankruptcy Law and Procedure That Affect Real Property Interests.

[Go To Supp]

§ 84.03(a) Determining Property That is Exempt from the Estate.

Certain property of the debtor may be exempted from inclusion in the estate that will be distributed to the creditors, and those exemptions may be defined by state law. Some states have created a "homestead" exemption. Although the state courts may hold that the homestead exemption will not apply to property that became subject to a judicial lien predating the property's homestead status, the federal bankruptcy court may nevertheless eliminate the lien. n28

The debtor may not, however, eliminate or avoid the lien if the debtor did not possess an interest in the liened property before the lien attached. n29

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/30 exempt! w/5 property

§ 84.03(b) Adjusting the Amount of Secured Claim Under a Mortgage.

When a debtor seeks adjustment of indebtedness under Chapter 13 through a flexible repayment plan, one device for achieving this adjustment is to reduce the amount of an allowed claim when it is secured by a lien on property worth less than the amount of the lien. The allowed claim is treated as secured by the lien up to the value of the property, but the balance is treated as an unsecured claim n30 and is therefore often worthless. This "mortgage stripping" may not occur, however, if the security interest or lien is in real property that is the debtor's principal residence. n31 Also, a federal court may order interest paid to a secured creditor, even if interest is not required by either the mortgage instruments or state law. n32

It has also been held that a mortgagor who obtains discharge from personal liability on the mortgage note in a Chapter 7 proceeding may nevertheless be subject to the mortgagee's *in rem* claim against the property. n33

§ 84.03(c) Obtaining Adequate Protection for Secured Creditors.

Protection of property interests under the Fifth Amendment of the United States Constitution has prompted the principle that secured creditors must be afforded "adequate" protection in bankruptcy proceedings. n34

Because this protection extends only to the amount of the claim, an undersecured creditor obtains no special protection for the part of the claim not secured.

Under the Bankruptcy Act, secured creditors are protected up to the value of their claim, that is, of the benefit of their bargain, but different means of realizing that value may be substituted:

§ 361. Adequate protection

When adequate protection is required under section 362, 363, or 364 of this title of an interest of an entity in property, such adequate protection may be provided by --

(1) requiring the trustee to make a cash payment or periodic cash payments to such entity, to the extent that the stay under section 362 of this title, use, sale, or lease under section 363 of this title, or any grant of a lien under section 364 of this title results in a decrease in the value of such entity's interest in such property;

(2) providing to such entity an additional or replacement lien to the extent that such stay, use, sale, lease, or grant results in a decrease in the value of such entity's interest in such property; or

(3) granting such other relief, other than entitling such entity to compensation allowable under section 503(b)(1) of this title as an administrative expense, as will result in the realization by such entity of the indubitable equivalent of such entity's interest in such property. n35

One form of adequate protection is for periodic cash payments to be made to the secured creditor, with the payments being equal to the interest. In the case of real property, however, cash payments may not be ordered if the natural appreciation in the value of the realty is considered greater than the accruing interest and the appreciation alone is thus adequate protection. n36

Another form of adequate protection is a substituted or enhanced lien, such as a lien on additional real property or a lien on some other additional unencumbered collateral. In all such cases, the objective is to create a so-called "equity cushion" that in effect becomes the "indubitable equivalent" of the creditor's equity interest in the property held by the trustee. n37

This means that much litigation can be expected on what is an adequate "cushion" and on establishing the valuations of substitute property. The value of collateral is typically described as the amount that can be obtained from a judicial sale, and is not necessarily the same as the amount recoverable from a forced sale. The adequacy of the equity cushion is affected by factors such as accrual of interest indebtedness, appreciation of the property value, adequacy of insurance coverage, adequacy of property maintenance, current payments of taxes and assessments, and prospects for

rehabilitation. Larger equity cushions may be appropriate for unimproved land.

While a personal guarantee of a secured debt does not constitute adequate protection, n38 a guarantee that is properly secured can suffice. It has been held that mortgage insurance alone is not adequate protection for a secured creditor, n39 but in some courts VA and FHA mortgage insurance, standing alone, have been accepted as adequate protection. n40

§ 84.03(d) Relief from the Automatic Stay.

The automatic stay provisions are very broad, prohibiting all actions affecting the debtor or the estate as soon as the petition is filed. n41 The automatic stay provisions have specific impact on real property interests inasmuch as they prohibit enforcing pre-petition judgments, creditors' actions to obtain possession of property in the estate, and actions to enforce liens against the debtor or against property of the estate. n42 The automatic stay provisions do not apply to a limited range of property-related actions, such as perfection of a "relation back" lien after the petition, if the state law time for perfection has not expired, or to certain mortgage foreclosures by federal agencies.

The stay against litigation is very broad, but a few exceptions are in effect. The stay does not prohibit litigation on claims that arose after the petition was filed, nor litigation against a solvent and independent affiliate or subsidiary of the debtor, n43 nor -- in some circumstances -- against individual partners of a debtor partnership. The stay does prohibit actions to enforce a judgment (against the debtor) against debtor's assets held by a third party. A mortgage or trust deed foreclosure sale that takes place before the petition is filed will escape the effect of the stay, unless the debtor still had an equity of redemption or some other interest even after the sale. n44 Similarly, a pre-filing forfeiture of a real estate contract will escape the automatic stay, unless the debtor still had residual rights in the contract, such as a grace period in which to cure the default. This determination may be a matter of state law.

Actions undertaken in violation of the automatic stay are void, even if the violator is without notice of the stay. However, this voidness does not apply to good faith purchasers in certain situations, as explained in the following obtusely expressed provision:

(c) The trustee may not avoid under subsection (a) of this section a transfer of real property to a good faith purchaser without knowledge of the commencement of the case and for present fair equivalent value unless a copy or notice of the petition was filed, where a transfer of such real property may be recorded to perfect such transfer, before such transfer is so perfected that a bona fide purchaser of such property, against whom applicable law permits such transfer to be perfected, could not acquire an interest that is superior to the interest of such good faith purchaser. A good faith purchaser without knowledge of the commencement of the case and for less than present fair equivalent value has a lien on the property transferred to the extent of any present value given, unless a copy or notice of the petition was so filed before such transfer was so perfected. n45

If actions in violation of the automatic stay are undertaken knowingly and willingly, both the miscreant parties and their attorneys may suffer penalties based on contempt. n46 In addition to imposing fines and damages, the courts may also require creditors who violate the automatic stay provisions to have their claims subordinated to claims of other creditors. n47

Relief from the automatic stay may be sought "for cause including the lack of adequate protection." n48 Other causes that might justify relief include the desirability of completing an action in another tribunal, an averment that an action

would not interfere with the orderly progress of the bankruptcy case, failure to pay taxes, lapse of insurance, filing the bankruptcy petition in bad faith, and disobedience of court orders.

Relief from the automatic stay may also be granted with respect to actions or acts against property if the debtor does not have equity in the property and the property is not necessary to an effective reorganization. n49 Any automatic stay against property is automatically terminated once that property is no longer a part of the estate; property leaves the estate by being sold, or by being "abandoned" by the trustee, or by being determined to be exempt. In actions against the debtor rather than against the property, the automatic stay remains in effect until the case is terminated by closure, dismissal, or an order of discharge (of the debts). If a lien in existence at the time the petition was filed has not been discharged or avoided while the stay has been in effect, its enforcement may be pursued again after the stay has terminated. n50

§ 84.03(e) Use, Sale or Lease of the Property by the Trustee.

§ 84.03(e)(1) When Court Approval is Required.

The trustee, in carrying out the trustee obligations in Chapter 11 proceedings, is usually permitted to use, sell or lease the property in the debtor's estate without prior order of the court. n51 Court approval is required if the trustee's proposed use, sale, or lease of property in the state is not in the ordinary course of business or if the property to be used is "cash collateral":

> (a) In this section, "cash collateral" means cash, negotiable instruments, documents of title, securities, deposit accounts, or other cash equivalents whenever acquired in which the estate and an entity other than the estate have an interest and includes the proceeds, products, offspring, rents, or profits of property subject to a security interest as provided in section 552(b) of this title, whether existing before or after the commencement of a case under this title. n52

Because cash collateral is defined in terms of both the type of asset and who has an interest in it, cash that is unencumbered can be used by the trustee in the ordinary course of business without a prior court order.

A party whose interest in the estate may be affected by the trustee's use, sale or lease of property in the estate has the burden of raising the issue. n53 In response to such an objection, a court may condition the trustee's use, sale or lease of estate property on the providing of "adequate protection" to the objecting creditor.

If the trustee prefers to sell property of the estate, it can be sold free of encumbrances, claims, and lien interests if any one of five conditions are met:

> (1) applicable non-bankruptcy law permits sale of such property free and clear of such interest;
>
> (2) such entity consents;
>
> (3) such interest is a lien and the price at which such property is to be sold is greater than the aggregate value of all liens on such property;
>
> (4) such interest is in bona fide in dispute; or
>
> (5) such entity could be compelled, in a legal or equitable proceeding, to accept a money satisfaction

of such interest. n54

Such a sale by the trustee can also take place even if provisions in contracts or other documents related to the property would prohibit such a transaction. n55

The trustee may also sell estate property that is held concurrently by another party, but only if each of the following four conditions are fulfilled:

(1) partition in kind of such property among the estate and such co-owners is impracticable;

(2) sale of the estate's undivided interest in such property would realize significantly less for the estate than sale of such property free of the interests of such co-owners;

(3) the benefit to the estate of a sale of such property free of the interests of co-owners outweighs the detriment, if any, to such co-owners; and

(4) such property is not used in the production, transmission, or distribution, for sale, of electric energy or of natural or synthetic gas for heat, light, or power. n56

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/50 property w/5 trustee! w/5 use! or sell! or lease!

§ 84.03(e)(2) The Trustee's "Abandonment" of Estate Property.

A trustee may voluntarily "abandon" property of the estate, without prior order of the court, if the property is determined to be "burdensome to the estate" or of "inconsequential value to the estate." n57 If property is listed on a debtor schedule required to be filed, n58 but then is not otherwise disposed of until the case is closed, it is considered automatically abandoned and left to the control of the debtor. To abandon property to control of a party other than the debtor requires that such party have a possessory interest in the property. Abandonment does not necessarily lift the automatic stay, unless the abandonment is directly to a creditor with a possessory interest. Under those circumstances it is common to submit a request for abandonment accompanied by a request for appropriate relief from the automatic stay with respect to that property.

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/50 trustee! w/15 abandon! w/15 estate w/5 property

§ 84.03(e)(3) Obtaining Financing for the Trustee.

If the trustee seeks financial support for activities carried out on behalf of the estate, one source is the use of cash collateral, if any. Alternatively, the trustee may seek outside financing, and if obtaining such credit is in the ordinary course of business, no prior court order is necessary. n59

However, the trustee is severely limited in the kinds of collateral that can be made available to lenders. The trustee may promise a lender to repay the loan obligation as an expense of administration, although that commitment will be junior to secured debts. If this is unsuccessful, the trustee, after notice and hearing, may extend an administration expense that has priority over other administrative expenses; if this fails, the trustee may secure a loan by encumbering property in the estate. n60

These and other activities may seriously affect rights of unsecured creditors. If the trustee attempts to obtain financing

by encumbering estate assets that are already subject to claims of secured creditors, the trustee must show that adequate protection has been provided.

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/50 financ! w/5 trustee! w/5 obtain! or support!

§ 84.03(f) Disposition of Executory Contracts and Unexpired Leases.

The trustee has discretion to accept or reject executory contracts and unexpired leases, but the consequences of those choices are set forth in the bankruptcy code. For purposes of the bankruptcy law, an executory contract is probably best defined as a contract that remains at least partially unperformed by both parties. n61

Examples would include earnest money agreements, recreational use permits, and time-share condominium contracts. Installment land contracts are probably executory contracts, but there is not complete agreement on that point.

If the executory contract or unexpired lease was terminated before the petition was filed, then it is not part of the estate. However, much controversy can arise over whether a valid pre-petition termination actually took place, and much judicial stretching has been exerted to find that a termination did not occur and that the contract or lease is property of the estate. n62

Some contracts may not be assumed and thus may not be brought into the debtor's estate. For instance, commitments for real estate financing may not be assumed by the trustee. n63

The trustee in a Chapter 7 proceeding usually has sixty days after the court grants an order of relief to accept or reject the executory contract or unexpired lease. n64 If the trustee does nothing within that time, the contract or lease is considered rejected. n65

In a Chapter 11 proceeding, the trustee may accept or reject a contract any time before the plan is confirmed, n66 unless a party to the contract or lease successfully requests that the trustee be compelled to make an earlier decision. n67

If the trustee accepts a contract or lease in default, the acceptance is conditioned on the trustee committing to cure the default, compensate for losses, and give assurance of future performance. n68

The trustee is permitted to assign such a contract or lease once it is assumed, but the assignee must give assurance of future performance. n69

A rejection of a contract or lease by the trustee is subject to court approval, and courts will sustain the rejection if the contract or lease would be burdensome to the estate, or, alternatively, if rejection would benefit the estate. If rejection results in compensable damage to the other party, that party usually has a corresponding unsecured claim against the estate. n70

If a lease is rejected and the other party is the lessee, the lessee may remain in possession for the balance of the term and even offset against the rent any repair expenses or other damages resulting from non-performance by the lessor/debtor. The vendee in possession under a rejected installment land sale contract is treated similarly. The vendee who is not in possession under a rejected land sale contract, or who elects to treat the contract as terminated, has only a lien against the debtor and the property for recovery of the part of the purchase price already paid by the vendee. n71

These decisions are often affected by whether the property interest is appreciating in value.

§ 84.03(g) The Trustee's Power to Avoid Previous Transactions.

The trustee has power to avoid certain pre-petition transactions which, if not avoided, would end or limit the interest of the estate in assets. n72

Avoidance proceedings must be commenced within two years of the time the trustee is appointed or the case is closed, whichever is earlier. The right to avoid is subject to any applicable law that permits security interests to be perfected effectively against entities that acquire rights in the property before the date of perfection. The prime real property example is a security interest that, upon perfection, relates back to a pre-petition time. With respect to real property, the trustee may in effect become a bona fide purchaser upon the commencement of the case, which defeats most unperfected liens.

The trustee is empowered to avoid any statutory lien to the extent the lien arises because of the debtor's insolvency or bankruptcy, or to the extent the lien is unperfected against a bona fide purchaser at the time the petition is filed, or to the extent the lien is for rent or distress for rent. n73

Certain post-petition transfers can be avoided if the petition was involuntary. An example would be a transfer of property outside the ordinary course of business, unless the transfer was for value or to a bona fide purchaser in a county other than where the case is pending. n74

COMPUTER-ASSISTED RESEARCH

LEXIS: bankruptcy w/50 trustee! w/15 avoid! w/5 transaction! or lien! or transfer!

§ 84.03(h) Avoidance of Preferences.

Certain transfers by which the debtor has "preferred" one creditor over another can be avoided by the trustee. These transfers subject to avoidance are described in the bankruptcy code as follows:

(b) Except as provided in subsection (c) of this section, the trustee may avoid any transfer of an interest of the debtor in property --

(1) to or for the benefit of a creditor;

(2) for or on account of an antecedent debt owed by the debtor before such transfer was made;

(3) made while the debtor was insolvent;

(4) made --

(A) on or within 90 days before the date of the filing of the petition; or

(B) between ninety days and one year before the date of the filing of the petition, if such creditor at the time of such transfer was an insider; and

(5) that enables such creditor to receive more than such creditor would receive if --

(A) the case were a case under Chapter 7 of this title;

(B) the transfer had not been made; and

(C) such creditor received payment of such debt to the extent provided by the provisions of this title. n75

Some transfers, even if they meet all the above requirements to be avoided as preferences, are nevertheless protected from avoidance under the following provisions:

(c) The trustee may not avoid under this section a transfer --

(1) to the extent that such transfer was --

(A) intended by the debtor and the creditor to or for whose benefit such transfer was made to be a contemporaneous exchange for new value given to the debtor; and

(B) in fact a substantially contemporaneous exchange;

(2) to the extent that such transfer was --

(A) in payment of a debt incurred by the debtor in the ordinary course of business or financial affairs of the debtor and the transferee;

(B) made in the ordinary course of business or financial affairs of the debtor and the transferee; and

(C) made according to ordinary business terms;

(3) that creates a security interest in property acquired by the debtor --

(A) to the extent such security interest secures new value that was --

(i) given at or after the signing of a security agreement that contains a description of such property as collateral;

(ii) given by or on behalf of the secured party under such agreement;

(iii) given to enable the debtor to acquire such property; and

(iv) in fact used by the debtor to acquire such property; and

(B) that is perfected on or before 10 days after the debtor receives possession of such property;

(4) to or for the benefit of a creditor, to the extent that, after such transfer, such creditor gave new value to or for the benefit of the debtor --

(A) not secured by an otherwise unavoidable security interest; and

(B) on account of which new value the debtor did not make an otherwise unavoidable transfer to or for the benefit of such creditor;

(5) that creates a perfected security interest in inventory or a receivable or the proceeds of either, except to the extent that the aggregate of all such transfers to the transferee caused a reduction, as of the date of the filing of the petition and to the prejudice of other creditors holding unsecured claims, of any amount by which the debt secured by such security interest exceeded the value of all security interests for such debt on the later of --

(A)

(i) with respect to a transfer to which subsection (b)(4)(A) of this section applies, 90 days before the date of the filing of the petition; or

(ii) with respect to a transfer to which subsection (b)(4)(B) of this section applies, one year before the date of the filing of the petition; or

(B) the date on which new value was first given under the security agreement creating such security interest;

(6) that is the fixing of a statutory lien that is not avoidable under section 545 of this title; or

(7) if, in a case filed by an individual debtor whose debts are primarily consumer debts, the aggregate value of all property that constitutes or is affected by such transfer is less than $600. n76

§ 84.03(i) Avoidance of Fraudulent Conveyances.

The trustee may avoid certain conveyances deemed fraudulent. These fraudulent conveyances may consist of transfers of debtor's property made with actual intent to hinder, delay, or defraud creditors. Other fraudulent conveyances are defined as transfers for less than reasonably equivalent value made while the debtor was insolvent or which made the debtor insolvent, or which left the debtor unreasonably little capital, or which were intended to incur debts beyond the debtor's ability to pay. n77 The adequacy of the purchase price can be a fraud issue in foreclosure sale proceedings; this issue should be determined under applicable state law.

Supp. To CHAPTER 84 THE IMPACT OF BANKRUPTCY LAW ON REAL PROPERTY INTERESTS

9-84 Thompson on Real Property, Thomas Editions Supp. to § 84.02

Supp. to § 84.02 Overview of Current Bankruptcy Law.

[Go To Main]

§ 84.02(c) Typical Case Procedure. [Go To Main]

§ 84.02(c)(1) Filing the Petition; Creating the Estate.

Change the text in the first sentence to read:

A case is commenced by a debtor filing a voluntary petition, a debtor and spouse filing a joint petition, or by one or more creditors filing an involuntary petition for relief.

Delete *11 U.S.C. § 101*(12) and add:

11 U.S.C. § 301

After the phrase "a debtor and spouse filing a joint petition." add new footnote:

5.1. *11 U.S.C. § 302.*

Add:

Jackson v. Novak (In re Jackson), 593 F.3d 171 (2d Cir. 2010) (interests include causes of actions possessed by the debtor at the time of filing, but do not typically include property the debtor neither owns nor becomes entitled to until after the filing); *Torch Liquidating Trust v. Stockstill, 561 F.3d 377 (5th Cir. 2009)* (cause of action is included regardless of whether or not the case was more likely to brought by another party).

Annas v. Allard, 272 B.R. 633 (E.D. Mich. 2002) (by including all legal interests of debtor without exception in the "property of the estate" Congress indicated its intention to include all legally recognizable interests even though they may be contingent and not subject to possession until some future time).

§ 84.02(c)(3) Gathering the Assets of the Estate.

Add:

Levey v. Sys. Div., Inc. (In re Teknek, LLC), 563 F.3d 639, 645 (7th Cir. 2009) (the trustee's duty is to gather the estate's assets, but this typically includes only "general claims" and not "personal claims"); *In re Smith, 2010 U.S. Dist. LEXIS 27658 (E.D.N.Y. 2010)* (trustees are to use reasonable diligence in fulfilling this duty and can be held personally liable for negligence in this duty).

Add:

In re Blackburn Bkrtcy., 385 B.R. 660 (N.D. Iowa 2008) (denial of discharge based on fraudulent concealment of assets).

Add:

In re Erickson, 406 B.R. 522 (Bankr. W.D. Mich. 2009) (tax refunds may be exempt, but they may be limited to the maximum exemption amount); *Swimelar v. Baker (In re Baker), 2010 U.S. App. LEXIS 9871 (2d Cir. 2010)* ; *In re Ferrante, 2009 Bankr. LEXIS 2862 (Bankr. D.N.J. 2009)* . Mitrani, Jacob. "Deepening Insolvency in Consumer Bankruptcy: A New Twist on a Once-Forgotten Theory," *28 ABI J. 48 (January 2010)* .

Turner v. Turner, 335 B.R. 755 (D. N.M. 2005) (debtor failed to disclose complex divestment scheme prior to filing for bankruptcy).

In re Karaus, 276 B.R. 227 (D. Neb. 2002) (most categories of exempt property were designed to enable debtor to hold, free from claims of creditors, property necessary to protect him and his family from impoverishment); *In re Alberto, 271 B.R. 223 (N.D. N.Y. 2001)* (once creditor had lawfully repossessed motor vehicle, debtor no longer had possessory right in the vehicle, but had right to redeem it before creditor disposed of it).

In re Lewandowski, 386 B.R. 643 (E.D. Mich. 2008) (trustee sale of land the debtors had claimed as exempt).

§ 84.02(c)(3)(i) Avoiding Preferences.

Add:

Englander v. Hekman Furniture Co. (In re Mastercraft Interiors, Ltd.), 2009 Bankr. LEXIS 4218 (Bankr. D. Md. 2009) (payments were not avoidable because they were made during the ordinary course of business between the parties); *Wells Fargo Home Mortg., Inc. v. Lindquist, 592 F.3d 838, 845 (8th Cir. 2010)* (the pre-petition transfer of the mortgage was deemed preferential); *Bank of Am., N.A. v. Mukamai (In re Egidi), 571 F.3d 1156 (11th Cir. 2009)* (use of cash advances and convenience checks to pay off a credit card company just before bankruptcy were deemed preferential transfers). *See generally* Tyson, John. "Automatic Stays and Administrative Expenses: Rights and Remedies Available to Landlords and Tenants in Bankruptcy Proceedings." *31 Campbell L. Rev. 413* (Spring, 2009).

In re Diagnostic Instrument Group, Inc., 276 B.R. 302 (M.D. Fla. 2002) (payments that Chapter 7 debtor had made during 90-day preference period on usurious short-term loan were not ordinary in the relevant industry, and could be avoided as preferential).

In re Lyon Bkrtcy., 360 B.R. 749 (E.D. N.C. 2007) (the look-back provision of the bankruptcy fraudulent transfer section is a substantive element, not a statute of limitations, and is not subject to tolling).

§ 84.02(c)(3)(ii) Avoiding Fraudulent Conveyances.

Add:

Goldstein v. Colombo Bank, F.S.B. (In re Md. Prop. Assocs.), 309 Fed. Appx. 737 (4th Cir. 2009) (badges of fraud may include the grantor's insolvency, the relationship between the grantor and the grantee, and departure from the normal course of business); *Stone v. Smile, 2009 Tenn. App. LEXIS 855 (Tenn. Ct. App. 2009)* (transfer deemed fraudulent because of several badges of fraud that existed: grantor was in a precarious financial condition, the grantor knew there was or soon would be a large judgment against it, and there was a lack of an innocent purpose for the transfer).

In re World Vision Entertainment, 275 B.R. 641 (M.D. Fla. 2002) (courts generally look at the totality of circumstances and the "badges of fraud" surrounding the transfers).

Snyder v. Zayler, 309 B.R. 272 (E.D. Tex. 2004) (Where debtor's purported transfer is a mere sham transaction, the transfer is null and void and does not affect the fee simple interest the debtor possessed in the property when the petition was filed.)

In re Lyon Bkrtcy., 360 B.R. 749 (E.D. N.C. 2007) (the look-back provision of the bankruptcy fraudulent transfer section is a substantive element, not a statute of limitations, and is not subject to tolling).

§ 84.02(c)(4) The Automatic Stay.

Add:

Barner v. Saxon Mortg. Servs. (In re Barner), 597 F.3d 651 (5th Cir. 2010) (the automatic stay does not disallow foreclosure proceedings where a previous bankruptcy order involved the same debtors, the same creditors and the same property); *Daimler Chrysler Fin. Servs. Am., LLC v. Jones (In re Jones), 591 F.3d 308 (4th Cir. 2010)* (if the debtor fails to state his intention to reaffirm the debt, the automatic stay is terminated and the creditor is free to take whatever action is necessary on the debt obligation); *Severo v. Comm'r, 586 F.3d 1213 (9th Cir. 2009)* (unless the IRS obtains relief from the automatic stay, the IRS may not collect tax claims against a debtor in bankruptcy); *Sternberg v. Johnston, 595 F.3d 937 (9th Cir. 2009)* (a debtor may recover emotional distress damages that arose from a violation of an automatic stayueven if the violation is not egregious).

Brown v. Chesnut (In re Chesnut), 422 F.3d 298 (5th Cir. 2005) (foreclosure on real property interest to which the debtor may have had a claim violated the automatic stay).

Fleet Business Credit, L.L.C. v. Wings Restaurants, Inc., 291 B.R. 550 (N.D. Okla. 2003) (automatic stay does not apply to disallow creditor with claims against both Chapter 7 debtor and non-debtor co-obligor from seeking appointment of receiver over co-obligor's property; receiver could be appointed even without any misconduct, in order to prevent dissipation of rents in which creditor had security interest); *Edwards v. Heartwood, 590 S.E.2d 734 (Ga. App. 2003)* (sale of real property during original owner's pending bankruptcy was void ab initio because it was in violation of the automatic stay, and purchaser therefore lacked standing to challenge the subsequent tax sale of the property).

Add:

Saleh v. Bank of Am., N.A. (In re Saleh), 2010 Bankr. LEXIS 908 (Bankr. S.D. Ohio 2010) (corporate co-debtors and business debts are not intended to receive the benefit of the co-debtor stay in a Chapter 13 bankruptcy); *In re Thongta, 401 B.R. 363 (E.D. Wis. 2009)* (co-debtor stay did not apply, because the debt was the debt of the debtor alone).

Add:

Cross-Appellees in 09-1432 v. BEPCO, LP (*In re* 15375 Mem'l Corp.), *589 F.3d 605 (3d Cir. 2009)* (the automatic stay protection is not per se valid justification for Chapter 11 filing, and courts typically demand more of Chapter 11 petitions to prove the filing is in good faith); *BEPCO, L.P. v. 15375 Mem'l Corp. (In re 15375 Mem'l Corp.), 400 B.R. 420 (D. Del. 2009)* (if the filing of a Chapter 11 petition is a litigation tactic, the petition will likely be dismissed as not being filed in good faith).

Arnold v. Garlock, Inc., 278 F.3d 426 (5th Cir. 2001) (bankruptcy court may invoke automatic stay provision to stay proceedings against nonbankrupt codefendant where such identity between the debtor and codefendant exists that a judgment against codefendant would in effect be a judgment or finding against the debtor); *Spears v. Boyd, 313 B.R. 212 (W.D. Mich. 2004)* (Chapter 7 petition by one spouse did not have the effect of severing a tenancy by the entirety held with the non-debtor spouse) (reversing *In re Spears, 308 B.R. 793* (Bankruptcy Ct., W.D. Mich. 2004) .

§ 84.02(c)(5) Operation of the Debtor's Business.

Add:

Taub v. Taub (In re Taub), 2010 Bankr. LEXIS 942 (Bankr. E.D.N.Y. 2010) (a trustee should operate the debtor's business in an objective and neutral manner)

§ 84.02(c)(6) Filing a Plan.

Add:

In re South Beach Secs., Inc., 2010 U.S. App. LEXIS 10175 (7th Cir. 2010) (the bankruptcy plan was rejected and not in the best interest of the affected parties, because the disclosure statement indicated the only purpose of the plan was to avoid taxes); *In re Casinos, Inc. v. President Casinos, Inc., 2010 U.S. Dist. LEXIS 12901 (E.D. Mo. 2010)* (case number 08CV1976 CDP) (the bankruptcy plan was accepted, even though some impaired creditors contested the elements of the disclosure statement).

U.S. v. Johnston, 267 B.R. 717 (N.D. Tex. 2001) (the interests of creditors are impaired when disclosure provided by debtors is incomplete).

Add:

Correct the citation for In re Pinto to read: *191 B.R. 610 (D. N.J. 1996)* and add the following to the end of the citation: abrogated on other grounds by *In re Mendez, 255 B.R. 143 (D. N.J. 2000)* .

Supp. To CHAPTER 84 THE IMPACT OF BANKRUPTCY LAW ON REAL PROPERTY INTERESTS

9-84 Thompson on Real Property, Thomas Editions Supp. to § 84.03

Supp. to § 84.03 Aspects of Bankruptcy Law and Procedure That Affect Real Property Interest.

[Go To Main]

§ 84.03(a) Determining Property that Is Exempt from the Estate. [Go To Main]

Add:

In re Bernbaum, 404 B.R. 39 (Bankr. D. 2009) (a "cram down" interest may be permitted in a proposed Chapter 13 plan if the secured creditor would be likely to receive at least the present value amount if the claim were paid in full at confirmation). *See also Bank of New York Trust Co., NA v. Official Unsecured Creditors' Comm. (In re Pacific Lumber Co.), 584 F.3d 229 (5th Cir. 2009)* .

In re Sentry Operating Co. of Tex., Inc., 264 B.R. 8580 (S.D. Tex. 2001) (proposed Chapter 11 plan discriminated unfairly between classes of unsecured creditors for purposes of bankruptcy cram down provision, in that trade creditors were to receive 100 percent of their claims while others were to receive one percent).

Add:

see also In re Pederson, 230 B.R. 158 (B.A.P. 9th Cir 1999) .

Add:

Fehmel v. Union State Bank (In re Fehmel), 2010 U.S. App. LEXIS 7036 (5th Cir. 2010) (debtors' homestead exemption was limited because debtors failed to show their exemption for passively obtained equity was property); *In re Parton, 2009 Bankr. LEXIS 4175 (Bankr. E.D. Tenn. 2009)* (debtor could not claim the homestead exemption

because he was not residing on the property at the commencement of his bankruptcy); *Greene v. Savage (In re Greene), 583 F.3d 614 (9th Cir. 2009)* (a homestead exemption does not "run with the land" and is considered a classification, not a property interest).

Lanier v. Beaman, 394 B.R. 382 (E.D. N.C. 2008) (the exempt "residence" did not include the 9-acre lot adjacent to the 12-acre lot on which the debtor's residence was situated); *In re Raffone, 381 B.R. 30 (D. Conn. 2008)* (statute providing for exemption continuity applied only to a specific exemption interest, not to the entire fee simple property interest).

In re Procaccianti, 253 B.R. 590 (2000) .

Add to In re Davis cite:

aff'd in part and vacated in part by 170 F.3d 475 (5th Cir. 1999) .

Johnson v. Johnson, 288 B.R. 130 (8th Cir. 2003) (lien interest in divorced debtor's former marital residence qualified for inclusion within homestead exemption).

In re Wilson, 338 B.R. 315 (W.D. Ky. 2006) (state homestead exemption not applicable to property on which the debtors did not reside).

In re Harle, 422 B.R. 310 (Bankr. M.D. Fla. 2010) (the homestead exemption is subject to the judgment lien because the lien antedated the debtor's eligibility to claim the homestead exemption).

In re Johnson v. Johnson, 288 B.R. 130 (8th Cir. 2003) (debtor's lien interest in the former marital residence qualified as an "aggregate interest" in real property, under the homestead exemption provision of the Bankruptcy Code, and therefore debtor could exempt his aggregate interest in real property that debtor or dependant of debtor used as a residence).

Add to In re Mayer cite:

aff'd in part and vacated in part by 167 B.R. 186 (9th Cir. B.A.P. 1994) .

§ 84.03(b) Adjusting the Amount of Secured Claim Under a Mortgage. [Go To Main]

Add

In re Vondall, 364 B.R. 668 (8th Cir. 2007) (adversary proceeding by trustee to avoid mortgage lien).

Johnson v. Home State Bank cite should read:

501 U.S. 78 (1991) .

Add:

Johns-Manville Corp. v. Chubb Indemnity Ins. Co. (In re Johns-Manville Corp.), 600 F.3d 135 (2d Cir. 2010) (in rem authority for a bankruptcy court is restricted to the claims against the property in the bankruptcy estate).

See also In re Ehlen, 202 B.R. 742) (W.D. Wis. 1996) .

But see In re Witt, 199 B.R. 890 (W.D. Va. 1996) (stating that *Nobelman* had been overruled by Congress in *11 U.S.C. § 1322(c)(2)*).

Add:

but see In re Hatcher, 208 B.R. 959 (B.A.P. 10th Cir 1997) (stating that *Rake* had been overruled by Congress in *11 U.S.C. § 1322*)

Change citation to *Johnson v. Home State Bank, 498 U.S. 1066 (1991)* to:

Johnson v. Home State Bank, 501 U.S. 78 (1991) ; *Spears v. Boyd, 313 B.R. 212 (W.D. Mich. 2004)* (Chapter 7 petition by one spouse did not have the effect of severing a tenancy by the entirety held with the non-debtor spouse) (reversing *In re Spears, 308 B.R. 793* (Bankruptcy Ct., W.D. Mich. 2004) .

§ 84.03(c) Obtaining Adequate Protection for Secured Creditors. [Go To Main]

Add:

Thompson v. GMAC, LLC, 566 F.3d 699 (7th Cir. 2009) (a creditor must, after a debtor has filed for bankruptcy, return the asset to which the debtor has an interest and then seek adequate protection of its interests in bankruptcy court); *In re Warrington, 424 B.R. 186 (Bankr. E.D. Pa. 2010)* (although the creditor could not sell the vehicle to accomplish a transfer of title, the creditor was entitled to adequate protection).

In re Segovia, 387 B.R. 773 (N.D. Cal. 2008 (the lien of an attorney providing prepetition services to the debtor was not enforceable as a secured debt); *but see In re Yi, 219 B.R. 394 (E.D. Va. 1998)* (stating that Radford had been effectively *overruled* by *Wright v. Vinton Branch of Mountain Trust Bank, 300 U.S. 440, 8 Ohio Op. 301 (1937))* .

Add:

Contrarian Funds LLC v. Aretex LLC (In re WestPoint Stevens, Inc.), 600 F.3d 231 (2d Cir. 2010) (cash payments, a lien, or similar relief may constitute adequate protection for a creditor); *see also In re R & G Props., 2009 Bankr. LEXIS 2100 (Bankr. D. Vt. 2009)* ; *Bank of New York Trust Co., NA v. Official Unsecured Creditors' Comm. (In re Pacific Lumber Co.), 584 F.3d 229 (5th Cir. 2009)* .

In re Gaines, 243 B.R. 221 (1999) (court determined "cause" existed to lift automatic stay for mortgagee to exercise right in property because of debtor's erratic payment history and insufficient income); *In re Dupell, 235 B.R. 783 (1999)* ; *In re Goode, 235 B.R. 584 (1999)* ; *In re Q-C Grants Corp., 231 B.R. 506 (1999)* .

In re Duness Hotel should read:

In re Dunes Hotel

Add:

In re Jennings, 2010 BNH 10 (Bankr. D.N.H. 2010) (although the debtor proposed to provide adequate protection of an equity cushion from two properties and a lien on another property, the debtor still failed to prove that this adequate protection would provide the creditors with the indubitable equivalent of their interest in the properties); *In re YL West 87th Holdings I LLC, 423 B.R. 421 (Bankr. S.D.N.Y. 2010)* (equity cushion must be proven to show whether a senior lien is appropriate).

§ 84.03(d) Relief from the Automatic Stay. [Go To Main]

Add:

Titan Real Estate Ventures, LLC v. MJCC Realty Ltd. P'ship (In re Flanagan), 415 B.R. 29 (D. Conn. 2009) (automatic stay is given to protect creditors by avoiding the first-come first-served approach to the debtor's assets).

Add:

Ford v. Bd. of Managers of Cameo Townhouses, 2009 U.S. Dist. LEXIS 13124 (E.D.N.Y. 2009) (creditor could not name the debtor in a foreclosure action because the debtor had filed for bankruptcy before the foreclosure action was taken and consequently was protected by the automatic stay).

Add:

In re Johnson, 2010 Bankr. LEXIS 1393 (Bankr. D.S.C. 2010) (automatic stay did not apply to a truck that was not owned by the debtor, but by the debtor's employer and family).

Annotation, *Violation of Automatic Stay Provisions of 1978 Bankruptcy Code (11 U.S.C.A. sec. 362) as Contempt of Court, 57 A.L.R. Fed. 927 (1982)* .

In re Butchman cite should read:

4 B.R. 379 (Bankr. S.D. N.Y. 1980) .

Add:

Brooks v. Bank of N.Y. Mellon (In re Brooks), 2009 U.S. Dist. LEXIS 97824 (D. Md. 2009) (bank was granted relief from the automatic stay and could proceed with the foreclosure sale).

Add:

Lee v. Baca, 73 Cal. App. 4th 1116 (Cal. App. 1999) (A landlord obtained an unlawful detainer judgment against tenants and a writ of possession. The tenants filed for bankruptcy. The court held that the writ extinguished the tenant's rights to possession of the real property and since the tenants have no interest in the property, the landlord does not need to obtain relief from the automatic stay provision). *Walls v. Wells Fargo Bank, N.A., 276 F.3d 502 (9th Cir. 2002)* (compensatory civil contempt allows an aggrieved debtor to obtain compensatory damages, attorney fees, and the offending creditor's compliance with the discharge injunction).

But see In re Coletta, 336 Fed. Appx. 202 (3d Cir. 2009) (creditor was not liable when he inadvertently violated the automatic stay); *Eakin v. Goffe, Inc. (In re 110 Beaver St. P'ship), 355 Fed. Appx. 432 (1st Cir. 2009)* .

Add:

In re Biscayne Inv. Group, Ltd., 264 B.R. 765 (Bankr. S.D. Fla. 2001) (equitable subordination of claims required (1) that claimant has engaged in inequitable conduct, (2) misconduct resulted in injury to creditors or conferred unfair advantage on claimant, and (3) subordination is not inconsistent with provisions of Bankruptcy Code).

In parenthetical for In re LDN, last 5 words should read:

relief of stay for cause

Add:

In re Hickory Ridge, LLC, 2010 Bankr. LEXIS 1131 (Bankr. N.D. W. Va. 2010) (automatic stay terminated for lack of

adequate protection of the creditor's interests); *Barner v. Saxon Mortg. Servs. (In re Barner), 597 F.3d 651 (5th Cir. 2010)* (relief from an automatic stay is granted when the filing is a scheme to delay, hinder, and defraud creditors that are involved in several bankruptcy filings concerning the real property).

Add:

In re Pulcini, 261 B.R. 836 (Bankr. W.D. Pa. 2001) (cause existed for lifting stay to permit mortgagee that had purchased property at pre-petition foreclosure sale to bring eviction action against debtor-mortgagors who had at most bare legal title to property).

Add:

Capital One, N.A. v. Najafian (In re Najafian), 2010 Bankr. LEXIS 1508 (Bankr. E.D. Va. 2010) (debtor's automatic stay was terminated when she received her discharge and the creditor was able to continue with its motion to enforce the deed of trust).

Add:

Colarusso v. Ragosa, 280 B.R. 548 (D. Mass. 2002) (estoppel of claim to land by adverse possession).

Mousel Law Firm, P.C. v. Townhouse, Inc., 608 N.W.2d 571 (Neb. 2000) .

§ 84.03(e) Use, Sale or Lease of the Property by the Trustee. [Go To Main]

§ 84.03(e)(1) When Court Approval Is Required.

Add:

Stewart v. Shubert, 325 Fed. Appx. 82 (3d Cir. 2009) (affected party raised the issue concerning the bankruptcy estate and the trustee could not sell the land).

Add:

In re Canonigo, 276 B.R. 257 (Bankr. N.D. Cal. 2002) (lien which encumbered property that Chapter 13 debtor moved to sell did not constitute an "interest" therein within meaning of bankruptcy statute so long as lienholder could be compelled to accept money satisfaction of its interest).

Add:

Fitzpatrick v. Fredenberg (In re Wilson), 2010 Bankr. LEXIS 42 (Bankr. E.D. Tenn. 2010) (residential homes are not used for sale of electric energy or of natural gas for heat, light or power).

§ 84.03(e)(2) The Trustee's "Abandonment" of Estate Property.

Add:

A.T. Massey Coal Co. v. Jenkins, 2009 U.S. Dist. LEXIS 43516 (W.D. Va. 2009) (trustee abandoned all state tort claims because the claims were burdensome to the estate); *In re Hastings, 2009 U.S. Dist. LEXIS 16831 (D. N.J. 2009)* ; *In re Kent, 411 B.R. 743 (Bankr. M.D. Fla. 2009)* (abandonment of the asset is appropriate when there is no equity left in an asset and the unsecured creditors are unlikely to benefit).

In re Unidigital, 262 B.R. 283 (Bankr. D. Del. 2001) (although debtor may abandon property that is burdensome to estate, there is a limitation on this right where abandonment would pose a threat to public health).

§ 84.03(f) Disposition of Executory Contracts and Unexpired Leases. [Go To Main]

Add:

In re Reading Broad., Inc., 2009 Bankr. LEXIS 2593 (Bankr. E.D. Pa. 2009) (obtained financing to continue operating the television station); *but see In re Meehan 59 B.R. 380 (E.D. N.Y. 1986)* .

Add:

Olah v. Baird (In re Baird), 567 F.3d 1207 (10th Cir. 2009) (medical policy was not an executory contract, because the relevant policy period had expired and the doctor had already paid for the policy for that period); *Realnetworks, Inc. v. QSA Toolworks, LLC, 2009 U.S. Dist. LEXIS 71848 (W.D. Wash. 2009)* (trademark consent agreement deemed an executory agreement); *In re 72 Townsend, LLC, 2010 Bankr. LEXIS 1366 (Bankr. N.D. Cal. 2010)* (option agreement was not an executory agreement, because at the date of bankruptcy, the partnership had performed all its material obligations under the contract).

In re Ter Bush, 273 B.R. 625 (Bankr. S.D. Cal. 2002) (contract for purchase or sale of real property is no longer "executory" and may not be rejected by debtor once it has been reduced to judgment in specific performance action); *see also* Flaccus, Janet. "Domestic Relations Contempt Orders and the Bankruptcy Automatic Stay, Property of the Estate and Concurrent Jurisdiction." 2004 Ark. L. Notes 41 (2004).

Add:

Neal v. Eckersley, 2009 U.S. Dist. LEXIS 92734 (M.D. Pa. 2009) (contract was rejected because the debtor failed to accept or reject the executory contracts).

Add:

In re Sae Young Westmont-Chicago, L.L.C., 276 B.R. 888 (Bankr. N.D. Ill, May 2, 2002) (if debtor fails to respond within court-ordered deadline, he will be deemed to have rejected the contract or lease).

Add:

In re Valley Media, Inc., 290 B.R. 73 (D. Dela. 2003) (landlord of property included in the bankruptcy estate was entitled to immediate payment of real estate taxes).

In re Esmizadeh, 272 B.R. 377 (Bankr. E.D. N.Y. 2002) (trustee failed to assume lease in timely manner since he failed to make rent payments).

§ 84.03(g) The Trustee's Power to Avoid Previous Transactions. [Go To Main]

Add

Drake v. Franklin Equip. Co. (In re Franklin Equip. Co.), 418 B.R. 176 (Bankr. E.D. Va. 2009) (trustee has authority to avoid preferences and statutory liens to manage the bankruptcy estate); *Spicer v. United States, IRS (In re Motion Mktg. Solutions, Inc.), 403 B.R. 403 (Bankr. N.D. Tex. 2009)* (trustee unable to avoid a statutory lien from the IRS).

Gallups v. Kent, 953 So. 2d 393 (Ala. 2006) (8th Cir. BAP (Minn.)) (mortgage lien was avoided based on an erroneous legal description in the recorded mortgage).

Add:

40235 *Washington St. Corp. v. W.C. Lusarch, 177 F. Supp. 2d 1090 (S.D. Cal. 2001)* (purchase price for apartment complex was not close to fair market value for purposes of statute authorizing trustee to avoid certain unauthorized post-petition transfers of property of estate).

§ 84.03(h) Avoidance of Preferences. [Go To Main]

Add:

Menotte v. Oxyde Chemicals, Inc. (In re JSL Chem. Corp.), 424 B.R. 573 (Bankr. S.D. Fla. 2010) (payment was held to be an avoidable preference, and the creditor had to turn over the amount previously received); *Reding v. T.R. Motors, Inc. (In re Baker), 2009 Bankr. LEXIS 369 (Bankr. M.D. Ala. 2009)* (trustee was able to avoid the security interest as a preference because it was not timely effected). Deaton, David & Warren, Stephen. "Distressed Healthcare: Significant Considerations for Buyers, Sellers, and Lenders Arising from the Intersection of Healthcare and Bankruptcy Laws." 3 *J. Health & Life Sci. L.* 1 (January, 2010) (government overpayments will likely not be considered an avoidable preference if the healthcare provider files for bankruptcy).

Add:

In re Lakeside Community Hosp., Inc., 200 B.R. 853 (Bankr. N.D. Ill. 1996) (payment to county of outstanding real estate taxes as part of real estate closing did not fall within ordinary course of business exception to preference avoidance, where real estate closing included sale of all of the debtor's assets).

§ 84.03(i) Avoidance of Fraudulent Conveyances. [Go To Main]

Add:

Goldstein v. Colombo Bank, F.S.B. (In re Md. Prop. Assocs.), 309 Fed. Appx. 737 (4th Cir. 2009) (bank's constructive knowledge of the owner's fraudulent intent was sufficient for a trustee to avoid share-loan payments to bank); *Farinash v. Bensusan (In re Prebul Jeep, Inc.), 2009 Bankr. LEXIS 3927 (Bankr. E.D. Tenn. 2009)* ; *Campbell v. Dudley (In re Sobota), 2009 Bankr. LEXIS 1496 (Bankr. D. S.C. 2009)* (trustee failed to meet burden of proof for a fraudulent conveyance). See generally Klein, Sandra. "USTP Initiative Combats Bankruptcy-related Mortgage and Real Estate Fraud." *28 ABI J. 18* (July, 2009) .

In re French, 440 F.3d 145 (4th Cir. 2006) (the debtor's prepetition conveyance to her children as foreign real property was set aside as a fraudulent transfer).

In re Richardson, 268 B.R. 331 (Bankr. D. Conn. 2001) (Chapter 7 trustee failed to satisfy burden of proving that debtor's gratuitous transfer of homestead to wife more than 3 years prior to bankruptcy petition was effected with actual intent to hinder, delay, or defraud creditors).

Moore v. Moore, 277 B.R. 141 (M.D. Ga. 2002) (discharge of debt precluded by debtor's obtaining credit by false pretenses, false representation or actual fraud).

In re Balboa Street Beach Club, Inc., 319 B.R. 736 (S.D. Fla. 2005) (bankruptcy case was not dismissed for bad faith despite debtor's admission that the filing was motivated by a desire to reject an undesirable sales agreement); *United States v. Wagner, 382 F.3d 598 (6th Cir. 2004)* (fraudulent concealment of property from a bankruptcy trustee); *Eppers v. Eppers, 311 B.R. 826 (D. N.M. 2004)* (incomplete and inaccurate disclosure of nature of interest in real property on the bankruptcy schedules).

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.01

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.01 Financing and Contracting to Acquire Sites for Development: An Introduction.

This chapter is about the legal issues a land developer encounters in buying sites for residential development, financing the early stages of land acquisition and development, and obtaining development rights.

A developer who subdivides acreage into buildable lots for resale to homebuyers must: (1) locate and "tie up" suitable sites, (2) determine whether the soil conditions at the site are compatible with development, (3) design and engineer the site for roads and utilities, (4) obtain all the necessary approvals from governments entitling the developer to proceed with the project, and (5) construct the improvements. Sometimes the subdivider builds the individual houses. Sometimes the subdivider sells "improved" lots to homebuilders or individual buyers who build houses on their own.

In analyzing potential sites the developer tries to assess the most profitable use for the site -- what appraisers call the "highest and best use. n1 Land use patterns around the site are examined, taking into account natural boundaries which limit land supply (e.g., bodies of water, rough terrain), transportation networks, population trends, the economic base, and vacancy rates. The developer assesses the availability of utilities, roads, fire and police, hospitals, schools, employment, shopping and other support services. The developer reviews government regulations affecting land use n2 and examines the physical characteristics of the site, which are very important. Besides having the appearance that the ultimate consumers expect, a good site has soil that is able to physically support the planned structure without the need for substantial infrastructure and a slope that allows the in-flow of water and out-flow of sewage without elaborate pumping systems.

The developer feeds the market information from the location analysis into an estimate of projected revenues and costs. Revenues are based on the product of the total number of lots and the anticipated selling price per lot. An important factor in estimating revenues is the timing of lot sales, as measured by the "absorption rate." The absorption rate is the number of lots that are sold in a given market over a specified time. All else being equal, the higher the absorption rate, the greater the present value of the project.

A developer usually prepares more than one subdivision plan -- based on the existing zoning or how she thinks it could be changed. Often she compares plans with fewer units at higher prices against plans with a greater number of less expensive units. If the absorption rate for the cheaper product is higher, and the developer can pocket the revenue faster,

it may pay to accept a lower total revenue. The developer could go for the highest dollar yield, must also consider the time it will take to sell out. Expensive lots may sell much more slowly than "affordable" ones, offsetting a higher profit margin per unit. Estimated revenues are set against all of the costs of development. As with revenues, the timing of costs is important.

As for the actual development process, there is no simple guideline. In fact, the developer often engages in many activities simultaneously, such as meeting with real estate brokers to locate sites, reviewing plans with architects and engineers, assessing the interest of potential tenants or buyers, and discussing money availability with possible lenders and equity investors. Nevertheless, the development process may be broken down into distinct stages where activities in one stage will undoubtedly flow into the activities of another stage.

First, the land developer must conduct a market assessment of the area where the developer plans to build. This assessment would consider a wide range of factors, such as housing demand, housing supply, interest rates, demographic trends, economic growth, and regional development plans. Second, the land developer must identify appropriate sites by taking into account the relative infrastructure demands, local land development regulations, estimated land and housing development costs, and estimated profit levels. Third, the land developer must finalize the acquisition of the property by obtaining an option to purchase the property, preparing a site-specific development plan, submitting the plan to the local water, sewer and electrical departments for review and approval, submitting a formal finance proposal to lenders for approval, and exercising the option. Fourth, the land developer must prepare detailed engineering and architectural drawings for the infrastructure and buildings, begin construction, and develop a marketing plan. Last, the land developer must conduct continuous maintenance and management of the project. n3

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.02

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.02 Special Characteristics of the Land Developer's Purchase-and-Sale Agreement.

[Go To Supp]

Although the land developer's contract to buy land may be compared with a homebuyer's contract to buy a home, the land developer's list of contingencies is usually much longer. Whereas most homebuyers will learn whether they can arrange their acquisition loan in months, the land developer may need two or three years before even receiving a definitive answer regarding the necessary approvals from local government. Even then, in many states, the right to rely on local government approvals may not "vest" until the developer actually commences building in reliance on the approvals. n4

§ 85.02(a) Contingent Contract.

In many ways the land developer's contract to buy land is no different from the contract a homebuyer would sign. But in several respects it is quite different.

The homebuyer may want his contract subject to financing and inspections. The land developer has much more to worry about than the homebuyer, and a longer list of contingencies reflects this. The developer rarely knows before buying land whether the project to be built on the site is feasible. During the executory period the developer will spend thousands -- sometimes hundreds of thousands -- of dollars on soils and seismic tests and design and engineering studies. Are the soils stable enough for the project? Is the water table so high that it interferes with development? Will local government officials grant the necessary approvals to subdivide the property? At what price? Can the developer procure adequate financing for the early stages of development? The land developer will want to make her purchase obligation contingent on some or all of these items checking out to her satisfaction.

Not only is the developer's list longer than the homebuyer's, but the individual items often take more time to check out. In two months the homebuyer can expect a definitive answer from a lender. The land developer may need two or three years for a definitive answer from local government on whether approval to develop can be obtained.

The developer who contracts to buy a site for development may condition the obligation to buy on: (a) the recordation of a locally approved subdivision map dividing the site into a specific number of buildable lots; (b) the acquisition of

satisfactory A&D (acquisition and development) financing; (c) the return of good results from soil and hydrology tests; (d) the availability of sewer, water, utilities, and roads; and (e) the reassurance of positive marketing studies. Even if the developer has paid a team of experts to perform a detailed feasibility analysis, looking closely at everything from the local politics of subdivision approvals to storm drain costs, there are often unforeseen events that may turn a profitable project into a money loser.

However, the developer who signs a purchase-and-sale agreement hedged with such contingencies pays a premium. As one builder said, "We buy what we know can be developed. A contract contingent on zoning generally drives the price of land up." n5

The Legal Risks of a Contingent Contract for the Buyer/Developer. The developer entering a contingent contract carries certain legal risks inherent in the use of so many contingencies. First, the seller may try to force the unwilling developer to go through with the purchase claiming that all contract contingencies have been reasonably fulfilled -- even when the developer doesn't believe they have. Or, when the contingencies have clearly not been met, the seller may contend that the developer could have met the contingencies had the developer only made a good faith effort to do so.

Second, since many contingencies are typically worded to depend on the developer's satisfaction, the seller may seek to rescind the contract on the basis that it was illusory -- lacking in mutuality. The seller will be especially eager to do this after the developer has secured the requisite entitlements which cause the value of the land to rise above the promised contract price. By invalidating the contract, the seller hopes to cash in on the developer's hard work by building the project or by selling to another developer.

The seller's legal argument has some merit. In most land purchase-and-sale contracts with developers, the seller waives the right to specific performance. The last thing a developer wants is to be forced to buy a property which cannot be developed profitably. For this reason, the developer carefully limits the seller's remedies for the developer's breach to damages or liquidated damages. On the other hand, a developer will always insist on reserving specific performance to *force* the seller to sell. Since potential developer profits are usually deemed too speculative to reward as an element of damage, the developer believes that only the remedy of specific performance can give the developer the benefit of the bargain. It is precisely this lack of symmetry in the contract's remedies that invites a seller to challenge an unwanted land purchase agreement as lacking mutuality.

The developer's chances of enforcing a contract with asymmetrical remedies depends on two issues: (1) whether the state where enforcement is sought is one which requires mutuality of remedy or mutuality of obligation; and (2) whether the court will imply obligations on the part of the buyer to infuse a contract with some obligation on the buyer's part. Mutuality of remedy means that both parties are entitled to the identical remedy whereas mutuality of obligation means that both parties are entitled to some, not necessarily the same, remedy.

Comm'nly, the developer's land contract provides that if the contingencies fail and the developer cancels, the developer's only penalty is to pay all or half the escrow and title costs incurred to the date of cancellation. The seller is obligated to return the developer's down-payments. To save such contracts from being illusory or totally lacking in mutuality, developers may promise to use their best efforts to obtain entitlements. Where the developer has made no such promise, some courts will imply one. Other courts will not imply such a condition to save the contract. Where no such obligation is implied or expressed, and the seller really is given no remedy, absolutely none, under the contract in the event of the buyer's breach, not even the right to keep $100 of the buyer's down payment, mutuality of obligation is lacking. n6

Third, although the developer prefers to keep the contract open, the seller may want to rescind on grounds that the contingencies may take too long to satisfy. For example, one contract for 382 building lots was contingent on the availability of municipal water service. Upon entering the contract, the county sewer plant had excess capacity. Later, the county notified the parties that the local sewer plant was nearing capacity and that service hookups would only be

allocated on a "first come, first served" basis. The contract gave the buyer the right, if any contingency failed, to extend the closing date until sixty days after the contingency failed. The seller wanted to terminate because there was no telling how long it might take for the county to build a new plant and be in a position, once again, to guarantee service to all new lots.

The court understood the hardship to the seller and agreed it would be unfair to keep the seller waiting indefinitely for the county to increase its sewage plant capacity. But the seller had thoughtlessly contracted to extend the closing date until sixty days after all conditions were met, including the condition regarding a sewer hookup. The court did limit the contract to twenty-one years from the date it was signed -- to save the contract from violating the Rule Against Perpetuities. n7 Had the seller not given the buyer the option of extending the closing date until all contingencies were met, the seller could have rescinded. A reasonable time had passed for removal of the contingency and, ordinarily, an unforeseen delay that makes the promisor's performance materially more burdensome will discharge both parties' peformances. n8

The Zone Change Contingency: Determining Whether the Developer Has Tried Hard Enough. Sometimes, when the developer's obligation to buy is contingent on a zone change, and the change doesn't occur, the seller contends that the fault lies with the developer in not trying hard enough to get the change. How hard must the developer try to get a zone change in order to avoid liability?

In *Feinberg v. Berlewicz*, n9 the developer's obligation to buy a building was contingent on the developer obtaining a special zoning exception for manufacturing uses in the building. n10 The town of Barkhamstead required a special exception before the building could be used for manufacturing purposes; however, in order to file a successful use permit application, the applicant had to describe the actual intended use. Although the developer could have described a potential use, the developer was reluctant to do so without a committed tenant on the basis that if a tenant were ever found, that tenant might object to the agreed conditions. So, the developer tried valiantly to entice a tenant during the three-month executory period, but never found one and so never applied for the special exception permit. The sellers refused to extend the contract date and sued the developer for breach of contract, contending that the developer failed to make reasonable efforts to obtain the zoning permit. The contract had been conditioned on the buyer obtaining a special use permit; it had not been conditioned on the buyer being able to sign up a tenant. The developer countered by arguing that a complete application was out of the question since it was impossible to specify an actual intended use without a viable tenant. The court decided for the buyer, believing the buyer had behaved reasonably and used best efforts to obtain the special use permit.

Sometimes a developer whose obligation to buy is conditioned on a satisfactory zone change, comes to realize that potential opposition is so fierce it would be a total waste of time and money to go through the motion of filing a request. In *Riverfront Investors Group v. Chavese,* n11 the developer had contracted to buy a site for $1.7 million, hoping to use it as a surface parking lot. The obligation to purchase was "subject to Purchaser acquiring all appropriate permits and licenses...." Relying on the advice it had received that it would never get the permit, the developer never applied for the permit. In implying an obligation on the part of the developer to make a "good faith" effort to satisfy all contingencies, the court held that the developer could not use zoning problems as an excuse for its failure to go through with the purchase. n12 As a result, the developer forfeited $10,000 -- an amount equal to the earnest money -- plus interest.

Some courts draw a distinction between the obligation to use "good faith" and the obligation to use "best efforts." "Best efforts" implies a higher standard than "good faith." In *Krobath v. Brent* n13 the developers contract with the seller to use their "best efforts" to secure approval to subdivide a 216-acre tract. They submitted their survey and a proposed subdivision map to the Planning Board. Although the Planning Board denied the developers' application because the site was in a flood plain and wetlands, the board indicated that approval might be granted if obtained from the Department of Environmental Conservation. Since that process was expensive and could take over a year, the developers sought to rescind and get back their down-payment. The trial judge agreed with the buyer, apparently equating "best efforts" with "good faith." On appeal, the case was sent back to trial on grounds that "best efforts" requires more than "good faith."

which is an implied covenant in all contracts. "Best efforts" requires that developers pursue all reasonable methods for obtaining subdivision approval, and whether such obligation has been fulfilled will almost invariably, as here, involve a question of fact. n14

§ 85.02(b) The Option.

Contingent contracts invite disputes over whether the contingencies have been satisfied. By the use of options, such disputes may be avoided.

What is an Option? n15 Under an option, the developer has the right to compel specific performance and no obligation to purchase. The requirement for mutuality of obligation is satisfied by the seller receiving a fixed, non-refundable price for the option (which may or may not be credited towards the purchase price, depending on the particular option contract). For a cash investment (the option price), the developer enjoys a hold on the site. If the developer succeeds in her land planning efforts, the value of the site rises and the developer exercises the option to capture that value. Should the site prove unsuitable for any reason (e.g., geology, hydrology, planning or political difficulties, adverse market conditions, etc.), the developer may elect to withdraw painlessly, forfeiting only her option fee.

The difference between an option and a contract can be seen by analogy to put and call options in the stock market. Since a call option gives the purchaser the right to buy a security at a given price, known as the strike price, for a set period, the purchaser will exercise the option when it is "in the money" -- when the market price rises above the strike price. Accordingly, the purchaser will not exercise the option when the security is "out of the money" -- when the market price is below the strike price. In contrast, a put option gives the purchaser the right to sell a security as the strike price. So, by exercising the option when it is "in the money" -- when the market price is below the strike price, the purchaser is forcing the other party to purchase the security at a price higher than its actual market price.

The ordinary purchase-and-sale agreement contains both a call and a put option in that the buyer has a call option (the right to compel the seller to sell at the contract price) and the seller has a put option (the right to compel the buyer to buy at the contract price). However, in the typical real estate option, the purchaser has a call option and the seller relinquishes its put option in exchange for a price -- a non-refundable option fee.

In contrast, a purchase-and-sale agreement may be arranged where the seller has the call option and the buyer has the put option. n16 In one case, the seller reserved a call option presumably to be exercised if the development was successful and the buyer reserved a put option to be exercised if the development was unsuccessful.

Pricing the Option. In pricing the option, the seller may take into account the expenses it will incur during the option period, such as maintenance, taxes, insurance, and opportunity costs.

Statute of Frauds Applies. An option, like a contract, must satisfy the Statute of Frauds which requires as a condition to legal enforceability that contracts for the sale of real property be in writing. Case law holds that the writing must at least identify the parties to the agreement, state the price, describe the property, and contain all material conditions. n17 Alternately, the contract must prescribe a means by which the purchase price, the location of the property and the parties can be determined.

As is true of all real estate contracts, the death or subsequent insanity of the seller is not defense to performance; the seller's successors in title will be bound. If tender of the purchase price is made a condition precedent to the purchaser's exercise of the option, tender is necessary. Otherwise, it is not.

The Downside of Options. The option has three main drawbacks for the developer.

First, the developer who elects not to buy forfeits the option price. By contrast, a purchaser who backs out of a failed

contract contingency has a right to a full refund of the earnest money or down-payment. However, the line between an option and a contract blurs when the contract restricts the seller's remedies to the buyer's forfeiture of a pre-agreed, fixed sum -- usually the earnest money deposit. Further, if the seller agrees to waive the right to specific performance, the contract becomes more like an option.

Second, courts uniformly honor time-of-the-essence provisions in options. The time for performance is almost always specified in an option and when it is, it is strictly enforced. n18 Thus, the option is hazardous for the developer who makes a late payment because the late payment may be construed as a forfeiture of the option. In contrast, under purchase-and-sale agreements, courts often allow the buyer to pay late, to avoid forfeitures even over the vigorous objections of the seller.

Third, sellers are wary of options and seek compensation for the uncertainties of an option by hiking the selling price well above the price they would accept even under a contingent contract.

Options and the Single-Family Home Purchase Situation: The Lease-Option. Options are used less in the single-family home market than in the raw land market because people who are looking to buy or sell a home expect an immediate transfer of title, a change of possession, and an exchange of cash and holding cost obligations (mortgage, insurance, maintenance, etc.). However, in a soft housing market, sellers may agree to a lease-option.

With respect to buyers, the lease-option would be most helpful to those who recently moved, those who are starting new and uncertain careers, and those who are short on cash for down-payments. Through the use of a lease-option, the potential buyer can save on monthly payments (since monthly payments on a lease usually run about half the cost of owning the property), try out the neighborhood, and take the time to locate the best mortgage.

With respect to sellers, it might appear at first glance that the lease-option would only serve the interests of the buyer. However, the lease-option offers the seller many distinct advantages, such as: (1) a plentiful pool of prospective lease-option buyers; (2) little or no negotiation over the top-dollar option price; (3) higher than market rent to pay the owner's expenses such as mortgage payments; (4) top quality tenants who treat the home well since they usually expect to own it eventually; (5) option money which is not immediately taxable to seller until the exercise or expiration of the option; (6) the continued use of income tax deductions for the property; and (7) the continued maintenance of the house during the lease-option period since the seller usually pays for it. n19

Drafting the Option. An option exercised becomes a purchase-and-sale agreement. Developers realize that and draft their options carefully, but lessee-optionees seldom appreciate the need to write the option agreement as if it were a purchase-and-sale agreement because it becomes one at the buyer's command. The buyer may not require financing or inspection contingencies since, as a tenant, the buyer has time to learn the conditions of the premises and pre-qualify for a loan. But if the buyer desires warranties and representations from the seller about the property or title, or expects to retain furnishings or other items of personal property, the buyer needs to speak up early and get these promises from the seller in writing. This can be especially important if the option price turns out to be a bargain a year to two into the lease, because the buyer may not be able to obtain concessions from the seller at this point.

§ 85.02(c) The Right of First Refusal.

Definition. A species of contract akin to an option is the right of first refusal, also called a preemptive right and sometimes mislabelled as the "first right" of refusal. n20 Under a right of first refusal, the property owner isn't obligated to put the property up for sale. But if the owner does, the owner promises to give the holder of the right the chance to match the price she would accept or has contracted to accept from a third party. n21 The property owner may but doesn't have to set a price since the right-of-first-refusal price can be an offer the property owner receives from a third party that she would accept.

When Rights of First Refusal Are Used. Rights of first refusal are seldom used by developers to acquire sites precisely because the holder of the right has no guarantee either of the right to buy or of the right to buy at a fixed acquisition price. However, there are occasions when land developers might use rights of first refusal. If the seller holds more than one lot or parcel in the area, and is presently willing to sell only one, the developer may seek a right of first refusal should the seller later decide to sell the other contiguous parcels or lots. n22 Community builders, subdividing vast tracts into smaller, developable ones, usually temper the pace at which they release land to homebuilders so as not to overwhelm market demand -- thereby reducing their own land prices. They are often willing to grant successful homebuilders purchasing released parcels rights of first refusal on sites to be put on the market later. Although the developer might have preferred an option at a presently fixed price, a mutually acceptable price may not be easy for the buyer and seller to arrive at. With the right of first refusal, as least the developer has a foot in the door to bid on the additional acreage if and when it comes on the market.

The right of first refusal is also useful in leases, n23 partnerships, n24 co-ops, n25 condominiums, n26 and family settings. Interestingly, a few state and local legislators have conferred on apartment tenants a right to buy, when a landlord converts the apartments into condos or co-ops. n27

The Hidden Costs of a Right of First Refusal to the Grantor. We can detect five possible consequences to grantors conceding rights of first refusal. First, the right may have no effect on the ultimate price paid as the high bidder signs a purchase-and-sale agreement and the holder of the right decides either to match it or let the right expire unexercised. Second, the existence of a right of first refusal must be disclosed to potential buyers. The prospective homebuyer who offers too low a price will lose the deal, even if the owner accepts the offer, when the holder of the right matches the offer and buys the property. If the right holder elects not to match the bid, the high bidder will always wonder if she overpaid. For the length of the exercise period, the bidder's deal is in limbo. All of this may deter some potential buyers from bidding at all. Third, the existence of the right may encourage the bidder not to offer a price so low as to arouse the interest of the right holder. Like the right of statutory redemption, a right of first refusal may deter bidders from underbidding. Fourth, the right may nurture a bidding war between the high bidder and the holder of the right when the holder decides to match the high bidder's first contract offer. For the grantor/seller to benefit from a bidding war, the right of first refusal must be drafted to provide that the contract offeror shall have the opportunity of increasing its offer if the holder of the right elects to match the offer, and that each time the contract offer raises the bid, the holder of the right may elect to match or better it until one of the bidders ceases bidding. Few rights of first refusal are drafted this way. The grantor's interest would best be served if they all were. Fifth, the contract offeror may size up the situation, and decide to buy out the holder of the right of first refusal by purchasing a release of the person's interest under the right. How this affects the grantor's price depends, all too obviously, on what would have happened if the holder of the right had not agreed to sign a release.

Right of First Offer Distinguished From Right of First Refusal. Similar to the right of first refusal, but less objectionable to most sellers and seller's brokers, is a right of first offer. As with an option, the seller isn't obligated to sell under a right of first refusal or first offer. The holder of the right of first offer is entitled to be offered the property before the owner offers it to the general public. At what price? On what terms? The resolution of these issues is tricky. The idea is to give the holder of the right the first chance to buy at a price and on terms the owner would accept from a hypothetical third party. Naturally, since it is human nature for an owner to shoot high when first offering property for sale, the owner is tempted at the outset to set the right-of-first-offer price on the high side. One way of inducing the owner to set a realistic offer price and terms is to provide that the owner may only offer the property for sale to others at the same price and terms as those offered to the right holder. The right can be drafted to require that each time the owner reduces the asking price or relaxes the terms, the owner becomes obligated to give the right holder another chance.

An advantage to the seller of the right of first offer, compared to the right of first refusal, is that the seller need not have contracted with a broker and found a willing buyer before tendering the property to the holder of the right and learning whether the holder of the right wants to exercise it. Since sellers usually insist that the listing agreements contain an

exclusion denying the broker a commission if the holder of the right ultimately exercises it, brokers don't like to market property under a cloud of a right of first refusal. Under a right of first offer, if the owner decides to sell, the owner enjoys the option of holding back on any marketing effort until the holder relinquishes the right by accepting or rejecting the owner's offer price.

The right of first offer is better for the seller because, with a right of first refusal, the seller is put to the task of negotiating a complete and signed contract with a prospective buyer. The holder of the right of first refusal must be given the option of matching an actual contract. n28 Under a right of first offer, the owner doesn't begin negotiations until the holder of the right of first offer has rejected the deal. n29

Preemptive Rights Legal Issues

Price Specificity. Since rights of first refusal and first offer carry no fixed price, the holder of the right has the chance to match an offer the owner would accept. The failure to specify a price does not make these agreements unenforceable under the Statute of Frauds. Nor does it violate the principal that no contract for the purchase and sale of real property is specifically enforceable without a definite or ascertainable purchase price. As long as a means of reaching the price is stated, the agreements are enforceable.

Right of First Refusal or Right of First Offer? A well-drafted preemptive rights agreement should specify whether the optionor must place the property on the market and give the optionee the chance to match a third-party offer the optionor would accept (right of first refusal), or whether the optionor can simply declare an acceptable price and force the optionee to match it or forfeit the option before the optionor puts the property on the market (right of first offer). If the agreement is unclear as to which preemptive right is intended, some courts will not imply either and declare the option unenforceably vague or indefinite. n30

Preemptive Right Construed as a One Time Event. The agreement should also specify whether the optionee's right only extends to the seller's offer of listing price, or whether the optionee has the right to buy at the price ultimately negotiated between the seller and a third-party buyer. n31 As to whether which price or offer the optionee's right extends to, courts have limited the right to the seller's initial offer or list price. n32 So, if the optionee wants to have the right to keep bidding on the property, as the optionor's price expectations become more realistic, the agreement had better provide so.

Sale of Larger or Smaller Parcel Than That Reserved in the Option or Preemptive Right. Suppose the seller owns and wants to sell 1,000 acres but the optionee has only reserved the right to purchase 100 acres of it. Or the option is for 1,000 acres but the seller wants to sell only 100 acres? May the optionee insist that the seller match what the seller puts up for sale precisely with the amount reserved in the right? courts are divided.

After the seller has sold or contracted to sell the entire acreage to a third party, some courts allow the buyer to compel specific performance under either of these circumstances, others do not. Among those courts sympathetic to the holder of the preemptive right, courts have either set the sale aside, granted money damages, granted the holder of the 100-acre right the chance to buy the 1,000 acres, or compelled the seller to offer the 100 acres to the 1,000 acre-right holder at an appropriately reduced price. n33 Other courts simply deny the optionee any relief. n34

Should the default rule differ when the right of first refusal is conferred not by contract but by a state statute? In Iowa, mortgagors who lose their property through a foreclosure are given a statutory right of first refusal. The legislature has given foreclosed mortgagors the right to repurchase foreclosed property at the price the foreclosing mortgagee is later willing to accept when the mortgagee buys at its own foreclosure sale, and then resells. The lender, understandably, is looking for the highest net yield while the foreclosed debtor wants to redeem at the lowest possible price. When the lender believes that the highest price can be gained by offering the foreclosed property as part of a larger package, does the lender have to offer just the foreclosed piece to the foreclosed buyer? An Iowa court ruled that the mortgagee did not have to offer the property in separate tracts just because it was mortgaged or foreclosed that way. The mortgagee

satisfies its statutory obligation by giving the mortgagor the chance to buy the combined parcels. n35

Time for Exercise. Options usually specify a definite time for their exercise. If they do not, courts attempt first to discover how long the parties intended the preemptive right to last. "While an option for an indefinite term is void, a right of first refusal which does not specify a time limitation is not ordinarily void for indefiniteness...." n36

Rule Against Perpetuities, Rule Barring Restraints on Alienation. Options, rights of first refusal and rights of first offer are vulnerable to being declared unenforceable as unreasonable restraints on alienation or as violations of the Rule Against Perpetuities when they lack definite dates of termination consistent with the rule. The Rule Against Perpetuities consists of two parts, a prohibition against remoteness of vesting and a prohibition against suspending the power of alienation beyond the period of the rule. That period is "not later than twenty-one years, plus the period of gestation, after some life or lives in being at the time the of creation of the interest." n37 Most courts have held that options and other preemptive rights are subject to the time limitations of the Rule Against Perpetuities. n38 The drafting challenge: make sure the right must be exercised within the perpetuities period.

Exceptions and Exemptions to Perpetuities Rules. Some courts have saved preemptive rights from successful restraints or perpetuities challenges by implying the right must be exercised within the lifetimes of the optionor, the optionee, or both. n39 Of course, under such an implication, if the right hasn't been exercised before the optionee dies, the right terminates. n40 Other courts have characterized the interest under an option as a condition subsequent, so that title vests in the optionor unaffected by the preemptive right. n41 Some courts analyze preemptive rights by deciding whether they are "reasonable," looking to the optionee's reasons for wanting the right in the first place, n42 their duration, and how they affect the owner's practical ability to sell. Some courts save options by overlaying a 21-year time limit.

State legislatures have enacted statutes modifying perpetuities and restraint rules, or excepting specific interests. The most important of these is the Uniform Statutory Rule Against Perpetuities (USRAP) § 4(1), which precludes the rule from applying to "a non-vested property interest ... arising out of a non-donative transfer ...." Thus, the rule is effectively abolished for all commercial trans-actions. To date, twenty-four states have adopted some variation of the USRAP. n43

Further, in addition to exempting commercial transactions, some states such as New York n44 and Connecticut n45 have exempted governmental transactions as well. In this context, although the Rule Against Perpetuities is held to apply to the preemptive right at issue, the rule does not work against the governmental unit since it is perpetually in existence. n46

Release Provisions. Even if the holder of the right decides not to exercise it, unless the holder signs a recordable and recorded release to clear title, any sub-sequent purchaser with notice of that right risks taking title clouded by it. The agreement should require the right holder to sign a recorded release and specify damages for failure to do so.

Jenkins, 924 P.2d 1239, 1250 (Kan. 1996)* (Provision of contract for sale of control of corporation, calling for sellers to use their "best efforts" to secure return of shares pledged as collateral for bank loan, created standard of conduct on part of sellers above and beyond implied obligation of good faith); *First Nat'l Bank of Lake Park v. Gay, 694 So. 2d 784 (Fla. App. 1997)* (The contractual term "best efforts" imposes a legal duty of performance more demanding than mere competence, due diligence, or good faith. It requires the party owing the duty to take all action and do all things necessary to consummate the transaction contemplated by the agreement. "Best efforts" means maximizing the contractual benefits of the person to whom the duty is owed even if the benefits to the one owing the duty are reduced. If the duty of best efforts is owed, it must be performed even at a loss).

(n12)Footnote 15. *See* Ronald Benton Brown, *An Examination of Real Estate Purchase Options, 12 Nova L. Rev. 147 (1987). Casa El Sol-Acapulco, S.A. v. Fontenot, 919 S.W.2d 709 (Tex. App. 1996)* ("Option contract" has two components: underlying contract which is not binding until accepted; and covenant to hold open to optionee opportunity to accept); *Ingram v. Kasey's Assocs., 493 S.E.2d 856 (S.C. App. 1997)* (Contract to sell and purchase real estate mutually obligates both seller and buyer to complete transaction, while option to purchase only gives optionee right to purchase within limited time and without obligation to purchase); *HGS Homes, Inc. v. Kelly Residential Group, Inc., 948 S.W.2d 251 (Mo. App. 1997)* (A valid option to purchase land requires independent consideration separate and apart from the purchase price to be paid for the land; however, where the option is incorporated into a larger real estate contract or lease, the mutual considerations supporting the entire contract or lease support the option provision).

But see Brokaw v. Roe, 669 N.E.2d 1039 (Ind. App. 1996) (Option automatically expired when it was not exercised

before deadline, and owner was not required to take affirmative action to claim termination).

(n13)Footnote 16. *See Turboff v. Gertner, Aron & Ledet Invs., 840 S.W.2d 603 (Tex. App. 1992).*

(n14)Footnote 17. A 1989 update of the English Statute of Frauds seeks to avoid disputes over what conditions and terms are "material" by requiring the writing to incorporate "all terms which the parties have expressly agreed." *See also Lawrence v. Jones, 864 P.2d 194, 197 (Idaho App. 1993); Wolvos v. Meyer, 668 N.E.2d 671 (Ind. 1996)* (Agreement providing option to purchase property did not lack essential terms to render it unenforceable, though it required parties to enter formal purchase agreement, where parties agreed to adopt particular standard purchase agreement form used by brokers in county, and option agreement sufficiently identified essential terms, including parties, subject real estate, purchase price, and time frame in which closing was to be completed, as required to order specific performance).

But see Coulter & Smith, Ltd. v. Russell, 925 P.2d 1258 (Utah App. 1996) (purchaser's promise to vendor in written option agreement that he would proceed immediately to annex and develop tracts supplied consideration necessary to support option, but option agreement, which made completion of subdivision development precondition to transfer of real estate and stated that option expired two years after such completion, without specifying completion date, violated rule against perpetuities).

(n15)Footnote 18. 65 *Real Estate Sales*, Cal. Jur. § 153 (1979); *Bantam Four Cinemas, Inc. v. Zamias, 544 A.2d 487 (Pa. 1988); Western Sav. Fund, Etc. v. Southeastern, Etc., 427 A.2d 174 (Pa. 1981).* Once the optionee has by election converted the option into a bilateral contract, that same permissiveness towards timely performance returns. *Ingram v. Kasey's Assocs., 493 S.E.2d 856 (S.C. App. 1997)* (Option gives optionee a power of acceptance within time and manner specified in option, and such acceptance must objectively manifest Ass'nt in positive and unambiguous manner. When analyzing attempt to accept option, courts strictly construe in favor of optionor, the terms, conditions, and time limits of option); *HGS Homes, Inc. v. Kelly Residential Group, Inc., 948 S.W.2d 251 (Mo. App. 1997)* (When optionee accepts the offer in the prescribed manner, the option is deemed to have been exercised so as to create a binding bilateral contract, and the bilateral contract so created is specifically enforceable); *Beiger Heritage Corp. v. Estate of Kilbey, 667 N.E.2d 184 (Ind. App. 1996)* ("Option" is continuing offer whose duration and method of exercise is strictly controlled by agreement that created it; generally, exercise of option is effective if it strictly adheres to terms stipulated in contract).

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.03

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.03 The Case Study.

To see how the financing and contracting issues are resolved in context we turn to an actual acquisition of a site by a subdivider-home builder, The Larwin Company, which has constructed tens of thousands of houses in California since World War II.

The Larwin Company builds single-family detached housing -- affordable, attractive houses at prices pitched to first-time buyers. To keep land prices reasonable the company purchases sites in outlying areas well ahead of development.

Larwin's land prices are low because outlying sites often lack road access and utility lines haven't been extended to the site. Someone has to finance the linkage of the remote site to the nearest public road, sewer, water, and power source. The likely candidates are local governments, utility companies, area-wide landowners through special tax assessment districts, or developers like Larwin. At the time sites are acquired, Larwin often does not know for sure what these infrastructure costs will be, and how much of them Larwin will have to shoulder.

The subject site is in the fast-growing northern part of Los Angeles County. This particular site was at least five to eight years from development when Larwin's president, Mr. Keston, began negotiating to buy it. For several decades it had been owned by a group of Los Angeles-based physicians who bought when the land was dirt cheap and had been shouldering the burdens of property taxes and insurance ever since.

Mr. Keston learned about the site from an acquaintance, a lawyer, who knew the physicians. Mr. Keston checked it out and discovered it was a desert parcel in the path of development but many miles from the nearest road and utility hookups -- absolutely undistinguishable from thousands of other acres but for one key fact. Most of the surrounding vacant desert land had been subdivided decades ago into smaller parcels and sold to individual investors as part of a failed land promotion scheme. This was one of the few large parcels still under single ownership. Size is important to Larwin because it needs to spread the high infrastructure costs over as many units as possible so as to obtain the economies of scale a large project in order to build its affordable product.

The physicians were in no position to become developers and had held the title for twenty years. Twenty years of taxes

and insurance with some offsetting income from farming leases gets to even the most patient investor. California's Proposition 13 n47 eased the burden somewhat by fixing property taxes at 1% of value in 1978 with a modest 2% inflation adjustment annually, unless land changes hands. Without Article 13 the sellers' property tax obligation would have grown each year as the fair market value of the site appreciated to account for increasing development potential. Still, the investing doctors were ready to be relieved from the costs of ownership and to reap a return on their initial investment, even if the site wasn't quite yet ready for building. That's why they agreed to negotiate a deal with Larwin. Better that Larwin "bank" the land for the next five years or so, as long as the owners were compensated adequately. Larwin had to decide what price to pay for the site.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.04

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.04 Estimating Yields on Real Estate Investments.

What a developer is willing to pay for land depends on what the developer believes the land ultimately can be sold for. One needs to know whether one can turn a profit when all the costs are weighed against the eventual sales price. There are various ways to determine that.

§ 85.04(a) Current Yield.

The simplest measure of profit or loss is current yield. Current yield is used for income producing property, such as apartments, offices, hotels, and shopping centers. The investor or developer calculates the gross rents or sales price and subtracts the operating expenses and debt service. The result is called cash flow.

Gross rents or sale

-- Operating expense

-- Debt service

Cash flow

The cash flow is then measured against the investment cost:

Cash flow - investment/Investment = Current yield

Suppose Mr. Keston could buy land for $5,000,000 and sell it for $6,000,000 at the end of the year, incurring operating and sales expenses plus debt service costs of $500,000 during the year. His cash flow would be ($6,000,000 -$500,000) = $5,500,000. His profit would be $500,000. His current yield would be $500,000/$5,000,000, or 10%.

The current yield calculation works well enough in a very short-lived deal (one year or less). But the formula doesn't account for the time period of the investment, and therefore is inadequate for assessing multi-year investments. For

example, suppose Mr. Keston were putting his $5,000,000 up front in year one, but not selling subdivided lots until year five. Assuming his sales price and expenses remain unchanged, the current yield would be the same, but it would not reflect an annual percentage rate like we are used to dealing with. Instead, it would be 10% over the five-year investment period, or an average of 2% per year.

Five hundred thousand dollars received five years from now is worth less than the same amount received one year from now. This is because money has a time value. Wouldn't you grab a deal in which you got $100,000 now and repaid it at the end of the year? Of course you would -- for one simple reason. You would pocket the interest on $100,000 during the year.

In addition to the time value of money drawback, the current yield method is a "before tax" analysis and does not take into account changes in rents, expenses and property values over time. For these reasons, investors and lenders have used more sophisticated formulas to account for the time value of money -- formulas such as the Net Present Value method and the Internal Rate of Return.

§ 85.04(b) Net Present Value (NPV).

To demonstrate the time value of money, let's start by determining the present value of the right to receive $500,000 in sales proceeds five years from now. Assume that if you had the money now, you could earn 10% annually on it.

In effect, you are searching for the reciprocal of compound interest. Compound interest shows the future value of money you have now. Present value shows the value now of money you will receive in the future. The formula for present value is as follows:

Present value = Future Value/(1 + 1) [n]

i = interest rate

n = number of years from now

Our example is formulated as follows:

Present value = $500,000/(1 + .10) [5]

= $310,461

In other words, if you expected a 10% annual rate of return on your money, you would be indifferent to possessing $310,461 today or having the right to receive $500,000 five years from today.

Compare the following two investments. Each requires you to put out $100,000. Each will yield $120,000. The difference between the two deals is the timing of the expenditures and returns.

Investment I: you pay the entire $100,000 up front and get back $50,000 at the end of the first year and $70,000 at the end of the second year.

Investment II: you pay $20,000 a year for each of five years and get back $70,000 at the end of year five and $50,000 at the end of year six.

	Investment I		Investment II	
	Cost	Return	Cost	Return
Year 0	(100,000)		(20,000)	
Year 1		50,000	(20,000)	
Year 2		70,000	(20,000)	
Year 3			(20,000)	
Year 4			(20,000)	
Year 5				70,000
Year 6				50,000

Which investment is the better one?

If you are looking for a rate of return of at least 10%, would it pay to make Investment I? In order to answer this, you need to determine the NPV of Investment I.

The NPV is the present value of a stream of cash flows, less the present value of the costs of the investment discounted at your desired rate of return. Using the formula for present value presented earlier, you would calculate the NPV of Investment I as follows:

NPV	=	$50,000/(1 + .10) [1]	+	$70,000/(1 + .10) [2]	-	$100,000/(1 + .10) [0]
	=	$45,454	+	$57,851	-	$100,000
	=	$ 3,305				

What this means is that Investment I would yield $3,305 more, in today's dollars, than an investment that paid 10% annually. Therefore, Investment I is worth taking. Had the NPV been a negative number, this would have indicated that Investment I yielded less than 10% per annum, and you would invest your money elsewhere.

Now let's compute the NPV for Investment II, using the same minimum rate of return of 10%:

NPV	=	$70,000 (1.10)[5]	+	$50,000 (1.10)[6]	-	$20,000 (1.10)[0]	-	$20,000 (1.10)[1]	-	$20,000 (1.10)[2]
	-	$20,000 (1.10)[3]	-	$20,000 (1.10)[4]						
	=	-$11,709								

If you were seeking at least a 10% annual return on your investment, you would choose Investment I because of its positive NPV, and reject Investment II because of its negative NPV.

§ 85.04(c) Internal Rate of Return (IRR).

The NPV method starts with a targeted annual rate of return and arrives at a present value for the investment as measured against that target. If the NPV is positive, the investment yields more than the presumed rate of return. If the NPV is negative, the investment yields less. If the NPV is zero, then the investment yields are exactly equal the presumed or targeted rate of return.

This "zero point" is exactly what the IRR method tries to find. Therefore, the formula for IRR is simply the formula for NPV with the NPV set at zero. In other words, the IRR is the interest rate that causes the present value of all the cash flows the investor anticipates to equal exactly the present value of her investment.

Computers and financial calculators are commonly programmed to compute the IRR. However, if you want to determine the IRR of an investment by hand, you can use the "Trial and Error" method by inserting interest rates into the NPV formula until you find one that makes the equation equal to zero. n48 Your search may be facilitated by a technique called interpolation. The following is an example of how to determine the IRR of Investment I:

We have already determined that Investment I yields $3,305 more, in today's dollars, than a 10% rate of return. Our IRR must be higher than 10%, so let's insert 14% into the equation and see if that works.

	Future Value	Present Value at 10%	Present Value at 14%
Year One Cash Flow	$50,000	$45,454	$43,860
Year Two Cash Flow	70,000	+ 57,851/103,305	+53,865/97,825
Less: Initial Investment		- 100,000/3,305	- 100,000/- 2,175

Because the NPV at 14% is negative, whereas at 10% it was positive, the IRR must be somewhere between 10% and 14%. If we continued to insert interest rates, we would eventually arrive at 12.4%. But once we have done the calculations for 10% and 14%, we can stop guessing and use interpolation to nail down the correct IRR.

Interpolation:

NPV 10%	$3,305	NPV 10%	$3,305
Less NPV 14%	(2,175)	Desired NPV	0
Difference	5,480	Difference	3,305

Difference in rates 14 - 10 = 4%

3,305/5,480 = .60

.60 x 4% = 2.4%

10 + 2.4 = 12.4%

Through the same procedure you can determine that the IRR of Investment II is 5.4%. n49 With the IRR in hand, the investor may apply the IRR investment rule which states that one should accept the project if the IRR is greater than the discount rate and reject the project if the IRR is lower than the discount rate. n50

§ 85.04(d) Choosing Between NPV and IRR.

Some commentators prefer NPV to IRR because it yields a specific number, not a percentage. For equity investors, that dollar sum is "the bottom line." They would sometimes prefer to put more money in a deal for a larger set dollar yield than to invest a smaller sum at a higher rate of return -- if those were their only two choices.

One commentator offers this example of two competing investments. n51

	Initial Investment	Payoff (1 Year)	IRR	NPV (r = 10%)
Project A	$2,000	$2,500	25%	$273
Project B	$1,000	$1,300	30%	$182

Utilizing this example, the author reckons that project A is a better choice than B, because even though A has a lower IRR it yields more cash than B. "If project B were chosen on the basis of the IRR, the investor would not be maximizing his wealth. n52

Critics are quick to point out that the investor is seldom limited to such an odd choice -- either investing more money for a higher fixed dollar yield or investing a smaller sum for a lesser dollar yield but at a higher rate of return. Even in our example, the investor would have $1,000 left after investing in project B. Perhaps she could invest this money somewhere else, making up for the difference in NPV between projects A and B.

In the pages which follow, you will see Larwin's IRR calculations for the 880-acre project. Larwin used IRR because lenders prefer it -- probably, as Mr. Keston notes, "because it gives lenders a percentage against which they can compare their return on other projects against their cost of funds. The NPV yields a number which isn't a percentage and lenders deal in percentage."

§ 85.04(e) Analyzing the Larwin Numbers.

(i) The driving differences between Larwin's Exhibit A and Exhibit B, which follow, are the land price and the payout periods. Exhibit A assumes the land price to be $3,520,000, Exhibit B assumes it to be $4,576,000. Exhibit A has five annual repayments, each equal to 20% of the unpaid balance. B provides a steady stream of principal repayment. If Larwin had paid the greater sum, its rate of return would decline, as you can see, by 4.31% -- still well above Larwin's investment threshold.

Investment threshold is a function of risk. If Larwin viewed the risk as so high that a return in excess of 31.5% would be required for Larwin to take the risk, then paying even $3,520,000 would be too much.

(ii) Did the sellers leave over $1 million "on the table"? Larwin might have been able to absorb the cost if they were able to accept a lower IRR, but the highest price Larwin would have paid depended on the price other site owners would have accepted. Certainly, Larwin would not have paid $1 million -- or any amount -- more than owners of comparable sites in the immediate vicinity were asking. Still, sellers who can gain access to the buyer's projections may come to a clearer understanding of the buyer's "reservation price" -- the highest price the buyer will pay.

(iii) Timing matters greatly in NPV and IRR calculations. Huge expenses are incurred in real estate development well before the first homes are sold. If development takes longer than expected or sales are slower to close, IRR drops fast and hard. Conversely, it rises sharply if homes can be sold before completion or if completion and sales are ahead of schedule.

(iv) IRR calculations "incorporate both the magnitude and timing of the projected future benefits into a single number, so that you can compare projects having similar size and holding periods, yet dissimilar flows. n53

(v) Neither the NPV nor IRR methods assess very well the probabilities of their underlying assumptions. In Larwin's case, for instance, the land purchase price will be set once the land sale contract is entered. Government fees and exactions will remain indeterminate for several years; and estimates of market trends -- the strength of demand for housing -- are even less reliable since they purport to forecast sales perhaps 8-10 years in advance.

(vi) Even with these uncertainties, you can see why builders like seller financing. Based on Larwin's IRR calculations, Larwin can set an interest rate on seller financing that yields it strongly positive leverage. Sellers will compare their yield against other investment opportunities, what they could get on a CD, money market fund, or TD.

When Larwin first purchased the site, it was an unincorporated part of Los Angeles County, a jurisdiction which would have allowed 440 houses to be built there. Later, Larwin was able to persuade the county to de-annex and persuade an adjoining city to annex the site. The annexing city at the time was more friendly than the county planning regime to development. That city ultimately agreed to allow up to 2550 houses on the 880 acres, but wanted substantial off- and on-site "infrastructure" (road improvements, an 18-acre regional park, etc.). These numbers are based on the 440-unit project, before Larwin acquired the site.

These points are of special interest:

(1) Observe the relationship between the cost of the raw land, the cost of improving the land and the cost of constructing houses. In this example, the construction cost of building houses was about equal to the purchase price of the site plus land development costs. Raw land cost represented only about 15% of the "finished" lot cost.

(2) Larwin's expense meter starts running in the first four quarters, but only in the fifth quarter do sales proceeds start trickling in -- and this proved to be optimistic. Six years later, the site remains vacant due to adverse market conditions.

(3) Larwin assumed the project would be fully built and sold by the 21st quarter -- 53 years after buying the land. In fact, four years have gone by and the site is still vacant. Planning took longer as Larwin annexed the site and negotiated a development agreement. And the southern California housing market collapsed. So Larwin deferred development.

(4) The chart projects the costs and sales price of various house plans -- from 1,549 to 1,982 square feet. The finished lot cost is the same for each house. The base sales price per square foot is highest for the smallest house and smallest for the biggest house -- even though construction costs are assumed to be the same per square foot. The reason the bigger house seems to be a better buy is that a fixed land plus land development cost per unit is being spread across more square footage in the larger house. This is one way of seeing how land development costs (including fees paid to local governments) encourage the construction of larger houses. The fees become a smaller percentage of square foot cost as the number of square feet in a house increases. Big fees and infrastructure costs incline builders toward wanting to build bigger houses.

(5) Many developers run several sets of projections -- high, average and low -- for sales expectations and development costs, looking for the worst and best case scenarios. Larwin ran just one set of numbers as a rough, early stage guide. Later, after acquiring the site Larwin would refine its analysis.

(6) IRR calculations put numbers on one of the most difficult trade-offs developers must make: how much money should be spent up-front in hopes that by spending intelligently, the pace of sales will be accelerated? For instance, should the developer spend $150,000 or $2,000,000 constructing and outfitting the model homes and sales office? Cash spent years before the first sale lowers the IRR. But the earlier the sales, the higher the IRR. Just how much will attractive model homes and sales offices accelerate

sales? The IRR calculation does not answer that question. It only reports what happens if the developer's hunch to spend now is right -- or wrong. It does not indicate whether, in fact, the developer's decision will prove right or wrong in the marketplace.

Exhibit 1

Larwin Examines many sites before selecting the ones it will buy, and needs some way of comparing them. To assist, these calculations are run aimed at estimating Larwin's probable return from the site we have been reviewing.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.05

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.05 Three Types of Real Estate Development Financing.

[Go To Supp]

Like all subdividers, Larwin must somehow finance land acquisition and development. Land development financing is of three types:

(1) A&D (Acquisition and Development) Loans -- financing the land acquisition, the preparation of engineering and design plans, local government approvals, and site work (grading, utilities, roads, etc.). These are sometimes called land development loans.

(2) Construction Loans -- financing the construction of houses and other buildings in the project.

(3) Permanent Mortgage Loans -- financing the homebuyer's purchase.

A&D Financing. A&D financing is the most difficult and costly type of loan to arrange. Since many more projects are begun than are successfully completed, this form of financing carries a substantial risk premium -- a risk premium which is reflected in higher points, higher origination fees, higher nominal rates of interest, a share of the profits, and/or a measure of control over the developer's use of the investor's funds.

However, despite these measures, a lender may not necessarily profit from an A&D loan. For example, although a lender may contract for an 18% rate of interest, the lender will not turn a profit when it lends $1 million secured by a mortgage on property that later turns out to be worth only $600,000 on foreclosure. The $400,000 loss of principal will not be offset by the 18% interest rate over the two to five years of the A&D loan. In fact, many S&Ls failed precisely because their A&D loans proved riskier than anticipated. Their buoyant confidence in the 1980s that they could accurately price the risks of making loans secured by raw land was drowned in a flood of repossessed vacant sites, unbuilt and sometimes unbuildable. As a result, bank regulators discourage A&D lending by insisting that lenders hold greater sums aside as reserves when they make such loans. These requirements are called risk-related capital requirements. n54

Those institutional lenders who survived have gained new respect for the market and political uncertainties often overlooked by optimistic developers. Lenders also realize that a predeveloped site is just handfuls of dirt if repossession becomes necessary. That is why financing for the acquisition and development of vacant land is expensive. n55

Due to the newly appreciated risks associated with A&D financing, lenders have devised ways in which to minimize their exposure. First, some A&D lenders cap their loan-to-value ratios at 50-60%. Second, some insist on developers to invest funds personally in the project. Third, others expect developers to personally guarantee the loans. Fourth, some lenders include extension agreement whereby developers pay additional fees for extending the term of the loan. This addresses the significant timing uncertainties which are common in land development. Fifth, some lenders key fund disbursement to the developer's schedule of site improvement in attempt to assure satisfactory completion of the portion on schedule and within budget. Sixth, some lenders review important contracts for major site work components and insist that contractors be bonded to assure timely performance of their obligations. Seventh, some lenders take their profit shares as participating mortgagees.

However, with respect to A&D lenders who expect to be treated as participating mortgagees, the last thing in the world these secured lenders want is to have their security interest recharacterized as a joint venture. If characterized as joint venturers, these lenders risk tort and contract liability. In addition, they lose the ability to foreclose since only secured lenders, not co-venturers, have this right. n56 In order to avoid this situation, some lenders split their investment into two parts. One part is denominated as secured debt. The other part is explicitly labeled as an interest in a real estate joint venture. The typical real estate development joint venture is formed between an experienced developer and an institutional investor with the investor acting as the money partner and the developer as the managing partner. As to the forms of organization they might choose, they may select a partnership, limited partnership, limited liability company, or corporation.

Currently, the sources of A&D financing include commercial banks, investment banks and, in California, the California Public Employee Retirement System (C.A.L.P.E.R.S.) which started making A&D loans during California's real estate recession to jump-start the construction industry and promote entry level housing.

Construction Financing. This form of financing is somewhat easier for a developer to procure. By the time houses can be built, a lender has a fighting chance to figure out whether buyers are likely to bite in the six to twelve months it will take to build the house. Moreover, sales can be contracted from models. This gives a cautious construction lender the option of withholding construction financing until homebuyers enter into binding contracts for each house built with the lender's advances. Frequently, lenders package construction and A&D loans into one loan agreement with disbursements staged so that the developer covers a big share of the costs of each phase of construction.

Permanent Mortgage Loan. This form is the least expensive of all financing when secured by owner-occupied housing. A lender making this sort of loan takes a smaller credit risk than an A&D or construction loan financier. The home mortgage lender can appraise the house against comparable homes in the area whereas the A&D financier does not know if any income-generating use will ever be possible on the land. In addition, the home mortgage lender can run a credit check on the homebuyer without worrying, in the ordinary case, about the homebuyer simultaneously obligating himself to massive debt elsewhere -- as real estate developers are prone to do. Thus, where single A&D loans could run into the tens of millions, home mortgage loans come in bite-size portions.

Real estate financing sometimes resembles a house of cards with A&D financing resting precariously on the presumed availability of construction financing. The developer hopes to find a construction loan large enough to pay off the more expensive A&D loan. In turn, construction financing often depends on a permanent lender having made a commitment to finance the ultimate user's purchase once the project is built and sold. If construction and permanent loans are not available, the A&D lender could end up taking a very big hit.

Another hazard for lenders in every stage of development finance is the temptation for the developer to use loans from

one project to complete a previous project. This is all too common in the development business. When a developer has gone far enough on Project A to obtain construction funds, the developer may decide to divert some the funds to a new venture, Project B, or to finish work on the last project, Project C, for which funds ran dry. If the construction lender catches the developer, the lender may declare default on the Project A loan. Even if the construction lender does not figure out what is happening, chances are that the diverted construction loan proceeds were really needed to complete work on Project A, so the project will not be finished and ready for sale unless the developer can borrow more funds elsewhere -- maybe against Project D or Project E. With a downturn in the real estate market, all the developer's projects could go "sideways" -- even Project A which would have been fine but for the diversion of funds.

§ 85.05(a) Carryback Financing.

Land sellers can ease the developer's cash flow burden by taking back IOUs -- notes they can secure by retaining a security interest in the site.

There are three ways to structure the seller's security interest: (1) the land contract stays in place with the sellers continuing as legal title owners until the buyers pay the full purchase price; (2) sellers convey title and take back a note secured by a mortgage or deed of trust from buyers; (3) sellers lease the site to the developer along with an option to purchase.

In some states laws protecting secured debtors will be the same no matter what security device is chosen -- be it contract, mortgage, deed of trust, or ground lease, as long as courts are persuaded that the chosen instrument is in fact a security device. In other states the rights of the defaulting buyer depend significantly on the form of security investment used. In other states, the rights of a buyer under an installment sales contract are slimmer than under a mortgage or deed of trust. The contract seller may retain the buyer's down payment even if no deficiency judgment would have been owing under a mortgage, and the defaulting debtor has no right to redemption or a foreclosure sale. n57

In all cases, the buyer will want to put the world on notice of its interest by recording so as to prevent the seller from impairing or clouding the title. The informed seller appreciates that if the buyer's interest is recorded, the seller's ability to resell is impaired even if the buyer has defaulted. Until the buyer releases her claim of record, the seller's title will be unmarketable.

§ 85.05(b) Subordination Agreements.

Most construction lenders are required, whether by state law or their own lending policies, to acquire first liens when they make construction loans. n58 This could cause a problem if the seller of the land took back a purchase money deed of trust from the buyer, since purchase money deeds of trust are presumed to have priority over other liens created against the purchaser. n59 The solution is a subordination agreement.

The subordination agreement came into widespread use first in California development financing. Its use has spread to other states. n60

"Subordination" means simply that a security interest holder agrees that in the event of default, one who came later in time would have a superior position if foreclosure ensued and there wasn't enough money to satisfy both liens. n61

In other words, a subordination agreement reverses the lien priorities.

Subordination agreements are very risky for sellers, who can quickly end up with no land and no money. If the developer defaults on the loan they subordinated to, their security interest could be wiped out in foreclosure. Some sellers agree to subordinate because they don't know what they are doing or because they are being paid richly to take the risk (in the form of a higher purchase price and/or higher interest rate). Some subordinate because the only

developer/buyers they get offers from are short of cash, need third party money for construction, and explain to the seller that third party lenders demand first liens. In some cases the seller can obtain a share of profits as part of the subordination package in order to compensate for the risk.

A seller-protective subordination agreement strictly limits the amount, cost, timing and uses of borrowed funds. The goal is to make sure the value of the site is enhanced at least one dollar for every dollar to which the seller subordinates. Some limitations designed to minimize the seller's risk include: (1) restricting the uses to which development financing may be put; (2) limiting the type of lender to institutional ones; (3) "capping" the amount to be subordinated; and (4) requiring the holder of the senior debt to notify the subordinating seller of defaults and give the seller the opportunity to cure. n62

The Need for Consideration. To be legally enforceable, every contract must be supported by consideration. Thus, when there is an absolute lack of consideration, there can be no contract. For instance, in *Dugan v. First Nat'l Bank in Wichita*, n63 the court upheld one subordination agreement and invali-dated another subordination agreement on the basis of whether improvements were made to the property. In invalidating the second subordination agreement, the court noted that "[c]onsideration for the original [subordination agreement] is not consideration for a subsequent subordination agreement...." n64

However, the "prospect of ... enhanced property value is sufficient consideration to support an agreement to subordinate a security deed to a construction loan." n65 Further, conferring of benefit to a third party other than the subordinator is sufficient consideration for a subordination agreement. n66

Statute of Frauds Applies. A subordination agreement, much like a release from a mortgage obligation, must be in writing to be enforceable since a subordination agreement is essentially a surrender of an interest in land. n67 However, as with other agreements affecting an interest in land, courts may enforce subordination agreements which violate the Statute of Frauds on alternative grounds such as partial performance, n68 estoppel, n69 intent, n70 and passage of time. n71 Although the Statute of Frauds governs the enforcement of subordination agreements, the individual facts of a case may eventually dictate the outcome of the dispute.

Three Forms of Subordination. Subordination may take one of three forms: (1) automatic; (2) optional; and (3) recordation.

An automatic subordination clause obligates the seller to subordinate to the buyer's construction loan even though the precise terms are unknown at the time the purchase-and-sale agreement is signed. The buyer will nail down financing only after tying up the land with an option or purchase-and-sale agreement. Without the seller's subordination, the buyer probably would not be able to procure an acquisition and development loan. The purchase-and-sale contract will usually require the seller to execute documents the lender later requires affirming the automatic subordination.

An optional subordination occurs when the seller makes no promise to subordinate at the time the purchase-and-sale agreement is entered, or promises in the agreement only to subordinate to a construction loan satisfactory to the seller.

Subordination by recordation occurs when the seller specifically allows the construction lender to record the construction loan ahead of the security interest by which the buyer's promise to pay the balance due for the land.

The buyer would prefer an automatic subordination under which no further discretionary action by the seller is required. Automatic subordination agreements usually specify the seller's acceptable range for each crucial term of the new loan without limiting the buyer to loan terms that may be unavailable -- the amount of senior debt the buyer may incur, the uses to which those loan proceeds may be put, the way the construction funds are to be monitorred. n72

The optional subordination agreement gives the seller the opportunity to review the buyer's development proposal and

financing plans, and then decide whether it is willing to subordinate or not. Some sophisticated sellers of development land insist upon this format. If they do not like the developer's proposal, they refuse to subordinate. They refund the developer's down payment under the contract, and terminate the land sale contract. If they like what the developer proposes, they subordinate to the land acquisition and construction loan, and go forward with the contract.

Drafting Subordination Agreements to Protect the Senior Lienor. "Subordination is a term widely used in real estate law but is not generally defined and not always fully understood ... The paucity of case law, particularly in defining the term subordination, underscores the importance of spelling out in the documents, in more normal detail, what is intended by the parties." n73

A thoughtful lender, expecting the seller to subordinate its purchase money loan to the senior lienor's security interest, may desire certain rights and require certain actions on behalf of the junior lienor before default. With respect to rights, the senior lender would want the ability to: (1) amend, modify, blanket, split and extend the first mortgage without losing the benefit of subordination; (2) alter the project, grant easements, dedicate streets or agree to subdivision conditions without the consent of the junior lienor; (3) advance funds in the future and keep its senior lien priority for funds advances; (4) receive any insurance proceeds and condemnation awards payable to the junior lienor to reduce senior debt; (5) purchase, without obligation, the junior lien by paying it off in full; (6) send notices to the borrower without providing copies to the junior lienor; and (7) maintain a lien superior to the junior lienor's irrespective of the junior lienor's payment of taxes or insurance premiums on the borrower's behalf. n74 With respect to obligations of the junior lienor, the senior lender would require the junior lienor to:

(1) give the senior lender copies of any notices sent to the borrower;

(2) provide estoppel certificates and beneficiary statements indicating how much is owed on the junior debt;

(3) grant to the senior lienor a right of first refusal to purchase junior;

(4) not accept any prepayment of debt before the first mortgage is paid in full; and

(5) ensure that all future holders of its lien agree to maintain all the protections of the senior lienor which the seller has agreed to. n75 In the event of default, the senior lienor would want:

(1) a default on the junior lien to be regarded as a default on the senior lien; and

(2) an agreement whereby the junior lienor will not foreclose or exercise any other right on the borrower's default without first notifying the senior lienor. n76

Drafting Subordination Agreements to Protect the Seller. A pro-seller subordination agreement strictly limits the amount, cost, timing and uses of borrower funds. The goal is to make sure that the value of the site is enhanced at least one dollar for every dollar to which the seller subordinates. Ideally, the seller would want to:

(1) restrict the uses to which development financing may be put -- to construction of the project on the seller's site;

(2) limit its subordination to institutional lenders;

(3) cap the amount to be subordinated;

(4) require the holder of the senior lien to provide notice of defaults; and

(5) have the opportunity to cure defaults. n77

Limits on Buyer's Right to Enforce Seller's Automatic Subordination Promise. Some land sellers, after contracting to subordinate, get cold feet and refuse to execute the necessary documents implementing their promises to subordinate. When sellers go back on their word, they may provoke developers into suing for specific performance or the subordination agreement.

If the loan doesn't conform to the explicit terms of the subordination agreement, the seller wins. n78 But what if the subordination agreement doesn't specify any details about the construction loan to be obtained? A naive seller who signed a subordination agreement and fails to condition the subordination is begging to lose the security.

In sympathy, California courts have generally protected sellers from subordination agreements which were either vague in not specifying how much the buyer could borrow at what rate of interest, or failed to place enforceable limits on how the borrowed funds could be used (in order to make sure they went into improvements on the site and not into the borrower's pocket or her other projects). n79

In *Handy v. Gordon*, n80 the subordination agreement set the maximum allowable loan as an amount per lot. Since the developer could divide the land into however many lots he wanted, there was really no ceiling on the amount of loan allowed. The California Supreme Court noted that if the developer divided the property into one-acre lots, the construction loan could total $3,200,000, whereas if the developer chose 3-acre lots, the loan could total $12,000,000. Additionally, the agreement set no limits as to how the developer could use loan proceeds not needed for construction. Refusing to enforce the agreement, the court concluded that "the contract leaves [the seller] with nothing but [the buyer's] good faith and business judgment to insure them that they will ever receive anything for conveying their land. Such a contract is not as to them 'just and reasonable'...."

In *Troj v. Chesebro,* n81 a Connecticut court declared a subordination clause unenforceable for failing to meet the Statute of Frauds requirement of "plain and precise" language. The clause litigated in that case provided the purchase money mortgage "will be subordinate to land development and construction mortgage." n82 The subordination agreement provision was unenforceable because it was "silent with respect to the amount, terms, interest rate and date of maturity of the [subsequent loans]." n83 In fact, the plaintiff in *Troj* was denied any relief, legal or equitable, because the Statute of Frauds demands that "no action can be maintained for the direct enforcement of any agreements which is within the statute, and no damages can be recovered for its breach." n84

A similar result obtained in Florida under a "clear, definite and certain" test derived from contract law principles. In *Lasseter v. Dauer*, n85 a Florida court denied specific performance of a sales contract because, *inter alia*, the subordination clause of the contract stated that "Seller agrees to subordinate this mortgage to allow additional financing" n86 but the "nature or purpose of such financing, or the amount or limits thereof are not stated in the contract." n87

Some states are less protective of subordinating sellers than California. In Vermont, a subordination agreement was enforced by the buyer of an inn although the agreement didn't specify any details of the construction loan except that it would be used for capital improvements. The court held that since the seller intended the buyers to rely on the subordination agreement and they did, the seller was equitably estopped from denying or refusing to sign it. n88

A lender who doesn't want to take the chance that the court will protect the seller might prefer to avoid the subordination agreement format altogether. Instead, the parties could simply agree to record the construction lender's deed of trust before the seller's. Recording act principals give lien priority to the lender who "first duly records." However, in most states the lender only enjoys that priority who is a bona fide purchaser -- paid value for its position and had no notice of the earlier unrecorded claim. So the seller whose deed of trust is recorded second might still have a

lien superior to the lenders. If the lender knew about the seller's security interest, the lender would not qualify as a bona fide purchaser, and would not be entitled to protection under the recording acts. However, if there were a foreclosure of the acquisition and development loan, a third party purchaser at the lender's foreclosure sale might have an interest superior to the land sellers' under recording act cases in many states assuming the purchaser were truly a bona fide purchaser. Disregarding strict application of recording act principles, some courts treat the lender and the land seller in this situation as if the land seller *had* signed a subordination agreement. In doing so, they often scrutinize the subordination arrangement to see if it treats the subordinating land seller fairly. n89

Suppose the buyer defaults on his construction loan. The lender forecloses. In such a case the *seller*, who had signed a vague or unfair subordination agreement, might sue this time, seeking a declaration that the seller's lien has priority over the *lender*'s despite the subordination agreement, because the *buyer* couldn't have gotten specific performance of it. In this situation the courts are more likely to side with the lender:

> Relying on *Handy v. Gordon*, plaintiffs contend that the subordination agreement was unenforceable because it did not spell out the terms of the note and trust deed to which it was being subordinated. However, that case is of no help to plaintiffs here. *Handy* was a suit for specific performance, not a foreclosure. It denied specific performance because the Supreme Court held that, because of the uncertainty, *specific performance* was barred... That is not a holding that a subordination clause such as is herein involved is not enforceable by other means. n90

The *Schneider* case draws a distinction between the rights of a seller against the buyer with whom she entered a subordination agreement and her rights against the construction lender. The seller doesn't have to sell to a buyer who needs subordination. Once the seller signs a subordination agreement she can't invoke its vagueness or unfairness as a defense to the construction lender's foreclosure.

The rationale is equitable estoppel. The lender, advancing funds in good-faith reliance on a subordination agreement, is allowed to retain the lien priority the seller, from all appearances, granted. Sellers are estopped from denying their own subordination agreements in priority disputes with third-party lenders. n91 Unlike the buyer, the lender did not lure the seller into signing a "blank check" promise, and the lender advanced substantial funds relying on the seller's promise while most buyers using subordinated vendor financing have little cash at risk.

Even a vague subordination clause which would not, in all likelihood, be specifically enforceable by the buyer, was deemed sufficiently clear for the lender to obtain lien priority in foreclosure in *Hyatt v. Maryland Federal Savings and Loan Ass'n*. n92 The clause: "[t]his mortgage will be subordinated to bona fide ground development and construction loans."

Only in New Jersey, so far, are lenders disadvantaged in the same way as buyers for relying on a seller's vague subordination agreement. In *B.J.I. Corp. v. Larry W. Corp.* n93 a New Jersey court held that general, blanket subordination clauses are "ineffective to elevate the lender, whose advances were not used to benefit the property of the subordinator, to a position of priority, unless the clause was bargained for and its consequences fully understood by the subordinating party." n94

Lender is Bound By the Terms of the Subordination Agreement. Note, however, that the lender can only rely on the subordination agreement if it meets the agreement's terms. If the lender had disbursed funds contrary to the terms of the subordination agreement, it would lose its lien priority for those improper disbursements. n95 Furthermore, the lender is charged with inquiry notice of the exact terms of the subordination agreement by merely knowing that such an agreement exists whether the lender has a copy of the agreement or not, and whether or not the agreement was recorded. n96

Seller's Remedies Against the Lender for Improper Disbursement of Loan Proceeds. When the terms of the

subordination agreement are breached and the lender has disbursed funds improperly, courts wield three distinct remedies.

(1) The lender could have its lien priority subordinated to the seller's. There is some disagreement among courts whether this remedy is appropriate when the terms of the subordination agreement were implied in law (written in by courts after the fact). Some judges have thought the lien priority reversal should be used only in cases where the lender had actually agreed to the terms of the subordination (the terms weren't court imposed), and the lender ignored them. n97

Other judges have thought that institutional lenders could as reasonably be expected to request a copy of the subordination agreement when the agreement wasn't recorded as to ask a title company for a copy when it was. n98

(2) The lender could have its lien priority subordinated to the seller's lien but only to the extent of the sum disbursed improperly. Suppose the subordination required all funds in a $1 million loan to be used for construction on the seller's land. But the lender gave the buyer/borrower $100,000 for non-construction purposes. Under this remedy the lender would lose its lien priority for $100,000 but retain it for the $900,000 that was properly paid out. Under the first remedy the lender would lose its lien priority for the entire $1 million.

(3) The lender could retain its lien priority, and the subordinating seller could be given a claim for money damages up to the amount of the improperly disbursed funds. Thus, suppose the security property was worth $1,500,000 and the seller's subordinated loan was for $550,000. If the lender had a $1,000,000 secured loan to which the seller had subordinated, the lender would be able to foreclose and pocket the first $1,000,000 of foreclosure sale proceeds. Assuming the property yielded its full value at foreclosure of $1.5 million, this would leave $500,000 for the seller. The seller would be short $50,000. If the lender had disbursed $100,000 contrary to the terms of the subordination, the seller would be able to recover its actual loss up to $100,000. In this case, that would be $50,000. n99

Lenders, of course, who want first liens insist that sellers sign remedy waivers. Typical is this one: "Any application or use of Construction Loan funds, for purposes other than those provided for in the Construction Loan agreement, shall not defeat, alter or invalidate the lien of the Construction Trust Deed in whole or in part."

That was the language the lender used in *In re Sunset Bay Associates.* n100 The Ninth Circuit held that the disclaimer applied to diversions of funds. But it didn't specifically exonerate the lender from charging a loan fee of more than two points, another limitation in the subordination agreement. After this decision we can expect lenders' counsel to go back to their PCs and whip out a more inclusive disclaimer for future use.

Some lenders are protecting themselves another way against the risk that one of their loan disbursements might violate the terms of a subordination agreement. They subtract the subordinated seller's lien from the amount they lend. Then even if they make an improper disbursement, their desired loan-to-value ratio remains intact. For example, assume the senior lender were wanting to limit its loan-to-value ratio to 70%. The property is worth $2,000,000. The lender might loan up to $1,400,000. But if the sellers were taking back a subordinated purchase money loan for $300,000, the lender will only lend $1,100,000. Where lenders do this, subordinated financing is far less attractive to developers. The result of these seller-protective subordination cases is that California courts, trying to protect sellers from unfair subordinations, may have ended up removing the option of subordinated seller financing altogether. This works to the detriment of knowledgeable land sellers prepared to take the risks of subordination in exchange for a bigger purchase price.

Subordination by a Home or Condo Buyer to the Developer's Construction Loan. Just as the developer could

borrow from a land seller by deferring payment of the land purchase price, the developer can also borrow from home or condo buyers by using their down payments to build the project. The condo or home buyers will be asked to subordinate their purchase-and-sale agreements to the construction lender's mortgage.

Here is a subordination provision from the purchase-and-sale agreement for a condo not yet constructed:

> Seller may borrow money to construct the Condominium. Buyer agrees that any lender advancing funds to Seller for Seller's use in connection with the Condominium will have a prior mortgage on the Unit and the Condominium until closing. At that time, Seller may use all the proceeds of Buyer's purchase which are necessary to release the Unit from the then applicable mortgages for the purpose of obtaining those releases. Neither this agreement, nor Buyer's payments of their Deposits, will give Buyer any lien or claim against the Unit of the Condominium. Without limiting the generality of the foregoing, buyer's rights under this agreement will be subordinate to all mortgages (and all modifications made to those mortgages) that secure the advancement of construction funds, whether made or recorded before or after the date of this agreement.

§ 85.05(c) Partial Release Clauses.

Definition. A developer who finances the site acquisition with a loan secured by a mortgage or deed of trust on the entire project site will not be able to retail individual lots free of the lien unless she reserved a "partial release" right in her contract or loan agreement. No informed lot purchaser or homebuyer would pay $200,000 for a house subject to a mortgage or other lien of $3,250,000 which could be foreclosed at any time unless it is paid off. Yet that is the specter raised by land acquisition security interests. These are called "blanket" encumbrances because they cover the whole site. n101 The requisite release provisions are called partial releases because the parties contemplate the blanket being removed from individual lots as they are sold to individual lot or homebuyers, and the loan being partially repaid from lot sales proceeds. n102

What happens when a seller-financier provides no chance for partial payments? Here is a sad story from Miami Beach. In an old and worn-out hotel, there lived dozens of retirees, mostly on modest, fixed incomes. The hotel owners sold, taking back a big mortgage. Their buyers got the bright idea of selling long-term leases to individual rooms and scooping up whatever life savings the tenants could fork over for their cheap leases (all unrecorded, by the way). After selling a good number of these leases, the buyers of the hotel disappeared, and defaulted on the purchase money blanket mortgage. The creditors initiated foreclosure. The tenants had the choice of losing their residences, paying current market rents for them, or coming up with enough money to pay off the blanket encumbrance.

In agreeing to a partial release clause the seller doesn't want to be left with a landlocked parcel, one so small it can't be legally subdivided. Also, if the developer appreciates the riskiness of land development, the developer may be eager to recoup as much as possible of the unpaid purchase price from the first lot sales. At a minimum the developer expects to avoid a deterioration in the effective loan-to-value ratio, so must release individual sites only on payment of sums ample to compensate for the security being released. This is easy when each site in a subdivided tract is of equal value. A simple formula by which the vendor releases a site for 110-120% of its pro rata value will usually work satisfactorily for the seller. When the sites aren't of equal value, a schedule of release prices lot-by-lot or an agreement about the sequence of releases (the least valuable sites being released first), does the job.

Partial release clauses usually bar release if the mortgagor is in default, require the developer to pay the costs of effecting the release (loan escrow and recording fees), and assure payment concurrent with the release.

An institutional lender who holds a blanket encumbrance will usually condition partial releases with these requirements:

1. Survey of entire property encumbered by the deed of trust (or mortgage) showing the parcel to be

released ("Release Parcel") and the parcel to remain ("Remaining Parcel").

2. Opinion of counsel or other evidence, satisfactory in form, scope, and substance to Institution that the Remaining Parcel, without taking into account the Release Parcel, or any other property will (a) comply with and not be in violation of any zoning, subdivision, environmental, or other law, rule, or regulation of any authority having jurisdiction over the Remaining Parcel, and (b) be assessed as a separate tax parcel or lot with separate billing for the same.

3. Unless otherwise specifically approved by Institution, such easements, in form, scope, and substance satisfactory to Institution, as Institution determines to be necessary over, on, and across the Release Parcel to provide the same pedestrian and vehicular access and other uses to the Remaining parcel as existed prior to the release of the Release Parcel. Any such easements shall be included as appurtenances under the deed of trust (or mortgage).

4. An indorsement to Institution's title policy insuring its deed of trust (or mortgage) on the subject property which shall extend the effective date of the policy to the date of the recording of the partial reconveyance and any modification of deed of trust (or mortgage) instrument necessary to encumber such easements as may be required under item 3. No additional exceptions to the title policy unless the same are specifically approved by Institution. The indorsement must be in the form, scope, and substance satisfactory to Institution.

5. The borrower shall not be in default under the loan secured by the deed of trust (or mortgage) and shall provide Institution an estoppel certificate, in form, scope, and substance satisfactory to Institution, that the loan is current and the borrower has no claims or defenses to its obligation to pay the same.

6. The release price shall be applied first to all sums due under the deed of trust (or mortgage), then to accrued interest, and then to the unpaid principal balance of the loan.

7. The entire transaction shall be completed at no expense to Institution. n103

Developers would much prefer to reserve for themselves the right to determine the sequence of lot releases. They would also prefer the lender or seller to release free of charge land that the local government requires for public easements. Naturally, developers have no trouble sleeping comfortably when the most valuable sites are released first even if that means the lender's or seller's security interest has been dissipated. The lender and seller each must look out for themselves in structuring the sequence of releases.

The developer has one cogent argument for the seller to keep release prices "reasonable." The developer needs enough cash left over to meet the continuing obligation to complete the land improvements and market the project. A too-aggressive release payment schedule can leave the developer stranded with insufficient liquidity. That could lead to insolvency, which benefits neither seller nor developer.

§ 85.05(d) Land Development Loans.

It isn't easy to finance non-income producing activity, so a developer will be lucky to find a lender willing to advance even half the site and early development costs. Such loans usually have low loan-to-value ratios, 50% being typical. Lenders often expect developers to guarantee these loans personally in recognition that the site might not be readily saleable in foreclosure.

The land development loan won't be repaid until the site is subdivided and individual lots are sold. Timing uncertainties are so common in development that land development loans often contain extension agreements requiring the developer

to pay additional fees for extending the loan term. Fund disbursement is usually keyed to the developer's schedule of site improvements, and her satisfactory completion of each portion of the work on schedule and within budget. Land development lenders usually review the important contracts the developer enters for major site work components, and insist that significant contractors be bonded to assure timely performance of their obligations.

If the developer's estimates of revenue and costs are accurate, and the lender's release clause payment schedule is realistic, the land loan will be repaid as the lots are sold.

The following example is offered by the general counsel of an institutional lender of how a land loan repayment might work.

> A buys parcel Y from B for $1 million. A puts down $200,000 in cash, borrows $500,000 from Institution, and B takes back a $300,000 second mortgage. [A gives B all $500,000 of the Institution loan proceeds.] Under this scenario A would have to pay debt service on both loans. However, if A borrows $600,000 at 10% per annum from Institution, Institution will advance A $500,000 for the purchase and advance the remaining $100,000 as needed to enable A to pay the debt service on Institution's loan -- the $100,000 being the Institution's and A's estimate of the carrying cost of the loan assuming partial releases and paydowns. For example, if the loan provides for the land to be sold or developed in five parcels over a 3-year loan term, with each release A would pay Institution $100,000 to reduce the loan. n104

If A paid institution only $100,000 as she sold each of the five parcels, this would leave the developer owing B, the seller, $300,000, and Institutional lender $100,000 (assuming the developer borrowed the $100,000 to cover interest payments on the $500,000 Institutional loan). Why isn't this an advantageous release payment schedule for the institution? The seller?

§ 85.05(e) Joint Ventures.

Since acquisition and development loans are so risky, land sellers or lenders may prefer to be joint venturers or partners with the developer. If the seller or lender is taking the greater share of the risk, why not reserve a big share of the profits and exercise some control over the developer's use of the investor's funds?

The typical real estate development joint venture is formed between an experienced developer and an institutional investor with the investor acting as money partner, and the developer as managing partner. The precise forms of organization among which they might choose -- partnership, limited partnership, corporation -- are described in Chapter 16 of these materials.

Their agreement will specify who is to control major project decisions, how and when funds are to be disbursed, what expenditures may be funded from the money partner's contribution, how cost overruns are to be funded, whether the developer can be involved in competing projects, how profits and losses are to be shared, and limits on the sale or assignment of joint venture interests.

§ 85.05(f) When a Loan in Form Becomes a Joint Venture in Fact, and Vice Versa.

It isn't always easy to tell whether an agreement is a joint venture or a land acquisition loan. courts can sometimes be persuaded to disregard the form of documentation and instead analyze the reality of the relationship when the form and reality aren't the same.

The *Restatement (Second) of Agency* § 140 converts a lender into a partner who exercises "control of his debtor's business for the mutual benefit of himself and his debtor." One thoughtful commentator, Professor Dennis Hynes, argues that "control" should not be the only test of when a lender becomes liable as a principal. He urges that courts

should, and often do, take into account such factors as whether the lender shares profits, whether control is exercised mainly to impose financial responsibility in a poorly-run debtor company, whether the controlling lender made things better or worse for other creditors, and whether the lender could have realized that its decisions affecting management carried it outside its role as a lender. n105

The other tests to distinguish a joint venture from a loan aren't imbedded in concrete either.

> A joint venture is an association of two or more persons formed to carry out a single business enterprise for profit, through the combination of their property and services. A joint venture exists when an express or implied contract providing for (1) a community of interests, and (2) joint or mutual control, that is, an equal right to direct and govern the undertaking, binds the parties to such agreement. Neither criterion is dispositive of the point, however. The joint venture agreement must provide for sharing profits but it need not distribute them equally. Sharing of losses, if the losses involve only time and labor, need not specifically be in the joint agreement. Distribution of other losses and expenses may be implied from the manner in which profits are to be shared. Where it is the intent of the parties for all co-venturers to be subject to the risks of the business, a joint venture exists even though one co-venturer contributes capital and secures his condition with a note. Finally, a joint venture is similar to a partnership except a joint venture contemplates only a single business transaction. A partnership, on the other hand, is formed for general business of a particular kind. n106

A defaulting borrower may claim the lender exercised so much control over the business as to have become a joint venturer. If the borrower succeeds in this claim, the borrower will be able permanently to stay foreclosure (since the lender's "mortgage" will have become a partnership stake). The borrower may also succeed in pushing some of the venture's losses to the lender. n107 If the venture succeeds, the "lender" may claim joint venture or partnership status to share the profits.

A money "partner" would prefer to be a secured lender and not a co-owner when the partner wants bankruptcy priority over unsecured creditors. A secured lender whose interest is recast as that of a joint venturer becomes subordinated to the claims of unsecured creditors and liable jointly and severally along with the developer n108 for claims by homebuyers for construction defects. If the *developer's* sales agent lied to prospective purchasers to help close sales, the money partner would be jointly liable in fraud as a partner but free of liability as a lender.

The Statute of Frauds and the parol evidence rule would seem to bar these attempts to convert one sort of interest into another. Mortgages have to be in writing as they are interests in land. Oral statements can't be used in court to vary the terms of a written instrument. However, fraud and estoppel sometimes justify exceptions to the Statute of Frauds. So do other statutory and common law goals -- usury laws and redemption rights among them. And oral testimony may be admissible to explain ambiguities in a document or provisions collateral to it. Once these suits reduce to questions of fact, settlement may look inviting.

§ 85.05(g) Special Assessment Bond Financing.

Traditionally, local governments financed some improvements like streets, sidewalks, and street lights by forming taxing districts within the boundaries of the property to be benefited by the improvements and levying a special property tax against each lot in the district. In some states it is possible for a developer to initiate the formation of such a district with the approval of the county or city issuing bonds for improvements within the district. Under California law, for instance, a community facilities district may be formed to sell bonds secured by future property tax revenues to pay not only for streets and sidewalks but parks, schools, fire and police stations, jails, juvenile halls, ambulance and paramedic facilities and services, school sites, libraries, utility infrastructure, and other improvements. n109

When California developers acquire large vacant sites, they sometimes find this form of financing attractive. It enables

them to raise bond proceeds to pay for site improvements.

After a noticed public hearing and local government approval, a two-thirds vote of the qualified electors is necessary to approve the maximum tax rate to be applied in the district. If the site has fewer than twelve residents, the owners of property in the proposed district vote in proportion to their acreage.

The rate of tax is based on the amount of benefit each parcel will receive from the proposed improvements. The tax is collected by the county tax collector along with all other property taxes due. These bonds usually include a reserve fund to provide for debt service until the property in the district is improved, subdivided and sold to individual lot buyers. By scheduling the sale of bonds to mesh with the actual use of funds, and marketing the bonds to get the best rate, financing costs can be kept to a minimum. Good brokers are available to advise developers on these details. n110

Home or lot buyers in the district are expected to repay the debt in annual taxes. These special assessments can be quite steep -- and may be scheduled to rise over time. Under the laws of a few states, California among them, prospective buyers must be notified of this liability. n111

In the early years of this type of bond financing, few buyers seemed to appreciate the impact these assessments could have on their monthly housing cost.

As homebuyers became sensitive to the special property tax assessments they had to pay for infrastructure bonds, some developers who weren't using them began to advertise that fact. Apparently, homebuyers are catching on.

Some homebuyers might nonetheless prefer the special property tax assessment to the higher mortgage payments that would result if the costs of improvements weren't bonded but got passed to homebuyers as an increase to the house price. Interest rates on home mortgages are usually higher than on special assessment district bonds. Interest from such bonds is usually exempt from federal and state income taxes. So bonds bear lower interest rates than mortgages.

Special assessment bonds are quite risky for the investor -- the bond buyer -- because the local government doesn't pledge its "full faith and credit" to repayment. The investor depends entirely on property tax special assessments, hoping that the development project will succeed, houses will be built, and the new homeowners will pay their taxes. Should the project fall short of expectations, the bondholders will get stuck foreclosing on a partially developed site, the value of which may be insufficient to repay the sums they invested. n112

For example, consider the plight of Nevada County, California. In December of 1990, the county issued $9.7 million in Mello-Roos bonds to facilitate the development of a 384-unit project. As with other Mello-Roos bonds, the proceeds were to pay for the sewer, water and other utilities of the subdivision. Initially, all went well as Phase One construction on 103 lots was completed by 1991. However, the developer experienced financial difficulty in 1992 and failed to pay property taxes. The bonds fell into default in late 1992. After the county and the bank instituted foreclosure proceedings, the developer filed for bankruptcy. Eventually, the bankruptcy court permitted the bank to foreclose on the property and title was passed to the bank in December of 1993. To this day, the county and the bank are working together to sell the property and restructure the debt. In fact, one developer recently paid the county $751,000 for twenty-five lots with an option to acquire additional lots. With these proceeds, the county cured a two-year default on the bonds.

Tragically, the county's problems do not end merely with the default of the Mello-Roos bonds. In late 1994, the SEC contacted the county regarding possible violations of federal securities laws. In citing the failure of the county to disclose the structure and security of the bonds, SEC enforcement attorneys have notified the county of its intentions to recommend that the SEC file civil fraud charges. Although the SEC would have to prove either actual fraud or extreme recklessness to establish guilt, the mere possibility of such a penalty may chill further issuance of such bonds in the country. n113

Mello-Roos and Environmental Impact Statements. Local agencies are required to prepare environmental impact reports for projects which may have a significant impact on the environment. However, this requirement is limited to projects which are a necessary step in the chain of events which would culminate in a physical impact on the environment. As a result, the mere formation of a Mello-Roos district does not necessitate the preparation of environmental impact reports. n114

FOOTNOTES:

(n1)Footnote 54. As part of the Financial Institutions Reform, Recovery and Enforcement Act of 1989, Congress required all bank regulators to establish "uniform accounting standards for determining the capital ratios of all federally insured depository institutions." Acting within the scope of that authority, the Board of Governors of the Federal Reserve System adopted capital standards for banks. *56 Fed. Reg. 44,084.* Among them is an assignment "to the 100 percent risk weight category" for "real estate development and construction." *Id.* at 25.

(n44)Footnote 97. *Protective Equity Trust Co. No. 83 v. Bybee, 2 Cal. Rptr. 2d 864, 871 (1991).* The seller had sold property to the buyer for $210,000, $40,000 down and a $170,000 note secured by a purchase money deed of trust. The seller agreed to subordinate its purchase money deed of trust to the buyer's construction loan. The buyer's lender made him a loan of $95,000, but not for construction. The lender gave the buyer $40,000 to pay the down payment and the rest in cash. The buyer defaulted on both loans. The sellers foreclosed on their lien and brought suit to quiet title against the construction lender. A California appellate court ordered what the sellers sought. The seller had allowed the construction lender's deed of trust to be recorded before their deed of trust, but only because the sellers were relying on the terms of the subordination agreement. The buyer breached it with the construction lender's help. So the court reversed the priority and made the seller's trust deed senior to the lender's deed of trust. The lender lost its lien entirely since the sellers had already foreclosed theirs.

(n58)Footnote 111. Cal. Gov't Code § 53341.5 requires a subdivider to give any purchaser or lessee a notice about the district and the maximum annual amount of special tax which may be levied. Unnotified purchasers or lessees may rescind. They also may rescind within three days of receiving notice personally or within five days of receiving mailed notice.

> The notice must include, among other things, (i) a statement that the property being purchased or leased is subject to a special tax which is in addition to regular property taxes and any other applicable local tax or assessment, (ii) the maximum annual amount of the special tax, the number of years for which it will be levied, and the permitted amount of annual increases; (iii) the specific facilities or services which are being financed; (iv) a statement that the special tax is imposed on the property because it is a new development; (v) in the event of a sale, a statement that if the purchaser fails to pay this tax when due each year, the property may be foreclosed upon and sold; (vi) a statement that the tax is used to provide public facilities or services that are likely to particularly benefit the property; (vii) a statement that the purchaser or tenant should take this tax and the benefits from the facilities and services for which it pays into account in deciding whether to buy or lease the property; (viii) a statement that the authorized facilities may not yet have been constructed or acquired and that it is possible that some may never be constructed or acquired; (ix) an acknowledgment by the purchaser or tenant that he or she has read the notice and received a copy of the notice prior to entering into a contract to purchase or lease with respect to the property; and (x) a statement that the purchaser or tenant may terminate the contract or lease within three days of receiving the notice by person or within five days after it was deposited in the mail. (n59)Footnote 112. *See* Ben Weberman, *Shallow Bonds*, Forbes (Apr. 16, 1990). The author's advice to bondbuyers: "[T]read carefully... Investors who buy these instruments are entering a shadowy side of municipal finance. They are often left in the dark about credit quality."

In preventive anticipation, the California legislature in 1992 passed Senate Bill No. 1464, ch. 772, § 3 to add the following amendment to Section 53321(d) of the Mello-Roos Community Facilities Act:

> In the case of any special tax to pay for public facilities and to be levied against any parcel used for private residential purposes, (1) the maximum special tax shall be specified as a dollar amount ... which amount shall not be increased over time except that it may be increased by an amount not to exceed 2 percent per year, (2) the resolution shall specify a tax year after which no further special tax subject to this sentence shall be levied or collected, and (3) the resolution shall specify that under no circumstances will the special tax levied against any parcel subject to this sentence be increased as a consequence of delinquency or default by the owner of any other parcel or parcels within the district by more than 10 percent.

Subsections (1) and (2) clearly seek to protect the homebuyer by placing a cap on Mello-Roos tax increases and specifying a final maturity date after which the bond repayment is satisfied. Both these features protect the homebuyer from runaway tax increases and a predictable duration of repayment. However, since there are no further limitations, it is conceivable that the tax levied may increase 2% annually until the final tax year.

The 1992 amendment also limited the extent of cross-collateralization to avoid the disaster that occurred in a failed financing district in Colorado by adding subsection (3) to Section 53321(d). Specifically, it limits any increases due to a default or delinquency of other lots within the financing district to no more than 10%. This limitation allows for some cross-collateralization without the unbearable financial burden of a sudden doubling of special taxes.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.06

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.06 Larwin's Purchase-and-Sale Agreement.

Larwin submitted the enclosed letter of intent and option agreement to the physicians. Review it with the interests of the sellers in mind.

Exhibit 1

This is the letter of intent which the President of Larwin submitted for discussion with a committee representing the sellers. You will see that in the resulting contract Larwin got much but not all that it sought. Try spotting the key differences.

May 26, 1987
RE:Approximately 880 acres located between 90th and 110th Streets and G and H Avenues in the Lancaster area of the County of Los Angeles and more particularly described on the Preliminary Title Report ("PTR") attached hereto as Exhibit "A."
LETTER OF INTENT

Larwin ("Buyer") offers to purchase the above designated property from GH Ranch Properties, a Limited Partnership ("Seller"), for a purchase price of $4,000 per acre subject to the following general terms and conditions:

1. Purchase price to be payable as follows:

A. Twenty-five percent (25%) of the purchase price to be payable in cash at close of escrow.

B. The balance of seventy-five percent (75%) of the purchase price to be evidenced at

close of escrow by a Note secured by a first trust deed on the property. The Note shall bear interest at the rate of 72% per annum and five (5) equal principal payments (together with accrued interest) shall be due annually beginning one year after close of escrow. Appropriate release provisions at 110% with full credit for the down payment will be agreed upon prior to opening of escrow.

2. Within sixty-five (65) days of opening of escrow, Buyer will approve or disapprove the PTR, attached hereto as Exhibit "A." Seller will provide all underlying documents to the PTR within ten (10) days from opening of escrow.

3. Escrow to open at TMC Escrow Co., Encino, when a formal purchase and escrow agreement is signed by both Buyer and Seller. Escrow to close upon recordation of a final subdivision map for the property, but no later than thirty-six (36) months from opening of escrow.

4. During the escrow period, Buyer will process with the County of Los Angeles, the required zoning, EIR and Tentative Map approvals for the property and will pay all costs and fees necessary to obtain such approvals. Buyer to provide copies of all plans submitted to Los Angeles County to Seller for Seller's approval, such approval not to be unreasonably withheld.

5. Buyer shall be entitled to reasonable access to the property at any time prior to close of escrow for the purpose of making such engineering, survey, soils, geology and environmental studies and tests as Buyer may reasonably deem necessary, all of which shall be completed at no expense to Seller. Buyer agrees to indemnify and hold Seller and property free and clear of any liens, costs or liabilities in connection with such tests.

6. Buyer and Seller each acknowledges to the other that no broker was used in connection with this transaction.

7. Buyer to pay all real property taxes for the 880 acre parcels commencing twelve (12) months from opening of escrow.

8. Seller represents to Buyer that Seller has clear and marketable title to the property and full authority to convey the property at close of escrow.

If the above basic terms and conditions are satisfactory, please sign this letter below and return it to me on or before 5:00 PM, Thursday, June 4, 1987. Upon receipt of acknowledged Letter of Intent, a formal purchase and escrow agreement will be prepared by Buyer for the approval and signature of Buyer and Seller.

Very truly yours,

Agreed and accepted:

GH Ranch Properties,

Michael I. Keston

a Limited Partnership ("Seller")

Date _____

When Does a Letter of Intent Become a Binding Purchase-and-Sale Agreement? It is black-letter law that once parties agree to all material terms of a contract, a contract is formed. So, even though the parties may have agreed that the letter of intent shall become null and void if no agreement of purchase-and-sale is entered into within thirty days, courts may look past the letter's language and look to the intent of the parties. n115 In fact, express provisions of a written agreement may be waived either expressly or implicitly. n116 Thus, since the determination of intent and of waiver are both questions of fact, the party may not prevail upon a motion for summary judgment. n117

In order for a party to avoid the entanglements of a lawsuit and still use a letter of intent during negotiations, the party must include a release provision.

Exhibit 2

OPTION AGREEMENT

Purchase and Sale of Real Property and Escrow Instructions

Escrow No. _____

Date of Execution:
July _____, 1987

This Option Agreement, entered into between GH Ranch Properties, a California Limited Partnership ("Sellers"), and Larwin Construction Co., a California corporation, 16255 Ventura Boulevard, Suite 900, Encino, CA 91436 ("Buyer"), constitutes both an agreement to purchase and sell real property, and escrow instructions director to Escrow Consultants, Inc., 1901 Avenue of the Stars, Los Angeles, California 90067, Attention: Jean Selby ("Escrow Holder").

OPTION TERMS AND CONDITIONS

1. *Property*. Seller agrees to sell to Buyer and Buyer agrees to buy from Seller, upon timely execution of this Option, and on the terms and conditions hereinafter set forth, that certain real property (the "Property") consisting of approximately 880 acres in the unincorporated north of Avenue "H," south of Avenue "G," west of 90th Street, and east of 110th Street, and as more particularly described in that certain preliminary report of title issued by Chicago Title Insurance Company ("Title Company") Order No. 8754090-27, attached hereto as Exhibit "A," and made a part hereof.

2. *Purchase Price*. Seller agrees to sell the Property to Buyer for a total purchase price consisting of the sum of the Base Purchase Price, as set forth in Paragraph 2.1, and the Carry Adjustment, as set forth in Paragraph 2.2. The parties agree that the base purchase price and the Carry Adjustment are each stated with sufficient certainty, and a sufficient mechanism is provided for calculating said elements of the purchase price, that both parties waive any right to make a future assertion that the purchase price is not determinable with sufficient certainty on which to form the basis for this Agreement.

2.1. *Base Purchase Price*. The base purchase price of the Property ("Base Purchase Price") shall be $3,520,000.

2.2. *Carry Adjustment*. Buyer shall pay to Seller an amount ("Carry Adjustment") to compensate Seller for costs of retaining ownership of the Property until the closing of this transaction. The Carry Adjust shall be the product of (i) 0.01

(representing an escalation of one percent (1%) per month), multiplied by (ii) $3,520,000, multiplied by (iii) the number of the whole months elapsing between the date that is six months from the signing of this Agreement and the date of close of escrow.

As an example, if escrow closes on June 10, 1990, the Carry Adjustment would be (0.01) x $3,520,000 x (29 months) = $1,020,800.

3. *Exercise of Option and Terms of Payment*. The Purchase Price of the Property shall be payable as follows:

3.1. *Payment of Real Property Taxes*. In consideration of Buyers promise and agreement to pay all current, nondelinquent property taxes on the property commencing to accrue twelve (12) months from the date of this Option Agreement and the timely payment of the Option payments, as set forth below, Seller hereby grants to Buyer an Option to Purchase the property for a period as set forth in Paragraph 4.3 of this Option Agreement.

3.2. *Option Payments and Down Payment*. On or before six (6) months from signing of this Option Agreement, Buyer shall pay directly to Seller the amount of Twenty-Five Thousand Dollars ($25,000) ("First Option Payment"), which shall be applicable to the Purchase Price. The first Option Payment shall be refundable to Buyer only in the event of the failure or refusal of Seller to deliver the Property to Buyer at close of escrow in the condition required by this Option Agreement.

On or before eighteen (18) months from signing of this Option Agreement, Buyer shall pay directly to Seller the amount of Seventy-Five Thousand Dollars ($75,000) ("Second Option Payment") which shall also be applicable to the Purchase Price, and which Second Option Payment shall be refundable to Buyer only in the event of the failure or refusal of Seller to deliver the Property to Buyer at close of escrow in the condition required by this Agreement.

An additional amount, which, when combined with the First Option Payment and Second Option Payment aggregates twenty-five percent (25%) of the Purchase Price ("Down Payment") shall be paid by wire transfer or Cashiers Check drawn upon a California financial institution, to Escrow Holder, for Seller, at least one (1) day prior to the date set for close of escrow.

3.3. *Balance of Purchase Price*.

A. The balance of the Purchase Price shall be paid at Close of Escrow by Buyer's promissory note ("Note") in the form of Exhibit "B" attached hereto, bearing annual interest at ten percent (10%) per annum, which interest shall be paid annually by Buyer together with five (5) equal annual payments of principal. Such payments of principal and interest commencing on the first anniversary of the Close of Escrow.

(1) The Note shall be secured by a deed of trust ("Trust Deed") encumbering the property conveyed in the form of Exhibit "C" attached hereto.

(2) The Note shall be all due and payable on or before five (5) years after the Close of Escrow. All payments of principal shall release portions of the Property from the encumbrance of the Trust Deed as set forth herein.

B. The Trust Deed shall be the standard Chicago Title Insurance Company short form Deed of Trust in the form of Exhibit "C" attached hereto supplemented by a "Rider" satisfactory to Buyer and Seller. The Rider is attached to this Agreement as Exhibit "D" and made a part here by this reference.

4. *Escrow*.

4.1. *Escrow Holder*. Buyer shall perfect this Option Agreement by depositing a signed copy of this Option Agreement

with Escrow Holder not later than thirty-five (35) months from the date of this Option Agreement. The date of such deposit shall be referred to herein as the "Opening of Escrow" and the date escrow actually closes and the deed is recorded shall be referred to as "Close of Escrow." Escrow Holder is hereby authorized and instructed to act in accordance with the provisions of this Option Agreement, which Option Agreement, together with Escrow Holder's standard general escrow instructions. As between the parties, if there is a conflict between Escrow Holder's general instructions and this Option Agreement, this Option Agreement will control.

4.2. *Title Report and Underlying Documents*. Seller has caused Title Company to Provide Buyer with a preliminary title report (attached hereto as Exhibit "A") and all underlying documents covering the Property, such report showing all matters of record and all items which would be shown as exceptions on a CLTA policy of title insurance. On or before sixty (60) days from the date of this Option Agreement, Buyer shall give written notice of any items on such report or reports which Buyer disapproves, (with the exception of reserved mineral rights as herein described) and Seller shall, within ten (10) days following notice of Buyer's disapproval, notify Buyer of the items which Seller will cause to be removed or cured. As to the items which are to be removed or cured, Seller shall remove such items on or before close of escrow. If Seller elects not to cure or remove all of the disapproved items, and Buyer does not terminate under Section 5 below, Buyer shall be deemed to have waived its disapproval of such items. As to reserved mineral rights, Buyer shall have six (6) months from the date of this Option Agreement within which to notify Seller of its disapproval. The term "Reserved Mineral Rights," as used in this Agreement, shall mean any and all interest in the property, whatsoever, wherein any claim to ownership, royalty, or right to extract any mineral, water, or petroleum substance is made, referred to, or may be inferred.

4.3. *Close of Escrow*. Close of Escrow shall be the date upon which the Grant Deed conveying title to the Property to Buyer is recorded in the Official Records of the County of Los Angeles. Buyer shall designate by written notice the date for Close of Escrow, but in no event will Escrow close later than the sooner to occur of (i) thirty-six (36) months from the date of this Option Agreement or (ii) upon recordation of a final tract map upon any portion of the property. If this Escrow is not then in a condition to close, (as the same may have been extended by mutual agreement), because of the inability or refusal of Seller to deliver title in the condition provided for herein, Buyer may (in addition to any other remedies to which it may be entitled) in writing demand and receive the return of its money or documents. Should Seller not so default, and escrow not close through no fault of Seller, Seller may retain all option payments made.

4.4. *Required Conditions of Closing*. Escrow Holder is hereby authorized to record the documents and disburse the funds and documents called for, provided each of the following conditions has then been fulfilled:

(a) Chicago Title Insurance Company can issue a CLTA Owner's Policy of Title Insurance, (or, at Buyer's option and additional expense, an ALTA Owner's Policy of Title Insurance) with liability equal to the Purchase Price, showing title to the Property vested in Buyer, SUBJECT ONLY TO:

(i) Real Property taxes not then delinquent; and

(ii) All conditions and exceptions and other matters affecting title as shown in the preliminary title report to be delivered to Buyer pursuant to this Option Agreement, except for such exceptions and other matters which Buyer shall have disapproved (unless later waived) and which Seller prior to the Close of Escrow has agreed to remove.

(b) Buyer and Seller shall have deposited in Escrow funds and documents described in Paragraph 3.2, 3.3, and Section 8.

(c) Escrow Holder is authorized to record any instrument delivered through this Escrow if necessary or proper for issuance of the policy of title insurance referred to in this Paragraph 4.4.

4.5. *Prorations*. Ad valorem property taxes for the current fiscal year and the annual installments of (i) any bonded

indebtedness, (ii) any landscape and lighting maintenance assessments, and (iii) any other (maintenance and/or improvement) assessments imposed by a local government or public agency, shall be prorated as of the Close of Escrow.

Except for the foregoing assessments, all other assessments, deferred agricultural taxes, impositions or penalties (including Williamson Act exactions), and/or special taxes, including the full principal amount of any bonded indebtedness encumbering the Property, as well as supplemental taxes with respect to improvements completed by Seller as of the date of Close of Escrow, shall be paid by Seller. To the extent such amounts can be identified or reasonably estimated by Escrow Holder they shall be paid (or reserved for payment) from funds otherwise accruing to Seller at Close of Escrow, and if not so offset, Seller shall pay such amounts immediately upon demand by Buyer; provided, however, Seller shall not be responsible for any assessments resulting from Buyer's development of the Property.

5. *Review Period*. Buyer shall have until six (6) months from the date of this Option Agreement (the "Review Period") to examine and investigate all aspects of the Property, including without limitation, grading, soil composition and condition, easements, feasibility, governmental conditions, zoning, and traffic matters. Seller shall make available to Buyer all information in its possession regarding the Property during the Review Period.

At any time prior to the expiration of the Review Period, Buyer shall have the right in its sole discretion to terminate the Option Agreement for any reason whatsoever by giving written notice to Seller. In the event of such termination, all title charges shall be paid by Buyer. If not so terminated, the First Option Payment shall be paid by Buyer to Seller.

6. *Access/Dealing with Government*. Prior to Closing, and so long as this Agreement continues in effect, Seller shall

> (i) permit Buyer's representatives to have reasonable access to the Property to carry on any normal or customary investigatory or planning work with respect to development or improvement activities;
>
> (ii) facilitate Buyer's representatives in dealing as a contract purchaser of the Property with the County of Los Angeles and any other governmental and quasi-governmental authorities having jurisdiction over same in matters having to do with the planning, mapping, zoning and development of the Property; and in connection therewith.

7. *Delivery of Documents to Escrow Holder*. Seller hereby covenants and agrees to deliver to Escrow Holder on or prior to the Close of Escrow for disbursement to Buyer after Close of Escrow the following instruments and documents, the delivery of all such documents being a condition to the Closing of Escrow.

(a) *Grant Deed*. Grant Deed in a form reasonably acceptable to the Title Company and duly executed and acknowledged by Seller.

(b) *Tax Affidavit*. A declaration signed under penalty of perjury which provides Seller's employer identification number, which states that Seller is not a "foreign person" within the meaning of the Foreign Investment in Real Property Tax Act and which complies with any other applicable requirements in order to exempt Buyer from the withholding requirements of Section 1445 of the Internal Revenue Code as amended.

(c) *Proration Statement*. A proration statement to Paragraph 4.5 above.

8. *Delivery of Documents and Funds to Escrow Holder by Buyer*. Buyer hereby covenants and agrees to deliver to Escrow Holder on or prior to the Close of Escrow for disbursement as provided in this Option Agreement:

(a) Any documents which Buyer is obligated to countersign hereunder.

(b) Buyer's funds made payable to Escrow Holder in accordance with Section 3 above.

9. *Warranties of Seller*. Seller makes the following representations and warranties, each of which shall be true as of the Close of Escrow.

(a) The Property is free and clear of all leases and contracts of any kind or character which will bind the Property after the Close of Escrow.

(b) Seller is not now involved in or aware of any pending or threatened proceeding, or litigation which will affect the Property or Seller's ability to perform its obligations hereunder.

(c) The execution and delivery of, and the performance under this Option Agreement will not result in a violation, breach, or constitute a default under, any agreement or instrument of any nature to which Seller is a party or by which it or any of its properties may be bound.

(d) To the best of Seller's knowledge, there are no contracts (executory or otherwise) affecting the Property other than as disclosed in writing to Buyer.

(e) Seller has received no notice of and, to the best of knowledge of Seller, no violation exists or is claimed to exist, with respect to the Property for any use or improvements or their construction, of any statute, ordinance, regulation, or administrative or judicial order or holder, whether or not appearing in public records.

(f) During the period prior to Close of Escrow, Seller will execute no contract which will affect the Property after the Close of Escrow nor do any act to extend or modify any leasehold interest on the Property without prior written consent of Buyer, which consent shall not be unreasonably withheld.

(g) To the best of Seller's knowledge, Seller has complied, and the Property is in compliance, with all laws relating to the storage, use, and disposal of hazardous, toxic or radioactive matter including those materials identified in Sections 66680 through 66685 of Title 22 of the California Administrative Code, Division 4, Chapter 30, as they may be amended from time to time (collectively, "Toxic Materials"). If Seller has stored, used, or disposed of any Toxic Materials on the Property, during the period of Seller's ownership of the Property, Seller shall notify Buyer in writing within thirty (30) days after the signing of this Agreement as to the location of such activity. Buyer shall have the right to conduct appropriate tests of water and soil to ascertain the extent of any contamination in excess of permitted levels on the Property. Seller shall, respecting the period of Seller's ownership of the Property, be solely responsible for, and shall defend, indemnify and hold Buyer, its agents, and contractors harmless from and against, all claims, costs, and liabilities, including attorneys' fees and costs, arising out of or in connection with any removal, clean-up, and restoration work and materials required hereunder to return the Property to its condition existing prior to Seller's ownership. Seller's obligations hereunder shall survive the Close of Escrow. Seller agrees Buyer and/or its agents may, without liability so Seller, make all disclosures and file all reports which may be required by law with respect to discovery as a result of such investigations of any hazardous, toxic, or radioactive materials thereon.

Seller covenants to take no action prior to the Close of Escrow which would make any of the above representations and warranties untrue. All sellers warranties and representations are made for the benefit of Buyer and shall survive the Close of Escrow.

10. *Termination of Liquidated Damages*. IF BUYER TERMINATES THIS AGREEMENT PRIOR TO THE EXPIRATION OF THE REVIEW PERIOD OR BECAUSE OF SELLER'S INABILITY OR UNWILLINGNESS TO TRANSFER THE PROPERTY IN THE CONDITION REQUIRED HEREUNDER, ESCROW HOLDER SHALL RETURN ALL FUNDS HELD BY IT. HOWEVER, IF CLOSE OF ESCROW FAILS TO OCCUR AFTER THE

REVIEW PERIOD FOR ANY REASON OTHER THAN SELLER'S UNWILLINGNESS OR INABILITY TO TRANSFER THE PROPERTY IN THE CONDITION REQUIRED BY THIS AGREEMENT, ANY DEPOSIT(S) RELEASED TO SELLER SHALL BE RETAINED BY SELLER AS LIQUIDATED DAMAGES, AND SELLER'S SOLE REMEDY AND RIGHT TO DAMAGES. THE PARTIES AGREE THAT SELLER'S ACTUAL DAMAGES, IN THE EVENT OF SUCH DEFAULT BY BUYER, WOULD BE DIFFICULT OR IMPOSSIBLE TO DETERMINE. THEREFORE, THE SAID DEPOSIT HAS BEEN AGREED UPON, AFTER NEGOTIATION, AS THE PARTIES' BEST ESTIMATE OF SELLER'S DAMAGES.

Buyer and Seller each agree to indemnify and hold Escrow Holder harmless from any claim by the other arising out of any distributions made by Escrow Holder in accordance with and pursuant to the provisions of this section.

* * *

15. *Mutual Covenants*. In consideration of the mutual promises of the parties hereto, and of the execution of this Option Agreement by the parties, each party hereby agrees in good faith to utilize its best efforts in connection with the taking of any and all action necessary with respect to any investigation, review, or other procedure required to in order to enable such party to grant or withhold its consent or approval as provided for herein, it being the intention of each party that such covenant of good faith and utilization of best efforts shall be deemed sufficient and valid consideration for the promises of each party hereunder. Wherever any consent or approval of a party is required hereunder, such party shall not withhold such consent or approval unreasonably, it being understood that the standard of reasonableness shall be determined with reference to the standard of a reasonably prudent investor having experience and sophistication in the purchase of property of the type covered by the subject matter of this Option Agreement.

* * *

21. *Condemnation*. In the event that any eminent domain proceeding for the taking or condemnation of all or any part of the Property is instituted prior to the Close of Escrow, the following provisions shall apply:

(a) Seller shall promptly notify Buyer of such proceeding.

(b) If more than ten percent (10%) of the Property is subject to such proceeding, Buyer shall have the right to terminate this Agreement by giving notice of termination to Seller no later than fifteen (15) days after Seller has given Buyer notice of such proceeding.

(c) If Buyer elects not to terminate this Agreement, this Agreement and the parties' rights and obligations under this Agreement shall remain in full force and effect, and the full amount of any award attributable to the condemnation of all or part of any of the Property arising out of such proceeding shall be paid to Buyer and Seller shall be entitled to the full amount of the Purchase Price for the Property.

22. *Memorandum of Option*. A memorandum of this Option Agreement, in the form of Exhibit "E" attached, may be recorded by Buyer in Los Angeles County.

MEMORANDUM OF OPTION AGREEMENT

This Memorandum of Option Agreement is made this _____ day of _____, 1987, by and between Larwin Construction Co., 16255 Ventura Boulevard, Suite 900, Encino, CA 91436 ("Larwin"), and GH Ranch Properties,

1. GH and Larwin have entered into a certain Option Agreement and Escrow Instructions dated

_____, 1987, which Option Agreement provides for the sale of certain Property described in Exhibit "A" attached hereto to Larwin upon specified terms and conditions.

2. The parties have executed this Memorandum of Option Agreement in order that third parties may have notice of the existence of Larwin's right to purchase the Property upon the terms and conditions stated in the Option Agreement and Escrow Instructions.

IN WITNESS WHEREOF, the parties have executed this Memorandum of Option Agreement as of the date set forth above.

This is the document Larwin insisted on recording to protect its option.

Question 10.

What interest rate is the seller receiving in the form of the Carry Adjustment?

ANSWER 10.

The seller is receiving interest at one percent per month measured from a date six months after this contract is entered, to the close of escrow, in the form of a carry adjustment, 12% on an annual basis.

Question 11.

If the buyer decides within six months and before tendering the first payment not to buy, do sellers become automatically entitled to $25,000?

ANSWER 11.

No. Paragraph 3.2 governs the time for payment, not the obligation to pay. Paragraph 5 provides that the buyer can walk without paying anything in the first six months: "Buyer shall have six months from the date of this Option Agreement (the Review Period) to examine and investigate all aspects of the Property... At any time prior to the expiration of the Review Period, buyer shall have the right in its sole discretion to terminate the Option Agreement for any reason by giving written notice to the seller." If the buyer decided not to buy before the end of the six-month period, the buyer would only be obligated to pay title charges and property taxes under this provision.

Question 12.

(a) Suppose the real estate market in southern California collapses just after Larwin signs its agreement. So Larwin waits a few months and then sends a letter to the sellers indicating it has decided not to go forward. The sellers, through counsel, respond, more or less, like this:

We trusted you to see if our site could feasibly be developed. In conversation with us you said you were probably going to be spending $300,000-400,000 in staff time and independent engineering consulting studies, to evolve a politically and technically viable subdivision plan for the site. That is why we agreed to give you a six-month "free look" at the site. We fully expect you to perform those studies and let us know your results, or to compensate us for your not having done this work before walking away from this deal.

Is there anything in the agreement obliging Larwin to do the sort of work described in this letter? In the letter of intent? Which document governs on this point?

(b) In reality, Larwin planned to use their expertise to annex the site to the City of Lancaster which would allow 2,500 houses on the site -- not the 440 the county plans contemplated. The value of the site, once annexed by Larwin's efforts, could easily top $20,000 per acre, not the $4,000 the sellers were to receive.

On learning the news, suppose the sellers had written Larwin thusly:

Since you have yet to exercise your option to buy we are hereby terminating whatever rights you may have had under our alleged agreement. We call it "alleged" because you paid no consideration for it.

How could Larwin have reformulated the contract so as to have blocked this escape route to the seller?

ANSWER 12.

(a) Larwin makes no express promise in the option agreement to process its subdivision or to perform studies of any kind. But paragraph 5 implies Larwin will because they promise sellers copies of information in their possession concerning the property and there would be no information if Larwin did nothing. Larwin does make a promise to process the project's entitlements in paragraph 4 of the Letter of Intent. Usually the later document governs but perhaps paragraph 4 of the letter could be used to explain the meaning of paragraph 5 of the contract.

(b) Larwin could have made an explicit promise to do a certain amount of processing as consideration for the option, or could have paid money for the option even if it decided not to buy before the expiration of the sixth month. Larwin has, however, agreed to pay property taxes during the review period. This might be sufficient consideration for the option.

Question 13.

(a) How much must the buyer pay in cash to close the contract and take title?

(b) When can the sellers count on receiving the full purchase price -- at the latest -- following the buyer's election to buy?

ANSWER 13.

(a) Larwin must pay 25% of the purchase price ($880,000 of $3,250,000 + carry adjustment) in cash to close the contract and take title.

(b) The sellers can count on receiving the full purchase price "within five years from the date of close of escrow" which can take 36 months from the contract date--a total of eight years.

Question 14.

(a) Will the buyer receive title unencumbered by the seller's deed of trust to *any* portion of the property until paying the *full* purchase price?

(b) Representing the sellers what should the accompanying partial release provision specify to protect their security interest as the debt is partially paid and portions of the site are released from the blanket encumbrance?

(c) What is the "blanket encumbrance"?

ANSWER 14.

(a) Yes. The buyer will receive title unencumbered by the seller's deed of trust to the initial 200 acres upon payment of the down payment and then to any portion of the property upon which subsequent payments of principal have been made. There is a provision for partial releases.

(b) The sellers should make sure that each partial release leaves them at least as well secured as they were at the outset. The price paid for each released acre should preserve the original loan-to-value ratio. The sellers never want the value of the parcel released to exceed what is paid for its release. The sellers would not want the value of the remaining acreage ever to be lower than the balance due on the purchase price.

The sellers should also make sure they don't get stuck with any landlocked parcels or parcels so small as not to be legally subdivided.

(c) A blanket encumbrance is a trust deed on the entire property. In this case it is the deed of trust securing the unpaid balance of the purchase price which the buyer owes the seller for the land.

Question 15.

(a) How could an oil company's right to remove oil beneath the ground ever affect development activity at or near the surface?

(b) What modifications of a mineral right might a land developer need to renegotiate with its holder in order to develop without fear of later intrusion?

(c) Hazard a guess why the buyers need 6 months to "check out" mineral rights, but only 60 days to satisfy themselves about the other aspects of title?

ANSWER 15.

(a) An oil company's right to remove oil beneath the ground could affect the development at or near the surface if the company could drill from the surface, disrupting the surface land uses, houses, yards, streets, etc. Subsurface drilling could also cause soil subsidence.

(b) The developer would want to renegotiate the mineral rights with the holders of those rights to eliminate the possibility of physical entry. The developer will also seek to restrict the amount of oil recoverable to prevent subsidence or weakening of the foundations or structures on the surface. The developer will want surface entry relocated in a place that won't disturb the project or its residents.

(c) The developer may need time to negotiate with the holder of mineral rights concerning these modifications. Other aspects of title may not require protracted negotiation.

Question 16.

The Williamson Act, Calif. Govt. Code § 5120 et seq., is a state law allowing county government to designate areas as agricultural preserves for which subdivision activity is zoned out. Landowners in those areas may contract with the county, agreeing to keep their land for farming in exchange for the county's promise to assess the land at its agricultural value, not its potential value as a subdivision site. If the owners of lands want to sell to developers or subdivide themselves, they may petition to have their land withdrawn from the agricultural preserve program. Withdrawal must be "consistent with the purposes" of the Act or be proven "in the public interest."

In *Sierra Club v. City of Hayward*, the California Supreme Court found the administrative record inadequate to justify a city's agreeing to cancel. There had been evidence that the land was ripe for development, a fact predictable when the contract was entered. The city made no record to show whether other sites were available for housing in the area, whether there had been a change of conditions making land unprofitable for the agricultural use, or whether the public interest in additional housing was outweighed by the public interest in preserving agricultural land as open space.

If a landowner withdraws from the program, he may be assessed a penalty of 12.5% of the fair market value of the property.

(a) If such back taxes are levied, under this contract who pays them -- buyer or seller?

(b) What argument might the buyer have advanced to explain why the seller should pay them?

(c) Absent any provision or legal presumption regarding the date to which property taxes should be prorated, would the seller prefer the date to be when the obligation accrues, first becomes due and payable, or first becomes delinquent?

(d) Say property taxes are levied twice yearly, December 10 and April 10, becoming delinquent after those dates, but taxes accrue at six-month intervals, January 1 to June 30 and July 1 to December 31. V deeds to P on December 1. How could the December tax obligation be equitably divided between V and P, assuming prorations are figured as if all months had 30 days?

ANSWER 16.

(a) The answer isn't entirely clear. Paragraph 4 states the seller is to pay all deferred agricultural taxes (Williamson Act exactions). But the buyer is responsible for exactions if the assessment "results from buyer's development of the property."

(b) The buyer might argue that since the seller enjoyed the tax break and will now receive a "development value" purchase price for allowing the land to be put to non-agricultural uses, the seller should pay back taxes attributable to

the Williamson Act exemption.

(c) This depends on when the contract is to close. The seller would prefer the earliest date before the closing. Say the obligation accrues on July 1, becomes due and payable November 1, and delinquent December 10. If the closing were December 11, the seller would be responsible for some of the tax if the proration were based on the accrual date, a smaller liability if it were based on the due date, and no liability if it were based on the delinquency date. The accrual date is almost always used.

(d) 5/6 would be paid by V; 1/6 by P.

Question 17.

(a) By the terms of this contract does *seller* have a right to copies of the reports Larwin commissions during the review period if Larwin elects not to buy?

(b) If Larwin elects not to buy, how could these reports be of use to the sellers if they have no intention to develop but might want to sell to someone who does?

ANSWER 17.

(a) No. The sellers do not have a right to copies of the buyer's reports if the buyer elects not to buy. However, the sellers may have the right to see (and copy) reports and studies prepared by the buyer if the sellers' approval of zoning or subdivision applications is necessary.

(b) If Larwin decides not to buy the sellers might want to make Larwin's studies and reports available to future or prospective buyers.

Question 18.

(a) If buyer's agents or employees are injured in the course of their inspections could sellers be liable?

(b) What sort of provision would shift this risk to the buyer exclusively?

ANSWER 18.

(a) Yes. Sellers could be liable for injury to buyer's agents or employees on sellers' land. There is no provision in the contract to the contrary. The sellers still own the property and have given the buyer permission to conduct tests. So the sellers remain liable.

(b) The sellers need a clause making buyer liable for its inspectors' well-being, insuring for them, and naming sellers as additional insureds on the buyer's policy. This sort of language would be appropriate: "Buyer shall indemnify and hold Sellers harmless from all liability, claims, demands, damages or costs arising from the inspection of the property."

Question 19.

(a) Does the provision in paragraph 6 obligate the sellers to join with the buyer in requesting the site to be subdivided even if the sellers believe the subdivision layout would diminish the value of the site for most other potential developers active in the area?

(b) Does paragraph 6 obligate the sellers to sign documents subjecting the site to substantial development fees?

ANSWER 19.

(a) Paragraph 6 does not obligate the sellers to join with the buyer in requesting the site to be subdivided. The provision only requires the sellers to "facilitate" the buyer's representatives in dealing with the county regarding subdivision approval. A "reasonableness" standard might be implied in law. "Facilitate" doesn't necessarily mean "sign," "agree."

(b) Probably not. Paragraph 6 does not obligate the sellers to sign documents subjecting the site to substantial development fees. The sellers would be ill-advised to do so. The tax clause, paragraph 4, makes the buyer solely liable for development-related taxes. By analogy this clause could be read to imply that the developer and the developer alone should be liable for promised fees.

Question 20.

Does paragraph 9 protect Larwin against the sellers' contract warranties concerning the title from merging in the deed? How?

ANSWER 20.

Paragraph 9(g) explicitly protects the buyer against sellers' title warranties merging in the deed: "all sellers' warranties ... shall survive the Close of Escrow."

Question 21.

(a) Why does paragraph 10 have the effect of converting the contract into an option?

(b) Why is paragraph 10 important to the buyer?

(c) Under what circumstances might characterizing this agreement as an option disadvantage the buyer?

ANSWER 21.

(a) Paragraph 10 converts this contract into an option. The sellers' "sole remedy and right to damages" is the right to retain a specified sum as liquidated damage if buyer terminates. Paragraph 10 could be read as making liquidated damage the sellers only *damage* remedy. This would be consistent with the generally prevailing common law rule that liquidated damage clauses, absent contrary language, serve only to circumscribe the damage remedy and leave the equitable remedy for specific performance intact. If the paragraph is read as affirming this common law, the sellers could still sue for specific performance. The paragraph would be better drafted to protect the buyers if it expressly removed from the sellers the right to specific performance.

(b) Paragraph 10 is important to the buyer. The buyer wants freedom from any obligation to purchase the property or to pay actual damages for not buying it.

(c) Characterizing the agreement as an option could disadvantage the buyer if the buyer were late in performing. Time for performance provisions are strictly construed in options. Under ordinary purchase and sale agreements some courts give buyers a "reasonable" time to perform absent a compelling time of the essence provision.

Question 22.

Seller financing.

(a) Have the sellers agreed to finance part of the acquisition? How much of it?

(b) Have the sellers agreed to subordinate their security interest?

(c) Larwin will develop in stages. The day will come when an institutional lender will be prepared to extend credit for the improvements in phase one -- about 200 acres. How can that lender be assured a first lien, free of the seller's blanket encumbrance, according to the terms of this contract?

(d) Attached is the partial release clause Larwin and the sellers formulated. What assumption does it appear to embody about the value of each acre?

(e) Under the provision for partial releases, approximately how much of the site will still be subject to seller's blanket encumbrance released when the buyers have paid all the purchase price except one dollar?

(f) When the sellers are fully paid are they required to release the balance of the site?

ANSWER 22.

(a) Yes. The sellers have agreed to finance three-fourths (75%) of the purchase price.

(b) No. The sellers have agreed to no subordination provision.

(c) A future lender who wishes to extend credit for improvements in phase one can be assured a first lien free of the sellers' blanket encumbrance by the buyer invoking the rider to the trust deed and obtaining partial release of the 200 acres from the sellers' blanket encumbrance.

(d) The partial release clause embodies the assumption that each acre is worth the same value.

(e) Under the provision for partial release, 90% of the site will have been released at the time of the last payment to the sellers. The release price for each parcel is 110% of the purchase price.

(f) At the time of the last payment the entire site would have to have been released because "payment in full of the Note shall entitle Trustor to release all the property."

Exhibit 3

RIDER TO TRUST DEED

Portions of the land hereby encumbered shall be released from time to time as Trustor shall request, so long as Trustor is not in default on payments of the Note secured hereby and has paid accured interest on the amount of the release price principal. In consideration of the Down Payment, Trustor shall be entitled to an initial release, without payment of any further consideration, of up to 200 acres of the Property, which area shall be as designated by Trustor. Subsequent to this initial release, Trustor may release any other legal parcel, including such areas as become legal parcels as a result of "Release Maps" prepared by Trustor at its own cost. All subsequent releases shall be in any area of the Property designated by Trustor in its discretion, but contiguous in at least one point to area already released. The remaining area may be released from the lien of this Trust Deed by payment of an amount equal to (i) the number of acres sought to be released, multiplied by (ii) one hundred ten percent (110%), multiplied by (iii) the purchase price (as calculated in the Purchase and Sale Agreement), divided by 880 acres. As an example, if 50 acres are to be released, and the purchase price (base price plus carry adjustment) is $4,540,800 the release price would be (50 acres) x (110%) x ($4,540,800)) (880 acres) = $283,800. All property shall be reconveyed free of all encumbrances except such as are created by Trustor

or set forth in the policy of title insurance previously issued to Trustor for the Property. Payments for releases shall be applied to the principal amount due under the Note that this Trust Deed secures and payment in full of the Note shall entitle Trustor to release of all the Property.

Chicago Title Insurance Company, or its successor, as trustee under this Deed of Trust, is hereby appointed as attorney-in-fact and authorized to execute, as directed by the trustor, and without further instruction from beneficiary, subdivision applications, maps, grants of easements to public agencies and public utilities, applications to the Department of Real Estate, and letters to the Federal Housing Administration and Veterans Administration for the approval of proposed subdivisions of the Property, and to reconvey portions of the Property from the encumbrance hereof; said agency is a power coupled with an interest and shall be irrevocable so long as no uncured notice of default is filed of record. Seller shall execute and/or record any additional instruments reasonable necessary to effectuate the intent of this paragraph.

AGREED TO ON BEHALF OF BENEFICIARY,

ITS SUCCESSORS AND ASSIGNS:

_____

Exhibit 4

Among Larwin's earlier proposals was one for the subdivision of the site into 440 homesites of two acres each. Larwin then developed a proposal for a subdivision of 2,469 homesites on lots ranging from 7,000 square feet to one-half acre in size (concept B).

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.06.1

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.06.1 The Community Builder's Purchase-and-Sale Agreement with the Homebuilder.

The Difference Between Planned Communities and Ordinary Sub-divisions. Large-scale planned communities like Reston, Virginia; Columbia, Missouri; Irvine, Mission Viejo, and Valencia, California; or Aventura and Weston, Florida owe more in concept and aspiration to the garden suburbs built in the United States in the early decades of the 20th century than they do the post-World War II suburbs that have come to symbolize what the word "subdivision" means. Disney's 8,000 unit planned community in Orlando, Florida is described as "a pre-1940's sort of town ... garages behind homes, and everything within walking distance." n118

The post-war subdivisions provided basic, affordable housing on small lots by reducing overhead costs, adopting an assembly technique to the construction of houses. These projects seldom made provisions for public schools, recreation, shopping, or landscaping.

The garden suburbs of the 1910-1930 period and the planned communities of today are distinguished by such features as elaborate park and parkway systems, plazas, wide streets with sidewalks, golf courses, lakes, schools, lush landscaping, and convenient shopping. In fact, many are gated communities which enhance security and exclusivity. Further, house designs are sometimes controlled by design review and recorded deed restrictions.

Generally, when land subdividers aspire to create high quality communities, they start with large sites -- sites so vast that few developers could afford to build houses on all sites and fewer still are experienced in constructing and marketing the great variety of product types necessary to form a planned community. Community developers subdivide their holdings into separate projects or tracts, and then sell lots wholesale to homebuilders. They secure land use approvals for the concept, the project master plan, and often leave to the homebuilder the responsibility of filing the necessary subdivision map. Although the overall land developer makes sure there are sewer, water, and utilities hookups available for each tract, the homebuilder pays for most of the street improvements within each tract.

Special Provisions in a Purchase-and-Sale Contract Between a Planned Community Developer and a Homebuilder. Generally, the purchase-and-sale contract between a planned community developer and a homebuilder contains many provisions similar to those found in a homebuilder's contract to buy land from land investors. However, negotiations over price and payment terms for land in planned communities may be quite sophisticated since a

community developer will usually be more knowledgeable than the land speculator or amateur seller as to the number of units the builder may construct, the costs of development, and the time necessary to sell or rent the units. In this instance, the homebuilder's challenge in negotiating the price down is to convince the planned community developer that his or her numbers are wrong -- that the site cannot accommodate the proposed number of units, that the soil conditions are much worse than anticipated, and that the marketing success is far from certain. In addition, the developer will demand provisions unique to the sale of land in a planned community which are drafted to preserve the design integrity and development quality of the planned community.

First, the developer wants to see "lights, camera, action" style development where there is a steady buzz of construction activity, a carefully selected product mix, and a thoughtfully coordinated marketing plan. Second, the developer expects the homebuilder to swiftly landscape the purchased site, to install streets, sidewalks, utilities, and to maintain the site in a manner consistent with the overall community design and development standard. Third, the developer expects the homebuilder to extend cable television and telephone lines, sewer and water pipes, storm drains, electricity and gas to each house according to plans and specifications approved by the developer. Fourth, the developer wants the homebuilder to secure its promises with a letter of credit or performance bond. Fifth, since homebuilders usually purchase lots in stages, the developer wants the right to deny the homebuilder further lots if the houses are sub-par. Sixth, in the course of the homebuilder's procurement of local government subdivision map approvals, the developer expects the homebuilder to employ top-notch professionals. Seventh, since the developer has probably entered into agreements with local governments promising to pay certain fees for regional public improvements (roads, schools, parks, libraries, fire and police stations, etc.), the developer expects a pro-rata reimbursement of costs from the homebuilder. Eighth, the developer expects the homebuilder to seek its approval before reaching separate agreements with local governments regarding development standards and conditions. Ninth, the developer expects the homebuilder not to sell lots to another homebuilder. Tenth, in case the homebuilder borrows a construction loan or A&D loan secured by its interest in the land, the developer wants a right of first offer in the case of default to prevent the foreclosing lender from offering vacant lots at firesale prices. Eleventh, the developer expects reimbursement from the homebuilder in the event that its contractors damage adjoining streets or landscaping. Twelfth, the developer expects the homebuilder to carry ample public liability insurance and property damage insurance to cover claims arising out of accidents or damage caused by the homebuilder, or anyone directly or indirectly employed by the homebuilder, in the public rights-of-way or on the property retained by the land developer. Lastly, the developer expects a pledge of confidentiality from the homebuilder as to the terms and conditions of the contract.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.07

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.07 Allocating Liability for Hazardous and Toxic Waste.n119

[Go To Supp]

Under federal and some state laws the owner of land, or the operator of a business, may be liable for the cost of remediating contaminated property, and may not develop the property until it is "clean." The potential liability associated with such a clean-up poses a risk to real estate developers greater than the mere loss of a good opportunity. Once a developer acquires title, the developer may become liable for the cost of investigating whether a site contains hazardous or toxic substances, removing them, restoring natural resources and making health assessments. Business at the site may be interrupted. The value of the site may depreciate due to market reaction to adverse publicity about the site. The owner may also be liable to third parties for toxic torts, damage to adjacent properties and environmental claims litigation. n120 These costs can easily exceed by a large margin the value of the site.

Seller's Right to Rescind. If the seller during escrow came to realize for the first time that the site is polluted, the seller may have the right to rescind and may exercise that right in the realization of potential liability under federal law for hazardous and toxic clean-up costs even after closing and trusting the buyer to clean the site efficiently. In *Garb-Ko, Inc. v. Lansing-Lewis Services*, n121 the seller discovered, after contracting, that underground gasoline storage tanks were leaking. The seller sought and the Court granted rescission so that the seller could regain control of the site and avoid further clean-up costs and the third party claims that might have arisen had escrow closed and buyer failed to clean up the site satisfactorily.

Buyer Has No Right to Rescind; Title Is Marketable Despite Soil Contamination. A real estate developer or homebuilder discovering site contaminations during escrow may want to avoid closing and taking title because of the potentially crushing burden of owner liability for hazardous wastes.

Courts have consistently held that the presence of hazardous or toxic substances on a site does not render title unmarketable. n122 This means that the reluctant purchaser won't automatically be able to resist specific performance and get back a security deposit just because hazardous wastes are detected on the site -- unless the buyer contracted for that right specifically.

Litigating purchasers have argued that federal law does make title unmarketable since those laws can result in liens being placed on the property by the EPA for clean-up costs. They have contended that the threat of such liens and accompanying litigation should be enough to justify Courts treating contaminated sites as unmarketable. But Courts have held that until a lien is actually placed on the property, its title is unaffected -- even though such liens are real possibilities. Mere possibilities do not unmarketability make.

How Buyers Protect Themselves From Having To Buy Contaminated Sites. Purchasers can protect themselves in several ways by negotiating certain provisions in their contracts. First, the buyers can condition their obligation to buy on an environmental audit or their being personally satisfied the site is clean. They can reserve the right to rescind if they don't like what the audit reveals -- or to buy only the clean portions of the property, if clean portions are severable from the contaminated portions.

Second, buyers can insist on representations and warranties from the seller that the site is clean, and if it isn't, the seller will make it so. When the seller warrants against contamination, the liability for clean-up costs may be considerable. n123

Third, buyers can reserve the right to buy and clean up the site, with the seller paying all or part of the remediation cost, or agreeing to indemnify the buyer, perhaps with the indemnity secured by a letter of credit or third party guaranty, or covered by a price reduction equal to the clean-up cost. In this instance, the seller who agrees to a price abatement should seek from the buyer a release, indemnity, hold-harmless clause, or warranty promising the clean-up will be thorough and no further liability will come the seller's way afterwards. For example, the seller may seek a provision stating that the "Buyer shall not be entitled to the benefits of any insurance now or later existing for the benefit of any of the indemnified Parties and insuring against risks included within the scope of Buyer's obligations under this agreement." n124

No smart sellers want to sign a blank check for any amount of clean-up costs. Sellers often demand verification of whether a problem exists, a definition of the extent of the problem, a chance to review clean-up technologies, and maybe even a cost sharing arrangement with the buyer. n125 Sellers certainly don't expect to be liable for pollution attributable to activities occurring after the closing, or that result from the purchaser's intentional or willful conduct. They would prefer to limit their liability as to avoid "special, indirect, incidental or consequential damages." n126 Further, if sellers are to indemnify the buyer for clean-up costs, they would prefer to do so on an after-tax basis -- net of any tax benefits. In addition, sellers may prefer a decision-making panel comprised of representatives of the buyer and sellers to oversee the cleaning -- instead of the buyer making all of the clean-up decisions at the sellers' expense.

When Buyers Agree to Purchase Contaminated Sites. Developers-buyers prepared to clean-up sites are sometimes able to negotiate excellent terms from sellers. Those terms may include warranties, indemnifications, price abatements, or even an agreement under which the buyers act as the seller's agent during escrow as manager of the clean-up effort. For example, commercial developers purchase contaminated sites because the location and price are right. Abandoned industrial land is the easiest for which to secure planning approval from local governments. Since local public officials take no delight in presiding over industrial wastelands, they are eager to cooperate with developers who promise to transform rust zones into regional shopping malls, office towers, or even storage or warehouse facilities.

Unfortunately, compliance with federal law and state hazardous waste laws is seldom easy. Major clean-up requires years, bundles of money, abundant patience, and a good working relationship between buyer and seller. Experts may disagree on what needs to be done to clear the site, including experts inside the approving state or federal agencies. This is exacerbated when competing state agencies with different, potentially inconsistent, standards have jurisdiction over the same site. n127 Agency definitions of "hazardous" or "toxic" change as to the acceptable levels of contaminants, and what has to be done to secure compliance. In fact, government certification that the site is free of contaminants, where certification procedures exist, are sometimes applicable only to sites the state has already marked for treatment or to sites the state can be persuaded ought to be.

On the other hand, regulatory agencies direct their limited resources to the most polluted, visible, largest, most difficult sites. Generally, since most contaminated sites fall well below regulatory sight lines, the problem can be solved expeditiously and reasonably by hiring a competent remediation contractor.

§ 85.07(a) The Most Important Statute and Its Key Provisions: CERCLA.

In 1980 Congress passed the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), n128 commonly known as "Superfund," in response to public concern and outrage over the discovery of toxic waste dumps such as the Love Canal and the recognition of their dangers to the public health.

CERCLA established a system to identify sites where hazardous substances have been released into the environment or where this may occur in the future. The most seriously contaminated sites are generally placed on the National Priorities List (NPL), a compilation that now includes over twelve hundred sites across the nation. However, listing on the NPL is not required for CERCLA to apply. Any property where hazardous wastes have been deposited may fall under CERCLA's liability provisions.

Under this law the Environmental Protection Agency is given the mission of identifying and cleaning up polluted sites. A federal fund was created for this purpose, the Hazardous Substance Response Trust Fund, or Superfund. n129 If the owner of contaminated property refuses to clean up the site, the EPA may do so and has the statutory right to place a lien on the property in order to be reimbursed for the cleaning costs. n130

"The lien provision was designed to recover the enhanced value of the restored property and prevent the owner from realizing a windfall from Superfund cleanup and restoration activity...." n131 The lien is subordinate to prior recorded mortgages. It becomes effective when the government first spends public money cleaning up a site, and ends when the government's costs are repaid or the statute of limitation expires. Because the EPA can record the lien without giving the property owner notice and a hearing in advance, one federal circuit court of appeals has declared it a violation of the property owner's due process rights under the Fifth Amendment. n132 Under CERCLA, the Environmental Protection Agency is given the mission of identifying and overseeing the clean-up of polluted sites. A federal fund was created for this purpose: The Hazardous Substance Response Trust Fund, or Superfund. n133

EPA has never organized itself to conduct major public works projects. The EPA bureaucracy does preliminary assessments and site inspections and lets contracts for remedial investigations, feasibility studies, and some remedial designs. In the few cases where EPA initiates Fund-financed remedial action, however, it does so indirectly by entering an interagency agreement with the Army Corps of Engineers, which lets the contracts and supervises the remedial action projects. n134

Private owners may clean up their own sites and seek contribution from prior site owners and polluters.

CERCLA also establishes a framework for private parties to initiate site cleanups and then to pursue former site owners and polluters to share the costs of the privately initiated cleanup. n135

If the owner of contaminated property refuses to clean up the site, the EPA may do so and has the statutory right to sue the owner directly for reimbursement of cleanup costs, n136 and place a lien on the property for reimbursement. n137

The availability of private funds to clean up contaminated sites may be one reason CERCLA cleanups have gone so slowly. EPA hopes to stretch the limited federally-appropriated Superfund by adding the private dollars of landowners and polluters.

... Fund-financed cleanup is the exception rather than the rule within the Superfund program. Rare indeed is the site

where EPA willingly commits sufficient financial resources to implement a remedial action public works project. Special barriers to this commitment, for example, state assurances or the need for waiver of caps on federal spending, discourage the public works approach. n138

CERCLA was amended and expanded by the passage of the Superfund Amendments and Reauthorization Act of 1986 (S.A.R.A.). n139 These amendments introduced more stringent cleanup standards; created new, independent regulatory programs, such as the Emergency Planning and Community Right-to-Know Act; and generally increased the profile of environmental enforcement across the country.

CERCLA costs can and often do exceed the value of the site.

The EPA also has authority to sue the owner directly for reimbursement of clean-up costs. n140

Liability under CERCLA is based on the principle of strict liability and not negligence. n141 Even a contaminator who acted reasonably under the circumstances may be liable under the act. "Parties may have to bear the full costs of cleanup, for instance, even if they disposed of their wastes according to prevailing law and even if no evidence shows that their wastes, rather than someone else's, caused the contamination at the site." n142

For a defendant to be liable under CERCLA, it must be established that:

> 1. The contaminated site is a "facility." This is tautological since a facility is defined as any place hazardous substances "come to be located."
>
> 2. A release or threatened release of hazardous substances has occurred at the site. Release covers any spilling, dumping, pouring, emitting, leaching, leaking, escaping -- any way a substance could enter the environment.
>
> 3. The plaintiff has incurred response costs as a result of the release or threatened release. Response costs are those incurred in cleaning up the site, and not the costs of personal injuries or other economic harms caused by hazardous substances.
>
> 4. The defendant is included in one of the four statutory classes of liability, i.e., owner, former owner, transporter, or generator. n143

Once the foregoing have been established, the defendants are held strictly liable and can only raise the defenses set forth in the statute (as discussed below).

The statute poses the threat of retroactive liability. It has no exemption for releases of hazardous substances that were legal at the time they took place. Parties may be liable for past actions that were legal when they occurred.

In order to be vulnerable to a CERCLA action, a defendant must be a "potentially responsible party" (PRP) as defined by the statute. n144 The statute fingers present owners, owners at the time of the disposal of hazardous substances, anyone who arranges for disposal, treatment or transport of such materials, or anyone who accepts hazardous substances for transport. n145

The statute literally provides that the present "owner *and* operator" of the facility is liable. This prompted owners who had not actually contaminated the site to claim they were not owner-operators under the law, just owners. Courts have consistently rejected this as a "crabbed reading" of the statute. n146

Buyers of land have been socked with millions of dollars in clean-up costs even though the sites became contaminated long before they acquired title. n147

Liability under CERCLA is generally thought to be joint and several. n148 This means that each PRP is potentially exposed to bear the burden of other PRPs who cannot be found or are insolvent. However, the statute neither mandated nor rejected the common law of torts which reserves joint and several liability for situations where the cause of a harm is perceived as indivisible. But one of the bill's sponsors asserted that the intent to was to leave to common law the issue of joint and several liability. n149 Where more than one PRP is inculpated, Courts on a case-by-case basis determine the liability of each PRP -- and must also decide whether liability should be sole, joint, or joint and several.

The EPA is not bound to take any notice of the risk-sharing agreements of private parties. CERCLA specifically prohibits any private agreement from exonerating any person from liability under the statute. n150 Otherwise, what would stop owners from escaping all CERCLA liability by entering cost-shifting agreements with insolvent shell corporations? Note, in the absence of an "express statutory language evidencing a legislative intent to prohibit agreements in which private parties allocate the risk" of environmental cleanup liability under a state toxics control act between themselves, such private allocations have been held enforceable. n151

In determining contribution obligations (which is analogous to a comparative negligence proceeding where liability is divided among the responsible parties) the court is guided only by the vague instruction to examine "such equitable factors as the court determines are appropriate." n152 However, in an attempt to apportion liability, some Courts have relied upon a valuable, yet non-exhaustive, list of considerations known as the *Gore* factors. These factors include: (1) the ability of the parties to demonstrate that their contribution to a discharge, release or disposal of a hazardous waste can be distinguished; (2) the amount of hazardous waste involved; (3) the degree of toxicity of the hazardous waste involved; (4) the degree of involvement by the parties in the generation, transportation, treatment, storage, or disposal of the hazardous waste; (5) the degree of care exercised by the parties with respect to the hazardous waste concerned, taking into account the characteristics of such hazardous waste; and (6) the degree of cooperation by the parties with federal, state or local officials to prevent any harm to the public health or environment. n153

PRPs have a strong incentive to settle, especially if there is only one solvent PRP. Settlements in CERCLA actions are becoming much more common than litigation unless a party has a very strong defense to liability. Trial lawyers have written that the primary problem with CERCLA is "the legal wrangling relating to joint and several liability." n154 The complexity originates in the various conflicting common-law standards for determining when joint and several liability is appropriate. Under CERCLA as at common law, it is possible for a small but deep-pocketed waste contributor to become the major cleanup cost payor.

Much litigation has occurred concerning the breadth of the definition of "owner and operator" for purposes of CERCLA's strict liability. CERCLA § 101(2)(A) defines the term as "any person owning or operating such facility." As the case law has developed, some courts have expanded this definition to include a number of entities that, at least at first glance, would not normally be considered owners or operators.

One controversial area where CERCLA's definition of "owner or operator" has had a dramatic effect is upon banks and other lenders. A mortgage holder has limited protection under the so-called "secured creditor exception" found in CERCLA § 101(20)(A), which provides:

> Such term [owner] does not include a person who, without participating in the management of a ... facility, holds indicia of ownership primarily to protect his security interest in the facility.

Hence, merely holding title under a mortgage does not expose the creditor to liability. Lenders that became actively involved in managing the affairs of a financially distressed debtor -- as is frequently the case in "work outs," however --

found that some courts regarded them as owners or operators for purposes of CERCLA liability.

The Environmental Protection Agency has published its Final Rule Governing Lender Liability Under CERCLA. n155 Pre-foreclosure the lender is free of "owner or operator" liability for offering occasional or isolated advice, even about environmental compliance. "Workout" related efforts to cure, mitigate or prevent a default are also permissible without putting the lender in CERCLA harm's way. Post-foreclosure the lender can acquire title but must dispose of the foreclosed-on property expeditiously. n156 EPA's efforts at clarity were thwarted when a federal Court of appeals ruled that EPA lacked statutory authority to promulgate rules circumscribing lender liability under CERCLA n157 Presently, the scope of lender liability is uncertain, especially for lenders who take over the property upon default or foreclosure.

Lenders still have a powerful incentive to avoid lending on contaminated property since in a pinch they must look to the value of the security property for loan repayment. Contaminated property is seldom a safe bet.

Defenses to liability under the CERCLA are limited to (1) an act of God, (2) an act of war, or (3) an act or omission of a third party other than an employee of the defendant, or one in a direct or indirect contractual relationship with the defendant. n158

By its terms, the statute would seem to exclude from the defense all

subsequent purchasers of contaminated property, even remote purchasers, since sellers and remote purchasers have an indirect contractual relationship with each other. n159 However, an exception to the exception exists, known as the "innocent purchaser" defense.

SARA added the innocent purchaser defense to CERCLA's liability scheme. Under CERCLA § 107(b), it is no defense to CERCLA liability that the release of hazardous substances occurred by the actions of a third party if there was a contractual relationship with the third party. "Contractual relationship" is defined in § 101(35) to include "land contracts, deeds or other instruments transferring title or possession." However, SARA amended the definition of "contractual relationship" to exclude these transactions if the real property on which the facility is located was acquired by the defendant *after* the disposal or placement of the hazardous substance and the defendant did not know and had no reason to know that any hazardous substance was placed at the facility, or the defendant acquired the facility by inheritance or bequest or both.

Why shouldn't a purchaser be able to claim innocence even if the purchaser acquires title *before* the toxic substance gets to the site? A site owner is supposed to secure the property even against "accidental" spills.

To use this defense, a land purchaser must establish that the purchaser did not cause the environmental problems at the site and used all due care in attempting to discover the condition of the property before buying it. n160

To establish that the defendant had no reason to know of the

contamination, the defendant must have undertaken, at the time of acquisition, "all appropriate inquiry" into the previous ownership and uses of the property consistent with good commercial or customary practice.

Such an inquiry generally must take into account:

-- The previous uses of the facility;

-- The price;

-- All known or reasonably ascertainable information; and

-- The likelihood of the presence of hazardous substances or contaminated property.

To determine whether the appropriate inquiry has been made, a court will consider:

(1) any specialized knowledge or experience on the part of the owner or operator;

(2) the relationship of the purchase price to the property's value if uncontaminated;

(3) commonly known or reasonably ascertainable information about the property; and

(4) the ability to detect such contamination by appropriate inspection. n161

Environmental Audits. Buyers and lenders are demanding very rigorous inquiry into even seemingly benign transactions involving commercial and agricultural properties. n162 In 1989 and 1990, an informal real estate industry group gathered to promulgate an advisory, voluntary approach to defining "due diligence" for the innocent purchaser defense. The final Standard for Environmental Assessment for Commercial Real Estate was adopted in March, 1993. While carefully hedging, and indicating that different degrees of inquiry may be appropriate at different sites and "no implication is intended that a person must use [any one standard] in order to be deemed to have conducted inquiry in a commercially prudent or reasonable manner in any particular transaction," it recommended two separate but related practices. One, a "Phase I" Environmental Site Assessment Process and an "Environmental Site Assessment: Transaction Screen Process." The purpose of these is to identify obvious or likely signs of contamination. These practices include on-site visual inspection, research regarding the prior uses of the property, review of governmental data bases concerning neighboring hazardous waste facilities and hazardous substance users, search for environmental liens, interviews with past and present owners and operators and their employees, and review of facility and government records concerning the facility's operation. Among the historic records to be reviewed: aerial photographs, fire insurance maps, property tax files, recorded land title records, USGS 7.5-minute topographical maps, local street directories, building department records, and zoning/land-use records.

What, then, is a Phase I? It is a limited inquiry into the environmental condition of a property by an environmental consultant who opines on the existence or likelihood of contamination on the basis of non-intrusive data gathered from records, interviews and observation of the property. Yet, there is currently no uniform industry-wide agreement on what constitutes a Phase I. n163 If there is a reasonable suspicion to believe that site contamination may exist, an additional "Phase II" investigation may be conducted. This typically involves taking soil or groundwater samples to be analyzed for hazardous constituents.

Once it is determined that a "hazardous substance" exists or may exist, therefore, the property is subject to CERCLA, the first major task is the performance of the detailed technical study designed to determine the exact extent of contamination at the site. This study is referred to as a remedial investigation (RI). The RI is followed by an engineering analysis of the technologically available alternative methods that might be employed to clean up the contamination, which is known as a feasibility study (FS). The RI/FS process may take three years to complete, and cost over $1 million.

Once the RI/FS has been reviewed by the EPA, the Agency will issue a Record of Decision (ROD). The EPA evaluates the proposed remedies and in its decision recommends the remedial action required at the site. The final phase is the actual remedial action (RA) or clean-up of contamination. Techniques used include on-site incineration of contaminated soils or removal from the site to an appropriate facility. Groundwater contamination is a particular concern of the EPA. Restoring groundwater to drinking water quality is a long and costly process. Sometimes remedies take more than a

decade to implement.

Eventually, the work at the site is completed at substantial cost. The average cost of a Superfund site clean-up is in the range of $20 and $40 million, and the estimate for remediation of certain sites exceeds $500 million. Despite all the money spent in investigation, litigation, and actual remediation (an amount in the billions), no Superfund site has yet to be fully cleaned up and restored to its pre-contamination state; some of the more severely contaminated sites never will be. By mid-1994, only 56 of the 1,345 sites on EPA's National Priorities List have been cleaned up and removed from the list. n164

The parties to a contract may shift CERCLA liability between themselves through representations, warranties, indemnities, indemnifications, affidavits of environmental compliance, promises of remediation at seller's expense,

transfer of permits, and insurance coverage. These agreements may shift the costs of compliance among private parties but the EPA isn't bound by the risk-sharing agreements of private parties. CERCLA specifically prohibits any private agreement from exonerating any person from liability under the statute:

> No indemnification, hold harmless, or similar agreement or conveyance shall be effective to transfer from the owner or operator ... or from any person who may be liable for a release ... to any other person the liability imposed under this section. n165

Thus, the EPA can come at all Potentially Responsible Parties except those with a statutory defense. PRPs can invoke private agreements in a contribution proceeding or other action to enforce warranties, indemnities and the like. But those agreements aren't defenses to liability under CERCLA. If they were, what would stop owners from shifting liability to insolvent shell corporations?

Nuisance and Trespass. Among the most promising legal remedies available to the purchaser of a contaminated site against former owners are those in tort. Say, a former owner stored gasoline in underground tanks now leaking contaminants. CERCLA exempts petroleum products. But oil companies and gas station owners may be nonetheless liable for past spills that amounted to common-law nuisances. Those who placed leaking oil tanks in the ground or later neglected to maintain them properly may be liable for a continuing trespass as the tanks further contaminate the site.

While owners can't be held liable for nuisances and trespasses committed against themselves on their own property, they are potentially liable to successors -- unless they disclosed their previous activities so the costs of contamination cleanup could be figured into the purchase price. The successor must prove the elements of private nuisance as a precondition to recovery. It helps if the jurisdiction is one in which sellers are liable for innocent or negligent failures to disclose material adverse facts so the successor is relieved of the burden of having to prove fraud -- an intentional misrepresentation. n166

Warranties. Sometimes sellers warrant against soil contamination. When they do, their potential liability for cleanup costs may be considerable. Consider the case of *Mailman's Steam Carpet Cleaning Corp. v. Lizotte*. n167 A previous owner had operated a service station and fuel oil business on the site for 39 years and left 11 underground tanks behind. The next owner, Lizotte, in selling the property to Mailman, signed a warranty that the tanks were free of spillage and leaks, and would remain so for ten years. After closing, the buyer detected contamination, and sued for $225,000 to clean up the site. The purchase price had been $63,000. In upholding the recovery, the Court observed:

> [A] test of reasonableness may be imposed to determine if restoration of the property is a fair and reasonable remedy in the circumstances.
>
> ***

> Although these principles of tort damages are instructive, we are presented here with a breach of contract. "The established principle of law upon which damages for breach of contract may be assessed is that the injured party shall be placed in the same position he would have been in if the contract had been performed, so far as the loss may be ascertained to have followed as a natural consequence of the breach and to have been within the contemplation of the parties as reasonable men as a probable result of the breach." *Abrams v. Reynolds Metals Co., 166 N.E.2d 204 (1960).* The contamination of Mailman's property caused by leaks in the oil tanks was clearly the natural consequence of the breach of warranty. Lizotte could reasonably have contemplated that he would be liable to Mailman for all costs related to cleanup of the oil leakage as a probable result of the breach and that these costs would likely exceed the fair market value of the property. n168

Seller's Limited Warranties. No smart seller wants to sign a blank check for any amount of cleanup. Sellers want verification a problem exists, the extent of the problem, a chance to review cleanup technologies, and maybe even a cost-sharing arrangement with the buyer. n169 Sellers certainly don't expect to be liable for pollution attributable to activities occurring after the closing, or that result from the purchaser's intentional or willful conduct. They would prefer to limit their liability so as to avoid "special, indirect, incidental or consequential damages." n170 If the seller is to indemnify the buyer for cleanup costs, the seller will prefer indemnity based on an after-tax basis -- net of any tax benefits. The seller might prefer a decision-making panel to oversee the cleaning with representatives of buyer and seller, instead of the buyer making all the cleanup decisions at the seller's expense.

CERCLA's Inapposite Precedent. The huge costs, pervasive uncertainty and modest results under CERCLA have led to a vigorous attack on the statutory scheme. One author sees the problem with CERCLA in its having been modeled after an inappropriate precedent. CERCLA was modeled on Section 311 of the Clean Water Act as amended by the Federal Pollution Control Act Amendments of 1972. n171 That section seeks to compel the owners and operators of vessels to pay the "actual costs" of cleaning up oil and hazardous substance spills into navigable waters.

In the final analysis, the cleanup of contaminated groundwater and soil simply may be too unlike the oil spill situation for the Section 311 approach (upon which CERCLA is based) to work effectively. Like CERCLA, section 311 contemplates that the owner or operator of a vessel will clean up releases from that vessel or that the government will do so followed by the owner/operator's quick reimbursement of the Clean Water Act fund with which EPA or the Coast Guard finances response action. But the successful section 311 regime is different in several respects.

First, for all intents and purposes, the Clean Water Act's liability under Section 311, is prospective; its enactment preceded the spills which triggered its application. There is no attempt to cast liability back in time to past ship users or owners. Second, there are monetary caps on recoverable damages under the Clean Water Act. Third, and of particular relevance here, the Clean Water Act neither expressly nor implicitly creates a cost recovery cause of action on behalf of any entity other than the United States Government. n172

CERCLA's Perverse Land Use Incentives. Drafters of the Clean Water Act faced far simpler land use issues. They had only to worry about spills contaminating beaches and wetlands. CERCLA applies to vastly more terrain, much of it centered in the industrial heartland of big American cities. By forcing cleanup to pristine conditions of even these sites, many heavily contaminated for nearly a century, the costs of complying with CERCLA have been reported to "help drive employers away from cities, contributing to economic and social deterioration." An unintended consequence of CERCLA is that it encourages "the development of factories and buildings in uncontaminated forests, fields, and meadows." This contributes to "more urban sprawl and, ultimately, more air and water pollution as workers and their families move or drive to the new job sites." Often, "the levels of contamination found are tiny, and even after millions of dollars are spent on cleanups, particularly in urban areas, it is virtually impossible to measure whether anything improved." n173 Experimental efforts are underway to scale back the cleanup standards on "brown fields" (formerly industrial sites) so as not to thwart inner-city job creation and to slow down the flow of office and manufacturing

construction on what were previously green field sites.

Federal/State Turf Wars. The most disconcerting problem with CERCLA enforcement, however, has been the inability of the EPA and state governments to forge a cooperative relationship in order to provide a coordinated and effective cleanup response. It might be said that EPA's own use of the Superfund has simply limited the resources available to support state enforcement initiatives under CERCLA n174 Much of the problem though has been the result of controversy over the extent to which EPA is *required* under CERCLA to support state initiatives. There is a constant tension between EPA and state officials concerning, among other things, the appropriate role states should have in the cleanup of hazardous wastes.

The result is often a legal battle between the states and EPA where the focus is not on the problem of providing for an effective cleanup response, but on seemingly endless disputes over the rights and responsibilities of the parties involved... Despite the technical nature of hazardous waste cleanup, the entire process has become politically charged. Indeed, divergent political agendas on the state and federal level have spurred much of the conflict. n175

Almost every state has adopted some form of "mini-Superfund" legislation to deal with the hazardous waste problem... n176 Further, the states that have had the most success with hazardous waste cleanup programs have essentially administered the programs independent of CERCLA

While there might be powerful incentives for states to be content with a secondary role under CERCLA, many states are interested in taking more control of the cleanup response within their boundaries... Unfortunately, the prevailing attitude with EPA is that states are incapable of adequately cleaning up hazardous waste sites. One commentator has suggested that, while EPA may want states to assume a larger role in CERCLA enforcement, it seems to doubt that they will do an acceptable job. n177

§ 85.07(a)(1) The Technical Side of a CERCLA Remediation Action.

Once it is determined that a "hazardous substance" exists or may exist, and the property is subject to CERCLA, the first major task is the performance of the detailed technical study designed to determine the exact extent of contamination at the site. This study is referred to as a remedial investigation (RI). The RI is followed by an engineering analysis of the technologically available alternative methods that might be employed to clean up the contamination. This analysis is referred to as a feasibility study (FS). The RI/FS process may take three years to complete and cost over $1 million. n178 Once the RI/FS have been reviewed by the E.P.A., the agency will issue a Record of Decision (R.O.D.). In the R.O.D., the E.P.A. will evaluate the proposed remedies and recommend the remedial action required at the site. The final phase is the actual remediation action (RA) or clean-up of contamination. Techniques used include on-site incineration of contaminated soils or removal of such soils to an appropriate facility.

§ 85.07(b) The Common Law Relationship Between Buyer and Seller Pertaining to Hazardous Waste.

A real estate developer who discovers during escrow that a site is contaminated may want to avoid closing the deal and taking title because with the acquisition of title comes the potentially crushing burden of CERCLA.

Courts have consistently held that the presence of hazardous or toxic substances on a site does not render title unmarketable. n179 This means that the reluctant purchaser won't be able to resist specific performance and get back a security deposit even after consultants detect hazardous wastes on the site.

Litigating purchasers have argued that CERCLA does make titles unmarketable since it can result in liens being placed on the property by the EPA for cleanup costs. They have contended that the threat of such liens and accompanying litigation should be enough to justify courts treating contaminated sites as unmarketable. But courts have held that until a lien is actually placed on property, its title is unaffected -- even though CERCLA liens are real possibilities. Mere

possibilities do not unmarketability make.

Since purchasers get no protection at common law, they must be especially careful to include adequate protection in their contracts.

State Statutes Allocating the Costs of Site Cleanup Between Buyer and Seller. Some states have laws allowing the state to order that contaminated property be cleaned up before it is sold, so that property owners of industrial sites obtain a "negative declaration" that the property is free from contaminants before selling. Other states require disclosure before the owner transfers title of a hazardous waste site to the grantee, n180 or a state agency, n181 or approval of a state agency prior to transfer. n182 In New Jersey, before the property owner of a contaminated site can sell, the owner must prepare a remedial action plan for cleaning up the site. n183 The cleanup must take place in a timely manner just before or after the sale. Thus, the noses of the buyers and sellers are pushed right up against the unpleasant realities of cleanup. Elsewhere, buyers can ignore the risks. Or the parties may consciously allocate the costs of cleaning up a contaminated site between themselves through representations, warranties, indemnities, indemnifications, affidavits of environmental compliance, promises of remediation at seller's expense, transfer of permits, and insurance coverage. The EPA isn't bound to take any notice of the risk-sharing agreements of private parties. CERCLA specifically prohibits any private agreement from exonerating any person from liability under the statute:

> No indemnification, hold harmless, or similar agreement or conveyance shall be effective to transfer from the owner or operator ... or from any person who may be liable for a release ... to any other person the liability imposed under this section. n184

Thus, the E.P.A. seeks contribution from all Potentially Responsible Parties except those with a statutory defense. PRPs can invoke private agreements in a contribution proceeding or other action to enforce warranties, indemnities, and the like. But those agreements aren't defenses to liability under CERCLA. If they were, what would stop owners from shifting liability to insolvent shell corporations?

§ 85.07(c) State Title Transfer Requirements.

Some states have laws allowing the state to order that contaminated property be cleaned up before it is sold, or that property owners of industrial sites obtain a "negative declaration" that the property is free from contaminants before selling. Among them are New Jersey, n185 Illinois, n186 Connecticut, n187 Minnesota, n188 Pennsylvania, n189 and West Virginia. n190

§ 85.07(d) CERCLA Dispute Resolution Costs Are High.

If the statute's language and procedures were clear, there would be fewer disputes to resolve by litigation. However, this is not the case, and the financial stakes are high. In fact, the Office of Technology Assessment has estimated that 44% of the money allotted by Congress to the Superfund program is spent on negotiating and litigating the myriad issues that arise because of differing interpretations of CERCLA. n191

A Rand corporation study of four national insurance carriers (with 13,000 hazardous waste site claims) and five Fortune 100 industrial companies (with an average of 144 hazardous waste sites each) showed that considerable sums were spent on transactions costs -- mostly in litigation and negotiation. On average, 88% of the insurers' total expenditures went to transaction cost shares (ranging among insurers from 80% to 96% percent). More than half of this sum (42%) funded disputes over coverage. The rest (37%) was used to defend policyholders. The industrial firms spent more of their CERCLA related money on actual site clean up, averaging transactions costs of 21%. n192

A recent Rand study found average transaction costs for average PRPs to be one-third or 32% of the total cost incurred. n193

These transaction costs arise primarily out of disputes between potentially liable parties over their respective shares of the costs and between these parties and their insurers. Cong. Rec. S1079 (daily ed. Feb. 7, 1994) (summary of S. 1834). Rand researcher Lloyd Dixon, noted, however, that transaction costs tend to be front-loaded. Upon completion of cleanup, the ultimate proportion of transaction costs for PRPs would be from 19% to 27%. n194

Increasingly, transaction dollars may go to challenge EPA's recommended choice of cleanup methods when PRPs believe there are other less expensive options. For instance, removing contaminated soils to a remote toxic waste site is often quite costly compared to cleaning the soil in place. Insurers may incur legal and engineering costs persuading EPA or the courts to approve a new cleanup technology.

§ 85.07(e) Practical Factors to Consider in Drafting Hazardous Waste Warranty and Indemnity Clauses.

-- Developer-buyers prepared to clean up sites are sometimes able to negotiate excellent terms from sellers who appreciate the unlimited, strict liability they face under CERCLA even after selling. Those terms may include warranties, indemnifications, price abatements or even an agreement under which the buyer acts as the seller's agent during escrow as manager of the clean-up effort.

Commercial developers purchase contaminated sites because the location and the price are right. Abandoned industrial land is the easiest for which to secure planning approval from local governments. Local public officials take no delight in presiding over industrial wastelands. They are eager to cooperate with developers who promise to transform rust zones into regional shopping malls, office towers, or even storage or warehouse facilities.

-- CERCLA compliance is not easy. Major clean-up requires years, bundles of money, abundant patience, and a good working relationship between buyer and seller. Experts may disagree on what needs to be done to clear the site, including experts inside the approving state or federal agencies. Competing state agencies may have jurisdiction over the same site, and their standards may differ and even be inconsistent. There may be conflicts between a state environmental agency and the U.S. Environmental Protection Agency, as the states seek "substantial and meaningful involvement" in the cleanup process as guaranteed by federal law and the E.P.A. looks for expediated, superfund-financed cleanups. n195 Agency definitions of "hazardous" or "toxic" change as to the acceptable levels of contaminants, and what has to be done to secure compliance. Government certification that the site is free of contaminants, where certification procedures exist, are sometimes applicable only to sites the state has already marked for treatment or sites the state can be persuaded ought to be.

-- Sellers who reduce the purchase price substantially in exchange for the buyer agreeing to clean up the site might seek from the buyer releases, indemnities, hold harmless clauses or warranties, promising the clean-up will be thorough and no further liability will come the seller's way afterwards.

-- If the buyer is not obligated to clean up the site, a seller of property with known contaminants may also seek a restrictive covenant limiting

the future use of the land to nonresidential purposes so as to limit her exposure to future claims.

-- Indemnities may be limited by duration, dollar amount, and type of claim.

-- In many states a provision that the buyer takes "as is" will not suffice to shift the risks of hazardous substances to the buyer. Only specific mention of this risk would suffice in an "as is" clause. A release from unknown liabilities is invalid in California unless the assuming party expressly waives his rights to assert claims unknown at the time of the waiver. n196

-- A seller who releases a buyer from liability arising under CERCLA might later seek contribution from that buyer despite the release.

In one such case the U.S. Sixth Circuit Court of Appeals held for the seller, surprisingly, on the theory that Congress intended only indemnity contracts, and not releases, to be enforceable in CERCLA contribution cases. n197

The buyer might have won if the case had been heard in either of the two federal courts where release provisions have been held to protect buyers against suits by sellers for contribution. n198

-- A buyer might be willing to take title to a portion of the property, the uncontaminated part, or a buyer might be prepared to accept title to a site contaminated with some types of pollutants but not others, depending on the difficulty of cleaning them up and finding a disposal site for them.

-- Buyers and sellers might disagree about whether a site was contaminated or not. This can happen easily because environmental regulations are not always clear and change often. If the buyer has the right to rescind if the site is contaminated, who bears the burden of proving contamination?

-- If the sellers during escrow come to realize for the first time that the site is polluted, they may seek rescission on their own if they realize that under CERCLA they remain liable for hazardous and toxic clean-up costs even after the closing. In *Garb-Ko, Inc. v. Lansing-Lewis Services,* n199 the seller discovered, after contracting, that underground gasoline storage tanks were leaking. The seller sought rescission and the court granted it so that the seller could regain control of the site to avoid further clean-up costs and third party claims that might have arisen had escrow closed and buyer failed to clean up the site satisfactorily.

doctrine to make the presence of hazardous wastes an encumbrance on title); Michael A. Nardolilli, *Title Insurance: Spotlight on Recent Lender's Policy Cases*, 50 Consumer Fin. L.Q. Rep. 466, 467 (Fall 1996) ("Unmarketability" of Title).

(n5)Footnote 123. Consider the case of *Mailman's Steam Carpet Cleaning Corp. v. Lizotte, 616 N.E.2d 85 (Mass. 1993).* A previous owner had operated a service station and fuel oil business on the site for thirty-nine years and had left eleven underground tanks behind. The next owner, Lizotte, in selling the property to Mailman, signed a warranty that the tanks were free of spillage and leaks, and would remain so for ten years. After closing, the buyer detected contamination, and sued for $225,000 to clean up the site. The purchase price had been only $63,000. In upholding the recovery, the Court observed:

> The contamination of Mailman's property caused by leaks in the oil tanks was clearly the natural consequence of the breach of warranty. Lizotte could reasonably have contemplated that he would be liable to Mailman for all costs related to cleanup of the oil leakage as a probable result of the breach and that these costs would likely exceed the fair market value of the property.

616 N.E.2d at 88.

Davis v. Sun Refining & Mktg. Co., 671 N.E.2d 1049 (Ohio App. 1996) (Purchasers brought action against vendor, alleging breach of contract and fraudulent concealment in connection with petroleum contamination of property resulting from failure of vendor, when removing underground storage tanks, to also remove piping. The remedy of specific performance of cleanup was granted against the vendor).

Fed. 117 (1997).*

Millipore Corp. v. Travelers Indem. Co., 115 F.3d 21 (1st Cir. 1997) (CERCLA cost allocation scheme may operate retroactively making potentially responsible party (PRP) responsible for actions taken before CERCLA was enacted and before PRP was aware that its actions might lead to environmental liability); *Town of New Windsor v. Tesa Tuck, Inc., 935 F. Supp. 305 (S.D.N.Y. 1996)* (State thruway authority was not "responsible party" under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) as owner or operator of a facility where there was no evidence that hazardous substances were deposited, stored, disposed of, placed, or otherwise located on the authority's property); *Aluminum Co. of America v. Beazer East, Inc., 124 F.3d 551 (3d Cir. 1997)* (Corporation may be held liable under CERCLA as "operator" of facilities owned by another corporation only if "actual control" standard is satisfied).

(n27)Footnote 145. CERCLA § 107 (codified at *42 U.S.C. § 9607). Farm Bureau Mut. Ins. Co. of Michigan v. Porter & Heckman, Inc., 560 N.W.2d 367 (Mich. App. 1996)* (Subsection of Michigan's Environmental Response Act (MERA) stating that liability for incurrence of response activity shall attach to "owner or operator of the facility" applies to current owners and operators of facility); *United States v. CDMG Realty Co., 96 F.3d 706 (3d Cir. 1996)* (passive migration of contamination, that was dumped before prior owner's ownership, did not constitute disposal under CERCLA).

(n28)Footnote 146. *Tanglewood East Homeowners v. Charles-Thomas, Inc., 849 F.2d 1568 (5th Cir. 1988).*

(n29)Footnote 147. *N.L. Indus. v. Kaplan, 792 F.2d 896 (9th Cir. 1986); T & E Indus. v. Safety Light Corp., 680 F. Supp. 696 (D.N.J. 1988).*

(n30)Footnote 148. The government has argued often and successfully for a liberal application of joint and several liability. *See e.g., O'Reil v. Picillo, 883 F.2d 176 (1st Cir. 1989), cert. denied, 493 U.S. 1072 (1990); United States v. Chem-Dyne Corp., 572 F. Supp. 803 (S.D. Ohio 1983).* But there are cases which make proof apportionment -- and therefore a release from joint and several liability -- easier. *See EPA v. Segua Corp. (In re Bell Petroleum Servs., Inc.), 3 F.3d 889 (5th Cir. 1993); United States v. Alcan-Butler, 964 F.2d 252 (3d Cir. 1992); United States v. A&F Materials Co., 578 F. Supp. 1249 (S.D. Ill. 1984). See also* Note, *EPA v. Sequa Corporation (In re Bell Petroleum Services): The Fifth Circuit's Approach to Joint and Several v. Apportioned Liability Under CERCLA, 40 Loy. L.A. L. Rev. 165 (1994).*

Joint and several liability has been assailed because it discourages potential tortfeasors from reducing damages their acts cause. A rational firm would spend $100 to reduce pollution by $500 if it were fully liable for the $500 and had a 20% chance of being caught. But with joint tortfeasors, a rational firm figures its share of the total liability bill by dividing it into the total number of other solvent defendants. By that fraction, its incentive to prevent or mitigate damage is diminished. *See* Richard A. Epstein, *Two Fallacies in the Law of Joint Torts, 74 Geo. L.J. 1377, 1385.*861385-86 (1985). Song, *Application of Joint and Several Liability for Natural Resource Damages Under the CERCLA and Determining Who Can Recover for Natural Resource Damages 1997 Army Law. 49 (Nov. 1997).*

(n31)Footnote 149. *See* 126 Cong. Rec. S14964 (daily ed. Nov. 24, 1980). *United States v. Wallace, 961 F. Supp.*

969 (N.D. Tex. 1996) (Although CERCLA imposes strict liability on persons as listed in CERCLA as responsible, defendant may escape joint and several liability for response costs if it shows that its waste, when mixed with other hazardous wastes, did not contribute to release and cleanup costs incurred, or that, at most, it contributed to only divisible portion of harm).

But see United States v. Occidental Chem. Corp., 965 F. Supp. 408 (W.D.N.Y. 1997) (Covenant not to sue, which was contained in company's deed conveying property to city board of education and which was subsequently incorporated in board's deed to city, did not render city solely liable for costs of remediation of public nuisance; however, courts will enforce private contract allocating among parties any loss that parties might suffer by imposition of CERCLA liability where provisions show clear and unmistakable intent of parties).

(n32)Footnote 150. *142 U.S.C. § 9607*(e)(1) ("No indemnification, hold harmless, or similar agreement or conveyance shall be effective to transfer from the owner or operator ..... or from any person who may be liable for a release ..... to any other person the liability imposed under this section").

(n42)Footnote 160. Note, *Liabilities of the Innocent Current Owner of Toxic Property Under CERCLA, 23 U. Rich. L. Rev. 403, 416-17 (1989):*

Few current owners to date have successfully avoided liability under the third-party defense. New York v. Shore Realty Corp. was one of the first cases in which a responsible party asserted the third-party defense. Shore claimed it was entitled to the third-party defense because the hazardous conditions were created by a prior tenant and Shore had exercised due care while it was in control of the property. The court held that the harm to Shore was not "caused solely" by a third party because Shore knew of the prior tenant's activities before purchasing the property, should have foreseen that such activities would continue, and did not take "precautions against" the tenant continuing the activities.

Among the few who have successfully invoked the "innocent purchaser" defense: the children and wife of a property shareholder were held exempt from liability for cleanup in a case in which they received their ownership shares by gift or devise after the contamination had occurred. *United States v. Pacific Hide & Fur Depot, Inc., 716 F. Supp. 1341 (D. Idaho 1989).*

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.08

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.08 Laws Potentially Applicable to Securing Entitlement to Develop Land.

[Go To Supp]

In the preceding sections we saw how a company (Larwin) engaged in subdividing land and home-building might finance and contract for land. The following section describe most of the laws such an enterprise would have to satisfy in order to obtain the legal right to divide its 880 acres into smaller saleable parcels.

Many of these laws and regulations governing development are federal -- among them the Clean Air Act, the Clean Water Act, and the Endangered Species Act. Other applicable laws are state or local ones. Across the country, state governments and local communities differ in their attitudes towards growth. Even in the same community, attitudes towards development may change. In recessions, the case for development looks pretty good. When growth is abundant and outstrips infrastructure, the case for slowing growth may look better. n200 Developers going through the same technical steps may find themselves encouraged or impeded depending on the community's attitude towards new development, the competence of the local planning staff, and the efficiency of local bureaucratic practice.

A developer or lawyer in the entitlement business does well to start with a list of the applicable laws, regulations and rules. Such a checklist, however, can be daunting. For a southern California home builder it may look something like this:

> (1) *The Subdivision Map Act*. Before a home builder will be able to record a map showing how it proposes to divide its land into smaller lots, that map must be approved by local government. The local government's authority to control the subdivision of land is usually derived from state law. In some states, home rule cities derive their authority to regulate subdivisions from their charters. Subdivision regulation authority includes the right to restrict the number and size of lots, the width of streets, and their locations.
>
> (2) *Exactions, Dedications, and Fees*. A developer's right to subdivide will be conditioned on its dedicating land for streets, utility rights-of-way, and possibly sites for schools and parks. It may have to kick in money for regional public improvements located off its site such as highways, fire stations, and

libraries.

(3) *The Subdivided Lands Act*. Under state law in about 15 states, subdividers must provide lot buyers with detailed information about the project, its financing, the location of public facilities, and other important consumer information. These reports are analogous to the reporting requirements imposed on those who sell securities.

(4) *Zoning*. The land uses permitted on the site, the size of lots, and the portion of the site that can be utilized for building are the subject of local zoning ordinances.

(5) *General Plan*. Most states adopted the standard state zoning enabling act which requires that zoning be in accordance with a comprehensive plan. The zoning ordinance itself has been held to satisfy the requirement for a comprehensive plan in all but a few states. In California, Florida, Hawaii, Maine, Oregon, and Vermont the state legislatures have mandated -- independent of the local zoning ordinance -- an additional set of conditions for development approval.

(6) *Environmental Impact Statements*. Projects funded or subsidized by the federal government must meet requirements of the National Environmental Protection Act (NEPA). Many states have enacted laws modeled after NEPA requiring state and local decision-makers to consider the environmental impacts of government projects before approving them. Analyses and descriptions of the impacts, if they are potentially significant, are gathered in a document called an environmental impact report or an environmental impact statement (EIS or EIR) under NEPA.

(7) *CERCLA (The Comprehensive Environmental Response, Compensation and Liability Act)*. This federal law mandates that sites containing hazardous or toxic waste be cleaned up, preferably at the expense of past and present owners. Should a developer propose to subdivide and build houses on a site with contaminated soils, the developer will have to remove the contaminants as part of the approval process.

(8) *The Clean Air Act*. The Clean Air Act sets national air quality standards. The law requires states to prepare implementation plans showing how federal air quality standards are to be met locally. Under the implementation plans in cities that fall short of Clean Air Act standards, the developer may be subjected to the requirements of state, regional, or local air quality control boards. Requirements may include the necessity for new industry to "purchase" pollution from firms in the area who earned credits by reducing their emissions; by creating employee ride-sharing programs for major employers; through design changes in the layout of the project to encourage car-pooling and public transit use; and through a better balance of jobs and housing within the project area. Through the Clean Air Act, n201 Congress mandated air quality standards and authorized the E.P.A. to oversee the development of state implementation plans (S.I.P.s) to achieve those standards. Many localities failed to promulgate S.I.P.s and that has led to considerable litigation by environmental groups to compel the E.P.A.'s adoption of federal implementation plans and other sanctions against states that don't propose adequate S.I.P.s. n202

Under the implementation plans in cities that fall short of Clean Air Act standards, the developer may be subjected to the requirements of state, regional, or local air quality control boards. New industries may need to "purchase" the right to pollute from firms in the area. Marketable pollution credits may be awarded to firms in the area. Marketable pollution credits may be awarded to firms reducing their emissions. Employers may have to create employ ride-sharing programs. Land developers may have to design their projects to encourage car-pooling and public transit use. Local and regional land use regulators may need to use their authority to encourage a better balance of jobs and housing within the sub-areas of the region. However, Congress and the states have been hesitant to authorize air quality regulators to enact control over indirect sources of pollution such as parking garages and shopping centers. n203

Section 805 of the Clean Air Act Amendments declares that the law is not to be "an infringement on the existing authority of counties and cities to plan or control land use." But as one lawyer expert in air quality regulation observes: "restrictions applicable to stationary sources in the most severely polluted metropolitan areas will place bounds on local authority," and these can have "substantial impacts" on growth in such areas. n204

(9) *Wetlands*. The Clean Water Act protects wetlands against promiscuous dredging and filling. Developers are not allowed to dredge and fill without a special permit from the Army Corps of Engineers, and wetlands permits are not ordinarily issued for housing projects. Under § 404 of the Clean Water Act developers are not allowed to dredge and fill without a special permit from the Army Corps of Engineers. n205 Any activity that moves dirt around in a wetland counts as "dredge and fill." Placing dirt in a wetland to build a road or farming, can be "dredge and fill." An activity need not "pollute" to require a permit. n206 Getting a § 404 permit is by no means to be regarded as "routine, simple, cheap or pleasant." n207

No permit can be granted unless it is in the public interest. The Corps considers an enormous array of factors in its public interest review, everything from ecological conservation to the needs and welfare of people. n208 But the upshot of the public interest review is that anyone seeking to fill a wetlands will be required to create new wetlands from existing uplands at least equal in size and quality to the wetlands filled or dredged for development. The new wetlands must be at the site of the project or nearby. Many states have wetland protective legislation. n209 Wetlands permits are not ordinarily issued for housing projects.

Other agencies may become involved in wetlands permitting: the National Marine Fisheries Services, the Soil Conservation Service, state departments of fish and game, state and local water resources, and water quality control boards, to name some. Even the Secretary of the U.S. Department of Agriculture enters the wetlands scene through a program known as "Swampbusters." This program stops the Secretary from passing out agricultural subsidies to farmers who plant commodity crops in wetland basins. n210

(10) *The Endangered Species Act*. Congress has voted to protect endangered species. If the U.S. Department of Interior has declared a site to be the critical habitat of a species listed as endangered or threatened, developing the site may be an unlawful taking of that species. Under special circumstances (where the species can be saved by mitigation measures), a permit for development may be obtained. The Endangered Species Act n211 was designed so that the Secretary of the Interior first determines whether a species is "in danger of extinction" (endangered) or "likely to become endangered within the foreseeable future" (threatened). The process for making this determination is by *listing* endangered or threatened species. The Secretary publishes proposed listings, holds public hearings, and then publishes findings in the Federal Register.

The Secretary defined "harm" to include "significant habitat modification or degradation where it actually kills or endangers wildlife." If the U.S. Department of Interior has declared a site to be the critical habitat of a species listed as endangered or threatened, developing the site may be an unlawful taking of that species. n212 Under special circumstances (where the species can be saved by mitigation measures), a permit for development may be obtained, but a signi-ficant portion of the site may have to be set aside as open space under a *habitat conservation plan*. n213 Under a habitat conservation plan, a developer may end up losing the use of considerably more than half the project site so as to leave room in the critical habitat for the survival of an endangered or threatened species.

> (11) *Development Agreements*. In a few states, development agreements may be entered between the developer and local government. These agreements protect the developer against changes in local zoning or subdivision regulations enacted after beginning the project that might be applied retroactively. Developers enter these contracts with local governments so that future changes in land use laws won't prohibit or increase the costs of projects already approved.
>
> (12) *Referenda and Initiatives*. Many projects will require changes in zoning. In most states, even if the

developer secures a change favorable to the project, it is subject to repeal by the local voters. The voter repeal is called a *referendum*. In some states voters may also *initiate* zone changes.

(13) *Growth Caps*. Many communities have enacted absolute limits on the number of houses or the square footage of commercial space that can be built in the community within any given year. These are allocated to specific projects based on a competition (a "beauty contest" some call it) in which local officials assess the design qualities of competing projects, their neighborhood impacts, and the "goodies" the project offers the community. Some cities and counties have rigid urban growth boundaries beyond which no approvals will be granted for urban development. Some have voted to link new development to improvements in traffic or school capacity. A developer whose project falls askew of these requirements has an especially difficult task.

(14) *Annexation*. A developer will often consider the possibility of annexing her site from a growth-hostile jurisdiction to a more friendly local government if the site lies near the boundary of a welcoming community.

(15) *Coastal Zone Management Laws*. Projects lying in coastal zones may be subject to review by state or regional entities to assure compliance with plans that all coastal states have enacted to protect their coastlines from overdevelopment pursuant to the Federal Coastal Zone Management Act of 1972. n214 "Virtually all these state statutes utilize some type of permit system geared toward restricting development in fragile coastal regions. However, the different statutes vary considerably in stringency, focus, and clarity." n215 Louisiana requires a coastal use permit for any use that would "directly and significantly affect coastal waters." n216 California developers must obtain a coastal development permit, either from local governments or the state, before building any structure seaward of the nearest public road or less than 300 feet inland from the mean high tide. n217

Here is a partial list of agencies and groups a private developer dealt with in a coastal project in southern California on 900 acres of open space for a new city with 11,700 residential units, 4.9 million square feet of office, 720,000 square feet of residential area, and 2,400 hotel rooms: n218

(n10)Footnote 209. *See, e.g.*, The Dam Safety and Encroachment Act, Pa. Stat. Ann. tit. 32, 693.1§§ 693.1 - 693.27, and the Clean Streams Law, Pa. Stat. Ann. tit. 35, ??691§§ 691 - 691.001. *See* Robert B. McKinistry, Jr., *Constraints Upon Development in Environmentally Sensitive Areas: Regulation of Wetlands and Floodplains in Pennsylvania*, 2 Vill. Env. L. J. 333, 354 (1991). A challenge to the application of one of those state wetlands protection acts, South Carolina's coastal zone management law, gave rise to the famous takings case, *Lucas v. South Carolina Coastal Council, 112 S. Ct. 2886 (1992).* Few developers will benefit directly from *Lucas* because most land use laws allow some economic use of land. Ordinances that ban all or nearly all uses usually do so to prevent nuisance-like conditions. However, local governments restricting development to secure open space or to protect farming where farming is no longer economically viable may have to compensate property owners. The *Lucas* case may have its greatest impact where developers are entirely prevented from using any of their land, because it is a wetlands, or provides a habitat for an endangered, or threatened species protected by the federal law.

State Courts differ dramatically in their responses to claims for compensation from property owners who are denied the right to develop based on state wetlands protection. At least four states hold that a buyer who purchases swampland has no reasonable expectations of being able to develop by filling the site. *Compare Just v. Marinette County, 201 N.W.2d 761 (1972) with State v. Johnson, 265 A.2d 711 (Me. 1970).* This is sometimes called the "buy a swamp, get a swamp" rule.

In two states, wetland owners have been held to enjoy the right to develop or be compensated. New York: *Berwick v. State (Berwick), 552 N.Y.S.2d 409 (N.Y.A.D. 1990);* Connecticut: *Gil v. Inland Wetlands & Watercourses Agency, 593 A.2d 1368 (Conn. 1991).* But in one of those, New York, the owner is only entitled to claim from the state damage caused by federal wetlands controls. For that the property owner must sue the Feds. Washington: *Orion Corp. v. State, 747 P.2d 1062 (Wash. 1987), cert. denied, 486 U.S. 1022 (1988);* Wisconsin: *Just v. Marinette County, 201 N.W.2d 761 (Wis. 1972);* New Hampshire: *Claridge v. New Hampshire Wetlands Bd., 485 A.2d 287 (N.H. 1984);* Florida: *Graham v. Estuary Props., Inc., 399 So. 2d 1374 (Fla. 1981).*

Basile v. Town of Southampton, 678 N.E.2d 489 (N.Y. 1997) (Valuation of property acquired by town in condemnation proceeding was required to reflect applicable wetlands restrictions, rather than its preregulatory property value; claimant took title to her property subject to wetlands regulations and encumbrances of covenants entered into by former owner in exchange for right to subdivide and develop).

(n11)Footnote 210. *16 U.S.C. §§ 3801* - 3845. *See* Turrini, *Swampbuster: A Report From the Front, 24 Ind. L. Rev. 1507 (1991).*

(n12)Footnote 211. Pub. L. No. 93-205, *8 Stat. 884.*

(n13)Footnote 212. The Secretary's definition of "harm" to include habitat modification was upheld in *Babbitt v. Sweet Home Chapter of Communities for a Great Oregon, 115 S. Ct. 2407 (1995).* Requiring the owner to forfeit the use of her site may also be a "taking" of private property for public use in the Fifth Amendment sense. *See, e.g.,* Oliver A. Houck, *Why Do We Protect Endangered Species and What Does That Say About Whether Restrictions on Private Property to Protect Them Constitute "Takings"?, 80 Iowa L. Rev. 297 (1995).*

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.09

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.09 Checking Out the Politics of Planning.

To play the entitlement game, developers and their lawyers need to know who the decision-makers are. In most states they can be divided into four groups: elected local officials (mayor and councils for the cities; supervisors for the counties); planning commissions -- volunteer panels whose members, called planning commissioners, are appointed by elected officials; planning staff members; and staff members of other agencies, both within the jurisdiction and outside.

Unofficial players include the neighbors, journalists and newscasters who cover local news, and occasionally special interest groups, ranging from the Sierra Club to the Chamber of Commerce, who may become involved in a particular planning contest if the stakes are high enough.

(1) *Elected Officials*. The city council or county board of supervisors will have to give final approval to all "legislative" acts. These include zone changes, general plan amendments and the environmental documentation accompanying them, and, by special statute, development agreements.

In cities or counties whose representatives are elected by district, not at large, the representative of each district has a disproportionately important say in planning decisions arising on his or her turf. Fear of reciprocal intervention keeps others from more than the occasional attempt to second-guess the district supervisor or councilor in a planning case. Nonetheless, it sometimes happens that a project is approved over the objections of the district representative. The constituents of other council members may favor the project, or they may not care if their representative votes for it, and the representative may believe the project benefits the city as a whole, or may owe allegiance to the applicant or to established planning precedents.

A developer can anticipate the elected officials' preferences by:

(a) talking with earlier applicants about their cases;

(b) studying the transcripts and files of similar cases filed in the same area recently;

(c) sitting in on public hearings on planning and zoning matters to hear what peaks the interest of

councilors or supervisors;

(d) reading newspaper accounts from the local press on past planning controversies;

(e) reading the public conflict-of-interest disclosure form each elected official is required to file annually and which lists the official's residence, major investments, and gifts over $25; and

(f) meeting the official to discuss the application directly.

In larger jurisdictions, elected officials have staff who screen agendas. Among these may be a deputy who handles planning matters. That person is usually more accessible and often more candid than the elected official, an indispensable player for anyone hoping to develop or block a project.

As tempting as it is for the combatant in a land use contest to pick up the phone and call a powerful official who owes her a favor, be aware of legal limits to *ex parte* communications -- off-record conversations or information obtained in the absence of one or more of the parties to the dispute. In some places, any proven *ex parte* contact creating the "appearance of unfairness" taints the final decision and may result in sanctions. In some states, *ex parte* contacts are only barred for decisions of the quasi-judicial type but not legislative matters. n219 Elsewhere, sanctions apply to *ex parte* information only when the excluded party can show clear bias affecting the final decision. n220 Possible sanctions: the decision is set aside and next time around the tainted official is forbidden from participating, or the official is required to fully and truly disclose publicly the content of the communication in time for those who were excluded to have their say in rebuttal. n221 Sometimes Courts reverse decisions based on *ex parte* information. n222

Developers are the largest single contributors to state and local election campaigns. n223 What their donations purchase, they are quick to admit, is "access," the opportunity to discuss their problems privately with the official whose campaign they have helped finance. Developers who aren't regular contributors -- and many who are -- will often employ a political consultant, lawyer, engineer, architect, or planner who chews chicken at the right campaign fundraisers and thus has "paid dues" for access. One study showed, not surprisingly, that "lawyers with political connections to the leadership were more successful in obtaining re-zonings than lawyers without traceable connections." n224

Defenders of campaign funding by developers contend that, but for those contributions, the politics of planning would be dominated entirely in many places by the parochial interests of neighbors.

Smart developers watch the election calendar. They prefer to defer an unpopular proposal if a hotly contested local election is on the horizon. They don't want to jeopardize the political careers of their favorite elected officials.

(2) *Planning Commissioners*. These appointed officials serve as part-time volunteers, and usually enjoy some political clout. They have the first official say on all matters headed for the local legislature (zoning, plan amendments). In many communities, they also have the last word on administrative or quasi-judicial matters (subdivision approvals, variances, conditional use permits, planned unit developments) unless their decisions are appealed to the city council or board of supervisors.

"Good government" reforms established nonpartisan, appointed commissioners in hopes of removing planning and other "technical" decisions

from the clutches of political party bosses.

> ... the original reason for making planning commissions independent, outside of politics, still exists. There is still a need for a commission that will attract the services of leaders who are unable or unwilling

> to get into active politics, but who are interested in serving their city. There is still need for an official agency that any and all governments can approach with some assurance of an unbiased hearing. n225

This aspiration has been realized only partly.

Since planning commissioners are appointed by elected officials, they sometimes reflect the views of those who appointed them or, at a minimum, try to avoid head-on, politically embarrassing conflicts. Because they are not elected, they do sometimes enjoy an independence elected officials often forego. Elected officials can use planning commissions as convenient political buffers to insulate them from some controversial "no win" planning and zoning decisions.

(3) *Planning Staff*. The planning staff varies hugely from jurisdiction to jurisdiction in numbers and competence. In smaller towns they may be part-time supplemented by consultants. In larger jurisdictions the staff may be composed of several hundred souls. Being professionals, staffers often have well-formulated ideas about how things should be, and many of those ideas are forged from hard years of experience and perceptive observation of what works and what doesn't. Knowing the profession of the staffer assigned to a project can be helpful. Civil engineers, for instance, often see things differently than architects or social scientists.

A smart developer avoids antagonizing a staffer working on the application, no matter how incompetent or indifferent the staffer seems. Even after a final decision, many permits have conditions attached to them which prove ambiguous or technically unworkable. A staff member will be assigned by the department to decide what changes in the project are consistent with the approvals already granted, so that the project can proceed as modified, and what changes require a new approval. The assigned staff member will often be the same one who helped process the application in the first place.

(4) *Other Agency Staff*. Increasingly, planning is a multi-departmental and multi-jurisdictional affair. Developers or their engineers negotiate directly with many of these people. They include representatives of the local road or public works department, fire, police, school board, and water providers. If their projects require certification

from regional air and water quality control boards, state fish and game, or a wetlands permit from the U.S. Army Corps of Engineers, developers will want to know exactly which staff person is responsible for each of these.

(5) *Project Formulation and Expert Advice*. Good projects are easier to defend than bad ones. What counts as "good" is subjective, and depends hugely on who the neighbors are, what the regulators care about, and the technical standards and ground rules already in place. Surveying all these before the developer has locked a proposal into shape can save grief later.

Sophisticated developers are masters at offering the designs and "goodies" that will bring local cheers. It may be a school or park site. It could be low-income housing units (or a promise the project won't have any). Maybe it's hacienda or "Cape Cod" styling or a village-type clustering of houses, shops, and streets.

Savvy developers employ planning consultants to pave the way at city hall, lawyers to map and oversee the process required to obtain the necessary approvals, public relations firms to study what the neighbors really want and care about, traffic engineers to make sure congestion is alleviated, geologists to advise on how to prevent landslides, and environmental consultants to address all the ecological issues. Experienced developers don't get locked into a project design until they have consulted the local politicos and brainstormed with their experts.

FOOTNOTES:

(n1)Footnote 219. Generally, quasi-judicial decisions are those involving conditional use permits, variances, and subdivision map act approvals. Legislative acts are those involving zoning or the general plan. In some states, zoning decisions may be classified as quasi-judicial if the decision affects only one small parcel of land.

(n2)Footnote 220. See Jennie L. Petitt, *Ex parte Communication in Local Land Use Decisions, 15 B.C. Envtl. Aff. L. Rev. 181 (1988);* Richard Grosso, *Symposium: Growth Management: A Plan for Florida's Future. Florida's Future. Florida's Growth Management Act: How Far We Have Come, and How Far We Have Yet to Go, 20 Nova L. Rev. 589 (Winter 1996).*

(n3)Footnote 221. *See White v. Town of Hollis, 589 A.2d 46 (Me. 1991)* (denying property owners right to due process where board members failed to disclose *ex parte* information about the proposed project).

But see Castaneda v. Brighton Corp., 950 P.2d 1262 (Idaho 1998) (Developer's alleged ex parte contact with city council when developer presented preliminary plat for approval at council meeting did not invalidate council's approval of subdivision, where there was no allegation of an economic interest by any of council, only bias suggested was that approving preliminary plat prior to annexation and rezoning allowed city to prejudge issue, there was no means for developer to apply for preliminary plat approval other than to appear before city and ask for such approval, and hearing at which preliminary plat was approved was open to the public and press).

(n5)Footnote 223. Campaign contributions are subject to exacting rules -- federal, state and local -- rules so complex that a specialized area of legal practice has evolved around them. If these rules are met, the contributions are deemed legitimate and not bribes. Developers who seek to influence local officials by, say, employing these officials or their family members or their business associates run the risk of prosecution for bribery. *See People v. Diedrich, 182 Cal. Rptr. 354 (1982),* in which a developer seeking removal of land from a Williamson Act agricultural preserve employed a county supervisor's associate for $142,000 as architect and planner on a project which a removal vote made possible. The jury found that the fee was intended to influence the supervisor's vote.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.10

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.10 Developer Strategies for Dealing with Neighbors.

[Go To Supp]

§ 85.10(a) Advance Meetings: Pros and Cons.

Some developers always like to present the projects for which they need local land use approvals to neighbors in advance of public hearings in order to win political support or at least acquiescence. By meeting with those who could be harmed by a new project, developers hope to head off opposition, perhaps by a redesign of the project or an offer of a compensating amenity to the neighborhood. Even if efforts at compromise fail, the developer gets some idea in these informal sessions with neighborhood groups what the neighbors are likely to say when the developer's case goes before the planning commission or city council. Planning officials, too, appreciate developer efforts to defuse potentially explosive planning decisions.

Some developers caution against such contacts, especially when opposition is certain to be strong and well organized. They say you are just giving the enemy advance information to use against you.

§ 85.10(b) Agreements with the Neighbors.

§ 85.10(b)(1) Generally.

A developer may actually contract with a neighborhood homeowners' association. The essence of the contract is the developer's promise to build a project of a certain quality and density in exchange for the association's political support. Sometimes the developer makes the neighbors happy by redesigning the project. The redesign can be costly. After the developer acquiesces in changing the project design, how can the developer be sure some of the neighbors won't fight the project anyway? How can the neighbors be sure, if they go along with the project and don't oppose it politically, that the developer will keep the bargain and build as agreed?

> (a) The neighbors and the developer can enter in a negotiated written contract embodying their respective promises. Illustrating a promise not to participate, here is a clause a major home builder, Kaufman & Broad, had all its buyers in one project sign as part of the developer's required disclosure statement: "Buyer agrees that it shall not oppose any action taken by Kaufman & Broad before the

County of Contra Costa or any other applicable municipal agency to reduce or increase the size of homes to be constructed in the community or to change the materials, plans, and specifications of such homes in the community." The developer's promises concerning development may be accompanied by deed restrictions recorded once the requested land use approval is granted -- or even prior to approval. The developer may agree to place restrictions on the future use of the site more exacting than those imposed by zoning. For example, the developer of a retail center, seeking to rezone a site from R-1 (single-family residential) to C-1 (light commercial) might agree not to use the site as a car wash even though a car wash is a permitted use in the C-1 zone. n226

(b) Some types of zoning involve a procedure by which specific conditions may be attached to the developer's rezoning. When conditions are imposed *ad hoc* -- with no prior enacted set procedures, regulations, or statutory guidelines, this is called contract or conditional zoning. In some jurisdictions, contract or conditional zoning is vulnerable to legal attack if the conditions seem out of line with the basic zoning scheme in the community. n227 The zoning ordinance itself may detail procedures for reviewing a developer's proposed plan and the attachment of specific conditions to it. This is a common feature of the Planned Unit Development, the Specific Plan, the Conditional Use Permit and the Special Exception Zoning.

(c) Local governments may enter development agreements either by authority of state statues or -- in the absence of explicit statutory authority -- through an aggressive use of their zoning powers. Development agreements link developer promises to the developer's entitlement to develop. n228

(d) Some cities delegate to homeowners' groups the right to act as planning vigilantes, and won't issue building permits until the developer "works something out" which the neighbors can approve. n229 Consultation is one thing. Veto is quite another. When cities delegate the final word to neighborhood groups without specific and appealable guidelines, and without reserving the ultimate decision to public officials, the delegation is unconstitutional and can even result in the city being liable in damages for unconscionable delays caused by intransigent neighborhood protectors. There is nothing wrong with city officials taking the neighbors' comments and suggestions into account in formulating permit conditions. What is impermissible is delegating the land use approval function to neighborhood groups.

Suppose the neighbors are naive. They don't know that there are many ways the developer's promise to them can be made a part of the developer's deal with the city. They take the developer's word about eliminating objectionable features of the original proposal. As their *quid pro quo*, they keep their promise to stay away from the public hearing, and not to oppose the project in any way. The developer's project is approved without the conditions promised the neighbors. Have they any recourse, then, if the developer begins breaching promises made to the neighbors?

Possibly so. In *Lacher v. Superior Court*, n230 a California appellate Court sanctioned a cause of action by neighbors alleging fraud against a developer for promising his project would not block their views. Relying on that promise, they stayed home from public hearings on the project. When the project was approved and construction commenced, the neighbors filed suit for damages on the houses if framing climbed above one story.

§ 85.10(b)(2) Homeowner Politics and the Limits of Delegation.

Homeowners' groups often succeed in exercising significant influence over what can be built in or near their spheres of political influence. The influence of neighbors has been so important that zoning has been likened to a pyramid with the single-family residence at the apex as the most protected use.

No individual property owner has a right to a particular zoning ordinance to control undeveloped land or prevent redevelopment. But homeowners appear to have a reliable political entitlement to the status quo in land use. The major difference between these public rights (zoning), and their closest private analog, private homeowners' associations, is

that the latter do not include any property owners who have not agreed to the rules in advance. Zoning is enacted by a local government, which usually has some involuntary members. The one-resident, one-vote rule and majority voting procedures open the possibility that public property rights might be expanded at the expense of politically effete members of the community. n231

The hegemony of neighboring owners over zoning is so great that one commentator has suggested formalizing homeowners' informal rights by giving owners the right to sell zoning entitlements to developers for a price. That way, when market conditions justified scrapping outdated zoning, there would be an orderly way of discarding it, by passing expensive and imperfect political detours.

The gravest deficiencies of zoning are caused by a separation of the possession of certain property rights from the right to receive payment for their transfer. By designing new and better forms of land tenure to replace zoning, the greatest failings of the metropolitan land market can for the most part be corrected without requiring that public decisions replace private ones. n232

Although, practically speaking, neighborhood associations are the most potent force in many city zoning fights, no recent case shows where the line must be drawn to limit the influence of neighborhood associations in land use decisions better than *Schulz v. Milne*. n233

The saga began in 1988 when Paul Schulz and Deborah Savage bought a dilapidated, unsafe, uninhabitable house in Bernal Heights, a San Francisco neighborhood, with the idea of refurbishing it. They drew plans to add a floor, alter the interior and basement and add twelve feet to the rear of the house. Everything they desired was permitted by local zoning codes. So they applied for a building permit.

"Not so fast," the building inspector told them. They first had to work out any renovation plans with the Bernal Heights Neighborhood Review Board, and Terry Milne, an officer of the Board. The Board is a private association of Bernal Heights residents.

Since the lawsuit they eventually filed was for damages based on the U.S. Civil Rights Acts, you can probably guess what happened in the three years from 1988 to 1991. Terry Milne wasn't easily satisfied. Paul and Deborah submitted thirteen revisions and ran up big architecture bills. Each time they submitted a revision, Milne found new objections -- none embodied in any city statute or regulation -- but all firmly entrenched in Terry Milne's mind.

At one brief moment in September, 1989, the city issued a permit, but withdrew it within a few weeks when "someone" lodged an objection with the building department. Finally, in November, 1991, the city issued Paul and Deborah a building permit. But it was too late. By that time, Paul and Deborah were broke. They had depleted their construction budget fighting Terry Milne for the building permit. They were living on the premises of a business they operated, and continued living there while they sought damages against the city, the Bernal Heights Board, and Terry Milne.

Were their civil rights violated? Absolutely, ruled the Court. Citing past U.S. Supreme Court cases, the Court concluded that a municipality is prohibited "from making a statutory or de facto delegation of power to private decision-makers if the municipality does not provide safeguards or standards to govern the use of private discretion." n234 Without such standards and safeguards, there is nothing to prevent "administrative decision-making" to deteriorate into "potentially selfish or arbitrary motivations or the whims of local taste." n235

The city contended that Paul and Deborah didn't have a "ripe" constitutional claim because they hadn't appealed to the city's Board of Appeals -- the final arbiter of building permit denials. But plaintiffs' claim was based on the excessive delay that robbed them of the means to refurbish their house, no less to take further administrative appeals. In the words of the Court:

> Under these circumstances, City's attempt to bar plaintiffs' takings claims for lack of ripeness here is troubling, to say the least. City claims that plaintiffs are barred ... until they first pursue their claim through all state Court and City channels. Yet, the reason plaintiffs are barred as a practical matter from seeking relief from the state Courts or the City is because the City siphoned away all of plaintiffs' money by excessively delaying plaintiff's application process... Because the heart of plaintiffs' takings claim is that plaintiffs were financially paralyzed from going forward with their remodelling plans ... those state remedies are "constitutionally deficient" with respect to plaintiffs. Thus, in the absence of a state remedy for delay alone, plaintiffs' takings claims against defendants for excessive delay are ripe. n236

Paul and Deborah didn't have it all their way in federal Court. They had pleaded a cause of action for "interference with prospective economic advantage." a tort claim. This theory the Court rejected. To establish such a claim there must be an economic relationship between the plaintiff and some third party. But when an applicant seeks a building permit, a zone change, or a municipal license, the relationship between the applicant and the city is not ordinarily regarded as an economic one because the city is exercising its police powers, not engaging in a purely economic transaction. Were the rule otherwise, any citizen who objected to any permit or zone change would be potentially at risk to a tort claim by the thwarted, disappointed applicant. This could chill all public participation -- legitimate and reckless alike.

§ 85.10(c) Lawsuits to Discourage Dissidents.

One way a developer might try to discourage homeowners from breaching their promise of support or urging others to breach it would be by filing a lawsuit based on the tort of intentional interference with economic advantage. To make out a case, the developer would have to show (1) an intentional disruption of a potential economic advantage or a disruption of a contract, (2) that the disruption caused a loss, and (3) the amount of damage. n237

Dissidents may have First Amendment and other defenses, especially if the developer's motive is to quell homeowner participation in political debate, or to retaliate against those who spoke against the project at zoning hearings. Litigation for such pernicious purposes is called a Strategic Lawsuit Against Public Participation (SLAPP). n238 The First Amendment prevents an award for intentional interference with prospective economic advantage if interference is "based on true statements." n239 States are enacting laws to make it easier for those who are being sued just to penalize them for exercising their right of petition or free speech to obtain dismissal. n240

A SLAPP suit is a tort action designed to intimidate defendants into silence. The target of a SLAPP potentially faces enormous damages and must bear substantial costs to defend against the SLAPP suit. The potential costs of litigation serve as a deterrent to the defendant and others privy to the lawsuit from further participation in the SLAPP related activity or other future related activities. Because the objective of a SLAPP suit is not to win, but rather to subject the defendant to the cost of litigation, traditional safeguards against meritless actions (suits for malicious prosecution and abuse of process, requests for sanctions) are inadequate to counter SLAPPs. n241 Some states have re-acted to the problem of SLAPP suits by enacting legislation designed to make it easier to dismiss SLAPP suits.

California, n242 Delaware, n243 Minnesota, n244 Nevada, n245 New York, n246 Rhode Island, n247 and Washington n248 have enacted Anti-SLAPP legislation. The legislation in these states provide procedural remedies or special defenses to dismiss lawsuits that are designed to chill and diminish a citizen's right to free expression and petition of government. n249 If the target of a SLAPP prevails, they are usually entitled to attorney's fees and costs. Furthermore, legislation in Delaware, n250 Minnesota, n251 New York n252 and Rhode Island n253 creates a cause of action for the prevailing target from which they can recover actual and punitive damages.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.11

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.11 Controlling Subdivisions Through the Subdivision Map Act.

[Go To Supp]

§ 85.11(a) The Process.

It may come as a shock to those unaware of the pervasiveness of local land use controls, but in most states, a property owner has no right to sell land except in its present configuration. Say, you inherit 100 acres of undeveloped scrub outside a big city in the southwest. You might get the idea of selling it off in smaller parcels, hoping maybe to pocket enough from the sale of some of the acreage to pay for the construction of a house on the last 5, 10, or 20 acres. In most states, you will need a surveyor to delineate your boundaries, a licensed civil engineer to draw a subdivision map, and local government approval of the map before you can record it in the county land records and start selling lots. You can't just retail your 100 acres as you please. Attempting to do so without local government approval may be a criminal offense. The state laws which authorize this type of local government review are called Subdivision Map Acts.

The process of subdivision control is easier to describe than to endure for the proponents of most large-scale projects because the purposes and demands of subdivision regulation have been expanding rapidly in recent years. From insights into the marketplace, and a sense of what different layouts or site plans will cost to construct, the developer proposes a tentative map to the subdivision committee of the local government. "A tentative map is a precise drawing detailing the design of a project...." n254 Although the state map acts set the general procedural and substantive boundaries on what local governments may require, local governments get the first and usually the last word on the map configurations. They approve a tentative map with conditions that the developer must meet before the final map can be recorded, and lot sales begin.

In order to get approval of a tentative subdivision map, the developer's proposed map must be consistent with local zoning laws. For instance, if the zoning code calls for one-acre minimum lot sizes, the subdivider can't expect approval of a map subdividing the site into half-acre parcels.

Approval is conditioned on the developer doing certain things before recording a final map. Usually the conditions involve putting in roads, sewers and water connections. The developer can meet these conditions in kind or by financing them through a surety bond, a special assessment district bond, or a letter of credit. On recording the final subdivision map, the developer can sell individual lots.

The developer or the buyers can draw up plans to build on the lots. Those plans must meet local building codes. Armed with an approved building permit, the owner of a legally subdivided lot can commence construction. The work will be inspected for building code compliance during construction. On completion, the owner receives a certificate of use (in the case of commercial or industrial property) or occupancy (residential).

In some states the local government's elected officials are the arbiters of subdivision approvals, although planning staff and planning commissioners review proposed maps beforehand. In other jurisdictions the process is handled entirely by professional staff, with appeal rights only to the commission or elected officials. Elsewhere the process starts with the staff and ends with the planning commission, absent appeals.

Blue-penciling the developer's proposed maps had once been entirely a behind-closed-doors affair for experts -- the developer's engineer, representatives of local road, fire, police, and other public agencies. This is changing. Many states and cities now require neighbors to be notified of a pending subdivision proposal and to have an opportunity to be heard. n255

§ 85.11(b) Purposes.

When the public approval of subdivision maps began toward the end of the 19th century, the purpose of those early laws was to make a switch from the often confusing and inaccurate metes and bounds descriptions, which depended on distances, directions and monuments, to descriptions based on large, legible plat maps drawn with India ink, and filed with the county recorder for all to see. Those maps would divide the project area into blocks, and the blocks into individual lots. The developer would sell by referring to a lot and block number in her subdivision, as identified by her recorded plat map -- Lot 5, Block 18 in the Glorious Acres Subdivision on file in the County of Bliss at Book 1, Page 2.

On the plat map, the subdivider is obliged to show the width, direction, and length of streets. These are usually made to conform to the local master plan of streets which most states require as a condition to local governments' regulating subdivisions. Until recently this meant that a city or county would insist the streets inside the development connected to the city streets outside to form a contiguous network of roads linking the entire community.

This idea of a uniform, area-wide road system, often on a grid, has run into the safety and privacy worries on the minds of many homeowners. As a result, local road planners and fire departments must contend with increasing consumer demands for cul-de-sacs, speed bumps, and other traffic diverters that stop the flow of "through" traffic. A subtext is evolving on how far local governments can go in closing local roads to "through" traffic in order to shelter residents from outside motorists. n256

Landscape architects and planners see strengths and weaknesses in the traditional "grid" pattern:

> The traditional rectilinear "gridiron" street plan, despised by avant-garde planners of the 1930s, and used almost exclusively by American real estate developers up to that time, has, objectively speaking, many things to say for itself. It provides a strong visual order, clarity of orientation, flexibility of circulation (one-way streets) and spatial organization (green squares), and flexible density and land use. But the rectilinear plan does have its defects, particularly in residential areas: it conflicts with a hilly terrain; it has difficulty accepting diagonals; it encourages through traffic; provides excess street capacity at low density while creating too many conflict points at intersections; finally, it becomes monotonous if overly large and undifferentiated.
>
> As street networks began to approach their present size, and traffic its present volumes and speeds, planners began to look for a functional, not merely geometric, street system that would differentiate between different kinds of traffic, eliminate points of conflict and unnecessary street area, define

comprehensible, undisturbed areas for living, and fit the streets to natural topography. n257

The subdivision committee reviews the developer's plans for: (1) carrying water run-off from the site, (2) laying out water and sewer lines, (3) connecting the project to the nearest sewage treatment plant or constructing a sewage plant within the project, (4) tying the project into a municipal or local water company, or utilizing underground water through a system of wells for the project, and (5) providing easements and service for cable and TV, electricity, and gas.

Scrutiny of this infrastructure is a consumer protection measure. Lot purchasers rarely know whether their homes and neighborhood are protected from the 10-, 50- or 100-year flood, whether water pumping pressure is adequate to let them have the high velocity showers they crave, and whether the base and paving materials used to construct streets are durable.

The local government also protects itself in mandating these requirements, for it has the task of maintaining the streets, sidewalks, and storm drains. These should be designed so that maintenance is practical and efficient. Curbs and gutters make street-sweeping easier. Storm drains need access points so that maintenance crews can reach them. In high fire-risk areas, streets should be wide enough to accommodate fire trucks.

Major expenditures are at stake when infrastructure standards are set. These costs, like all the costs of new development, will affect the price of the finished lots and houses. Yet cost/quality trade-offs receive little public attention. Subdivision standards involve what appear to be technical choices. Planning commissioners or elected officials seldom overrule the recommendations of the local government's technical experts. So the developer and the local engineering technocracy battle it out until they reach an accord.

The subdivision map must conform to local zoning ordinances controlling the minimum size of lots, and lots must meet width and depth requirements where these are in place.

Often the subdivider will be asked to contribute to the solution of a regional school, park or traffic shortfall by constructing roads outside the subdivision to link it to the local street network. She may also be expected to contribute to school construction, park acquisition, or highway improvements.

Local governments have had a harder time sustaining mandatory off-site improvement requirements than sustaining on-site requirements. n258

It is easy to see how on-sites benefit the development project. The connection between a developer's project and off-sites needs to be proved.

Assessing subdividers for off-site public improvements raises important equity and efficiency issues, some of which have become the source of legal challenges to subdivision dedication and fee requirements.

(1) The subdivider may be asked to contribute money or dedicate land to remedy past shortfalls in road, school or park funding that have nothing to do with the burdens caused by her project.

(2) Once the local government is certain it can legally assess developers for "off-sites," local government officials may tend to prescribe bigger and more "off sites" than if local taxpayers had been picking up the tab, and may insist that these facilities be built by public employees at a price far greater than private firms would have charged for the same facilities.

(3) Landowners who don't change the use of their properties and don't subdivide don't have to pay subdivision exactions. This creates an incentive for maintaining the status quo even if the community would be better served by the landowner's changing the use of the site. n259

(4) Some types of development escape subdivision exactions entirely. Apartment developers, for instance, building on previously subdivided vacant lots, bring large numbers of people to the area but aren't engaged in the act of subdividing, and hence escape subdivision exactions and dedication requirements. (They could be liable, though, for impact fees levied when building permits are issued or utility hook-up fees are assessed to amortize the costs of capital facilities.)

(5) In states where converting an apartment house into a condominium is considered a "subdivision" for which local government approval is required, condo converters are caught in the web of subdivision fee and dedication requirements. Yet they are not necessarily bringing more people into the community than already reside there. In fact, if the buyers of condos are richer, and live at lower densities than the renters they displace, condo converters may actually be reducing the demand for schools, parks, and roads. Yet they may get socked for subdivision off-site contributions anyway.

(6) Some subdividers may actually benefit from dedicating land within their tracts for parks. People may pay more for houses near (but not necessarily adjoining) parks and schools. n260 Other subdividers may be required to provide or contribute to parks and schools whose projects are so far from these facilities they don't benefit at all from them. The buyers of homesites on large lots, in a planned private community with a country club and golf course, may not value a park as much as the buyers of a project built at very high densities in a project lacking open space amenities. Assessing both groups on a per lot or dwelling unit basis for a park may seem inequitable. Buyers in a retirement village may see no reason why they should subsidize schools (except in their capacity as taxpayers), or why they should pay a subdivision exaction for a regional high school.

(7) Exactions are often calculated on a per unit basis. Thus, they hit the buyers of cheaper houses harder than the buyers of big, expensive ones. An $8,000 exactions bill is 10% of an $80,000 house price, but only 1% of an $800,000 tag. (Exactions calibrated by the acre or by the square footage of the house help the buyers of smaller houses built at higher densities.)

(8) When communities first begin to fund a particular public facility through subdivision exactions, the buyers of new houses are required to pay for infrastructure or services that were paid by the community at large before then. This disadvantages the buyers and builders of new homes and benefits the owners of existing residences.

(9) Further, through their local property taxes, new homebuyers will be helping to retire the debt that was incurred to pay for the infrastructure built to service the existing residents.

(10) Subdivision fees and dedications are designed to charge the developer the costs a project may impose on the community. But the developer seldom receives a credit for benefits the project confers, such as construction employment, the location of housing near employment opportunities, and the provision of excess open space. n261

Most legal challenges to mandatory off-site contributions have fallen under one of three headings: (1) that the local government lacked authority under state statutes to impose the particular exaction; (2) that the subdivision exaction was unreasonable "because it is unrelated to the provision of an improvement needed by the subdivision itself "; n262 or (3) that requiring a cash payment involved an impermissible form of taxation under state law.

The payment could violate state tax laws in various ways. It might be characterized as violating state laws that taxes be uniform. It might be challenged because local governments weren't given the power to tax subdividers under state laws. n263 As a tax, the exaction might violate state spending, debt limit, or voter approval requirements. n264

Subdividers must also find ways of mitigating adverse environmental impacts, or risk disapprovals.

Arizona authorizes municipalities to:

> [d]etermine that certain lands may either not be subdivided, by reason of adverse topography, periodic inundation, adverse soils, subsidence of the earth's surface, high water table, lack of water or other natural or man-made hazard to life or property, or control the lot size, establish special grading and drainage requirements, and impose other regulations deemed reasonable and necessary for the public health, safety or general welfare on any lands to be subdivided affected by such characteristics. n265

California's subdivision map act instructs local governments to reject a subdivision if:

> (1) the proposed map is not consistent with applicable general and specific plans;
>
> (2) the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans;
>
> (3) the site is not physically suitable for the type of development or proposed density;
>
> (4) the design or improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;
>
> (5) the design or improvement is likely to cause serious health problems; or
>
> (6) the design or improvements will conflict with public easements. n266

The developer's tentative subdivision map, if approved, will be conditioned on installing the required improvements before recording the final map, bonding for them, or securing a financial institution's letter of credit guaranteeing payment of the developer's obligations. n267 This saves taxpayers and homebuyers the surprise burden of paying for infrastructure in most cases. n268

Unless the developer plans an immediate build-out, the improvements will not usually be constructed all at once. Usually, the developer will bond or provide a letter of credit for them and furthermore, may decide to phase a large project into smaller, distinct subdivision maps, and only record in phases. This way the developer limits the financial obligation to each phase as the map is recorded.

§ 85.11(c) The Analogy to Special Assessment District Financing.

In many localities, the installation of sidewalks, curbs, gutters and street lights are supported by the formation of special assessment districts. Property owners within the area benefited by the improvement are assessed a special property tax in proportion to the benefit. For instance, sidewalks are assessed based on the owner's frontage.

> That the return to the property owner by way of benefit is, under our system of government, the basic foundation upon which this right [to levy special assessments] rests, becomes apparent from the consideration that if we are not able to say that the owner for the specific charge imposed is compensated by the increased value of the property, then most manifestly we have a special tax upon a minority of the property owners, which tax is for the benefit of the public and which tax is special, unequal, and un-uniform. n269

While the number of local governments has remained about the same over the past forty years (3,000 counties, 35,000 cities and townships), the number of special assessment districts has grown from 8,000 to 28,000.

§ 85.11(c)(1) How Special Assessment Financing Works.

Special assessment districts can be formed by a local general purpose government, a special purpose agency, residents petitioning for the formation of a district, and, in a few states, private developers.

In the Depression of the 1930s, many owners of subdivided vacant lots failed to pay the special assessments levied against them. The local government would then foreclose special assessment liens. Because local governments couldn't get much for these lots at foreclosure sales, however, the local taxpayers often got stuck having to pay for improvements in failed subdivisions. After that, special assessment bonds became harder to sell; bondholders took the risk of default seriously. Bond defaults also prompted many communities to begin requiring subdividers to install roads, streets, and drainage in their subdivisions, or fund the improvements before selling title to individual lots.

Traditionally, the use of special assessment financing was restricted in several ways. First, the benefit to the assessed owner had to exceed the cost of the funded improvement.

Second, the improvement had to be of a kind not generally of equal use to all members of the community but one that provided special utility to those whose property was assessed to fund it.

Third, the assessment had to be levied in proportion to benefit. That is why sidewalk assessments were based on frontage and highway improvements often funded on the basis of estimates of the trips generated by different types of land uses.

Nowhere have these traditional limitations been abrogated as much as in California. When cities in California came up against Proposition 13's two-thirds voter approval requirement for special taxes, they soon seized on the special assessment district as a way around it.

Local governments have expanded on the idea of a special assessment to fund regional public improvements as part of their growth control programs. The City of San Diego, for instance, created a special assessment district in a rapidly developing area called North University City. The assessment was designed to pay for nearly all the costs of water mains, utilities, sewers, drainage systems, streets and sidewalks, parks, transit and transportation, libraries, fire stations, school buildings, police stations, and other capital facilities the city felt necessary for the orderly development of North University City.

The city declared a fixed benefit area consisting of all those undeveloped parcels located within the boundaries of the district the city declared benefited by the assessment. Owners of parcels within this district were assessed. The fee was payable when a building permit was issued or when the capital improvement program called for a particular facility to be built, whichever event came first.

The fee was based on "the equivalent dwelling units" buildable on each parcel at its highest development potential under current zoning.

A California appellate court upheld this use of the special assessment district as "a valid exercise of San Diego's power to require undeveloped land to bear the costs of the public facilities necessary for the health and welfare of the future residents of North University City." n270

The court found that: "the main beneficiaries will be the residents in the immediate vicinity who will regularly use the facility and whose property value can only be enhanced by the property's proximity...." n271

These facilities are public and can be used by anyone in San Diego County, but the court presumed that use by the general public was incidental, not the primary goal of the capital improvement program.

These cases display a fairly relaxed special assessment standard, a marked departure from earlier California special assessment case law, not necessarily applied in all special assessment cases. In a landmark California case a grocery store, Safeway, had been included in a district to finance off-site parking, even though Safeway had its own 119-space parking lot. At peak use, never more than 71 of its spaces were filled. The court concluded: "We have searched the record in vain for an answer as to how Safeway was or could be benefited." n272

How far from precedents such as the Safeway case the California courts have come is the court's upholding the use of a benefit assessment which the City of Orland levied equally on all houses in the city to pay for the maintenance of city parks. n273 The fee had been derived by dividing the total annual maintenance cost by the number of houses in the city. n274 It is possible in Orland for Homeowner A to buy a house on a five-acre parcel in a project complete with swimming pool, tennis court, and country club membership. Orland Homeowner B buys a townhouse on a "postage stamp" lot across from a public park. Orland assesses A and B the same park maintenance fee, though B probably needs the park and A probably doesn't.

If it is right for Homeowner A to pay for a park he doesn't need, why didn't Safeway have to pay a share of an assessment for a municipal parking garage? Theoretically, some of Safeway's customers might use the municipal garage even when there was ample room for them on the Safeway lot. The municipal garage gives Safeway an option for future parking space which ought to be worth something. In future years Safeway could increase its customer base. Homeowner A is certainly going to have trouble seeing any distinction between his situation and Safeway's, and so are a good many property lawyers.

Here is the Orland Court's explanation:

> While renters, commercial and undeveloped property owners and persons residing outside the district are able to use the park facilities, and the community at large benefits by the presence of five parks in the area, the residential property owners are uniquely benefited by the proximity of these facilities to their properties. The record establishes no reason for doubting that the desirability of the assessed residential properties is enhanced by the presence of well-maintained public pools, playgrounds, picnic and barbecue areas, bicycle paths, baseball and softball fields, tennis and volleyball courts, and horseshoe pits in the area for the use and enjoyment of residents. Moreover, having a wide assortment of facilities such as a pool, a playground and a tennis court readily accessible in nearby public parks means that the assessed owners may enjoy the benefits of having such improvements available for use by their families and/or tenants while avoiding the expense of privately installing and maintaining such improvements on their own properties. Finally, in the absence of evidence to the contrary, we may presume that the presence of well-maintained open park land contributes to the attractiveness of the district and thereby also enhances the desirability of the properties therein. n275

Under reimbursement or "recapture agreements," developers who are required to install sewers or water lines, roads, parks and school sites larger than needed for their projects may contract for the right to be reimbursed by later developers who make use of these oversize facilities. Reimbursement agreements, typically, describe the project to be funded by the developer, promulgate a schedule coordinating the city's public works with the developer's improvements, allocate financial responsibility between city and developer, set a timetable for payments, define the "excess" costs for which the developer is entitled to reimbursement, identify the boundaries of the sites liable for reimbursement payments, and provide indemnity to the developer from liability arising from the city's construction of the public works at the developer's expense. Developers expect the city to assess other benefited owners as they come forward to develop their sites and if the city fails to levy and collect those payments, "itself to reimburse the Developer for reimbursable

costs."

If the city is to pay some of the cost, state rules for government contracts may apply. The city's reimbursement promise could cause the project to be within state competitive building statutes.

Off-site improvements a contractor was made to construct on public property were held subject to state competitive building rules in *Achen-Gardner, Inc. v. City of Chandler*. n276 The developer retained the right to hire someone other than the lower bidder or build the improvements himself on the understanding that the city's duty to reimburse the developer would be limited to the lowest bid received. That wasn't good enough in Arizona. Either the lower bidder gets the job, or the city pays nothing. Any agreement to the contrary is unenforceable. n277

The reimbursement obligation should be recorded in the county land records in the chain of title of the properties to be assessed later so purchasers subject to recapture payments will take title knowing about them. n278

Special assessment districts can be formed by a local general purpose government, a special purpose agency, residents petitioning for the formation of a district, and, in a few states, private developers. State statutes prescribe notice and hearing requirements, a chance to protest and sometimes require voter approval of special assessments.

Special assessments are levied against real property and are often collected along with the property tax. Special assessments may, but need not be, based on the fair value of the property being assessed, not exceeding the property's proportionate share of the cost of an improvement or service. The special assessment could be based on front footage, as in the case of sidewalks, lot area, as in a flood control system, or the size of buildings in a fire protection assessment. "Special assessments are traditionally used to finance the construction or repair of roads and sidewalks, and to finance the extension of sewer systems, both primarily residential uses." n279 Special assessments have also been used to fund parking garages, security patrols and street cleaning services in central business districts. They have been used to drain wetlands.

Special assessments aren't deductible as state and local taxes from federal income tax because the special assessment is not just another form of general taxation. n280 The special assessment entitles the assessed property owner to a proportionate offsetting benefit. Property taxes, on the other hand, are levied without regard to whether the taxpayer is well positioned to use the services or facilities funded. Property taxes may even be used to support welfare or other wealth distribution programs. Reimbursement agreements typically:

(1) describe the project to be funded by the developer,

(2) promulgate a schedule coordinating the city's public works with the developer's improvements,

(3) allocate financial responsibility between city and developer,

(4) set a timetable for payments,

(5) define the "excess" costs for which the developer is entitled to reimbursement,

(6) identify the boundaries of the sites liable for reimbursement payments,

(7) provide indemnity to the developer from liability arising from the city's construction of the public works at the developer's expense.

Developers expect the city to assess other benefited owners as they come forward to develop their sites. If the city fails to levy and collect those payments, it must "itself ... reimburse the Developer for reimbursable costs." n281

The reimbursement obligation should be recorded in the county land records in the chain of title of the properties to be assessed later so purchasers subject to recapture payments will take title knowing about them. n282

§ 85.11(c)(2) Legal Limits to Special Assessment Financing.

(a) Special Benefit. The assessed owner's property must demonstrably benefit specially from the improvement funded by the assessment. "Special" means the benefit must be different in kind and degree from the benefit the general public may derive from the improvement.

The benefit determination should be supported by expert evidence, inde-pendent research indicating the scope of the improvement and the precise impact of the improvement on the burdened property. The analysis must go further because the improvement "is not, per se, the special benefit. Instead, it is simply the mechanism from which the special benefit to the property is derived." n283

One way to prove special benefit is by an increase in property value attributable to the improvement. Alternately, a site might be more easily rented, more safely used, more quietly enjoyed, or more readily or intensively deve-loped. The improvement might result in lower fire, casualty, flood or other insurance premiums.

(b) Proportionality. The benefit must be proportionate to the special levy. This means that the cost must be apportioned among benefited property owners in a reasonable and fair way. Some owners cannot be arbitrarily assessed more than others whose benefits are identical.

One method of assessment is called front-footage. Each owner's assessment is the proportion of his property's front footage to that of all the properties being assessed. For this method to be lawfully applied, the assessed property must front on the improvement, and serve it. n284

(c) Kind. The improvement has to be of a *kind* not generally of equal use to all members of the community but one that provides special utility to those whose property is assessed to fund it.

With more traditional uses of special assessments, it is easy to identify the special benefit to the property assessed. For example, it is obvious that paving a street improves the value of abutting lots, and that building a storm drain or a sewer system has the same effect. n285

Courts have sometimes held that certain kinds of facilities can never properly be financed by special assessment. Libraries, fire stations, schools, water plants and police stations have all been on the list of improvements not fundable by special assessment in one place or another. n286 The judicial reasoning was that the benefits from these sorts of facilities are necessarily "general," and flow to the entire community. The benefits are not "special;" capable of being enjoyed by those property owners because of their living near the facility. n287

There is a second rationale for keeping some kinds of facilities off the special assessment candidates list. Some public facilities are seen as "merit" goods, public goods to which access should be denied to no one because they aren't property owners and which should not be located only where they could be funded by assessments based on property values. Schools are one example, hospitals and health clinics, another.

However, in many states, *any* public facility or service, potentially, may be funded by special assessment as long as the levying government can show that the benefits are special and proportional. The assessment has to be apportioned so that those who benefit more pay more.

§ 85.11(d) Applicability, Exemptions, Exceptions.

In most states only housing tract subdividers need comply with subdivision regulations. In all but a few states, industrial parks, shopping centers, and apartment complexes aren't subject to subdivision controls. n288

These types of developments may be subject to tight controls through zoning laws which mandate some form of site plan review, and even fee obligations. But they are controlled only when the owner actually wants to develop, not when she wants to subdivide her project and sell or lease pieces of it separately. n289

Some states exempt owners from subdivision controls who lease or finance individual lots and yet keep the property in common ownership. Because the owner retains common ownership, there is less need for the local government to fear development will take place on individual lots before the necessary infrastructure is in place or funded. But the financing exemption creates problems when a lender forecloses. Does the lender foreclosing on only part of a larger parcel have the right to convey title to a buildable, saleable parcel free of Subdivision Map Act requirements? If so, buyers at foreclosure will have little reason ever to comply with the subdivision law. On the other hand, if the purchaser at foreclosure takes only an undivided interest in the entire unsubdivided parcel, and the lender can't convey good title to the individual parcel on which the mortgage was placed, its security interest may not be worth much. A judicial decree to partition the co-tenancy probably won't be granted because it would violate the Subdivision Map Act. n290

The division of an existing apartment house into condominium units is exempted from subdivision laws in some states on the notion that conversion affects only the form of ownership and not the physical development of the property. n291 In California the state legislature has given local governments the right to control condo conversions through the subdivision process. n292

Condominiums are linked to subdivision approval because the developer must record an approved map dividing the "airspace" vertically into saleable units so that sales can take place by reference to that map, just as ordinary houses are sold according to a map which divides the tract horizontally.

Only the form of ownership changes when an apartment previously held for rental is converted into individually saleable units. So local government officials could sensibly be required to sign off on the recordation of a condo converter's map without a discretionary vote or the imposition of local fees and conditions. But if the option is open to them, local officials will be tempted to condition their approval of the converter's tentative tract map with fees for parks and maybe for schools, road widenings, off-street parking garages, art, and daycare centers. If the conversion results in affordable apartments being upgraded for sale to more affluent people, this may cause local officials to feel justified in disapproving the conversion altogether, or imposing conditions to help low income tenants buy their units. n293

Many subdivision map acts exempt subdivisions of fewer than five lots n294 and also exempt subdivisions of undeveloped acreage into very large parcels (e.g., 40 acres, or 20 acres if each parcel has direct access to an improved highway). The justification is that if not many parcels are involved or they are so large that they probably won't be developed at that size, the public won't be burdened with significant obligations for street, sewers, roads, sidewalks and other urban infrastructure.

§ 85.11(e) Sanctions for Illegally Subdividing.

The sanctions vary from state to state for noncompliance with subdivision laws:

(1) Typically, the subdivider can't begin selling lots using a plat map description until the map has been recorded. n295 The map won't be accepted for recordation until the local government certifies to the county recorder that the developer has met all the conditions it imposed on the tentative map.

(2) The purported transfer of a lot in an unrecorded map is often made void by statute, although the purchaser retains a right to damages from the subdivider. n296

(3) In most states, buyers of illegally subdivided or unsubdivided lots have the choice of going through with the sale, or rescinding contracts of sale or deeds and getting back their downpayments or purchase money. n297

(4) In a few states where the subdivision map act doesn't make conveyance of unrecorded lots void, and only provides penalties against the illegal subdivider, vendors have been allowed to enforce their contracts of illegally subdivided or unsubdivided lots. n298

(5) In some states, local governments may enjoin the sale of lots in an unapproved subdivision. n299

(6) Unless a lot abuts an approved street, no building permit may be issued for it in some places. n300

§ 85.11(f) Retroactive Application of Subdivision Standards to Lots Subdivided Before Those Standards Were Enacted.

A difficult legislative question arises when lots were subdivided before local governments began regulating subdivision activity as rigorously as they do now. A grantor may have met the standards in effect when she subdivided in 1935 or 1943. Today, however, the local government may insist, as a condition to issuing a building permit, that the applicant meet present-day standards by improving the street, contributing to a park fund, or buying an adjoining parcel where the applicant's lot size is short of current minimum lot size requirements.

These attempts to right past wrongs run into constitutional challenges as takings of private property when they result in the lot owner having no lawful use for the property. n301 Short of outright confiscation, new standards retroactively applied are balanced against the public interest -- what the "public health, safety and welfare" of the community require. n302

FOOTNOTES:
(n1)Footnote 254. *Del Monte Dunes v. City of Monterey, 290 F.2d 1496, 1499 (9th Cir. 1990).*

(n2)Footnote 255. *See, e.g.,* Minn. Stat. §§ 394.26(1a) and (2a) (requiring notice by publication for public hearings for subdivisions). The California Supreme Court ruled that neighbors whose property rights could be substantially affected by a neighboring subdivision were entitled to procedural due process -- a right to notice and a hearing. *Horn v. County of Ventura, 596 P.2d 1134 (Cal. 1979).* Following that case, the legislature enacted a state law requiring all property owners within 300 feet of a proposed subdivision to be given notice by mail or delivery and a right to be heard by the agency or person the city or county designated to approve subdivisions. Cal. Gov't Code § 66474.64. (This applies to General Law cities. Charter cities may go their own way on the specifics of notice-and-hearing requirements within the constitutional outlines of the *Horn* case.)

If the constitutional predicate of *Horn* is sound, anyone whose property interests could be substantially affected should receive notice -- even owners more than 300 feet from the proposed subdivision.

Shrewd subdividers sometimes try to limit potential opposition by obtaining development approvals for large sites in phases -- the first phase located well within a 300-foot radius of vacant property they already own. By the time the developer is ready to seek approval for the outer ring of her project, most of it will already have been approved without notice to neighboring owners. A statute in the State of Washington anticipated and closed this legal loophole. Wash. Rev. Code? § 58.17.090. That law requires notice to be sent to at least the 50 closest neighboring owners no matter how far away they are from the subject property.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.12

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.12 Land Dedications, Exactions, in Lieu Fees, and Impact Fees.

[Go To Supp]

§ 85.12(a) From On-Site Dedications to Fees for Off-Site Impacts.

Early in the history of subdivision controls, local governments required subdividers to dedicate land within their tracts for roads, sidewalks, drainage courses, and utility easements. This practice continues. Many builders and developers are happy to comply because, in dedicating title of streets to the city, the developer escapes the obligation of maintaining them.

Theoretically, though, these dedications can be seen as

uncompensated takings of private land for public use without just compensation. n303

Dedications withstand the challenge and are upheld on the privilege theory, as the developer's quid pro quo for the local government agreeing to let the subdivider record a map. As Fred P. Bosselman and Nancy Stroud explain:

> At first blush, it might have seemed more logical to concede that the government was coercing the landowner into dedicating land to the government, and to justify such coercion on the grounds that the government would benefit the developer by perpetually maintaining the property dedicated. But because such sophisticated trade-offs are not permitted under the interpretation of the constitution's taking clause that requires that compensation be available to the landowner in cash, the courts were forced to resort to the legal fiction of a privilege in order to justify a bargain that seemed fair to both sides. n304

Eventually fees came to take the place of some types of land dedications. These are usually one-time cash payments earmarked for capital improvements serving the subdivision directly or indirectly. The fee is levied against the developer. It may fall due when a final subdivision map is recorded, building permits are issued, or when, upon completion, projects are given certification that occupancy is safe.

Governments prefer fees because:

(1) Land dedications "could not deal with facilities that should logically be located beyond the boundaries of the development...." n305

(2) Fees are the only sensible option when the subdivider doesn't actually own the site that the community wants for its school or park, or when the subdivider's tract is so small it would be inequitable to place the entire burden of providing the site on that developer alone.

(3) Land dedications only provide a site for a facility -- not the construction cost. The land may account for only a fraction of the total cost of a school or freeway ramp. With impact fees from builders or developers, local governments pay for the construction of school buildings, sewer mains, water treatment plants, flood control channels, arterial roads, freeway access ramps, and park improvements.

Developers would often rather dedicate land than pay fees. A dedicated site within a project for a park or school benefits buyers directly and obviously. Buyers might even pay a little more for it. The benefits of fees spent off-site are less apparent to buyers, especially if the public facilities funded by the fees are distant from the subdivision and open to others who contributed nothing to a sewer and water plant expansion, freeway on-ramp, flood control channel, library, or community center. n306

The developer's land dedication may be made on the understanding the local government will improve the site with a park or school within a certain time, and that if the local government doesn't make the improvement within the time, title to the dedicated site will revert to the developer. n307

Land dedications may not suffice when the local government is looking to the developer to fund the cost of constructing a public facility, when the subdivider doesn't own the site the community wants for its public facility, when the facility should logically be located beyond the boundaries of the development, or when the subdivider's tract is so small it would be inequitable to place the entire burden of paying for the site on just that one developer.

Impact fees are imposed usually by cities and counties, sometimes by special-purpose districts (school, sewer, or water districts), less frequently by state and federal agencies. In some places, several levels of government levy fees concurrently. n308 Fees are being imposed across the country, but are increasing especially rapidly in fast-growing states like Arizona, California, Colorado, Florida, Maryland, Nevada, Texas, Virginia and Washington. n309

Most exactions go for land or capital improvements; some pay for services or programs. Impact fees are in vogue because local governments, state highway departments, and school districts need money and are faced with cutbacks at all levels of government. n310

Fees are justified "to assure that new development pays its own way rather than imposing external costs on existing residents." n311 But fees can also be imposed as just another way of squeezing money from developers, and may actually subsidize the taxpayer. n312 "Cities often hire consultants and say, 'We need X amount of money, you develop an impact fee system that is legally defensible to get it.'" n313

§ 85.12(a)(1) Legal Challenges to Developer Exactions.

Most legal challenges to mandatory developer fees and land dedications have fallen under one of four headings:

(1) that the subdivision exaction was unreasonable "because it is unrelated to the provision of an improvement needed by the subdivision itself." n314

(2) that the local government lacked authority under state statutes to impose the particular exaction,

(3) that requiring the cash payment involved an impermissible form of taxation under state law, n315 or

(4) that the subdivision exaction exceeds the federal constitutional limits as to how far local governments may go in requiring subdividers to dedicate land or pay fees as conditions to the recordation of subdivision maps. These derive from the Fifth and Fourteenth Amendments prohibiting government from taking property without just compensation.

§ 85.12(b) Constitutional Limits: The *Nollan* Case.

Three different standards are used by state courts in determining the legitimacy of impact fees. n316

(1) "Reasonable Relationship." This standard is the least demanding of local government. Almost any connection between the exaction and the development will suffice, n317 as long as the impact fee bears a reasonable relationship to the exercise of the police power. n318

(2) "Specifically and Uniquely Attributable Test." Courts using this test want to be sure that the public facility would not have been needed but for this project. n319 They apply a standard much like that used by courts in determining whether a property has been properly included in a special assessment district: are the capital expenditures tied to a unique benefit directly conferred on homebuyers in the subdivision not enjoyed by taxpayers generally?

(3) "Rational Nexus." The "rational nexus" test has three parts: (a) Did the development to be assessed create a need for the service or facility it is being required to fund? n320 (b) Is the price the developer has to pay proportionate to the need attributable to the developer's project and to the cost of meeting that need? n321 (c) Is the fee earmarked?

This has become the dominant test in the state courts. n322 It became the federal constitutional standard as well. The U.S. Supreme Court, in *Nollan v. California Coastal Commission*, n323 required "a direct nexus between the condition imposed and some impact of the development."

The following excerpt describes the *Nollan* case, its origins and implications.

Property Rights, Endangered Species, Wetlands, and Other Critters -- Is It Against Nature To Pay for a Taking? n324

In California, there are few things more sacred than the beach. In 1972 the voters of California established a mechanism for sweeping protection of the California coast. The scheme ultimately resulted in the creation of the California Coastal Commission (Commission), which was given permit authority over all development activities on the coast. In a short while, the Commission embarked on an ambitious program of creating new public beaches, public access corridors to the beach, and easements across private property. The Commission, under the guise of its police power, chose not to pay for any of these improvements. Instead, it waited until a property owner sought a development permit -- and then simply told the owner that the permit was for sale -- at the price of giving up some land for a public beach, an access way, or whatever happened to be on the Commission's wish list.

When Marilyn and Patrick Nollan proposed replacing a ramshackle old beach bungalow with a two-story family home more in line with the neighborhood, they were not thrilled when the Coastal Commission demanded that they dedicate one-third of their property to the state to be the first segment in a new park. n325 After exhausting their administrative remedies, the Nollans sued. n326 Eventually, the Supreme Court rejected the Commission's imposition of the "exaction" requirement that the Nollans give up one-third of their property in exchange for the building permit. Such an exaction,

which would allow the public onto private property, would be a physical invasion and invoke the Takings Clause.

Writing for the Court, Justice Scalia explained the law of regulatory conditions. He indicated that it might be perfectly acceptable for a government agency to deny a development permit *if* the development were to have an adverse impact on the public "unless the denial would interfere so drastically with the Nollans' use of their property as to constitute a taking." In the situation where a permit can be denied, *and only in such a case*, the agency also has the option to approve the permit while imposing conditions on the permit when those conditions would directly ameliorate the same harms for which the permit could have been denied in the first place.

Under *Nollan*, it might be acceptable for an agency to require a builder to put in sewers in exchange for a permit to build a subdivision because without sewers, the development would be a health hazard. However, it would not be acceptable to require a builder to contribute to a fund to renovate city hall if the subdivision were not likely to adversely affect city hall. In the case of the Nollans, the replacement of a bungalow with a new home was *not* the sort of activity that was likely to create any need for a new lateral beach park. Therefore, the Commission could not condition *this* permit on the granting of a beach strip.

The Commission tried to justify the action by saying that the new home would obstruct the public's view of the beach. In the Commission's exact words, the home would prevent the public "psychologically ... from realizing a stretch of coastline exists nearby they have every right to visit." The Court noted, however, that even if the public's view of the beach were a legitimate governmental interest, a lateral beach park did nothing at all to ameliorate the loss of the view. There was no nexus between the view and the exaction of beachfront property.

The Nollans and their neighbors allow public access. The Coastal Commission required the Nollans to build the seawall, which the Nollans regard as a reasonable condition.

§ 85.12(c) What *Nollan* Means.

§ 85.12(c)(1) Generally.

The U.S. Supreme Court's opinion in *Nollan* repudiated the "reasonable relationship standard," which a California court had applied in *Grupe v. California Coastal Commission*. n327 In that case the property owner wanted to build a 5,000-square-foot house on a 15,200-square-foot beachfront lot. In exchange for the permit, the Commission wanted the owner to surrender between 8,000 and 10,000 square feet of land for a public access easement running along the beach the width of the property. The land was not accessible from anywhere but the shoreline; neighboring owners hadn't had to dedicate such easements; and the construction of one residence certainly didn't impact beach access enough to justify the easement.

The California appellate court upheld the Coastal Commission's requirement anyway:

> Although respondent's home alone has not created the need for access to the tidelands fronting his property, it is one small project among a myriad of others which together do severely limit public access to the tidelands and beaches of this state, and therefore collectively create a need for public access. n328

The *Nollan* case rejected this line of reasoning. The link between the exaction and the harm was too speculative, indirect, and remote. If Californians wanted to enjoy an afternoon sunbathing on the Nollans' beach, they would have to pay for it by acquiring the property outright. n329

Nollan sparked a nationwide controversy, including dozens of law review articles -- some heralding, some condemning the decision. The "nexus" debate is not about whether developers should ever have to pay fees. Almost everyone

accepts the possibility of some developer impact fees being appropriate under some circumstances. The issue is what the government should have to prove to justify the fees.

Courts sometimes have interpreted *Nollan* as requiring a detailed, provably close "nexus" between the developer's activity, the amount of the fee, and the use of the money. n330 Other courts have tolerated rather generalized studies showing far less than a compelling and proximate relationship between the development and the harm it is levied to address. n331

Most commentators assumed that the *Nollan* opinion would lead to courts striking down fees as disguised takings of property unless the fee was levied to compensate for a harm caused by the developer. n332

Others were not so sure how courts would interpret *Nollan*. n333

Those who don't think *Nollan* will make much of a difference in the legal standard cite this paragraph from the opinion:

> Thus, if the Commission attached to the permit some condition that would have protected the public's ability to see the beach notwithstanding construction of the new house -- for example, a height limitation, a width restriction, or a ban on fences -- so long as the Commission could have exercised its police power (as we have assumed it could) to forbid construction of the house altogether, imposition of the condition would also be constitutional. Moreover (and here we come closer to the facts of the present case), the condition would be constitutional even if it consisted of the requirement that the Nollans provide a viewing spot on their property for passersby with whose sighting of the ocean their new house would interfere... The evident constitutional propriety disappears, however, if the condition substituted for the prohibition utterly fails to further the end advanced as the justification for the prohibition... [T]he lack of nexus between the condition and the original purpose of the building restriction converts that purpose to something other than what it was. The purpose then becomes, quite simply, the obtaining of an easement to serve some valid governmental purpose, but without payment of compensation. Whatever may be the outer limits of "legitimate state interests" in the takings and land-use context, this is not one of them. n334

A few scholars and courts have insisted that *Nollan* only requires heightened scrutiny of government actions that result in the owner having to surrender physical possession of private property without just compensation or that impose other unconstitutional conditions. But they argue that it does not apply to most exactions, fees and land use regulations. n335

Presumably, *Nollan* supports or reenforces the position that the right to build a development that creates only a small amount of new traffic could not be conditioned on the developer funding the full cost of a new freeway through

town. n336 Nor could developers be legitimately assessed for all new fire hydrants and watermain replacements in a city -- just those installed to serve new development, not those replaced that were serving older buildings. n337

Whatever the "nexus" test requires, developers can seldom get a court to invoke the "nexus" test and set aside mitigation measures they have already agreed to provide in a development agreement or through a negotiated settlement with a local government. n338

> [a] contractual promise which operates to restrict a property owner's use of land cannot result in a "taking" because the promise is entered into voluntarily, in good faith and is supported by consideration. n339

Developers may not feel their promises and contracts with local governments were entered freely when they wouldn't have gotten planning permission otherwise. But they are not the best plaintiffs to be claiming that they didn't understand

the agreement signed, or that they were coerced into signing adhesive contracts with local governments. Most developers have the resources to challenge local authority even though they may decide going after the locals isn't a good way to use those resources.

Developers have also been estopped from protesting the legitimacy of a fee after they pay it, on the theory that the local government -- once it collects a fee -- will feel entitled to spend it. But no payment usually means no permit and a long delay while the developer's challenge works its way through court. Some states have created procedures for developers to pay under protest, and challenge fees or conditions later. n340

§ 85.12(c)(2) The Rough Proportionality Test.

Most commentators assumed that the *Nollan* opinion would lead to Courts striking down fees as disguised takings of property unless the fee was levied to compensate for a harm caused by the developer. n341 Others were not so sure how Courts would interpret *Nollan*. n342 Those who thought the Supreme Court didn't intend a continued, active scrutiny of local land-use decisions were startled by the next case the Court decided on this subject: *Dolan v. City of Tigard* n343 articulated a rough proportionality test for land dedication.

Florence Dolan wanted to expand an existing plumbing and electrical supply store in the city of Tigard, Oregon, on the main street of the central business district. Ms. Dolan's planned expansion was consistent with the city's applicable zoning scheme. Her idea was to double an existing 9,700-square-foot store and to pave a 39-space parking lot on existing gravel. Her parcel totalled 1.67 acres.

The state of Oregon has enacted a comprehensive land-use management program that requires cities and counties to adopt regulations and restrictions consistent with statewide planning goals. The city of Tigard had adopted such regulations codified in its Community Development Code (CDC).

The CDC's principal requirements of relevance to Ms. Dolan's planned expansion:

> (1) Lot owners in the Central Business District had to comply with a 15% open space and landscaping requirement. This meant only 85% of each CBD site, including Dolan's, could be developed.
>
> (2) Lot owners proposing development within or adjacent to the 100-year floodplain were required to dedicate land for "greenway" in that area. Fanno Creek flows through the southwestern corner and along the western boundary of Dolan's property. The Fanno Creek floodplain is designated in the city's comprehensive plan as part of the "greenway" system. Part of the Dolan property lies within the Fanno Creek floodplain.
>
> (3) The dedicated greenway was to include a pedestrian/bicycle pathway of 15 feet to encourage alternatives to automobile transportation. As applied to Dolan's property, these conditions -- the dedication of a portion of the site near the creek for floodplain management and a bike path -- required about 10% of Dolan's property, 7000 square feet, to be deeded to the city. Dolan would be permitted to rely on these dedications to meet the 15% open space requirement of the city law. Dolan requested variances from the CDC standards, but was denied by the Planning Commission. Dolan sued.

The Oregon Court of Appeals affirmed a Land Use Board of Appeals decision that a *Nollan* "reasonable relationship" existed between the proposed development and the requirement to dedicate land for the greenway and between alleviating the impacts of increased traffic flow caused by the development and facilitating the pathway as an alternative means of transportation. The Oregon Supreme Court also affirmed, reading *Nollan* to mean that an "exaction is reasonably related to an impact if the exaction serves the same purpose that a denial of the permit would serve." n344

The United States Supreme Court reversed and remanded in a 5-to-4 vote. The opinion begins by noting that had the

city simply required Dolan to dedicate the land for public use, a taking would have occurred without question. This would have deprived Dolan of the right to exclude others, "one of the most essential sticks in the bundle of rights that are commonly characterized as property." n345 On the other hand, however, the Court notes that the authority of state and local governments to engage in land-use planning has been sustained against constitutional challenge for almost 70 years.

In evaluating Dolan's claim, the Court laid out a *two-pronged analysis*. First, the Court must determine whether the *Nollan* "essential nexus" exists between the "legitimate state interest" and the permit condition exacted by the city. n346 If the Court finds that a nexus does exist, the Court must then decide the required degree of connection between the exactions and the projected impact of the proposed development. n347 The Court was not required to reach this second question in *Nollan*. The two prongs can be visualized like this: n348

case	element	test
Nollan	nature	"essential nexus"
Dolan	degree	"rough proportionality"

The Court noted that the permits imposed by the city of Tigard had none of the gimmicks attempted by the California Coastal Commission in *Nollan*. The Court found that the prevention of flooding and reduction of traffic congestion are the types of legitimate public purposes that the Court has upheld. The Court found it "obvious" that a nexus exists between preventing flooding and limiting development within the floodplain, noting the fact that Dolan would be doubling the size of the store and paving the parking lot, thus expanding the impervious surface on the property and increasing the amount of stormwater runoff. The Court also found a nexus between the city's attempt to limit traffic congestion by providing for alternative means of transportation through the construction of the pedestrian/bicycle pathway.

The Court then turned to the question of "whether the degree of the exactions demanded by the city's permit conditions bear the required relationship to the projected impact of petitioner's [Dolan's] proposed development." n349 The Court looked to how state Courts dealt with this question and found three general standards of review.

First, some state Courts use very generalized statements as to the necessary connection between the required dedication and the proposed development. n350 The Court found this standard too "lax" to adequately protect a property owner's right to just compensation if her property is taken for a public purpose.

Second, some state Courts use the "specific and uniquely attributable" test. n351 Under this standard, if the government cannot demonstrate that the exaction is directly proportional to the specifically created need, the exaction will be invalidated. The Court found this test to require such exacting scrutiny that was beyond the Federal Constitution.

Third, some state Courts take an intermediate position and require the local government to show a "reasonable relationship" between the required dedication and the impact of the proposed development. n352 Under this standard, the property owner need not dedicate property as a condition of obtaining a building permit unless the future public use is "occasioned by the construction sought to be permitted." n353 The Court found this "reasonable relationship" test to be closer to the constitutional norm than either of the other two tests. However, the Court refused to adopt it, because the term "reasonable relationship" is too confusingly similar to the term "rational basis," which describes the minimal level of scrutiny under the Equal Protection Clause of the Fourteenth Amendment. n354

One commentator analogized the Court's analysis to a "Goldilocks and the Three Bears" sort of critique: n355

> The first group of cases permitted government to exact land dedications with only "very generalized statements" of the connection between the project's impacts. This was found to be too soft.
>
> The second group of cases required a very precise fit between the impact of the project and the proposed solution. This was found to be too hard.
>
> The third group of cases adopted a "reasonable relationship," between the dedication and the project's expected impact. This was found to be just about right, but the Court didn't like the label. Instead of "reasonable relationship," the Court announced a standard of "rough proportionality."

The Court found that a term such as "rough proportionality" best portrays what it holds to be the requirement of the Fifth Amendment. The Court stated:

> No precise mathematical calculation is required, but the city must make some sort of individualized determination that the required dedication is related both in nature and extent to the impact of the proposed development. n356

Thus, the burden is on the government to meet the "rough proportionality" test before they can place conditions on a permit approval. The Court examined the facts of the case and determined that the rough proportionality test had not been met. The Court found that the city never said why a public greenway, as opposed to a private one, was required in the interest of flood control. The difference between a private and a public greenway is that Dolan loses her ability to exclude others, one of the "most essential" elements of property ownership. n357 The Court noted:

> It is difficult to see why recreational visitors trampling along petitioner's [Dolan's] floodplain easement are sufficiently related to the city's legitimate interest in reducing flooding problems along Fanno Creek, and the city has not attempted to make any individualized determination to support this part of its request. n358

With respect to the pedestrian/bicycle pathway the Court found that, although the city was correct in finding that the larger retail sales facility will increase traffic, the facts show:

> [T]he city has not met its burden of demonstrating that the additional number of vehicle and bicycle trips generated by the petitioner's [Dolan's] development reasonably relate to the city's requirement for a dedication of the pedestrian/bicycle pathway easement. The city simply found that the creation of the pathway "could offset some of the traffic demand ... and lessen the increase in traffic congestion." n359

The Court ended by noting the city's "laudable" goals of reducing flooding hazards and traffic congestion, but stated that there are limits to how this may be done. "A strong public desire to improve the public condition will not warrant achieving the desire by a shorter cut than the constitutional way of paying for the change." n360

> A critically important aspect of the *Dolan* decision is the Court's placement of the burden on the public entity to justify its exactions under the "rough proportionality" standard through "some sort of individualized deter-mination that the required dedication is related both in nature and extent to the impact of the proposed development."
>
> While it is not entirely clear from the majority opinion, as a practical matter, the Court's decision probably means that cities making adjudicatory permit decisions will have to make findings supported by substantial evidence that show a reasonably close fit between the particular development's projected

> impacts and any exactions or conditions required. This, in turn, means that cities will more often have to demonstrate (at administrative permit hearings or otherwise) through expert testimony and evidence -- such as traffic surveys, engineering studies and other expert evidence -- the nature and extent of the proposed project's likely impacts and the relationship of the exactions to these impacts. n361

Property rights activists have hailed the decision as a "dramatic victory." The Court finally recognized that "the ends can no longer justify the means in the regulation of land use." n362 Reactions by environmental groups and municipalities trying to develop a cohesive land-use plan have been mixed. Some have been bothered by the shift of the burden of proof to the municipality that could make land-use decisions more expensive and more time-consuming. n363 Others believe that the standard set by the Court was one municipalities could meet. n364 Clearly, *Dolan* offers developers a new talking point in their land-use entitlement negotiations. Cities may also be forced to do extensive research, on an individual basis, to justify certain exactions and dedications.

One commentator anticipates land use regulators to react to *Dolan* in a number of ways. n365 (1) Communities could abandon the use of dedications as a tool for offsetting the expected impacts of new development. *Dolan* doesn't explicitly apply to fees, just land dedications. (2) Communities may condemn and pay the owner for the land they would have formerly required to be dedicated. (3) Regulators could deny development applications they would previously have granted under conditions that might fail the "rough proportionality" test. (4) Regulators -- at the developer's expense -- might commission "property rights impact statements" much like developers now pay for environmental impact statements. (5) Governments could pay for land they would previously have sought by dedication with impact fees calibrated to have the required "essential nexus" and "rough proportionality" to the expected impacts of development. *Dolan* forecloses none of these possibilities.

"Roughly Proportionate" or "Rational or Essential Nexus." The language of the *Dolan* test is bound to lead to disagreements between subdividers and regulators about where the boundary line is which separates unconstitutional conditions from legitimate regulation.

Some situations are clear. It would be acceptable for a public agency to require a builder to put in sewers in exchange for a permit to build a subdivision since, without sewers, the development would be a health hazard. However, the right to develop a project that creates only a small amount of new traffic could not be conditioned on the developer funding the full cost of a new freeway through town. n366 Nor could developers be legitimately assessed for all new fire hydrants and watermain replacements in a city -- just those needed to serve new development, not those serving older buildings. n367 But how tailored, really, should the fit be of condition to harm?

No case shows that better than *Ehrlich v. City of Culver City*, n368 which the U.S. Supreme Court sent back to California's Second District Court of Appeals on the day it decided *Dolan*. The *Ehrlich* case began when developer Richard Ehrlich closed the failed Westside Sports Center at 4901 Overland Avenue in Culver City and applied to build a 30-unit townhouse project on his 2.4-acre parcel.

Before October 28, 1974, the property had been zoned C-2 (retail commercial) on Overland and R-1 (single-family), back from Overland. Ehrlich's predecessor sought a zone change in 1974, to C-3 (commercial) with a specific plan restricting the property to the development of a sports facility. Thus zoned, Ehrlich's predecessor sold the site to Ehrlich in 1975. Ehrlich spent $800,000 improving the property as a private tennis club. Besides five tennis Courts, the club featured a heated swimming pool, jacuzzi, sauna, three paddle tennis Courts, a jogging track, an aerobics area, and a building with lockers, a kitchen and other accessory uses.

Ehrlich was never able to make a financial success of the club. In 1981, Ehrlich sought a change to permit an office building on the site. The City denied the application, citing as justification that the tennis club provided the city with needed recreational facilities.

In 1988, the developer closed the sports facility, gave the equipment to the City and sought permission to build 30 townhouses on the site. This was a perfectly reasonable request viewed through the lens of traditional zoning. Adjoining the site to the south was a public library; to the west, a school and a large concrete play yard; to the south, three shops fronting on Overland; and further west, single-family residences. Across Overland to the east are two-story apartments built at densities exceeding Ehrlich's proposal. Indeed, a 30-unit townhouse could be expected to generate far less traffic and noise than the 1500-member sports club. Nonetheless, at first the City refused, again citing the need for recreational facilities. Ehrlich sued for a writ of mandate and damages and also sought city reconsideration offering to build four tennis Courts for the city elsewhere in exchange for permission for the townhouses.

The City reconsidered and approved the project subject to conditions:

> (1) a $280,000 mitigation fee -- the estimated cost of building four tennis Courts;
>
> (2) a $30,000 fee for the purchase of parklands, required of all Culver City developers under a state law called the Quimby Act;
>
> (3) a fee based on 1% of project cost -- $32,220 -- for art, unless the developer elected to sponsor an art project on-site, subject to City approval, or donated an art object to the City of equivalent value.

The developer entered an agreement with the City reserving his right to challenge the $280,000 mitigation fee and $32,220 art fee, as he is entitled to do under state law.

Ehrlich sued and at trial, Judge John Zebrowski agreed with him that the tennis Court mitigation fee was "simply an effort to shift the cost of providing a public benefit to one no more responsible for the need than any other taxpayer." The trial Court upheld the art fee and Ehrlich commissioned a sculpture to be built on the site -- an object the townhouse owners, association would like to get rid of. A California appellate Court overturned Zebrowski. n369 The U.S. Supreme Court vacated this opinion, and remanded the case for further consideration in light of *Dolan*. On remand, the same Court of Appeals, in an unpublished opinion, stood its ground, unmoved by *Nollan* and *Dolan*. On the nexus issue, while the Court conceded that the city could not prevent Ehrlich from going out of the sports club business and closing down under California law, that didn't mean the city had to give him a zone change. He bought the club knowing how the land was zoned. Nor does the fact he couldn't turn a profit mean the city's refusing to allow a change in use amounts to a denial of all economically viable use. For one thing, no one has a vested right to disregard otherwise legitimate zoning laws just to make a profit. And the fact that Ehrlich couldn't make a profit on the club doesn't mean no one could have. As for the rough proportionality test, $280,000 was about right as the cost of replacement tennis Courts. n370

Property rights advocates are disappointed. They had hoped for a victory on both counts: (1) no nexus because Ehrlich has no obligation to provide Culver City with tennis Courts just because he once ran a sports club that had them; (2) no proportionality because whatever recreational needs thirty townhouse units generated, $280,000 for four tennis Courts far exceeded them.

The appellate Court opinion may be appealed to the California Supreme Court. The "nexus" debate continues.

§ 85.12(c)(3) Reactions to *Dolan*.

The U.S. Supreme Court in *Dolan v. City of Tigard* n371 articulated a test for land dedication. The Court essentially adopted a three-part test: 1) The permit condition needs to promote a legitimate state interest, 2) the condition asked of the developer must be substantially related to the enunciated government purpose, and 3) the nature and extent of the condition needs to be "roughly proportional" to the projected impact of the proposed development. The Court stated:

> No precise mathematical calculation is required, but the city must make some sort of individualized determination that the required dedication is related both in nature and extent to the impact of the

proposed development. n372

Thus, the burden is on the government to meet the "rough proportionality" test before it can place conditions on a permit approval.

The majority opinion in *Dolan* does not clarify the type of findings that the public entity must make in order to satisfy its burden of making "some sort of individualized determination that the required dedication is related both in nature and extent to the impact of the proposed development." However, in the aftermath of *Dolan,* state and federal Courts have provided guidance on what constitutes adequate quantification necessary to satisfy the "rough proportionality" test. n373

§ 85.12(c)(4) Applicability of *Dolan* to Fees.

Some Courts have ruled that whether a development or impact fee is subject to the "rough proportionality" test depends on whether the exaction was imposed through a legislative enactment which sets standards so precise and uniform that the application of the standard becomes ministerial, much like the application of traditional land use regulations such as setbacks and design control. Courts have held that such fees are not subject to *Dolan* scrutiny because *Dolan* arose in an adjudicative proceeding that was site specific and discretionary. n374

§ 85.12(d) The "Nexus" Debate.

Should local governments be required to demonstrate that the development created a need for the fee, the fee is no greater than necessary to meet the need, and the fee will be used for its stated purpose and no other? Here is a catalog of the arguments on both sides. Hopefully, by scanning the arguments, the consequences of *Nollan* will be easier to appreciate.

Those favoring a strict "nexus" test have made these points in the debate:

1. Freed of strict constitutional limits, local governments, eager for revenue, might be tempted to approve environmentally destructive projects, just to siphon the developers' cash into the general fund. n375 By tying the use of subdivision exactions to public works projects necessitated by those subdivisions, the courts and legislatures have dulled the temptation to underregulate. n376 The temptation to underregulate isn't prevented entirely because developers may elect to forego their *Nollan* claims and pay higher-than-legal fees in exchange for development approval.

2. Unrestricted impact fees can be an invitation for communities to create pricey "entry fees" (like country club memberships) to bar the less affluent. A policy of charging excessive fees can be part of a "raise-the-drawbridge" mentality at work. n377 A strict nexus test can help restrain fee fever.

High fees and excessive exactions that rise above the direct public cost of providing services for new development put a severe strain on the tenability of an affordable housing market. Thus, policy makers must determine whether decreased housing opportunities for employees will deter business or industry from entering or expanding in a community. n378

3. The "nexus" test frees subdividers from having to pay school fees in districts with declining enrollments where the children of new homebuyers are filling the empty seats. n379

4. Developers forced to pay for schools, fire and police stations, and roads, have a great incentive to make sure public monies are well spent. Private builders are usually more efficient than government agencies. Once the costs of public facilities are assessed to private developers, they have an incentive to "blue pencil" the public design and construction process. The "nexus" test gives developers the legal

authority to hold local government accountable. n380 (One example: a major builder in southern California actually built a school, and discovered school districts spend 100-250% more than he did for the same product. Under a strict nexus test, he will now be able to challenge school fees greater than actually needed to build new schools).

5. Fees don't just take wealth from developers, land sellers, or homebuyers (experts are divided on who actually ends up paying these fees). They also drain tax funds from state and federal coffers because the developer will deduct the exaction from the gross income earned on the project. This revenue shifting may be subject to little political debate or public scrutiny since the impact fee is "off budget," and not evaluated against other public expenditures that the developer's exaction and taxes might have been allocated to cover. Through impact fees, special interests may be able to impose costs on developers for programs that taxpayers don't want to fund. n381 A strict "nexus" test puts a cap on the promiscuous use of fees. n382

6. Responsible developers favor some impact fees. They want the buyers of houses in their new subdivisions to enjoy quality schools, parks, playgrounds, and free-flowing traffic.

They might even have funded some of these improvements voluntarily. A nexus test means that all developers -- even less responsible ones -- share the burden proportionately, and no single developer is stuck having to pay more than a fair share.

7. If there were no limits on what local governments could charge developers, local officials might try to avoid seeking other revenue sources to fund needed capital improvements even when developer fees could never be sufficient to redress the problems at which local officials are aiming. Traffic congestion, for instance, is a result of vastly increased car ownership (the car population went up at twice the rate of the human population in the 1980s) and auto use (as more adult members of households took jobs outside the home in the 1980s). The needed transportation improvements could never be funded entirely out of development impact fees. If a state or local government attempted it they would eventually see that to fund a state highway improvement program out of impact fees would require fees so high as to cut down dramatically the number of houses built, causing a decline in net fee revenue. n383 By distinguishing early between fees legitimately assessed to mitigate the impacts of a particular project and fees levied in a hopeless effort to compensate for problems not truly related to new development, courts help focus the attention of local officials where it should be -- identifying additional and appropriate revenue sources.

8. Development impact fees are a volatile revenue source -- more volatile than other tax revenues -- since fee revenues fluctuate with the development cycle. In boom times, governments may be flooded with fee income. If they get used to putting this money towards anything but capital improvements necessitated by new development, they will have to deal with layoffs and program cutbacks in the inevitable downswings of the real estate cycle.

Those opposing a strict "nexus" test have made these points in the debate:

1. The strict nexus test can sometimes inhibit local government from levying sufficient fees to pay for needed public facilities. To avoid the strict and costly accountability of the nexus test localities may err on the safe side, and levy fees not nearly high enough to cover the full costs of new roads, parks, and schools. Developers are less likely to protest fees priced well below their fair share of the actual cost of new facilities. But taxpayers may rebel.

2. One consequence of underpricing is that local taxpayers may have to pay the difference. This can exacerbate calls for a politics of "no growth." A city whose impact fee is overturned in court may

propose larger lot sizes to reduce growth, or enact more stringent growth controls (annual building caps). n384 Underpricing impact fees can also result in public facilities not being built on time, provoking new residents and old to protest that government is failing them. Conversely, impact fees give a community an alternative to pricing entry into the community. The community doesn't have to depend on fiscally inspired exclusionary zoning. n385 Cities that use fees have higher growth rates than cities that don't. n386

3. Some local governments want janitors, secretaries, and paralegals to have the option of residing near their offices downtown, and for suburban police, nurses, firefighters, and schoolteachers to be able to find housing in the suburbs where they work. They may pass laws assessing office developers to pay "linkage fees" into a local affordable housing fund, and suburban housing developers to set aside units priced below cost so low- and moderate-income people can afford them. Strictly applied, the nexus test could result in these programs being declared invalid. n387

Opponents of "inclusionary" housing requirements and linkage fees say they would prefer courts to apply a strict version of the nexus test and strike down these programs. They argue that such programs are inefficient and illogical attempts to force developers whose projects may have indirectly increased the local demand for housing, and thus increased residential rents, to compensate by funding more housing. n388 If developers had to compensate for all the indirect price effects of their projects, there would be no limit to what they could be required to finance. Further, if they are forced to pay all the direct and indirect costs their projects impose, why not credit them with all the direct and indirect benefits of development? City growth benefits landowners by increasing property values, local businesses by increasing market potential, and existing residents by making new types of commerce, culture, and consumer goods feasible. n389 "... Not crediting developers for the benefits of growth effects a redistribution of wealth toward the existing residents." n390

4. Some scholars contend that a "strict" court-imposed nexus test isn't necessary because there is enough competition among cities for residents and new businesses to keep fees and taxes reasonable in relation to local services. The marketplace does a better job than courts of detecting and penalizing communities where fees are "out of line." Those communities won't attract firms and residents. n391

Other scholars have pointed out that, although some developers may elect to avoid communities that are overly restrictive or whose fees are out of line, this is small comfort to landowners in those communities who will lose the chance to sell to exiting developers. n392

Communities may want to exclude less affluent residents. Some cities may have unique attributes that allow them to exact excessive fees from developers. Hence "[c]ompetition alone will not prevent municipalities from imposing exactions that significantly exceed the external costs imposed by new development." n393

5. A strict "nexus" rule means simply that local governments will have to fund special studies to justify each new fee. This will nurture a "nexus study" industry and encourage litigation. But it won't reduce fees because local governments are strapped for funds. "Nexus" could even necessitate increased fees to pay for elaborate, detailed studies and court costs.

6. One economic argument for exactions is that they should reflect fully the cost of new facilities. They should be constructed as user charges and should exactly equal the actual costs of the capital facilities required to serve new development. The fees would become like prices in the private market, a cost that developers and homebuyers would pay only when the benefits of the development exceeded its true total costs, including those now shared among all taxpayers. n394

For this resource allocation ideal to be realized, a strict nexus test would have to be based on marginal cost instead of average cost pricing. To see the difference, consider the case of hookups to a regional water or sewer facility. In an average cost pricing system, every user would pay the same fee for a hookup. Marginal cost pricing would factor the distance to the facility and the density of the development when these affect the actual cost of the service. Density, distance, and location would be figured into the hookup fee. Lower density projects further removed from the sewage treatment plant would pay higher hookup fees than higher density projects located closer to it.

Developers and homebuyers should have their choice, but those who prefer the higher cost option shouldn't be able to push some of the sewage treatment and other real costs of their choice on those who settled for more efficient locations and densities.

Despite its theoretical elegance, marginal cost pricing is politically unpopular: it is difficult to administer, and it also results in some community members paying more than others for what seem to be the same services.

Where commercial and industrial fees are cross-subsidizing homeowner hookup charges, the use of marginal cost pricing would result in higher fees to housing and reduced fees for commercial and industrial users. But since voting is based on residence, a shift from average to marginal cost pricing could prove a political disaster. It might even ignite no-growth fires.

7. Developers are made to fund public improvements to compensate community residents for the inconvenience of growth. "*Nollan* disfavors ad hoc exactions [such as] those negotiated during a rezoning hearing, required as a condition of approval of a planned unit development, or added to normally administrative determined permits...." n395 Nexus requires that funds be put in special accounts and used only for designated purposes. Sometimes, however, residents might be willing to live with increased congestion levels for a price lower than the cost of the developer installing the public improvements to alleviate congestion.

When this is the case, the nexus requirement may inhibit the developer and the community reaching a settlement for the lower price. That lower price is the efficient one. The nexus study should only be the first step in unfettered bargaining between the developer and local government. If the total cost of mitigating negative impacts were the most the developer ever had to pay in exchange for planning permission, and payment of that sum delineated the outer boundary of the community's right to deny development, developers and local governments would be free to strike deals that optimized both their interests. n396 A strict nexus test discourages the search for less costly but equally satisfactory accommodation between developers and the existing community.

§ 85.12(e) Statutory "Nexus" Standards.

State courts have differed on whether the state enabling laws must explicitly authorize impact fees, or whether local authority to levy fees can be inferred either from the general power of charter cities, or implied from planning laws which make no mention specifically of the exaction power. n397

Several states have resolved this dispute by enacting statutes specifically giving localities the right to impose impact fees and dedication requirements. A few of these statutes simply authorize local governments to levy impact fees. n398 Many state legislatures have gone further and incorporated rather stringent "nexus" accountability standards into their state laws. n399 Commentators have recommended that all state legislatures do this. n400

These are among the requirements, which vary from state to state:

(1) Impact fees may be assessed only to fund capital improvements necessitated by and attributable to the new development being charged -- and only in proportion to the service demands the development generates. n401 There are often detailed requirements for calculating the maximum level for impact fees.

(2) Funds must be earmarked and spent only for the designated purpose. n402

(3) Funds not spent within a specified time must be refunded.

(4) Only certain types of public facilities may be funded by impact fees. Roads are the most popular. n403

(5) Municipalities enacting impact fee programs must first adopt a comprehensive plan with a capital investment component. Impact fees can only be spent according to a schedule consistent with the capital investment component of the comprehensive plan. n404

These laws are a call for communities to promulgate capital improvement plans and to study carefully the relationship between new development and the need for new public facilities. Under these laws, local governments set standards or levels of service for each facility. They are encouraged by some and required by others to monitor levels of service in developing areas and the city's progress in building promised facilities. Local governments become accountable for the timing of public improvements on penalty of having to refund fees to developers if facilities aren't provided within statutory time limits.

Developer attitudes about fees vary; they depend a great deal on the project, the amount of the fee, its predictability, how it is calculated, the means available for paying it, and how and when the money is collected and spent.

Developers are happy with the fees that enhance the value of their projects by funding new roads, parks, and schools that serve their projects directly and uniquely. n405 They don't like fees that go into the general funds of local governments. Developers prefer fees that give their projects a marketing advantage over those who built earlier and didn't have to pay.

Developers also prefer exactions that are predictable before they negotiate for the purchase of land, and before they estimate the costs and returns they expect from a project. They would like a chance to pass the fee backward to land sellers through a reduced land purchase price or forward to homebuyers through higher house prices. Developers may not be able to find landowners willing to cut their prices or buyers ready to pay more. But predictable exactions give developers the chance to avoid projects that "don't pencil." Communities that negotiate fees on a case-by-case basis aren't giving developers that chance.

Fees based on measured standards are more predictable than those based on vague performance standards. A school fee of $2.65 per gross square foot of housing is more readily calculated than a requirement of one new classroom per 30 bedrooms when neither the size or cost of the classroom is specified in advance and a "bedroom" isn't defined.

Developers also prefer to have the option of dedicating land, paying a fee, or building the required facility themselves.

Flexibility of financing sources also helps. Developers will be much more willing to agree to provide public improvements if alternative funding sources are available to use in place of the developer's expensive construction financing. The use of assessment districts, tax increment financing, and similar financing methods reduces developer's capital requirements and risk of exactions. n406

The developer's desire to have a public facility located in or near the project as a marketing advantage can conflict with the desire for a fee schedule that is predictable and that applies equally to all developers in the market area. A school

district might be empowered to demand particular sites marked out for schools on the district's master plan which the developer could be required to sell at a below-market price or dedicate free of charge. This would give the developer a marketing edge, especially if the school is located within walking distance of the project. Neighboring projects, however, might be free of any school financing obligation whatsoever. To create a level playing field, all developers region-wide should share the costs of new facilities by paying a fixed amount per dwelling unit or per square foot of assessable, conditioned or habitable space. Under this type of arrangement, developers won't necessarily obtain any marketing edge for their projects, but they don't have to fear being burdened disproportionately.

§ 85.12(f) Timing of Developer Contributions and Public Facilities.

§ 85.12(f)(1) Generally.

Nearly as important to the developer as the amount of the fee is the timing of its payment. Suppose it takes two years for a subdivider to obtain approval of a tentative tract map, another year to complete site improvements, and an additional six months to build houses. Must the subdivider pay the impact fee: (1) before recording the final map, (2) before applying for permits to construct houses, (3) just before seeking certificates of occupancy signifying that the houses are complete and meet local building code requirements, or (4) only when the houses are actually sold, the developer has the buyer's purchase price and the buyer is there, ready to use local public facilities?

From the developer's viewpoint, the later the better. Looking at the Internal Rate of Return calculations previously described in this chapter, you can see how timing affects the developer's ultimate returns. A developer whose IRR is 20% would be willing to pay approximately 44% more in fees if she could defer paying them for two years.

In a multi-phased development, can the developer be required to install improvements for all phases or throughout a very large tract before selling the first house?

At least one court held that only those improvements necessary for the health, welfare and safety of the occupants of the particular house could be required to be in place before the developer became legally entitled to the certificate of occupancy for that house. n407

Obviously, the timing of infrastructure is one of the issues a well considered set of conditions on a tentative tractmap will address. Most California jurisdictions won't allow a map to be recorded until all conditions have either been met on site, or financial means for their being met has been assured by a bonded guarantee or letter of credit. Developers building in phases obtain separate maps for each phase and only record when they are ready to improve and build a particular phase.

On the other hand, developers prefer off-site facilities to be in place by the time they begin marketing their houses. The local government can only do this without invading its general fund if the developer pays for the improvements up front or floats bonds or tax anticipation notes, repaid by developer contributions or tax assessments when the houses are completed.

Impact fees are usually levied when the developer applies for building permits, a compromise point between the recordation of the subdivision map and the day certificates of occupancy are issued or houses sold. n408 A proposed New Jersey impact fee statute splits them this way: 25% prior to final subdivision map approval, 25% prior to the issuance of a building permit, and the balance on application for an initial certificate of occupancy. n409

§ 85.12(f)(2) The Complexity of Nexus Testing.

The complexity of "nexus" testing is illustrated in *Shappell Industries v. Governing Board*. n410 A school district had imposed a fee for new facilities of $1.50 per square foot on residential and $0.25 per square foot on new commercial

and industrial development throughout the district. These state-authorized fees had to be supported by a showing of need.

To show need, the district relied on a consultant's report calculating school needs to the year 2000. First, the report projected student population, utilizing local general plan population projections. (Population projections are educated guesses extrapolated from past birth, death and migration rates.) Then the consultant calculated the number of school-aged children among the projected population. Making an assumption about the number of children in a classroom, the consultant estimated the number of new classrooms that would be needed in the year 2000. The consultant then figured the costs of constructing new schools. He divided these costs into the estimated square footage of all new housing expected to be built in the community to the year 2000.

The court perceived a fatal flaw: the city's consultant had failed to apportion the increased school population between new and existing housing. Some of the school population would be coming from older houses. After all, there is no preventing couples in older houses from childbearing. Another city-paid consultant had estimated that only 54.9% of the school enrollment would reside in new housing. So the court reduced Shappell's school fee accordingly. The reduction came to $0.15 per square foot. The reason for the modest reduction: developers weren't being assessed the full costs of the new schools. Schools were also being funded by subventions and local taxes.

Step back and consider how speculative the data really are that form the foundation for this careful "rough proportionality" or "nexus" exercise.

(1) Population projections, especially for local areas, are notoriously inaccurate. While birth and death rates are relatively reliable, migration patterns aren't as easy to predict, and migration matters a lot, especially in the south, southwest and west.

(2) The calculation assumes, crucially, a certain number of children per classroom. Pupil/teacher ratios vary greatly among the states. Should the present ratio be chosen, a ratio more in line with the national average, or a ratio preferred by school planners?

(3) There is data supporting the proposition that there are more school-aged children in houses with more bedrooms. A 1980 San Diego study demonstrated a link between the number of bedrooms and the number of children. It found that 27.4% of all the housing stock was three-bedroom units which accounted for 41.1% of all school-aged children. Two-bedroom houses were 32.7% of the stock and 17.2% of all school-aged students lived in them. Four-bedroom units were 11.3% of the stock and 30.7% of all students came from those houses.

But the school district fee challenged in *Shappell* hadn't been based on the number of bedrooms. It had been calculated on house size. There was no evidence that larger houses have more bedrooms, and more school-aged children living in them. We know that family size declines while dwelling space per person increases with wealth. Should the school district be required to show a positive connection between house size and school-aged children before utilizing a school fee based on house size?

The state legislature had previously mandated that school fees be assessed on the number of bedrooms. The legislature shifted to house size partly due to the difficulty of counting bedrooms (does a den count as a potential bedroom?), and in hopes that richer people would have to pay bigger school fees.

(4) For the commercial and industrial portion of the fee, the Milpitas school district -- the one sued by Shappell Industries -- had actually commissioned a study of the employees of different types of employment-generating land uses. They calculated the number of square feet used by each employee (e.g., retail: 631 square feet per employee; heavy industry: 63 square feet). This study also showed the ratio of school-aged students per employee (e.g., .43 students per research and development employee; .89 students per employee in warehouse space). From this data, the

city derived assessment amounts ranging from $1.35 per square foot for retail to $15.20 per heavy industry. The court saw no difficulty with the actual fee of $0.25 because it was such a small fraction of the need generated by each type of use.

(5) The employee study had neglected to estimate the percentage of employees in newly constructed facilities actually moving children into the district. Many people find work in newly built shops and factories who already reside in the community, and thus cause no net increase in the school-aged population. Again, because the $0.25/square foot fee was so small relative to likely need, the court wasn't troubled by the imprecise data used to support the commercial fee.

§ 85.12(g) Developers Who Voluntarily Contract with Local Governments or Pay Fees Without Protest Waive Their Rights to Challenge the Legality of the Fee.

Whatever the "nexus" test requires, developers can seldom get a court to invoke the "nexus" test and set aside mitigation measures they have already agreed to provide in a development agreement or through a negotiated settlement with a local government. n411

> [a] contractual promise which operates to restrict a property owner's use of land cannot result in a "taking" because the promise is entered into voluntarily, in good faith and is supported by consideration. n412

Developers may believe their promises and contracts with local governments were not entered into freely when, in fact, they wouldn't have gotten planning permission otherwise. However, developers are not the best plaintiffs to be claiming that they didn't understand the agreement signed, or that they were coerced into signing adhesive contracts with local governments. Most developers have the resources to challenge local authority even though they may decide that going after the locals isn't a good way to use those resources.

Developers have also been estopped from protesting the legitimacy of a fee after they pay it on the theory that the local government -- once it collects a fee -- will feel entitled to spend it; but no payment usually means no permit, and a long delay while the developer's challenge works its way through court. Some states have created procedures for developers to pay under protest and challenge fees or conditions later. n413

§ 85.12(h) The Attitudes of Planning Officials to Fees.

In 1987 and 1988, Raleigh, North Carolina (population 218,000; 76 square miles), instituted an ambitious impact fee program. n414 In 1985 the city had obtained state statutory authorization for its impact fee program through a local bill. n415 Since local bills require the unanimous consent of the entire delegation from the city, compromises had to be made:

(1) The city wanted the fee to cover six types of infrastructure (storm drainage, sewer, water, parks, roads, off-street parking downtown). The enabling power was granted only for drainage, roads, and parks.

(2) The city wanted 100% cost recovery. The state General Assembly limited it to 50% of any one project's cost.

(3) Park fees could only be spent on land acquisition, not park improvements.

(4) Fees could not be used to pay existing debt. This was meant to protect developers from having to contribute to the retirement of debt for infrastructure serving the older parts of the city. But it had the unintended effect of prohibiting the city from floating bonds to pay for new infrastructure, repayable from impact fees. The provision was later amended to allow borrowing secured by impact fees for new infrastructure in areas where the fees were raised. n416

Raleigh then adopted a "Facilities Fee Program" ordinance adding further restrictions:

(1) Fees were segregated into separate accounts for each of several defined large areas.

(2) Funds could only be spent for capital costs, not maintenance.

(3) Funds had to be spent in the order collected.

(4) Unspent funds would be refunded.

(5) A developer who provides "oversize" facilities to serve later development is entitled to reimbursement.

(6) The city council is to receive a report every two years showing who paid how much and where the money was spent. The money must be spent in the zone where it was collected. The periodic review gives the city government the chance to make sure that the money is being spent to benefit the specific projects within the zone from which it was collected. n417

How has the Raleigh system been working? "Very well," according to the facilities fee ordinance co-author, Deputy City Attorney Ira J. Botvinick. n418 Over three million dollars has been collected for roads, parks, and other infrastructure since 1987, despite the current recession.

Most of it is spent fairly quickly because the city actually schedules public improvements and implements voter-approved bond programs ahead of development. The impact fees go to retire improvement bonds.

The fee level is modest compared to the sums levied in many Florida and California communities -- less than $1,000 per dwelling unit, although fees may have to be adjusted upward soon. n419

Developers in Raleigh were among the main supporters of the fee program. They realized that if they didn't step forward to fund some portion of the cost of new infrastructure, voters might be reluctant to approve bonds for the balance. In fact, fees are calculated to pay only one-quarter to one-third of the actual projected cost of public facilities.

Developers perceived the impact fee system as more equitable than the special assessments and subdivision fees it replaced. Special assessments were based on criteria such as front footage. Mr. Botvinick gives the following example. Think of a rectangular project (shoe box-shaped). If the narrow end faced the road, the developer paid less than if the long side faced the road. Yet its trip-generating and park-use potential would be the same. Impact fees are based on national trip generation figures. Park fees are calculated per dwelling unit.

The fees are collected as part of the building permit process, and become due and payable at the time the permit is issued. Developers see this as more equitable than the earlier system, which relied on subdivision approvals, because not all projects required new subdivision maps. Lots subdivided before the ordinance was enacted would have been exempt. Expansions of existing buildings would also have escaped paying their fair share under subdivision exactions, but are assessed under this program because they require building permits even though they seldom require subdivision map approvals.

Have developers been successful in passing the fee back to land sellers? One reason the city decided to assess fees in fixed and determinable amounts rather than by negotiation, and to levy them at the building permit stage was to encourage developers to negotiate harder with landsellers. Locations are unique, however, and, as far as Mr. Botvinick has been able to tell, developers don't seem to have had much luck passing fees backward to landowners.

The easiest situation for developers to negotiate a land price adjustment is when part of the site is scheduled for a park

or road in the city's capital improvement program. That program specifies how much the city will voluntarily pay for sites required for public uses. The city needs to make its land acquisition price clear because land acquisition costs account for about one-third of total public facilities improvement expenses. If the city didn't know what it was going to pay for land, it wouldn't be able to estimate accurately the costs of public improvements and couldn't determine the appropriate fee levels to charge. Those who buy land in Raleigh can learn in advance what portion of the site the city expects to acquire and at what price. Yet, developers, chain stores particularly, often pay landowners many times more per square foot than the city reimburses when it buys the site. They could sue the city for "fair market value," but none have to date. An assistant city planning director, reflecting on the early Raleigh experience, observed that:

(1) Fees are an unstable source of funds, and depend on the rate of growth and mix of project types.

(2) They could put the community at a competitive disadvantage with other cities.

(3) Fees are a poor substitute for taxes because of their inherent inflexibility. They can only be spent for limited purposes in certain areas.

(4) Fee programs are time-consuming and costly to administer. n420

After examining the Raleigh formula, one observer concluded: "I hereby issue a health warning that Raleigh's enabling legislation and its Fee Ordinance are deceptively simple. Behind those two instruments lies an amazingly complex process of calculation...." n421

The nuances of local government finance are beyond the scope of this chapter except to note that in some states local governments have a way of avoiding the constitutional and statutory limits on impact fees. They can levy excise taxes on property development.

An excise tax is a general tax imposed on the privilege of developing property and benefiting from city services. Revenues from an excise tax go into the general fund. Impact fees revenues are marshalled for capital improvements only.

Whether a state statute that sets criteria for the imposition of development impact fees would bar local governments from adopting excise taxes free of those limitations is a question of state law. A recent California appellate court case upheld a city's excise tax on development of $3,000 per unit and 30 cents per square foot of non-residential development. The court observed that California's impact fee statute defined a fee as a "monetary exaction other than a tax." The city of Vallejo, having enacted a tax on development, and not a development impact fee, didn't have to concern itself with the impact fee limitations the statute imposed on local governments. n422

(n1)Footnote 303. Fred P. Bosselman & Nancy Stroud, *Legal Aspects of Development Exactions,* in Development Exactions 70, 71-72 (James E. Frank & Robert M. Rhodes eds., American Planning Ass'n 1987).

(n2)Footnote 304. *Id.* at 72. It might be just as well that courts didn't tag the upkeep obligation as a fair trade-off for the "taking," since many local governments are now requiring developers to provide for upkeep by funding endowments or transferring the title of streets, parks, and open space to homeowners' associations. The association becomes responsible for the maintenance of open space, and meets that burden by charging residents maintenance fees. The requirement that the subdivider convey open space to a homeowners' association has been upheld against constitutional challenge. *See, e.g., River Birch Assocs. v. City of Raleigh, 325 N.C. 100 (1990).*

The elaborate impact fees formulae in this book "were designed largely to satisfy the courts rather than with any confidence in the various assumptions that underlie them." John Delafons, Paying for Development 60 (1990) (based on author's interview with Professor Nicholas).

(n12)Footnote 314. R. Marlin Smith, *From Subdivision Improvement Requirements to Community Benefit Assessments and Linkage Payments: A Brief History of Land Development Exactions,* 50 L. & Contemp. Probs. 5, 9 (1987).

(n13)Footnote 315. The payment could violate state laws in various ways. It might be characterized as violating state laws that taxes be uniform. It might be challenged because local governments weren't given the power to tax subdividers under state laws. *Compare, Home Bldrs. Ass'n of Central Ariz., Inc. v. Riddel, 510 P.2d 376 (Ariz. 1973)* (construction tax on dwelling units for city parks held beyond Tempe's statutory taxing power since use of tax would not benefit taxpayers proportionately) *with Squires Gate, Inc. v. County of Monmouth, 588 A.2d 824 (N.J. 1991)* (developer escrowed fee for off-site road improvement to widen culverts held within the county's implied regulatory power because the costs of off-site road improvements were shared by all beneficiaries proportionately). As a tax, the exaction might violate state spending, debt limit, or voter approval requirements. Comment, *Financing Local Government in the Post-Proposition 13 Era: The Use and Effectiveness of Nontaxing Revenue Sources, 22 PAC. L. J. 1333 (1991).*

(n14)Footnote 316. *See* David L. Callies & Malcolm Grant, *Paying for Growth and Planning Gain: An Anglo-American Comparison of Development Conditions, Impact Fees and Development Agreements, 23 URB. LAW. 221, 232-35 (1991).*

(n15)Footnote 317. *Compare Bevan v. Brandon Twp., 475 N.W.2d 37 (Mich. 1991)* (court upheld a requirement of a 66-foot wide access road to intersecting highway for construction to accommodate emergency fire, police, and other vehicles, although court of appeals had determined that the existing 20-foot access was wide enough to accommodate emergency equipment for 2 single-family dwellings); with *Board of Supvrs. of W. Marlborough Twp. v. Fiechter, 129 Pa. Commw. 537 (1989).* Here, the court struck down a subdivision condition requiring the subdivider to increase the width of an existing 33-foot wide road by 82 feet (1/5 of an acre) because there was no evidence that a two-lot subdivision could possibly increase road usage enough to justify the dedication.

(n16)Footnote 318. *See, e.g., Weingarten v. Town of Lewisboro, 542 N.Y.S.2d 1012 (1989),* upholding $5,000 per lot fee for parklands as a condition for approving a subdivision. The fee was lower than the value of the land the subdivider could lawfully have been required to dedicate as parkland within the subdivision, and was "rationally related" to subdivision activity generally. *See Billings Props. Inc. v. Yellowstone County, 394 P.2d 182 (Mont. 1964). See also Blue Jeans Equities v. San Francisco, 4 Cal. Rptr. 2d 114 (1992),* upholding San Francisco's Transit Impact Development Fee ordinance applied to a project away from the traditional downtown area served by the transit system. This court sided with those commentators who have argued that *Nollan* only applies to unconstitutional conditions and possessory takings, not regulatory takings or fees.

(n17)Footnote 319. This language comes from *Pioneer Trust & Sav. Bank v. Village of Mt. Prospect, 176 N.E.2d 799, 802 (Ill. 1961).* Courts in New Hampshire, Ohio, New Jersey, and Rhode Island have invoked it on one or more occasions.

(n18)Footnote 320. *See, e.g., Rohn v. City of Visalia, 263 Cal. Rptr. 319 (1989)* (City could not require owner to dedicate 14% of its site to correct a long-existing street misalignment unrelated to the conversion of the site from residential to office use without paying for the land).

Seawall Associates v. City of N.Y., 542 N.E.2d 1059 (en banc), *cert. denied, 110 S. Ct. 500 (N.Y. 1989)* (moratorium on conversion, alteration, or demolition of single-room occupancy (SRO) housing was stricken because city failed to prove homelessness was significantly related to the supply of SRO units). Note, *Forced Tenancies as Takings of Property in Seawall Associates v. City of New York, Expanding on Loretto and Nollan, 40 DEPAUL L. REV. 245 (1990).*

(n19)Footnote 321. *See, e.g., Batch v. Town of Chapel Hill, 376 S.E.2d 22, 35 (N.C. App. 1989).* A subdivider of a 20-acre tract divided into 11 lots can't be required to make room for a parkway right-of-way through the property because the condition is "not proportionately related to the impact of the development, and there is no commensurate benefit to the subdivision...."

(n20)Footnote 322. The leading law review article arguing for a rational nexus test was written by Ira Michael Heyman & Thomas K. Gilhool, *The Constitutionality of Imposing Increased Community Costs on New Suburban Residents Through Subdivision Exactions, 73 YALE L.J. 1118 (1964).* It found almost immediate acceptance in the New York Court of Appeals and the Wisconsin Supreme Court. *See* Bosselman & Stroud at 74. *See also, Wald Corp. v. Metropolitan Dade Cty., 338 So. 2d 863, 868 (Fla. Dist. Ct. App. 1976).* Courts in Louisiana, Minnesota, Missouri, Nebraska, Texas, and Utah have also embraced it.

(n21)Footnote 323. *483 U.S. 825, 837 (1987).*

(n22)Footnote 324. James S. Burling, *27 LAND & WATER L. REV. 309, 332-33 (1992).* Copyright © 1993 by Pacific Legal Foundation. Reprinted with permission.

(n23)Footnote 325. The Nollans owned the land down to the mean high tide water mark. *Nollan v. California Coastal Comm'n, 483 U.S. 825 (1987)* (so did all their neighbors). What the Commission asked for was a lateral (*i.e.,* parallel to the shoreline) easement over the most seaward third of the Nollans' property. Because their adjacent

neighbors still owned *their* most seaward property, the general public would not have been able to reach the new Nollan park strip during high tide without trespassing on the neighbors' property. What the Commission was hoping for, obviously, was that the rest of Nollans' neighbors would ultimately request permits, and then would be required to give up their seaward property, thus creating, in time, one long thin beach park. *See 483 U.S. at 829;* telephone conference with Nollans' attorney Robert K. Best, Pacific Legal Foundation (April 6, 1987).

(n24)Footnote 326. By the time the case reached the United States Supreme Court the Nollans managed to build the house during a "window of opportunity" between two different state court appellate proceedings. *483 U.S. at 829.* Because the challenge was to a specific application of a regulation it was an "as applied" rather than a "facial" attack.

(n25)Footnote 327. *212 Cal. Rptr. 578 (1985).*

(n26)Footnote 328. *Id. 589-90.*

(n27)Footnote 329. Martin County, on the Atlantic coast in rapidly growing mid-peninsula Florida, has a beach access fee program. Residential developers contribute to a fund based on projected demand for beach access. The county uses the money to buy beach land. The formula is based on the county's estimate of a new resident's average expected frequency of usage and the standard linear footage used by each person at the beach. Combining the figures yields "beach land required per new resident." This leads to a "beach acquisition cost per person." Based on average household size per type of dwelling unit, the cost per person is converted into an impact fee per dwelling unit. *Impact Fees Protect Beach Access in Martin County, Florida,* SUCCESSFUL COMMUNITIES 1, #3 (Conservation Foundation 1989).

(n28)Footnote 330. *Seawall Assocs. v. City of N.Y., 544 N.Y.S.2d 542 (1989)* (striking down an exaction equal to the cost of constructing a replacement low-income unit for every SRO unit removed from the market because Arehabbers" didn't create the problem of homelessness in New York City).

Compare Banberry Dev. Corp. v. South Joran City, 631 P.2d 899 (Utah 1981) (requiring detailed assessment of the fairness of a water connection fee between new and old residents) with *J.W. Jones Cos. v. City of San Diego, 203 Cal. Rptr. 580 (1984)* (sustaining San Diego's facilities benefit assessment on undeveloped property in a growth area to raise funds for street and park improvements, exempting improved property in the area).

(n29)Footnote 331. *Commercial Bldrs. of N. Cal. v. City of Sacramento, 941 F.2d 872 (9th Cir. 1991), cert. denied, 112 S. Ct. 1997 (1992).* New office developers were to pay a fee based on a study that calculated the number of low income workers employed in a typical office building, and the subsidy that would be necessary to house the workers in a newly built Sacramento apartment house. The dissenting judge pointed out: "Even the study relied on by the city to support the ordinance states that its 'nexus analysis does not make the case that building construction is responsible for growth.' The ordinance is nothing more than a convenient way to fund a system of transfer payments."

See also Holmdel Bldrs. Ass'n v. Holmdel Twp. 556 A.2d 1236 (N.J. App. 1989), rev'd, 121 N.J. 550, 572, 583 A.2d 277, 288 (1990) (indicating that if the state mandated a housing linkage fee program and assessed homebuilders for it, New Jersey courts would apply a relaxed Aimpacts" or nexus standard).

See also, Peter G. Sheridan, *Development Impact Fees in the 1990s,* Real Est. Fin. J. 30 (Fall 1992) (Impact fees have a devastating impact on the development of affordable housing, and they perpetuate homogeneous communities that lack socioeconomic diversification).

(n77)Footnote 379. The school impact fee raises a special question after *Nollan* because most state constitutions require "free and uniform" public schools. If *Nollan* requires that users, and only users, pay in proportion to their use, wouldn't impact fees for schools violate these state constitutional requirements that public schools be free? Not

necessarily, because those state constitutional provisions are interpreted to prohibit charging directly for attendance. An impact fee is not tuition, "a charge for school attendance," yet there is a nexus between new housing and the need for new schools even when each house averages only .44 schoolchildren because homebuyers enjoy the *option* of school access. *See St. Johns County, Florida v. Northeast Fla. Bldrs. Ass'n, 583 So. 2d 635 (Fla. 1991).*

Mr. Sterthous suggests localities be compelled to enact guidelines in a comprehensive capital improvement plan, that localities differentiate the costs attributable to new development from those necessary to maintain or repair existing facilities, and that they be allowed to waive fees on "affordable" projects targeted to low-or moderate income families. *Id. at 233-34.*

(n99)Footnote 401. *See, e.g.,* Cal. Gov't Code § 66001. Fee as Condition of Approval; Agency Requirements.

(a) In any action establishing, increasing, or imposing a fee as a condition of approval of a development project by a local agency on or after January 1, 1989, the local agency shall do all of the following:

(1) Identify the purpose of the fee.

(2) Identify the use to which the fee is to be put.

(3) Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed.

(4) Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed [and] how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed.

(n100)Footnote 402. *See, e.g.,* Tex. Loc. Gov't Code § 395.012.

(n101)Footnote 403. In 1989 the Virginia General Assembly adopted a road impact fee provision. Va. Code Ann. §§ 15.1-498.1 - 15.1-498.1). A number of states have authorized impact fees for roads. N.J. Stat. Ann. § 27:1C-1; Ill. Rev. Stat. ch. 121, §§ 5:901 - 5:919; Wash. Rev. Code § 39.92.040; W. Va. Code § 72). In order to charge these fees, the locality must first designate the areas to be charged and estimate the cost of bringing the road network to a specified standard. "Then, fees for off-site road work can be imposed on developments on a pro-rata basis if the need for the off-site improvements are generated by the development itself." Woodrow W. Turner, Jr., *Planning, Zoning and Subdivision Law, 24 U. Rich. L. Rev. 691, 713 (1990).* Professor Turner attributes to the *Nollan* nexus test the reluctance of the Virginia General Assembly to add schools or parks to the list of permissible impact fee purposes. *Id.*

(n102)Footnote 404. The Maine Comprehensive Planning and Land Use Regulation Act, Me. Rev. Stat. Ann. tit. 30-A § 4354. In California, capital improvements can only be funded pursuant to plans indicating "the approximate location, size and time of availability, and estimates of costs." Cal. Gov't Code § 66002(a).

(n103)Footnote 405. An example of a fee program acceptable to the developers comes from south Orange County, California, a 2700-acre development called Foothill Ranch. There, the developer committed 800 acres for commercial and industrial development so that people living at the project and nearby could avoid long commutes to the vast majority of the county?s jobs, which lie miles to the north over very crowded roads. Some 12,000 to 18,000 jobs are expected to be drawn to the site. The developer pledged $40 million for a $240 million road project in south Orange County, and another $40 million on roads within the project. With smaller neighborhood parks taken into the measure, a total of 1,393 acres -- nearly half the site -- will be open space. Only 530 acres are being put to the developer's principal intended use -- housing for 3,900 units. The estimated value of the entire project on completion is $3 billion. John Charles Tighe, *Balancing Jobs, Parks, Homes in Orange County,* Los Angeles Times, Aug. 20, 1989 (Real Estate'section), at 1, col. 3.

A more controversial fee assessment program is the one in Riverside County, California. Homebuilders protested fees of $2,000-3,000 per housing unit. The developers' complaint was that the county had imposed developer fees as a way to cover deficits in its general fund, regardless of their relationship to new development. The Riverside County fees include contributions for expansion of space for courts, juvenile detention, the county general hospital, mental health clinics, the regional park system, wildlife preserves, sheriff stations and jails, roads, bridge, communications networks, and so on. Ordinance No. 659: Establishing a Redevelopment Mitigation Fee for Residential Development, County of Riverside (July 5, 1988).

By 1992, Riverside County development fees were $7,500 per home. The County Board of Supervisors froze them for 1993 to encourage growth in a time of recession, even though it may cause county planning staff layoffs. CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.13

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.13 Laws Concerning the Marketing of Subdivided Lots.

The marketing activities of subdividers are subject to various federal and state laws.

§ 85.13(a) The Interstate Land Sales Full Disclosure Act.

The federal laws applicable to the sale of subdivided lots are federal securities laws discussed in chapter sixteen and the Interstate Land Sales Full Disclosure Act (ILSFDA). n423

ILSFDA prohibits developers from using interstate commerce or the mails to sell any lot within a subdivision unless the developer has: (1) registered the development with the Secretary of the U.S. Department of Housing and Urban Development, (2) delivered an approved property report to the purchaser before sale, or (3) is exempted under the terms of the statute.

The purpose of the law is full disclosure, to "prevent unscrupulous developers from preying on the elderly and other less sophisticated members of the public." n424

"Interstate" is defined so broadly that most sales of subdivided lots would be swept into the statutory net. "Lot" includes "any portion, piece, division, unit or undivided interest in land located in any state or foreign country if the interest includes the right to the exclusive use of a specific portion of the land."

The statute applies no matter how the purchaser intends to use the property -- industrial, agricultural, residential, commercial. To be a subdivision under the terms of the law, the lots don't have to be contiguous as long as they are part of a "common promotional plan."

Developers may qualify for one of the exemptions. (1) Subdivisions with fewer than 25 lots are totally exempt. (2) Subdivisions with fewer than 100 lots don't have to register but are subject to the Act's anti-fraud provisions. (3) Lots are exempt if improved with a building or the seller is obligated to erect a building on the land within two years after the purchaser signs the contract. (4) Fully improved single-family residential lots are exempt if they are in subdivisions which meet all local codes and standards, the developer does not promote the subdivision through direct mail or by

telephone offering gifts, trips, dinners, or other promotional techniques to induce visits to the site. The lot must be zoned or restricted for residential use, situated on a paved street or highway, serviced with sewer, water and electricity at time of closing, conveyed by warranty or special warranty deed according to local custom, with a title insurance policy showing marketable title in the seller, and the purchaser must have personally visited the site. (5) Sales to purchasers in the building or land sales business.

The ILSFDA requires the property reports and statements made to prospective buyers to be meticulously honest. The law prohibits "any device, scheme, or artifice to defraud." n425

Examples in the regs of what the law doesn't allow: A property report that the property is "lakeside" and the lake is dry half the year. A brochure picturing amenities or improvements -- a golf course, a paved road, a country club -- that the promoter has not entered a binding contract to provide. n426

Remedies for breach of the ILSFDA available to purchasers include damages and rescission. The Act also establishes criminal penalties, and an action may be brought by the U.S. Department of Housing and Urban Development in any U.S. District court to enjoin acts or practices that violate the Act.

§ 85.13(b) State Subdivided Lands Acts.

Some states have laws regulating the disclosures subdividers must give their buyers, usually administered through a state corporation commission, just like state securities disclosure laws. n427 These laws restrict the marketing practices of land subdividers and typically require them to prepare an offering statement approved by a state which the subdivider agency must give to each prospective purchaser.

The exemptions in these laws aren't necessarily the same as those in the state Subdivision Map Acts.

Subdivided Lands Act are geared to protecting the innocent buyer from being pressured into an ill-advised sale. Under the New York law, for instance, the buyer not represented in the transaction by an attorney has ten days to cancel. n428 Subdivided Lands Acts often mandate that "advertising material and the general promotional pace" shall not be "false or misleading and comply with the standards prescribed" by a state commission. n429 New York requires a copy of all advertising for the sale of subdivided lands to be filed with a state agency first. n430

Under many of these laws, including the California law, no lot may be sold to an individual that is subject to a blanket encumbrance unless it contains a release clause. n431 A blanket encumbrance is any lien affecting more than the parcel being sold. n432 Larwin, for instance, couldn't have sold a lot to a homebuyer while the physicians still held an unpaid deed of trust secured by the entire project. For the sale to a homebuyer to close, Larwin would have needed a "partial release" clause. Then the subdivider could buy a release from the physicians, freeing the lot sold from the underlying deed of trust.

The California Subdivided Lands Act also requires that if a subdivider tries to pawn off a lot that has encumbrances or liens on it, he must make arrangements to satisfy these liens before pocketing the buyer's funds. Those arrangements may include: obtaining a bond, escrowing the purchase money, substituting a letter of credit for the funds, or another arrangement satisfactory to the commissioner.

A problem can arise when the subdivider promises to sell a house not yet built, or when the subdivider promises "community facilities" like a golf course or swimming pool, not in existence when the first sales take place. The commissioner can't allow sales to commence unless "reasonable arrangements have been made to assure completion of the subdivision and all off-site improvements included in the offering." n433

For all projects with common areas, including condos, the commission must satisfy itself that the projected costs of

maintaining the common areas are reasonable. The developer must also be committed to make "reasonable arrangements for delivery and control over the subdivision and all off-site land and improvements" to the buyers. n434

This is a particularly important requirement because it can be used to prevent the condo developer or tract subdivider from committing the buyers to "sweetheart" contracts with management or servicing companies affiliated with the developer. A bargain-priced condo won't be such a good deal if the condo buyer is stuck paying a small ransom each month for, say, pool maintenance -- provided by a company run by the developer. Nor will the buyers of units sold be happy to learn that they alone are paying the full tax and maintenance burden on unsold units because the developer controls the majority of votes on the condo board of directors. California's law gives the real estate commissioner the power to determine that the developer is capable of keeping all the key promises made to buyer n435 and prohibiting sharp practices. Legislators in states with fewer controls on subdivided land sales have had to deal with these grievances one-by-one, formulating statutes to correct each of them. California law tries to prevent a deceptive offering of a subdivision or condo from "hitting the street."

When a subdivision project passes this anti-fraud, anti-misrepresentation test, the subdivider prepares a public report under the instructions and rules of the real estate commission. That report must be presented to every buyer before closing. Among its prescribed contents are soil conditions, a description of every special tax assessment the homebuyers will have to pay in order to finance facilities serving the subdivision, a note on existing and proposed airports in the vicinity, a summary of arrangements for utilities to serve the tract, whether fill was used in constructing the project, and so on. n436 Sales can't commence until that report, called the white paper, has been approved by the commission.

Investigation; Public Report; Grounds for Denial

...

The grounds for denial are:

(a) Failure to comply with any of the provisions in this chapter or the regulations of the commissioner pertaining thereto.

(b) The sale or lease would constitute misrepresentation to or deceit or fraud of the purchasers or lessees.

(c) Inability to deliver title or other interest contracted for.

(d) Inability to demonstrate that adequate financial arrangements have been made for all off-site improvements included in the offering.

(e) Inability to demonstrate that adequate financial arrangements have been made for any community, recreational or other facilities included in the offering.

(f) Failure to make a showing that the parcels can be used for the purposes for which they are offered; and in the case of a subdivision being offered for residential purposes failure to make a showing that vehicular access and a source of potable domestic water either is available or will be available.

(g) Failure to provide in the contract or other writing the use or uses for which the parcels are offered together with any covenants or conditions relative thereto.

(h) Agreements or bylaws to provide for management or other services pertaining to common facilities in the offering, which fail to comply with the regulations of the commissioner.

(i) Failure to demonstrate that adequate financial arrangements have been made for any guaranty or warranty included

in the offering.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.14

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.14 Zoning.

[Go To Supp]

§ 85.14(a) History and Legal Basis.

The workhorse of local land use controls is zoning which involves dividing the community into districts with different regulations in each. n437 "Despite its faults, zoning is still the most important and widely used tool for controlling development in the best interest of society." n438

All fifty states have laws enabling cities to zone. Some states specifically authorize counties to enact zoning laws as well.

Zoning ordinances -- written and enacted by local government officials -- prescribe the uses to which property can be put, and set the development standards for construction such as lot sizes, required off-street parking spaces, and building heights. They divide the community into discrete use zones with a text and accompanying maps. The text outlines different types of use zones such as residential (R), commercial (C), agricultural (A), manufacturing (M), and so on. While cities borrow one from the other, there are significant variations among these ordinances. There are as many zone categories as local whim, policy, and politics dictate. Some uses are allowed in each zone. Some uses may be specifically prohibited. Some uses may be allowed only if the applicant obtains a permit from a zoning administrator, planning commission or city council.

When zoning took hold in the early decades of this century in many big U.S. cities -- Boston, Los Angeles, New York n439 -- the idea was to improve on the law of nuisance. Nuisance law was often faulted for being reactive, unpredictable, random and limited. By the late 19th and early 20th centuries, the strict and literal application of the plaintiff-oriented maxim "*Sic utere tuo et alienum non laedas*" ("one should use his own property in such manner as not to injure that of another") had yielded to a more flexible standard of "reasonable use." courts considered the reasonableness of harm to the plaintiff and/or the reasonableness of the defendant's conduct. n440

Some courts denied offended neighbors relief until a noxious use had actually been built and was proved noxious. Injunctions of private nuisances were reserved for actual harms, not prospective ones. n441 Shops, warehouses, workshops and offices whose owners had the misfortune of building in areas where tract developers would eventually

subdivide, were sometimes sued by homeowners who arrived just in time to file nuisance petitions. The doctrine of "coming to the nuisance" didn't always prove a winner. For developers, especially of manufacturing facilities near residential areas, this meant surprise and, if they lost, enormous losses for buildings that they would never have built had their owners known in advance what awaited them in nuisance litigation. n442

Different courts reached different results on similar facts. There were no legislatively enacted standards of the sort it was hoped that zoning ordinances could supply. Because of its *ex post facto* application, courts were reluctant to classify minor disturbances as a nuisance, unless the remedies could be found short of forcing important industries to shut down. Zoning applied in advance of a project being built. Zoning proponents assumed zoning could embody more exacting standards than courts would have upheld in nuisance cases.

One 19th-century nuisance doctrine can be seen as the intellectual harbinger of zoning: the locality doctrine. In jurisdictions applying the locality rationale courts took into account whether the defendant's use was located in an area with similar or incompatible uses. A manufacturer locating in a predominantly residential district could be enjoined if it created "spillovers" substantially above those normally prevailing in the area. Once industry "took over" a neighborhood, those residents who remained were stuck with higher interference thresholds. As Professor Bone rightly concludes: "This version of the locality doctrine in effect worked a crude form of common law zoning." n443

Here is a California court's 1946 summary of the early safeguards courts, drawing significantly on the law of nuisance, imposed to protect property owners against too aggressive a use of the zoning power:

> Zoning Ordinances which have been held invalid fall roughly into four categories: 1. Where the zoning ordinance attempts to exclude and prohibit existing and established uses of business that are not nuisances. 2. Where restrictions create a monopoly. 3. Where the use of adjacent property renders the land entirely unsuited to or unusable for the only purpose permitted by the ordinances. 4. Where a small parcel is restricted and given less rights than surrounding property, as where a lot in the center of a business district is limited to use for residential purposes, thereby creating an "island" in the middle of a larger area devoted to other uses. n444

Support for zoning came from sources besides disaffection with nuisance law. Zoning in the U.S. also got a big boost nearly one hundred years ago from Chicago's World's Fair, an international exposition held in 1893 in Jackson Park, on the shore of Lake Michigan, to commemorate the discovery of the New World -- the Columbian Exposition. The image was of a gleaming city with monumental buildings arranged on a lake front, canals, and broad tree-lined, grand boulevards. The main structures were massive, symmetrical, classical Beaux Arts style buildings, with arcades, pavilions, domed ceilings, spires, arched windows -- the sort of architecture one sees in the public buildings of European capitals -- Paris or Vienna. The structures built to house the various national and state exhibits were sizeable mansions, the sort of houses multimillionaires of the day inhabited, carefully landscaped with ample side yards, setbacks and front yards. "Chicago's fabled 'White City' was an ideal to which every American city aspired. From the fair emerged the nationwide City Beautiful movement, a progenitor of modern city planning and the force behind such New York landmarks as Grand Central Terminal and the Public Library." n445

Inspired by the impressive mansions built for the state and national exhibits in the Chicago World's Fair, the Columbian Exposition, the earliest zoning ordinances legislated a minimal aesthetic that would capture the elements of classicism on a smaller scale: uniform side yards and setbacks, a uniformity of uses, landscaping requirements, and maximum building heights.

The separation of residences from commercial and industrial uses was a cornerstone of zoning. As early as 1908, the City of Los Angeles had established separate "Residence Districts" and "Industrial Districts." Real estate developers -- both residential and industrial -- could see advantages in separating incompatible land uses. Social reformers distressed by disease-ridden, crowded tenements hoped that by zoning more land for low-density residential use, and barring

apartments, the "conservation of the health of the people" n446 would result. They expected to curb slumlordism by making fewer sites available for high-density apartments. n447

While zoning ordinances prescribed the details for evolving suburbia, the unifying design vision of The City Beautiful was never realized. Major U.S. cities that evolved after the advent of zoning, the post-automobile cities, were places like Los Angeles, Houston and Miami. These are scarcely the prototype envisioned by The City Beautiful movement:

> Not that North American cities lack form, but their shape seems to be the result less of the resolution of an individual's will -- of a Peter the Great, a John Nash or a Baron Hausmann -- than of anonymous, pragmatic decisions to build railroads, highways, or factories. To understand the shape of the American city one has to appreciate the ripple effect of technologies like the commuter train, the automobile, steel frame construction and the elevator. n448

Engineers more than architects determined the shape of North American cities.

§ 85.14(b) The Economics of Use-Segregated Zoning.

Because zoning laws are usually enacted and enforced with the support of local residents, most of whom are already homeowners, it should not be surprising that some researchers have found that zoning raises the value of existing single-family dwellings. n449

Here is some of what researchers have found about the impacts of "use-segregating" zoning:

-- Non-residential uses adversely affect home values. The more land devoted to multi-family and industrial uses in a community, the lower are single-family home values there. n450

-- The presence of non-residential uses will *not* adversely impact the value of single-family residential zones, as long as the stores and factories are located together, not dispersed throughout residential areas. n451

-- Property subject to private deed restrictions limiting its use has about the same value as property subject to similarly restrictive zoning codes. But property that is neither zoned nor covenanted is less valuable than restricted property. n452 This suggests that property owners value the restrictions imposed by zoning laws and private deed covenants.

-- Apartments on the same or nearby blocks reduce home values in affluent areas. n453 Well-designed, carefully managed, small-scale publicly subsidized housing units scattered in low-density residential areas can raise home values in a neighborhood. n454 It is even possible to mix apartments with single-family houses in the same area without seriously impairing aggregate land values. But this requires careful site planning. n455

§ 85.14(c) Judicial Review Reenforces Single-Use Zoning.

When state courts were called upon to review zoning laws, many of them wanted to make sure that local officials didn't abuse their land use powers by discriminating in favor of some landowners, or by wielding their police powers so forcefully as to disrupt the investment-backed expectations of property owners.

Judges tested zoning ordinances for arbitrariness by looking to the existing and nearby uses to see if the zoning scheme codified those uses or disrupted them wholE.S.A.le. n456 They considered the impact on property values, and whether the property could be developed at all as zoned. Courts in most states were prepared to condone sizable private losses only when zoning was used to zone out "nuisance like" activity. n457

Local governments moved towards the promulgation of zoning maps that grouped comparable uses in monolithic zones.

This type of zoning was easy to justify in court because it appeared to treat landowners within a given zone alike, and offered a measure of predictability to developers and neighbors alike.

§ 85.14(d) The Impact of the Separation of Uses on Housing Affordability.

§ 85.14(d)(1) Keeping Apartments Out of Single-Family Zones.

If zoning was a blossom on the locality branch of nuisance law, it soon fell off the nuisance tree and sprouted a life of its own. Separating factories from houses could be justified as classic nuisance prevention. Many observers could not see justifying the separation of duplexes or apartments from single-family houses on the basis of classic nuisance law. Yet following the lead of the U.S. Supreme court's opinion in *Village of Euclid v. Ambler Realty*, n458 which declared that "apartment houses" in single-family areas "come very near to be nuisances," most courts readily sustained exclusive single-family zones. The rationalizations courts often gave (prevention of fire, increase in fresh air, and playing room for children) would have justified fire codes and limits on buildable density, but not the total exclusion of multi-family from single-family zones. Nonetheless, courts uniformly uphold the single-family zone, which bars duplexes, second units, or apartments. n459

Advocates of affordable housing contend that by keeping apartments out of single-family zones and allowing very little vacant land for new apartments, local zoning makes new housing more expensive than it needs to be.

"The biggest regulatory barriers to new lower cost housing are local zoning regulations that restrict the construction of medium-density, walk-up, multifamily housing units. It is much less expensive to build such apartments than any other type of housing." n460 As an example, a national advisory commission in 1991 cited Fairfax County, Virginia, where only 1% of 211,904 acres zoned for residential use are zoned for multi-family housing. n461 At one point, half of all building permits in Portland, Oregon, were for multi-family housing, but only 7% of all vacant land zoned residential allowed multi-family development. n462

§ 85.14(d)(2) Accessory Apartments in Single-Family Housing. n463

Critics of land use controls have also pointed out that by allowing people to rent a guest room or build a small second unit on their lot, the stock of affordable housing could be vastly increased. n464 About a third of all houses with more than five rooms are occupied by one- or two-person households. "Several million additional modest-rent housing units could be created across the nation very quickly, with almost no cost to the public sector. True, such units would serve mainly small households. But over one-half of all American households contain just one or two persons." n465

Many people do create second units in their houses in patent and knowing violation of zoning ordinances and building codes. "Over half a million accessory apartments were added to the nation's housing stock by conversion and remodeling between 1973 and 1980. This represents close to 21% of all private unsubsidized rental construction for that period...." n466

Accessory-unit housing has been promoted by local officials not enforcing single-family zoning laws even though an accessory unit converts a single-family residence into a duplex. Enforcement has been lax because it could result in "political repercussions." n467 Also, accessory-unit conversions are widely perceived as "victimless crimes," seldom causing noise or traffic problems when there aren't many of them on any block. Further, most conversions are difficult to detect.

Many owners of illegal conversions may not want them legalized anyway. By keeping notice of their conversions from public view, they are avoiding the property tax re-appraisals that usually follow new construction. They evade federal income tax by not reporting rental income. They wouldn't want to get caught because their conversions don't fully comply with provisions of the local building and housing codes. Owners seldom skimp on safety knowingly because

they continue residing in the house and have no interest in jeopardizing their own safety or security. But they often build in violation of code provisions they see as unnecessary or too costly.

Accessory units, kept illegal in single-family zones, may actually be more acceptable to the community when selective enforcement takes place by complaints from neighbors. The threat of enforcement disciplines owners of accessory units into behaving in a neighborly way, and gives the community the right to "clamp down whenever conversions begin causing traffic, parking, or other problems." n468

Suppose a local ordinance allowed accessory units either as a matter of right or subject to prescribed completion, and the owner complied. Neighbors would lose their tight grip over the conduct of the owner and the tenant. No law can mandate that people be good neighbors; land use controls don't reach aspects of personal conduct that can be more important to the neighbors than how many kitchens there are in a house. The owners and occupants of an illegal land use who persist in conduct annoying to their neighbors risk getting their illegal use shut down.

The downside of selective enforcement is unequal protection of the law, and possible health and safety problems for occupants and neighbors alike. n469 Legislation to legitimize and encourage these second units has been adopted by some states and cities. n470 Legislation forces officials to spin out "worst case" scenarios, and to build high legal walls against them. Rules written to prevent the worst case result in standards well in excess of those that would be perfectly acceptable in the usual situation. For instance, in most areas, there might be no parking problem for an accessory-unit occupant. But if a great many owners on the same block all decided to build accessory units, curb parking may no longer be available for visitors and deliveries, or cars may be parked curbside all the time, crowding the street. Solution: require one or more on-site parking spaces for each accessory unit.

Thus, in legalizing accessory units, local governments sometimes impose rigorous parking requirements, deep yard setbacks, design controls, higher-than-usual minimum lot sizes, minimum and/or maximum sizes for the accessory units, and occupancy restrictions. Occupancy restrictions are also common: owner occupancy or occupancy of the second unit only by those over a certain age (55 is a popular choice), or someone related to the owner. n471

Often, efforts to legalize accessory units outright are hotly opposed outright as an unwarranted intrusion into the single-family residence zone. n472 Opponents protest the legalization of secondary units because they want to avoid higher population densities and lot coverage ratios, traffic congestion, and competition for curb parking spaces. They don't like the idea of a neighborhood brimming with transients, and want to make sure if accessory units are to be legal, the neighborhood keeps its appearance as a single-family area. Appearance can best be achieved by requiring accessory-unit applicants to obtain conditional use permits, and by conditioning them so additions respect the single-family look. But requiring site plan and design review through a conditional use permit process raises the cost of accessory units and encourages illegal conversions or discourages conversions entirely.

§ 85.14(d)(3) Prohibiting Mobile Homes.

Factory-built houses, sometimes called mobile homes, are among the least expensive forms of new housing. Factories operate in bad weather when on-site construction might have to be suspended. Sometimes factory workers are paid less than on-site construction workers. Local governments have passed ordinances to exclude mobile home parks entirely, limit the number of mobile homes in any one park, or prohibit their construction in single-family zones. Again, legal challenges to these ordinances have yielded mixed results. n473 A few states have enacted laws preempting local governments from imposing their own interpretations of building and safety codes when the mobile homes meet nationally promulgated safety standards. They also mandate that local governments allow the construction of mobile homes on single-family zoned lots, provided the units meet the same development standards as are required for conventionally built houses in single-family zones, such as setbacks and sideyards. n474

§ 85.14(e) The Impact of the Separation of Uses on Traffic Patterns and Commuting.

"... [t]he social desirability of uniform neighborhoods characterized by a single land use is more controversial today...." n475 Outlawing all commercial uses in single-family zones means that even convenience grocery stores must be pushed out miles from where their consumers live, except when the store was there before zoning and got to stay in business as legal nonconforming uses. Many local planners have awakened to the fact that people can work at home without disturbing their neighbors -- and have encouraged cities to create a home occupation exception often conditioned on the home worker not generating much traffic and providing parking spaces for visitors and employees. But professional offices and research parks are still resisted close to residential areas. Pushing them out increases commuting distances, traffic congestion, air pollution, n476 and housing prices, n477 and diminishes housing choices. n478

> Mixed use zoning. When traditional Euclidean zoning is non-cumulative, it effectively separates residential from nonresidential uses. These uses were thought to be incompatible. Industrial factories, for example, were often dirty, smoky and smelly when Euclidean zoning was first adopted. This has changed. Industrial development now is often clean, and may even be located in large self-contained developments that may also include residential, retail and office uses.
>
> These trends have prompted a zoning innovation called mixed-use zoning. This type of zoning expressly permits the mixing of the traditional land-use categories in a single zoning district. The concept can be applied to large developments, but it also can be applied to what is known as "infill" development in transitional neighborhoods. These neighborhoods may be single-family residential neighborhoods that have become attractive to multifamily or commercial development or both. n479

Nonetheless, planners given the green light to drafting ordinances for mixed use zones would probably agree with a British observer: "It is almost impossible to draw up a zoning map that would result in the balance of activities and uses that has emerged in the villages and small towns on the east coast that predate strict separation of uses, or in the traditional neighborhoods of the larger cities." n480

§ 85.14(f) Bulk and Density Controls.

Zoning ordinances also usually include controls on building bulk and density. Big front yards are mandated by requiring minimum setbacks from the street. These persist even where people have little use for them where they are just a maintenance burden. Some land use planners and cost conscious developers champion the "zero lot line" -- an ordinance with no front yard setback, where the house abuts the sidewalk, and there are zero lot line residential zones in some states.

Lot widths are more apparent from the street than lot depths. Requiring that lots have a minimum street frontage is an aesthetic choice sometimes taken to create the appearance of house lots being bigger than they are.

Height limitations are common. These limit building bulk.

Site ratio. Some zoning ordinances limit the percentage of a lot that can be occupied by a building.

Floor area ratio. Some communities, especially in downtown office and multifamily districts, regulate building bulk through a floor area ratio (FAR). The FAR specifies a ratio between the square footage allowable in a building and the square footage of the building lot. A FAR of 2:1, for example, allows two square feet of building for each square foot of the lot. The FAR encourages innovative building design because the developer may utilize the FAR any way he wishes subject to height and other limitations on the site, such as setbacks. Under a FAR of 2:1, for example, the developer constructs a four-story building on half the lot if a building height of four stories was permitted. No case has considered the validity of floor area ratios. But see *Broadway, Laguna, Vallejo Ass'n v. Board of Permit Appeals, 427 P.2d 810 (Cal. 1967)* (stressing the importance of the FAR as a zoning control).

Minimum lot size requirements. The zoning ordinance usually requires a minimum size for building lots... The buildable area available on a lot also is limited by off-street parking requirements. The number of required spaces is based on the number of dwelling units in multifamily residential projects. For commercial, office, and industrial development the required number of spaces may be based on square footage or on the type of use. In the only case directly addressing the issue, the court held off-street parking requirements constitutional. *Stroud v. City of Aspen, 582 P.2d 720 (Colo. 1975)* ("cannot believe" ordinance unconstitutional in "these days of environmental concerns"). Because parking areas are paved, communities that want to ensure that part of the lot is left in its natural state may also include a usable open space requirement. This requirement specified a percentage of the lot that must be left in its natural condition. n481

Slope/Density Formulas. In hillside areas, buildable densities may depend on the steepness of the slope of the hillside. Here is the Los Angeles City slope density provision:

In Hillside Areas as defined in Chapter IX of the Los Angeles Municipal Code which are designated in the minimum density housing category by the applicable element of the General Plan adopted by the City Council, the dwelling unit density shall not exceed that allowed by the following formula:

$$D = 50 - S/35$$

Where D = the maximum number of dwelling units per gross acres allowable, and

S = the average natural slope of the land in percent.

Where the total allowable number of dwelling units per parcel map or tentative tract map calculated under the above formulas results in a number other than a whole number, it shall be rounded to the nearest whole number as follows: where the fractional portion of the total allowable number of dwelling units equals .5 or more, the total number of allowable dwelling units shall be rounded to the next larger whole number; where the fractional portion of the total allowable number of dwelling units equals less than .5, the total number of allowable dwelling units shall be rounded to the next smaller whole number. Average natural slope is slope prior to any grading. Where previous grading on a site makes it difficult to determine average natural slope using the above formula, the Director of Planning shall determine the average natural slope in a manner to carry out the purpose and intent of this subsection (La. Mun. Code § 17.05C).

Slope density is the ratio of height to length.

Click here to view image.

The greater the slope, the lower the density. These ordinances are designed to protect the steepest hillsides from being graded beyond recognition. In order to carve out level pads for houses and roads, hillside projects often need substantial grading. The more gentle the slope, the more likely the land can be developed without extensive cutting and filling of natural slopes.

Minimum Lot Sizes and Affordable Housing. n482 The bulk and density control that has been most challenged in court is the minimum lot size in single-family areas. Courts have almost always sustained these for a long list of reasons: the prevention of overcrowding, fire prevention, freedom from noise, to facilitate planning for roads, sewer, water, and other infrastructure, preservation of soil rainfall absorption, the use of on-site sewage treatment and underground water, agricultural preservation, regulation of the rate of suburban growth, green belt protection, property value enhancement. n483

The one situation where large minimum lot sizes are regularly stricken is where most of the area has already been developed with smaller lots and only a few unbuilt parcels remain. These owners of those few unbuilt lots are often able to have the "downzoning" set aside in court. n484

The critics of large lot zoning explain that large lots for some mean longer commutes n485 and higher land prices for everyone else in the region. Local minimum lot size controls also contribute to keeping out people with lower incomes. n486

> Thus what we see today, in city after city, and often at the state level, is a three-cornered political fight among the advocates of business and development, the poor and working class and their liberal advocates, and the environmentalists in alliance with no-growth people who are usually middle-class young or upper-middle class. This situation brings about strange alliances between, for instance, business groups and minority people, or ecologists and tax leagues. These same conflicts and contradictions are mirrored within many people who, traditional liberals, find themselves unable to reconcile their environmental interest with their concern for social equity. n487

courts in New Jersey and Pennsylvania have stricken local land use controls that had "exclusionary" effects, that made land prices prohibitive for low and moderate income housing. n488 "Affordable housing" legislation exists in California, Connecticut, Massachusetts, New Hampshire, New Jersey, Oregon and Rhode Island. n489 A feature of the California law is that local governments must grant a density bonus to developers who construct at least 20% of their dwellings for low and/or moderate income households, or 10% for very low income. n490

§ 85.14(g) Zoning to Achieve Economic Development Objectives.

The case of *Board of Supervisors of James City County v. Rowe, 216 S.E.2d 199 (Va. 1975)* depicts a complex local zoning ordinance enacted to promote economic development and planned commercial growth. The case shows that property owners sometimes object to aggressive planning efforts that depart significantly from the original "nuisance prevention" origins of zoning. The James City County ordinance, designed to nurture "quality" tourism imposed deep setbacks, making many parcels totally unusable unless combined with adjoining ones. It imposed exactions for the construction of ancillary roads to separate local from through traffic and it barred many highly profitable land uses such as fast food outlets. Ultimately, the Virginia Supreme court struck down all of these features of the ordinance.

Standard of Review. In nearly all states local land use laws must be rationally related to the public health, safety, or welfare, but carry with them a presumption of validity. n491 Despite the common rhetoric, the scope of state court review over local zoning laws differs markedly. In their 1981 land use casebook, Professors Ellickson and Tarlock found California and Illinois at opposite ends of the judicial review spectrum. "The California courts have long been exceedingly deferential to land-use controls. The Illinois courts are at the other pole; they actively conduct their own cost-benefit analysis of challenged land-use restrictions, and do not hesitate to invalidate restrictions that they regard as inefficient." n492 The Virginia Supreme court is closer to Illinois on this scale.

Zoning ordinances carry a presumption of constitutionality that is rebuttable. In California, however, "the presumption is close to conclusive." n493 One commentator, Richard Babcock, remarked: "What can one say about the California courts other than that one has to be a madman to challenge a government regulation in that bizarre jurisdiction." n494

Richard Babcock was writing about challenges by property owners turned down by local governments. California judges appointed in the administrations of Republican Governors Reagan, Deukmejian and Wilson may be moving California closer to the center of the judicial review spectrum. n495 At the same time, some Illinois judges, concerned about upholding sensible environmental standards, may be relaxing their tight grip on local governments' land use decisions. n496

Exhaustion of Remedies. Landowners wishing to vindicate their constitutional rights by challenging zoning ordinances that appear unduly restrictive must prove that their claims are "ripe" -- that the ordinance has actually been applied to the owner's property.

The U.S. Supreme court has created a series of tests, collectively known as the ripeness test, for when property owners' suits against local land use controls are appropriate. The owner must submit a development application, n497 request a variance, and exhaust state compensation procedures, n498 and perhaps reapply if her initial applications are denied. n499 "Where the plaintiff fails to meet these requirements, judicial action will be held in abatement." n500 A case isn't "ripe" for court decision until the local government has made its "final" decision. The challenger must also "exhaust administrative remedies," which means using all available administrative procedures to change the regulation or otherwise obtain relief before instituting litigation. "Even if a property owner can somehow chart this Kafkaesque maze of technical, expensive, and ultimately futile procedures, the game has only just begun. The property owner must now convince the court that a taking has occurred, which is another story in itself." n501

When a property owner challenges a law as unconstitutional on its face, rather than as applied to that owner's property, as the owners did in the Virginia case, they don't have to exhaust all administrative remedies before a court will hear their case. n502 Facial challenges can only be made to legislative enactments, not to administrative rules or decisions. Further, the enactment of a comprehensive plan without accompanying zoning or subdivision controls restricting an owner's use of property has also been held immune from a facial challenge. n503 Facial challenges are difficult to win. The law may be upheld if the court can imagine any circumstances in which the law might be valid. n504

More commonly, challenges are to the law or regulation as applied to the challenger's property. For "as applied" challenges: "The court's cases uniformly reflect an insistence on knowing the nature and extent of permitted development before adjudicating the constitutionality of the regulations that purport to limit it." n505 The "as applied" challenge has to start with the developer exhausting all conceivable administrative remedies. More takings cases have been lost or remanded for failure to exhaust than for any other cause. n506

Developers have three nonjudicial avenues to pursue before they can immunize their constitutional challenge from a "failure to exhaust administrative remedies" defense. First and most common, a variance from the board of adjustment, the staff, or the planning commission. n507 The owner may be able to persuade a court that applying for a variance would be futile, and should therefore not be required if the owner's property shares characteristics with adjacent property, similarly restricted, and a variance can't be granted under state law except for "special" or "unique" hardship. Second, if the application was for a conditional use permit or other site-specific approval, revise the application and try again. n508 Third and rare, request an amendment to the zoning ordinance or an amendment to the general plan. n509

Property owners, required to exhaust their administrative remedies first, may spend fortunes applying for local approvals -- doing engineering work, environmental studies and project design, all for naught. Local governments never tell owners what they can build. They don't render "advisory" opinions. They only tell the owner whether the application she has made happens to be one the locality will approve. So in a sense, an owner's land use remedies are potentially inexhaustible. n510 The developer can easily run out of money or patience pursuing them long before she exhausts all the possibilities.

The statute of limitations under the "exhaustion" doctrine is usually measured in days (30 to 90 depending on the action challenged), compared to the three to five years a plaintiff would ordinarily have in most states before a claim of inverse

condemnation would be barred by statute. If the developer needs to seek a variance, a conditional use permit, a rezoning, a tentative tract map approval, or a general plan amendment, and is denied one of these, the statute of limitations is the one that applies to the administrative or legislative action. n511 Ironically, developers have traditionally lobbied to reduce the time within which local government actions can be challenged. Until the time for challenge expires, no developer can safely rely on a permit. Now those short statutes of limitations are being applied against developers in "takings" challenges.

Another drawback of the "exhaustion" requirement is that the developer must usually bring the cause of action by requesting a writ of mandate. The challenger in an administrative mandamus action is usually not entitled to a new trial on the merits of the claim. The developer must present and rely on the administrative record developed by the agency reviewing the property owner's permit application.

The developer's problem is that the administrative record is usually made to persuade a local government to approve a particular project. Rarely will the developer consider the fact that the record has to be complete enough to support a takings claim if things go badly enough. To support a takings claim, the developer must show that there were no other options she could reasonably have chosen, and that the denial results in a total or near total diminution in value. It would try the patience of most local officials for the developer to introduce oral testimony on these points. The developer may be well advised to introduce written evidence. One way or another, the developer must figure out how to perfect the administrative record to support the takings claim under the exhaustion doctrine.

Exceptions to the exhaustion requirement exist. One is the "futility" doctrine, which exempts developers from pursuing "futile" administrative remedies. n512 The Virginia court, sensibly enough, excused a landowner from seeking a variance when the local government would have to gut or disregard the challenged ordinance entirely in order to grant the variance. Not all state courts would have waived the exhaustion of remedies requirement under these circumstances, especially in an "as applied" challenge. n513 Courts often dismiss cases for want of ripeness or exhaustion of remedies as a way to avoid reaching a decision on the merits of a claim. n514

Federal courts can also invoke the abstention doctrine and send a case back to a state court to decide state issues. Until state questions of law are decided, the federal court will postpone deciding federal issues. n515

Property owners like the ones in *James City County* sometimes avoid ripeness and exhaustion defenses by seeking declaratory judgments that local ordinances are unconstitutional. n516 While the U.S. Constitution limits federal courts to hearing "cases and controversies," most state courts are allowed to issue declaratory judgments concerning the legality of state or local laws before they are enforced.

Further, while challenges in federal court must be based on claimed violations of the U.S. Constitution or statutes, state court claims may include challenges based on state constitutions, state enabling legislation, or the construction of the language of the local ordinance or state statute, as well as on federal claims. *Dedication as a Condition to Zoning or Building Permit*. Dedications of land for streets, roads, and even parks and schools are commonly imposed on subdividers as a condition to their being allowed to subdivide their lots. Far less frequently are owner/builders required to dedicate land as a condition to receiving a building permit. The issuance of most building permits is regarded as a ministerial, not a discretionary act except for especially complicated projects. The owner who complies with all applicable zoning, subdivision, and building codes is presumed to have an absolute right to a building permit. Conditioning that right on a land dedication is therefore challengeable because it diminishes the owner's absolute entitlement to a building permit.

In areas that are already developed, local governments can't expect much future subdivision activity. So they won't be able to increase roadways through subdivision dedication requirements. Hence, many cities do condition the obtaining of a building permit on the applicant's dedicating land when the city's highway plan calls for a road widening abutting the applicant's site. This is the only way the city can get private funds to pay for the road widening, short of the

cumbersome and often politically contentious formation of a special assessment district.

In many states dedication requirements attached to building permits are permissible when the applicant's project itself generates the need for the extra road width. They have been stricken down when existing roads are already inadequate and the applicant's project isn't generating enough new traffic to justify the widening. n517

Architectural and Design Review. Typical zoning-for-aesthetic-purpose ordinances are those which restrict or prohibit billboards, regulate junkyards, create design review boards with the authority to prohibit private projects from being built without prior approval of the board. Currently, twelve states do not permit zoning based solely on aesthetics, while eleven states do. n518

States justify aesthetic zoning two ways: (1) protection of property values, and (2) under their police power to protect the health, safety, and *general welfare* of their citizens. n519 Most states which allow aesthetic zoning follow the seminal statement made by Justice Brennan in *Berman v. Parker*: "[t]he concept of public welfare is broad and inclusive. The values it represents are spiritual as well as physical, aesthetic as well as monetary. It is within the power of the legislature to determine that the community should be beautiful as well as healthy, spacious as well as clean, well-balanced as well as carefully patrolled." n520

A 1974 article in the *Urban Lawyer* reported that there were over 500 local governments with appearance or design review boards. n521 At least another 150 communities have historic district appearance controls. n522

Relatively few cases have reached the courts challenging design review probably because these laws affect mostly individuals wanting to build their own homes, and small businesses. They find compliance easier and cheaper than litigation even if they don't particularly like the changes design review boards impose. These laws may be vulnerable when the standard is "no excessive difference" or "compatibility" in neighborhoods with a great

variety of architectural styles. n523

Design review boards are labelled objectionable because:

> [They] exceed the proper role of government... Aesthetic zoning is based on subjective factors that defy attempts to find reasonable standards. A use of discretion and corruption are dangerous byproducts of such regulation. Finally, some courts have suggested that zoning based on aesthetics alone infringes on personal freedom. n524

The antagonists of aesthetic zoning also find billboard controls an infringement of free speech. n525

Opponents of aesthetic zoning also find the regulation of junkyards as eyesores to be arbitrary. The Arkansas Supreme court invalidated a junkyard regulation which prohibited five or more junk cars within one-half mile of a highway. n526

> By no stretch of the imagination could it be maintained that 5 such cars located one-half mile away from the highway, hidden behind a hill, a forest, a high fence, or in a building, could offend the aesthetic senses of a traveler along said highway, and certainly not his peace, health, or happiness. To that extent, then, it must be concluded that the Act is arbitrary and unreasonable, and bears no relation to the purpose intended to be achieved, which could only be to keep travelers from having to look at an unsightly junkyard. n527

Downzoning. Downzoning is any attempt to reduce the intensity or density of a landowner's entitlement. For example, the zoning ordinance might have allowed two units per acre, and could be amended so that the new minimum lot size is

increased to permit only one unit per acre. Or a site that was previously zoned for industrial purposes might be re-zoned for commercial or residential use only. Traditionally, downzonings carry a presumption of constitutionality with the burden of proof on the developer challenging its validity.

The Virginia courts have developed precise rules for judging the legitimacy of downzoning with two distinct standards, a permissive test if the downzoning is comprehensive, and a more restrictive test if the downzoning is piecemeal.

Comprehensive downzonings are sustained if evidence would lead reasonable persons to reach different conclusions, a "fairly debatable" standard. Piecemeal downzoning can be challenged by landowners making a prima facie case that there have been no changed circumstances to justify the zone change. Then the burden shifts to the local government which must prove that the original zoning was based on fraud or mistake or that circumstances have changed since the original ordinance was passed to justify the new one. n528

Other state courts have adopted strict guidelines for reviewing downzoning. Washington courts, for instance, have also made it more difficult to justify downzonings. In *Parkridge v. City of Seattle*, n529 the court held that downzonings were quasi-judicial actions, dropped the presumption of constitutionality, and placed the burden of proving the validity of the downzoning on the local government.

Developers dislike downzoning because it means fewer developable units. Legal challenges, seldom successful, are that the downzoning: (1) constitutes a "taking" of property; n530 (2) discriminates against a particular developer; n531 (3) constitutes exclusionary zoning; n532 (4) violates the developer's vested rights. n533

Involuntary Lot Mergers of Contiguous Parcels in Common Ownership. James City County contended that its building densities could be met by many owners who owned contiguous parcels if those parcels were merged. The Virginia Supreme court stated: "Since the restrictions are addressed to individual lots ... and since an owner of several lots (any of which he has a right to sell) cannot be deprived of the beneficial use of any individual lot, we fail to see how common ownership is constitutionally significant." n534

courts differ on whether the owner of two subdivided contiguous lots has a constitutional right to build one house on each of them when a zoning law increases the minimum lot size so that only one house could be constructed on the combined site. n535 Local officials may decide to "grandfather" them so that each remains a buildable parcel. Quite often, the language of the minimum lot size ordinance doesn't clearly address the question, and courts must construe the ordinance language. But if the local government enacts an ordinance clearly intending to "merge" contiguous lots in common ownership at the date of the new minimum lot size ordinance, is that merger constitutional? This question divides the courts. n536

§ 85.14(h) Flexible Zoning: Special Uses, Variances, Planned Unit Developments, and Zoning Amendments.

Early zoning advocates contemplated a once-and-for-all type of regulation that would have to be amended or varied only occasionally. They were completely mistaken. Zoning codes have had to be made flexible.

A provision is made in most zoning ordinances for variances to be granted in cases of unique and individual hardship. Variances were to be granted only when the application of uniform standards resulted in a particular owner suffering special losses so great, and unequal to what others experienced, as to justify a court labelling the application of the ordinance to that owner unconstitutional. n537 The applicant, under most variance provisions, must demonstrate that the ordinance causes unnecessary hardship, which can be relieved by a site-specific relaxation of standards in the ordinance.

The owner must demonstrate more than a small inconvenience, or even a substantial diminution in the value of the affected property. The owner's loss, if the ordinance is applied, must result in the owner not receiving a "reasonable return" on the property, or a loss of "all viable economic use," whichever standard the jurisdiction uses for measuring

whether a regulation is an unconstitutional taking of property.

The owner's hardship must be unique to the owner's site and cannot be the sort of problem that many owners in the neighborhood have with the ordinance. If the hardship is general, not unique, the remedy is to change the underlying ordinance, not to grant case-by-case exceptions through the variance procedure. For example, suppose the owner of a shop in a commercial zone can't comply with the on-site parking requirements economically because his site is so small it can't contain both a shop and even one off-site space. If all the properties in the area were subdivided into larger lots except this one, the owner may have a case for a variance. If the properties in the area are all too small to comply with the parking requirement, however, a variance would not be the appropriate remedy. A new and more realistic parking standard should be promulgated for the entire neighborhood.

The variance should not result in altering the "essential character of the locality." n538 If it did, the zoning board of adjustment, the planning commission, or the staff would be exercising their variance authority (which is administrative) to effect a major policy change only the elected legislative body should be making.

Studies of variance procedures throughout the country show that local boards of adjustment, planning commissions, and zoning administrators grant variances for applicants whose claims fall far short of constitutional legitimacy, as long as neighboring property owners don't object. Many legal scholars and some courts strongly disapprove the liberal granting of variances n539 because the procedure was designed to prevent unequal application of a uniform zoning law, and is often used to justify granting of special privilege to a property owner simply because the neighbors aren't vociferous. Other commentators, a distinct but articulate minority, point out that if no one objects to a variance perhaps granting it is in the public interest. n540 No harm, no foul.

Typically, a zoning ordinance lists the uses that would be allowed as of right in a zone. It might also list uses prohibited in each zone. A typical zoning ordinance has a third category of uses -- those which will be allowed only if the applicant obtains a special or conditional use permit. The applicant may have to spend several thousand dollars to process a conditional or special use permit application. The applicant will then have to meet the conditions the local government attaches to it.

The standard state zoning enabling act contemplated that there could be some land uses not necessarily but potentially incompatible in a given district if those uses weren't closely and specifically controlled.

(1) A hospital or church might be appropriate in a low-density residential zone, depending on how well it was buffered with landscaping, what the structure looked like, how loudly and often the sirens sounded or the church bells rang, how traffic was routed, and whether parking was adequate.

(2) Municipalities also use CUPs to regulate uses that, "although desirable in limited numbers, could have a detrimental effect on the community in large numbers." n541 Typical CUP-regulated uses of this type are: residential care facilities, private detention facilities, and large-scale daycare centers.

(3) The category of uses permitted only with special conditions has come to include many quite ordinary uses that could create "special" impacts. A fast food or convenience grocery store in a commercial zone might generate so much more traffic than other uses in that zone, as to justify requiring its promoters to obtain a conditional or special use permit. Through the CUP device, parking and access can be reviewed to be sure the heavy flow of traffic won't cause congestion or hardship for other business in the area. n542

(4) Sometimes, the special or conditional use technique is deployed to control ordinary developments in extraordinary places. A residential tract located in an ecologically sensitive area might be subject to a CUP requirement. Through site plan review the project developer might be restrained from developing those portions of the site that are of archeological significance or environmentally sensitive.

Gravel mining might be allowed in an agricultural zone if it can be done without disrupting farming. Mobile homes might be allowed in single-family residential zones if they meet comparable parking, open space, and design criteria.

All of these "conditional" uses, special exceptions, or special uses "require discretionary administrative approval ... pursuant to criteria specified in the zoning ordinance." n543 If the criteria in the ordinance are vague, CUPs issued under it may be unconstitutional.

Vagueness is especially troubling when the CUP process targets First Amendment protected uses like "adult" bookstores. The ordinance must specify precisely the harm which the decisionmakers expect to avoid in denying or conditioning CUPs that would regulate free speech. n544 Some CUP ordinances are written so as to require the board, commission, or staff to issue the permit on conditions assuring compatibility with adjoining uses. Sometimes the decisionmakers are given total discretion to approve, deny, or approve with conditions. The definition of vague phrases like "compatibility" and "adversely affect ... the existing neighborhood" are questions of law which courts, not local officials, get the last word in interpreting.

In one recent case a developer proposed to build four single-family houses in a hillside area considerably larger than the one-story bungalows in the neighborhood, with setbacks averaging 150 feet from the road where previously houses had been set back only 50 feet. The developer agreed to meet all the conditions the city planners had imposed to preserve sensitive plants, reduce fire hazards, avoid interference with neighbors' views, and prevent soil erosion. The planning commission approved the project. But the city council yielded to objecting neighbors and Sierra Club representatives who had argued the project was incompatible with the surrounding community and could damage rare plant species and wildlife habitat.

The appellate court set aside the city's denial by interpreting the phrase "adversely affected" in the city's ordinances as meaning: "to impact in a substantial, negative manner the economic value, habitability, or enjoyability of properties in the neighborhood."

> [T]he City essentially based its denial of the PIRD [planned infill residential development] permit upon the grounds the setbacks of the houses would be greater than is typical in the neighborhood and the houses would be arranged around a private road unlike most other houses in the neighborhood which are directly adjacent to 35th Street. Although such facts reveal Project differences from most of the existing neighborhood properties, they do not show the neighborhood or nearby properties would be "adversely affected."
>
> Nor does the record of the testimony and other evidence considered by the city council reveal any substantial evidence showing the Project would "adversely affect" the neighborhood or nearby properties. n545

A Texas city required a special use permit for group homes for the mentally retarded in R-3 (multiple family) zones. The U.S. Supreme court in *Cleburne v. Cleburne Living Center, Inc.*, n546 struck down this requirement as patently irrational. The city had denied the applicant a special use permit for a group home for 13 retarded men and women to be located in a multi-family zone. The house had four bedrooms and two baths. The group home complied with all state and federal regulations. The court saw no reason why this multi-family use had to be subjected to a discretionary land use review when other multi-family projects in the same zone did not -- except for the irrational fears of the neighbors about the mentally retarded.

The following excerpt from the court's opinion demonstrates a thorough "rationality" test being carried out. Originally, the promulgators of zoning thought that amendments to the ordinance would only take place in response to substantial

changes in political attitudes towards development. These could result from new demands for further growth or for greater environmental protection. In fact, many zoning amendments aren't initiated by public officials but by the owners of individual sites.

Zoning amendments can take two forms. An applicant may petition to rezone her site by amending the zoning map, changing the zone designation on the map of her site from, say, low-density residential to medium density residential.

Less commonly, but alternately, the applicant might petition for an amendment to the text of the zoning ordinance itself. Say the low-density category called R-1 allowed up to 1 unit per acre. A text amendment might provide thereafter in R-1 zones up to 2 units per acre would be allowed. By changing the text the applicant could double the allowable density of the site just as could be done by obtaining an amendment changing the zone applicable to the site from low- to medium-density residential, say from R-1 to R-2.

Under this type of ordinance the developer of a large tract may apply for a permit much like a conditional or special use permit, which allows greater flexibility in the way that permissible densities are distributed throughout the site. Suppose the land is in a zone which allows 2 units per acre. The site contains 400 acres. The developer may prefer some areas with "estate"-size parcels, two acres or larger, and others with four units per acre. As long as the total density for the tract doesn't exceed 800 units, the developer remains within the parameters set by the zoning ordinance. Most PUD ordinances allow this sort of density transfer from one portion of the site to another.

Some PUD ordinances will allow multi-family structures in otherwise single-family zones. Others do not. Some allow mixed use projects. Others don't.

Most PUD ordinances are available only to applicants whose tracts are greater than a prescribed minimum size, and many require that a certain substantial percentage of the site be dedicated as open space.

For developers contemplating a golf course, a lake, or the preservation of a steep hillside (as much to avoid the high costs of grading as for the aesthetics), a PUD ordinance is a welcome alternative to the use and density controls commonly found in standard zoning ordinances. They pay for this flexibility by undergoing a more complex process and sometimes risk even greater community opposition. They also must confront the possibility that even when their PUD is approved, the subdivision committee may later impose infrastructure conditions which make the project too expensive to build. For instance, the subdivision control administrators may not allow the developer to build smaller roads in the estate section of the tract than are permitted in the higher-density portions.

> Determining how much discretion should be allowed under PUD ordinances presents some difficult dilemmas. Open-ended review standards allow the reviewing agency an adequate scope of review to ensure good PUD design. Open-ended standards may also foreclose effective judicial review. If the basic zoning density is exclusionary, open-ended standards may also provide municipalities with an opportunity to use PUD review to exclude high-density development... Some commentators claim that PUD review is simply a pretext for municipal exclusion.
>
> Yet the adoption of precise PUD review standards may rigidly limit PUD design, and may be resisted by municipalities that want the greatest amount of discretion possible in the PUD review process. n547

California state law offers an alternative for rezoning a site to tailor its regulation to a particular development through the enactment of a specific plan. n548 A specific plan is a type of zoning ordinance which details the use, design, layout, and even the fees a developer must pay who builds within its boundaries. Ordinarily, such plans result from negotiations among the site owners, the developers, the local planners and elected officials, and the neighbors. Their

negotiated settlement becomes the basis for the language, maps, drawings, and other exhibits that constitute the specific plan. Of course, the plan may be amended. But its amendment is site-specific -- and won't change the zoning on sites that aren't part of the "deal."

A final aspect of zoning deserves mention, pre-zoning. If a city anticipates incorporating land previously outside city boundaries, it can adopt zoning laws ahead of annexation, so that the owners of the site to be annexed may have some assurance of the city's land use intentions for them. The developer through pre-zoning gets some assurance of how a community to which she might annex her site will zone it. Whether she can rely on the pre-zoning depends on the vesting rules discussed earlier.

§ 85.14(h)(1) Court Imposed Limits on Conditional Use Permits.

State courts have developed judicial limitations on the authority of local governments to condition CUPs. Here are some California court-imposed limits on authority of local governments to condition CUPs. n549

Conditional use permits run with the land. Hence, a city cannot condition a use permit on the requirement that it is nontransferable. Furthermore, A CUP does not expire automatically -- even when a permit condition provides for automatic termination. Notice and hearing are required, and the revocation must be reasonable. In addition, CUPs must be consistent with the general plan.

FOOTNOTES:

(n1)Footnote 437. The treatment of zoning in this chapter is skeletal compared with what you would see in a course dedicated entirely to land use controls. *See*, for instance, Daniel R. Mandelker & Roger A. Cunningham, Planning and Control of Land Development (3d ed. 1979).

REV. 1104, 1151 (1986).* Today courts in nuisance cases look to zoning ordinances for guidance. Most of the time the zoning ordinance codifies the land uses which predominate in the area. *See, e.g., Bove v. Donner-Hanna Coke Corp., 258 N.Y.S. 229 (1932).*

To forestall conflicts between the land use preferences embodied in local ordinances and those that might prevail in individual nuisance litigation, California has passed a statute protecting any land use that is properly zoned from being subject to an injunction as a nuisance. However, the landowner or user still may be liable for nuisance damages who utilizes "unnecessary and injurious" methods. Cal. Civ. Proc. Code § 731(a). *See Wilson v. Interlake Steel Co., 649 P.2d 292 (Cal. 1982). (n36)Footnote 472. Section 65852.2 of the Cal. Gov't Code authorized localities to adopt ordinances allowing "second units," or if they didn't, requiring them to grant conditional use permits for any second units meeting certain statutory standards. The legislature required the local government to grant permits even if parking were inadequate. In Wilson v. City of Laguna Beach, 92 Daily J. Dar 6398 (1992), the court ruled that state law required the city to validate illegally created Grannie flats:

> It is thus not surprising that cities, where finding a parking space can be the highlight of one's day, were less than enthusiastic about implementing the granny flat statute. This case arises out of the efforts of one such city, Laguna Beach, which, as the record shows, employed a number of artful bureaucratic devices to circumvent the statute in the time period before the adoption of its own (and, of course, somewhat stricter) ordinance -- the interval when, under the statute, they were required to grant the requested permits... But the fundamental value judgment at stake here -- a choice between housing and parking -- was made by the Legislature in favor of housing. It decided the benefits of the additional housing provided by second units outweigh the costs of exacerbating local parking problems. Accordingly, we must reverse and order the trial court to grant the writ.

Zoning, when introduced into America, was in its essential form a German import from which, almost miraculously, all the beneficent features had been removed... German practice, for example, permitted duplex housing in even the most restricted residential zone, and still does... [t]his feature has all but disappeared from American ordinances. The German practice subjected commercial uses in residential zones to performance standards: they were prohibited only if they emitted objectionable odors or were otherwise noxious. In order to foster ease of administration, and out of perhaps justified mistrust of the integrity of zoning administration, commercial uses were almost totally prohibited in American residential zones, with malign consequences.

George W. Liebmann, *The Modernization of Zoning: Enabling Act Revision as a Means to Reform, 23 Urban Law. 1, 9-10 (1991).*

(n40)Footnote 476. This problem was recognized quite early in the history of zoning. *See* Jacob L. Crane, Jr., Progress in the Science of Zoning in Annals of the Amer. Acad. Pol. Sci. 195-96 (1931) (Lack of jobs/housing proximity makes transportation "more difficult, irksome and expensive.").

(n41)Footnote 477. Robert Cervero, *Jobs-Housing Balancing and Regional Mobility*, 55 J. Am. Plan. Assoc. 136 (1989) (higher housing costs in San Francisco Bay Area suburban employment centers induced many workers to live four miles or more from their workplaces).

(n42)Footnote 478. Jeffrey S. Zax, *Compensation for Commutes in Labor and Housing Markets*, 30 J. Urb. Econ. 203-04 (1991). Constrained housing choices make it difficult for households to shift the burden of commuting expenses to employers. A better set of jobs/housing location choices could result if employers who elected to locate farther from areas where employees could find affordable housing were forced to "internalize" some of those costs by paying employees who have to commute.

(n59)Footnote 495. *See, e.g., Ross v. City of Yorba Linda, 2 Cal. Rptr. 2d 638 (1991).* The city denied a property owner the right to subdivide a 1.17-acre parcel into two lots because the area was in a zone requiring a minimum one-acre lot size. But only four of the 53 lots on the northern half of the block were an acre or larger. The court held that the denial of the property owner's request was arbitrary. The decision was based on a 1963 California Supreme court precedent.

(n60)Footnote 496. *See* Bosselman, 583-84 at n.132, describing *Beverly Bank v. Illinois Dep't of Transp., 579 N.E.2d 815 (Ill. 1991),* upholding restriction on construction in floodways. *But see Amoco Oil Co. v. Village of Schaumburg, 661 N.E.2d 380 (Ill. App. 1995)* (repeal of special use permit was not a reasonable exercise of village's legislative authority).

(n61)Footnote 497. *Agins v. City of Tiburon, 447 U.S. 255 (1980).*

(n62)Footnote 498. *Williamson County Regional Planning Comm'n v. Hamilton Bank, 473 U.S. 172 (1985); Citizens for Mount Vernon v. City of Mount Vernon, 947 P.2d 1208 (Wash. 1997)* (Objector's opposition to commercial development project before city council on grounds it was inconsistent with comprehensive plan, that proposal was not a neighborhood grocery store, and that proposal was inconsistent with residential zoning regulations surrounding site was sufficient to satisfy requirement of exhaustion of administrative remedies, despite objector's failure to specifically raise technical, legal argument of compatibility between R-2A zoning and commercial planned unit development (PUD); issue before council was not R-2A zoning, but city council's ability to approve commercial PUD in residential neighborhood and on property zoned residential); *Board of County Comm'rs of La Plata County v. Moga, 947 P.2d 1385 (Colo. 1997)* (property owner was required to exhaust remedies by appealing to county board of adjustments prior to the judicial review); *Tate Terrace Realty Investors, Inc. v. Currituck County, 488 S.E.2d 845 (N.C. App. 1997)* (property owner waived any right to object to competency of letter introduced at hearing on its application for permit, and the courts may not consider a matter not addressed by the county board); *Fehlhaber Corp. v. Village of Tequesta, 696 So. 2d 880 (Fla. App. 1997); Ward v. Board of County Comm'rs, Skagit County, 936 P.2d 42 (Wash. App. 1997); Macri v. King County, 110 F.3d 1496 (9th Cir. 1997); Drury Displays, Inc. v. City of Richmond Heights, 922 S.W.2d 793 (Mo. App. 1996); Martin v. Monroe County Plan Comm'n, 660 N.E.2d 1073 (Ind. App. 1996); Riley v. Boxa, 542 N.W.2d 519 (Iowa 1996)* (neither fee nor loss of rental income was sufficient to be considered irreparable injury justifying judicial intervention prior to property owner's exhaustion of administrative remedies).

But see Premium Standard Farms, Inc. v. Lincoln Twp. of Putnam County, 946 S.W.2d 234 (Mo. 1997) (Hog farming corporation challenging statutory authority of township to promulgate zoning regulations was not required to exhaust administrative remedies by pursuing appeal for variance permit to township board of zoning adjustment; issue presented was not dependent upon further development of record through administrative procedures, township had made clear that feed lots and lagoons such as corporation's fell within purview of its zoning regulations, and sole issue was whether statute prohibited township's regulations); *Smoke v. City of Seattle, 937 P.2d 186 (Wash. 1997)* (interpretation available under city land use code was not available administrative remedy for purposes of exhaustion requirement; owners had no duty to mitigate their injury through interpretation procedure); *Loulis v. Parrott, 695 A.2d 1040 (Conn. 1997)* (Exhaustion of administrative remedies doctrine does not preclude one party from bringing civil action to challenge alleged zoning violation by another party where that other party would be required to undertake, but has not yet undertaken, administrative proceedings concerning conduct underlying alleged violation); *Martin County v. Yusem, 690 So. 2d 1288 (Fla. 1997)* (Landowner was not required to exhaust administrative remedies prior to filing judicial action to challenge county's decision to deny requested amendments to comprehensive land use plan, which are legislative decisions that are subject to "fairly debatable" standard of review); *Reed v. City of Hoover, 695 So. 2d 34 (Ala. App. 1996)* (City filed complaint against owners of residential property, seeking injunction against construction and maintenance of fence on property; owners were not required to exhaust administrative remedies before counterclaiming against city).

(n69)Footnote 505. *Sinclair Oil Corp. v. County of Santa Barbara, 96 F.3d 401 (9th Cir. 1996)* (Under California law, when opposing land use regulation as applied to particular parcel, landowner must first utilize available administrative procedures before seeking recourse in state courts); Lucas v. South Carolina Coastal Council, No. 91-543 (S. Ct. 1992), *citing MacDonald, Sommer & Frates v. County of Yolo, 447 U.S. 340, 351 (1986).*

(n70)Footnote 506. James S. Burling, *Local Control of Mining Activities on Federal Lands, 27 Land & Water L. Rev. 309, 346 (1992).*

(n71)Footnote 507. *See* Morgan, *Exhaustion of Administrative Remedies as a Municipal Defense to Inverse Condemnation Actions*, 9-20 to 9-23.

(n72)Footnote 508. In *Agins v. Tiburon, 447 U.S. 255 (1980)*, the U.S. Supreme court overruled the California Supreme court's holding that all a property owner could ever achieve through litigation was another chance to obtain local land use compensation.

Permitted: Kucera v. Lizza, 59 Cal. App. 4th 1141 (Cal. App. 1997) (State may legitimately exercise its police powers to advance aesthetic values; preservation of views and sunlight was legitimate purpose for exercise of municipality?s police power); *Wallace v. Brown County Area Plan Comm'n, 689 N.E.2d 491 (Ind. App. 1998)* (Town's ban of neon signs was no more extensive than necessary to further its interests in safety and aesthetics, and thus complied with First Amendment's restrictions on government regulation of commercial speech, given town's small geographic area and other alternatives available to restaurant owners challenging ban, including use of grounded light signs); *Lamar Adver. of Mobile, Inc. v. City of Lakeland, Fla., 980 F. Supp. 1455 (M.D.Fla. 1997)* (Municipality may regulate or prohibit signs or billboards for aesthetic purposes, and may distinguish and treat differently on-premises and off-premises signs); *Peterson Outdoor Adver. v. City of Myrtle Beach, 489 S.E.2d 630 (S.C. 1997)* (City validly exercised its authority in enacting ordinance to prevent unsightly and inharmonious development); *Blockbuster Video, Inc. v. City of Overland Park, 948 P.2d 179 (Kan. App. 1997)* (city properly denied revised final development plan using continuous awning after city had rejected such awning and tenant had accepted approved final development plan with segmented awning but then asked for revised plan to accommodate its after-the-fact changes to approved plan. There is aesthetic and cultural side of municipal development which can be fostered within reasonable limits, and it includes regulation of redevelopment or new development for aesthetic reasons); *City of Nichols Hills v. Richardson, 939 P.2d 17 (Okla. Crim. App. 1997)* (Ordinance which prohibited parking pickup truck in driveway of private residence, forward of front wall of main building, between 2:00 a.m. and 5:00 a.m., but allowing parking at such time and location of "private passenger vehicle," no matter how ugly, was unreasonable and overbroad and could not be upheld as promoting aesthetics); *Wilson v. City of Louisville, 957 F. Supp. 948 (W.D. Ky. 1997)* (Ordinance reducing maximum allowable size of "small free standing signs" did not violate equal protection rights under State Constitution; decision to amend ordinance, to promote aesthetic and safety interests, was rational).

Aesthetics concern not permitted: AT&T Wireless PCS, Inc. v. City Council of City of Virginia Beach, 979 F. Supp. 416 (E.D. Va. 1997) (Under Virginia law, zoning authority cannot limit or restrict use which person may make of property under guise of police power, where exercise of such power would be based solely on aesthetic considerations); *Damurjian v. Board of Adjustment of the Twp. of Colts Neck, 690 A.2d 655 (N.J. Super. A.D. 1997)* (Although creation of desirable visual environment is statutorily specified zoning purpose, and municipalities have ample opportunity under Municipal Land Use Law (MLUL) to work towards that purpose, municipalities must do so with reasonable precision and without blanket delegation); *Desert Outdoor Adver., Inc. v. City of Moreno Valley, 103 F.3d 814 (9th Cir. 1996)* (City billboard ordinance could not be justified on aesthetic or safety grounds where ordinance lacked any statement of purpose concerning those interests and city provided no evidence that the ordinance promoted those interests); *Westinghouse Elec. Corp. v. Council of Twp. of Hampton, 686 A.2d 905 (Pa. Cmmw. 1996)* (complaints by

residents as to existing poor aesthetics of site were insufficient to defeat conditional use applied for by company).

(n99)Footnote 535. *See* Deborah A. Foppert, *Merger Ordinances: An Unconstitutional Taking of Property?, 26 Suffolk Univ. L. Rev. 365 (1992).*

(n100)Footnote 536. Annotation, *Construction and Application of Zoning Laws Setting Minimum Lot Size Requirements, 2 A.L.R.5TH 553 (1992). James City Council* argues against "merger." *But see Cook v. Haynes, 406 N.Y.S.2d 173 (1978).*

The owner bought a lot on which a single-family house could have been built but the frontage requirements were later increased to a size the lot didn't satisfy. No house had been built on the site so it wasn't entitled to the status of a legal nonconforming use. The site was being put to the same uses as other acreage in the area -- agricultural.

A California court condoned an involuntary merger in *Hill v. Manhattan Beach, 491 P.2d 369 (Cal. 1971).* But the legislature has proscribed this practice. CAL. GOV'T CODE § 66499.20 *et seq.* authorizes local governments to accept lot mergers, but prohibits "automatic merger where contiguous parcels under common ownership exist." *See* 59 Cal. Opp. Att'y Gen. 239 (1976). Unless the local government has complied with the notice, hearing, and recordation-of-notice-of-merger provisions in state law, no merger occurs. *See Stell v. Jay Hales Dev. Co., 11 Cal. App. 4th 1214,* 92 Daily J. 17090 (2d Dist. 1992).

(n101)Footnote 537. Cases hold that the landowner's hardship can't be "self-inflicted." New York and Pennsylvania courts have repeatedly held that purchasing property with knowledge of the zoning restriction gives rise to self-inflicted hardship undeserving of a variance. Daniel R. Mandelker & Roger A. Cunningham, Planning and Control of Land Development 416 (3d ed. 1979).

By California statute, general law cities can only grant variances for modifications of development standards such as height, bulk, and parking. Changes in use can't be sanctioned by variance except in charter cities.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.15

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.15 The Vested Rights Problem.

[Go To Supp]

Zoning may be our most common example of ex post facto laws ... it often appears that the only time a developer has a true "vested right" to develop is after he has literally established that right in concrete, the concrete of a building's foundation. n550

Developers are accustomed to checking out the land use entitlement situation before buying. But developers may not be able to rely on those rules. Local officials may change the rules and apply the new ones months later when the time comes to evaluate the developer's application. n551 They may apply further rule changes while the application is pending. Worse than that, even after the developer's application is approved and her subdivision map recorded, she could be subjected to additional changes. n552 The elusive point beyond which the owner's right to develop is no longer subject to new rules is called the "vesting" point.

May the developer rely on those rules being the ones that local officials will use in evaluating the application, n553 or be forced to submit to adverse changes in land use rules while the application is pending, or, worse, be subjected to changes enacted after the plan was approved and the subdivision map recorded? n554

Precedent can be found for every conceivable answer, sometimes within the same state. Even in California, there are decisions holding that the subdivider isn't protected from subsequent land use ordinance changes until a building permit is obtained and construction begins, n555 and cases holding that once the subdivider secures approval of a tentative map, the developer can proceed in reliance on it free of later-enacted ordinances or general plan amendments. n556

Why local legislators attempt to make retroactive changes in land use laws is readily understandable. Sometimes none or only a few of the neighbors of a development project will know when the developer has filed a request for a tentative subdivision map approval. Even those who receive notice of the subdivision hearing may not appreciate its significance. Neighbors may not become aroused until development is actually commenced at the site. By the time they see work at the site, the developer will probably have a "vested" right to proceed with the approved project. Even so, the developer may be vulnerable to political machinations at the behest of angry neighbors, forcing the developer to seek court relief

from retroactive laws.

The developer, on the other hand, would prefer to know for sure what she can do with the site before she commits herself to buying it. Admittedly, land use controls are complicated and demand vigilence. A developer must pay the price of constant vigilence or suffer the consequences. Why shouldn't the property owners seeking zoning protection do the same?

§ 85.15(a) Challenges to Retroactive Zoning: Estoppel and Vested Rights Theory.

The developer will challenge the application of new rules to her existing approved project on one or both of two legal theories: estoppel and vested rights.

Some commentators see these doctrines as quite distinct. Estoppel focuses on whether it would be inequitable to allow the government to repudiate its prior conduct; vested rights upon whether the owner acquired real property rights which are constitutionally protected and can't be taken away by governmental regulation without just compensation. n557

Some courts and commentators think the two doctrines are the same. n558 They see attempts to distinguish them as "predestined for failure ... hopelessly muddled by imprecise judicial application." n559 The vested rights claim is constitutionally based -- an assertion that the owner is protected by the U.S. or state constitutions. A claim based on the doctrine of estoppel is a petition for fair play.

Contrasting these two formulations of the anti-retroactivity rule, observe their ambiguities and the issues that must be addressed by the developer who invokes them.

§ 85.15(a)(1) Does Estoppel Apply to *Any* Act, Omission or Promise?

Must some local official have actually promised the developer freedom from later-enacted laws. Is an implied promise good enough? Usually, yes.

Suppose the local government is shrewdly attached as a statement to the tentative subdivision map approval: This approval is subject to such subsequent changes in fee schedules, dedication requirements, zoning and planning rules as the county or city enacts that are applicable to all properties similarly situated within the jurisdiction. Would this disclaimer be sufficient to rob the subdivider of the estoppel claim?

Must the official making the promise or doing the act be authorized to do it? Suppose an official issues a permit or renders an opinion contrary to existing law.

Once a project is built, the local governing body will issue a certificate of use or occupancy, signifying that the construction and use of the premises conform to local zoning. Occasionally a certificate will be issued illegally by a building department official who has misinterpreted or misapplied zoning, subdivision or planning rules. The error may be caught at once or may not become apparent for decades, when the error is finally established.

May the developer who relies on the illegal permit or erroneous opinion successfully claim estoppel? Generally, no. If estoppel "can too easily replace the legally established substantive and procedural requirements for obtaining permit," governments would be enabling private developers to operate "in violation of its own laws." n560 But every so often, not very often, the developer wins despite the fact that the underlying permit was invalid. n561

Local government officials may grant relief to property owners who were misled by public officials. Some city councils and courts will cut the property owner some slack if the error was not the owner's fault, and waiving the invalidity doesn't present an imminent threat to public health and safety. Publicity depicting the innocent owner's plight in having

relied on government-issued permits can help. Public sentiment usually works in the owner's favor to goad reluctant officials into making good on what the owner was told. At other times, the owner is just out of luck. n562

Suppose one government entity issues a valid permit or approves a subdivision map but another one passes an ordinance which drastically alters the conditions of development. Is agency or government B estopped by an implied promise made by agency or government A? When the agencies report to the same elected officials, usually yes. When different governments are involved, the answer is less clear. On estoppel grounds, strictly construed, B should not be bound by A's implied promise. On the "vested rights" theory, B might be bound by A's act once the developer's right to the project has vested.

§ 85.15(a)(2) Is Estoppel Based on "Reasonable Reliance" or on "Expenditure or Obligation So Substantial It Would Be Unjust Not to Enforce the Developer's Earlier Acquired Right Despite the Subsequent Change in Law"?

Just restating the second prong of the two formulations highlights the discrepancies in what courts might require. In some cases, developers lose their estoppel claims despite having invested tens or hundreds of thousands of dollars. Sometimes "reasonable reliance" isn't enough. A developer's reliance expenditures must be so substantial it would be conscience-shocking to allow local officials to apply a law retroactively against him.

Courts often disallow sums spent on "soft" costs (engineering studies, architectural fees, test borings), or on acquiring land before obtaining a permit. Other courts stamp these expenditures sufficient.

Suppose the developer knows that changes in local land use rules are being proposed. Is she lacking in good faith if she hurriedly begins construction while "red flags are flying," as one court put it, signaling imminent change? A tabulation of cases would show that the developer isn't required to stop in her tracks because local officials are considering rule changes. But a few decisions label the subdivider in bad faith who proceeds despite ordinance changes in the air.

§ 85.15(a)(3) The Public Interest and Nuisance Exceptions to Estoppel.

In several states estoppel isn't applied against the government if there is a substantial public health, safety, or welfare justification for applying a new rule retroactively. n563

Some judges would not apply the doctrine "'except in unusual cases where necessary to avoid grave or manifest unjustice' and with due consideration for any effect of an estoppel on the achievement of public policy goals." n564

Unlike estoppel, the claim to a "vested right" is essentially constitutional, based on the Fifth Amendment guarantee that private property may not be taken for public use without just compensation. This is why "nonconforming uses" are protected against later changes in zoning.

There is a public nuisance exception. The owner of a junkyard, gravel mining operation, or stockyard may have to yield to the interests of surrounding homeowners even when the "nuisance-like" use is zoned out retroactively.

§ 85.15(b) When Do "Vested" Rights "Vest"?

Clearly, a person who buys *half* an acre in an area *already zoned* with a *one*-acre minimum, can't legally obtain a building permit for a house. n565 Presumably, the person would have paid far less for the lot than if it had been large enough for entitlement to build a house on it. At best the person can hope to sell it to the owner of an adjoining parcel, or acquire enough additional land from a neighboring owner to meet the one-acre minimum. But if the person had built a house on a half-acre parcel when the zoning allowed it, the house can be kept in place even when the locality later enacts a minimum lot size of one acre. Single-family homes in residential zones aren't a public nuisance. The

homeowner's right to the house "vested" constitutionally -- and without regard to any promises or acts of local officials -- when it was built.

A "vested rights" dispute can arise if the property owner has a permit to build and hasn't yet begun construction. When, exactly, does the owner's right to build the house "vest" against the minimum lot size rule?

> [c]ourts have recognized that the law of vested rights must balance two conflicting interests: the public interest in lower construction costs that result from providing developers a fair degree of certainty about their investments; and the public interest in controlling pollution and congestion effectively. n566

Some states protect owners against subsequent changes in zoning or planning rules when they relied on and bought land on the advice of city planners that the project would be consistent with local land use objectives. n567 This is true only in a few states. In most places a prospective buyer who schmoozes with a planning director or city staffers gets no "vested rights" leverage out of it. It's just free advice. The schmoozing buyer is still at risk if the sources prove wrong.

In a few jurisdictions a property owner is protected from the time the owner obtains a favorable rezoning for the specific project. n568 Seldom is this enough. A rezoning is only a paper change. The developer who obtains it has spent, at most, "soft" costs -- legal, architectural, engineering fees -- no "hard" money in construction at the site.

Filing a building permit or subdivision map is sufficient for "vesting" in some states from the day the developer submits the completed subdivision application. n569 Several states, however, require a bit more than simply filing for a building permit, but less than actually getting one. These states, which include Florida, n570 Illinois n571 and New Hampshire, n572 require that the applicant have substantially changed his position in good faith reliance on the *probability* that the permit will be issued.

Getting a subdivision map approved is what it takes in other states. Recording the final approved map is the magic vesting moment in some places. Elsewhere, a developer isn't protected until she actually dedicates a street, sells a lot, or obtains a building permit pursuant to the approved map.

Finally, many states don't protect a developer against planning rule changes until the developer actually commences construction under a validly issued building permit. This is close to the "rule of irrevocable commitment" suggested by Cunningham and Kremer. n573 They would only protect owners who made an investment at the site that could not be recouped once the rules of the game were changed.

The property owner's vested right to develop isn't necessarily of infinite duration. A property owner who waits too long to utilize a vested right can find that the right has been divested. In one decided case, a developer was held entitled to rely on a special use permit but lost his right for failing to proceed "at a pace reasonably close to that contemplated at the time the project was approved." n574

§ 85.15(c) State Legislative Responses to the "Vested Rights" Problem.

Ten states now have specific legislation on vested rights authorizing development agreements as an option. n575 Here are examples of how several state legislatures have addressed the vested rights problem.

§ 85.15(c)(1) Colorado.

Colorado's "vested Property Rights" statute n576 allows a landowner to rely on the laws in effect at the time any "site specific development plan" is received. These include subdivision plat maps, planned unit developments, a conditional or special use plan, a development agreement, or other approval in which the type and intensity of use are specified.

The law protects the owner for three years from the date of.site-specific approval. Local governments can extend the time. By entering a development agreement, the developer can obtain a vested right under the agreement for more than three years.

The landowner isn't protected from retroactive laws if they are enacted to correct for hazards posing a serious threat to public health or safety and couldn't have been detected earlier, or if the laws are of general applicability like building codes.

§ 85.15(c)(2) California.

The California state legislature created two ways for developers to secure a right to rely on approved tentative maps free of subsequent adverse changes in the land use rules: vesting tentative maps and development agreements.

Under one California statute n577 the developer is entitled to label a map application as a "Vesting Tentative Map." The developer whose approved tentative subdivision map, whether a vesting one or not, must comply with the ordinances, policies and standards in effect when the developer *completes the application*. The subdivider is protected against later changes in land use rules.

From the time an application is completed, it can be months or years before it is finally approved. So it is quite significant that the day the *completed* application is filed becomes the "vesting" date under this statute. n578 Local officials may attempt to defer the completion date by insisting on additional information.

Other agencies like school districts aren't bound by the vesting rules that apply to the city or county granting the vesting tentative map. They can impose conditions based on rules or ordinances enacted after the completed tentative map was filed.

The local government may deny or condition a permit, approval, extension, or entitlement, regardless of the rules in effect on the filing date, "if a failure to do so would place the residents of the subdivision or the immediate community, or both, in a condition dangerous to their health or safety, or both." n579

If the subdivider gets a vesting tentative map, but needs other approvals or permits to effectuate the development, the local government agency may impose "reasonable conditions" on these, if those conditions were authorized by ordinances, policies and standards in place on the "vesting" date. n580

Also, the developer must meet state and federal rules in effect on the date her application is *approved* -- not the filing date.

The vesting tentative map may also be conditioned or denied "in order to comply with state or federal law." n581

The developer's right to rely on the rules in effect when she completes her application isn't perpetual: it is time-bound. She must meet the conditions of the tentative map act within prescribed time limits or lose her "vested" rights. n582

Some communities have tried to evade the certainty and notice purposes of the vesting tentative map statute by reserving the right to impose new and higher fees for capital facilities based on later additional studies. When the city of Modesto hiked its per-unit capital facilities fee from $2,654 to $4,890, a home builder challenged the city and won. The court reasoned that the statute was designed to give developers effective notice of the fees they could be expected to pay, and a "blank check" provision that didn't indicate the method of calculating increases clearly as to provide notice to developers frustrated by the statutory notice-and-certainty goals of the vesting tentative tract map act. n583

The difference between a vesting tentative map and a "plain vanilla" tentative map is the word "vesting" at the top of the

page. The developer decides whether to place that label on the map. It protects the developer against changes in the planning rules after the application has been submitted but before the developer has been able to obtain a valid building permit and spent substantial funds in good faith reliance on it.

Why doesn't every California developer take advantage of this statute and elect to inscribe "vesting" on every subdivision map she files? The statute makes processing a developer's vesting tentative map mandatory. But many local governments require far more detailed plans for "vesting tentative maps." They insist on seeing the precise locations of houses on lots, the heights, setbacks, and sometimes the elevations. All this detail is relevant because the local government won't be able to apply changes in its building and zoning standards retroactively. It will have to evaluate the detailed design of the project under its present rules and live with it. So cautious localities demand enough material from developers to evaluate just what those rules imply for the project the developer seeks to build.

If the developer later alters the configuration of lots or design of houses, the approved map will have to be amended. A developer who does that, may find that all but minor amendments occasion a new Environmental Impact Report (EIR) under the California Environmental Quality Act (CEQA) and the application of rules in effect at the time of the amendment. Hence, the vesting tentative map may not be useful to a developer whose project is large and who contemplates building it over a long time. Market fluctuations are more likely than not to push the developer into redesigns that invalidate the approved vesting tentative map.

"Lack of certainty," the California Legislature wisely declared, "can result in a waste of resources, escalate the cost of housing and other development to the consumer, and discourage investment." To protect developers against retroactive changes in zoning, subdivision, or building regulations, the California legislature was the first to authorize localities, at their discretion, to enter "development agreements" with developers, securing for developers the right to rely on the existing land use rules. n584 Ten states now have specific legislation on vested rights authorizing development agreements as an option. n585

A development agreement is a contract between the developer and the local government. The local government agrees to apply certain land use rules in exchange for the developer's promise to develop in a certain way. For developers, the main purpose of the development agreement is to protect against later changes in land use rules. n586

The development agreement has advantages to a developer besides the fact that she is protected against later changes in the locality's rules undermining hard-won entitlements. A developer can negotiate the right to have changes in the project judged by the rules in effect at the time the development agreement was first entered, and not by rules enacted later.

The developer can also obtain a longer time to complete the project with a development agreement than would have been available with a tentative subdivision map or a conditional use permit. Under California's Subdivision Map Act, approvals are good for two years with the possibility of a one-year extension. A development agreement may give the developer five, ten, even twenty years' protection against political mood changes. This is especially important in slow markets and for big multi-phased projects.

Local governments like development agreements because they can secure promises from the developer that they might not otherwise have the legal authority to demand. They can also exercise a great deal of site-specific control over the project. They are "relatively (legally) unrestricted" in what they can negotiate from the developer in the form of public facilities and amenities. n587 The local government can negotiate developer contributions for the maintenance of public parks or schools where only capital contributions could have been required, and then only to mitigate the impact of the developer's project on public facilities. The issues addressed in the various development agreement statutes provide guidance on matters that should be included in any development agreement, whether or not a particular matter is required under a specific statute. In general, the major issues addressed in development agreement statutes include: (1) the permitted parties to the agreement, (2) the process for approving or adopting the agreement, (3) the maximum

allowable duration of the agreement and any extensions, if allowed, (4) the items or issues which must be described or covered in the agreement, (5) the applicability of any changes in existing regulations, (6) a mechanism for periodic review of the development project and compliance with the agreed to conditions, (7) future amendment or cancellation of the terms of the agreement, and (8) mechanisms for enforcement of the agreement. The terms governing these issues in a development agreement should comply with any statutory requirements and establish a comprehensive and workable agreement between the local government, any relevant state agencies if permitted, and the developer. n588

Development agreements come with some risks and disadvantages. Lawyers disagree whether constitutionally the development agreement which one council or board signs can bind future elected officials to items generally classified as legislative (not administrative).

Legislative matters would include general ordinances imposing and changing development fees, zoning ordinances, and general plan categories and policies.

May a municipality agree not to enforce zoning, subdivision, and other police power regulations in the future? "On the one hand, government must keep its word [under the contracts clause]. On the other hand, a government cannot contract away the power to govern [reserved powers]. n589 Where do development agreements fall in the balancing of these two provisions?" n590

The agreement to "buy" certain amenities such as street improvements and recreation space from developers in exchange for development permits is analogous to the purchase of other goods and services. It would therefore be protected since the state may not "pass any ... law impairing the obligation of contract." This arguably prohibits the rescission of a development agreement because of an inconsistent new city ordinance, such as a zoning amendment. The possibly illegal consideration given for these purchases, however, might make the contract unenforceable. Under the reserved powers doctrine, a government may not agree to waive its police powers in the future.

Another rationale to counter the unlawful delegation agreement in states which have authorized localities to enter development agreements argument is that the state legislature has retained its own police power authority. The state has merely delegated some of its police power authority to cities and counties when they enter development agreements.

This position takes as its starting point such expressions as this one:

> The [state] legislature is possessed of the entire police power of the state, except as its power is limited by the provisions of the constitution'... The determination as to what portion, if any, of a state's police power shall be delegated to its lesser political entities is left to its people through constitutional processes or through their legislatures. n591

The snare for developers relying on this argument is that it implies that while a local government might be bound by the development agreement it enters with a developer, the state legislature might be able to renounce that agreement under a theory of retained powers.

Another self-contained limit in development agreements is obvious but nonetheless important. They only bind the government enacting them. Projects that require approval from several governmental agencies remain at risk. These include projects needing a wetland permit to dredge or fill from the U.S. Army Corps of Engineers, or a project affecting an endangered species. One answer here is a multi-party development agreement. n592

Many developers have rushed to friendly local governments when no-growth advocates were pushing anti-development initiatives to a vote. Developers hoping to conclude development agreements before the planning rules get tightened are often charged dearly in the form of fees and assessments for a range of public improvements from new freeway construction to daycare centers. n593 But they agree to pay the price in order to lock in local government approvals for

long-term development projects.

Developers may be able to collar the demands of local governments when they sit down to hammer out the terms of a development agreement by first securing an approved subdivision map or vesting tentative map. Then the developer already has a right to subdivide and sell. She has perfected an entitlement baseline below which she can't be asked to stoop.

Another disadvantage to development agreements is that they are time-consuming to negotiate. For the developer, this translates into legal fees. For the local government officials, it may involve the expenditure of political capital if they are accused of granting special privileges.

"The states of California, Hawaii, Nevada, and Florida have led in developing detailed legislation that authorized the use of development agreements...." n594 The Hawaii statute differs from the California statute in two key ways. First, Hawaiian development agreements are administrative acts, precluding repeal by referendum. n595 Second, subsequent Hawaiian laws may be applied if necessary to rectify a condition "perilous" to residents' health and safety. n596

Florida's statutory law is the most demanding of developers. The agreement must detail who will provide public facilities and when those facilities will be completed. n597 The statute details which subsequent government actions can unilaterally modify agreements. n598 Florida also limits the duration of a development agreement to five years. n599 Commentators in other states advise local governments to enter into development agreements, which may give the local governments greater powers in regulating private property rights than they would enjoy constitutionally. n600

The issues addressed in the various development agreement statutes provide guidance on matters that should be included in any development agreement, whether or not a particular matter is required under a specific statute. In general, the major issues addressed in development agreement statutes include: (1) the permitted parties to the agreement, (2) the process for approving or adopting the agreement, (3) the maximum allowable duration of the agreement and any extensions, if allowed, (4) the items or issues which must be described or covered in the agreement, (5) the applicability of any changes in existing regulations, (6) a mechanism for periodic review of the development project and compliance with the agreed to conditions, (7) future amendment or cancellation of the terms of the agreement, and (8) mechanisms for enforcement of the agreement. The terms governing these issues in a development agreement should comply with any statutory requirements and establish a comprehensive and workable agreement between the local government, any relevant state agencies, if permitted, and the developer. n601

(n13)Footnote 562. *See, e.g., Marcus v. Village of Marmaroneck, 28 N.E.2d 856, 859 (N.Y. 1940).* One of my colleagues doing a house remodelling was given advice at a city planning department counter. He relied on it. Later, a building inspector made him demolish what he had built in reliance. When he protested to a lawyer in the city's planning department, she asked who had given the advice. He told her. "Oh," the lawyer replied, "there's nothing I can

do for you. That lost soul is so often wrong interpreting the codes that if we excused everyone who relied on her opinions, our zoning code would be nearly unenforceable."

(n20)Footnote 569. *See, e.g.,* Vermont: *Smith v. Winhall Planning Comm'n, 436 A.2d 760 (1981).*

(n21)Footnote 570. *Good v. United States, 39 Fed Cl. 81 (Fed. Cl. 1997)* (Under Florida statutory and common law, developer may obtain vested right to pursue particular development plan where developer can show that he or she has substantially changed position, in good faith reliance, upon some act or omission of government, such that it would be highly inequitable to destroy acquired rights).

But see Stokes v. Board of Permit Appeals, 52 Cal. App. 4th 1348 (Cal. App. 1997) (Owner of abandoned bathhouse did not rely in good faith on building permits when he spent almost $400,000 in improvements to bathhouse, so as to give him vested right to complete construction, where owner misrepresented that property was currently being used as bathhouse when he applied for building permit, instead of disclosing it was vacant, and city was misled into issuing building permits based solely on that misrepresentation).

(n22)Footnote 571. In *Pioneer Trust & Sav. Bank v. County of Cook, 377 N.E.2d 21 (Ill. 1978),* the plaintiff was held to have a vested right in a retirement complex based on statements made to the plaintiff by the zoning administrator and zoning land planner. The plaintiff spent $65,000 for retirement prototype units which the county had given him permits to build, $7,000 for trips to view other retirement developments, at least $29,000 for an architect, $10,250 for a structural engineer, $10,000 for mechanical and electrical engineers, $2,300 for soil and water tests, and a $2,000 deposit for the building permit. The permit was never issued before the county downzoned the property to eight units per acre instead of the 17.4 which had been previously allowed. The Supreme court of Illinois ordered the county to issue the plaintiff a permit for his retirement project based on the above expenditures and advice the local planning staff had given him.

(n23)Footnote 572. The New Hampshire rule was applied in *Henry & Murphy, Inc. v. Town of Allenstown, 424 A.2d 1132 (N.H. 1980).* Subdividers had recorded a subdivision plan and sold 34 of 50 lots, each of which was 10,000 square feet, before the town downzoned the area by requiring a minimum lot size of 40,000 square feet.

The court held that the subdivider had a vested right to sell the remaining 16 lots. The value of the 16 10,000 sq. ft., each at $4000, was a total of $64,000, twice what the land would have been worth as four 40,000 sq. ft. lots (at $8,000 each) -- $32,00). Moreover, the larger lots might have been difficult to market since the subdivision contained homes of

modest size.

However, the court did allow that portion of the ordinance to apply "retroactively" to the still unimproved lots which restricted their use to one- and two-family dwellings. Previously, multiple-family dwellings would have been allowed.

A developer was held to have lacked a vested right in *Socha v. City of Manchester, 490 A.2d 794 (N.H. 1988).* When he bought his lot in Manchester, it was zoned to permit residential construction of unlimited height. On September 6, 1983, the city council passed a motion to begin proceedings to rezone the area to prohibit high-rise construction. Two days later plaintiff applied for a foundation permit to construct a high-rise apartment building. On the following day notice of public hearings of the proposed rezoning was published. The building commissioner notified plaintiff in writing that construction permits inconsistent with the proposed ordinance would not be issued.

The plaintiff never got a building permit for a superstructure. The court held that the plaintiff failed to demonstrate any detrimental reliance on the foundation permit, and therefore had no vested right in the proposed construction.

(n40)Footnote 589. *See, e.g., P.C.B. Partnership v. City of Largo, 549 So. 2d 738, 741 (Fla. App. 2d Dist. 1989).* A city allegedly repudiated a contract with a developer to make certain traffic improvements along with a sale to the developers of downtown land the city owned. The land sale was completed, but the city council changed its mind about making the traffic improvements. In a developer's suit for specific performance of the agreement, the court held for the city.

The agreement purports to restrict the City's ability to decide whether to build a road, install a traffic device and permit the development of a parking lot and a storm drain. The City does not have the authority to enter into such a contract, which effectively contracts away the exercise of its police powers.

The court did indicate, though, that the lender might have a cause of action for rescission or fraud if some of the purchase price for the lots was consideration for the traffic improvements.

See also Rockingham Square Shopping Center, Inc. v. Town of Madison, 262 S.E.2d 705 (N.C. 1980) (town agreed to construct access road as inducement for shopping center development; town reneged; developer sued and lost; town's promise held "ultra vires").

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.16

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.16 The General or Comprehensive Plan.

[Go To Supp]

§ 85.16(a) Functions of the General or Comprehensive Plan.

The idea behind a general or comprehensive plan is that local governments should have some articulated reasons for saying yes or no to applications for development. Advocates of comprehensive planning don't believe a simple colored map, designating some areas for houses, some for shops, etc., is enough. The community ought to examine the impact of future growth on roads, schools, fire and police services. "If probable funding falls short of meeting identified needs, [the comprehensive plan should include] a discussion of how additional funding will be raised, or how land use assumptions will be reassessed to ensure that level of service standards will be met." n602

Planning ought to address issues of housing affordability, of making jobs and shops accessible to where people live, of open space for recreation and preservation, and of community design and appearance. The plan might also address the need to encourage economic development. Language in a general plan gives local residents a clue about what sorts of land uses could be expected in future years. It gives developers an idea of what proposals might be acceptable. It gives courts a standard for judging the fairness of individual planning outcomes. It offers a yardstick against which to measure individual planning decisions against alleged corruption or bribery.

Of course, certain things would have to be true for a general or comprehensive plan to accomplish all these objectives. First, each locality would have to be required or mandated to have such a plan possibly as a condition to its exercising zoning or subdivision controls.

Second, all elements of the planning documents would have to be internally consistent.

Third, the plans would have to be sufficiently specific so that individual applications could be measured against the plan's policies, objectives, and mapped land use designations. Cliches, vague promises, and contradictions would have to be avoided.

Fourth, the plan would have to apply both to public and private development projects to assure that standards for public facilities were observed no matter what kind of developer proposed to construct an office building, school, housing

project, or shopping mall.

Fifth, the plan would have to articulate all potentially relevant aspects of subsequent planning choices. There could be no "wild cards" pulled out by public officials at the last minute to justify individual zoning decisions that appeared contrary to stated planning goals.

Sixth, the plan would have to be adopted by the city council or board of supervisors, not just the planning commission or a staff committee, since it would be the reference point for future legislation.

Even if all these conditions can't be realized, comprehensive plans can be useful when they reflect a clear community consensus about where and how development ought to take place.

§ 85.16(b) Status of State Planning Requirements in the U.S.

All states have enabling legislation for planning. A few states have legislated specific standards for the plans of local governments. n603 Some state courts have indicated that they would show greater deference to local zoning decisions that were consistent with locally enacted plans. n604 But very few states have gone so far as to require that cities and counties adopt general or comprehensive plans. Most state courts faced with the issue have ruled that when state enabling laws refer to a comprehensive plan, the zoning ordinance itself may serve as that plan. No independent document is necessary.

The comprehensive plan "usually only represents a writer's or judge's assessment that the zoning is systematic and rational -- in other words, that the zoning itself, considered in its whole and in its parts, evidences a comprehensive plan. n605

Among the few states requiring a separate comprehensive or general plan as a condition to exercising zoning and subdivision controls are Arizona, n606 California, n607 Florida, n608 Georgia, n609 Hawaii, n610 Maine, n611 Oregon, n612 Rhode Island, n613 and Washington. n614 In these states a general plan serves as "a constitution for all future development." n615

A general plan must address the issues associated with a jurisdiction's physical development. Such issues concern the general locations, appropriate mixtures, timing and extent of land uses and supporting infrastructure. They pertain to the physical nature of a jurisdiction's environment. The broad scope of physical development issues ranges from appropriate areas for building factories to open space for preserving scenic vistas. n616

State laws list the elements of the plan that are required and others that are permitted. Almost always, the plan must delineate standards for land use, transportation and community facilities.

§ 85.16(c) Concurrency Requirements: Matching Development Approvals to Capital Improvements.

Florida's statute is unique in its insistence that "public facilities and services needed to support development shall be available concurrent with the impacts of such development." n617 That public facilities be in place "concurrent" with the impacts of new development gave Florida's state planning law its nickname, "concurrency." Florida is the first state to attempt integrating local capital improvements with local land development regulation. n618

Development orders and permits of local governments in Florida can only be issued in accordance with levels of service established by local governments, aided by state guidelines. These are spelled out in local facilities plans, part of a comprehensive plan each of Florida's 417 local governments must submit to the Florida Department of Community Affairs for review under Florida's Growth Management Act. The facilities for which acceptable levels of service need to be assured include roads and mass transit, sewers, solid waste, drainage, potable water, and parks. The most difficult of

these are transportation facilities.

> The construction of transportation facilities is costly and time-consuming, existing transportation deficiencies are substantial, and local governments cannot control the volume of traffic on roads that do not stop at jurisdictional boundary lines. Establishing appropriate levels of service for traffic is and has been a matter of great controversy, and the state and local governments have vigorously disagreed over whether the responsibility for setting those standards and funding transportation should be a state or local responsibility. n619

Critics point out that concurrency without transportation funding could mean "no growth." Business and development interests are apprehensive because state and local tax revenues aren't sufficient to meet public facilities needs. There is strong anti-tax sentiment, especially among Florida's retirees who moved there as much for the shelter against high state taxes as for the tropical climate. Critics predict massive job losses in construction, retail and wholE.S.A.le trade, finance, insurance and real estate as concurrency causes a substantial reduction in Florida homebuilding. n620

Tom Pelham, the first administrator of the law, explains the challenge: "The question is whether concurrency will be a mechanism for raising infrastructure funds or a vehicle for no-growth movements." n621

Under "conventional" growth management systems, developers only have to pay their fair share for services and facilities attributable to their development; they needn't worry about existing deficiencies in levels of service. Some Florida developers see denials based on these preexisting and pervasive shortcomings as a "takings." n622

An evaluation of the Florida law isn't yet feasible. The Florida law comes on line at a time when development has slowed. Many projects in the planning pipeline were exempted. Moreover, projects with regional impacts are subject to a special statewide approval process and are exempt from "concurrency." n623

§ 85.16(d) Consistency Requirements.

State law in Arizona, n624 California n625 and Florida n626 mandate that all local zoning and subdivision decisions be consistent with the locally adopted plans. n627

§ 85.16(e) What Consistency Means.

Both the City and the County of Los Angeles were required to "downzone" (reduce the allowable densities) in residential areas because their planned population projections exceeded by very large margins the amount of land they had zoned, potentially, for housing. This downzoning was expected to result in a significant reduction of land developable for affordable housing. n628

Suppose a city's present population is 70,000. Based on past growth rates and demographics (birth and death rates), its general plan projects a population of 100,000 for the city by the year 2000. But the city has zoned enough land residential to accommodate a population of 175,000. This city is vulnerable to a consistency lawsuit which would force the city to eliminate some of its potential residential capacity. n629

It isn't always clear, though, how far courts will go in making sure all land use decisions are consistent with the general plan. Say the land use element of a general plan marks a particular site for "low-density" residential and the land is zoned that way -- low-density residential. A developer seeks a zone change for a shopping center or high-density apartments. Such a change would be inconsistent with the general plan. Probably the city could be stopped from changing the zoning to an inconsistent use without also amending the general plan to cure the inconsistency.

But suppose a developer's site had been zoned for a shopping center long before the general plan marked out the site for

low-density residential. The developer sought and got a building permit for a shopping center. Building department officials saw that the zoning was right for a shopping center but neglected to observe the inconsistency between the general plan and the shopping center. Under similar circumstances a California court ruled that the developer could keep his building permit over the neighbors' vigorous protest. The court's decision was based on its interpretation of what situations the state legislature intended to reach by its consistency requirement. n630

Plan language expressing general goals and policies allows local governments considerable discretion. The general plan for the City of San Jose, for instance, called for city streets to operate at a Level of Service (LOS) during peak travel periods of D. LOS is a traffic engineer's qualitative measure of "the operating conditions within a traffic system and how these conditions are perceived by drivers and passengers." n631 Six levels of service have been established, with A the best and F the worst in terms of motorist satisfaction.

A property developer in San Jose sought to amend the general plan for his site from industrial-only to mixed use, to allow some shops and housing. The traffic engineers identified one intersection where the proposed change in land use would cause the LOS to drop from D to E. An objector argued the general plan amendment sought by the developer would contravene the traffic flow goals of the general plan. In upholding the plan amendment for the mixed use zone, a California appellate court wrote:

> This contention is patently unmeritorious on its face. [T]he ... provision is a goal and policy rather than a strict standard. It therefore does not follow that an amendment ... which does not strictly conform to that policy is invalid for that reason. n632

The court's work was made easier by the city planning staff. The staff had determined that certain road improvements at the crowded intersection would mitigate congestion. They had recommended: "restriping the north approach to have two left turn lanes, one through lane, and one shared through/right turn lane, and by adding an additional left turn lane at the south approach." The improvements would be funded by the developer as part of the construction project.

Occasionally, courts have even allowed cities in "consistency" states to approve rezonings with development standards that contradicted those in the specific general plan. The Arizona Supreme court upheld a rezoning in downtown Phoenix for a 500-foot-tall building even though the plan had set a 250-foot height limit.

This rezoning did deviate from the general plan in that it surpassed by a large margin the 250-foot height restriction. The plan, however, has other goals for that area. The plan does provide that gradient areas where this proposed building lies will have some concentrations of land use in sub cores. Also there is a provision for commercial development of the Central Avenue corridor. The building height restrictions are only stated in precatory language. Additionally, the plan provided for open space in the gradient, encouragement of landscaping, areas for people to enjoy and commercial development. The city council had before it evidence that this building would be commercially beneficial, would provide open spaces and recreational areas, landscaping, etc. The council also heard testimony that the developer could build two 20-story buildings which would leave less open space and less potential recreational areas. In viewing the above evidence, we cannot say the city council was wrong in finding the rezoning in basic harmony with the general plan. We do not need specific findings by the council to come to this conclusion since we have viewed the same evidence the council viewed. Certainly written findings would be preferable, but they are not mandatory. n633

In this case the developer got more than the plan promised. But can a property owner or developer always count on getting at least as great a density as was promised in the plan?

Judges aren't consistent in reviewing cases brought by property owners when local governments deny rezoning and development approvals seemingly promised in general plans. Suppose the general plan calls for a site to be developed high-density residential, but the zoning for the site only allows low-density residential. To make the two consistent the zoning could be amended to allow the greater density promised in the general plan; or the plan could be amended to

reduce the promised density. California courts have usually thought that zoning should be made to follow the general plan like the tail of a dog. n634

The Mira Development Corporation tried to obtain an increase in its zoning density consistent with the plan. But the San Diego city council refused, after neighbors vigorously objected at a public hearing before the city council, contending that their area already was overcrowded with too many apartments. In *Mira Development Corp. v. City of San Diego*, n635 a court sustained the city's refusal to rezone 11 acres from R1-10,000 (1 house on 10,000 square feet, 4 units per acre) to R-3,000 (15 units per acre), even though the general plan designated this area for high-density rental housing.

Another owner did much better when he was refused a subdivision map approval that he had submitted, which was consistent with the local plan. In *Herrington v. Sonoma County*, n636 the owner wanted to subdivide undeveloped agricultural acreage. He was awarded damages against the county when it denied him the right to develop a 32-unit subdivision where the general plan would have allowed up to 35 units.

§ 85.16(f) The Case Against Consistency Requirements.

Why is consistency or concurrency, and even mandated planning, so uncommon among the several states? Here are some possible answers:

(1) "If a master plan is vague, easily changeable, or packed with opportunities for the use of flexibility devices, then virtually any land use regulation can 'conform' to the plan." n637

(2) In the absence of concrete situations, and a particular proposal with identifiable impacts, plan designations don't receive the close attention a specific development proposal can attract. Elected officials, planning commissioners, and neighborhood associations aren't much interested in general goals. They awaken only when they think they can almost hear the bulldozer at work nearby. When the owner is ready to build according to a plan enacted years earlier, the shift in power between pro- and anti-growth factions may have changed. What was once politically acceptable may no longer be.

(3) There is no dominant ideology or philosophy behind land use planning to provide some "value" core for deciding individual cases. Also, there do not appear to be unique "correct ways of using, managing and regulating land use and development. Rather there is an extraordinary and rich range of approaches. Ideologues and technocrats will doubtless be very disappointed by this conclusion...." n638

(4) Remedies for noncompliance can be counterproductive. In California, for instance, a housing element is among the required elements of a general plan. n639 The state statutes call for each locality to plan housing affordable to all income groups. Many cities don't have housing elements. n640 Some have housing elements that don't meet state guidelines. n641 There is no state enforcement or penalty for noncompliance, so courts have created one. All development proposals are put "on hold" until the city adopts a housing element according to state standards. n642 This means that a "no growth"-motivated band of local officials can obtain their goal of no new development simply by not having a housing element.

(5) Comprehensive land use planning requires information about future populations, market demands, ecological linkages, funding for public facilities, usage patterns for those facilities, and a host of other variables that can't be forecast with an accuracy that would justify the cost and effort involved.

(6) "Consistency" planning actually increases the temptations for corruption and bribery by increasing the red tape developers must unwind in order to build.

(7) Some advocates of "consistency" planning believe it will remove discretion from inherently capricious local officials. However, at least one of those advocates, rethinking the matter, concluded that planning doesn't lead to consensus in advance of actual cases. It simply moves the negotiating stage forward in time. To the extent fewer players participate in this earlier stage when the general plan is evolved, and to the extent standards for making decisions at that stage are vague, opportunities for capriciousness are actually increased, not decreased, by planning consistency requirements. n643

(8) The owners of undeveloped property object. They say consistency requirements result in their sites being downzoned, thus reducing land values.

(9) Developers also object. They say downzonings reduce the number of sites potentially available for development, increasing the price of the remaining ones.

(10) Once enacted, these requirements are difficult to remove. There is a comforting ring to phrases like "consistency" and goals like "affordable housing" or "environmentally sound" land use decisions. Persuading people that these laws are counterproductive is difficult.

§ 85.16(g) The Consistency Bottom Line.

Whether you find the arguments for comprehensive planning persuasive, or the case against consistency compelling, one thing is certain for those who seek to develop in Florida, California, Oregon, Arizona, and other states that adopt planning consistency or planning concurrency: they must study with care all the provisions of the local general plan that could affect their project's approval. If they find aspects of the plan unfavorable to them, they will have to consider a plan amendment. This is not quick, cheap, or easy, but in many cases it is necessary.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.17

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.17 Initiatives and Referenda.

[Go To Supp]

§ 85.17(a) Definitions; Variations.

The initiative process refers to the adoption of legislation by direct popular vote. The referendum is a process for rejecting, by direct vote, the ordinances a city council or statutes the state legislature had passed.

Some initiative laws give the legislative body first crack, and if it votes "yes," the initiative never gets to the ballot box. Some referenda are advisory only, others mandatory. The legislative body in some states may propose a referendum. An initiative may substitute for a referendum when the time for filing a referendum has passed or more signatures are required than for an initiative. If a legislative body approves a zone amendment some voters would like to reverse, they can mount an initiative campaign to repeal the amendment and restore the prior zoning.

§ 85.17(b) Purposes and Legality.

The dominant political forces behind initiatives and referenda shift over time. States at the turn of the century began adopting constitutional and statutory authorizations for initiative and referendum to "return government to the people," and to loosen the perceived domination of state legislatures by big business, special interest groups and their lobbyists. In California the Southern Pacific Railway was a target of populist reforms which included the initiative and referendum.

The tax revolt of the late 1970s got its start with an initiative -- California's Proposition 13. But its use a decade earlier bordered on the invidious. It was widely used to stop civil rights and fair housing legislation. Akron, Ohio passed a fair housing ordinance to bar racial discrimination in housing sales or rentals. When a citizen filed a lawsuit challenging the fair housing law, the council added a provision to its city charter requiring an advisory referendum on any future fair housing or anti-discrimination laws. The U.S. Supreme court struck down this charter provision because it embodied "an explicitly racial classification treating racial housing matters differently from other racial and housing matters." n644

Referenda with more subtle racist overtones darkened the legal landscape in the late 1960s-early 1970s but the U.S.

Supreme court, after *Hunter*, validated several because they touched on matters of race only tangentially. California voters added a provision to the state constitution requiring local voter approval of all public housing projects. Doubtless there were some voters who equated "public" housing with "minority" housing. That connection between racial or ethnic animus and the referendum wasn't close enough. The U.S. Supreme court in *James v. Valtierra* n645 upheld the public housing referendum requirement. The referendum applied to all low-rent public housing projects, not just ones occupied by a racial minority, and there was no support in the record for "any claim that a law seemingly neutral on its face is in fact aimed at a racial minority." n646

In later cases, litigants succeeded in setting aside local zoning decisions opposing subsidized housing projects as violations of the Fair Housing Act. n647 But civil rights activists lost in *City of Eastlake v. Forest City Enterprises, Inc.* n648 A developer sought to rezone eight acres from "light industrial" to multi-family housing for a subsidized housing project. As the rezoning application was moving from the planning commission, which voted yes, to the city council, the charter was amended by initiative to require 55% voter approval of all rezonings. The developer argued that delegating the zoning power to voters in this way violated procedural due process standards, since no standards existed to prevent the electorate from voting arbitrarily. The court decided against the developer:

> If respondent considers the referendum result itself to be unreasonable, the zoning restriction is open to challenge in state court, where the scope of the state remedy available to respondent would be determined as a matter of state law, as well as under Fourteenth Amendment standards. That being so, nothing more is required by the Constitution.
>
> * * *
>
> As a basic instrument of democratic government, the referendum process does not, in itself, violate the Due Process Clause of the Fourteenth Amendment when applied to a rezoning ordinance. n649

Starting in the early 1970s local initiatives and referenda were common weapons used by environmental advocates and neighborhood defenders in their battle against new development. There was little point in raising federal constitutional challenges after *Eastlake*, but numerous state law challenges succeeded. n650

"Perhaps the most conspicuous use of land-use initiatives in California has been to enact some form of local growth management." n651 Some of these measures took the form of prohibitions against new development until adequate public services or facilities were in place (usually transportation and traffic facilities).

These have run into judicial barriers when voters attempted to penalize developers for past shortfalls in public facilities instead of simply requiring developers to make a "fair share" contribution to prevent local traffic or school overcrowding from getting worse with new development. Some measures impose annual limits on new construction -- "caps" on the number of new houses or the volume of office space that could be built in any year in the locality. These have generally been upheld, although projects in the planning pipeline have sometimes won exemptions in court on "estoppel" grounds. Some initiatives require that no future general plan amendment, public works expenditures or development beyond a certain size or of a certain type (e.g., hotel) be allowed without a direct vote of the people. All of these have been or are being challenged in court. The initiative opponents have done best in court when they could find some basis for arguing that the state legislature had preempted voters from deciding the issue at stake, and had empowered only the local legislative body to enact laws on that subject. n652 The most important of these are the state's planning consistency rules.

Don Collin, general counsel of California's Building Industry Association, offers this analysis: "No growth" initiatives often fail because they are, in effect, zoning ordinances inconsistent with local general plans. Attempts to adopt general plans by initiative fail because the complexities imposed by state law on their enactment can't be met by an initiative process. The result is that while the *referendum* is very much alive in California land use law, the use of the *initiative* to

attain land use objectives is virtually preempted by state planning laws.

In many other states the zoning initiative and referendum are often held by courts to be subordinate and incompatible with the state's statutory processes for enacting land use laws.

> In *Kaiser Hawaii Kai Development Co. v. City and County of Honolulu [777 P. 2d 244 (Haw. 1989)],* the Hawaii Supreme court suggested that the deference modern California courts exhibit toward direct democracy might stem from the fact that the California State Constitution reserves the powers of initiative and referendum to the people. In Hawaii, by contrast, the powers of initiative and referendum, like the power to zone, are vested in the State. Proceeding on the notion that zoning and direct democracy are coequal powers, the *Kaiser* court held that the Zoning enabling Act was superior to the provision in Honolulu's Charter authorizing initiatives because "[z]oning by initiative is inconsistent with the goal of long-range comprehensive planning, and '[i]t seems unlikely that the Legislature intended the possible frustration of comprehensive zoning through the initiative process.'" n653

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.18

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.18 Annexation.n654

[Go To Supp]

§ 85.18(a) The Competing Interests.

Cities are carved out of unincorporated areas called counties, towns, or townships, depending on the state. n655

In any annexation there are at least two and possibly three or four loci of interests. The annexing city always has a stake in the outcome. So does the area to be annexed, its residents and landowners. Landowner interests may conflict with resident interests since owners of undeveloped acreage prefer more growth while residents often prefer less growth. Sometimes another city nearby would prefer the annexed area to become part of its jurisdiction. Sometimes the county government would prefer the area to remain unincorporated, and continue under county rule. People in areas adjacent to the annexed area may have some interest in it because its moves may affect their options. For instance, the annexed territory may foreclose the feasibility of the entire area becoming one large new city. Or the adjacent neighbors may become isolated from existing county facilities as the unincorporated territory around it shrinks.

§ 85.18(b) Who Decides?

Annexation methods and statutes vary by state, and in some states home rules cities may have their own independent annexing authority. n656

The annexing city, the area to be annexed, or the county may be given the lead role or may share authority over annexation decisions. n657 Although voting is not a constitutional requirement, n658 by statute a voter approval may be required in the annexing city, n659 the area to be annexed, n660 both n661 or neither. n662 In a few states the state legislature itself by special act may effect annexations. n663 Most states offer more than one path to annexation, and in some the paths depend on how the annexing city is classified under state law, e.g., home rule, charter, or general law city.

The role of courts also varies by state. Judicial review and approval are required in Virginia n664 and Missouri. n665 Virginia's annexation system rests on final confirmation by an annexation court, empowered to oversee the process in order to serve "the best interests of the State in promoting strong and viable units of government." n666 This system

evolved because some wholE.S.A.le annexations were threatening the fiscal viability of county governments.

In other states judicial review is optional but available on petition. Courts in many states apply a "rule of reason" standard of review which is based on whether the annexed area is reasonable, necessary or convenient to the exercise of city government. Courts under this standard compare the benefits and detriments to both the municipality and the area to be annexed. n667

§ 85.18(c) Implications for Developers.

Since there isn't one agreed approach to land use regulation among jurisdictions, developers naturally consider forum shopping. They look for friendlier jurisdictions when they aren't happy with the one in which they find their undeveloped site.

Sometimes developer efforts are frustrated by the requirement that cities may only annex "contiguous" territory. n668 If the developer's site doesn't actually border on the city in which she would rather be, she may have to buy a strip of land that will connect to it or persuade the landowners separating her from contiguity to join her petition for annexation.

Litigation challenging development-motivated annexations usually, but not always, fails. As a Wisconsin court put it: "It cannot be doubted that a purpose to develop one's land is legitimate, and this court has stated that property owners may seek annexation in pursuit of their own perceived best interests." n669

The annexing city will almost always have its own reasons for wanting new development -- a need for new housing, industrial expansion, or an enlarged tax base. So courts will be able to cite both private and public interests in upholding development-oriented annexations.

In one of the few cases striking down such a move, a New York court observed that "the sole reason" for the annexation was to avoid the restrictive effect of the Town Zoning ordinance. n670 It is difficult to believe litigators defending an annexation would ever allow a record to be closed without their having shown reasons for the annexation other than the developer's desire to escape restrictive zoning.

§ 85.18(d) Annexation Agreements.

> *Annexation agreements*. Many annexations occur through annexation agreements between landowners and municipalities. They often are used when a developer wishes to develop land that requires city services or, as in the principal case, when the landowner needs a rezoning from the annexing municipality. The agreement usually provides that the developer will not protest annexation in return for the municipality's promise to provide necessary services and, if necessary to rezone the developer's land. The agreement may also provide for fees and site improvements to be provided by the developer. n671

These agreements raise the same constitutional issues posed by development agreements: can today's elected officials bind future elected officials to the zoning or other land use approvals promised in the annexation agreement? Suppose the Lancaster city council promises Larwin it will zone its site for 2,500 houses. But between the time of the agreement and Larwin's completed filing of a subdivision map, a newly elected council -- more skeptical of growth than their predecessors -- downzones Larwin's 880-acre site to 220 units. Must the new council honor the annexation agreement? Courts turn to the language of state-enabling statutes but state statutes seldom answer this question directly.

§ 85.18(e) Annexation Highlights Planning Anomalies: The Larwin Example.

Larwin succeeded in annexing its site from the County of Los Angeles to the City of Lancaster. The Lancaster general plan promised to accommodate significantly higher densities than did the county's. Los Angeles County's general plan

called for 2-acre minimum lot sizes. Larwin calculated it needed 3 units per acre, about 2,500 houses, to support its infrastructure costs (water supply, new roads, sewer services, parks, and schools).

Larwin wanted to spread the cost across a sufficiently large number of houses to keep final sales prices affordable to first-time buyers. Only the larger number of units could accomplish this. The higher density was acceptable to the City of Lancaster.

Recalling our earlier review of California's stringent "general plan consistency" rules, you may find this curious. How come the same site that in the general plan for Los Angeles county wasn't suitable for more than 440 homes could magically transform itself into a site well adapted for 2,500 houses -- just because of an annexation? The site didn't move, just some artificial planning boundaries?

The answer lies in a bit of local legal history. Los Angeles County had been careless in promulgating an earlier general plan. The open space element of that plan promised low density development. The county's zoning ordinances and subdivision rules facilitated development consistent with market demand. Yet the county's population projection figures were based on the relatively moderate growth rates the county experienced in the 1960s and 1970s. (The population projections of the county's 1980 plan proved totally wrong as the county experienced a population burst. Developers knew it from sales figures. County planners couldn't update their analyses fast enough because of the procedural constraints on the planning process and the millions a new plan costs.)

A "public interest" law firm successfully forced the county to downzone in order to bring its earlier planning projections into line with its zoning. A result of the downzoning was the two-acre minimum lot sizes Larwin encountered at its site. The "public interest" law firm collected a big legal fee for this lawsuit under state law for serving the vital public interest in sound planning.

Planning goals in California are measured jurisdiction by jurisdiction. Lancaster hadn't been sued for any lack of consistency among the various elements of its general plan. (A suit against Lancaster, a smallish city, wouldn't have been very profitable since the "public interest" varies proportionately with the size of the jurisdiction, the amount of lawyering effort involved, and the nature of the results obtained.) Anyway, Lancaster's growth rates were considerably higher than the county's. It started from a lower population base, and was located in the path of rapid growth. The county had to "average out" its projections in fast growing areas with slower growth parts of the county that had been fully built out years ago.

By annexing to the City of Lancaster, Larwin was able to overcome the slow growth bias which California's general plan consistency rules had foisted upon the County of Los Angeles.

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.19

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.19 State-Mandated Environmental Impact Reports for Local Land Use Decisions.

[Go To Supp]

§ 85.19(a) The Content of State Environmental Laws Affecting Approvals of Private Development Projects.

In a number of states, California and New York among them, burdens resulting from environmental assessment procedures are among the most significant that real estate developers are required to shoulder.

These state requirements resulted when states inspired by the National Environmental Quality Act began to enact "baby" NEPAs. The operative core of NEPA was the requirement that every federal agency, before taking any action that could significantly affect the environment, prepare a detailed environmental assessment and consider it before making any decision. n672 The assumption of NEPA, in the words of the U.S. Supreme court:

> Simply by focusing the agency's attention on the environmental consequences of a proposed project, NEPA ensures that important effects will not be overlooked or underestimated only to be discovered after resources have been committed... n673

Twenty-six states have adopted their own versions of NEPA. n674 Like NEPA, state environmental laws are also procedural in the sense that most of them require no more than that state and local government officials, before taking any action that could affect the environment significantly, prepare and consider a detailed written assessment of those impacts. n675

The state progeny of NEPA that affect local land use decisions the most are those that apply not just to state-sponsored or state-funded projects, but to all projects that require a permit from any state or local government. In these states any property owner who requests a general plan amendment, zone change, or subdivision map act approval may end up having to fund an extensive environmental assessment of her proposed project. n676 These laws apply to "discretionary" not "ministerial" acts, a distinction which invites litigation over whether such a government action as the granting of a building permit is "discretionary" or "ministerial." n677

Property developers are mercifully excluded from state versions of NEPA that define "actions" or projects as those actually built or funded by public agencies. n678

Some state laws define the relevant "environment" as the physical or natural one. Under these laws the boundaries of the environmental assessment are limited to impacts on air and water quality, noise, animals, flora and fauna, scenic and historic resources. n679 Other state laws define environment broadly to include socioeconomic factors: "existing patters of population concentration, distribution, or growth, and existing community or neighborhood character." n680 The distinction between laws which restrict the scope of environmental inquiry to the purely physical and those which authorize a holistic inquiry into all potential socioeconomic impacts is sometimes obscured by administrative regulation. For example, CEQA is supposed to be about "physical" impacts only. The California law, at first glance, seems clear on this point. "Significant effect on the environment" means an "adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance." But the statute bridges the physical and socioeconomic: "an economic or social change related to a physical change may be considered in determining whether the physical change is significant." n681 The CEQA guidelines include, in a long list of "physical" environmental impacts, projects which "displace a large number of people."

Thus, a developer seeking to demolish a 795-unit, rent-controlled apartment complex to clear the site for 706 market-rate condos and 144 new low-income rental units on the site, was required to describe the displacement effects on rent-controlled tenants, and mitigate those impacts, by offering replacement units on site or relocating the tenants to nearby "affordable" rent-controlled units. n682 This requirement was imposed even though California's environmental law is only supposed to apply to "physical" -- not "socioeconomic" impacts.

Under most state laws, if a "project," as defined by law, could significantly affect the environment, then the public decision-maker is required to order an environmental impact assessment before making its final decision on the project. The decision-maker cannot "waive" the environmental reporting requirement. Under North Carolina's law, the governing body has the discretion by ordinance to require detailed environmental statements. n683 One consequence is that a local government's decision in North Carolina to do without an EIR can't be successfully second-guessed in court.

Once an environmental assessment reveals that a project or action is bound to spew out negative impacts, does that mean the government decision-maker cannot approve the project? Not under NEPA. n684 And not under most of the state versions. n685 But some state laws prohibit the granting of permits "likely to cause pollution, impairment, or destruction of the air, water, land or other natural resources located within the state," despite economic considerations. n686

In California, local officials have three choices when confronted with a development project request that has potential adverse environmental impacts. They can vote "no" on the zoning, subdivision, or plan amendment because of the negative impacts. Indeed, the state subdivision map act requires that in order to approve a subdivision the local agency must find (and support its findings with facts) that the subdivision is not going to cause significant environmental damage or substantially injure fish and wildlife or their habitats.

A second choice is to impose all feasible conditions on the granting of the zone change, subdivision approval, or plan amendment in order to mitigate the environmental damage. For instance, scheduled road improvements might reduce traffic congestion below thresholds the local government set.

A third option is to approve the project despite its bad environmental results. To take this third route, public officials must find that "specific economic, social or other considerations made infeasible the mitigation measures or project alternatives identified in the environmental impact report." n687 These findings can't be conclusory. They must be supported with specific facts recited and proved in the public record.

Many cautious California land use lawyers advise their clients -- whether developers or local agencies -- always to adopt a finding of "overriding economic or social considerations" to insulate the agency's decision from attack on

grounds that the selected mitigation measures are inadequate to the task. Legally, this is a shrewd move. Politically, it is a big pill for elected officials to swallow since the "overriding considerations" resolution is a tacit admission that the local government had doubts about whether its mitigation measures are truly sufficient to avoid environmental degradation.

Generally, any affected citizen has the right under federal and state environmental quality laws to challenge the government's compliance. The plaintiff must demonstrate some type of injury (aesthetic would be sufficient) that could result from the construction of the project being challenged. n688 The Supreme court has recently held that unless a statute specifically allows broad regulations to be directly reviewed, litigants must be prepared to show that some concrete action will harm or threaten to harm the litigant directly at the site where the action will take place. n689

There are a few limits to the liberal standing rules under state environmental laws. For instance, one New York court dismissed the claim of an oil refinery owner who wanted to challenge a shopping center project nearby. The oil company was apprehensive that redeveloping the area for shopping center uses would later preclude oil refineries. This, ruled the court, was an economic concern, not an environmental one, for which the plaintiff lacked standing under New York's environmental laws. n690 But decisions denying standing under state environmental laws are rare even when business competitors sue. n691

The Supreme Judicial court of Massachusetts has interpreted that state's environmental law to preclude *all* private causes of action. n692 The court's policy justification: litigation delays resulting from environmental litigation are potentially unfair and impose great social and economic losses.

Environmental lawsuits can result in projects costing more or being relocated to areas where residents are less able to fight them. Neither of these results is necessarily benign environmentally. Even a losing environmental lawsuit eviscerates a project. But there have been times when slow growth advocates shot themselves in the foot by challenging and delaying projects. When property values and demand were on the rise in the mid-1980s many developers whose projects were temporarily stopped by environmental lawsuits eventually succeeded in procuring permits later at densities greater than those they had originally obtained. Most state court challenges to local land use decisions based on state environmental laws are procedural. The procedural emphasis is understandable and perhaps inevitable.

> [i]t would be inconsistent with NEPA's reliance on procedural mechanisms -- as opposed to substantive, resulting-based standards -- to demand the presence of a fully developed plan that will mitigate environmental harm before an agency can act. n693

Under most state environmental laws decision-makers are free to make whatever decision they wish, as long as they have had an opportunity to review a study detailing the environmental consequences of their actions.

Typically, suits are filed challenging the sufficiency of the data on which negative declarations are issued, or alleging the insufficiency of the environmental report itself, its failure to address all the important environmental factors, to consider alternative sites or alternatives to the project proposed. Since many large-scale projects are revised during development and construction, litigants sometimes object when supplemental environmental reports are not prepared and evaluated before local government officials approve changes in the original development.

The emphasis on procedure is easier for lawyers, business people and judges to comprehend since few of them are expert in the underlying disciplines that inform the content of good environmental reports -- such as biology, geology, chemistry, or transportation engineering. The procedural emphasis satisfies most litigants, too, since, as Professor Sterk observes, they "do not want more extensive consideration of environmental issues; what they want is a different decision." n694 Recognizing this, some courts have grown impatient with the procedural haggling which state environmental law seems to invite. Here is how California courts have put it:

> [t]he purpose of CEQA is not to generate paper, but to compel government at all levels to make decisions with environmental consequences in mind. CEQA does not, indeed cannot, guarantee that those decisions will always be those which favor environmental considerations. n695

The state of Michigan, uniquely, puts the environmental ball directly into play in court. n696 Outside Michigan the standard of judicial review is generally whether there is substantial evidence in the record to support the local agency's determination. Under the Michigan statute the court must decide whether a project threatens environmental harm based on the weight of the evidence. n697

The standard of review can make a big difference. The 1976 amendments to the California Environmental Quality Act (CEQA) require local agencies to impose all *feasible* mitigation. Feasible is defined by statute as "capable of being accomplished in a successful manner." n698 A student editor points out:

> Agencies committed to a development plan might make environmentally superior alternatives seem infeasible by carefully defining the goals of proposed projects in such a way that alternatives are incapable of successfully achieving those goals. n699

The reviewing court, under the substantial evidence test, would presumably be stuck with the agency's articulation of its goals. Using an "independent judgment" review like the one implicit in the Michigan statute, the court could decide whether the agency's formulation of its goals is persuasive.

§ 85.19(b) Environmental Assessment Procedures.

In most states the environmental review process for private developments begins when the applicant applies for a zone change or other public land use approval and the agency reviewing the application must define the project with the applicant's help.

The project description includes the precise location and boundaries shown on a map, a statement of the proponent's objectives, the technical, economic and environmental characteristics of the proposal, and the intended user of any environmental impact report -- namely, the government decision makers who need the information. A lead agency is designated to assess, at the earliest possible time in the planning process, whether the state environmental law applies to that project. Projects with impacts below some threshold are usually exempted by statute, regulation or administrative procedure.

The California Environmental Quality Act (CEQA), for instance, applies to "discretionary projects proposed to be carried out or approved by private agencies." n700 Any project that may have a significant environmental impact must proceed to the next step in the review process. In California, land use regulations often require case-by-case permitting of large-scale private development so that nearly every major private project is subject to CEQA.

While procedures and nomenclature vary from state to state, certain steps are common in the environmental impact assessment game.

> -- Below some threshold very small projects are usually exempted by statute, regulation or administrative procedure.
>
> -- The proponents of projects above that threshold need to fill out an environmental assessment form (the New York lingo) or an initial study (the California phrase). Here is an excerpt from one: n701

	Yes	May be	No
Air. Will the proposal result in:			

a. Substantial air emissions or deterioration of ambient air quality?	___	___	___

-- If the form or study shows no significant impacts, the agency charged with tracking the process can issue a "negative declaration," a statement that the project threatens no significant environmental effects. The "neg dec" can sometimes be achieved by the developer agreeing to mitigation conditions which reduce the project's impacts below specified threshold levels. It is tempting for developers and local agencies eager to rush through a project to go for a "neg dec" even when there are big unmitigated impacts in hopes they will not get caught before the statute of limitations for challenge expires. But challenges to "neg decs" are among the most frequent and successful of environmental lawsuits.

An agency cannot support a decision to adopt a negative declaration by relying solely on a naked checklist that does not show the basis for disputed findings that a project will have no significant impacts. Argument, speculation, unsubstantiated opinion, and narrative evidence which is clearly inaccurate or erroneous does not constitute substantial evidence.

The requirement for substantial evidence was originated by courts and reflects the need for a reviewable record showing the factual basis for the agency's decision when a negative declaration is challenged. Some explanation needs to accompany the bare-bones checklist especially when an item checked "no" is counter-intuitive or likely to be disputed. Shortcomings in an initial study may be compensated by detailed findings adopted by the agency to accompany the "neg dec," as long as the record shows a factual basis (substantial evidence) for the agency's decision.

A "neg dec" can sometimes be achieved by the developer agreeing to mitigation conditions which reduce the project's impacts below specified threshold levels, to levels of insignificance. The mitigation measures must be clear, effective and realizable. About 40% of all "neg decs" in California are mitigated "neg decs."

One reason there is so much environmental litigation in California is that the state law requires more than substantial evidence. Substantial evidence is necessary but not sufficient to support a "neg dec." California law favors the preparation of full environmental studies by providing that an environmental impact report (EIR) is required "if there is a 'fair argument'" that there "may" be significant environmental impacts. The usual administrative law standard for judicial review of agency decisions is less rigorous. Under administrative law principles, agencies are upheld if a preponderance of the evidence supports their decision. But a "neg dec" decision is vulnerable in California if there is a "fair argument" the lead agency was wrong in issuing a "neg dec" -- no matter how much evidence the agency considered in reaching its "neg dec" decision. By contrast, in the state of Washington, projects and other major actions escape further environmental review unless the initial assessment shows "a *probable* significant, adverse environmental impact." n702

A 1990 survey of planners in California cities and counties showed that approximately three-quarters of all initial studies led to negative declarations or mitigated negative declarations. Only one initial study in four led to an E.I.R. n703

-- If the form or study shows significant impacts, the project developer and the public agency staff meet to scope out the issues that will require special attention in the environmental report. n704

-- Based on that scoping session, the firm or individual charged with preparing the report puts together a draft environmental impact statement (EIS in New York) or environmental report (EIR in California).

-- The public agency reviews that draft to see if it meets basic agency standards.

-- If the agency is satisfied, the draft EIR or EIS is circulated for public comment. It is also sent to all other public agencies including other federal or state authorities with potential environmental interests in the proposed project.

-- A public hearing may (but need not) be held so that government officials can take testimony on the draft report.

-- A final environmental report will be prepared which takes into account the public comments. Usually the final report is the draft plus each comment and the preparer or agency's response to it. The final EIR must address in detail each cogent objection.

-- The final report is circulated for a few days for last-minute comments and review.

-- The final EIR must be adopted by the government agency charged with making the discretionary decision *before* acting on the petition for which the EIR was prepared in the first place. The function of the report, after all, is to give decision-makers information about the environmental consequences of their actions. If they act before adopting the final EIR, they act without the benefit of the key document mandated by the environmental law.

§ 85.19(c) The Contents of the Environmental Report.

§ 85.19(c)(1) Generally.

One thing environmental reports almost always have in common is that they are bulky, filled with "boilerplate," the redundant and the obvious. n705 A typical Manhattan redevelopment project will detail the extent to which local area residents may be displaced, and may, reports Professor Sterk, include six pages outlining all of New York's rent regulations designed to keep existing residents in place despite "gentrification." These are laws any elected New York official knows all too well. In the years when this author was on the Los Angeles County planning commission, a typical Los Angeles county environmental report would start with a detailed analysis of the southern California climate ("Mediterranean," it was called).

Professor Sterk explains well that no one involved in the process of EIS preparation has any incentive for brevity. The lawyers and environmental consultants are earning fees usually based on the volume of their "input," not the usefulness of their work. The public bureaucrats overseeing the process are not paying for the report, the developer is, and public officials want to be sure every base is covered to avoid the embarrassment of having their decision remanded back to them by a reviewing court.

Many lawyers believe that hefty EISs are easier to defend in court than thin ones. They believe the bigger the report, the less likely the judge is to read it or conclude that the decision-makers did not have the material necessary to take into account all the potential environmental angles. n706

California by statute actually prescribes some of the headings that each EIR must address:

> (a) The significant environmental effects of the proposed project.
>
> (b) Any significant environmental effects which cannot be avoided if the project is implemented.
>
> (c) Mitigation measures proposed to minimize the significant environmental effects, including, but not limited to, measures to reduce wasteful, inefficient, and unnecessary consumption of energy.
>
> (d) Alternatives to the proposed project.
>
> (e) The relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity.
>
> (f) Any significant irreversible environmental changes that would be involved if the proposed project were not implemented.
>
> (g) The growth-inducing impact of the proposed project. The report shall also contain a statement briefly indicating the reasons for determining that various effects of a project are not significant and consequently have not been discussed in detail in the environmental impact report. For purposes of this section, any significant effect on the environment shall be limited to substantial, or potentially substantial, adverse changes in physical conditions which exist within the area. n707

§ 85.19(c)(2) Regional Impacts Must Be Evaluated.

State-mandated environmental reviews were quickly held by courts to require local governments to take a bigger view of the impacts of their land-use decisions. Local governments could no longer stop their analysis of impacts at their own boundaries. "Serious detrimental effects" on areas outside the locality had to be addressed. In one landmark case, the

Supreme court of the State of Washington declared a rezoning of farmland for a regional shopping center to be "arbitrary and capricious," despite the fact that a majority of voters in the city supported the proposal in an advisory ballot proposition. n708

The City of Bothell had entered a zoning agreement with the developer of a regional shopping center requiring mitigation of some impacts, but the agreement only required mitigation of impacts within the city. The Washington Supreme court cited the State Environmental Policy Act -- "that each person has a fundamental and inalienable right to a healthful environment" -- to justify protecting the welfare of all the people living in the area, not just those residing within Bothell. The court insisted that mitigation be as wide-reaching as the environmental impacts themselves. The court listed factors the city's impact statement had failed to address:

> First, agricultural and low density residential uses of land around the center could not be maintained. Pressures for secondary business growth would be severe. Not only would desirable agricultural land be lost, but intensified commercial uses would require substantial investments in highways, sewers, and other services and utilities. The economic and aesthetic values of the essentially rural character of the Valley would be lost. Second, highway construction requiring millions of dollars of local, state and federal funds would be necessary. Serious increased traffic congestion would create a potentially serious air pollution problem in the Valley. It would also, of course, add substantially to the aesthetic loss. Third, new alignment of the North creek to accommodate the shopping center, together with anticipated increases in runoff, might create a danger of flooding. Finally, the unstable peat soil on which the center is to be built may settle unevenly, with consequences which have not yet been investigated. n709

§ 85.19(d) Some Anomalies in Environmental Reporting.

NEPA and state environmental reports in New York and California are supposed to evidence a good faith search for options or alternatives less environmentally intrusive than the project proposed. n710 These usually include "no project," and sometimes the same project but at reduced densities. n711 Since the report is prepared after the proponent has selected a site and designed a project, the alternative analysis comes long after the developer has committed itself to its proposal.

In many situations, alternative sites must also be considered. "The private developer may own or control feasible alternative sites, may have the ability to purchase or lease such properties, or may otherwise have access to suitable alternatives." n712

Anticipating an "alternative site analysis," cautious developers, even as they look at sites before deciding which to buy, check out sites for environmental problems. By keeping a good record of the features of rejected sites, the developer can supply raw material which consultants may later be able to shape into an "alternate site analysis" in the EIR.

Professor Sterk points out how ludicrous this alternatives analysis can be. The developer is usually paying for the environmental report and has no incentive to broadcast better options than the one being proposed. "As a result, the pages devoted to consideration of alternative uses are often significant only for the waste of resources used in their production." n713

Since fewer environmental impacts are always presumed better, and smaller projects offer the promise of reduced traffic and air pollution, environmental reporting methodology favors lower density development. The environmental advantages are often illusory because most environmental analysis takes place case-by-case, not on a cumulative, regional basis.

One-acre home sites generate less traffic and pollution than quarter-acre sites only if you focus on a particular housing tract, not if you presume that all new housing throughout the region will be developed at one-acre minimum lot sizes.

n714 The California legislature has expressly disapproved the blanket use of lower densities in *housing* developments as an environmental quick fix. n715 There are two possible reasons. (1) Reductions of housing density -- larger minimum lot sizes -- tend to make housing more expensive, less affordable. (2) If all housing were developed at low densities, houses would probably end up farther away from job centers. This would lead to longer commuting to work and densities too low to support efficient public transit. n716

EIRs do not always deal with "second order" events because they are speculative, even if undeniable, possibilities. As sophisticated developers gain experience with environmental report methodologies they are beginning to insist that regional and not just local traffic and air quality impacts be the focus of their studies. New development may generate pollution at its site but could also result in net commuting benefits by bringing residents closer to shopping and job opportunities.

To some extent environmental reporting does mandate that secondary consequences be considered. Federal regulations, for instance, mandate consideration of "indirect effects," defined as those "caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable. Indirect effects may include *growth-inducing effects* and other effects related to *induced changes in the pattern of land use, population density, or growth rate*, and related effect on air and water and other natural systems, including ecosystems. 40 C.F.R. § 1508.08.

Agencies need not consider highly speculative or indefinite impacts. n717 The First Circuit offered some interpretive guidelines:

> Whether a particular set of impacts is definite enough to take into account, or too speculative to warrant consideration, reflects several different factors. With what confidence can one say that the impacts are likely to occur? Can one describe them "now" with sufficient specificity to make their consideration useful? If the decisionmaker does not take them into account "now," will the decisionmaker be able to take account of them before the agency is so firmly committed to the project that further environmental knowledge, as a practical matter, will prove irrelevant to the government's decision? n718

A developer building in phases would be required to assess not only the impacts on the environment of the first phase but the eventual build-out of all of its site. The EIR for the developer's project would also need to assess the cumulative effects of its growth-inducing impact on the entire area.

"Cumulative" analysis certainly means that the agency consider all the projects already planned and approved which are likely to be built in the area. Identifying past and current projects is normally easy enough by looking at local land use approvals and construction permit applications. But what about future projects?

Suppose a city receives applications for 2,000 new housing units in the same census tract from ten different developers. Must the EIR for each application take into account the possibility that all the other ones will be approved and built? Probably so. What about other "possible" future projects? Yes, if they are "reasonably foreseeable probable future projects." n719 Judicial pronouncements like these lead to calls for detailed administrative guidelines from the state agency overseeing CEQA compliance so that public agencies can "do the right thing" without excessive crystal ball gazing. n720

The issue of when and how to assess the "cumulative" impacts of projects has been far more complicated in the federal arena. Take the case of highways. n721 Should each link be subject to environmental review as it is funded and commenced, or should the entire network be considered in advance of the first phase being built? If there is substantial doubt about whether later phases will be funded, courts have sometimes upheld agency decisions not to assess the impacts of the entire network. Other federal courts have insisted that even though later phases may not come into being, their potential environmental impacts must be examined before phase one is commenced on an integrated program.

If a blanket programmatic assessment is made at the outset for an entire network of projects, must each project also be evaluated later for environmental impacts peculiar to it, or that may result because of changes in populations or traffic patterns which occurred after the initial environmental study was performed? Generally, if individual projects are interdependent their cumulative environmental impacts must be assessed at the outset. Distinct parts of an integrated network may later have to be subject to individual assessment as well, but only for their unique environmental impacts or to update the initial report with changes that could affect the conclusions reached earlier. n722

The anti-growth bias of environmental reporting is reinforced by the requirement that growth-inducing impacts be evaluated. n723 The accepted methodology focuses on negative secondary impact from building a project, and seldom the negative secondary impacts of not building it.

New housing might be halted in a rapidly developing area until more freeways are built. Environmental reports would show that if the housing is built ahead of the freeways, levels of service on existing roads will fall unacceptably. So state highway authorities obtain federal highway funds and propose a new freeway to service the anticipated growth. In reviewing the freeway proposal the Environmental Protection Agency under NEPA might well contend that building the freeway would induce growth. If the freeway were not built, the houses could not be built either. That makes the freeway growth-inducing, and contributes to congestion and air pollution.

This is ludicrous because stopping the construction of new houses or freeways is not a birth control device. It does not slow down immigration into a state or region except at the point that house prices are forced up by tightened planning controls. Yet environmental documents contain hundreds of pages of this sort of short-sighted analysis of growth-inducing impacts. n724

Most of the information elaborately displayed in costly EISs and EIRs is already available in the ordinary land use application process when a developer requests a change of zone, a subdivision map approval, a general plan amendment or a conditional use permit.

Local governments that want to facilitate development are able to combine their approval processes, conducting public hearings on zone change cases concurrently, for instance, with EIS or EIR approvals. Local governments hostile to development can stretch out the approval process even though the substantive material may be the same in a zone change case as in its underlying EIS or EIR.

Most environmental impact reports recommend mitigation measures which are later imposed on the developer as conditions of project approval. For example, mitigation for flooding would include storm drains and perhaps a pro rata contribution to a regional flood control facility. Mitigation for freeway access congestion might include contribution to a fund by all developers in the area, based on a study of their project's likely traffic impact, to widen the access way. To preserve endangered species developers might have to contribute to a fund for purchasing sites in the area that would become dedicated as wildlife preserves. n725

In California, those mitigation measures which are reasonably feasible to specify in the EIR must be specified. n726 But sometimes local officials can defer decisions on mitigation, approve a project in concept and wait until specific designs are drafted before imposing particular mitigation measures. n727

Many localities fail adequately to monitor the mitigation measures they impose. This failure undermines the efficacy of the process. California has specific statutory mitigation monitoring requirements. n728 One example of a city with well-considered guidelines for the monitoring of mitigation is San Luis Obispo. That city insists mitigation measures specify what should be done, who should do it, when the mitigation should be done, and how it should be done.

Professor Joseph Sax in 1973 observed that environmental reporting would reveal the fullest data only if data gatherers

had no incentive that would "bind them regularly to any particular client group." n729 In reality, it is difficult, if not impossible, to avoid bias of one sort or another among environmental preparers. They work for clients. If the client is the developer, the preparer knows it. This does not mean the preparer is dishonest. The developer needs to know the truth about the site and the neighborhood for optimal marketing, construction planning and to obtain political approval. But bad news can be cushioned, displayed in its best light, or on occasion discreetly avoided.

If the institution hiring the preparer is a slow- or no-growth motivated local government, the preparer knows that, too, and responds accordingly.

Local governments embrace different procedures for selecting the EIR or EIS preparer. In some, the planning staff does all the work, with the government reimbursed by developer fees. Some governments established a panel of approved independent consultants. When an EIR is required, the local planning staff selects one of them to do the job. Some localities have a list of approved preparers, and allow the developer to select among them. Some allow the developer to select her own EIR preparer. In all cases the local planning staff reviews drafts to determine if they are adequate and objective. After receiving public comments on the drafts and monitoring revisions and responses to these, the staff certifies completion of the final EIR.

Los Angeles County allows the developer to choose and hire an environmental consultant to prepare a draft EIR according to state and local planning guidelines. That procedure was challenged in *Friends of La Vina v. County of Los Angeles*. n730 The court upheld the county's practice of allowing developers to select their own preparers even though CEQA mandates that EIRs be "prepared directly by, or under contract to, a public agency." The court observed that CEQA guidelines and state practice "consistently teach that an agency may comply with CEQA by adopting EIR materials drafted by the applicant's consultant, so long as the agency independently reviews, evaluates, and exercises judgment over the documentation and the issues it addresses." n731

The dissenting judge would have put an end to the county practice of allowing the developer to hire the preparer of the draft EIR. "The stark and irreconcilable conflict of interest which exists if the developer's paid consultant prepares the EIR is manifest." The dissenting judge didn't believe consultants whose livelihoods depended on developers could achieve unbiased assessments of the dangers posed by their clients' projects.

One developer, hearing the result, applauded the majority opinion. His enthusiasm was based on these assumptions:

> [T]he developer should select the EIR preparer because he has the most to lose from a poorly drafted EIR. His project approval can be set aside because of it. "No growth" staffers if they prepared these reports might intentionally screw up, hoping to make sure the final approval was voidable. Anyway, local government planners aren't as competent or efficient as private consultants. If EIR work were done by governments "in house," planning bureaucracies would get larger, the work would take longer and it would cost more -- which developers would have to pay through higher application fees. As the majority says, local governments must approve the report, so all preparers must meet the same local standards for EIRs. Also, not allowing the developer to work with the preparer in advance of the initial draft would diminish the chance of the developer changing its project early to avoid negative environmental consequences.

The dissenting judge in *La Vina* wasn't convinced. The majority appears to have been.

§ 85.19(e) Supplemental Environmental Reports for Project Changes.

Developers change their plans. They expand or contract projects already approved, reducing or increasing the percentage of their sites they intend to use, the number or the size of the houses they want to build. They add or remove amenities -- golf courses, lakes, parks, guest parking facilities. When they seek to change an earlier approved project,

one that required and received an environmental assessment, will the change occasion an entirely new environmental review of the whole project, or just an assessment of the change?

This depends initially on whether their intended change requires a new discretionary decision by the local government. For instance, a developer who has subdivided the land into a configuration that is no longer deserved will probably need a new subdivision map. There may be a statutory procedure for very small changes, such as "lot line adjustments," just altering the boundaries among existing lots. But big changes in the way the subdivider wants to subdivide will require a new map, hence, a new environmental review.

Suppose, though, the subdivider just wants to build smaller houses because they will probably sell faster than larger, more expensive ones. Unless the developer has entered a development agreement specifying minimum dwelling sizes, a local ordinance requires them, or a map condition calling for the larger dwellings, or a design review, the developer won't need a new map or a new environmental review.

If the developer does need a new discretionary approval, two competing principles come into play in determining the scope of the environmental assessment. First, if construction has not started and the developer has no vested right to proceed with the earlier approval, local government officials "must consider all the facts and circumstances surrounding the proposed project...." n732 The developer is back to square one. Second, it would be "arbitrary and capricious for a Board to condition approval of the modification on the developer's compliance with remedial measures unless those remedial measures have some demonstrable connection with the environmental impact of the proposed modification." n733

In the case from which the above quotes were taken, the property owner in September 1982, obtained approval to remove a metal storage building, renovate a 12-unit motel building and construct two new motel buildings of 20 and 30 units respectively. This application was approved with certain conditions, but no environmental assessment was required.

A few months later, in January 1983, the applicant submitted a second proposal to modify the original site plan. This proposal only affected the front of the property along Old Montauk Highway and involved removing six cottages and constructing a new 28-unit motel (see Site Plan). For this second proposal, the town planning board issued a formal negative declaration under the New York environmental law.

Click here to view image.

Concerned citizens sued to prevent implementation of the modified plan and were granted a temporary injunction. A trial court determined that there was no likelihood the suit would succeed and allowed the petitioner to recommence construction. The entire project -- both parts -- was completed in June, 1983.

One month later, a New York trial court set aside the resolution of the Planning Board approving the modified plan, and directed the board to take a "hard look" at its potential environmental impacts.

The property owner appealed, and while the appeal was pending, resubmitted its second proposal to the Board. This time the Board, which had several new members on it, issued a positive declaration and insisted on an environmental report. They wanted an environmental study of the impact of the entire project, not just the modification (the second proposal). However, the statute of limitations for challenging the first proposal had long since lapsed. Meanwhile, the entire project -- the original and the modified portions -- had been fully constructed.

The Board wanted substantial improvements in traffic and fire vehicle access. To widen the turning radius and access road, the Board wanted the property owner to demolish some of the newly-built units, four in the project first approved,

four in the structure built as part of the second proposal.

On appeal, the property owner argued equitable estoppel. That argument, the New York court of Appeals found, was inappropriate. Granting estoppel when local government officials had violated state mandated planning and environmental laws could result in "large scale public fraud." Further, "the more fundamental reason why estoppel is not generally permitted against the government is that to do so may violate the doctrine of separation of powers... The State Legislature has granted municipalities the right to condition land development within their boundaries on approval of an acceptable site plan. This consideration is more than theoretical. The State has made protection of the environment one of its foremost policy concerns."

But this part of the court's opinion concerned the second proposal. The first proposal had not been assailed as violating the state's environmental laws within the applicable statute of limitations. It was perfectly legal when built. By virtue of the statute of limitations having run, the town board had lost jurisdiction over the impacts created by the already approved and built project.

The property owner argued that for the town planning board to review the environmental impacts of the first project as a condition to its review of the second application was arbitrary and capricious. The New York court of Appeals agreed. The court ordered the town building inspector to issue temporary certificates of occupancy for all units constructed under the site plan approved in September 1982.

The court also observed that as a result of this environmental litigation the property owner had been forced to hold its property vacant for five summer seasons, had lost profits estimated at $1,000,000 per year, and incurred carrying charges of $100,000 per month.

§ 85.19(e)(1) Power and Authority in the Land Use Approval Context.

Local officials may realize they cannot require as much as they would like of a property owner who submits a request for a minor amendment to an approved subdivision tract map, conditional use permit, or development agreement. But usually it will not be difficult for local officials to find plausible justifications for voting "no" on the request. For voting "yes," they may be able to squeeze more out of the property owner than the change itself would support legally. After the New York court of Appeals remanded *E.F.S. Ventures* back to the East Hampton Planning Board with an order for the Town Building Inspector to issue temporary certificates of occupancy for the units built under the September 1982 plan, the Town Planning Board resisted:

> After the court of Appeals decision, the client went back to the East Hampton Planning Board, which was not prepared simply to issue certificates of occupancy. There were negotiations. In order to eliminate another year or two or more of litigation, while the project sat dormant and eating up interest, a settlement agreement was entered into under which, I think four units, or perhaps six, were eliminated and the other objections that had been raised disposed of. After a relatively small amount of landscape work, the certificates of occupancy were issued about two or three months after the court of Appeals decision and in time for putting these units on the market. I think they were sold out rather quickly. n734

§ 85.19(e)(2) The Vested Rights Doctrine and the Supplemental EIR Requirement.

The *E.F.S. Ventures* case invites the question, for purposes of meeting the requirements of environmental reporting laws, when, if ever, do applicants' rights "vest"? Only when they actually construct their projects?

Suppose a developer conditions a land purchase agreement on land use approvals, and gets the approvals. The developer exercises the option to buy the land, and then petitions for changes in the already approved project. Would local officials be free to reevaluate what they had already approved, or would their inquiry be limited to evaluating the

environmental impacts of the changes?

The applicant's "vesting" claim would be based on the land acquisition, but not on any expenditures made to improve the site. In most states a property owner's right to rely on existing zoning does not vest at the point of land acquisition alone. But should the "vesting" rule for environmental review be more permissive?

§ 85.19(e)(3) The Nexus Test and the Permissible Scope of Environmental Reassessments When Owners Request Changes in Already Approved Projects.

Following the *Nollan* case described earlier in this chapter, property owners have another way to defend against local officials using the excuse of the owner's petition for a minor change to reevaluate the environmental impacts of the entire project. Local officials must be prepared to show that there is some logical connection, some rational nexus, between the proposed changes and the scope of the environmental review they are imposing upon the property owner. If the impacts of the proposed change fall below the environmental review threshold, local officials will not be able to demonstrate the existence of any such nexus -- even though the property owner has yet to begin building. n735

§ 85.19(e)(4) The Rules for California Supplemental EIRs.

By statute and regulation, California administrators and lawmakers protect applicants by requiring a subsequent or supplemental EIR in three circumstances.

(1) An Initial Study shows that the changes being proposed will bring about impacts not considered in the original EIR. Even if the change is substantial, if its impacts are no greater than those studied in the initial approval, no new EIR or supplemental EIR is required. n736

(2) Changes have occurred surrounding the project since the original EIR was prepared that will result in new significant impacts not previously discussed or anticipated.

(3) New information reveals (a) impacts overlooked earlier, (b) substantially more severe impacts than previously anticipated, (c) alternatives or mitigation not feasible before that have since become feasible.

Fifteen states enacted laws modeled after NEPA: California, Connecticut, Hawaii, Indiana, Maryland, Massachusetts, Minnesota, Montana, New York, North Carolina, Puerto Rico, South Dakota, Virginia, Washington, and Wisconsin.

Six states adopted similar procedures by executive order:

Arizona: Game and Fish Commission Policy of July 2, 1971, Policy Memo,

Requirements for Environmental Impact Statements (June 9, 1971); Michigan: Executive Directive 1974-4, issued by Governor (May 3, 1974); Nebraska: Dep't of Roads Action Plan (1973); New Jersey: N.J. Exec. Order No. 53 (Oct. 15, 1973) and Admin. Order No. 33 (Aug. 1, 1973); Texas: Policy for the Environment (adopted Jan. 1, 1973); Utah: Executive Order of the Governor (Aug. 27, 1974).

Five states enacted laws requiring environmental impact analysis in limited situations: Delaware, Mississippi, Georgia, Nevada, and North Dakota.

(n16)Footnote 687. Cal. Pub. Res. Code § 21081(a). There is a debate among California land use lawyers whether "all feasible mitigation" has to be imposed in order for California local governments to elect this third option. Those who think not have this sort of case in mind: developer wants to subdivide into 40 lots. A grave environmental harm can be mitigated if he settles for 39 lots and dedicates one as open space. It is an archeological site. He would rather dedicate 100 acres of this property as open space than lose that 40th lot. The local government could refuse to allow the 40th lot on environmental grounds but has no basis for demanding the 100-acre dedication. They are willing to make the trade: Lot 40 for 100 acres. Whether they can do it involves parsing the language of California's Government and Health & Safety Codes.

The lawyers who think mitigation feasible would use the same example -- but without the 100-acre trade-off.

(n17)Footnote 688. *Knowles v. United States Coast Guard, 924 F. Supp. 593 (S.D.N.Y 1996)* (prospect of injury to party's aesthetic and recreational interest in historical sites on island was within "zone of interests" to be protected by

NEPA); *Sierra Club v. Morton, 405 U.S. 727 (1972).*

(n39)Footnote 710. NEPA's alternatives analysis requirement appears in 40 C.F.R. § 1502.14. California's is at CEQA Guidelines, § 15126(d)(4). NEPA does seem to require a more detailed analysis of alternatives. This is sensible for federal agencies with the power of eminent domain. *See* Tosta et al., *Environmental Review after Goleta, 21 SW. U.L. REV. 1079, 1101 (1992).*

(n40)Footnote 711. Larwin's Draft EIR, for instance, compared its 2500-unit project to no project, a development of 352 units on 2.5-acre lots, of 880 dwellings on 1-acre lots, but a project of 2500 units and similar density on a site closer to existing urbanization.

(n41)Footnote 712. *Citizens of Goleta Valley v. Board of Supvrs., 243 Cal. Rptr. 339 (1988). City of*

Carmel-By-The-Sea v. United States Dep't of Transp., 123 F.3d 1142 (9th Cir. 1997) (With regard to NEPA requirement that environmental impact statement (EIS) discuss reasonable alternatives to proposed action, "rule of reason" guides both choice of alternatives as well as extent to which EIS must discuss each alternative. Under California Environmental Quality Act, range of alternatives meriting consideration in environmental impact report is guided by doctrine of feasibility); *Sierra Club v. United States Army Corps of Eng'rs, 935 F. Supp. 1556 (S.D. Ala. 1996)* (Army Corps of Engineers did not violate Clean Water Act (CWA) or NEPA by failing to consider multi-tiered parking deck alternative in environmental assessment (EA) issued in connection with CWA wetlands fill permit for construction of conventional baseball stadium parking lot, given unrebutted evidence showing that alternative parking scheme was not practicable or reasonable; alternative would have more than doubled cost of construction project and posed substantial logistical problems for construction of stadium complex on donated land); *Airport Neighbors Alliance, Inc. v. United States, 90 F.3d 426 (10th Cir. 1996)* (Federal Aviation Administration (FAA) did not act arbitrarily by not considering alternatives to proposed runway upgrade under NEPA where implementing either alternative would be infeasible; alternative of parallel runway was precluded by terrain and existing military facilities and alternative of new airport would cost several billion dollars and would present environmental complications); *Mobil Oil Corp. v. City of Syracuse Indus. Dev. Agency, 646 N.Y.S.2d 741 (App. Div.. 1996)* (State Environmental Quality Review Act (SEQRA) review regarding proposed retail shopping plaza adequately considered environmental ramifications of project, and made appropriate analysis of reasonable alternatives; city industrial development agency responded in detail to comments directed at foreseeable potential environmental impacts not only from projects, but from other contemplated projects in redevelopment scenarios, and alternatives considered included multifamily housing, mixed use retail and office, cultural uses, alternate project sites, and no action alternative).

Compared with Organization to Preserve Agric. Lands v. Adams County, 913 P.2d 793 (Wash. 1996) (Proposed landfill project was properly characterized as "private," as it was primarily sponsored and initiated by private corporation and was not intended to fulfill solid waste responsibilities of county and, thus, environmental impact statement (EIS) did not have to include discussion of offsite alternatives; private corporation had no obligation to develop landfill for county, and was not currently involved in handling county's solid waste, nor was county involved in creating corporation, and corporation sought to build landfill to serve customers throughout region, including other states and Canada, and county had no governmental responsibility for solid wastes generated outside county).

(n42)Footnote 713. Stewart E. Sterk, *Environmental Review in the Land Use Process: New York's Experience with SEQRA, 13 Cardozo L. Rev. 2041, 2080-81 (1992).*

(n43)Footnote 714. For example, in the Larwin draft for Del Sur Ranch (June 16, 1989), the 352-unit alternative was anticipated to generate far fewer auto trips than the 2500-unit proposal. But, of course, no mention was made of where the other 2200 families would live if not at the Del Sur Ranch. Besides being too speculative, that data could also be embarrassing to local governments since it might prove that Larwin's higher density project was *not* the proximate cause of all the road congestion estimated in the EIR. Some of that traffic might occur anyway if the 2200 "surplus" families settled in the area at other projects. The "nexus" between Larwin's project and its off-site road contributions might be broken.

(n44)Footnote 715. This policy appears in two provisions: (1) Cal. Pub. Res. Code § 21083.3 calls for an EIR to mitigate only site-specific or project-specific impacts. This section only applies to the proposals for housing at densities that are permitted by zoning or a community plan. The underlying zoning or planning ordinance must have been approved with the benefit of a complete EIR that considered all significant environmental consequences; (2) Cal. Pub. Res. Code § 21085 cautions against the reduction in density of a housing project unless there is no other measure "that would provide a comparable level of mitigation."

(n45)Footnote 716. The same results are obtained under urban containment policies of the sort embodied in the United Kingdom's greenbelts and Oregon's statewide planning law. *See* Arthur C. Nelson, *An Empirical Note on How Regional Urban Containment Policy Influences an Interaction Between Greenbelt and Exurban Land Markets*, 54 Am. Plan. Ass'n J. 178-84 (Spring 1988).

(n46)Footnote 717. *Citizens' Utility Bd. v. Public Serv. Comm'n of Wis., 565 N.W.2d 554 (Wis. App. 1997)* (Wisconsin's Environmental Protection Act does not require administrative agency to engage in remote and speculative analysis, but it must take a hard look at environmental consequences of its proposed action); *Dubois v. United States Dep't of Agriculture, 102 F.3d 1273 (1st Cir. 1996)* (Environmental effect would be considered too speculative for inclusion in environmental impact statement (EIS) if it cannot be described at time EIS is drafted with sufficient specificity to make its consideration useful to reasonable decision maker, although reasonable forecasting is implicit in National Environmental Policy Act (NEPA) and agencies may not shirk their responsibilities by labeling all discussion of future environmental effects as "crystal ball inquiry."); *National Parks and Conservation Ass'n v. County of Riverside (Kaiser Steel Resources, Inc.), 42 Cal. App. 4th 1505 (Cal. App. 1996)* (EIR for proposed landfill project would not be required to analyze environmental effects of materials recovery facilities (MRF) from which landfill would accept processed wastes, because it (EIR) cannot currently provide meaningful information about speculative future projects); *Sierra Club v. Marsh, 769 F.2d 868 (1st Cir. 1985),* as edited in Shoenbaum & Rosenberg, Environmental Policy Law 89-90 (1991).

(n47)Footnote 718. Shoenbaum & Rosenberg, *supra* note 498, at 9).

(n48)Footnote 719. *See* Note, *The Cumulative Impact Assessment in CEQA: Is the Standard in San Franciscans for Reasonable Growth Attainable?, 12 WEST. ST. U. L. REV. 801 (1985);* Gail Kamaras, *Cumulative Impact Assessment: A Comparison of Federal and State Environmental Review Provisions, 67 ALB. L. REV. 113 (1993).*

(n49)Footnote 720. *San Franciscans for Reasonable Growth v. City & County of San Francisco, 198 Cal. Rptr. 634 (1984)* (City evaluated four different proposals for high-rise buildings within a few months of each other, but treated each as if the other three didn?t exist. City's EIRs were deemed deficient.). *See also NRDC v. Callaway, 524 F.2d 79 (2d Cir. 1975)* (agency failed to consider effect of dredging and filling operations it had recently authorized).

(n50)Footnote 721. *See Maryland Conserv. Council v. Gilchrist, 808 F.2d 1039 (1986).*

(n51)Footnote 722. *See* Frank P. Grad, Environmental Law 1091-1116 (3d ed. 1985).

(n52)Footnote 723. *Sierra Club v. Marsh, 769 F.2d 868 (1st Cir. 1985).*

(n53)Footnote 724. *See* letter to Ed Wood, Regional Administrator, Federal Highway Administration, San Francisco, from Daniel W. McGovern, Regional Administrator, United States Environmental Protection Agency, Ninth Region (Jan. 10, 1991), on Draft EIS for the San Joaquin Hills Transportation Corridor, Orange County, California.

(n54)Footnote 725. A maddening Catch-22 provision on mitigation appears in CAL. PUB. RES. CODE ? 21004. That section confines government to demanding only those mitigation measures which it has authority to impose simply by virtue of laws *other than* CEQA. However, § 21002 declares that projects should *not* be approved if there are feasible mitigation measures or alternatives which would "substantially lessen the significant environmental effects" of the project. Hence, a developer who refuses to accept unlawful mitigation requirements faces the possibility of project denial.

(n55)Footnote 726. *Los Angeles Unified Sch. Dist. v. City of Los Angeles, 58 Cal. App. 4th 1019 (Cal. App. 1997)* (Environmental impact report (EIR) was inadequate in failing to consider whether air conditioning and filtering at schools would be feasible method of mitigating impact of air pollution resulting from planned development; while EIR projected that levels of carbon monoxide around schools would be "slightly lower" in future, it did not characterize impact of air pollution on schools as "insignificant," and authors of EIR had sufficiently reliable data to permit preparation of meaningful and accurate report on its impact); *Citizens for Responsible Gov't v. City of Albany, 56 Cal. App. 4th 1199 (Cal. App. 1997)* (Article in gaming development agreement requiring developer to submit information addressing any potential adverse environmental impact of project and providing that all reasonably feasible mitigation measures would become conditions of city implementation approval did not suffice to bring agreement within terms of California Environmental Quality Act (CEQA), given language of section, which raised apparent conflicts with CEQA,

untimeliness of deferred CEQA review following approval of agreement and related measures, and city's limited discretion to adopt alternatives and mitigation measures that might be required for adequate CEQA review); *Sundstrom v. County of Mendocino, 248 Cal. Rptr. 352 (1988).*

CHAPTER 85 OBTAINING LAND AND RIGHTS FOR DEVELOPMENT *

9-85 Thompson on Real Property, Thomas Editions § 85.20

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 85.20 The Federal Dimension to Local Land Use Approvals.

[Go To Supp]

Congress decades ago rejected proposals for a national land use policy partly because land use has always been regarded as best regulated locally. n737 But local governments, whose officials depend only on the votes of local residents for their tenure, may find little political gain in sacrificing local interests for regional or national ones. So a growing volume of federal law directly limits what developers and landowners may do with their property even after they have secured local approvals. Federal laws regulate especially those industries whose by-products could pollute air, water, or land. n738

§ 85.20(a) Clean Water Act.

Anyone discharging pollutants into navigable water must comply with the Clean Water Act. n739 In some states, permitting authority has been delegated by the U.S. Environmental Protection Agency (EPA) to a state agency, such as the California Regional Water Quality Control Boards.

§ 85.20(b) RCRA.

Anyone handling hazardous wastes -- generating, treating, storing, transporting, or disposing -- is subject to the federal Resource Conservation and Recovery Act (RCRA). n740 Federal Rules require the generator to notify the EPA, obtain an identification number before sending wastes off-site, prepare manifests so the materials can be traced, train personnel, package properly and obtain permits, among other requirements. Again, the EPA has delegated its authority to agencies in some states by agreement.

§ 85.20(c) TSCA.

Similarly, the Toxic Substances Control Act (TSCA) n741 expanded EPA authority to require testing of new and old chemical substances and to regulate those as necessary, including a phase-out of polychlorinated biphenyls (PCB) manufacture.

§ 85.20(d) The Clean Air Act.

Through the Clean Air Act n742 Congress mandated air quality standards and authorized the EPA to oversee the development of state implementation plans (SIPs) to achieve those standards. Many localities failed to promulgate SIPs and that has led to considerable litigation by environmental groups to compel the EPA's adoption of federal implementation plans and other sanctions against states that don't propose adequate SIPs. n743

Many urban areas fail to meet health-based air quality standards due to high levels of ozone (the cause of urban smog) and carbon monoxide (CO). A Congressional deadline for the attainment of national ambient air quality standards was set in 1975. First the year 1982 was chosen, then 1987. By 1990, 96 metropolitan areas continued to have unhealthy ozone levels and 41 areas exceeded CO levels. Metropolitan areas were divided into categories based on the severity of their air pollution ranging from extreme to marginal. In 1990 Congress enacted and the President signed Clean Air Act Amendments providing time limits for the attainment of national air quality standards, varying from 3 years for marginal areas to 20 years for Los Angeles, the only extreme nonattainment area.

Many small firms previously unregulated by air quality authorities must now obtain permits.

"Major" stationary sources of pollution had been formerly defined as those spewing 100 tons per year (TPY) or more. The new air quality regulatory net will capture smaller polluters as "major" sources: 10 TPY generators in Los Angeles, 25 TPY in severely polluted areas, and 50 in seriously polluted areas.

Among the small businesses who will now have to pay the fees and obtain the permits that chemical manufacturers and oil refineries have long been subjected to are auto refinishing and undercoating plants, bakeries, dry cleaners, and printers. n744 Existing firms will have to retrofit by installing "reasonably available control technologies." New or modified sources must install technology to achieve the lowest achievable admissions rate. Both existing and new sources needing permits must monitor, keep records and report their pollution-generating activity to regulators.

Transportation controls will also become more stringent in severe nonattainment areas since automobiles (mobile sources in the air quality vernacular) are significant contributors to CO and other pollutants. Regulations could affect the siting of offices and shopping centers not served by mass or public transit as part of an effort to reduce vehicle miles traveled by discouraging single-occupant automobile trips to work. n745 Employers and developers may be required to create incentives for van pools, car pools, and the use of public transit.

Local governments may also seek to establish land use control incentives for a "jobs-housing" balance, policies that would bring jobs to bedroom suburbs and housing to office and industrial areas.

> The jobs/housing balance concept has initial surface appeal. If people work near where they live, they commute fewer miles between home and work, and produce less traffic and smog. n746
>
> Stripped to its essentials, a jobs/housing balance simply means a ratio between a measure of employment and a measure of housing within a given geographic area. n747

Air quality regulators tentatively concluded that it is "very difficult to produce real, permanent emission reductions" from a jobs/housing balance program "because people choose their housing, especially in two-worker households, for many reasons besides commuting distance to work." n748 Southern California planners are now working with air quality regulators to see if they can promulgate a set of specific jobs/housing balance land use rules that, if implemented, could noticeably reduce vehicle miles traveled.

Section 805 of the Clean Air Act Amendments declares that the law is not to be "an infringement on the existing authority of counties and cities to plan or control land use." But as one lawyer expert in air quality regulation observes:

"restrictions applicable to stationary sources in the most severely polluted metropolitan areas will place bounds on local authority," and these can have "substantial impacts" on growth in such areas. n749

§ 85.20(e) Wetlands Controls.

Environmental advocates are vigorous defenders of wetlands. It is easy to appreciate why.

> Wetlands may be swamps, bogs, marshes, tidal estuaries or potholes carved out of the earth by glaciers. They may sprawl over four million acres, like the Louisiana marshes and swamplands that constitute 40 percent of the nation's total coastal wetlands. They may cover a fraction of an acre, or thousands of acres, like the prairie potholes that provide nesting sites for 80 percent of North America's ducks.
>
> Wetlands are the cradle of life for wildlife and fish; almost all fish and shellfish spend time spawning or feeding in tidal estuaries. These swampy lands recycle nutrients and filter pollutants more efficiently than any state-of-the-art sewage treatment plant. They recharge aquifers, absorb storm waves and floodwater. They are also places of peace and incomparable beauty.
>
> Wetlands harbor one-third of America's endangered and threatened species. n750
>
> Wetlands are now valued for their intrinsic qualities as natural areas, for their recreational and educational uses, and for their ecological services, e.g., ground water recharge, floodpeak reduction, water quality improvement, wildlife habitat, food-chain support, and shoreline stabilization. n751

The federal law most directly affecting the right of property owners to develop wetlands is § 404 of the Clean Water Act, a complex statute over a hundred pages of which includes the 1972 Federal Water Pollution Control Act amendments, amended again in 1977. n752

Section 404 requires that anyone dredging or filling wetlands that could affect the waters of the United States must obtain a permit before doing so. Any activity that moves dirt around in a wetland counts as "dredge and fill." Placing dirt in a wetland to build a road or a house, digging a ditch when the spoil is tossed next to the ditch, even intensive farming, can be "dredge and fill." An activity need not "pollute" to require a permit. n753

"Dredge and fill" permits are issued by the United States Army Corps of Engineers. The Environmental Protection Agency oversees the law and can veto a permit.

Other agencies may become involved in wetlands permitting: the National Marine Fisheries Services, the Soil Conservation Service, state departments of fish and game, state and local water resources, and water quality control boards, to name some. Even the Secretary of the U.S. Department of Agriculture is in the wetlands act through a program known as "Swampbusters." This program stops the Secretary from passing out agricultural subsidies to farmers who plant commodity crops in wetland basins.[534]

The statute embodies a number of interlocking regulatory schemes including controls over the construction of waste treatment works, provisions setting federal effluent standards for conventional and toxic or other hazardous pollutants, the creation of a national water quality standard, and a permit scheme for anyone whose activities could affect the achievement of the Act's objectives.

The determination of whether a site is wetlands depends on its vegetation, the hydrology, and soils. n754 Generally, only if the Army Corps of Engineers finds indicators under each of these parameters will it declare a site wetlands, but there are exceptions. n755 Parameters under each of these headings are reviewed and changed from time to time by federal and state regulators, sometimes with Congressional oversight. n756

The statute itself isn't a complete wetlands protection law. Many activities affecting wetlands aren't regulated at all. Only dredging and filling come within the purview of the act. Among the activities that don't require permits: removing vegetation (without using equipment), draining, excavating, burning and flooding. n757

An underlying tension in the early administration of § 404 was that the Army Corps of Engineers saw § 404 as designed only to protect water quality. The EPA, the Fish and Wildlife Service, the National Marine Fisheries Services, and many environmental groups considered § 404 a legislative mandate to preserve wetlands as fish and wildlife habitats as well. n758

Under EPA guidelines the Corps' permits for dredging and filling are only available for water-dependent projects, like marinas, or where there is no practicable alternative to the proposed project. It is difficult to obtain a permit for housing, industrial or commercial construction in a filled wetland because these are not considered water-dependent in the sense that they can be constructed in areas that aren't wet. The housing applicant needs to show why the project can't be located elsewhere (even if the developer doesn't own other sites), why the project can't be reconfigured to avoid encroaching on wetlands, or why the site can't be used for some purpose that doesn't involve disturbing wetlands. n759

There are exemptions for certain farming and forestry activities but these aren't much help to real estate developers. n760

No permit can be granted unless it is in the public interest. The Corps considers an enormous array of factors in its public interest review, everything from ecological conservation to the needs and welfare of people. n761 But the upshot of the public interest review is that anyone seeking to fill a wetlands will be required to create new wetlands from existing uplands at least equal in size and quality to the wetlands lost to the project. The new wetlands must be at the site of the project or nearby.

Agencies acting to enforce the Clean Water Act assert jurisdiction over "waters of the United States." They take this to mean navigable waters, their tributaries, and wetlands adjacent to navigable waters and their tributaries.

The Army Corps of Engineers has also asserted jurisdiction over isolated wetlands (prairie potholes, vernal pools). "Every low-lying field and every wrinkle in a hillside is potentially subject to regulation by the Corps." n762

The jurisdictional basis for federal wetlands protection rests on the authority of the federal government to protect navigable waters, and its authority over interstate commerce. n763 These are independent predicates of authority with interstate commerce providing the broader constitutional base. If a person pollutes a non-navigable stream, that pollution could affect interstate commerce.

> Congress and the courts have become aware of the lethal effect pollution has on all organisms. Weakening any of the life support systems bodes disaster for the rest of the interrelated life forms. To recognize this and yet hold that pollution does not affect interstate commerce unless committed in navigable waters below the mean high water line would be contrary to reason. Congress is not limited by the "navigable waters" test in its authority to control pollution under the Commerce Clause. n764

Courts have interpreted the intent of Congress in the Clean Water Act to extend EPA jurisdiction to the limits of congressional power over interstate commerce.

A wetland could affect interstate commerce even though it is isolated -- unconnected to any significant body of water. That is what the Seventh Circuit court of Appeals ruled recently in *Hoffman v. EPA*. n765 A developer filled a 0.8-acre isolated wetland while constructing a 48-acre residential development. He hadn't obtained a permit under § 404 of the Clean Water Act. After the fact, he applied for one, and was denied. The Environmental Protection Agency (charged

with enforcing the Clean Water Act) fined him $50,000. The developer, Hoffman, appealed.

The EPA's interstate commerce argument was based on the flight patterns of migratory birds. n766 The court accepted the EPA's argument that migratory birds suffice to justify the regulation of isolated wetlands. The court had to swallow hard an observation it had made in its earlier opinion striking down the EPA's claim of authority, when "the EPA admitted that migratory birds would land and drink a puddle in the median of a highway." The court in defining interstate commerce as coterminous with the flight and landing patterns of migratory birds, sanctioned broad federal regulatory authority.

On the facts of the case the Seventh Circuit ruled that Hoffman's "puddle" wasn't subject to the wetlands permitting rules because there was no substantial evidence that the Hoffman property contained characteristics that would make it more attractive to birds than any other land.

> The migratory birds are better judges of what is suitable for their welfare than are we, the ALJ [the EPA Administrative Law Judge] or the CJO [the EPA's Chief Judicial Officer]. Having avoided Area A the migratory birds have thus spoken and submitted their own evidence. We see no need to argue with them. No justification whatsoever is seen from the evidence to interfere with private ownership based on what appears to be no more than a well intentioned effort in these particular factual circumstances to expand government control beyond reasonable or practical limits. After April showers not every temporary wet spot necessarily becomes subject to government control. n767

§ 85.20(f) Property Owners' Claims for Compensation Under "Takings Clause" When Regulations Become Confiscatory.

§ 85.20(f)(1) The Distinction Between Physical and Regulatory Takings.

§ 85.20(f)(1)(i) Generally.

HENDLER v. U.S.

952 F.2d 1364, 1371 (1991) **[citations and footnotes omitted]**

A man's home may be his castle, but that does not keep the Government from taking it. As an incident to its sovereignty, the Government has the authority to take private property for a public purpose. In England, when the King did so, payment for what was taken was, at least before Magna Carta, a sometimes thing, and largely at the discretion of the sovereign. In the United States, the Constitution does not leave that issue to the sovereign's good will. The ringing phrases of the Fifth Amendment conclude with the simple statement: "nor shall private property be taken for public use, without just compensation." U.S. Const. amend. V.

At the time of the writing of the Constitution and for many years thereafter a government taking meant exactly that -- the Government would physically occupy the land. If the Government needed a place for a military base, or for a building to house a government office or activity, that was a public purpose for which a government taking was authorized upon payment of just compensation. Much of the law of eminent domain -- both statutory and case -- developed for the purpose of providing the procedural structure for government takings; the main issue in the cases was what compensation was just.

As government activities expanded, situations arose in which government action resulted in an invasion of an owner's private property, but the government had not undertaken the procedural steps called for by statute to acquire the affected property interests. For example, the government's roadbuilding activity in A's land, the taking of which was authorized and paid for by the government, might cause permanent flooding on the nearby land of B. The suit by B, to require the government to pay just compensation for the taking of B's property as well, acquired the name of inverse condemnation.

Since the suit was based upon the constitutional provision protecting property rights, and the provision was considered to be self-executing with respect to compensation, it escaped the problems of sovereign immunity. Whether by planned acquisition through the exercise of eminent domain, or a payment after the fact through inverse condemnation, there was routinely present in these cases the fact of physical entry upon and occupation of private property by the government.

Occasionally an issue arose as to whether the government's activity was so short lived as to be more like the tort of trespass than a taking of property. The distinction between the government vehicle parked one day on O's land while the driver eats lunch, on the one hand, and the entry on O's land by the government for the purpose of establishing a long-term storage lot for vehicles and equipment, on the other, is clear enough. The fact that sovereign immunity might insulate the government from liability in the tort but not in the taking makes for interesting line-drawing in the close cases, and provides employment for lawyers.

Traditional takings doctrine, based as it is on the indicia of physical occupation of land, does not fit easily into the issues that arose with the emergence of the regulatory state._____

The U.S. Supreme court has drawn a fine, clear line between suits that arise when the government physically invades private property and suits arising from "mere" regulation. n768

> Where the government authorizes a physical occupation of property (or actually takes title), the Takings Clause generally requires compensation. *See, e.g., Loretto v. Teleprompter Manhattan CATV Corp., 458 U.S. 419, 426 (1982).* But where the government merely regulates the use of property, compensation is required only if considerations such as the purpose of the regulation or the extent to which it deprives the owner of the economic use of the property suggest that the regulation has unfairly singled out the property owner to bear a burden that should be borne by the public as a whole. *See, e.g., Penn Central Transp. Co. v. New York City, 438 U.S. 104, 123-25 (1978).* The first category of cases requires courts to apply a clear rule; the second necessarily entails complex factual assessments of the purposes and economic effects of government actions. n769

§ 85.20(f)(1)(ii) Requiring a Permit Isn't Taking.

Suppose a home builder obtains all the local approvals for a project, and commences filling a marshy area to make it buildable -- without having obtained a § 404 permit. Is the requirement of a permit itself a potential taking of private property without just compensation -- in violation of the U.S. Constitution, Fifth Amendment? The U.S. Supreme court answered this question in *United States v. Riverside Bayview Homes, Inc.* n770

> A requirement that a person obtain a permit before engaging in a certain use of his or her property does not itself "take" the property in any sense: after all, the very existence of a permit system implies that permission may be granted, leaving the landowner free to use the property as desired. Moreover, even if the permit is denied, there may be other viable uses available to the owner. Only when a permit is denied and the effect of the denial is to prevent "economically viable" use of the land in question can it be said that a taking has occurred. n771 This decision is not innocuous, because an applicant may need to spend considerable sums in order to complete an application and apply for a permit. But courts regard this as a constitutionally unobjectionable cost of doing business.

§ 85.20(f)(2) The Regulatory Takings Test As a Basis for Claiming Compensation Based on § 404 Permit Denials.

The most widely accepted test for determining whether a government action has become a regulatory "taking" comes from Justice Powell in *Agins v. Tiburon*. n772 The challenged law is a regulatory taking if it fails substantially to

advance a legitimate government interest *or* denies a property owner economically viable use of his land.

When the *federal* government effectively "takes" private property by regulating its use severely without paying for it, the owner may have a claim under the Tucker Act which may be filed in the U.S. Court of Claims. n773 Appeals from court of Claims rulings are decided by the U.S. Court of Appeals for the Federal Circuit. n774

A Tucker Act suit concedes the validity of the regulation and is a claim for compensation only. n775 If the litigant believes that the federal agency acted without authority, it must sue in federal district court. That is why Hoffman in the case didn't bring suit in the court of Claims under the Tucker Act.

In the early challenges under § 404, the court of Claims was unfriendly to developer suits. Typical of these was the court of Claims opinion in *Deltona Corp. v. United States*. n776 Deltona had bought a 10,000-acre parcel in 1964 for $7.5 million to develop in phases as a waterside residential community. Deltona subdivided its site into five parcels. It completed two phases by 1969. In 1973, after § 404 was added, Deltona sought a permit for the remaining three parcels. The Corps granted a permit for only one of the parcels. Deltona filed suit for compensation under the Tucker Act.

The court of Claims decided against Deltona. Of Deltona's total acreage the permit denial affected just 20%. While the value of the undevelopable acreage had diminished as a result of the denial, the court found that the partly submerged land had value for other purposes. Further, the court noted that these controls were imposed nationwide. Deltona had not been singled out for specially adverse treatment. The company knew that it would have to obtain various permits as a condition to developing, and bought knowing and assuming the risk that permit conditions would become more onerous over time.

Starting in the late 1980s, property owners began having better luck in the court of Claims as they challenged § 404 permit denials. Perhaps the case best illustrating this trend *is Loveladies Harbor, Inc. v. United States*. n777 The developer bought the site in 1958. By 1982, the developer had built on 199 acres of the holding, 250 acres, mostly before the enactment of the Clean Water Act in 1972.

The site was located on Long Beach Island, Ocean County, New Jersey. It abutted wetlands on the west, single-family homes on the east and southeast. The developer needed a permit from the New Jersey Department of Environmental Protection (N.J.D.E.P.) and the Corps to build out the remaining 51 acres. At first, N.J.D.E.P. denied the permit. The developer went to court to challenge the denial. Eventually the N.J.D.E.P. and the developer settled by agreeing that only 12.5 of 51 acres could be developed -- with 35 single-family homes. The other 38.5 acres were to be dedicated to the state in return for the N.J.D.E.P. permit. Nonetheless, the Corps denied the permit. The N.J.D.E.P. was delighted. It had labelled the developer's project a "'60's anachronism." The Corps' denial was held to be a taking because in denying the right to develop the last 12.5 acres, the developer suffered a deprivation of "all economically feasible use." n778 The trial court had found a value diminution of the 12.5-acre parcel from $2.6 million to $12,500, hence, a taking.

Crucial to this result was the court's willingness to separate the final 12.5 acres from the original 250-acre parcel of which it had once been a part. The calculation of a near-total loss was only possible because the court viewed the 12.5 acres separately. Weighed against all 250 acres, the owner's diminution in value would surely have fallen within the range of permissible regulation.

§ 85.20(f)(3) "Takings" Challenges to State Wetlands Laws.

Many states have wetland protective legislation. n779

> In most cases state wetlands regulation is undertaken in association with a state coastal zone management program, a comprehensive site planning regime for coastal areas undertaken under the standards of the Federal Coastal Zone Management Act, *61 U.S.C. § 1455*. n780

States don't face the "navigable water" or "interstate commerce" limitations imposed by the U.S. constitution on federal wetland protections. But they are still subject to the strictures of the Fifth Amendment via the Bill of Rights. State courts, though, differ dramatically in their responses to claims for compensation from property owners who are denied the right to develop based on state wetlands protections. n781

At least four states hold that a buyer who purchases swampland has no reasonable expectation of being able to develop by filling the site. n782 This is sometimes called the "buy a swamp, get a swamp" rule. In two states, wetland owners have been held to enjoy the right to develop or be compensated. n783 But in one of those, New York, the owner is only entitled to claim from the state compensation attributable to New York State's wetland rules. New York isn't liable for damage caused by federal wetlands controls. For that the property owner must sue the feds.

The U.S. Supreme court reviewed a property owner's "takings" challenge to South Carolina's coastal zone management law in *Lucas v. South Carolina Coastal Council*.

LUCAS v. SOUTH CAROLINA COASTAL COUNCIL

***112 S. Ct. 2886,* argued Mar. 2, 1992, decided June 29, 1992 [citations and footnotes omitted]**

JUSTICE SCALIA delivered the opinion of the court.

In 1986, petitioner David H. Lucas paid $975,000 for two residential lots on the Isle of Palms in Charleston County, South Carolina, on which he intended to build single family homes. In 1988, however, the South Carolina Legislature enacted the Beachfront Management Act, S.C. Code § 48-39-250 et seq. (Supp. 1990) (Act), which had the direct effect of barring petitioner from erecting any permanent habitable structures on his two parcels. See § 48-39289(A). A state trial court found that this prohibition rendered Lucas's parcels "valueless." App. to Pet. for Cert. 37. This case requires us to decide whether the Act's dramatic effect on the economic value of Lucas's lots accomplished a taking of private property under the Fifth and Fourteenth Amendments requiring the payment of "just compensation." U.S. Const., Amdt.

* * *

Prior to Justice Holmes' exposition in *Pennsylvania Coal Co. v. Mahon, 260 U.S. 393 (1922),* it was generally thought that the Takings Clause reached only a "direct appropriation" of property, *Legal Tender Cases, 12 Wall. 457, 551 (1871),* or the functional equivalent of a "practical ouster of [the owner's] possession." *Transportation Co. v. Chicago, 99 U.S. 635, 642 (1879).* Justice Holmes recognized in Mahon, however, that if the protection against physical appropriations of private property was to be meaningfully enforced, the government's power to redefine the range of interests included in the ownership of property was necessarily constrained by constitutional limits. *260 U.S. at 414-415.* If, instead, the uses of private property were subject to unbridled, uncompensated qualification under the police power, "the natural tendency of human nature [would be] to extend to qualification more and more until at last private property disappear[ed]." *Id., at 415.* These considerations gave birth in that case to the oft-cited maxim, that "while property may be regulated to a certain extent, if regulation goes too far it will be recognized as a taking." *Ibid.*

Nevertheless, our decision in *Mahon* offered little insight into when, and under what circumstances, a given regulation would be seen as going "too far" for purposes of the Fifth Amendment. In 70-odd years of succeeding "regulatory takings" jurisprudence, we have generally eschewed any "'set formula'" for determining how far is too far, preferring to "engag[e] in ... essentially ad hoc, factual in inquiries," *Penn Central Transportation Co. v. New York City, 438 U.S. 104, 124 (1978)* (quoting *Goldblatt v. Hempstead, 369 U.S. 590, 594 (1962)).* See Epstein, Takings: Descent and Resurrection, *1987 Sup. Ct. Rev. 1, 4.*

* * *

As we have said on numerous occasions, the Fifth Amendment is violated when land-use regulation "does not substantially advance legitimate state interests or denies an owner economically viable use of his land." *Agins*, [447 U.S.], at 260 (emphasis added).

We have never set forth the justification for this rule. Perhaps it is simply, as Justice Brennan suggested, that total deprivation of beneficial use is, from the landowner's point of view, the equivalent of a physical appropriation. *See San Diego Gas & Electric Co. v. San Diego, 450 U.S., at 652* (Brennan, J., dissenting). "[F]or what is the land but the profits thereof[?]" 1 E. Coke, Institutes ch. 1, § 1 (1st Am. ed. 1812). Surely, at least, in the extraordinary circumstance when no productive or economically beneficial use of land is permitted, it is less realistic to indulge our usual assumption that the legislature is simply "adjusting the benefits and burdens of economic life," *Penn Central Transportation Co., 438 U.S., at 124,* in a manner that secures an "average reciprocity of advantage" to everyone concerned. *Pennsylvania Coal Co. v. Mahon, 260 U.S., at 415.* And the functional basis for permitting the government, by regulation, to affect property values without compensation -- that "Government hardly could go on if to some extent values incident to property could not be diminished without paying for every such change in the general law," *id., at 413* -- does not apply to the relatively rare situations where the government has deprived a landowner of all economically beneficial uses.

On the other side of the balance, affirmatively supporting a compensation requirement, is the fact that regulations that leave the owner of land without economically beneficial or productive options for its use -- typically, as here, by requiring land to be left substantially in its natural state -- carry with them a heightened risk that private property is being pressed into some form of public service under the guise of mitigating serious public harm. As Justice Brennan explained: "From the government's point of view, the benefits flowing to the public from preservation of open space through regulation may be equally great as from creating a wildlife refuge through formal condemnation or increasing electricity production through a dam project that floods private property." *San Diego Gas & Electric Co., supra, at 652* (Brennan, J., dissenting). The many statutes on the books, both state and federal, that provide for the use of eminent domain to impose servitudes on private scenic lands preventing developmental uses, or to acquire such lands altogether, suggest the practical equivalence in this setting of negative regulation and appropriation.

We think, in short, that there are good reasons for our frequently expressed belief that when the owner of real property has been called upon to sacrifice all economically beneficial uses in the name of the common good, that is, to leave his property economically idle, he has suffered a taking.

The trial court found Lucas's two beachfront lots to have been rendered valueless by respondent's enforcement of the coastal-zone construction ban. Under Lucas's theory of the case, which rested upon our "no economically viable use" statements, that finding entitled him to compensation. Lucas believed it unnecessary to take issue with either the purposes behind the Beachfront Management Act, or the means chosen by the South Carolina Legislature to effectuate those purposes. The South Carolina Supreme court, however, thought otherwise. In its view, the Beachfront Management Act was no ordinary enactment, but involved an exercise of South Carolina's "police powers" to mitigate the harm to the public interest that petitioner's use of his land might occasion. *304 S.C., at 384, 404 S.E.2d, at 899.* By neglecting to dispute the findings enumerated in the Act or otherwise to challenge the legislature's purposes, petitioner "concede[d] that the beach/dune area of South Carolina's shores is an extremely valuable public resource; that the erection of new construction, inter alia, contributes to the erosion and destruction of this public resource; and that discouraging new construction in close proximity to the beach/dune area is necessary to prevent a great public harm." Id., at 382-383, 404 S.E.2d, at 898. In the court's view, these concessions brought petitioner's challenge within a long line of this court's cases sustaining against Due Process and Takings Clause challenges the State's use of its "police powers" to enjoin a property owner from activities akin to public nuisances.

It is correct that many of our prior opinions have suggested that "harmful or noxious use" of property may be proscribed by government regulation without the requirement of compensation. For a number of reasons, however, we think the South Carolina Supreme court was too quick to conclude that that principle decides the present case.

* * *

Where the State seeks to sustain regulation that deprives land of all economical beneficial use, we think it may resist compensation only if the logically antecedent inquiry into the nature of the owner's estate shows that the proscribed use interests were not part of his title to begin with. This accords, we think, with our "takings" jurisprudence, which has traditionally been guided by the understandings of our citizens regarding the content of, and the State's power over, the "bundle of rights" that they acquire when they obtain title to property. It seems to us that the property owner necessarily expects the uses of his property to be restricted, from time to time, by various measures newly enacted by the State in legitimate exercise of its police powers; "[a]s long recognized, some values are enjoyed under an implied limitation and must yield to the police power." *Pennsylvania Coal Co. v. Mahon, 260 U.S., at 413.* And in the case of personal property, by reason of the State's traditionally high degree of control over commercial dealings, he ought to be aware of the possibility that new regulation might even render his property economically worthless (at least if the property's only economically productive use is sale or manufacture for sale), *see Andrus v. Allard, 444 U.S. 51, 66-67 (1979)* (prohibition on sale of eagle feathers). In the case of land, however, we think the notion pressed by the Council that title is somehow held subject to the "implied limitation" that the State may subsequently eliminate all economically valuable use is inconsistent with the historical compact recorded in the Takings Clause that has become part of our constitutional culture.

Where "permanent physical occupation" of land is concerned, we have refused to allow the government to decree it anew (without compensation), no matter how weighty the asserted "public interests" involved, *Loretto v. Teleprompter Manhattan CATV Corp., 458 U.S., at 426* -- though we assuredly would permit the government to assert a permanent easement that was a pre-existing limitation upon the landowner's title. We believe similar treatment must be accorded confiscatory regulations, i.e., regulations that prohibit all economically beneficial use of land: Any limitation so severe cannot be newly legislated or decreed (without compensation), but must inhere in the title itself, in the restrictions that background principles of the State's law of property and nuisance already place upon land ownership. A law or decree with such an effect must, in other words, do no more than duplicate the result that could have been achieved in the courts -- by adjacent landowners (or other uniquely affected persons) under the State's law of private nuisance, or by the State under its complementary power to abate nuisances that affect the public generally, or otherwise.

On this analysis, the owner of a lake bed, for example, would not be entitled to compensation when he is denied the requisite permit to engage in a landfilling operation that would have the effect of flooding others' land. Nor the corporate owner of a nuclear generating plant, when it is directed to remove all improvements from its land upon discovery that the plant sits astride an earthquake fault. Such regulatory action may well have the effect of eliminating the land's only economically productive use, but it does not proscribe a productive use that was previously permissible under relevant property and nuisance principles. The use of these properties for what are now expressly prohibited purposes was always unlawful, and (subject to other constitutional limitations) it was open to the State at any point to make the implication of those background principles of nuisance and property law explicit. See Michelman, "Property, Utility, and Fairness, Comments on the Ethical Foundations of 'Just Compensation' Law," *80 Harv. L. Rev. 1165, 1239-1241 (1967).* In light of our traditional resort to "existing rules or understandings that stem from an independent source such as state law" to define the range of interests that qualify for protection as "property" under the Fifth (and Fourteenth) Amendment(s), this recognition that the Takings Clause does not require compensation when an owner is barred from putting land to a use that is proscribed by those "existing rules or understandings" is surely unexceptional. When, however, a regulation that declares "off-limits" all economically productive or beneficial uses of land goes beyond what the relevant background principles would dictate, compensation must be paid to sustain it.

The "total taking" inquiry we require today will ordinarily entail (as the application of state nuisance law ordinarily entails) *analysis, of among other things, the degree of harm to public lands and resources, or adjacent private property, posed by the claimant's proposed activities* [emphasis added] see, e.g., Restatement (Second) of Torts §§ 826, 827, the social value of the claimant's activities and their suitability to the locality in question, see, e.g., id., §§ 828(a) and (b), 831, and the relative ease with which the alleged harm can be avoided through measures taken by the claimant and the government (or adjacent private landowners) alike, see, e.g., id., §§ 827(e), 828(c), 830. The fact that a particular use has long been engaged in by similarly situated owners ordinarily imports a lack of any common-law prohibition (though

changed circumstances or new knowledge may make what was previously permissible no longer so, see *Restatement (Second) of Torts, supra*, § 827, comment g. So also does the fact that other landowners, similarly situated, are permitted to continue the use denied to the claimant.

It seems unlikely that common-law principles would have prevented the erection of any habitable or productive improvements on petitioner's land; they rarely support prohibition of the "essential use" of land, *Curtin v. Benson, 222 U.S. 78, 86 (1911).* The question, however, is one of state law to be dealt with on remand. We emphasize that to win its case South Carolina must do more than proffer the legislature's declaration that the uses Lucas desires are inconsistent with the public interests, or the conclusory assertion that they violate a common-law maxim such as sic utere tuo ut alienum non laedas. As we have said, a "State, by ipse dixit, may not transform private property into public property without compensation...." *Webb's Fabulous Pharmacies, Inc. v. Beckwith, 449 U.S. 155, 164 (1980).* Instead, as it would be required to do if it sought to restrain Lucas in a common-law action for public nuisance, *South Carolina must identify background principles of nuisance and property law that prohibit the uses he now intends in the circumstances in which the property is presently found* [emphasis added]. Only on this showing can the State fairly claim that, in proscribing all such beneficial uses, the Beachfront Management Act is taking nothing.

The judgment is reversed and the cause remanded for proceedings not inconsistent with this opinion.

So ordered. n784

Lucas, a building contractor, bought two beachfront lots, the last of four lots in a subdivision on the Isle of Palms, a South Carolina Barrier Island, two years before South Carolina's Beachfront Management Act was applied to prohibit any construction on those two lots. Ironically, he had relied on the advice of the same consultants that two years later would help the state draw the imaginary line beyond which no one could build. They had told him the beachfront was stable and growing. Lucas reported, "when I bought the lots I was in total compliance with all rules and regulations." n785

Suppose Lucas sold those two lots after the law was passed. Would that subsequent purchaser have had as good a constitutional claim as Lucas did?

Justice Scalia writes that the state may resist compensation only if the logically antecedent inquiry into the nature of the owner's estate shows that the proscribed use interests weren't part of his title to begin with. Other U.S. Supreme court "takings" cases have invoked the phrase "distinct" or "reasonable" investment-backed expectation. Would a subsequent purchaser's case fail because she purchased with notice of the law, and maybe paid a discounted price because of it? What would her "reasonable" investment-backed expectation have been? Would awarding compensation to that buyer give her more than she bargained for?

Some courts consider inverse condemnation rights as personal and not as "running with the land." The seller will often have sold at a discount so that if the buyer got compensated, she would be getting a windfall. n786 In one Supreme court opinion discussing "investment-backed expectations," regulations, in order to become de facto "takings," had to be "so substantial and unforeseeable ... that justice and fairness require that they be borne by the public as a whole." n787

However, many courts allow the buyer to assert the seller's "takings" claim if that right was assigned by contract from seller to buyer. n788

Nollan, the homeowner the Supreme court rescued from the clutches of the California Coastal Commission, bought with clear notice of what the Coastal Commission would require. That didn't seem to make any difference to a majority of the justices. n789 Lucas himself had no vested right to develop and had invested nothing but the land purchase price.

In zoning cases some courts have taken the view that it is the property which is zoned, not the owner. If the zoning is

confiscatory or arbitrary, any owner should be able to challenge the law and have it set aside -- whether she bought before or after the law was enacted. What should matter is whether the law actually results in the property being reduced to worthlessness even though the owner's intended use of her property is exactly the same as all her neighbors.

South Carolina's coastal law establishes building setback lines according to the records of the shoreline over the past 40 years. The annual rate of erosion is multiplied by 40, setting a baseline, and the building setback is 20 feet behind the baseline. n790

Most owners of shoreline property in South Carolina are left with buildable lots. Lucas was not.

In 1990 the law was amended so that those very few owners with no buildable lot area could petition and obtain restricted building permits. n791 Applying for such a permit is one of the options now available to Lucas. Counsel to the South Carolina Coastal Council was quoted after the Supreme court issued its opinion: "I can't say with absolute certainty Mr. Lucas would obtain a permit but I can say the permitting committee would look favorably on an application."

Even if Mr. Lucas applied for a permit under the new hardship provisions and got one, he might still have a claim for the compensation based on a temporary taking.

If a government agency enacts a regulation which is later found to have been a "taking" of property, or the local government itself withdraws the unconstitutional regulation, the affected property owners cannot claim that their property was taken permanently. But they may have a claim for a temporary taking.

The U.S. Supreme court made this principal clear in *First English Evangelical Lutheran Church v. County of Los Angeles*. n792 By analogy the court cited situations in which the U.S. government used property during World War II which was returned to its rightful owners after the war, and cases in which governments had initiated condemnation actions to acquire private property and then abandoned their condemnation suits.

At one time some state courts thought that the only remedy available to a property owner in a "takings" case was the right to have the objectionable regulation stricken, usually by remanding the case back to the local government so it could reformulate its regulations. For developers this was not much of a remedy. The local government would be ordered to adopt new regulations or rules and give the aggrieved property owner a second chance to apply for a permit. Developers weren't sure they would be treated any better the second time, and expected to be socked with new fees and different requirements -- possibly forcing them to a second lawsuit, and a further remand back to the same hostile locals who had already rejected two proposals. *First English* declared the possibility of a damage remedy for a temporary taking. This remedy results in a developer being reimbursed for the time the developer lost and money he spent while the local government was trying to sort things out. The property owner, even the one who eventually obtained the right to build under the new rules, could collect damages for the temporary taking. The U.S. Supreme court in *First English* may have been reacting to a well established attitude of municipal officials that if a particular regulation were stricken down by a court decision under the Takings Clause, the municipality could always just amend the regulation and start all over again. n793

Before *First English*, local government officials didn't have to worry much about whether the land use controls they were enacting were confiscatory. If the local government's land use controls were stricken as unconstitutional, the most they faced was a long paperwork trail at the end of which the local government could enact new laws not all that different from the first set, and see if those would withstand constitutional challenge. After *First English*, a local government that enacted confiscatory regulations could be held liable by affected property owners for damages under the Fifth Amendment for the temporary taking even after withdrawing the offending regulations. n794

Compensation might be based on such measures as the fair rental value of the property, the value of an option for the

period the unconstitutional law was in effect, the owner's holding costs (mortgage interest, property taxes, insurance), the owner's opportunity costs (if the property could have been sold then but can't be sold when the regulation is lifted), or the before-after value of the property during the takings period. n795

The burden of proving a temporary taking is the same as proving a permanent one: (1) The value of the property must be reduced to zero, or nearly so; and (2) The challenged regulation must be found not to be advancing a legitimate state interest.

Neither test is easy to prove. The value reduction must be of "all economically viable use" or close to it. Just because property is greatly reduced in value, it hasn't necessarily been "taken" in the constitutional sense.

On remand, the appellate court found that the regulation in *First English* had not been a taking because the property owner had not been denied all economically viable use and the regulation substantially advanced a legitimate state interest. n796

The property owner, First English, was operating a camping facility. The county had denied it the right to reconstruct buildings -- bunkhouses and living quarters -- destroyed in a flood. The denial was pursuant to a temporary or interim ordinance. The interim ordinance was replaced by a permanent one restricting what could be built in the flood hazard area. Under both the interim and permanent ordinances, the camp facility could have been used to cook meals, play games, give lessons, pitch tents and for many other camping activities.

The appellate court ruled that neither the interim nor the permanent ordinance was an unconstitutional taking because both had been designed to protect human life, the highest goal in the hierarchy of police power objectives, through the control of what could be built in the flood hazard zone.

The lesson of *First English* on remand was that in order to establish a claim, even for a "temporary" taking, Mr. Lucas would still have to establish that the South Carolina law had been an unconstitutional taking. In November 1992, he succeeded in doing so. The state Supreme court rejected the Coast Council's claim that Lucas' building two houses on an erosion-prone beach would constitute a nuisance under South Carolina common law. The South Carolina Supreme court sent the case back to the circuit court to assess Lucas' damages "for his temporary deprivation of the use of his property" plus interest for his four-year court battle. n797

Some environmental lawyers are especially displeased with the South Carolina Supreme court's opinion. In South Carolina, as in most states, the right to rely on existing laws doesn't vest on mere site acquisition.

Further, the evidence at trial in *Lucas* showed "unusually frequent sales of, and rapidly escalating prices for, the two lots. One was bought for $96,000 in 1979 and sold for $187,000 in 1984 ... sold for $260,000 in 1985 ... and sold for $475,000 to Lucas in 1986 (an eighty-three percent increase in one year). The other lot had a similar history. Therefore, a lot escalated in value by more than 490 percent over twelve years ... and was alleged to have been worth $650,000 in 1991 ... only two years after Hurricane Hugo killed twenty-nine people and caused $6 billion in property damage along South Carolina's coast." n798

To avoid further litigation, the South Carolina Coastal Council paid Lucas $1.6 million for his two lots. Astonishingly, it expects to recoup some of that by selling the lots for development. n799 Rumor has it that when a neighboring owner offered the Commission a few hundred thousand dollars for one lot so it could be kept permanently as open space, the Commission rejected the offer. They preferred the higher price that development would bring.

Earlier, we mentioned *Deltona*, a court of Claims opinion which upheld a § 404 permit denial even though Deltona had been denied the right to develop 20% of its tract. n800 Deltona had subdivided its land into five parcels. It was denied the right to dredge and fill two of them. Suppose it had sold those two sites before seeking a § 404 permit. Would that

buyer have a claim better than Deltona's and as good as Lucas'?

Remember, Lucas' two beachfront lots weren't the only ones Lucas had ever developed. Could the South Carolina Supreme court determine the extent of Lucas' loss by considering the activities on the Island of the subdivider who sold Lucas the two lots? That doesn't seem fair, but if the court can't consider the situation of Lucas' seller, doesn't the *Lucas* case invite property owners to subdivide their sites by placing environmentally sensitive areas into separately owned parcels? Doesn't the case also invite Congress to immunize any environmental statute from a takings challenge by allowing some minimal development of affected sites?

Justice Scalia expressed awareness of these issues in footnote 7 in *Lucas* without resolving them:

> Regrettably, the rhetorical force of our "deprivation of all economically feasible use" rule is greater than its precision, since the rule does not make clear the "property interest" against which the loss of value is to be measured. When, for example, a regulation requires a developer to leave 90% of a rural tract in its natural state, it is unclear whether we would analyze the situation as one in which the owner has been deprived of all economically beneficial use of the burdened portion of the tract, or as one in which the owner has suffered a mere diminution in value of the tract as a whole. (For an extreme -- and, we think, unsupportable -- view of the relevant calculus, see *Penn Central Transportation Co. v. New York, 42 N.Y.2d 324, 333-334, 366 N.E.2d 1271, 1276-1277 (1977),* aff'd *438 U.S. 104 (1978),* where the state court examined the diminution in a particular parcel's value produced by a municipal ordinance in light of total value of the taking claimant's other holdings in the vicinity.) Unsurprisingly, this uncertainty regarding the composition of the denominator in our "deprivation" fraction has produced inconsistent pronouncements by the court. Compare *Pennsylvania Coal Co. v. Mahon, 260 U.S. 393, 414 (1922)* (law restricting subsurface extraction of coal held to effect a taking), with *Keystone Bituminous Coal Assn. v. DeBenedictis, 480 U.S. 470, 497-502 (1987)* (nearly identical law held not to effect a taking); see also *id., at 515-520* (REHNQUIST, C.J., dissenting); Rose, "*Mahon* Reconstructed: Why the Takings Issue is Still a Muddle," *57 S. Cal. L. Rev. 561, 566-569 (1984).* The answer to this difficult question may lie in how the owner's reasonable expectations have been shaped by the State's law of property -- i.e., whether and to what degree the State's law has accorded legal recognition and protection to the particular interest in land with respect to which the takings claimant alleges a diminution in (or elimination of) value. In any event, we avoid this difficulty in the present case, since the "interest in land" that Lucas has pleaded (a fee simple interest) is an estate with a rich tradition of protection at common law, and since the South Carolina court of Common Pleas found that the Beachfront Management Act left each of Lucas's beachfront lots without economic value.

Justice Stevens dissented in *Lucas* and elaborated on the complications the majority's opinion would engender:

> [b]ecause of the elastic nature of property rights, the court's new rule will also prove unsound in practice. In response to the rule, courts may define "property" broadly and only rarely find regulations to effect total takings. This is the approach the court itself adopts in its revisionist reading of venerable precedents... On the other hand, developers and investors may market specialized estates to take advantage of the court's new rule. The smaller the estate, the more likely that a regulatory change will effect a total taking. Thus, an investor may, for example, purchase the right to build a multi-family home on a specific lot, with the result that a zoning regulation that allows only single-family homes would render the investor's property interest "valueless." In short, the categorical rule will likely have one of two effects: Either courts will alter the definition of the "denominator" in the takings "fraction," rendering the court's categorical rule meaningless, or investors will manipulate the relevant property interests, giving the court's rule sweeping effect. To my mind, neither of these results is desirable or appropriate, and both are distortions of our takings jurisprudence.

Few developers will benefit directly from *Lucas* because most land use laws allow some economic use of land. Ordinances that ban all or nearly all uses usually do so to prevent nuisance-like conditions. However, local governments restricting development to secure open space or to protect farming where farming is no longer economically viable may have to compensate property owners.

The *Lucas* case may have its greatest impact where developers are prevented from using their land because it is a wetland or provides a habitat for an endangered or threatened species protected by the federal law described

later in this chapter.

The court's rule in the *Lucas* case is that an owner deprived of all economically viable uses of property is entitled to compensation unless the state's restriction of the use is compatible with the state's pre-taking nuisance law and the rights of property owners in the state before the challenged law was enacted. There will be no federal common law of nuisance. The standard is what property owners in the state could legitimately have expected to do with their property. This raises a particularly interesting question where state courts have held that wetlands owners have no right to fill and develop.

The law of nuisance is often unpredictable. The U.S. Supreme court cited the *Restatement (Second), Torts*, acknowledging the vagaries of nuisance law. The law of nuisance is also an evolving one, open to changed conditions. The court recognizes this when it offers the example of a nuclear plant on an earthquake fault that could be made to relocate.

The 11th Circuit court of Appeals, following *Lucas*, presented a trial court with a list of questions it should ask in deciding a property owner's challenge to the Lee County (Florida) Comprehensive Land Use Plan. Richard Reahard inherited 40 acres of waterfront land, once part of a 540-acre property his parents had developed for single-family houses. He wanted to do the same with the 40 acres as they had done with the 500 acres -- build houses. But under the county plan the site was put in a Resource Protection Area and he was limited to one single-family house or to uses of a "recreational, open space, or conservation nature."

Here is the list of questions the court of Appeals instructed the district court to ask on remand:

(1) The history of the property -- when was it purchased? How much land was purchased? Where was the land located? What was the nature of title? What was the composition of the land and how was it initially used?

(2) The history of development -- what was built on the property and by whom? How was it subdivided and to whom was it sold? What plats were filed? What roads were dedicated?

(3) The history of zoning and regulation -- how and when was the land classified? How was use proscribed? What changes in classifications occurred?

(4) How did development change when title passed?

(5) What is the present nature and extent of the property?

(6) What were the reasonable expectations of the landowner under the state common law?

(7) What were the reasonable expectations of the neighboring landowners under state common law? and

(8) Perhaps most importantly, what was the diminution in the investment-backed expectations of the landowner, if any, after passage of the regulation? n801

The process courts use in nuisance cases is quite different from the typical ones deployed by state legislatures or city councils in drafting land use and environmental controls. The testimony of witnesses, neighbors and environmental advocates is subject to discovery and cross-examination. Some local governments permit cross-examination in planning hearings, but it is seldom used and even more rarely effective because it antagonizes local officials, and few developers or their representatives are skilled interrogators. Litigation offers a more dispassionate forum for expert testimony, hard evidence of harm or lack of it and sometimes an analysis of alternatives that would be less damaging to the regulated owner. In sum, nuisance law is more protective of the private owner's property rights, making the *Lucas* court's opinion both significant and controversial.

In a separate concurring opinion, Justice Kennedy objected to the court drawing the takings line at the nuisance boundary:

> I agree with the court that nuisance prevention accords with the most common expectations of property owners who face regulations, but I do not believe this can be the sole source of state authority to impose severe restrictions. n802

Up to the *Lucas* decision, the U.S. Supreme court had sustained many restrictive and confiscatory land use controls on the grounds that they were proscribing "harmful or noxious" uses. Justice Kennedy's concurrence signals the possibility that there may be territory on which a majority of the court can find common ground for an exception to the "takings" rule somewhere between "nuisance" and "harmful use."

Justice Scalia's opinion in *Lucas* rejects Justice Blackmun's dissenting view that a local or state declaration should be presumed correct absent conflicting evidence in the record. Justice Scalia, writing for the majority, would give little credibility to these self-justificatory legislative declarations and findings. "Since such a justification can be formulated in practically every case, this amounts to a test of whether the legislature has a stupid staff. We think the Takings Clause requires courts to do more than insist upon artful harm-prevention characterizations." n803

At a minimum, state and local governments won't be able to satisfy the "nuisance" prong of the test by their own declaration of findings. They will have to show that their regulation was consistent with the state's nuisance law or was necessary to prevent an owner from harming others in ways universally understood as unacceptable.

There is a well established nuisance exception to the Fifth Amendment. Owners have no property right to commit nuisances. The court gives the example of an owner filling a lakebed that will result in neighboring lands being flooded, and a nuclear power plant built on an earthquake fault. These are extreme examples, indeed, of the nuisance exception to the takings doctrine. State courts and legislatures wanting to squeeze confiscatory police power regulations into the nuisance exception will have their hands full if these examples offer the only models. n804

The U.S. Supreme court now insists that local and state governments about to regulate a property owner's land to worthlessness must pay for their actions unless a court can actually find that the regulation is consistent with that state's nuisance or property law traditions. But what standard of review is appropriate for these findings? Is it enough that there is "substantial evidence" for them -- even if the court's conclusions are "fairly debatable"? n805

Must the "preponderance of evidence" point the state's way? n806 Or are these findings to be evaluated afresh and upheld only if "clear and convincing"? n807

Justice Scalia distinguishes personal from real property. "[I]n the case of personal property ... [the property owner] ought to be aware of the possibility that new regulation might even render his property economically worthless" while

real property is protected by the takings clause.

Does this mean that if Lucas had formed a corporation just to buy the two lots and the corporation had held title, he would have had no constitutional claim when his stock became worthless because it is personal property? The corporation would have had a takings claim, but not Lucas?

If there is a significant constitutional distinction to be drawn between real and personal property, recall the *Nollan* case, described earlier, concerning a property owner saved by the U.S. Supreme court from being "extorted" by the California Coastal Commission into giving up his sand beach in exchange for the right to replace his small old house with a larger new one. The case is widely cited as requiring a "nexus" between the fees local governments can charge developers and the rationale and uses of those fees. But Nollan was fighting to keep real property. The developers are fighting to keep money, personal property. Are they as much at risk as Allard when the Supreme court ruled in 1979 he could be stopped from selling eagle feathers without "just compensation"?

Perhaps it would be prudent not to take the sentence in *Lucas* distinguishing real from personal property too seriously. In upholding the right of a U.S. president to compensation against a Congressional attempt to "take" presidential papers, a federal appellate court applied the *Lucas* tests persuasively and definitively with no hint that personal property was somehow less entitled to Fifth Amendment protection than real property. *See Nixon v. United States*. n808

Perhaps the "personal property" sentence in Justice Scalia's *Lucas* opinion should be viewed as yet another attempt to brush eagle feathers under the precedential carpet. The "eagle feather" case is *Andrus v. Allard.* n809 In that case, the U.S. Supreme court upheld a prohibition against trading in the parts of endangered species challenged by a person who dealt in eagle feathers. Later, the U.S. Supreme court struck down a statute enacted to prevent land owned by Native Americans from being splintered into divided ownerships when the owner died intestate. The statute would have prohibited the devise or descent of undivided interests, and those interests would have escheated to the tribe. In the various opinions in *Hodel v. Irving*, n810 three justices (Brennan, Marshall and Blackmun) found nothing in the *Hodel* result to limit *Andrus v. Allard.* n811 Three justices (Scalia, Rehnquist and Powell) viewed *Hodel* as indistinguishable from *Andrus v. Allard*, and therefore saw *Andrus* as limited to its facts. n812 The language in *Lucas* regarding a personal property exception to regulatory takings law may be just another *Andrus* spillover.

§ 85.20(g) The Endangered Species Act.

A developer might have secured all local land use approvals and even be ready to bulldoze a site, when a federal marshal appears to stop the work because a species newly listed by the Secretary of Interior as endangered or threatened with extinction has been rumored to live there. The chance of development being halted this way is greatest in rapidly growing states like California, Florida, Texas, and Hawaii where native plants and animals are losing ground fast.

Some extinctions are natural, of course, and others man-induced. The magnitude of the problem, though widely perceived, is difficult to assess with any precision. Only 1.4 million species have been identified worldwide, but estimates of global species run to 100 million. With this much uncertainty it isn't easy even to guess what is happening to species globally, and what the future holds for them. Some researchers say 50,000 species are becoming extinct each year, and humans are "in imminent danger of precipitating a biological disaster to rival anything in evolutionary history." n813 Other scientists say the magnitude and rate of extinction is small, and probably exaggerated. n814

Throughout most of this century environmental advocates have sought to slow the rate worldwide of species extinction. "The collapse of biodiversity will be the whole world's loss, and those who live in relative ease cannot expect the most hard-pressed nations to bear the brunt of stemming it." n815

Here is one scholar's summary of the situation:

> (1) There is serious debate as to what actually constitutes a species;
>
> (2) Extinctions have been a part of the cycle of life since the first species evolved;
>
> (3) There have been from five to twelve mass extinction episodes on earth, relatively brief periods during which an unusually large number of species went out of existence;
>
> (4) There is significant scientific support for the proposition that we are currently in the midst of, or on the precipice of, another mass extinction equal to or greater than those of the past;
>
> (5) There is also great uncertainty as to the validity of the current mass extinction projections, amounting to orders of magnitude differences in the estimates; and
>
> (6) Most scientific authorities agree that it is at least probable that, whatever the margin of error in the extinction estimates, the actual number of species becoming extinct is large enough to be a matter of concern. n816

The first endangered species acts passed by Congress authorized the Secretary of the Interior to promulgate a list of species "threatened with worldwide extinction" and prohibited those species from being imported or exported." n817 The task of protecting such species from being harmed or "taken" was left to the states. n818 Federal agencies only had to avoid harming endangered species "to the extent practicable." n819

President Nixon signed a much strengthened revision of the Endangered Species Act in 1973 because the earlier 1969 Act "simply does not provide the kind of management tools needed to act early enough to save a vanishing species." n820

The purpose of the 1973 Act was to conserve the ecosystems upon which endangered or threatened species depended for their continued existence. n821

The Act was designed so that the Secretary of the Interior would first determine whether a species was "in danger of extinction" (endangered) or "likely to become endangered within the foreseeable future" (threatened). The process for making this determination is by *listing* endangered or threatened species. The Secretary publishes proposed listings, holds public hearings, and then publishes findings in the Federal Register.

Part of the listing process of special concern to property owners involves the Secretary delineating the "critical habitat" of the threatened or endangered species. Critical habitats are:

> [s]pecific areas within the geographical area occupied by the species, at the time it is listed ... on which are found those physical or biological features (i) essential to the conservation of the species and (ii) which may require special management considerations or protection; and ... specific areas outside the geographical area occupied by the species [if so determined by the Secretary]. n822

Once a species is identified ("listed") as threatened or endangered, the Act prohibits any person to "take" it. Taking may at first blush seem to prohibit only hunting and capturing, but the Act defines the term broadly to include any form of harm or harassment. n823 Developing the critical habitat of a listed species constitutes a "taking."

To grasp the implications of the "take" prohibition, consider the case of *Cristy v. Hodel*. n824 Grizzly bears were devouring Cristy's sheep. He complained to the U.S. Fish and Wildlife Service but they weren't able to do much about it. So Cristy shot a grizzly. He was fined $3,000 under the Endangered Species Act but took the offensive and sued the Secretary of the Interior to enjoin enforcement of the E.S.A. and recover just compensation under the Fifth Amendment. The Ninth Circuit affirmed a district court's entry of summary judgment in favor of the Secretary of the Interior. n825

Justice White put the issue this way:

> There can be little doubt that if a federal statute authorized park rangers to come around at night and take petitioner's livestock to feed the bears, such a governmental action would constitute a "taking"... If the Government decided ... to enact a law barring grocery store owners from "harassing, harming, pursuing" people who wish to take food off grocery shelves without paying for it, such a law might well be suspect under the Fifth Amendment. For similar reasons, the Endangered Species Act may be suspect as applied in petitioner's case... n826

Some commentators agree with Justice White, doubt the wisdom of the Ninth Circuit's opinion and believe that the grizzly's invasion of Cristy's land protected by federal law would justify the court ordering the feds to pay for the grizzly's dinners at Cristy's expense. n827 At common law a property owner had the right to capture or shoot a trespassing grizzly. By reversing the common law, the federal government leaves Cristy vulnerable to the property damage grizzlies inflict. The Ninth Circuit disagreed. It pointed out that the grizzly, not the government, had done the noshing.

The U.S. Supreme court has consistently interpreted the Act according to the "plain intent of Congress ... to halt and reverse the trend toward species extinction, whatever the cost." n828 Cost-benefit analysis is irrelevant. Listed species are to be protected regardless of the cost.

In the leading case, the court halted the construction of the $100 million Tellico dam project, when it was about 80% completed, because the dam threatened the critical habitat of a three-inch- long species of perch called the snail darter. At the time the case received a lot of publicity, much of it unfavorable.

Congress eventually exempted the dam from the E.S.A. by a rider to a public works appropriations bill. Not only was the dam built, the snail darter survived, too. New and apparently naturally occurring populations of snail darters were found elsewhere. n829 And the snail darter was successfully transplanted. n830

In the 1973 Act, Congress mandated that every federal agency had to consult with the Fish and Wildlife Service in the Department of the Interior to make sure its actions were not jeopardizing the continued existence of a listed species. The Department promulgated procedures for that consultation. n831 Consultations are required even if federal involvement is only the issuance of a permit or the funding of a private project.

The Secretary then determines if the actions proposed by the federal agency will jeopardize a listed species or disturb a critical habitat. If it will, and reasonably and prudent alternatives exist, the federal agency must take those alternatives. They include mitigation measures recommended to minimize the impacts. Any taking approved through the consultation process is an "incidental taking" and is exempted from the prohibitions of the Act. n832 This process occurs under § 7 of the Act.

In 1982 Congress made a similar process available to private parties who did not need a federal permit and so had not previously been entitled to a consultation process that could lead to a finding that a "taking" was "incidental" and thus exempt from the penalties of the Act. n833 The 1982 Amendment authorized the Fish and Wildlife Service to promulgate "habitat conservation plans" and issue "incidental" take permits to private persons under § 10A of the Act. n834

The habitat conservation process contemplates all interested parties -- environmental advocates, developers, local government officials -- reaching consensus on how to conserve critical habitat without completely rejecting development. Mitigation measures are part of the plan. These usually involve setting aside open space for endangered or threatened species.

The first habitat conservation plan (HCP) was in the San Bruno Mountains just south of San Francisco. It allowed the construction of houses on a site inhabited by the Mission Blue butterfly, a listed endangered species. The developer was able to preserve 87% of the butterfly habitat by donating and selling much of the site to the state and county, and building on only a small portion of it. Yet, counsel to the developer reports that "even though the project was redesigned, the developer did not lose a single unit of development as a result of the process. It did lose three years in completing the planning process and was subjected to the cost of the process." n835

In Riverside County, California, developers, environmental groups, and the county put together a plan for the preservation of the Stephens' Kangaroo Rat and perhaps as many as forty other species on the list or likely to get onto it by the creation of a vast regional park. n836 The cost of the regional park was estimated at $150-200 million.

The U.S. Fish and Wildlife Service issued an "incidental taking" permit for areas outside certain designated study areas. For every acre of species habitat "taken" for development, the county must set aside one acre as a permanent species habitat. The habitat lands are bought with proceeds from a development fee of $1,950 per acre. Ten million dollars was raised from development fees in each of the first two years of the program. n837 Habitat lands may only be used for purposes consistent with species preservation. For instance, horse riding trails are permissible; soccer playing fields are not.

Habitat conservation plans, like the one in Riverside County, increasingly remove vast amounts of land from development, much of the land privately owned and in the path of development. Property owners discover that hundreds, even thousands, of acres are "critical habitat."

> Wildlife biologists are urging local governments and developers to preserve entire habitats and broad swaths of land called wildlife corridors, as opposed to isolated patches of open space. Without these corridors linking large patches of habitat, predators, like coyotes and mountain lions, cannot travel between the "islands," and the ecological balance is disrupted leading to extinctions. n838

Understandably, the property owners whose sites fall within these wildlife corridors complain that the costs of conserving endangered species should not be paid by them alone. They believe all taxpayers should share the burden by compensating owners of lands that the law prohibits from being developed. A new aggressiveness on the part of landowners has been nurtured by cases like *Florida Rock Industries* and *Lucas*, reprinted earlier. n839

Environmental lawyers dispute the legitimacy of these Fifth Amendment takings claims, pointing out that property owners of critical habitat are in the same position as if a local ordinance prohibited development without a conditional use or other special permit. n840

§ 85.20(h) Evaluations of the Act.

There is a raging debate over whether the E.S.A. should be re-authorized and extended by Congress, substantially modified or junked altogether. Emotions run so high the issues are aired everywhere from controversial radio talk shows to the editorial pages of the Wall Street Journal. n841

Here is what the current Secretary of the Interior thinks about the E.S.A.'s accomplishments:

> The E.S.A. is undeniably the most innovative, wide-reaching, and successful environmental law which has been enacted in the last quarter century. In 1993, it is precisely twenty years old in its modern form. Case after case of resurgence and rebirth show that it has been remarkably successful: the American alligator has returned; the skies are now again graced by many bald eagles; the peregrine falcon is now moving from near extinction to the threshold of delisting. The exceptional stories include,

> not in the least, the forest plan that has now been worked out in the Cascade Forest ecosystem in the Pacific Northwest.
>
> The opponents of the E.S.A. understand those successes and those facts, so they attack it from a different direction. A collection of different groups has assembled, advocating a concept called the "takings" doctrine -- the notion that the E.S.A. is really about unconstitutional, uncompensated taking of private property. n842

On the other side of the debate, the case is put with equal conviction:

> Because of the rigid, burdensome strictures the E.S.A. attaches to the presence of listed species or critical habitat on a given piece of property, landowners are presented with perverse incentives. Rather than be severely restricted in the use they can make of their property, along with the attendant procedural requirements, some people have opted for the "3-S" alternative: shoot, shovel, and shut up. The E.S.A. actually has led to the preemptive slaughter of listed species in an effort to eliminate the perceived roadblock to business-as-usual. Similarly, in certain forests where there was the prospect of future critical habitat designation, greatly accelerated logging has been the self-help solution.
>
> Conversely, the E.S.A. either prohibits or strictly regulates activities that might help bring listed species off their deathbeds. Ownership, possession, and sale of listed species could provide positive incentives for people to protect and nurture them for reasons of their own financial self-interest. Yet the E.S.A. bans such activities. Individuals who might otherwise be interested in providing a sanctuary for listed species on their property find that if they set up birdhouses, nest boxes, or feeders, or harvest their trees on a longer cycle, or make any arrangements to attract and nurture such species, they become shackled by a host of restrictions as to the use of their land as soon as the first invitee arrives. Under such circumstances, few of even the most conservation-minded people will want to open their property to listed species.
>
> The E.S.A. restrictions have been analogized to requiring a person who finds a Rembrandt painting in her attic to keep it on the premises, ensure no matter how great the expense that it is not damaged or stolen, and give the federal government free, unlimited access to her home to monitor protection. Despite these burdens, the person would not be allowed to own, sell, trade, or display the painting for profit. Any delight the person might have felt of discovering this magnificent treasure on her property would probably be a fading memory by this point. She might even consider destroying the Rembrandt if she could do so undetected. Many people cherish living things as priceless works of art, but this natural affection is directly counteracted by the perverse incentives of the E.S.A. n843

(n52)Footnote 788. *Id.*

(n53)Footnote 789. It did to Justice Brennan, dissenting, who saw that fact as crucial in removing from Nollan any "reasonable expectation" of maintaining the beach. *483 U.S. at 858-60. See* Daniel R. Mandelker, *Waiving the Taking Clause: Conflicting Signals From the Supreme Court*, LAND USE L. & Zon. Dig. 3.5 (Nov. 1988).

(n54)Footnote 790. For a spirited justification for not allowing construction in areas like these, *see* Ian L. McHarg, Design with Nature (1971).

(n55)Footnote 791. Dean, *When a Shoreline Home May Be a Public Nuisance,* N.Y. Times, July 4, 1992, at 6.

(n56)Footnote 792. *482 U.S. 304 (1987).*

(n57)Footnote 793. *See San Diego Gas & Elec. Co. v. City of San Diego, 450 U.S. 621, 655-66 n.21 (1981)* (Brennan, J., dissenting, quoted a California city attorney speaking to the National Institution of Municipal Law Officers in 1974).

(n58)Footnote 794. Property greatly reduced in value isn't a good candidate for any kind of takings claim. The value reduction must be of "all economically viable use" or close to it. The weakness in the second prong can be seen in the result of *First English* on remand; the court found the county's ordinance a perfectly legitimate police power exercise.

(n59)Footnote 795. William E. Farrell, *The Corrigan Case: Litigating Money Damage for a Temporary Taking in a State court,* Institute on Planning, Zoning, and Eminent Domain, Proceedings of the Institute §§ 5.01, 5.03 (1987).

Damages for temporary takings are limited. The State of Florida destroyed 137,880 citrus trees belonging to a private

nursery to wipe out a citrus canker. Samples from the nursery's trees were "clean" and showed no evidence the trees were contaminated. The state was held liable for a temporary taking. But the nursery was denied damages for the lost production time caused by the decontamination process. *State Dep't of Agric. & Consumer Servs. v. Mid-Florida Growers, 541 So. 2d 1243 (Fla. App. 1989),* noted in *19 STETSON L. REV. 955 (1990).*

(n62)Footnote 798. Richard J. Grosso and David J. Russ, *Takings Law in Florida: Ramifications of Lucas and Reahard, 8 J. Land Use & Envt'l Law 431, 436* (1993 Summer Supp.)

(n63)Footnote 799. *See* Torf Fulton Assoc., 8 Cal. Plan. & Dev. Rep. 5 (Dec. 1992).

(n64)Footnote 800. To Florida Rock Industries, the court of Claims awarded $1 million for a permit denial affecting only 98 of 1560 acres. But they had asked for a permit for all the land and were forced to shrink their request.

(n65)Footnote 801. *Reahard v. Lee County, 968 F.2d 1131, 1136 (11th Cir. 1992).*

(n66)Footnote 802. *Lucas v. South Carolina Coastal Council, 112 S. Ct. 2886 (1992).*

(n67)Footnote 803. *Lucas, 60 U.S.L.W. 4848 n.12.*

(n68)Footnote 804. *See* John A. Humbach, *'Taking' the Imperial Judiciary Seriously: Segmenting Property Interests and Judicial Revision of Legislative Judgments, 41 Cath. U. L. Rev. 771 (1993),* criticizing the court on this point: "courts have to make value judgments too -- for example, when legislative direction is absent or when courts are applying some of the vaguer prescriptions of the constitution such as 'due process of law.' However, it would be a poor constitutional strategy to give the courts the job of making the same value judgments that an elected legislature has already made under *its* constitutional authority." *Id. at 809.*

(n69)Footnote 805. This was the standard in *Village of Euclid v. Ambler Realty Co., 272 U.S. 365 (1926)* (upholding zoning ordinances).

(n70)Footnote 806. "Preponderance of evidence" is the normal burden of proof in California civil actions. Cal. Evid. Code § 115.

(n71)Footnote 807. The *Nollan* case seemed to impose at least this great a burden on the California Coastal Commission.

These questions were suggested to the author by Kenneth B. Bley, Partner, Cox, Castle & Nicholson, Los Angeles (Oct. 24, 1992). He didn't offer answers.

(n101)Footnote 837. *Id.* Those who dreamed of a regional park were shaken by hard reality. In November 1990, voters turned thumbs down on a bond issue to add a special assessment on all property owners in the county to supplement developer contributions. Voters had been asked to approve a levy of $3 per parcel per month for it. Without some public funding for the regional park, the habitat conservation plan may fail if development fees aren't sufficient to fund it.

(n104)Footnote 840. Silver, *Endangered Species Act: Views of an Environmental Lawyer,* 1 Land Use F. 48, 49 (1991). There is a provision in the Act which allows the President and Congress to invoke a Cabinet-level committee to override the Act. *16 U.S.C. § 1536*(e) to (h).

To approve harm to a listed species, the committee must find that there are no reasonable alternatives to the project, its benefits outweigh alternatives, it is in the public interest, of regional or national significance, and doesn't already involve an irreversible commitment of resources. To date, this provision has rarely been invoked.

(n105)Footnote 841. *See* Editorial, *Endangered Property Rights,* Wall St. J. (Sept. 12, 1994) at A14 ("If Washington decides it needs land to preserve the greater needs of the community, it should acquire it justly: by paying for it.").

CHAPTER 86 POWERS

10-86 Thompson on Real Property, Thomas Editions § 86.01

AUTHOR: Professor Leonard Levin Villanova School of Law Villanova University

§ 86.01 Powers of Appointment.

[Go To Main]

§ 86.01(a) Introduction.

§ 86.01(a)(1) General Nature and Development.

The power of appointment is the power conferred by an owner of property to another person designating future ownership. n1 As applied to the law of wills, the power of appointment appears to be an anomaly in that one is allowed, in substance and effect, to permit someone else to make will provisions for one. n2 Historically, the power of appointment grew out of early attempts to control the disposition of land at death before a direct testamentary disposition of land was legally possible. A landowner who desired to retain land during the owner's lifetime and have a disposition which differed from the Canons of Descent n3 would make an inter vivos conveyance to a nominee. The nominee, in turn, agreed to hold it on inactive trust for the grantor during the grantor's lifetime and at death to such persons as the grantor might designate. These early "trusts" or "uses" became enforceable in the Chancery Court, thus permitting a landowner to bypass the rigid feudal rules of conveyancing as well as the prohibition of testamentary disposition of land. n4 One of the provisions of the Statute of Uses purported to prohibit the employment of a use to accomplish an indirect testamentary disposition of land. n5 However, the demand to dispose of land other than through intestacy remained strong. As a result, a few years after the Statute of Uses had purported to forbid the practice of employing a passive use to effectuate the purposes of a will, Parliament adopted the Statute of Wills and Devises which, for the first time, recognized the right of a landholder to make a direct testamentary disposition of landholding. n6 Although the employment of the inactive trust or use to accomplish a testamentary disposition was no longer possible or desirable, the power of appointment, nevertheless, developed from this practice. Thus, the ability to confer upon another a power to designate a future owner was seen simply as a logical development from the practice of employing the inactive trust or use as a means of effectuating testamentary land dispositions. n7 In theory, from the perspective of the law of estates, the power was viewed as creating a condition subsequent to the title of the creator of the power (who was usually denominated as the donor of the power). If the power were exercised appropriately, the condition was deemed to have occurred and the title of the donor or creator of the power was deemed divested in favor of the designee. n8 Similarly, if the donor designated a taker in default of the exercise of the power, the rights of such taker in default were deemed to be divested if the power was properly exercised. n9 On the other hand, if the power was not exercised, the property would pass to the donor or the donor's designee in default of an appointment. n10 In this sense, the person

designated to make the appointment (who was usually denominated as the donee of the power) was viewed as having no direct property interest but as being the instrumentality through whom the donor effectuated the gift. n11 Courts, however, have not been entirely consistent in this characterization. This problem is pursued further in subsequent sections.

§ 86.01(a)(2) Powers of Appointment as Distinguished from Other Relationships.

§ 86.01(a)(2)(i) Powers of Attorney.

A power of appointment is an irrevocable fractional interest in the property itself. This fractional right consists of the power to designate future owners of the property. As such, the power is unaffected by the death or subsequent incompetency of its creator. n12 Moreover, it resembles other property interests in that, once it is created, it can be revoked or modified only to the extent that the accompanying trust or other property interest could be revoked or modified. n13 On the other hand, the power of attorney constitutes a naked authority conferred on a person to act on another's behalf. n14 The power remains fully revocable and, in the absence of specific statutory changes, terminates on the principal's death or incompetency. n15 This is based on the fundamental agency concept that the principal can confer no greater power than the principal has individually. n16 By definition, a power of attorney is a document that creates an agency relationship. All such relationships are grounded on the principle that one can authorize another to do only what one can do personally. This has been expressed by the familiar Latin maxim, *"qui facit per alium facit per se*." n17

COMPUTER-ASSISTED RESEARCH

LEXIS: power! w/1 appointment w/50 power! w/1 attorney

§ 86.01(a)(2)(ii) Powers of Consumption.

Ordinarily, during the specified term for the trust to exist, beneficiaries are restricted to income. The corpus usually may be distributed only on the trust's termination. n18 This is true whether the trust provides income for one person during the income beneficiary's lifetime with corpus to another, or provides income for the beneficiary for a specific period, after which that beneficiary receives the corpus. n19 Hence, any right to corpus during the existence of the trust must be provided for by the trust. n20

Provisions for a beneficiary to receive corpus take two forms. The most common type of provision vests the discretionary power in the trustee to invade the corpus for the beneficiary's benefit. Such discretion may or may not be controlled by such standards as "maintenance, health or education." In any event, courts ordinarily will not interfere with the trustee in the exercise of this discretion. n21 It is, however, possible to confer on the beneficiary of the trust a power to demand distribution of corpus, or some portion, free of the trust. Strictly speaking, it is only the latter type of power which can properly be called a power of consumption. n22

For federal tax purposes, the power of a trustee to direct the corpus, and the power of a beneficiary to demand a portion of the corpus, are treated as powers of appointment subject to Internal Revenue Code § 2041. n23 Thus, if the beneficiary has a right to demand principal uncontrolled by ascertainable standards, and the right can be exercised either alone or without the joinder of the settlor or an adverse party, the trust assets, to the extent of such right, are a part of the estate of the beneficiary, regardless of whether the beneficiary exercises the right. n24 Moreover, failure to exercise such a power during the beneficiary's lifetime may itself be a reportable gift from such beneficiary. n25

For non-tax purposes, the construction problems of these types of powers bear little resemblance to the common law powers of appointment. Thus, for purposes of property law, a power of appointment refers only to the power to designate a future owner of property, but not to a power to demand or receive corpus of a trust. n26 Few property

lawyers would think of a power of consumption as a power of appointment. In this respect, the terminology employed by the property lawyer differs from that used by the tax lawyer.

COMPUTER-ASSISTED RESEARCH

LEXIS: power! w/1 appointment w/50 power! w/1 trustee!

§ 86.01(a)(2)(iii) Powers of Trustee.

Extensive powers may be granted to a trustee under the terms of a trust. These powers are, for many purposes, the equivalent of powers of appointment. Thus, a trust instrument may confer the power to allocate income to a class of beneficiaries with or without standards, thus giving rights to one beneficiary to the exclusion of others. n27 A similar power may be given with respect to corpus. n28

Traditionally, the ability to confer such a power on a trustee has been subject to an important limitation. When the trust is created for individuals, and no charitable purpose is involved, most courts have required the trust instrument to contain sufficient objective standards to enable a court to evaluate the trustee's exercise. An attempt to confer broad power on a trustee (or executor) to select beneficiaries without such standards is void on the theory that it attempts to create a trust for an insufficiently defined group of beneficiaries. n29 Many text writers have condemned this rule and have argued that if a trustee is willing to make the selection, public policy is not violated by permitting the trustee to do so, regardless of whether the trustee has a duty to make such a selection or not. n30

The *Restatement of Trusts* recommends a basic change in the law, so that when a settlor creates a trust for an indefinite class, purporting to vest the trustee with power to select from that class, the power should be viewed as a valid power of appointment in the trustee to create a trust, "so long as the class is not so indefinite that it cannot be ascertained whether any person falls within it." n31 Except for one English case n32 and possibly a California statute, n33 the recommendation has not found support. A settlor may avoid invalidity under this rule by expressly providing an objective standard which a court might evaluate. Thus, a settlor may confer discretion on the trustee to award to the "person or persons who most contributed to my health and comfort during my last illness." n34

He may also satisfy the requirement, even when no standards are provided for the trustee's discretion, when the class is sufficiently defined to enable a court to objectively determine the identity of the members of the class. Thus, a trustee may be given discretion to distribute among the settlor's children or other similar class of relatives. n35 As stated, the foregoing rules only apply to trusts for individual beneficiaries. If the trust is for charitable purposes, it is permissible to confer broad discretionary power on the trustee to select such purposes. This is because the Attorney General, as the representative of the state, has standing to make certain the trust is enforced. n36

Moreover, modern authorities have accepted the concept of the "honorary trust." Following the lead of the *Restatement of Trusts*, n37 these authorities permit a settlor to dedicate funds for a specific non-charitable purpose, and that will be recognized as long as the trustee is willing to carry out the purpose, and so long as the duration of the trust does not exceed the period of the Rule against Perpetuities. n38

It should be noted that something of an inconsistency appears in the willingness of some courts to recognize the so-called honorary trust and at the same time to deny to the settlor the ability to confer upon the trustee a power of appointment to make indefinite beneficiaries more specific.

Furthermore, even when the donee is not the trustee of an existing trust, if the power of appointment is for a limited, defined class it has some of the attributes of a trust, in that the potential appointees of the class have a recognizable interest in the appointive assets. As a result, some courts have spoken of a special power for such a class as a power held by the donee "in trust for the potential appointees." n39

LEXIS: power! w/1 appointment and power! w/1 trustee!

§ 86.01(a)(3) Parties and Classification of Powers.

§ 86.01(a)(3)(i) Necessary Parties.

A power of appointment is created either by the will or by the trust of the original property owner who is denominated as the donor of the power. n40 Much of the desirability of the power of appointment as a planning device arises out of its great flexibility. In creating the power, the donor may "cut the cloth" to fit known needs. Thus the donor may dictate how, when and under what circumstances the power may be exercised, and for whose benefit it may or may not be exercised. n41 There are no boundaries on the character of the limitations the donor may impose. Thus, regardless of the jurisdiction, the donor may make it more difficult for a donee to exercise a power inadvertently by requiring a specific reference to the power to effectuate its exercise. n42 Also, the donor can require the power to be exercised only by the donee's will, n43 or only after the lapse of a specific period of time. n44 Finally, the donor can limit the potential appointees to a limited class or can exclude one or more persons or classes from potential appointment. n45

Normally, a power designates another who, in fact, determines ownership within the limits established by the donor in the creation of the power. The person making such designation is called the donee of the power. n46 As previously indicated, when the donee stands in a fiduciary relationship with the appointive assets, such as a trustee or executor, a serious question of the validity of the transaction may arise, unless the class to whom appointment can be made is clearly defined. n47 The problem may be further complicated because some courts treat the donee of a power for an ascertained and limited class as holding such power "in trust" for members of the class. n48 Additionally, the donee may not have a further interest in the property. The donee may simply be a person in whom the donor vests particular confidence, and who has no other relationship to the appointive assets. n49 While it is common for a donee of a power to appoint a remainder interest to have a right to income during the donee's lifetime, this is not a prerequisite. n50 The person for whose benefit the power is exercised is called either the appointee or the beneficiary. n51 The power may or may not limit the persons to whom such appointment may be made. n52

Finally, it is wise for the donor in creating the power to designate an alternate taker in default in the event that the donee fails to exercise the power. n53

COMPUTER-ASSISTED RESEARCH

LEXIS: limit! w/1 power! w/1 appointment classif! w/5 power! w/1 appointment

§ 86.01(a)(3)(ii) Testamentary or Inter Vivos Powers.

One basis for classifying powers of appointment is according to the time they may be exercised. Although the donor has total power in describing when a power may be exercised, n54 the most common limitation is a requirement that the donee exercise the power only under the terms of the donee's will. Such a power is designated a testamentary power of appointment. n55 It is possible to confer upon a donee the right to exercise the power during the donee's lifetime, in which case the power is an inter vivos power. n56 An inter vivos power confers upon the donee virtually the same ability to transfer or convey full title as if the donee were a full owner. The inter vivos power's use, therefore, is primarily in instances in which a donor wishes to confer upon another the authority to act on the donee's behalf, virtually as an agent, without making the power terminable or destructible. n57 The testamentary power, on the other hand, is a common feature of a modern estate plan. It enables the donee to respond flexibly to changed conditions occurring after the donor's death and it permits the donor to tie up the property during the donee's lifetime since the

donee can only effectuate a transfer by exercising the power in the donee's will. n58

The limited extent to which a donee may effect the property which is subject to a testamentary power during the donee's lifetime is considered in a subsequent section. n59

§ 86.01(a)(3)(iii) General, Special or Mixed Powers.

Powers may also be classified by how the potential class of appointees is described. If there is no limit upon the potential appointees, the power is denominated a general one. The donee under such a power has the same power to designate future owners as the original owner, the donor, has. n60 The donee may be thought of as having a type of ownership, limited only by the terms of the power. Thus, under the Internal Revenue Code, when a donee dies having such a general power of appointment, the appointive assets are taxable as part of the donee's estate to the same extent as property the donee fully owned. n61 Also, the donee's creditors may have a claim against the appointive assets if the donee is insolvent at the time of death and such donee purports to exercise the power by will. n62

A power containing a limitation on potential appointees is a non-general power. n63 It is possible for the donor to limit the potential appointees in one of two ways. First, the power may be limited to an ascertained class, in which case it is called a special power. Because the donee's power to make a further designation is so limited, the donee cannot be deemed the owner of the appointive assets. As a matter of fact, the donee's relationship to the class of potential appointees and to the appointive assets is analogous to a trustee's relationship to the trust beneficiaries and the trust assets. Thus, some of the courts have spoken of the donee as "holding the power in trust" under such circumstances. n64

Second, the donor may permit an appointment to anyone in the world except designated persons. n65 This is considered a mixed power. Thus, a donor who is angry at a relative, such as a brother, may permit the donee to exercise the power in favor of anyone except the brother. Limitations of this sort have become common, because under the terms of the Internal Revenue Code, the appointive assets are not included in the donee's estate at death, if the donee is prohibited from appointing to self, to creditors, to the donee's estate or creditors of the estate. n66 Thus, a donor may prevent inclusion of appointive assets in the donee's estate simply by excluding these classes from the potential group of appointees. n67

§ 86.01(a)(3)(iv) Exclusive or Non-exclusive Powers.

Historically, special powers of appointment were further subdivided into two types. First, if the donee had the power to appoint to one or more members of the designated class and to exclude other members totally, the power was deemed an exclusive power. n68 The donee could make this perfectly clear by a simple statement that the donee could appoint "to one or more of the following...."

Second, if the donee could not exclude any member of the class, and this discretion was restricted simply to fixing the members' respective shares in the appointive property, the power was deemed a non-exclusive power. n69 A typical

example would be a power that simply conferred upon the donee the power to appoint "among" the members of a specified class. During the classic common law period, unless clearly specified to the contrary, powers were presumed to be non-exclusive. n70 Moreover, the donee could not evade the responsibility to make an appointment to all members of the class by making nominal appointments. Such an appointment was deemed illusory and void. n71 Thus, a significant share would have to be appointed to each member of the class. Courts had considerable difficulty under the common law rule in fixing the precise size the share should be to prevent being held void as illusory. n72

An estate planner could easily avoid the whole problem of illusory exercises of a power, if in the creation of the power, minimum and maximum amounts were fixed for each beneficiary. For example, a donor might specify that each member of the class shall receive an appointment of no less than 10% of the total appointive assets. If such a clause were included and the actual exercise was within the established guidelines, no tenable argument could be made to invalidate the exercise of the power.

The distinction, however, has little validity in most jurisdictions today. Many courts have reversed the common law presumption, declaring that unless an intention to the contrary is clearly expressed in the instrument, a power is presumed to be exclusive. n73 If the power is exclusive, the whole problem of illusory exercise of the power is avoided. Some jurisdictions have abolished the non-exclusive power altogether and have purported to make all powers exclusive. n74 Still other jurisdictions, while purporting to retain the distinction between exclusive and non-exclusive powers, have abolished the concept of illusory powers. n75 In such a jurisdiction, a donee with a non-exclusive power could appropriately exercise it by appointing a nominal amount to those members of the class whom the donee did not wish to benefit. n76

§ 86.01(a)(3)(v) Powers Collateral, Powers in Gross and Powers Appendant.

Finally, powers have been classified by the identity of the donee. In many modern estate plans, the donee has a personal interest in the property, in addition to having a right to designate an interest in the property. Thus, it is common for a settlor or testator to confer upon a spouse or a child a right to income during the spouse's or child's life, and then confer upon the spouse or child a testamentary power to designate the remainder interest with or without restriction upon the potential appointees. In this way, the donee received not only the enjoyment of income from the property, but also the power to designate future ownership. Such a power is called a power "in gross." n77 A power is "collateral," on the other hand, when the donee has no interest in the property other than the right to designate future owners. n78

The donee in such a case acted more or less as the alter ego for the donor, who would necessarily be dead if the power were testamentary, or who might no longer be available in the case of an inter vivos power. Historically, there existed a third type of power, in which a donee had the power to divest the donee's own prior interest. If a donee were given an inter vivos power to appoint away the donee's own rights in the property, this was said to be an appendant power. n79 Most modern courts no longer recognize such powers, since under modern law, such power would merge with the preexisting ownership of the donee. n80 Historically, such powers assumed some importance when, for example, a married woman was forbidden from devising her own property but could exercise a power of appointment. n81 Since the acceptance of full property interests for married women is universal, n82 there is no longer any need for recognition of such powers.

§ 86.01(b) Problems of Characterization and the Doctrine of Relating Back.

§ 86.01(b)(1) General Powers.

§ 86.01(b)(1)(i) Statement of Problem.

As previously noted, in theory a power of appointment constitutes the creation of a condition subsequent to the donor's ownership. n83 The exercise of the power by the donee has the effect of divesting that ownership and vesting it in the appointee. The donee is thus seen as an instrument of the donor to effectuate the gift. The appointive assets remain the donor's until the exercise of the power. The ultimate giver is the original donor rather than the donee. This has led courts to bifurcate the process of determining the validity of the donee's will, so that it may be declared valid for purposes of disposing of the donee's own assets and yet ineffective to exercise a power of appointment. Thus, in *Hogarth-Swann v. Weed*, n84 an heir-at-law of the donor who would inherit if the power were not exercised was permitted to contest the donee's will in so far as it purported to exercise the power, even though the heir was not an heir of the donee and had no standing to challenge the donee's will for any other purpose. n85

Nevertheless, when the power is a general one in which the donee has an unlimited choice of appointees, realistically the donee, in making the designation, has in fact perfected the gift to such appointee. This is particularly so when the donee also has a life interest in the estate and the power is a testamentary one, so that there is a possibility of a substantial time lapse between the time the power was created and the time of its exercise. Thus, it is possible to argue that, even though the donee is not the owner of the appointive assets, the practical effect of the donee's exercise of the power is to confer upon the appointees the benefit of the donee's largess. In many cases it makes no difference whether one characterizes the giver as the donor or the donee, since title is vested in the appointee. In other cases, the outcome is entirely different, depending upon whether the giver is deemed the donee or donor. Most reported decisions appear to be made on a fairly pragmatic basis.

§ 86.01(b)(1)(ii) Choice of Law Problems.

When the donee and the donor of a testamentary power are domiciled in different jurisdictions, a problem may arise as to whether the appropriate choice of governing law should be the domicile of the donor or domicile of the donee. As long as the appointive assets are in the form of realty, little controversy has arisen with respect to choice of law. Regardless of where the donor or donee are domiciled, the law in effect at the situs of the land in question will be regarded as the law of the state with the most significant contact with the subject matter, and its rules govern. n86

On the other hand, a much more complex question arises in determining which state has the most significant contact with the subject matter when the appointive assets consist of personal property. Such a power of appointment would necessarily be in the form of a trust. Under orthodox conflicts of law principles, the state of the decedent's domicile is deemed to have the most significant contact with the subject matter, and its rules control unless a trust has been created which is being administered in another state. n87 However, if the established trust does not have a definitely defined situs and if the donor and donee reside in different jurisdictions and the power is a testamentary one, whose domicile should be regarded as controlling for this purpose?

Earlier cases, generally speaking, applied the law of the donor's domicile on the theory that the donee was merely the donor's instrumentality for effectuating the gift. n88 This view has been subject to criticism and it has been suggested that the choice of law should differ depending upon the character of the problem. When the problem relates to the validity of the power or the construction of the donor's will, the law of the donor's domicile should, in fact, control. n89 On the other hand, when the problem relates to the construction of the meaning and intention of the donee, the same choice of law should not necessarily be made. In fact, when courts have faced problems such as the question of whether

the donee's will should be construed as an exercise of an outstanding power, their decisions are in conflict. n90 Some have followed the traditional rules set forth above and have continued to apply the law of the donor's domicile. n91 Other jurisdictions, following the lead of the *Restatement (Second) of Conflicts*, n92 have held that in construing the meaning and effect of the donee's will, the law of the donee's domicile should control. n93

COMPUTER-ASSISTED RESEARCH

LEXIS: power! w/2 appointment w/50 conflict! w/2 law!

§ 86.01(b)(1)(iii) Lapse, Anti-Lapse and Similar Constructional Problems.

Generally speaking, when a court is called on to construe the meaning of the donee's will, it treats the problem in the same way when the disposition relates to appointive assets as when the disposition relates to the donee's own assets. The tendency of courts to look to the law of the donee's domicile rather than that of the donor has already been discussed. n94 Moreover, in construing the donee's will, courts must look at the facts at the time the power is exercised (the death of the donee, if the power is a testamentary one) n95 rather than from the creation of the power (i.e., the creation of the trust or the death of the donor). Thus, if during the period between the creation of the power and its purported exercise the appointee has died, the appointment is deemed to lapse, even though such appointee was alive when the power was created. n96 Moreover, in the leading case of *Thompson v. Pew*, n97 a provision in the Massachusetts Wills Act providing for an alternate gift to issue of a legatee who died before the testator (the so-called "anti-lapse" provision) was held applicable to permit the issue of an appointee under a power of appointment to take the appointment through the force of the statute; this was so even though the statute said nothing about the failure of a power of appointment as distinguished from the lapse of a personal gift of the donee. n98

A similar problem may arise with respect to other rules governing the construction of a donee's will in the light of changed circumstances. For instance, in *Shoch's Estate*, n99 the Pennsylvania Supreme Court was confronted with an afterborn child. The Pennsylvania Probate Code has long provided that if a decedent has a child born after the making of the will, then in the absence of a showing of contrary intention, such child receives the intestate share, and to the extent necessary to effectuate this purpose, the will is treated as inapplicable (the so-called Premittitur Heir Statute). The statute contains no provisions at all relating to powers of appointment or the disposition of appointive assets. Nevertheless, in *Shoch's Estate*, the court held that when the donee had a child during the time between the creation of the power and its attempted exercise, and such issue would have taken through the donor in the event the power was not exercised, the afterborn child took and the power would have to be deemed non-exercised. n100

From the foregoing, it may be fairly deduced that when the problem is one of construction of the donee's will, the law of the donee's domicile should control. This is on the basis that there should be little difference between what is meant for the purpose of disposing of the donee's own assets and what is meant for the purpose of disposing of the appointive assets.

§ 86.01(b)(1)(iv) Rights of Creditors of Donee.

Unless the donee was also the original donor, n101 as long as the assets of the donee are sufficient to pay the debts, a creditor of the donee cannot regard the appointive assets as property of the donee for purposes of enforcing the obligation. n102 In the event of insolvency of the donee a somewhat different problem arises.

If the power of appointment is inter vivos, its exercise should be subject to the fraudulent conveyances statutes. In other words, if the donee of an inter vivos power exercises the power in favor of others than the creditors, and when the donee had the power to utilize such appointive assets to pay the creditors at time that the donee is insolvent, such exercise might be regarded as a voidable transfer in fraud of creditors and in violation of the statute. n103

If the power is testamentary in character, courts are not in agreement. The prevailing view is that, if the donee is insolvent at the time of death and purports to exercise the power of appointment, the appointive assets are sequestered in equity for the benefit of the donee's creditors. n104 This is on the theory that if the donee had the power to utilize these assets to satisfy creditors, equity will compel their use for this purpose rather than allowing such assets to pass to the donee's appointees. n105 But, under such prevailing view, if the donee fails to exercise the power at all, there is no basis for regarding such assets as a part of the donee's estate and the creditors have no rights. n106

Not all courts agree with the foregoing analysis. A respectable minority of jurisdictions take the position that, unless the donee appoints either to the creditors or to the donee's estate, the creditors cannot establish any rights, because the appointive assets remain assets of the donor and the donee's connection is only as a conduit of the donor's largess. n107 Under this theory, creditors might have a right to appointive assets if the donee's will contained a boilerplate provision directing the payment of debts and the jurisdiction was one in which general language in a donee's will was presumed to be an exercise of any outstanding powers of appointment. n108 So, too, if a donee blended personal and appointive assets in the donee's will it might be possible to infer an appointment to the donee's estate by necessary implication. n109 Actual decisions in which a creditor has been successful in establishing that an appointment has been made to the donee or to the donee's estate have been relatively rare.

The New York legislature some years ago adopted a provision that if a life tenant was also given an unlimited general power of appointment, as far as such life tenant's creditors were concerned the property could be considered as the life tenant's, regardless of whether the life tenant had exercised such power. n110 A few other jurisdictions have adopted similar legislation. n111

Finally, it should be noted that under the federal Bankruptcy Code, which supersedes any contrary state law, n112 if a donee with an inter vivos power of appointment which could be appointed in the donee's own favor becomes bankrupt, the trustee in bankruptcy as the representative of all the creditors may exercise such powers for the benefit of the donee's creditors. n113 Thus, even when the donee has not exercised the power, by force of the statute the trustee could do so on behalf of the creditors. The provisions of the Bankruptcy Code, however, have been held to be applicable solely to powers exercisable inter vivos. When the power is a testamentary one exercisable only by will, it cannot be exercised directly in favor of the donee and the provisions of the Bankruptcy Code do not apply. n114

§ 86.01(b)(1)(v) Rights of Spouse of Donee.

It is common for the surviving spouse to be given either a forced share in the deceased spouse's estate n115 or, in a community property state, a direct right of ownership in community property. n116 The question of whether the spouse may treat appointive assets held under a general testamentary power as part of the deceased's estate for this purpose largely turns on the statutory provisions of the jurisdiction in question. n117 In the majority of jurisdictions, such assets are only part of the decedent's estate when the deceased was not only the donee but when the property was originally the

deceased's, so that the deceased is both the donor as well as donee of the power. n118

Several jurisdictions have adopted the same test as that employed for federal tax purposes so that the appointive assets are included as long as the donee could exercise the power in favor of the donee, the creditors, the estate or creditors of the estate. n119 Others have denied the spouse any rights treating the property as that of the donor and not the donee. n120

It should be noted, however, that the spouse may also have accrued rights such as support or alimony, and to this extent may be treated as a creditor of the decedent. To the extent that the spouse has rights as a creditor, the rules applicable to creditors of the donee generally, which have been discussed previously, are fully applicable. n121

§ 86.01(b)(1)(vi) Disposition in Absence of Valid Appointment.

When a testamentary power of appointment has not been properly executed, the appointive assets are ordinarily treated as never having been divested from the donor and are thus distributed as property of the donor. n122 The drafter for the donor should anticipate the circumstance that the power may not be exercised. This would ordinarily be done by creating an express gift to a nominee of the donor in the event that the donee has not made an effective disposition of the appointive assets. n123 If no such clause is included, the property is disposed of as if no power of appointment had ever been created. Thus, if the power were a part of a testamentary disposition, the appointive assets would be distributed either to the residuary legatees of the donor's will or, in the absence of an effective residuary clause, by intestacy. n124

All of the foregoing is, however, subject to one important qualification under the doctrine of capture. n125 Although the donee's attempted exercise might be ineffective, it might be possible to construe such ineffective exercise as, by necessary implication, an exercise of the power in favor of the donee's own estate. This is most likely in either of two situations. First, if the donee has attempted to exercise the power by creating a trust, the beneficial interests of which fail, the appointive assets pass as a part of the donee's estate. n126 This is simply an application of the familiar rule that when a beneficial interest in a trust fails, there is a resulting trust in favor of the settlor, who in this case is the donee. n127 Secondly, if, under the terms of the donee's will, the donee has blended the appointive assets with the donee's own, the donee will be deemed to have made such appointive assets a part of the estate even if the appointment is ineffective. It is not entirely clear how far a donee must go to achieve such blending. If the donee were to direct by a single clause that personal assets and those over which there was a power of appointment were to be distributed to the same people, this would probably be sufficient. n128 On the other hand, it has been held that no blending occurs when the donee in one paragraph of the will gives personal assets to designated beneficiaries and then in a separate paragraph exercises the power of appointment in favor of the same beneficiaries. n129 Although there is limited authority to the contrary, the prevailing view is that the doctrine of capture applies even when the donor has expressly provided for a gift in default of the exercise of the power. n130

Since most powers employed as a part of an estate plan are most likely testamentary, there has been little authority dealing with the consequences of an ineffective exercise of a power during the lifetime of the donee, when the terms of the power authorize such an exercise. In principle, it would seem that if the power was one which could be exercised inter vivos and it was not properly executed, a close question of construction would arise as to whether the donor contemplated only a single attempted exercise. If so, the ineffective exercise might terminate the power and the outcome would thus be similar to that involved when the power was testamentary. Otherwise, the donee might, while living, still make an effective exercise of the power.

§ 86.01(b)(1)(vii) Taxability of Appointive Assets: The Federal Tax Structure.

Under the terms of the Internal Revenue Code, appointive assets may be taxed both to the donor and also to the donee so long as the power is a general one as that term is defined in the Code. n131

When a power of appointment is created by an inter vivos trust, its creation is subject to a gift tax so long as the trust is an irrevocable one and the power is created in favor of someone other than the donor. n132 So too, if a power is created by will, the appointive assets are treated as a part of the donor's estate for estate tax purposes. n133

The Code defines a general power as one in which the donee may appoint to the donee, to the donee's creditors, the estate or creditors of the estate. n134 If a power is general in this sense, the Internal Revenue Code directs that the appointive assets be treated as a part of the donee's estate. This is true regardless of whether the donee purports to exercise the power. n135 Furthermore, when any person makes a gift of property in which a life interest is retained, the property continues to be in the donee's estate for estate and gift tax purposes. n136 Thus, when a donee attempts a release of this power during the donee's lifetime, such release is ineffective for federal estate tax purposes if the donee also has a life income interest in the trust. n137 Additionally, any such release would ordinarily constitute a taxable gift as long as it was more than $5,000 or 5% of the corpus of the trust. n138

COMPUTER-ASSISTED RESEARCH

LEXIS: appointive w/1 asset! w/15 tax!
general w/1 power! w/1 appointment w/5 tax! w/2 federal

§ 86.01(b)(1)(viii) State Taxation.

The state inheritance or estate tax treatment of the general power of appointment differs considerably from one jurisdiction to another. In some jurisdictions the appointive assets are taxable as property of the donor only. The donee is viewed simply as the conduit for completing the transfer. n139 Thus, in Pennsylvania, where the tax rate varies depending upon the relationship of the recipient to the giver, it has been held that the rate is established by the relationship of the appointee to the donor rather than to the donee. n140 Furthermore, no additional tax is triggered by the exercise of the power. n141

In some jurisdictions, in addition to a tax upon the donor at the creation of the power, a tax is levied on the donee if, but only if, the donee exercises the power. n142 In other words, the question of the taxability of the appointive assets to the donee or the donee's estate is treated precisely the same as the question of whether the appointive assets are available to creditors of an insolvent donee's estate. n143

Still other jurisdictions have adopted as their model similar provisions to those in the Federal Tax Code previously discussed. n144 In other words, in addition to a tax upon the donor at the creation of the power, a tax is levied on the donee of a testamentary power at death regardless of whether the donee exercises the power. n145

In the notes are the statutory citations of some significant jurisdictions, along with the view to which these jurisdictions subscribe. n146

COMPUTER-ASSISTED RESEARCH

LEXIS: general w/1 power! w/1 appointment w/15 state w/2 tax!

§ 86.01(b)(2) Special and Mixed Powers.

§ 86.01(b)(2)(i) In General.

When the donee's power to designate beneficiaries is not absolute, there is little possibility of treating the appointive property as the donee's. Thus, most of the problems previously considered have no applicability to special powers.

If the power is a special power, i.e., it is limited to a class, the power of a donee to designate within the class is more closely analogous to the power of a trustee than to that of a full owner. As a matter of fact, some authorities have gone so far as to suggest that under these circumstances, the donee holds such power "in trust for the benefit of the intended appointees." n147

Until quite recently, the mixed power, in which the donee is not limited to a definite class but is simply excluded from making designations to those within a prohibited class, was an uncommon occurrence, so there is little theoretical authority on its nature. It would seem to be clear, however, that if, for example, creditors were an excluded class to whom an appointment could not be made, then the rules conferring rights on creditors if the donee was insolvent when purportedly exercising the power could have no application. n148 Moreover, under the express terms of the Internal Revenue Code, it is clear that if the donee, the creditors, the estate, and creditors of the estate are excluded classes, appointive assets are not subject to present estate tax on the donee's estate. n149 The present form of § 2041 of the Internal Revenue Code encourages the use of a power of attorney excluding these four classes of beneficiaries. Thus, more litigation on the nature of such powers seems likely in the future.

COMPUTER-ASSISTED RESEARCH

LEXIS: special w/2 power! w/1 appointment w/50 appointee

§ 86.01(b)(2)(ii) Disposition in Absence of Valid Appointment.

If the donee fails to make a valid appointment and the donee's estate is not within the class to whom an appointment could be made, the doctrine of capture previously discussed could have no application. n150 Since the doctrine is based upon the theory that the donee has, by implication, appointed in favor of the donee's own estate, this theory could not be invoked when the estate is not one to which a valid appointment can be made. Of course, if the donor has designated someone to take in default of a valid power of appointment, such designee does, in fact, take. n151 If on the other hand, no such designation is made, a distinction must be drawn between the special power for a limited class and the mixed power which simply excludes classes from being beneficiaries.

If the power is to appoint to a limited class and no alternate designation is made, the appointive assets do not return to the donor's estate. Instead they are distributed equally to all the members of the class. n152 This is true even though the power specifies that the donor may select one member of the class to the exclusion of others. n153 Two alternate theories for this outcome have been advanced. Some jurisdictions have justified the outcome on the theory that the donor should, by implication, be deemed to have intended a gift to the members of the class equally, in default of the exercise of the power. n154 Others have justified the outcome by analogy to the law of trusts. The theory is that the donee holds the power in trust for the beneficiaries, and when the donee fails to make the designation, the court itself will act by applying the maxim that a trust will not fail for want of a trustee, and thus will appoint equally to all eligible members of the class. n155 Occasionally courts have used both theories interchangeably as though they were the same; in most cases it makes little difference which is employed, since each produces the same outcome. However, in one fact situation it does make a difference. If a member of the class who survived the donor dies during the lifetime of the

donee, before any attempt is made to exercise the power, the estate of such intended appointee might share in the appointive assets, if a court were proceeding on the theory that there was an implied gift in default of the power. Presumably such an interest would be a vested one. The estate of the holder of the interest would take, even though such holder did not survive to the time of enjoyment. n156

On the other hand, if the court is considered to be exercising the power as a substitute trustee-donee, then the court, in exercising the power, could do no more than the donee could have done had the donee survived. As has already been noted, a donee cannot exercise a power in favor of an appointee who is already dead. n157 Thus, a court acting in place of the donee could not make such an appointment, either. n158

If, on the other hand, the power was a mixed one, the foregoing rules could have no application and it would seem that the appointive assets would have to remain in the donor's estate to be distributed with the other assets. n159

§ 86.01(c) Creation of Power of Appointment.

§ 86.01(c)(1) In General.

A donor may create a power of appointment in the same ways that any other right can be created or transferred. Thus, it may be created as the result of the creation of a gift or trust during the donor's lifetime. n160 It may also be created under the terms of the will of the donor. n161 No magic words are required to create a power of appointment; n162 all that is required is a showing that the donor intended that another should have the ability to designate interests in the property in question. Nevertheless, care should be taken to employ language that does not cast doubt on the donor's intention. Moreover, the donor in the creation of the power may, and should, designate the manner in which it may be exercised, n163 and any limitations imposed upon the donee, either as to the persons to whom appointment may be made n164 or as to the time at which the appointment may be made. n165

§ 86.01(c)(2) Special Caveats for the Drafter.

§ 86.01(c)(2)(i) Avoiding the Construction of the Indefinite Trust.

As previously noted, some courts have been unwilling to treat a direction to a fiduciary such as an executor or trustee to designate a beneficiary from an indefinite class as creating a valid power of appointment. n166 Although the *Restatement (Second) of Trusts* recommends such a position as creating a valid power of appointment to create a trust, n167 this recommendation has not been widely followed and many courts have traditionally ruled that the transaction constitutes a trust which is invalid and unenforceable for lack of beneficiaries. n168 These courts have distinguished such a relationship from a power because of the supposed obligation of the fiduciary to make the selection without any standards against which the court can evaluate its correctness. n169 Text writers have subjected this point of view to considerable criticism. n170 Irrespective of its correctness, it is a point of view that planners must take into consideration. When it is desired to select beneficiaries from an indefinite class, it is suggested that the donees specified be persons other than the executor or trustee. So, too, although magic language is usually unnecessary to create a power, the drafter in this context should be careful to explicitly label the right of designation as a power of appointment, so that a court might similarly treat it.

§ 86.01(c)(2)(ii) Rule Against Perpetuities.

A power of appointment in theory creates a type of executory interest divesting the interest of the donor. n171 It is thus an interest whose creation must satisfy the criteria of the rule against perpetuities. n172 As noted elsewhere, many states no longer apply a common law rule against perpetuities in the sense that the barest of remote possibilities that an interest might vest beyond the permissible period will invalidate the interest. Generally speaking, modifications have taken either the form of judging the validity of the interest totally by hindsight to determine whether it had in fact vested, or permitting a court to modify the will or trust to bring it into conformity with the rule. n173 Regardless of whether the rule against perpetuities is construed as it was at common law or as it has been modified, the problem remains of determining whether a power is or is not remote. In most situations, if the power is one which the donee can presently exercise in favor of any person without restriction, it is the equivalent of full ownership and hence the rule against perpetuities is satisfied so long as it comes into existence within the period of the rule. n174

On the other hand, if the power were testamentary or there are limits on the class of potential appointees, the power must be such that the time of its exercise cannot be delayed beyond the permissive period. n175 Since the permissive period is a life or lives in being plus 21 years and since the power must be exercised by a donee within the donee's own lifetime, it follows that if a donor creates a power designating an existing person as a donee, the power is not too remote. A possible violation of the rule against perpetuities in this sense may arise if a donee exercises the power by creating new powers of appointment. n176 So, too, if, in conjunction with a class gift for a class capable of further increase, the donor purports to confer any powers of appointment upon members of the class, a perpetuities problem might arise. Thus, if a donee was identified as being a surviving member of class which remained open, such donee is of necessity a life in being. n177 A far more common possible violation of the rule against perpetuities may arise when the power at the time of its creation is admittedly valid under the foregoing rules, but it is argued that the donee in attempting to exercise the power has attempted to create interests which are too remote. This problem is discussed in a subsequent section. n178

LEXIS: power! w/1 appointment w/5 rule against perpetuities

§ 86.01(d) Exercise of Power.

§ 86.01(d)(1) Donor's Power to Designate.

As the creator of the power, the donor may determine what action the donee must take to exercise the power. How the power may be exercised may be set forth in the instrument creating the power. Theoretically, the donee would be bound to comply with the donor's directions, no matter how bizarre. n179 Thus, in theory, a donor could require that the donee could only exercise the power by "standing on his head." Many of the rules relating to the exercise of the power herein discussed are made applicable in the absence of contrary controlling provisions by the donor when creating the power. Thus, in some states it is presumed from a general bequest or a residuary clause that a donee intends to exercise the power. n180 Even in such a state, a donor who is anxious to prevent a donee from inadvertently exercising a power may specify that the power may be exercised only by specific reference to the terms of the power. n181 In the face of such a clause, no presumption would be made that the donee intended the exercise of the power; the clause would thus prevent the construction of the donee's will as an exercise of the power when the donee did not comply with the terms specified for such exercise. n182 Similarly, the donor may limit the means for exercising the power to the will of the donee (the testamentary power), or may designate the classes of persons to whom the power may or may not be exercised, or may

specify the nature of interests which the donee may create in the exercise of the power. n183

§ 86.01(d)(2) Constructional Problems of Donee's Will.

§ 86.01(d)(2)(i) Determining Whether Donee Intended an Exercise.

One question litigated frequently is whether the donee of a testamentary power has intended to exercise the power under the terms of his will. Proper drafting of the donee's will may, of course, prevent the problem from arising. If the testator is the donee of a power of appointment, it can be specifically stated in the will whether the testator intends the terms of such will to be an exercise of the power of appointment. n184 Even a testator who is unaware of the power can frequently avoid a problem by including a "boilerplate" provision in the will purporting to exercise any powers of appointment. n185 In the alternative, the will could include a clause that states that no power conferred upon the testator shall be treated as having been exercised. n186

When the donee's will is silent on the subject, the courts are in conflict about what presumptions should apply. The classic common law view, which the *Restatement (Second) of Property* continues to recommend, n187 presumes that the donee's powers have not been exercised. Anyone asserting a contrary position has the burden of proof. n188 However, even when the donee's will fails to mention the power, the burden has been held to have been met when the donee purports to bequeath or dispose of appointive assets which are specifically described as if they were owned. n189 It has also been held that if a clause in the donee's will, such as a residuary clause, would be totally ineffective because removal of the appointive assets from the donee would leave no residue, the court may infer that the donee intended to exercise the power of appointment. n190 The rationale for such a determination is subject to some criticism, because a donee does not necessarily know what will be in the estate when death occurs. Thus, it is difficult to see why the intent to exercise the power should be inferred. Nevertheless, whether logical or not, this principle has become well-established.

Moreover, some authority proposes that if circumstantial evidence outside of the will can establish that the donee intended to exercise the power, such intent will be given effect. n191 Thus, the donee was deemed to have exercised a power conferred upon her under the will of her husband through a residuary clause in her will in favor of her only daughter. n192 There was evidence that the donee had a close relationship with her daughter. n193 The appointive assets were necessary to care for an invalid grandson. n194 There was no evidence that the donee would not have intended an exercise. n195 Finally, the out-of-state lawyer who drafted the will was confused about whether the power would be deemed exercised. n196

Other jurisdictions, either by statute or judicial decision, have presumed that general bequests and residuary clauses of a donee's will exercise any of the donee's testamentary powers of appointment unless the donee clearly indicated a contrary intent. n197 Indeed, it has been held that even the fact that the donor created the power after the donee executed the will exercising the power, would be insufficient to prevent the will of the donee from being construed as an exercise of the power under the foregoing rule. n198

COMPUTER-ASSISTED RESEARCH

LEXIS: donee! w/2 intent w/15 testament! w/1 power! w/1 appointment

§ 86.01(d)(2)(ii) Perpetuities and Appointive Interests.

In determining the validity of interests created by a donee in the exercise of a power of appointment, no special problem arises when the power is exercisable at any time and in favor of any person. Such a power is essentially the equivalent of ownership, and the validity of interests under the rule against perpetuities is determined as if the interest was the donee's own asset. In other words, for purposes of determining remoteness, time is deemed to be measured from the exercise of the power. n199 On the other hand, a potential trap exists for the estate planner preparing the will of the donee regarding the exercise of a non-general power in which there is a limitation on potential appointees. A serious possibility of an inadvertent violation of the rule against perpetuities exists, because for purposes of determining remoteness, measurement is not from the time of the exercise of the power, but from its creation. In other words, in determining the validity of an executory or contingent interest created through the exercise of a non-general power of appointment, the terms of the exercise must be read into the donor's will as though the donor had made the disposition. n200 Even if there is no limitation on the potential appointees (a general power), if the power is testamentary, most courts n201 determine the validity of the interests created by measuring from the creation of the power, rather than its exercise. n202 Since it is likely that the donor or creator of the power may be in an earlier generation than the donee, it is relatively easy to see how a violation may arise. For instance, if a person were to receive a testamentary power of appointment under the will of a parent, it could not ordinarily be exercised in favor of the donee's own grandchildren, since the determination of who would take could be delayed beyond the 21st birthday of the donee's children. n203

The traditional common law rule has been ameliorated to some degree. Although at common law the possibility rather than the reality of remoteness ordinarily controls, in the exercise of a power of appointment, the court is entitled to a "second look," such that actuality controls as to events transpiring between the creation and the exercise of the power. Thus, if a donee were to create an interest for grandchildren, such interest might be valid if it could be established that the donee's children were all alive when the power was created and no additional children were born to the donee. n204 A modern "wait and see" jurisdiction permitting actuality rather than possibility to control would reach a similar conclusion. n205

COMPUTER-ASSISTED RESEARCH

LEXIS: appoint! w/1 interest! w/50 rule against perpetuities

§ 86.01(d)(2)(iii) Effect of Invalidity of Interest Created by Exercise of Power.

If a donee lawfully exercises a power of appointment but some or all of the interests purportedly created are ineffective, a number of legal consequences must be considered. If the power is a general one which the donee can exercise in favor of anyone, including the donee's estate, this ineffective appointment may be construed as an implied appointment to the estate under the doctrine of "capture." Such assets would be divested from the donor's estate and from the takers in default specified in the donor's will of trust, and instead would pass to the distributees of the donee's estate. n206

This construction is most likely to occur in two types of cases. First, if the donee exercises the power in favor of a trustee and attempts to create interests for beneficiaries, which interests fail because of lapse or a violation of the rule against perpetuities or other positive law, the power is deemed to have been exercised in favor of the donee. This is simply an illustration of the concept that if a beneficial interest in a trust fails, a resulting trust arises for the settlor or creator of the trust, in this case the donee. n207 Similarly, if the donee was to dispose of both appointive and non-appointive assets by the same clause, the donee might be said to have "blended the appointive assets" with those of the estate, and would be deemed to have appointed the assets to the donee's own estate. n208 These concepts are more fully developed elsewhere. n209

The second situation where appointed assets would pass to estate distributees arises if a donee purports to make a gift of the donee's own assets and of appointive assets for several purposes, and fails to earmark which assets are to be used for which purposes. This can occur if some of the purposes are inappropriate for the appointive assets. To give maximum effect to the donee's intention, a court might, under the doctrine of marshalling, earmark appointive assets only to those

purposes to which they could be lawfully applied, leaving the donee's own assets for the other purposes. n210 For example, suppose a donee had a special power of appointment limited to children. Donee left a will purporting to exercise the power and also to distribute his own assets, and the will provided for equal gifts to his wife and his children. A court applying marshalling might utilize appointive assets only to satisfy the gift for the children, leaving the donee's own assets, to the extent that they were sufficient, to make the gift for his wife who could not be an appointee. n211 The same concept might be invoked if an exercise, measured from the creation of the power of appointment, would violate the rule against perpetuities, while a similar gift of the donee's own assets would be valid, because it would be measured from the time the donee made the gift. n212

Finally, a donee of a special power might purport to appoint the power to several members of the class in question, or might make valid appointments to some members of the class and invalid appointments to other members (if, for example, some violate the rule against perpetuities). If the invalid appointments were simply voided and the normal rule applied (that the invalid appointment would be distributed equally among all members of the class) the result would be an unintended inequality, because the appointees of a valid exercise would receive not only their appointed share but a portion of the assets invalidly appointed. A donor might anticipate this problem by including a so-called "hodgepot" clause, under which any appointee who wishes to receive a portion of the unappointed assets must allow the validly appointed share to be included in the amount to be divided among the appointees, thereby assuring equality. n213 Even in the absence of such a clause, a court might reach a similar outcome by treating the appointments as not severable. Thus, invalidity of any portion of the appointment renders all appointments invalid. n214 In each case, a court, as a matter of construction, must ask whether the donee would have desired the valid appointments to stand if it had been known that the other appointments would be invalid. How a court will respond to this question is not always predictable.

LEXIS: invalid or ineffective w/2 interest w/50 power! w/1 appointment

§ 86.01(d)(2)(iv) Creation of New Powers in Appointee.

Two competing analyses are possible when a donee purports to exercise a power of appointment by attempting to create new powers in the appointee. One possibility is to consider the exercise as an attempt to delegate to another the power conferred by the donee. Since the donor would normally be deemed to rely personally on the selected donee, such a delegation would be considered unlawful under the familiar maxim that discretionary power vested in one person is personal and may not be delegated. A few decisions have taken this position. n215 The majority of jurisdictions, however, hold that the donee has authority to create any interest desired in the appointee. Thus, just as the power of appointment, prima facie, would include the power to designate a full interest and any partial interest, so, too, the new power of appointment might be deemed a new partial interest in the new donee. This is particularly so when the original power was a general power. n216 In accepting this reasoning, the Massachusetts court distinguished an earlier case on the basis that the creation of the new power had accompanied the creation of other interests for the appointee, so it could not be deemed a mere delegation. n217 It is uncertain whether this distinction is sound. The *Restatement of Property* has taken the position that, under these circumstances, the donee may exercise a power by creating new powers. n218

Even if the donee's power to select is unlimited (a general power), the donee's exercise must still comply with the rule against perpetuities. If the general power is testamentary, in most jurisdictions its validity under the rule against perpetuities is measured from the time the power was created, rather than from when it was exercised. n219 Since the new power must also be exercised within the permissive period, n220 it follows that the donee, in creating the new power, could do one of two things. The donee could designate a person who was alive when the donor originally created the power to assure that its exercise must occur within the permissive period. Alternatively, the donee could limit the time when the exercise of the new power could occur to a time period within the period of the rule. n221

On the other hand, if the donee of the original power is limited as to the persons to whom the donee can appoint, a problem then arises as to whether a new power created by the donee must similarly limit its appointments to those who could have been appointed under the terms of the original power. Most courts, when confronted with this problem, have limited such a donee to the creation of powers with the same limitations that existed in the original power. n222 This is also the position taken by the Restatement. n223

§ 86.01(e) Enforcement of Limitations on Exercise.

§ 86.01(e)(1) Testamentary Powers.

By definition, a donee can only exercise a testamentary power of appointment under the terms of the donee's will at death. n224 Hence, any attempt by the donee to exercise the power during the donee's lifetime is void. So too, a donee's attempt to contract to exercise the power in a specified way is unenforceable. If a donee breaches such a contract and exercises the power differently than had been contracted, the contract cannot be specifically enforced. n225 Moreover, such a donee cannot be held liable for damages, since that possibility would inhibit the donee in the free exercise of the power under the terms of the will as contemplated by the donor. n226

If the donee does not breach the contract, but exercises the power in the will consistent with the terms of his contract, the exercise is not tainted and the appointee may take in accordance with the terms of the exercise. n227 This is so even though the very existence of the contract might be thought of as inhibiting the donee in the free exercise of the power. The effect of such a contract must be distinguished from an agreement constituting a fraud on a special power, which invalidates the exercise of the power. n228 This question is more fully discussed elsewhere. n229

COMPUTER-ASSISTED RESEARCH

LEXIS: donee! w/2 exercise! w/5 testament! w/1 power! w/1 appointment
donee! w/5 contract! w/5 power! w/1 appointment

§ 86.01(e)(2) Special Powers.

A donee may not fetter the discretion to exercise a testamentary power while living, but may agree to release the power while living. n230 This power, although illogical, has two sources. First, historically, the donee's ability to release a power of appointment *inter vivos* was considered analogous to the recognized power of a life tenant to extinguish the life estate. This device was employed at common law to enable the life tenant who also had the reversion to destroy any contingent remainders and thereby acquire a full fee simple. n231 Second, in 1942, when federal tax liability was imposed on the donee of a general testamentary power, a provision was made for the donee to avoid tax liability by disclaiming the power. n232 This reinforced the notion that such testamentary powers could be released.

Moreover, just as the donee may release the power, the donee may also enter into a valid contract with the takers in default not to exercise the power in such a way as to interfere with the rights of the taker in default. n233 For example, in one case a donee had a testamentary power to appoint among her six children, and agreed that one child would receive a minimum specified sum ($1000). The court construed the agreement as a contract by the donee to leave $6000 unappointed so each child would receive $1000. n234

§ 86.01(e)(2)(i) Benefitting Non-Objects Generally.

It is axiomatic that if a power of appointment restricts who may be potential appointees, such a restriction will be enforced. Thus, if the power is for a limited class, any attempt to appoint to anyone outside the described class will be utterly void. n235 Thus, when a power is created to appoint to the donor's nieces and nephews, an attempt to appoint to the issue of any niece or nephew who predeceased the donee was held to be void. n236 Similarly, if the power precludes appointment to a given class of persons, an appointment within the prohibited class will be deemed void. n237

Occasionally, however, a difficult constructional problem may arise in determining which appointment is the donor's intended appointee. Motives are frequently mixed, and an appointment may simultaneously confer a benefit upon an appropriate appointee under the power while also benefitting an inappropriate object. For example, if the donee appoints within the proper class of appointees in order to make a property settlement upon the donor's intended bride, is the appointment for the benefit of an appropriate object or for the benefit of the wife who is not an appropriate appointee? n238 Similarly, if the donee appoints to an appropriate appointee to enable the appointee to pay an overdue debt, should the appointment be construed as to the appointee, or is the appointee merely a conduit for the creditor who is not an appropriate object of the power? It is difficult to state any firm rule because the problem is frequently one of degree. However, the power is generally deemed to be exercised appropriately when it is exercised directly to an appropriate object, even if the donee knows that the gift will be used for immediate payment to a non-object of the power. n239 Only if it could be established that the appointee was under some legal or moral duty to transfer such specific funds to the non-object might the exercise of the power be attacked. n240

COMPUTER-ASSISTED RESEARCH

LEXIS: benefit! w/15 non-object! w/50 appointment

§ 86.01(e)(2)(ii) Application to Fraud on Power.

Even if an appointee is an appropriate object of the power, the appointment may be invalid if its primary purpose is to create a benefit for a non-object of the power. Such an appointment is called a "fraud on the power" and is therefore void. n241 The clearest application of this doctrine arises when the donee appoints to an appropriate object of the power solely in response to a contract to use all or part of the appointive assets for a non-object. n242 A similar outcome has been reached when no appointment, or a limited appointment, is given to an object in retaliation for the object's refusal to agree to dedicate the appointive assets to benefit a non-object. n243 An appointment to an object cannot be sustained if the appointee is under a mandatory duty to hold the proceeds as a trustee for a non-object. n244 Again, the donee ordinarily may not exact a benefit for the donee as the price for making an appointment. n245 Thus, it has been held that when a donee had the power to appoint among the donee's children, an appointment in favor of the children of an earlier marriage, as part of an overall property settlement with the previous first spouse, was void as an attempt to benefit personally. Since the donee was a non-object of the power, the appointment made to secure favorable terms from the previous spouse was held void. n246

COMPUTER-ASSISTED RESEARCH

LEXIS: fraud w/1 power! w/50 appointment

§ 86.01(f) Termination of Power.

§ 86.01(f)(1) Termination by Donor.

Once the donor creates a power of appointment, the donee has no greater power to withdraw or terminate it than with any other interest. Under the law of gifts, most inter vivos gifts are deemed irrevocable. n247 Similarly, the power of appointment is not terminable by the donor. If the power is part of an inter vivos trust, the donor may terminate it only if the trust is revocable. In most jurisdictions, the settlor has no power to revoke a trust unless such a right is specifically reserved. n248 So, if the trust confers a power of appointment, the power cannot be withdrawn, unless the donor expressly reserves the right to withdraw it.

On the other hand, if the donor purports to create a power of appointment by his will, the will has no effect until the donor dies. Hence, no power of appointment arises until the donor dies and the will is probated. Before that, the donor maintains the right to amend or revoke the will or any provision of it, including any attempted power of appointment. n249

LEXIS: donor! w/15 terminat! w/15 power!
w/1 appointment donor! w/15 withdraw!
w/15 power! w/1 appointment

§ 86.01(f)(2) Termination by Donee.

§ 86.01(f)(2)(i) Disclaimer or Release.

The transfer of property can never be forced upon anyone. Hence, any transferee of a property interest has always had the option to disclaim it. n250 In this sense, creation of the power of appointment is viewed as the creation of a property interest in the donee which the donee need not accept. Because under modern tax law a general power of appointment may have serious adverse tax consequences, the donee's ability to disclaim the power has been regulated by the tax code. n251 A disclaimer avoids the adverse tax consequences of an interest, and prevents it from being treated as a new gift to the taker in default, only if the disclaimer is "qualified" under federal law. To be qualified, a disclaimer must be made in writing within nine months of the creation of the interest. n252 The nine months runs from the donor's death if the donor created the interest by will, or from the creation of the trust if the donor created the interest in an inter vivos trust. Even if the disclaimer is not qualified because it is not made in time or with sufficient formality, it may nevertheless be effective as a release of the power. n253 If it does not qualify under the tax code, it operates as a further transfer of an interest by the donee. This leads to gift tax consequences. The appointive assets will also be included in the donee's estate, if the power is general and the donee has a life interest in the trust. n254

Even if the donee does not disclaim the power of appointment, the donee may always release rather than exercise it. Such a release presents no difficulty when the power is exercisable inter vivos. Even if the power is testamentary, the donee may release it during the donee's lifetime. The rule permitting such a release is a curious anomaly in the law. n255 Whether a release of a special power may be set aside because it is for purposes foreign to the power's creator, and therefore constitutes a fraud on the power, is more complicated. n256

COMPUTER-ASSISTED RESEARCH

LEXIS: donee! w/15 disclaim! w/15 power!
w/1 appointment donee! w/15 release!
w/10 power! w/1 appointment

§ 86.01(f)(2)(ii) Death of Donee.

A power of appointment is personal to the donee and cannot be exercised by another on the donee's behalf. In this sense all powers of appointment are nondelegable. Thus, if the donor purports to create a power of appointment in the donor's will for a donee who dies either before the donor does or simultaneously with the donor, the power is not deemed to be exercised even if the donee purports to make reference to it. No exercise is possible before the power comes into existence, and, in this example, the power cannot come into existence until the donor dies. Thus if the donee predeceases the donor, the power is deemed to lapse. n257

It may be possible, however, to read an attempt by a donee to make an appointment as the donor's own gift. Thus, if the donor was aware of the donee's will provisions, the gift might pass under the donor's will. The attempted exercise by the donee might be construed as an act of significance independent of the donor's own testamentary disposition, which the donor has adopted as a means of distributing the donor's own estate. n258

Even if the donee does survive the creation of the power, the donee normally does not have an inheritable interest. Thus, if the donee dies without having exercised the power while living or under the terms of the will, the power to exercise it will not ordinarily pass as a part of the donee's estate unless the terms of the power expressly so provide. The donee's power is normally deemed purely personal. n259

§ 86.01(g) Estate Planning and Use of Power of Appointment.

§ 86.01(g)(1) Historic Use and Development.

Initially, the power of appointment grew out of medieval estate planners' employment of the medieval use. n264 The use was originally employed as a means of evading the rule prohibiting the testamentary disposition of land, and requiring that it descend to one's heir in accordance with the Canons of Descent. n265 Prior to the enactment of the Statute of Wills and Devises in 1540, a direct devise of land was not recognized. n266 Instead, if a landowner had not conveyed land during the owner's lifetime, it usually passed to the eldest son under the rules of primogeniture. n267 *Inter vivos* conveyances were, of course, recognized. It had become settled that the Chancellor would enforce the obligations assumed by one who took a conveyance for the use of another. n268 A landowner who wanted to dispose of property at death in a fashion other than that prescribed by the Canons of Descent could convey the property to a nominee to hold for the landowner's own use for life, and upon the landowner's death to hold for the use of such persons as the conveyancer might thereafter designate. n269 In enforcing such a use, the Chancellor would give effect to the conveyancer's will to fix the beneficiaries of the use upon the conveyancer's death. Although the Statute of Uses

specifically prohibited this practice, n270 Parliament almost immediately conferred a direct right upon a landowner to devise land. n271 However, by the time direct devises of land were recognized, the employment of a use for the benefit of the nominee of another had become well-established. The practice continued, even after direct devises of land were recognized.

COMPUTER-ASSISTED RESEARCH

LEXIS: estate planning w/15 power! w/1 appointment not w/30 tax

§ 86.01(g)(2) Non-Tax Planning.

The power of appointment is most commonly employed in estate plans to increase flexibility. A donee designated by the donor will be able to alter the estate plan in response to changing, and frequently unforeseeable, events. Often, the terms of a trust may indicate an intention that the trust will remain operative for decades after its creation. It is not uncommon for a trust to provide life income for the first generation, and for termination of the trust and distribution of corpus to the succeeding generation. n272 The trust thus may have to provide for circumstances arising decades after its creation. While a gift to a class provides limited flexibility, keeping the class open to receive additional qualifying members, n273 it cannot provide for differences within the class. Such differences can best be dealt with by conferring the power on a donee to provide for such differences when actual events establish a rational basis for making such provision. For example, a settlor might create a right to life income for a child and then confer upon the child the right to choose a successor interest among the child's children. It may be impossible for the settlor to make such a choice when the actual individual needs of the grandchildren are unknown and unknowable. Such power of appointment need not be limited to the life income beneficiary. The settlor, as a matter of fact, can confer a general or non-general power of appointment upon virtually any nominee, as a means of responding to changes in circumstances which the settlor cannot anticipate.

A donor may also employ the power of appointment to confer on an individual some, but not all, of the incidents of ownership. Thus, a settlor may wish to confer the property's ultimate disposition on a donee, but also to prevent the disposition during the donee's lifetime. Any attempt to give the property to the beneficiary while inhibiting the ability to transfer it during his lifetime would be ineffective. n274 The restriction on transfer would be void as a restraint on alienation, and could safely be disregarded. However, a settlor may accomplish the desired result by giving the beneficiary a life income and coupling it with a general testamentary power, exercisable only by donee's will. A testator may wish to give a surviving spouse an income interest in a trust, and then confer upon the spouse the power to select shares of any interest for their children. Without having full ownership, the spouse will have both the benefit of income from the property and the power to designate subsequent interests in the property.

In the above illustrations, the power of appointment relates only to a future interest in a trust following an income interest, at a point when the donor cannot anticipate changed circumstances. Although theoretically a power of appointment may be employed to create a present right or interest, n275 in most instances, such a power has little utility as a planning device. Possibly if a testator fears incompetency or illness at the time the will is drafted, it might be appropriate to delegate to another the power, in effect, to alter or amend the will on the basis of circumstances that change between the execution of the will and the testator's death. Thus, a testator may be able to employ the power of appointment as a device to prevent the testamentary plan from becoming frozen when, by reason of illness or incompetency, the testator is not in a position to respond to a changed and possibly unforeseeable circumstance. Situations in which the power is used in this fashion, however, are relatively rare.

§ 86.01(g)(3) Tax Planning.

§ 86.01(g)(3)(i) The Marital Deduction Trust.

Under the federal estate tax, all property passing to the surviving spouse is exempt from estate tax so long as the survivor's interest would be included in the estate of such surviving spouse, unless it were consumed or given away at death. n276 While it is possible to make an outright gift to a surviving spouse, many testators want to control the ultimate disposition while providing for management of the assets for the surviving spouse. Prior to the adoption of the present tax reform act, the best way to accomplish this was to create a trust in which the surviving spouse would receive the income during his or her lifetime. The surviving spouse would be given a general power of appointment which, under I.R.C. § 2041, would make the trust assets part of the surviving spouse's estate whether the spouse exercised the power or not. n277 The trust would provide a gift in default of the power's exercise. The testator could therefore assure the marital deduction for the assets, and if in fact the survivor never exercised the power of appointment, the original testator would maintain control over the ultimate disposition. n278

The tax reform act has created the qualified terminable interest (QTIP). Under the act, if the surviving spouse is given all of the income of the trust, the spouse may elect to treat the assets as a part of the survivor's estate, although under federal tax law they would not be included. n279 Hence, the general power of appointment is no longer essential to qualify an interest for the marital deduction. Even with a QTIP trust, the settlor will frequently want to retain flexibility in the estate plan and will thus limit the surviving spouse to a life income interest and confer on the surviving spouse a special power of appointment among class of beneficiaries selected by the settlor.

A unified credit is built into the estate and gift tax structure. Approximately the first $600,000 of assets passing by gift or inheritance is tax-exempt, no matter who is the beneficiary. n280 Often an estate planner will provide for the utilization of this credit as well as the marital deduction by creating two trusts. In the second trust, the surviving spouse's rights are limited so that trust assets are not included in the survivor's estate and the property can pass to the next generation completely tax free. n281 Since each spouse has the same unified credit, this means that $1,200,000 can pass tax free upon the death of the surviving spouse.

Since the tax reform act was adopted, the gift tax and estate tax have been coordinated. Thus the principles outlined above with respect to the testamentary estate plan also apply to a gift inter vivos. n282 In other words, so long as the donor spouse has made a gift which will be included in the donee spouse's estate (if not consumed or given away at the time of the donee's death) the gift is not subject to federal gift tax. Should a donor wish to create an inter vivos trust for the surviving spouse's benefit, he may prevent the imposition of a gift tax in the same way as that outlined in connection with a testamentary trust.

LEXIS: marital deduction trust! w/50 power! w/1 appointment

§ 86.01(g)(3)(ii) The Generation-Skipping Trust.

The present tax code has imposed a generation-skipping tax, which is levied at the highest available estate tax rate on all legacies, devises or gifts constituting a generation-skipping transaction. n283 There is, however, a generous $1,000,000 exemption before any generation-skipping tax is imposed. n284 Because of the high tax rate, planners should remember to avoid the tax whenever possible when large gifts are contemplated. The generation-skipping tax is imposed on any gift when there is more than a single generation between the giver and the receiver. n285 Thus, a generation-skipping tax might be imposed on a gift by a donor to his grandchildren, or on a gift by a donor to grandnieces and grandnephews. n286 Since no tax is exacted on the death of the donor's children or nieces and nephews, the added generation-skipping tax is imposed on the grandchildren or grandnieces and grandnephews. The tax is imposed regardless of whether the interest of the grandchildren or grandnieces and grandnephews is a direct gift or preceded by a life interest for their parents. As long as no tax was levied on their parents, the additional tax is imposed on the grandchildren. A generation-skipping tax can be avoided if the property is deliberately made taxable at what may be significantly lower rates on the death of the parents in question. Thus, a settlor confronted with a possible

generation-skipping tax might prefer the property to pass through the estate of the parent for tax purposes. Thus, the settlor can simply give such parent a right to life income with a general power of appointment. n287 Under the provisions of I.R.C. § 2041, such a power will trigger estate tax in the parent's estate. If the assets are taxable in the parents' estate, no generation-skipping tax will arise. The settlor may then provide for a gift to the grandchildren in default of the exercise of the power. So long as the parent does not exercise the power, the settlor's plan remains intact and no generation-skipping tax will be triggered. When the estate plan is for a married couple, the $1,000,000 exclusion that each is entitled to ought to be preserved. This can be done by combining a trust with a special power of appointment. Provisions comparable to the QTIP provisions previously discussed exist so that the spouse making the gift may utilize the personal $ l,000,000 exclusion and that of the spouse, as long as the spouse consents. n288

(n14)Footnote 14. Restatement (Second) of Agency at 274 (1958).

(n15)Footnote 15. *See infra* § 86.02 (d)(1) *et seq*. for a discussion of common statutory changes. Although the actual authority of the agent will terminate on the death or incapacity of the principal, under some circumstances it might be possible for the agent to continue to have the power to bind the principal or the estate when the parties act in ignorance of the death or incapacity of the principal. This point is more fully developed *infra* § 86.02 (d) *et seq*. Additionally, many states have followed the lead of the Uniform Probate Code by allowing a power of attorney to be created which specifically survives the death or incapacity of the agent. *See* U.P.C. § 5-502 *et seq*.

(n16)Footnote 16. *Jefferson Std. Life Ins. Co. v. Guilford Co., 38 S.E.2d 519 (N.C. 1946); Clark v. Clark, 191 A.2d 417 (Pa. 1963); In re Peters Estate, 336 N.Y.S.2d 712 (1972).*

(n17)Footnote 17. Translated, this means, "he who acts through another acts by himself." *See Arkansas State Bd. of Architects v. Bank Bldg. & Equip. Corp. of Am., 286 S.W.2d 323 (Ark. 1956).*

(n18)Footnote 18. Restatement (Second) of Trusts § 233(b)(1987).

(n19)Footnote 19. *Id.*

(n20)Footnote 20. Occasionally, however, upon proof of hardship, a court may modify the terms of the trust to permit the trustee to invade corpus for an income beneficiary even when no such power is reserved. *See, e.g., In re Wolcott, 56 A.2d 641 (N.H. 1948).* Most courts have refused to make such distribution when it will affect the rights of other beneficiaries unless they have agreed to the distribution. This is because the court has no power to take property from one beneficiary and give it to another. *Springfield Safe Deposit & Trust Co. v. Friele, 23 N.E.2d 138 (Mass. 1939). See generally* Restatement (Second) of Trusts § 168 (1987).

A few states have specific provisions authorizing the probate court, at its discretion, to order a distribution which is inconsistent with the terms of the trust upon a finding that, given the circumstances, the settlor would have approved. *See, e.g.,* 20 Pa. Cons. Stat. Ann. § 6102.

(n21)Footnote 21. *Cf. Conlin v. Murdock, 43 A.2d 218 (N.J. 1945)*(court found that trustee who was also a beneficiary was guilty of abuse of discretion by providing equal payments to himself and to another beneficiary from trust providing for maintenance and support, because trustee was apparently well off and did not need funds and other beneficiary was destitute). Hartzell v. Commissioner of Internal Revenue, T.C.M. 1994-576 (finding that trustee acted within bounds of reasonable judgment in exercising its discretion in invading the trust); *In re Shurley, 171 Bankr. 769 (Bankr. W.D. Tex. 1994)*(upholding discretion of trustee to distribute corpus as trustee saw fit and to maintain accustomed manner of living of beneficiaries).

(n22)Footnote 22. *Montgomery v. Browder, 930 S.W.2d 772 (Tex. App. 1996)* (where a legal life tenant was given the power to appropriate from the corpus of decedent's estate such sums as required for maintenance and support with the power and authority to act as the owner thereof, this power was not absolute and unlimited and gave no right to make testamentary gifts).

(n23)Footnote 23. *See* Treas. Reg. § 20.2041-1(b)(1) (as amended 1961).

(n24)Footnote 24. *Id.* It should be noted, however, that this rule was created by a change in the Internal Revenue Code effective October 21, 1942. Any powers created before that date must be exercised to be brought into the estate of

the donee. *See* I.R.C. § 2041(a)(1). *Best v. United States, 902 F. Supp. 1023 (D. Neb. 1995)*(permitting invasion of the trust corpus for the beneficiary's comfort, support and maintenance did not create a general power of appointment under state law).

(n25)Footnote 25. *See* I.R.C. § 2514(e); Treas. Reg. §§ 20.2041-2(d), 25.2514-3(c)(4)(as amended 1986). It should be noted, however, that under the foregoing provisions, releases which do not exceed 5% of the trust corpus or $5000 are exempted.

(n26)Footnote 26. *See supra* § 86.01(a)(1).

(n27)Footnote 27. The power to distribute income this way is frequently called a "sprinkle trust." For the use of this form of trust, *see generally* Restatement (Second) of Trusts § 127 cmt. d (1987).

(n28)Footnote 28. *See* Restatement (Second) of Trusts § 120 cmt. c (1987).

(n29)Footnote 29. The rule apparently had its origin in *Morice v. Bishop of Durham, 9 Ves. 399, 10 Ves. 521 (1805)* and has been continued into relatively modern times. *See Clark v. Campbell, 133 A. 166 (N.H. 1926). Estate of Boyer v. Morrison, 868 P.2d 1299 (N.M. 1994)*(testamentary trust was invalid for failure to sufficiently identify beneficiaries).

Ch. 1973).* Occasionally the question has arisen whether the donee of such a special power may release it for ulterior purposes. The few cases which have considered the question have conflicted. *See also Thomson's Ex'rs v. Norris, 20 N.J. Eq. 489 (1869).*

(n236)Footnote 236. *Daniel, 159 S.E. at 209.* Moreover, on the basis that a court would not permit to be done indirectly what could not be done directly, the court refused to apply the anti-lapse statute which provided for a substitute gift to the lineals of the first taker in the event that such taker's gift lapsed. *Id.*

(n237)Footnote 237. *Cf. State St. Trust Co v. Kissel, 19 N.E.2d 25 (Mass. 1939).* In *Kissel*, the donor created a power of attorney which was construed as a general power. He then added a provision which purported to prohibit creditors of the donee from ever acquiring any interest in the appointive assets. Donee, who was insolvent at the time of his death, purported to appoint to one of his creditors. The court ruled that the provision prohibiting creditors from sharing in the appointive assets of a general power was void as contrary to public policy. As a result, since the donee was insolvent, all of his creditors shared in the appointment in accordance with the mandate of *Clapp v. Ingraham, 126 Mass. 200 (1879).* It should be noted that the decision in *Kissel* was made before the Internal Revenue Code made it advantageous to have a power which could be exercised in favor of anyone other than the donee, his creditors, his estate, or creditors of his estate. I.R.C. § 2041. As a result, the decision has doubtful validity today.

CHAPTER 86 POWERS

10-86 Thompson on Real Property, Thomas Editions § 86.02

AUTHOR: Professor Leonard Levin Villanova School of Law Villanova University

§ 86.02 Powers of Attorney.

[Go To Supp]

§ 86.02(a) Theoretical Origin and Basis.

Unlike the power of appointment, the power of attorney is not predicated on property concepts. n289 Instead it constitutes a formal declaration that one person is to act as an agent on behalf of another. It is an essentially consensual relationship in which one person is vested with the power or authority to act on behalf of another. It is a familiar maxim of the law that ordinarily one may confer upon another the power to do any act that one could do personally. n290 No property is deemed to be involved in the creation of the relationship. Just as one may deal with one's own property on one's own behalf, one may authorize or empower another to do so on one's own behalf. It should be noted that this theoretical distinction creates very real differences in application as herein set forth. Thus, in the case of a power of appointment, the donor who has created it normally has no right to revoke the power unless the donor has retained the right. n291 Moreover, the fact that the donor who created the power has thereafter died or become incompetent is irrelevant. n292 On the other hand, since the agency relationship is predicated on consent, in the absence of an estoppel, the principal retains the right to withdraw consent and thus terminate the power. n293 Furthermore, if the principal dies or becomes incompetent, the power likewise terminates, since the power of the agent is predicated on the principal's continuing assent and the agent has no greater power than the principal would have with regard to the subject matter. n294

§ 86.02(b) Construction and Scope of Power.

§ 86.02(b)(1) Express Authority.

In determining the scope or extent of power created through a power of attorney, the first step is a close reading of the provisions of the document constituting the power of attorney itself. In the first instance, what action the agent has the power to take affecting the property of the principal can only be determined by reading the language in the power itself.

n295 Generally speaking, courts have enunciated the principle that the document should be closely and narrowly construed. If the document has been carefully prepared and articulates with specificity what the agent can and cannot do on behalf of the principal, little difficulty should be anticipated in its interpretation. On the other hand, if this is not done, difficult and unpredictable problems of interpretation may arise. Thus, if the power of attorney relates to the power to sell property, it should specify whether the sale must be public, and, if it can be private, under what terms and conditions the sale may be made. n296 The same would be true of a power to lease, or any other power conferred by one person upon another to deal with property on the principal's behalf. n297

COMPUTER-ASSISTED RESEARCH

LEXIS: express w/1 authority w/10 power! w/1 attorney
scope w/2 power! w/1 attorney

§ 86.02(b)(2) Implied Authority.

When a power of attorney is not carefully drawn it may be possible for a court to cure the problem through the use of the doctrine of implied authority. It is a familiar doctrine of the law of agency that the power of an agent extends not only to acts which have been specifically authorized, but to other acts which are reasonably necessary to carry out the powers which have been expressly conferred. n298 This doctrine has been applied by some courts to the power of attorney. However, courts have only done so reluctantly and under circumstances when the power being implied is essential to carrying out the intention of and the purposes of the power itself. n299 Thus, it would seem that if a power of attorney conferred upon an agent a power to sell real estate of the principal, it might be inferred that the agent could employ a broker or an attorney to effectuate such a sale, even if the power is silent on that point. n300 Likewise, it would seem that if a power of attorney conferred upon an agent a power to lease such real estate, it might be inferred that an agent could employ the necessary assistance in procuring a tenant and in actually collecting the rent. While it is true that some courts have suggested in dictum that the powers created by a power of attorney should be strictly construed, n301 such limitation does not exclude the possibility of inferring additional power which is reasonably incidental to the power expressly conferred. The question of whether additional power should be inferred can only be determined on a case by case basis.

COMPUTER-ASSISTED RESEARCH

LEXIS: implied w/1 authority w/10 power! w/1 attorney

§ 86.02(b)(3) Apparent Authority.

It is possible for the doctrine of apparent authority to apply to an agent designated by a power of attorney. Under that doctrine, an agent may have powers not authorized either expressly or by implication on the basis of an estoppel. n302 Such a power arises from the relationship of the parties, independent of the power of attorney. If a principal places an agent in a position in which the agent reasonably appears to have the power to act, the principal may be bound by the agent's acts when a third person relies on appearances. n303 The application of this principle to a power of attorney should be relatively rare, since ordinarily the third person dealing with one who acts under a power of attorney might be expected to examine the power under which such person acts. n304 However, the doctrine of apparent authority on the basis of an estoppel might be invoked if outside of the power of attorney the principal has given to the agent oral instructions limiting the exercise of the power. Under those circumstances such third person would have no way of knowing of such limitations. n305 So, too, there may be circumstances in which, although the agent acts under a power of attorney, the agent would appear to have such power in any event. n306 Under these circumstances it might not be expected that the third person would examine the power. Thus, if a real estate broker leases property to another under a power of attorney authorizing such conduct, it seems unlikely that a tenant would anticipate that the broker was acting under a power of attorney; thus it seems unreasonable to impose a duty on such tenant to determine that the broker is

acting under a power of attorney in order to impose a duty to examine the precise limits of the power.

COMPUTER-ASSISTED RESEARCH

LEXIS: apparent w/1 authority w/10 power! w/1 attorney

§ 86.02(b)(4) Ratification.

The doctrine of power by ratification of an agent's unauthorized acts would appear to be fully applicable to the agent who has been appointed by a formal power of attorney. Under the doctrine of ratification, it is possible for a principal to be bound by an unauthorized act of the agent by ratifying the agent's act. If the agent purports to act on behalf of the principal and the principal then manifests assent to the act, such assent relates back and the transaction is treated as though originally authorized. n307 So too, if the principal, with knowledge of the agent's unauthorized act, accepts a benefit from such act, the principal may be deemed to have manifested assent to the act, thus ratifying it. n308 Although the application of the doctrine of ratification to the act of an agent acting under a power of attorney is relatively rare, it may in fact be invoked to bind the principal to an act which exceeds the authorization given by the power of attorney, even though none of the doctrines previously discussed would have conferred any such power upon the agent *ab initio*.

COMPUTER-ASSISTED RESEARCH

LEXIS: ratification w/10 power! w/1 attorney

§ 86.02(c) Application of Statute of Frauds.

By definition, a power of attorney implies an authority conferred upon an agent through a written document. There is, however, no direct statute of frauds dealing with the empowering of an agent to act on behalf of a principal. When the power involves the creation of an interest in land in which the interest itself must be evidenced by a signed writing, jurisdictions differ on the question of whether the agent's authority must also be contained in a writing to bind the interest of the principal in the land. n309 If the statute in question does not explicitly require it, the agent may execute the document on behalf of the principal and thus satisfy the statute of frauds, even if the agent's authority to so act is purely oral. n310 On the other hand, in several states the statute of frauds in question specifically requires that the agent cannot, by signature alone, bind the principal's interest in real estate, unless the agent's authority to act on behalf of the principal is itself evidenced by a writing duly signed by the principal. n311 In such a state, when the creation of an interest in real estate is at issue, the authority of the agent to act for the principal can be evidenced, for example, by a written power of attorney duly authorizing said agent to create the interest in question on behalf of the principal.

COMPUTER-ASSISTED RESEARCH

LEXIS: statute of frauds w/15 power! w/1 attorney

§ 86.02(d) Termination of Power.

§ 86.02(d)(1) Death or Disability of Principal.

Since the power of attorney is based on agency principles, its existence depends upon both the principal and agent remaining alive and competent. Thus, in the absence of any additional elements discussed herein, n312 if the principal dies or becomes incompetent the power of the agent to bind the principal also automatically terminates. n313 This is because one can only authorize an act to be done which one is personally capable of doing. Moreover, according to traditional authorities, the rule terminating such a relationship fully applies even when a third party dealing with the agent is unaware of the principal's death or incapacity. n314 Other jurisdictions disagree and hold that the agent has the power to bind the principal until the third party has reasonable notification of the principal's death or disability. n315

The latest revision of the Uniform Probate Code has recommended that the attorney-in-fact continues to have the power to bind the principal or the principal's estate when the attorney has acted in good faith without actual knowledge of the principal's death or incapacity. n316

If the agent dies or becomes incompetent, the agency terminates by operation of law in much the same way as when the principal dies or becomes incompetent. n317 Although the Uniform Probate Code specifically deals with death or incompetency of the principal, it contains no provision relating to the death or incompetency of the agent. From its very nature, the problem would seem to be a rare one. n318

§ 86.02(d)(2) Revocation by Principal.

The principal who creates an authority in another to act on the principal's behalf always retains the right to terminate that authority by revocation. n319 It is recalled that a distinction must be drawn between the power of attorney, where the principal has a power to revoke, and the power of appointment, in which the donor has no such power unless it was expressly reserved. n320

In the case of the power of attorney, even if the actual authority is terminated, the agent continues to have the power to impose liability upon the principal to third parties who have not received notice of termination. n321 This limitation is based on estoppel principles. The principal who created the authority is deemed to make a continuing representation that the agent may bind the principal. Thus, even if the authority is terminated, the agent continues to have the apparent authority to bind the principal to those who have not been notified of the revocation and who act in reliance on the original power of attorney. n322

§ 86.02(d)(3) Statutory Durable Power.

In states which have not fully adopted the Uniform Probate Code, a Uniform Durable Powers of Attorney Act contains similar provisions. n323 Not all powers of attorney come within the terms of the statute. In order to be durable, the power must clearly and expressly assert the intention of the principal that it is to endure during any subsequent incompetency of the principal. n324 Thus, a power of attorney containing a provision that "it shall not be affected by disability or incapacity of the principal" or that "it shall become effective on disability or incapacity of the principal" will come within the scope of the statute.

The durable power of attorney may be used in a number of ways by a modern estate planner. One who is fearful of becoming incompetent and wishes to avoid the expense and trouble involved in having a guardian or committee for the estate appointed, may, while competent, designate someone to act and deal with one's assets on one's own behalf, and provide that such designation shall remain unaffected by one's own incompetency. In this fashion, the durable power may function much as a revocable trust without the necessity of transferring a trust res to a trustee. n325

The durable power may also be used in conjunction with a trust. The property owner may execute an appropriate trust instrument but not wish to create a present trust. The owner therefore may not transfer any present trust res to the

designated trustee. The owner may, however, couple the instrument with a durable power of attorney authorizing and empowering the trustee or another to transfer designated property to the trust, should the owner become incompetent. This creates a res and makes the trust operative at that point. Such a device is frequently called a "standby trust." n326

Finally, the durable power may be employed with a "living will" to provide for the acceptance or rejection of medical care. n327 This has become particularly important when a person's quality of life has significantly deteriorated with no hope of recovery. Some states have not adopted living will legislation. In these states, it may be possible for a designee to act directly on the patient's behalf after the patient has become incompetent. Even in states with living will legislation, a durable power of attorney may be a useful way to create flexibility, by permitting a designee to act on then-existing circumstances which might have been difficult for the patient to anticipate when the living will was prepared. n328

CHAPTER 86 POWERS

10-86 Thompson on Real Property, Thomas Editions § 86.03

AUTHOR: Professor Leonard Levin Villanova School of Law Villanova University

§ 86.03 Powers of Sale.

[Go To Supp]

§ 86.03(a) Relationships Giving Rise to Power of Sale.

§ 86.03(a)(1) Generally.

A power of sale may be conferred either expressly or by implication by a power of attorney, as discussed previously. n329 Moreover, a power of sale may arise from an unrestricted power of appointment. Thus, if a donor gives a donee an unrestricted power of appointment, the donee may exercise the power through a sale of the appointive assets. n330 Even in the absence of a formal agency relationship or a power of appointment, one person may have the power to sell property in which another has interest based on the person's status or relationship to the property or to its owner. Generally, such a power of sale exists in two types of cases. First, a fiduciary such as a trustee, executor, administrator, or guardian will have a right of sale of property in the fiduciary's charge; this is essential to the performance of the fiduciary's duties. n331 Secondly, a creditor or representative of creditors may have a right of sale of property which secures a debt that is in default, as a means of collecting on the indebtedness. n332 Although either relationship gives rise to a power of sale, in some instances the power may only be exercised after obtaining permission from the appropriate court. A more detailed discussion of the extent to which such a power of sale is recognized, and the extent to which court approval is a prerequisite of its exercise, are discussed below. n333

power w/1 sale w/50 power w/1 appointment
power w/1 sale w/50 power w/1 attorney

§ 86.03(a)(2) Trustees and Executors.

Both the trustee and executor operate under written instruments created by the original donor. A trustee's powers are likely to be articulated in the instrument creating the trust. Similarly, the powers of an executor of a will are likely to appear in the will which appointed the executor. In both of these cases, the instrument in question should not only

expressly create a power in the executor or trustee to sell real estate or personal property, but should also contain details of how the sale is to be conducted, and may waive any obligation to obtain court approval or post security for the protection of the proceeds. n334

Absent provisions in the appointing instrument, the law has generally conferred on trustees and executors broad power to sell personal property without court approval during the administration of the estate. n335. Such a sale may be appropriate to secure funds for the payment of taxes or debts, to make distribution to beneficiaries, or, in the case of a trust, to procure funds for other lawful investments. n336

Historically, such broad power was not conferred with regard to real estate. When family wealth and position were related to holding land, sale was discouraged. The title to land was deemed to pass automatically to the heirs or devisees. It was only somewhat begrudgingly that land could be sold when sale was essential to the payment of debts, and then only with court approval. n337 Theoretically, a similar analysis could be applied to the trustee, even though the trustee had legal title to any real estate that was part of the res of the trust. n338 Most modern courts, confronted with the trustee's assertion of a right of sale of real estate during the administration of the trust estate, have implied, from the terms of the trust, a power to sell, even if not expressly provided. n339

Some states would require an executor, but not a trustee, to obtain the court's approval before conducting the sale of real property in the estate, when the terms of the will do not expressly confer power of sale. n340

Under the Uniform Probate Code, and in many modern jurisdictions, the problem does not exist. The statute gives both a trustee and an executor broad power of sale when necessary to the trust or estate's administration. n341 Thus, the historic distinction between realty and personalty is eliminated, since the trustee or executor's power of sale of realty is substantially similar to the common law treatment of personalty.

COMPUTER-ASSISTED RESEARCH

LEXIS: trustee! or executor! w/50 power w/1 sale or sell

§ 86.03(a)(3) Administrators and Guardians.

By definition, the administrator of an estate is a personal representative designated by a court when a decedent dies intestate or when the executor named in a will cannot or will not qualify. n342 Similarly, when the owner is a minor, or otherwise incompetent to exercise the powers of ownership, a court may designate a guardian of the minor's estate and vest the guardian with the power to act on the incompetent's behalf. The incompetent is called the guardian's ward. n343

By definition, there is no appointing instrument of an administrator or guardian. n344 Hence, the donor has no opportunity to specify what powers the administrator or guardian has, as the donor has when naming a trustee or executor. The scope and extent of the powers of administrators and guardians can only be determined by the local statutes and rules of court. Thus, an administrator or court-appointed guardian is more likely to require court approval to sell real estate, and the court may exercise substantial supervision over such a sale. n345

Nevertheless, in many modern jurisdictions the distinction between administrators and executors has begun to disappear. There is a tendency to vest administrators with the same broad power of sale over both personal and real property as that held by an executor. n346

COMPUTER-ASSISTED RESEARCH

LEXIS: administrator! or guardian! w/50 power w/1 sale or sell

§ 86.03(a)(4) Holders of Security Interests in Personal Property.

Generally speaking, the holder of a security interest in personal property has the power to sell the property constituting the security upon default by the debtor. It is common for the security agreement itself to provide for such sale. Under the express terms of the Uniform Commercial Code, however, the power is provided for, even if the power of sale is not expressly conferred under the terms of the security agreement. n347 Should the security agreement provide for the authority for such a sale, such authorization, unlike the normal agency relationship, is not terminable by either revocation or by subsequent death or incompetency of the property owner. n348

Liens in personal property may also arise by operation of law. For example, one who takes and retains possession of a chattel on which one has performed work or services to either preserve or enhance its value has what has been denominated an artisan's lien. n349 Other liens exist for innkeepers, n350 carriers n351 and public warehousemen. n352 At historic common law such liens did not include a right of sale but were viewed strictly as retaining liens. n353 In most modern jurisdictions, however, in the event of debtor's default, the power of sale is conferred on the lienholder just as in the case of security interests created through the express intention of the parties. n354 Some liens, such as those of carriers and public warehousemen, are governed by applicable provisions of the Uniform Commercial Code. n355

COMPUTER-ASSISTED RESEARCH

LEXIS: holder! w/2 security w/1 interest! w/15 personal
w/1 property w/50 power w/1 sale or sell
liens! w/15 power w/1 sale or sell

§ 86.03(a)(5) Mortgagees of Real Estate.

As more fully noted elsewhere, when a mortgage of real estate is in default, the most common means employed for a foreclosure is through public sale by an officer of the court. n356 Nevertheless, as an alternative, many jurisdictions permit the terms of the mortgage to confer upon the mortgagee an irrevocable power of sale in the event of a default in the mortgage. n357 The employment of such a power of sale is particularly common in the case of a corporate bond issue which has been secured by a mortgage of corporate real estate. In such a case, the mortgage agreement will commonly designate a trustee to whom an irrevocable power of sale is given on behalf of all of the holders of the corporate bond. n358

In any case in which a power of sale is conferred under the terms of a mortgage, like the power of sale created by any other security interest previously discussed, the power is treated as "coupled with an interest" and as such is not subject to revocation nor termination upon death or incompetency of either the principal or the agent. n359

COMPUTER-ASSISTED RESEARCH

LEXIS: power! w/1 sale w/50 mortgage! w/15 foreclos!

§ 86.03(b) Manner of Sale.

§ 86.03(b)(1) Notice to Interested Parties.

Whether notice to interested parties is required to effectuate the sale depends largely on the basis of the power. In those instances in which the power of sale can only be exercised with prior approval of a court, a part of the procedure for obtaining such approval involves notice of the fact that application is to be made to all parties in interest. n360 Thus, the administrator or guardian who obtains prior leave of court for the sale of real estate would have to notify all parties interested in the estate of the intent to apply to a court for leave of court to proceed with the sale. n361 On the other

hand, if the sale is not a public one (that is, one by auction) or is of personal property, the administrator or guardian's right to sell frequently does not depend on court permission. So too, if the sale is by an executor or trustee whose power of sale springs directly from the appointing instrument itself, there is less likelihood that the jurisdiction will impose such an obligation to notify interested parties. n362

If the sale, on the other hand, is by the holder of a security interest in personal property, notice to the debtor and to all other persons with an interest in the property being exposed to sale is an absolute requirement. n363 If the sale is by a mortgagee who is proceeding under a power of sale in lieu of foreclosure, notice to the mortgagor and other parties in interest is required. n364

Unless there is contrary statutory provision, a sale may be avoided by any party in interest who has failed to receive appropriate notice when such notice is required. n365 It is common, however, for there to be a statutory provision which protects the interest of a bona fide purchaser in the sale and relegates the injured party to remedies against the holder of the power of sale. Thus, if the transaction is a security interest within the terms of the Uniform Commercial Code, a sale by the secured party will pass valid title to a bona fide purchaser for value even if the notice requirements have not been met. n366 The Uniform Probate Code contains a similar provision with respect to an improper sale by a personal representative. n367

COMPUTER-ASSISTED RESEARCH

LEXIS: power w/1 sale w/15 notice or notify w/15 interested w/2 part!

§ 86.03(b)(2) Public or Private Sale.

A public sale is, by definition, an auction sale following advertised notice to the public. Frequently such sale is conducted on the theory that it is calculated to obtain the best available price for the property being sold. A private sale, on the other hand, is simply a sale by agreement between the seller and an individual buyer. n368

Jurisdictions differ as to when the sale must be a public one. More specifically, fiduciaries such as trustees, executors, administrators and guardians usually have very wide latitude in connection with the sale of personal property. It is rare that a duty will be imposed upon them to conduct a public sale with respect to such property. n369

On the other hand, in connection with the sale of real estate, a number of variables must be considered. In the first place, if the sale is one which requires court sanction or approval the court order authorizing the sale will undoubtedly specify whether the sale must be a public one. n370 Moreover, close attention must be paid to the sources of the fiduciary's power. Thus, in the case of a trustee or executor, close attention must be given to the will or trust making the appointment. Any direction given by the testator or settlor must be obeyed. As to all fiduciaries, including administrators and guardians, attention must be given to the statutory provisions relating to the power conferred on fiduciaries with respect to the sale of land. n371

As previously noted, the power of sale may also be related to the enforcement of mortgage in real estate or a lien or security interest in personal property. When a power of sale is conferred on a mortgagee, the terms of the mortgage must be carefully examined. The use of a public sale to enforce the mortgage is common because it most resembles enforcement by court process and because it fixes a reasonably reliable way of determining property valuation for purposes of satisfying the mortgagor's obligation. n372 With respect to liens on personal property, many of the statutes which authorize enforcement of the lien by sale mandate that the sale be a public one. n373 On the other hand, if the transaction is governed by the terms of the Uniform Commercial Code the sale may be private. n374 The only requirement is that the sale must be commercially reasonable in the sense that it must be reasonably calculated to produce the best available price. n375 Failure of the secured party to use appropriate care in effectuating such a sale is a basis for imposing liability upon the secured party, even though title in fact passes to the good faith purchaser. n376

In short, the trend of modern statutes and decisions is to provide for greater flexibility by permitting a private sale so long as the seller can establish that the price obtained is a fair and adequate one.

COMPUTER-ASSISTED RESEARCH

LEXIS: power w/1 sale w/15 public or private

§ 86.03(b)(3) Purchase by Seller.

If a sale is by a fiduciary such as a guardian, administrator, trustee or executor it is a settled rule that such a fiduciary cannot purchase the property on the fiduciary's own account. This is true even if a full and adequate price was paid. n377 Such prohibition is intended to prevent a fiduciary from engaging in self-dealing. n378 A few jurisdictions have relaxed this rule to the extent of permitting such fiduciary, after a full disclosure to the appropriate court, to make such a purchase with the court's approval. n379

If the sale is by a secured party or mortgagee the same considerations are not involved. If the sale is a public one by a mortgagee, the mortgagee will ordinarily participate in the competitive bidding either directly or through a nominee to be certain that the property is sold for an amount at least equal to the amount of the mortgagee's claim. Although there is little authority for a purchase of personal property by the secured party of personal property, on principle there would seem to be no objection to the secured party's participation. As a matter of fact, under the terms of the Uniform Commercial Code, the secured party, upon giving appropriate notice to the debtor may, in some cases, retain the secured property in satisfaction of the indebtedness without formally exposing it for sale at all. n380

(n11)Footnote 339. *Penn v. Pennsylvania Co., 171 S.W.2d 437 (Ky. App. 1943); Sword v. Marquette Nat'l Bank, 91 N.W.2d 75 (Minn. 1958).*

(n12)Footnote 340. *See, e.g., Sigmon v. Simmon, 45 A 2d 495* (N.J. ch. 1946); *cf. In re Thompson's Estate, 63 A.2d 55 (Pa. 1949)* (dispensing with court approval because will authorized sale).

(n13)Footnote 341. Uniform Probate Code § 3-711. *See also* 20 Pa. Cons. Stat. Ann. § 3351.

(n14)Footnote 342. *Lichtenfels v. North Carolina Nat'l. Bank, 132 S.E.2d 360 (N.C. 1963); In re Minder's Estate, 270 P.2d 404 (Mont. 1954).* The Uniform Probate Code abandons any distinction between executor and administrator by defining the term "personal representative" as applicable to both. See Uniform Probate Code § 1-201(36).

(n15)Footnote 343. In some jurisdictions, other terms are employed instead of the term "guardian." The Uniform Probate Code employs the word "conservator," apparently to distinguish from one with custody of the person of the incompetent. *See* Uniform Probate Code § 1-202(8). In other jurisdictions the term "committee for the incompetent" is employed. See *Lockhart's Guardian v. Bailey Pond Creek Co., 30 S.W.2d 955 (Ky. 1930).*

(n16)Footnote 344. In some jurisdictions, the term "guardian" is broad enough to include a person designated by the terms of the will or gift of the donor. For example, the Pennsylvania Will Act confers on the testator power to designate a guardian for the estate of any minor beneficiary. See 20 Pa. Cons. Stat. Ann. §§ 2519(b), 5115. Such person, however, is for all practical purposes a trustee and is excluded from this discussion.

(n17)Footnote 345. *Withers v. Patterson, 27 Tex. 491 (1864); McIntosh v. Conn. Gen. Life Ins. Co., 366 S.W.2d 409 (Mo. 1963).* In Pennsylvania no sale of realty is possible by the guardian of either a minor or an incompetent without prior approval of court. *See* 20 Pa. Cons. Stat. Ann. §§ 5155(1), 5521. *Hardeman v. Judge, 931 S.W.2d 716 (Tex. App. 1996).*

(n18)Footnote 346. *See, e.g.,* Pa. Cons. Stat. Ann. § 3351 (drawing no distinction between executor and trustee). So too, the Uniform Probate Code utilizes the term "personal representative" to include both executors and administrators without distinction. See Uniform Probate Code § 1-201(36).

(n19)Footnote 347. U.C.C. § 9-504.

(n20)Footnote 348. The authority thus created has been denominated as a "power coupled with an interest," which is deemed to be irrevocable. *Boyer v. Nesbitt, 76 A. 103 (Pa. 1910).*

(n21)Footnote 349. *United States v. Toys of World Club, Inc., 288 F.2d 89 (2nd Cir. 1961); International Elecs. Co. v. N.S.T. Metal Prods. Co., 88 A.2d 40 (Pa. 1952). See generally* Restatement of Security § 61(a) and corresponding comments (1941).

(n22)Footnote 350. *See generally* Restatement of Security § 61(c) and corresponding comments (1941).

(n23)Footnote 351. *See generally* Restatement of Security § 61(b) and corresponding comments (1941).

(n24)Footnote 352. *See generally* Restatement of Security § 61(d) and corresponding comments (1941).

(n25)Footnote 353. Restatement of Security § 72, cmt. a (1941).

(n26)Footnote 354. *See, e.g.,* 6 Pa. Cons. Stat. Ann. § 11. *In re Newport Sav. & Loan Ass'n, 928 F.2d 472* (2d cir. 1996).

(n27)Footnote 355. U.C.C. § 7-210 (enforcement of warehouseman's lien), § 7-308 (enforcement of carrier's lien).

(n28)Footnote 356. *See generally infra*, Chapter 101.

(n29)Footnote 357. *Id. See also Garfinkle v. Superior Ct., 578 P.2d 925 (Cal. 1978); Spires v. Lawless, 493 S.W.2d 65 (Mo. Ct. App. 1973).*

(n30)Footnote 358. *See King v. Pelkofski, 266 N.Y.S.2d 61 (1978); Ames Family Sch. Ass'n v. Baker, 173 N.E. 437 (Mass. 1930).*

Supp. To CHAPTER 86 POWERS

10-86 Thompson on Real Property, Thomas Editions Supp. to § 86.01

Supp. to § 86.01 Powers of Appointment.

[Go To Main]

§ 86.01(a) Introduction. [Go To Main]

§ 86.01(a)(2) Powers of Appointment as Distinguished from Other Relationships.

§ 86.01(a)(2)(iii) Powers of Trustee.

Add:

In *Martone ex rel. Martone v. Martone, 509 S.E.2d 302 (Va. 1999)* testator gave a similar power to his executor by authorizing him, in his sole discretion, to distribute income earned during the period of administration of the estate to one or more members of a class consisting of his wife and his issue, or accumulated and added to the residuary estate, or used to pay debts, funeral expenses, administration expenses or taxes owed by the estate.

Add:

Matter of Fouts, 677 N.Y.S.2d 699 (1998) . In a proceeding by a trustee to change the situs of an inter vivos honorary trust from New York to Washington, the court appointed an enforcer, not a guardian ad litem, to protect the interests of five chimpanzees who were the income and principal beneficiaries of the trust.

§ 86.01(a)(3) Parties and Classification of Powers.

§ 86.01(a)(3)(iii) General, Special or Mixed Powers.

Add:

Linehan v. Linehan, 904 N.E.2d 769 (Mass. 2009) (donee of power appointed the assets in trust for the benefit of his widow and son); *Brown v. Miller, 2 So. 3d 321 (Fla. App. 2009)* (language authorizing payments as donee should "from time to time request" did not prohibit withdrawal of the entire principal in a single transaction).

In re Chervitz Trust, 198 S.W.3d 658 (Mo. App. 2006) (a husband validly exercised his power of appointment when he appointed assets of his wife's trust to his trust).

Dickinson v. Wilmington Trust Co., 734 A.2d 605 , aff'd 734 A.2d 642 (Del. 1999) . The life income beneficiary of a trust who was given the power to appoint by will the principal and undistributed income to such persons as she should select held a general testamentary power of appointment with the ability to distribute to her creditors if she wished to do so. Existence of a spendthrift provision in the will was not logically inconsistent with the creation of a general power.

Add:

Pierce v. Doyle, 816 N.E.2d 1212 (Mass. 2004) (power of appointment granted by testator was reformed to make it consistent with testator's intent to grant a limited power).

§ 86.01(b) Problems of Characterization and the Doctrine of Relating Back. [Go To Main]

§ 86.01(b)(1) General Powers.

§ 86.01(b)(1)(iv) Rights of Creditors of Donee.

Add:

In re Gilroy, 235 B.R. 512 (Bkrtcy. D. Mass. 1999) . Debtor was the sole beneficiary of an Illinois subtrust created by her father with lottery winnings and valued at $230,000. This subtrust gave the beneficiary, either during life or at death, the right to appoint all or any part of the trust to any persons including herself. The spendthrift provision barring transfer of income and principal and exempting the trust assets from claims of creditors expressly permitted exercise of the general power of appointment. The Illinois rule barring a creditor from compelling the exercise of a general power of appointment was irrelevant. By filing the bankruptcy petition, the debtor made the general power an asset of the bankruptcy estate and no intervention of creditors was required.

§ 86.01(b)(2) Special and Mixed Powers

§ 86.01(b)(2)(i). In General.

Change Daniel v. Brown citation to read:

Daniel v. Brown, 159 S.E. 209 (Va. 1931) .

§ 86.01(b)(2)(ii). Disposition in Absence of Valid Appointment.

Change Bridgewater citation to read:

Bridgewater v. Turner, 29 S.W.2d 659 (Tenn. 1930) .

§ 86.01(d) Exercise of Power. [Go To Main]

§ 86.01(d)(1) Donor's Power to Designate.

In line 3, after "creating the power" add new footnote: n178.1

Add:

Giammarrusco v. Simon, *91 Cal. Rptr. 3d 50 (2009)* (a trustee's proposed argument that the court should reform the trust to correct a drafting mistake was not a contest in violation of the trust's no-contest rule); Townsend v. Townsend, *89 Cal. Rptr. 3d 760 (2009)* (a proposed challenge to a trust amendment did not violate the trust's no contest rule).

In re Meyer, 987 P.2d 822 (Ariz. App. 1999) . Settlor created two trusts, each giving her son a power to appoint in his will the balance of the trust to his wife, his issue or a named foundation subject to the condition that if, within three months after the son's death, the trustees have received no notice of the existence of the son's will, they may conclusively presume that he died intestate. The son died leaving a will which was not admitted to probate. The court found that its provisions were effective to transfer the trust assets to the foundation.

Add:

In re Allen A. Atwood Trust, 23 P.3d 309 (Okla. Civ. App. 2001) (where a trust created a limited testamentary power of appointment exercisable by express reference to the power. Under Virginia law, failure of the donee of the power to refer to the trust or the power precluded its exercise since the condition may not be disregarded).

Add:

In *Wetherill v. Basham, 3 P.3d 1118 (Ariz. App. 2000)* , the spouses as settlors of a revocable trust provided that the survivor, during life or upon death, had the right to appoint principal of the trust to or for the benefit of settlors' descendants "upon such conditions, and in amounts and at such times, as the Survivor may direct and appoint by written instrument delivered to the Trustee." Sixteen years later, the wife, individually and as guardian and conservator of her mentally incapacitated husband, executed a writing purporting to substitute herself for her husband as trustee and to replace her daughter with a granddaughter as sole remainder beneficiary. When the wife died shortly after her husband, her will left her residuary estate to the trust "as amended." The court found that the trust amendment was a proper exercise of the special power of appointment even though it was executed while both settlors were living. Proof of an intention to exercise the power of appointment was not required. *Edwards v. Urice, 99 P.3d 256 (Okla. App. 2004)* (power of appointment effectively exercised in a revocable trust).

§ 86.01(d)(2) Constructional Problems of Donee's Will.

§ 86.01(d)(2)(i) Determining Whether Donee Intended an Exercise.

Add:

Hargrove v. Rich, 604 S.E.2d 475 (Ga. 2004) (a specific reference to the power of appointment in the donee's will was sufficient to exercise the power).

Add:

First Union National Bank v. Ingold, 523 S.E.2d 725 (N.C. App. 1999) . The general power of appointment retained by the settlor was exercised in favor of his wife by the residuary clause of his will without reference to the power. Although not expressly referred to as a power of appointment, the language used specifically provided that he had the right to appoint the entire trust by will and contrary to the trust provisions.

§ 86.01(d)(2)(ii) Perpetuities and Appointive Interests.

Add;

In re Chappell, 883 N.Y.S.2d 857 (2009) (powers of appointment granted to the donee under trust instruments were "postponed" powers).

§ 86.01(d)(2)(iii) Effect of Invalidity of Interest Created by Exercise of Power.

Add:

Puzzanchera v. Loetel, 293 S.W.3d 51 (Mo. App. 2009) (exercise of power of appointment was invalid because such exercise had been specifically prohibited).

§ 86.01(e) Enforcement of Limitations on Exercise. [Go To Main]

§ 86.01(e)(1) Testamentary Powers.

Line 4, after "is unenforceable," add new footnote: n224.1

§ 86.01(g)(3)(i). The Marital Deduction Trust.

--second full paragraph

Strike:

The tax code has been updated and the tax-exempt amount has been raised to one million dollars for gifts given through 2010. This means that the total that spouses could pass would be two million dollars, one million each.

§ 86.01(g)(3)(ii). The Generation-Skipping Trust.

Strike:

Id.

Replace with:

I.R.C §§ 2010, 2631.

FOOTNOTES:
(n1)Footnote 178.1. *See e.g., Smith v. Brannan, 954 P.2d 1259 (Or. App. 1998)* . In 1978, H executed a will creating a marital trust for his wife which included the power to appoint the total fund by specific reference to the provision in her will. Contemporaneously, W made a will purporting to exercise the power through proper specific reference. In 1988, H executed a new will reducing his beneficiaries from six to two but retaining the trust and the power of appointment provisions in the same form. W had become incompetent and was unable to execute a new will. It was held that her will failed to satisfy the specific reference requirement.

(n2)Footnote 224.1. *Carmichael v. Heggie, 506 S.E.2d 308 (S.C. 1998)* . A life tenant with a general testamentary power of appointment over realty could not create a present interest in her son by deeding him her interest in the land, making a will purporting to exercise the power of appointment in his favor and contracting with him not to change the

will in return for his promise to care for her in her old age. The deed was effective to convey only the life estate.

Supp. To CHAPTER 86 POWERS

10-86 Thompson on Real Property, Thomas Editions Supp. to § 86.02

Supp. to § 86.02 Powers of Attorney.

[Go To Main]

§ 86.02(a) Theoretical Origin and Basis. [Go To Main]

Add:

Chase v. Northwest Airlines Corp., 49 F. Supp. 2d 553, 562 (E.D. Mich. 1999) quotes with approval 3 Am. Jur. 2d, Agency, § 23, p. 528 as follows: "A power of attorney is an instrument in writing by which one person, as principal, appoints another as his agent and confers upon him the authority to perform certain specified acts or kinds of acts on behalf of the principal."

Line 5, after "behalf of another," add new footnote: n289.1

Add:

In re Sechrest, 537 S.E.2d 511 (N.C. App. 2000) (where, in a proceeding to set aside a will, the execution of a power of attorney designating a health care agent with "full power and authority to make health care decisions" on her behalf created a fiduciary status only pertaining to matters within the scope of the agency).

In re Schlagel Trust, 51 P.3d 1094 (Colo. App. 2002) (the settlor's agent under a common law power of attorney had authority to revoke a trust although the instrument did not grant specific power to do so. It did give the agent broad powers in the execution of trust agreements and other estate planning documents. The trust agreement had been executed by the attorney-in-fact for the settlor).

Estate of Keatinge v. Biddle, 789 A.2d 1271 (Me. 2002) (held that under the usual rule retention of counsel by an attorney-in-fact under a durable power of attorney did not create an attorney-client relationship between the attorney and the principal. A separate agreement between the counsel and the grantor is required. Concern was expressed about the potential for conflicting loyalties being imposed on the counsel).

In re Estate of Romanowski, 771 N.E.2d 966 (Ill. App. 2002) (the attorney-in-fact under a statutory short form power of attorney exceeded her authority in naming herself and her daughter as contingent beneficiaries of a trust because such authority was not explicitly granted to her in the instrument).

In re Will of Kipke, 645 N.W.2d 727 (Minn. App. 2002) (a statutory short form power of attorney allowing the attorney-in-fact to change the beneficiary of a life insurance policy insuring the principal, except the attorney-in-fact cannot be a new beneficiary, does not apply to changes made by the principal).

§ 86.02(b) Construction and Scope of Power. [Go To Main]

§ 86.02(b)(1) Express Authority.

Add:

Cheloha v. Cheloha, 582 N.W.2d 291, 297 (Neb. 1998) (stating that "It is well settled that no gift may be made by an attorney in fact to himself or herself unless the power to make such a gift is expressly granted in the instrument itself and there is shown a clear intent on the part of the principal to make such a gift." Certificates of deposit owned by the principal were unlawfully converted by the attorney in fact to the extent they were used to pay the attorney in fact for personal services rendered to the principal when no oral contract for compensation was proved); *Elizondo v. Texas Nat. Resource Cons. Com., 974 S.W.2d 928 (Tex. App. 1998)* . An attorney-in-fact named by ten property owners could not bring suit in her representative capacity on behalf of her principals. Her agency status did not qualify her as a real party in interest permitting suit in her own name; *Schock v. Nash, 732 A.2d 217 (Del. Supr. 1999)* (An attorney-in-fact, under the duty of loyalty, always has the obligation to act in the best interest of the principal. Transfers made by the attorney-in-fact to herself or her family are voidable unless they were made with the consent of the principal after full disclosure); *Dayton Monetary Assoc. v. Becker, 710 N.E.2d 1151 (Ohio App. 1998)* (a partnership fictitious name statute requiring that certificates of registration be signed by the partners does not preclude use of a power of attorney broad enough to give such authority to the attorney-in-fact); *Ramos Irizarry v. Rivera Varela, 59 F. Supp.2d 358 (D. Puerto Rico 1999)* (A power of attorney granting authority to act on behalf of the principal in relation to her parent's estate did not include the right to sell the principal's share of a farm after title had been transferred to her and others as heirs).

In re Trust of Jameison, 8 P.3d 83 (Mont. 2000) (where a broad, general power of attorney to act in all matters affecting business or property did not authorize the attorney-in-fact to transfer the principal's property to herself as trustee and create a trust. Acceptance of trust benefits would not serve as a ratification since a writing was required).

In re Conservatorship of Anderson v. Lasen, 628 N.W.2d 233 (Neb. 2001) (where the attorneys-in-fact caused an unauthorized and unlawful dissipation of the principal(s estate by making gifts therefrom to themselves).

In re Estate of Roth, 724 N.Y.S.2d 476 (A.D. 2001) (where the attorney-in-fact and her son were obligated to repay alleged gifts made pursuant to a power of attorney because of insufficient evidence that the principal intended that the gifts were to be made).

Amcore Bank v. Hahnaman-Albrecht, Inc., 759 N.E.2d 174 (Ill. App. 2001) (a power of attorney authorizing the agent

"to perform for me every act of every kind and nature which may be deemed desirable or advisable to be performed for me" did not authorize an attorney-in-fact to sign a guaranty since such act was outside the powers specifically set forth. These specifically limited powers were not expanded by the broad "catch all" provision).

Add:

Salvation Army v. Ferrara, 775 N.Y.S.2d 470 (2004) (holder of power of attorney's transfer of property to himself was not presumptively invalid).

In re Estate of Wilson, 869 N.E.2d 824 (Ill. App. 2007) (agent under power of attorney for real estate not permitted to enjoin a temporary guardian).

In line 10, after "interpretation may arise" add new footnote: n295.1

Add at the end of the subsection:

Broad authority to sell real estate may carry ancillary statutory restrictions with respect to use of the proceeds.[297.1] Similarly, a general power of attorney broad enough to authorize the exercise of a power to revoke a trust may be required to recite specific authority and specific reference to the trust in order to be effective for that purpose.[297.2]

Add:

In re Estate of Kraus, *108 Cal. Rptr. 3d 760 (2010)* (alleged misappropriation of settlor's funds after defendant executed an invalid power of attorney).

§ 86.02(b)(2) Implied Authority.

Add:

In re Washington, 297 B.R. 662 (S.D. Fla. 2003) (holder of power of attorney acted improperly in forging purported debtor's signature on bankruptcy petition).

Add:

288 *St. Nick L.L.C. v. 288 Kiseki Realty, 728 N.Y.S.2d 20 (A.D. 2001)* (where the sole owner of defendant corporation executed a power of attorney authorizing his agent to engage in "business operating transactions." Sale of real property by the agency was barred because the power of attorney did not specifically include real estate transactions).

§ 86.02(b)(4) Ratification.

Add:

Township of North Fayette v. Guyaux, 992 A.2d 904 (Pa. Super. 2010) (power of attorney did not have retroactive effect).

§ 86.02(c). Application of Statute of Frauds. [Go To Main]

Add:

Estate of Rabinowitz v. Rabinowitz, *7 Cal. Rptr. 3d 722 (2004)* (the grantor of a power of attorney may orally acknowledge the power to witnesses).

Add:

HSBC Bank USA, N.A. v. Valentin, 900 N.Y.S.2d 350 (2010) (the power of attorney was not invalid because it had not been certified by an attorney).

§ 86.02(d) Termination of Power. [Go To Main]

§ 86.02(d)(1). Death or Disability of Principal.

Add:

Musquiz v. Marroquin, 124 S.W.3d 906 (Tex. App. 2004) (a power given to a daughter and a son was presumed to be a joint agency).

§ 86.02(d)(3) Statutory Durable Power.

Add:

Estate of Smith v. Southland Suites of Ormond Beach, LLC, 28 So. 3d 103 (Fla. App. 2010) (upholding durable power of attorney in connection with nursing home admission).

Add new footnote at end of first paragraph: n324.1

Add:

In re Guardianship of Shaffer, 711 N.E.2d 37 (Ind. App. 1999) (Attorneys-in-fact for an elderly Alzheimer's victim had the right to oppose the appointment of a guardian for the principal. The guardian, if appointed, would have no authority to revoke the power of attorney and no authority to act as to matters covered by the power); *In re Khoubesserian, 695 N.Y.S.2d 312 (A.D. 1999)* (A principal, in failing health, granted a durable power of attorney to her sister, who served for six years before her health also failed. An agreement made by the attorney-in-fact with an attorney to pursue an insurance claim on a contingent fee basis was valid as against a challenge interposed by a petitioner for appointment as guardian. The attorney acted pursuant to a power of attorney made by the original attorney-in-fact. Although the authority of the attorney ended at the death of his principal, compensation was awarded for services beneficial to the original principal made after the death of his principal).

In re Nellie G., 831 N.Y.S.2d 473 (2007) (trial court should have allowed person who held durable power of attorney to continue to manage property of incapacitated person).

Add:

Moffett v. Life Care Centers of America, 219 P.3d 1068 (Colo. 2009) (a person possessing the power of attorney could act on behalf of a person who became incapacitated after executing the power of attorney).

Add:

In re Guardianship of Muriel K., 640 N.W.2d 773 (Wis. 2002) (where the court held that agents under a power of attorney for health care and a durable power of attorney had authority to appeal from a lower court decision revoking their powers of attorney and replacing them with guardians to act for the principal).

Arrington v. Reynolds, 564 S.E.2d 870 (Ga. App. 2002) (landowners received sufficient notice of pending foreclosure

sale of their property where notice was published in the local newspaper, where timely notice was sent by certified mail to wife's post office box and where the postal service twice notified her of the letter's presence).

In re Keener, 268 B.R. 912 (Bkrtcy. Tex. 2001) (stating that a foreclosure sale is a harsh remedy under a deed of trust and must be done in strict compliance with the provisions of the deed of trust. The trustee must act with absolute impartiality to both parties when performing a foreclosure sale).

FOOTNOTES:
(n3)Footnote 289.1. Consent may be negated by showing that the principal was incompetent when he signed the power of attorney or by showing that the principal had been subjected to undue influence. *See Morris v. Jackson, 733 So. 2d 897 (Ala. Civ. App. 1999)* (where the attorney-in-fact was directed to return $7,000 and $2,700 improperly removed from the principal's bank accounts, plus interest); *Louros v. Cyr, 175 F. Supp. 2d 497 (S.D.N.Y. 2001)* (where powers of attorney executed by depositors creating individual accounts in a foreign bank did not cause a fiduciary relationship to exist with the attorney-in-fact who was a compensated contact of the foreign government charged with developing the private banking scheme. The attorney-in-fact was not acting as the mere agent of the depositors).

(n4)Footnote 295.1. *Estate of Smith v. U.S., 979 F. Supp. 279 (D. Vt. 1997)* . A power of attorney giving authority to "sell, purchase, lease, mortgage and convey any real property owned by me" was ambiguous in regard to creation of authority to make a charitable gift eligible for an estate tax deduction. Extrinsic evidence was appropriate and summary judgment was denied.

(n5)Footnote 324.1. *Miller v. Jackson Hospital and Clinic, 776 So. 2d 122 (Ala. 2000)* (where a durable power of attorney stated that it was to be unaffected by the subsequent incompetence of the donor. Although the donor had statutory power to delay the effectiveness of the power of attorney until his incompetence, he chose the form that created the authority immediately upon execution).

Supp. To CHAPTER 86 POWERS

10-86 Thompson on Real Property, Thomas Editions Supp. to § 86.03

Supp. to § 86.03 Powers of Sale.

[Go To Main]

§ 86.03(a) Relationships Giving Rise to Power of Sale. [Go To Main]

§ 86.03(a)(2) Trustees and Executors.

--Last sentence on Page, fourth word from the end. Correction:

"res" should be "rest."

Add:

Matter of Estate of Maxedon, 946 P.2d 104 (Kan. App. 1997) . The trustee had the power to sell a non-wasting asset to enhance income for distribution consistent with trust purposes. The trust instrument neither expressly permitted nor excluded such a sale.

Add:

Gershaw v. Gershfield, 751 N.E.2d 424 (Mass. App. Ct. 2001) (where trustees were expressly given broad direction to sell, convey and manage trust properly and the sale of an apartment building occupied by a beneficiary was a reasonable exercise of authority. Proceeds were to be used for maintenance of the beneficiary and the educational needs of his

children).

§ 86.03(a)(5) Mortgages of Real Estate.

Add:

6 *Angels, Inc. v. Stuart-Wright Mortgage, Inc., 102 Cal Rptr. 2d 711 (Cal. App. 2001)* (where, in a non-judicial foreclosure sale, the servicer of a loan on a deed of trust through clerical error understated to the trustee the amount of an acceptable opening bid. Sale of the understated amount was not set aside).

Rapps v. Cooke, 540 S.E.2d 241 (Ga. App. 2000) (where the court stated: "In exercising a power of sale, the foreclosing party is required only to advertise and sell the property in accordance with the terms of the instrument and to conduct the sale in good faith." Actual receipt of notice of default was not required by the security deed and the mortgagees did not act in bad faith by failing to provide the pay off amount of the accelerated debt).

Hicks v. E.T. Legg & Associates, 108 Cal Rptr. 2d 10 (Cal. App. 2001) (where in an action to set aside a non-judicial foreclosure sale, the court described the purposes of the legislative regulatory scheme as ((1) to provide the creditor/beneficiary with a quick, inexpensive and efficient remedy against a defaulting debtor/trustor; (2) to protect the debtor/trustor from a wrongful loss of the property; and (3) to ensure that a properly conducted sale is final between the parties and conclusive as to a bonafide purchaser).

Supp. To CHAPTER 86 POWERS

10-86 Thompson on Real Property, Thomas Editions Supp. to § 86.03

Supp. to § 86.03 Powers of Sale.

[Go To Main]

§ 86.03(b) Manner of Sale. [Go To Main]

§ 86.03(b)(1) Notice to Interested Parties.

Add:

Riley v. Robey, 25 Fed. App. 149 (4th Cir. 2002) (under Virginia law, specifying the street address in the notice of sale is not mandatory. Substantial compliance with the statutory requirement will validate the sale so long as the parties' rights are not affected in any material way).

Mills v. Haggard, 58 S.W.3d 164 (Tex. App. 2001) (a judgment of foreclosure sale was invalidated because holder failed to send notice of cure to debtor's address in file).

§ 86.03(b)(2) Public or Private Sale.

At end of last sentence in last paragraph, add new footnote: n376.1

§ 86.03(b)(3) Purchase by Seller.

Add:

Scurria v. Hodge, 720 So. 2d 460 (La. App. 1998) (An administrator has the fiduciary obligation to obtain the best price available. Sale of stock in a closely held corporation by a co-administrator to himself and another as original

shareholders of the corporation for less than market value creates a claim in the estate beneficiaries for the difference between the value of the shares and the amount received).

At end of second sentence in second paragraph, add new footnote 379.1: n379.1

FOOTNOTES:
(n6)Footnote 376.1. *See e.g. Blue Star Investments v. Johnson, 801 So. 2d 218 (Fla. App. 2001)* (a purchase price of 69.09% of the property's appraised value was not so grossly inadequate as to warrant setting aside the foreclosure sale). *Cf. In re Krohn, 52 P.3d 774 (Ariz. 2002)* (where the court adopted the rule of Restatement (Third) of Property: Mortgages § 8.3, a sale of real property under power of sale in a deed of trust may be set aside solely on the basis that the bid price was grossly inadequate. A bid of $10,000 for a property worth $57,000 was found to be grossly inadequate).

(n7)Footnote 379.1. *See e.g. Manion v. Chase Manhattan Mortgage Corp., 43 P.3d 576 (Wyo. 2002)* (where the first mortgagee was allowed to purchase at a foreclosure sale for the amount of its debt irrespective of the value of the premises in the absence of fraud or illegality).

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.01

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.01 Origin and Nature of the Doctrine of Adverse Possession.

[Go To Supp]

Much of the legislative and judicial confusion in the field of adverse possession of land is ascribable to the chain of causation of the doctrine's origin and growth. Its reason for existence may be explained by either or both of two different theories. It may be (as Blackstone n1 considered it) a limitation of action to recover possession, or it may be an actual transfer of title as a survival of feudal tenure. n2

The reason for the difficulty, but not its answer, lies in the mists of history. One must always read with caution the post-Elizabethan writers and perhaps even some of their hallowed predecessors. For the law of adverse possession has always been cultivated in the soil of political theory as it existed at the time and as it was fostered by the writer. Adverse possession is the law of the landless, the "have nots." It must be remembered that in the feudal scheme "seizin" took the place of our modern "title" to land. One who was "seized" held all of the legal rights that the law recognized as capable of being concentrated in an individual. Seizin was a sui generis legal concept whose basis was the only legal possession recognized by the law. n3 It combined the concept of possession n4 with "tenure." n5 The separation of possession and title was a later development in the law. n6 Early, no one had an interest in the land unless one was seized, i.e., unless one had possession. If one was disseised, if one lost possession, one lost the interest in the land. One no longer had title as we understand title today. n7 The early remedy -- at one time the sole remedy -- was to oust the "disseisor" by force. n8 If one did not do so promptly n9 one lost the right, after the law gave a legal remedy, to regain seisin by force. n10 The disseisin effected a change in the seisin and hence the legal title from the disseisee to the disseisor. n11 The disseisor had legal title albeit a defeasible one. n12 The disseisee had a mere right of entry -- something almost as nebulous as a chose in action, n13 so nebulous that it was not the subject of alienation, n14 nor even of descent n15 until the statute mort d'ancestor. n16 It is not certain whether there existed before the time of Henry II a writ to enable a disseisee to regain possession. n17 Glanvill, n18 however, mentions two assizes, novel disseisin and mort d'ancestor, whereby the disseisor or the disseisor's heirs could have the title tried and possession restored. Glanvill indicated that a plea of mort d'ancestor required a showing that the disseisin had occurred after the coronation of Henry II. n19 The writ of novel (or new) disseisin applied to disseisins occurring after Henry II's return from Normandy. n20 The statute of Merton n21 prevented the bringing of writs as to disseisin earlier than the death of Henry I. n22 Later the limitation was

fixed as of the coronation of Richard I. n23 Finally, by statute of Henry VIII n24 the limitation was changed to three score years before the bringing of the writ. n25 Littleton, however, treats these early acts as creating a title by prescription. n26 He points out that there was another source of such title to wit, possession beyond which the memory of man runneth not to the contrary. n27 Blackstone likewise states positively that sixty years possession in fee simple gives a title good as against the world. n28 Coke felt that the time of limitation had a two-fold result: to bar the writ and to make a title by the common law. n29 Preston has pointed out, however, that there were exceptions and, as in the case of persons under disabilities and life tenancies, the disseisor did not acquire title. n30

By statute of James I n31 writs of formedon in descender, in remainder and in reverter, were required to be sued out within 20 years. The purpose of this act as stated in the preamble was "For quieting of men's estates and avoiding of suits." With such historical confusion it is little wonder that there is lack of unanimity among the courts as to the exact nature of adverse possession. Although the statute of James I came some years after the settling of Jamestown (the usual date fixed as the crystalizing of the common law in America), n32 its fiat is generally accepted as the common law. Hence "adverse possession" for 20 years under the common law in this country passes title to the adverse possessor with certain stated qualifications. n33 In most states, however, there exist special statutes of limitations, actions affecting possession and title to land. Several questions present themselves. Do such statutes supplant or merely supplement the common law? Under such statutes of limitation, has the adverse possessor good title, with the statute merely affecting the required time for possession? Or does the statute merely bar certain remedies of the dispossessed person, leaving title to that person? n34 Does adverse possession give title as a bonus to the possessor, or does it take away title so that "possession" today becomes title if continued for a sufficient time? n35 This statute did more than bar possessory writs; it prevented the demandant from alleging seizin. n36 Some of the earlier statutes seem on their face merely to have barred possessory actions, leaving the writ of right available. n37

Adverse possession of real estate is a possession thereof inconsistent with the right of the true owner, and when such possession is accompanied by certain acts and circumstances, the title will vest in the possessor. The possession must be hostile, actual, visible, exclusive, notorious, continuous, and under a claim of title during the time necessary to create a bar under the statute of limitations. n38 The right to property thus acquired is not originated by consent, but against the will of the true owner, and generally rests on original trespass, which matures into a property right as the result of such owner permitting the adverse claimant or trespasser to continue the adverse use and possession uninterruptedly with a claim of right for the statutory period of limitation. n39 Such title is not based on a presumed grant, but is a new and independent title by operation of law and is not in privity with any former title. n40 "Adverse possession" means adverse occupation and use, since the word "possession" does not necessarily denote actual physical contact with the thing to be possessed, as where the holder of the legal title is, as a matter of law, possessed of the subject through constructive possession, and this can be ousted only by an actual physical entry and actual physical occupation thereafter. n41 Adverse use is such a use of property as the owner would personally exercise, disregarding the claims of others entirely, asking permission from no one, and using the property under a claim of right. n42

Adverse possession, to ripen into title, must be such as would have exposed the one in possession to an action because of what was done by the possessor, at any and all times during the prescriptive period that this possession continued. n43 Title by adverse possession rests upon the statutes limiting the time within which the owner must sue for the recovery of the land held adversely by another.

STATE ADVERSE POSSESSION LEGISLATION

State	Statute Of Limitations	General Time Limitation	Time Limitation Under Special Circumstances	Applicable Elements Listed By Statute
Alabama	Ala. Code § 6-2-33	**10 Years**	**10 Years** with color	Color of title, Notice,

By such adverse possession for the statutory period, the title of the lawful owner is lost by the failure to sue, and vests in the one in possession. n44

Statutes of limitation are sometimes termed statutes of repose, and, notwithstanding their drastic effect, are considered

as necessary and expedient for the general welfare. n45 The purpose of a statute providing that actions for the recovery of realty are barred in a specified number of years, is to render indefeasible the title of a limitation claimant whose claim satisfies the requirements of the statute. n46 In order to start the running of the statute, there must be a disseisin or ouster of the true owner, n47 and the possession of the disseisor must be such as will give such owner a right of action at any time during the period requisite to give title by adverse possession. n48 The one having title of record to the land is deemed in law to be in seisin and possession thereof and such seisin continues until ouster by the adverse possession of another. n49 It has been said perhaps incorrectly that the doctrine of adverse possession is based on the presumed acquiescence of the true owner, n50 since the law presumes, until the contrary appears, that those in possession are rightfully so. But acquiescence cannot be presumed unless such owner has or may be presumed to have notice of the possession. n51 It is presumed that possession is subordinate to the title of the true owner and adverse possession against such owner must be taken strictly and established by clear and positive proof. n52 Thus the possession of land by the grantor after the execution and delivery of a deed therefor is in trust for the grantee, and the statute of limitations does not begin to run until the grantor asserts an adverse holding by some unequivocal act brought to the knowledge of the grantee. n53 A claimant of title to land by adverse possession has the burden of showing that the possession on which the claim is based was for the length of time required by law. n54

Because of the close connection between "adverse possession" and "prescription," the terms are often used interchangeably. n55 "Adverse possession" may be distinguished from "prescription," in that it is a means of acquiring title to corporeal hereditaments only, and today is usually the direct result of the statute of limitations. "Prescription," on the other hand, is the outgrowth of common-law principles with but little aid from the statute, and involves the acquisition exclusively of incorporeal hereditaments. n56 Adverse possession differs from laches or permission and the owner can have no presumptions drawn against the owner because of laches. n57 It differs from dedication which contemplates a state of mind of the owner consenting to the gift. n58

Adverse possession denotes title acquired through the manner of possession. A prescriptive easement is a non-exclusive right acquired by manner of use. n59

So it is held that the acts of one claiming title by adverse possession must be strictly construed. n60 Other states, however, favor statutes of limitations and strictly construe exceptions thereto.

(n6)Footnote 6. Laws, especially in early times "are not made, but grow." Digby, History of Real Property, ch. 2, § 2. *See also Dalo v. Laughlin, 636 S.W.2d 585 (Tex. 1982).*

(n7)Footnote 7. Williams felt that seisin and title were synonymous. If a person wrongfully gets possession of the land of another, he becomes wrongfully entitled to an estate in fee simple, and to no less estate in that land; thus, if one wrongfully encloses a bit of waste land and builds a hut on it and lives there, one acquires an estate in fee simple by one's own wrong in the land which one has enclosed. Williams on Seisin.

Maitland, however, distinguished between seisin and title:

> He who is seised, though he has no title to the seizin, can alienate the land; he can make a feoffment and he can make a will (for he who *has* land is enabled to devise it by statute), and his heir shall inherit from him, for he is a stock of descent; and there shall be dower and there shall be curtesy, and the lord shall have an escheat and the king a forfeiture, for such a one has land 'to give and to forfeit. ' This may make seisin look very much like ownership, and in truth our old law seems this (and has it ever been changed?) that seisin does give ownership good against all save those who have better because older title. Nevertheless we err if we begin to think of seisin as ownership or any modification of ownership; after all, it is but possession. A termor was not seised, but certainly he could make a feoffment in fee and his feoffee would be seised. This seems to have puzzled Lord Mansfield, and puzzling enough it is if we regard seisin itself as a proprietary right, for then the termor seems to convey to another a right that he never had. But when it is remembered that substantially seisin is possession, no more, no less, then the old law become explicable. My butler has not possession of my plate, he has but a charge or custody of it; fraudulently he sells it to a silversmith: the silversmith now has possession: so with the termor, who has no seisin, but who by a wrongful act enables another to acquire seisin.

(n12)Footnote 12. Sir Geoffrey Gilbert, A Treatise of the Tenures in Two Parts (London, 1758) 21 felt, however, that the disseisor had only noticed possession against the disseisee and only a right of possession as against others. But the heir of the disseisor had possessions.

The disseisor could, however, alienate though the disseisee could not. Littleton, L. 3, c. 6, § 386 and when the disseisor died and his heir became seised the entry of the disseisee was tolled, Littleton, L. 3, c. 6, § 385, and he was put to his remedy at law.

(n15)Footnote 15. Coke on Littleton, § 2.

Gilbert's Tenures 42 speaks of the pre-conquest law as giving a writ of entry available in the county courts.

The first adverse possession statute of limitations ran to beginning of the reign of Henry I (1100), the next to the reign of Henry II (1154), the Statute of Merton. The next was the reign of Richard I (1189), Statute of Westminster I; 3 Edw., ch. 39.

(n16)Footnote 16. *Hunter v. Hunter, 237 S.W.2d 100 (Mo. 1951).*

(n17)Footnote 17. 2 Frederick Pollock and Frederick William Maitland, The History of English Law Before the Time of Edward I, ch. 4, § 2.

Gilbert's Tenures 42 speaks of the pre-conquest law as giving a writ of entry available in the county courts. The first adverse possession statute of limitations ran to the beginning of the reign of Henry I (1100), the next to the reign of Henry II (1154), the Statute of Merton. The next was the reign of Richard I (1189), Statute of Westminster I; 3 Edw., ch. 39.

The first modern statute was 32 Henry 8, ch. 2 (1540) which made the period 30 years. 21 Jam., ch. 6 made the period 20 years.

(n18)Footnote 18. Book XIII. *See also* 2 Sir Edward Coke, Institutes of the Laws of England 24 (London 1794-1797). 2 Blackstone, *supra*.note 1 at 184, 185.

(n19)Footnote 19. 8 Ranulf de Glanvill, Tractatus de Legibus et Consuetudinibus Regni Angliae, Ch. 3 (London 1673). The date according to 2 Coke's Institutes, 94 was Act 20, 1154.

The initial date of statutes limiting disseisin action was December 1, 1135, death of Henry I. Then in 1236, it became December 19, 1154, coronation of Henry II. In 1275, it became September 3, 1189, coronation of Richard I. In 1540 the 60-year rule was made.

(n20)Footnote 20. Glanvill, *supra*, n. 19, Chs. 33, 37.

The date was A.D. 1184. This may have varied at the king's pleasure, LXIII, c. XXXII.

(n21)Footnote 21. 3 Blackstone, *supra* n. 1, at 196. *20 Hen. 3*, ch. 8.

The first statute of limitation required a showing of seisin of the death of Henry I. Bracton's Notebook, Hilary and Easter, A.D. 1228, A.R. 12, 280. Later this was shortened by the statute of Merton, BRACTON, f. 373.

(n22)Footnote 22. Westminster I, 3 Edw., ch. 39 (1275). Bracton f. 373 speaks as of a *tempo re regis Henrici senioris*.

The assize of mort d'ancestor was, by the statute of Merton, limited to the time after the return of John from Ireland. *See* Sir Matthew Hale, A History of the Common Law 124 (London 1794).

Some states have statutes which bar claims to real estate dating prior to a fixed time unless such claims are filed or recorded within a fixed date after the enactment of the statute. Such statutes seem to do away with the common law requirements of adverse possession.

See R. D. Cox, History of the Adverse Possession Statutes of Tennessee, *6 MEM. ST. U. L. REV. 673 (1976).*

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.02

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.02 A Title by Lost Grant.

[Go To Supp]

Some states have recognized a doctrine of title based on the theory of a lost grant n61 somewhat similar to the doctrine of prescription in acquisition of easements. The doctrine has no basis in the English common law, although the concept of adverse possession based on parliamentary action held sway. n62 The Supreme Court of the United States has recognized that presumptions of lost grants can apply to corporeal as well as incorporeal rights in land. n63 In general the essentials of a title by lost grant are those of adverse possession. But there are material differences. Under the lost grant theory there is no initial disseisin and so no necessity of a showing of hostility. n64 A few states have by statute made lost grants the basis of adverse possession. n65 There is a practical distinction between the concepts of adverse possession and prescription as means of acquiring title to land: under the lost grant theory the title of an individual can be supported as against the sovereign, n66 and as against those under a disability, n67 or other causes suspending the running of the statute. n68 It is commonly invoked where the records are destroyed. Its requirements are generally those of adverse possession other than disseisin, except that the payment of taxes is often added. n69

In these states, however, there exists a doctrine either parallel with or in substitution for the rule of adverse possession that permits title to land to pass by prescription. n70

COMPUTER-ASSISTED RESEARCH

LEXIS: Adverse possession w/20 lost grant 3 Am. Jur. 2d, Adverse Possession § 3

FOOTNOTES:
(n1)Footnote 61. *Kohala Corp. v. State, 732 P.2d 652 (Haw. 1987); Adams v. Slattery, 295 S.W.2d 859 (Tex. 1956).*

(n2)Footnote 62. *Ricard v. Williams, 20 U. S. (7 Wheat.) 59, 5 L. Ed. 398 (1822); Fletcher v. Fuller, 120 U. S. 534 (1887).*

But see William F. Walsh, Title by Adverse Possession, *16 N.Y. L. REV. 532,* pointing out that this theory arose out of

erroneous judicial concepts of adverse possession. For an example of this error as giving use to the doctrine see the discussion in *Lewis v. San Antonio, 7 Tex. 288 (1851),* which is the foundation of the Texas lost grant rule, and where the English doctrine of adverse possession was by the court confused with the Spanish law of prescription.

(n3)Footnote 63. The writers as late as Blackstone are silent, but see Parker v. *Baldwin, 11 East. 488, 103 Eng. Rep. 1092,* allowing a plea of a presumed grant by an individual against the crown. The court distinguished this rule from that of adverse possession where possession could not be held adversely to the crown. Co. Litt. § 277A. A crown grant was presumed from long continued occupancy.

(n4)Footnote 64. N.C. Gen. Stat. § 98-8, supports a seven-years possession as against all but the state where the official records have been destroyed by fire and also gives a presumed grant even as against the state after 30 years. The doctrine of presumed grant, § 1-35, is very old, going back to the Act of 1791 and is based on the statutes 21 Jam. ch. 2 and *9 Geo. 3.* Under the present statute, 30 years' possession is an absolute bar, not a mere presumed grant. *Price v. Jackson, 91 N.C. 11 (1884).*

Okla. Stat. Ann. tit. 60, § 322, creates a title by occupancy, which is valid except against those holding title by accession, transfer, will or succession, or against the state, or by "prescription." Section 333 provides that those who have occupied for a statutory time shall have a title by "prescription." The Oklahoma courts indicate, however, that this is not the lost grant theory, since such an occupancy does not run against the state. *Merritt Indep. Sch. Dist. No. 2 v. Jones, 249 P.2d 1007 (Okla. 1952),* nor against those under a disability. Thomas v. Morgan, 240 P.735 (Okla. 1925), and the courts treat it as a disseisin. Harjo v. Mathis, 41 P.92 (Okla. 1935), and it must be hostile. Taylor v. Harmon, 250 P.887 (Okla. 1926); Honeyman v. Andrew, 253 P.489 (Okla. 1926).

Pa. Stat., tit. 12, § 71 makes seven years' quiet possession based on an equitable right necessary, § 72 bars entrance after 21 years and § 79 makes 30 years' possession a presumption that the commonwealth has parted with title.

Wis. Stat. 1955, § 330.10, permits a title by prescription against the state after 40 years as distinguished from the usual 20 years. §§ 330.05-330. 10.

See Downing v. Bird, 100 So. 2d 57 (Fla. 1958) (the distinction between prescription and adverse possession).

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.03

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.03 Effect of Adverse Possession.

[Go To Supp]

Disseisin as before noted transferred title, as far as that concept was then known, to the disseisor. The disseisee had for time a right of re-entry. n71 After this time elapsed the disseisee had to resort to a writ of possession or right. n72 The disseisor might be said to have acquired, by the disseisin, something in the nature of a defeasible fee, n73 a fee upon condition subsequent, subject to being cut off by a writ of possession or of right. The statutes of limitations, by denying these writs to the disseisee, thus converted the defeasible fee into an absolute one. n74 When adverse possession does ripen into title it operates retrospectively. n75 Thus the owner cannot obtain damages for the interim possession. n76 Nor can the owner recover for profits that have been severed during such period. The common law permitted the disseisor and the adverse possessor to recover against a trespasser damages to the freehold as well as to the possessory interest. n77 Some states still follow this rule. n78 Others permit the trespasser to raise the question of title the *ius terti* as a defense to actions for damage to the freehold. n79 The older and apparently still majority rule gave the possessor title to the crops raised, leaving to the owner an action for damages. n80

The adverse possessor cannot, however prior to obtaining title, convey to a third party title to the profits, the timber, minerals, etc., as against the owner's claim. The owner can recover therefore even in the hands of an innocent purchaser. n81 But the adverse possessor is entitled to compensation in eminent domain and, if the adverse possessor has a wife, she can recover her dower. n82 The lapse of time limited by such statutes not only bars the remedy; it extinguishes the right, and vests the perfect title in the adverse holder. n83 A statute governing adverse possession is a statute of repose. n84

At common law the disseisor could defend possession against all comers, n85 even against the disseisee who, after the right of entry had been lost, attempted to reenter without a writ. n86 The disseisor acquired so much of the title or rights that the disseisee had no title to convey to another while out of possession, n87 nor could the disseisee devise the land. n88 The disseisor, however, could lease, convey and devise. n89 This limitation upon alienation by the disseisee was preserved for a late period in America. n90 Today the owner out of possession can convey and devise. n91 The adverse possessor can also do so by virtue of the possession though the time has not yet run. n92 Most jurisdictions now permit

peaceful, n93 but not forceful, re-entry n94 by the record owner.

The effect of completion of adverse possession under the American statutes is not so certain. The cases are in accord that when adverse possession is completed, title passes from the former owner to the adverse possessor. Title is acquired free from the claims of creditors of the former owner of the land and the administrator of a deceased former owner. n95 Such title so acquired by adverse possession is free and clear of all liens and encumbrances against the property held by private parties. n96

If the adverse possessor gives a mortgage before possession has ripened into title, the mortgage foreclosure, after the adverse possessor has acquired title, will pass as good title. n97

Title by adverse possession is subject to tax liens and assessments, n98 but is free from all easements, licenses and grants of profits by the former owner, n99 as well as all covenants and equitable servitudes. n100 When land is platted and lots are sold with reference to the plat, a lot owner claiming title to a lot through a common grantor cannot by adverse possession defeat another lot owner's private easement of ingress and egress over the alleys shown on the plat, even though the public rights in the alley have been relinquished. n101 Adverse possession for sufficient time to bar an action to recover real estate confers title against any title whatsoever as effectively as if the original owner n102 had made a formal conveyance to the possessor. It operates as complete investiture of title. n103 Adverse possession extinguishes the real owner's title n104 and passes an indefeasible title which is not lost by failure to promptly assert it. n105 A title acquired by adverse possession is as good as the best when established. n106 It is sometimes said the rule rests upon the theory that, when possession and use are long continued, they create a presumption of lawful origin. That is, they are founded upon such instruments and proceedings as in law would pass the right to the possession and use of the property. n107 It is more proper to say that when an adverse possession is shown there is no need to seek the aid of such presumption. The title is as full and complete as if the possessor had always held the undisputed title of record. n108 More properly, like disseisin, n109 when adverse possession ripens into title, it is taken as against all the world. n110 The adverse possessor forms a new stock of descent. n111 The adverse possessor is not subject to any former owner, and the title of the adverse possessor is not subject to any of the infirmities attaching to that of the former owner. n112 Title by adverse possession defeats a record title just as it defeats non-record title. n113

By the weight of authority, it is held that a purchaser may be compelled to take a title resting upon a hostile adverse and uninterrupted possession, under color of title which has continued for a length of time, sufficient to bar an action for the recovery of the property. n114 The agreement in favor of forcing a purchaser to take such a title is that the court has jurisdiction itself to try the title. n115 The contra rule relies upon the possibility that a third party claimant to the title is not bound by the decision of a court that has not obtained jurisdiction over him. n116

A title based on adverse possession is usually said to be a good but not a clear title. n117 The title thus acquired is respected in courts of equity as well as in courts of law. n118 Court action is not necessary to establish title by adverse possession, but the title is not marketable until there is a judicial etermination. n119 And the title is such as will support an action to remove a cloud therefrom; n120 or to maintain trespass against one claiming under a grant senior to the adverse claimant but without possession. n121 Some cases hold that title by adverse possession is effective for the removal of a cloud on the title by adverse possession is effective for the removal of a cloud on the title, n122 while other cases take a contrary view. n123 The effect of the possession of the adverse holder for the statutory period is not only to bar the remedy of the owner of the title paper or otherwise, but to divest the estate and vest it in the party holding adversely. n124 Such title is a legal title in fee simple; but where it must be proved by extrinsic evidence it is not a record title. n125 It is held that there is no superiority in a title derived from a grant to that acquired by possession under color of title for the period of limitations, although the latter title is derived by force of statute. n126 After title has been once acquired by adverse possession, the title so acquired is not lost by abandonment of possession, n127 nor by the mere recognition of the former owner's title and a promise to pay for the land. n128 After adverse possession has been established, the fact that the original owner later grants permission does not defeat the claim. n129 Where adverse possession has once actually ripened into title, the title is not lost through a parol disclaimer by the possessor or the

possessor's successors. n130 Such a parol statement may, however, be considered in evidence as bearing on the question of whether the possessor held the essential element of hostility. n131 A bona fide purchaser from the record owner of the property held adversely takes, subject to the possessor's rights, even though the statute provides that all deeds shall be void unless recorded. n132 This is true even though the adverse possessor's line has ceased to be visible on the surface. n133

If prior to the maturing of the adverse possession, the adverse possessor grants the surface and retains the minerals, the grantee's continued possession of the surface inures to the benefit of the grantor so as to ripen title as to the minerals. n134

The cases are divided as to whether working of part of a well-defined mineral estate is constructive possession of the whole. n135

The adverse possessor holds title not merely against the owner but also against the transferees; the latter are not protected by the recording acts. n136 When adverse possession ripens into title it relates back to the beginning of the possession so as to cut off the original owner's claim to interim rents, issues and profits, even if the original owner has already collected the rents. n137

The rule that a grantor retaining possession after the deed is presumed to be in with permission of the grantee is rebuttable by a showing of contrary intent. n138

Title of a person holding adverse possession of land for the requisite period extinguishes all other consistent titles and becomes the true title. n139

A title acquired by adverse possession is a fee simple absolute, while by prescription one acquires only a particular easement. n140

Where the time for adverse possession has been completed, title vests, and a formal admission by the adverse possessor of having held as the record owner's tenant will not disturb the title, unless the possession had not been adverse during the period. n141 This type of archaic phrasing means only that once title is in truth perfected, nothing said later by the successful claimant will divest title.

Absent a statute creating a means to record title by adverse possession, an adverse possessor's title does not need to be recorded. n142

It has been held that a strip of land acquired along a boundary by adverse possession does not pass under a deed from the adverse possessor unless the newly acquired land is described in the deed. n143

Adverse possession creates a new title -- not merely a defense against the prior title holder. n144

Court action is not necessary to establish title by adverse possession, but the title is not marketable until there is a judicial determination. n145

An adverse possessor who plants, cultivates and harvests crops has title thereto, even though the adverse possessor was a mere trespasser. n146

LEXIS: Adverse possession w/20 effect

FOOTNOTES:
(n1)Footnote 71. Digby, History of Real Property, ch. 2, § 9. Littleton, L. 3, c. 7, §§ 422 - 424.

If the disseisor, though the disseisee make continual claim, died more than a year and a day after the disseisin entry could not be made on his heir. Lacking a statute the continual claimant had a right of entry until the disseisor died. LITTLETON, L. 3, c. 7, § 427.

Entry by the disseisee destroyed the dower of the wife of the disseisor, even though entry was not made until after the disseisor's death. Littleton, L. 3, ch. 6, § 393.

The same rule applied as to defeasible fees but the courts divided as to whether there was dower and curtesy in a determinable fee after the estate determined. *See* 3 Richard Preston, An Essay in a Course of Lectures on Abstracts of Title 372 (New York, 1828); Evans v. Evans, 9 Bann. 190; Reed v. Morrison, 12 Serg. & Rawle 18 (Pa. 1824); *Beardslee v. Beardslee, 5 Barb. Ch. 324 (N.Y. 1849).*

(n2)Footnote 72. Even in the case of the crown, if the heir of the disseisor was in possession a writ of right, "Praecipe quod reddat nobis" was required to oust him. 1 Britton, § 22b.

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.04

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.04 "Possession."

[Go To Supp]

The essence of title by adverse possession is the legal concept of "possession," which is not always congruent with the lay understanding of the term. The legal concept of possession dates back to the time when possession and title were inseparable. Whenever one lost physical control, one lost title. In the formative stages of the common law, when one ceased to be in control of the land, one ceased to be the owner thereof. Land could be stolen just as cattle. Today this rule has receded only to the point that the thief must deny control to the title holder for a sufficient period for the thief to become the owner.

In order for the particular statute to be operative the claimant must have been in "possession" for the requisite period. What is this possession? It seems that the very early English statutes named real but not possessory actions. n147 The statute of James, however, did bar entry actions. n148 What is the sense of the modern statutes? Do they require seizin of the adverse possessor or do they merely require possession by him? n149 It is clear that an act which amounted to a disseisin at common law n150 is sufficient to constitute adverse possession. n151 Blackstone defines "disseisin" as a wrongful putting out of one who is seized of the freehold. n152 There is an actual disseisin when one wrongfully enters upon the land of another with intent to usurp, and, retaining the possession, actually turns the owner out, or at least keeps the owner out. n153 It is impossible to reconcile the American cases on the question of the extent to which the possession concept must be accompanied by a claim of right or title to pass title. The problem lies in the extent to which the jurisdiction likens adverse possession to disseisin. n154 Much authority states that possession must be accompanied by an intent to claim ownership. n155 This intent is not the secret purpose of the occupant, but is the purpose which the acts themselves manifest, and the acts done must be manifested to the person against whom the ouster is directed. n156 Possession must be sufficient to notify the owner of the assertion of the claim. Silent possession, accompanied by no act which can amount to an ouster, is insufficient upon which to found title by adverse possession. n157 Proof of acts of dominion over land by an occupant can be effective in establishing a title by adverse possession. n158 One of the most effective means of proving ouster is by showing the exercise of dominion over the land by the adverse claimant. n159 Actual possession is evidence of ouster. n160 Others distinguish between disseisin and adverse possession. n161

Proof of prior peaceful possession under color of title is not prima facie evidence of ownership and seisin. n162 Under this theory it is held that a wrongful intent to disseise the true owner is not a necessary element of adverse possession. n163 If a mere trespasser, without any claim or pretense of title, enters into land and holds the same adversely to the title of the owner, then ouster of the owner is effected. n164 The extent or degree of dominion of control necessary to establish adverse possession is largely determined by the nature of the property. Unquestionably under any theory there must be (a) an intent to take possession and (b) sufficient acts of dominion. n165 Possession alone is insufficient. The possessor must intend to hold despite and not subservient to the owner's title. A mere squatter does not have the intent to possess. n166 The mere fact that the legal concept of possession has been achieved and retained for the required period of time under the statute is not itself, however, enough to give the possessor title. There must be something more, something further even than actual disseisin. There must be a state of mind in the possessor claiming title to the property as against all the world including the true owner whomever the true owner be, and there must be sufficient publication of that fact to the world. n167

Some cases look upon adverse possession as analogous to common law disseisin. So a possession which does not amount to an ouster or disseisin is sufficient. n168 A true owner has the constructive possession, or seisin, and disseisin cannot be brought about without actual adverse possession, and, if there is no disseisin, the statute of limitations can have no operation. n169 To constitute adverse possession there must be an entry and ouster of the true owner, for until disseisin any possession of another is presumed to be subservient to the title. n170 It must appear that there has been a wrongful exclusion from possession of the party entitled to it. n171 In the case of a dispossession by a stranger, the fact that such stranger takes the actual and exclusive possession of the land is of itself a notice of the character of such possession, and of the intent with which it was done. None of these acts are essential where from the character of the land they are impossible. n172

Except when held under color of title, in order that title to land may be gained by adverse possession, the possession must be actual. n173 To determine the fact of actual possession in a particular case, all the circumstances must be taken into consideration. n174 In determining the question whether one has actual possession of property, the character and locality of the property and the uses for which it is naturally adapted are taken into consideration, for the possessory acts over an outlying and uncultivated piece of land may be proved by acts of ownership somewhat different from what would be required in regard to land under enclosure and in actual cultivation. n175 "Actual possession" is such possession as in general terms indicates an exclusive ownership of the property, and this is usually shown by a residence thereon, an enclosure of at least a portion of the land or the cultivation thereof, or such use of the land as is practicable and for the purpose for which lands of a similar character are ordinarily used. n176

Navigable waters may form part of the enclosure for adverse possession. n177

Mere casual acts of ownership do not constitute adverse possession, although there may be certain sorts of acts of possession which, if continued and uninterrupted, will be sufficient though the land is wild. n178

Actual possession is the same as pedis possessio or pedis positio, and these mean a foothold on the land, an actual entry, a possession in fact, a standing upon it, as a real demonstrative act done. It is the contrary of a possession in law, which follows in the wake of title, and is called constructive possession. n179

Some courts take the view that for a statute to operate against the owner out of possession, there must be an actual entry on the land by the disseisor that amounts to an ouster or disseisin of the owner. n180 In some cases the acts of dominion on the part of the disseisor must be done with the intention to disseise the owner; n181 and such intention must be made manifest by the disseisor's acts. n182 A mere intention to disseise unaccompanied by positive acts will not produce that effect, n183 nor will mere passive possession, without intention to claim the property, amount to an ouster or disseisin of the owner. n184 Mere occupation of land beyond boundary line is not possession, nor is fencing n185 of itself alone sufficient. n186 Residence on the land is not absolutely essential. n187 Cultivation of the tillable land and claiming the whole by virtue of color of title may be sufficient to constitute adverse possession. n188 Fencing is not necessary to

constitute either actual or adverse possession of land. n189 The possessor must exercise such acts of dominion over the property as will apprise the owner of the fact that a claim of ownership is being asserted. A test of adverse possession is whether the possessor has enjoyed the land as the average owner of similar property would. n190

As distinguished from prescription, adverse possession requires exclusive possession. n191 Where the property is vacant, the law attributes continual possession to the person having legal title, and in order to oust this constructive possession there must be actual possession for the necessary period. n192 A party occupying land must appropriate it for some purpose to which it is adapted to constitute adverse possession. n193 The mere fact that an action of trespass would lie is not sufficient possession to give rise to adverse possession. n194 One in possession of one tract cannot stretch the possession so as to include another by means of a claim of ownership without actual possession of such other tract. n195 Actual residence is not ordinarily required. n196 Statutes sometimes control the question of actual possession by requiring an actual residence on the land, n197 or by requiring the land to be enclosed or cultivated. n198 It is not essential that the owner have actual knowledge of the adverse possession if it was open, visible and notorious. n199

Where two deeds purport to convey the same land, thus resulting in an interlock, the senior deed supported by constructive possession of the land described will prevail over the junior deed, except to the extent that the latter proves adverse possession of some portion of the interlock. n200

At common law, "occupation" was a word of art signifying a putting out of a man's freehold in time of war when the courts were closed. Coke on Littleton § 249b.

Littleton, L. 3, c. 6, § 412 indicated that there could be seisin by occupation. Coke felt, however, that usurpation in time of war did not amount to putting out of possession. § 249b.

Use in common with the servient estate is not adverse. *Sottiaux v. Bean, 95 N.E.2d 899 (Ill. 1950).*

(n8)Footnote 154. *See* Monthomery & Mullen Lumber Co. v. Quimby, 128 P.402 (Cal. 1912); Truman v. Raubuck, 56 A.944 (Pa. 1904); Clithero v. Fenner, 99 N.W.1027 (Wis. 1904).

A possessor's purchase or offer to purchase an outstanding title or interest does not necessarily admit the validity of

the outstanding claim or interest sought, nor does it necessarily amount to an acknowledgement that the possessor holds in subjection to the outstanding title or interest. Still less does the purchase or offer to purchase an outstanding interest necessarily negate the existence of the elements of adverse possession as to titles, claims or interests of third persons: *Brooks v. Bruin, 18 Ill. 539 (1857);* Bond v. O'Gara, 58 N.E.275 (Mass. 1900); Blackfoot Land & Dev. Co. v. Burks, 199 P.685 (Mont. 1921); Pease v. Whitney, 98 A.62 (N. H. 1916); Rock Springs v. Sturm, 273 P.908 (Wyo. 1929).

> Disseisin was the wrongful taking away from the real owner of his actual seisin. "Disseusub was formerly a notorious act, when the disseisor put himself in the place of the disseisee as tenant of the freehold and performed the acts of the freeholder and appeared in that character in the lord's court." Lord Ellenborough, in William v. Thomas, 12 East 141, 155 (1810). Or, as Lord Mansfield put it: "Disseisin therefore must mean some way or other turning the tenant out of his tenure and usurping his place and feudal relation." *Taylor v. Horde, 1 Burr 60, 107 (1757).* How this was accomplished originally, unless the lord conspired with the disseisor, we do not know. It is sufficient for our purpose that disseisin was early possible, and that every wrongful taking of seisin from the real owner was not necessarily a disseisin. That only was disseisin where someone entered upon and ousted one who had taken actual possession under claim of freehold. Certainly this was true of actual disseisin, though there was a disseisin by election, where persons, to avail themselves of the remedy by assize, frequently were allowed to suppose or admit themselves to be disseised when they were not. Whatever may be true of the law of today, there was in the early common law a clear distinction between disseisin and other forms of adverse possession; for unless actual seisin was interfered with or could be regarded as interfered with for the purpose of the action, there was no disseisin, though there might perhaps be an abatement or some other form of adverse possession.

Conn, 263 S.W.902 (Tex. 1924); *Gibbs v. Lester, 41 S.W.2d 28 (Tex. Com. App. 1931);* Thompson v. Richardson, 221 S.W.952 (Tex. Com. App. 1920); Vergara v. Myers, 239 S.W.942 (Tex. Com. App. 1922); North Fort Worth Townsite Co. v. Taylor, 262 S.W.505 (Tex. Civ. App. 1924); Kelly v. Wilson, 283 S.W.696 (Tex. Civ. App. 1926); Oliver v. West Lumber Co., 287 S.W.100 (Tex. Civ. App. 1926); Dignan v. Nelson, 72 P.936 (Utah 1903); Wells v. Austin, 10 A.405 (Vt. 1887); Sulphur Mines Co. v. Thompson, 25 S.E.232 (Va. 1896); Chilton v. White, 78 S.E.1048 (W. Va. 1913); Kurz v. Miller, 62 N.W.182 (Wis. 1895). *See Bowles v. Whites, 57 S.E.2d 187 (Ga. 1950)* (denying betterment statute to one living with a relative).

Where a deed makes independent conveyance of separate and non-contiguous land, actual possession of one part does not include all. Morris v. Gibson, 134 S.E.796 (Ga. App. 1926).

A claimant under a junior grant which overlaps a senior grant is not in actual possession of any part of the junior grant

which is covered by the senior grant unless the claimant actually enters upon the land. Morgan v. Big Woods Lumber Co., 249 S.W.329 (Ky. 1923). *See* McQueen v. Graham, 111 S.E.890 (N.C. 1922) (junior grantee may, by actual adverse possession of a part of the lapped premises acquire title to the whole); Southern Coal & Iron Co. v. Schwoon, 239 S.W.398 (Tenn. 1921) (accidental encroachment on the land of another cannot be treated as an adverse possession of the entire tract belonging to such other person); Temple Lumber Co. v. Low, 272 S.W.769 (Tex. Com. App. 1925) (a tenant in possession of adjoining land can no more acquire title to more land than the tenant has in actual possession by encroachment through mistake or design than can an owner or claimant of adjoining land).

When land is held under a grant of title, possession is presumed to extend only to the land within the calls of the grant. Strunk v. Geary, 288 S.W.1053 (Ky. 1926); *Ellington v. Ellis & Dorsett, 2 La. App. 715 (1925); Holmes v. Hendricks, 4 La. App. 1 (1926).*

In the absence of color of title, the possession extends only to the limits of the visible actual occupancy. Fitschen Bros. Commercial Co. v. Noyes, 246 P.773 (Mont. 1926). *See* St. Petersburgh v. Meloche, *110 S. 341 (Fla. 1926);* Rock Run Iron Co. v. Heath, 116 S.E.590 (Ga. 1923); Baxter v. Girard Trust Co., 135 A.620 (Pa. 1927); Lyles v. Fellers, 136 S.E.13 (S.C. 1926). Possession of a portion of a tract while holding record title to the entire tract is deemed possession of the whole tract with the exception of such portions as may be actually occupied adversely by another. Davis v. Cox, 239 S.W.917 (Tex. Com. App. 1922); Kelly v. Wilson, 233 S.W.141 (Tex. Civ. App. 1922).

Where a tract of land is subdivided and sold to different parties, a subsequent purchaser of the whole tact entering under a deed conveying to him the whole tract cannot claim by limitation those subdivisions upon which he has never entered. His adverse possession of one subdivision will not extend to such other subdivisions as have not been invaded by his actual possession. Southwestern Lumber Co. v. Evans, 275 S.W.1078 (Tex. Civ. App. 1925).

The extent or degree of dominion of control necessary to establish adverse possession is largely determined by the nature of the property. *Wijas v. Clorfene, 262 N.E.2d 83 (Ill. App. 2d 1970).*

Actual possession is such occupancy or possession by a person as would put an ordinary prudent person on notice of that fact by observation of the premises involved. *Thomas v. Flynn, 100 N.W.2d 37 (Neb. 1951).*

(n28)Footnote 174. *Thomas v. Rogers, 53 So. 2d 736 (Ala. 1951); Combs v. Dubois, 662 P.2d 140 (Ariz. 1982); Klein v. Coswell, 199 P.2d 689 (Cal. App. 1948); Roche III v. Town of Fairfield, 442 A.2d 911 (Conn. 1982); Bakutis v. Schramm, 448 N.E.2d 982 (Ill. App. 1983); Chicago Title & Trust Co. v. Darley, 1 N.E.2d 846 (Ill. 1936); Snelling v. Adair, 199 So. 782 (La. 1940); Louisiana-Delta Hardwood Lumber Co. v. Johnson, 19 So. 2d 687 (La. App. 1944); Peters v. Staubitz, 498 A.2d 661 (Md. App. 1985); La Chance v. Rubashe, 17 N.E.2d 685 (Mass. 1938); Denton v. Ipock, 652 S.W.2d 290 (Mo. App. 1983); Frazier v. Shantz Real Estate & Inv. Co., 123 S.W.2d 124 (Mo. 1938); Saunders v. Rebuck, 496 N.W.2d 472 (Neb. 1993); Devins v. Borough of Bogota, 568 A.2d 903 (N. J. Super. 1989); Hightower v. Pendergrass, 662 S.W.2d 932 (Tenn. 1983); Jarvis v. Gillespie, 587 A.2d 981 (Vt. 1991); Blair v. Preece, 377 S.E.2d 493 (W. Va. 1988); Crites v. Koch, 741 P.2d 105 (Wash. App. 1987).*

Occasional acts of ownership or occasional trespasses are ordinarily insufficient to establish an adverse holding. Evans v. Joseph, 132 A.891 (Del. Ch. 1926) (use of water in pond held not to give prescriptive title to the bed of the pond); *Clark v. Cochran, 85 So. 250 (Fla. 1920)* (desultory logging operations on wild land); New York-Kentucky Oil & Gas Co. v. Miller, 220 S.W.535 (Ky. 1920) (grazing stock or permitting others to graze stock on land claimed to have been held adversely); *Industrial Lumber Co. v. Farque, 111 So. 166 (La. 1926)* (cutting and removing posts and logs from swamp lands held insufficient, but surveying the land and keeping a man in charge thereof is sufficient); Baxter v. Girard Trust Co., 135 A.620 (Pa. 1927) (leaning of party wall beyond boundary lines held not to establish title by adverse possession to ground covered by leaning wall). Compare, O'Banion v. Simpson, 191 P.1083 (Nev. 1920) (where land was suited only for grazing purposes, the grazing of cattle thereon under charge of a herder who was instructed to confine them to that particular tract constituted actual possession).

A parol gift of land must be perfected by adverse possession for the required statutory period. Lyles v. Fellers, 136 S.E.13 (S.C. 1926).

Physical residence is not always essential. Adverse use in a manner consistent with the nature of the property is sufficient. *Turnham v. Potter, 271 So. 2d 246 (Ala. 1972).*

Cutting of timber is not of itself adverse possession. *Cagle v. Valter, 170 N.E.2d 593 (Ill. 2d 1960); Conran v. Girvin, 341 S.W.2d 75 (Mo. 1960).*

Adverse possession is sufficient if land is used continuously for purposes for which it may by nature be adapted. *Shirk v. Schmunk, 218 N.W.2d 433 (Neb. 1974).*

Building of fence not conclusive as to adverse possession. *Payne v. Priddy, 371 S.W.2d 783 (Tex. Civ. App. 1963).*

Acts must be such as to give actual owner notice of claim by adverse possession. *Miller v. Fitzpatrick, 418 S.W.2d 884 (Tex. Civ. App. 1967). See 21 BAYLOR L. REV. 95.*

(n29)Footnote 175. *Harris v. Lynch, 940 S.W.2d 42 (Mo. App. 1997)* (Evidence not sufficient to establish adverse possession to strip of land) (manifestations of possession exhibited by claimant adequate to support possession in populous area differ from those which would support such a finding in a farming area); *Faulks v. Schrider, 114 F. 2d 587 (1940); United States v. Chatham, 323 F. 2d 95 (1963); Richterberg v. Wittich Mem. Church, 222 F. Supp. 324 (W. D. Okla. 1963); Bergen v. Dixon, 527 So. 2d 1274 (Ala. 1988); Thorman v. Cross, 541 N.E.2d 840 (Ill. App. 1989); Ranger Land Co. v. Story, 1 So. 2d 410 (La. App. 1941); Estate of Stone v. Hanson, 621 A.2d 852 (Me. 1993); Gadd v. Stone, 459 So. 2d 773 (Miss. 1984); Nennemann v. Rebuck, 496 N.W.2d 467 (Neb. 1993); Olson v. Fedde, 107 N.W.2d 663 (Neb. 1961); Patton v. North Jersey Dist. Water Supply Comm'n, 459 A.2d 1177 (N. J. 1983); Mullis v. Winchester, 118 S.E.2d 61 (S.C. 1961); Price v. Humble Oil & Ref. Co., 152 S.W.2d 804 (Tex. Civ. App. 1941)* (in determining what will amount to actual adverse possession, considerable importance must be attached to the nature and uses of the land, and that adverse possession is one thing in a populous country, another thing in a sparsely settled one, and still a different thing in a town or village); *Hart v. Rochelle, 170 S.W.2d 245 (Tex. Civ. App. 1943). See Kelso v. Caffery, 58 So. 2d 402 (La. 1952)* (acts of trapping held insufficient); *W. T. Carter & Bro. v. Ruth, 275 S.W.2d 126 (Tex. Civ. App. 1955)* (hunting and fishing held sufficient).

"Possessio pedis must correspond in a reasonable degree with the size of the tract, its condition and appropriate use, and must be such as usually accompany the ownership of land similarly situated. *Ewing v. Burnet, 36 U. S. (11 Pet.) 41 (1837); Brumagim v. Bradshaw, 39 Cal. 24 (1870).*

Where one is occupying enclosed premises, one does not have to build over the entire premises in order to make the holding adverse. It is sufficient if one occupies the land to which one has deed and not only claims the adjoining land, but actually enters thereon and regularly uses it in the way that land adjoining one's home is ordinary used. Davis v. Davis, 277 S.W.1025 (Ky. 1925) (town property). Cultivation is sufficient evidence of adverse holding. *Cambron v. Kirkland, 253 So. 2d 180 (Ala. 1971).*

Cultivation is evidence of possession as against a purchaser. *Humble Oil & Ref. Co. v. Laws, 272 So. 2d 841 (Fla. App. 1973).*

Pasturing, cropping, soil conservation and hay growing for more than 20 years established adverse possession. *Illinois Ry. Museum, Inc. v. Siegel, 266 N.E.2d 724 (Ill. App. 1971).*

Extent of possession depends upon the nature and character of the ground. *Authement v. Theriot, 292 So. 2d 319 (La.*

App. 1974); Derryberry v. Deford, 506 S.W.2d 152 (Tenn. App. 1973).

The nature of the land determines the type of use required to establish possession. *Succession of Kemp v. Robertson, 316 So. 2d 919 (La. App. 1975).*

Fencing and grazing cattle was sufficient possession. *Kimbell v. Allred, 317 So. 2d 487 (Ala. 1975).*

Partial fencing and use for pasture held sufficient possession. *William T. Burton Indus. v. Cook, 322 So. 2d 880 (La. App. 1975).*

Grazing of cattle in Louisiana may be sufficient possession. *Mustiful v. Galaspy, 340 So. 2d 659 (La. App. 1976).*

Mere mowing of grass not sufficient possession. *Wagley v. Cross, 347 So. 2d 859 (La. App. 1977).*

Mere maintenance of garden not sufficient possession. *Bailey v. Mahr, 255 N.W.2d 866 (Neb. 1977).*

Situation of parties, size and extent of land and purpose for which adopted controls adverse possession. *Sears v. State Dep't of Wildlife Conserv., 549 P.2d 1211 (Okla. 1976).*

Timbering, hunting, fishing and picnicking held insufficient possession. *Seven Springs Farms, Inc. v. King, 344 A.2d 641 (Pa. Super. 1975).*

Grazing or cultivation without enclosure held insufficient. *Gandy v. Culpepper, 528 S.W.2d 333 (Tex. Civ. App. 1975).* Grazing held sufficient occupation where land only adaptable and capable of being used for that purpose. *Doyle v. Ellis, 549 S.W.2d 62 (Tex. Civ. App. 1977).*

Where this was the sole use of which land was capable, grazing was sufficient to cite adverse possession. *Doyle v. Ellis, 549 S.W.2d 62 (Tex. Civ. App. 1977).*

Essential dominion is determined by the location, condition and reasonable use of the property. *Somon v. Murphy Fabrication & Erection Co., 232 S.E.2d 524 (W. Va. 1977).*

Occupation must be sufficient to place an ordinary, prudent person on notice. *Somon v. Murphy Fabrication & Erection Co., 232 S.E.2d 524 (W. Va. 1977). Whiteside v. Rottger, 913 S.W.2d 114,* (Mo. App. E.D., 1996)

(n30)Footnote 176. *Tampa Mtg. & Title Co. v. Smythe, 109 So. 2d 524 (Fla. 1958).*

(n31)Footnote 177. *Tensaw Land & Timber Co. v. Rivers, 15 So. 2d 411 (Ala. 1943); Monroe v. Rawlings, 49 N.W.2d 55 (Mich. 1951).* But see Murray v. Bousquet, 280 P.935 (Wash. 1929).

Mere cutting of posts and firewood did not establish possession. *Vick v. Berg, 473 S.W.2d 858 (Ark. 1971).*

Mere pasturing of livestock was not sufficient possession. *Cooper v. Cooper, 476 S.W.2d 223 (Ark. 1972).*

Acts of sporadic possession were insufficient. *Epps v. Freeman, 200 S.E.2d 235 (S.C. 1973).*

Merely grazing livestock on unfenced land was not possession. *Dingman v. Spengler, 371 S.W.2d 416 (Tex. Civ. App. 1963).*

Grazing as "possession" requires enclosure. *Dorbandt v. Jones, 492 S.W.2d 601 (Tex. Civ. App. 1973).*

Occasional cutting of timber is not such possession as to sustain adverse possession. *Sims v. Cage, 523 S.W.2d 486 (Tex. Civ. App. 1975).*

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.05

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.05 Essential Elements of Adverse Possession.

[Go To Supp]

The unfolding of the bud of possession into the flower of title comes so close to the concept of a forfeiture obtained by equity that the law has developed certain elements essential to such perfection of title. Generally speaking, since there are no equities in favor of a person seeking to acquire property of another by adverse holding, the person's acts are to be strictly construed. n201 These elements become part of the common law doctrine of adverse possession even though under the rule of the particular state adverse possession is bottomed on a particular statute of limitations which is itself silent as to these requisites. Probably in no state is the statute of limitations self-sufficient. Always it is supplemented by these common-law rules. n202 In order for there to be "adverse possession" there must be first "possession" as that concept is developed under the law of the particular jurisdiction. n203 "Unless the adverse claimant is so in possession of the land that he may at any time be sued as trespasser the statute will not run in his favor; and although he may have taken actual possession, if he does not continue there sufficiently so that he may be sued at any time as a trespasser during the prescriptive bar, he cannot rely on the statute of limitations." n204 Second, the possession must be "adverse." n205 Again, the interpretation of this universally required doctrine of adversity has had a variety of treatment. Always, to be adverse, the "possession" must be open and notorious. n206 Notice required in adverse possession is not merely mere occupancy but that which opposes the owner's right and is defiant and inconsistent with the title. n207 It must be under a claim of right n208 or title, n209 continuous, n210 exclusive, n211 and it must be for the length of time required by statute. n212 In most jurisdictions the possession must be hostile. n213 The great weight of authority does not require color of title, n214 but many states do give certain benefits by statute or common law to adverse possessors who do claim under color of title. n215 In some states to claim the benefits, the possession must be in good faith. n216 The absence of any of these elements, or others required by statute, will prevent the acquisition of title by adverse possession. n217 In addition to these elements, some jurisdictions require, that the claimant pay taxes. n218 Where there are tax payment requirements, the courts have disagreed as to the necessity of paying taxes in adverse possession of boundary strips. n219 Payment of taxes is primarily evidence of a claim of right under common law standards. Some few states have short-term statutes where payment of taxes is a substantive element of adverse possession.

A statute requiring the payment of taxes as an element of adverse possession does not retroactively affect titles which

have been perfected by adverse possession prior to the passage of the statute. n220 Therefore, a tax-exempt organization which was in possession, but had failed to pay taxes on the property, did not obtain title by adverse possession. n221

If the statute required the payment of taxes during the period relied upon for adverse possession, failure to make such payments prevented the statute from running, although the statute was later repealed. n222 In the absence of a statute changing the rule, the fact that the owner of a legal title to land pays taxes from time to time does not prevent the running of the statute of limitations to defeat the title by adverse possession. n223 Under a statute requiring the adverse holder, predecessors, and grantors to pay all taxes levied and assessed against the property for the number of consecutive or successive years comprised in the statutory period, such payments are a condition precedent to the establishment of a title by adverse possession. Failure to pay the taxes for any one or more years of the statutory period is fatal, n224 regardless of whether or not the adverse claimant had color of title or other evidence of interest in the land involved. n225 Under a statute providing that possession under color of title and payment of taxes for seven years constitutes title by adverse possession, color of title must be acquired before payment of taxes relied upon; and the color of title, possession, and payment of taxes must exist concurrently without interruption and must continue throughout the same seven years. n226

Some courts have taken the position that there may be acts constituting "possession" without it being so open and notorious as to be "adverse." n227

LEXIS: Adverse possession w/20 essential elements

FOOTNOTES:

(n1)Footnote 201. *Bullock v. Andrews, 688 So. 2d 845 (Ala. App. 1997)* (evidence established exclusive, continuous and hostile possession for 30 years); *Mashburn v. Tucker, 705 So. 2d 400 (Ala. 1997)* (where adverse claim started in 1945 based upon an old fence which was maintained by landowners and since 1976 based upon a survey, and the adjoining landowners knew the fence to be on their land, adverse possession was established); *Drake v. Cornelius, 706 So.2d 1214 (Ala. App. 1997)* (fencing in of adjacent property did not constitute claim of right where the party claimed only property as set forth in the fencer's deed and had not occupied the fenced in land for requisite ten years); *Paul v. Mead, 11 N.W.2d 706 (Iowa 1943)* (entry into actual possession in good faith as owner under the title translative thereof); *Miller v. Transcontinental Gas Pipe Line Corp., 358 F. Supp. 1357 (W. D. La. 1973).* Hostile possession, claim of right, actual possession, open and notorious possession, exclusive possession and continuous possession are essential to constitute adverse possession. *Wilton Boat Club v. Hazell, 502 S.W.2d 273 (Mo. 1973). See* Williams, Title by Adverse Possession in Indiana, *6 VAL. U. L. REV. 26 (1972). Rice v. McGinnis, 653 So. 2d 950 (Ala. 1995)* (adverse possession established by occupation of land over ten years through possession that was actual, hostile, open, notorious, exclusive and continuous).

(n2)Footnote 202. *See Parker v. McGinnes, 842 S.W.2d 357 (1992); Kurz v. Blume, 95 N.E.2d 338 (Ill. 1950); Neters v. Canutt, 46 N.W.2d 72 (Iowa 1951).*

Possession includes the right to exclude others. *In re Opinion of the Justices, 313 N.E.2d 561 (Mass. 1974).*

(n3)Footnote 203. *See Davis v. Harnesberger, 87 S.E.2d 841 (Ga. 1955)* (possession by one holding instrument purporting to convey fee, plus claim of exclusive ownership, constitutes adverse possession); Knight v. Denman, 90 N.W.863 (Neb. 1902); Murray v. Bousquet, 280 P.935 (Wash. 1929); *Ewing v. Burnett, 36 U. S. (11 Pet.) 41 (1837).*

Henry W. Ballantine, Title by Adverse Possession, *32 HARV. L. REV. 135 (1918);* Percy Bordwell, Disseisin and Adverse Possession, *33 YALE L. J. 141 (1923).*

(n4)Footnote 204. *Colley v. Carpenter, 362 N.E.2d 163 (Ind. App. 1977)* (a period of time provided by statute for adverse possession is shortened by statute, the earlier statute governs if the possession was started during the time of earlier statute). *See also Core v. Faupel, 24 W. Va. 238 (1884).*

(n5)Footnote 205. *Miller v. Transcontinental Gas Pipe Line Corp., 358 F. Supp. 1357 (W. D. La. 1973)* (Louisiana requires an entry in good faith to acquire acquisitive prescription).

All-*State Credit Plan Natchitoches, Inc. v. Ratliff, 279 So. 2d 660 (La. 1972)* overruling *Trahan v. Broussard, 206 So. 2d 82 (La. 1968)* (in order to have a taking, the possession of the "ancestor in title" must be in good faith).

In Louisiana, immovable property under a plea of 30 years' acquisitive prescription cannot only be acquired where there has been corporeal possession for the required length of time, but there must also be positive intention to take possession as owner. *Thomas v. Congregation of St. Sauveur Roman Catholic Church, 308 So. 2d 337 (La. App. 1975),* overruling Caufield v. Clark, 21 P.443 (Or. 1889) (an offer to buy possessor's title is a recognition of the title, and thereafter, the offeror may not claim the property under the doctrine of prior possession); *Stringfellow v. Brown, 326 S.W.2d 1 (Tex. Civ. App. 1959).*

Hensz v. Linnstaedt, 501 S.W.2d 463 (Tex. Civ. App. 1973) (intention to hold adversely to true owner is an indispensable element of adverse possession).

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.06

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.06 Establishment of Adverse Possession.

[Go To Supp]

The burden of proving the elements which will constitute adverse possession is upon the party who asserts it, n228 by clear and positive evidence. n229 In proving possession, the facts should be shown which in law constitute possession. n230 The intention to claim adversely need not be manifested by words, but may be inferred from the claimant's acts. n231 All presumptions are in favor of the holder over the true owner. n232 There is no presumption of the rightfulness of the claimant's possession; the claimant prevails only because the true owner has not seasonably asserted the right of ejectment. n233 The presumption is that the true owner's possession is in accordance with the legal title, and it requires clear and unmistakable evidence to overcome this presumption. n234 It should be noted that the commonly used phrase "legal title" is not used to denote legal as opposed to equitable. Rather it refers to the title held by the true owner who may have acquired title by adverse possession. Mere conclusions of a witness as to who was in possession are inadmissible. n235 Mere inference is never sufficient to establish a title by adverse possession. n236 The possession in order to support a claim to title by adverse possession must be hostile to the true owner and not merely subordinate to him. n237

To support title by adverse possession, it is necessary to show that there were no circumstances during the alleged adverse possession period preventing the claimant against whom it is asserted from exercising his or her right of possession. n238 While every presumption is in favor of a possession in subordination to the rightful owner, and title by adverse possession must be established by clear and positive proof, where the evidence is conflicting the weight of the evidence still remains a question for the court or jury trying the issue. n239 Adverse possession may be shown in various ways. Among these are residence on the land; n240 the erection of buildings and other structures n241 on the premises; making use of the land by clearing and cultivating, n242 cutting timber, n243 or pasturing; n244 or by the actual inclosure of the land with a fence. n245 A fence built by agreement and held by the parties for the statutory period constituted a boundary by adverse possession. n246 The changing and improving of the land, the opening and grading of streets, the cutting and removal of timber for the use of and sale by the one in possession, protecting the water front by the construction of bulkheads and the leasing of land to others are acts sufficient to establish adverse possession. n247 The fact that the person who exercised control over the land did not live on it has been held not to

imply that the person was not in possession. n248 The erection of buildings and other improvements is insufficient unless accompanied by actual occupation or open use; n249 but an application for a permit to erect a building on land has been held of little value, if any, in proving adverse possession of the land on which the applicant proposed to erect the building. n250 The inclosure and use of lands by the claimant is sufficient to show actual possession. n251 Even though it be considered that the inclosure of the ground by a fence is unnecessary, nevertheless, the extent of the ground claimed must be indicated in some way and be of such character as to clearly show that such ground is claimed by the party asserting to the right thereto. There must be such marks as indicate that the land is under the actual control of the party claiming it. n252 Where the quantity of land involved is small, the rule as to the location of the line is exacting and possession to the line during all the statutory period must be definitely shown. n253 Also, adverse possession may be evidenced by such acts as conveying, n254 leasing, n255 mortgaging, n256 or paying the insurance n257 or taxes n258 on the property; but payment of taxes has been held insufficient of itself to establish adverse possession. n259 When the evidence tends to show that the possession has all the qualities of an adverse holding, the law presumes that such possession is adverse, absent evidence to the contrary. n260 Thus where land beneath the overhanging eaves and gutters of the plaintiffs' house was in actual possession of its owners, it was held that the plaintiff did not acquire any title to such land merely because eaves and gutters overhung it for the statutory period. n261 At most the plaintiff could acquire an easement by prescription.

LEXIS: Adverse possession w/20 burden pre/2 proof or proving

FOOTNOTES:

(n1)Footnote 228. *Gunn v. Mickel, 501 So. 2d 466 (Ala. 1986); Ratliff v. Giorlando, 343 So. 2d 506 (Ala. 1977); McLester Bldg. Co. v. Upchurch, 60 So. 173 (Ala. 1912); Gerner v. Sullivan, 768 P.2d 701 (Colo. 1989);* Evans v. Welch, 68 P.776 (Colo. 1902).

Clark v. Drska, 473 A.2d 325 (Conn. App. 1984); Catlin v. Decker, 38 Conn. 262 (1871); Matter of Keamo, 650 P.2d 1365 (Haw. App. 1982); Heacock v. Madsen, 696 P.2d 916 (Idaho 1985); Morris v. Humphrey, 496 N.E.2d 1209 (Ill. App. 1986); Rich v. Neffziger, 94 N.E.1 (Ill. 1911); *Eakins v. Sadler, 683 S.W.2d 303 (Mo. App. 1984);* Spicer v. Spicer, 155 S.W.832 (Mo. 1913); *Kruse v. Horlamus Indus., 387 N.W.2d 64 (Wis. 1986);* Baty v. Elrod, 92 N.W.1032, 97 N.W.343 (Neb. 1903); Conkey v. Knudsen, 284 N.W.737 (Neb. 1939); *Miller v. Leaird, 413 S.E.2d 841 (S.C. 1992); Panter v. Miller, 698 S.W.2d 634 (Tenn. App. 1985); Harlow v. Miller, 520 A.2d 995 (Vt. 1986).*

(n2)Footnote 229. Naporra v. Weckwerth, 226 N.W.569 (Minn. 1929); Pauls Valley Nat'l Bank v. Foss, 226 P.567 (Okla. 1924).

Nutting v. Herman Timber Co., 29 Cal. Rptr. 754 (1963); Sherman v. Goloskie, 188 A.2d 79 (R. I. 1963).

Clear and positive proof of adverse possession is needed. *Redfearn v. Kuhia, 494 P.2d 562 (Haw. 1972); Grant v. Strickland, 385 So. 2d 1123 (Fla. App. 1980); Tietzel v. Southwestern Const. Co., 154 P.2d 238 (N. M. 1944); Park Acres, Inc. v. New York, 36 N.Y.S.2d 458 (1942); Linn County v. Rozelle, 162 P.2d 150 (Or. 1945);* Baxter v. Girard Trust Co., 135 A.620 (Pa. 1927); *Buchanan v. Nixon, 43 S.W.2d 380 (Tenn. 1931);* Lecomte v. Toudouze, 17 S.W.1047 (Tex. 1891); *Churchman v. Rumsey, 166 S.W.2d 960 (Tex. Civ. App. 1942); Hart v. Rochelle, 170 S.W.2d 245 (Tex. Civ. App. 1943);* Lockin v. Johnson, 202 S.W.168 (Tex. Civ. App. 1918); Raleigh v. Wells, 81 P.908 (Utah 1905); Rock Springs v. Strum, 273 P.908 (Wyo. 1929).

Burden of proof is on one claiming adversely. Handy v. Handy, N.W.2d 245 (N.D. 1973).

Contra, the burden is on the holder of the record title as against the adverse possessor. *Pure Oil Co. v. Skinner, 294 So. 2d 797 (La. 1974).* Burden of proof of one seeking to establish adverse possession. *Horacek v. Hudson, 538 P.2d*

1019 (Mont. 1975).

(n3)Footnote 230. *Finocchiaro v. Francescone, 198 A.2d 37 (R. I. 1964); Horton v. Smith-Richardson Inv. Co., 87 So. 905 (Fla. 1921).*

Adverse possession may be kept up without a personal residence, where the disseisor gives leases to tenants, puts them in possession, and receives rent from them, claiming the land as the disseisor's own. *Abel v. Love, 143 N.E. 515 (Ind. App. 1924).*

Irrespective of the title, if any, conferred by a will, title may be acquired to the property by adverse possession where the party claiming under the will, and each of the successive grantees thereunder, entered into actual possession of the real estate conveyed under a claim of ownership in fee simple and held openly and adversely for the statutory period. Coil v. Schetter, 152 N.E.870 (Ind. App. 1926).

A parol gift of land is ineffectual to pass title, even where accompanied by possession unless such possession is adverse. Weyhmueller v. Hannebohm, 154 N.E.771 (Ind. App. 1927).

The mere holding of a tax deed and the subsequent payment of taxes assessed upon the land so held is not such adverse possession as starts the running of the statute of limitations. Widdicomb Co. v. Card, 187 N.W.308 (Mich. 1922).

(n4)Footnote 231. *Lilly v. Palmer, 495 So. 2d 522 (Ala. 1986);* Rock Springs v. Strum, 273 P.908 (Wyo. 1929). Destruction of a line fence constitutes notice of an adverse boundary claim. *Gomes v. Upchurch, 432 P.2d 890 (Haw. 1967).*

(n5)Footnote 232. *Esquibel v. Hallmark, 586 P.2d 1083 (N. M. 1978); Buchanan v. Nixon, 43 S.W.2d 380 (Tenn. 1931);* Rock Springs v. Strum, 273 P.908 (Wyo. 1929).

Burden of proof on claimant to establish adverse possession. *St. Louis-San Francisco R. Co. v. Walter, 305 F. 2d 90 (10th Cir. 1962); White v. Wilks, 357 S.W.2d 908 (Mo. 1962).* Preponderance of evidence necessary to establish adverse possession. *Burns v. Owen, 357 S.W.2d 520 (Ark. 1962).*

Burden on one claiming adverse possession held fulfilled by more than 30 years' acquiescence to established curb line. *Martin v. Arndt, 95 N.W.2d 858 (Mich. 1959).*

Possession for 57 years held insufficient to overcome burden of showing possession was adverse. *White v. Wilks, 357 S.W.2d 908 (Mo. 1968).*

(n6)Footnote 233. *Taffinder v. Thomas, 381 A.2d 519 (R. I. 1972); Superior Oil Co. v. Harsh, 126 F. 2d 572 (7th Cir. 1942).*

(n7)Footnote 234. Lambert v. Hemler, 91 N.E.435 (Ill. 1910); Folley v. Thomas, 93 N.E.181 (Ind. App. 1910).

Presumption that possession is not adverse. *Lawse v. Glaha, 114 N.W.2d 900 (Iowa 1962); Parrish v. Minturn, 382 P.2d 861 (Or. 1963).*

(n8)Footnote 235. Carnahan v. Cummings, 180 N.W.558 (Neb. 1920).

(n9)Footnote 236. Peyton v. Stephens, 60 S.E.562 (Ga. 1908); *Mercer v. Wayman, 137 N.E.2d 815 (Ill. 2d 1956);* Finn v. Alexander, 171 P.602 (Kan. 1918); *Schwartz v. Kuhn, 10 Me. 274 (1833);* Preble v. Maine Cent. R. Co., 27 A.149 (Me. 1893), 21 L. R. A.829; *Budd v. Brooke, 3 Gill 198 (Md. 1845), 43 Am. Dec. 321; Riley v. Jameson, 3 N. H.*

23 (1823); Austin v. Bailey, 37 Vt. 219 (1864); Schwallback v. Chicago, M. & St. P.R. Co., 34 N.W.128 (Wis. 1887).

(n10)Footnote 237. Tony v. Knapp, 106 N.W.552 (Mich. 1906); In re Auditor General, 274 N.W.745 (Mich. 1937); *Miller v. Warren, 87 N.Y. S. 1011 (1904);* Ayers v. Reidel, 54 N.W.588 (Wis. 1893).

One standing by and watching property being sold by the title holder is estopped from later asserting his equitable interest. *Leidel v. Ballbach, 75 N.W.2d 860 (Mich. 1956).*

(n11)Footnote 238. Breeden v. Moore, 64 S.E.604 (S.C. 1909).

Possessor's acknowledgment of record title owner's rights while the statute is running defeats adverse possession. *Wolgamot v. Corley, 523 S.W.2d 491 (Tex. Civ. App. 1975).*

(n12)Footnote 239. *May v. Campbell, 470 So. 2d 1188 (Ala. 1985); Harvey v. Thorpe, 28 Ala. 250 (1856); Woods v. Montevallo Coal & TransP.Co., 3 So. 475 (Ala. 1888); Normant v. Eureka Co., 12 So. 454 (Ala. 1893); Roberts v. Brooks, 649 P.2d 710 (Alaska 1982); Sevier v. Locher, 272 Cal. Rptr. 287 (1990); Sands Assocs. v. Rios, 503 A.2d 179 (Conn. App. 1986); Clark v. Drska, 473 A.2d 325 (Conn. App. 1984);* Twining v. Goodwin, 77 A.953 (Conn. 1910); *Marathon Petr. Co. v. Colonial Motel Props., Inc., 550 N.E.2d 778* (Ind. App. 1 Dist. 1990); *A.M. K. U. Trust v. Talley, 580 So. 2d 1116 (La. App. 4 Cir. 1991); McMullin v. Dowley 418 A.2d 1147 (Me. 1980); Peabody v. Hewett, 52 Me. 33,* (1861); *Hutchins v. Maloomian, 590 N.E.2d 1171 (Mass. App. 1992); Miller v. Leaird, 413 S.E.2d 841 (S.C. 1992); Bywaters v. Gannon, 686 S.W.2d 593 (Tex. 1985);* Lockin v. Johnson, 202 S.W.168 (Tex. Civ. App. 1918); *Crites v. Koch, 741 P.2d 1005 (Wash. 1987); Perpignani v. Vonasek, 408 N.W.2d 1 (Wis. 1987);* Illinois Steel Co. v. Bilot, 84 N.W.855 (Wis. 1901); *Grappo v. Blanks, 400 S.E.2d 168 (Va. 1991).* Burden of proof is on the one seeking to establish adverse possession. *Russell v. Russell, 540 S.W.2d 626 (Mo. App. 1979).* Dickerson Pond Sewage Works Corp. v. Valeria Associates, 647 N.Y.S.268 (N.Y. A.D. 2 Dep't 1996).

(n13)Footnote 240. *Bennett v. Kovarick, 51 N.Y. S. 752 (1898).* See *Evans v. Thomas, 106 S.W.2d 1006 (Ky. 1937).*

Acknowledgment of a tenancy stops running of the period. *Boles v. Red, 227 S.W.2d 310 (Tex. Civ. App. 1950).*

Hostility presumed by holding boundary line despite disavowal of interest to hold land of another. *Faubion v. Elder, 301 P.2d 153 (Wash. 1956).*

(n14)Footnote 241. *Kitzinger v. Gulf Power Co., 432 So. 2d 188 (Fla. App. 1983); Idaho Forest Indus. v. Haden Lake Watershed Imp. Dist., 733 P.2d 733 (Idaho 1987); Hubbard v. Kiddo, 87 Ill. 578 (1943); Whittington v. Cameron, 52 N.E.2d 134 (Ill. 1943); Williams v. Rogier, 611 N.E.2d 189 (Ind. 1993)* (laying sewer lines, grading, excavation was sufficient); *Pinewoods Assocs. v. W. R. Gibson Dev. Co., 837 S.W.2d 8 (Mo. App. 1992); Titcomb v. Anthony, 492 A.2d 1373 (N. H. 1985); Sinicropi v. Town of Indian Lake, 538 N.Y.S.2d 380 (1989);* 1540 *Columbus Corp. v. Cuyahoga County, 589 N.E.2d 467 (Ohio App. 3d 1990); James v. Union Graded Sch. Dist. No. 2, 207 P.2d 241 (Okla. 1943); Brown v. Clemens, 338 S.E.2d 338 (S.C. 1985); Alzo Advertising, Inc. v. Industrial Props. Corp., 722 S.W.2d 380 (Tex. App. 1986);* Pioneer Inv. & Trust Co. v. Board of Educ., 99 P.150 (Utah 1909); *Perpignani v. Vonasek, 408 N.W.2d 1 (Wis. 1987).*

Where the supporting beams intruded into plaintiff's wall although the defendant had not known this, the defendant obtained title by adverse possession. *Ottavia v. Savarese, 155 N.E.2d 432 (Mass. 1959).*

Clearing of land and installing septic tank held sufficient adverse possession. *Collins v. Cabral, 206 N.E.2d 84 (Mass. 1965); Tenala v. Fowler, 921 P.2d 1114* (Alaska, 1996).

(n15)Footnote 242. *Hayes v. Cotter, 439 So. 2d 102 (Ala. 1983); Royall v. Lisle, 15 Ga. 545 (1854);* Omaha & Florence Land & Trust Co. v. Parker, 51 N.W.139 (Neb. 1892); *Hardy v. Bumpstead, 41 S.W.2d 226 (Tex. Com. App.*

1931); Central Pac. R. Co. v. Tarpey, 168 P.554 (Utah 1917); Gross v. Robinson, 256 P.80 (Wyo. 1927).

Cropping of hay as possession. Illinois Cent. R. Co. v. HaseN.W.inkle, 83 N.E.815 (Ill. 1908); *Kennebeck Purchase v. Springer, 4 Mass. 416 (1808).*

(n16)Footnote 243. *Drennen Land and Timber Co. v. Angell, 475 So. 2d 1166 (Ala. 1985); Baldrich v. Barbour, 90 F. 2d 867 (1st Cir. 1937); Martel v. Hunt, 197 So. 402 (La. 1940); Little v. Barbe, 198 So. 368 (La. 1940); Haas v. Dezauche, 37 So. 2d 441 (La. 1948); Ranger Land Co. v. Story, 1 So. 2d 410 (La. App. 1941);* Bolland v. O'Neal, 83 N.W.471 (Minn. 1900); *Hoelmer v. Heiskill, 221 S.W.2d 142 (Mo. 1949). Lake Charles Harbor & Terminal District v. Erwin Heirs, Inc., 673 So. 2d 1351 (La. App. 3 Cir. 1996).*

(n17)Footnote 244. *Robertson v. Dombroski, 678 So. 2d 637 (Miss. 1996); State Nat'l Bank & Trust Co. v. Jacobsen, 358 N.W.2d 743 (Neb. 1984)* (claimant raised cattle and refused to remove fence enclosure); *Hoelmer v. Heiskill, 221 S.W.2d 142 (Mo. 1892);* Omaha & Florence Land & Trust Co. v. Parker, 51 N.W.139 (Neb. 1892). But see *Whitney v. United States, 167 U. S. 529 (1897); Bergere v. United States, 168 U. S. 66 (1897); Richey v. Miller, 177 S.W.2d 255 (Tex. 1944).*

Kelso v. Caffery, 58 So. 2d 402 (La. 1952); Blanchard v. Martel, 146 So. 2d 480 (La. App. 1933) (adverse possession may even be acquired by trapping if the nature of the ground and the exclusiveness and extent of the use justified the necessary possessory concept).

William L. Burton Indus., 322 So. 2d 880 (La. 1975) (partial fencing and use for pasture held sufficient possession); *Gandy v. Culpepper, 528 S.W.2d 333 (Tex. Civ. App. 1975)* (grazing or cultivation without enclosure held insufficient); *Monroe v. Rawlings, 49 N.W.2d 55 (Mich. 1951)* (hunting and building of a cabin was sufficient possession of which the land was capable).

(n18)Footnote 245. *Klinefelter v. Dutch, 467 N.W.2d 192 (Wis. 1991)* (fence partway across land, fence posts and section of telephone pole along fence line was "substantial enclosure"); *Normant v. Eureka Co., 12 So. 454, 39 Am. St. 45 (Ala. 1893);* Illinois Cent. R. R. v. Houghton, 18 N.E.301 (Ill. 1888); *Davies v. Wickstrom, 134 Am. St. 1100 (Wash. 1909);* Clithero v. Fenner, 99 N.W.1027 (Wis. 1904). *See* Sherrad v. Henry, 106 S.E.705 (W. Va. 1921) (actual enclosure not essential). Construction of fence and possession up to the fence line created adverse possession. *Vetick v. Kula, 247 N.W.2d 637 (Neb. 1976).* Timbering, hunting, fishing and picnicking held insufficient possession. *Seven Springs Farms, Inc. v. King, 344 A.2d 641 (Pa. 1975); Calvert v. Belcher, 678 So. 2d 795 (Ala. App. 1996); Palmer Ranch v. Suwansawasdi, 920 P.2d 870 (Colo. App. 1996); Abino Town and Country Estates Ass'n v. Carr, 920 P.2d 26 (Ariz. App. 1996). Robertson v. Dombroski, 678 So. 2d 637 (Miss. 1996).*

(n19)Footnote 246. *Vetick v. Kula, 247 N.W.2d 637 (Neb. 1976).*

(n20)Footnote 247. *Guaranty Title & Trust Corp. v. United States, 264 U. S. 200 (1924). See Horton v. Smith-Richardson Inv. Co., 87 So. 905 (Fla. 1921); Haywood v. Marker, 55 N.W.2d 143 (Mich. 1952).*

(n21)Footnote 248. *Chicago Title & Trust Co. v. Darley, 1 N.E.2d 846 (Ill. 1936).*

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.07

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.07 Constructive Possession.

[Go To Supp]

To the extent that the rule of transfer of title by adverse possession arises out of the common law theories of disseisin, and not out of statutes of limitations, reliance must be had upon actual disseisin, i.e., an actual taking of possession by the adverse possessor before the period can be said to begin running. n262 The common law does not seem to have recognized any such thing as constructive disseisin, n263 although the right heirs could make a constructive entry. n264

Initially the common law associated seizin with title, so that one who had no possession did not have title. As the concept of title ripened, however, it ceased to be identified with possession in the actual sense. Thus, title carried with it the element of possession until possession was voluntarily yielded by the owner or until the owner was actually ousted by another.

Generally, constructive possession still today follows title and can only be overcome or defeated by actual possession adverse thereto. n265 An adverse occupant who holds land without any color of title can obtain title by adverse possession only to so much of the land as is actually occupied; by the doctrine of constructive possession under color of title, however, the adverse possessor may acquire title to more land than actually occupied. The adverse possessor obtains title to the entire area defined or described by the instrument giving color of title. n266 When there is a claim only, however, and no color, the adverse possession is restricted to the land which the claimant enters and takes possession of with the intention to hold same, to the exclusion of all others. n267 Therefore, if one enters without color of title, that entry can give the disseisee no notice of adverse occupancy, except as to the land actually occupied. n268

When one enters upon land under color of title, however, that possession is not limited to the land actually occupied but, by construction, is extended to the entire tract included in the instrument under which possession is claimed. n269 Grantees taking actual possession under recorded deeds had constructive possession to the extent of the boundary described in the deeds. n270 Entry made under a patent or bare color of title is presumed in conformity thereto, and actual possession of the entrant will, by construction, be extended to the boundary described in such deed, patent, or color, provided another's possession is not invaded. n271

The rule that the older title takes precedence in the case where constructive possession between senior and junior patentees or grantees claiming title from a common source clashes, is held to have no application to one who claims under a senior grant but whose claim of title does not reach back to it. n272 By entry under color of title, the adverse claimant is presumed to be in possession of the whole of the claim. n273 In order to acquire adverse title by constructive possession, however, the owner of the land must have notice of the claim of title, either by actual knowledge or through notice implied by law. n274 Mere color of title, without more, is inoperative to give constructive possession. n275 Any land which is actually held by the owner cannot, of course, be acquired by another who bases the claim on constructive possession. n276 The main purpose of color of title under common law, as opposed to statutory law, is not to show an actual grant of land or any interest therein, but to designate the boundary of the possessor's claim thereto. n277

Where one asserts adverse possession under a claim of title without color of title, one's possession is limited to the area over which one has exercised actual dominion, whereas, under color of title, the limit is determined by the description contained in the title paper, as long as one is possessor and exercises some dominion over a portion of the property and other elements are satisfied. n278 If one possesses a good title to land, the possession of that land is not extended beyond its boundaries to cover any part of land covered by a void patent or void deed, and possession beyond such boundary is not of the character essential to a title by adverse possession. n279

As a foundation for the consideration of the extent of possession under color of title, the pertinent fundamental principles are: first, when land is unoccupied, the ownership is by construction of law in the true owner; n280 second, actual possession under color of title creates a constructive possession of all unoccupied land within the boundaries laid down in the instrument giving color of title; n281 third, there can be no constructive possession under color of title without actual possession of a part of the land conveyed by the instrument giving color of title; n282 fourth, it is presumed that the party entering under color of title holds to the boundaries defined by the instrument under which the party enters; n283 and fifth, the actual possession of a portion of the land by the rightful owner overcomes the constructive possession of a party holding under color of title as to that land actually held by the true owner. n284

These principles are general and apply whether the claim is to one lot; one lot divided into two parts by a natural feature which has the appearance of a boundary; several lots under one enclosure but conveyed separately; several contiguous lots amalgamated into one tract by the description in the instrument giving color of title; several lots held under one instrument but conveyed therein as separate parcels by distinct descriptions; several contiguous lots held by various instruments giving color of title; or several non-contiguous lots under one instrument. n285 Entry under colorable title to real estate is effective to ripen a good title only in accordance with the title purported to be conveyed by the instrument, and possession is deemed coextensive only with the limits thereof. n286

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.08

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.08 "Open and Notorious."

[Go To Supp]

For a possession to be adverse, the possessor must hold openly and notoriously to the world. A variety of reasons can be given for this requirement. Since title by adverse possession is valid as against the entire world and the adverse possessor does not come in by way of purchase through the record title holder, n287 the possession must be such that all other possible claimants can learn of it. If adverse possession is a reward to the possessor, the possession must be straightforward and not clandestine. Before possession can operate as notice, it must be clear and unequivocal. n288 Possession so open, visible, and notorious that it will raise the presumption of an adverse claim is the equivalent of actual knowledge; therefore, the adverse claimant need not show that the record owner had actual knowledge that the claimant was asserting an adverse claim. n289

It is necessary that adverse possession be open and notorious in order to constitute notice to the real owner of possession and claim of disseisin, and it is not mere occupancy or possession of the land which must be known to the true owner in order to prejudice the owner's rights; rather, it is its adverse character. n290 Knowledge by the true owner of actual claim of ownership is not essential in adverse possession. n291 The possession must be notorious and so conspicuous that it is generally known and talked of by the public, at least by the people in the vicinity of the premises. It must be manifest to the community. n292 Occupancy must be so notorious that the owner may be presumed to have knowledge that the occupancy is adverse. n293

The possession must be evidenced by such physical acts as will give the owner constant notice of the claimant's possession. n294 The notoriety as to claim of title and possession is for the purposes of showing that the original owner had notice of the claim and possession, and of its hostile character, and will therefore be presumed to have acquiesced in the claim of the possessor. n295 The cases indicate that where the original owner has actual knowledge of the adverse title, and of the hostile possession thereunder, notoriety becomes immaterial, for actual knowledge takes its place. n296

Under this line of reasoning, the word "notorious" means such elements of notoriety as the owner may be presumed to have notice of, and of its extent. n297 The claimant need not show actual notice to other persons claiming title to the

property. n298 It is doubted, however, that if a possession, known by the record owner alone to be adverse, possesses the notoriety sufficient to give the title *in rem*, good as against all the world that adverse possession purports to do.

Where possession is taken under the true owner, a claimant of title to land by adverse possession has the burden of clearly proving open and notorious use, hostile and adverse to the true owner's title. n299 Under one rule, a person who is in possession subservient to another must first surrender possession and then retake it before the person can claim to be holding adversely. n300 The weight of authority does not require actual surrender of possession, however. n301 The basic theory upon which adverse possession rests is that the owner of land who, having notice of the fact that it is occupied by another claiming dominion over it, nevertheless stands by during the entire statutory period and makes no effort to eject the claimant or otherwise protect the title, ought not to be permitted, for reasons of public policy, thereafter to maintain an action for that purpose. n302 Therefore, in order that the possession of the occupying claimant may constitute notice in law, it must be visible and open to the common observer so that the owner, or the owner's agent, on visiting the premises may readily see that the owner's rights are being invaded. In order to effect an ouster or disseisin of the true owner, possession must maintain such notoriety that the owner may be presumed to have notice of it and is therefore guilty of laches in failing to assert title during the statutory period against the claimant. n303 The possessor's claim of right must be in such tangible form that all those who are affected by it must be presumed to have acquiesced in it. n304 Encroachment upon land by concrete pier supporting building on adjoining land is a trespass of a permanent nature, and cause of action accrued when the trespass was first committed, at which time the statute of limitations began to run. n305

Meaning of open and notorious possession, see further Crawford v. Davis, 227 S.W.5 (Ark. 1921) (continuous and notorious occupation and dominion over land must be shown); Meador v. Weathers, 267 S.W.787 (Ark. 1925) (possession must be so notoriously hostile as to constitute notice); Hibberd v. McCosker, 203 P.810 (Cal. App. 1921) (enclosure of land, necessity for, construction of California statute); Vallejo v. Burrill, 221 P.676 (Cal. App. 1923) (owner must have knowledge or a means of knowledge of the adverse occupation); Elrod v. Bagley, 115 S.E.3 (Ga. 1922); Crider v. Woodward, 135 S.E.95 (Ga. 1926) (tax receipt as evidence of notoriety of possession); Branch v. Central Trust Co., 151 N.E.284 (Ill. 1926) (fact that adverse claim was brought to the knowledge of the owner of the fee must be proved); Abel v. Love, 143 N.E.515 (Ind. App. 1924); Nelson v. Johnson, 226 S.W.94 (Ky. 1920) (acts of possession so open and notorious that they give notice generally of intention and purpose of occupant start the statute of limitations running in his favor); Combs v. Turner, 237 S.W.37 (Ky. 1922) (claim of occupants must be so notorious as to amount to constructive notice); Morgan v. Big Woods Lumber Co., 249 S.W.329 (Ky. 1923) (natural and artificial barriers as indicating purpose of occupant to exercise dominion over premises and give notice of possession); Ahart v. Wilson, 277 S.W.1007 (Ky. 1925) (acts must be so open and notorious as to put owner on notice); Elkhorn Coal Corp. v. Bradley, 288 S.W.326 (Ky. 1926) (actual possession of and residence on land sufficient notice); Ball v. Moss, 291 S.W.1042 (Ky. 1927) (clearing and enclosure of land not notice of claim beyond enclosure); *Loeb v. Fetzer, 99 So. 520 (La. 1924)* (actual possession or preservation of possession by external and public signs announcing the possession); *Carrere v. New Orleans, 111 So. 393 (1926)* (right of city to claim by adverse possession denied where it had no apparent title, the property was obscurely located, and was assessed for taxation against individuals); Webber v. Barker Lumber Co., 116 A.586 (Me. 1922) (purpose to hold dominion over land in hostility to owner must be openly evinced); Bloodsworth v. Murray, 114 A.575 (Md. 1921); Dow v. Dow, 137 N.E.746 (Mass. 1923) (acts must be sufficiently notorious to warrant jury in presuming that the owner had notice thereof); Northern Pac. R. R. v. Cash 216 P.782 (Mont. 1923) (possession may be open and notorious but not adverse); O'Banion v. Simpson, 191 P.1083 (Nev. 1920) (actual possession of land and exercise of usual acts of ownership, constructive notice); Folkman v. Myers, 115 A.615 (N. J. 1921) (possession not adverse when one occupies land by mistake and with no intention to occupy more land than he purchased); *Albany Garage Co. v. Munson, 218 N.Y. S. 78 (1926);* Berry v. Richmond Cedar Works, 113 S.E.772 (N.D. 1922) (posting land as adverse possession); *Munroe v. Mason, 83 Pa. Super. 411 (1924)* (act must amount to notice to world that adverse claim is being asserted); Leonard v. Cleburne Roller Mills Co., 239 S.W.605 (Tex. Com. App. 1922) (gift of house and lot by one partner to an employee, adverse possession perfecting title as against non-consenting partners); Krause v. Hardin, 222 S.W.310 (Tex. Civ. App. 1920) (actual possession and cultivation of land sufficient notice); Carter v. Richardson, 225 S.W.816 (Tex. Civ. App. 1920) (possession must be open, visible, and notorious for full period of time required); Gerhart v. Moore, 229 S.W.876 (Tex. Civ. App. 1921) (act of enjoyment must be such as to afford ground for action by real owner); Hopkins v. Waterstreet, 275 S.W.303 (Tex. Civ. App. 1925) (acts must be so open and notorious that knowledge thereof will be presumed); Madison v. Fleming, 283 S.W.589 (Tex. Civ. App. 1926) (actual and visible appropriation of land sufficient notice); Mandelbaum v. Looney Merc. Co., 293 S.W.203 (Tex. Civ. App. 1927) (registration, occupation, and use of property and payment of taxes generally sufficient as notice); Grays Harbor Commercial Co. v. McCulloch, 193 P.709 (Wash. 1920) (fishermen using land between highwater mark and inner harbor line).

Where the only use to which claimant put the land was to erect a sign, at or near the edge of the same, close to the

railroad and public highway for advertising purposes, this did not constitute adverse possession, since it is a matter of common knowledge that such signs are to be found upon and along railroads and public highways and at crossroads and advantageous points all over the country, both in town and in the rural section. Burton v. Holland, 278 S.W.252 (Tex. Civ. App. 1925).

Acts of dominion or making of improvements such as will indicate to persons residing in the immediate neighborhood who has exclusive management and control of the property are sufficient for adverse possession. *Wijas v. Clorfene, 262 N.E.2d 83 (Ill. App. 1970).*

To be notorious, possession must be so conspicuous as to be generally known and talked about by public or people in the neighborhood. *Commonwealth Dep't of Parks v. Stephens, 407 S.W.2d 711 (Ky. 1966).*

Use of property for hunting and fishing together with construction of a lean-to windbreak and a duck blind was not open and notorious. *Bramlett v. Harris & Eliza Kempner Fund, 462 S.W.2d 104 (Tex. Civ. App. 1970).* Essential dominion is determined by the location, condition and reasonable use of property. *Somon v. Murphy Fabrication & Erection Co., 232 S.E.2d 524 (W. Va. 1977).*

(n7)Footnote 293. *Witt v. Miller, 845 S.W.2d 665 (Mo. App. 1993); Taffender v. Thomas 381 A.2d 519 (R. I. 1977); People v. Hagaman, 215 S.W.2d 827 (Tenn. App. 1948).* The claimant must exercise such acts of ownership and occupancy as are sufficient to "hoist his flag" over the lands, so that all may observe it. McComb v. Saxe, 122 S.W.987 (Ark. 1909). *See* Pierce v. Barney, 58 A.152 (Pa. 1904).

Owner must be made aware of claim of adverse use. *Lawless v. Sears Roebuck & Co., 555 S.W.2d 79 (Mo. App. 1977).*

Payment of taxes by possessor is notice of prescription. *Adams v. Slattery, 295 S.W.2d 859 (Tex. 1956).*

§ 87.09 Exclusive Possession.

[Go To Supp]

One survival of the old concept of disseisin is the necessity that the possession must be exclusive in order to give use to a holding adverse to the owner. n306 Adverse possession does not rest primarily on oral claims, but on acts which evince a purpose to exercise exclusive dominion over the property. n307 A possession which is not exclusive, but is in participation with the owner or others, falls far short of that kind of adverse possession which deprives the true owner of the title. n308

It is necessary that the adverse claimant hold possession of the land for the claimant directly, and not for another. n309 A tenant cannot originate adverse possession in favor of the lessor; n310 two or more persons cannot hold one tract of land adversely to each other at the same time. It is essential that the possession of one who claims adversely must be of such an exclusive character that it will operate as an ouster of the owner of the legal title, since, in the absence of ouster, the legal title draws to itself the constructive possession of the land. n311 When two persons are in possession, the seisin follows the owner. n312 If either owns a better title than the other, the law will refer the joint occupancy to the right of such owner. n313

The rule that two persons claiming title may not be in constructive possession at the same time is inapplicable to actual possession. n314 There are cases which hold, moreover, that possession need not be exclusive of all persons holding, but only of the true owner. n315 Other cases have held that the claim of right must be exclusive in the possessor, so that no one individual can claim ownership where the acts of possession have been exercised in common with others. n316 In determining the exclusive character of the possession, the character and locality of the property and the uses and purposes for which it is naturally adopted are considered. Mere casual and occasional trespasses upon the land by a stranger are not generally considered to interrupt the continuity of adverse possession of land. n317 Thus, where an adjoining owner slightly encroached upon land held adversely but pulled back at the request of the adverse claimant under recognition of the latter's claim and title, it was held that the adverse claimant's possession was exclusive during the statutory period. n318 The claimant has the burden of proof upon the issue of exclusive and adverse possession, and such proof must be clear and satisfactory. n319

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.10

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.10 The Necessity of Hostility.

[Go To Supp]

Most of the courts and writers on the subject show a requirement that the adverse possession be "hostile" to the true owner. n320 In truth, no court has been found to repudiate the essentials of hostility. Possession itself is hostile when one holds property as one's own, whether by mistake or wilfully. n321 One taking under a parol gift may hold hostile to the giver. n322 "Hostile," in this sense, does not necessarily imply ill will toward the owner, or even that there may be a dispute, but means that an occupant holds as an owner against all other claims. n323

This hostility must be present at the inception of the adverse holding and continue throughout the entire period of limitation. n324 This does not mean that the original entry must be hostile but that the acts by which the possession becomes adverse must be hostile; in other words, whether the possession was originally hostile or not, it must have been hostile at the time the statute of limitation began to run, and it must have continued to be so during the full period. n325 Where possession or occupancy of land lacks hostility and adversity to the title of the true owner, the claim to title by the occupant fails. n326 The land must be held in direct opposition to the holder of the legal title and to all others, with the exception of the government. n327 It does not matter what the character of the possession was originally, but it must become hostile in order to be deemed adverse. n328

It is said that hostility is of the very essence of adverse possession. n329 Acts done by permission never ripen into title by adverse user. n330 If possession is permissive in the beginning, it can be changed to one of hostility only by the most unequivocal conduct on the part of the adverse claimant. n331 Permissive possession, even over a long period of time, does not confer title on the person in possession of the property. n332

The difference of opinion on hostility is based on the objective versus the subjective intent of the possessor. n333

Permissive possession by someone other than the true owner will not start the running of the statute of limitations. n334 One may, however, go into possession through permission and by later acts of hostility, cause the possession to become adverse from the time of such acts. n335 Thus, if the adverse claimant recognizes title in the owner, the period of

limitation will stop running. n336 If one enters with a supposition of a license or continues in possession with a mistaken belief in a license, the possession is not adverse, except at the option of the disseisee. n337 One may take possession under a void deed or by parol, however, and start the running of the statute. n338 A husband deserted his wife and later got a divorce. Twenty-five years after desertion, the husband sold to a bona fide purchaser. It was held that the wife did not hold adversely to her husband, since possession was permissive originally and there was no showing of any new hostile act. n339

The cases are divided as to whether a mistaken claim of right with no intent to hold hostile to the true owner is adverse. n340 Hostility is presumed in case of pure mistake. n341 In the case of line fences, the majority rule permits adverse possession even under a mistaken belief as to title where the adverse possessor had an intent to possess up to the claimed line, even though it was not the legal boundary. n342 Thus, while adverse possession of land beyond the true boundary may be obtained under a mistaken claim of right, n343 under the other rule in most jurisdictions it cannot be so obtained unless there is an intention to claim such land, whether or not it is the true boundary. n344

The minority view follows the subjective test of the adverse possessor. This test requires the possessor to intend to hold adversely, regardless of whether the holding was through a mistake as to the true line or through an intent to hold regardless of error. n345 The majority rule, on the other hand, holds that intention is immaterial. n346 The distinction appears to be essentially one of semantics. If a person claimed up to a fence line only if that line was consistent with the true survey line, then, in truth, there was no claim of right where the fence line was erroneous.

Before there can be hostility, notice must be bought home to the record owner. Mere possession, even if fenced, is not sufficient in itself. n347 The word "hostile" does not imply ill will or hostility, but an intent to hold title against the record title holder. n348 While a grantor's continuing possession is presumed permissive, n349 it can be adverse if inconsistent with the grantee's rights n350 and brought to the grantee's attention. n351

An attornment by a tenant of the adverse possessor to the record owner interrupts the running of the period only where the record owner is unaware of the adverse claim. If the record owner knows of the claim and the claimant does not know of the attornment, however, there is no interruption. n352 Where the tenant of the adverse possessor attorns to the true owner and the adverse possessor fails to remove the tenant, the adverse possession is broken. n353 Otherwise, the attornment by the tenant does not interfere with the running. n354

The presumption that a grantor who remains in possession does so in subordination to the grantee's title is overcome by a long continued possession. n355 When a trustee takes title initially hostile to the *cestui*, adverse possession begins to run from the date of acquisition of title; n356 otherwise, the running begins from the date of repudiation of the *cestui*'s right. n357 The running may be interrupted by recognition of *cestui*'s right. n358 A grantor remaining in possession after executing a deed is presumed to be a tenant at sufferance and not an adverse possessor. n359

The best that can be said of the word "hostility," as related to adverse possession, is that it is redundant at best and misleading at worst. What the cases require is a clear claim of right. A conclusion of hostility follows in virtually every case.

LEXIS: Adverse possession w/20 hostil! w/10 necess!

FOOTNOTES:
(n1)Footnote 320. *Dredge v. Forsyth, 67 U. S. (2 Black 563) (1862); Armstrong v. Morrill, 81 U. S. 120 (1871); Marino v. Smith, 454 So. 2d 1380 (Ala. 1984); Chastang v. Chastang, 37 So. 799 (Ala. 1904); Fulkerson v. Van Buren, 961 S.W.2d 780 (Ark. App. 1998)* (church congregation did not possess land adversely to landowner); *Stokes v. Kummer, 936 P.2d 4 (Wash. App. 1997)* (use of farmland without making lease payments is hostile possession); Hardin

v. Watson, 148 S.W.506 (Ark. 1912); DeFrieze v. Quint, 30 P.1 (Cal. 1892); *Miller v. Bell, 764 P.2d 389 (Colo. 1988); Stamper v. Griffin, 20 Ga. 312 (1856); McCrea v. Georgia Power Co., 1 S.E.2d 664 (Ga. 1939);* Schmidt v. Williams, 203 P.1075 (Idaho 1921); Meacham v. Bunting, 41 N.E.175 (Ill. 1895); *Worchester v. Lord, 56 Me. 265 (1868);* Putzel v. Drovers & Mechs. Nat'l Bank, 28 A.276 (Md. 1894); *Witt v. Miller, 845 S.W.2d 665 (Mo. App. 1993);* Mabary v. Dollarhide, 11 S.W.611 (Mo. 1889); *Riebold v. Smith, 150 S.W.2d 599 (Mo. App. 1941); Bebout v. Peffers, 1986 WL 9303 (Ohio App. 1986);* Long Island R. Co. v. Mulry, 105 N.E.806 (N.Y. 1914); Erck v. Church, 11 S.W.794 (Tenn. 1889); Evans v. Templeton, 6 S.W.843 (Tex. 1887); *Musgrove v. Foster Lumber Co., 89 S.W.2d 287 (Tex. Civ. App. 1935);* McNeill v. Chicago & N.W.R. Co., 240 N.W.377 (Wis. 1932).

(n2)Footnote 321. *Strickland v. Markos, 566 So. 2d 229 (Ala. 1990)* (claimant's customers parked on owner's land, left beer bottles and refused to stop parking on owner's land for 22 years, was sufficiently hostile); *Whitlow v. Moore, 21 So. 2d 253 (Ala. 1945).*

Ewald v. Horenberger, 345 N.E.2d 524 (Ill. App. 1976) (good faith mistake held sufficient hostility); *Heaver v. Helm, 941 S.W.2d 801 (Mo. App. 1997)* (mistake as to legal ownership establishes hostile possession); *Calfee v. Duke, 544 S.W.2d 640 (Tex. 1976)* (innocent belief in ownership is sufficient).

(n3)Footnote 322. *Humphrey v. Harrison, 646 S.W.2d 340 (Ky. 1983); Harrelson v. Reaves, 65 S.E.2d 478 (S.C. 1951).*

(n4)Footnote 323. Helm v. Wilson, 18 P.604 (Cal. 1888); Silvarer v. Hansen, 20 P.136 (Cal. 1888); Webb v. Rhodes, 61 N.E.735 (Ind. App. 1901); *Lebel v. Nelson, 560 N.E.2d 135 (Mass. App. Ct. 1990);* Ballard v. Hansen, 51 N.W.295 (Neb. 1892); Hoffine v. Ewing, 84 N.W.93 (Neb. 1900); *Vagnoni v. Gibbons, 598 A.2d 530 (N. J. Super. 1991); Brewer v. Brewer, 78 S.E.2d 719 (N.C. 1953);* Griffin v. Mulley, 31 A.664 (Pa. 1895); *Roesch v. Gerst, 138 P.2d 846 (Wash. 1943); Young v. Newbro, 222 P.2d 1066 (Wash. 2d 1950).* "Adverse" does not require evil intent. *Leon v. Byus, 565 P.2d 1312 (Ariz. 1977).* "Hostility" only requires a claim of right. *Barclay v. Tussey, 532 S.W.2d 193 (Ark. 1976).*

(n5)Footnote 324. Collins v. Bluff City Lumber Co., 110 S.W.806 (Ark. 1908); Illinois Cent. R.R.. v. Houghton, 18 N.E.301 (Ill. 1888); *Johnson v. Black, 469 So. 2d 88 (Miss. 1985); Crawford v. Aherns, 15 S.W. 341 (Mo. 1891); Curtis v. LaGrande Hydraulic Water Co., 23 P. 808, 25 P. 378 (Or. 1840);* Delacey v. Commercial Trust Co., 99 P.574 (Wash. 1909).

(n6)Footnote 325. *Machado v. Southern Pac. TransP.Co., 284 Cal. Rptr. 560 (1991); Mercer v. Selden, 42 U. S. 37 (1843); Superior Oil Co. v. Harsh, 126 F. 2d 572 (1942). See Jasperson v. Scharnikow, 150 F. 571 (9th Cir. 1907);* Keller v. Harrison, 128 N.W.851, 131 N.W.53 (Iowa 1911); *LaFrombois v. Jackson, 8 Cow. 589 (N.Y. 1834); Sumner v. Murphy, 2 Hill (S.C.) 488, 27 Am. Dec. 397.*

(n7)Footnote 326. *Brown v. Clemens, 338 S.E.2d 338 (S.C. 1985)* (encroaching chicken coop and garage were erected under mistaken belief as to location of boundary, no evidence of hostility); *Comstock v. Finn, 56 P.2d 957 (Cal. App. 2d 1936).* Continued possession by one who agreed to a judgment holding he had no interest in the realty was not adverse. *Sweeten v. Park, 276 S.W.2d 794 (Tex. 1955).*

(n8)Footnote 327. Philbin v. Carr, 129 N.E.19 (Ind. App. 1920); *Stephens v. Stephens, 94 So. 2d 366 (Fla. 1957); Vlachos v. Witherow, 118 A.2d 174 (Pa. 1955)* (if the possession of the grantor is not hostile, that of the grantee is not until the grantee commits an adverse act); *Metze v. Metze, 97 S.E.2d 514 (S.C. 1957).* Possession cannot be permissive. *Wiggins v. Lykes Bros. 97 So. 2d 273 (Fla. 1957).* The court held that a statute providing for a passing of timber title after 30 years' possession requires such possession to be adverse. Content v. Dalton, 190 A.328, aff'd, 194 A.286 (N. J. Eq. 1937). Hostility is not required; mistaken belief is sufficient. *Brand v. Prince, 349 N.Y.S.2d 222 (1973).* If the possession of the grantor is not hostile, that of the grantee is not until the grantee commits an adverse act. *Vlachos v. Witherow, 118 A.2d 174 (Pa. 1932).*

(n9)Footnote 328. *Stamper v. Griffin, 20 Ga. 312 (1931);* Clatskanie v. McDonald, 167 P.560 (Or. 1899); *Martin v. Jackson, 27 Pa. 504 (1901).*

It is questionable whether a possessor once claiming that his possession was permissive can later insist that it was adverse during the same period. *Van Valkenburgh v. Lutz, 106 N.E.2d 28 (N.Y. 1952).*

Where possession is originally by permission there must be a clear disclaimer of the owner's rights. *Coumas v. Transcontinental Garage, Inc., 230 P.2d 748 (Wyo. 1951).*

When one takes possession of a tract of land in belief that it was a gift, where in fact no gift was intended, he is a parol licensee and not a parol donee, therefore, the interest cannot ripen into title by adverse possession. *McKinnon v. Commerford, 88 So. 2d 753 (Fla. 1956).*

One entering by permission does not become adverse until one surrenders one's possession or, by some unequivocal act, notifies the owner that he no longer holds under the agreement made. *Jackson v. Eichenberger, 205 N.W.2d 349 (Neb. 1973).*

After a judgment divesting the possessor of title, his continued possession is not adverse until notice of his hostile claim is brought home to the other party. *Green v. Vance, 314 S.W.2d 794 (Tex. 1958).* An attempt to secure a deed from the record owner was not a denial of possessor's claim of right. *Ott v. Hoffmeier, 528 S.W.2d 166 (Mo. 1975).*

(n10)Footnote 329. Ruggles v. Dandison, 279 N.W.851 (Mich. 1938); *Hillery v. Jackson, 56 N.E.2d 921 (Ohio 1931).* Entry must be hostile. *Gregg v. Moore, 85 S.E.2d 279 (S.C. 1954).* Permission destroys adverse possession. *Dutile v. Aymond, 338 So. 2d 350 (La. App. 1976); John v. Turner, 542 S.W.2d 293 (Mo. App. 1976).* Acknowledgement of owner's title destroys adverse possession. *Dickson v. Davis, 230 S.E.2d 279 (Ga. 1976); Lewis v. Village of Lyons, 389 N.Y.S.2d 674 (1976); Root v. Meekem, 542 S.W.2d 878 (Tex. Civ. App. 1976).* Permission bars adverse possession. *Pendley v. Pendley, 338 So. 2d 405 (Ala. 1976).*

(n11)Footnote 330. *Smith v. Bentley, 27 S.E.2d 252 (Ga. App. 1943); McCoy v. Cover, 158 P.2d 380 (Kan. 1945); Reuter v. Reuter's Succession, 19 So. 2d 209 (La. 1944); Harris v. Mount Zion Baptist Church, 198 So. 780 (La. App. 1940);* Warne v. Noble, 282 N.W.855 (Mich. 1938); *Strubberg v. Roethemeyer, 941 S.W.2d 557 (Mo. App. 1997)* (neighboring landowners' possession of parcel was consensual); *Kelly v. Grainey, 129 P.2d 619 (Mont. 1942); Price v. Western Life Ins. Co., 146 P.2d 165 (Mont. 1944); Petsch v. Widger, 335 N.W.2d 254 (Neb. 1983); Laurance v. Tucker, 85 P.2d 374 (Or. 1938); First Church of Christ, Scientist v. Revell, 2 N.W.2d 674 (S.D. 1942); Adams v. Lamicq, 221 P.2d 1037 (Utah 1916); Northwest Cities Gas Co. v. Western Fuel Co., 123 P.2d 771 (Wash. 2d 1942).*

See John D. Holschuh Adverse Possession: Landlord and Tenant, *19 U. Cin. L. Rev. 248 (1950).*

See also Tex-Wis Co. v. Johnson, 534 S.W.2d 895 (Tex. 1976) (holding over for forty-three years after mortgage's foreclosure overcame presumption that former owner was merely a possessive tenant); *Robinson v. Myers, 244 A.2d 385 (Conn. 1968)* (positive proof necessary to establish adverse possession); *Ramey v. Ramey, 353 S.W.2d 191 (Ky. 1962)* (The mother made a parol gift of land to a son. The son's possession was held adverse as to the mother but the adverse possession was interrupted when the mother died and the other children were not aware of the gift); *Reid v. Reid, 348 P.2d 29 (Or. 1959)* (continued possession of grantor after deed presumed with permission of grantee).

(n12)Footnote 331. *Meyers v. Meyers, 368 N.W.2d 391 (Minn. 1985)* (violent argument between former husband and wife, support and property settlement negotiations and limited use of property by wife did not rise to level of declaration of hostile possession necessary); *Johnson v. Ocean Shore R. Co., 94 Cal. Rptr. 68 (1971)* (actual notice of adverse possession is necessary if entry was by permission); *Cox v. Godec, 108 P.2d 876, 109 P.2d 643 (Colo. 1940);* Ruggles v. Dandison, 279 N.W.851 (Mich. 1938); Lustmann v. Lustmann, 283 N.W.387 (Minn. 1938); Lindolkken v.

Paulson, 272 N.W.453 (Wis. 1937).

(n13)Footnote 332. *Hutchins v. Mason, 556 So. 2d 1002 (La. App. 1990); Aylesbury v. Lawrence, 199 P.2d 474 (Kan. 1948); Barron v. Federal Land Bank, 180 So. 74 (Miss. 1938); New Orleans & N.E.R. R. v. Morrison, 35 So. 2d 68 (Miss. 1948)* (right-of-way); *Pilgrim v. Neshoba County, 40 So. 2d 598 (Miss. 1949)* (ninety-nine year lease); *Tidwell v. Waldrup, 151 S.W.2d 1092 (Mo. 1941).*

Although the Maryland constitution refers to adverse possession, MD. CONST., Declaration of Rights, art. V, see Dene L. Lusby, Note, *17 MD. L. REV. 253 (1957),* the Maryland courts have repeatedly used the lost grant theory of prescription as the basis of acquisition of title. *Colvin v. Warford, 20 Md. 357 (1863);* Sollers v. Sollers, 26 A.188 (Md. 1893); *Sterling v. Sterling, 128 A.2d 277 (Md. 1957); Scott v. Lewis, 98 S.E.2d 294 (N.C. 1957)* (where a court decision had been rendered against the possessor's title his continued possession was not adverse thereafter without further notice of their intent to hold adversely); *Port of Portland v. Maxwell, 496 P.2d 23 (Or. App. 1972)* (use by permission is not adverse).

(n14)Footnote 333. Subjective intent. *Moss v. James, 411 S.W.2d 104 (Mo. 1967).* Objective intent. *French v. Pearce, 8 Conn. 439 (1831). Gates v. Roberts, 350 S.W.2d 729 (Mo. 1961). See* Allen L. Rays, South Carolina Law on Boundary Disputes, *12 S.C. L. REV. 418 (1959)* (objective intent).

(n15)Footnote 334. *Dial v. Armstrong, 113 S.W.2d 503 (Ark. 1938); Wright Estates Germain, 12 So. 2d 451 (Fla. 1943). DeTenorio v. McGowan, 364 F. Supp. 1051 (S.D. Miss. 1973)* (if one takes possession with permission, it is presumed that this permission continues and is not hostile).

(n16)Footnote 335. *Poole v. Corwin, 447 N.E.2d 1150 (Ind. App. 1983); Burham v. Van Zandt, 7 Barb. 91 (N.Y. 1849). Connot v. Bowden, 200 N.W.2d 126 (Neb. 1972)* (permissive use requires notice brought home to the owner before it becomes adverse); *Borens v. Krywoshyja, 184 A.2d 378 (Pa. Super. 1962)* (burden of showing use was under a license and not adverse); *In re Harlem River Drive, 121 N.E.2d 414 (N.Y. 1954)* (possession by a railroad holding a determinable easement becomes adverse when the railroad ceases to function).

(n17)Footnote 336. *Combs v. DuBois, 662 P.2d 140 (Ariz. 1983)* (offer to lease or buy the property from plaintiff's predecessor constituted recognition that defendant's claim was subordinate to true owner's claim); *Ott v. Hoffmeier, 528 S.W.2d 166 (Mo. 1975)* (an attempt to secure a deed from the record owner was not a denial of possessor's claim of right); *Foster v. Foster, 100 So. 2d 19 (Ala. 1958)* (an attempt by the possessor to obtain a deed from the record owner merely manifests knowledge that the possessor does not have a valid claim and does not defeat the adverse character of the possession); *Miller v. Roberson, 165 S.W.2d 469 (Tex. Civ. App. 1942).*

(n18)Footnote 337. *Coumas v. Transcontinental Garage, 230 P.2d 748 (Wyo. 1951); Lyons v. Andrews, 313 A.2d 313 (Pa. Super. 1973)* (possession is adverse, though under a mutual mistake of ownership); *Colley v. Carpenter, 362 N.E.2d 163 (Ind. App. 1977)* (possession held adverse through mistake); *Mumrow v. Riddle, 242 N.W.2d 487 (Mich. App. 1976)* ("hostile" does not imply ill will); *Somon v. Murphy Fabrication & Erection Co., 232 S.E.2d 524 (W. Va. 1977)* (entry by mistake is hostile); *Matter of Williams' Estate, 140 Cal. Rptr. 593 (1977)* ("hostility" does not require a dispute as to the title).

(n19)Footnote 338. *Harrelston v. Reaves, 65 S.E.2d 478 (S.C. 1951).*

(n20)Footnote 339. *Moser v. Granquist, 66 A.2d 267 (Pa. 1949).*

(n21)Footnote 340. *Gay Brothers Constr. Co. v. Florida Power & Light Co., 427 So. 2d 318 (Fla. App. 1983); Tartar v. Tucker, 280 S.W.2d 150 (Ky. 1955); Bishop v. Stackus, 112 A.2d 472 (Md. 1955); Barker v. Allen, 273 S.W.2d 191 (Mo. 1954); O'Brien v. Schultz, 278 P.2d 322 (Wash. 1954),* and see *Horton v. McLerkin, 275 S.W.2d 10 (Ark. 1954); Engquist v. Wirtjes, 68 N.W.2d 412 (Minn. 1955).*

Robertson v. Fincher, 348 So. 2d 466 (Ala. 1977) (mistaken intent sufficient); *Keyakuck Inv. Co. v. Doerhoff, 530 S.W.2d 507 (Mo. App. 1975)* (possession hostile and adverse since one intended to occupy as owner even though by mistake).

Mistaken belief sufficient, VT. STAT. ANN., § 501. *Zuanick v. Quera, 376 A.2d 763 (Vt. 1977);* Holmes, J. in Bond v. O'Gara, 58 N.E.275 (Mass. 1900):

> It is true, of course that a man's belief may be immaterial as such. Probably, although the courts have not been unanimous upon the point, he will not be the less a disseisor or be prevented from acquiring a title by lapse of time because his occupation of a strip of land is under the belief that it is embraced in his deed. His claim is not limited by his belief. Or, to put it in another way, the direction of the claim to an object identified by the senses as the thing claimed overrides the inconsistent attempt to direct it also in conformity to the deed, just as a similar identification when a pistol shot is fired or a conveyance is made overrides the inconsistent belief that the person aimed at or the grantee is some one else.

Hostility is required in adverse possession. *Ellingson v. Fuller, 513 P.2d 1339 (Ariz. App. 1973); Thomas v. State, 514 P.2d 572 (Haw. 1973); Thibodeaux v. Quelodeaux, 282 So. 2d 845 (La. App. 1973).*

Mistaken belief is sufficient regardless of whether claim would have been made if true line had been known. *Barnett v. Millis, 246 So. 2d 78 (Ala. 1971).*

Colorado, as respects hostility, merely requires the person occupying the property to believe that it is his own. *Brehm v. Johnson, 531 P.2d 991 (Colo. App. 1974)* (so adverse possession can be based on mutual mistake); *Meyer v. Law, 265 So. 2d 737 (Fla. App. 1972)* (possession by mistake is adverse); *Schuline v. Pelzer, 276 N.E.2d 832 (Ill. App. 1971)* (continued use by grantor of a strip erroneously included in a deed constituted adverse possession by the grantor); *Stark v. Stanhope, 480 P.2d 72 (Kan. 1971)* (an adverse possessor's continuity is not broken by casual entry on the land by use of the public on a roadway).

Adverseness of possession held adequate where land enclosed by a plainly visible fence, even though possessor believed disputed land was his and held and used it as his own for statutory period. Hostility of possession distinction is possessor's honest belief he owns land, and willing to defend supposed right. *Ridgely v. Lewis, 105 A.2d 212 (Md. 1954).*

Massachusetts has departed from its previous position and now holds that hostility only requires possessor to hold without intending to deprive any other of what is rightfully his. *Ottavia v. Savarese, 155 N.E.2d 432 (Mass. 1959).*

Ehle v. Prosser, 197 N.W.2d 458 (Minn. 1972) (subjective intent is not required in adverse possession); *Glenville v. Strahl, 516 S.W.2d 781 (Mo. App. 1970)* (hostility is not required); *Carfee v. Duke, 544 S.W.2d 640 (Tex. 1976)* (innocent belief in ownership is sufficient); *Ewald v. Horenberger, 345 N.E.2d 524 (Ill. App. 3d 1976)* (mistaken good faith is hostility).

(n22)Footnote 341. *Shults v. Geary, 660 N.Y.S.2d 497 (N.Y. A.D. 1997)* (claimant's acknowledgment of southern landowner's superior claim defeated hostility); *MAG Associates, Inc. v. SDR Realty, Inc., 669 N.Y.S.2d 314 (N.Y. A.D. 1998)* (claimant loses where prior to vesting of title it admits that title belongs to another; there is no hostility); *Almond v. Anderegg, 557 P.2d 220 (Or. 1976). Robarge v. Willett, 636 N.Y.S.2d 938 (1996)* (hostility presumed even though both parties were mistaken as to boundary); *Reynolds v. Arnold, 633 N.Y.S.2d 662 (1995)* (presumption of hostility not rebutted).

(n23)Footnote 342. *Morrow v. Dychess, 492 S.E.2d 420 (S.C. App. 1997)* (adjacent property owner failed to establish hostility to acquire easement by prescriptive right); *Knox v. Bogan, 472 S.E.2d 43 (S.C. App. 1996);*

Linebarger v. Gomer, 766 S.W.2d 180 (Mo. App. 1989); Hustace v. Jones, 629 P.2d 1151 (Haw. App. 1981); Alexander v. Hyland, 58 So. 2d 826 (Miss. 1952).

Only when the boundary up to which each has been in possession is found to be erroneous, and the true line ascertained, is the character of the possession of the intervening strip the subject of inquiry. It has long been the settled doctrine of this state that when this has been proven, and such possession is by mistake, and without intention to assert title thereto beyond the true boundary, if it should turn out to be a part of the adjoining owner's land the possession is not adverse; for in the absence of title, or color thereof, the essential element of adverse possession -- claim of right -- is lacking. *Grube v. Wells, 34 Iowa 148 (1872);* Fisher v. Muecke, 48 N.W.936 (Iowa 1891); Goldsborough v. Pidduck, 54 N.W.431 (Iowa 1893); Skinner v. Crawford, 6 N.W.144 (Iowa 1880); Wacha v. Brown, 42 N.W.269 (Iowa 1889); Jordan v. Ferree, 70 N.W.611 (Iowa 1897). If however, such possession, though taken by mistake, is with the intention to claim title to the division line, and thus, if necessary, acquire "title by prescription," it may ripen into title. Fullmer v. Beck, 518, 75 N.W.366 (Iowa 1898); Doolittle v. Bailey, 52 N.W.337 (Iowa 1892); Heinrichs v. Terrell, 21 N.W.171 (Iowa 1884). In other words, the possession of the strip of land beyond the true boundary, taken by mistake, may or may not be adverse. It is not the mistake, but the presence or absence of an intention to claim title, that fixes the character of the entry, and determines the disseisin. Preble v. Maine Cent. R. R., 27 A.149 (Me. 1893); Wilson v. Hunter, 28 S.W.419 (Ark. 1893); *Watrous v. Morrison, 14 So. 805 (Fla. 1894).* The necessity of such intent is questioned by many authorities, holding that the reasons which influence the entry are not material, provided it was under claim of ownership, and continued in the belief in its rightfulness. The cases are about equally divided, and will be found collected in a note to Finch v. Ullman, 16 S.W.863 (Mo. 1891); Miller v. Mills County, 82 N.W.1038 (Iowa 1900).

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.11

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.11 Claim of Right or Title.

[Go To Supp]

It is probably a better rule that for the possession to be adverse, the possessor must have the intention of making a claim of right personally n360 and not through permission of another. n361

The Statute of Marlborough, n362 which set the date of 1230, the year Henry III voyaged to Brittany, n363 as the time for which seisin was necessary before a landlord's distress for services would lie, did not require proof of a written charter except in one instance. This was the beginning of the common law rule that an adverse possession need not be based on color of title, but only on a claim of right.

This claim of right must go beyond a mere right to possession. n364 It must relate to title or at least common law seisin. No matter how exclusive and hostile the possession may be in appearance, it cannot be adverse unless accompanied by an intent on the part of the occupant to make it so, and naked possession without any claim of right will never constitute a bar to the true owner's recovery of the land. n365 Possession, no matter how long continued, will not ripen into title unless the occupant asserts an exclusive ownership. n366 A mere squatter or trespasser is not an adverse possessor. n367 Mere naked possession or occupancy of realty must be deemed as being an occupancy for the benefit of the true owner. n368 Possession should be based on a claim of ownership or title in order to render it adverse. n369

The intention with which possession is taken or held is regarded as a controlling factor in determining whether or not it is adverse. There must be an intention to claim the title as owner, in derogation of the rights of the true owner. n370 Occupancy is not a mode of acquiring title to land, except when it is retained by the acquirer with the intention of keeping the property occupied as the acquirer's own. n371

This intention to claim as owner is said to be the very essence of title by adverse possession, n372 and to say that the possession must be hostile is equivalent to saying that it must be under a claim of right. n373 A claim may be of right even though the claimant knows that the true title is held by another. n374 A few courts have stated that the adverse claimant must have actual exclusive possession under claim of specific title, and not simply under a general assertion of

ownership. n375 However, the general rule is that one may claim and acquire title by adverse possession, independent of color of title. n376 To claim title by adverse possession, the claim of right must be as broad as the possession. n377 The claim of ownership must be open and not clandestine. n378 While reputation evidence of ownership is admissible to support a claim of title, it is not admissible to show actual ownership. n379

The courts and the legislatures are not, however, in step as to the extent to which such claim of right must be identical with a claim of fee simple absolute title. n380 The problem is understandable in light of the fact that the average layman does not know what fee simple absolute is. It is commonly said that the possession must be under claim of ownership, n381 but misapprehension has arisen from the use of such terms as "claim of right," "claim of title" and "claim of ownership." These terms, when used in connection with adverse possession, mean to some courts nothing more than the intention of the disseisor to appropriate and use the land as the disseisor's own, to the exclusion of all others. n382

There is a line of authority that holds to the doctrine that an adverse possessor must claim nothing less than a fee simple absolute that is the whole title. n383 Others permit the acquisition of a right-of-way by a railroad through adverse possession. n384 Still others permit one to obtain adverse possession of a right-of-way owned by a railroad where the possessor did not claim the entire fee, n385 and a mineral severance can be effected by adverse possession of the minerals separate from the land. n386 The cases have divided as to whether one claiming a homestead on what was mistakenly believed to be public lands could obtain title by adverse possession when the lands were ultimately shown to have been privately owned. n387

Some courts permit the adverse possessor to claim less than a fee simple absolute. n388 Under this rule, the claim of right by the adverse holder need be adverse only to the owner of the land. n389 The claim of right must be asserted publicly; it cannot exist merely in the mind of the possessor. n390 It need not, however, be based on any written instrument, n391 nor made in writing. n392 It has been held that it need not have any actual basis in fact. n393 It can arise through the acts and conduct of the possessor alone. n394 Care must be taken to distinguish between claim of right and color of title. n395 Claim of right is always required; color of title is not, except as required by statute. n396 Claim of title is where one enters and occupies land with the intent to hold it as one's own against the world, irrespective of any shadow or color of right or title as a foundation for his/her claim. Color of title is the semblance or appearance of title where the claimant does not in fact have title. They are distinct from, but supplementary to, each other. A parol gift of land gives sufficient claim of right in the grantee to permit the running of adverse possession. n397

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.12

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.12 "Color of Title" as the Term Is Generally Used.

Cal. Prob. Code § 56.14

"Color of title" is something in writing which, at face value, professes to pass title but which does not do it, either from want of title in the person making it or from the defective mode of conveyance that is used. Such writing must not be so plainly and obviously defective, however, that a person of ordinary understanding would be misled by it. Where reference is made in a statute to "color of title," the term may have a much more limited meaning, referring to instruments which would pass good title but for certain stated defects. In most such cases, the defects will not be apparent on the face of the instrument, such as a deed, will, or certificate of inheritance. Under the statutes of some states, an unrecorded or unregistered deed cannot afford color of title. n398 A quitclaim deed does not constitute color of title. n399

While a forged deed is not in and of itself color of title, a grantee under a forged deed may, in turn, give a deed sufficient validity to be color of title for purpose of adverse possession. n400 Since color of title is defined as any writing which professes to pass title but which fails to do so, either from want of title in the person making it or from the defective mode of conveyance employed, n401 a forged deed, accepted by the grantee and subsequent grantees as genuine and regular in all respects, is a sufficient color of title. n402

The Federal "Color-of-Title" Act n403 requires good faith possession to ripen into title. n404 Color of title is not essential to adverse possession, n405 except where it is being relied upon pursuant to a statute. Title can be perfected by longer occupancy with all elements present.

A quitclaim deed to a right-of-way does not constitute color of title to the fee, n406 but a tax deed is ordinarily considered color of title, whether void or voidable. n407 To be effective as color of title, the property must be described with a degree of certainty, so that the boundaries may be ascertained. n408 A sales contract is color of title. n409 As to whether color of title must be in writing is a matter upon which the authorities are not agreed. Statutes in some states expressly require some writing, n410 and in some jurisdictions the courts hold that a writing is indispensable as a matter of law. n411 In other jurisdictions, however, it is held that color of title may exist without a writing. n412

In law, color of title is not title at all. It is a void paper having the semblance of a muniment of title, to which, for certain purposes, the law attributes certain qualities of title. Its chief office or purpose is to define the limits of the claim under it. Nevertheless, it must purport to pass title. n413 A deed to community property is color of title though one member of the community does not sign. n414 In some jurisdictions the doctrine of color of title is available only in cases where the instrument purporting to be a conveyance is accepted in good faith and in the honest belief that it invests the title in the claimant. n415 Other jurisdictions lay down the rule that, except in particular cases covered by statute, it is not a necessary element of color of title that the claimant thereunder should believe it to be valid. n416

The fact that the deed does not contain a covenant of warranty or is a mere quitclaim deed does not generally prevent adverse possession from running in favor of the grantee. n417 Where all the parties knew that the grantors named in a deed had no title, they could not rely on the deed as color of title. n418 An instrument conveying actual title is not color of title. n419

In problems involving adverse possession, care must be taken to distinguish between claim of right and color of title. Claim of right is an essential element of adverse possession. n420 In the absence of a statutory requirement to that effect, it is not necessary that the claim of title should be with color in order to constitute adverse possession. n421 Some courts have held it unnecessary and improper to inject the idea of color of title where the evidence is introduced for the sole purpose of showing that the possession has been adverse. n422 In a few jurisdictions, in particular, which make good faith a requirement of adverse possession, the requirement of color of title has been added to the common law claim of right as an element of adverse possession, though not necessarily. n423 Thus, some statutes provide that there must be color of title, either at the time of entry or subsequent thereto, before possession of land will ripen into a title by adverse possession. n424

Even in those states, however, it is not necessary that title of the disseisor be valid to constitute an adverse possession. The disseisor's title may be bad, or the original entry may have been by permission of the true owner. It is only necessary that the disseisor should have color of title and that the color of title should purport to give a freehold estate adverse to that of the original owner. The disseisor must have title, or color of title as distinguished from a mere claim of title. n425

On the other hand, at common law and under the majority rule in this country, the adverse claimant need not have a deed or other writing giving color of title or furnishing foundation for belief or claim of ownership or legal right to enter or take possession of land. n426 So under the rule in the majority of states, color of title is a necessary factor only when it is necessary to establish constructive possession, n427 to claim title to improvements as an occupying claimant n428 or as an aid to proving good faith when required, n429 or to benefit from a shorter statute of limitations. Color of title can dispense with the necessity of other proof that possession is hostile. n430

As the term is generally used, it is merely a sign or semblance of title, n431 written evidence of title n432 which, by reason of some defect not clearly appearing on its face, does not, in fact, amount to title. n433 It implies that a valid title has not passed to the claimant. n434 Consequently, an instrument which conveys title cannot be said to be color of title. n435 Color of title is merely the appearance of title without its reality, saving its possessor only from the imputation of being a naked trespasser; it contributes nothing to the fiber of title as affecting the adverse character of the possession. n436 Color of title may be given by deed not fully effective to pass title, n437 by will, by descent cast, by an execution sale, by a tax deed though invalid, n438 by a decree of court or invalid deed, n439 or by any instrument which serves to define the extent of the disseisor's claim and purports to convey title. n440 Some decisions hold that color of title or its equivalent may also be created by acts and circumstances which of themselves show the character and extent of the disseisor's entry and claim. n441 Basically, color of title is not essential to adverse possession, although it is a constructive possession. n442 As previously noted, however, some states shorten the requisite time if there is color of title. n443

LEXIS: Adverse possession w/20 index (color of title) or title (color of title)

FOOTNOTES:
(n1)Footnote 398. Eaton v. Doub, 128 S.E.494 (N.C. 1925); Rook v. Horton, 129 S.E.450 (N.C. 1925) (an unregistered deed not supported by consideration does not afford color of title against one claiming under a deed for value).

Color of title, where adverse possession under color of title requires a shorter period of time than otherwise by statute, requires a written instrument. *Karvonen v. Dyer, 261 F. 2d 671 (9th Cir. 1958).*

Color of title cannot arise from a deed in which the description is not sufficient to identify the premises so as to pass title thereto. *Hughes v. Heard, 109 S.E.2d 510 (Ga. 1959).*

A deed, which validly conveys title to part of a tract which it describes, is color of title to the balance. *Wachovia Bank & Trust Co. v. Miller, 89 S.E.2d 765 (N.C. 1955). Solomon's Rock Trust v. Davis, 675 A.2d 506 (Me. 1996).*

Georgia Power Company v. Irvin, 482 S.E.2d 362 (Ga. 1997) (adverse possession established by 20 years of adverse possession and 10 years under color of title.); *Harris v. Lynch, 940 S.W.2d 42 (Mo. App. 1997)* (possession must involve physical possession of entire area claimed if there is no color of title.); *Whipple v. Trail Properties, Inc., 652 N.Y.S.2d 657* (N.Y. App. Div. 3d Dep't 1997) (where deed did not indicate actual boundaries of contested parcel with certainty, summary judgment in favor of claimant was error where action was under color of written instrument.)

(n2)Footnote 399. A quitclaim deed would not support a short period of limitation. *Porter v. Wilson, 389 S.W.2d 650 (Tex. 1965);* Cal L. Donsky & William A.Kramer, Title to Land -- An Instrument Which Conveys only the Grantor's Right in the Land is a Quitclaim and Will Not Support the Five-Year Statute of Limitations, *43 Tex. L. Rev. 1129 (1965).*

(n3)Footnote 400. *Boudreaux v. Olin Industries, Inc., 94 So. 2d 417 (La. 1957).*

A deed by one co-tenant cannot be color of title as against the other co-tenants. John L. Roper Lumber Co. v. Richmond Cedar Works, 80 S.E.982 (N.C. 1914).

Johnson v. McLamb, 101 S.E.2d 311 (N.C. 1958) (tax foreclosure sale of one co-tenant's interest was color of title where sheriff's deed purported to convey entire interest).

(n4)Footnote 401. *Lewis v. Harding, 512 So. 2d 96 (Ala. 1987)* (any instrument purporting to convey title); Burns v. Stewart, 78 S.E.321 (N.C. 1913); *Cobb v. Spurlin, 327 S.E.2d 244 (N.C. App. 1985)* (does not convey title because of defect).

(n5)Footnote 402. *Bergesen v. Clauss, 155 N.E.2d 20 (Ill. 1958).*

(n6)Footnote 403. *43 U. S.C. § 1068.*

(n7)Footnote 404. Actual boundaries of patent, clearly marked, prevented title from ripening as to adjoining tract. *Day v. Hickel, 481 F. 2d 473 (9th Cir. 1973).*

(n8)Footnote 405. *Bonifay v. Garner, 445 So. 2d 597 (Fla. 1984); Ruick v. Twarkins, 367 A.2d 1380 (Conn. 1976).*

(n9)Footnote 406. Void tax deed is color of title. *Carney v. Anderson, 58 So. 2d 13 (Miss. 1952),* cert. denied, *344 U. S. 860 (1952). See La Caze v. Boycher, 80 So. 2d 583 (La. App. 1955);* and *Shepherd v. Mahannah, 220 F. 2d 737*

(5th Cir. 1955), to same effect.

Quitclaim deed executed after the grantor has conveyed away the property is not color of title. *Coons v. Baird, 265 N.E.2d 727 (Ind. App. 1970).*

(n10)Footnote 407. *Bradley v. Gordon, 200 So. 736 (Ala. 1941); Douglass v. Aldridge, 105 So. 145 (Fla. 1925); Gochenour v. Logsdon, 30 N.E.2d 666 (Ill. 1040);* Tibbetts v. Holway, 109 A.382 (Me. 1920); *Jones v. Gulf Ref. Co., 34 So. 2d 735 (Miss. 1948); Johnson v. Moore, 143 S.W.2d 254 (Mo. 1940); Barker v. Hayes, 147 S.W.2d 429 (Mo. 1940); Heron v. Garcia, 199 P.2d 1003 (N. M. 1948).*

See Calvary Baptist Church v. Saxton, 242 P.616 (Or. 1925); *Junction City Special Sch. Dist. v. Whiddon, 249 S.W.2d 990 (Ark. 1952)* (tax deed void for erroneous description was color of title); *King v. Fasching, 234 S.W.2d 549 (Mo. 1950)* (one in possession under an invalid deed may acquire title by adverse possession); *Turner Lumber Co. v. Beckham, 277 So. 2d 110 (Miss. 1972)* (tax deed is color of title).

(n11)Footnote 408. *Bryant v. Perry, 145 S.W.2d 1055 (Ky. 1940); Snelling v. Adair, 199 So. 782 (La. 1940); Armstrong Cork Co. v. Crook, 227 So. 2d 64 (Fla. App. 1969)* (to be color of title, the instrument must purport to convey the land); *Bruce v. Cheramie, 93 So. 2d 202 (La. 1956)* (a deed with a defective description is color of title for purposes of prescription).

(n12)Footnote 409. *First Nat'l Bank of Wray v. McGinnis, 819 P.2d 1080 (Colo. App. 1991); Rosenbaum v. Bohanon, 36 So. 2d 798 (Miss. 1948).*

(n13)Footnote 410. Wilson v. Atinson, 20 P.66 (Cal. 1888); Lower Latham Ditch Co. v. Louden Irrig. Canal Co., 60 P.629 (Colo. 1900); *Doyle v. Wade, 1 So. 516 (Fla. 1887); Mitchell v. Moore, 13 So. 2d 314 (Fla. 1943);* Sontag v. Bigelow, 31 N.E.674 (Ill. 1892); *Brooks-Scanlon Co. v. Childs, 74 So. 147 (Miss. 1917);* Power v. Kitching, 86 N.W.737 (N.D. 1901).

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.13

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.13 Requirement that Possession Be Continuous.

[Go To Supp]

As has been earlier discussed, the exact legal theory behind the origin of adverse possession is not clear. To the extent that disseisin gave a legal title, though defeasible, to the disseisor, no substantial term for possession was essential. n444 The disseisin itself gave title as against all the world. The disseisee could invoke the aid of the courts to regain seisin, provided the disseisin had not occurred before the date specified in the current statute. The later statutes n445 again limited the time within which the action for possession could be brought. They thus operated merely as a bar to the disseisee. There was no requirement of time of possession in the disseisor before the disseisor could defend possession against third parties, or even against the disseisee who re-entered. n446

There were, however, traces of a requirement of continued possession in the disseisee, n447 yet this was not true if another estate as of curtesy intervened between the death of the ancestor and the entry of the heir. n448 The statute of Henry VIII n449 barred entry against the heir only if the disseisor had five years possession after disseisin. The English Prescription Act n450 changed the theory of the previous statutes by barring the right of property, as well as the right of action, with others vesting the occupant with fee simple title. n451 Although this positive declaration of passage of title is missing from most of the American statutes, its force is universally recognized by the courts.

The courts are not in accord, however, as to the basic theory of adverse possession. Some treat it primarily as either an abandonment of possession or as a punishment to the owner for neglecting to re-enter. Under this reasoning, an owner out of possession for the statutory period loses title regardless of the privity of those in possession. n452 There is authority, however, to the effect that if title can be acquired by eminent domain it cannot be taken by adverse possession. n453 The great weight of authority, however, holds to the position that title draws possession to it, unless the possession is held adversely. n454 Therefore, when one abandons adverse possession, the possession reverts to the owner. n455 Thus, each adverse possessor must start anew, unless the possession is held in privity with the predecessor. n456 The effect of this change is evidenced further. Since the statute of limitations so confers a positive right on the possessor as well as creating a disability in the record owner, principles of equity demand that the possessor earn this right. Certainly, the possessor of today does not, as did the disseisor, acquire title by taking possession. Instead, today's

possessor gains title through long continued possession. Thus, not only must the owner be out of possession for the required period of time, but the possessor must also be in possession during this period. The holding may be interrupted by acts of the possessor indicating an admission of the record owner's title. n457

Continuity of possession may be established even if the land is used regularly for only a certain period each year; n458 intermittent and irregular use may be continuous if not interrupted by assertion of a paramount right. n459 Hence, to confer title by adverse possession, the possession must be shown to have been continuous for the full prescriptive period. n460 The possession must not only begin under claim of right adverse to the true owner, but it must continue so. n461 An intermittent occupancy will not satisfy the requirements of the law, for the moment the land becomes vacant, the law restores the possession to the holder of the legal title. n462 A perspective more consistent with general principles is that interim occupancy rarely meets the requirement that possession be continuous.

The cases are divided as to whether an adverse possessor of the surface terminates the adverse possession of the underlying minerals when the adverse possessor executes a mineral severance. n463

A party cannot get title by holding for part of the period and then surrendering the lands sought to another party. To give up the possession before the statutory period has run will wipe out all rights theretofore gained. n464 It must be continuous in the sense of not being abandoned by the claimant, n465 and in the sense as to afford a cause of action every day during the whole period. n466 When possession is effectively interrupted, the running of the statute is stopped, and a subsequent return to possession will not avail. The running of the statute will begin only from the date of the return. n467 Since occasional acts of dominion over the land will not constitute continuous possession, even if extended over the statutory period, the possession must be something more than temporary occupancy in order to be adverse. n468 Mere sporadic acts do not constitute adverse possession, n469 but it has been held that a temporary break or interruption, of not unreasonable duration, will not destroy the continuity of the adverse claimant's possession. n470 This rule is one of substance and not of absolute mathematical continuity, provided there is no break so as to sever two possessions. n471 It is not necessary that the occupant should be actually upon the premises continually. n472 If the land is occupied during the period of time it is capable of use, there is sufficient continuity. n473

Abandonment of the property by the adverse possessor prior to perfecting title puts an end to the possessory title, so that the adverse possessor cannot recover the property from a person entering subsequently without right. When the adverse possessor's possession ends, the adverse possessor is no longer subject to an action of ejectment by the owner, and, therefore, the statute can no longer run against that action. The adverse possessor becomes a complete stranger to the property. A subsequent entry gives rise to a new cause of action against which the statute starts to run anew. The question usually involved in the cases is whether the adverse possessor abandoned the premises without intent to return or merely left it temporarily intending to return and retain the possessory title. n474 Starting an action in ejectment or to quiet or register title by the owner and carrying through to a successful conclusion, not discontinued or otherwise disposed of not on the merits, is an interruption, causing the statute to start to run anew if the adverse possession is continued thereafter. n475 Based on the same requirements as the taking of possession by the adverse holder, open and notorious entry to regain the possession is an interruption, since a continued possession by the adverse possessor thereafter creates a new cause of action. n476 Some statutes fix a required period for interruption to be effective. n477 In the absence of evidence either of abandonment of possession or interruption thereof or of possession by another under a claim of title, possession of land by the grantee under a deed is presumed to continue as to the grantee and the grantee's successors in title. n478 The burden is on the claimant to show that a break in the continuity existed only for a reasonable period. n479 A break in possession after one has acquired title by adverse possession will have no effect on the rights one has thus acquired, at least against all except the owner. n480 The general principleis that once title is perfected it is like any other title as against everyone, including the former owner.

By taking possession, the adverse possessor acquires a legal right in the land that can be transferred to another. Thus, though possession must be continuous for the entire statutory period, such continuous possession need not be by one and the same person. One person may start the adverse possession to land, and another in privity with the person may

continue it for the statutory period. n481 The possession of successive occupants, if there is privity between them, may be tacked to make adverse possession for the requisite period. n482 Several successive periods of possession by different persons may be tacked or added to each other, provided the successive occupants are in privity of contract, estate, or blood, n483 and the combined period of such adverse holdings will be deemed as one continuous possession for the statutory period. n484

To tack, it is essential that there be privity, for different, unconnected entries only constitute a succession of trespasses, even though there may be no appreciable interval between the same. n485 It is generally held that "there must be privity of grant or descent, or some judicial or other proceedings which shall connect the possession so that the latter shall apparently hold by right of the former," n486 and that "the privity may be created in any way that will prevent a break in the adverse possession and refer the several possessions to the original entry, and it may be created by parol or otherwise from vendor to vendee." n487 Privity of estate exists between successive occupants when the earlier occupants' possession and claim passed or was transferred to the latter occupants by agreement, gift, devise, or inheritance. n488 It may be established by parol under the majority rule. n489 Privity necessary to enable possessory rights to be transferred is merely a succession of relationships to the same thing. n490 The English view has permitted tacking though there be no privity; it has been held that one disseisor in England can tack the possession of one whom the disseisor has disseised, though the latter be also a disseisor. n491

There is authority for the proposition that in the case of deeds, only the land actually conveyed is considered as being included, and the possession by the grantor of other lands not conveyed cannot be tacked by the grantee onto the period of the grantee's holding to make up the statutory period, even though such land may be adjacent to the property conveyed and used in connection therewith. n492 In such cases the deed does not establish privity between the two disseisors. n493 This is especially true if the grantee in possession has made no claim to title. n494 Where a person having title by deed to a lot or tract of land described in the deed also has enclosed with it -- and is in possession of -- adjoining land to which the person has no record title, and where the person conveys the land by the description in the deed and delivers with it the possession of the entire enclosure, the continuity of possession will not be broken, and the two possessions may be joined and considered as one continuous possession. n495

The point at issue is the intended and actual transfer of possession of the land held adversely. n496 A correction deed subsequently executed which includes the omitted tract makes proper the tacking of successive adverse possession of occupants. n497 It is the general rule that any conveyance, agreement, or understanding which will refer several adverse possessions to the original entry, and which is accompanied by a transfer of possession, will create such a privity as to permit a tacking for the purpose of establishing title by adverse possession. n498 For example, a husband's deed to his wife of the homestead was void because he did not sign and acknowledge it, and the wife conveyed the property to third person after her husband's death. No interval of time prior to the husband's death could be considered as adverse possession to support a claim of adverse possession asserted by the wife's grantee. n499

If a purchaser from an adverse possessor relies upon the seller's statement that the seller owns the land held adversely, there is sufficient privity to permit tacking though the deed does not describe the land. n500 On the question of boundary, the manner in which the privity is maintained is important, for if the deed description is strictly construed, the conveyance to an adverse claimant relied upon for tacking may not include within its bounds the land adversely held, and the tacking may therefore depend entirely upon an understanding. n501 Privity that will permit the tacking of possessions exists in the relationship of testator and devisee, n502 ancestor and heir, n503 landlord and tenant, n504 vendor and vendee, n505 and purchaser at a judicial sale and the occupant of the land. n506 To tack the tenant's occupation, however, the use must have been expressly or impliedly embraced within the terms of the tenancy. n507 Purchasers at administrators' sales of realty take in privity with the deceased adverse possessor. n508 An oral transfer will convey the adverse possessor's rights to the land but only until possession ripens into title, thereafter the Statute of Frauds applies. n509 It is essential that there be no gap between the holdings which are to be tacked, n510 although a brief vacancy resulting from a change of occupancy, as between landlord and tenant, does not prevent tacking in favor of the landlord. n511 Possession either through descent or by transfer of title or possession is considered to be in privity.

n512 A remainderman may tack the remainderman's possession to that of the life tenant for the purpose of creating adverse possession. n513 South Carolina permits tacking by descent, n514 but not by *inter vivos* transfer n515 or by will. n516

An adverse occupant cannot tack the possession of a prior occupant in order to perfect adverse title where such prior occupant did not or could not claim the land adversely. n517 Therefore, possession of land by the owner thereof in fee simple cannot be tacked upon subsequent possession of others to make out a prescriptive period. n518

(n31)Footnote 474. Held no abandonment under the facts. *Beasley v. Howell, 22 So. 989 (Ala. 1898)* (vacancy caused by a tenant of claimant moving out, continuing for some time until another tenant moved in); Botsford v. Eyraud, 83 P.1008 (Cal. 1906) (grantee of possessor did not enter for a year; enclosure and keeping out of trespassers

during interval); Britt v. Houser, 188 S.W.628 (Ky. 1916); Bahneman v. Fritche, 180 N.W.215 (Minn. 1920); Hunter v. Pinnell, 91 S.W.472 (Mo. 1906); Pease v. Whitney, 98 A.62 (N. H. 1916) (failure to cultivate land, intent to retain land proved); Cathcart v. Matthews, 89 S.E.1021 (S.C. 1916) (temporary absence with intent to return); Chase v. Eddy, 92 A.99 (Vt. 1914) (after cutting for several years, marked lines of lot and made survey, no abandonment of possessory title).

Held abandonment. Meek v. Davis, 224 S.W.659 (Ky. 1920) (moved his family away a mile, returning after a full crop season); *Stephens v. Leach, 19 Pa. 262 (1852)* (intent to abandon sufficiently established by actual unequivocal abandonment in fact). Actual intent to return is not material if not established by conduct. A definite surrender of possession and dominion is sufficient. *Hoyle v. Mann, 41 So. 835 (Ala. 1906).*

(n32)Footnote 475. *General Iron Industries, Inc. v. A. Finkl & Sons Co., 686 N.E.2d 1 (Ill. App. 1997)* (adverse possession interrupted when title owner filed petition for bankruptcy reorganization); *Knoke v. Swan, 42 P.2d 1019 (Cal. 1935)* (action to quiet title); Baumgartner v. Doherty, 190 N.E.838 (Mass. 1934); Holmgren v. Isaackson, 116 N.W.205 (Minn. 1908) (dismissal by consent, no interruption); Butler v. Secrist, 138 N.W.749 (Neb. 1912); and Butler v. Smith, 120 N.W.1106 (Neb. 1909) (holding ejectment an interruption though action was changed to an action to redeem); Monnot v. Murphy, 100 N.E.742 (N.Y. 1913) (statute started to run anew when the possession was continued after the owner's judgment in ejectment); Barrell v. Title Guar. & Trust Co., 39 P.992 (Or. 1895). Dismissal without prejudice prevents an interruption by the suit. *Crawford v. Sasser, 38 S.W.2d 434 (Ky. 1931); Chastang v. Chastang, 37 So. 799 (Ala. 1904)* (entry ends the exclusive character of the wrongdoer's possession though he is not actually ousted); *Smith v. Southern Pac. R. Co., 34 P.2d 713 (Cal. 1934);* Nelson v. Johnson, 226 S.W.94 (Ky. 1920); *Bowen v. Guild, 130 Mass. 121 (1881);* Landon v. Townshend, 29 N.E.71 (N.Y. 1891); Zellmer v. Martin, 147 N.W.371 (Wis. 1914).

(n33)Footnote 476. Stealth not an interruption. *Burrows v. Gallup, 32 Conn. 493 (1865).* Must be more than a mere trespass, such as a contentious entry, to build a fence then torn down by possessor, Bugner v. Chicago Title & Trust Co., 117 N.E.711 (Ill. 1917); express notice is not necessary where entry and taking possession are open and notorious so that notice is implied. Batchelder v. Robbins, 45 A.837 (Me. 1900); *Ransom v. Lewis, 63 N.C. 43 (1868).*

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.14

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.14 Duration and Interruption of Time of Possession.

[Go To Supp]

The English statute of limitations shifted from the ancient common law time beyond which the memory of man runneth not to the contrary through a succession of stated events to a period of sixty and finally twenty years. n519 The common law may be said to have finally come to rest on twenty years. n520 In America where by statute title by adverse possession has come to rest upon the various legislative enactments concerning limitation of actions, the required time of possession is governed by the statute and varies greatly between the jurisdictions. In a number of states, possession based upon some written instrument or judgment is protected against the entry or suit of the dispossessed owner after a much shorter period than that which bars the right against a possession not founded on an instrument or judgment. n521 And, just as at common law the entry required of certain persons such as heirs was "more tender" than that required of others, so the statutes sometimes vary the amount of time of possession required according to the nature of the claim of right of the possessor. So some states give shorter periods if the possessor has color of title. n522 No owner of land can be barred of title unless the owner has been put to an entry or action for the statutory period, and the statute begins to run at the time the possession of the claimant becomes adverse to that of the owner. As a rule, this is at the time of entry n523 but the possession of the claimant may not become adverse until some time after entry. n524 The statute does not begin to run until notice has been made of the adverse holding claim on the part of one seeking title by adverse possession and there has been an ouster. n525 An adverse possessor may be ejected one day before the expiration of the period. n526 The statute prescribing the period for the commencement of an action to recover real estate refers to adverse possession of real estate. n527 Where the premises are abandoned by the adverse claimant before the expiration of the statutory period of limitation, the adverse claimant forfeits all rights acquired by the adverse holding, and the constructive possession of the true owner reasserts itself. n528 The rule applies even where the abandonment is enforced by some occurrence over which the claimant has no control. n529 But a mere temporary absence from the premises by the adverse claimant not evincing any intention of abandonment, there being no interruption of the possession by entry of the true owner, or other disseisin, does not suspend the running of the statute against such owner. n530 There is no abandonment when a person leaves the land adversely occupied with the intention of returning. n531 When the occupancy is temporarily broken by a flood or fire, the possessor has a reasonable time to resume possession after such event without there being a discontinuance. n532

The question as to whether there has been such an abandonment of the possession as to break the continuity thereof depends upon whether the premises were vacant for such length of time and under such circumstances that the constructive possession of the owner can be said to have reasserted itself. n533 A break in the continuity of the possession stops the running of the statute and the adverse claimant can rely only upon a new possession taken after the break. n534

However, the fact that the premises were unoccupied on various occasions for a short period of time occasioned by one occupant moving out and another moving in, n535 or breaks of no greater duration than that reasonably required for a change of tenants, n536 does not interrupt the running of the statute. A temporary interruption not of unreasonable duration, does not destroy the adverse possession. n537 Where one holds possession adversely, an oral lease agreeing to hold under the true owner does not stop the running of the statute of limitations, because the true owner never lost the right to eject the adverse possessor. n538 A tenant cannot toll or interrupt the running of the adverse possession period by attorning to the holder of the record title. n539 The execution of a mineral lease by the adverse possessor, thereby severing the mineral from the surface estate, while operating as an estoppel as between severor and severee, does not stop the running of the statute so far as third persons are concerned. n540 The burden of proving adverse possession is on the one relying thereon; n541 but after the adverse possessor has made out a prima facie case, the burden of showing that the running of the statute was interrupted is on the party claiming title in opposition to the adverse possessor. n542

Possession by the adverse claimant must be uninterrupted for the full statutory period, for to break effectively the possession at any time before the period has fully expired will arrest the running of the statute. n543 The moment the running of the statute of limitations is interrupted the law restores the possession to the holder of the legal title, n544 and the claimant by adverse possession must begin de novo. n545 To disrupt the running of adverse possession, the owner must reassert a claim which would reinstate the owner in possession. n546 Upon interruption of the possession before completion of the statutory period, the possession of the true owner constructively intervenes, and should the claimant resume possession, the statute of limitations begins to run at the date of such resumption, and must run for the full statutory period thereafter in order to give the claimant title. n547 If the possession be interrupted, either by fraud or force, or by process of law, the statute begins to run only from the time of reentry. n548 So, a cessation of hostility for any length of time during the statutory period will interrupt the adverse character of the holding and stop the running of the statute. The possession of the claimant may be exclusive and continuous for the entire period, but if it ceases to be hostile at any time, the statute ceases to run, as hostility of possession cannot be assumed from exclusive and continuous possession. n549 A recognition or acknowledgment by the possessor of the true owner's title, prior to the running of the full statutory period, interrupts the running of the statute. n550 By a cessation of hostility, the claimant is deemed to recognize the title of the true owner, even though the claimant continues in possession for the whole period of limitation. n551 A tenant cannot interrupt the running of the adverse possession of the landlord by acknowledging the paramount title of a third person. n552 It would seem that, to have the effect to destroy the hostility of the possession, a recognition of the title of the rightful owner need not be communicated to such owner, but to some third person or persons. n553 Such acknowledgment is effective if made to a third person. n554 However, one holding property under claim of right may buy or attempt to buy peace without recognizing the title of the one from whom one attempts to purchase and without interrupting the statute of limitations. n555 The attempt to purchase the record title does not necessarily amount to a recognition of the superior title of the record owner, n556 but may be considered in determining whether the possession was actually adverse. n557 After title has been once acquired by adverse possession, the acknowledgment of the prior title of the prior owner does not divest the claimant of the title acquired by limitation. n558

The acquisition of a right of possession by deed or lease by the adverse possessor destroys the hostility of such possessor. n559 Any visible manifestation of ownership by the record owner at any time during the period of limitation will defeat adverse possession if the adverse possessor does not resist such acts of ownership. n560 The entry and building of a temporary structure by the true owner was held not in itself sufficient to interrupt the adverse claimant's adverse possession in the absence of evidence to show that the entry was connected with a right to enter. n561 The

weight of authority is that the effect to be given the act of purchase by an adverse claimant, either under color of title or as a trespasser, or an undivided interest in the subject matter of the claim, does not, as a matter of law, constitute a recognition of the true title to such extent as to change the character of the adverse claim as to others. n562 Also, it is held that the purchase of a tax title by the adverse occupant of the taxed premises, which were assessed in the name of other parties, does not operate to interrupt the continuity of the adverse possession of such occupant. n563

If a tenant of a person in adverse possession takes a written lease from the holder of the true title without the knowledge of the adverse possessor, the possession is interrupted only if the holder of true title does not know the facts as to the tenancy, or has no reason to suspect the adverse possession. n564 As a general rule, an entry upon or possession of the lands claimed by another, which, in the first instance, would suffice to effect a disseisin or ouster of the real owner, will break the continuity of the holder claiming by adverse possession. Such an entry upon or occupation of the land by the true owner for any portion of the period of adverse possession by the claimant will, as a general rule, break the continuity, and destroy the adverse possession. n565 Especially is this true where such entry is followed up by possession by the owner, although the adverse claimant continues in possession as before such entry. n566 To have this effect the entry need not be by the owner in person, but it may be by the owner's agent. n567 Entry by the agent or licensee of the record owner of the land may be sufficient to interrupt the running of the statute. n568 However, the reentry and consequent interruption of the possession must rise in dignity and character to that required to initiate an adverse possession. n569 It is not every entry, however, by the owner that will destroy the adverse possession, but to effect this, the owner must assert the claim to the land by acts of ownership. n570 Entry on land by a purchaser of timber rights from the real owner and the cutting and removal of timber from all parts of the land was held to constitute a reentry by the true owner and interrupted the limitation of claimant's exclusive possession. n571 The continuity of adverse possession is not broken by casual or occasional entries on the land by trespassers and wrongdoers. n572 Nor does a mortgage foreclosure of the record title interrupt the running of the period, n573 but a sale to the state for taxes does, since adverse possession ordinarily does not run against the state. n574 The redelivery of a deed by the grantee to the grantor for the purpose of re-investing the latter with the title is not effective for that purpose. Such delivery for the purpose of reinvesting the title in the grantor followed by a surrender of possession to the grantor makes the holding of the latter adverse. The running of the statute is not interrupted by the grantee's returning to and occupying the land at different intervals, if on such occasions the grantee occupied as tenant of the grantor and thereby recognized the superiority of the latter's claim to the land. n575 A conveyance by an adverse possessor to a corporation, whose stock the adverse possessor owned, without surrendering possession, followed by a reconveyance from the corporation to the adverse possessor, does not interrupt the running of the statutes. n576 An entry on land by a person disseised, merely for the purpose of seeing if there is any evidence of an adverse occupation, is not, as a matter of law, conclusive evidence of an interruption of the disseisor's possession. n577 A title once acquired by continuous adverse possession for the statutory period of limitation will not be forfeited by a subsequent interruption of the possession, or, it would seem, by a subsequent possession which was lacking in some of the characteristics essential to give title of itself. n578 Where the statute of limitations has commenced to run against the owner of real estate, the owner's subsequent death does not toll the statute. n579 A claim of title by adverse possession fails where possession is interrupted by the filing by the claimant of an action to quiet title before the statutory period has elapsed. n580 A decree quieting title to a given tract of land does not interrupt the running of the statute of limitations as to a strip in possession of an adjoining owner when no possession is taken under the decree. n581

The bringing of suit within the prescriptive period interrupts an adverse holding if followed by a judgment and recovery of possession thereunder by the plaintiff. n582 The interruption from this cause has been held to take place at the time the action is instituted. n583 So, a holding after the institution of an action to recover the land cannot be considered in making out this period of adverse possession. n584 Under some statutes, it is held that where an action for possession of land begins before the completion of the statutory period necessary to give title, and in which a judgment is subsequently returned, but not enforced by a writ of possession until after the expiration of the statutory period, such action for possession stops the running of the statute of limitations from the date of commencement of the action. n585 Where the action results unsuccessfully to the plaintiff, there is no interruption of the adverse holding. n586 The same result ensues where the statute has run so as to establish title by adverse possession long before the judgment in

ejectment was rendered. n587 While a trespass may be enjoined the relief from adverse possession is in ejectment and not by injunction. n588 However, the rule of interruption by entry of the owner has been modified or entirely abrogated by statute in many states. Some statutes require the entry by the owner to be followed by possession by the owner for a certain time, n589 while other statutes provide that in order that an entry by the owner may be sufficient to break the continuity of the adverse possession an action in ejectment must be brought within a certain time after such entry. n590 Still other statutes provide that an entry by the owner has no effect to break the running of the statute of limitations. n591 Reentry by permission of the party in adverse possession for a specific and limited purpose does not arrest the running of the statute or interrupt the possession of the adverse claimant, n592 at least as to such part of the land as is not entered upon nor covered by the agreement. n593 Although permissive entries are ineffective n594 and temporary intrusions are insufficient, n595 an interruption to be effective need not be for an extended period, but in other regards must satisfy remaining conditions necessary for acquiring title by adverse possession. It must be notorious, for mere denials of the owner or loose verbal claims of title in oneself, or any ineffectual protest short of a disturbance of the rights of the adverse claimant in a legal sense and -- short of an actual assertion of a right in oneself -- will not interrupt. n596 Forfeiture to the commonnwealth for nonpayment of taxes is not an interruption of possession where the state merely acquired a tax lien. n597 Where a grantee takes possession of adjoining lands not described in the grantee's deed in the belief that it is part of the granted land and conveys the land by deed description but delivers possession to the adjoining land also, the continuity of possession will not be broken and the two possessions will be considered as one possession for the purpose of acquiring adverse possession title. n598

If one is out of possession and must before obtaining possession have reformation of the instrument, the applicable statute of limitations is that which will mature the right to possession, not that applicable to recovery of possession. But if one in possession seeks reformation of the instrument under which one claims, the statute will not run against one's right until the other party goes into possession or asserts an adverse claim. n599

Where because of flooding or other reasons, the property cannot be continuously occupied, such possession as the land permits is sufficient. n600

The filing of a quiet title action by an adverse possessor does not interrupt the running of the possession. n601

The sale of land for taxes and its subsequent redemption by the owner of the legal title does not interrupt the running of adverse possession. n602 Possession taken under a contract of sale may be used in tacking. n603

Many states have short statutes of limitation for adverse possession under color of tax deed. n604 Tacking in adverse possession is allowed if the adverse possessor intended to and actually did turn over possession of undescribed land together with that described in the deed. n605

LEXIS: Adverse possession w/20 interrupt! w/5 possession not w/3 adverse

FOOTNOTES:

(n1)Footnote 519. The Roman Law followed the Greek Law in settling the period as to real estate at ten years. *Dalton v. Angus, 6 Ann. Cas. 740.*

(n2)Footnote 520. Jam., ch. 16 (adverse possession, 20 years).

For the number of years necessary to confer title by adverse possession in the different states, see the following statutes and decisions:

Ala. Code § 6-5-200; *Robinson v. Allison, 27 So. 461 (Ala. 1900)* (ten years).

Ten years' adverse possession required. *Cambron v. Kirkland, 253 So. 2d 180 (Ala. 1971).*

Alaska has a 7 and a 10-year statute of adverse possession. Alaska Stat. §§ 4. 10. 030, 9.25. 050.

Possession must be uninterrupted. *Shilts v. Young, 567 P.2d 769 (Alaska 1977).*

Three years, where possession is peaceable, adverse, and under color of title; five years where possession is peaceable, adverse, and where possessor pays taxes; ten years where there is merely an adverse holding. Ariz. Rev. Stat. Ann. §§ 12-523 to 12-526.

Seven years' adverse possession where taxes paid and with color of title Ark. Code Ann. § 18-11-102; fifteen years for wild and unimproved land. *Id.*, § 18-11-103. VanEtten v. Daugherty, 103 S.W.737 (Ark. 1907).

Seven years adverse possession required in *Arkansas. Pate v. Junkin, 489 S.W.2d 802 (Ark. 1973).*

Five years' adverse possession. Cal. Civ. Proc. Code § 325.

Eighteen years adverse possession. Colo. Rev. Stat. § 38-41-10; seven years' actual residence under a connected title deducible of record, § 38-41-106; seven years' possession under color of title taken in good faith, and paying of taxes, § 38-41-108; same for unoccupied lands. *Id.*

Fifteen years' adverse possession. 52 Conn. Gen. Stat. 575 (1993).

Seven years' adverse possession. Fla. Stat. Ann. §§ 95. 16 and 95. 18.

Twenty years' adverse possession, and seven years' adverse possession under color of title. Ga. Code Ann., §§ 85-406, 85-407.

Defective tax title plus seven years' adverse possession gave a fee simple absolute title. *Herrington v. LaCount, 167 S.E.2d 631 (Ga. 1969).*

Seven years' adverse possession under color of title. *Stevens v. Cogdell, 179 S.E.2d 45 (Ga. 1971).*

Seven years' adverse possession requires written evidence of title. *Seaboard Coast Line Ry. Co. v. Carter, 200 S.E.2d 113 (Ga. 1973).*

Five years' adverse possession. Idaho Code, § 5-207.

Twenty years' adverse possession. Ill. Ann. Stat. 110 para. 13-101; seven years with possession and record title from public officer, 110 para. 13-107; and seven years' payment of taxes with color of title and possession, 110 para. 13-109; same for vacant land. 110 para.13-110.

Seven years' adverse possession under color of title. Held adverse possession under facts: *Pyle v. Ferrell, 147 N.E.2d 341 (Ill. 1958).*

The court passed title by adverse use to a dwelling house under a theory similar to adverse possession but for a period of time governed by the statute of limitations in replevin actions. *Isham v. Cudlip, 179 N.E.2d 25 (Ill. App. 1962).*

Ten years' adverse possession. Ind. Stat. Ann. § 34-1-2-2.

Ten years' adverse possession after recording deed. Iowa Code Ann. § 614. 22; *Shires v. Niewoehner, 191 N.W.2d 633 (Iowa 1971).*

Fifteen years' adverse possession. Kan. Stat. Ann. § 60-503; Schrimpcher v. Stockton, 51 P.276 (Kan. 1897).

Possession must have been for more than fifteen years to claim title. *Wallace v. Magie, 522 P.2d 989 (Kan. 1974).*

Fifteen years' adverse possession. Ky. Rev. Stat. Ann. § 413. 010.

Ten years' continuous and uninterrupted possession in good faith. La. Civ. Code, art. 3473; *Moulierre v. Coco, 41 So. 113 (La. 1906);* and thirty years of such possession without regard to good faith. *LA. CIV. CODE, art. 3486, Mortimer v. Hodgson, 30 So. 104 (La. 1901).*

Ten years' possession is required in *Louisiana. Board of Comm'rs for Lafourche Basin Levee Dist. v. Elmer, 268 So. 2d 274 (La. App. 1972).*

Thirty-year acquisitive prescription is required in *Louisiana. Babin v. Montegut Ins. Agency, Inc., 271 So. 2d 642 (La. App. 1973).*

Twenty years' adverse possession. 14 Me. Rev. Stat. Ann. § 801.

Twenty years' uninterrupted adverse possession. Md. Code Ann., Cts. & Jud. Proc. § 5-103; University of Md. v. Calvary M. E. Church, South, 65 A.398 (Md. 1906).

Twenty years' adverse possession. Mass. Gen. Laws Ann. ch. 260 § 21.

Five years' adverse possession under color of title, and fifteen years' without regard to color of title. Mich. Comp.Laws Ann. § 600. 5801.

Fifteen years' adverse possession. Minn. Stat. Ann. § 541. 02.

Ten years' adverse possession. 5 Miss. Code Ann. § 15-1-13.

Ten years' adverse possession. 34 Mo. Ann. Stat. § 516. 010.

Five years' adverse possession with payment of taxes. 9 MONT. CODE ANN. §§ 70-19-404 and 70-19-411 (1991).

Ten years' adverse possession. 2 Neb. Rev. Stat. § 25-202; Flanagan v. Mathiesen, 97 N.W.287 (Neb. 1903).

Five years' adverse possession of property other than mining claims, Nev. Rev. Stat. Ann. § 11-070; two years' adverse possession of mining claims, § 11-060.

Twenty years' adverse possession. N. H. Rev. Stat. Ann. § 508:2.

Twenty years' adverse possession. 2A N. J. Stat. Ann. § 14-7; *Spiegle v. Borough of Beach Haven, 281 A.2d 377 (N. J. 1971).*

Ten years' adverse possession under color of title. N. M. STAT. ANN. § 37-1-22.

Ten years' adverse possession. N.Y. Real Prop. Act. Law. § 501; *Corrington v. McNeil, 58 A.D. 2d 719, 396 N.Y.S.2d 286 (1977).*

Seven years' adverse possession with color of title, N.C. Gen. Stat. § 1-38; and twenty years of such possession without color of title, § 1-40. *See also* Hawkins v. Richmond Cedar Works, 30 S.E.13 (N.C. 1898).

Ten years' adverse possession and payment of taxes. N.D. Cent. Code § 47-06-03.

Twenty-one years' adverse possession. Ohio Rev. Code Ann. § 2305. 04.

Fifteen years' adverse possession. 12 Okla. Stat. Ann. § 93; 60 Okla. Stat. Ann. § 333.

Seven-year limitation on land holding outside city limits. *State ex rel. Brett v. North Am. Life Ins. Co., 225 P.2d 796 (Okla. 1950); State ex rel. Combs v. Hopping Inv. Co., 269 P.2d 997 (Okla. 1954).*

Ten years' adverse possession. Or. Rev. Stat. § 105. 620 (1991).

Twenty-one years' adverse possession. 42 Pa. Const. Stat. Ann. § 5530.

Title to land by prescription results from possession in good faith and under a proper title for ten years as against persons present in Puerto Rico and for twenty years as against persons absent therefrom; 31 P.R. Laws Ann. § 5278 (1991); thirty years without color of title or good faith § 5280.

Ten years' adverse possession under claim of ownership in fee. R.I. Gen. Laws § 34-7-1.

Ten years' adverse possession. S.C. Code Ann. § 15-67-210; Mitchell v. Hamilton, 82 S.E.425 (S.C. 1914).

Twenty years' adverse possession. S.D. Codified Laws Ann. § 15-3-1.

Seven years' adverse possession. Tenn. Code Ann. § 28-2-161 et seq.

Three years' adverse possession with color of title. Tex. Code Ann., Civ. Prac. & Rem. § 16. 024; five years' adverse possession coupled with registered deed and payment of taxes, § 16. 025; ten years without color of title, § 16. 026. *See also Carroll v. Brown, 472 S.W.2d 825 (Tex. Civ. App. 1971).*

Seven years' adverse possession; four years with tax title coupled with payment of taxes. Utah Code Ann. §§ 78-12-7 and 78-12-7. 1. Fifteen years' adverse possession. 12 Vt. Stat. Ann. § 501; *Montgomery v. Branon, 278 A.2d 744 (Vt. 1971); Russell v. Pare, 321 A.2d 77 (Vt. 1974).*

Fifteen years' adverse possession. Va. Code § 8.01-236; *LaDue v. Currell, 100 S.E.2d 217 (1959); Peck v. Daniel, 184 S.E.2d 7 (Va. 1971).*

Seven years' adverse possession under color of title, Wash. Rev. Code Ann. § 7. 28. 050; ten years without, § 4.16. 020.

Ten years' adverse possession. W.Va. Code § 55-2-1; *Somon v. Murphy Fabrication & Erection Co., 232 S.E.2d 524 (W. Va. 1977).*

Ten years' adverse possession under color of title, Wis. Stat. Ann. § 893. 26; and twenty years' adverse possession without color of title, § 893. 25.

Ten years' adverse possession. Wyo. Stat. § 1-3-103.

North Dakota has adopted a statute barring claims to real estate by one not in possession within twenty years of bringing the action. N.D. Cent. Code § 28-01-04.

A somewhat similar statute in Iowa has been held to bar remainders. Lane v. Travelers Ins. Co., 299 N.W.553 (Iowa 1941). *See also* Ind. Code Ann. § 32-1-21-2, barring claims based on possibility of reverter or right of entry after thirty years from creation of such interest.

See Melvin D. Whitaker, Comment, The Twenty-five Year Statute of Limitations, *10 Baylor L. Rev. 196 (1958).* Purchaser at tax sale entitled to three-year statute of adverse possession. *Riley v. Depriest, 322 So. 2d 713 (Ala. 1975).*

Possession under color of title for three years. *Henderson v. Tejada, 549 P.2d 242 (Ariz. App. 1976).*

In Arkansas the period for wild and unimproved land is fifteen years. *Schuman v. Martin, 531 S.W.2d 26 (Ark. 1975).*

In Georgia the seven-year statute of adverse possession under color of title also applies to laches in ejectment. *Stone Mtn. Memorial Ass'n v. Bell, 223 S.E.2d 716 (Ga. 1976).*

Where possession was commenced while fifteen-year statute was in force, fifteen-year statute would apply over later ten-year statute. *Corrington v. McNeil, 396 N.Y.S.2d 286 (1948).*

(n3)Footnote 521. *Latta v. Clifford, 47 F. 614 (Colo. 1891); Stoltz v. Doering, 112 Ill. 234 (1885).*

(n4)Footnote 522. *See* William Edward Taylor, Titles to Land by Adverse Possession, *20 Iowa L. Rev. 551 (1935).* Where no color or muniment of title, the full period must run for prescription. *Pyron v. Colbert, 328 S.W.2d 825 (Tenn. App. 1959).*

(n5)Footnote 523. *Sheftel v. Lebel, 689 N.E.2d 500 (Mass. App. 1998)* (Declaratory judgment action to prevent nearby landowner from extending an express easement); *Lebel v. Nelson, 560 N.E.2d 135 (Mass. 1990);* Blumer v. Iowa R. R. Land Co., 105 N.W.342 (Iowa 1905), aff'd, *Iowa R. R. Land Co. v. Blumer, 206 U. S. 482 (1907); Jackson v. Andrews, 7 Wend. 152 (N.Y. 1831);* Munshower v. Patton, 10 Serg. & Rawle 334 (Pa. 1823); *Keaton v. Thomasson, 32 Tenn. (2 Swan) 138 (1852).*

(n6)Footnote 524. *Huebner v. Kuberski, 387 N.W.2d 144 (Iowa 1986)* (claimant did not assert rights over disputed land in beginning); Salt Lake Inv. Co. v. Fox, 90 P.564 (Utah 1907).

(n7)Footnote 525. *Monaghan v. Wagner, 487 So. 2d 815 (Miss. 1986); McKnight v. Basilides, 143 P.2d 307 (Wash. 1943); Harris v. Mandeville, 24 S.E.2d 23 (Ga. 1943).*

Benedict, 165 P.2d 561 (Wyo. 1946).*

"The question is not, what did the out-going occupant intend, but, what did he do? Did he keep his flag flying, and present a hostile front of adverse pretensions? An adverse possession ought to be such as to challenge the right of all the world; but when an occupant evacuates the place and suffers it to go to wreck, he hauls down his colors, and his challenge is withdrawn. " *Stephens v. Leach, 19 Pa. 262 (1853).*

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.15

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.15 Necessity of Good Faith.

[Go To Supp]

There are two completely divergent views on the question of whether adverse possession must be taken and maintained under a claim of right made in good faith. n606 One line of cases requires a showing of good faith. n607 The other line (majority rule) does not require good faith where there has been actual possession, n608 but applies good faith only to constructive possession. n609 There is likewise a question as to whether good faith is an element of color of title. Some courts require that color of title be taken in good faith, n610 others do not. n611 Adverse possession may be acquired though possession is obtained through fraud. n612 Even where the possession is constructive, there are cases denying the necessity of good faith in the absence of a statute requiring it. n613 The weight of authority seems to be that, where the claimant actually occupies the land, good faith on the claimant's part is not required in order that the holding may ripen into a title. n614 Where required, "good faith" merely means that a person honestly believes to have acquired a good title regardless of knowledge and mental capacity, n615 and it exists wherever possession is taken in belief that such taking is rightful. n616 Knowledge on the part of the claimant that the title was defective, or even when one has knowledge of another claim under a different title, n617 will not impeach good faith, n618 for one will speculate in the purchase of land where one knows that there are imperfections and irregularities in the chain of title. If a claimant knows a title is worthless, then all trace of good faith is lacking and there is no color of title. n619 When one claims adversely, it is not necessary for one to show that one went into possession in good faith, but the burden of showing fraud is upon the opposite party. n620 If possession is commenced in good faith, subsequent knowledge of outstanding rights or subsequent possession, even if considered to be bad faith, does not prevent the establishment of title by adverse possession. n621 While, according to some adverse possession must not have arisen in fraud, direct evidence of bona fides is not required, and a presumption of good faith arises from adverse possession. n622 It has been held that an adverse possessor holding under "the expectancy of inheritance" did not have the "good faith" necessary to be holding under a claim of right n623 or for invoking a betterment statute so as to recover for improvements on ouster. n624

An occupying claimant is not liable for rent until after refusing a demand for rent. n625

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.16

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.16 What Property Can Be Acquired by Adverse Possession.

[Go To Supp]

Adverse possession involves the acquisition of title to corporeal or possessory interest of land initially owned by another. Prescription concerns the acquisition of non-possessory interests and incorporeal hereditaments in another's land without affecting the title thereto. The origin, requisites and effects of adverse possession and prescription differ widely. The title to land may be obtained by adverse possession without regard to whether rights incidental to such title could be acquired independently by prescription or otherwise. n626 Land is subject to adverse possession regardless of how it was subdivided. n627 On the other hand, rights and interests in lands may be acquired by prescription without regard to the ownership of the fee to the land. n628 Thus easements, water rights, and the like, may be created or acquired by adverse use and enjoyment. n629 Easements may be lost by adverse possession. n630 An adverse claimant may establish a prescriptive right to use water intermittently and for part of the irrigation season only. If a right of this character is insisted upon and maintained without interruption, the prescriptive right arises. n631 The right to divert water from foreign watersheds may be acquired by adverse possession. n632 It is clear that wherever a portion of the surface or of the subsoil can be severed from the remainder, such portion is subject to adverse possession. n633 Where title to the shore is obtained by adverse possession, title is obtained to accretions though the accretions have existed only for a period of time short of the statutory period. n634

After the severance of the mineral estate from the surface estate, the owner of the mineral rights does not lose the same by any length of surface possession by non-user, that is the owner of the surface does not acquire title by the statute of limitations to the minerals by exclusive and continued occupancy and enjoyment of only the surface. n635 But where the mineral rights have not been severed from the surface rights, adverse possession of the surface will perfect valid title to both surface and mineral rights. n636 The title to the surface estate may be acquired by adverse possession where the original owner of the entire estate has conducted such mining operations thereon as amount to a severance of the minerals. n637 Title to minerals underlying the surface is gained by adverse possession of the surface n638 unless the title to the minerals has been severed from the surface. n639 And title to minerals alone may be obtained by adverse possession of the minerals themselves. n640 But where the possession is limited to the surface, title to the severed mineral estate does not pass by adverse possession. n641 It has been held, however, that severance after the start of

adverse possession will not stop the adverse possessor of the surface from gaining title to the minerals. n642 When title to minerals has been severed from the title to the surface an adverse possession of the surface arising after such severance does not affect title to the minerals. n643 However, where there has been a mineral severance, the owner of the surface can by working the minerals acquire title thereto through the doctrine of constructive possession. n644 If the possession commenced before the severance the weight of authority permits it to continue after severance even as against the minerals. n645 It is also held that title to a building may be acquired by adverse possession, although the title to the supporting land is in another. n646

There is a divergence of authority as to whether title by adverse possession can be obtained by encroachment such as overhanging structures. n647 But an easement may arise by such adverse use. n648

It has even been held that title to a burial lot with the rights in cemetery aisles or lanes may be acquired by adverse possession, and, conversely, may be lost by entry and continuous possession for the required statutory period; n649 but where bodies are buried in a cemetery lot through mistake as to the true boundary line, no adverse claim arises. n650

There is controversy as to whether the claim of right requisite to adverse possession can be less than a claim of a fee simple absolute. It has been held that title by adverse possession may be acquired to the lands of a married woman, n651 or to the right of dower of a widow, n652 and title to land intended to be used for church purposes can be acquired by adverse possession. n653 Under certain circumstances recordation of deed and possession of the property can give possessor title by adverse possession as against tenant in common. n654 Under some authorities title can be gained, as against a railroad, by adverse possession for the statutory period of limitation. n655 However, the adverse user of a railway right-of-way must be inconsistent with the use and enjoyment of the easement by the railway company. n656 In those states where no controlling statute intervenes, it is generally held that such parts of a railroad right-of-way as are acquired by private grant, purchase, gift, condemnation, or prescription, and are not enclosed or covered by the tracks of the railroad company and its structures, may be acquired against the railroad by adverse possession. n657 Other cases adhere to the rule that since a railroad right-of-way is devoted to a public use the title of the railroad company cannot be divested by adverse possession. n658

New York has firmly held that a private party can acquire title to the bed of a navigable stream by adverse possession against the state, subject to the state's right to regulate the use of the water for navigation, upon the theory that there was no interference with a public use. n659

Title by adverse possession may be acquired to lands held in trust, even where the adverse possessor conveyed the property to others in trust prior to adverse possession. n660 But at common law, as against the public, no right can be created by mere prescription or adverse possession. n661

There is a position that adverse possession will run in favor of the sovereign if a cause of action will be against it in favor of the owner. n662 The constitutional provision that prohibits taking property without paying just compensation does not bar the state from acquiring title by adverse possession. n663 A governmental subdivision may acquire title by adverse possession for the benefit of the public. n664

Where there is an adverse possession as to a trustee, and there is no fraud or concealment, and the *cestui que trust* is under no disability, the possession has been regarded as adverse both to the trustee and to the *cestui que trust*. n665 The same rule has been applied even where the *cestui que trust* is under a disability if the trustee holds title. n666

Adverse possession carries title to all of the land occupied, regardless of whether the titleholder had actual record title thereto. n667 Record title means only a title reflected in the public records, such as by deed, devise, certificate of heirship or court order. It is not necessarily the true title.

Adverse possession is not applicable to Indian lands held in trust by the state. n668 Adverse possession rules also apply

to personal property, n669 and are often at issue when owners seek to recover stolen artworks. n670

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.17

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.17 Who May Acquire Title by Adverse Possession.

[Go To Supp]

As a general rule, title by adverse possession may be acquired by every class and description of persons, natural or artificial, n671 who are otherwise legally capable of taking title to land. n672 Thus, title by adverse possession may be acquired by the nation, n673 state, n674 or municipality. n675 A private corporation may acquire title by adverse possession to the same extent as an individual. n676 One who has no capacity to take title by deed may or may not be able to acquire title by adverse possession. n677

In the context of border disputes, states may acquire title by prescription and acquiescence against another state. n678 But the state cannot acquire title by prescription as against the federal government. n679 Under one doctrine, any division or instrumentality of the sovereign can acquire title by adverse possession although it has the right of eminent domain. n680

Corporations having power to take under eminent domain have been held, in some cases, entitled to acquire real estate by adverse possession; n681 while in other cases this right has been denied. n682 Unincorporated associations such as religious groups n683 or graveyards n684 may mature title to realty by adverse possession. n685 But where an unincorporated association cannot hold by grant it cannot acquire by adverse possession. n686 Title by adverse possession may also be acquired by foreign corporations, n687 aliens, n688 non-residents, n689 infants, n690 and married women. n691 As between parties sustaining parental and filial relations, the possession of the land of the one by the other is presumed to be permissive and not adverse, and adverse possession cannot ordinarily be predicated on the possession of one as against the other in such cases. To make such possession adverse, there must be some open assertion of actual title, other than mere possession, and knowledge thereof brought home to the owner of the land. n692 Adverse possession may be asserted either defensively or aggressively. n693

A rule is sometimes laid down that to hold estates in land, the statute of limitations may be invoked defensively only by a defendant in actual possession of the land. n694 Possession under a title bond or a deed is not adverse. n695 Railroads can acquire fee title by adverse possession n696 but ordinary right-of-way use creates an easement by prescription only.

n697 A mortgagor in possession may begin adverse possession as against the purchaser at a foreclosure sale by hostile acts. n698 Possession by the grantee of a security deed holds subject to the rights of, and not adversely to, the debtor. n699 A mortgagee in possession after default may hold adversely. n700 But a mortgagee to claim adversely against a mortgagor must first distinctly disavow and repudiate the mortgage relationship and notice thereof must be brought home to the mortgagor. n701 Where the possessor made payments to the holder of the security deed, one did not have adverse possession against such a holder. n702 One who goes into possession under a parol gift of land, and who holds possession adversely, acquires title to the land. n703 Title by adverse possession may be acquired by a person through the adverse possession of another who receives and holds possession adversely in the name of the former and under the former's authority. n704 The mere passage of time abates the rule that a grantor who remains in possession is holding subservient to the grantee. n705 Where the possessor has sold property and remains in possession by the sufferance of the vendee such possession is not adverse unless the possessor can establish the fact that possession was held as owner. n706 A grantor remaining in possession after the deed may by notice of adverse claim to the grantee start the running of the period. n707 But generally the grantors continued possession is presumed permissive. n708 The cases are not in accord as to the extent to which religious groups can acquire title by adverse possession. Certainly they can do so if incorporated. n709 Some cases hold that they can do so generally. n710 Others deny the right of the trustees to acquire by adverse possession. n711

When possession is obtained in fiduciary capacity as agent, the unauthorized issuance of deed to the fiduciary by the principal's wife cannot transform the agent into an adverse possessor. n712

A *cestui que trust* in possession is a tenant at will of the trustee and until notice of hostility is brought home to the trustee such possession is not adverse to the trust. n713

A cotenant cannot hold adversely to the other cotenants unless the single cotenant brings home to the the others n714 or at least gives adequate constructive notice of the disclaimer of their interest. n715

Adverse possession of adjoining land by a cotenant in possession inures to the benefit of the other cotenants. n716 Nor can a cotenant's conveyance of a cotenancy give the grantee an adverse claim. n717 Where the tenant in common purports to deed the entire interest and the grantee does not record the deed but goes into possession, the cases are divided as to when adverse possession begins to run. n718

It is axiomatic that those with future interests are not subject to adverse possession against their future interests n719 until such persons have immediate right to possession. n720 Prior to such time, the owner of the future interest has no right to possession and, therefore, no cause of action. n721 However, if the period began to run before the future interest was created, it will continue to run, and thus the running of the period can bar the future interest before it becomes possessory. n722

CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions § 87.18

AUTHOR: Professor Olan B. Lowrey School of Law Temple University Portion of this Chapter are based on Ch. 38 of George W. Thompson, Commentaries on the Law of Real Property (John S. Grimes, ed. reprinted 1979).

§ 87.18 Against Whom Adverse Possession Runs.

[Go To Supp]

As a rule adverse possession will run as against any person except those specifically exempted by statute. n723 There is a general principle of law that a statute of limitations does not begin to run against a person until a right of action accrues to the person. If, therefore, the doctrine of adverse possession is, in principle, a punishment to the owner for negligence, adverse possession should not begin to run against the holder of a future interest until those rights vest in possession as well as interest. At least it should not run until the law gives the future interest holder a right to protect it. If, however, in reliance upon the concept of disseisin n724 title passes as a bonus to the disseisor, n725 or as the early statutes indicate, n726 to put an end to stale claims as a matter of public policy, then emphasis should be on the length of possession not on the beginning of the right of action. The great weight of the decisions is, however, that a statute of limitations does not begin to run against any person until a right of action has accrued to that person. Hence, no disseisin on the part of anyone can affect a reversioner or remainderman until the termination of the intermediate estate. n727 The general rule is that adverse possession does not run against the holder of future interest until that holder has an immediate right of possession. n728

An owner cannot generally be barred while the owner has no right to possession or capacity to sue, or where for any other reason the owner is prevented by law from asserting the owner's rights, hence, the rule that the statute will not run against remaindermen during the existence of the precedent estate. n729 But where a life tenant is stranger to the deed under which another party claims, the rule that a life tenant cannot hold adversely to the remainderman is not applicable. n730 A life tenant does not hold adversely to the remainderman if the possession is consistent with the life interest. n731 The grantee of a life tenant does not ordinarily hold adversely to the remainderman. n732 There are some decisions holding that the adverse possessor holds adversely to the owner of the future interest n733 as well as the holder of the immediate estate particularly where the law gives the holder of the future interest a right of protection while the immediate estate is outstanding. n734 A few statutes purport to give absolute title by adverse possession as against the world. n735

There are generally two positions on the situation where the life tenant acquires an outstanding interest in or claim

against the property. One is that the life tenant holds the interest so acquired in trust for the remainderman but has a lien for the cost of acquisition. n736 The other is that the life tenant acquires title to the outstanding interest or lien but has a duty to afford the remainderman the right to acquire the interest by contribution. n737

An adverse possessor holds title as against a bona fide purchaser from the true title holder. n738

The holder of the immediate estate ordinarily does not hold adversely to the owner of the future interest. n739 The immediate holder may do so, however, by a proper claim of hostility coupled with adequate notice to the holder of the future interest. On the ground that possibilities of reverter and rights of reentry are mere expectancies and not vested interests, a statute terminating their existence after a stated period has been held constitutional. n740

Under what is known as the "holdover rule" the tenant holding over on a determinable fee does not hold adverse to the tenure of the possibility of reverter even after the fee determines, unless the tenancy has been repudiated and notice of such repudiation has been brought home to the true titleholder. n741

It has been held, however, that the holdover rule is not applicable with respect to easements. n742

The possession of the life tenant and of any person claiming under the life tenant ordinarily does not become adverse as against the remainderman until the cessation of the life estate. n743 A deed by a life tenant together with a recorded affidavit of fee simple title is not notice of claim of adverse possession to remainderman. n744 A widow who purchases property at a tax sale for taxes which accrued prior to the assignment to her of dower in the land claimed may acquire title by adverse possession to such land as against the remaindermen. n745 Where the life tenant and remainderman are respectively parent and child, the possession of the child as remainderman is not considered as adverse to the mother who is the owner of the life estate in the property. n746 A life tenant may, however, set up a claim hostile to the future interest and, if all the elements of adverse possession are accomplished, acquire a fee. n747

Possession of a life tenant becomes adverse to the remainderman when knowledge is conveyed that the possessor is claiming the entire title. n748 Adverse possession runs against a *cestui que* trust n749 and, unless barred by statute, against incompetents. n750 It does not appear that at common law the disability of a disseisee was taken into consideration so far as the exercise of the right of entry was concerned. n751 Nor did the common law writers mention any such exception to the early rule barring writs where possession had been held since the memory of man runneth not to the contrary. The first statute n752 and most of the succeeding ones barring writs of right and of possession contained certain exceptions in favor of those under stated disabilities, and this theory has found expression under the modern statutes. There is some authority that adverse possession will not run against any of the title holders if one of them is under disability. n753

It is commonly said that the statutes never run against a person under a disability. This is not accurate. Rather, title does not ripen against a person under a disability at the time the possession became adverse until after the disability is removed. n754 But it does run and ripen if the disability commences after the possession has become adverse. n755 Thus possession for the statutory period of limitation has been held to yield no title against infants where no one was charged with the duty of bringing action, even though such possession be under color of title. n756 There is authority for the point where the statute barring actions for the recovery of real property makes no exception in favor of persons under disability; the fact that the owner of the land was under disability at the time the adverse possession commenced does not suspend the running of the statute in the person's favor during the period of disability. n757 Some statutes contain specific exceptions in favor of stated disabilities. n758 Other states have reached the same result by judicial construction. n759 It has been said, perhaps inaccurately, that adverse possession presumes a grant and when no power to grant exists it follows that title by adverse possession cannot be acquired against persons under legal disability and unable to resist the alleged adverse claim if it is not well founded. This rule has been applied in the case of infants, insane persons, married women, and reversioners. n760 The exact disabilities which are favored by this exception vary from state to state. All favor infancy n761 and insanity. n762 But the approaches differ. Some treat disability in the case

of adverse possession as in the case of contracts and require action to be brought within a stated time after attaining the adult status. n763 Others do not start the period to run until after the infant becomes an adult. n764 The same variance is noted in the case of insanity. n765 There is also the problem of the retrospective effect of an adjudication of unsoundness of mind. n766 It has also been held in some states that, as against a married woman, title by adverse possession cannot be acquired. n767 A few states consider imprisonment n768 and military service to be a disability. n769 The courts are divided as to whether the running of adverse possession statutes are tolled by absence of the owner from the state. n770 Nor can disabilities be locked together n771 whether they exist in the same person n772 or in different title holders. The courts do recognize a fiduciary relationship, of a sort, between cotenants. If one cotenant acquires an outstanding interest in or claim against the property, the cotenant acquires it in the name of all. Hence adverse possession does not ordinarily operate in the case of cotenancies, as between cotenants. n773 Mere possession by one tenant in common for any period of time, however long, is not accepted as evidence of a release from the cotenants without additional evidence, giving to that possession a hostile character. n774 The possession of one joint owner or cotenant is regarded in law as the possession of all. n775 It is possible, however, for one cotenant to voluntarily break this fiduciary relationship and establish a possession adverse to the others. That cotenant must do so, however, by overt act and upon proper notice. n776 One cotenant can by a claim of exclusive ownership such as being a "sole heir" start the running of the period of adverse possession in favor of himself. n777

Strict proof is required as to the hostility of one cotenant's possession as against the others. n778

A grantee from a cotenant could acquire titles against other cotenants by adverse possession. n779 In order for one cotenant to acquire title to the common estate by exclusive possession of it, such possession must be held in known hostility to the cotenants and for the statutory period. n780 In order for the possession of the disseisor to be adverse to the cotenants they must have a knowledge of their rights and of the cotenant's assertion of adverse title. n781 In order to create an ouster as against the non-occupying cotenant or cotenants, the occupying cotenant must bring notice, in some form, to the other or others whom -- either by express notification, or from the notorious character of the occupancy -- before the possession will be adverse as against the other or others. n782

Cases are not in accord as to whether one cotenant who takes an outstanding title from a third party and records the deed thereby gives notice to the other cotenants of the claim of adverse possession of the property. n783

The cotenant against whom the adverse possession is asserted must have either actual notice of it or there must be such outward acts of exclusive ownership of an unequivocal character as to impart notice. n784 Acts of exclusive ownership by one cotenant, such as the open sale, conveyance, and delivery of possession thereunder of the whole estate, amount to a complete ouster of the other cotenant and unless the other cotenant or cotenants bring suit within the prescriptive period thereafter their right of recovery will be barred. n785 One cotenant's ouster must be so openly and notoriously hostile as to give notice to any other cotenants. n786 A quitclaim deed from a cotenant which described the entire property, and words to convey it, was sufficient to fulfill title requirement of adverse possession. n787

A quitclaim deed by one tenant in common, as to her interest, does not constitute color of title in the grantee as against the other tenant. n788 But a deed of a tenant in common purporting to convey the entire fee causes a claim of right on which to base adverse possession. n789 A mortgagee in possession after foreclosure of mortgage of one cotenant's interest does not hold adversely to the other cotenants. n790 Children may adversely possess against parents, and parents against children. n791

If credence is to be given to the theory enunciated by most of the common-law writers that the king acquired ultimate title to all the land of England, feudal principles would prevent the subject as tenant from holding adversely to the sovereign as the overlord. This principle was adhered to by the common law, whatever may have been its historical origin. In America the rule is universally followed that the statute of limitations does not operate against the United States acting in its public capacity. n792

The state statute of limitations cannot bar action by the federal government. This can only be done by act of Congress. n793

In the absence of a statute to the contrary the same is true in regard to the state, n794 and a subdivision thereof, n795 but a grant may sometimes be presumed from a state by reason of long continued possession. n796

It has been held that statutes of limitation for trespass apply to the state, n797 even if doctrine of adverse possession does not. n798 The state cannot lose by prescription that which it cannot constitutionally alienate. n799 Even where adverse possession cannot run against the state, the government may be estopped to deny the possessor's title. n800

Parties purchasing part of a platted area, in 1936 and 1939 described by metes and bounds in reference to a memo of the plat area, who enclosed property with a fence, acquired a right to street easements by adverse possession and the property purchasers cannot require that the fence be torn down and the street easements be reestablished. n801

In Texas, the doctrine of adverse possession is bottomed on the presumption of a lost grant. n802 A state may not generally acquire title from the United States by adverse possession. In any event, the period does not begin to run until after a patent is obtained from the government. n803 Title by adverse possession cannot be acquired against the governmental interests of the state, which it holds in trust for the public, but the rule may be otherwise where the state or a subdivision thereof holds in its proprietary character. n804 A statute may also make the state subject to the statute of limitations. n805 In some states, limitations run in favor of an adverse claimant against a municipality, n806 especially when the land in question is held by such municipality as private owner. n807

The public can acquire title by adverse possession. n808 Where the statutes are expressly made to apply to land held by the state, the usual construction is that they apply only to lands held in a private or proprietary manner, and not to those dedicated to a public use. n809 There is some conflict of authority, however, with reference to lands held by a municipality for a public purpose, some courts holding that such lands may be acquired by adverse possession; n810 but the weight of authority based either upon the common law or specific statutes holds that lands held by a municipality or quasi-municipal corporation as trustees of the public rights cannot be acquired by adverse possession. n811 In some states adverse possession will run against municipalities and school districts. n812 When property of the state or city is inalienable, title thereto cannot be obtained by adverse possession. n813 The United States and those claiming through it may claim adversely to a state, n814 and public lands may be acquired by adverse possession as against all persons except the government. n815

Lloyd, 453 S.W.2d 570 (Ky. 1970); Daley v. Daley, 14 N.E.2d 113 (Mass. 1938); Bentley v. Cam, 106 N.W.2d 528 (Mich. 1960); Klorner v. Nunn, 339 S.W.2d 838 (Mo. 1960); Braue v. Fleck, 127 A.2d 1 (N. J. 1956); Lotspeich v. Dean, 211 P.2d 979 (N. M. 1949); Heath v. Turner, 308 S.E.2d 244 (N.C. 1983); Miller v. Leaird, 413 S.E.2d 841 (S.C. 1992); Edwards v. Puckett, 268 S.W.2d 582 (Tenn. 1954);* cf. *West v. Moore, 246 S.W.2d 74 (Tenn. 1952)* (life tenant may hold adversely to devisor's remaindermen); *Rutledge v. Rutledge, 132 S.E.2d 469 (Va. 1963).* Contra *Mullan v. Bank of Pasco County, 133 So. 323 (Fla. 1931)* (possession adverse to remainderman where remainderman knew of such possession); *Cessna v. Carroll, 290 P.2d 803, 58 A.L. R. 2D 291 (Kan. 1956)* (life tenant may hold adversely to remainderman with notice); *Fleming v. Brunner, 166 A.2d 901 (Md. 1961)* (possession adverse to remainderman where remainderman knew of such possession); *Unick v. St. Joseph Loan & Trust Co., 21 N.W.2d 752 (Neb. 1946)* (life tenant may hold adversely to remainderman with notice); *Jones v. Bilderback, 290 S.W.2d 580 (Tex. Civ. App. 1956)* (same).

In the case of *Pooler v. Hyne, 213 F. 154 (7th Cir. 1949),* the court held that under the Indiana law, where a life tenant had conveyed by deed to a third party, adverse possession did not begin to run in favor of the third party until the life tenant's actions were brought home to the remaindermen. The court held in favor of the vendee, however, on the ground of laches of the remaindermen. But see *Meyers v. Kissner, 594 N.E.2d 336 (Ill. 1992)* (laches generally will not apply short of limitations period); *Chadek v. Alberhasky, 111 N.W.2d 297 (Iowa 1961)* (same).

Sale of property for unpaid taxes during life of life tenant does not start adverse possession running against remainderman in favor of the purchaser at the tax sale before the death of the life tenant. *Stamper v. Avant, 104 S.E.2d 565 (S.C. 1958).*

Possession by life estate is not adverse to remainderman. *Martin v. Walters, 490 P.2d 138 (Wash. 1971).*

(n6)Footnote 728. *Bradford v. Federal Land Bank of New Orleans, 338 So. 2d 388 (Miss. 1976); Haynes v. Strange, 337 S.W.2d 661 (Ark. 1960); Metropolitan Park Dist. of Tacoma v. Rigney, 399 P.2d 516 (Wash. 1965)* (possession by grantee of fee subject to condition subsequent not adverse to possessory estate of grantor until grantor declares forfeiture); *Rutledge v. Rutledge, 132 S.E.2d 469 (Va. 1963)* (after termination of the life estate, possession by grantee from life tenant holding under deed conveying the fee simple is adverse to remaindermen).

(n7)Footnote 729. *Willhite v. Berry, 83 N.E. 852 (Ill. 1908);* Gohlson v. Desha, 107 S.W.330 (Ky. 1908).

In *Superior Oil Corp. v. Alcorn, 47 S.W.2d 973 (Ky. 1931),* it was contended that the possession by the claimant had been adverse to the remainderman. In discussing a Kentucky statute, the court said:

> One ... might think it strange that the 30-year statute (section 2508) did not apply, as that statute expressly says it applies to all disabilities, but the answer to that is that being a remainderman is not a disability.

Disseisin at common law barred not only the tenant holding a fee upon condition subsequent, but also the right of reentry. LITTLETON, L. 3, ch. 6, § 392.

Sterling v. Sterling, 128 A.2d 277 (Md. 1957) (no adverse possession where state was powerless to grant land under navigable waters).

Rptr. 716 (1968); Application of Kelley, 445 P.2d 538 (Haw. 1968).* Adverse possession will not run against the sovereign, regardless of whether the property is held for proprietary or governmental purposes. *Grand Lodge of Ga., I. O. O. F. v. City of Thomasville, 172 S.E.2d 612 (Ga. 1970).* See Adverse Possession of Public Land: A Look at the Recommendations of the Public Land Law Review Commission, 1971 L. & SOC. ORDER 131. No loss of public right by adverse use. *Williams v. Babcock, 368 A.2d 1166 (N. H. 1976).* Lands held by municipality in a proprietary as distinguished from governmental capacity can be acquired by adverse possession. *Lewis v. Village of Lyons, 389 N.Y.S.2d 674 (1976).*

Bell v. State Dep't of Highways and Public Transp., 945 S.W.2d 292 (Tex. App. 1997) (State built highway on property claimed by claimant; claim denied because of sovereign immunity where the state claimed title by lost deed).

(n71)Footnote 793. *Rogers v. South Holding Corporation, 656 N.Y.S.2d 169 (1997)* (adverse possession can not be asserted against lake bottom below low water mark of navigable lake, because it belongs to the state); *Lysicki v. Montour School District, 701 A.2d 630 (Pa. Comm. 1997)* (no adverse possession against a school district); *Engel v. United States, 258 F. 2d 50 (6th Cir. 1958).*

(n72)Footnote 794. *Harvey v. Holles, 160 F. 531 (C. C. Iowa 1908); Lovell v. Dulac Cypress Co., Ltd., 117 F. 2d 1 (5th Cir. 1941),* cert. denied, *314 U. S. 672 (1941),* reh'g denied, *314 U. S. 713 (1941); Engle v. United States, 258 F. 2d*

50 (6th Cir. 1958); Grissom v. State for use of Ala. College, 48 So. 2d 197 (Ala. 1950); Pearce v. Cone, 2 So. 2d 360 (Fla. 1941); Elbe v. State ex rel. LeaveN.W.orth County Att'y, 93 P.803 (Kan. 1908); People v. *Baldwin, 188* N.Y.S. 542 (1921), aff'd, *135 N.E. 964 (N.Y. 1922); Hoffman v. Pittsburgh, 75 A.2d 649 (Pa. 1950); Brown v. Derway, 192 A. 16 (Vt. 1937); Virginia Hot Springs Co. v. Lowman, 101 S.E. 326 (Va. 1919); State v. Scott, 154 P. 165 (Wash. 1916).* Rule that no one can acquire title by adverse possession against the state does not apply to the *United States. California v. United States, 132 F. Supp. 208 (Ct. Cl. 1955); Wyatt v. Wycough, 341 S.W.2d 18 (Ark. 1960); Waterman v. Smith, 94 So. 2d 186 (Fla. 1957); Lovey v. Escambia County, 141 So. 2d 761 (Fla. App. 1962),* cert. denied, *147 So. 2d 530 (Fla. 1962); People v. Sys. Props., Inc., 141 N.E.2d 429 (N.Y. 1957); Frankfater v. State, 235 N.Y.S.2d 476 (1962); Corbin v. Cherokee Realty Co., 91 S.E.2d 542 (S.C. 1956); Commercial Waterway Dist. No. 1 v. Permanente Cement Co., 379 P.2d 178 (Wash. 1963).* In some states, by statute, the statute of limitations as to reconveyances of realty applies to the state but this does not apply to the federal government. *Engel v. United States, 258 F. 2d 50 (6th Cir. 1958).* Neither adverse possession nor estoppel runs against the *United States. United States v. Springer, 321 F. Supp 625 (C. D. Cal. 1970),* aff'd, *478 F. 2d 43 (9th Cir. 1972).*

(n73)Footnote 795. *Jackson v. Nacogdoches County, 188 S.W.2d 237 (Tex. Civ. App. 1945); Bowden-Gazzam Co. v. Kent, 154 P.2d 292 (Wash. 1944). Johnston v. New Orleans, 144 So. 2d 901 (La. App. 1962)* (once there has been a dedication, title to the property dedicated cannot be obtained by adverse possession); *Corbin v. Cherokee Realty Co., 91 S.E.2d 542 (S.C. 1956)* (adverse possession will not lie against a municipality); *Commercial Waterway Dist. No. 1 v. Permanente Cement Co., 379 P.2d 178 (Wash. 1963). See* Richard W. Miller, Real Property -- Nullum Tempus Occurrit Regi, 24 U. K. C. L. REV. 187 (1955). Property owned by municipality and reserved for public use is not subject to adverse possession. *Resnick v. Fort Madison, 145 N.W.2d 11 (Iowa 1966).* No adverse possession against the state. *Pretzer v. Lassen, 479 P.2d 430 (Ariz. App. 1971); State v. Zimring, 479 P.2d 202 (Haw. 1970); Moran v. Roaring River Dev. Co., 461 S.W.2d 822 (Mo. 1970).* No adverse possession against the state. *McBryde Sugar Co., Ltd. v. Robinson, 504 P.2d 1330 (Haw. 1973),* aff'd on reh'g, *517 P.2d 1330 (Haw. 1973),* cert. denied, *McBryde Sugar Co., Ltd. v. Hawaii, 417 U. S. 962 (1974),* and by *Robinson v. Hawaii, 417 U.S. 976 (1974),* and by *Albardo v. Hawaii, 417 U. S. 976 (1974).* No adverse possession as against sovereign. *Roe v. Newman, 509 P.2d 844 (Mont. 1973).* Holding that the state's fee ownership in tidelands cannot be lost through adverse possession or prescription. *O'Neill v. State Highway Dep't, 235 A.2d 1 (N. J. 1967).*

Adverse possession does not run against the state. *State v. Case, 356 N.Y.S.2d 717 (1974).* No adverse possession against the sovereign. *Romart Properties, Inc. v. City of New Rochelle, 324 N.Y.S. 2d 277 (1971),* aff'd, *338 N.Y.S.2d 247 (1972).* Limitation of actions does not run against the sovereign, nullum tempus occurrit regi. *State v. Berry, 220 N.E.2d 671 (Ohio App. 1966).* Adverse possession does not run against the government as to land taken for nonpayment of taxes. *Torch v. Constantino, 323 A.2d 278 (Pa. Super. 1974).* Holding that adverse possession plus other circumstances which would make it inequitable not to favor private rights over public rights will protect the private party. *City of Myrtle Beach v. Parker, 197 S.E.2d 290 (S.C. 1973).* Public right is not lost by adverse use. *Williams v. Babcock, 368 A.2d 1166 (N. H. 1976). See* Richard W. Miller, Real Property -- Nullum Tempus Occurrit Regi, 24 U. K. C. L. REV. 187 (1955).

(n74)Footnote 796. *Bullard v. Barksdale, 33 N.C. 461 (1850).* Title may not be acquired by adverse possession to a public road against the county. *Plischke v. Jameson, 146 N.W.2d 223,* modified, *152 N.W.2d 119 (Neb. 1967),* and modified, *153 N.W.2d 359 (Neb. 1967).*

Buckner v. Castro, 306 S.W.3d 655 (Missouri 2010) (prescriptive easement interest was extinguished by property owner's adverse possession of land)

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions Supp. to § 87.04

Supp. to § 87.04 "Possession."

Replace the chapter synopsis with:
[Go To Main]

Add:

Snell & Wilmer, LLP v. Fegen, 3 P.3d 1172 (Ariz..App. 2000) .

Add:

Cook v. Robinson, 924 So. 2d 592 (Miss. App. 2006) (adverse possession acquired only over those lands upon which the claimant planted and cut timber); *Henson v. Tucker, 630 S.E.2d 64 (Ga. App. 2006)* (survey by claimant did not constitute adverse possession). However, a survey by the owner could interrupt adverse possession. *See* Annotation, Owner's surveying of land as entry thereon tolling running of statute of limitations for purposes of adverse possession, *76 A.L.R.3d 1202* .

Stump v. Whibco, 314 N.J. Super. 560, 715 A.2d 1006 (N.J. Super. 1998) (Where the facts show an open, obvious and continuous possession an ordinary person would be put on notice that the land is in possession of another and a presumption is created that the use is adverse. "The foundation of so-called title by adverse possession is the failure of the true owner to commence an action for the recovery of land within the period designated within the statute" where there is knowledge or a presumption of such owners' knowledge of the adverse possession).

Add:

Brinner v. Huckaba, 957 S.W.2d 491 (Mo. App. 1997) (Landowner did not establish continuity of adverse possession for 10-year period by tacking where previous occupants testified they had not claimed adverse possession); *Guenther v. Allen, 268 A.D.2d 934, 702 N.Y.S.2d 678 (2000)* (Thirty years of annual vacation on three hundred and sixty acres of deeded forest land from prior owner, erection of barrier to stop trespassers from using old logging roads, posting of property, attempt to repair old barn and payment of $23,000.00 in taxes established adequate possession to prevail by adverse possession against a holder of a tax deed one year earlier than claimants' deed. Nature of property is critical to issue of what constitutes adequate possession).

Add:

Devins v. Borough of Bogota, 592 A.2d 199 (N.J. 1991) (Judgment in lower court decision cite at page 103, note 178 reversed by above decision);

Add:

Opinion in Rice v. Hill City Stock Yards at the noted page and note was withdrawn and *Superseded on Denial of Rehearing by Rice v. Hill City Stock Yards Co., 826 P.2d 1288 (Idaho 1992)* ; *Ewald v. Hubbard, 737 So. 2d 858 (La. App. 1999)* ; *Opinion subject to revision.* (Possession established by growing corn and sugar cane, raising livestock, maintaining fence and pasturing horses and intent to possess is presumed where such possession is not in the name of another).

Supp. To CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions Supp. to § 87.05

Supp. to § 87.05 Essential Elements of Adverse Possession.

Replace the chapter synopsis with:
[Go To Main]

Add:

Silas v. McGuire, 709 So. 2d 1272 (Ala. App. 1998) (Adverse possession began when claimants received deed to property, not when they became tenants under "unrecorded" lease-sale agreement);

Add:

Candler Holdings Ltd. I v. Watch Omega Holdings, L.P., 947 So. 2d 1231 (Fla. App. 2007) (without color of title, summary judgment affidavits are insufficient to establish possession).

Add:

Commander v. Winkler, 67 S.W.3d 265 (Tex. App. 2001) ; *Natural Gas Pipeline Co. of Am. v. Pool, 30 S.W.3d 639 (Tex. App. 2000)* .

Add:

Silipigno v. F.R. Smith & Sons, Inc., 896 N.Y.S.2d 261 (2010) (buried fuel tank did not establish open and notorious act of possession supporting adverse possession); *Wanha v. Olander, 255 Neb. 849, 587 N.W.2d 531 (Neb. 1998)* (Platting of disputed property gives notice but lack of notice by adverse claimant is not an element of adverse possession);

Add:

Teel v. Stading, 228 P.3d 1293 (Wash. 2010) (claimants had permissive use of disputed area, and therefore could not claim area through adverse possession);

Add:

Apperson v. White, 950 So. 2d 1113 (Miss. App. 2007) (good statement of all the elements required for adverse possession).

Add:

Luce v. Marble, 127 P.3d 167 (Idaho 2005) (tax payment requirement for oral claims of adverse possession); *Rocket Oil and Gas Company v. Donabar, 127 P.3d 625 (Okla. App. 2005)* (payment of ad valorem taxes on property did not constitute adverse possession, especially of the mineral interest).

Fraley v. Minger, 786 N.E.2d 288 (Ind. App. 2003) (adverse possession claimant never paid taxes and was thus precluded in establishing claim); Baumann v. Miles, Ca. 2002 (evidence showed that adverse possession claimant did not pay taxes on land claimed).

Hunter v. Robertson, 40 S.W.3d 337 (Ark. App. 2001) (payment of taxes requirement was not met when tax exempt status was granted to the landowner's predecessor in interest).

Fraley v. Minger, 786 N.E.2d 288 (Ind. App. 2003) (adverse claimants failed to prove that they had ever paid taxes on the parcel of land claimed); *Roark v. Bentley, 86 P.3d 507 (Idaho 2004)* (tax payment requirement satisfied under lot number exception).

10-87 Thompson on Real Property, Thomas Editions Supp. to § 87.06

Supp. to § 87.06 Establishment of Adverse Possession.

Replace the chapter synopsis with:
[Go To Main]

Add:

Mayerhoff v. Timenides, 2000 N.Y. App. Div. LEXIS 1199 (App. Div. 2000) (Claim of adverse possession rejected where four tenants of a third party lived at the property during the time adverse possession was claimed as part of the ten-year requisite period); *Pioneer Mill Co. v. Dow, 978 P.2d 727 (Haw. 1999)* .

Add:

Double "D" Bar "C" *Ranch v. Bell, 658 S.E.2d 635 (Ga. 2008)* (claimant failed to prove actual possession).

Add:

Dotson v. Former Shareholders of Abraham Lincoln Land and Cattle Company, Inc., 773 N.E.2d 792 (Ill. App. 2002) (erecting fence and placing sign on land was not sufficient to meet possession requirement).

Jutting v. Hendrix, 606 N.W.2d 140 (S.D. 2000) (maintaining a lawn and two trees on a disputed strip of land was enough to constitute possession).

Add:

Mastro v. Kumakichi Corporation, 951 P.2d 817 (Wash. App. 1998) (Grantor judicially estopped from asserting defense that suit would not lie for breach of title covenant until such time as an "adverse possessor" made lawful claim against the grantor's grantee); *Petrus v. The Nature Conservancy, 330 Ark. 722, 957 S.W.2d 688 (Ark. 1997)* (Court order not adequate where the land successfully claimed can not be identified from the court order); *Henderson v. Town and Country Grocers of Fredericktown, Missouri, Inc., 978 S.W.2d 850 (Mo. App. 1998)* (Cutting grass, weeds and removing snow from entire tract of land not sufficient to establish possession of entire tract, but claimant had actual possession of a portion of such tract for more than ten years, such possession was open and notorious and it was not necessary for claimant to "tack" her possession onto anyone else's to establish ownership); *Petrowsky v. Henkel, 583 N.W.2d 673 (Wis. App. 1998)* (Trial court's findings as to no interruption of possession, lack of exclusive possession, that the property was not enclosed and that the trial court improperly established the occupation line are sustained unless clearly erroneous); *Schwenker v. Mengert, 89 Wn. App. 1014 (Wash. Ct. App. 1998)* (Factual showing in support of prescriptive easement claim inadequate where both notes to the claimant and a lease reflected permissive use or just good neighborliness); *Mag Associates, Inc. v. SDR Realty, 247 A.D.2d 516, 669 N.Y.S.2d 314 (1998)* (Where under New York law a presumption of hostility had arisen because the elements of actual, open, notorious, exclusive and continuous evidence had been established by the evidence the claimant lost based on its introduction of maps raising a fact issue though the maps had not been prepared for the claimant's predecessor in interest where the title of such predecessor was relied upon); *Brennan v. Manchester Crossings, Inc., 708 A.2d 815 (Pa. 1998)* (Adverse possession established where record owners had not given permission and claimants had maintained disputed property as extension of their lawn); *Keene v. Jackson, 732 So. 2d 1138 (Fla. 1st DCA 1999)* (Establishment of adverse possession not accomplished as to any period of time).

Supp. To CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions Supp. to § 87.09

Supp. to § 87.09 Exclusive Possession.

Replace the chapter synopsis with:
[Go To Main]

Add:

Davis v. Chadwick, 55 P.3d 1267 (Wyo. 2002) (the town's use of property for public recreation did not defeat an adverse possessor's claim of continuous possession); *Warren v. Tom, 946 S.W.2d 754 (Mo. App. 1997)* (Landowners could not exercise exclusive possession over disputed strip when they did not know where their claimed boundary lay).

Add:

Ebenhoh v. Hodgman, 642 N.W.2d 104 (Minn. App. 2002) .

Add:

Conaway v. Fauller, 972 S.W.2d 442 (Mo. 1998) (Sporadic use of land in dispute by record owner did not defeat claimants' suit for title); *Madson v. TBT Ltd. Liability Co., 686 N.W.2d 85 (Neb. App. 2004)* (both parties used the

property for hunting and fishing so neighboring adverse claimant did not have exclusive use of the disputed property).

Add:

Gonzalez v. Gonzalez, 653 N.Y.S.2d 700 (1997) (Where entireties property for husband and first wife became tenancy in common property upon their divorce second wife could not establish hostility towards first wife after the husband's death and the first wife was granted partition); *Myers v. Bartholomew, 697 N.E.2d 160 (N.Y. 1998)* (Ten-year statute requiring ten years of exclusive occupancy to perfect title against a tenant in common requires a total of 20 years when there is no ouster);

Add:

Harrell v. Tilley, 119 P.3d 251 (Or. App. 2005) (trial court found mutual adverse possession between adjacent landowners claiming title to a strip of land between them; reversed on appeal).

Add:

Vaughn v. Stoenner, 581 S.E.2d 543 (Ga. 2003) (adverse possession failed when plaintiff failed to effect an actual ouster against defendant).

Thompson on Real Property, Thomas Editions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

Supp. To CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions Supp. to § 87.10

Supp. to § 87.10 Necessity of Hostility.

Replace the chapter synopsis with:
[Go To Main]

Add:

Maier v. Giske, 223 P.3d 1265 (Wash. App. 2010) (act of planting tree in wild area did not satisfy the notoriety and hostility elements required for adverse possession); *Sholl v. Anderson, 50 P.3d 1248 (Ore. App. 2002)* (adverse possession claimant did not establish hostility in claim for possession).

Add:

Sugarman v. Malone, 853 N.Y.S.2d 21 (2008) (adverse claimant of cooperative who offered to purchase the interest during the statutory period defeated the presumption of hostility).

Add:

McDaniel v. Kendrick, 688 S.E.2d 852 (S.C. 2009) (adverse possession failed for lack of hostility); *Mack v. Landry, 22*

S.W.3d 524 (Tex. App. 2000) ("Joint continuous use alone without an independent hostile act attempting to exclude all other persons, including the property owner, from using the roadway, is not sufficient to establish an easement by prescription"; *Vrazel v. Skrabanek, 725 S.W.2d 709, 711 (Tex. 1987)* (exclusivity not met when landowner and claimant both use the road)"); Estate of Seifert v. Seifert, *26 Cal. Rptr. 3d 560 (2005)* (continuous adverse possession did not occur while the adverse possession claimant owed a fiduciary to the property owner). *Jones v. Miles, 658 S.E.2d 23 (N.C. App. 2008)* (possession by adverse possession claimants was not hostile to interests of record owners).

Add:

Watkins v. Watkins, 2001 PA Super 128 (2001) (because of a familial relationship between the claimant and the record owner, the claimant's possession was not necessarily hostile); *Natural Gas Pipeline Company of America v. Pool, 30 S.W.3d 618 (Tex. App. 2000)* (lessees unable to establish adverse possession, even though they were trespassers); *Totman v. Malloy, 431 Mass. 143, 725 N.E.2d 1045 (Mass. 2000)* (no presumption exists that a close family relationship between the claimant and the record owner renders the claimant's possession permissive).

Add:

Walling v. Przybylo, 804 N.Y.S.2d 435 (2005) (adverse possessor could succeed despite knowledge that someone else held record title to the land); *Dombkowski v. Ferland, 2006 ME 24, 893 A.2d 599 (Maine 2006)* (intent is not a requirement of an adverse possession claim).

Conaway v. Fauller, 972 S.W.2d 442 (Mo. 1998) (Hostile possession established by claimants' occupation of area with intent to possess it as their own);

Add:

Greenberg v. Sutter, 257 A.D.2d 646 (N.Y. App. Div. 1999) (Requisite showing of hostility was made where there was invasion upon the owners' rights. Enmity need not be shown. Hostility can be found even if possession occurred inadvertently or by mistake);

Add:

But the mere existence of a benefit accruing to the district by virtue of the farmers' occupation was not sufficient to declare the use permissive. *White River Levee Dist. v. Reidhar, 61 S.W.3d 235 (Ark. App. 2001)* .

Supp. To CHAPTER 87 ADVERSE POSSESSION

10-87 Thompson on Real Property, Thomas Editions Supp. to § 87.13

Supp. to § 87.13 Requirement That Possession Be Continuous

Replace the chapter synopsis with:
[Go To Main]

Add:

McNeil v. Ketchens, 397 Ill.App.3d 375 (2010) (temporary vacancy of home did not interrupt the couple's adverse possession)

Add:

McLendon v. Copiah Forest Products, Inc., 926 So. 2d 260 (Miss. App. 2006) (tacking permitted).

Add:

General Iron Industries v. Finkl & Sons Co., 686 N.E.2d 1 (Ill. App. 1997) (Interruption of possession requires starting over. Filing of petition for reorganization in bankruptcy estate creates constructive possession of the trustee so as to defeat claimant's rights because 20-year required possession was interrupted).

Add:

Gillett v. White, 153 P.3d 911 (Wyo. 2007) (tacking permitted to satisfy a 10-year requirement).

Replace the chapter synopsis with:
[Go To Main]

In entry for Alabama, add:

Wadkins v. Melton, 2002 Ala. Civ. App. LEXIS 708 (No. 2001144, Sept. 13, 2002) (ten years).

In entry for Missouri, add:

Casteel v. Yeary, 77 S.W.3d 127 (Mo. App. 2002) (ten years).

In entry for Ohio, add:

Krupp v. Leddick, 2002 Ohio App. LEXIS 6104 (No. 13-02-23, Nov. 20, 2002) (21 years).

Add:

Harwick v. Black, 580 N.W.2d 354 (Wis. App. 1998) (Twenty-year statute of limitations need not expire immediately before filing of a court action); *Pearson v. Virginia City Ranches Association, 993 P.2d 688 (Mont. 2000)* (period of adverse possession began when adjacent owner who erected a fence was asked to remove it and refused).

Add:

Manderscheid v. Dutton, 88 P.3d 281 (Or. App. 2004) (adverse possession obtained even though livestock were grazed only seasonally).

Add:

A grant of permission, and subsequent inaction, would have been sufficient to interrupt the running of the statutory period of adverse possession. *McKenzie v. Pope, 33 P.3d 1277 (Colo. App. 2001)* .

Add:

Jones v. Leagan, 681 S.E.2d 6 (S.C. 2009) (Conveyance did not interrupt period of adverse possession)

Add:

Witcher v. Bennett, 120 S.W.3d 922 (Tex. App. 2003) (tenant at sufferance failed to repudiate tenancy so as to begin the time period for adverse possession).

[Go To Main]

Add:

Walsh v. St. Mary's Church, 670 N.Y.S.2d 220 (N.Y.A.D. 1998) (It is well settled that adverse possession runs against religious property).

Add:

Vezey v. Green, 171 P.3d 1125 (Alaska 2007) (claimant could not assert adverse possession of a long-standing public trail).

Add:

Cornfield Point Association v. Town of Old Saybrook, 882 A.2d 117 (Conn. App. 2005) (town immune from claims of adverse possession); *Adams Outdoor Advertising, Inc. v. Charter Township of Canton, 711 N.W.2d 391 (Mich. App.*

2006) (city property immune from claims of adverse possession).

Loavenbruck v. Rohrbach, 795 A.2d 90 (Maine 2002) (adverse possession claimants were not entitled to include within their possession period the years the two was the record owner of the parcel in dispute).

City of Marietta v. CSX Transportation, 533 S.E.2d 372 (Ga. 2000) (there can be no adverse possession or implied dedication of state property to the city).

Reisinger v. Terra Linda Development Co., Ltd., 2003 Cal. App. Unpub. LEXIS 3879 (No. A097086, Apr. 16, 2003) (homeowners could not claim adverse possession of open space that had been dedicated by private covenant to public use).

Add:

Nyman v. Anchor Development, LLC, 73 P.3d 357 (Utah 2003) (when a county acquired land for non-payment of taxes, this constituted a public purpose, precluding adverse possession actions relating to the land); *Albany Parking Services, Inc. v. City of Albany, 770 N.Y.S.2d 472 (2004)* (land held by the city in the city's proprietary capacity was subject to adverse possession).

Add:

Lawson v. City of Kankakee, Illinois, 81 F. Supp. 2d 930 (C.D.Ill. 2000) . (Terraces adjoining the sidewalk both dedicated to the City but maintained by the residents can not give title to residents by adverse possession against a government body even if all elements are present because possession does not run against the government where the property is dedicated to a public use).

Lakeview Farm, Inc. v. Enman, 689 A.2d 1089 (Vt. 1997) (Where two generations of neighboring landowners established boundaries by accepting fence and blazing boundaries the boundary was established by acquiescence).

Kraft v. Mettenbrink, 559 N.W.2d 503 (Neb. App. 1997) (Both adverse possession and theory of mutual recognition and acquiescence may be raised under statute providing for court action to settle disputed corners although the two doctrines are separate).

Lilly v. Lynch, 945 P.2d 727 (Wash. App. 1997) (Mutual recognition acquiescence doctrine supplants adverse possession and exists where there has been a settlement as to boundaries in good faith by the relevant parties and who thereafter acquiesced therein for the statutory period of time and made improvements thereto. The lines so established are correct).

Jennings v. Burford, 958 S.W.2d 12 (Ark. App.1997) (Time required to establish boundary by acquiescence varies depending on facts of each case).

Arnold v. Robbins, 563 N.W.2d 178 (Wis. App. 1997) (Acquiescence by the true owner in another's possession for 21 years permits acquisition of title by adverse possession without the usual adverse intent).

Sorg v. Cunningham, 687 A.2d 846 (Pa. Super. 1997) (Proof of actual possession of an entire parcel of land as in adverse possession is not necessary to establish a boundary under the doctrine of consentable boundary).

Klein v. Mazar, 92 Wash. App. 1002 (1998) (Losing litigant raised the issue of mutual recognizance only at the appellate level. The trial court had ruled pursuant to a standard of proof calling for clear, cogent and convincing

evidence. The appellate court applied the lesser standard of preponderance of the evidence and affirmed).

Replace the chapter synopsis with:
[Go To Main]

Jacque v. Steenberg Homes, 563 N.W.2d 154 (Wis. 1997) (Prescriptive right can be gained by intentional trespass. Nominal damages for such trespass can support punitive damages, $100,000 not being excessive).

Green v. Mann, 237 A.D.2d 566, 655 N.Y.S.2d 627 (App. Div. 1997) (Easement established by 30 years of use with acquiescence of defendants).

Soderberg v. Weisel, 687 A.2d 839 (Pa. Super. Ct. 1997) (A prescriptive right differs from land acquired by adverse possession in that adverse possessor acquires land in fee whereas prescriptive easement holder is only entitled an easement-like use).

Songbyrd, Inc. v. Bearsville Records, Inc., 104 F.3d 773 (5th Cir. 1997) (Possessor of master recording did not give sufficient evidence to show owner actual notice of claim to possess recordings for the purpose of "acquisitive prescription" and action brought was not subject to "liberative prescription").

Parillo v. Salvador, 680 N.Y.S.2d 460 (App. Div. 1998) (Claimant, though having acquired fee by adverse possession to land underneath two docks built on adjacent landowners property, did not gain easement by laying electric line under water to the docks built by him).

Bingham v. Knipp, 1999 Tenn. App. LEXIS 117 (No. 02A01-9803-CH-00083, Feb.23, 1999) (No prescriptive easement in spite of a deed conveying a right of way, because there was no "clear and convincing evidence" of a continuous use).

Simpson v. Colonial Pipeline Co., 499 S.E.2d 634 (Ga. 1998) (Substantial evidence supported trial court finding that Pipeline Company had prescriptive title to right of way).

Donnelly et al v. Cowsill et al, 716 A.2d 742 (R.I. 1998) (Claimant with an implied easement through another property to a public street did not require access to a private way in order to reach a public street as required to obtain an easement in a private way).

A & M Properties, Inc. v. Norfolk Southern Corp., 506 S.E.2d 632 (W. Va. 1998) (A prescriptive right across active railroad track owned by railroad can not be established because the railroad is considered a "public highway").

CHAPTER 88 TESTAMENTARY TRANSFERS OF REAL PROPERTY

10-88 Thompson on Real Property, Thomas Editions § 88.01

AUTHOR: Professor Victoria Mikesell Mather School of Law St. Mary's University of San Antonio

§ 88.01 Introduction and Overview of the Chapter.

[Go To Supp]

§ 88.01(a) General Notes.

This chapter will cover the law of testamentary transfers, or wills. The chapter begins with a summary of the history of wills. Then the execution ceremony and formalities of attested (witnessed) wills, and certain types of other wills are discussed in the next sections. Sections on will contracts, will construction (components and reformation doctrines) and will revocation follow. Post-mortem aspects of testamentary transfers are then presented, in sections discussing will contests; changes in persons (e.g., lapse) and changes in property (abatement, ademption, satisfaction, etc.); limits on dispositions under a will; probate and estate administration. Finally, sections on health-care planning devices, will substitutes, and malpractice issues in probate law conclude the chapter.

The chapter does not purport to cover the tax aspects of estate planning in great detail, although tax notes are sometimes included.

§ 88.01(b) Testamentary Freedom.

It is a virtually universal and ancient concept that property rights should transfer at death, from older family members to younger ones. n1 It is not as clear that the transfer of property by will (or by testator's instructions to be carried out at death) is fundamental in the same way. Yet the English common law and the law of the United States clearly and uniformly recognize the principle of testamentary freedom. Modern wills law imposes very few restrictions on testators. Most legal limits involve protection of family members and the prevention of unwarranted dead hand control on property from deceased grantors. n2 Authors have frequently attempted to justify the idea of testamentary freedom and control. Some explanations involve family relationships. First, it is assumed that the ability to provide for one's dependents at death serves a useful psychological function. If adequate provision can be made, and guardians selected for minor children, testators can be relieved of some anxiety about death. Second, the transfer of property at death to family members gives expression to, and reinforces the natural family ties. Third, the ability to transfer property at death helps to protect older, enfeebled testators. It gives them leverage over family members in soliciting care, or gives them the ability to reward faithful friends and servants for services rendered.

Other, largely psychological benefits may follow from the ability to make a will. The testator may wish to leave property to charity, to show benevolence. Also, the ability to leave gifts, charitable or otherwise, is a way to leave concrete evidence of worldly success after death. Another type of justification for the right to leave property by will is an economic one. People will have an incentive to produce, to invest and to accumulate property, and to do so in a creative manner, in order to have the psychological and material benefits of testamentary power. In the absence of the ability to make a will, testators might be more inclined to use up their resources during their lifetimes. The creative development and investment of resources benefits the economy in general, this argument maintains. n3

Testamentary freedom is also criticized. It is argued that the testator may have too much leverage over family members and may use the testamentary ability to control them. The power to effect testamentary transfers also tends to perpetuate wealth dynasties and to reward persons on the basis of accident of birth, rather than on a concept of merit. n4 Although the ability to make a will may not be a creature of natural law or a constitutionally protected right, the courts are relatively protective of the notion of testamentary freedom. Americans seem to value the ideal of transfer by will, although most people do not leave a will. n5

§ 88.01(c) Terms.

Many of the terms still used in wills and inheritance law come from the English common law. n6 At common law, if a person died without a will, the person was said to have died *intestate*. The personal property of an intestate individual passed by *distribution*, and was distributed to the *next of kin* of the decedent. Real property passed by *descent*, and it was *inherited* by the *heirs*. Modern intestacy statutes may be called statutes of *descent and distribution*, as a result of the common law terminology. At common law, property passed to the oldest son, under the system of primogeniture. American law never adopted the concept of primogeniture, and the intestacy law has attempted to benefit all similarly situated heirs equally regardless of age or gender.

Under modern intestacy law, a decedent's heirs are those who take under an intestacy statute. The specific terms of the statutes vary from state to state. n7 Which one will be applied depends largely on the domicile of the decedent at the time of death and the location of real property owned by the decedent.

If a person died with a will, the person died *testate*. A male person who left a will was known as a testator and a female person was known as a testatrix. Modern usage is testator, for either male or female decedents. A gift of real property was termed a *devise*, and the beneficiary was a devisee. A gift of money was called a *legacy*, and the recipient was a legatee. A gift of any other personal property was termed a *bequest*, and the testator was said to bequeath property to the beneficiary. In modern usage, the term "devise" will often be applied to all gifts under the will, and this is the Uniform Probate Code approach. n8 On the other hand, it is best for a will drafter to continue use of the terms in their technical senses, since in some jurisdictions the differences may still be recognized, and a "devise" of personal property could be found to be ambiguous.

Both intestate and testate estates have a personal representative. The personal representative collects the estate assets, pays claims, and carries out the distributions required by the statute (intestacy) or the will (testacy) A personal representative of an intestate estate is known as an *administrator*. (Former equivalent female term was administratrix, but this is generally not in modern usage). A personal representative for a testate estate is usually an *executor* (former female equivalent -- executrix). n9

§ 88.01(d) Uniform Probate Code.

The original version of the Uniform Probate Code (UPC) was adopted in 1969 by the National Conference of Commissioners on Uniform Laws. The Code was significant because it was the first comprehensive modern codification of the law of wills, probate, estates and trusts. Fifteen states have adopted the Uniform Probate Code. n10 The Code has been modified periodically and is subject to constant monitoring by the Joint Editorial Board for the

Uniform Probate Code (JEB-UPC) The JEB-UPC has nine members, three each from the National Conference, the American Bar Association and the American College of Trust and Estate Counsel. The board also has an Executive Director, a Chief Reporter, and three liasons, one for probate judges and two for law teachers. n11

In 1989, the JEB-UPC completed major changes to Article VI of the Uniform Probate Code, the sections on non-probate transfers at death. n12 In 1990, another, even more significant revision was adopted, that of Article II of the UPC. Article II contains most of the substantive provisions on the law of wills, intestacy and donative transfers.

In revising the terms of Article II, the drafters were concerned with three themes relevant to modern estates law. n13 The first is the transformation of the family and of family law in recent years. Most marriages entered into during the 1970s and most of the 1980s ended in divorce. Most people who divorce remarry. The concept of serial marriage changed the nature of family law in the past two decades and is now incorporated into various sections the Uniform Probate Code. Another family theme is the idea of marriage as a partnership between the parties. The notions of marital (rather than individual) property ownership, as well as the equitable distribution of property at death, were included in the Code revisions. n14 Equitable distribution has been recognized as a standard for the division of marital property at death for some time.

A second theme is the increased use of non-probate transfers to effectuate wealth transmission. More and more people are using life insurance, pension funds, joint accounts, inter-vivos trusts and other will substitutes to transfer assets at death. The revised version of the Uniform Probate Code attempts to bring the law of probate and non-probate transfers into greater unison. n15 Finally, the new Code provisions attempt to respond to the decline of formalism, in favor of rules attempting to honor the intent of the testator, or the presumed intent of an intestate decedent. For example, the areas of will execution, construction and revocation are sometimes plagued with technicalities that all too frequently operate to frustrate the clear intent of the testator. n16 The provisons of Article II have been incorporated into a new, free-standing uniform act, the Uniform Act on Intestacy, Wills, and Donative Transfers. Other free-standing uniform acts derived from the Uniform Probate Code 1990 revisions include the Uniform Testamentary Additions to Trusts Act (two acts, one based on the 1990 version of Uniform Probate Code § 2-511 and one based on the 1960 version); the Uniform Disclaimer of Property Interests Act (based on § 2-801 of the 1990 UPC). and the Uniform Disclaimer of Transfers by Will, Intestacy or Appointments Act (based on pre-1990 UPC § 2-801); the Uniform Statutory Rule Against Perpetuities (based on the 1990 UPC version of Part 9, Subpart 1 of Article II); and the Uniform International Wills Act (based on UPC Article II, Part 10, both pre- and post-1990 versions). n17 The reason for the adoption of free-standing statutes is to permit non-UPC states to adopt portions of the revised code without interfering with the state's existing probate scheme.

In this chapter, some emphasis will be placed on both the original and the 1990 versions of the Uniform Probate Code. The Code typically reflects the modern trend in wills law, and may also represent the "better view" in much of this area.

§ 88.01(e) Clients and Testamentary Transfers.

Some authors remind us that a probate practice, like some other areas of law, is an emotional one. When a client comes in for a will, the attorney should seek to determine the client's feelings about death, about property, and about disposition of that property. The feelings of the client are important in their own right, but the feelings are also themselves facts, as one author points out. Also, if the attorney understands the client's feelings and motivations, then the attorney will be better able to draft a will that is in fact in accord with the client's wishes. The post-mortem "client" will usually be in a process of mourning, and again it is useful for the attorney to strive to understand his or her feelings and emotions, in order to do a better job. n18

As one author argues, attorneys can help courts to understand that a will in probate is a story, told by the testator. Writing a will is an act of trust, the testator trusts the living survivors to carry out the testator's intentions after death. If we accept that trust, then we should respect the vulnerability of the deceased, and try to understand the entire story, even

if difficult or painful. n19

CHAPTER 88 TESTAMENTARY TRANSFERS OF REAL PROPERTY

10-88 Thompson on Real Property, Thomas Editions § 88.02

AUTHOR: Professor Victoria Mikesell Mather School of Law St. Mary's University of San Antonio

§ 88.02 History of Wills.

It appears that the concept of testamentary disposition existed in ancient societies, as well as in pre-feudal England and Europe. References to testamentary dispositions are found in the Bible, as well as in Egyptian and Roman times. n20 The idea that a testamentary disposition might be necessary and useful may have originated with the problem of what to do with a person's property when the person died without a family to take the property. n21

When William the Conqueror defeated the English in the Battle of Hastings in 1066, he brought the feudal system of land tenure and ownership to England. n22 One of the key characteristics of feudalism was that freehold estates in real property (the most valuable estates) could only be transferred by livery of seisen. n23 This ceremonial transfer of real property was a public and open display with the present land owner passing a clod of earth or some twigs from the land to the new owner. n24 The necessity of livery of seisen made it impossible for individuals to leave their real property by will. n25 However, even in feudal times, it was considered good for the immortal soul to write a will disposing of one's personal property and the ecclesiastical courts had jurisdiction over such wills. Later, the English Statute of Distribution (1670) and the Statute of Frauds (1677) established the basis of modern succession to personal property. These and the Wills Act of 1837 were instrumental in the development of modern wills execution requirements in the United States. n26

The demand for the right to dispose of real property at death was very strong. This was at least partially due to the fact that feudalism also encompassed the doctrine of primogeniture, in which the eldest son would automatically inherit all of his father's interests in real property. This had the practical effect of disinheriting all of the landowner's other children. n27 The device of the "use" became popular in the 15th century, and enabled landholders to do many things with their real property that were previously impossible to accomplish. This included the disposal of property at death. n28

A use is a separation of the legal and equitable interests in real property. An owner of land (O) could convey Blackacre to the use of another person (X) The conveyance meant that X held the legal title and O held the equitable title in Blackacre. O could direct X's actions with regard to Blackacre, including what to do with it at O's death. While the courts of law refused to recognize the use, the courts of equity would give effect to the parties' intent. Thus, O could easily accomplish the goals of testamentary disposition. n29 The use ceased to exist, in a practical sense, after the

Statute of Uses took effect in 1536. The Statute "executed" the use by uniting legal and equitable title in the holder of the equitable title. n30 The ultimate purposes of the Statute of Uses were: (1) to make land transfers public again, and (2) to reinstate some of the feudal incidents (feudal form of taxation), which were due at the time of inheritance of land, to the overlords and to the king. n31 However, in 1540 the Statute of Wills was enacted, and it permitted individuals to freely dispose of their property by will. n32 This law became the foundation for the United States law of testamentary transfers and intestate succession.

In the United States, as in most of the world, pre-Industrial Revolution wealth tended to be concentrated in land and in family units. The family farm or family business was the key element of wealth for those families with any property at all. This property was passed at death, and tended to be passed to male heirs, rather than female. A female spouse would frequently have a legally mandated life interest in the property, but would not take the full fee simple estate. n33 The situation of a married woman began to change after 1840, when Married Womens Property Acts began to be adopted in the United States. By the turn of the century, married women could also freely direct the distribution of their property by will. n34 Much of current wills law is based on this type of society.

CHAPTER 88 TESTAMENTARY TRANSFERS OF REAL PROPERTY

10-88 Thompson on Real Property, Thomas Editions § 88.03

AUTHOR: Professor Victoria Mikesell Mather School of Law St. Mary's University of San Antonio

§ 88.03 Will Formalities and the Execution Ceremony.

[Go To Supp]

§ 88.03(a) Introduction and History.

Most modern wills acts are modeled on one of two English statutes: the Statute of Frauds of 1677 n35 and the Wills Act of 1837. n36 Both acts require that a testamentary document be in writing, signed by the testator (or by a proxy at the testator's direction) and that the will be attested and subscribed by testator in the presence of witnesses. Other than the extra witnesses required by the Statute of Frauds (3 or 4), and the Wills Act actually increased the formalities required for will execution. Some differences among state wills statutes can be explained by referring to the two different English models.

Traditionally, the formalities of a will execution are said to fulfill three functions, n37 and a fourth function has more recently been suggested. The original purpose of the Statute of Frauds was to prevent fraud, and one of the functions of a modern wills act is to protect the testator from fraud after the testator's death; this is the *protective function*. If witnesses are present, it will be difficult for wrongdoers to forge the testator's signature or to produce a substitute will. Disinterested witnesses also reduce the posssibility of duress or undue influence. In a sense, the requirement of witnesses also protects the heirs of the testator, in that the competency of the testator can be evaluated by disinterested observers. If the testator is required to sign at the end of the will, then new or additional provisions cannot be inserted by a third party.

A second primary purpose of will formalities is to ensure that the will is the best possible evidence of the testator's intent; this is the *evidentiary function*. The requirement that the will be in writing establishes a permanent record of what the testator directed be done with the testator's property at death. The requirement of a signature (or proxy) establishes that the document is adopted by the testator as the testator's own will. Again, the presence of witnesses helps to establish the fact of execution and adoption of a testamentary document by the testator.

A third purpose of formal will execution is the *ritual* or *cautionary function*. All of the ceremony of a formal will execution is designed to ensure that the testator realizes that the making of a will is serious business. People will often make offhand comments about who should receive property when they die. Leaving property at death does not compel a testator to feel the "wrench of delivery" that is required in most inter-vivos transfers. Although wills are revocable and

do not take effect until death, a formal will execution helps to establish the significance of the event for the testator.

The fourth function of will formalities is to provide a "safe harbor" for testators; this is called the channeling function. If a will is executed in accordance with the statutory provisions, the testator can rest assured that its terms will be honored at the testator's death. The channeling function also has a societal benefit. If testators will standardize their testamentary dispositions as provided in the wills act, then the courts will have an easier time processing the documents throught the legal system and enforcing the provisions contained therein. n38

In theory, all of the functions of will formalities are as valid and as necessary as they were at the common law. At common law, strict compliance with the terms of the wills act was required. If the will execution did not meet all of the statutory formalities to the letter, the will was invalid. Both the common law theory and result are being questioned in the modern trend, and some recent developments are discussed below.

§ 88.03(b) Basic Formalities.

All wills acts, including the Uniform Probate Code, n39 require that wills be in writing and signed by the testator in some fashion. It is universally agreed that these two elements of a formal will are indispensable. n40 Some details of the requirements, particularly the signature, are discussed below.

§ 88.03(b)(1) Writing.

All states provide that wills must be in writing. A written will establishes a permanent record of the testator's stated desires about property disposition at death. To date, the law has limited the use of oral wills to a very narrow range of circumstances. n41 The law has also been reluctant to recognize a videotape or an audiotape as a "writing" for purpose of the wills statutes. n42

§ 88.03(b)(2) Signature.

Again, all states and the Uniform Probate Code n43 require that the will be signed by the testator. Although the Statute of Frauds of 1677 did not require the testator to sign in any particular location on the will, the Wills Act of 1837 did provide that the will should be signed at the end. This was intended to prevent the addition of later provisions, either by the testator, or by third parties. n44 Some state wills acts specifically provide that the will be signed at the end, n45 but the majority and the Uniform Probate Code do not specify location.

If no location is specified, the signature can appear anywhere, even in the body of the will, or in the introductory (exordium). clause. n46 If the signature is not at the end, the proponent of the will must show that the written name was intended as the signature of the testator. n47 If the will must be signed at the end, the issue arises as to the meaning of "end." If the term means the physical end of the will, then many wills might be held to be invalid on a technicality. The better view is to construe the term "end" to mean the "logical end" of the will. n48 Then, provisions such as the designation of the executor, or instructions for burial may be honored without serious problem.

Anything intended to be a signature by the testator will suffice as such. For example, if the testator writes a partial name, or a mark (such as an X), it will be a signature if the testator so intends. n49 Even at common law, a proxy could sign for the testator. A testator may not know how to write, or may be too weak to sign the will. A proxy signature must be made in the testator's presence and at testator's direction. The proxy may also need to add the proxy's own signature as well. n50 The concept of what is in the testator's "presence" arises most frequently in the context of witnesses, but can come up in this situation as well. The testator's presence may mean the testator's line of sight or line of vision, where the testator must actually be able to see the proxy sign the document. The "conscious presence" test is a more modern concept, and merely requires that the proxy sign in the vicinity of the testator, so that testator can keep track of what is going on. n51 The 1990 version of the Uniform Probate Code specifically provides that the proxy sign in the

conscious presence of the testator. n52

Someone may assist the testator with the testator's signature. Occasionally, it may be important to determine whether the signature is the testator's own, although written with assistance, or whether the signature is a proxy. This is because the proxy signature provision of a state statute may require that the testator specifically or expressly request or direct that the proxy sign the will. Sometimes testators merely indicate the need for the proxy or for assistance without express direction. A request for assistance can be indirect, and not run afoul of such a statute. n53 Normally it is assumed that the testator will sign the will first, and then the witnesses will sign. However, it is generally held that the exact order of signing is not important if the will execution and signatures take place during a continuous, single transaction. n54

§ 88.03(c) Formal Wills -- Attestation Requirements.

Even an informal or holographic will is required to be in writing and to be signed by the testator. However, the concept of a formal will includes witnesses and other aspects of attestation. These other formalities are discussed in this section.

§ 88.03(c)(1) Witnesses.

§ 88.03(c)(1)(i) Number.

The modern trend and the Uniform Probate Code require two witnesses, n55 as provided in the Wills Act of 1837. Some states however, do require more than two witnesses, in accord with the Statute of Frauds rule. n56

§ 88.03(c)(1)(ii) Competence.

Witnesses must be mentally competent, and able to observe the testator and understand the execution of the will. n57 In some states, a witness must be a minimum age (such as 18), in most, the witness must simply be able to observe and remember the events of the will execution, regardless of age. n58

The most important competency requirement is that a witness must be "credible," meaning disinterested. Witnesses must not be will beneficiaries. At common law, if an interested person was a witness to the will, the will was void. The modern trend avoids that harsh result by the use of "purging statutes." n59 A purging statute voids the interest of the interested witness under the will, but lets the rest of the provisions stand. Some statutes void only the "extra benefit" that the witness would receive under the will. n60 Consider, for example, a will leaving a $10,000 gift to A who is an heir of the testator. As an heir, A would be entitled to $5,000. The statute might void the entire gift to A, or simply void the extra $5,000 that A receives under the will. (A similar scenario could arise if a prior will gave A $5,000, but A was not a witness to that will. Testator executes a second will, leaving $10,000 to A, but this time A is a witness. The gift might be void *in toto*, or just to the extent of the extra benefit.).

Also, modern law tends to exempt the supernumerary witness from the purging statute. n61 For example, suppose the statute requires 2 witnesses, but the will is witnessed by three persons, A, B and C. Suppose that A and B are disinterested, but C is a will beneficiary. The gift to C may stand, because the statute only requires two disinterested witnesses, and that requirement is met under these facts. The supernumerary rule may also come into play if the testator executes a valid codicil to the will, with different, disinterested witnesses. The doctrine of republication by codicil may help to avoid the interested witness problem. n62 However, a witness cannot later disclaim an interest under the will and then serve as a disinterested witness. The witness must be competent and disinterested when the will is executed. n63 Courts are split as to whether the spouse of a will beneficiary is an interested witness. n64 Generally, the person named as the executor (if not also named as a beneficiary under the will) or the attorney for the executor will be considered to be disinterested witnesses. n65 A substantial minority of states follow the pre- and post-1990 Uniform Probate Code rule that the "interest" of a witness is irrelevant. n66 Witnesses are not required to be disinterested under this view. The Uniform Probate Code drafters reasoned that the interested witness prohibition operates as a trap for the layman, who may innocently use family members or friends as witnesses. The risk of fraud or undue influence is not

deemed to be substantially increased by the absence of the requirement that witnesses be disinterested. If a witness is the recipient of a large gift under the will, for example, the fact that witness was benefitted may be used in a suit to establish undue influence or fraud.

§ 88.03(c)(1)(iii) Witnessing Procedures.

As indicated above, it is usually presumed that the testator signs first, although the will is generally upheld if the parties sign as part of a continuous single transaction. The witnesses should sign within a reasonable time after the testator signs. n67 Usually statutes provide that the witnesses sign in the "presence" of the testator. It is said that the prevailing view is that the witnesses must sign in the testator's physical presence, or in the *line of sight* of the testator. n68 The testator does not have to watch the witnesses sign, but must be capable of watching. The modern trend is that the witnesses must only sign in the "conscious presence" of the testator. n69 Some statutes follow the terms of the Wills Act of 1837 and require that the witnesses sign in the presence of each other as well as the presence of the testator. n70 There is a difference of authority whether the witnesses must actually see the testator sign the will, or whether an acknowledgment of the signature is sufficient. That is, the testator would indicate that her signature on the document is authentic. The Wills Act required the witness of the signature, the Statute of Frauds required the witness of the will. The modern trend is to hold that witness of testator's acknowledgment of a signature is sufficient. n71

The 1990 Uniform Probate Code does not include a "presence" requirement at all, and permits witness of an acknowledgment of testator's signature on the will. The Code specifies that witnesses must witness either the testator's signature or the testator's acknowledgement of signature. n72 This "witnessing" would presumably involve some personal contact with the testator. This does not have to be done in the presence of other witnesses, and the testator does not need to be present when the witness signs the will.

In some states, the testator must request that the witnesses witness and sign the wills. The request may be expressed, or may be upheld as a proper request even if implied, by gestures or words. n73 Finally, the witnesses must intend to attest the will. The attestation is not proper if the witnesses think that they are witnessing or signing a contract, for example. n74

COMPUTER-ASSISTED RESEARCH

LEXIS: witness! w/15 sign! or attest! w/15 will! w/30 testator!

§ 88.03(c)(2) Publication.

A minority of some states require that the testator "publish" the will to the witnesses as the testator's last will and testament. The testator should state that the document that the witnesses are signing is the will of the testator, in order to meet this requirement. The testator must know that the document is a will, and what provisions are contained in the will. The witnesses, however, do not need to know the contents. n75

§ 88.03(d) Evidence of Attestation.

Two devices designed to insure that there is adequate evidence of proper attestation procedures are the attestation clause and the self-proving affidavit.

§ 88.03(d)(1) Attestation Clause.

While not required, the use of an attestation clause can be very useful in establishing the validity of a will. n76 The attestation clause details what happened during the will execution ceremony. For example, a typical attestation clause might provide:

The foregoing instrument (consisting of (number) pages including this one) was (date), signed and declared to be his [her] last will by (testator) in our joint presence; we, at his [her] request and in his [her] presence and in the presence of each other, subscribe our names as witnesses to the execution of this will, declaring our belief that he is of sound mind and memory and under no constraint or undue influence whatsoever.

_____ residing at _____

_____ residing at _____

_____ residing at _____

In some states, the attestation clause establishes a presumption that the will was executed in accord with its provisions. n77 This relieves the will proponent from needing to find witnesses who may or may not remember details of the will execution years after it takes place.

COMPUTER-ASSISTED RESEARCH

LEXIS: attestation clause w/15 will! w/30 presum! or valid!

§ 88.03(d)(2) Self-proving Affidavit.

The use of the self-proving affidavit is allowed in the majority of states. Under the Uniform Probate Code, n78 the affidavit establishes a conclusive presumption of all signature requirements and a rebuttable presumption of all other execution requirements. The 1990 version added new subsection (c), which provides that a signature attached to a self-proving affidavit would suffice as a signature affixed to the will, if necessary to prove the will's due execution. n79 Some states may even provide that the affidavit is conclusive evidence of all execution requirements. A sample affidavit is presented below:

The State of _____ County of _____ We, _____, _____, and _____, the testator and the witnesses, respectively, whose names are signed to the attached or foregoing instrument, being first duly sworn, do hereby declare to the undersigned authority that the testator signed and executed the instrument as his [her] last will and that he [she] signed willingly or directed another to sign for him [her], and that he [she] executed it as his [her] free and voluntary act for the purposes therein expressed; and that each of the witnesses, in the presence and hearing of the testator, signed the will as witness and that to the best of his [her] knowledge the testator was at that time 18 or more years of age, of sound mind and under no constraint or undue influence.

_____

_____
Witness

Subscribed, sworn to and acknowledged before me by _____, the testator, and subscribed and sworn to before me by _____ and _____, witnesses, this _____ day of _____, _____.

(SEAL)

(Signed)_____
(*Official capacity of officer*)

The Uniform Probate Code also contains a form combining the attestation clause and the self-proving affidavit so that the testator and witnesses sign once rather than twice in § 2.504(a).

COMPUTER-ASSISTED RESEARCH

LEXIS: self-proving affidavit w/30 presum! w/15 will!

§ 88.03(e) Modern Developments.

At common law, strict compliance with will formalities was required. In the modern law, this approach seems unsatisfactory to many courts and commentators. n80 Will formalities are designed to prevent problems that arise with regard to transfers that are to take effect at death. However, the modern testator has a wide variety of will substitutes available for use. These will substitutes do not require execution formalities, and arguably create legal problems that are no worse than standard will problems. n81 Also, the modern philosophy of transfer of property at death has changed over time. Intestacy is disfavored in the modern law, whereas testacy was not favored at the common law. n82 Most importantly, the strict compliance requirement can operate to frustrate testator's clear and unambiguous intent, even if the testator has consulted a lawyer. Formalities may just be a trap for the layman, and discriminate against those individuals who are unable to afford an attorney. n83

One technique used to avoid the invalidation of an improperly executed will is the "substantial compliance doctrine." This is a type of harmless-error standard. If the will is in substantial, but not perfect compliance with the execution requirements of the wills act, it will nonetheless be admitted to probate. This approach can be adopted by courts, or by the legislature. n84

The new Uniform Probate Code (1990 version) incorporates an approach used in Australia, commonly called the "dispensing power." The dispensing power gives courts broad authority to excuse compliance with execution formalities. The UPC provisions provide that the will should be admitted to probate if the proponent can establish by clear and convincing evidence that the testator intended that the document be the testator's will. n85 Although no states have yet adopted this provision, it is probable that some states will move in this direction in the future. By its nature, the dispensing power is only available as a legislative alternative. It is a grant of power to the courts from the legislature.

One author has advocated the abolition of the attestation requirement for wills. In other words, the only essentials of will execution should be a writing and a signature. He argues that no useful purpose is served by the continued existence of elaborate will execution formalities whose main impact is the frustration of testator's intent. n86 Again, this approach has not been adopted in any state, and has not been incorporated into the Uniform Probate Code. This would have to be a legislative remedy, since it abolishes existing standards.

§ 88.03(f) Model Will Execution Ceremony.

In the modern trend, a will that is valid where executed will be valid everywhere. For choice of law purposes, the disposal of personal property will be governed by the law of the testator's domicile at the time of the testator's death. The disposition of real property will be governed by the law of the situs of the real property. As a result, it is wise for the practitioner to execute every will in accordance with the strictest formalities. Some suggestions are presented in this section. n87

**Before the will is drafted*, conferences with the client/testator should be conducted in private, without the presence of

persons who will be beneficiaries under the will. This will help to avoid accusations of fraud or undue influence after testator's death.

*When the will is drafted, it should be typed without strike-outs, erasures, or changes. If last minute changes are necessary, the client/testator and the witnesses should initial the changes. The pages of the will should be numbered, and fastened securely together. The number of pages should be included in the attestation clause. An attestation clause chould be included, as well as a self-proving affidavit.

**The location* of the will execution ceremony should be a room large enough to hold the testator, the lawyer, three witnesses, and a notary. All persons should be placed so that they can view the entire ceremony and observe each other.

**The witnesses* must be disinterested persons, ideally not even related to any will benficiaries. They must be mentally competent persons. They should be adults, and ideally reliable, stable, permanent residents of the place where the will is executed. Three witnesses will be sufficient for all states, and if only two are required, one can still serve as a supernumerary witness.

**At the time of the will execution ceremony*, all parties (witnesses, testator, notary, attorney) should go into the meeting room. No beneficiaries should be present. The parties should be introduced. The parties should be able to see each other, and to witness activity. The ceremony should take place without interruption and with all parties present at all times -- no one should leave or enter the room. The witnesses should have the opportunity to observe the testator and to assure themselves of testator's mental competence. The attorney should ask the testator to read the will carefully. The attorney may want to send the testator copies of drafts ahead of time, particularly if the will is long or complicated. If the will is short, the attorney may want to read the will (or key provisions of the will) to the testator out loud.

**The attorney should ask the testator the following questions*. The testator should answer "yes" to each question, and both the questions and the answers should be audible to the witnesses. The attorney should orally indicate that the testator is declaring the testator's answers to the questions in the presence of the witnesses, and should name the witnesses.

"Is this document your will?"

"Have you examined it, and do you understand its terms?"

"Does this will accurately express your wishes regarding the dispositon of your property at your death?"

"Do you request that (again attorney should name the witnesses individually) witness your will?"

**The testator should sign the will first*, and should also sign or initial each page in the will, in the margin. The attention of the witnesses should be directed to the testator's activity.

**One of the witnesses should read the attestation clause aloud* (indicating that the formalities have been met) The witnesses should agree, orally or in writing (after the signature of the witness on the will), that the statements made in the attestation clause are accurate. Then the witnesses should sign the will, and write their address next to or underneath their signature. The testator and the other witnesses should watch each witness sign. The attorney may also want to have the witnesses sign or initial each page of the will.

**The testator and the witnesses should then execute a self-proving affidavit*, which will be signed by the testator, witnesses, and a notary.

**The attorney may want to arrange for a videotaped record of the entire execution ceremony*, particularly if a will

contest is anticipated.

**A photographic copy* of the executed will should be made, and clearly marked as a copy. The safekeeping of the original will should be discussed with the client. Prior wills should probably be destroyed.

FOOTNOTES:
(n1)Footnote 35. Section I, Statute of Frauds, 29 Car. II., c. 3, § V (1677) states:

And be it further enacted by the authority aforesaid, That ... all devises and bequests of any lands or tenements, devisable either by force of the statute of wills, or by this statute, or by force of the custom of Kent, or the custom of any borough, or any other particular custom, shall be in writing, and signed by the party so devising the same, or by some other person in his presence and by his express directions, and shall be attested and subscribed in the presence of the said devisor by three or four credible witnesses, or else they shall be utterly void and of none effect...

(n2)Footnote 36. The Wills Act, 7 Will. IV & 1 Vict., c. 26, § IX (1837) states:

And be it further enacted, That no will shall be valid unless it shall be in Writing and Executed in manner hereinafter mentioned; (that is to say,) it shall be signed at the Foot or End thereof by the Testator, or by some other Person in his Presence and by his Direction; and such signature shall be made or acknowledged by the Testator in the Presence of Two or more Witnesses present at the same Time, and such Witnesses shall attest and shall subscribe the Will in the Presence of the Testator, but no Form of Attestation shall be necessary...

CHAPTER 88 TESTAMENTARY TRANSFERS OF REAL PROPERTY

10-88 Thompson on Real Property, Thomas Editions § 88.04

AUTHOR: Professor Victoria Mikesell Mather School of Law St. Mary's University of San Antonio

§ 88.04 Certain Types of Wills.

[Go To Supp]

§ 88.04(a) Holographic Wills.

§ 88.04(a)(1) Introduction.

Holographic wills, also known as "olographic" wills, are wills written entirely in the handwriting of the testator. The holographic will was recognized in Roman Law and came to the United States from the civil law tradition. Such wills need not be witnessed. n88 Normally witnesses are required in order to prevent forgery, to avoid undue influence or fraud on the testator, and to emphasize the formality and ceremony of a will execution. n89 Nonetheless, the Uniform Probate Code and a majority of jurisdictions in the United States do recognize holographic wills. n90 The policy seems to be that when the will is entirely in the handwriting of the testator, the functions of the witnesses are basically served. Also, many people support the proposition that one should be able to "do it yourself" when writing a will, without outside interference. n91 However, holographic wills can create problems, since they may have inherent ambiguities or may not be properly drafted. Holographic wills, by their very nature, are usually written by individuals without attorney advice.

§ 88.04(a)(2) Uniform Probate Code.

The Uniform Probate Code (UPC) expressly allows holographic wills if the signature and the material portions of the document are in the testator's handwriting. No other formal requirements for holographic wills are listed in the UPC. Thus, jurisdictions following the UPC approach do not require that the entire document be in the testator's handwriting. The testator may use a will form, for example, and simply fill in the material provisions disposing of the property. n92

§ 88.04(a)(3) State Statutes.

Slightly less than half the states do not recognize holographic wills. n93 Of the states that do recognize holographic wills, most adopt the Uniform Probate Code approach and require the signature and the material provisions to be in the handwriting of the testator. n94 Of the remaining jurisdictions, several adopt an older approach and require that the entire document be in the testator's own writing. n95 In these jurisdictions, a will containing some printed portions, such

as a will form, might not be admitted to probate. n96

Some states explicitly require a certain number of witnesses to testify that the handwriting is actually that of the testator. n97 Maryland and New York allow holographic wills only during service in the Armed Forces. n98 Some of the states that do not allow holographic wills nonetheless explicitly recognize the validity of a holographic will which is executed in a jurisdiction that does permit them. n99

§ 88.04(a)(4) Issues Involved with Holographic Wills.

§ 88.04(a)(4)(i) Date.

The Uniform Probate Code does not require holographic wills to be dated. Some states do require a date. n100 The issue arises when more than one will is found and there is a question about which is the most recent, or if there are questions about the decedent's capacity, during periods of the decedent's lifetime, to make a will.

§ 88.04(a)(4)(ii) Intent.

All wills must be made with testamentary intent, which is the intention to dispose of property at death. Many holographic will cases involve questions of intent, where would-be beneficiaries attempt to probate letters or notes. n101 Courts look to the context of the writing and the circumstances as a whole, in order to resolve the question of testamentary intent.

A related problem is the requirement of a signature. While holographic wills must be signed, they do not normally need to be subscribed; the signature can appear anywhere on the document, not just at the end. Courts have sometimes struggled with the issue of whether something is a signature; initials, a name in the body of a document, or a pet name. n102

Holographic wills have taken many colorful forms, such as writings on a wall, a handbag, or articles of clothing. n103

COMPUTER-ASSISTED RESEARCH

LEXIS: intent! or sign! w/30 holographic will!

§ 88.04(b) Nuncupative Wills.

A nuncupative will or testament is a will that is not in writing, and usually exists only when the testator, in a last illness, declares the will orally before witnesses. n104 Such a will is in a separate and distinct class and is subject to different requisites and conditions than written wills. n105

§ 88.04(b)(1) History.

Roman law permitted oral wills for soldiers. This may have been due to the difficulties of writing a will while on the eve of battle, or as a reward for military service, or as legal recognition of the fact that many soldiers could not write. n106 The English common law permitted oral wills for disposition of personal property. n107

In 1676 the English Statute of Frauds was passed requiring most wills to be in writing. The law was concerned with the risk of fraud or perjury in wills. However, the statute permitted oral wills under certain circumstances. A testator could make an oral will if: (1) the estate did not exceed 30 pounds; (2) three witnesses were present; (3) testator made clear that this was a will; and, (4) the testator was in a last illness. Also, the statute provided for a six month cut-off for proof of an oral will, except for such material as was committed to writing within six days of making the will. n108

Many United States jurisdictions as well as the Uniform Probate Code no longer permit nuncupative wills, or limit them to the "soldiers and sailors" situation. n109 Others (about 20) do permit oral wills, and the provisions often reflect the conditions of the English Statute of Frauds.

§ 88.04(b)(2) Modern Requirements.

The majority of United States jurisdictions, as well as the Uniform Probate Code, do not permit oral wills. In the states where they are permitted, such wills must meet certain requirements. These include: testator must be in the last illness, testator must show testamentary intent, a certain number of witnesses may be required, the will may be limited to personal property, the will may need to be reduced to writing within a certain period of time, and may be only admitted to probate for a limited period of time.

§ 88.04(b)(2)(i) Last Illness.

The general rule followed by most authorities is that an oral will can be made only when the testator is in the last illness. n110 The authorities have constructed the meaning of the term "last illness" in a couple of different ways. Under one view "last illness" means that the testator must be *in extremis*. n111 The privilege of leaving a nuncupative will must be exercised as a matter of necessity and not of choice. n112 Under this view, a nuncupative will is not valid where there was no immediate apprehension of death and no inability to reduce the will to writing. n113 For example, *Bellamy v. Peeler*, n114 a nuncupative will was held invalid where it appeared that the testator, after making the will, had the time, opportunity and means at hand to have reduced the will to writing, but failed to do so. A nuncupative will was denied probate where the testator for a long time suffered from pulmonary consumption and lived for 9 days after the alleged nuncupation. However, merely misjudging one's ability to recover, such as where the testator's condition deteriorates to the extent that it is physically impossible for the testator to make a written will, does not render a nuncupative will invalid. n115

Other authorities have not interpreted "last illness" to mean *in extremis*. n116 Under this view the requirement is that an oral will, to be valid, must be made in the last illness of the testator. This requirement is satisfied if the disease of which the testator dies has progressed to such a point that the testator expects death at any time, and because of the expected death and in preparation for death, a nuncupative will is made and death from this illness does, in fact, occur within a short time thereafter. n117 Under this view, a nuncupative will is not rendered invalid by the testator having sufficient time and opportunity, after making oral will, to make a written one.

State statutes that permit oral wills do require a last illness, *in extremis* or imminent peril of death. The statutory approaches vary as to how "imminent" death must be. n118 The English Statute of Frauds also required that the testator make the nuncupative will at home or wherever residence had been established for the previous 10 days or more, unless the testator was taken ill suddenly or by surprise. Some statutes also reflect this requirement. n119

§ 88.04(b)(2)(ii) Testamentary Intent.

Another requisite of nuncupative wills, and all wills in general, is testamentary intent. The general view is that, in order to support a nuncupative will, the testator must be shown to have not only testamentary intent but also intent to make an oral will. The requirements of a nuncupative will are not met, and cannot be established, where a testator dies while attempting to make a formal written will that has not yet been completed. n120 Mere verbal instructions and directions for drawing a written will do not constitute a nuncupative will, although spoken in the presence of witnesses requested to bear witness thereto, and reduced to writing. n121 State statutes usually require the testator to state that a will is being made. n122

§ 88.04(b)(2)(iii) Witnesses.

While the common law did not require a certain number of witnesses, the English Statute of Frauds required three

witnesses and state statutes sometimes incorporate this requirement. n123 Also, state statutes may specifically limit the use of the oral will to personal property, or to a maximum value, or both. n124

§ 88.04(b)(2)(iv) Reduction to Writing.

State statutes may also require that an oral will be reduced to writing by someone, usually a witness, within a certain period of time in order to be effective. The English Statute of Frauds required that this be done within 6 days. n125

§ 88.04(b)(2)(v) Proof.

A nuncupative will must be proved shortly after the testator's death. The rationale is that the longer the time between the testator's death and the proof of the oral will, the greater the probability that the words of the testator will escape the memories of the witnesses. In the English Statute of Frauds, as in most state statutes, this period is 6 months. n126

§ 88.04(b)(2)(vi) Miscellaneous.

A limitation in the use of oral wills exists in respect to the revocation of written wills. Under statutes providing that a will may be revoked by some other will or codicil in writing executed with due formalities, a nuncupative will, although sufficient when standing alone to dispose of an estate, cannot take effect as a revocation of a prior written will. n127 Some states do not permit an oral will to be admitted to probate unless the testator's spouse or other heirs are expressly notified and given the opportunity to contest the will. n128 Since nuncupative wills are not favored by the courts, because of the possibility of fraudulent practices and fabrication of wills, strict compliance with the prescribed requisites of oral wills is a must. n129 These requirements can be more onerous than those of a formal written will and they must be established to entitle the nuncupative will to probate.

Nuncupative Will! w/25 Require!

§ 88.04(c) Videotaped and Audiotaped Wills.

Several commentators have suggested and approved videotaping the execution ceremony of a written will. n130 Such use envisions the supplementing of a written will, not its complete replacement. At the present time, videotapes are used by some practitioners to record the will execution ceremony. Such recordings, however, only supplement the written instrument. A recorded visual and audio image presents a superb record of present reality, and the intent, capacity and state of mind of the testator. It is easy to understand the attraction of this medium and why its application to the probate process might expand. Of course, the problem of signatures of the testator and witnesses as well as other technical requirements of the Probate Code still remain to be resolved for a videotaped will to stand alone.

To date, Indiana is the only state to pass a statute specifically allowing the evidentiary use of a videotape of the execution ceremony, n131 although several states have considered bills dealing with videotapes and probate. n132 The 1989 amendment to the 1985 Indiana statute authorizes the use of videotapes to show the proper will execution, the intention of the testator, the mental state or capacity of the testator, the authenticity of the will, and other matters determined by a court to be relevant to the probate of a will. Although Ohio has not passed a statute dealing with videotaping of the will execution ceremony, the Board of Commissioners on Grievances and Discipline of the Supreme Court of Ohio has stated that the Ohio Code of Professional Responsibility does not prohibit the taping of such a ceremony. n133

Videotape may be used to prove the contents of a will if the testator declares that the provisions of the will reflect the
