emptor rule. n1035 The doctrine only applies where the parties have equal means of knowledge. n1036 However, few subjects of the law appear, upon a cursory examination of the authorities, to be in such a hopeless state of confusion as that which relates to what constitute proper exceptions to the rule of caveat emptor. It will be found, however, upon examination, that the cases on this subject are governed by certain general principles which, when applied, obviate much of the difficulty. The doctrine applies to the purchase of real estate, n1037 and will be invoked where necessary that one may not be deprived of one's rights, n1038 but will not be applied to assist the vendor in getting or keeping that to which the vendor is not entitled. n1039 It will not be invoked to aid the vendor in avoiding the consequences of fraudulent representations as to material facts, n1040 especially where the vendor is in a better position to know the facts than the purchaser. n1041 Thus, where a vendor knowingly and falsely makes representations of material facts to induce another to purchase real estate, and the purchaser in reliance on such representations enters into a contract and thereby sustains a loss, the purchaser is entitled to relief from the fraud practiced. n1042 However, the doctrine will be invoked to the of the ordinary physical condition of the property at the time of the purchase. n1043 A vendor cannot be held responsible for a fraudulent concealment of an adverse claim of which the vendor has no knowledge. n1044

The earlier rule absolved the vendor from any tort liability for unsafe condition of the premises after sale, even though the condition was known to the vendor. n1045 A later doctrine holds the builder-vendor liable. n1046

Courts have divided as to whether there is an implied warranty of quality in the sales of unfinished houses. n1047 In recent years some jurisdictions have recognized a doctrine of warranty of fitness by a builder-seller of houses, n1048 which may even carry tort liability. n1049 However, this trend toward avoiding caveat emptor in sales of new houses is not unanimous, n1050 and courts recognizing a right to fitness for habitation in new houses are cautious about the extent of this doctrine. n1051 Those courts extending the builder liability to remote grantees do so under different theories. n1052 In other jurisdictions, assignees of vendees cannot sue the builder-seller if the warranty is held to extend only to the first purchaser. n1053 In these situations would also apply the usual exception to caveat emptor when the knows and does not disclose to the purchaser information which would be important to the purchaser. n1054 The net effect of these cases is that more commonly now the liability of the vendor is being extended to third parties. n1055

Distinction is made in many cases between mere puffing and actual misrepresentation. Mere statements of opinion and shop talk are allowed in the sale of land. n1056 If the statement is based on alleged facts, it is a statement of fact and not an expression of opinion and, if relied on, amounts to a fraudulent misrepresentation. n1057 Caveat emptor yields to false representations by the vendor, n1058 even where the falsity is easily discernable, n1059 but unless there is a duty to speak, i. e., where no fiduciary relationship exists, mere nondisclosure is not fraud, n1060 unless, as held sometimes, the fact cannot be discovered by the vendee on inspection. n1061 As long as the vendor does not prevent an independent investigation and the parties are dealing at arms length, the purchaser cannot predicate an action to rescind on statements made by the vendor as to profits made from the business. n1062 The doctrine of caveat emptor as related to sales of land applies to title n1063 as well as quality and condition. n1064

While a vendee has not duty to investigate title, if facts known to the vendee constitute a warning that further inquiry is needed and such facts are of sufficient interest to invite inquiry, the vendee does have a duty to investigate the title. n1065 The doctrine of caveat emptor applies to inherent geological defects in real estate. n1066

A few states have developed specified exceptions by statute or by judicial decision to the caveat emptor doctrine. n1067

The doctrine of caveat emptor is not available to a vendor making misrepresentations to induce a sale. n1068 Caveat emptor is increasingly limited to situations where the seller did not know of the defect or was under no duty to disclose or where the buyer had opportunity to discover the defect. n1069 The doctrine of caveat emptor does not apply where a builder is to perform work after the close of the transaction. n1070 And, as mentioned above, in some states subsequent, remote purchasers from the builder-vendor have a cause of action for breach of the implied warranty of fitness for habitation. n1071 Thus courts are rapidly eroding the classic caveat emptor. n1072

§ 96.15(a)(4)(iii) The Extent to Which Representations May Constitute Fraud.

If a party is induced to enter into the contract by fraudulent representations as to a fact deemed material, and upon which the party has a right to rely, the party may rescind the contract upon the discovery of the fraud, n1073 and relief may be granted, even if the misrepresentations were not consciously made to defraud. n1074 However, the power is an extraordinary one, and should never be exercised unless the fraud is clearly made to appear. n1075 If the purchaser has been induced to enter into a contract by an intentional misrepresentation, the purchaser may rescind even if reliance was negligent. n1076

An innocent misrepresentation may be the basis of rescission. n1077 The misrepresentation must be as to a material matter. n1078 It must relate to a present or pre-existing fact, and cannot ordinarily be predicated on unfulfilled promises or statements as to future events. n1079 The contract may be avoided for false statements of fact made by the vendor to induce the sale and relied on by the purchaser. n1080 The purchaser may not rely on the representations of the vendor as to the recitals in the title deeds. n1081 A recital in a contract of sale that no statement should be binding upon the vendor unless the same be in writing does not prevent the purchaser from repudiating the contract if execution of the contract was fraudulently induced. n1082 It is not essential that the party making the representations knew them to be false. It is sufficient that the party ventured the assertions without knowing whether they were true or false, for the affirmation of what one did not know or believe to be true is equally in morals and law as unjustifiable as the affirmation of what is known to be positively false. n1083 Thus, false representations of a material fact justifies rescission of a real estate contract, even though the party making the misrepresentation was ignorant as to whether it was true or false. n1084 Such representation operates as a surprise and a misrepresentation on the party to whom it is made. n1085

The older rule was that misrepresentations by the vendor, to be material, were required to be dishonest. n1086 Today it is generally accepted that the misrepresentation need only be material. n1087 Ordinarily, a misrepresentation as to a matter of law by a person possessing no superior knowledge of the particular question of law is insufficient to support an action for fraud and deceit. n1088

No fraud arises where the complaining party has knowledge of all the facts. n1089 If the party complaining has the means of knowledge as readily at hand as the party making the false representations, it is incumbent upon the party to seek that knowledge, and upon neglect to do so, the party will usually not be entitled to relief. So, if it be that such a party has investigated, seeking from other quarters the verification of the statements, has not been impeded in the inquiry, and has made it as full and searching as desired, the party cannot insist that the party relied upon the verity of such statements. n1090 Misrepresentation entitling the purchaser to a rescission of the contract for the sale of land must be such as to mislead and induce the purchaser to buy on the faith thereof. n1091 An intent to deceive the purchaser by misrepresentation of material facts is said to be a necessary element to sustain a charge of fraud on the part of the vendor; n1092 but the better rule would seem to be that the purchaser's right to rescind for misrepresentation does not depend upon the motive or cause which actuated the vendor in making the misrepresentation, n1093 it being sufficient if the vendor made material representations without knowledge of their falsity. n1094

Fraudulent misrepresentations must be precisely alleged and established by clear and convincing proof. n1095 The vendee must account for any damages to the land. n1096 Fraud justifying recission may consist in material misrepresentation relied on by the purchaser as to quantity of the land or its boundaries, n1097 location of the land, n1098 character and value of the land, n1099 rentals, n1100 existence of springs or water supply on the premises, n1101 financial standing of the purchaser, n1102 or change of the purchase price in reducing the contract to writing. n1103 A purchaser induced to execute a contract of purchase by false representations may stand on the contract and recover damages caused thereby, or he may rescind the contract and return the land purchased and receive back what was paid. n1104 The purchaser need not rescind the transaction, but may confirm it, retain what was received, and recover damages sustained as the proximate consequence of the fraud. n1105 The right to a rescission on account of a vendor's fraudulent misrepresentations as to material facts which influence the transaction is not affected by the fact of the

solvency of the vendor or the vendor's good faith in making the representations. n1106 To justify rescission on the ground of the vendor's fraud, the misrepresentation must be based on an alleged past or presently existing fact. n1107

A statement as to the value or area of land may be such a statement of fact as will entitle the other party to rescission. n1108 Any material misrepresentation as to the location of land, or the like, whether made innocently or with a fraudulent intent, will, in general, entitle a person acquiring the land and relying on such statements to rescind the transaction and recover the amount paid on the purchase price. n1109 False representations made by a vendor as to title, although innocently made, upon which the vendee relies to the vendee's injury, may constitute such constructive fraud as will entitle the vendee to a rescission. n1110 A vendor is also entitled to have a contract canceled in a proper case on account of fraudulent misrepresentations of the purchaser. n1111 The judgment may rest upon any one material false representation. n1112 It is not material that the party making the representation believed it to be true and did not know that it was false. n1113 The representations are not material where they are mere opinions or ordinary sales talk, n1114 or where their falsity is known or obvious or could have become known by the exercise of ordinary prudence. n1115

In a misrepresentation that the premises could be used for the conduct of a particular business, the purchaser's intention so to use the property being made known to the vendor, it was held that the vendee could recover the deposit paid under the agreement if such use was in fact forbidden by a zoning ordinance. n1116 However, it has been held that fraud cannot be predicated upon a mere promise, even though the promise is accompanied by a present intention not to perform it. n1117 In a case of misrepresentation by the seller, the time for vendee's action begins to run from the time the facts were discovered, not from the time of sale. n1118

Misrepresentations by a stranger to the contract will not ordinarily be ground for an avoidance of the agreement, nor render the party benefitted liable for damages. The false representation of a third person will work this result, if the third person is acting under authority of, in collusion with, or as the agent for the party to the contract. n1119 This is true even though the principal may be innocent of fraud, provided the false statements of the agent were made within the scope of the agent's authority. n1120 False statements of material facts by the vendor's agent to induce execution of the contract and relied on and working injury to the purchaser will ordinarily be imputed to the principal and furnish ground to avoid the contract. n1121 The principal is liable even though the misrepresentation is committed for the benefit of the agent and does not benefit the principal. n1122 Ordinarily, where the purchaser inspects the premises, the purchaser may not urge reliance on the representations of the agent. n1123 Reckless representations by an agent as to the quantity of the land are fraudulent, even though the agent did not know that they were false; n1124 but if the false representations made by the agent are not within the scope of the agent's authority, and the principal has no knowledge of such misrepresentations and does not adopt them, the principal is not liable. n1125 The fraud of the agent will not generally be imputed to the principal where the contract provides that no statements or agreements are binding unless written in the contract. n1126

Representations made by a third person without any authority whatever may, however, be ratified by accepting the benefits or otherwise, and if this is done the result may be the same as if the beneficiary had expressly authorized the misstatements. n1127 The principal cannot affirm the action of the agent in making the sale and not assume responsibility for his representations. n1128 The agent's promise to a purchaser that the agent would resell the land for the purchaser's benefit would not be sufficient ground for rescission unless the promise was made by the agent without any intention to perform the promise. n1129 The purchaser may have relied on the representations even though the public records disclosed the true situation. n1130

Apparent authority in an agent to receive payment may be created by a course of dealing, or previous conduct, leading persons of ordinary prudence to believe such authority has been given the agent. Real estate brokers have no such authority to receive payments unless "apparent authority" exists. n1131 The cases are divided as to whether a broker is entitled to commission where the sale is at a price less than that stipulated between the owner and the broker. n1132 A real estate broker's agent is under a fiduciary duty to disclose to the vender a prospective purchaser's relationship to the broker. n1133

By the rule of the common law, a vendee who has knowledge of valuable minerals beneath the surface of the land of another, and of which the latter is ignorant, is under no legal obligation to disclose such fact in making the purchase. Under such circumstances, the vendee may remain silent, and not disclose facts in the vendee's knowledge, or answer inquiries as to such facts. However, if the vendee undertakes to answer or disclose, the vendee must disclose the whole truth, without concealment of material facts, and without doing anything calculated to prevent an investigation on the part of the vendor, especially if the vendor does not reside near the land and the vendee does. n1134 Very generally, the law places no obligation on a purchaser to disclose the purpose of the purchase or matters calculated to enhance the value of the land; n1135 neither is a purchaser on resale bound to acquaint the vendee with the terms of the vendor's purchase. n1136 Inadequacy of price paid by the purchaser is indicative of fraud only when the inadequacy is so great as to suggest that the vendor has been overreached or imposed upon. n1137

When no peculiar circumstances call for disclosure, such as some confidential or fiduciary relation existing between the parties, a purchaser, having superior knowledge of value, does not commit fraud merely by purchasing without disclosing knowledge of the value of the thing purchased. n1138 Thus, a purchaser of timber land having special knowledge of facts enhancing its value is under no obligation to inform the vendor. n1139 It has been held, however, that active or intentional concealment of material facts amounts to fraud which will prevent the enforcement of the contract by the party guilty of the fraud. n1140 The purchaser's misrepresentation of facts which essentially enter into the inducement on which the vendor makes a contract usually constitutes a ground for the avoidance of the contract. n1141 It has been held that a vendor is not entitled to a cancellation of a contract on the ground of the fraud of the purchaser in making a false statement that the purchaser had stock and equipment to farm the land. n1142 When gross inadequacy of consideration for a conveyance is accompanied by other inequitable incidents, such as misrepresentation, concealment, or undue advantage taken of ignorance or misplaced confidence, a court of equity will set aside such conveyance. n1143

If the contract contains a provision that both parties disclaim reliance upon any representation not contained in the contract, the cases divide as to whether there can be recovery in cases of actual fraud. n1144 The weight of authority seems to be that a provision in the contract that there have been no representations made is not an assertion that such representations actually have not been made, but is an agreement of the parties that their contractual rights are to be considered as though none had been made. n1145 Thus extrinsic evidence may come in to show fraud, n1146 but a provision in the contract to the effect that the seller has not made any representations with respect to the property is a bar in law to an action for damages brought by the vendee on the grounds of false representation. n1147

Under ordinary circumstances a purchaser's failure to disclose material facts within the purchaser's knowledge does not constitute "fraudulent concealment." For fraudulent concealment to arise against the purchser, it is not only necessary that great advantage should be taken in such a contract and that such advantage should arise from superiority of skill or information, but it is also necessary to show some obligation binding the purchaser to make such a disclosure. n1148

The following elements must be proved in an action based on fraud:

(1) The misrepresentation must be of a statement of fact;

(2) it must be made for the purpose of influencing the other party to act;

(3) it must be untrue;

(4) the party making the statement must know or believe it to be untrue;

(5) the person to whom it is made must believe and rely on the statement;

(6) the statement must be material. n1149

Rescission of a deed is allowed on parol statements of grantee's false representation of intended use. n1150 A purchaser's misleading statement to the vendor as to the probable future value of the land is held insufficient to show fraud such as would justify cancellation. n1151

§ 96.15(a)(4)(iv) Particular Misrepresentations That Will Constitute Fraud.

Very general false representations by the vendor regarding the quantity of the land sold or its boundaries or location, made as an inducement to purchase and which actually deceive the purchaser and are relied on by the purchaser, constitute fraud which entitles the purchaser to relief. n1152 Under one rule, rescission on the basis of fraudulent representation is not available unless injury or damage to the party has been prove. n1153 The purchaser is entitled to relief where the deficiency is so great as to justify an inference of fraud. n1154 A mere expression of opinion on these matters is not sufficient to taint the transaction with fraud. n1155 An owner presumptively knows the boundaries, particularly where the purchaser could only obtain this knowledge by scientific measurement of the property. n1156 However, authorities are in conflict as to whether an incorrect statement of area vitiates the contract or is actionable where the boundaries are correctly pointed out, n1157 the prevailing opinion being that the vendor's misrepresentations as to area constitute deceit regardless of the fact that the vendor pointed out the true boundaries of the land to the purchaser. n1158 A few jurisdictions depart from this general rule. n1159 The mere fact that the purchaser saw the land may not be conclusive that the purchaser did not rely on the misrepresentations. n1160 The fact that the purchaser made an examination and inspection of the land under such circumstances that the purchaser discovered or ought to have discovered the truth will usually defeat a recovery by the purchaser. n1161

Where the representation of the vendor as to the quantity of the land comprised in the description is made at the time of the negotiations for its purchase and antecedent to the written contract, with the intention of inducing the purchaser to execute the contract, such representation amounts to a warranty, and the purchaser has a right of action for damages for breach of warranty and not an action for compensation by way of abatement of the price. n1162 Purchasers who were induced to buy a lot by the representation of a vendor who had knowledge that the lot was being purchased as a site for a hotel and that there was a public street in front of the lot, were held entitled to a rescission of the contract, where the lot was surrounded by privately owned land. n1163 Representations by the vendor that the property has been zoned is a representation as to an existent fact and is actionable in damages. n1164

Three situations may arise where the sale has been in gross:

(a) Absent any reference to the quantity, no action for deficiency or excess acreage based on mutual mistake of fact will lie. n1165

(b) Though there is mention of the quantity it is obvious that the parties contemplated no recourse if it was inaccurate. There is no recovery here. n1166

(c) Where it is clear that the parties did not anticipate there would be a major discrepancy, recovery on mutual mistake lies here. n1167

Where there has been fraud there is recovery even though the sale was in gross. n1168

Statements concerning the depth of the top soil are not mere expressions of opinion, but constitute representations of a material fact. n1169 Any false representations as to the title to real estate, made as a fact or without regard to their truth or falsity, and in order to induce another to purchase the same, constitute actionable fraud, when such representations are relied on and induce the contract to purchase, and injury results. If the purchaser acts with reasonable promptness after discovering the fraud, the purchaser may maintain an action for the fraud and deceit or a rescission of the sale.

n1170 The right of the purchaser to rescind is not necessarily defeated by the fact that the statement made as to the character of the vendor's title was honestly or mistakenly made. n1171 Misrepresentation of title is fraud if it results in injury to the purchaser, but no fraud justifying rescission exists where the purchaser sustained no injury and the vendor entered into the contract in good faith, and is able to furnish a good title upon demand. n1172 Thus, representations by a vendor as to the title he held at the time of the sale, which the vendor believes to be true, but which are in fact untrue, will not justify a rescission of the contract. n1173 Representations that land is free and clear of encumbrances may be relied upon, and the person to whom it is made is not required to examine the records. n1174 The constructive notice furnished by the records will not relieve the party from the consequences of positive statements fraudulently made as to the land being unencumbered. n1175 A purchaser is justified in relying upon the vendor's representations in pointing out the lot lines. n1176 Material misrepresentations as to value falsely made and relied upon are grounds for invalidation of the contract of sale. n1177 Representations as to fertility, water supply, and other matters going to the value of the land are generally held to be representations of fact and thus material; n1178 but this does not include representations which are no more than mere expressions of opinion or ordinary sales talk. n1179 A mere erroneous statement or opinion as to the value will not ordinarily vitiate the contract, n1180 but material representations of quality or condition are grounds for rescission, even though they do not affect the value in any certain sum. n1181 Likewise, a false representation by the vendor in the sale of land that it is in good condition for cropping, or fertile and specially adapted to certain crops, or the like, are representations of fact entitling the purchaser to rescind and recover the purchase price when properly relied upon and the purchaser is thereby induced to make the purchase; or, in a proper case, the purchaser may maintain an action in damages for the fraud. n1182 The representations must have been relied on, and this cannot be said to have existed where the purchaser has knowledge of the value by inspection or otherwise. n1183

No legal obligation rests on the vendor to inform the purchaser that the purchaser is under such a mistake, when the mistake is not induced by the act of the vendor. Thus, where facts respecting the value of the land or the means of information concerning its condition are equally accessible to both vendor and vendee, and the vendor says or does nothing which tends to deceive or mislead the vendee, the vendee is in no position to complain that the vendor failed to disclose facts affecting the value of the land. n1184 However, the rule is different where the facts are accessible to the vendor only, and the vendor knows that such facts cannot, by reasonable diligence, observation, and judgment, exercised by the vendee, be ascertained. In such case, the vendor is bound to disclose the facts. n1185

Where a vendee is induced to enter into a contract of purchase by a false representation of the vendor as to the price paid for the land by the latter, the vendee may rescind the contract. n1186 False statements as to what property had cost, or as to what similar property had sold for, constitute fraud that will usually vitiate a contract and justify rescission, and it is generally actionable, at least when relied and acted upon and made the basis of the selling price or amount agreed to be paid. n1187 It is not proof of fraud that the vendor charged an excessive price to one ignorant of the value of the land. n1188 A vendor's false representation of a loan commitment was held to be ground for for rescission by vendee. n1189 Where the vendor innocently makes a false statement upon which the vendee relies, the cases divide as to whether the vendee can rescind, n1190 and some cases today permit an action for damages even where the misrepresentations were innocent. n1191

§ 96.15(a)(5) Actions for Rescission.

The rescission of a contract is to be enforced in equity, and it must be just and equitable under the circumstances of the case. n1192 An action for rescission will lie only in the absence of an adequate legal remedy. n1193 The remedy of rescission or cancellation of instruments is not one of absolute right, but rests in the sound discretion of the court to be exercised in accordance with what is reasonable and just under particular circumstances. n1194 The words "rescind," "annul," and "cancel" are interchangeable in the description of this form of action. n1195 "Rescission" and "cancellation" may be regarded as one and the same remedy; the decree for rescission generally directs the cancellation of the instrument which embodies the evidence of the contract in question, or of the obligation arising therefrom, thereby rendering the decree of the court effectual and complete. n1196 So, where rescission as well as cancellation is sought, the latter remedy is a mere auxiliary to effectuate the rescission. n1197

Rescission is a matter of equitable jurisdiction. n1198 The purpose of this remedy is to procure the cancellation of the instrument. A contract for the sale of real estate may be rescinded in this way on the ground of fraud or mistake. n1199 Rescission will not necessarily be denied merely because the contract has been executed, n1200 but where the contract is conscionable, and the complaining party has had the full benefit of it, it will not ordinarily be rescinded. n1201 State statutes are beginning to permit rescission of vendor-purchaser contract where breaches by the vendor are so material as to defeat the purchaser's object in making the contract. n1202 The equitable remedy of rescission is not one enforceable as a matter of right, but rests on the sound discretion of the court, n1203 and a court should not award it except in a clear case, n1204 nor unless some such element as actual fraud, accident, mistake or insolvency appears. n1205 A court of equity may declare a rescission of a contract of conveyance in order to prevent a manifest wrong. n1206

Where rescission is sought on several grounds, it is enough if the contention is sustained on one of the grounds. n1207 One who demands cancellation for nonperformance must show compliance with the terms of the contract or make tender of performance. n1208 The majority rule seems to be that proof of pecuniary damages need not be shown to entitle a purchaser to rescind the contract, even for a misrepresentation as to the quality or value of the property sold. n1209 A demand for performance is not necessary where it would be futile if made, n1210 such as where the vendor admits inability to perform, n1211 or the title is unmarketable. n1212

A fraudulent transaction must be affirmed or rescinded as a whole by the defrauded party. n1213 The vendor's fraudulent misrepresentations give the vendee the option of rescission or an action for damages. n1214 In cases where fraud is the ground for rescission, the defrauded party may treat the contract at an end and resort to a court of law for relief, or he may seek the aid of a court of equity to have the contract avoided, and perhaps incidentally to obtain further relief. n1215 The purchaser may not maintain suit for rescission for the purchaser's own default. n1216

The good faith of the party making the misrepresentations is not a defense. n1217 Notice to the parties of an intention to rescind is ordinarily required. n1218 This requirement in some jurisdictions is satisfied by the bringing of the action to rescind. n1219 No rescission arises by the offer of the vendee to reconvey at a discount. n1220 The election not to rescind is shown by suit to foreclose a vendor's lien. n1221 Rescission annihilates the contract and an offer to perform thereafter is without avail. n1222 The grounds for rescission must be related directly to the subject matter of the contract to be effective. n1223 Demand for performance is a condition precedent to rescission. n1224 So is tender, unless useless. n1225

Upon rescission for failure to convey good title, the vendee is chargeable with reasonable rent plus interest, and the vendor with return of the purchase money paid plus interest. n1226 Where the vendee has offered to rescind and the offer is rejected, the vendee may either abandon the premises or may continue in possession as caretaker for the vendor. n1227

§ 96.15(b) Forfeiture of the Contract. n1228

To obtain the greatest protection in face of the purchaser's breach, the vendor will seek the option of terminating all of the vendee's interest in the land and of the vendee's rights to possession thereof. Not unnaturally the vendor seeks to secure such option either by express provision in the contract or by construction thereof. To a greater or lesser degree this desire of the vendor is controlled by the courts or by the legislatures. n1229 At common law the vendor had the right to maintain an action of ejectment against the purchaser after condition broken, where the purchaser was let into possession under the contract. n1230 In some jurisdictions unlawful detainer is by statute made available for the vendor under similar circumstances. n1231 Some courts will uphold express forfeiture provisions in the contract. n1232 Generally a provision for default on breach of the contract is valid. n1233 The law does not supply a forfeiture clause in a contract where none exists. n1234 In some states the vendor may bring strict foreclosure on vendee's default, n1235 but other states deny the vendor's right to ejectment. n1236 Provisions in the contract that upon default the vendee will become a tenant at will have met conflicting treatment in the courts. n1237

Where the contract stipulates that for certain breaches the party shall lose rights under the contract or forfeit a fixed sum, this condition is called a "forfeiture." Forfeitures are not favored either in equity or in law, n1238 and, when their enforcement will work a hardship upon a party to the contract, the courts will consider all circumstances tending to show a waiver of the forfeiture. n1239 Thus, an express provision for the forfeiture of a contract to convey for nonpayment of the purchase price within a time specified was held waived by the vendor's act of holding the deposit money after the vendee's failure so to complete payment. n1240

Where time is clearly the essence of the contract the vendor may declare a forfeiture for failure to pay the purchase price or any installments when due. n1241 It is usually a condition precedent to forfeiture that the vendor make demand and tender of performance. n1242 The formal tender of performance by vendor is not required where it would have been fruitless if made. n1243 A vendor in default cannot declare a forfeiture. n1244 The vendor must be able to perform in order to forfeit the interest of the vendee under the contract to purchase. n1245

Notice is usually required of the intent to forfeit for default. n1246 The mere passage of time for the performance of an executory contract for the purchase of real estate does not alone work a forfeiture, as respects the necessity of notice of the forfeiture. n1247

A vendor whose title is found to be unmarketable is not automatically in default if the defect is curable with a reasonable time after law day. n1248 The vendor must serve upon the vendee a notice of intention to forfeit the real estate contract. n1249 A notice of forfeiture under the more modern rule merely informs the vendee that the delinquency must be cured and does not of itself terminate the contract. n1250 Where the conditional vendor had been in the habit of accepting late payments from the vendee, the vendor must give notice to the vendee that in the future the right of forfeiture will be exercised unless the default is paid within a reasonable and specified time. n1251

The provision for forfeiture is for the benefit of the vendor and may be waived by the vendor, n1252 and this will usually happen where the vendor accepts payments after default. n1253 Such an acceptance is generally held to be a waiver as to the installments that are past due. It amounts to a temporary suspension of the right to forfeit, subject to being restored at any time by definite notice, n1254 and where the payments were received at irregular intervals, n1255 acceptance of an installment after it becomes due does not, as a matter of law, waive the right to prompt payment of subsequent installments. n1256

A vendor waives the right to rescind the contract by demanding payment of the amount due thereunder from the vendee. n1257 The vendor may acquiesce in the breach of conditions of the contract; n1258 or the parties may agree that the contract shall remain in force. n1259 Waiver is a matter of defense to be pleaded and proved. n1260 When conduct amounts to a waiver of the provision making time of the essence of the contract, the vendor may not declare a forfeiture unless the vendor gives the purchaser reasonable notice and reasonable time to comply with the contract. n1261 The contract may provide against forfeiture for failure or delay in exercising the option to rescind. n1262 An abandonment may be inferred from long extended failure to perform with no demand for performance. n1263 The abandonment may not be inferred from failure to pay at the stipulated time where the title is in such condition that it cannot be transferred. n1264 Acquiescence in the forfeiture by the purchaser closes all of the purchaser's rights under the contract. n1265 Where forfeiture is declared, the vendor may not recover the unpaid portion of purchase price. n1266 A forfeiture may be set aside for fraud. n1267 Until the vendor exercises a right of forfeiture, the vendee in possession is not liable for rent. n1268 A party seeking forfeiture under a statute as to land contracts should fully and strictly follow the procedure there required. n1269 The vendor must strictly pursue the course of conduct prescribed by the contract in foreclosing the vendee's rights thereunder. n1270 The vendor may not forfeit without tendering a conveyance, n1271 unless the vendee admits inability to perform. n1272

Some states protect the vendee through statutory enactments as to forfeiture of sales contracts. n1273 A vendor may by conduct waive the right to declare a forfeiture. n1274 In some jurisdictions, despite the terms of the contract, an

installment land sales contract must be foreclosed as a mortgage and not by forfeiture. n1275 Indeed, where forfeitures of conditional sales contracts are not favored, the trend is to treat them as creating liens in favor of the vendor and to be required that they be foreclosed as mortgages, particularly if the vendee has made substantial payments. n1276 This trend is also noted in statutes giving the vendee the same protection as a mortgagor. n1277

Norton, 243 P. 560 (Or. 1926); Riley v. Wheat, 187 N.W. 425 (S.D. 1922); Gustafson v. Am. Land Co., 234 S.W. 244 (Tex. Civ. App. 1921); Wilks v. McGovern-Place Oil Co., 207 N.W. 692 (Wis. 1926); Skendzel v. Marshall, 289 N.E.2d 768 (Ind. Ct. App. 1972), superseded, 301 N.E.2d 641 (Ind. 1973)* (No notice of rescission is required if one party has substantially breached the contract.).

(n49)Footnote 839. *Buckley v. Turner Heritage Homes, Inc., 248 Ga. App. 793 (Ga. App. 2001)* (purchaser's delay in notifying vendor of her intent to rescind the contract for sale of real estate until ten months after she discovered 30 problems with the home was unreasonable, and thus, she waived her claim for rescission); *Warner v. Denis, 933 P.2d 1372* (Hawai'i App. 1997) (while party may not alone rescind contract for sale of real property, he may by neglecting or refusing to perform it on his part place it in power of other party, who is not also derelict, to avoid the contract at his pleasure; right of rescission must be exercised within reasonable time after default, as equity will not permit party in whose favor right to rescind has arisen to delay unreasonably in exercising right and thus speculate on rise or fall in property's value); *Mott v. Lombard, 655 A.2d 362 (Me. 1995)* (rescission was no longer available as remedy to purchasers of property six and one-half years after sale of property, despite vendors' failure to remove lis pendens affecting property for over three years from date of sale); *Schwiegert v. Fowler, 784 P.2d 405 (Mont. 1990)* (to accomplish rescission of real estate contract, party must rescind promptly upon discovering facts that entitle him to rescind, and must restore or offer to restore property that was received under contract); *Benson v. Pyfer, 783 P.2d 923 (Mont. 1989)* (laches barred lot purchasers' claim against developers for rescission of contracts for deed; purchasers had continued making payments on contract for five years despite obvious indications that promised improvements had not been made and thus had not been reasonably diligent in asserting claim once right to rescind was apparent); Hirschman v. Hodges, O'Hara & Russell Co., *51 S. 550 (Fla. 1910); Provident Loan Trust Co. v. McIntosh, 75 P. 498 (Kan. 1904); Whitney v. Bissell, 146 P. 141 (Or. 1915).*

Thomas, 215 N.W. 927 (S.D. 1927); Maverick v. Perez, 228 S.W. 148* (Tex. Comm'n App. 1921); *Haddaway v. Burford, 239 S.W. 625 (Tex. Civ. App. 1922); Wilson v. Fay, 204 P. 800 (Wash. 1922).*

(n55)Footnote 845. *Paden v. Murray, 523 S.E. 2d 75 (Ga. App. 1999)* (evidence supported finding that home purchaser affirmed sales contract, and thus, his proper remedy against vendors for alleged defects was to sue for breach of contract, rather than for rescission based on fraudulent concealment; after moving into house, purchaser completely remodeled two sections of roof, changing its pitch, and he also repainted number of rooms and made other additions and alterations, including installation of termite monitoring system and replacement of front door); *McLeskey v. Ocean Park Investors, Ltd., 405 S.E.2d 846 (Va. 1991)* (if party, after discovering facts that would justify rescission of real estate contract, continues to treat contract as subsisting obligation, leading other party to believe that it is still in effect, right to rescind is waived); *Wolken v. Wade, 406 N.W. 2d 720 (S.D. 1987)* (purchaser may waive right to rescind by delay or conduct inconsistent with that right); *Uren v. Troup, 242 P.2d 895 (Cal. Dist. Ct. App. 1952)* (Acceptance by vendors of further payments after default was waived.); *Goldberg v. Krayeske, 128 A. 27 (Conn. 1925); Joiner v. S. Land Sales Corp., 124 S.E. 518 (Ga. 1924)* (retention of possession without complaint); *Hill v. Rogers, 99 N.E.2d 270 (Ind. Ct. App. 1951); Sylvester v. Lynde, 215 P. 305 (Kan. 1923); Roszczewski v. Jozwiak, 196 N.W. 359 (Mich. 1923); Clark v. Kirby, 153 N.E. 79 (N.Y. 1926); Burke Aviation Corp. v. Alton Jennings, Co., 377 P.2d 578 (Okla. 1962)* (One accepting the benefits of a real estate contract is estopped from denying its validity for failure to attach corporate seal.).

(n56)Footnote 846. *Chin v. Zoet, 418 N.W. 2d 191 (Minn. App.1988)* (to establish that purchasers waived their right to rescind contract for failure to provide marketable title, it must be shown that purchasers had full knowledge of facts, full knowledge of their legal rights, and intended to relinquish those rights); *Isom v. Johnson, 87 So. 543 (Ala. 1920); McMillen v. Betz, 224 Ill. App. 117 (1922); Couch v. Thompson, 129 S.E. 794 (Ga. Ct. App. 1925)* (no waiver of fraud by agreement to accept damages caused by fraud).

(n57)Footnote 847. *Bharodia v. Pledger, 11 S.W. 3d 540 (Ark. 2000)* (purchasers never abandoned right to terminate contract for sale of home under contract provision requiring vendors to provide disclosure statement on condition of property within three days of accepting offer, and thus, purchasers' failure to state in termination notice that non-receipt of disclosure statement was reason for terminating contract did not amount to a knowing and intentional "waiver" of that contractual right, where purchasers consistently argued breach of disclosure requirement as reason for termination, even before litigation was initiated); *England v. Nettesheim, 634 N.Y.S. 2d 797* (N.Y.A.D. 3 Dept. 1995) (delay by purchaser in terminating contract for purchase of home based on failure of appraisal to support purchase price, as required by appraisal contingency in addendum to contract, did not give rise to waiver barring purchaser from terminating contract where purchaser terminated contract shortly after becoming aware of contents of report, purchaser's conduct in attempting to resolve electrical and termite problems did not manifest intention to waive protection of clause or mislead vendor into thinking clause would not be enforced, and appraisal clause contained no time limitation); *Humphrey v. Camelot Retirement Community, 893 S.W. 2d 55* (Tex.App.-Corpus Christi 1994) (evidence supported trial

court's determination that purchaser did not intentionally relinquish or act inconsistently with her right to claim rescission of contract, and thus supported determination that vendor could not rely on defenses of waiver, promissory estoppel, or ratification to prevent rescission of contract); *Rogers v. Newton, 340 So. 2d 768 (Ala. 1976)* (Accepting payments after breach of contract does not waive right to rescind for later breaches.); *Craig v. White, 202 P. 648 (Cal. 1921); Stockburger v. Brooker, 127 S.E. 663 (Ga. Ct. App. 1925); Spitler v. Perry Town Lot & Improvement Co., 179 N.W. 69 (Iowa 1920); Keifer v. Dreier, 205 N.W. 472 (Iowa 1925); Cavell v. Trichell, 100 So. 249 (La. 1924).*

(n58)Footnote 848. *Smith v. McLeod Distributing, Inc. 744 N.E.2d 459 (Ind. App. 2000)* (ratification applies when a party to a contract, with knowledge of facts entitling that party to rescind the contract, treats the contract as a continuing and valid obligation, thus leading the other party to believe that the contract is still in effect); *Clear v. Missouri Coordinating Bd. for Higher Educ., 23 S.W. 3d 896 (Mo.App.E.Dist. 2000)* (an individual ratifies an agreement if he or she either expressly or by implication confirms or adopts the agreement with knowledge of its contents); *Stable Energy, L.P v. Newberry, 999 S.W. 2d 538 (Tex. App. Austin 1999)* (ratification of a contract occurs when a party recognizes the validity of the contract by acting under the contract, performing under the contract, or affirmatively acknowledging the contract); *Le Vine v. Whitehouse, 109 P. 2 (Utah 1910).*

(n59)Footnote 849. *Dean v. Garland, 779 A. 2d 911 (D.C. 2001)* (purchasers of home could not seek rescission of contract of sale as remedy for vendor's alleged breach of contract in failing to correct wet basement problem before settlement, even if vendor and real estate agents had fraudulently misrepresented that the problem had been corrected, where purchasers treated the property as their own and affirmed the contract through continued performance; purchasers had been aware that at least three agreed-upon repairs had not been completed before settlement, but they nevertheless proceeded with settlement and accepted the property with these problems, in exchange for payment from vendors and agents, and did not seek rescission for a year and a half after they had moved in); *McLeskey v. Ocean Park Investors, Ltd., 405 S.E. 2d 846 (Va. 1991)* (if party, after discovering facts that would justify rescission of real estate contract, continues to treat contract as subsisting obligation, leading other party to believe that it is still in effect, right to rescind is waived); *First Citizens Bank and Trust Co. of South Carolina v. Strable, 355 S.E. 2d 278 (S.C.App. 1987)* (purchaser of home was not entitled to rescission for failure of consideration where, after discovering latent defects, he acknowledged his debt to the seller and reaffirmed his intention to pay, renegotiated terms of payment, continued to live in the house, and sold timber from the property); *Kerns v. Bank of Manitou, 242 P.2d 817 (Colo. 1952); Deutsmann v. Kuntze, 125 N.W. 1007 (Iowa 1910); Ryan v. Brady, 366 A.2d 745 (Md. Ct. Spec. App. 1976)* (Where the purchaser has the right to rescind, he must exercise it promptly within a reasonable time after the discovery of the facts upon which the right is based.); *Dennis v. Jones, 14 A. 913 (N.J. 1888); Kent v. Church of St. Michael, 32 N.E. 704 (N.Y. 1892).*

(n60)Footnote 850. *Cooper v. Hillsboro Garden Tracts, 152 P. 488 (Or. 1915).*

(n61)Footnote 851. *Shappirio v. Goldberg, 192 U.S. 232 (1904); Cooper v. Hillsboro Garden Tracts, 152 P. 488 (Or. 1915).*

(n62)Footnote 852. *Engelking v. Field, 522 P.2d 439 (Or. 1974)* (where purchasers knew, as early as January 1971, the general condition of apartment building they had purchased, in March they knew specifically what was wrong with building and that it would have to be vacated if they did not bring it up to standards required by building code, but they waited until February 1972 to bring rescission suit and, before bringing action they had sold the property to another from whom they had accepted reconveyance, purchasers' conduct subsequent to sale constituted waiver of their right to rescind); *McMichael v. Webster, 41 A. 714 (N.J. 1898).*

(n63)Footnote 853. *Moch v. Moch, 562 N.W. 2d 558 (N.D.1997)* (since son made reduced payments of varying amounts on contracts for deed and father did not declare contracts to be in default and took no action to enforce his contractual remedies in event of default, trial court could reasonably conclude that father waived strict compliance with contracts); *United States v. Winterburn, 749 F.2d 1283 (C.A.9.Wash.1984)* (where vendor has granted defaulting purchaser indulgences by permitting payments after they were due without protest, under Washington law, strict performance is waived and forfeiture cannot be declared without notice of intention to do so and reasonable time for

vendee to perform); *Gorbett v. Estelle, 438 N.E. 2d 766* (Ind. App. 1 Dist. 1982) (where a party by his own indulgence has accepted late payments, he has waived right to terminate a contract which provides that time of payment is of the essence); *Martin v. Gulf Coast Orchard & Products Co., 279 F. 8 (5th Cir. 1922); Wishered v. Noonen, 205 P. 530 (Colo. 1922); Waller v. Lieberman, 183 N.W. 235 (Mich. 1921); Bodin v. Wilcox, 224 P. 558 (Wash. 1924); Larabee v. Gilbert, 190 N.W. 932 (Iowa 1923)* (request for extension not waiver of fraud).

(n64)Footnote 854. *Johnson v. Brado, 783 P.2d 92 (Wash. App. 1989)* (purchasers, by moving into house, waived right to rescind contract, but did not waive their right to enforce contract and sue broker and agent for damages arising from misrepresentation); *In re Fahnders, 66 B.R. 94 (Bkrtcy.C.D.Ill.1986)* (purchaser's continued possession of farm, albeit as self-proclaimed tenant, following breach of contract by vendors, effectively waived purchaser's right to rescind contract); *Fontaine v. Lyng, 202 P. 1112 (Mont. 1921); Randolph v. Gen. Investors Co., 124 A. 765 (N.J. Ch. 1924), rev'd, 128 A. 156 (N.J. 1925); James v. Ward, 190 P. 1105 (Or. 1920); McKellar Real Est. & Inv. Co. v. Paxton, 218 P. 128 (Utah 1923); Logwood v. Holland, 108 S.E. 571 (Va. 1921); Dieterich v. Rice, 215 P. 65 (Wash. 1923).*

(n71)Footnote 861. *Renth v. Krausz, 579 N.E. 2d 11* (Ill.App. 5 Dist. 1991) (laches barred action by purchasers to rescind real estate installment contract, brought on ground that vendor failed to attach certificate of compliance with building code, where purchasers delayed filing suit six years from time they should have known of availability of action and vendor was substantially prejudiced when value of property depreciated by 42% during delay); *Grymes v. Sanders, 98 U.S. 55 (1876); Truesdale v. Sidle, 67 N.W. 1004 (Minn. 1896); Sipola v. Winship, 66 A. 962 (N.H. 1907); Elsasser v. Wilcox, 596 P.2d 974 (Or. 1979)* (Rescission denied where vendor had not given vendee notice and an opportunity to cure breach.).

See contra

Anderson v. Doms, 984 P.2d 392 (Utah App. 1999) (loss in value of property did not by itself show that vendors were prejudiced by purchaser's delay in bringing rescission action, so as to raise laches bar to rescission claim); *Derouin v. Granite State Realty, Inc., 459 A.2d 231 (N.H.1983)* (rescission was not available remedy, where purchasers of property had undertaken substantial improvements to property so that property could not be returned to sellers in substantially same condition in which they received it).

(n72)Footnote 862. *Stone v. McCarty, 220 P. 690 (Cal. Dist. Ct. App. 1923).*

(n73)Footnote 863. *Barker v. Ness, 587 N.W. 2d 183 (N.D.1998)* (for purposes of equitable recission of real estate purchase contract, equity envisions a restoration of both parties to their pre-contractual positions); *Putman Const. & Realty Co. Inc., v. Byrd, 632 So. 2d 961 (Ala.1992)* (party seeking rescission of real estate contract must first restore consideration received, and land then becomes vendor's as though no contract had existed and money in hands of seller becomes property of purchaser); *Metcalfe v. Talarski, 567 A.2d 1148 (Conn. 1989)* (if vendee seeks equitable remedy of rescission, vendee must, in accordance with mandates of that remedy, restore to vendor any benefit that vendor has bestowed upon him or her); *Holcomb v. Zinke, 365 N.W. 2d 507 (N.D. 1985)* (to be effective, offer to restore status quo, as requirement for rescission, should include offer to remit any rent collected or reasonable value of using premises during period of occupancy and cannot be conditioned upon payment of damages); Or. *Mortg. Co., v. Renner, 96 F.2d 429 (9th Cir. 1938); Kent v. Clark, 128 P.2d 868 (Cal. 1942).*

(n74)Footnote 864. *Isaacs v. Bokor, 566 S.W. 2d 532 (Tenn.1978)* (it is usually required in action for rescission and restitution at law, that vendee, make offer of restitution prior to filing suit); *Strickland v. Strickland, 90 So. 345 (Ala. 1921)* (an offer in bill sufficient); *Rowland v. Hester, 90 So. 910 (Ala. 1921); Lost Creek Coal & Mineral Land Co. v. Hendon, 110 So. 308 (Ala. 1926); Conlin v. Sunset Beach Investments, 644 P.2d 138 (Wash.App. 1982)* (in rescission action, purchaser who is in possession of the property may recover its enhanced value if enhancement resulted from reasonable and necessary improvements); *Cutright v. Wilson, 410 So. 2d 1274 (La.App. 3 Cir. 1982)* (saves vendee who had improved land he thought he had purchased would be entitled to amount it cost him for fill dirt and culverts after sale

was set aside); *Smith v. Am. Motor Inns, Inc., 538 F.2d 1090 (5th Cir. 1976).*

(n114)Footnote 904. *Farmer v. Groves, 555 P.2d 1252 (Or. 1976). See Contra, Molalla Bowling Lanes, Inc. v. Corey, 697 P.2d 990 (Or. App. 1985)* (prematurely bringing an action for strict foreclosure of a land sales contract does not amount to a repudiation of the contract that enables the purchaser to effect a mutual rescission, rather, the purchaser's remedy is to seek an abatement or dismissal of the action.).

(n115)Footnote 905. *Farmer v. Groves, 555 P.2d 1252 (Or. 1976).*

(n116)Footnote 906. *Barker v. Ness, 587 N.W.2d 183 (N.D. 1998)* (for purposes of equitable recision of real estate purchase contract, equity envisions a restoration of both parties to their pre-contractual positions); *Metcalfe v. Talarski, 567 A.2d 1148 (Conn. 1989)* (if vendee seeks equitable remedy of rescission, vendee must, in accordance with mandates of that remedy, restore to vendor any benefit that vendor has bestowed upon him or her); *Howard v. Jones, 572 So. 2d 698 (La.App. 4 Cir. 1990)* (purchasers, who alleged that a one-half interest in the property which they contracted to purchase for $7,000 was previously sold to a transferee along with several other properties for $1,450 and that the sale to transferee was lesionary, sufficiently stated a cause of action for rescission of the sale based on lesionary grounds); *Williams v. Dunas, 352 N.E.2d 266 (Ill. App. Ct. 1976).*

(n117)Footnote 907. *Alexander Myers & Co. v. Hopke, 565 P.2d 80 (Wash. 1977)* (price reduced); *Dlug v. Wooldridge, 538 P.2d 883 (Colo. 1975)* (reduction refused).

(n118)Footnote 908. *Horine v. Greencastle Production Credit Ass'n, 505 N.E.2d 802* (Ind.App. 4 Dist. 1987) (parties mutually agreed to rescind land contract for farm, where purchasers failed to make payments required by contract, vendors received quitclaim and warranty deeds from escrow agent, vendors took possession of farm and there was no forfeiture clause in land contract); *Smith v. Mohan, 723 S.W.2d 94 (Mo.App. E.D. 1987)* (mutual release of contracted duties was consideration for purchaser's rescission of real estate sales contract); *Messer Real Est. & Ins. Co. v. Ruff, 64 So. 51 (Ala. 1913); Williams v. Jones, 186 S.W.2d 160 (Ark. 1945); Carter v. Fox, 103 P. 910 (Cal. Ct. App. 1909); King v. Seebeck, 118 P. 292 (Idaho 1911); Pardoe v. Jones, 143 N.W. 405 (Iowa 1913); Kilpatrick v. Smith, 19 N.W.2d 699 (Iowa 1945); Asher v. Helton, 101 S.W. 350 (Ky. 1907); Estey v. Whitney, 90 A. 1093 (Me. 1914); Grauel v. Rohe, 43 A.2d 201 (Md. 1945); White Pine Lumber Co. v. Manufacturers' Lumber Co., 158 N.W. 124 (Mich. 1916); Sieker v. Sieker, 130 N.W. 1033 (Neb. 1911); Wiiest v. Pounds, 8 N.W.2d 211 (Neb. 1943); Young v. Lee, 138 P.2d 259 (N.M. 1943); Guilfoyle v. Pettigrew, 56 N.E.2d 951 (Ohio Ct. App. 1943); Miles v. Hemenway, 111 P. 696 (Or. 1910); Mader v. James, 546 P.2d 190 (Wyo. 1976)* (A written contract for sale of realty may be rescinded by oral agreement or by acts of conduct.).

(n119)Footnote 909. *Todd v. Grayson, 270 S.W. 595 (Ark. 1925); Little v. Kennedy, 260 P. 890 (Cal. Dist. Ct. App. 1927); Haygood v. Kennedy, 109 S.E. 522 (Ga. Ct. App. 1921); Manley v. Underwood, 110 S.E. 49 (Ga. Ct. App. 1921); Feagin v. Georgia-Carolina Inv. Co., 11 S.E.2d 813 (Ga. Ct. App. 1940); King v. Walrath, 145 N.E. 94 (Ill. 1924); McLain v. Smith, 202 N.W. 239 (Iowa 1925); Wilson v. Holub, 210 N.W. 593 (Iowa 1926); Schwab v. Roberts, 263 N.W. 19 (Iowa 1936); Mathis v. Martin, 228 S.W. 431 (Ky. 1920)* (consideration necessary to release purchaser); *Osborn v. Osborn, 263 S.W. 738 (Ky. 1924); Flaherty v. Goldinger, 144 N.E. 374 (Mass. 1924); see Krause v. McDermott, 263 N.W. 788 (Mich. 1935); Miller v. Chinn, 223 S.W. 767 (Mo. Ct. App. 1920); Jose v. Aufderheide, 293 S.W. 476 (Mo. Ct. App. 1926)* (consideration necessary to mutual rescission of partially performed contract); *Beren Corp. v. Spader, 255 N.W.2d 247 (Neb. 1977)* (Where the vendees had given a mortgage on the contract, the contract could not be rescinded without the mortgagee's consent.); *Model Plan Fin. Corp. v. Dempsey, 138 A. 696 (N.J. 1927); Harrington v. Eggen, 199 N.W. 447 (N.D. 1924); C.A. Finch Lumber Co. v. Weishaar, 215 N.W. 155 (N.D. 1927); James v. Ward, 190 P. 1105 (Or. 1920)* (The mere fact that purchaser in default permits vendor to take possession does not amount to rescission.); *Builders Supplies Co. of Goldsboro, Inc. v. Gainey, 192 S.E.2d 449 (N.C. 1972)* (Contract may be abandoned by mutual oral agreement.); *Lieberman v. Har Nebo Cemetery Co., 82 Pa. Super. 178 (1923); Dooley v. Stillson, 128 A. 217 (R.I. 1925)* (Where purchaser surrenders possession on default, vendor may resell without rescinding.); *Johnson v. Smith, 280 S.W. 158 (Tex. 1926); Davis v. Cox, 239 S.W. 917* (Tex. Comm'n App. 1922);

Anderson v. Anderson, 223 P. 323 (Wash. 1924); Colburn v. Keyser, 123 S.E. 430 (W. Va. 1924).

(n120)Footnote 910. *Preheim v. Ortman, 331 N.W.2d 62 (S.D. 1983)* (mutual rescission of a real estate contract does not require a formal agreement but may result from any actions of parties clearly indicating their mutual understanding that contract is terminated); *Forsyth v. Pendleton, 617 P.2d 358 (Utah 1980)* (when the intent to abandon a uniform real estate contract by one party is coupled with the equal intention of the other party, such mutual abandonment may under certain circumstances, be found to constitute rescission of the contract); *McLain v. Smith, 202 N.W. 239 (Iowa 1925); Martin v. Work, 206 N.W. 288 (Iowa 1926); Denler & Denler Land Co. v. Eby, 269 N.W. 203 (Mich. 1936); Scales v. Warren, 293 S.W. 238 (Tex. Civ. App. 1927); Colburn v. Keyser, 123 S.E. 430 (W. Va. 1924).*

(n122)Footnote 912. *Hastings v. Matlock, 217 Cal. Rptr. 856* (Cal.App. 6 Dist. 1985) (rescission of written contract for the purchase and sale of interest in real property may be accomplished by oral agreement); *Sabot v. Rykowsky, 363 N.W.2d 550 (N.D. 1985)* (mutual rights and obligations of parties to written contract for purchase and sale of real estate may be waived, and contract annulled and extinguished, by oral agreement); *Beach v. Covillard, 4 Cal. 315 (1854); Lewis v. Fitzsimmons, 122 P.2d 882 (Colo. 1942); Strickland v. Woods Brothers Indus. Corp., 40 P.2d 367 (Kan. 1935); Chamberlain v. Barrows, 184 N.E. 725 (Mass. 1933); Silcox v. McLean, 11 P.2d 540 (N.M. 1932); Moseley v. Witt, 60 S.E. 520 (S.C. 1908); Wilcox v. Scallon, 127 N.W. 1007 (Wis. 1910).*

(n123)Footnote 913. Restatement of Contracts, §§ 222, 509.

(n124)Footnote 914. *Savitsky v. Sukenik, 659 N.Y.S.2d 48* (N.Y.A.D. 2 Dept. 1997) (generally, abandonment of contract for purchase of real property need not be express, but may be inferred from conduct of parties and attendant circumstances); *Saunders v. Sharp, 840 P.2d 796 (Utah App. 1992)* (vendors' refusal to convey property which purchasers had paid for constituted substantial breach of real estate installment sales contract, impairing purchaser's ability to continue making installment payments on the property, and justifying abandonment of the contract; thus, purchasers were not liable for unpaid installment payments, but had no right to property for which they had not paid); *Kolling v. Martin, 7 N.E.2d 527 (Ind. Ct. App. 1937).*

(n125)Footnote 915. *Preheim v. Ortman, 331 N.W.2d 62 (S.D. 1983)* (mutual assent to abandon or rescind a real estate contract can sometimes be evidenced by failure of both parties to take action towards enforcement or performance of contract); *Forest Preserve Real Est. Improvement Corp. v. Miller, 41 N.E.2d 526 (Ill. 1942).*

(n126)Footnote 916. *Puller Mortg. Associates, Inc. v. Keegan, 829 F. Supp. 1507 (S.D. Ind. 1993)* (contract not fully performed on both sides may be rescinded or cancelled by mutual agreement, which agreement may be expressed orally or in writing, or may be implied by the conduct of the parties); *Shackelford v. Leavengood, 532 So. 2d 1194 (La. App. 2 Cir. 1988)* (cancellation of written contract does not need to be in writing, but may be effected by oral, mutual consent); *Tompkins v. Davidow, 149 P. 788 (Cal. Dist. Ct. App. 1915); Ill. Bankers Life Assurance Co. v. Price, 45 P.2d 585 (Kan. 1935); Murray v. Boyd, 177 S.W. 468 (Ky. 1915); Lewis v. Cooley, 62 S.E. 868 (S.C. 1908); Van Keulen v. Sealander, 49 P.2d 19 (Wash. 1st Dept. 1935).*

(n127)Footnote 917. *Prime Financial Group, Inc. v. Masters, 676 A.2d 528 (N.H. 1996)* (parties to contract cannot, even by express provision in contract, deprive themselves of power to alter or vary or discharge it by subsequent agreement; express provision in written contract that no rescission or variation shall be valid unless it too is in writing is ineffective to invalidate subsequent oral agreement to the contrary); *Nelson v. Appalachian Ins. Co. of Providence, 399 So. 2d 711 (La.App. 1 Cir. 1981)* (there is no requirement that subsequent modification or revocation of contracts required to be in writing be in writing itself); *San Roque Properties, Inc. v. Pierce, 63 P.2d 1198 (Cal. Dist. Ct. App. 1937).*

(n128)Footnote 918. *Vildibill v. Palmer Johnson of Savannah, Inc., 536 S.E.2d 779 (Ga. App. 2000)* (the parties to

a contract may rescind it by mutual agreement, and rescission of a written contract need not be in writing; one party to a contract may consent to rescission by the other party either impliedly or by conduct); *Haberman v. Sawall, 237 P. 776 (Cal. Dist. Ct. App. 1925); Osborn v. Osborn, 263 S.W. 738 (Ky. 1924).*

(n129)Footnote 919. *Smith v. Moran, 693 P.2d 1246 (Mont. 1985)* (although no written notice is required, both parties must assent to and be aware of rescission of contract in order for it to be effective); *White Pine Lumber Co. v. Manufacturers' Lumber Co., 158 N.W. 124 (Mich. 1916); Taylor v. Wentworth, 193 S.W. 158 (Tex. Civ. App. 1917).*

(n130)Footnote 920. *Smead v. Lampher, 86 A. 1005 (Vt. 1913).*

(n131)Footnote 921. *Truman v. Martin, 321 N.W.2d 420 (Neb. 1982)* (cancellation, abandonment, or rescission of written contract may not only be written but may also be oral; moreover, implied agreement to rescind contract may be given effect and assent of parties to rescission may be shown by their acts or conduct and surrounding circumstances; accordingly, in determining whether rescission took place, courts look not only to language of parties but to all circumstances); *Graceville St. Bank v. Hofschild, 206 N.W. 948 (Minn. 1926).*

(n132)Footnote 922. *Watts Const. Co. v. Cullman County, 382 So. 2d 520 (Ala. 1980)* (where acts and conduct of one party inconsistent with existence of a contract are acquiesced in by the other, such contract will be treated as abandoned or rescinded); *Saunders v. Sharp, 840 P.2d 796 (Utah App. 1992)* (refusal of vendors to convey a lot and roadway constituted substantial breach of real estate installment sales contract so as to materially impair vendor's ability to perform and to continue making installment payments on unplatted property, justifying abandonment of contract); *Pardoe v. Jones, 143 N.W. 405 (Iowa 1913); Greggo v. Wohl, 241 A.2d 522 (Del. 1968)* (Condition in sales contract that the property be usable for liquor store made the contract void where the license could not be obtained even though it was for the benefit of the vendee, heirs, and assigns.).

(n133)Footnote 923. *Bailey v. Gordon, 8 F.2d 672 (D.C. Cir. 1925).*

(n134)Footnote 924. *Akins v. Vermast, 945 P.2d 640 (Or. App. 1997)* (if conveyance to purchaser is canceled, any interests that purchaser purported to grant are canceled also, except as to subsequent purchasers who claim as affirmative defense that they are bona fide purchasers for value without notice); *Cutright v. Wilson, 410 So. 2d 1274 (La.App. 3 Cir. 1982)* (when sale has been rescinded, parties are returned as nearly as possible to situation as it existed prior to sale and vendee returns property to vendor and vendor returns purchase price, subject to whatever adjustments are necessary for vendee's use of property during period he possessed the same); *T.H. Mastin & Co. v. Kirby Lumber Co., 14 F. Supp. 858 (S.D. Tex. 1936).*

(n135)Footnote 925. *Pilgrim v. Grant, 9 Alaska 17 (1936); Fowler v. Dieleman, 185 N.W. 79 (Iowa 1921).*

(n136)Footnote 926. *U.S. Postal Service v. Phelps Dodge Refining Corp., 950 F. Supp. 504 (E.D.N.Y. 1997)* (mutual mistake supports cause of action for reformation or rescission of sale of real property when mistake is so fundamental it defeats object of contract and status quo is restorable); *Kidd v. Fowler, 498 So. 2d 969* (Fla.App. 4 Dist. 1986) ("mutual mistake" occurs where, by inadvertence, written real estate contract is drafted and executed contrary to intention of parties, such as when it is shown that parties agreed on one thing but said something different when they incorporated it into their contract); *Clark v. Kirsner, 74 A.2d 830 (Md. 1950); Curtis v. Albee, 60 N.E. 660 (N.Y. 1901); Miles v. Stevens, 3 Pa. 21 (1846); Pond v. Fisher, 112 S.E.2d 147 (Va. 1960)* (Unilateral mistake of vendee will not prevent specific performance.); *Metzler v. Bolen, 137 F. Supp. 457 (D.N.D. 1956)* (To justify the reformation of a contract to convey realty on the ground of mistake, the mistake must have been made in the drawing of the instrument and not in the making of the contract which it evidences.); *see* Aldridge, Truth-in-Lending in Real Estate Transactions, *48 N.C. L. Rev 427 (1970); Miller v. Reynolds, 223 S.E.2d 883 (Va. 1976)* (An innocent but erroneous representation by the vendor as to the suitability of the premises was grounds for recission as creating a mutual mistake.).

(n137)Footnote 927. *Home Savers, Inc. v. United Sec. Co., 741 P.2d 1355 (Nev. 1987)* (purchaser of property at trustee's sale was entitled to rescission of sale on basis of unilateral mistake; shortly after foreclosure sale, purchaser

discovered that it had bought parcel located in back of parcel it believed it had purchased, notice published by trustee was misleading in that it included street address for front parcel, no one would have anticipated that dilapidated back parcel would have served as security for loan with balance many times value of property, and purchaser telephoned trustee for purpose of investigating property and trustee gave purchaser tax parcel number for front parcel, not back parcel); *Murray v. Paquin, 173 F. 319 (W.D.N.C. 1909); Kan. City & Memphis Ry. Co. v. Smithson, 168 S.W. 555 (Ark. 1914); Van Loan v. Glaze, 106 P. 250 (Cal. Dist. Ct. App. 1909); Taber v. Piedmont Heights Bldg. Co., 143 P. 319 (Cal. Dist. Ct. App. 1914); Kerns v. Bank of Manitou, 242 P.2d 817 (Colo. 1952); Selby v. Matson, 114 N.W. 609 (Iowa 1908); McGeorge v. White, 174 S.W.2d 532 (Ky. 1943); Hoffman v. Chapman, 34 A.2d 438 (Md. 1943); Dzuris v. Pierce, 103 N.E. 296 (Mass. 1913); Barber-Paschal Lumber Co. v. Boushall, 84 S.E. 800 (N.C. 1915); McCrea v. Hinkson, 131 P. 1025 (Or. 1913).*

(n138)Footnote 928. *Harding v. Willie, 458 N.W.2d 612 (Iowa App. 1990)* (mutual mistake of material fact as to whether house's roof leaked existed and therefore minds of the parties did not meet and no contract to purchase a house was made); *Clark v. Stetson, 97 A. 273 (Me. 1916); Dover Pool & Racquet Club, Inc. v. Brooking, 322 N.E.2d 168 (Mass. 1975)* (Mutual ignorance of both parties, assuming that zoning bylaws interposed no obstacle to contemplated use of premises, made the contract voidable for mutual mistake of fact.); *Dvorak v. Kuhn, 175 N.W.2d 697 (N.D. 1970)* (Rescission allowed where vendor's agent made an innocent mistake and an unconscionable result would occur if rescission were refused.); *Graham Magnetics, Inc. v. Region, 471 S.W.2d 600 (Tex. Civ. App. 1971)* (Court will reform in case of mutual mistake so as to conform to intent of the parties.); *Davey v. Brownson, 478 P.2d 258 (Wash. Ct. App. 1970)* (Rescission where mutual mistake if parties would not have contracted had they known the true facts--termites.).

(n139)Footnote 929. *Moonves v. Hill, 360 A.2d 59 (Vt. 1976).*

(n140)Footnote 930. *Sunlight Funding Corp. v. Singer, 536 N.Y.S.2d 533* (N.Y.A.D. 2 Dept. 1989) (vendor was entitled to rescission of agreement amending contract for sale of real estate, and specific performance of original contract of sale, where contract was amended primarily because of parties' mutual mistake of fact as to vendor's marketable title); *Mitchell v. Cal.-P. Title Ins. Co., 248 P. 1035 (Cal. Dist. Ct. App. 1926); Bredensteiner v. Oviatt, 210 N.W. 133 (Iowa 1926); Jones v. Metzger, 96 So. 161 (Miss. 1923); Va. Trust Co. v. Catoe, 99 So. 261 (Miss. 1924); Ferguson v. Mounts, 281 S.W. 616 (Tex. Civ. App. 1926); contra U.S. Fidelity & Guar. Co. v. Bimco Iron & Metal Corp., 464 S.W.2d 353 (Tex. 1971).*

(n141)Footnote 931. *Donovan v. RRL Corp., 27 P.3d 702 (Cal. 2001)* (a significant error in the price term of a contract constitutes a mistake regarding a basic assumption upon which the contract is made, which ordinarily has a material effect adverse to the mistaken party, and thus may constitute a unilateral mistake of fact potentially sufficient to warrant recission of contract); *Neel v. Lang, 127 N.E. 512 (Mass. 1920); Speers v. Lucas, 279 S.W. 736 (Mo. Ct. App. 1926); Logwood v. Holland, 108 S.E. 571 (Va. 1921); Arko Enterprises, Inc. v. Wood, 185 So. 2d 734 (Fla. Dist. Ct. App. 1966)* (Eminent domain does not warrant rescission of sales contract.).

(n142)Footnote 932. *Punie v. Achong, 765 So. 2d 823 (Fla.App.4.Dist. 2000)* (in a sale of real estate, if one party believes he is buying a particular piece of property while the other thinks he is selling another piece, there is no meeting of minds so as to constitute a valid contract); *Hill-Shafer Partnership v. Chilson Family Trust, 799 P.2d 810 (Ariz. 1990)* (generally, if seller intends to sell and buyer intends to buy land other than that described in deed, case of mutual mistake is presented); *Brown v. Coker, 92 So. 585 (Miss. 1922); Park Addition Co. v. Sawyer, 245 P. 829 (Okla. 1926); Holloway v. Wheeler, 261 S.W. 467 (Tex. Civ. App. 1924), rev'd, Wheeler v. Holloway, 276 S.W. 653* (Tex. Comm'n App. 1925) (Relief in equity cannot be granted upon the ground of mistake alone.).

(n143)Footnote 933. *Bain v. Guntersville Realty Co., 100 So. 128 (Ala. 1924); Lombardi v. Sinanides, 235 P. 455 (Cal. Dist. Ct. App. 1925); Nelson v. Pedersen, 137 N.E. 486 (Ill. 1922); Kirkham v. Bortz, 188 N.W. 770 (Iowa 1922); Brown v. Coker, 92 So. 585 (Miss. 1922).*

(n144)Footnote 934. *Colas v. Donaldson, 1 La. App. 389 (1925); Ford v. Delph, 220 S.W. 719 (Mo. Ct. App.*

1920); Hohertz v. Durham, 224 S.W. 549 (Tex. Civ. App. 1920); Brewer v. Ross, 290 S.W. 781 (Tex. Civ. App. 1926).

(n145)Footnote 935. *Thieme v. Worst, 745 P.2d 1076 (Idaho App. 1987)* (at time contract was made, both vendor and purchaser mistakenly believed that irrigation water could be delivered to high corner of property, and hence, mutual mistake of fact occurred in formation of contract); *Peardon v. Markley, 195 P. 70 (Cal. Dist. Ct. App. 1920).*

(n146)Footnote 936. *Turner v. Ferrin, 757 P.2d 335 (Mont. 1988)* (alleged discrepancy of about six percent in sale of 96.73 acres of land in gross was not "material or substantial lack of consideration," and did not entitle purchasers to rescission; one purchaser was shown property boundaries, and no fraud, duress, or undue influence was alleged); *Lawson v. Floyd, 124 U.S. 108 (1888); Cox v. Fisher, 225 S.W. 305 (Ark. 1920); Owens v. Durham, 70 S.E. 989 (Ga. Ct. App. 1911); Rotermund v. Lauritzen, 225 Ill. App. 170 (1922); Hoxie v. Iiams, 42 N.W. 711 (Neb. 1889); Beatty v. Depue, 103 N.W.2d 187 (S.D. 1960)* (rescission of sales contract due to mutual mistake as to acreage).

(n147)Footnote 937. *Bowling v. Poole, 756 N.E.2d 983 (Ind. App. 2001)* (purchase agreement was for land "in gross," not for a specific acreage, and thus there was no mutual mistake between vendor and purchaser as to the amount of land to be sold, where purchase agreement described acreage as three acres, more or less, survey revealed actual acreage to be near six acres, and parties walked the land together and described the land for sale by using roads, a creek, and other boundary lines); *Ewing v. Bissell, 777 P.2d 1320 (Nev. 1989)* (even if there is significant mutual mistake of fact as to acreage contained in real estate parcel, purchaser is usually not entitled to relief if sale was of acreage in gross); *Clippard v. Kneibert, 226 S.W. 584 (Mo. Ct. App. 1920); see Nasha Holding Corp. v. Ridge Bldg. Corp., 223 N.Y.S. 223 (1927).*

(n148)Footnote 938. *Hays v. Hays, 81 S.W.2d 926 (Ark. 1935); Firstbrook v. Buzbee, 132 So. 673 (Fla. 1931); Wallace v. Mobley, 112 S.E. 264 (S.C. 1922); Rich v. Scales, 91 S.W. 50 (Tenn. 1905).*

(n149)Footnote 939. *Bigham v. Madison, 52 S.W. 1074 (Tenn. 1899); see Brown v. Bradley, 259 S.W. 676 (Tex. Civ. App. 1924).*

(n150)Footnote 940. An agreement may be avoided where parties contracted under a misconception or mistake of material fact.

(n151)Footnote 941. *Kyle v. Kavanagh, 103 Mass. 356 (1869); see Stong v. Lane, 68 N.W. 765 (Minn. 1896); Briggs v. Watkins, 70 S.E. 551 (Va. 1911); Sheldon v. Capron, 3 R.I. 171 (1855)* (Where one purchases a lot at public sale understanding the auctioneer to offer lot 25 when in fact he offered lot 24, no valid contract was made); *Page v. Higgins, 22 N.E. 63 (Mass. 1889)* (Mistakes as to tract of land agreed upon or location of the boundary line thereto, may prevent a formation of any contract.); *Bigham v. Madison, 52 S.W. 1074 (Tenn. 1899).*

(n152)Footnote 942. *Homeside Lending Inc. v. Miller, 31 P.3d 607 (Utah App. 2001)* (equity will not correct a mistake of law as to the legal effects of an agreement unconnected with a mistake of fact, fraud, imposition, or undue advantage); *In re Estate of Holden, 539 S.E. 2d 703 (S.C. 2000)* (equitable relief is available where the parties acted under a mistake of fact going to the essence of the particular transaction, but not if the mistake was one of law); *Sentry Ins. v. ClaimsCo Intern., Inc., 608 N.W. 2d 519 (Mich.App. 2000)* (a mistake of law is usually not a ground for equitable relief); *Pattridge v. Youmans, 109 P.2d 646 (Colo. 1941); Trigg v. Read, 24 Tenn. 529 (1845); Dover Pool & Racquet Club, Inc. v. Brooking, 322 N.E.2d 168 (Mass. 1975)* (If the parties to a sales contract entered into the agreement by mutual mistake of fact, assuming that zoning bylaws did not prohibit the intended use, the contract could be rescinded by purchaser.) *Hunt v. Rhodes, 26 U.S. 1 (1828); Gwynn v. Hamilton's Adminstr., 29 Ala. 233 (1856); Burns v. Hamilton's Adminstr., 33 Ala. 210 (1858); Burt v. Wilson, 28 Cal. 632 (1865); Vickerson v. Frey, 224 P.2d 126 (Cal. Dist. Ct. App. 1950)* (mistake as to effect of building restrictions as grounds for rescission); *Williams v. Hamilton, 73 N.W. 1029 (Iowa 1898); Men About Town, Inc. v. Budde, 166 S.W.2d 305 (Ky. 1942); Clark v. Carter, 136 S.W. 310 (Mo. 1911); Hawralty v. Warren, 18 N.J. Eq. 124 (1806); Storrs v. Barker, 6 Johns. Ch. 166 (N. Y. 1822); Champlin v. Laytin, 18 Wend. 407 (N.Y. 1837); Good v. Herr, 7 Watts & S. (Pa.) 253 (1844); Trigg v. Read, 24 Tenn. 529 (1845);*

Utley, 252 S.W. 16 (Ark. 1923) (false representation that land was not in heavily assessed drainage district, material); *Muller v. Palmer, 77 P. 954 (Cal. 1904); Fenley v. Moody, 30 S.E. 1002 (Ga. 1898);* Drake v. Latham, 50 III. 270 (1869); *Craig v. Hamilton, 21 N.E. 315 (Ind. 1889); Riley v. Bell, 95 N.W. 170 (Iowa 1903); Provident Loan Trust Co. v. McIntosh, 75 P. 498 (Kan.1904); Fristoe v. Laytham, 36 S.W. 920 (Ky. 1896); Skinner v. Brigham, 126 Mass. 132 (1879); Stockham v. Cheeney, 28 N.W. 692 (Mich. 1886); Lackovic v. Campbell, 195 N.W. 798 (Mich. 1923)* (misrepresentation as to expiration of lease, material); *Reynolds v. Franklin, 38 N.W. 636 (Minn. 1888); Haight v. Hayt, 19 N.Y. 464 (1859); Jenkinson v. Stoneman, 4 Ohio Dec. Rep. 289 (1878); In re Wilson's Appeal, 7 A. 88 (Pa. 1995); In re Fleming's Estate, 109 A. 265 (Pa. 1919)* (forgery, ground for cancellation); *Morris v. Brown, 85 S.W. 1015 (Tex. Civ. App. 1905); Dehnhoff v. Hege, 230 P. 131 (Wash. 1924)* (fraudulent representation by bank as to ownership when its

sole right was that of owner of certificate of sale on a defective judgment); *Koepke v. Winterfield, 92 N.W. 437 (Wis. 1902).*

A positive statement that a title is good may be somewhat a matter of opinion, but it also implies that there are no facts affecting its validity within the knowledge of the vendor making the representation, and the purchaser is entitled to rely thereon. *Burns v. Dockray, 30 N.E. 551 (Mass. 1892).*

See Buchanan v. Burnett, 114 S.W. 406 (Tex. Civ. App. 1908), aff'd *119 S.W. 1141 (Tex. 1909). See*, however, *Conwell v. Clifford, 45 Ind. 392 (1873)* (a false representation by the vendor, who had a good title to certain land, is no defense to an action, by the person making the representation, upon notes given for the purchase price).

(n381)Footnote 1171. *Guerken v. Rozga, 319 N.W.2d 178 (Wis. App. 1982);* It is immaterial whether the vendor knew the representations to be false, if the representation is in relation to a material matter and the purchaser is misled thereby. *Lanier v. Hill, 25 Ala. 554 (1854); Bailey v. Jordan, 32 Ala. 50 (1858); Lindsey v. Veasy, 62 Ala. 421 (1878); Kiefer v. Rogers, 19 Minn. 32 (1878); Parham v. Randolph, 5 Miss. 435 (1840); Rimer v. Dugan, 39 Miss. 477 (1860); Zunker v. Kuebn, 88 N.W. 605 (Wis. 1902).*

The assertion is equivalent to an assumption of its. truth. *Piche v. Robbins, 53 A. 92 (R.I. 1902).*

The vendor is bound to make reparation, no matter whether the representation is made with or without his knowledge of its falsity. *Buchanan v. Burnett, 114 S.W. 406 (Tex. Civ. App. 1908), aff'd, 119 S.W. 1141 (Tex. 1909).*

The mere fact that the vendors refer to it as "my property" does not sufficiently establish fraud. *Reuter v. Lawe, 56 N.W. 472 (Wis. 1893). See Brown v. Manning, 3 Minn. 35 (1859); Buchall v. Higgins, 96 N.Y.S. 241 (1905).*

Where one who held a tax sale falsely represented such title to be perfect, there is such fraud in law as will entitle the one defrauded to rescind a contract induced thereby, even though the one making the representation believed it to be true. *Kathan v. Comstock, 122 N.W. 1044 (Wis. 1909).*

A vendor who represents his title as being a freehold when it is only a copyhold is guilty of a fraud where the purchaser relies upon the representation, and this is true even though the vendor believed in the truth of his statement. *Hart v. Swaine, 7 Ch. Div. 42.*

CHAPTER 96 Vendors and Purchasers

11-96 Thompson on Real Property, Thomas Editions § 96.16

AUTHOR: David A. Thomas Professor of LawJ. Reuben Clark Law School Brigham Young University

§ 96.16 Remedies for Breach of Contract.

[Go To Supp]

Whenever the vendor or the vendee fails to meet any of the requirements imposed by the contract, the other party has a variety of remedies. The party may elect to waive or to rescind, or may bring an action for damages. The vendee and under some circumstances the vendor may have specific performance of the contract. The vendee who elects to rescind may have an action for recovery of purchase money paid. n1278 The various jurisdictions present a kaleidoscope of opinions as to the nature and extent of the remedies of the respective parties on default. n1279 To a considerable extent these determinations depend on whether the contract of sale is considered as in effect transferring title to the vendee with the vendor merely holding a security or whether the vendor retains all or most of the concepts of title. Or viewed from another point, should the public policy in favor of debtors govern or should the public policy in favor of free alienation afford the vendor a cheap and easy method of foreclosure. n1280 Courts are in major disagreement as to whether the equitable concept, that the vendee in an installment sales contract is the owner and the vendor holds the title as security for the purchase price, is to be extended to require the vendor to foreclose against a defaulting vendee. n1281

The breach of a contract may arise by the renunciation of liability thereunder, by failure to perform, or by doing some act rendering performance impossible. n1282 If the vendee breaches the contract the vendor may have an action for the purchase money. If the vendee has been placed in possession and defaults, many states give the vendor a possessory action to terminate the contract and at the same time recover possession, but other states deny the vendor's right to ejectment. In some states the vendor may bring strict foreclosure on the vendee's default. n1283 "Breach of contract" is the failure, without legal excuse, to perform any promise which forms the whole or part of the contract, and may be inferred from the refusal of a party to recognize the existence of a contract, or the doing of something inconsistent with its existence. n1284 A party to a contract cannot be prevented from breaching it, but may be held liable for rescinding it without legal justification. n1285

A contract for the sale of land may be breached in any one of three ways: First, by a positive statement of an intention not to be bound or to perform and an acceptance by the other party; second, by inability to perform; and third, by failure to perform. The first two forms of breach may take place while the contract is still executory and before performance can be legally demanded. The third form of breach can take place only at or during the time for performance. The effect

of a breach of contract by one party is to excuse performance by the other and generally, but not always, to discharge the contract. n1286 The breach of a contract may consist in a failure to perform in a matter which is vital to the existence of the contract. The principle is illustrated by the case of contracts which expressly state that the time of performance is of the essence of the contract. n1287

To work a release of a contract of sale of land, a refusal to perform must be distinct, unequivocal, and absolute, and must be acted upon as such by the party to whom the broken promise was made. n1288 The contract is breached by the inability of the vendor to make title n1289 or the refusal of either of the parties to comply with the terms of the contract, n1290 or by the announced declaration of the vendee not to be bound by the terms of the contract. n1291 Where the vendor is unable to convey such title as called for by the contract, and the purchaser has performed or offered to perform everything required to be performed, the purchaser is as much entitled to an action in damages against the vendor as if the latter had wilfully refused to perform the contract. n1292 If the vendor is not ready, able, and willing to perform the agreement on the day fixed for performance, the purchaser may elect to treat the contract as at an end and recover back the purchase money, or such part thereof as may have been paid. n1293 Likewise, if the vendee fails or refuses to perform the contract, the vendor may either tender the deed and compel payment of the price, or may maintain an action to recover damages. n1294 A litigant may not sue upon one cause of action and recover upon another. Accordingly, where a party injured by a breach of contract elects to stand on the contract, the party cannot generally recover on a quantum meruit, for the remedies are inconsistent. n1295 The vendor, in foreclosing a contract, can recover as a deficiency judgment damages caused by the vendee's waste, but not the difference between the foreclosure sale price and the original sale price. n1296

On the breach of a valid contract to devise certain property, the promisee may maintain an action at law against the estate of the deceased promisor. n1297 Some features of the contract may be breached without breaching the entire contract. n1298 The breach of a material covenant by the grantor amounts to a breach and justifies rescission by the purchaser. n1299 No tender of deed by the vendor is necessary where the purchaser refuses to perform. n1300 The grantee is not required to tender performance where the grantor has made it impossible to perform the grantee's part of the contract, n1301 or refuses to perform. n1302 Very generally, the courts will not declare a breach by a vendee for some immaterial defect which can be compensated for in the absence of express stipulations against such a defect. n1303 The contract is rescinded by the recovery of the purchase money for the breach of the contract. n1304 The action of a vendor in placing a caretaker on the premises to protect them after abandonment by vendee in default does not amount to an acceptance of surrender of the contract by the vendor. n1305 Fraud is not an essential requisite to recovery for deficient acreage. n1306

On breach of contract, the party not in fault must elect the remedy, and may either rescind and recover money paid, or may have specific performance or may sue for damages for the breach. n1307 The purchaser, for example, cannot have rescission and damages for the default of the vendor. n1308 Where the vendor has no title, the only remedy afforded the vendee is a suit for damages for breach of contract. n1309 In case of a suit for specific performance of a contract to convey real estate, where the vendor is unable to convey the title called for by the contract, the purchaser may usually elect to take what the vendor can give, and hold the vendor answerable in damages as to the rest. n1310 Such damages may be awarded in lieu of specific performance only when the case is one of equitable interposition, such as would entitle the complainant to specific performance but for intervening facts, n1311 and even though no equitable cause of action is stated, provided an answer was interposed. n1312 It is held that no such damages will be awarded where the purchaser at the time of the institution of the suit for specific performance knew of the inability of the vendor to perform. n1313

An agreement, made in advance of breach, fixing the damages therefor, is not enforceable as a contract and does not affect the damages recoverable for the breach, unless the amount so fixed is a reasonable forecast of just compensation for the harm that is caused by the breach, and the harm that is caused by the breach is one that is impossible or very difficult to estimate accurately. n1314

Neither party can enforce the contract against the other without showing performance or readiness or willingness to perform the party's own promise, n1315 and where one party has put it out of the power of the other party to perform, the first party cannot recover. n1316 This is also the form of remedy in case the purchaser wrongfully refuses to complete the contract n1317 However, as has been said, the vendor may elect to rescind the contract and recover the damages sustained by the purchaser's default, or may elect not to rescind and recover the price; n1318 but if there has been a conveyance, his remedy is at law for the unpaid purchase price. n1319 A suit to recover the purchase price is in effect a suit for specific performance. n1320 Generally, an action for the purchase price will not lie where the title has not passed, especially where it cannot pass without the doing of further acts, the performance of which equity cannot and will not compel. n1321 The party who does not elect to rescind is not entitled to recover the price in an ordinary action at law, but can recover damages only. n1322 The party in default cannot sue for breach of the contract. n1323 A vendee in default cannot place the vendor in default, so as to be entitled to recover payments made, by merely remaining quiet, without tender of the amount due, upon receiving notice that the balance due must be paid at once or the payments made will be forfeited; n1324 but an intention to rescind, so as to permit the purchaser to recover back what has been paid, is not evidenced by the vendor's service of notice of an intention to declare a forfeiture of the contract. n1325 The complaint against the vendor for breach of contract to convey should allege the making of the contract, the breach, the value at the time of the breach, and that the vendor without any just cause refused to make the conveyance. n1326 Where there has been no offer to perform, the pleader should show an excuse for this omission. n1327 If mutual extension is a defense, it must be pleaded specifically. n1328 The purchaser who alleges nonmarketability of the title tendered by the vendor has the burden of proof. n1329 Accordingly, in any action grounded on defect of title, the plaintiff must prove such defect, and the proof must be more substantial than the opinion of an attorney. n1330

If only one joint tenant signs a contract of sale it will be enforced against the signer with abatement of the purchase price on account of the surviving interest of the other cotenant. n1331 Where the purchaser has paid the consideration, and the vendor has failed to convey the premises to the purchaser within a reasonable time, the purchaser may treat the contract as abandoned, and bring an action against the vendor for money had and received. n1332 A failure by the vendor to tender performance is a defense when the covenants between the parties are dependent. n1333 The party in default may make tender before the other party acts on the default. n1334 Often the courts in several jurisdictions treat defaulted sales contracts as mortgages with regard to appropriate remedies. n1335

§ 96.16(a) Vendor's Action for Purchase Money.

§ 96.16(a)(1) Action for Purchase Money as an Action for Specific Performance.

In case of default by the purchaser, the vendor has three alternatives. The vendor may rescind, can tender compliance with the contract and bring an action for the balance of the purchase money, or can retain the land and bring an action for the excess in the agreement consideration over that upon a sale at a fair market price. n1336 An election will prevent rescission; n1337 but it is held that an ineffectual attempt to declare a forfeiture of the contract does not preclude the vendor under the doctrine of election of remedies from subsequently seeking to recover the purchase price. n1338 A suit for the recovery of purchase money by the vendor partakes in effect of the nature of an action for specific performance of a contract of purchase, and should he governed by the same equitable principles. n1339

§ 96.16(a)(2) Actions on Contracts for Installment Payments.

Where the contract provides that a deed shall be made on payment of all the installments, and all are not due, an action on an intermediate installment may be maintained without averring a tender of the deed. n1340 The vendor may sue for each installment as it becomes due, n1341 or, where the contract authorizes it, sue for the whole purchase price on default in payment of an installment. n1342 Thus, where the purchaser makes default in the payment of installments due under an executory contract, if the contract so specifically provides, the vendor may declare the entire remaining unpaid installments due and maintain an action to recover a money judgment for that amount. n1343 The vendor has a right,

upon default by the vendee to pay the purchase price in full, to stand on the contract and sue upon the debt, or maintain ejectment to regain possession of the land. n1344 Some courts hold that where the vendor fails to sue for prior installments falling due until the last installment becomes due, the vendor thereby waives the right to treat the prior installments as independent, and cannot recover any part of the unpaid purchase money unless the vendor is ready and willing to convey the land. n1345 However, where the contract is executory and the promise of the purchaser is independent of an agreement to convey, an action is held to lie for the unpaid purchase money, even though the vendor has shown no conveyance or willingness to convey. n1346 It is otherwise, however, where the stipulations to pay the first installments are independent and the stipulation to pay the last installment and to execute the deed are mutually dependent conditions. n1347 The courts generally hold that an unqualified and positive refusal to perform the contract before performance is due may be regarded as a complete breach of the contract where the renunciation goes to the whole contract, and the injured party may bring the action at once; n1348 but a contrary view is taken by some courts. n1349 Where a vendor is in default as to the covenant to make improvements, the vendor generally cannot maintain an action to recover either an installment of the purchase money or the whole amount remaining unpaid. n1350

§ 96.16(a)(3) Other Prerequisites to a Right of Action.

The vendor's failure to pay delinquent taxes, when the vendor is so obligated, will preclude an action for the unpaid balance of the purchase price, even though the contract provides that, in case the vendor fails to pay such taxes, the purchaser has the option to pay them and deduct the amount from the installments accruing on the contract. n1351 The provision for forfeiture and retention of money paid does not prevent suit by vendor for balance of purchase price. n1352 The vendor who is unable to convey may not sue. n1353 The authorities require the vendor to tender a deed as a condition to suit for the entire purchase price. n1354 The tender of a deed is not a condition precedent to the recovery on a note given for the purchase price where the contract binds the vendor to make the deed if the purchaser shall first make payment. n1355 The purchaser has the burden of sustaining his defense of payment. n1356

§ 96.16(b) Vendee's Right to Recover Down Payments. n1357

§ 96.16(b)(1) When Recovery Is Granted.

The rescission of an executory contract for the sale of real estate will generally entitle the purchaser to a recovery of any payments made. n1358 Refusal or inability to perform the contract by the vendor will entitle a purchaser who is not in default to disaffirm the contract and recover the purchase money paid. n1359 This the purchaser may do in lieu of the right of action for damages for breach of the contract. n1360 Where performance by the vendor is rendered impossible by reason of condemnation proceedings, the purchaser has a right to recover the installments paid. n1361 A purchaser may maintain an action for damages for fraud either with or without rescission, and, if with rescission, may recover the purchase price with interest. n1362 Where mutual rescission occurs and the contract is abandoned, the purchaser may recover any payments made. n1363 This is true even though the vendee may have been in default at the time of rescission. n1364 Under one rule a vendee, though in default, may rescind and recover back the payments if the vendor after default cannot perform. n1365 Under another theory the vendor is entitled after breach by the vendee to treat the contract as forfeited and resell or otherwise encumber the land and keep the partial payments. n1366

§ 96.16(b)(2) When Recovery Is Denied.

Generally where the vendee is in default and no rescission has occurred, the vendor on terminating the contract need not return the down payments. n1367 Earnest money deposited as part payment of the purchase price cannot be recovered back on forfeiture of the contract through the purchaser's default. n1368 A defaulting vendee could not recover the excess of the down payment over the vendor's actual damages. n1369 The test of the vendor's right to have the contract of sale rescinded for nonpayment of the purchase price is the return to the purchaser of a portion of the price paid and complete discharge as to unpaid portion of the price. n1370 Tender of the amount remaining due is not a prerequisite to a recovery by a purchaser of the payments already made upon the wrongful termination by the vendor of the contract of sale. n1371 A purchaser is entitled to recover a payment made after the contract has been mutually abandoned or

rescinded, although the contract provides that on default in payment the vendee shall forfeit rights and payments. n1372 Such mutual rescission nullifies the contract; hence the party is no longer bound by the contract, but an action will lie to recover the payments made by the vendee. n1373 Where vendor is unable or disabled to convey title or deposits according to contract, n1374 payments are recoverable in the absence of preventing provisions in the contract. n1375 This rule is applicable where the vendor is unable to convey a title of the quality contracted for. n1376 Likewise, the vendee may recover where the vendor does not make the title marketable within a reasonable time. n1377

§ 96.16(b)(3) Recovery of Payments by Defaulting Party.

Three theories with respect to the right of the defaulting vendee to recover back part payments after default are: (a) no right to recover n1378 though the contract is unenforceable, n1379 or there is no provision for forfeiture; n1380 (b) giving restitution if vendor has sold again, at least if the vendor has not given proper notice of termination and if the vendee has not abandoned the contract; n1381 and (c) giving restitution though vendee has been guilty of total breach, but only to the extent the down payment exceeds the vendor's damages. n1382 So a purchaser induced to purchase by false representations may rescind and recover money paid. n1383 A deed of bargain and sale containing no warranties operates solely as an instrument of conveyance, and, consequently, affords no basis for the recovery back of the purchase money on failure of title. n1384 Eviction of the grantee in a quit-claim deed by the holder of an outstanding paramount title does not, in the absence of fraud or mistake, entitle the grantee to recover the consideration paid for the deed. n1385 A few states permit the buyer to recover the amount paid less the seller's damages before returning possession to the seller. n1386 The vendor's wrongful declaration of forfeiture may amount to an abandonment equivalent to a mutual rescission. n1387 The purchaser is entitled to the return of money paid where the contract is illegal and void. In such a case, the contract creates no consideration. n1388 In order to sustain the action, the purchaser need only be ready, willing, and able to perform the purchaser's part of the contract. n1389 Tender, however, is not required where the vendor refuses to or cannot perform, n1390 or the title is unmarketable. n1391

§ 96.16(b)(4) Liens Based on Right to Recover Payments.

Upon an award of rescission the vendee is entitled to a lien for the purchase price paid. n1392 A purchaser has lien on land for deposit of purchase money, where the vendor fails to deliver merchantable title. n1393 A vendee is not entitled to an equitable lien if the vendee merely seeks damages instead of rescission. n1394 Where the purchaser has paid money in consideration of an oral contract for the sale of land, the purchaser cannot rescind and recover the money paid unless the vendor insists on the statute of frauds and refuses to perform the contract. n1395 It is generally held that a vendor who, because of the vendee's default, enforces a forfeiture provision of the contract cannot be compelled to return the money paid on the contract. n1396 There is disagreement as to whether a defaulting vendee has a lien for improvements n1397 or can recover earnest money where title is unmarketable. n1398 But a purchaser in default cannot recover back the purchase money through belated specious objections to the title. n1399 The dispute in such matters turns on the problem of unjust enrichment of the vendor. n1400

§ 96.16(c) Measure of Damages in Action for Breach of Contract.

§ 96.16(c)(1) The Variety of Approaches to Measure of Damages.

Under one rule where the vendor, through unanticipated causes which the vendor cannot control, and although acting in good faith, is unable to convey, the measure of damages is the amount of consideration actually paid and interest thereon. n1401 Under the English rule where the vendor is in good faith unable to convey the vendee is limited to expenses. n1402 The cases are not uniform as to the extent of the vendor's rights to damages when the vendee defaults. Some cases give the vendor the equivalent of specific performance by enabling the vendor to recover the full purchase price, not merely damages. n1403 The measure of damages for breach of contract of sale is the difference between the contract price and the value of the property at the time of the breach of the contract. These damages represent the loss of the bargain. n1404 On abatement of the purchase price, the measure of damages is the difference between the value of the land actually sold and that of the land represented to be sold; n1405 but before the plaintiff may recover more than

nominal damages, where there is no stipulation for liquidated damages, the plaintiff must show actual and substantial loss. n1406

Where, after the purchaser's breach of the contract, the property is resold, the damages recoverable are held to be the difference between the contract price and the amount received on resale. n1407 The courts of some jurisdictions hold to the view that the measure of damages in a case of this character is the contract price and interest thereon. n1408 This would seem the proper rule where the vendee has been put in possession and the vendor is tendered a proper deed. n1409 Where the breach consists of a failure to comply with a bid at an auction sale, the measure of damages is generally the difference between the contract price and the amount received on a resale where this amount is less than the amount bid. n1410 The general rules applicable to other contracts that the measure of damages should be just compensation to the vendor for the actual loss or injury sustained by reason of the breach, n1411 and such as might reasonably have been contemplated by the parties, n1412 apply to contracts for the purchase and sale of real estate.

§ 96.16(c)(2) Prevailing Rules for Measure of Damages.

Under the prevailing rule in the United States, in cases where the vendor refuses to convey according to the contract, the vendee may recover the market value of the land at the time of the breach, with interest, less the amount of the purchase price remaining unpaid. n1413 However, this rule is not everywhere accepted. In numerous jurisdictions, the recovery is limited to the purchase price paid, with interest and the expenses of investigating the title, n1414 unless the vendor is chargeable with fraud or a wilful refusal to convey, in which case substantial damages may be recovered. n1415 In these jurisdictions, it is the rule that, where the vendor acts in good faith and a breach results, the vendee can recover only the amount paid, with interest thereon, and if the vendor has paid nothing and incurred no expense, the vendor can recover only nominal damages, unless the vendor has, since the sale to the purchaser, voluntarily put it beyond the vendor's power to comply with the contract; or, if, having good title, the vendor refuses to convey, the vendor will be liable in substantial damages, the measure being the market value of the land at the time of the breach, less the unpaid purchase money and interest on such sum from that time. n1416 Nominal damages are recoverable only where the breach is shown and the damages are not proved, or, if proved, they are inconsequential. n1417

Damages for breach of the contract cannot be based upon a profit which could have been made on a resale of the land. n1418 Special damages resulting from a failure of the vendee to make a profitable resale are not recoverable, unless knowledge was brought to the vendor at the time of entering into the contract that the purchase was for the purpose of resale. A sufficient reason is that a loss of this character could not reasonably be supposed to have been in the contemplation of both parties, at the time they made the contract, as the probable result of its breach. n1419 Under the one rule, the measure of damages for a deficiency in quantity is the difference in value between the land contracted to be conveyed and that actually conveyed. n1420 Where possession is delayed on account of an outstanding lease and a tenant in possession, the purchaser's measure of damages is the fair rental value of the property during the time the tenant is kept out of possession. n1421

Where the contract provides for a certain sum to be paid in case of breach, it may, according to the intention of the parties, be either liquidated damages or a penalty. n1422 If the provision is for liquidated damages, it is necessary to show only the contract and its breach to entitle the plaintiff to recover. n1423 The fraud that will enlarge the damages recoverable by a purchaser for the breach of an oral contract for the sale of real property must be actual fraud on the part of the vendor that reaches back to the original contract. n1424 The fact that a purchaser has agreed to sell the land to another at a profit less than the foregoing measure of damages does not prevent the purchaser from recovering the full measure of damages. n1425

An unreasonable delay by purchaser in possession in giving notice of intention not to perform will entitle the seller to the profits of a crop the seller could have planted had the seller not been prevented by the delay. n1426 In an action at law for damages where, by reason of a breach of. the contract, the plaintiff is wrongfully deprived of the use of the land, the rental value may be allowed as damages, since it is considered to be a fair average measure of compensation for a

failure to perform the contract. n1427 The purchaser who breaches the contract is liable for waste of the premises while in the purchaser's possession. n1428 The vendor's damages for possession by purchaser after default is the rental value of the property during the time of the unlawful detention. n1429 The vendee kept out of possession is entitled to the rental value of the property for the time of the withheld possession. n1430

For breach of contract of purchaser to assume a mortgage, the measure of damages is the amount of the debt assumed. n1431 Nominal damages may be allowed although not prayed for. n1432 Such damages are recoverable where no money loss is proved. n1433

§ 96.16(c)(3) Liquidated and Exemplary Damages.

Exemplary damages may be given for vendor's fraud of vendee in a real estate sale. n1434 Where vendor who knowingly does not have good title contracts to convey full title, the vendor is liable for damages for loss of bargain. n1435 It is held that, in order to determine whether a stipulated sum is a penalty or liquidated damages, the court will consider the language used as the subject matter of the contract and the intention of the parties. n1436 A purchaser is entitled to recover special damages arising from circumstances peculiar to a particular case if those circumstances were communicated to or known by the other party when the contract was made. n1437 The equity courts have shown a considerable inclination to relieve against provisions calling for forfeiture of purchase price payments on the default of an installment. Courts show a tendency to limit the damage in such instances to the rental value as ameliorated by the vendee's improvements. n1438

§ 96.16(d) The Nature of Specific Performance. n1439

The remedy of specific performance is a purely equitable proceeding, n1440 and is a means of compelling a party to do precisely what the party ought to have done without being coerced by the court. n1441 The remedy is governed by the elements, conditions, and incidents that control the administration of all equitable remedies. n1442 Equity may compel a party to a contract to do that which in equity ought to have been done, and which was in contemplation of the parties as expressed in their contract, assuming there was no adequate remedy at law. n1443 It is available to the vendee where vendor refuses to perform. The remedy is inconsistent with other remedies available to purchasers and its election precludes resort to the remedy of action for damages or action for return of money paid by purchaser. n1444 It is not a remedy of right and whether it will be granted depends on all the circumstances of the case. n1445 No inflexible rule can be laid down to control specific performance of contracts in equity, since every case depends upon its specific facts and the circumstances attending the transaction. n1446 It is a character of relief which should be granted only where under the circumstances the thing ordered to be done is within the legal capacity of the party ordered to do it and the rights of parties not before the court are not involved. n1447 This remedy is of purely equitable nature, being a substitute for the legal remedy of compensation in damages when the latter is inadequate or impracticable, and lies within sound judicial discretion on consideration of all the circumstances surrounding the case. n1448 The remedy is granted on the theory that the award of damages will not put a party in a situation as beneficial to him as if the agreement were specifically performed. n1449 It is doubtful if the defense of adequacy of legal remedy can ever be advanced in actions for specific performance of land sales contracts, since there can be no monetary substitute for the precise land bargained for. n1450

Where a contract for the sale of real estate is entered into without misunderstanding on the part of the purchaser and without misrepresentation on the part of the vendor, specific performance will be granted as a matter of right and not as a matter of discretion. n1451 The vendor may ignore the right to forfeit and sue for specific performance. n1452 The vendor who elects specific performance may have interest on the purchase price but cannot also claim the interim rents and profits. n1453 The fact that the contract is for the conveyance of a greater interest than the vendor possesses does not prevent specific performance of whatever interest is possessed by the vendor. n1454

The vendee loses the right to the specific performance remedy by abandonment of the contract and the return of the

premises to the vendor. n1455 Specific performance within the time specified may be waived. n1456 Waiver by one of two vendors of purchaser's performance will not bind the other vendor. n1457 In the great class of cases where decrees enforcing the specific performance of contracts concerning land are granted, the decree necessarily and vitally affects the question of title, and yet it is firmly settled that a suit to enforce such a contract is a proceeding in personam and not in rem, and may be maintained where there is jurisdiction of the person, although the land involved in the controversy may be situated in another state. n1458 However, in a limited and qualified sense a decree for specific performance may also operate in rem in cases where the property to be conveyed under the contract is within the court's jurisdiction, but the defendant is absent therefrom. n1459 Inasmuch as every suit for specific performance must necessarily be determined largely on its own special facts, the rules governing the case must be applied with more or less flexibility. n1460 The remedy had its origin in the inability of the law courts to give any other remedy for breach of contracts than damages. n1461

A court of equity may compel the specific performance of an executory contract for the conveyance of real estate, n1462 for exchange, n1463 or lease, n1464 except mining leases. n1465 Specific performance is not the appropriate remedy for breach of a contract to give a license, in the absence of fraud or estoppel. n1466 It is held that the granting or withholding of specific performance of a mining lease is within the discretion of the court. n1467 Where parents agreed to give real estate to a son in consideration that he would render certain services for them, and the son made full performance of his part of the agreement, it was held that he was entitled to a decree for specific performance of the agreement. n1468

When either party to a contract for the sale of land has failed in the party's respective obligation, the other is entitled to the alternative remedy of specific performance in equity, or damages at law. n1469 The vendor, n1470 vendee, n1471 heirs or next of kin of the vendee, n1472 or the vendee's assignee, n1473 or an undisclosed principal, n1474 or the beneficiary under a contract for the benefit of a third person n1475 may, in a proper case, compel specific performance of a contract to convey land. While the assignee of such contract may ordinarily enforce specific performance, a contract to convey to "A and associates," will not be enforced in favor of the assignees of A alone, when it is not made to appear that such assignees were also the associates of A. n1476 An assignee who does not assume any of the burdens or obligations of the assigned contract cannot have specific performance, because there is no mutuality of obligation. n1477 The test of an assignee's right to specific performance of a land contract was whether the assignor could have enforced specific performance by the vendor if the assignor had not assigned. n1478 The vendee's assignee is entitled to specific performance upon completing the contract, even though the contract contains a covenant against assignment. n1479 But if the contract contains a covenant to perform an additional personal service, the contract is unassignable. n1480 A third person who is not an assignee of one of the parties to the agreement or who does not stand in privity of relationship to one of the parties is not entitled to specific performance. n1481 Specific performance will not be enforced against a person who is neither a party nor a privy to a contract. n1482 As between a purchaser who has fully performed his part of the contract to sell and a purchaser of the property at an execution sale, there exists no privity so as to entitle the purchaser under the contract to compel the purchaser at the execution sale to convey the legal title to the purchaser under the contract. n1483 Where the defendant in an action to enforce specific performance has an interest in the subject matter of the action, the defendant may be required to acquire title and then specific performance may be decreed. n1484 In case a vendor, after executing a contract for the sale of real estate, subsequently conveyed such land to another with notice of such contract, the grantee may be held liable for specific performance of the contract, in the absence of any countervailing equities. n1485 The doctrine of mutuality of obligation and remedy does not entitle the vendor to enforce an oral contract of purchase because the vendee might have done so. n1486 A vendor, electing to treat the contract as broken, may not sue for specific performance. n1487

Where a married man contracted to convey full title to realty but his wife owned half interest therein and both spouses refused to convey the property, such facts furnished sufficient basis for relief to the purchaser by specific performance or damages against the husband. n1488 Where two or more parties agree together on the purchase of land, one of them may, upon performance of his part of the contract, enforce specific performance by the other. n1489 An oral agreement that real estate be conveyed to the parties thereto, jointly, may be specifically enforced, and neither can have partition.

n1490 Where a husband contracted to convey the homestead without the wife's knowledge, and afterwards the land ceased to be a homestead, specific performance of the contract of sale was decreed against him. n1491

Under the equitable rule of mutuality, the vendor of real estate may sue for specific performance. n1492 He may proceed in equity for the specific performance, in a proper case, even if some relief might be obtained at law. n1493 It is held that the exercise of such remedy, where the contract is fair and just, is within the discretion of the court. n1494 The cases are not in accord as to whether the vendor can have specific performance for the purchase price. n1495 The cases further disagree on this point where the contract provides for liquidated damages. n1496 It rests entirely in judicial discretion, exercised according to settled principles of equity. n1497 It is a matter of grace and not of right, and the granting of specific performance rests in the sound discretion of a court of equity. n1498

§ 96.16(d)(1) Requisites of an Action for Specific Performance.

In order for a court to enter a proper decree for specific performance of a contract to purchase and sell realty the following requisites must be present:

(a) the court must have jurisdiction over both the subject matter and over the persons and there must be proper venue;

(b) a valid enforceable contract must be in effect;

(c) adequate consideration for the contract must exist;

(d) mutuality of obligation must exist;

(e) the party seeking specific performance must be capable of performing;

(f) the party seeking performance must have made tender or tender must have been waived in some adequate manner;

(g) the proper basis for equitable relief must be shown, i. e., either no adequate remedy at law or impossibility of measuring damages.

The general rule is that, to entitle a purchaser to demand a deed and maintain a bill for specific performance, it is sufficient that the purchaser is ready and offers to pay any sum that may be found to be due and still unpaid and to comply with the contract. n1499 It is enough that the purchaser is ready and willing, and in the pleading offers to perform. n1500

Where payment of the price is a condition precedent to the duty to convey, the offer of performance by the vendee must be made before suit will lie. n1501 In the case of a contract for the sale of land where the terms are fair, certain, and definite, and the purchaser tenders the purchase money, the purchaser is entitled to specific performance. n1502 Tender by the vendee is excused where the vendor refuses to accept the money and carry out the contract. n1503 An actual tender is not necessary to a vendor living outside the state. n1504 Objections to the sufficiency of the tender must be given at the time it is made. n1505 Good-faith purchasers of ninety-nine-year leases of individual apartments in an apartment building are entitled to specific performance of their contracts or to damages in lieu thereof. n1506

As a general rule, a contract will not be specifically enforced unless the obligations thereof are mutual. n1507 A contract lacked mutuality where the holder of a treasurer's deed and the owner of a deed of trust on the same land contracted that the latter should perfect the title and that from the date of the contract they should be equal owners of the land. n1508 Where one party to a contract cannot obtain specific performance, the other party is precluded from

enforcing the contract, n1509 for the right to specific performance must be mutual and reciprocal. n1510 There must be mutuality both as to obligation and remedy. n1511 Thus, if the contract is executory and only one of the parties thereto is bound, and the party not bound has not acted on the agreement, the same is not enforceable in equity by either party; n1512 but the rule does not apply where the contract has been performed by the party seeking specific performance; n1513 nor does it apply to option contracts or to one who did not sign the contract but is seeking specific performance against the party who did sign the same. n1514 So it is said that lack of mutuality of remedy is not a defense in an action for specific performance of a land sales contract. n1515 When a contract for the conveyance of land is otherwise valid, it will be enforced in a proper case although it lacked mutuality of remedy. n1516

While mutuality of remedy is not always indispensable to the granting of specific performance, it is a well-settled rule that equity will not compel specific performance by the defendant if, after performance, the common-law remedy of damages would be the sole security for the performance of the plaintiff's side of the contract. n1517 When it is not essential to the validity of the contract or to plaintiff's right to specific performance that there should be a reciprocal obligation or mutuality of remedy, as where plaintiff has performed all of the conditions of the contract and has come clearly within the terms of the contract, the plaintiff is entitled to specific performance. n1518 Where the vendor of real estate is unable to make a good title as agreed, the vendor cannot compel the purchaser to perform; n1519 nor can the purchaser, after refusal to accept such title as the vendor is able to make, maintain an action for specific performance. n1520

A minor is not, ordinarily, entitled to specific performance during minority unless the minor has fully performed the minor's obligations. n1521

While every case of specific performance necessarily must depend in a large degree upon its own special circumstances, yet where a written contract for the sale of real estate is entered into fairly and understandingly and its provisions are unambiguous, each party is entitled as a matter of right to specific performance of it. n1522 The rule of mutuality of remedy is not applicable where the unavailability of the remedy to the party against whom relief is sought resulted from the party's own default. n1523 Some jurisdictions deny the requirement of mutuality of obligation as a prerequisite to enforcement of specific preponderance. n1524 Specific performance should not be denied a petitioner who has performed the agreement simply because the defendant might not or could not obtain specific performance. n1525 The absence of mutuality of remedy at the time the contract was entered into does not render the promises of the parties less obligatory, and specific performance may be had if such mutuality is thereafter supplied. n1526

"Jurisdiction" is the authority to hear and determine a cause, while "venue" is the place in which an action may or must be brought. n1527 Courts of equity have exclusive jurisdiction of suits for specific performance of contracts involving the sale and purchase of real estate. n1528 Suits to compel specific performance of contracts to convey land are suits in personam and not in rem, and, therefore, a decree of specific performance against a nonresident served only by publication cannot be rendered. n1529 Where a third person holds in trust for another, jurisdiction over such person may be sufficient to compel conveyance although jurisdiction of the vendor is not secured. n1530 However, in a limited and qualified sense, a decree for specific performance may also operate in rem in case the property to be conveyed under the contract is within the court's jurisdiction, but the defendant is absent therefrom. n1531 It was held that an equitable action to require specific performance on the part of a trustee, who by the terms of the declaration of trust agreed to convey premises to another party as trustee if so requested by the beneficiaries, was required to be brought in the county where the realty constituting the trust corpus was situated. n1532 It was also held that a court of equity can decree specific performance of a contract to sell land in another state if it has jurisdiction of all the parties. n1533 Such a decree is effectual only upon the person, not upon the land. It remains the same as before the decree was granted until the person in whom the title resides either voluntarily or per force obeys the decree and divests the title by a conveyance valid under the lex loci. n1534 So, also, specific performance of a contract to convey land in one state may be decreed against an inhabitant of another state who has been personally served with process. n1535 A suit for specific performance operates only on the person and may, it has been held, be brought either in the county of the defendant's residence or in the county where the land is located. n1536 The vendor has a right to specific performance, although the

land is situated in another state, if both parties are within the court's jurisdiction, and such right is enforceable by and against privies in contract. n1537

Specific performance rests on the inadequacy of the remedy at law, n1538 and will be decreed only where there is no adequate legal remedy, or where nonperformance would amount to a fraud. n1539 When, therefore, no adequate remedy exists at law and the contract is legal, perfectly fair in its terms, and the parties stand upon an equality with respect to the remedy, and where its specific enforcement, in the light of all the circumstances existing at the time it is sought, would work no hardship or injustice to either party and such relief will put them in the position contemplated by the contract, specific performance will be granted; n1540 but it must appear that it would be unjust and inequitable to permit the contract to remain unexecuted. n1541 But elsewhere it is said that the defense of adequate remedy at law will not avail the defendant in the absence of special circumstances. n1542 A legal obligation, though valid, will not be specifically enforced when to do so would be inequitable, n1543 or where the circumstances are such as to thereby impose an inequitable burden. n1544 When an adequate remedy exists at law, it must be pursued instead of an action for specific performance. n1545

Specific performance will be decreed where the contract has been so performed by one party that the parties cannot be placed in status quo or damages awarded as full compensation. n1546 It must appear that some injury will result from a refusal to perform the contract before equity is warranted in awarding a decree of performance. n1547 It must appear that some definite provision of the contract has not been complied with. n1548 As a part of the appropriate and acknowledged jurisdiction of a court of equity, specific performance of a contract to convey land has been enforced from the earliest decisions of that court, although the vendor has, in most cases, another remedy by an action at law upon the agreement to purchase. n1549

The right of the vendee to maintain specific performance has also been, for a long period of time, a well-established right. n1550 The decree will not be denied to the vendee because the vendor is possessed of sufficient property to respond in the event a judgment for damages should be recovered against him. n1551 So, in case of a breach of a contract for the sale of real estate, the injured party is entitled to elect to bring suit for specific performance, and is not bound to bring an action at law for damages. n1552

The court's jurisdiction in such cases extends even to lands in another county and out of the jurisdiction of the court if the parties are within its jurisdiction. n1553 The theory upon which a court of equity grants relief in such cases is that its powers are exercised in personam and not in rem. n1554 Equity has jurisdiction of a suit to compel specific performance on the part of the purchaser of real estate, although the vendor has a remedy at law by action for the purchase money. n1555 Damages are not essential to such relief. n1556 If the parties in their contract of conveyance provide for a penalty to be forfeited on a failure of either to perform, there seems to be no question that it will not operate to prevent the relief of specific performance. n1557 Where a contract of sale and purchase of land contains a provision for a pecuniary forfeiture or penalty by the party in default, it is generally held that such provision does not affect the right to have specific performance, unless such provision was intended as a substitute for specific performance. n1558 Also, where the contract itself has assessed the damages which the defaulting party has to pay, equity will not interfere to enforce specific performance of the contract to prevent the recovery of damages. n1559

An action for damages for breach of a contract to convey real estate is not usually an adequate remedy, and equity has jurisdiction to decree a specific performance. n1560 The remedy is not a matter of right but is addressed to the sound discretion of the court. n1561 The relief is granted only where injustice results from permitting a contract to remain unexecuted. n1562 The minds of the parties must fully meet on the terms of the contract. n1563

For a court of equity to grant specific performance of a contract to purchase and sell realty the contract must be valid and enforceable. It must not contain elements of illegality and it must meet the requirements of the statute of frauds of the applicable jurisdiction. A contract may be specifically performed even though there is not mutuality of obligation. n1564 In the case of specific performance of contracts to sell realty, relief will be granted though there is an adequate

remedy at law even where there is inadequate consideration. n1565 Some cases refuse to allow the vendee to have specific performance where to do so would be to also require the vendor to clear a title defect. n1566 Specific performance is not made unavailable for a remedy by the fact that the contract contains a provision for the payment of liquidated damages in case of breach. Such a provision does not create an option between alternative contracts. n1567

§ 96.16(d)(2) Contracts that May Be Specifically Enforced.

It is essential to specific performance that the contract be definite and certain in the obligations it imposes. Uncertainty and vagueness will defeat enforcement. n1568 A contract for the sale of real estate which is not definite and certain will not be specifically enforced in equity. n1569 A greater degree of certainty is required in the terms of the contract sought to be specifically enforced in equity than is required in a contract which is the basis of an action at law for damages. n1570 The evidence must be clear and satisfactory, but it need not be direct; neither is it necessary that the contract be specific in all its terms. Thus, it has been held that an oral agreement which provided that a sister was to have a brother's property at his death in consideration of their removal to another state and caring for him could be specifically enforced, when performed by her. n1571 Likewise, it has been held that a contract to will one-third of one's property to another might be specifically enforced and that it was not necessary that the testator should designate the one-third to be devised. n1572 However, an option to buy oil, gas, and coal in place, which provided for the giving of a warranty deed containing provisions used for similar property, was held incapable of specific performance when it appeared that there was no uniform or customary form of deed for such purposes. n1573 Certainty as to time may be an element essential to the specific performance of a contract. Thus, it is held that an executory agreement for the sale of land which does not designate the time of payment is not enforceable in a court of equity. n1574 Also, a contract for the sale of realty which does not show the time of payment of a mortgage to be given for a part of the purchase price is held to be too indefinite to be specifically enforced. n1575 The rule requires certainty in the description of the premises to be conveyed, n1576 the time of performance, n1577 the parties, n1578 and the price to be paid. n1579

The essential basis of a decree for specific performance of a contract for the sale or exchange of property is a definite present agreement in regard to specific property, sufficiently designated as present to the minds of both parties, which is to be transferred from one to the other. n1580 Even though the description of the property set out in the contract proper is insufficient, if the evidence establishes a state of facts taking the case out of the statute of frauds, and supplying the description, the contract may be specifically enforced. n1581 The uncertainty in the description may be removed by extrinsic evidence. n1582 Before the contract will be specifically enforced, it must be complete in all its essential elements. n1583 The contract to be enforced must be complete with nothing left for future negotiation. n1584 In case it is a contract of sale, the price must be fixed with sufficient certainty. n1585 The foregoing principle applies not only to the price, but the time of payment as well. n1586 Thus, an option in a lease to purchase the property, but not naming any price, is not enforceable; n1587 but specific performance may sometimes be enforced when the incomplete portions of the contract are merely discretionary, and the discretion can be supplied by the court. n1588

It is held that mere inadequacy of consideration may justify a court in refusing to decree specific performance of a contract of bargain and sale. n1589 A binding contract to convey realty, in the absence of fraud, mistake, undue influence, or oppression, will be specifically enforced, and mere inadequacy of price without more does not as a rule, prevent the application of this principle. n1590 A contract to be specifically enforced must be supported by a valuable consideration, but the mutual promises of each party, as in a contract to exchange real estate, may be sufficient consideration to support an action for specific performance. n1591 When specific performance is sought after the death of the promisor, it is necessary to prove that the contract was based upon a proper consideration. n1592

Although mere inadequacy of consideration may not of itself bar the right to specific performance, n1593 it is a strong circumstance which, with others, may influence the court in withholding its decree. n1594 Generally, inadequacy of consideration, without fraud, will not prevent specific performance. n1595 Thus, where mere inadequacy of consideration is coupled with fraud, specific performance will be denied. n1596 Adequate consideration to warrant specific performance is a fair and reasonable price. n1597 Love and affection have been held not sufficient to support a

suit for specific performance. n1598 In an action for specific performance of contracts for the purchase and sale of real estate, market value furnishes the proper test of value. n1599 Lack of mutuality or consideration is not necessarily fatal to the enforcement of option contracts to purchase real estate, although the early cases seemed to recognize such rule. n1600 Where there is an unqualified and unconditional acceptance of an option to buy land, a contract is created which equity will enforce. n1601

The remedy is denied in cases where the contract is impossible of performance. n1602 The same rule holds where the ability to perform depends upon the consent of third persons, n1603 as where the property does not belong to the person contracting to convey the same, n1604 or where one holds an executory contract to purchase from a mortgagor against whom there has been foreclosure and sale. n1605 A purchaser deprived of the possession of the premises because third persons are in possession thereof cannot have specific performance against the vendor, since the court cannot order the vendor to deliver property possessed by others. n1606

Specific performance may not be ordered where the court is unable to enforce its decree. n1607 Neither will the courts decree specific performance in cases where it will operate oppressively or work hardship or injustice, n1608 but this does not mean mere inconvenience. n1609 As a general rule, specific performance will not be decreed in favor of a party who is financially unable to carry out his part of the contract. n1610 Fraudulent conveyance of the property to a third person will not necessarily defeat specific performance of an agreement to convey. n1611 Where a party has put it out of the party's power to perform according to the terms of the contract, the court may compel the party to perform in some practicable way. n1612 So, where the only thing which stood in the way of performance was the settlement of an estate, which could be procured by the vendor by a proceeding in the probate court, specific performance was decreed against the vendor. n1613

Specific performance of a contract to convey land has been granted when the plaintiff claimed that defendant had not disqualified defendant to convey title. The defendant is not concerned with controversies the plaintiff may subsequently have with others concerning the title. n1614 Where the defendant has not entirely divested the legal title on which the decree can operate, specific performance will be granted. n1615 Specific performance against the vendor under a contract for the sale of real estate will not be denied because there is a mortgage on the property which the vendor is unable to remove unless the purchase money is applied. n1616 The fact that a building on the premises which were contracted to be sold was destroyed by fire before the time for performance was no defense to a suit for specific performance by the vendee. n1617

It is no objection to the specific performance of a contract that the consent of a third person is necessary where the third party does or will consent, but where the defendant cannot perform without the consent of a third person and such consent is withheld, the contract will not be enforced. n1618 Thus, a contract to sell land signed by a husband alone will not be specifically enforced when the purchaser prays an abatement of the purchase price or an indemnity to protect himself from her claim for dower, the wife having refused to join in the conveyance. n1619 Where an executrix, by the terms of the will, was required to have sales of real estate confirmed by the county court, specific performance of a contract of sale was refused where such confirmation was not secured. n1620 Specific performance of the delivery of a deed by a married woman will be refused when the same is void because the husband has not joined. n1621 A rule for guidance of a court in the exercise of its discretion in granting or denying an application for the enforcement of a contract is that it must appear that specific performance will result in no injustice. n1622 A bad bargain, in the absence of fraud, will not relieve a party from specific performance of his contract. n1623

Specific performance will be refused if, under all the circumstances, it would be inequitable to grant such relief, n1624 even though no act of fraud or mistake appears to have been made. n1625 Specific performance will be denied where the contract is founded on fraud n1626 or misrepresentation. n1627 To obtain specific performance of a contract for the sale and purchase of real estate, it must be established that the contract was procured fairly and openly, and any misrepresentation in the procurement thereof will bar such enforcement, notwithstanding that the misrepresentation was innocently or ignorantly made. n1628 The rule is the same as to mistake of the parties. n1629 But the rule is well

established in the United States, that where the mistake or fraud in a written contract is such as admits the equitable remedy of reformation, the plaintiff may allege and prove by parol evidence the mistake or fraud, and the modification of the written contract made necessary thereby, and may obtain a decree for the specific performance of the agreement thus corrected. n1630

Specific performance of a contract will usually be denied if a mistake has occurred in its execution or where the contract does not express the intention of the parties; n1631 however, the omission by mistake of a provision favorable to the defendant will not prevent a decree of specific performance when the plaintiff is ready, willing and able to perform the whole contract, including the omitted provision. n1632 The courts will not enforce an illegal contract, n1633 or a contract against public policy. n1634 The mere misconception of the legal effect of an agreement will not operate to defeat specific performance; n1635 nor will specific performance be denied where a mistake does not go to the foundation of the contract, but is of such a character that it may be corrected by the decree. n1636

Specific performance will be refused when there has been misrepresentation of a material matter relied upon by the defendant or fraud in the execution of the contract. n1637 Thus, where one misrepresents the value n1638 or area of land, n1639 the value of capital stock to be exchanged for land, n1640 the date of maturity of mortgages on lands to be exchanged, n1641 the location with reference to a suburban street, of platted lots, where the plat is not accessible to the purchaser, n1642 or where the purpose for which the land is to be used is concealed, n1643 specific performance will be denied. Such principle is held to apply to misrepresentations made by an agent, even though the defendant conceals such fraudulent representations from the plaintiff. n1644 Specific performance will be denied a party who has obtained a contract by fraud, n1645 overreaching, trickery, or imposition on an ignorant person. n1646 To constitute a defense in a suit for specific performance, the misrepresentations must have been relied upon by the party with whom the contract was made. n1647 However, a party intentionally making false statements has been held not entitled to specific performance, even though such statements were not relied on by the other party to the contract. n1648

It may be stated as a general rule that a court of equity will not specifically enforce a contract void under the statute of frauds; n1649 but an oral contract to convey land may be enforced when the circumstances are such that to refuse specific performance would result in the perpetration of a fraud upon the plaintiff. n1650 In order to prevent the perpetration of a fraud, a court of equity will decree specific performance of an oral contract to convey at the instance of a purchaser who has taken possession of the land, paid a part of the purchase price, and made valuable improvements in reliance on the contract. n1651 To prevent the statute of frauds from becoming an instrument of fraud the law has engrafted an exception so as to permit specific performance to be decreed where there is no other adequate remedy at law. n1652

The statute of frauds will not prevent specific performance of oral contracts for the sale of lands substantially, n1653 or even partially performed. n1654 Specific performance of such a contract will be decreed where the contract has been so far executed that the party seeking relief cannot be restored to the former position. n1655 The performance must, of course, refer to the contract. n1656 It is only where the very justice of the thing is so clear that the refusal of relief would itself amount to a deep-seated wrong, and fraud upon the party, that equity will act to enforce specific performance of an oral contract to convey. n1657 To justify a decree in favor of a vendee for the specific performance of a parol contract for the sale of real estate, the contract and its performance on the part of the vendee must be clearly proved. n1658 Thus, it has been held that a court of equity, in order to defeat fraud, will compel specific performance of a parol contract for the sale of land, if established by clear and convincing proof. n1659

Generally, where the purchaser has made a conscientious effort fully and fairly to comply with the contract, specific performance will be granted. n1660 A parol contract for the sale of land may be enforced in equity where the party seeking the aid of the court has achieved partial performance, under the doctrine of equitable fraud. n1661 A partly performed oral contract may also be specifically enforced when a fiduciary relation exists, and the court's aid is necessary to prevent injustice. n1662 The part performance relied on to justify specific performance of a contract must place the performing party in such a situation that it would be a fraud on that party if the contract were not carried out.

n1663 Where a party seeks to enforce an oral agreement of a person now deceased to convey or devise lands, the proof to establish the circumstances of such oral agreement must he clear, satisfactory, and convincing. n1664 "While contracts of this kind are not favored and many times are not enforced upon oral proof, the power to make a valid agreement to dispose of property by will in a particular way has long been recognized ... The evidence, to sustain an oral promise to make a will, must be conclusive, definite, certain, and the contract must be established beyond all reasonable doubt." n1665

Whether the vendor or purchaser is the plaintiff three alternatives arise when the vendor is able to give only a performance nonconforming in quantity, quality or value: (1) to refuse the remedy of specific performance; (2) to enforce the contract without any regard to the partial failure; (3) to decree a conveyance and allow the vendee an abatement from price equal to the value of the deficiency in the performance. n1666 If the vendor cannot convey the agreed quantity of the estate the vendee may have specific performance with pro tanto abatement of purchase price. n1667

FOOTNOTES:

(n1)Footnote 1278. Upholding theory of restitution of money paid in part performance, on strict foreclosure of contract. *Schwartz v. Syver, 59 N.W.2d 489 (Wis. 1953); Henry Uihlein Realty Co. v. Downtown Dev. Corp., 101 N.W.2d 775 (Wis. 1960).*

(n2)Footnote 1279. Where a valid executory contract for the purchase and sale of real property is broken by the vendee's failure to pay the purchase money as stipulated in the contract, the vendor has in equity a choice of remedies. He may tender a deed and sue for the specific performance of the contract, or he may sue for a strict foreclosure of the contract. If the suit is for a specific performance of the contract, plaintiffs would be entitled to a decree requiring the vendee to pay the sums stipulated, as provided in the contract, while, if the suit is for a strict foreclosure, and the case is such that the granting of the remedy of strict foreclosure would not be inequitable, then the plaintiffs would be entitled to a decree requiring the defendants to pay the money due under the contract within such reasonable time as the court should direct, or be foreclosed of their equities in the property. If, however, the granting of the equitable relief of strict foreclosure would, for any reason, be inequitable, then it would be the duty of the court to decree that, if the purchase money be not paid within the time set by the court, the property should be sold and the vendor's interest be satisfied from the roceeds. *Sheehan v. McKinstry, 210 P. 167 (Or. 1922).* In any case where the relief sought is that of a strict foreclosure, the plaintiffs would not be entitled to have a judgment for the amount due and also at the same time have the contract strictly foreclosed. The payment of the money, whether under the compulsion of a judgment or voluntarily made, would operate to reinstate the contract and continue it in force, and thus preserve the vendee's equities under the contract, while the failure to pay the money would operate to entitle the plaintiffs to maintain a suit for strict foreclosure. *Marquardt v. Fisher, 295 P. 499 (Or. 1931).*

Under *Shenners v. Pritchard, 80 N.W. 458 (Wis. 1898),* and *Foster v. Lowe, 110 N.W. 829 (Wis. 1907),* it cannot be doubted that upon the breach of the conditions of a land contract the vendor has three remedies: (a) He may elect to sue for the unpaid purchase money; (b) he may elect to sue for specific performance of the contract; and (c) he may elect to declare the contract at an end. See, also, *Kunz v. Whitney, 167 N.W. 747 (Wis. 1918).* There can be no doubt that the election of one of these remedies waives the others. *Oconto Co. v. Bacon, 195 N.W. 412 (Wis. 1923).*

See Rights of a Vendee in Land Where There Is a Failure of Title: With Special Emphasis on the Law of Alabama, *13 Ala. L. Rev. 409 (1961);* Enforcement of Forfeiture Provisions as a Remedy in Land Sale Contracts, *14 Hastings L.J. 44 (1962);* Vanneman, Strict Foreclosure on Land Contracts, *14 Minn. L. Rev. 342 (1930).*

(n3)Footnote 1280. "The cases in this court go no farther than to hold that a vendor may proceed to foreclose the right of the vendee to have specific performance of his contract, on his failure to make the payments as agreed; and this court has established the rule that in such cases the only judgment the plaintiff can have is a judgment of strict foreclosure of the rights of the vendee, unaccompanied by any personal judgment for the unpaid purchase money.

Button v. SchrOyer, 5 Wis. 598 (1855)." In the cited case the lower court decreed foreclosure and sale and the court on appeal, reversed saying, "But as the title did not pass by the contract, but remained in the vendor, we think the decree of sale erroneous. The proper decree in such cases is, that the money due upon the contract be paid within such reasonable time as the court may direct, or that the vendee be foreclosed of his equity of redemption." *First National Bank v. Agnew, 45 Wis. 131 (1978).*

Valleau, 51 A. 102 (R.I. 1902).* Finally, it would be manifestly unfair and inequitable and constitute an unjust enrichment to permit defendants to retain the earnest money paid them by plaintiffs. First, because there is no showing that they were damaged by any act of plaintiffs; the damage, if any, resulting from acts of their own. Second, because the acts of defendants do not show entire candor or good faith in both their failure to warn plaintiffs before attempting to work a forfeiture, and their failure to live up to the conditions precedent of supplying the promised deed of conveyance for inspection or of getting a formal release from the lessees of at least that part of the lease containing the option to buy. And last, it is to be observed that the contract between the parties does not contain any forfeiture provision. *Hillman v. Busselle, 185 P.2d 311 (Ariz. 1947); Malmberg v. Baugh, 218 P. 975 (Utah 1923).*

App. 1921).* In a suit for the performance of a contract for the sale of real estate against the vendee, held the vendor is entitled to a decree for the balance of the purchase money and for sale of the land to satisfy the same. *Marshall v. Porter, 80 S.E. 350 (W. Va. 1913).* Attorneys' fees are not allowable in a specific performance action. *Gallinaro v. Fitzpatrick, 267 N.E.2d 649 (Mass. 1971).*

(n216)Footnote 1493. *Kjesbo v. Ricks, 506 N.W.2d 326 (Minn. App. 1993); Schumacher v. Ihrke, 469 N.W.2d 329 (Minn. App. 1991); Shelton v. Wallace, 137 P. 694 (Okla. 1913).*

(n217)Footnote 1494. *Caplan v. Buckner, 91 A. 481 (Md. 1914).*

(n218)Footnote 1495. Specific performance granted. Morgan v. Lewis, *82 S. 7 (Ala. 1919); Corby v. Ward, 171 A. 813 (N.J. 1934); Prichard v. Mulhall, 103 N.W. 774 (Iowa 1905)* (vendor's recovery was limited to the difference between the contract price and the market value at the time of breach). For, to the vendor, the possession, until the contract shall be executed, is about, all that is left by the contract in him, the legal title being really but the shadow of that of which the possession is the substance, and the right to hold it is the vendor's best security for performance by the purchaser. The surrender of this right of possession to any control of the purchaser, to take effect prospectively, it is true, yet absolutely leaves the vendor no other remedy but in all cases to resort to equity for a specific performance. It takes away the protection of the rule that holds these covenants, which are to be concurrently performed, to be conditions precedent to each other, and that he is not bound to convey and deliver possession until the purchaser tenders performance on his part. Or putting the effect of the proposition in another point of view, as soon as the time for performance arrives it substantially executes the contract on the part of the vendor, and against him, without any tender of performance by the purchaser or readiness to perform, or perhaps even ability to perform. *Marvel v. Ortlip, 3 Del. Ch. 9 (Del. Ch. 1866).* Clause for liquidated damages prevented specific performance by the vendor. *Dekowski v.*

Stachura, 185 N.W. 549 (Wis. 1921).

(n219)Footnote 1496. "The rule is well established in this country that a provision, in a contract for the sale of land, such as is contained in the contract in this case, and termed a forfeiture clause, is a provision for the exclusive benefit of the vendor, and the vendee cannot, by his own default put an end to the contract." The clause is for the vendor's benefit and at his election. A provision for liquidated damages did not prevent specific performance for the vendor. *Rogers v. Dorrance, 117 A. 564 (Md. 1922).*

CHAPTER 96 Vendors and Purchasers

11-96 Thompson on Real Property, Thomas Editions § 96.17

AUTHOR: David A. Thomas Professor of LawJ. Reuben Clark Law School Brigham Young University

§ 96.17 What Is "Merchantable" or "Marketable" Title.n1668

[Go To Supp]

If the contract directly or by inference contemplates that the vendor shall furnish to the vendee a marketable or merchantable title, the question of what is a marketable title in a particular situation may be as easy to answer as what is right and what is wrong. A marketable title is one that a prudent person with full knowledge of all facts would be willing to accept. n1669 The leading rule follows the principle that to make a title unmarketable it is not necessary that proof establish that it is defective, if there is reasonable doubt in the mind of the court. n1670 The doubt must be not remote but rational. n1671 The test has been said to be whether a court could direct a verdict. n1672 A vendee who takes possession under the contract of sale may not dispute the vendor's title. n1673

A merchantable or marketable title has been defined as one that is "a title that a man of reasonable prudence, familiar with the facts and apprised of the questions of law involved, would in ordinary course of business accept." n1674 The test of a marketable title is not the hazard of possible litigation but the chance of successful attack. n1675 A marketable title must be salable without abatement of price and salable on the face of the record. n1676 If the defect complained of is not applicable to bona fide purchasers the title is considered "marketable." n1677

The term "marketable title," when applied to real estate, means a "title free from reasonable doubt." n1678 It means a title that is reasonably free from such doubts as will affect the market value of the estate; one which a reasonably prudent person with knowledge of all the facts and their legal bearing would he willing to accept. n1679 It has even been held to be a title in which there is no doubt involved either as to a matter of law or fact. n1680 It is one in which the possession can be acquired and retained without litigation or judicial decision. n1681 It is a title free from apparent defects, grave doubts, and litigious uncertainties. n1682 A title is "unmarketable" when for the purchaser to accept the title proffered would lay the purchaser open to a fair probability of vexatious litigation with the possibility of serious loss. n1683 The term is synonymous with "merchantable title," "good title," and "perfect title." n1684

The test is whether the purchaser can peaceably enjoy and use the property for the purchaser's intended and announced purposes. n1685 "Less certainty of proof is required to justify the vendee's refusal to accept title than to open up a case after title is passed and the consideration has been paid." n1686 A title subject to an encumbrance is not a good

marketable title. n1687 A "clear record title" requires that the record should show an indefeasible unencumbered estate. n1688 The purchaser is entitled to have a title which is not doubtful and which does not suggest the possibility of a lawsuit, but which a well-informed and prudent person paying full value would be willing to take. n1689 The doubt to render a title unmarketable must be a reasonable doubt that would induce a prudent person to hesitate. n1690

An "equitable title" is not a "marketable title." n1691 "A title open to reasonable doubt is not a marketable title. The court cannot make it such by passing upon an objection depending upon a disputed question of fact or a doubtful question of law, in the absence of the party in whom the outstanding right was vested. He would not be bound by the adjudication, and could raise the same question in a new proceeding ... It would especially be unjust to compel a purchaser to take a title, the validity of which depended upon a question of fact, where the facts presented upon the application might be changed on a new inquiry or are open to opposing influences." n1692 A reasonable doubt concerning the title exists when there is uncertainty as to some fact appearing in the course of its deduction, and the doubt must be such as affects the value of the property or will interfere with its sale. n1693

The title should not only be good, but indubitable. n1694 It should at least be such a title as would ensure to the purchaser a peaceful enjoyment of the property. n1695 If a reasonable doubt remains, after the vendor has produced all the proof the vendor is able to produce, the title is not marketable, and the purchaser is not obliged to take it. n1696 A title may be perfect, and yet not marketable. For instance, suppose the validity of A's title depends upon the question whether or not he is next of kin to B. If he is in fact the next of kin to B, his title is perfect; but if he is unable to show to the court beyond a reasonable doubt that he is such, then his title, although really perfect if all the facts could be shown, will be deemed unmarketable. n1697 The title may be good in fact; but to be marketable it must be good of record or able to be made good of record. n1698 It may be marketable if there is no reasonable doubt how the fact is and the proof is readily accessible at any time to show how it is. n1699 Such proof, however, must be very clear. n1700 The sufficiency of a title may depend on proof of facts not of record. n1701 According to some courts, the fact that the title is capable of being made good by. the production of oral testimony or by affidavits does not make it a marketable title where the record does not show the title to be good. n1702

However, the vendee is not entitled to demand a title absolutely free from all suspicion or possible defect, n1703 or that it will be satisfactory to the vendee or his attorney, unless the contract so provides. n1704 The doubt must be rational or real, and not fanciful. n1705 The purchaser may waive the right to a marketable title, n1706 and may bargain to take realty subject to existing encumbrances. n1707 The motive of the vendee in raising the question of unmarketability is not important if the title is actually unmarketable. n1708 Statutory uniform title standards have been approved. n1709

The courts are not in agreement as to the extent to which a title will be held marketable where the facts are in dispute. n1710 So by one rule the vendee cannot be compelled to accept a title based on affidavits n1711 where, under another rule, the vendee is entitled to marketable title. n1712 The Declaratory Judgments Act may determine the title to realty. n1713

Where all parties having a possible interest are not before the court, not only will a purchaser not be required to take a title depending upon a doubtful question of fact, which is applicable to all cases, but will not be required to take a title depending upon a doubtful question of law, since the decision thereof would not be binding upon those who are not parties to the action and who might thereafter assert a claim of title. n1714 If doubt exists as to the title the courts will usually avoid determining the title to make it marketable. n1715

Courts are divided as to whether in an action between the vendor and the vendee, the court may pass upon a title that requires a determination of a question of fact or of law where all the parties are not before the court. n1716 Under the New York rule if the court in which specific performance is brought can determine the question of title it may hold the title to be marketable. But if the same question can later be raised in another court as where a federal constitutional question is involved, the title is not marketable. n1717 But Massachusetts refuses in a specific performance action to determine whether or not a state constitution question is involved. n1718

Under one rule the court will determine the marketability of the title and then decree specific performance if it is satisfied with the law, even though all of the persons who might raise the question are not before the court. n1719 Under another rule, if all parties cannot be brought before the court the court will not try the title. But some courts will try the title in a specific performance action if all parties are joined. n1720 It has been squarely held that the question of marketability of a title is one of law and that the opinion of witnesses is not receivable. n1721

§ 96.17(a) Situations Making Title Unmarketable. n1722

For a title to be unmarketable the defect must be a reasonable one. n1723 Recitals in deeds are not usually allowed to be marketable title. n1724 Most of the cases hold that a restriction against the manufacture or sale of intoxicating liquor on the premises makes the title unmarketable. n1725 A title derived from a tax deed is marketable if there are no defects in the proceedings under the leading rule, n1726 but some cases hold that a tax deed of itself is not prima facie evidence of merchantable title lacking proof aliunde that all provisions of the statutes regarding tax sales were met. n1727 Tax sales supported by affidavits of adverse possession have been held marketable title. n1728 An easement makes a title.unmarketable unless the easement is open and notorious. n1729

Under one rule, to make a title marketable a grantor must be shown to have been unmarried, n1730 but other cases hold there is no presumption that the grantor was married. n1731 A prospective assessment for contemplated improvements which had not become a lien when the title was closed was held not an encumbrance or valid objection to taking title under the contract. n1732 A land purchaser assumes the annoyance involved in an adjoining prior existing landowner's use of land in a reasonable manner. n1733 The vendor and the vendee contract with notice of visible easements. n1734

A vendee was not bound by constructive notice of a zoning ordinance which the vendor was violating. n1735 It is possible for a title to be "marketable" and yet contain such collateral infirmities as would deny specific performance to the vendor. n1736 Ordinarily, the vendor must have discharged all encumbrances before tendering a deed and may not impose on the purchaser the burden of procuring satisfaction of encumbrances. n1737 The inability of the vendor to convey a full title because of a reservation of riparian water rights may or may not excuse performance of the contract by the purchaser, this depending upon the value of the rights reserved. n1738

The purchaser cannot be compelled to take a partial interest n1739 and cannot be compelled to accept a title under encumbrance which the vendor cannot or will not remove and which the purchaser cannot remove by application of the purchase money. n1740 Very generally, an encumbrance will not render the title unmarketable where it may be removed by the vendee out of the purchase money to be paid, n1741 or the vendor is obligated to pay it out of the money to be received. n1742 An encumbrance will include charges which burden, obstruct, or impair the use of the land or impair its transfer. n1743 Other matters considered as encumbrances warranting rejection of title as unmarketable are as follows: outstanding dower interests, n1744 future interests, n1745 a pending suit for condemnation of part of the property, n1746 judgments, n1747 executions, n1748 the pendency of padlock proceedings, n1749 unreleased mortgages, n1750 easements, n1751 encroachments on the premises, n1752 the encroachment of buildings on the premises over adjoining premises or streets, n1753 party walls, n1754 building and business restrictions, n1755 tax titles n1756 or tax liens, n1757 an outstanding oil lease, n1758 sale of coal and mineral rights, n1759 an unascertained transfer tax lien, n1760 income tax liens, n1761 mechanics' liens, n1762 the undisposed of interests of minors, n1763 administrators' or guardians' deeds without showing court authority for such deeds, n1764 titles containing restrictive covenants, n1765 confusion and differences in names and initials of prior grantors, n1766 corporate deeds not showing authorization by the corporation, n1767 options to purchase, n1768 and titles on decrees still subject to review. n1769 A permanent easement visible to the purchasers, such as a public road or telephone right-of-way, is held not an encumbrance. n1770 Courts divide as to whether public highways are encumbrances. n1771

Where the lien can be satisfied out of the unpaid purchase price the title is generally held marketable. n1772 The title is not marketable if it depends upon an unconstitutional statute, n1773 but it is marketable if the statute which would have

created the encumbrance is unconstitutional. n1774 Indeed the cases are divided as to whether a vendee must accept a title subject to an encumbrance, even though a sufficient amount is reserved from the purchase money to pay the lien when it is determined. n1775 Marketable title vests title and is more than a statute of limitations, being valid as against those under disability. n1776 Encroachments are not fatal to title if removable before law day. n1777

A buyer sued to recover the purchase price, because a public utility had the right to inundate the land. The court held the title was unmarketable, even though the reservation was beneficial to lake property. n1778 A purchaser of property entitled to a "marketable title" may not be required to accept a conveyance, if the title is in such condition that the purchaser may be required to defend litigation challenging the purchaser's possession and interest. n1779 A title may be regarded as unmarketable if a reasonably careful and prudent person, familiar with the facts, would refuse to accept the title in the ordinary course of business. It is not necessary that the title be actually bad in order to render it unmarketable. It is sufficient if there is such a doubt or uncertainty as may reasonably form the basis of litigation, n1780 but if there is an existing violation of building ordinances, the buyer may rescind, n1781 unless the building is protected by the nonconforming rule.

A condition is implied in a land sales contract that the seller shall convey a marketable title, n1782 unless the contrary is stipulated, n1783 but after the deed is executed this condition is merged and the grantee must depend upon the covenants in the deed for relief. n1784 The willingness of a title company to insure is not a test of marketability. n1785 Marketable title must be of record and not be based on parol evidence. n1786 An equity of rescission because of fraud of a former grantee in obtaining the deed makes the title unmarketable. n1787 A zoning regulation does not make the title unmarketable unless the present use is in violation of the zoning ordinance. n1788

Where the record owner has died and the estate has not been settled so as to cut off the creditors, the cases are not in accord as to whether the title is marketable. n1789 There is also a problem in such instances as to the determination of heirs or devisees. n1790 The cases are at variance as to whether the purchaser can be required to accept a title where there has been no administration of the estate of the deceased titleholder. n1791 Where the interest of a minor or of an unborn person is involved, the title is not marketable if the interest has not been properly divested of record. n1792 A vendee's interest in a land contract must be foreclosed to clear the title. n1793 The question of marketability of the real estate of a deceased person upon a sale by the purported heirs also depends on the possibility of an outstanding will. n1794 It further depends upon who are the true heirs. n1795 An interloping mortgage is not a defect, n1796 and a mortgage that can be paid out of the purchase price is not a defect. n1797

Under the leading rule the taking of possession by the purchaser prior to the law day does not waive any objections to the title, n1798 but contrary authority exists. n1799 A third rule holds that no waiver occurs, if the purchaser is ignorant of the particular defect, n1800 but the cases do hold that by retaining possession after making title objections waives such objections. n1801 Other cases do not see a waiver by retaining possession where the vendee was ignorant of the objections at the time of the contract. n1802 Of course the vendee who is responsible for the defect cannot rescind. n1803 Where it is apparent that the vendor can never acquire good title, the vendee may rescind before the law day. n1804 Some cases have placed a burden on the vendee by holding that the vendee waives all objections to title unless the vendee particularly calls attention to them and they were of such a character that they could be cured by the vendor. n1805

§ 96.17(b) Defense of Inadequate Quantity.

If the vendor is unable to deliver the area expected by the vendee the court must determine whether the agreement contemplated the sale of a certain unit of property regardless of its size or whether a definite area played a part in the agreement, i. e., whether the sale was in bulk. If there is a deficiency the "lex non curat de minimis" (the law does not pay attention to trifles) rule must be considered. If the deficiency is material and such part is not contemplated by the agreement, the question of the vendee's remedy is material: may the vendee rescind or elect to pay a pro tanto diminished purchase price? If the realty is deficient in quantity the weight of authority denies specific performance to

the vendor, n1806 unless the de minimis rule applies, n1807 or the vendee had prior notice of the deficiency before executing the contract, n1808 or the contract had waived deficiencies. n1809 Where a designated tract is sold as a whole for a gross sum and no express or implied warranty applies as to quantity, the sale is deemed to be in gross and not by the acre. n1810 Where the sale is not in bulk and a material deficiency in quantity exists, the vendee may have specific performance with corresponding abatement in price. n1811 Thus where the purchase price has not been paid, the purchaser may have the deficiency in the land conveyed credited against the amount the purchaser agreed to pay. n1812

If the parties to a contract for the sale of land estimate the quantity at so much, and the amount of land has a direct influence on the price to be paid or was a controlling motive in entering into the contract, equity will grant relief in case of a material excess or deficiency, by compelling a reconveyance of the excess, n1813 or fixing an equitable compensation, n1814 or rescinding the agreement. n1815 Where the sale of a tract of land was in gross and described as containing one hundred fifty-two acres and a fraction, and the tract in fact only contained one hundred thirty-one acres, more or less, it was held that the deficiency entitled the purchaser to relief. n1816 Where a purchaser agreed to purchase property described with reference to a certain map, the tender of a deed which conveyed the property according to its exact dimensions on the map was held a substantial compliance with the terms of the contract of sale. n1817 Where the land is sold in bulk for a lump sum, then quantity is not generally of the essence of the contract, and the parties take the risk of deficiency or excess, n1818 except in cases where there is actual fraud. n1819 Mere shortage does not conclusively show that the purchaser is entitled to compensation for such shortage, but other facts and circumstances tending to show the intention of the parties must be taken into consideration in order to determine whether the contract would have been consummated if both of the parties had known the facts. n1820 In Kentucky, there must be a deficiency of more than ten per cent in gross sales to authorize abatement. n1821

The sales in bulk rule is held not to apply to the sale of city lots. n1822 Quantity is of essence in cases where the sale is by the acre and abatement is allowed for deficiency. n1823 It is not essential to the right to abatement that the vendor should have known of the acreage shortage. n1824 The words "more or less" mean "substantially" or "approximately" and imply that both parties assume the risk of any ordinary, n1825 but not of a gross, discrepancy, n1826 nor where fraud is practiced in the transaction. n1827 Where both parties were mistaken as to the land described, the courts will usually allow abatement of the purchase price for deficiency. n1828 Specific performance has been refused in several instances where the mistake was not mutual but was caused by the act of the other party. n1829 This is also the rule, on the other hand, where the purchaser knew that the vendor was making a mistake as to the size of the lot to be conveyed, n1830 or where it would be inequitable to enforce the agreement. n1831 However, where a tract of land is sold as a whole, the amount may be immaterial even though greater than the vendor supposed, and the contract be valid and enforceable. n1832 The vendee cannot have any action for misrepresentation as to quantity where the vendee has information as to the area before the consummation of the contract. n1833 If both vendor and vendee believe that the land contracted to be sold contains a certain number of acres and the transaction is based on that belief, the vendee may recover for the deficiency where the acreage is subsequently discovered to be deficient. n1834 The general rule of compensation or abatement in case of deficiency in the quantity of land sold is according to the average value per acre of the whole tract, unless particular circumstances require a departure therefrom. n1835

Whether the sale is intended to be in bulk or by the acre is to be determined from all the terms of the contract, including a lump-sum purchase price, conduct of the parties, value and extent, and location of the land and its description. n1836 A vendor who has fraudulently misrepresented the quantity cannot defend on grounds that the sale was in bulk. n1837 The use of the words "more or less" or "approximately" n1838 are evidence, n1839 but not conclusive evidence, n1840 that the parties expected a deficiency, but do not excuse a large deficiency. n1841 It is not a defense to specific performance at the suit of the vendor that a highway across the premises took a portion of the premises where the contract did not call for a specific acreage. n1842 Where the vendor represented that the land contained more than the number of acres conveyed to the purchaser, the purchaser may recover the proportionate part of the amount paid, if the deficiency is sufficient to warrant it. n1843

§ 96.17(c) Where Title Depends upon Adverse Possession.

While adverse possession will transfer title, such transfer is dependent upon a number of diverse facts. n1844 The final conclusion as to whether there has been "adverse possession" for the requisite period, therefore, is one which must be determined by judicial opinion. Can a buyer be required to accept a title which rests on the concept of adverse possession? Ordinarily, where the contract calls for record title, the title by adverse possession will not suffice. n1845 Marketable title requires an abstract "free from reasonable doubt in law and in fact as to its validity." Affidavits and claim of adverse possession are not sufficient. n1846 Where a purchaser has contracted for a good title of record, the purchaser will not be compelled to take a title depending upon adverse possession under the statute of limitations, although it may be a good title, as that would be to enforce a different contract from that of the parties. n1847 Where the contract does not call for a perfect record title, a title by adverse possession will suffice; but the proof must be convincing and readily available. n1848 In many jurisdictions, clear title by adverse possession is marketable, and the purchaser may be required to accept it. n1849

Undoubtedly a title by prescription is as high as any known to the law, but the facts upon which it is based should be legally established. n1850 A court of equity will never compel a purchaser to take a title where the point on which it depends is too doubtful to be settled without litigation, or where the purchase would expose the purchaser to the hazard of such proceeding. n1851 So, under a contract to furnish a marketable title, one rule holds that a marketable title must be shown on the abstract and not by adverse possession. n1852 An agreement to convey by warranty deed, with abstract showing good title, is not satisfied by the offer of a title based on oral evidence of adverse possession. n1853 Where the contract calls for a "perfect title," the purchaser may insist upon good title of record, and a perfect title by adverse possession is insufficient. n1854 It has even been held that in the absence of a stipulation to furnish a title of record the purchaser is not required to accept a title based on adverse possession which requires parol proof to establish it. n1855

On the other hand, where the contract does not stipulate for a title of record, the cases in most jurisdictions hold that the purchaser is bound to accept a title resting upon a hostile, adverse, and uninterrupted possession under color of title for a period of time sufficient to bar the rights of any possible adverse claimant. n1856 It has been held that a vendor who for the full period of limitation prescribed by statute has been in peaceable and uninterrupted possession of lands has a marketable title which the vendee who has stipulated for a "clear and indefeasible title" is bound to accept. n1857 If the facts as to adverse possession are clear, the title is marketable and the purchaser may be required to accept it. n1858 A contract calling for a conveyance by "a good and sufficient general warranty deed, in fee simple" is satisfied by the giving of a good and marketable title, which is a title not open to reasonable objection; and such is a title by prescription. n1859 It has been held that a purchaser is not entitled to rescind a land contract on the ground that a reasonable doubt existed as to whether the vendor's title was good, where a will gave power of sale to trustees under whom the vendor claimed title and such a long time had elapsed since the death of the testator that the heirs could not successfully claim the property. n1860

A distinction is drawn between a "clear title" and a "marketable title," n1861 but considerable confusion exists as to the extent to which a marketable title can be established by bolstering the record with affidavits. n1862 A title based on adverse possession is good if proved. n1863 The statute of limitations ordinarily cannot be relied upon as to unreleased or defectively released mortgages because of the danger that the mortgagor may have taken an action to keep the mortgage alive. n1864

§ 96.17(d) Vendee's Rights When Vendor's Title Is Inadequate. n1865

If the vendor cannot furnish the title contemplated by the contract the vendee may rescind, and the court will not decree specific performance of a contract to convey if the grantor cannot make a good title to the property, if the title is doubtful, n1866 or not marketable, n1867 or if the grantor can convey only an undivided interest therein. n1868 It is the duty of a vendor to tender to the vendee a safe title, and a purchaser is never bound to accept a defective title in the absence of express agreement. n1869 A promise to convey such title is always implied in an executory contract for the sale of real estate, and a purchaser is never bound to accept a defective title, unless the purchaser expressly stipulates to

take such title, knowing its defects. n1870 In the absence of a specific provision to the contrary, the vendor must convey a title that is free from encumbrances. n1871

When a vendor agrees to sell a piece of land, the law imputes to the vendor a covenant that the vendor will convey a marketable title unless the vendee stipulates to accept something less. n1872 An agreement to convey, unless otherwise provided, obligates a conveyance of a title in fee simple free from liens and encumbrances. n1873 A purchaser who has been promised a good title cannot be compelled to accept a defective title, even though the vendor is ignorant of the defect when making the promise. n1874

Where the vendor agrees to convey to the vendee "by warranty deed with abstract showing good title," this has reference to the record title, which may be epitomized in the abstract, and is a condition precedent to the vendor's right to demand the deferred payments. n1875 In case of defect of title as to which the vendor was ignorant, the vendee may rescind or disaffirm the contract and sue to recover any part of the purchase money paid. n1876

Where the contract stipulates the character of title to be conveyed, effect will be given to such stipulation. n1877 The covenant for "good and lawful title" intends a title free from encumbrance. n1878 The title must be a good record title and not one that may be shown to be good by oral proof or writings not subject to registration. n1879 Thus, a contract providing for the conveyance of an estate in fee simple, clear of all encumbrances whatever, by a good and sufficient warranty deed, requires a conveyance of a good, merchantable title. n1880 Strictly speaking, there is no such title as a "perfect title," but where the contract calls for such title the purchaser is entitled to a title free from reasonable doubt and fairly deducible of record, n1881 and cannot be compelled to accept a title encumbered by a recorded oil and gas lease. n1882 Under such stipulation the purchaser has a right to demand a title that will enable the land to be held in peace, with reasonable assurance that no flaw will disturb its marketable value. n1883 To constitute a perfect title, as contemplated by the parties, there must be a union of three elements, namely, actual possession, the right of possession, and the right of property. n1884 Where the phrase, "perfect title," was embodied in a contract of sale, it was said to mean such a title as is perfect and safe to a moral certainty; a title which does not disclose a patent defect suggesting the possibility of a lawsuit to defend it; a title such as a well informed and prudent person paying full value for the property would be willing to take. n1885 "A perfect title always carries with it, in legal contemplation, a lawful seisin and possession. Such seisin and possession are coextensive with the right, and deemed to continue until ouster by actual possession of another under claim of right." n1886 Like a "perfect title," a "complete title" requires the union in one person, from one or more sources, the possession, the right of possession, and the right of property. n1887

Where the contract contemplates the conveyance of a good title when the purchase price is paid, it is the duty of the vendor to have such title and to be able to convey same when the time for performance arrives. n1888 The purchaser is not required to accept a defective title, n1889 and is not required to accept title from a third person. n1890 The term "good title," used in a contract of sale, does not necessarily mean one perfect of record. n1891 It consists in the rightful ownership of property and in the rightful possession thereof, together with the appropriate legal evidence of rightful ownership. As between vendor and purchaser, it means the legal estate in fee, free and clear of all valid claims, liens or encumbrances whatsoever. n1892 It means a title free from all litigation, palpable defects, and grave doubts. It should consist of both legal and equitable titles, fairly deducible of record; n1893 but the purchaser will not be permitted to object to the title on account of the bare possibility that it will prove defective. n1894 A defect that will excuse performance must be such as to cast a cloud on the title in the minds of reasonable persons. n1895

"A good title means not merely a title valid in fact, but a marketable title, which can again be sold to a reasonable purchaser or mortgaged to a person of reasonable prudence as security for a loan of money. A purchaser will not generally be compelled to take a title when there is a defect in the record title which can be cured only by a resort to parol evidence." n1896 In a contract to convey a good title, the word "good" comprehends all that the word "clear" does. n1897 The term "clear title," as used in such contract, means that there are no encumbrances on the land. n1898 Where the contract of sale provided that the vendor was to furnish an abstract of title "showing a good and clear title, free from defects," it was held that the contract was not performed where the abstract showed defects which may or may not exist

in the title as tested by the original records, and an encumbrance which may or may not be barred by limitation. n1899 An agreement to convey "in fee simple, clear of all encumbrances whatsoever, by a good and sufficient warranty deed" requires conveyance of a good title in law, which means a good merchantable title. n1900

It is the duty of a vendor to tender to the vendee a safe title, and a purchaser is never bound to accept a defective title in the absence of express agreement. A promise to convey such title is always implied in an executory contract for the sale of real estate, and a purchaser is never bound to accept a defective title, unless the purchaser expressly stipulates to take such title, knowing its defects. n1901 Where there was a failure to furnish title insurance as stipulated for in the contract, the purchaser was held not bound to perform the contract. n1902 Likewise, a failure to furnish an abstract showing a clear title as provided in the contract will absolve the purchaser from performance thereof. n1903 A purchaser is not compelled to take property, the possession of which the purchaser may be obliged to defend by litigation. n1904

A doubtful title, which a purchaser will not be compelled to accept, is one that may be reasonably and fairly questioned in the opinion of competent persons. n1905 Title to a whole tract will not suffice if title to any part of it is bad. n1906 It is the condition of the title at the time fixed for performance which determines the rights of the parties. A vendor may not have title at the time of the contract and yet will fulfil his obligation if the purchaser has title at the time set for conveyance. n1907 Where the time to perform is indefinite, it is sometimes held that the vendor will be given a reasonable time to perform after the time is fixed and definite. n1908 The purchaser is not obligated to advance money to the vendor to enable the vendor to secure title. n1909 The contract may give the vendor a reasonable time in which to cure defects, n1910 and it may obligate the vendor to furnish an abstract showing good title, which will constitute a condition precedent to payment of the purchase money. n1911

In order to entitle a vendor to the equitable relief of specific performance, the vendor must tender to the vendee a marketable title by a conveyance containing the usual covenants, unless the contract provides otherwise. n1912 Equity will not compel a purchaser to accept a doubtful title. n1913 The title of the vendor of land must be marketable, even if the contract does not so stipulate. Such a condition is implied in all contracts for sale of real property. n1914

The purchaser is entitled, unless stipulated to the contrary, to receive a marketable title, n1915 a title that is fairly deducible of record and not depending on matters resting in parol; n1916 but it is said that a "marketable title" is not necessarily one that can be fully established merely by recourse to the public records. n1917

The purchaser may enforce rescission where the vendor is unable or unwilling to perform the contract to convey a merchantable title. n1918 The purchaser may rescind for failure of title to a portion of the land covered by the contract. n1919 Where a contract for the sale of realty is executory on both sides, a failure of title is a failure of consideration, and a rescission of the contract may be had and the consideration recovered, but the vendee must restore the possession and the estate of the vendor. n1920 This rule also applies to a contract for the exchange of land. n1921 On refusal of the vendor to deliver a deed according to the terms of the contract, the vendee may sue for rescission and the recovery of the purchase price already paid in by him. n1922

Where a vendor is unable to convey good title within the time stipulated in the contract, the purchaser may rescind without tendering the remainder of the unpaid purchase money, n1923 and it is immaterial that the vendor honestly believed to have a good title. n1924 A purchaser will not be denied the right to rescind a contract because of the falsity of the vendor's representation that the title was good by the fact that by the lapse of time the title has become good. n1925 It has been held, however, that equity will refuse a purchaser relief if the defects might with reasonable diligence have been discovered prior to the execution of the contract. n1926 The prevailing rule in the United States is that in a sale of real estate the vendor is bound to disclose any defect in the title to or encumbrance on the property sold, known to the vendor and not known to the purchaser, and that failure so to do will render the contract voidable at the vendee's option. n1927 This has been held to be true even though the encumbrance is of record. n1928 In the absence of fraud, an executed sale of real estate will not be rescinded for failure of title, but the purchaser's remedy then is an action on the

covenants of the deed. n1929 The time fixed for the performance of such contract is generally of the essence thereof, and a long delay in offering a marketable title agreed to be purchased warrants the purchaser in rescinding the contract; n1930 but rescission will not be decreed unless facts are pleaded showing why the vendor will not be able to perform when the time for performance arrives. n1931

The failure of title that will warrant rescission is the failure of title at the time the contract is to be performed. The seller has until that time, or a reasonable time thereafter, to make the title good. n1932 Ordinarily, there will be no case for rescission for a partial failure of title which does not materially take away the enjoyment, and which can be compensated in damages. n1933 Expressions of opinion as to the sufficiency of the title, when the means of factual information on the subject are accessible to the purchaser, do not ordinarily amount to deceit. n1934

The vendor must furnish the exact title called for by the contract. n1935 Defendant must point out defects which the defendant relies upon to defeat an action for specific performance. n1936 Where the title is good, specific performance will be decreed although the abstract through oversight failed to show clear title. n1937 In a case where the vendor's title was through one described as "agent," specific performance was decreed where it appeared that such agent had an absolute fee-simple title. n1938 Where there was a failure to furnish title insurance n1939 or an abstract showing a clear title as stipulated in the contract, specific performance was denied. n1940

While a purchaser cannot be compelled to take a doubtful title, the purchaser will not be permitted to object to a title on account of a bare possibility that it will prove defective. n1941 Where there is any doubt about the title being free from liens or encumbrances, the court will not decree a specific performance. Its validity must not rest upon some fact not before the court. n1942 Specific performance will not be decreed even at the suit of the vendee where it would compel the vendee to accept an imperfect title which was not in the contemplation of the parties when the contract was made. n1943 The vendor must own the land at the time suit is brought or the relief will usually be denied. n1944 Where the vendor's title rests on an indefeasible title under the statute of limitations, however, it has been held that equity may enter a decree in the vendor's favor enforcing specific performance of the contract. n1945

The problem of the failure of the wife of the vendor to sign the contract is a special one. In most states if the property is owned by the entireties, the vendee has no relief except to recover the purchase price and damages against the husband, since the deed is void unless signed by both parties. Where the right of survivorship creates a future interest, the interest of the survivor cannot be transferred by one party unless that party is the survivor.

Where a defense of lack of marketability is raised based on title defects, the action may be only between the parties, or the plaintiff may have made all holders of alleged outstanding interests parties in the nature of a quiet title action. The standard test of the sufficiency of the vendor's title to justify a decree of specific performance is its marketability. n1946 The vendor cannot be forced to take action to clear the title. n1947

Where a clause in the sales contract that by accepting the deed the vendee acknowledged full performance of sales contract to deliver good title, the vendee could not complain of an outstanding lease not discovered until after deed was delivered. n1948 It is not essential that the vendor actually have the legal title if the vendor has the certain means of procuring it, or can control it and have it conveyed to the purchaser and offers to do so. n1949 Where a vendor has been acting in bad faith a court of equity may require the vendor to correct title defects so as to convey a marketable title. n1950

If the vendor is the equitable owner of the property to be conveyed and has the right to call for the legal title, the vendee may have specific performance of the contract. n1951 Unless time is held to be of the essence, the vendor is allowed a reasonable time after closing date in which to clear the title. n1952

Many contracts now call for a marketable or an "insurable title." n1953 If the contract calls for an insurable title, a title that is good but not insurable is insufficient. n1954 An "insurable title" is one which the insurance company will insure

without exceptions. n1955

A vendor who cannot make out a clear and good title, cannot set up, in defense, the plaintiff's delay in payment, even despite a stipulation that the contract shall be avoided if the payment is not made at the time. This is in accordance with the rule that a defendant cannot rely as a defense upon a breach which the defendant has caused. n1956 Where a title or other defect exists and the extent of such defect can be measured in monetary terms, the courts will modify the contract to the extent of permitting the vendee to pay the purchase price so reduced. n1957

The vendee's failure to give timely notice of defects is a waiver. n1958 In order to rescind a contract because of defects in a title, the party must act promptly and within a reasonable time. n1959 To justify rescission there must be a reasonable doubt as to the validity of the title, one which will cause a prudent person to hesitate in making the investment. A mere possibility of a defect does not justify rescission. n1960 Where a "perfect title" is called for the vendor must furnish a title free from litigation, palpable defects or grave doubts, and a legal and equitable title fairly deducible from the record. n1961

Batdorf, 130 N.E.2d 111 (Ill. 1955);* Ill. Rev. Stat. ch. 30 §§ 37b-37h (1967). A good and marketable title does not necessarily mean perfect title. *Allen v. Hyland, 215 N.Y.S.2d 587 (N.Y. Sup. 1961).* Implied contract to furnish a title "which will not expose the purchaser to the hazard of litigation or embarrass him in the peaceable enjoyment of the land." *Madbeth, Inc. v. Weade, 129 S.E.2d 667 (Va. 1963). See* Ronald W. Polston, Legislation, Existing and Proposed, Concerning Marketability of Mineral Titles, *7 Land & Water L. Rev. 73 (1972).* Purchaser entitled to marketable title, one which can be readily sold or mortgaged to a person of reasonable prudence, unless contract provides otherwise. *Regan v. Lanze, 387 N.Y.S.2d 79 (N.Y. 1976).* The title is not marketable if there is a doubt concerning either the facts or the law on which it is founded. *Keown v. West Jersey Title & Guaranty Co., 371 A.2d 370 (N.J. Super. 1977),* overruled on different grounds, *390 A.2d 715 (N.J. Super. App. Div. 1978).*

(n3)Footnote 1670. *Spencer v. Sandusky, 33 S.E. 221 (W. Va. 1899). See* Marketable Title in Equity and at Law, *22 Harv. L. Rev. 529 (1908).*

(n4)Footnote 1671. *Deleon v. WSIS, Inc. 728 So. 2d 1046 (La. Ct. App. 1999); Tolosi v. Lese, 104 N.Y.S. 1095 (N.Y. App. Div. 1st Dept. 1907).*

(n5)Footnote 1672. *Shriver v. Shriver, 86 N.Y. 575 (N.Y. 1881).*

(n6)Footnote 1673. *Thompson v. Ellenz, 59 N.W. 1023 (Minn. 1894).*

(n7)Footnote 1674. *Woods v. Schmitt, 439 N.W.2d 855 (Iowa 1989); Tesdell v. Hanes, 82 N.W.2d 119 (Iowa 1957).* A merchantable title is "a title not subject to such reasonable doubt as would create a just apprehension of its validity in the mind of a reasonable, prudent and intelligent person; one that persons of reasonable prudence and intelligence, guided by competent legal advice, would be willing to take and pay the fair value of the land for." *Eggers v. Busch, 39 N.E. 619 (Ill. 1895).* Title is marketable even though there is a possibility of defect if such possibility is not sufficient to raise a reasonable doubt. *Morse v. Stober, 123 N.E. 780 (Mass. 1919).* A title may be regarded as unmarketable if a reasonably careful and prudent man, familiar with the facts, would refuse to accept the title in the ordinary course of business. It is not necessary that the title be actually bad in order to render it unmarketable. It is sufficient if there is such a doubt or uncertainty as may reasonably form the basis of litigation. Williams v.*Bricker, 109 P. 998 (Kan. 1910),* quoted in *Bartos v. Czerwinski, 34 N.W.2d 566 (Mich. 1948).* The obligation to give a marketable title is not necessarily altered by a stipulation in the contract of sale that the conveyance will be by quitclaim deed. *Wallach v. Riverside Bank, 100 N.E. 50 (N.Y. 1912).* Marketable title, which is the same as merchantable title, is one that is free from reasonable doubt and will not expose the land to the hazards of litigation. *Darby v. Keeran, 505 P.2d 710 (Kan. 1973).* Any title that may require the purchaser to litigate was unmarketable. *Westerlind v. Dehon, 326 S.2d 24 (Fla. App. 1976).* Purchaser entitled to marketable title, one that can be readily sold or mortgaged to a person of reasonable prudence. *Regan v. Lanze, 387 N.Y.S.2d 79 (N.Y. 1976).*

(n8)Footnote 1675. *Whittier Ests., Inc. v. Manhattan Sav. Bank, 48 N.Y.S.2d 111 (N.Y. Sup. 1944).* The law assures to a buyer a title free from reasonable doubt, but not from every doubt. *Crocker Point Assn. v. Gouraud, 120 N.E. 737 (N.Y. 1918); Goldberg v. McCord, 166 N.E. 793 (N.Y. 1929).* If "the only defect in the title" is "a very remote and improbable contingency," a slender possibility only," a conveyance will be decreed. *Greenblatt v. Hermann, 38 N.E. 966 (N.Y. 1894); Ferry v. Sampson, 20 N.E. 387 (N.Y. 1889); Cambreleng v. Purton, 26 N.E. 907 (N.Y. 1891).* Merchantable title is one free from reasonable probability of litigation. *May v. Nyman, 278 N.E.2d 97 (Ill. App. 1972).* Success in a quiet title action must depend upon the strength of the plaintiff's title and not the weakness of the defendant. *Cady v. Morton, 527 F.2d 786 (9th Cir. 1975).*

(n9)Footnote 1676. *Weaver v. Richards, 108 N.W. 382 (Mich. 1906); McLaughlin v. Nelson, 202 N.W. 871 (Neb. 1925).* The existence of a building code violation is not of itself a violation of a covenant to provide good title. *Cox v. Sup. Sav. & Loan Assn., 262 N.E.2d 74 (Ill. App. 1970)*

(n10)Footnote 1677. *Chastain v. McKinney, 203 F.2d 712 (6th Cir. 1953),* Rights of Bona Fide Purchaser for Apparent Devisee or Distributee, *27 St. Johns L. Rev. 336 (1953); Gordon v. Holman, 250 P.2d 875 (Okla. 1952).* Building code violation does not prevent the title from being "good." *Ableman v. Slader, 224 N.E.2d 569 (Ill. App. 1967).*

Howey, 100 S.W.2d 851 (Mo. 1936).* "However, a title, to be marketable, need not be free from every conceivable technical criticism, but only from those possibilities of defect which are sufficient to raise a reasonable doubt. It is not every possibility of defect or even threat of contest that will be sufficient to make a title unmarketable, for it may be practically impossible for a vendor to anticipate all imaginable objections which, if they existed, would defeat his title. * * * For instance, equity will decree specific performance of a contract for the sale of land even where the title is based upon adverse possession, if the title is so clearly proved and so free from doubt that it may serve as a proper foundation for a decree against the purchaser. * * * In other words, a title, to be marketable, must be one which a reasonably intelligent purchaser, who is well informed as to the facts, would be willing to accept in the exercise of ordinary business prudence. * * *" *Garner v. Union Trust Co., 45 A.2d 106 (Md. 1945).* Acceptance of land contract was not made conditional by requiring evidence of title since merchantability is implied in a contract to convey land. *Burkhead v. Farlow, 146 S.E.2d 802 (N.C. 1966).* Purchaser may waive partial title defect. *Schwope v. Kiesling, 538 S.W.2d 490 (Tex. Civ. App. 1976).*

(n43)Footnote 1710. *Contrast, Barger v. Gery, 53 A. 483 (N.J. Ch. 1902),* holding to the limited rule, with *Fahy v. Cavanagh, 44 A. 154 (N.J. Ch. 1899),* where the court stated:

> "That titles must be held marketable, although dependent on the proofs of facts, cannot be disputed. If this were not so, a vendor holding title as heir or devisee, in a large number of cases, could not have the remedy of specific performance." When the authorities speak of the hazard of litigation to which the purchaser must not be subjected, it seems to me that they must refer to a hazard which is to be determined by the chance of successful attack as viewed by the court in the suit for specific performance. When, also, they speak of a doubt or a supposed flaw as affecting the salability of a title, they must refer to the character of the doubt or flaw as the court views it, and not as it may be viewed by the intermediate judgment of the real estate market. "Some purchasers, guided by cautious counsel, will not accept a title against which the slightest possibility of doubt is suggested; and yet there is no title concerning which a possible doubt or the possibility of a future flaw cannot be raised. The authorities, I think, establish the rule as a safe one that a title dependent on a fact must be regarded as marketable when (1) the fact is so conclusively proved in the suit for specific performance that a verdict against the existence of the fact would not be allowed to stand in a court of law, and (2) where there is no reasonable ground for apprehending that the same fact cannot be, in like manner, proved, if necessary, at any time thereafter for the protection of the purchaser." In the case of marketable title the idem sonans rule must be such as to preclude questions of identity. *Douglass v. Ransom, 237 N.W. 260 (Wis. 1931).*

(n48)Footnote 1715. *Kane v. Rippey, 33 P. 936 (Or. 1893).* If the title defect is curable the vendee may not reject the title. Any such rejection is anticipatory breach of contract. *Cohen v. Kranz, 189 N.E.2d 473 (N.Y. 1963).*

(n49)Footnote 1716. *Chesman v. Cummings, 7 N.E. 13 (Mass. 1886)* (title determined marketable in specific performance action); *Townshend v. Goodfellow, 41 N.W. 1056 (Minn. 1889)* (refusing specific performance when question of fact involved and all parties not before the court).

(n50)Footnote 1717. *Lynbrook Gardens, Inc. v. Ullmann, 53 N.E.2d 353 (N.Y. 1943).* "A title dependent on a fact must be regarded as marketable when (1) the fact is so conclusively proved in the suit for specific performance that a verdict against the existence of the fact would not be allowed to stand in a court of law, and (2) where there is no reasonable ground for apprehending that the same fact cannot be, in like manner, proved, if necessary at any time thereafter for the protection of the purchaser. A specific performance will never be decreed at the suit of the vendor whenever the doubt concerning his title is one which can only be settled by further litigation, or when the court can see that the purchaser will, with reasonable probability, be exposed to bona fide adverse claims on the part of third persons, and to the risk of litigation for the purpose of enforcing such claims. * * * Whatever be the cause from which the doubt arises, * * * it must be something more than a mere speculation, theory or possibility. A court of justice, in all its investigations, deals with arguments more or less based upon a balance of probabilities; and in rendering its decisions must be satisfied if it reaches a conclusion which is morally certain. To admit of objections which were purely speculative, or mere possibilities, would destroy the practical efficacy of all judicial proceedings. A doubt covering the vendor's title, therefore, which can avail to defeat his remedy of specific performance, must be reasonable, and so far as it depends upon contingent events and uncertain facts their occurrence or existence must be fairly probable." *Barger v. Gery, 53 A. 483 (N.J. Ch. 1902).*

(n51)Footnote 1718. *Daniel v. Shaw, 44 N.E. 991 (Mass. 1896).* It is a great, though perhaps a common mistake, to suppose that a doubtful title can he made marketable by an opinion of a court in a case stated between vendor and vendee. *Pratt v. Eby, 67 Pa. 396 (Pa. 1871).*

(n52)Footnote 1719. *Minister, Elders, and Deacons of Reformed Protestant Dutch Church v. Madison Ave. Bldg. Co., 108 N.E.. 444 (N.Y. 1915)* (restrictive covenant in a plat affected all lot owners even though not before the court). "It is well settled, and I think so settled upon sound principles, that in suits for specific performance of contracts this court may compel a defendant to take a title, the validity of which depends upon what may be properly described as a doubtful question of law, and may itself determine that question of law for the purpose of that particular case. No harm will be done to the defendant because, by an appeal to a court of errors and appeals, that court,- which is at once a court of law and equity, may finally deter mine the question of law, and settle it as against all the world, whether parties to the suit or not." *Fahy v. Cavanagh, 44 A. 154 (N.J. Ch. 1899).* "It is further insisted, however, that, even if the title is good in fact, specific performance should not be compelled, because the questions raised remain open, inasmuch as the

grandchildren of the testator, born since the sale under the statute, are not parties to the action and are not bound by our determination. There would be much force in this position if the alleged defects in the title depended upon questions of fact or upon doubtful questions of law, but as they rest wholly on the construction of a statute and a decree made thereunder, we do not think we should hesitate, under all the circumstances, in declaring the title free from judicial doubt, and requiring the defendant to perform his contract. When the court has carefully examined and deliberately decided a question, its decision becomes a part of the common law, and is binding upon it as well as upon all the other courts of the state. The possibility that it may, at some time in the future, when other parties are before it, disregard its own precedent and decide the same question, depending on the same facts, in a different way, is so remote that it should not be permitted to arrest the development and destroy the salability of a large tract of land, possibly for a generation." *Ebling v. Dreyer, 44 N.E. 155 (N.Y. 1896).* If the property subject to a sales contract is subject to a utility easement, the vendor is not required to clear the easement until the time of passing of papers arrive. *Gossels v. Belluschi, 348 N.E.2d 115 (Mass. App. 1976).*

Patrovsky, 60 N.W.2d 336 (Wis. 1953).* One contracting to purchase land subject to a zoning ordinance permitting an intended use is entitled to rely upon the ordinance as against a subsequent amendment to the ordinance prohibiting the use. *Vazza v. Board of Appeals, 269 N.E.2d 270 (Mass. 1971).*

(n122)Footnote 1789. Not marketable. *Turner v. McDonald, 18 P. 262 (Cal. 1888); Chauncey v. Town of Leominster, 52 N.E. 719 (Mass. 1899); Dutton v. Buckley, 242 P. 626 (Or. 1926).* Burden on vendee to show outstanding claims. *Schmidt v. Fontron Loan & Trust Co., 211 P. 630 (Kan. 1923); Moore v. Taylor, 32 A. 320 (Md. 1895); Hayes v. Harmony Grove Cemetery, 108 Mass. 400 (Mass. 1871); Moser v. Cochrane, 13 N.E. 442 (N.Y. 1887).* Title based on presumption of death of record holder is not marketable. *Potter v. Ogden, 59 A. 673 (N.J. Ch. 1905); Saracino v. Kosower Constr. Co., 140 A. 458 (N.J. 1928); Vought v. Williams, 24 N.E. 195 (N.Y. 1890).* Refusing a title based on presumption of death though at law the title could be held good since vendee exposed to litigation. *Saracino v. Kosower Constr. Co., 140 A. 458 (N.J. 1928); Vought v. Williams, 24 N.E. 195 (N.Y. 1890)* (accord 24-year absence). Contra, *Ferry v. Sampson, 20 N.E. 387 (N.Y. 1889)* (40-year absence).

(n123)Footnote 1790. *Schmidt v. Fontron Loan & Trust Co., 211 P. 630 (Kan. 1923)* (title marketable where there had been no administration of the estate of the deceased owner, based on affidavits of no debts); *Fahy v. Cavanagh, 44 A. 154 (N.J. Ch. 1899)* (vendee not required to take title from vendor's heirs); *Kilpatrick v. Barron, 26 N.E. 925 (N.Y. 1891)* (unmarketable where rights of unborn persons involved). A statute authorized a sale of a testator's land, but excepted from the conveyance the reversionary interest of his heirs, if any there were found to be. Because of the possible existence of such heirs, the purchasers were unwilling to complete the purchase. The court recognized the possibility, though about 60 years had gone by, but overruled the purchasers' objection. The existence of heirs is so improbable that it is not to be considered as prejudicing the title. *In re Trustees of N.Y. Protestant Episcopal Pub. Sch., 31 N.Y. 574 (1864),* approved in *Norwegian Evangelical Free Church v. Milhauser, 169 N.E. 134 (N.Y. 1864).*

(n124)Footnote 1791. Sometimes the question is partially settled by statutes limiting time in which administration can be opened after death of the deceased titleholder, see Ind. Code Ann. § 7-115. Such statutes cannot, however, protect against claims of the federal government. Affidavits permitted to show no debts and so administration unnecessary. *Van Gundy v. Shewey, 133 P. 720 (Kan. 1913); Brown v. Baxter, 94 P. 155 (Kan. 1908); Moser v. Cochrane, 13 N.E. 442 (N.Y. 1887).* Contra, *Crosby v. Wynkoop, 56 Wash. 475, 106 P. 175 (Wash. 1910).*

(n125)Footnote 1792. *Barickman v. Kuykendall, 6 Blackf. 21 (Ind. 1841)* (infant); *Holliday v. Arthur, 44 N.W.2d 717 (Iowa 1950)* (where in a guardianship sale, service was made on the guardian and not on the ward as the statute required, the title was not merchantable); *Delnay v. Woodruff, 221 N.W. 614 (Mich. 1928)* (a title may be marketable

though subjected to captious doubt or remote and improbable possibility of litigation); *Horton v. Matheny, 51 N.E.2d 41 (Ohio App. 1943)* (infant); *Moore v. Elliott, 136 P. 849 (Wash. 1913)* (unborn child).

(n126)Footnote 1793. *McCracken v. Walnut Park Garage, 68 P.2d 123 (Or. 1937).*

(n127)Footnote 1794. *Kilpatrick v. Barron, 26 N.E. 925 (N.Y. 1891)* (title depending upon a will was unmarketable where there were persons unborn who could contest the will). In some states the will must be probated within a statutory time after death to be valid as against a bona fide purchaser from the heirs for value without notice. Ind. Code Ann. § 7-115; N.Y. [Decedent Est. Law] § 46. At common law the will itself transferred title to realty in the same manner as in a deed. *Ash v. Calvert, 170 Eng. Rep. 1193 (1810).* In a few states a will does not transfer title until admitted to probate. Ind. Code Ann. § 7-124.

(n128)Footnote 1795. "It is a great, though perhaps common, mistake to suppose that a doubtful title can be made marketable by an opinion of a court on a case stated between vendor and vendee. We have not the heirs of the Rev. Robert Graham before us as parties in this action, and their rights cannot be concluded by any judgment we can give." *Pratt v. Eby, 67 Pa. 396 (Pa. 1871). See* Specific Performance--Marketable Title--Refusal of Equity to Construe a Doubtful Statute in Order to Determine the Marketability of a Title, *13 Minn. L. Rev. 158 (1928).* Some states permit a statutory determination of heirship. Ind. Code Ann. § 6-606.

Specific performance will be denied when there is a reasonable doubt as to the title, or it is reasonable to anticipate that the purchaser will be exposed to litigation. Cudd v. Wood, *89 S. 52 (Ala. 1921).* It may be possible, however, for the vendor to clear up the defects by making the adverse claimants parties to the specific performance action. *Sabin v. Rauch, 255 P.2d 206 (Ariz. 1953).* Specific performance will not be denied on this ground when the purchaser knew that the vendor did not have a complete title, and it was contemplated that he should be given time to perfect it. *Sharp v. Bremer, 185 N.W. 449 (Iowa 1921).* Now it is the uniform rule in New Jersey to decline to decree specific performance at the suit of the vendor of real estate where a reasonable doubt concerning the title exists, though rested on grounds merely debatable, but which might visit upon the purchaser litigation in that regard, and that too, where at law the title might in fact be declared good. *Van Riper v. Wickersham, 76 A. 1020 (N.J. 1910).*

(n200)Footnote 1867. *Baugh v. Johnson, 641 S.W.2d 730 (Ark. App. 1982); Burke v. Dorfan, 137 A. 844 (N.J. 1927); Bourland v. Huffhines, 269 S.W. 184 (Tex. Civ. App. 1924).* A marketable title is one of such character as should assure to the vendee the quiet and peaceable enjoyment of the property, and one which is free from encumbrance. *Barnard v. Brown, 70 N.W. 1038 (Mich. 1897).*

White, 14 S.2d 687 (Ala. 1943); Asbury v. Cochran, 9 S.2d 887 (Ala. 1942);* Baker v. Howison, *104 S. 239 (Ala. 1925); Winkler v. Jerrue, 129 P. 804 (Cal. App. 2d Dist. 1912); Craig v. White, 202 P. 648 (Cal. 1921);* Walton Land & Timber Co. v. Long, *185 S. 839 (Fla. 1939);* Key v. Alexander, *108 S. 883 (Fla. 1926); Sorensen v. Larue, 252 P. 494 (Idaho 1926); Marshall v. Gilster, 201 P. 711 (Idaho 1921); Cobb v. Willrett, 144 N.E. 834 (Ill. 1924); Gibb v. Merrill, 234 Ill. App. 267 (Ill. App. 2d Dist. 1924); Carter v. Bair, 208 N.W. 283 (Iowa 1926); Marx v. King, 186 N.W. 680 (Iowa 1922); Ely v. Joslin, 208 P. 628 (Kan. 1922); Dalton v. Callahan, 119 A. 380 (Me. 1923); Wiemann v. Steffen, 172 S.W. 472 (Mo. App. 1915); Justice v. Button, 131 N.W. 736 (Neb. 1911); Robert H. Smith Corp. v. Kraushaar, 34 N.Y.S.2d 356 (N.Y. Sup. 1942),* order rev'd, *37 N.Y.S.2d 679 (N.Y. App. Div. 2d Dept. 1942); Edwards Lumber & Land Co. v. Smith, 132 S.E. 593 (N.C. 1926); Huwe v. Moulton, 211 N.W. 453 (S.D. 1926); Johnson v. Ford, 245 S.W. 531 (Tenn. 1922).* Legal and not equitable title intended. *San Mateo Land Co. v. Elem, 293 F. 869 (8th Cir. 1923).* Implied covenant of "marketable title" means a title not merely good in fact but one that is free from any reasonable objection of a reasonable purchaser. It is not "marketable" if it requires examination of records outside the state. *Paradis v. Bancroft, 91 A.2d 925 (N.H. 1952).*

(n203)Footnote 1870. *Brunswick Co. v. Dart, 20 S.E. 631 (Ga. 1894); McDonald v. Minnick, 35 N.E. 367 (Ill. 1893);* Lockhart v. Smith, *16 S. 660 (La. 1895); Hill v. Hobart, 16 Me. 164 (Me. 1839); Peabody Heights Co. v. Willson, 32 A. 386 (Md. 1895);* Corey v. *Clarke, 56* N.W. 1063 (Minn. 1893); *Saracino v. Kosower Constr. Co., 140 A. 458 (N.J. 1928); Bowen v. Vickers, 2 N.J. Eq. 520 (N.J. Ch. 1839); Irving v. Campbell, 24 N.E. 821 (N.Y. 1890); Rife v. Lybarger, 31 N.E. 768 (Ohio 1892); Egle v. Morrison, 17 Ohio C.D. 497 (Ohio Cir. Ct. 1904); Sorsby v. Thom, 168 S.W.2d 873 (Tex. Civ. App. 1943); Burwell v. Sollock, 32 S.W. 844 (Tex. Civ. App. 1895).* Failure of title may be a hardship defense against specific performance as well as grounds for rescission. *Micbar Realty Corp. v. Truval Realty Corp., 120 N.Y.S.2d 150 (N.Y. Sup. 1952).* Where the contract stipulates for the satisfaction of a third person, such as the vendee's attorney or a title insurance company, the seller's obligation is deemed to have been enlarged, and title can be rejected if not satisfactory to the named person. *Flower v. Coe, 196 N.W. 139 (Neb. 1923); Beinhauer v. Morris, 126 N.Y.S. 511 (N.Y. App. Div. 1st Dept. 1911); Baker v. Kaplan, 127 A. 623 (Pa. 1925).* Where the parties had agreed upon a quitclaim deed the court in New York stated: "An agreement to make a good title is always implied in executory contracts for the sale of land, and that a purchaser is never bound to accept a defective title, unless he expressly stipulates to take such title, knowing its defects. His right to an indisputable title, clear of defects and encumbrances, does not depend upon the agreement of the parties, but is given by the law." *Wallach v. Riverside Bank, 100 N.E. 50 (N.Y. 1912).* But under similar circumstances a Minnesota court has said: "It was equivalent to saying that 'upon an examination of your title to the property, as shown by the abstract, a deed which conveys that title, although it may be defective, will be satisfactory.' The proposed vendor would then have fully and adequately performed on his part had he tendered a deed of quitclaim. * * * If it clearly appears * * * that the parties contemplated and bargained for nothing

more than a conveyance which would pass such rights and interests as the vendor might have, or that they had in view and contracted for the mere transfer of the title held by the vendor, whether defective or not, that is all a vendee can claim or insist upon." *McManus v. Blackmarr, 50 N.W. 230 (Minn. 1891).*

(n204)Footnote 1871. *Elvidge v. Brant, 267 N.W. 169 (Neb. 1936).* An abstract reflecting title by tax deed without showing the preliminary proceedings of the tax sale did not show marketable title. *Alexander v. Cleveland, 79 S.2d 852 (Fla. 1955).* Party wall agreements are an encumbrance. *Maupai v. Jackson, 124 N.Y.S. 220 (N.Y. App. Div. 1st Dept. 1910),* only if perpetual; *Feder v. Soloman, 134 A. 917 (N.J. 1926). See* Royal C. Rubright, Marketable Title--What Certifiable Copies of Court Papers Should Appear of Record--An Addendum, *34 Dicta 335 (1957);* Robert W. CHAPTER 96 Vendors and Purchasers

11-96 Thompson on Real Property, Thomas Editions § 96.18

AUTHOR: David A. Thomas Professor of LawJ. Reuben Clark Law School Brigham Young University

§ 96.18 Abstracts and Abstracters.

The contract may contemplate that the vendor will furnish the vendee with an abstract of title or, in the alternative, with title insurance. The vendor is under no duty to furnish an abstract where the contract does not require it. n1962 The vendee may waive a provision in the contract to furnish an abstract. n1963 An agreement in the contract to furnish an abstract means an abstract taken from the record, n1964 and is to be furnished the vendee on or before tender of the deed. n1965 An abstract is not contemplated to be the complete evidence of title, but is a mere synopsis of the record as to the title, n1966 but the purchaser is entitled to rely on the abstract. n1967 The abstract may be supplemented in some instances by affidavits clearing omissions and obscure and defective recitals. n1968 Under an agreement to furnish "an abstract of title" the contract was held to require a record title and would not be satisfied by furnishing extrinsic evidence of title by adverse possession. n1969 The contract may provide for the approval of the abstract by an attorney, and the attorney's decision will generally be conclusive. n1970 The provision requiring the vendor to furnish an abstract showing a good and merchantable title means that this title should be in the vendor. n1971 The abstract is generally held not defective for omission of the original government grant. n1972 The vendee has a reasonable time for the examination of the abstract, n1973 and the vendor should have a reasonable time to correct defects. n1974 Objections to defects in the abstract may be waived. n1975 The provision for a title guaranty certificate is not satisfied by tender of a Torrens certificate and title insurance. n1976

The abstracter ordinarily insures the accuracy of the work. n1977 An abstracter is not liable for loss incurred by one who at the time of taking the action resulting in the loss does not rely on the abstract. n1978 If the vendor agrees to furnish an abstract showing title, the vendee is not liable if such abstract is not furnished. n1979

Regarding title examination of the record the courts are divided on two issues. First, is the examiner required to search the history of the tract to ascertain whether there were any instruments recorded prior to the time the maker acquired title and which would be binding on the maker under the after-acquired title doctrine of warranties? Second, must the examiner search the record for instruments outside the chain of title to the tract to ascertain if there were instruments executed by the maker before the time of a link in the chain but not recorded until after the link?

The weight of authority does not place upon the vendor, in the absence of contract, the duty of furnishing an abstract of title. n1980 If the contract requires the vendor to furnish an abstract, such abstract is a condition precedent to the

vendee's liability to perform, n1981 and the vendor may not have specific performance without furnishing the abstract. n1982 The abstract must show all matters of record detrimental to the title, including grantor's marital status n1983 and all defective descriptions. n1984 Whenever a recorded map or plan is essential to the description this must be shown. n1985 The abstract must reveal the present status of all liens and encumbrances of record. n1986 It must contain an abstract of all court proceedings affecting the title. n1987 If the instrument appears in the abstract of title, it gives notice to the purchaser, even though the instrument was not itself entitled to record because of defective acknowledgment. n1988 The abstract must reveal all instruments of record affecting title to the realty. n1989 Where the chain of title depends on court proceedings the abstract must show sufficient thereof to support the title. n1990

CHAPTER 96 Vendors and Purchasers

11-96 Thompson on Real Property, Thomas Editions § 96.19

AUTHOR: David A. Thomas Professor of LawJ. Reuben Clark Law School Brigham Young University

§ 96.19 Title Insurance.

Because of the inadequacy of protection afforded a buyer by the mere furnishing of an abstract, the practice of insuring the title through an insurance company regularly engaged in this field has developed. The title insurance policy will cover all title defects not excepted by the policy and the insurer becomes responsible to the insured for any such title defects. n1991 A policy is breached at the time of delivery if the title is then defective. n1992 A policy of title insurance ordinarily runs only to the insured and is not transferable. Title insurance issues are covered in detail in Chapter 93, above.

CHAPTER 96 Vendors and Purchasers

11-96 Thompson on Real Property, Thomas Editions § 96.20

AUTHOR: David A. Thomas Professor of LawJ. Reuben Clark Law School Brigham Young University

§ 96.20 Summary of Laws Requiring Sellers to Disclose Negative Background, Characteristics, and Condition of the Real Property.

Section 66.46, Wisconsin Statutes

§ 96.20(a) The Evolving Common Law Concerning Disclosures by Sellers.

A discussion of nondisclosure constituting fraud leading to rescission of an agreement for sale of realty is in § 96.15(a)(4)(i), above.

§ 96.20(a)(1) Seller's Duty to Disclose.

Historically, most of the risks associated with the purchase of real property fell on the purchaser, usually under the rubric of caveat emptor ("buyer beware"). Sellers were almost completely protected by the doctrine of caveat emptor, and had virtually no affirmative duty to disclose defects in their property to prospective buyers. n1993 In the modern era, the doctrine of caveat emptor has significantly eroded as courts have found duties to disclose in several situations described in the following paragraphs. n1994

§ 96.20(a)(2) Negligent Misrepresentation.

In keeping with the recognition that sellers and purchasers are generally not on equal bargaining terms, courts have often focused on whether a misrepresented fact about the property was discoverable by the purchaser. Courts have generally used language to the effect that sellers have a duty not to falsely represent a condition known only to them and which could not be expected to be revealed by the purchaser's diligence. n1995 The misrepresented condition must be a material fact, which courts have defined as one which has an effect on the property's value. n1996 If the seller who has made repairs to such a condition while in possession of the property is best advised to disclose the existence of the condition and the fact of the repairs. n1997 No duty may arise to disclose a condition which is not considered dangerous. n1998 Also, the doctrine of caveat emptor may still protect the seller if the defective condition is open to observation or discoverable, the purchaser has an opportunity to examine the premises, and fraud does not taint the conduct of the seller. n1999

§ 96.20(a)(3) Fraudulent Concealment.

In order to defeat a defense of caveat emptor, a buyer will likely have to prove not only that the seller actively and knowingly concealed a defect, but also that the buyer could not have detected the defect with reasonable diligence. Frequently, the court will have to determine whether the buyer should be charged with constructive notice of the defect, in effect defeating the buyer's claim. n2000 Also, if there is a question as to whether the buyer had such notice, the general move towards recognizing a duty to disclose will generally preclude an award of summary judgment in favor of the seller. n2001

§ 96.20(a)(4) Latent Defects.

Whether the seller has "negligently misrepresented" the non-existence of a defect or "fraudulently concealed" such a defect may seem a matter of semantics. What is clear, however, is that where a defect is latent, and materially affects the value of the property in question, courts will generally find a duty to disclose such defects. n2002 Thus, sellers have been required to disclose latent defects such as a weak or cracked foundation, n2003 a leaky roof, n2004 and unstable soil conditions. n2005 It should be emphasized that defects known or knowable to a buyer upon reasonable inspection do not fall within the scope of seller's duty to disclose. n2006

§ 96.20(a)(5) Legal Impairments: Easements, Building Codes, and Ordinance Violations.

The doctrine of caveat emptor remains partially intact in questions involving the disclosure of such intangible legal impairments to the property as easements, non-compliance with city ordinances, and building code violations. In such cases, courts focus on the materiality of the non-disclosed fact. Thus, if the easement or violation materially affects the value of the property, the seller will probably have a duty to disclose. n2007 By contrast, if the non-disclosed fact is not material to the sale of the property, generally no duty to disclose arises. n2008 Even if the seller is under no duty to disclose certain facts, if the purchaser directly asks about such conditions, the seller must answer truthfully. n2009 A court may also consider whether information regarding a legal impairment to the property is accessible to the purchaser. n2010

§ 96.20(a)(6) Other Intangible Defects and Special Conditions.

Some states are also moving to requiring disclosure of other intangible defects, in addition to legal impairments discussed in the preceding paragraph. Some states have enacted statutes regarding the materiality of non-physical defects, sometimes referred to as stigmas, typically providing that such defects are not material and need not be disclosed by the seller. n2011 Although the fact that a property has some non-physical defect is statutorily immaterial, the seller still has a duty to disclose information if directly asked. n2012 Similarly, if the stigma has been created by the seller, the seller may have a duty to disclose it, even if the defect is possibly imaginary. n2013

§ 96.20(a)(7) Infestation.

Courts now almost uniformly hold termite infestation to be a material and dangerous condition which must be disclosed by the seller. n2014 Termite damage can be so costly, and so difficult to detect, that most lending institutions now require a termite inspection before lending money to prospective buyers. In certain situations, the seller may also have to disclose infestation by other insects, such as roaches. n2015

§ 96.20(a)(8) Environmental Hazards.

Real property may be threatened by hazardous substances which are difficult to detect and often highly expensive to remove. In response, some states have enacted legislation requiring sellers to disclose environmental hazards to buyers. n2016 Courts have also recognized this problem, holding that such environmental hazards are dangerous and material and must be disclosed, n2017 even to the point of holding the seller liable for the real estate agent's non-disclosure. n2018

§ 96.20(b) Summary of State Statutes Requiring Disclosures by Sellers.

This section summarizes state statutes that impose on sellers of real property special disclosure requirements. Unless otherwise indicated for any one state, these state statutory provisions uniformly require sellers to disclose any material facts or conditions within their knowledge, or that should have been within the knowledge of sellers or sellers' agent that adversely affect the property or structures that are subject of transaction. These statutes may deny a cause of action if the seller made a good faith effort to disclose or if information is not within the knowledge of seller. They impose on sellers no duty to inspect but require that the buyer have opportunity to inspect. The statutory provisions set forth below summarize special disclosure provisions--applicable to sellers or to real estate licensees--in addition to the standard laws just described.

Alabama:

Code of Alabama § 34-27-85

Licensee must disclose to client all information known by licensee that is material to transaction and not discoverable by client through reasonable investigation and observation, except for confidential information. Licensee has no affirmative duty to investigate and discover the information.

§ 34-27-86

Licensee liable only for not disclosing information licensee knew or should have known about.

Alaska:

Alaska Stat. §§ 34.070.010-.70.200

Transferor of interest in residential real property (single-family dwelling, or two single-family dwellings in one building) must deliver to transferee completed written disclosure statement (*see* § 34.70.050) that notifies transferee that transferee is responsible to determine (1) whether a convicted sex offender resides in the vicinity of the property that is the subject of the real estate transaction and (2) where the transferee can obtain information on the convicted sex offender.

§ 34.70.090

A person who negligently or fails to perform duty required by this chapter is liable to transferee for amount of actual damages. Person who wilfully violates this chapter or fails to perform duty is liable to transferee for up to three times actual damages suffered.

Arizona:

A.R.S. § 11-806.03

Seller of five or fewer parcels of land other than subdivided land in unincorporated area of county and any subsequent seller of such parcel shall furnish written affidavit to buyer which must disclose whether: there is legal access to property; physical access; legal/physical access at same time; roads are publicly or privately maintained or not maintained at all; property is in flood plain or has been flooded; water, sewer, electrical, natural gas, phone, cable services; septic tank exists or must be installed; property subject to percolation test; access for emergency vehicles;

§ 33-434.01

Owner of property subject to soil remediation must, before transferring ownership, give written notice of remediation to purchaser, if owner has actual knowledge that property is subject to soil remediation. Written notice not required where soil remediation attains standards for residential uses in accordance with rules adopted.

§ 49-701.02

Owner of property who has actual knowledge that property has been used for disposal of excavated soils which do not meet predetermined residential soil remediation levels or remediation standards for residential exposure must, before transferring ownership, give written notice of disposal of excavated soils that do not meet predetermined residential soil levels or standards.

California:

Civil Code § 1102.6

Disclosure forms are included in the statute. They include inquiries into appliances, garage, pool/spa heater, water heater, water supply, gas supply, exhaust fans, defects and malfunctions in structural components, encroachments, zoning, conditions/covenants and restrictions, lawsuits. Seller must disclose knowledge of fill on property, environmental hazards (including asbestos, formaldehyde, radon gas, lead-based paint, fuel or chemical storage tanks and contaminated soil or water on subject property).

§ 1102.6d

Agent of seller must complete reasonably competent and diligent visual inspection of accessible areas of home in conjunction with seller inquiries in forms found in § 1102.6.

§ 1102.13

No transfer invalidated solely because of failure to comply with any provision of this article. However, any person who willfully or negligently violates or fails to perform duty shall be liable for actual damages suffered by transferee.

§ 1102.16

Disclosure of existence of any window security bars or safety release mechanism must be made pursuant to § 1102.6.

§ 1102.17

Seller must disclose actual knowledge that property is affected by or zoned to allow industrial use.

§ 1103 Disclosure of natural hazards upon transfer of residential property

Disclosure statement (§ 1103.2), is not a warranty. It includes requirements for disclosure by transferor of special flood hazard areas, areas of potential flooding, high fire hazard severity zone, wildland areas that may contain substantial forest fire risks, earthquake fault zone, seismic hazard zone. *See also* Public Resources Code §§ 2621.9 and 2694.

§ 1710.2

No cause of action against owner or agent for failure to disclose to transferee the occurrence of occupant's death on real property or manner of death, where death has occurred mor than 3 years prior to date transferee offers to purchase, lease

or rent property, or that occupant of that property was afflicted with, or died from Human T-Lymphotropic Virus Type III/Lymphadenopathy-Associated Virus (both AIDS related diseases).

§ 2079

Residential real property subject to these provisions includes one to four dwelling units or manufactured home or mobile home classified as personal property and intended for use as a residence.

§ 2079.3

Scope of inspection does not include areas that are reasonably and normally inaccessible nor affirmative inspection of areas off site. No duty to inspect more than unit offered for sale, such as common areas to planned development. *Padgett v. Phariss, 83 Cal. Rptr. 2d 373 (1997).*

§ 2079.4

Buyer has duty to exercise reasonable care to protect buyer, including facts known to or within diligent attention and observation of buyer

Colorado:

C.R.S. § 12-61-805 and 806

Broker may not disclose without informed consent of buyer or tenant any facts or suspicions regarding circumstances which would psychologically impact or stigmatize any real property pursuant to section *See* CRS 38.35.5-101.

§ 12-61-807

Transaction broker must disclose to all prospective buyers or tenants any adverse material facts actually known by broker, including material facts of title, physical condition of property, defects in property and environmental hazards affecting property.

§ 38.35.5-101

No cause of action against real estate broker or salesperson for failure to disclose circumstance occurring on property which might psychologically impact or stigmatize such property. Circumstances include: that occupant of property was or is at any suspected to be infected or has been infected w/ HIV or diagnosed with AIDS or any other disease unlikely to be transmitted through occupancy; that property was site of homicide or other felony or suicide

§ 38.35.7-101

Seller obligated to disclose in every contract for purchase and sale of residential real property special taxing district taxes for general obligation indebtedness. Purchasers still obligated to investigate debt financing requirements of the authorized general obligation of such districts.

Connecticut:

Conn. Gen Stat. § 20.327b

Each person who offers residential property for sale or exchange or for lease with option to buy must provide residential

report. *See* form in this section. Among other things, report must include information concerning environmental matters such as lead, radon, subsurface sewage and disposal, and a statement that information concerning the residence of a convicted criminal may be available from law enforcement agencies or department of public safety.

§ 20.327d

Seller not required to secure inspections, tests or other methods to determine physical condition of property.

§ 20.327e

Seller representations construed only to extent of seller's actual knowledge.

§ 20-329cc

Psychologically impacted property is the effect of certain circumstances surrounding real estate which includes but is not limited to fact that occupant is or was any time suspected to be infected or has been infected with HIV or fact that property was at any time suspected to have been site of homicide or felony or suicide.

§ 20-329dd

Existence of any fact or circumstance which may have psychological effect on purchaser or lessee is not material fact that must be disclosed in real estate transaction. No cause of action arises against owner or agent for failure to disclose to transferee that transferred property was psychologically impacted.

DC:

D.C. Code § 45-955

Residential property disclosure statement must contain a list of actually known defects and information concerning the following: water and sewer systems, insulation, structural systems (roof, walls, floors, foundation, basement), plumbing, electrical, heating, and air conditioning systems, history of rodents or wood-boring insects, appliances, alarm system and intercom system, garage door opener and remote control and fixtures.

§ 45-961

Duty to comply with this chapter imposed on transferor and not on any real estate agent or broker of transferor. Real estate agent not liable for omission or error unless agent or broker knowingly acts in concert with transferor to commit fraud.

§ 47-2853.198

Psychological impact on real property is not a material fact that must be disclosed in real estate transaction, nor is its non-disclosure a basis for a cause of action against owner of real property, real estate broker, salesperson, property manager, lessee, or sublessee. Psychologically impacted property is property where an occupant at any time was infected or was suspected to have been infected with HIV; occupant at any time has been diagnosed or was infected or was suspected to have been infected with AIDS or any other disease that is unlikely to be transmitted through occupancy; property at any time has or was suspected to have been site of suicide, homicide, or other felony.

Delaware:

6 Del. C. § 2572

Seller transferring real property shall disclose in writing to buyer, agent, and subagent all material defects of that property that are known at time property is offered for sale or that are known prior to time of final settlement.

§ 2574

Seller disclosure form is not warranty of any kind by seller or by any agents or subagents representing seller or buyer in the transfer and is not a substitute for any inspections or warranties that seller or buyer may wish to obtain.

24 Del. C. § 2930

Psychological impacts mean that property was or was at any time suspected to have been site of homicide, suicide, or other felony except arson; that occupant is or was any any time suspected to be infected or has been infected with HIV or diagnosed with AIDS or any other disease unlikely to be transmitted through occupancy of dwelling place. The fact that or suspicion that property might be or is psychologically impacted is not material fact that must be disclosed in real property transaction. If potential transferee makes specific written request about psychological impacts, owner or agent shall answer truthfully to best of knowledge. No duty to inquire about such impacts

Florida:

Fla. Stat. § 475.01

Real property or real estate is any interest or estate in land and any interest in business enterprises or opportunities, including leasehold, subleasehold, mineral right; real property or real estate does not include cemetery lot or right of burial in any cemetery nor renting of mobile home lot or recreation vehicle lot in mobile home park or travel park.

§ 475.278

Transaction broker has duty to disclose all known facts that materially affect property and are not readily observable to buyer. Forms are included in the statutory provisions.

§ 475.422 Disclosure

Licensee must, upon request of any other party to real state sales transaction, provide copies of termite or roof inspection reports performed on property within the year preceding effective date of contract for sale and purchase.

No provision regarding stigmatized property

Georgia:

O.C.G.A. § 10-6A-5

Broker engaged by seller must disclose the following to all parties with whom broker is working: all adverse material facts pertaining to physical condition of property located on such property, material defects, environmental contamination, other facts that could not be discovered through reasonably diligent inspection by buyer. Broker must also disclose material facts as to adverse physical conditions in immediate neighborhood (within one mile of the property) which are actually known to broker and could not be discovered by buyer upon diligent inspection of neighborhood or through review of available regulations, documents, records, maps, and statistics.

No duty on part of broker to discover or seek to discover either adverse material facts or existing adverse conditions in immediate neighborhood.. Broker not liable to buyer for providing false information to buyer if broker did not have actual knowledge and disclosed source of information. This section does not limit buyer obligation to inspect and become familiar with potentially adverse conditions on property and in neighborhood.

No provision regarding stigmatized property

Hawaii:

HRS § 508D-1

Residential real property: 1-4 dwelling units or residential condominium or cooperative apartment, primary use of which is occupancy as residence.

§ 508D-8

The fact that an occupant of residential real property was afflicted with AIDS or AIDS related complex or tested HIV positive or that the property was the site of an act or occurrence that had no effect on the physical structure or the physical environment of the residential real property or improvements are not material facts for purpose of disclosure statement.

§ 508D-9

Seller or seller's agent must prepare disclosure statement in good faith with due care. May include information based on seller's personal knowledge or on facts provided by government or third-party consultants. Neither seler nor seller's agent obligated to engage services of person in investigation, research or preparation of disclosure statement.

§ 508D-11

Disclosure statement must include notice to buyer that buyer may seek professional advice and inspection of property, notice to buyer that information in disclosure statement is representation of seller and not of seller's agent and notice of buyer's rescission rights.

§ 508D-15

Notification required when property lies in special flood hazard area, is within boundaries of noise exposure area, is within boundaries of Air Installation Compatibility Use Zone of any Air Force, Army, Navy, or Marine Corps airport as officially designated by military authorities; or within anticipated inundation areas designated on dept of defense's civil defense tsunami inundation maps. When it is questionable whether residential real property lies within any of the designated areas because of ambiguous boundary lines, ambiguity is construed in favor of seller,provided that a od faith effort was made to determine applicability of of these criteria to the subject real property

§ 508D-16

Seller liable to buyer for amount of actual damages, if any, suffered as result of seller's negligent failure to provide disclosure statement required by this chapter.

Idaho:

Idaho Code § 55-2508

Statutory provisions include seller disclosure form. Seller must specify problems with: basement water, foundation, roof condition and age, well (type), septic system (type), plumbing, drainage, electrical, heating. Seller must describe conditions that affect ability to clear title. Seller must disclose knowledge of hazardous materials or pest infestations on property, any substantial additions or alterations made without building permit, other legal or physical problems not listed.

§ 55-2801

Psychologically impacted property defined as effect of certain circumstances surrounding real property which include, but are not limited to, fact or suspicion that property might be or is impacted as result of the following: that occupant or prior occupant is or was at any time suspected of being infected or has been infected with disease determined unlikely to transmit through occupancy; that property was at any time suspected of being site of suicide, homicide, or commission of felony which had no effect on physical condition of property or its environment or structure; that registered or suspected sex offender occupied or resides near property.

§ 55-2802

No cause of action against owner or representative of owner for failure to disclose to transferee or transferee's representative that real property was psychologically impacted.

§ 55-2803

In event that purchaser advises owner's representative in writing that knowledge of whether property is psychologically impacted is an important factor in purchaser's decision to purchase property, owner's representative shall make inquiry of owner and, with consent of owner and subject to and consistent with applicable laws of privacy, shall report any findings to purchaser. If owner refuses disclosure, owner's representative shall advise purchaser or purchaser's representative that information will not be disclosed.

Illinois:

225 ILCS § 454/15-15

A licensee is person who holds valid unexpired license as real estate broker, salesperson or leasing agent. Duty of licensee representing clients is to disclose material facts concerning transaction of which licensee has actual knowledge, unless information is confidential. Material facts do not include physical conditions that do not have substantial adverse effect on value of real estate, and do not include fact situations or occurrences when located on or related to real estate not subject of transaction.

225 ILCS § 454/15-20

No cause of action against licensee for failure to disclose that former occupant of subject property was afflicted with HIV or any other medical condition, that property was site of act or occurrence that had no effect on its physical condition or environment or structures, fact situations on property not subject of transaction, or physical conditions located on property that is not subject of transaction that do not have substantial adverse effect on value of real estate that is subject of transaction.

765 ILCS § 77/5

Residential real property is real property improved with 1-4 units, units in cooperative or condominium units.

765 ILCS § 77/25

Seller must disclose material defects of which seller has knowledge. Seller not liable for errors or omissions based on reasonable belief that matter not disclosed had been corrected or if based on information provided by third party and seller had no knowledge of error or omission. Seller not obligated to make any specific investigation or inquiry in an effort to complete disclosure statement.

765 ILCS § 77/35

Statutory provisions include disclosure report form. Disclosure requirements listed include whether seller is aware of the following: property is located in flood plain or seller currently has flood hazard insurance; material defects in well or well equipment; unsafe conditions in drinking water; defects in fireplace or wood-burning stove; unsafe concentration of radon; unsafe conditions relating to asbestos, lead paint, lead water pipes, lead plumbing pipes or lead in soil on premises; mine subsidence, underground pits, settlement, sliding, upheaval or other earth stability defects; structural defects caused by termites or wood-boring insects; underground fuel storage tank; and other less significant items.

765 ILCS § 77/55

If seller fails or refuses to provide disclosure document prior to conveyance, buyer has right to terminate. A person who knowingly violates or fails to perform duty under this act or who discloses any false information is liable for actual damages and court costs, possibly attorney fees.

Indiana:

Ind. Code Ann. §§ 24-4.6-2-7

Specific disclosure form included in statutory provisions.

Required disclosures relate to foundation, mechanical systems, roof, structure, water and sewer systems, other areas. Seller may give notice to buyer that buyer may want to obtain professional advice or inspection of property and that representations in this form are not of the agent and not intended to be part of contract.

Owner must disclose that airport is located within a certain geographical distance of property as determined by Indiana real estate commission. Commission may consider difference between airport that serves commercial airlines and one that does not in determining distance to be disclosed.

§ 24-4.6-2-9

Disclosure form not a substitute for investigation or inspection.

§ 24-4.6-2-11

Owner not liable for error, omission not within actual knowledge of owner or based on information provided by third party and owner reasonably believed the information to be correct and owner not negligent in obtaining information from third party.

§ 24-4.6-2.1-2

Psychologically affected includes real estate or dwelling for sale, rent or lease where occupant was afflicted with or died from disease related to HIV, person died on the property, or property was site of felony under IC 35, criminal gang (IC § 35-49-9-1) activity, or discharge of firearm involving law enforcement officer while engaged in officer duties, or illegal manufacture or distribution of controlled substance.

§ 24-4.6-2.1-4

Owner or agent not required to disclose to transferee any knowledge of a psychologically affected property.

§ 24-4.6-2.1-5

Owner or agent not liable for refusal to disclose to transferee that dwelling or real estate is psychologically affected property or details concerning the affected nature of the dwelling or estate. However, owner or agent may not intentionally misrepresent fact concerning psychologically affected property in response to direct inquiry from transferee.

§ 25-34.1-10-11

Broker owes no duty to conduct independent inspection of the physical condition of the property. No cause of action against broker for disclosing information in compliance with this section.

Iowa:

No disclosure provision

No stigmatized property provision

Kansas:

K.S.A. § 58-30,106

Licensee is any person licensed under Kansas real estate brokers' and salespersons' license to act as a broker or salesperson.

Seller's or landlord's agent has statutory duty to disclose to client all adverse material facts about which agent actually knows, including environmental hazards affecting the property, physical condition of property, material defects in property, material defects in title or material limitations on client's ability to perform under terms of contract. Agent also has duty to advise client to seek expert advice as to material matters about which agent knows but whose specifics are beyond agent's expertise. If the licensee does give such advice, no cause of action shall arise against licensee.

Seller's or landlord's agent owes no duty to independently inspect property or independently verify accuracy or completeness of any statement made by client or any qualified third party.

Seller's or landlord's agent not liable for punitive damages for licensee's failure to perform any duty in this section, unless licensee is shown to have acted with willful or wanton conduct, fraud or malice.

§ 58-30,113

Transaction broker is not agent for either party. Transaction broker has duty to disclose to prospective seller or landlord all material facts known, including environmental hazards affecting the property, physical condition of property,

material defects in property, material defects in title or material limitations on buyer's ability to perform under terms of contract.

No stigmatized property provision

Kentucky:

KRS § 207.250

The fact that occupant of real property is or has been infected with HIV or diagnosed with AIDS is not a material fact that shall be disclosed in real estate transaction. No cause of action against owner or owner's agency or agent of transferee for failure to disclose to transferee that occupant was infected with HIV or diagnosed with AIDS.

§ 324.360

Seller disclosure form should include basement condition and whether it leaks, roof condition and whether it leaks, source and condition of water supply, source and condition of sewage service, working condition of component systems, other matters the commission deems appropriate.

Louisiana:

La. R.S. § 37:1468

Fact or suspicion that property might be or is psychologically impacted is not a material fact or material defect that must be disclosed. Psychological impact is such impact that is the result of facts or suspicions, including but not limited to: that occupant is or was at any time suspected to be or has been infected with HIV or diagnosed with AIDS, or any other disease which is highly unlikely to be transmitted through occupancy; that property was or was suspected at any time to have been site of homicide, or other felony, or suicide. No cause of action against owner or owner's agent for failure to disclose to transferee that transferred property was psychologically impacted.

Maine:

32 M.R.S. § 13273

Licensee has duty to disclose to seller any material facts of which licensee has actual knowledge or should have knowledge, and to advise seller to seek professional advice on material matters that are beyond agent's expertise.

Brokerage agency engaged by seller has duty to disclose all material defects pertaining to physical condition of property which the agency knows or should have known of.

Nothing in this subchapter precludes buyer's obligation to inspect the physical condition of the property.

33 § 171

Known defect is a condition known by seller that has significant adverse effect on value of property, significantly impairs the health or safety of future occupants of the property or, if not repaired, removed or replaced, significantly shortens the expected normal life of the premises.

§ 173

Required disclosures by seller to buyer: water supply system (type, location, malfunctions, most recent test, any problems), insulation (type and location), waste disposal system (type, size, location, malfunction, date of installment, date of most recent servicing, name of contractor who does services system, septic systems in shoreland zones), hazardous materials (includes asbestos, lead-based paint for pre-1978 homes in accordance with federal regulations, radon, underground oil storage tanks), known defects.

§ 177

Seller not liable for errors or inaccuracies if without actual knowledge or without negligence.

No stigmatized property provision

Maryland:

Business Occupations and Professions § 17-322.1

It is not a material fact relating to property offered for sale or lease that: owner or occupant is, was, or is suspected to be infected with HIV or diagnosed with AIDS; a homicide, suicide, accidental death, natural death, or felony occurred on property. It is not ground for disciplinary action against licensee under this subtitle that licensee did not disclose to prospective purchase or lessee a fact contained in this subsection.

Real Estate Code § 10-702

Residential property disclosure statement must include list of defects or information about which vendor has actual knowledge in relation to the following: water and sewer systems, insulation, structural systems, plumbing, electrical, heating, AC systems, land use matters, hazardous or regulated materials (asbestos, lead paint, radon, underground storage tanks, licensed landfills).

Massachusetts:

Mass. Ann. Laws Ch. 93 § 114

Fact or suspicion that real property may be or is psychologically impacted is not a material fact required to be disclosed in real estate transaction. Psychologically impacted means an impact being the result of facts or suspicions including, but not limited to, the following: that occupant of real property is now or has been suspected to be infected with HIV or with AIDS or any other disease which is highly unlikely to be transmitted through occupancy; that real property was site of felony, suicide or homicide; that property has been site of alleged parapsychological or supernatural phenomenon. No cause of action against seller or lessor of real property or real estate broker or salesman, by statute or at common law, for failure to disclose to a buyer or tenant that real property was or is psychologically impacted. Seller, broker, salesperson, or lessor not authorized to make misrepresentations of fact or false statement.

***See also* Ch. 93A § 2,** § **9, § 11**

Michigan:

MSA § 26.1286(57)

Seller disclosures form includes appliances, structure, flooding, damage from natural causes, basement/crawl space, insulation, roof, well, septic tanks/drain fields, heating system, plumbing system, electrical system, history of infestation, environmental problems (ie, asbestos, radon, gas, formaldehyde, lead-based paint, fuel or chemical storage

tanks, contaminated soil), mineral rights, farm or farm operation in the vicinity, proximity to special land uses (landfill, airport, shooting range), outstanding utility assessments or fees (including natural gas main extension surcharge), outstanding municipal assessments or fees, pending litigation that could affect property or seller's right to convey the property.

Buyer is advised to seek professional advice and inspections.

See also corresponding statutes in MCL § 565.951-959

Minnesota:

Minn. Stat. § 103I.235

Before signing agreement to sell or transfer real property, seller must disclose to buyer information about status and location of all know wells on the property by delivering to buyer either a statement that seller does not know of any wells on property or disclosure statement indicating legal description and county and map drawn from available information showing location of each well to extent practicable. Seller must indicate for each well whether well is in use, not in use or sealed.

§ 116.48, subd. 6

Before transferring ownership of property that owner knows contains underground or aboveground storage tank or contained underground or aboveground storage tank that had release for which no corrective action was taken, owner shall record with county recorder or registrar of titles of the county in which the property is located an affidavit containing: legal description of property where tank is located; description of tank, location of tank, and any known release from tank of regulated substance; description of any restrictions currently in force on the use of property resulting from any release and name of owner.

See Miss. Code. Ann. § 89-1-501-523.

No stigmatized property provision

Missouri:

VAMS § 339.710

Adverse material fact may include environmental hazards, physical condition of property, material defects in property, material defects in title to property, material limitation of party's ability to perform under terms of contract.

§ 442.600

The fact that a parcel of real property or any building or structure may be psychologically impacted or may be in close proximity to a psychologically impacted real property is not a material or substantial fact that is to required to be disclosed in a sale, exchange or other transfer. Psychologically impacted property is real property in which occupant is or was at any time infected with HIV or diagnosed with AIDS or with any other disease which is unlikely to be transmitted through occupancy of a dwelling place; real property which was the site of a homicide or other felony or of

a suicide. No cause of action against agent or broker for failure to disclose to buyer or other transferee that transferred real property was psychologically impacted.

Montana:

MCA § 37-51-102

Adverse material fact is fact that should be recognized by a broker or salesperson as being of enough significance as to affect a person's decision to enter into contract to buy or sell real property. The fact that an occupant of the property has or has had a communicable disease or that the property was the site of a suicide or felony are not adverse material facts.

§ 37-51-105

The responsibility of a broker or salesperson with respect to sexual or violent offender registration information is limited to disclosure of the fact that the information may be maintained and by whom and the actual knowledge, if any, that broker or salesperson has of sexual or violent offender registration information that pertains to the property in question.

§ 37-51-313

Duties of broker or salesperson vary depending on relationship, include duty to disclose all relevant and material information that concerns the real state transaction and that is known to seller's agent not known or discoverable by seller, unless information is subject to confidentiality arising from prior or existing agency relationship on part of seller's agent.

§ 75-3-606

A disclosure statement must be provided by seller or seller's agent to buyer which includes a radon disclosure statement on real estate documents, disclosure of prior radon testing; Statute provides immunity from liability.

Nebraska:

RSN§ 76-2,120

Disclosure statement includes: conditions of appliances, electrical system, heating and cooling system, water system, sewer system, all improvements on land, defects, hazardous conditions, title conditions, utility connections as public or private.

§ 76-2416

Seller's agent is under duty to disclose all adverse material facts actually known by licensee pertaining to environmental hazards affecting property, physical condition of property, material defects in property, material defects in title, material limitations on client's ability to perform under terms of contract. No duty to conduct independent inspection of property for benefit of customer and no duty to independently verify accuracy or completeness of any statements made by client or independent inspector.

2000 Op. Atty. Gen. No. 24

Real estate licensee does not have obligation to independently verify accuracy of seller property condition disclosure statement prepared by client. Licensee should be disciplined based only on licensee's actual knowledge of an error,

inaccuracy, or omission in statement.

New Hampshire:

RSA § 477:4-c

Seller must disclose information relative to type of water supply system, location, malfunctions, date of installation, date of most recent water test, and whether or not seller has had problems such as unsatisfactory water test or water test with notations. Seller must also disclose information relative to sewage disposal system, including size of tank, type of system, location, malfunctions, age of system, date most recently serviced, and name of contractor who services system

§ 477:4-e

Owner or agent of owner not required to disclose information to buyer that property was site of homicide, other felony, suicide, unless buyer requests the information and owner or agent has knowledge.

Nevada:

NRS § 40.770

The fact that property is or has been site of a homicide, suicide or death by any other cause, except death that results from a condition of the property, or the site of any crime punishable as a felony; or occupied by a person exposed to HIV or suffering from AIDS or any disease that is not transmitted through occupancy is not material to the transaction. The fact that a sex offender resides or is expected to reside in the community is not material to the transaction, and the seller or any agent of the seller does not have a duty to disclose such a fact to a buyer or any agent of a buyer. Seller or agent is not liable to buyer in any action at law or in equity because of failure to disclose any fact that is not material to the transaction.

§ 113.100

Defect is a condition that materially affects the value or use of residential property in an adverse manner.

§ 113.120

Disclosure form provides for evaluation of condition of any electrical, heating, cooling, plumbing, and sewer systems on the property and of the condition of any other aspects of the property which affect its use or value, and allows the seller of the property to indicate whether or not each of those systems and other aspects of the property has a defect of which seller is aware.

§ 113.140

Seller is not required to disclose defect in property of which seller is not aware. A completed disclosure form is not an express or implied warranty regarding any condition of the property.

§ 645.252

Licensee acting as agent must disclose to each party any material and relevant facts, data, information which licensee knows or which lecensee should know relate to property which is subject of transaction.

New Jersey:

NJSA § 46:3C-3

Offsite conditions are conditions which may materially affect value of property being sold and are limited to following: latest Dept of Environmental Protection listing of sites included on National Priorities List, latest sites known to and confirmed by DEP and included on New Jersey master list of known hazardous discharge sites, overhead electric utility transmission lines conducting 240,000+ volts, electrical transformer substations, underground gas transmission lines, sewer pump stations, sanitary landfill facilities, public wastewater treatment facilities, airport safety zones.

§ 46:3C-8

Sellers of newly constructed residential real estate required to notify purchasers of availability of lists disclosing existence and location of off-site conditions which may affect value of residential real property being sold.

No stigmatized property provision

New Mexico:

N.M. Stat. Ann. § 47-13-2

A seller or landlord is not liable for failing to disclose and has no duty to disclose the fact or suspicion that the real property is or has been the site of a natural death, the site of a homicide, suicide, assault, sexual assault or any other felony, or owned or occupied by a person who was exposed to, infected with or suspected to be infected with HIV or diagnosed to be suffering from AIDS or any other disease not transmitted through occupancy.

New York:

Real Property Law § 443

Seller or seller's agent has duty to disclose all facts known to seller or agent materially affecting the value or desirability of property except as otherwise provided by law.

§ 443-a

It is not a material defect or fact relating to property offered for sale or lease that an owner or occupant is or was at any time suspected to be infected with HIV or diagnosed with AIDS or any other disease which has been determined by medical evidence to be highly unlikely to be transmitted through occupancy of a dwelling place; or the property is or is suspected to have been site of a homicide, suicide or other death by accidental or natural causes, or any crime punishable as a felony. Failure to disclose any of these facts is not ground for disciplinary action, but buyer may submit request for such information. Seller may choose whether or not to respond.

North Carolina:

§ 47E-4

Disclosure form must include characteristics and conditions of the following: water supply and sanitary sewage disposal system; roof, chimneys, floors, foundation, basement and other structural components and any modifications of these structural components; plumbing, electrical, heating, cooling, and other mechanical systems; present infestation by wood-destroying insects or organisms or past infestation damage that has not been repaired; zoning laws, conditions/coventants/restrictions, building codes, other land use restrictions affecting real property; encroachments;

presence of lead-based paint, asbestos, radon gas, methane gas, underground storage tank, hazardous or toxic materials (whether buried or covered), and other environmental contamination.

No stigmatized property provision

Ohio:

ORC § 5302.30

Transferor has duty to disclose all material matters relating to physical condition of property to be transferred, including source of water supply, nature of sewer system, condition of structure (roof, foundation, walls, floors), presence of hazardous materials or substances (lead-based paint, asbestos, urea-formaldehyde foam insulation, radon gas), any material defects in property that are within actual knowledge of transferor. (*See also* § 4735.67)

See Note 24 in annotations for list of stigmatizing events.

Oklahoma:

59 O.S.A. § 858-513

The fact or suspicion that real estate might be or is psychologically impacted is not a material fact that must be disclosed. Psychological impacts include, but are not limited to: that occupant of real property is or was at any time suspected to be infected or has been infected with HIV or diagnosed with AIDS or other disease which is not transmitted through occupancy; that real estate was or was at any time suspected to have been site of a suicide, homicide, or other felony. No cause of action lies against owner of real estate or any licensee assisting owner for failure to disclose to purchaser or lessee or licensee assisting the purchaser or lessee that such real estate was psychologically impacted. In the event that purchaser or lessee who is in process of making a bona fide offer advises licensee assisting owner in writing that knowledge of such factor is important to person's decision to purchase or lease, licensee shall make inquiry of owner and report any findings with consent of owner and subject to and consistent with applicable laws of privacy. Also, if owner refuses to disclose, licensee assisting the owner shall so advise the purchaser or lessee.

60 OSA § 832

Defect is defined as condition, malfunction or problem that would have materially adverse effect on monetary value of property or that would impair health or safety of future occupants of property. Disclosure is defined as written declaration required based on actual knowledge of seller regarding certain physical conditions of property. It is not a warranty, implied or express, of any kind.

§ 833

Disclosure statement must include information within seller's knowledge of water and sewer systems (source of household water, treatment system, sprinkler system, occurrence of water in heat and air conditioning ducts, water

seepage or leakage, drainage or grading problems and flood zone status), structural systems (roof, walls, floors, foundation, basement), plumbing, electrical, heating, air conditioning systems, infestation or damage of wood-destroying organisms, major fire or tornado damage, land use matters, existence of hazardous or regulated materials and other conditions having environmental impact, any other defects known to seller, other matters the Oklahoma real estate commission deems appropriate

§ 835

Seller's liabilityi is limited to bad faith non-disclosure or non-disclosure of items within seller's knowledge.

Oregon:

ORS § 105.465

Seller's property disclosure and disclaimer statements form includes: inquiries into seller's knowledge of boundary disputes, easements or licenses, surveys and notices that would affect property; conditions, covenants and restrictions; water (household water, source, easements, treatment, irrigation, outdoor sprinkler system); sewage; insulation; structures; fixtures; common interests; environment (soil; water drainage; fill; damage from earthquake, wind, flood, fire, landslide; flood plain zone); hazardous substances, such as asbestos, formaldehyde, radon, lead-based paint; fuel or chemical storage tanks; contaminated soil or water; storage tanks, underground storage tanks); property used as illegal drug manufacturing site, other conditions or defects.

§ 537.330

Seller of real estate that includes water right shall upon accepting offer inform purchaser whether any permit, transfer approval order or certificate evidencing water right is available and that seller will deliver any permit, transfer approval order or certificate to purchaser at closing if it is available.

No stigmatized property provision

Pennsylvania:

63 PS § 455.607

Broker must disclose to prospective buyer a statement of zoning classification of property, except in cases where property is zoned solely or primarily to permit single-family dwelling.

68 § PS 1024

Seller of condo is required to give disclosures only with respect to the unit itself and not any common areas.

§ 1025

Disclosure form: seller must disclose to buyer all known material defects that are not readily observable, but this does not substitute for any inspections buyer may wish to obtain. Seller must disclose information regarding seller's expertise, occupancy, roof, basement and crawl space, termites or wood-destroying insects, dry rot, pests, structural items, additions and remodeling, water and sewage, plumbing system, heating and air conditioning, electrical system, other equipment and appliances included in sale, land (soil, fill, subsidence or other stability problems, mining, flooding, boundary disputes, hazardous substances, underground tanks, asbestos, PCBs, radon, lead paint, urea-formaldehyde foam insulation), miscellaneous (threatened legal action affecting property, violations of

state/federal/local laws or regulations relating to the property, unpaid dues to homeowner association, building/safety/fire ordinance violations, debts against property, defects in title, other material defects in property or title).

No stigmatized property provision

Rhode Island:

RI Gen. Laws § 5-20.8-2

Seller disclosure form must include information on length of seller occupancy, basement, roof, fireplaces, chimney, woodburning stove, structural conditions, insulation, termites or other pests, radon, electrical service, heating system, air conditioning, plumbing, sewage system, water system, domestic hot water, property tax, easements, deed, zoning, restrictions, building permits, minimum housing, flood plain, wetlands, multi-family or other rental property, pools and equipment, lead paint, fire, hazardous waste (including asbestos), miscellaneous.

§ 5-20.8-6

The fact or suspicion that property may be or is psychologically impacted is not a material fact requiring disclosure. Psychologically impacted property includes, but is not limited to, impacts that are a result of facts or suspicions that (1) an occupant of the property is now or has been suspected to be infected or is infected or has been infected with HIV or diagnosed with AIDS or any other disease determined to be highly unlikely to be transmitted through occupying the dwelling place; (2) the real property was or has been at any time suspected of being the site of a homicide, felony or suicide. No cause of action against seller for not disclosing psychological impacts but seller is also not authorized to make any false statements.

South Carolina:

§ 40-57-180

No cause of action against owner or agent or any party to transaction for failure to disclose in a transaction that: the subject real estate is or was occupied by person infected with virus or other disease unlikely to be transmitted through occupancy of dwelling either presently or previously occupied by the infected person; or death of occupant of property has occurred or the manner of death. Nothing precludes action against owner or agent who makes intentional misrepresentations in response to direct inquiry from buyer or prospective buyer with regard to psychological impacts or stigmas associated with the real estate.

South Dakota:

S.D. Codified Laws Ann. § 43-4-44

Disclosure statement form includes inquiries into:

Lot or title information: date home purchased/built, lines, easements, boundaries, encroachments, covenants/conditions/restrictions, pending litigation/foreclosure, zoning, building codes, currently occupied, leased, rent, fees to homeowner association (or equivalent), standing water more than 48 hours after rain, wetlands, common features with adjoining landowners.

Structural information: water penetration problems, water damage related repairs, drain tile, interior cracked walls or floors or driveways, roof leakage, type of roof covering, roof repairs, fire retardant treated plywood, roof inspection,

insulation, termite or wood-boring infestation/damage, property treated for wood boring infestation, work in last 5 years on plumbing, building electrical or any other permit, work approved by inspector, damage to property structures or improvements from natural causes or fire/smoke, sewer blockage/backup past or present.

Systems/utilities information: all features of electrical systems, heating and cooling systems, water systems.

Hazardous conditions: methane gas, radon, in house or well, radioactive material, landfill mineshaft, expansive soil, toxic materials, ureaformaldehyde foam insulation, asbestos, buried fuel/ chemical storage tank.

Miscellaneous information: public or private street location at end of driveway, flue cleaning, improvements to water system, broken window panes or seals, attachments that will not be left, other problems.

Psychological information must be disclosed. Seller must answer whether the following occurred in prior 12 months: human death by homicide, other felony committed against property or person on property.

Tennessee:

Tenn. Code Ann. § 66-5-110 and § 66-5-207

No cause of action against transferor for failing to disclose the fact or suspicion that an occupant has been or was infected with HIV or diagnosed with AIDS or other disease that is highly unlikely to be transmitted through occupancy of the dwelling place, or that the real estate was at any time suspected to have been the site of a suicide, homicide or other felony, or an act or occurrence which had no effect on physical structure of property or its physical environment or improvements.

§ 66-5-210

Disclosure form must:

Indicate whether property includes appliances listed, rain gutters, window screens, fireplaces, pumps, irrigation systems, garage door openers, intercom, antenna/satellite, spa, sauna.

Respond to inquiries into type of garage, and type of water heater, water supply, waste disposal, gas supply, roof type and age, other items.

Disclose any defects in walls, ceilings, floors, windows, doors, insulation, plumbing, sewer/septic tank, electrical system, roof, basement, foundation, sidewalks, central heating, heat pump, air conditioning.

Must disclose if seller is aware of environmental hazards (including asbestos, radon, lead-based paint, fuel or chemical storage tanks, contaminated soil or water); must disclose seller's awareness of features shared in common with adjoining landowners, changes in roads, drainage, utilities, changes in recent survey, questions about survey itself, structural modifications, landfill, settling from slippage or sliding or other soil problems, flooding/drainage, flood insurance, damage from fire, natural causes, zoning violations, neighborhood noise problems, deed restriction/obligation in subdivision, homeowner association authority, lawsuits, leased equipment; must disclose if exterior wall covering is covered with exterior insulation and finish systems (synthetic stucco) and its most recent inspection.

Texas:

Tex. Prop. Code § 5.008

Seller disclosure:

Seller must disclose known defects in all appliances, air conditioning and heating systems, plumbing, pools/patios/decks, windows, raingutters, sprinkling systems, fireplaces, carport, roof, water supply, walls, ceilings, foundation, driveways, basement, sidewalks, lighting fixtures, septics, other structural components. Seller must disclose knowledge of present and previous active termites or other wood-destroying insects and any damage caused, previous structural or roof repair, flooding, improper drainage, floodplain, flood insurance coverage, landfill, soil, fault lines, hazardous or toxic waste, asbestos components, urea formaldehyde, radon gas, lead based paint, previous fires, unplatted easements, subsurface structure or pits. Seller must disclose knowledge of any item or system in need of repair, additions/modifications, fees, common areas, lawsuits affecting the property, any condition that materially affects health or safety of an individual.

Seller has no duty to disclose information related to whether death by natural causes, suicide, or accident unrelated to condition of property occurred on property or whether previous occupant had, may have had, has, or may have AIDS, HIV related illnesses or HIV infection.

§ 5.010

Seller's disclosure of location of conditions under surface of unimproved real property: seller must provide notice in writing of transportation pipeline, including pipeline to transport natural gas, natural gas liquids, synthetic gas, liquefied petroleum gas, petroleum or a petroleum product, or a hazardous substance.

§ 5.011

Seller's disclosure regarding potential annexation: a person who sells an interest in real estate must give purchaser written notice that if property is outside limits of a municipality and may now or later be included in extraterritorial jurisdiction of municipality or may now or later be subject to annexation by municipality. (Form for such notice included.)

§ 5.012

Notice of obligations related to membership in property owners' association form.

Utah:

U.C.A. § 57-1-1

Stigmatized property is the site or suspected site of homicide, felony, suicide or dwelling place of person infected or suspected of being infected with HIV or any other infectious disease that cannot be transferred by occupancy of a dwelling place.

§ 57-1-37

Failure of owner of real property to disclose that property is stigmatized is not material fact that must be disclosed in transaction.

Vermont:

No stigmatized property provision

Virginia:

Va. Code Ann. § 55-519

Transferor of property must furnish to the purchaser either a disclaimer statement stating that owner makes no representations or warranties as to condition of real property or any improvement and that purchaser will be receiving real property "as is," with all defects which may exist except as otherwise provided in real estate purchase contract OR residential property disclosure statement disclosing physical condition of property. Form may include defects of which owner has knowledge regarding water and sewer systems, source of household water, water treatment system, sprinkler system, insulation, structural system, roof, walls, floors, foundation, basement, plumbing, electrical, heating, air conditioning systems, wood-destroying insect infestation, land use matters, hazardous or regulated materials (asbestos, lead-based paint, radon, underground storage tanks), and other material defects. Owner is not required to undertake independent investigation or inspection of property in order to make required disclosures.

§ 55-524

No cause of action against owner or real estate licensee for failure to disclose that occupant of subject real property, whether or not such real property is subject to this chapter, was afflicted with HIV or that real property was site of any act or occurrence which had no effect on physical structure of real property, its physical environment, or the improvements located thereon; or a homicide, felony, or suicide.

Washington:

Rev. Code Wash. § 64.06.020

Disclosure form includes knowledge of title issues (boundaries, easements, encroachments, joint maintenance agreements, survey, assessments against property, and conditions, covenants and restrictions), water (household water source information, irrigation, outdoor sprinkler system), sewer/septic system, structural (roof, age of house, settling, slippage, defects, pest or dry rot inspection, wood-destroying organisms), systems and fixtures (electrical, plumbing, hot water tank, garbage disposal, appliances, sump pump, heating and cooling, security), common interest (home owners' association assessments), general (settling, soil, drainage problems, fill materials, material damage from fire or natural causes, flood plain, environmental hazards such as asbestos, formaldehyde, radon, lead-based paint, fuel or chemical storage tanks, contaminated soil or water, property ever used as site for drug manufacturing.

No stigmatized property provision

West Virginia:

No stigmatized property provision

Wisconsin:

Wis. Stat. Ann. § 452.23

Broker or salesperson not required to disclose that property was site of specific act or occurrence, if act or occurrence had no effect on physical condition of property or structures on property.

Wis. Stat. Ann. § 709.03

Disclosure form requires that owner/seller must have notice or knowledge of any defects that would have significant

adverse effect on value of property and would impair health or safety of future occupants of property and limit expected normal life of premises. Seller required to disclose information about roof, electrical system, plumbing (water heater, pool, softener), heating and AC, well and water, septic and sanitary disposal system, under or above ground storage tanks, petroleum tank on property, basement and foundation, floodplain or wetland or shoreland zoning area, structure, mechanical equipment, boundaries, environmental hazards (radon, radium in water supply, lead in paint, lead in soil, lead in water supplies or plumbing, other potentially hazardous or toxic materials), asbestos, unsafe conditions relating to storage of hazardous or toxic substances on neighboring lands, termite infestations, woodburning stove or fireplace, remodeling affecting structure, tax increases, assessments, construction of public project that may affect property's value, other defects, property designated as historic building or property is in historic district.

Wyoming:

No stigmatized property provision

§ 96.20(c) Federal Disclosure Requirements Concerning Lead-Based Paint Hazards.

Congress enacted the Residential Lead-Based Paint Reduction Act, which became effective October 28, 1992. n2019 The Act required the Secretary of Housing and Urban Development and the Administrator of the Environmental Protection Agency to promulgate regulations requiring sellers or lessors of housing constructed before 1978 to disclose to the purchaser or lessee "the presence of any known lead-based paint, or any known lead-based paint hazards, in such housing and provide to the purchaser or lessee any lead hazard evaluation report available to the seller or lessor ... ." n2020 Regulations implementing these mandates for pre-1978 housing generally went in effect in 1996. n2021 Similar regulations were issued September 15, 1999, for "HUD-owned multifamily residential property or a multifamily residential property for which HUD is identified as mortgagee-in-possession. n2022 In addition to disclosure, these federal laws also require the seller to provide the purchaser or lessee with a lead hazard information pamphlet; give purchasers a 20-day opportunity to conduct a risk assessment or inspection; and attach specific disclosure and warning language to the sales or leasing contract before the purchaser or lessee is obligated under a contract to purchase or lease. n2023

The Residential Lead-Based Paint Reduction Act of 1992 also requires real estate brokers (1) to inform sellers and lessors of their obligations under the Act, (2) to inform sellers and lessors that they must certify and acknowledge all disclosures in writing, and (3) to inform sellers that buyers are entitled to conduct an inspection of the premises. Brokers must also ensure that the sellers and lessors they represent have performed their duties under the Act and have otherwise fully complied with the Act. n2024 Failure to fulfill these broker responsibilities can result in fines, criminal penalties, and civil damages. n2025

§ 96.20(d) Disclosures Required Under Land Sales Full Disclosures Acts.

Under the federal Interstate Land Sales Full Disclosure Act, as enacted in 1968 and substantially amended in 1979, developers of subdivisions are prohibited from using any instrument of transportation or communication in interstate commerce to sell a lot or subdivision without first filing a required statement of record or property report to the prospective purchaser. n2026 Many exceptions and exemptions apply to these federal requirements, and many states have enacted their own land sales disclosure provisions for intrastate subdivisions, all discussion in Chapter 78, above. n2027

FOOTNOTES:

(n1)Footnote 1993. *See, e.g., Peek v. Gurney, L.R. 6 H.L. 377 (1873)* (no duty to disclose defects in an arm's length transaction regardless of how "morally censurable" non-disclosure would be).

(n2)Footnote 1994. *See e.g., Shapiro v. Sutherland, 76 Cal. Rptr. 2d 101 (1998)* (duty of disclosure extends to

disclosure of existence of noisy neighbors where disturbance caused by those neighbors materially affected the value and desirability of the property); *Fimbel v. DeClark, 695 N.E.2d 125 (Ind. App. 1998)* (seller had duty to disclose unsuitability of soil for septic system to buyer whom seller knew wanted to build homes on the property).

(n3)Footnote 1995. *See McWilliams v. Barnes, 242 P.2d 1063, 1065 (Kan. 1952).* In *McWilliams*, the seller had informed the purchaser that certain drainpipes were connected and emptied into the city sewer system. Ten months later, the purchaser discovered that the drainpipes actually emptied into a backyard pit which overflowed with sewage. The Kansas Supreme Court found for the purchaser, holding that such facts could not be expected to be discovered by the purchaser prior to signing the contract. *Id. at 1066. See also Chapman v. Hosek, 475 N.E.2d 593 (Ill. 1985)* (misrepresentation of necessity for flood insurance and of local weather conditions). *See Gilchrist Timber Co. v. ITT Rayonier, 696 So. 2d 334 (Fla. 1997)* (noting that a seller who negligently transmits false information may be held liable for negligent misrepresentation under § 552 of the Restatement (Second) of Torts); *Billian v. Mobil Corp., 710 So. 2d 984 (Fla. App. 1998)* (where buyer sues for non-disclosure of a material defect it is not necessary to buyer's claim that seller have intended to defraud buyer).

(n4)Footnote 1996. *See, e.g., Karoutas v. Homefed Bank, 283 Cal. Rptr. 809, 811 (1991).*

(n5)Footnote 1997. *See Anderson v. Harper, 622 A.2d 319 (Pa. 1993).* Prior to selling their home to the Andersons, the Harpers made repairs to a faulty septic system, but did not obtain the required permits for such work. The court found that since the Harpers did not obtain the required permits, they could not assume that the latent, dangerous condition had been rectified. Without knowing whether the condition had been corrected, the Harpers had a duty to disclose the defect to the Andersons. *Id. at 323.*

(n6)Footnote 1998. *See Gozon v. Henderson-Dewey & Assocs., 458 A.2d 605 (Pa. 1983)* (leaky swimming pool); *Mobley v. Copeland, 828 S.W.2d 717 (Mo. 1992)* (slight electrical current in swimming pool).

(n7)Footnote 1999. *Layman v. Binns, 519 N.E.2d 642, 645 (Ohio 1988).* In *Layman,* the sellers had braced a defective basement wall with steel beams, and the wall was actually bulging when the purchasers viewed the home. *Id.* at 641. The court found no duty on the part of the sellers to expressly disclose the defective wall because the defect was not latent. *Id.* at 645.

(n8)Footnote 2000. *See Grant v. Wrona, 662 S.W.2d 227, 230-31 (Ky. 1983)* (buyer did not have constructive notice of rotten wood where the seller had covered the wood with fresh paint prior to placing the home on the market). *See also Flakus v. Schug, 329 N.W.2d 859 (Neb. 1983).* In *Flakus,* the buyers noticed one sump pump in the basement laundry room, but the seller had concealed two other sump pumps in basement closets, which went undetected until the buyers experienced significant water damage. The first sump pump was not enough to give the buyer constructive notice of the property's water defects, and the court found for the buyers on their fraudulent concealment claim. *Id. at 863. Smalls v. Blueprint Development, Inc., 497 S.E.2d 54 (Ga. App. 1998)* (buyer could not avail himself of passive concealment exception to doctrine of caveat emptor where express provision in contract noted the possibility that lots were subject to wetlands regulation).

(n9)Footnote 2001. *See George v. Lumbrazo, 584 N.Y.S.2d 704 (1992)* (summary judgment was improper because questions of fact remained as to whether the seller intentionally concealed cracks in the wall with panelling, and as to whether the buyer should have discovered the cracks); *Gantt v. Bennett, 499 S.E.2d 75 (Ga. App. 1998)* (buyer could prevail on "passive concealment" claim where seller knew of inappropriately installed sewer system, failed to disclose it, and fact was material and not apparent to the buyer).

(n10)Footnote 2002. "...Where a vendor is aware of defects or conditions which substantially affect the value or habitability of the property and the existence of which are unknown to the purchaser and would not be disclosed by reasonably diligent inspection, then the vendor has a duty to disclose the same to the purchaser ...[his] failure to disclose will give rise to a cause of action in favor of the purchaser." *Thacker v. Tyree, 297 S.E.2d 885, 888 (W. Va. 1982).*

(n11)Footnote 2003. *Id.*

(n12)Footnote 2004. *Johnson v. Davis, 480 So. 2d 625, 628-629 (Fla. 1985)* (the court stated that cases applying the doctrine of caveat emptor were "not in tune with the time and [did] not conform with current notions of justice, equity, and fair dealing.").

(n13)Footnote 2005. *Blake v. Doe, 623 N.E.2d 1229 (Ohio 1993).*

(n14)Footnote 2006. *Baylock v. Cary, 709 So. 2d 1128 (Ala. 1997)* (no duty to disclose water damage defect where buyer had knowledge of it); *Nelson v. Wiggs, 699 So. 2d 258 (Fla. App. 1997)* (flood-prone nature of property was knowable through reasonable steps to ascertain it; therefore seller had no duty to disclose it).

(n15)Footnote 2007. See, e.g., *Revitz v. Terrell, 572 So. 2d 996 (Fla. 1990)* (fraudulently obtained flood insurance was a material fact which sellers had a duty to disclose); *Curran v. Heslop, 252 P.2d 378 (Cal. 1953)* (fraudulent concealment of building code violations was a material fact which affected the value of the home and should have been disclosed).

(n16)Footnote 2008. An example of a non-disclosed fact which is not considered material to the sale is the existence of easements for public utilities, which are generally not dangerous and are to be expected. *See, e.g., Selvin v. Kelshaw, 611 A.2d 1232, 1238 (Pa. Super. Ct. 1992)* (existence of easement for municipal waterline not material; no duty to disclose even though easement not publicly recorded). *See also* Annotation, *Construction and Effect of Provision in Contract for Sale of Realty by which Purchaser Agrees to take Property "As Is" or in Its Existing Condition, 8 A.L.R. 5th 312 (1992).*

(n17)Footnote 2009. *See Kraft v. Lowe, 77 A.2d 554 (D.C. 1950)* (no duty to disclose a violative sewer system; however, seller had obligation to provide the truth when asked about the sewer).

(n18)Footnote 2010. *See Gilbey v. Cooper, 310 N.E.2d 268 (Ohio 1973)* (the state had taken a permanent easement to build a road and a temporary easement for "work purposes," neither of which was actually recorded until three days *after* the property was sold; because the purchasers could not have discovered the easements prior to completing the sale, the sellers had a duty to disclose this information); *Norris v. Mitchell, 495 S.E.2d 809 (Va. 1998)* (seller is not required to disclose restrictions of record).

(n19)Footnote 2011. The following Connecticut statutes are typical:

20-329cc "Psychologically impacted" defined:

As used in sections 20-329cc to 20-329ff, inclusive, "psychologically impacted" means the effect of certain circumstances surrounding real estate which includes, but is not limited to: (1) the fact that an occupant of real property is, or was at any time suspected to be, infected or has been infected with the human immunodeficiency syndrome, as defined in section 19a-581; or (2) the fact that the property was at any time suspected to have been the site of a homicide, other felony, or a suicide.

20-329dd Psychological Impact. No disclosure required. No cause of action.

(a) the existence of any fact or circumstance which may have a psychological impact on the purchaser or lessee is not a material fact that must be disclosed in a real estate transaction.

(b) no cause of action shall arise against an owner of real estate or his agent for the failure to disclose to the transferee that the transferred property was psychologically impacted, as defined in section 20-329cc.

Conn. Gen. Stat. §§ 20-329cc, 20-329dd.

See also Cal. Civ. Code § 1710.2; Ky. Rev. Stat. Ann. § 207.250; La. Rev. Stat. Ann. § 1468; Md. Code Ann., Real Property, § 2-120; N.C. Gen. Stat. § 39-50; Okla. Stat. tit. 59, § 858-513, N.Y. R.P.L. 443-a.

(n20)Footnote 2012. *See VanCamp v. Bradford, 623 N.E.2d 731, 738 (Ohio 1993)* (non-disclosure of rape which occurred in home after being asked about bars on windows was sufficient for jury determination of materiality).

(n21)Footnote 2013. *See Stambovsky v. Ackley, 572 N.Y.S.2d 672 (1991).* In *Stambovsky*, the seller had marketed her home as "haunted" for over ten years, but had not disclosed the fact to its eventual purchaser. The court held that having informed the public of the haunting, the seller owed the same duty to the purchaser. *Id. at 677.* "[W]here a condition which has been created by the seller materially impairs the value of the contract and is peculiarly within the knowledge of the seller or unlikely to be discovered by a prudent purchaser exercising due care with respect to the subject transaction, nondisclosure constitutes a basis for rescission as a matter of equity." *Id. at 676.*

(n22)Footnote 2014. *See Quashnock v. Frost, 445 A.2d 121 (Pa. Super. Ct. 1982).* Even an "as is" clause in the sale contract does not relieve the seller of the obligation to disclose termite infestation. *Stemple v. Dobson, 400 S.E.2d 561 (W. Va. 1990).*

(n23)Footnote 2015. *See, e.g., Weintraub v. Krovatsch, 317 A.2d 68 (N.J. 1974)* (roach infestation). The court called the no-duty-to-disclose cases, relied on by the seller, "a line of singularly unappetizing cases which [were] out of tune with [the] times." *Id. at 71.*

(n24)Footnote 2016. New Hampshire is a good example; sellers of property in New Hampshire are required to disclose the presence of radon gas and lead paint. *See* N.H. Rev. Stat. Ann. § 477:4-a.

(n25)Footnote 2017. *Schnell v. Gustafson, 638 P.2d 850 (Colo. App. 1981)* (absence of privity did not excuse a duty to disclose where seller misrepresented the fact that uranium tailings existed below the home). *See also* Annotation, *Vendor's Obligation to Disclose to Purchaser of Land Contamination from Hazardous Substances or Wastes, 12 A.L.R.5th 630 (1993).*

(n26)Footnote 2018. *See Roberts v. Estate of Barbagallo, 531 A.2d 1125 (Pa. 1987).*

(n27)Footnote 2019. *42 U.S.C. §§ 4851*-4856.

(n28)Footnote 2020. *42 U.S.C. § 4852d*(a)(1)(B).

(n29)Footnote 2021. 40 C.F.R. § 745.100 *et seq*.

(n30)Footnote 2022. 24 C.F.R. § 35.800 *et seq*.

(n31)Footnote 2023. For a more detailed discussion of these federal requirements, see Real Estate Brokerage Law and Practice, Ch. 15A, *Lead-Based Paint Disclosure*(Matthew Bender).

(n32)Footnote 2024. 24 C.F.R. § 35.94(a)-(b)(1).

(n33)Footnote 2025. For a more detailed discussion of these federal requirements, see Real Estate Brokerage Law and Practice, Ch. 15A, *Lead-Based Paint Disclosure* (Matthew Bender).

(n34)Footnote 2026. *15 U.S.C. § 1701 et seq*.

Supp. To CHAPTER 96 VENDORS AND PURCHASERS

11-96 Thompson on Real Property, Thomas Editions Supp. to § 96.16

Supp. to § 96.16 Remedies for Breach of Contract.

[Go To Main]

Add:

Willert v. Russo, 2009 Conn. Super. LEXIS 1212 (Conn. Super. Ct. May 4, 2009) (when purchaser breaches contract, vendor chooses the remedy to pursue).

Add:

Rich v. Olah, 274 S.W.3d 878 (Tex. App. 2008) (party could recover attorney fees pursuant to the real estate contract).

Koehler v. Paniagua, 2003 Ohio App. LEXIS 1886 (No. 5-02-64, Apr. 18, 2003) (election of forfeiture remedy precluded collection of contract installment payments).

Willert v. Russo, 2009 Conn. Super. LEXIS 1212 (Conn. Super. Ct. May 4, 2009) (if vendee breaches contract, vendor may seek specific performance only if the contract or controlling law provides for such a remedy).

Add:

Willert v. Russo, 2009 Conn. Super. LEXIS 1212 (Conn. Super. Ct. May 4, 2009.

§ 96.16(b) Vendee's Right to Recover Down Payments. [Go To Main]

§ 96.16(b)(2) When Recovery Is Denied.

Add:

Thompson v. Barry Berman Realty Associates, 751 N.Y.S.2d 532 (2002) (when purchaser defaulted, vendor retained down payment as liquidated damages).

§ 96.16(d) The Nature of Specific Performance. [Go To Main]

Add:

Beazer Homes, Corp. v. VMIF/Anden Southbridge Venture, 235 F. Supp. 2d 485 (E.D. Va. 2002) (an agreement to negotiate a contract was unenforceable, so specific performance was not an available remedy).

Add:

Edisto Island Historical Preservation Society, Inc. v. Gregory, 2003 S.C. LEXIS 101 (No. 25638, Apr. 28, 2003) (vendors did not have the right to terminate the contract, so specific performance was ordered).

§ 96.16(d)(1) Requisites of an Action for Specific Performance.

Add:

D'Amico v. Brightfelt, 924 So. 2d 872 (Fla. 4th DCA 2006) (No. 4D05-1672, Fla. App., Apr. 11, 2005) (a purchaser who failed to satisfy financing requirements in the contract was not entitled to specific performance); *Singh v. Gopaul, 809 N.Y.S.2d 549 (2006)* (purchaser's action for specific performance denied because purchaser failed to establish financial capacity to purchase the property).

Supp. To CHAPTER 96 VENDORS AND PURCHASERS

11-96 Thompson on Real Property, Thomas Editions Supp. to § 96.17

Supp. to § 96.17 What Is "Merchantable" or "Marketable" Title.

[Go To Main]

Add:

Bennett v. Guarco, 2009 Conn. Super. LEXIS 3299 (Conn. Super. Ct. Dec. 10, 2009) (title is not rendered unmarketable when driveway encroaches on neighboring property, where the neighbor does not object and denies offers to remove the encroachment); *Scott v. Turner, 345 Fed.Appx. 761 (3d Cir. Pa. 2009)* .

Add:

Bennett v. Guarco, 2009 Conn. Super. LEXIS 3299 (Conn. Super. Ct. Dec. 10, 2009) (title is not rendered unmarketable when driveway encroaches on neighboring property, where the neighbor does not object and denies offers to remove the encroachment).

Add:

Scott v. Turner, 345 Fed.Appx. 761 (3d Cir. Pa. 2009) (municipal ordinance requiring a minimum right-of-way held to be a defect rendering title unmarketable).

§ 96.17(a) Situations Making the Title Unmarketable. [Go To Main]

Add:

Haisfield v. Lape, 570 S.E.2d 794 (Va. 2002) (a line-of-sight easement made the title unmarketable).

Add:

Scott v. Turner, 345 Fed.Appx. 761 (3d Cir. Pa. 2009) (selling land that will not be subject to minimum right-of-way requirements renders the title unmarketable because of certainty of future litigation).

Add:

Bennett v. Guarco, 2009 Conn. Super. LEXIS 3299 (Conn. Super. Ct. Dec. 10, 2009) (driveway encroaching two feet by twenty feet onto neighboring property was not held to render title unmarketable, because the owner of neighboring property expressly said he did not object to the encroachment).

Add:

Bennett v. Guarco, 2009 Conn. Super. LEXIS 3299 (Conn. Super. Ct. Dec. 10, 2009) (two feet by twenty feet driveway encroaching onto neighboring property was a curable defect).

Supp. To CHAPTER 96 VENDORS AND PURCHASERS

11-96 Thompson on Real Property, Thomas Editions Supp. to § 96.20

Supp. to § 96.20 Summary of Laws Requiring Sellers to Disclose Negative Background, Characteristics, and Condition of the Real Property.

[Go To Main]

§ 96.20(a) The Evolving Common Law Concerning Disclosures by Sellers. [Go To Main]

§ 96.20(a)(1) Seller's Duty to Disclose.

Add:

Scafe v. Property Restorations, Ltd., 2004 Ohio App. LEXIS 5801 (No. 84447, Nov. 24, 2004) (because of the "as is" clause in the contract, the purchaser bore the risk of defects in the house).

Add:

Stebbins v. Wells, 818 A.2d 711 (R.I. 2003) (real estate agents had duty to disclose); *Kailin v. Armstrong, 643 N.W.2d 132 (Wis. App. 2002)* (vendor had duty to disclose tenant's rent arrearages and delinquencies); *Malach v. Chuang, 754 N.Y.S.2d 835 (2002)* (acceptance of disclosure form waived claims for defects); *Berger-Vespa v. Rondack Building Inspectors Inc., 740 N.Y.S.2d 504 (2002)* (no negligent misrepresentation or concealment of latent defects); *Riggins v. Bechtold, 2002 Ohio App. LEXIS 3525* (No. C-010541, Jun. 28, 2002) (vendors not liable for nondisclosure). *Muir v. Merano, 882 N.E.2d 715 (Ill. App. 2008)* (sale contract terminated for failure of vendor to provide the required disclosure document).

Add:

Crawford v. Mintz, 875 N.Y.S.2d 64 (2009) (attorney fees award under claim for negligent misrepresentation that the property was connected to the city sewer system).

Berger-Vespa v. Rondack Building Inspectors, Inc., 2002 N.Y. App. Div. LEXIS 3648 (Apr. 11, 2002) (defect not concealed or misrepresented).

§ 96.20(a)(2) Negligent Misrepresentation.

Add:

Dyke v. Peck, 719 N.Y.S.2d 391 (2001) (purchaser did not rely on vendor's misrepresentation).

Katzenmeier v. Oppenlander, 178 P.3d 66 (Kan. App. 2008) (purchasers shown to have not relied on vendor's disclosure, because purchasers inspected the property prior to purchase and learned of possible water and drainage problems).

Mynes v. Brooks, 2009 Ohio 5017 (Ohio Ct. App., Sept. 14, 2009) (caveat emptor applied after house was condemned for black mold, because the buyer had notice of mold but chose not to investigate further).

§ 96.20(a)(3) Fraudulent Concealment.

Add:

Lindberg v. Roseth, 2002 Ida. LEXIS 67 (Apr. 29, 2002) (the purchasers were entitled to rely on the sellers' condition disclosure even though the purchasers had conducted their own inspection).

Klasa v. Rogers, 2004 Ohio App. LEXIS 4077 (No. 83374, Aug. 26, 2004) ("as is" clause in the contract did not protect the vendor from liability for fraudulent misrepresentation).

Sutton v. Ebby Halliday Real Estate, Inc., 279 S.W.d 418 (Tex. App. 2009) (action alleging that parties knew the property flooded and purposefully concealed that information); *Rhee v. Highland Development Corp., 958 A.2d 385 (Md. App. 2008)* (allegation of desecrating and concealing a cemetery on the property sufficed as allegation of a material defect); *Katzenmeier v. Oppenlander, 178 P.3d 66 (Kan. App. 2008)* (allegation of intentional or reckless misrepresentations that buildings were free of serious leaking and moisture problems).

Dickerson v. Strand, 904 N.E.2d 711 (Ind. Ct. App. 2009) (court held there was no fraudulent concealment when a thorough inspection would have revealed signs of termite damage without removing the siding).

§ 96.20(a)(4) Latent Defects.

Zappitelli v. Miller, 868 N.E.2d 968 (Ohio 2007) (action for rescission and money damages for vendor's failure to disclose flooding and mold problems; attorney fees could be awarded if punitive damages awarded); *Nelson v. Heer, 163 P.3d 420 (Nev. 2007)* (vendor's omitted disclosure of water damage was not the proximate cause for purchaser's

damage resulting from mold); *Fisher v. Batista, 968 So. 2d 337 (La. App. 2007)* (money damages awarded for vendor's failure to disclose plumbing defects; vendor did not act in bad faith).

Add:

Clark v. Allen, 796 N.E.2d 965 (Ohio App. 2003) (vendors did not know about and were not liable for their real estate agent's misrepresentations concerning condition of the crawl space under the house).

Add:

Humphries v. Ables, 789 N.E.2d 1025 (Ind. App. 2003) (no fraud by vendors relating to soil contamination).

Add:

Harshman II Dev. Co., LLC, v. Meijer Stores L.P., 2010 Ohio 381 (Ohio Ct. App., Feb. 5, 2010) (no duty for buyer to disclose presence of environmental wetlands on the property, because a reasonable inspection would have discovered their presence).

§ 96.20(a)(5) Legal Impairments: Easements, Building Codes, and Ordinance Violations.

Add:

Coldwell Banker Whiteside Associat es v. Ryan Equity Partners, Ltd., 181 S.W.3d 879 (Tex. App. 2006) (vendors not required to disclose the zoning status of the property).

§ 96.20(a)(7) Infestation

Add:

Dickerson v. Strand, 904 N.E.2d 711 (Ind. Ct. App. 2009) (no duty to disclose where the termite damage would have been readily discoverable with a reasonable inspection).

CHAPTER 97 CONSTRUCTION AND DEVELOPMENT LAW

12-97 Thompson on Real Property, Thomas Editions § 97.01

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 97.01 Introduction: The Players.

In this Chapter we see something of the development and construction process--the contract issues and rules that apply to the design construction and leasing of a commercial project. The final section of the chapter spotlights the legal issues in the financing of commercial development. Commercial Leasing is also covered in Chapter 44, which is in volume 5.

This chapter highlights the key issues in agreements between the owner/developer and (1) the architect, (2) the contractor, (3) the tenant, (4) the construction lender, and (5) the permanent lender. You will also see the connection between the printed form language that is so often found in these agreements and the issues that have to be resolved for the successful completion of a project.

The person at the center of the development game is the developer.

> Property Developers come in all shapes and sizes, creeds and colors. Their personal styles range from the flamboyance of a Donald Trump to the reclusiveness of a Paul Reichmann. What they have in common is a desire to assemble developments and fortunes. At the highest level, they change the face of cities, transforming the flows of people and commerce like men moving iron filings with a magnet under a map. They are not necessarily architects or construction engineers or financiers, but their skill lies in bringing these specialties together to satisfy the demands of those who need space to carry on their business. They do not draw up blueprints or erect steel or pour concrete, but they cause things to happen. n1

The unifying characteristic of successful developers is an intangible called "vision." One author described this quality as a "peculiar entrepreneurial solipsism ... at the root of capitalism's greatest achievements, and greatest disasters." n2 To run a thread through the different types of contracts unique to the development process we conjure a fictional character named Happy Golittle who has the vision of building a shopping center of her own. She has in mind a 60,000 square foot, beautifully detailed, quality space specializing in high fashion--clothing boutiques, art and furniture, maybe an upscale restaurant or two.

Happy had the good fortune of being born rich. Her father was a successful shopping center developer whose regional malls made up in percentage rents what they may have lacked in refinement. Daddy's projects were leviathans--one million square feet plus. Happy, with her masters degree in art history, has quite another type of space and clientele in mind.

Daddy is proud his daughter is finally settling down and showing some interest in a version of the family business. He knows she is probably going to lose some money, but he would rather see a little of the family fortune go down a drain at Happy's Fashion Piazza as the price of a learning experience than to see her squander millions living off of a yacht in the harbor of Ibiza.

Happy's first task is to buy a site. She confers with the best commercial broker in town who reports that there are only three or four possibilities large enough for what Happy has in mind, in the sort of market area she is thinking about.

CHAPTER 97 CONSTRUCTION AND DEVELOPMENT LAW

12-97 Thompson on Real Property, Thomas Editions § 97.02

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 97.02 Background: Determining the Feasibility of a Project and Optioning a Site.

Shopping Center Developers--Happy included--and their lawyers should consider reviewing the Urban Land Institutes' Shopping Center Development Handbook, which covers the latest trends in retailing and best practices in shopping center development. It contains case studies that describe the development process for town centers, enclosed malls, power centers, and street front retail centers. And it covers small strip centers to super regional facilities as well as urban and suburban locations. It is available from the Urban Land Institute (http://www.uli.org).

CHAPTER 97 CONSTRUCTION AND DEVELOPMENT LAW

12-97 Thompson on Real Property, Thomas Editions § 97.03

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 97.03 The Owner-Architect Relationship.

Happy has done her studies and decided to exercise her option. The site is in a coastal town near Los Angeles on a prime walking street well known for its small avant garde clothing stores and trendy clientele. In order to build her project, Happy will probably require the services of architects, engineers, maybe environmental consultants and geologists, a general contractor, and subcontractors.

In the following pages we consider some of the key provisions in Happy's contract with her architect and general contractor, and some of the significant features of the developer-architect-contractor-subcontractor relationship. Maybe relationship is the wrong word. Struggle or war might be closer to what often occurs on the job site.

General contractors tend to think too many subcontractors are financially irresponsible and incompetent. Subcontractors suspect that the general contractor and owner are in bed together plotting ways to make life difficult and unprofitable for the subcontractors. They also know architects who are arrogant and desire only to build monuments to themselves at the expense of everyone else in the project. Architects sometimes find general contractors inept and subcontractors indifferent to good design.

To ameliorate these suspicions, some public agencies have required the major participants in new projects to spend two or three days in an intensive series of workshops run by professional facilitators to talk through their prejudices and fears so that when problems do arise later during construction, they will have "bonded" enough to solve problems quickly instead of worsening them. Whether these "partnership" workshops succeed in stopping the players from lapsing into their old feuds isn't clear. One participant was quoted during such a session: "We're all capitalistic pigs. We're all trying to make the biggest buck we can." n3

Happy won't have the benefit of a facilitation session. She will have to deal with her architect, contractor, and subs one by one, negotiating a contract with each of them in hopes they can work well together.

§ 97.03(a) A Cautionary Note on the Owner-Architect Relationship.

Any entrepreneur causing a new project or addition to be built is, for purposes of this text, a developer. Most

commercial ventures, and many custom-built homes and remodels begin when the developer seeks out an architect. Consider the difference between the developer-architect relationship and that of lawyer-client or doctor-patient. The client engages the lawyer to battle an adversary, and the patient looks to the doctor for relief or cure. They leave matters pretty much to the professional. The developer-owner approaches the architect with the hope of creating something special, mastering a bit of space, and maybe realizing a secret dream.

The owner's dream and the architect's objectives may not be the same. The architect may see the project as a step in the architect's aesthetic development or even as a statement in the history of the built environment. The owner has a program with a time frame, cost limits, and some functions in mind that may conflict with the architect's aesthetic sensibilities or career goals. An owner enthralled with aspirations for a project is prone to self-deception about its feasibility.

The owners's desire for the project being built at a modest price is counterbalanced by the nearly universal practice of the architect's fee being a percentage of project cost. The higher the project cost, the greater the fee. This is one reason some clients cap the fee or prefer to negotiate a fixed fee.

§ 97.03(b) The Architect's Possible Functions.

An architect may perform different types of services for the owner:

(1) *Plans and Specs.* The architect prepares initial plans and specifications. Usually the architect is responsible for pulling a building permit--once the plans are completed to the owner's satisfaction. This usually involves the architects making revisions to satisfy building and fire department plan checkers.

(2) *Entitlements.* Sometimes architects are asked to oversee obtaining variances, conditional use permits, rezonings and plan amendments.

(3) *Construction Administration.* The architect may or may not participate in construction administration, overseeing the work as it progresses.

(4) *Arbitration.* The architect may or may not be charged with arbitrating disputes on site during construction that can arise among the contractor, the owner, and subcontractors.

(5) *Coordination.* In most real estate construction ventures there are at least five players: owner, architect, lender, city or other government agencies, and soils engineer. Someone needs to coordinate the activities of these players. Usually that is the developer's responsibility, but occasionally it falls to the architect.

§ 97.03(b)(1) Design Phases.

The stages of design work are usually divided into three parts. n4 The first is schematic, often taking the form of sketches on tissue paper, as the architect and owner reach decisions on the general scope and form of the project. How many stories will it be? Is parking to be located underground? Will the elevators be hydraulic or electric? The second stage is called design development, as the architect converts the scheme into three-dimensional specifics. Finally, the design is converted into construction drawings, sufficiently detailed so that contractors may bid on them, knowing what materials and labor will be required to build the project.

The line between design development and construction drawings is flexible and may be bent according to the architect's need for periodic payment. An architect hard pressed for cash may announce the completion of the design development phase rather swiftly.

§ 97.03(b)(2) Cost Conditions.

In the ordinary construction venture, once the construction drawings are completed, the project will be put to bid. Bids are offers by contractors specifying the price and terms for building the project. The developer hopes that bids will be within the project budget. If no such bids are obtained, then whether the architect has any personal exposure--usually to redraw the plans without compensation--depends on whether "cost conditions" were part of the deal between owner and architect. n5

An architect's promise to the owner that the project will be built within the owner's budget exposes the architect to greater risk than would a cost condition: liability to the owner for the excess costs of completion, or for all the owner's out-of-pocket costs if the project is abandoned.

Five possibilities exist for allocating the risk that the plan may not be buildable at the owner's price.

§ 97.03(b)(2)(i) Fixed Limit.

This is the most stringent standard, and carries a promise by the architect to design a project not to exceed a specified cost. Here is a paragraph from a contract with an architect that the author drafted. The project was a two-unit condominium. Since the author was an amateur owner-developer, he had to rely greatly on the price judgments of the architect.

> The Designer acknowledges that the Owners' budget for this Project is $325,000, exclusive of construction loan interest charges and Designer's fees but including removal of the existing structures and trees on the site to the extent required by this Project, and landscaping plans and materials. While the Designer does not warrant a Construction Contract acceptable to the Owners, the Designer understands that the Owners have no use for plans that cannot be built within its budget. The Designer also understands that the Owners will require a fixed price general contract for construction that is bonded as to performance and payment, and a fixed time for completion, with per diem liquidated damages for late performance and a sharing of construction loan interest saved for early completion. The Designer will fortify his best judgment of construction costs by early and frequent consultation with one or more general contractors and with updated material and equipment pricing data. It is the Designer's responsibility to keep the Owners informed of the Owners' option should the Owners' wishes or the Designer's threaten to push the project over budget.

The architect's plans, though spectacular, couldn't be built within the budget. Based on this paragraph, the author terminated the contract without penalty. The author did not seek a refund of fees already paid. However, if the project had been abandoned, the author might have been able to recover fees already paid based on a restitution theory.

Clients rarely seek restitution of design fees. n6 The cost of attempted recovery may be too great. If the project is abandoned, other elements of damage such as permit filing fees and excavation costs are recoverable along with the design fee if such other elements are reasonably foreseeable. Even if the architect redesigns the project so it can be built at the promised price, construction delays may prove costly and lead to recoverable damages for the client.

If the owner goes forward with the project, hiring another architect, he owes his dismissed designer compensation in quantum meruit for ideas and plans put to use in the redesign. If fees are paid to the first architect this may estop that architect from claiming compensation for work the client eventually utilizes.

Suppose an owner builds according to an architect's plans and the costs of the project exceed the fixed limit of construction costs in the owner's agreement with the architect. The architect might be liable for the difference. Architects have gotten socked with sizable judgments for cost overruns. n7

§ 97.03(b)(2)(ii) Estimates.

A promise by the architect to deliver plans within estimates of construction cost implies that the architect will take reasonable steps to estimate construction cost. A "per square foot" guess isn't enough. To estimate cost, the plans must be reduced to their component parts. How many feet of concrete will need to be poured? How many windows, of what size and thickness? How many bricks, stones, etc.? By taking these quantities off the plans and utilizing standard construction industry cost sources, the architect can make an estimate of cost that should not be far off. An estimate isn't a warranty of cost like a fixed limit promise would be, but it is pretty close.

Architects may balk at having to perform this sort of exercise. Architects are not, after all, professional estimators. (In the U.K. such estimators are called "quantity surveyors," a beautifully descriptive phrase.) The architect who does not want to double as a quantity surveyor may decline this role.

Here is how one architect, Doug Lowe, expresses his aversion to "cost conditions":

> Only under extremely unique circumstances will we accept a contract with a cost condition. There are just too many factors that architects don't have control over to make an exact prediction as to the cost of a project. We can say that other projects like the one we're designing have cost X dollars a square foot, and we think that yours will cost about the same, but it's ridiculous to expect us to guarantee an exact amount. It's a fallacy to think that the architect has complete control over every phase of the project--including the cost. Once we finish designing the project, it is basically out of our hands. Sure, we step in to make sure that the general design is being followed, but we don't draw the shop drawings n8 that affect greatly the price, so in this regard we *can't* control the price. n9

§ 97.03(b)(2)(iii) Statement of Probable Cost.

This statement made by an architect is based on a rough guess of costs based on the square footage of the project, and what projects of that size and complexity usually cost to build. It is less exacting than a "take off" from the plans of the quantities of materials and labor implied in them. The American Institute of Architects standard form contract recommends this disclaimer accompanying any promise to deliver a Statement of Probable Construction Costs or a Detailed Cost Estimate.

> It is recognized, however, that neither the Architect nor the Owner has control over the cost of labor, materials or equipment, the contractor's methods of determining bid prices, or competitive bidding, market or negotiating conditions. Accordingly, the Architect cannot and does not warrant or represent that bids or negotiated prices will not vary from ... any estimate of the Cost of the Work ... prepared or agreed to by the Architect. n10

This clause may not be enough to protect an architect who has promised within some preliminary cost estimate. An incorrect statement of probable cost is a misrepresentation, itself actionable. That may be why the AIA changed its form language in 1987 striking "statement of between the architect and the owner are construed as implied or express cost promises. Parol evidence may not be introduced if it precedes and contradicts a specific written agreement. But parol evidence is admissible to supply an omission or to clarify an ambiguity in a written:

> There are just too many factors that architects don't have control over to make an exact prediction as to the cost of a project. We can say that other projects like the one we're designing have cost X dollars a square foot, and we think that yours will cost about the same, but it's ridiculous to expect us to guarantee an exact amount. It's a fallacy to think that the architect has complete control over every phase of the project--including the cost. Once we finish designing the project, it is basically out of our hands. Sure, we step in to make sure that the general design is being followed, but we don't draw the shop drawings n11 that affect greatly the price, so in this regard we can't control the price. n12

The AIA disclaimer may not be enough to protect an architect who has promised a project within some preliminary cost estimate. An incorrect statement of probable cost is a misrepresentation, itself actionable. That may be why the AIA changed its form language in 1987, striking "statement of probable cost" and substituting "preliminary cost estimate." Even that AIA form contract will not save architects from liability for negligence when project costs soar far above the "preliminary cost estimated." Negligence may be inferred when a cost estimate "very far out of line proves that the architect did not do his work properly." n13 In one case, an engineer undertook to design a water slide for a client, on a preliminary cost estimate of $409,000. To hurry completion, the project was "fast tracked"--construction was begun before the design was completed--on a cost-plus basis. The actual cost ended up at about $1,000,000--21/2 times the original estimate. The engineer was held liable for $205,000. He had never designed a water slide, not employed a professional estimator, had not looked at other water slides, had never revised cost estimates, and had never discussed the hazards of "fast track" and "cost plus" contracting with his client. n14

The architect's liability for excess costs may also be grounded in contract theories when conversations between the architect and the owner are construed as implying or expressing cost promises. Parol evidence is admissible to supply an omission or to clarify an ambiguity in a written agreement if it precedes or contradicts a specific written agreement.

In *Malo v. Gilman*, n15 the owner testified that the architect had promised to design a project that could be built for $70,000, or $20/square foot. The $70,000 figure appeared in the contract as a "preliminary estimated cost." The lowest bid was for $105,000. In the owner's opinion, this exceeded the bounds of reasonableness and so the owner refused to pay the architect. When the architect sued for fees, the appellate court affirmed a trial court's judgment denying the fees. The court cited this among several AIA Form provisions:

> AIA Form, 1.1.1: The Architect shall consult with the Owner to ascertain the requirements of the Project and shall confirm such requirements to the Owner.
>
> Not only did the architect lose his suit for payment of the fee, he was ordered to return the $500 he had already collected towards it.

§ 97.03(b)(2)(iv) Budget.

An architect's contract may sometimes contain a statement that the architect is aware of the project budget. The AIA form documents don't define the word "budget." Anyone using it must provide their own definition. Nonetheless, we might say that a promise to design within a budget is a "best efforts" commitment--vague but better than nothing as far as the client developer is concerned.

§ 97.03(b)(2)(v) No Cost Condition.

Ultimately, an architect's liability for a cost estimate or an acknowledged budget limit can be seen to depend on many factors, including:

> (1) How difficult is the job to estimate? Remodels are usually tougher than new construction; conventional, repetitive projects are easier than one-of-a-kind innovative designs.
>
> (3) When was the prediction made? Early estimates made before completion of plans and specs are usually less reliable than estimates based on 99% completed plans.
>
> (4) How experienced is the client? When the architect's estimates prove wrong, a homeowner doing a remodel could be a better plaintiff than a tract housebuilder. (5) How far from the original estimate was the lowest bid or the actual cost of construction? "[I]t seems significant that the number of decisions denying recovery of compensation in proportion to the number of decisions allowing recovery increases

> rapidly as the percentage of excess cost increases from less than 25 percent to 25 through 75 percent to over 75 percent." n16 (6) Did the owner go forward to complete the project, knowing full well its cost would exceed the fixed limit? If so, the architect may contend that the owner failed to mitigate damage by abandoning the project or allowing it to be redesigned once the owner realized a cost overrun was imminent, and the owner should be deemed to have waived any cost condition in the contract. If the finished product is actually worth the higher cost, the owner has suffered no loss. The owner got fair value for money. The owner may have added features to the design that increased costs. The owner may have interfered with the bidding or conducted bidding in a particularly foolish way.

Even when a design professional enters a contract with no cost condition, negligence may be inferred when a cost estimate "very far out of line proves that the architect did not do his work properly." n17 In one case, an engineer undertook to design a water slide for a client, on a preliminary cost estimate of $409,000. To hurry completion, the project was "fast tracked"--construction was begun before the design was completed--on a cost plus basis. The actual cost ended up at about $1,000,000. The engineer was held liable for $205,000. He had not employed a professional estimator, had not looked at other water slides, had never revised cost estimates, had never discussed the hazards of "fast track" and "cost plus" contracting with his client. n18

§ 97.03(b)(2)(vi) Remedies.

(1) Rescission and Restitution. If the architect's plans are veering far from the program the owner set forth, at least as far as the project cost goes, a cost condition may entitle the owner to rescind by terminating the employment contract with the architect, and pay no fee. The architect may have to refund fees already paid.

(2) Specific Performance. In the ordinary construction venture, once the construction drawings are completed, the project will be put to bid. Some construction contracts call for the contractor to deliver the project at a fixed price. Fixed price bids are offered by general contractors specifying the price and terms for building the project. The developer hopes that one or more of the bids will be within the project budget. n19 If no such bids are obtained, the architect plans without compensation until she comes up with a set of plans that a general contractor will agree to bid within the budget. n20

(3) Damages. Suppose an owner builds according to an architect's plans on a cost-plus or a fixed price construction contract and the costs of the project exceed the fixed limit of construction cost in the owner's agreement with the architect. The architect might be liable for the difference. Architects have suffered sizable judgments against them for cost overruns. n21

§ 97.03(b)(3) Construction Administration.

The architect's responsibility once construction begins can range from occasional site visits to see if the contractor is generally building according to plans to detailed supervision as the owner's agent to make sure all is going exactly as planned. The architect's liability as an occasional "observer" is far less than it would be if the architect agreed to "supervise" construction on behalf of the owner. n22 Furthermore, the owner's exposure if the architect misses something important is enlarged if the architect is the owner's supervising agent. On the other hand, if the architect is there as an independent contractor only to observe, the owner is immunized from liability for errors the architect commits while at the site.

Under AIA Form B201-2007, the architect's responsibilities during construction are limited.

> 2.6.2.1. The Architect, as a representative of the Owner, shall visit the site at intervals appropriate to the stage of the Contractor's operations ... (1) to become generally familiar with and to keep the Owner informed about the progress and quality of the portion of the Work completed, (2) to endeavor to guard

the Owner against defects and deficiencies in the Work, and (3) to determine, in general, if the Work observed is being performed in a manner indicating that the Work when fully completed will be in accordance with the Contract Documents. However, the Architect shall not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work.

2.6.2.2. The Architect shall report to the Owner known deviations from the Contract Documents and from the most recent construction schedule submitted by the Contractor. However, the Architect shall not be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Architect shall be responsible for the Architect's negligent acts and omissions but shall not have control over or charge of and shall not be responsible for acts or omissions of the Contractor, Subcontractor, or their agents or employees, or of any other persons or entities performing portions of the Work. n23

The form language is no excuse for inadequate site supervision. One purpose circumscribing the architect's duty to keep the project under general observation is to provide a basis upon which the architect can determine whether to issue the certificate of payment. Thus, periodic visits are required and the architect has the duty to observe generally the progress of work and to insure that the contractor is compensated for the amount of work completed. It is also apparent that the architect represents the owner in protecting the owner's aesthetic interests in the quality of the work and is under a duty to endeavor to guard the owner's interests.

Admittedly, the contract documents are explicit on the provision that exhaustive, continuous on-site inspections are not required. That exhaustive, continuous on-site inspections were not required, however, does not allow the architect to close his eyes on the construction site, refrain from engaging in any inspection procedure whatsoever, and then disclaim liability for construction defects that even the most perfunctory monitoring would have prevented. n24

Among the factors that result in architects becoming liable for construction defects that could have been detected by a more thorough or frequent on-site inspection:

(1) If the architect is also hired as a construction manager. n25

(2) If the architect has a connection to the contractor that could lead to a conflict of interest.

(3) If the job is big and the architectural fee substantial.

(4) If the defect occurs at a crucial point during construction when the architect should have been there (e.g., during a concrete pour).

(5) If the architect began more frequent and intense supervision than called for in the contract, and the owner began to rely on that.

(6) If the owner was out of town or inexperienced.

(7) If the architect became aware of the defects and did nothing about them.

The AIA Form B201-2007 also attempts to limit the architect's liability when advising the owner that a contractor is due a payment for completed work:

2.6.3.2 The issuance of a Certificate for Payment shall not be a representation that the Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work, (2) reviewed construction means, methods, techniques, sequences or procedures, (3) reviewed copies of

> requisitions received from Subcontractors and material supplies and other data requested by the Owner to substantiate the Contractor's right to payment or (4) ascertained how or for what purpose the Contract has used money previously paid on account of the Contract Sum.

Suppose Happy lets the contract go to the low bidder, and disburses funds during construction when the architect tells her to. Ten percent of the contract price is retained to assure satisfactory completion. When 90% of the contract price has been paid out, the contractor defaults by leaving the job. Happy finds another contractor willing to complete the work. In fact, the contractor left the job because he realized he had only performed two-thirds of the work required under the contact. Completion costs half a million more than the sum left in the construction fund. Is the architect liable to Happy for the half million because the architect certified payment on the basis that 90% of the work had been done instead of two-thirds?

Under AIA Form B201-2007 § 2.6.3.2, quoted above, it would seem not. But at least one court has held the architect liable under these circumstances, not only to the owner but also to the surety, directly contrary to AIA form language that the architect owes nothing to third parties. n26

§ 97.03(b)(4) Arbiter of Disputes.

Because projects are usually on tight schedules, it is in everyone's best interest that the contractor and developer quickly settle their disputes themselves. It is occasionally expedient for the architect to be a "quasi arbitrator." He is familiar with the situation, and the standard AIA Owner-Architect contract provides for it.

While it is true that the architect is being paid by the owner and could be biased in the owner's favor, the architect is the only third party familiar enough with the project who is immediately at hand to mediate owner-contractor disputes. Otherwise, the contractor and the owner would have no choice but to fight it out between themselves or find a third party who would have to take time to become familiar with the situation, or resolve it in ignorance of the project history. So the contractor may prefer the architect as arbiter. n27

As a "quasi judicial officer," the architect must exercise judgment in good faith. n28

The AIA forms prescribe binding arbitration adopting the rules of the American Arbitration Association which allow for limited discovery. Arbitration panels are not required to make a record or issue a written option, so courts cannot readily discern a basis for setting aside arbitration awards.

The AIA documents also provide for no joinder of parties. This may seem a minor technical point. But consider the case of a serious defect in the project that could be the result either of a design or construction flaw. In arbitration with the architect, the panel rules that the defect is due to a mistake in construction, so the architect is off the hook. In an arbitration with the contractor, a different panel decides it is caused by a design failure, so the contractor is off the hook. The owner gets stuck though the foul-up certainly wasn't the owner's fault.

§ 97.03(b)(5) Tort Liability.

Professor Sweet distinguishes among three potential standards of liability for architects: (1) negligence (do the reasonable); (2) professional (what other pros would do); and (3) warranty (accomplish the result desired by the client). The majority view is probably (2); the minority (3). Professor Sweet also warns not to take these distinctions too seriously. He describes a great many architect liability cases in which the formulas applied are "murky," and the results in a minority jurisdiction are indistinguishable from what would have been reached in a majority jurisdiction and vice versa. n29

The majority rule--the "reasonable architect's" performance standard--can be summed up this way: "Nobody's perfect.

The architect did what other architects doing this sort of work would have done." That is the customary and often successful defense architects use when someone is injured because a wall collapsed, a building burned, or a person tripped on the stairs.

> The responsibility resting on an architect is essentially the same as that which rests upon the lawyer to his client, or upon the physician to his patient ... . The undertaking of an architect implies that he possesses the skill and ability, including taste, sufficient to perform the required services at least ordinarily and reasonably well ... . But the undertaking does not imply or warrant a satisfactory result. n30

Implied warranty liability for architects was urged and specifically rejected in *City of Mounds View v. Walijarvi*: n31

> If every fact of structural design consisted of little more than the mechanical application of immutable physical principles, we could accept the rule of strict liability ... . But even in the present state of relative technological enlightenment, the keenest engineering minds can err in their most searching assessment of the natural factors which determine whether structural components will adequately serve their intended purpose. Until the random element is eliminated in the application of architectural sciences, we think it fairer than the purchaser of the architect's services bear the risk of such unforeseeable difficulties.

In addition, we observe that the ills which spurred the creation and expansion of the implied warranty/strict liability doctrine are not really present in this case or in the architect-client relationship generally. The implied warranty of fitness originated primarily as a means of facilitating the legitimate interests of the consuming public and bringing common-law remedies into step with the practicalities of modern industrialism. The outmoded requirement of contractual privity, coupled with manufacturers' sweeping disclaimers of liability, frequently operated to deny effective remedies to those who purchased commercial products at the bottom of a multi-tiered production and distribution network. n32 The introduction of the implied warranty doctrine created an effective remedy by allowing plaintiffs to proceed directly against the offending party without reliance on express contractual warranties.

The relationship between architect and client is markedly different.

> Finally, while it is undoubtedly fair to impose strict liability on manufacturers who have ample opportunity to test their products for defects before marketing them, the same cannot be said of architects. Normally, an architect has but a single chance to create a design for a client which will produce a defect-free structure. Accordingly, we do not think it just that architects should be forced to bear the same burden of liability for their products as that which has been imposed on manufacturers generally. n33

The architect may become strictly liable as a contractor by entering a design-build contract. Under that form of agreement, the architect becomes the general contractor ("GC") as well. Functioning and being paid as the GC, the architect becomes liable like a GC. Similarly, an architect who becomes a joint venturer in the project, becomes liable as would any other joint venture developer. Liability could be predicated on theories of negligence, strict liability or implied warranty, depending on the standard for developer liability in the jurisdiction.

Architect liability for negligence arises when the project design results in dangerous traps for the unwary, in dysfunctional spaces, and in violation of local building codes. Examples of each follow.

§ 97.03(b)(5)(i) Design Traps.

An ALR note on architect's liability for defective design begins by reminding readers of The Code of Hammurabi, under which a builder who constructed a house that collapsed and killed the owner would be put to death. n34 Today, the standard is negligence, not strict liability, so the injured plaintiff must demonstrate that the architect's design failed to meet generally prevailing safety standards.

In *Francisco v. Manson, Inc.*, n35 the plaintiff's 10-year-old son died when he fell from a 3-meter diving stand, designed by Manson, at his school's swimming pool. The court held that Manson was guilty of negligence in the design of the diving stand. Manson knew the stand would be used by children and also knew of feasible design changes that would have increased the safety of the board and stand, such as different shape, position, and materials of the guard rails, different height and rise of the steps, the addition of a Plexiglas enclosure at the top of the board, and the addition of a bed under the board. Manson was held liable for damages of almost $800,000.

Note that personal injuries aren't all the architect may be held liable for. When the roof of the Kemper Arena in Kansas City collapsed in 1979, preventing the Ringling Brothers-Barnum & Bailey Combined Shows Inc. and Ice Follies & Holiday on Ice, Inc., from staging performances and selling souvenirs, the Missouri Court of Appeals held that the architects of the Kemper Arena could be liable for negligently interfering with the entertainers' right to use and enjoy their leases. n36

Architects sometimes win malpractice suits. In one case, the architect was granted a directed verdict on a malpractice claim when a 22-month-old child fell to his death from the balcony of a 5th-floor apartment. n37 No one saw how the child got over the balcony. The height of the balcony railing was 42 inches. The child was 28 inches high. The distance between the vertical rails was 5 inches. There were 63/4 inches between the bottom rail and the floor. The District of Columbia had no code requirement for balcony designs at the time.

Here is another case which shows the limits of the architect's duty to the ultimate user of his design: a woman in a hospital parking lot with a poorly designed lighting system was kidnapped and later killed by her abductor. The court held that such a risk, not easily associated with the traditional risks of poorly designed lighting systems, was not encompassed within the duty owed by the designer. n38 More recently, a new issue has arisen concerning indoor air quality in newly built offices, sometimes referred to as "sick-building syndrome." Due to the increased concern of energy-saving HVAC systems, "stale" air occasionally results from insufficient replacement of "new" air in these energy-efficient buildings; employees report symptoms of nausea, fatigue, or headaches from working in such buildings. In some cases, employees of commercial tenants have brought action against tenants and have also named contractors, landlords, and architects as defendants. As discussed later in the chapter, owner/landlords often become the default party of blame for these suits, but architects must also be on the lookout for potential litigation that may cite architect's design as a contributing factor to the building's lack of air quality. n39

§ 97.03(b)(5)(ii) Dysfunctional Space.

Architects impliedly warrant that the plans and specifications are appropriate to the intended purpose of the project. n40 In *Bayuck v. Edson*, n41 the architect was employed to design and supervise the construction of a residence. The court found that the plans were improperly prepared in three respects: poor floor design, closets too narrow, and doors too elaborate for local artisans to fabricate. Additionally, supervision was deficient in the following respects: plycrate on the floor did not conform to specifications; kitchen tile was aesthetically displeasing; sliding doors stuck; and the fireplace cracked. The court said that the plans were so fancy that the architect should have given very close supervision, but he did not. A real estate broker testified that, without defects, the house would have been worth $50,000-60,000; but that with the defects, it was only worth $27,000-31,000. The court awarded the owners a judgment against the architect in the amount of $19,000.

§ 97.03(b)(5)(iii) Code Violations.

Architects are supposed to know the applicable building code restrictions, zoning ordinances, and set-back and parking requirements. n42 The plaintiff in *Johnson v. Salem Title Company*, n43 a pedestrian on a public sidewalk, was injured when hurricane winds caused a masonry wall to fall on him. The wall's design did not comply with a city building ordinance. The court held that even though the wall was approved by a city building inspector the architect's violation of the building ordinance constituted negligence per se. n44 The architect (contractor or subcontractor) may escape liability when the code violation results in no loss to the client, as in one case where a client decided to rip out a staircase in order to replace it with a new design. The client discovered coincidentally that the old staircase didn't conform to code, and sought damages from the architect. The violations were of improper stair height and width and handrail heights. The purpose of these code requirements was to assure safety. The clients replaced the staircase not because it was unsafe but because they no longer liked the way it looked. That didn't create a cause of action because the clients suffered no injury of the type building codes are enacted to prevent. n45 Architects usually accept the heroic burden of making sure their plans comply with all land use and building codes in existence when they obtain a building permit to construct the project. They seek to limit their exposure by insisting on form language entitling them to compensation for design changes necessitated by code changes that take place after a building permit has been obtained.

§ 97.03(b)(5)(iv) Architect's Rejoinder.

Architect Doug Lowe: n46

> All the plans we draw are imperfect. They all have omissions and mistakes. Some more than others. But all plans every architect draws are imperfect and full of mistakes. The key is to make sure that our plans don't have more mistakes and errors than the average architect in our situation would have had. Because unless we have more mistakes than others generally do we shouldn't be liable.
>
> If we draw plans that show the railing at the bottom of the stairs to extend out six inches and the code requires that it extend out twelve, we still may not be liable. It's important to understand that designing and building is an imperfect art. Every part must be designed and customized. There are going to be errors every time. Somewhere along the process 99% of them are going to be caught. If every time a railing is found to be too short the architect were forced to pay for its repair or replacement, then I'll guarantee there wouldn't be many architects.
>
> If someone gets hurt because of a short handrail and it's a clear violation of a code, and we drew it that way, then we may be liable. Even then, it would have to be shown that the contractor and the subcontractors and the building code inspector were under no duty to catch the error. We're not the only ones responsible for catching errors.

§ 97.03(b)(5)(v) Malpractice Insurance.

To deal with the negligence claims architects face, most take out malpractice insurance policies, called errors-and-omissions coverage. Whenever something goes wrong with a project, plaintiff's lawyers sue anyone and everyone who was involved with the project.

There are substantial exclusions from coverage that are of particular interest to the owner/developer. These include the failure to complete work on time and inaccuracy of estimates of probable cost. n47

In the last thirty years the number of claims per architectural firm has increased dramatically, causing the cost of malpractice insurance to skyrocket. Today, up to *one-half* of an architect's potential profits can go into insurance premiums.

§ 97.03(b)(5)(vi) How the Threat of Tort Liability Has Changed the Practice of Architecture.

In response to these astronomical insurance premiums, many architects have changed the way they operate. Some have become self-insurers, and practice without errors and omissions coverage. The architect's role in overseeing the project's construction has been curtailed. Architects choose to have less to do with overseeing construction, hoping to reduce their chances of liability. In 1961 the AIA owner-architect forms were changed to diminish the status of the site architect. Before 1961 the AIA form contract endowed the architect with the "general supervision of the work." The 1970 form called only for "periodic observation." n48

Some architects simply avoid types of projects they consider risky. For example, condominium complexes, where owners can organize through their homeowners' associations, carry an extremely high risk of a lawsuit--perhaps as high as 50%. n49 Developers sometimes may have to indemnify architects to get high-risk liability projects off the ground. n50

CHAPTER 97 CONSTRUCTION AND DEVELOPMENT LAW

12-97 Thompson on Real Property, Thomas Editions § 97.04

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 97.04 The Construction Contract.

Once plans are ready a developer needs to arrange for construction. Construction contracts can be defined by: (1) the parties to them, (2) their pricing structure, and (3) whether the design is completed before construction begins.

§ 97.04(a) Parties.

§ 97.04(a)(1) Owner/Builder.

One choice a developer faces is whether to have a general contractor oversee all aspects of construction or act as her own general contractor, and deal directly with the various subcontractors (plumbers, electricians, roofers, framers, etc., who would then be referred to as prime contractors). The owner/builder applies for the building permit and is responsible for code compliance. That responsibility is shared to some extent as each trade contractor must be licensed, and must comply with the applicable codes on its part of the job. Experienced developers often act as owner/builders. They know how projects are built, may actually have a list of seasoned, competent "subcontractors," and are prepared to oversee construction on a day-by-day basis. They have no reason to pay a general contractor 5-15% of the contract price to negotiate with and oversee trade contractors. Energetic budget-conscious neophytes may want to save money by being owner/builders. This is seldom a good idea on major projects. But developers without a track record probably won't get construction financing without an experienced general contractor in tow. n51 owner/builders they must have a contractor's license to enforce collection of the house purchase price. If the owner subcontracts all the work to subcontractors who are licensed, the owner may enforce contract claims for payment against buyers. The owner who is not licensed as a contractor may enforce contract claims as long as the owner qualified as an owner-builder and owned the property when work was done, and as long as the work was done by appropriately licensed contractors. But once the owner/builder who is not a licensed contractor sells the property, the owner/builder has no enforceable claim of payment for work done after the sale. It doesn't matter that the work was actually done by licensed subcontractors. In *Vallejo Dev. Co. v. Beck Dev. Co., 24 Cal. App. 4th 929, 29 Cal. Rptr. 2d 669, 929 (Cal. App. 1994)* , a subdivider contracted to sell lots to contractors and promised to complete subdivision improvements after the sale. The subdivider subcontracted the work to licensed subcontractors, completed it and sued the buyer/contractors for the cost of improvements. They defended because the subdivider had no contractor's license and had done the work *after* selling the site. The buyer prevailed--an admittedly harsh result geared to preserving the integrity of the contractor licensing laws.

§ 97.04(a)(2) Owner/General Contractor.

A general contractor undertakes to build a project for the owner. n52 Not all general contractors (referred to as "contractors" or "GCs") provide the same services. They possess different skills and abilities. Choosing a contractor with the skills and at a price that fits a developer's needs becomes one of the most critical decisions in the development process.

Some contractors have their own staff of subcontractors so most of the subcontracting work will be done by "in-house" personnel. (Subcontracting work refers to work like plumbing, electrical, foundation, framing, and roofing.)

Other contractors subcontract nearly everything and act as coordinators of the subcontractors. Contractors of this type may have subcontractors with whom they work regularly.

§ 97.04(a)(3) Construction Manager.

An owner may contract specially for construction management. This is a flexible term encompassing many types of owner-construction management agreements. n53

The difference between a construction manager (CM) and a general contractor is that the CM isn't obligated actually to build anything; in most states doesn't need a contractor's license; n54 doesn't contract on the CM's own behalf with subcontractors; and seldom guarantees a fixed price. The CM works usually on a cost-plus contract. n55

A construction manager (called a Project Manager in the engineer's--EJCDC--standard form) takes over many of the owner's administrative and coordinating functions. These include evaluating the design for feasibility, budgeting, cost estimating, negotiating subcontracts, scheduling, supervising and overseeing the construction job site, and monitoring the cost, timeliness and quality of performance. While some owners are able to perform these tasks "in-house," many do not know enough about construction to manage the process on their own.

As in the owner/builder arrangement, the owner contracts directly with the prime contractors who would be called subcontractors if a general contractor had been involved.

§ 97.04(a)(4) Designer-Builder.

Under the design-build format, the owner awards the contract to one firm which designs and constructs the project. n56 There are a few architects prepared both to design and construct what they build. Most large construction companies undertake design-build projects by employing the architect directly.

For the owner, "design-build" means dealing with just one firm, not two, in getting the project built. Disputes between architect and contractor are minimized (or kept out of the owner's way) since architect and contractor are working under one corporate roof.

Disputes between independent architects and contractors are not all bad for the owner. They can sometimes benefit the owner as the architect and the contractor watch each other, the architect customarily safeguarding project quality while the contractor keeps an eye on cost and timing. But often what happens is the architect and contractor end up blaming each other for problems and delays. The owner doesn't have the knowledge and experience to determine who is right, and yet the contractor demands more money and delays the project. The design-build form of contract is supposed to protect the owner from this scenario. n57

Following the collapse of a multi-story parking garage at California State University at Northridge in the January, 1994, Northridge earthquake, an engineering firm studying the system under which the university contracts for construction

faulted the use of the "design build" format. "It is our opinion that the advantages ... may not be worth the price of potentially low quality designs that even in a moderate earthquake may fail." n58 The engineers found that the designers failed to address a "series of general provisions" in the building code and that led to their conclusion the code was not complied with.

The policy choice in design-build is whether more is gained by the critical faculties of designers and builders overseeing each other's work than is lost by the internecine bickering which often comes when separate firms handle each function.

Conventionally, the design-build format has been thought to work best for projects that are easy and straightforward--a standard type of building. "When design-build contracts are used for anything other than the most standardized building types (metal or tilt-up warehouses, service stations, or fast food outlets for which standard details have been prepared), there are usually disputes concerning both the scope of the work and its quality." n59

A case has been made, though, for design/build contracts for build-to-suit projects. The case begins by pointing out that many of the participants in the traditional design-bid-build process have an incentive to get things wrong, for architects and engineers to design incomplete plans, and for contractors to charge for "extras" as plan shortcomings materialize during construction. Architects and engineers will claim compensation for additional work, contending that the gaps aren't their fault, just part of the process. Low-bidding contractors will have counted on change orders to lift their bid price into profitability.

Design/build can begin with a clear definition of the scope of work developed by all the parties involved in the project, and refined as construction proceeds. This is the way most firms develop products, and it is also the way Japanese and many European contracting firms work--with great success. By leaving the detailed design for later, as the project is actually being built, newly discovered site conditions and construction problems can be factored into the program and its specifications. (In other words, design/build is more readily combined with fast-tracking, defined below, than the traditional design-bid-build process).

> The appeal of design/build lies in its ability to control spiraling costs, establish an effective system of risk management and maintain efficient and dependable project schedules ... . The chief advantage is the accomplishment of a single course of responsibility for product delivery. n60

An additional advantage of the design-build format: it gives the owner a much improved chance of obtaining a fixed price contract. The architect doesn't have to guess what the contractor will bid and eventually charge. The contractor doesn't have to worry about the aesthetic demands the architect will make during construction.

§ 97.04(a)(5) Prime Contractors in Fast Track Projects.

In a fast track program, construction begins before all the design work has been done. This can save millions in large projects since enough of the design can have been completed to start grading and foundation work before every design detail has been decided. Theoretically, projects begun earlier should be completed earlier. Further, developers like the cash flow implications of fast tracking. They get to tap into the construction loan fund sooner.

Fast tracking opens the construction loan account early. Fast track contracting becomes popular in times of high interest rates, or when there are time limits on land-use entitlements, and is justified by harsh laws of economics. As an example, an owner may invest $10 million to build a hotel. The hotel will not bring in one dime of rent until the completion of construction. Toward the end of the job, the owner's interest costs approach $40,000 per day. The anticipated daily gross income of the hotel is $100,000 per day. This produces a motivation to *fast track* the job. n61 A fast-track project is divided into phases, and prime contractors bid one phase at a time. On one hand, this allows each trade contractor to identify and bid its work more accurately because it is bidding on a discrete portion of the job. Since the bid packages are tailored to the separate trades, each may be more detailed than when the entire project is designed

in advance. Subcontractors don't have to review the entire set of plans and specifications to scope out their parts of the work.

Fast tracking has drawbacks. Fast tracking increases the chance that in the rush, some work isn't assigned to any of the trades or contractors because the design is being done piecemeal. Also, contractors don't like to make fixed-price or G-MAX bids without the details spelled out in advance. (G-MAX, explained in the following pages, means cost-plus subject to a guaranteed maximum price.)

Sometimes fast tracking occurs unintentionally because the owner happens to be in a hurry. The project is put out to bid before the architect's plans are complete, and before the building and safety department has reviewed them, identified shortcomings, approved the architect's changes in response to the plan checker's review and issued a permit.

A contractor is entitled to charge more for costly, significant project changes. When a winning bidder is chosen on the basis of plans inadvertently fast tracked, and the plans need to be changed substantially, the contractor will be enviably situated to demand extra compensation for the numerous change orders that are sure to follow.

An experienced construction lawyer observes: "If *design build* offers the least exposure to construction disputes, *fast track* offers the most." n62 In the ensuing disputes over whether the differences justify a higher price, some cases are decided in the contractor's favor on the notion that the G-MAX only applied to the original scope of work. n63 But some cases go for the owner when the contractor had experience with the type of project and could reasonably have been expected to extrapolate from the incomplete plans to what eventually became the final plan. n64 In one case, the contractor bid $1,790,643 to construct a motel, relying on its own prior experience with comparable motels. The project ended up costing more than the G-MAX price and the contractor got stuck with the overage. n65

§ 97.04(b) Pricing.

Contracts may be priced in three basic ways: (a) "cost plus," (b) Cost Plus with a Guaranteed Maximum Price (G-MAX), or (c) lump sum or fixed price.

§ 97.04(b)(1) "Cost Plus."

In this pricing arrangement the contractor is reimbursed (usually monthly) by the owner for all construction costs. The owner also compensates the contractor for overhead. The contractor's profit comes in the form of a fee, either a percentage (5-15% usually) of construction costs, or a fixed amount paid in monthly installments or every two weeks. In competitively bid cost-plus contracts, the "costs" are paid by the owner--whatever they turn out to be. Bidders compete on the basis of the "plus"--the percentage of profit and overhead they propose to add to the contract price.

When a contractor is offered a cost-plus contract or one that is cost-plus with a guaranteed maximum, the contractor is likely to have heart flutter at the thought of the opportunities the contract presents for increasing the scope of work, loading of crews and benefiting favored subcontractors and suppliers all with resulting increase of profit to the contractor. A word of caution is in order for the contractor and his counsel, for all is not what it may seem. n66

The word of caution comes from studying the handful of cases litigated under the AIA form dealing with cost-plus contracts, Form A111 (the 2007 version is Form A102-2007). Courts often decide disputes arising under cost-plus contracts in favor of the owner and against the contractor. They cite this sentence from the AIA form: "The Contractor accepts the relationship of trust and confidence established between him and the Owner by this agreement." n67 This provision implies the contractor owes the owner the same sort of fiduciary duty as parent owes child, guardian owes ward, clergyman owes parishioner. The owner most likely to be granted "fiduciary law" protection is a novice trying to build a dream house on a tight budget. n68

Cost-plus contractors held to a fiduciary standard are rigorously second-guessed by reviewing courts to make sure they incurred no unnecessary costs. Cost-plus contractors are obliged to update the owner frequently about the costs being incurred. Cost-plus contractors must let the client know from time to time what the final cost will be. Cost-plus contractors must resist the temptation to charge the client for work the contractor does directly. n69 Their failure on any of these counts may result in the cost-plus contractor having to absorb some or all of the project cost overrun.

The biggest drawback to the owner under a cost-plus contract is not knowing in advance what the project is going to cost. A second drawback, alluded to in the "fiduciary" discussion, is that the contractor may be tempted to cheat. Contractors on any type of fee arrangement are tempted to "exaggerate" expenses, double bill, direct materials to other sites, but the temptations are far greater in a cost-plus than a fixed-price contract. The benefits of cost-plus may elude the owner who knows little of what things are supposed to cost and has no way of auditing the contractor's records. A third drawback: the cost-plus contractor has no incentive to spend as little as possible completing the project in the shortest possible time. That is why some cost-plus contracts are written to split the savings between owner and contractor of projects completed under budget or early.

Further, the higher the cost, the bigger their fees when fees are a percentage of cost. n70 That is why many "cost-plus" contracts limit the general contractor to a fixed fee instead of a percentage based on cost. At least with a fixed fee the contractor has no direct profit incentive to let the meter run on the project any longer than necessary. The contractor's profit won't grow with the cost overruns.

Defining "cost" is especially crucial in cost-plus contracts. The owner will seek to prevent the contractor from including items that should be counted as part of overhead such as telephone calls, carfare, postage, stationery, use of tools and equipment. n71 Even with the most careful drafting, disputes arise over what counts as an allowable cost.

Why are cost-plus contracts ever used? (1) Owners who care more about quality than price may be best served by cost-plus contracts. Contractors on cost-plus contracts are relieved from having to worry about getting stuck with the bill if the project runs over budget as they would on a fixed-price contract. (2) Some projects are unique. If put to fixed-price bids, contractors would overbid to protect themselves because the project is unpredictable. (3) Fast track projects are often cost-plus precisely because construction begins before detailed plans for the entire project have been completed, so the contractor really has no basis for making a fixed-price bid. (4) When the owner trusts the contractor, cost-plus may be a better deal for the owner than a fixed price bid if the project costs less to build than was estimated. The less the project costs to build, the less the owner pays.

§ 97.04(b)(2) G-MAX.

In a G-MAX the contractor promises that the project will not exceed a fixed sum. But if the project costs less, the owner pays only "cost-plus." The purpose of obligating the cost-plus contractor to commit to a guaranteed maximum price is to motivate the contractor to be efficient, and to protect the owner against liability for cost overruns. When the guaranteed maximum price is reached, the contractor will have to pay everything over the G-MAX--unless the owner required costly changes or agreed to pay more. n72 The owner and contractor entered a "cost plus with a guaranteed maximum," selecting the appropriate AIA form. The guaranteed maximum was $250,000. The owners were eventually billed and paid $593,687.79. The contractor always knew, but never told the client, that the project would run well above $250,000, and charged nearly twice his actual projected cost for his own work on the project. The owner agreed to pay some of the overrun because of changes in the plans. But the contractor was required to absorb all the excess above the G-MAX price for building the original project, including $100,000 to complete the project which the contractor left unfinished.

Under a G-MAX or fixed price contract the AIA forms provide, understandably, that subcontracts cannot be let over the contractor's reasonable objection. n73 If the owner insists on hiring a subcontractor whose bid exceeds that of the contractor's preferred lower bidder, the contractor may require an increase in the G-MAX price to cover the difference

between the two bids. n74

A contractor's G-MAX obligation should be worded clearly lest a maximum cost figure be construed as nothing more than an estimate of probable cost. This is precisely what happened in *Robinson & Wilson v. Stone*. n75 Doctors were building a medical office building, part for their own use, part for lease to other doctors. They were meticulously clear about the plans and specs for the space they were to occupy. But their construction contract made no provision for how the rented space was to be finished. When their construction lender insisted they clarify this, they added a provision that the contract price be increased $30,040 for completion of the rental offices "to the standards fixed by the plans and specifications presently in existence for the other areas of the building." The actual cost of finishing that space ended up at $85,000. The doctors contended theirs was a G-MAX contract. The court agreed with the contractor that it couldn't be since the scope of work had been so casually defined. There was no "standard" medical suite, as far the court could see. The court construed the $30,040 figure as an allowance or estimate only, not a G-MAX.

Bottom line: for a G-MAX format to succeed for the owner, the definition of the scope of work must either be so broad that any and all specific "changes" fit within the original definition of work and can't be billed as "extra," n76 or so specific and detailed that nothing is left out.

Contractors under G-MAX need to be given some incentive not to hit the max. Savings below the G-MAX may be split between owner and contractor equally or even 60-70% in the contractor's favor. Under the AIA Standard Form Between Owner and Contractor, the owner makes progress payments based on the lesser of the percentage of work actually completed or the expense incurred, divided by the G-MAX price allocated to the completed portion of the work. n77 Say the total contract price is set for a G-MAX of $100,000. Ten percent of the work is finished. It could have cost as much as $10,000 but it only cost $8,000. Under this formula, the contractor would get only $8,000. Contractors might be tempted to pad expenses so they could extract the full $10,000. After all, there may be unpleasant surprises ahead and if the contractor doesn't hedge now, she may get stuck later. An agreement to split the savings generously with the contractor dulls the edge of this temptation.

§ 97.04(b)(3) Fixed Price.

This type of pricing arrangement is supposed to inform the owner what the project will cost in advance. It works only for fairly standard and predictable projects. Also, the project plans and specs must be so detailed and complete that few questions can arise concerning what they mean. Even then, if the contact doesn't provide a clear way of pricing change orders, the final cost can skyrocket.

The advantage of a fixed-price contract to the owner is price certainty. There are some disadvantages to the owner: (1) Because the contractor under a fixed-price contract keeps all the savings, the contractor has an incentive to cut corners. So the owner needs to control quality with special diligence under a fixed-price contract. n78 (2) If the project is unique, or the plans incomplete when put to bid, the contractor will seek to protect himself against uncertainty by setting a very high fixed price. The owner may be paying a hefty risk premium measured by the difference between the fixed-price bid and what the owner would have paid on a cost-plus basis. (3) There is little point in entering a fixed-price contract with a poorly capitalized contractor who underbids the job. At some point, the contractor is likely to demand more money or quit.

§ 97.04(b)(4) Hybrids.

More than one form of price arrangement can be utilized in the same transaction. For instance, a developer might conduct bidding among qualified contractors only so they can compete in setting the contractor's fee and overhead. The contract could then be awarded to the contractor who bid the lowest fee on the basis of cost-plus with a guaranteed maximum. Or the developer could contract directly with some key trades for fixed-price contracts and with others on a cost-plus or cost-plus G-MAX.

§ 97.04(b)(5) Competitive and Negotiated Bids.

Another dimension of choice facing the owner is whether to entertain competitive bids for the job, or to negotiate directly with one or two general contractors. Many developers use aspects of both methods, seeking bids first and then negotiating with the lowest qualified bidder. Many shrewd contractors abhor competitive bidding. As Albert Reichmann put it, in a competitive bidding situation, "the bidder who makes the biggest mistake gets the job." n79

Government contracts, by law, must often be let to the lowest responsible or qualified bidder. The theory is that it fosters competition, gives everyone an equal chance to do public work, saves taxpayers money, and avoids favoritism, fraud and corruption. But it is also expensive for the many contractors who prepare bids which only one of them will win. Further, taxpayers pay a premium when governments can't negotiate privately with qualified contractors as private developers do. In the private sector, the next-to-low bidder may end up with the job, negotiating to beat the low bidder's initial prices. Public sector managers are barred from reaching "off record" deals like that. Contractors' representatives assert that government competitive bidding procedures are so elaborate, the paperwork so much greater than anything in the private marketplace, and the final selection process so rigid that contractors "routinely bid government work 10 to 30 percent higher than similar work in the private sector." n80 Almost everyone concedes that competitive bidding works poorly for goods and services that aren't standardized and easy to evaluate on completion. Yet, California courts require competitive bidding even for a construction manager type of contract. The contested rationale is that competition will reduce costs and avoid favoritism. n81

§ 97.04(b)(6) Incentives for Early or Below Budget Completion.

Should construction contracts include incentives for early performance and performance at or below budget?

The overcommitted contractor or subcontractor who anticipates a big payoff for getting the job done early or below budget may well favor the "incentive" site over other jobs.

On the other hand, many developers view these incentives as nothing but invitations to substitute cheap materials and "short cut" building techniques for quality work and a quality job. Indeed, one major homebuilder in California, well-known for rewarding employees when home sales have closed, is equally well-known for several well-publicized liability suits by disappointed home buyers alleging shoddy workmanship, defective construction, and fraud by sales personnel.

§ 97.04(c) Scheduling.

> Courts have held that it is an implied obligation of the contractor to complete the work within a "reasonable time." Despite the fact that the "reasonableness" standard is intended to be an objective rather than subjective standard, it is a standard which is nonetheless extremely difficult to define.
>
> Ultimately, what is a "reasonable time" must be determined from the totality of the events as viewed in the light of the reasonable expectancies of the parties at the time they entered into their contract. To the extent that a Schedule exists and its content is agreed to by the parties, the Schedule creates one objective means of determining what the parties considered to be "reasonable," and can therefore be an invaluable tool in and of itself in clarifying this reasonableness standard and in resolving disputes. n82

The schedule for a very simple project, such as the construction of a garage, may simply consist of starting and completion dates. As the complexity of the project increases, so does the complexity of the schedule. n83 The schedule may break the project into stages, which not only aids in management of the construction, but also provides points for progress payments. n84

The process of negotiating for control of the Project Schedule can be generally broken down into four steps: (A) choice of a scheduling method; (B) establishing the format and content of the Schedule (preparing the scheduling clause or specification); (C) submission, approval and adoption of the Schedule; (D) establishing ground rules in the contract for making changes (extensions) in the Schedule. n85

§ 97.04(c)(1) Excused Delays.

Delayed activities may or may not obstruct the critical path. If the developer's contract doesn't reserve the "float" to the developer, the contractor may have a defense for late performance if the contractor's delay didn't cause a delay in the overall project completion date.

In *Morris Mechanical Enterprises v. United States*, n86 described later, the contractor supplied an air conditioner chiller 231 days late. However, it didn't matter because the project was so far behind for other reasons, that the government wasn't ready for the chiller when it finally arrived. The most common sources of excused delays are owner-generated change orders and design changes, or other slower performing subcontractors whose work must be completed first.

§ 97.04(c)(2) The Owner Liability to One Contractor for Another Contractor's Delay.

Suppose a trade contractor (a structural contractor) agrees to a fixed price contract with a definite completion date and is delayed by another trade contractor (mechanical). Can the delayed contractor obtain damages against the owner? Is the contractor's late performance excused to the extent its delay resulted from another contractor's late performance? That depends on the owner-contractor-subcontractor arrangements. The subcontractor may not be in privity of contract with the owner and may need the general to intervene and assert the subcontractor's damage-for-delay claim against the owner. Alternately, the subcontractor may be a third party beneficiary of any provisions in the owner-general contact agreement holding the owner responsible for keeping the job moving. The general contractor or construction manager may be made primarily liable for preventable delays. But if the owner has the authority to order a contractor to increase shifts and workdays, and doesn't order the tardy subcontractor to put on double shifts and pay for accelerated deliveries, the owner may be liable for the wrongfully delayed contractor's loss. n87

On the other hand, suppose subcontractor A's tardy performance delays subcontractor B's work, and if B doesn't complete ahead of his promised due date, the general contractor, C, will be liable in liquidated damages to the owner for late completion. The contractor orders B to go on double shifts, knowing B expects reimbursement. So the contractor sues A to recover B's cost overrun which A caused. But A's contract has a liquidated damage clause, a per diem sum, for late completion. Is A's liability to the contractor limited by this, or is A liable for the actual damage the contractor's order to B caused? A's liability is clear if A promised indemnity for acceleration payments A's delay caused other subcontractors. Subcontractors wanting to protect themselves against delays caused by other subcontractors need to be sure the owner or general contractor has put in each subcontractor's contract a provision obligating that subcontractor to pay the acceleration costs its delay causes to other subcontractors.

§ 97.04(c)(3) Exonerating Owners from Liability for Delays They Could Have Prevented.

Owners often place "no damage for delay" clauses in their contracts. They hope this clause results in a delayed contractor getting only a time extension to complete his work, no cash. Such provisions are particularly important when the owner or architect caused the delay by changing the project design. However, courts are sometimes reluctant to enforce these clauses, and have held owners liable in spite of these attempts at exculpation, when the owner's delay is construed to have been in bad faith, the delay was a sort not reasonably anticipated in the normal course of construction, and the owner actively interfered with the job, or abandoned the project.

An example of bad faith: the owner knew that the contractor preparing a site for a freeway assumed the site was dry. In

fact, the owner--the state highway department--knew soil conditions to be wet (soft) and withheld that information from the contractor. n88

A number of contract provisions may achieve the same result as a "no damage for delay" clause. (1) The owner may reserve the right to delay, and such delay shall not constitute a breach. (2) The contractor's sole remedy for delay is a time extension equal to the owner's delay. (3) The contractor must give written notice at the time of the delay, or shortly thereafter, or be deemed to have waived its right to claim damages for delay. (4) A modest liquidated damage could be set as the contractor's exclusive remedy for owner's delay.

§ 97.04(c)(4) Contracts Conditions Provide for Extensions.

Construction contracts usually specify the number of days within which the work must be performed. The contract will also specify the conditions under which the contractor may request and be granted an extension of time. Extensions are frequently permitted when unexpected circumstances arise beyond the contractor's control. Many contracts provide that an extension may be granted only when the contractor requests it in writing within a certain number of days after the event that the contractor claims is the cause of the delay.

§ 97.04(c)(5) Liquidated Damages for Delays.

Construction contracts may provide for the contractor to pay the owner *liquidated damages* at a set amount for each day that the project is not finished beyond the contract completion date. The purpose is to "alleviate uncertainty over the extent of the parties' potential liability without relying on the courts." n89 This purpose is often defeated because courts will overturn liquidated damage clauses for a great many reasons--depending on the state and whether the contract is for private or public work. Some courts strike down "unreasonable" provisions, those calling for sums greatly above what the non-breaching party could expect as actual damages, or clauses intended to be punitive. n90 Some courts have let contractors off the liquidated damage hook when projects were "substantially" but not totally complete. n91

In some states the innocent party must show at least some actual harm or damage caused by the breach before the liquidated damage clause can be triggered. "[A]lthough proof of actual loss is not a prerequisite to collecting liquidated damages, a showing of some actual harm or damage is necessary ... ." n92 Setting the liquidated-damage-for-delay sum is no easy matter. A sum too high may be declared unenforceable as a penalty. A sum too low may undercompensate the non-breaching party. n93

For a developer, the main cost of delay is the lost rental, or use value, of the project. This sum may bear no necessary relationship to what it will take to motivate the contractor to perform on time. Most developers would agree that a liquidated damages clause is not just to compensate them for losses due to late completion but also to deter the contractor from being late. The penalty clause should make it cheaper for the contractor to get the job done on time than not, even if this means he has to pay overtime, hire double crews, or pay more for the expedited fabrication and delivery of materials. The sophisticated owner realizes she may be paying a premium in the form of higher bids when contractors bid on a job with such a penalty included in the contract documents.

Setting a liquidated damage fee so high it bears no reasonable relationship to owner's likely losses, the owner risks having the clause declared unenforceable as a penalty. The owner may not care. If the clause succeeds in prodding the contractor into timely performance, the clause has served its purpose. Once the delay occurs, and the liquidated damage clause is declared invalid, the owner still gets the chance in court to prove actual damage. A contractor racing to avoid a steep liquidated damages clause, like a speeding motorist late for work, may take unfortunate, potentially calamitous risks. California courts scrutinize liquidated damages clauses closely to prevent forfeitures and penalties. In other jurisdictions such clauses have been enforced with less difficulty. In Texas, for example, a contractor was allowed to collect completion costs plus 10% from a subcontractor who had failed to complete the project. Cost plus 10% was what the contract provided as the measure of damage, and that was what the contractor who completed the work sued the

subcontractor for. The Fifth Circuit Court of Appeals upheld the 10% as a reasonable and customary profit for construction work. n94

In one landmark case on the enforceability of liquidated damage clauses for late performance, n95 Bethlehem Steel was 52 days late in furnishing, erecting and painting structural steel for a highway. In accordance with a contract provision calling for $1,000/day for late performance, the City of Chicago withheld $52,000 in payment. Bethlehem Steel's argument was that the City of Chicago had sustained no damage. According to the contract the sole stated purpose of the penalty was to avoid delay in the completion of and opening of the South Route Superhighway. n96 Since the highway had opened on time, Bethlehem Steel's delay proved harmless. The court enforced the contract anyway: a promise is a promise.

The opposite result appears to have been reached in *Morris Mechanical Enterprises v. United States*. n97 A beneficiary of the General Services Administration's small business set aside program won the right to supply a 650-ton centrifugal chiller for a Federal Law Enforcement Training Center in Glynco, Georgia. The subcontractor shopped the contract with the three major suppliers in the industry. It contracted with Airtemp, a division of Chrysler Corporation, to produce the chiller because Airtemp was the only one that would guarantee a delivery date. Airtemp was very late delivering the chiller and caused the subcontractor to be 231 days late. The subcontractor stood liable for liquidated damages of $100/day--$23,100--which was withheld from a $78,763 contract. In fact, the entire job was delayed so substantially that the chiller--once on the critical path--no longer was. The court held that the subcontractor was therefore entitled to an extension of time to permit it to complete its work after the prime contractor formally prepared the site so that they were ready for the chiller.

The differences between *Bethlehem Steel* and *Morris Mechanical* help explain when liquidated damages delay clauses are enforceable and when they are not.

(1) In *Morris*, the contractor had not been able to perform on time because another contractor failed to supply a chiller on time. Bethlehem Steel had no other firm to blame for its tardy performance. Government contracts excuse contractor delays from contingencies over which they have no control. n98

(2) The fact that the highway was completed on time didn't mean the government suffered no damage due to Bethlehem's delay. Bethlehem's delay actually caused real problems to the City. The delay hindered the work of other contractors. It interrupted their production schedules, causing substantial time losses. It resulted in the subcontractor which depended on Bethlehem's timely performance having to lay off employees temporarily and posed a greater danger of accidents. It increased administrative costs and resulted in scheduling difficulties.

(3) The liquidated damage sum in *Bethlehem Steel* was probably a small percentage of the total contract. It was one-third of Morris Mechanical's gross and probably exceeded its net. Ordinarily, this wouldn't be relevant in assessing the reasonableness of a liquidated damages clause which looks to the probable loss for the innocent party--not the harm to the breaching party. But the purpose of Morris Mechanical receiving this contract was a government effort to assist small businesses. Socking them for damages in excess of their profits for delays they didn't cause and had tried their best to avoid would work against the purposes of the GSA's small business set aside program.

The court put down Bethlehem's argument on freedom of contract grounds: "There is no sound reason why persons competent and free to contract may not agree upon this subject as fully as upon any other, or why their agreement, when fairly and understandably entered into with a view to just compensation for the anticipated loss, should not be enforced." n99

A liquidated damages clause for late performance does not bar a developer from claiming--and being awarded--actual damages attributable to other aspects of the breach. A contractor who completes performance late may also have failed to perform within the budget or to build according to plans. For these items the developer may recover sums in addition

to a liquidated damages "late fee."

If the delay has been caused both by some acts of the owner (e.g., change orders) and some lack of diligence on the part of the contractor, it might make sense to apportion the blame and enforce a late-performance liquidated damages clause with an apportionment or set-off for that part of the delay attributable to the owner's acts. Especially in a comparative negligence state this would be sensible, but courts are divided in their willingness to apportion liquidated damages in these circumstances. n100

Most decisions indicate that courts are willing to apportion damages and apply the clause to that part of a delay for which the contractor is responsible, especially when the contract provides for apportionment. Unfortunately, some decisions indicate that mutual responsibility acts to abrogate a liquidated damages clause altogether, regardless of express contractual terms to the contrary. n101

Since judicial enforcement of a liquidated damages clause is so unpredictable, owners may consider using a "bonus" clause in an attempt to draft around the vagaries of liquidated damage clause enforcement. n102

For example, suppose that a developer and contractor both believe that a project can be completed in ten months, and that a fair price of the job is $100,000. The developer wants a liquidated damages clause of $300 for every day over ten months it takes to complete the project. Suppose rather than using a liquidated damages clause (which a court may later strike as punitive), the parties use a bonus instead. The contract calls for completion in twelve months at a base price of $82,000 plus a $300 per day bonus for every day that the contractor finished early, so if the contractor finishes in ten months as contemplated, she would receive $82,000 plus an $18,000 bonus (60 days at $300/day), or a total of $100,000. This provides the same incentive for a contractor as a ten-month contract for $100,000 with a $300 per day liquidated damage clause for late performance. In either case, the contractor loses $300 for every day over ten months that the contract remains uncompleted.

A court is likely to uphold the bonus clause for early performance against the challenge that it is a disguised penalty. n103 Failure to earn an early completion bonus is no default by the contractor, but rather an alternative performance in satisfaction of the contract. The contractor has a choice: perform early (in ten months) and receive a bonus; or perform on time (in twelve months) and receive the base contract price. In either case, the contractor fully performs.

Of course, if a court determined that the alternative performance was not a true option, that only one performance was really contemplated by the parties, a court might characterize the bonus clause as a disguised penalty. n104 This outcome seems most likely when the bonus component of a contract is excessively large, and it is an "all or nothing" bonus; for example, paying the contractor an $18,000 bonus for completing the contract in ten months, but no bonus for completion after that date. With a "sliding scale" bonus, the contractor would seem to have a rational choice in performance because not all would be lost by failing to perform early. n105 Only a rare "bonus" clause would drive a court to this result.

The contractor runs the risk in the "bonus" formula that if the contractor finishes late and the owner's actual damage far exceeds $300 per day, the contractor will be liable for actual damage. The "bonus" is not, after all, a liquidated damage proviso. Say the job isn't completed for 14 months. The owner may successfully contend that while the contractor would have earned $300 per day for every day the job was completed short of 12 months, the contract provided for completion in 10 months and the project wasn't completed in 10 months. Indeed, even if the contract took, say, 11 months to complete, the owner might claim actual damages for one month of delayed completion as an offset against the bonus.

Both liquidated damages and bonus payments are financial incentives, and ... "[p]eople do respond to economic incentives, often with huge advantages to everyone involved." Projects get completed more quickly, and thus anything that boosts the credibility of financial incentives will conserve resources in the future. n106

§ 97.04(c)(6) How to Assess a Late Performance Penalty When the Contractor Abandons the Job.

§ 97.04(c)(6)(i) Generally.

Sometimes a contractor abandons the job altogether. Not all courts are prepared to enforce liquidated damage for delay provisions when, instead of merely performing late, the contractor abandons the job entirely. Some courts reach the conclusion that late payment penalties aren't intended to cover total abandonment. Some hold that if the abandonment comes after the scheduled completion date, the contractor's liability is for breach of contract--not just for delay. n107 Where courts do enforce late completion fees in abandonment cases, is the original contractor liable for a late completion fee only up to the date it abandoned, or all the way to the day a replacement contractor actually finished the job? Neither, ruled the Massachusetts Supreme Judicial Court in *City of Boston v. New England Sales and Manufacturing*. n108 The abandoning contractor is liable on a late completion penalty to the day the contract reasonably should have been completed. So if the original completion date was February 1, the contractor abandoned March 1, and the contractor completed on April 1, the original contractor would be liable for two months' late fee but only if the owner demonstrated that April 1 was a reasonable completion date.

§ 97.04(c)(6)(ii) Distinguishing Substantial from Final Completion in Assessing a Late Payment Fee.

A project is considered to be substantially complete when it may be used for its intended purpose, although the construction may not yet be fully performed. There may be numerous items of work still to be corrected or completed.

Prior to the work being declared substantially complete, the contractor would have made a list of all known minor corrections, defects to be touched up, and other remaining contract requirements yet to be performed. The architect would usually check the list and supplement it with any additionally observed items. The combined so-called punch list is then attached to the architect's certificate of substantial completion.

The architect's certificate is to be co-signed by owner and contractor indicating their agreement to the respective allocations of responsibility for security, maintenance, heat, utilities, damage to the work, and insurance. The certificate also determines the time within which the punch list work is to be accomplished by the contractor. The owner is then entitled to move in and occupy the premises.

The contractor continues with the punch list, completing all remaining contract requirements within the agreed time. The contractor is not relieved of responsibility for correcting or completing any contract requirement inadvertently omitted from the punch list. n109

Sometimes a building is sufficiently complete so part of it can be occupied while corrective work takes place on other parts to finish the job. Or, the building may function well enough for some but not all its intended purposes. Under these circumstances, the owner may not be able to persuade a court to enforce a liquidated damages for delay clause if it is "far in excess of such compensatory damages as would be indicated ... ." n110 If it takes a long time to cure serious defects, the owner may be able to collect actual, provable damages attributable to the late opening and high interim operating costs but not the liquidated damages fee. That fee might be construed as applying only to "normal" construction delays.

§ 97.04(c)(6)(iii) Allocating a Liquidated Damage Payment Among Subcontractors.

If the project is completed late, a general contractor may face a stiff liquidated damage fee for late performance. The GC hopes to pass that fee forward to the subcontractors by charging each of them a ratable share of the late fee without allocating blame to avoid time-consuming finger pointing among the subcontractors. Subcontractors who performed their part of the work on time aren't going to like this. They will, predictably, try to resist the prospect of paying damages for someone else's late performance. They may be asked to sign AIA Doc. A401-2007, *Standard Form of*

Agreement Between Contractor and Subcontractor, § 3.3.1, assessing subcontractors for late performance "only to the extent caused by the subcontractor ... ." This is no panacea for the diligent subcontractor. A subcontractor's performance could *cause* a delay even though the subcontractor had not *breached* any of the terms of its contract. A careful subcontractor will agree to share liability only if its performance caused a delay *and* it failed to perform according to the time provisions in its contract in such a way as to have breached.

§ 97.04(c)(7) Rights of Third Parties to Recover for Contractor's Delay.

In *J'Aire Corp. v. Gregory*, n111 the question before the court was whether a cause of action for negligent loss of expected economic advantage could be maintained against a contractor for the losses of a third party. J'Aire Corporation operated a restaurant at the Sonoma County Airport in premises leased from the County of Sonoma. Under terms of the lease the county was to provide heat and air conditioning. In 1975 the county entered into a contract for improvements to the restaurant premises, including renovation of the heating and air conditioning systems and installation of insulation. Because the contract did not specify any date for completion of the work, J'Aire alleged the work was to have been completed within a reasonable time as defined by custom and usage. Despite requests that the contractor complete the construction promptly, the work was not completed within a reasonable time. Because the restaurant could not operate during part of the construction and was without heat and air conditioning for a longer period, J'Aire suffered a loss of $50,000 in profits for which it claimed the contractor was responsible.

The court held that the contractor had a duty to complete construction in a manner that would have avoided unnecessary injury to J'Aire's business, even though the contract was with the county. J'Aire's injury was foreseeable, proximately caused by the contractor's conduct and its damages were reasonably calculable. Accordingly, the court awarded J'Aire its damages.

§ 97.04(d) Change Orders and Extras.

While contract work is proceeding, the contractor frequently revises plans, specifications, or orders. Owners change their minds. The architect's drawings and specifications never anticipate and specify every item of material and every construction process choice to be made. Building code inspectors may require further clarification. Who determines if these changes or revisions justify additional compensation for the contractor?

One way to discourage contractors from underbidding with the intention of making up for the low bid with long lists of claimed "extras" is to price extras tightly--either setting a small percentage for profit and overhead, or disallowing profit and overhead altogether. The contractor bids the job on the assumption that for the bid price the contractor will perform only the work called for by the contract. If the drawings were incorrect and the contractor relied on them in making the bid, the contractor is entitled to recover for the extra work necessitated by the faulty drawings. n112

Sometimes the plans are ambiguous, incomplete or internally inconsistent. Change orders result when the ambiguities are resolved, additional details are provided, or the inconsistencies reconciled. Who bears the cost?

The architect will claim that the owner got a degree of specificity and detail befitting the architectural fee she agreed to pay. If the contractor had wanted the architect to draw more detailed plans, the owner should have paid the architect a higher fee.

The owner will claim that it is the duty of the contractor to detect those flaws in the plans and call them to the owner's attention before bidding the job. This is a realistic expectation in a negotiated contract. But, the contractor who is forced into a competitive bidding situation shouldn't be expected to note ambiguities because other contractors may submit lower bids and remain silent. The owner should be responsible for the plans being complete and unambiguous in a competitively-bid job. At least, that is what the contractor will argue, should the need arise.

Some changes don't cost the contractor more than the original work would have cost. Even if the parties agree that the work is extra, a dispute may arise over the amount to be paid for it.

The AIA Owner-Contractor form provides for the contract price to be adjusted when there is a construction change by (1) a mutually-agreed lump sum, (2) a unit price if the parties agree to one or one is already specified in the contract, or (3) cost as determined by the parties plus a mutually-acceptable fixed or percentage fee. These depend on the owner and contractor reaching agreement. If they can't, then the change order is billed at cost, (4) the costs of labor (including fringe benefits and workmen's comp.), materials and supplies, rental costs of machinery and equipment, bond and insurance premiums, sales taxes and permit fees, plus the "additional costs of supervision and field office personnel directly attributable to the change." n113 In most cases, the upshot is that the contractor will be limited to a recovery of his actual costs for a change order unless the owner agrees to pay more.

The Associated General Contractors provision on compensation for change orders allows the contractor, in most cases, reimbursement for his actual cost "plus reasonable amounts for overhead and profit." n114

Form construction contract provisions on change orders differ significantly on whether the change must be in writing. The AGC form allows changes to be made by "drawings, specifications, exhibits or written orders." n115 The Contractor doesn't have to perform the changes "until the owner has approved in writing the changes in the Contract Price and Contract Time." n116

But, if the owner and contractor can't agree on a price and time schedule for the extra work, the owner can, in writing, authorize the contractor to perform, if the change is a "reasonably foreseeable alteration to the Work originally contemplated by the Contract documents." n117

Taken together, these provisions give the contractor the option of (1) doing the work on a spoken instruction, and fighting later with the owner about compensation, or (2) refusing to do the work until the owner agrees with the contractor on how much to pay for it, unless the owner puts the request in writing and the order is the sort of request the contractor had expected to be getting anyway.

The contractor who does the extra work and sues later must prove:

(1) The work was outside the scope of the contract.

(2) The owner ordered the work.

(3) The owner agreed, by words or conduct, to pay extra.

(4) The contractor didn't volunteer the extras free of charge.

(5) The extras weren't necessitated by a fault of the contractor.

(6) That an owner "wanted" an item doesn't prove the owner knowingly ordered it as an extra.

(7) The contractor's claim for additional payment has to be made clear to the owner *before* the work is done. n118

A form drafted for owners specifies that "Contractor shall make no change in the work without the issuance of a written change order, and contractor shall not be entitled to compensation for any extra work performed unless the owner has issued a written change order designating work to be performed." n119

This provision won't be worth much if the owner waives it by making oral change orders, doesn't object to additional work when it is so substantial it clearly amounts to an extra, or pays for changes made without a prior written change order. n120

> The judicial attitude towards formal requirements must take into account: the contract language, the experience of the parties in construction, the need to protect public funds (when the government is the owner), the reasonable expectations of the owner, and the potential unjust enrichment that can result if the contractor is unable to recover for admittedly extra work. n121
>
> In the event of a dispute over the price or the question of whether the work is extra, the contractor must carefully weigh the following alternatives that are available to him before proceeding. First, the contractor can proceed under protest, hoping to gain the extra compensation after the completion of the job through arbitration or legal proceedings. Second, the contractor can stop work under the contract and seek recovery on a *quantum meruit* theory for the work already done. Refusing to obey the order would have some very practical disadvantages. A court might hold that the architect was correct and the contractor wrong by refusing to proceed.

The contractor has a right to resist changes of such great magnitude that they alter the general scope of work and convert the contract into one quite different from the one originally agreed. Even if offered payment on a cost-plus basis, the contractor shouldn't have to accept work on a job so greatly enlarged as not to fall within the scope of work of the agreed contract. The owner can insist on a double-sink counter top instead of a single in a bathroom remodeling contract. But when a 200-square-foot bathroom remodel becomes a 1500-square-foot second story addition, the owner is going too far and the contractor has the right to refuse the "extra." Third, if the alleged extra work is severable from the original project, such as a swimming pool is from the remainder of a house, the contractor can refuse to build the extras until the terms can be worked out, and continue building the original project.

The contractor has a fourth option--a bit risky, but potentially lucrative if the changes are so enormous they are tantamount to a completely different scope of work than the original contract. The contractor can finish the project and then sue for the entire value of the work on a *quantum meruit* theory, claiming that the original contract was mutually abandoned.

> In cases involving non-construction contracts, abandonment may start with an intent to abandon by one or both of the contracting parties and conclude with an agreement by each that the contract is terminated and of no further force and effect. Using this analytical approach, completion of the contract would be inconsistent with a holding that a contract was abandoned.
>
> In the specific context of construction contracts, however, it has been held that when an owner imposes upon the contractor an excessive number of changes, such that it can fairly be said that the scope of the work under the original contract has been altered, an abandonment of contract properly may be found. In these cases, the contractor, with the full approval and expectation of the owner, may complete the project. Although the *contract* may be abandoned, the *work* is not. n122

The contractor who wins may cash in on the actual cost or reasonable value of the work done. n123 The contractor won't be bound by any fixed price ceiling or liquidated damages clause in the original contract, as *would* the contractor who sued for breach of contract. n124

Contractors often underbid jobs to win the contract, and count on making up their losses by change orders. Some courts are quite aware of this strategy, and don't like it. There are two ways of calculating damage after liability has been established when a contractor has been damaged due to a change order. One is the detailed cost method which requires a discrete cost breakdown measuring the cost of each change. n125 The other is far easier, the total cost method. This only requires a comparison of the costs as contemplated in the original contract with the actual final cost of the entire

project--change orders included.

> When a court concludes that the cost overrun was due to the owner or architect substantially changing the terms of the contract, and was not due to the contractor deliberately underbidding the job, the court may allow the contractor to recover actual costs without requiring the use of the discrete cost method. Although many courts have questioned the use of the total cost method's application, most courts now accept the method if a four part test is met. The total cost method hinges on proof that (1) the nature of the particular losses make it impossible or highly impractical to determine them with a reasonable degree of accuracy; (2) the plaintiff's bid or estimate was realistic; (3) its actual costs are reasonable; and (4) it was not responsible for the expenses. n126

As noted earlier, if the changes had been so substantial that the final design bore only slight resemblance to the project the contractor had bid, the court might have awarded the contractor a *quantum meruit* recovery based on its actual costs. The theory courts apply in such situations is that both parties agreed to abandon the contract and yet to continue the work. So the owner should pay for the value of the work.

Happy's contract with Quick-and-Dirty requires the contractor to comply with all federal, state and local laws, ordinances, rules, regulations and lawful order of all public authorities. It has a fixed completion date, a cost ceiling, and an obligation to continue work at a specified level of progress. The contract recites that the contractor has visited the site and is familiar with it.

As work begins, the contractor discovers underground oil seepage. He stops work and insists the owner clean up the site. This is a condition unforeseen when the contractor bid the job. He promises to resume when the site is safe and clean, and the owner produces evidence that she has obtained permits certifying that the site is clean. The contractor wants to be compensated for the intervening delay.

Happy points out that the contractor promised a job for a fixed price to be completed within a specified time. Delay will equal breach. In her view, he should absorb the oil cleanup costs as part of the original bargain. Happy believes the oil seepage is common to the area, and won't be very costly or difficult to remove.

The risks of environmental contaminants could have been allocated by contract. n127 Standard contract forms by the American Institute of Architects (AIA), the Engineers Joint Contract Document Committee (EJCDC), and the Associated General Contractors (AGC) provide for the situation where subsurface or latent site conditions differ materially from those contemplated in the contract documents. n128 None of those provisions appear in this contract.

Happy and Quick-and-Dirty both appeal to the architect and ask him to allocate the cost of cleaning up the oil to the other. He decides they should split the cost, and Happy should grant a time extension equal to the time it takes to clean up the site.

QUESTION:

How will the contractor be likely to wish "cost" for extras had been defined in the contract?

ANSWER:

The contractor will want cost defined broadly to include reasonable amounts for overhead and profit as well as for office and administrative expenses.

QUESTION:

How will Happy wish "cost" for extras had been defined in the contract?

ANSWER:

The architect will want cost to be defined as the actual cost of labor paid by the contractor plus materials purchased solely to do the work involved in the cleanup less any savings that result from the change order.

§ 97.04(e) Payment Delays.

In the absence of a contract provision, the common law "conditions" rule was that the performance of services had to be fully rendered before payment was made for those services. This protected the person *receiving* services. No payment was due until *all* the service had been completed. The paying party could withhold to make sure the services were satisfactory.

Even for the best of service providers this could be bad news. Huge sums may be withheld for trivial matters. The client or owner could bargain for a deeper deduction in the agreed price than what was reasonable by threatening not to pay. The service provider might capitulate, instead of incurring the cost of a lawsuit to compel a more equitable quantum meruit payment.

Contractors protect themselves from the harshness of the conditions rule by requiring payment as work progresses. The contractor hopes to stay even with or collect a bit more than actual time and material expended. The owner or client hopes enough money has always been held back (retained) to finish the job with another contractor if the first one should falter. Not surprisingly, construction contracts generally provide for payments to be made in installments, known as "progress payments." Developers and construction lenders don't pay for work in advance. Yet few contractors want to wait until final completion and fewer still have the resources to finance a construction job that may take months or even years to complete. Thus, the compromise is for periodic payments. A contractor might call for 20% of the contract price to be paid when the foundation is in, 30% when the structure is framed and the roof on, 20% when plastering is completed, 20% on completion, and 10% thirty-five days after recording notice of completion.

The contractor hopes the payment schedule is generous enough to cover the actual costs of labor and materials expended up to the date of payment plus overhead and profit. The developer hopes the payment schedule is tight enough so that if the contractor left at any time before completion, sufficient funds would remain to pay another contractor to finish the project with a premium for the second contractor's taking over an unfinished job.

Payment may be made directly to the general contractor with the lender and owner relying on the general contractor to pay subcontractors and material suppliers in exchange for mechanics' lien waivers collected periodically. Or payment may be made directly to the general contractor on vouchers signed by the general contractor and the supervising architect or construction manager.

The owner usually pays the contractor or the subcontractors 90% of the value of the work completed each month. It is common to retain 10% of the contract price until 35 days after completion of the work under any payout scheme as security against mechanics' liens and to ensure completion.

The owner's repeated or egregious failure to make a progress or vouchered payment may give the contractor the right to rescind the contract and abandon the job. The contract could provide: Contractor shall have the right to stop work if any payment, including any payment for extra work, is not made to contractor as agreed under this contract. In the event of such nonpayment, contractor may keep the job idle until all payments are received. n129

Without such a clause, not every failure to make a periodic payment amounts to such a substantial or material breach as to justify rescission, though. n130 Rescission is legally justified only when failure to pay is extended and unreasonable, or there is an outright refusal to pay, or a total repudiation of the contract. The contractor who rescinds because the owner has failed to make a progress payment risks being in breach itself if the nonpayment is later found justified, or

not so serious a delay as to be a "material" or anticipatory breach of contract.

Alternately, the contractor's option to stop work can be circumscribed by contract: In the event of nonpayment ... contractor agrees to continue the work diligently to completion and will neither rescind this contract nor stop the progress of the work, but will submit such controversy to determination by a court of competent jurisdiction after the project has been completed. n131

The AIA form gives the Contractor the right to "stop the Work until payment of the amount owing has been received" if the "Owner does not pay the Contractor within seven days after the date established in the Contract Documents the amount certified by the Architect ... upon seven additional days' written notice to the Owner." n132

§ 97.04(f) Developer's Option When Contractor's Performance Is Late or Inadequate.

A contractor may fail to complete a project on schedule, may complete the project but not in conformity with the plans and specifications, or may abandon the job. In any of these situations, the developer may sustain damages as a result of the contractor's failure to perform. n133

§ 97.04(f)(1) Measuring Damages.

The difficult question becomes what is the measure of the developer's damages?

The rule for measuring damages as formulated in the *Restatement of Contracts* emphasizes the need for avoiding economic waste whenever possible. Section 346 provides that the measure of damages for defective or unfinished construction work shall be either:

> (1) the reasonable cost of construction and completion in accordance with the contract, if this is possible and does not involve unreasonable economic waste; or
>
> (2) the difference between the value that the product contracted for would have had and the value of the performance that has been received by the plaintiff, if construction and completion in accordance with the contract would involve unreasonable economic waste.

The comments to this section point out that the purpose of allowing recovery is to put the injured party in a position comparable to that for which he bargained (the familiar "expectation" measure of damages). The injured party is allowed either a "sum of money sufficient to produce the physical product contracted for" or "the exchange value that product would have had if it had been constructed." The two may at times be equal, but where they are not, consideration must be given to whether it would be "imprudent and unreasonable" to tear down and reconstruct the structure in question. If it is unreasonable, then "[t]he law does not require damages to be measured by a method requiring such economic waste."

§ 97.04(f)(2) When a Contractor Can Be Ejected from the Job Site.

When the contractor proceeds too slowly with the work or does not have enough employees on the job, it is difficult for the developer to know at what point a sufficient breach has occurred to give him a right to terminate the contract. The developer will be in a stronger position if the contract contains a provision that time is of the essence and gives the developer the right to take over the job if the contractor does not execute the work diligently after written notice from the developer.

If the developer ejects the contractor as a result of a legitimate material breach on the contractor's part, the contractor will be liable to the owner for damages caused by the breach. The measure of damages will generally be the amount by

which the total project cost to the developer exceeds the amount that the developer would have paid under the original contract.

Sometimes a contractor's performance is so poor that the developer will want to eject it from the job and have the work performed by another contractor. Or a subcontractor will perform so poorly the general contractor will want it out. To justify ejection from the job, the breach must be *material*, otherwise a wrongfully ejected contractor may be entitled to the entire amount of lost profits on the job.

Under the AIA form, if the Contractor fails to carry out the Work as required, the Owner may correct the deficiencies and charge the Contractor, subject to the Architect's approval. n134

The owner risks being wrong about whether the Contractor was really in default or had neglected to carry out the work. Further, changing contractors mid-project is costly. The new contractor who picks up in the middle of a job needs to find out what arrangements have been made with subcontractors and suppliers and the prices that have been negotiated and amounts already paid. A new contractor's bid is apt to be high because he knows he is taking over a problem job.

§ 97.04(g) The State Contractors Licensing Board as a Tool to Protect Against Poor and Untimely Workmanship by Contractors.

Among the remedies a disappointed developer or home improver may invoke against a poorly performing contractor or subcontractor is to file a complaint with the state's Contractors' Licensing Board.

For example, Florida Statutes § 489.129 gives the board the power to "revoke, suspend, or deny the issuance or renewal of the certificate or registration of a contractor, require financial restitution to a consumer, impose an administrative fine not to exceed $5,000, place a contractor on probation, require continuing education ..." if the contractor is found guilty of acts including:

> (d) willfully and deliberately disregarding and violating the applicable building codes or laws of the state or of any municipalities or counties thereof, and
>
> (h) committing mismanagement or misconduct in the practice of contracting that causes financial harm to a customer ... .

Other states impose punishments for different causes. Regardless of their specifics, perhaps the greatest practical value of such statutes is the developer's use of the "threat value" of going to the board to motivate a poorly-performing contractor.

§ 97.04(h) The General Contractor/Subcontractor Relationship.

One of the main functions of the general contractor is to select and contract with all the subcontractors who will be needed on a job. Depending on the project, it may take between 40 and 100 subcontractors to complete. The general contractor will want to get at least three returned bids for each trade, which may require contacting at least five subcontractors. Contacting each of them, lending them a complete set of plans, getting the bids and plans back (which can be tough), and signing the contracts with them can be very complicated.

The real work begins in the trenches with the subcontractors. Again, there are form contracts between the general contractor and the subcontractors or the owner and the prime contractors. Their provisions are as varied as those in the owner-general contractor forms we have described.

The general contractor and subcontractor have a unique relationship. Their interests are often different, if not

conflicting. The general contractor has a complex project to build. From the general contractor's point of view, all of the individual parts are interrelated and tied together by a detailed schedule. The subcontractor, on the other hand, usually doesn't care about the project as a whole. The subcontractor's main concern is to do what it was hired to do and make as big a profit as it can. The subcontractor has its own schedule to worry about, and might even be working on other jobs at the same time. As a result of these different perspectives, general contractors tend to take an adversarial stance toward subcontractors. They feel the need to keep a close eye on subcontractors in order to ensure the quality of the work and timely performance. n135 Developer Fred Johnson elaborates:

> I think of it as war between myself and the subcontractors. The superintendent has to be prepared to pull out all stops to protect his turf. These guys will get away with anything they can. They'll take as long as they can. They'll cut corners on quality. They may use inferior materials and charge you for the good ones. For all these reasons you've got to have a smart and tough superintendent who'll make the subcontractors think twice before trying any of the tricks they're so good at.
>
> Subcontractors aren't stupid when it comes to figuring out who they can push around. Like sharks, they know if they have a weak general contractor or superintendent or developer, and they won't hesitate to take advantage of the situation.

Generally, there will be fewer problems when the developer is big and has worked with the subcontractor before. Contractor Matt Greene says that in this situation "the subcontractors make their project a priority, and if there's a problem, they'll pull their crews off other jobs and fix the one for the big developer. The big developers have the leverage of offering the subcontractors work again in the future. So the subcontractors reciprocate by making them a priority." When problems do arise, general contractors like to be able to fall back on liquidated damages clauses in their contracts with subcontractors.

Subcontractors often feel that the general contractor is too quick to blame them for delays or other problems. Subcontractor Wayne C. Foglesong offers the following rejoinder in defense of subcontractors: n136

> Often, the contractor is to blame. A contractor may call and schedule a job in two weeks. We get there and he's not ready for us. It's tough when you're a subcontractor to keep a crew ready to go, and have all the materials on hand, when you can't know for sure when you're actually going to be able to do the work. All of a sudden, the contractor will call in a panic and need you the next day. I'm supposed to have a crew sitting around waiting for the call? Most of the problem with getting adequate crews on site is the fault of the contractor's scheduling.
>
> Architects are also partially responsible for the problems of subcontractors. Contractors will use a set of the architects plans in the bidding process. Then after the bid has been accepted, we'll get a new set of plans to work from. Sometimes this new set has numerous changes that make the project a lot more difficult and expensive. This slows the process down while the subcontractor submits an extra, finds new materials, and reassesses his crew requirements. Even more problematic than more detailed plans are plans with inadequate details. We're the guys who are trying to make the picture into reality. In that process there are judgment calls, items not addressed in the plans. At some point we'll call the architect to come out and tell us what he wants. This takes time. While we're waiting around, everyone's blaming the subcontractor for taking too long.
>
> Inspectors are also very tough on subcontractors ... . Inspectors are often right and the work needs to be modified before it should pass; sometimes, though, the inspectors will misread a code, or make some unreasonable demands.
>
> To a lesser extent than architects, contractors and inspectors, other subcontractors make the job of a

> subcontractor more difficult. When the subcontractor that did the work before you didn't finish it all the way, it can take days to get him back to get it ready for you.

Problems are bound to arise in any project. All parties should anticipate this fact of real estate development and try to protect themselves through careful contracting.

§ 97.04(h)(1) Estoppel by Bid.

Suppose a subcontractor decides his initial bid was too low. He has no binding promise from the general contractor at the time he makes the bid that if the general contractor gets the contract, the general contractor will hire the low-bidding subcontractor. The low-bidding subcontractor renounces his bid after the general contractor wins the contract and before the general contractor and the subcontractor reach final terms. Some courts let subcontractors out of their bids on familiar contract grounds: offers may be freely withdrawn before acceptance. The subcontractor had no deal with the general contractor before the subcontractor withdrew his offer. n137 On what legal theory, if any, could the subcontractor be liable to the general contractor? Many courts hold subcontractors to their bids on a theory of *promissory estoppel*. The subcontractor's bid is held to be irrevocable once the general contractor relies on it in formulating a bid on the prime contract. n138

§ 97.04(h)(2) Must the Contractor Pay the Subcontractor Even if the Owner Doesn't Pay the Contractor? The "Pay When Paid," "Paid If Paid" Distinction.

O enters a prime contract with C, a general contractor, to build a project. C fulfills that obligation by doing some of the work itself and subcontracting the rest. The project is successfully completed according to plans. But O never pays C. Is C obligated to pay the subcontractors anyway--even if O's failure to pay had nothing to do with any shortcoming on the part of C or the subcontractor?

The answer may depend on whether the provision regarding payment in the contract between C and the subcontractors was closer to example (A) or (B):

> (A) Contractor agrees to pay to the subcontractor upon receipt of each payment received from the owner the portion of said payment allowed to contractor on account of subcontractor's work to the extent of subcontractor's interest therein less any percentage retained under said general contract.
>
> (B) The subcontractor agrees that the prime contractor shall be under no obligation to pay the subcontractor for any work done on this construction project until and unless the contractor has been paid therefor by the owner. Payment by the owner to the contractor is a condition precedent to the contractor becoming liable for payment to the subcontractor.

Predictably, the subcontractor has a far better case for payment under (A) than under (B) when O stiffs C. n139 Explanations, in addition to the "plain meaning" rule, include: condition precedents are not favored in law; the subcontractor not being paid is too harsh a result; C prepared the contract and contracts are construed against the drafter.

A number of cases hold C liable to the subcontractor on language like that in (A). n140 C is freed of liability to the subcontractor on language like that in (B). n141

§ 97.04(i) Subcontractors May Not Have a Cause of Action in Negligence for Property Damage Against Other Subcontractors.

Architects are held liable in negligence even to those with whom the architect had entered no contract because of the risks to health, welfare, or comfort that a defective design in construction may pose. Subcontractors whose negligence

results in physical injury to the employees of other subcontractors have been held liable to other subcontractors--absent worker's compensation schemes and other statutory defenses. n142

But, one subcontractor may not be liable to another for damaging the work of the first subcontractor. The failure to exercise due care, if it creates economic loss only, isn't usually thought a sufficient predicate, standing alone, to support tort liability. A more intimate nexus, a contract or something like it, is usually required in the absence of physical injury. n143

In one recent case, during the course of construction a masonry contractor allegedly damaged the prior work of the roofer. The owner who had contracted with both subcontractors back charged the roofer for costs the owner incurred in correcting the damage to the roof. The roofer sued the masonry contractor for reimbursement.

The court denied the roofer's negligence claim. The court's reasoning began with the observation that once the building materials are incorporated into a structure they become property of the owner. They are fixtures. The subcontractor no longer has a claim for damage to what has been incorporated into the structure. At that point the subcontractor's only cause of action, if any, is for economic loss, not property damage.

The court concluded that a subcontractor could be liable for negligence to the general contractor, to the owner, and maybe to third parties physically damaged or injured--but not to another subcontractor for economic loss alone. n144

(n17)Footnote 67. The language in Form A102-2007 is "The Contractor accepts the relationship of trust and confidence established by this Agreement and covenants with the Owner to cooperate with the Architect and exercise the Contractor's skill and judgment in furthering the interests of the Owner; to furnish efficient business administration and supervision; to furnish at all times an adequate supply of workers and materials; and to perform Work in an expeditious and economical manner consistent with the Owner's interests."

(n18)Footnote 68. *H. Scott Kahle v. John McDonough Bldrs., Inc., 590 A.2d 548 (Md. 1991)* . Court held that contractor owed fiduciary duty to homeowners in a cost-plus contract for a new home. Homeowners had never undertaken a construction project of this scope. But court held that this fiduciary duty was fulfilled when contractor met with homeowners at every stage of the construction, kept them informed of work progress, and explained all changes made and costs incurred as a result of these changes.

(n19)Footnote 69. In *Jones v. J. H. Hiser Constr. Co., Inc., 484 A.2d 302 (Md. 1984)* , the Joneses hired a construction company to build a house for them. They selected a "cost-plus" contract. The contractor estimated that the house would cost $200,000. The Joneses ordered about $24,000 in changes. The contractor disbursed payments totaling $277,000 and claimed reimbursement. The Joneses had agreed to pay $240,000 during the course of construction but balked at paying more than that. Despite the contract being cost-plus, the contractor was limited to a recovery of $240,000 because, as the owner's fiduciary, the contractor had a duty to keep the owners fully informed of cost overruns well in advance of completion and the contractor had failed to do that.

(n53)Footnote 103. *See, e.g., House Wrecking Co. v. Sonken, 133 S.W. 355 (Mo. App. 1911)* ; 5 Arthur Linton Corbin, Corbin on Contracts § 1072 (1964).

(n54)Footnote 104. *See, e.g., Garrett v. Coast & Southern Fed. Savs. & Loan Ass'n, 511 P.2d 1197 (Cal. 1973)* (en banc). ("[W]hen it is manifest that a contract expressed to be performed in the alternative is in fact a contract contemplating but a single, definite performance with an additional charge contingent on the breach of that performance, the provision cannot escape examination in light of pertinent rules relative to the liquidation of damages.").

In *Blank v. Borden, 524 P.2d 127 (Cal. 1973)* (en banc), the court held that a "withdrawal-from-sale provision" in an "exclusive-right-to-sell contract" was not a penalty. After quoting the above passage from *Garrett*, the court stated that the "clause in question presents the owner with a true option or alternative ... ." The *Blank* court distinguished *Garrett* on the basis of whether the promisor has a "rational choice." *Id*.

Applying this line of analysis to the present hypothetical, a court would not find that a bonus was a disguised liquidated damage clause unless the contractor had no "rational choice" but to perform the contract early and receive the

bonus. As the text indicates, this is only likely with a very large "all or nothing" bonus where a contractor would lose a large portion of the contract price for failing to perform by a certain date.

(n55)Footnote 105. *Cf. South Mall Constructors v. State, 463 N.Y.S.2d 581 (N.Y.A.D. 1983)* (a sliding scale contract is not intended to "liquidate damages nor to provide for a penalty;" quoting 5 Arthur Linton Corbin, Corbin on Contracts § 1072 (1964)).

CHAPTER 97 CONSTRUCTION AND DEVELOPMENT LAW

12-97 Thompson on Real Property, Thomas Editions § 97.05

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 97.05 Building Codes.

The developer must satisfy local building codes. This involves obtaining a permit for the plans before the work begins, submitting the work in progress to inspector review at crucial stages during construction, and finally receiving a certificate of occupancy as a condition to taking possession and using the space.

§ 97.05(a) Authority to Enact Building Codes; Evolution from the National to the State to the Municipal Level.

Unlike many other key sectors of the national economy, the housing construction industry operates in a local, rather than a national, context. The authority to regulate construction is probably best described in a single comprehensive document that has set the standard for building code lawyers, Charles S. Rhyne's Survey of the Law of Building Codes at 7-8 (American Institute of Architects, Washington, D.C.):

> The law of building codes is grounded upon what is called the "police power" of the state. The police power is the source of all authority to enact building codes. It has never been very exactly defined, and indeed the United States Supreme Court has said that it is "incapable of any very exact definition." Broadly speaking, it is the power of the state to legislate for the general welfare of its citizens ... .
>
> This power resides in the legislature of the states and enables the legislature to pass laws such as building codes. Some states have done so. But most states have chosen to delegate a portion of their police power to local government units such as cities ... . It is under the police power delegated by the state legislature that local governmental units are able to enact building codes.

Although cities and states retain the option to enact any ordinance they wish, a degree of uniformity has been achieved through the drafting and adoption of model codes. The principal codes that shaped the current state of building codes throughout America are the *Uniform Building Code* (drafted by the International Conference of Building Officials), the *Basic Building Code* (Building Officials and Code Administrators, International, Inc.), *The Southern Standard Building Code* (Southern Building Codes Conference), and *The National Building Code* (National Board of Fire Underwriters). The former three codes were drafted largely by professional groups of building inspectors, and each is periodically updated, normally with annual supplements. All three of the former code-writing groups united in 1971 to publish a

joint code: *One and Two-Family Dwelling Code* . Additionally, the Federal Housing Administration has established minimum standards that serve as guides for all federally-financed housing programs and influence the content of the model codes, *U.S. Federal Housing Administration, Minimum Property Standards for Multi-Family Housing.*

Los Angeles is a good example of how a city can start with a model code and modify it to suit local needs. In 1986, Los Angeles adopted the Uniform Building Code (U.B.C.). n145 Since then, the city has greatly amended the U.B.C., creating one of the most restrictive building codes in the country. Los Angeles' extensive modification of the U.B.C. is largely due to the special standards needed to compensate for hillside grading and construction, undependable soil conditions, and earthquakes.

The formation and adoption of model codes and the modifications almost all cities make to them are political processes that can give rise to hotly contested battles. n146 For example, the Los Angeles Fire Department lobbied and recently won a battle with the lumber industry, banning the use of wood shingle roofing on new homes and any replacement of more than 10% of an existing roof.

In another battle waged by water conservation groups, the City of Los Angeles and other cities are enacting ordinances to limit the size of flush reservoirs in all new toilets to 1.6 gallons. The current standard is 3.5 gallons. It is estimated that this ordinance will save billions of gallons of water annually. It will also affect plumbers, plumbing supply houses, toilet manufacturers, and home buyers.

Reformers abound at every level of government with proposals for new standards and codes, or modifications of the existing ones. The distribution of power among the various levels of government makes reform diffuse and sometimes confusing.

§ 97.05(b) The Inspection Process.

A developer who has a set of plans and construction documents needs to obtain a building permit from the city in which the developer wishes to build. This is generally a complicated multi-stage process. Requirements for a building permit vary significantly from jurisdiction to jurisdiction and project to project.

Bill King, Chief Building and Mechanical Inspector for the City of Los Angeles, Van Nuys Office, explains how this process operates for single-family dwellings in his jurisdiction. n147

> With smaller projects like single-family dwellings, the process of approval can be as simple as having an architect or builder come into our office and go from window to window and get the plans signed off by each of the applicable departments. For more complicated projects, and almost anything commercial, the plans must be left. Approval can take anywhere from four to eight weeks. If there are any zoning problems, it could take a lot longer.
>
> Once the architect has drawn the plans, and an engineer has reviewed and added details to them, they are submitted to the Department of Building and Safety. At this point our department conducts a "plan check." The first stop is at the zoning counter, where we verify the legal description and make sure the existing zoning accommodates the plans. The next stop is with the structural plan checker, who looks at things like the fire walls, emergency exits, and energy efficiency aspects of the building to make sure they comply with the code. As part of a plan check review, the checker determines whether the plans need approval of the fire department, the department of public works for sewer connection, or city planning to confirm that they satisfy the General Plan or zoning ordinances. For some projects a builder may need CalTrans to sign-off. The checker indicates on the back of the permit where the plans have to go.
>
> Additionally, we have on loan from the fire department an individual whose role is to look at the

> sprinklers, fire hydrants, and sand pipes, and anything else of concern to the fire department.

John Condas, in the real estate department of a Los Angeles law firm, and teacher of land use and real estate development at the University of Southern California Graduate School of Business, points out one more big item developers may need in seeking a building permit for more complicated, multi-use projects: n148

> There will need to be evidence that all the aspects of the California Environmental Quality Act (CEQA) have been met if the approval of the building permit entails any discretionary choices on the part of the inspectors, as it almost always does in larger projects.
>
> The developer will also need to get a grading permit, and show evidence that the grading has been conducted satisfactorily.
>
> The developer will have to show there are adequate water, sewer and utilities available.

With a building permit in hand, the developer then begins a long series of relationships with various building inspectors. To get an inspection, a contractor will phone the inspector's office 24 hours in advance. The following day an inspector will visit the site and either "sign-off," not sign-off and require informally that certain things be done, write an "order to comply," or "cite" the project with a violation that needs to be fixed.

Before any cement can be poured, there needs to be a plumbing, an electrical, and a setback/forms/trenches inspection. Then the foundation can be poured.

Next, before any subfloor or floor slabs can be poured, each of the following items needs to be individually inspected and signed-off: electrical (groundwork), plumbing (drain and waste pipe), plumbing (water pipe), mechanical (groundwork), pre-slab (for soil compaction, membrane and reinforcement), and an underpinning inspection (for floor joists and girders).

The next inspections include: fireplace, decorative appliance (vent/chimney), roof (sheathing/diaphragm/frame), masonry (reinforcement and bond beam), rough plumbing, rough heating/venting/piping, rough electrical, framing (only after plumbing, electrical and heating have been signed-off), and insulation (sound/energy).

Before any tape or plaster can be installed, there needs to be an exterior lath, interior lath and drywall inspection.

Additionally, after all the above has been done, there needs to be an exterior plaster, permanent electrical pole, construction pole service, lighting standards, sewer, gas test, and water service inspection.

The final inspections include: electrical final, heating/venting final, plumbing final, grading final, fire department, police department, and structural final inspection.

Only after all of the above have been signed-off will a certificate of occupancy be issued.

While interviewing Chief Building Inspector Bill King for this project, he suggested I go "riding" out on inspection for one day with one of his inspectors. The following is a summary of that day.

> The contractor seemed shocked and a little embarrassed to see us--and he should have been. He had called to get approval on the footing so he could pour the cement foundation for a bathroom addition. The foundations had caved in from rain the previous weekend and were not anywhere near ready for approval or cement. As Jim looked at the other work that had been done, and asked a few questions, it became clear that the contractor really was not qualified to be doing certain aspects of the job. He had put in the piping for the WC (as inspectors refer to the toilet) in such a manner that it would not vent

properly. Jim took fifteen minutes to explain how to do it properly, not just so it would pass inspection, but so it would actually work. At least five times while Jim explained how to put in piping for a WC and bathtub, the contractor, who looked dazed and drugged, exclaimed "Oh wow, that's all right man!"

As we left through a living room so torn-up that I have my doubts whether the contractor would ever be able to make it livable again, Jim explained the remodel had been going on three months (and was nowhere near completion) and should have taken only three or four weeks. Through what I have to imagine has been an enormous ordeal, the wife had been living in a bedroom in the rear of the house, one of only two rooms not being remodeled. Jim commented that situations like this can lead to divorce.

For this couple, Jim's rigorous and thorough inspection saved them from dangerously poor workmanship.

Our next stop was to give the final inspection for the certificate of occupancy on another room addition in Sherman Oaks.

We arrived, knocked at an open door and then stepped in. We were at the right address, but the wrong residence. At first it was confusing. Then Jim realized that in this area zoned only for single-family houses, and not duplexes, we had stumbled onto an illegal conversion of part of the house into a second residence. Jim decided not to cite them, although he clearly could have.

Once in the correct home, Jim inspected, found everything to be in order (despite the fact the addition didn't match at all the existing structure) and asked the owner for the papers to be signed. In an exhausted gesture, the lady explained that this had been going on so long she didn't know where anything was anymore. Jim politely offered to send her a copy of her C of O.

Next stop, Stone Ridge Estates, consisting of ten custom homes off Mulholland. We went to the farthest lot so Jim could show me a huge, extravagantly beautiful home. Once there, Jim pointed out a few things, then noticed what appeared to be fire damage to the roof. We got out of the car with the air of authority of a building and safety inspector, went around back to find the entire home had been destroyed by fire. Within the last two weeks a devastating fire had essentially destroyed this 7,500-square-foot, $2.25-million, one-year-old home. Charred-through ceiling beams were scattered in the back yard next to the pool with floating toys still in it, broken glass covered the patio, sunlight came through the entirely burned-out vaulting ceiling, crude holes had been cut through the upper floor so water could drain through. Once-beautiful furniture, ruined by fire, smoke and water lay in the driveway. We later found it had taken an amazing 100,000 gallons of water to extinguish the blaze. As we walked around, Jim repeatedly stated that he was glad he hadn't been the inspector on that home. Apparently, one of the worst nightmares of an inspector is missing something on inspection, or allowing something in that's prohibited, and having a fire ensue. In those cases, the Department and the individual inspector are generally named in any lawsuit over fault.

We sought the architect of the project to ask about the fire. The architect was Lori LePel, the daughter of mega-developer Sheldon LePel. Ms. LePel had just received her architecture degree when her father decided she needed some experience. What better way to get experience, he must have thought, than building houses? Better yet, make that big houses. The burned-out house was her first project.

We found Lori LePel in her temporary office in another home she is building just a few houses away from the charred house. She was shocked to see Jim. After a brief discussion about her current projects, Jim asked about the fire. She explained that the fire had spread from a defective fireplace in the upstairs master bedroom. She suddenly became noticeably nervous. I was sitting across her desk with my legal

pad taking notes. When the subject of the fire came up she asked, again, who I was, why was I taking notes, and if she was incriminating herself.

Jim asked her if the zero-clearance fireplace she had installed had a double wall flue, as required. Her response, "What's that?"

As we talked a little more about the fire, I began to feel sorry for her. She has legitimate reason to be nervous. Most fireplace accidents are not due to negligence in the manufacturing, but negligence in the architect's design of the fireplace. Lori will likely be named in a lawsuit by the homeowners or their insurance company, as will the inspector who approved the fireplace as built.

As we left her office, we ran into Mr. Sheldon LePel ("Daddy," as Lori referred to him), who has years of experience dealing with inspectors. His first gesture, "Hello, Jim, great to see you. Come on out to the lunch truck and I'll buy you a cup of coffee." Jim noted that often when he inspects his projects, Mr. LePel has an extra pair of Lakers, Kings or USC football tickets he's not using. (Mr. LePel is a USC alumnus.) As soon as Lori had left the garage where we were all talking, Mr. LePel asked Jim to come around the side of the building to the fuse box. He had a little favor to ask. He was wondering if there was anyway he could please get approval for temporary power through the main fuse box. He was throwing a little surprise party for Lori at the house next weekend.

Next stop, Mulholland Estates. Ninety-eight lots selling today for an average of over $1.5 million. In one area, the developers had moved an unbelievable 7 million cubic yards of soil to create 18 more lots. On these lots, there are some of the most beautiful new homes in Los Angeles County. Nearly every one has a custom pool. We toured through several of these lavish homes, including one Goldie Hawn is trying to buy, as Jim gave some minor approvals to their swimming pools and jacuzzis.

At the top of a hill in Mulholland Estates, there is a 11,000-square-foot home that Wayne Gretsky recently made a reported $3.5 million offer on. Although they hadn't called for it, we decided to give them a little visit. As we walked up the driveway, I noticed some glares at Jim. The previous week, he had inspected the pool, and hadn't liked the design which featured a concrete slab pool deck over a hollow area. He required them to pull up the slab, and fill the hole. It took two entire cement trucks to fill the hole. They hadn't been and still weren't pleased.

Inside the house we met up with Jim's supervisor, David Keim, with whom I would spend the rest of the day observing the duties of a Senior Inspector. We toured around the house, turning on and off the faucets, looking in the cupboards, opening doors. Worth noting was the glass shower with a sweeping view, which featured dual shower heads, steam room capabilities, stereo speakers and wiring for a telephone. The rest of the house was equally lavish.

Jim had left ahead of Dave and me, but we caught up with him on a problem job where Jim was going to have to write an order to comply to a builder, requiring him to remove a balcony he had built on the front of his house without getting the proper variances. Zoning set-backs require that houses be a certain distance from the street. This builder had dug his foundations too close to the street some time back, and Dave and Jim had required he re-dig all the foundations. Then, the builder constructed a wall too close to the street on city property, which would preclude any future installation of sidewalks; they required him to rebuild the entire wall. Now, he had constructed a porch off the second story of the house, without any approvals. The porch violates the same set-back laws that required the builder to re-dig his foundations. Dave pulls up in his car, Jim and the builder are in the front yard looking at the porch, and Dave yells, "It's got to come off, the whole thing, off." Jim nods, the builder throws his arms in the air, and we drive off.

§ 97.05(c) The Appeals Process.

If any of the inspections is refused, the developer and contractor can appeal the decision. Generally, formal appeals are only used in extreme circumstances where great hardship would result from compliance.

Ken Astis, Director of Construction for Griffin Related Properties, explains: n149

> We had a project where the City of Santa Ana fire inspector refused to sign us off on a parking structure because it didn't have fire sprinklers. They took a hard line and refused to budge. It was going to cost us a fortune to install the sprinklers and all the piping and control equipment, so we decided to appeal their denial.
>
> In Santa Ana, to appeal a city inspector's decision, the first thing to do is to contact the head of the department and try and negotiate something with him. If that fails, the next step is to file an appeal with the city Appeal Board. In Santa Ana, the Appeal Board is a seven-member panel that hears the case and then issues a ruling. Realistically, the ruling they give is going to be final in 95% of the cases. You can appeal to the municipal court, but I can't remember hearing of a case where the courts have overruled the Appeal Board.
>
> We appealed the sprinkler requirement all the way through the Appeal Board. We lost. We installed, at enormous expense, sprinklers to protect our concrete parking structure.

Bill King explains that not all appeals are formal. In fact, most problems are settled by a Senior Inspector or a Chief Inspector: n150

> There is a problem that can arise with a builder getting different interpretations of the code from different inspectors. Through retirement, transfer or promotion, an inspector who has worked on a job may be replaced by another. Sometimes this leads to inconsistent rulings. But more often, inconsistent rulings come from a builder who has the same design being built in five different locations, with five different inspectors, and getting five different interpretations. It is for this very kind of problem that we have First Line Supervisors, Senior Supervisors and the entire appeals process.
>
> Almost every day we are faced with the situation where a plan has made it through plan check review, received certification, construction has commenced, and then an inspector finds a violation that was overlooked in plan check review. He cites the builder and requires compliance.
>
> It's important to understand that plans are very complex and difficult to follow. It's tough to see exactly what a project is going to be like by only looking at the plans. By giving a set of plans our stamp of approval, we are only saying we didn't catch any errors. We're not saying that if there are any code violations the builder is relieved of responsibility to comply. Otherwise, there'd be incentive to try and sneak things by us in plan check. Even after receiving our approval, the builder is still obligated to comply with every aspect of the code.
>
> In the event we have overlooked something in plan check, or there have been changes in the plans once construction has begun, and there's a building code violation, there are numerous ways to make the project comply. For example, suppose once construction has begun it is found that in a place where there was supposed to be a "four-hour wall" (this indicated the thickness of the wall and amount of time it would probably take for a fire to burn through it) and there is not one. We may not require the builder to tear down the entire wall and rebuild. We can provide "equivalency" by creating a water curtain (which is a row of fire sprinklers along the wall). This is just one example of the ways we are willing to work with builders in the event a violation is discovered once it's too late to fix without rebuilding.

§ 97.05(d) How Successful Developers Deal with Building Code Officials.

Architect Doug Lowe elaborates on successful--and legitimate--techniques for dealing with inspectors: n151

> If every aspect of the code were met verbatim, no building would ever be economically feasible. That's why it's so important to talk with the inspectors about the intent of the code and not just the literal reading. I know the code at least as well as they do, which makes it easier for me to convince them that my projects comply with the code's intent.
>
> It's okay to make a case before them and argue a point strongly, but once they make their decision, it's best not to keep arguing but just to accept it. They'll remember next time and may go easier on you.
>
> I'm building a house now. Every time an inspector comes and I'm not there, I get written up on something. When I'm there, there is never a problem. Being polite and explaining what's going on with a project can avoid a lot of problems. The subcontractors don't give the deference inspectors want. It turns into a power game, and the inspectors always win.

Bill King's response to Doug Lowe's quote above: n152

> I agree with him that if he's on the site and can explain to the inspector why he did what he did, it will help the inspector understand the project and may avoid certain delays.

§ 97.05(e) Gratuities and Favors for Building Inspectors.

Developer/builder Fred Johnson: n153

> In the past, about a quarter of all city inspectors expected a bottle of whisky at Christmas. Some inspectors will always show up at 11:30 for their inspection, which they know happens to be lunch time. You've got to know how to deal with these guys or they can really make your life miserable. Some need to be schmoozed and stroked; some need to be handled firmly and authoritatively. Make the wrong decision and it could be a long haul to certificate of occupancy. That's why there's a lot of talk between construction people about what type of an inspector each of them are. It's not hard to get the scoop on an inspector.

Bill King's response to Fred Johnson's quote above: n154

> I think you could change this quote, put my name at the top and I could say almost the exact same thing about developers.

Frank Scardina, formerly of Kaufman & Broad: n155

> Frequently, there are well-defined local customs concerning how a builder or owner is to show appreciation to a building inspector. Years ago, it was customary for a swimming pool contractor to instruct his client to give the inspector a bottle of Scotch or whiskey at the time of final inspection, just to show good faith and thank you for the inspector's efforts. It was explained to me as being similar to a tip at a restaurant or a card with a few dollars in it at Christmas for the postman.
>
> To a builder, an inspector's impact on a construction project extends well beyond the inspector's enforcement of local building codes. For example, you cannot start to install drywall or otherwise begin to finish the inside of a home until you have obtained a "framing" inspection. Should an inspector be "too busy" to get to your project for a week, your job stops, your subcontractors are angry because they cannot continue working, and interest on your construction loan continues to run. Needless to say, it's not

a good idea to do anything that will tend to upset your inspector.

Often, inspectors (and their bosses) who hadn't been involved or visited your construction site for months would let you know that they would be coming just before Christmas to extend their seasons greetings. It wasn't a good idea to let them leave without offering some friendly chatter and a bottle of booze or a box of candy, all in the spirit of the holiday season.

Several years ago, we experienced a major problem when a building inspector was caught taking significant bribes from several very small construction companies. He, and his lawyers, traded a "confession" to accepting several bottles of Scotch at Christmas from us for a shortened sentence. It seemed far more important to the local DA to pursue a "major" developer than the case he started with. As a result, our policy is never to give more than a firm handshake and sincere thank you to any inspector on any job--and we've suffered just a little bit as a result. Ultimately, we were able to "finesse" the issue by making a contribution to a local charity during the holiday season in the "name" of the local building department.

The issue of unauthorized acceptance and solicitation of gratuities by public employees is addressed in city, county, state and federal provisions. The State of California and the City of Los Angeles have no provision specifically addressing building inspectors acceptance of bribes, but the following city and state provisions have been held to apply to building inspectors.

City of Los Angeles Code of Ethics,
Adopted by the City Counsel July 21, 1959
Amended August 23, 1979

III. Acceptance of Favors or Gratuities

Persons in public service shall not accept money or other favors from anyone other than the city for the performance of an act which they would be required or expected to perform in the regular course of their duties; nor shall such persons accept any gifts, gratuities or favors of any kind which might reasonably be interpreted as an attempt to influence their actions with respect to city business.

California Penal Code § 68:

Every executive or ministerial officer, employee or appointee of the State of California, county or city therein or political subdivision thereof, who asks, receives, or agrees to receive, any bribe, upon any agreement or understanding that his vote, opinion, or action upon any matter then pending, or which may be brought before him in his official capacity, shall be influenced thereby, is punishable by imprisonment in the state prison for two, three or four years; and, in addition thereto, forfeits his office, and is forever disqualified from holding any office in this state.

California Penal Code § 7.6:

The word "bribe" signifies anything of value or advantage, present or prospective, or any promise or undertaking to give any, asked, given, or accepted, with a corrupt intent to influence, unlawfully, the person to whom it is given, in his or her action, vote, or opinion, in any public or official capacity.

Chief Inspector Bill King's Thoughts on Gratuities: n156

I think there is a perception of the inspection industry that comes out of New York, Chicago and some of the Eastern cities that being on the take is how the industry operates. We have an investigation

and internal affairs division. If anyone receives anything, from anybody, be it a bottle of whisky or a lunch, they have to report it.

An inspector can't even accept a lunch from a builder. That's a clear conflict of interest. I'm not going to tell you it doesn't happen, but it's the position of this department that accepting a lunch is a conflict of interest and must be reported to the department.

I'm not going to say that we don't have periodic problems with individuals violating these rules. We do. When you have 1,100 people in the department, you're going to have people cross the line. We've had to terminate employees on numerous occasions for their actions.

In one recent instance, we had an inspector with our earthquake safety division who was working with some developers who were paying him a "consultation fee." When the department looked into this one, the inspector was immediately fired for his actions and criminal prosecution was contemplated.

We've had several other instances where members of our department have been found to be receiving consultation-type fees and the individuals were fired ... .

The code is ambiguous and open to interpretation in many places. It's human nature that once an individual has developed a reputation in the industry for being legitimate and hard-working, he may not get the same degree of scrutiny that another might. Inspectors are human beings. They react to developers the same as developers react to inspectors.

I don't like to think that anyone in our department has ever been vindictive towards any builder. But there are times when a builder has tried to cheat in the past, by, for example, kicking dirt in the footings after they were inspected. When dealing with someone like this, the inspectors are going to demand that they see the footing, with the steel in it, 100% ready, no slack, before they're going to certify it and allow the builder to pour the footing. Along the same lines, if there is a quality tract home builder with a good reputation who is having ten homes inspected, and nine of them are ready and look right, but the tenth is only 75% ready, the inspector may certify all ten even though he will never see the tenth one.

It's important to remember that inspectors are human beings. They are performing as regulators, a necessary evil in our world. If you're polite, reasonable, knowledgeable, and cooperative, they are going to respond and be a lot easier to work with.

As chief inspector, most of the problems I get are not building code problems, but personality problems where the builder and the inspector didn't get along.

§ 97.05(f) Case Law: When Building Inspectors and Local Governments Are Liable for Negligent and Fraudulent Inspection and Enforcement of Building Codes.

§ 97.05(f)(1) Common Law Liability of Municipalities for Negligent Building Inspections.

[M]ajor causes of the structural failure of buildings in South Dade county, which suffered the brunt of the Aug. 24 storm (Hurricane Andrew), included inadequate design, substandard workmanship and misapplication of various building materials.

The poor construction was compounded ... by a shortage of county building inspectors and inspection supervisors and inadequate training of inspectors. n157

State governments are automatically safeguarded from tort liability by the ancient and often assailed doctrine of sovereign immunity. n158 Municipalities may or may not be. Courts in many states have conferred immunity on cities

anyway.

> Most of the cases involving the issue of a municipal corporation's liability for the negligent performance of its building inspectors duties have held or recognized the general rule that a municipality is immune from liability for the acts of its officers and employees while they are engaged in the performance of governmental functions. n159

Inroads into governmental immunity take two paths. First, only discretionary acts, not ministerial ones, are sometimes protected. The rationale is that public officials need leeway in their decision-making functions. If they were subject to tort liability for judgment calls, they would be stymied in using their best judgment. But in executing policy decisions, not making them, public officials should go by the book or risk having the book thrown at them. n160 Distinguishing the "discretionary" from the "ministerial" or "operational" is often next to impossible.

Jurisdictions are divided on whether building code officials' duties are ministerial or discretionary. n161 While the issuance of a certificate of occupancy is sometimes cited as the prototype of a purely ministerial task, a few courts have labelled it discretionary. n162

Second, some courts have accepted the premise that municipalities are immune from liability to the general public, n163 but specific statutes like the building codes may give rise to cities being liable to particular classes of individuals. A prime example of liability that falls under the special duty exception: Some courts have allowed builders to recoup losses from their having relied on negligently issued building permits. n164

In one leading case a builder got a permit for a house constructed in violation of an 18-foot setback required by the code. The builder excavated and leveled an existing structure, set the foundation forms, and requested an initial inspection. Like the plan checker, that inspector, too, overlooked the setback encroachment. After neighbors complained, the permit was revoked. The developer sued the county for damages and recovered. n165

The Washington Supreme Court expressly overruled this case in *Taylor v. Stevens County*. n166 The court retained the principal that "special relationships" may still give rise to exceptions to the public duty doctrine. But the "special relationship" required: "(1) [a] direct contract or privity between the public official and the injured plaintiff which sets the latter apart from the public, and (2) there are expressed assurances given by a public official, (3) [causing] justifiable reliance on the part of the plaintiff." n167 Building permits and inspections would not count as "expressed assurances." They "only authorize construction to proceed; they do not guarantee that all provisions of all applicable codes have been complied with." n168 Since the defendant-municipality had only approved the permits and had not offered "expressed assurances," no "special relationship" existed. The court excluded from "special relationship" compliance with building codes ruling that local governments owed no duty of care to private persons who had in fact failed to comply with all applicable codes.

The Washington Supreme Court's rationale was that "legislative enactments for the public welfare should not be discouraged by subjecting a governmental entity to unlimited liability." n169 Building codes are designed to protect public safety, health and welfare, not to protect individuals from economic loss caused by public officials performing (or misperforming) their public duties. Permit applicants and developers are in a better position to prevent such harms than are local governments. Were the local government to be held as the guarantors of the legality of permits, contractors would have a diminished incentive to conduct their own thorough investigations of the building and zone codes and make sure their projects complied. n170

At quite the opposite end of the spectrum from the position taken by the Washington Supreme Court, some jurisdictions have rejected the sovereign immunity defense entirely. If a building's construction or design violates code standards, those foreseeably injured have been allowed to establish their claims against the government just as if the perpetrators had been private entities. "A building inspector must be held to have foreseen that his alleged negligence in performing

the required inspection might have foreseeably resulted in harm to someone." n171

§ 97.05(f)(2) Statutory Immunity.

To halt the costly spread of liability many states have enacted statutes granting municipalities immunity from tort claims. Cities are protected from liability arising from discretionary functions in twenty states. n172 Thirteen states provide immunity arising from the issuance, denial, suspension, or revocation of permits or the failure to take action. n173 Eleven states provide municipal immunity from negligently performed building inspections or the failure to inspect. n174

Here are typical immunity-granting statutes:

> --A public *entity* is not liable for injury caused by misrepresentation by an employee of the public entity, whether or not such misrepresentation be negligent or intentional. (Emphasis added.) Cal. Gov't Code § 818.8.
>
> --A public *entity* is not liable for injuries caused by his failure to make an inspection, or by reason of making an inadequate or negligent inspection, of any property, other than its property ... for the purpose of determining whether the property complies with or violates any enactment or contains or constitutes a hazard to health or safety. (Emphasis added.) Cal. Gov't Code § 818.6.
>
> --A public *employee* is not liable for injuries caused by his failure to make an inspection, or by reason of making an inadequate or negligent inspection, of any property, other than the property ... of the public entity employing the public employee, for the purpose of determining whether the property complies with or violates any enactment or contains or constitutes a hazard to health or safety. Cal. Gov't Code § 821.4.
>
> --A public *employee* acting in the scope of his employment is not liable for an injury caused by his misrepresentation, whether or not such misrepresentation be negligent or intentional, *unless he is guilty of actual fraud, corruption or actual malice*. (Emphasis added.) Cal. Gov't Code § 822.2.

State immunity statutes can block recovery even by builders who rely on negligent inspections. n175

Plaintiffs try to breathe life into statutory exceptions to immunity, such as the one for "actual fraud, corruption or actual malice," n176 and sometimes succeed. In one case, a group of 100 condo buyers got past a general demurrer. They overcame the immunity statute quoted above by alleging a conspiracy between the builder-seller of their units and the county building inspectors, among others, to conceal the fact that the project was defectively, illegally and dangerously constructed in flagrant violation of the Uniform Building Code.

> We see no reason why purchasers, as intended beneficiaries of honest building inspection and as persons substantially harmed by allegedly intentionally false inspection, should not be able to maintain *an action for fraud* against the county building inspectors engaging in such misconduct. [Emphasis added.] n177

(n25)Footnote 169. *Id. at 170* .

(n26)Footnote 170. *Id. at 169-70* . The Washington Supreme Court also observed that imposing liability for non-compliance with building codes is consistent with Washington's zoning vested rights doctrine. Rights don't vest except under a lawfully issued permit. The burden of lawful compliance is on the claimant in a vested rights dispute and should remain there as well when the plaintiff seeks damages resulting from a building permit negligently issued.

(n27)Footnote 171. *Coffey v. City of Milwaukee, 247 N.W.2d 132, 139 (Wis. 1976) . See also Sexstone v. City of Rochester, 32 A.D.2d 737 (N.Y. 1969)* ; *Adams v. State, 555 P.2d 235 (Alaska 1976)* . Louisiana has also expressed willingness to abandon the public duty doctrine. *Stewart v. Schmieder, 386 So. 2d 1351 (La. 1980)* ("the mere fact that a duty is of a public nature, and benefits the general public, does not require a conclusion that the city cannot be found liable for breach of that duty").

(n28)Footnote 172. *See* Rosemary Maccarone, Note, *Connecticut Tort Reform Act and Municipalities' and Building Officials' Liability, 20 Conn. L. Rev. 203, 206, n.124 (1987).* These include Alaska, California, Connecticut, Delaware, Idaho, Illinois, Indiana, Kansas, Maine, Maryland, Massachusetts, Minnesota, Nebraska, New Jersey, Nevada, North Dakota, Oklahoma, Oregon, Tennessee, and Utah. The extent of statutory immunity in California is considerable, not just for building code violations but for the performance of other code related tasks. The City of Hermosa Beach issued a Report of Residential Building Records to the Grenells in 1974 when they bought a two-unit property from Mr. and Mrs. Sheldon. The report stated that the property contained "Two dwelling units constructed by permit," and there were no apparent building or zoning code violations. In 1975 the Grenells sold the property to the Altamuras, and a report from the city indicated that only one of the two dwelling units had been constructed pursuant to a permit. The Grenells sued the city for its earlier negligent report, and lost on a demurrer. 295 *Cal. Government Code § 818.6* was cited as an absolute bar to the Grenells' claim against the city. *Grenell v. City of Hermosa Beach, 163 Cal. Rptr. 315 (Cal. App. 1980)* .

(n29)Footnote 173. *Id.* These include Alaska, California, Connecticut, Delaware, Illinois, Indiana, Maine, Massachusetts, New Jersey, North Dakota, Oklahoma, Tennessee, and Utah.

(n30)Footnote 174. *Id.* These include Alaska, California, Connecticut, Illinois, Indiana, Kansas, Nevada, New Jersey, Oklahoma, Tennessee, and Utah.

(n31)Footnote 175. Plaintiff homeowners were forced to reconstruct their home built on reliance in faulty permits. They were prepared to prove that the inspector intentionally misrepresented and suppressed the facts that construction was not up to code when he signed the job card. "No go" against the municipality, ruled the court in *Harshbarger v. City of Colton, 197 Cal. App. 3d 1335 (Cal. Ct. App. 1988).*

(n32)Footnote 176. *See* Cal. Gov't Code § 822.2.

CHAPTER 97 CONSTRUCTION AND DEVELOPMENT LAW

12-97 Thompson on Real Property, Thomas Editions § 97.06

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 97.06 Understanding, Negotiating, and Drafting the Key Provisions in a Commercial Lease Related to New Construction.

The purpose of this section is to illustrate how successful leasing can be key to a successful construction project. Commercial leasing in a more general context is covered in Chapter 44. This section describes some of the most important provisions in a shopping center lease, to explain why they are there, and how some of the standard form provisions on these main issues can be improved for particular landlords and tenants.

§ 97.06(a) Happy's Lease with Georgio.

Leasing space could have been a problem for Happy because of the unusual configuration of the center. But Georgio Yrmoni, a prominent clothing designer, agreed to lease 30,000 square feet from Happy on the condition he could move in by October 1.

Georgio and Happy easily agreed to the main terms of their deal, leaving details to their lawyers. The main terms are the amount of rent, the length of the lease, the type of operation each was to run (Georgio in his shop and Happy in the balance of the center), the space to be let, parking arrangements, and cost-sharing for tenant improvements.

Some of these items are dynamically intertwined, such as the formula for determining rent and the length of the lease. With short-term leases, landlords needn't worry much in the U.S. about inflation, even if they agree to a fixed rent. For leases of longer terms, rent adjustments are customary, and take many forms. They might call for stepped increases, fixed or indexed at marked intervals. Long-term ground leases sometimes tie periodic rent reviews to appraisals of the land value, with the tenant paying a specified percentage of value. Leases of retail space commonly entitle the landlord to a percentage of the tenant's gross sales above an agreed minimum rent. n178

Georgio is a good credit risk. His lease provides significant comfort to Happy's lender, although not as much comfort as a lease with, say, a nationally owned retail chain. On the other hand, with the bankruptcy filings of major department store chains, lenders may be forced to reconsider their underwriting standards. "Big" in retailing doesn't necessarily mean financially sound anymore.

Georgio's investment in outfitting his shop will run about one million dollars, too much to be amortized over a three- to five-year lease term. Ten years, at least, perhaps with a five-year option, is what he wants.

Once Georgio signed up, three smaller accessory-selling tenants swiftly contracted for 10,000 square-foot shops.

The following materials offer a checklist of issues Georgio, Happy and their representatives must resolve. At the end of the chapter, there are a few questions about specific provisos in the lease.

§ 97.06(b) The Process.

A shopping center or office building owner will offer prospective tenants a form lease, usually prepared by an attorney, but sometimes taken "off a shelf" from a realtors' association or other printed form. n179 Tenants with little bargaining leverage will live with that lease, perhaps with minor changes in it. Anchor or major tenants that the landlord needs desperately in order to finance the project or keep it solvent--especially national or regional chains or franchises--will often demand that the landlord accept *their* form.

Once the parties agree on whose form to use, they or their negotiating representatives get to work. The reviewing party definitely is disadvantaged in having to work from someone else's form. That form won't be as familiar as its own. The form won't contain all the protective provisions added over the years. The client or the client's rep might begin by comparing the form they have been forced to accept with the one they would have used had they the choice.

The party responding to someone else's draft lease will usually send a letter with detailed specific drafting changes, comments, suggestions or a combination. They may write a new lease based on the draft with the desired provisions incorporated and unwanted ones deleted. They may send back the proffered lease with proposed changes.

Through correspondence, phone calls and meetings, the parties may be able to narrow their disagreements to an agreed list, and may then proceed to resolve these, with each side prepared to give up some points while insisting on others.

Clients are soured when lawyers run up big bills haggling over minor, technical details in a lease. That sentiment was well expressed by Bruce Eichner, a Brooklyn prosecutor turned commercial developer, who divides lease issues into two groups: "business points" and "legal points." Business points have to do with money, who spends what, who gets how much and when. Legal points are mostly about "what ifs," the chance of things going wrong. Mr. Eichner hates paying good money for lawyers to split hairs over legal points. The smarter the lawyer, the more Bruce Eichner worries about monstrous legal fees because smarter lawyers see more possibilities, more complications.

It wasn't that Bruce didn't believe that things could go wrong. On the contrary, he knew that thousands of things would go wrong, most of them totally unpredictable, unforeseen, and beyond the scope of even the most comprehensive legal draftsmanship.

The solution would be found in the real world and not in the carefully crafted and scrupulously numbered paragraphs of the agreements. Ultimately he would be thrown back on his own resources, to rant and deal as best he could. To spend $200 an hour pretending otherwise struck him as an expensive form of voodoo. n180

In many instances there is little or no bargaining between landlord and tenant over lease terms. Sometimes bargaining power is weighted heavily in favor of the lessor. Sometimes the tenant calls the tune. The lawyer representing the weaker party in these situations can do little more than analyze and explain to the tenant the implications of the lease, unless the stronger party will listen to reason and modify the more draconian provisions of the lease. n181 For all parties, it always pays to know the "default" rules--the rules that apply in the absence of a specific lease provision. On some points those rules may not be at all clear. n182

§ 97.06(c) The Usual Checklist.

Anyone drafting a shopping center lease for the first time will need a good guidebook. One of the best is Emanuel Halper's Shopping Center and Store Leases. n183 Law students might start with Lucy March, Real Property Transactions (Little Brown, 1992), a drafting "Primer" with sections on commercial leasing. Lawyers may turn to the Practicing Law Institute or state continuing education of the bar publications. We will focus on how these issues affect Happy, the developer whose story was depicted at the beginning of this chapter.

This introduction should help you understand what is at stake in commercial leasing, but it certainly is no substitute for a comprehensive leasing treatise.

Most commercial leases cover at least these items:

§ 97.06(c)(1) The Names, Authority, and Liability of the Parties.

The party signing the lease should be the correct one from a credit standpoint--the one whose credit the other party is relying on. If the lessee is a partnership or corporation, the lessor will want to verify that those who are signing the lease have legal authority to bind the partnership or corporation. The lessor will want proof of their authority--a certified copy of the partnership agreement or corporate by-laws, and a certified copy of the minutes of the meeting at which the corporation or partnership approved the deal. Alternately the lessor may accept the opinion of lessee's counsel that the person representing the lessee entity is duly authorized to *negotiate* and enter a lease on its behalf.

Determining who has the authority to negotiate for the other party is crucial. No smart lessor negotiating a lease will make concessions to the tenant's rep unless the rep can bind the tenant. If the rep lacks that authority, the lessee will *condition* her concessions on the rep getting the lessor's *approval* of the *quid pro quo* concessions the lessor is supposed to be making.

Franchises. When leasing to a franchise, the lessor wants to be sure the franchisee has a substantial net worth, no past defaults on leases or other debts, and is in fact an approved franchisee of the national chain. The lessor doesn't want the fact that it accepts *this* franchisee to mean it waives its rights to approve other operators to whom the space might be assigned or sublet later by the tenant. n184

Partnerships. When a general partnership signs a lease, partnership law provides that each general partner becomes jointly and severally liable for payments under the lease. This may not be acceptable to the partners. They may be willing to live with a share of the total liability in proportion to their partnership interest but may not be willing to pick up the costs for partners who don't pay their share. n185

Law firm partnerships have been successful in negotiating "caps" on partner liability for rent. Sometimes each partner's "several" liability for the total rent is limited to the money the landlord spent in luring the tenant: free rent, tenant improvement allowances, moving expenses, lease takeover amounts, and brokerage commissions. n186 This sum is often amortized and "burned off" over a stated period of years. Especially successful, diversified firms have even negotiated provisions exculpating the individual partner of the general partnership from personal liability.

Conversion of Partnership to LLC. Suppose the landlord enters a lease with a general or limited partnership (with a solvent individual general partner) and later, the law firm converts itself into a limited liability company ("LLC") or a limited liability partnership ("LLP"). In an LLC no members have personal liability for partnership debts except to the extent of their contributions to the partnership. Once a partnership becomes an LLC or LLP, n187 the landlord may lose the right to hold the former partners liable for a breach of the lease, absent personal guarantees. The breach would be by the LLC or LLP, not the partnership. n188 The lessor may require personal guarantees from all the general partners as a condition to allowing the LLC or LLP to replace the partnership as lessee.

§ 97.06(c)(2) Description of the Premises.

The lease should contain a site plan and be accompanied or preceded by a title policy showing the landlord owns the property the tenant assumes the landlord owns.

The use of suite numbers to identify space in office buildings may cause trouble. n189 As tenants expand or contract their space, and come and go, the lessor may renumber office suites. Suite 500 may now identify what used to be suites 500, 510 and 520. If the original lease for suite 500 specified certain terms, and the new leases for suites 510 and 520 specify different terms, then which lease applies to the new suite 500? It isn't clear. The lessor will have to seek a lease modification from the tenant unless the lease originally specified that "the premises presently known as Suite 500, 510, and 520 may be renumbered from time to time at the discretion of the lessor but all the terms applicable to the space as originally numbered will remain the same after renumbering."

Ownership. If the landlord holds only a long term ground lease, the tenant needs assurance from the ground lessor not to terminate the operating tenant's lease even if the shopping center owner, the ground lessee, defaults on the ground lease. If the landlord doesn't own the parking lot, the tenant must see a recorded document signed by the owner of the parking lot, extending a parking easement or lease to the tenant.

Comparable Space Definitions. Tenants shopping for space like to be sure prices being quoted in different buildings are truly comparable. To do this, when rent is quoted as a certain sum per square foot per month, the tenant needs to make sure "square footage" means the same thing in each building it is considering.

There are many ways of measuring space. *Gross* space is everything within the walls of a building. n190 Rent is seldom based on *gross* space unless one tenant takes the entire building.

Rent is often based on *rentable* or *leasable* space. The Urban Land Institute definitions use the phrase "gross leasable area." The Building Owners and Managers Association defines "gross rentable area." For our purposes, they may be taken as referring to the same sort of space although there are subtle differences. What matters most, though, in particular disputes over how much space the tenant must pay rent and maintenance expenses for, is the definition in the lease. n191

Rentable or *leasable* space in office buildings is measured, by one leading industry standard, from the inside surface of all outer walls of a floor, excluding vertical penetrations. n192 What about corridors, hallways, and shared bathrooms on each floor? If one tenant occupies the entire floor, these may be regarded as part of that tenant's rentable space. If more than one tenant occupies each floor, these areas, along with the building lobby, are not part of the tenant's rentable space.

Not all *rentable* space is *usable*. Mechanical rooms, interior hallways, and lavatories do not count as usable space. Think of *usable* space as space that could be carpeted. "*Rentable*" area may be 5 to 25% larger than *usable* area. n193 Nonetheless, office rent is usually calculated on *rentable or leasable* space.

Choosing Between Usable and Rentable Space in the Rent Base. Lessees don't want to pay for gross or rentable space because they will not use this space exclusively or directly. Instead, they insist on having the rent based on usable space. The Lessor will raise the per-square-foot multiplier on the smaller unit of space on which your rent is calculated. Ultimately the sum total of all the rent must justify the lessor's investment. So what difference does it make--gross, rentable, usable?

Measuring the Chosen Base. Whether tenants pay for gross, rentable or usable space, they often take their landlord's word for the volume of that space. Landlords sometimes miscalculate, often by 1% to 3%. Tenants have been known to employ independent surveyors to measure precisely the area for which they are to pay rent. Lessors have a way of

avoiding any rent decreases due to their space calculations being off a little. Their leases may provide: "For purposes of this lease, the square footage of the space rented to T shall conclusively be deemed to be 10,000 square feet, whether the tenant's space is actually 10,000 square feet or not. Any representations, plot plans, or drawings showing anything other than 10,000 square feet are to be disregarded." With this language, if the lessor's estimate of square footage is too high, the tenant will not be entitled to a rent abatement because of the "deemed to be" language. n194 If the lessor's estimate is too low, the lessor will not be entitled to a rent increase because of the "deemed to be" language.

Building Design/Efficiency. Some buildings are more efficient than others. One way of measuring efficiency is by the ratio of rentable to usable space. Currently, in downtown Los Angeles "A" office buildings, that ratio varies from 1.07 to 1.16. Why would any tenant pay for space in less efficient buildings? Because they are attracted to amenities such as wide hallways and spacious lobbies.

Another way of measuring the efficiency of space is by how well the layout of the building accommodates the tenant's needs. For example, rectangular space is easier to use than circular space. For some firms, space with windows is more valuable than space with no access to daylight or views. The time for a tenant to hire a space planner or interior designer is *before* signing a lease. If office building A offers 10,000 square feet at $28/foot and building B offers 10,000 square feet at $30/foot, the tenant will be better off with B if the B space is configured in such a way that it comfortably accommodates 50 people and the A space only 40.

Buildings that look alike may not have been built alike. You may have to keep the blinds closed all summer long in that glass enclosed corner office on the 46th floor, the one with the sweeping city view, because the air conditioning system isn't big enough to keep the office cool with the blinds open. You may have to keep half your PCs off at any one time to avoid blowing an electrical fuse. You may need to spend a fortune reinforcing the floor under your law library because the "live load" factor isn't high enough to support the books. Better to know all this before you negotiate your rent and improvement allowance, or at least hire the right technical consultants so they can specify the performance criteria you will insert in the lease as obligations of the lessor to deliver.

§ 97.06(c)(3) Common Areas and Operating Costs.

Will the tenant have the right to use the common areas? Will an office tenant have the right to put a communications satellite on the roof and run telecom wires from its space to it? At what price?

If the tenant is to pay for a share of costs in operating and maintaining common areas (hallways, parking, lobbies), how can the tenants verify that the total amount charged to the tenants for these areas doesn't exceed the landlord's actual maintenance cost? How can they be sure the landlord isn't charging them for his own business operations? Typically, the tenants aren't liable for reimbursing the costs of the landlord reletting vacant space as part of their common area assessment. But they need a way to make sure that isn't happening by verifying the common area expenses the landlord is allowed to pass through to tenants.

The lease needs to specify a procedure for determining whether an expenditure is to be treated as an expense and charged to the tenants in the year the landlord incurs it, or whether it is a capital expenditure to be amortized over its useful life so that tenants are charged only a portion of the total cost in the year the landlord spends it. If the cost is to be amortized, an interest rate should be specified.

If some tenants are bigger users of common area space than others, how are those differences to be taken into account? Here, a trade-off sometimes needs to be made between allocating costs fairly among tenants based on actual use and administrative simplicity.

Compare the law firm where young associates work nights and weekends with a bank which opens and closes at fixed times. Why should the bank pay for elevator and air conditioning service it doesn't use during off-hours? Or consider

the shopping center boutique whose high-end customers are affluent but few in number compared with the endless stream of kids drawn to a game arcade. In office buildings the use of heating, air conditioning and elevators can be computerized. After-hours users can key into the system and be charged for actual use. In shopping centers, precise allocations of common area usage aren't as readily determinable so tenants usually pay for common area maintenance based on their square footage in the center and not on the number or type of tenants they attract.

§ 97.06(c)(4) Parking.

In an office building, tenants often want designated and reserved parking spaces, not just a right to parking on a first come/first served basis. In a shopping center, major or anchor tenants will insist that no changes be made in the location and configuration of parking spaces without their consent. If the center becomes outdated, this provision will give the major or anchor tenants a veto power over changes that encroach on the parking area.

Office building leases often provide that tenants pay for parking. Some urban shopping malls are now charging for parking, too, although free parking used to be regarded as a "natural right" and still is in many areas. Will payment be based on fair market value or is the price of parking fixed? What arrangements will be made for validating parking for the tenant's guests? For valet parking?

Smart tenants with bargaining leverage don't leave parking arrangements to the landlord's discretion. Here are a few highlights from the three pages on parking which a national chain retailer demands as part of any shopping center lease it signs:

> *Parking Area Use, Maintenance and Operation.* Landlord shall throughout the term of this Lease, provide, operate and maintain the Parking Areas in good order and repair and in a safe, clean and sanitary condition and shall keep the Parking Areas properly drained and reasonably free from ice and snow. All shrubbery, trees, flower beds, grass and other landscaping within the Parking Areas shall be tended and maintained in an attractive and healthy condition.
>
> No fee is to be charged to any permittee for the privilege of parking any motor vehicle nor is any parking charge, validation or other condition to be imposed upon such parking privilege without the reasonable approval of Tenant and unless such condition is imposed uniformly upon all Parking Area maintained for retail parking; provided, however, that nothing herein contained prevents a charge being made to an occupant, tenant, subtenant or licensee as a part of a lease, license or other agreement.
>
> Landlord shall at all times during the term of this Lease provide and maintain or cause to be maintained within the Parking Area, parking facilities for not less than five (5) car spaces for every 1,000 square feet of Floor Area contained within buildings located on the Entire Premises.
>
> Except for minor changes not resulting in a violation of the parking requirements of this Lease or traffic circulation no changes shall be made in the parking layout and detail shown on Exhibit B hereto without tenant's prior written approval in each instance first obtained.
>
> If it should become necessary for parking lot attendants to be employed in connection with the operation of the Parking Area, Landlord shall furnish such service at Landlord's sole cost and expense and Tenant shall not be under any duty or obligation whatsoever to contribute toward such cost and expense or toward any other costs and expenses connected with the operation and maintenance of the Parking Areas except as expressly provided in this Lease.
>
> It is agreed that should landlord fail to comply with the aforesaid Parking Area car space ratio and minimum number of car space requirements at any time, then in such event Tenant shall have the right and option at any time thereafter to terminate the term of this Lease by notifying Landlord of tenant's

election so to do, and upon the giving of such notice by Tenant to Landlord and Landlord's failure to cure such default prior to the expiration of sixty (60) days after the giving of such notice, this Lease shall terminate and end as of the date one hundred twenty (120) days after such notice shall have been given, and Tenant shall thereupon be released from and relieved of all further obligations thereafter to accrue hereunder.

§ 97.06(c)(5) Merchants' Association; Payments to Marketing Fund.

In a shopping center, the promotion budget may have great bearing on the flow of business to the center. Tenants are usually assessed for group advertising and special events at the center. Their right to decide how this money is spent should be specified in the lease.

§ 97.06(c)(6) Term of Lease.

When will the lease begin and end? If the space isn't built yet, and isn't ready on the date scheduled for occupancy, is the tenant relieved of liability under the lease? Does the tenant have to wait until the actual scheduled move-in date to discover that the landlord can't perform on time, or will the tenant be given periodic opportunities to reject the lease if the landlord doesn't get the necessary land use entitlements, or construction financing on time, doesn't begin construction on schedule or can't lease up the center in advance of completion? If the space isn't ready on time, does the tenant get actual damages--the difference between the rent that would have been paid, and the rent the tenant is compelled to pay for space elsewhere? Only rarely will a tenant be able to bargain for this, but some major tenants have. Does the tenant get lost profits if suitable space available on demand cannot be found? This is even more difficult for a tenant to obtain by contract. A valuable option tenants may sometimes negotiate for themselves is the right to cancel after a period of years. The partners in a law firm, for instance, caught in a spiral of downsizing and falling market rents may rejoice on recalling they have the right to cancel well before the stated lease maturity date. The firm may even be able to negotiate a big immediate reduction in rent even though the cancellation option is years away if the firm is willing to trade away the cancellation right. n195

§ 97.06(c)(7) Preparation of Existing Premises.

The tenant needs to know what improvements come with the lease. In most office building projects, the landlord supplies only "core and shell." The shell is the structure itself. The core is the area inside the structure dedicated to hallways, utility closets, elevators, common area and restrooms.

Lease definitions of core and shell vary. For instance, are heating and air conditioning ducts carried only to the exterior wall of tenant's space, forcing the tenant to pay for all interior duct work out of the tenant improvement allowance (if any)? Or do the heating and air conditioning ducts run throughout the leased space so that the tenant only has to tap into them?

Will the tenant be responsible for outfitting the space, or will the landlord assume some or all of the costs of tenant improvements? If the landlord is contributing to the cost of tenant improvements, will the landlord or the tenant actually hire the contractors and oversee the work? The party who hires the contractor will be responsible to the other party for the contractor's negligent performance unless they have signed a release agreement. n196

Will the tenant have to pay rent during the fixturing period? If the landlord undertakes to outfit the space, and is late in completing the work, will the tenant be discharged from paying rent during the delay?

If the landlord has promised to pay for tenant improvements, will the landlord reimburse the tenant for the costs or will the landlord pay the contractor or subcontractors directly?

Tax Consequences of Tenant Improvement ("TI") Allowance. The tax consequences vary with the form of the lessor's payment of the TI allowance. If the landlord reimburses the tenant for costs directly, the tenant is receiving reportable income to the extent of the reimbursement and will be taxed on the TI allowance as ordinary income in the year of receipt. The tenant will be able to offset the TI allowance by deducting the actual cost of improvements, but the tenant will have to amortize the deduction over the life of the improvements.

If the landlord pays the contractors, subcontractors and material suppliers directly, the tenant receives no taxable income. The lessor amortizes the cost over the useful life of the improvement, which could be as long as 39 years, or the landlord may depreciate the allowance over the life of the lease--assuming the lease is for less than 39 years.

If the tenant pays for the work and the lessor simply abates the tenant's rent to the extent of the improvement allowance, the lessor has nothing to deduct or depreciate. The tenant doesn't have to report abated rent as income.

§ 97.06(c)(8) Maintenance, Alterations on Premises, Signs.

What obligation has the landlord to maintain the property and to what standard? Can the tenant alter the leased space? By what standard does the landlord decide how shopping center tenants decorate their display windows? Are they free to make any interior changes they want as long as the changes don't compromise the structure? Can office tenants hang signs in their windows? As mentioned earlier, newly built offices may carry with them a risk of liability to both the landlord and the contractor (and others involved in development), especially if the building is highly energy efficient. Because of commercial real-estate attorneys' recent push to assign responsibility to landlords, provisions assigning responsibility for the so-called "sick-building syndrome" may be an important part of the lease. Some lessees are even requiring landlords to provide representations and warranties regarding indoor air pollution and requiring retention of a professional to certify that indoor air quality is adequate, both prior to the tenancy and periodically throughout the term. n197

§ 97.06(c)(9) Condemnation and Destruction.

If the property is partially or entirely acquired by eminent domain, or damaged by fire, earthquake or riot, how are condemnation and insurance proceeds to be divided between landlord and tenant? Generally in condemnation, when the fee simple title is taken, the court will first determine the fair market value of the property taken. Then in a separate proceeding, the court will apportion the sum between landlord and tenant. If the total awarded sum is inadequate to compensate all the parties fully, "the inadequacy is to be shared." n198

If the tenant's rent is fixed at below-market levels, the tenant will want a sum sufficient to rent comparable space elsewhere. In other words, the tenant will want a sum equal to the present value of the difference between the contract rent and the current fair market value of the space. The mortgagee will want the first call on condemnation proceeds to pay off the loan when the entire property is taken, or to reduce its loan value proportionately in case of a partial taking. The lease should also indicate if the tenant is to be discharged of further liability on the lease and whether the landlord is obligated to rebuild in the event of a partial destruction or condemnation.

New Haven Unified Sch. Dist. v. Taco Bell Corp. n199 indicates some of the subtleties that must be taken into account in drafting lease condemnation clauses. In *Taco Bell*, the New Haven Unified School District (the "District") condemned a shopping center in which Taco Bell had operated its restaurant under a long-term lease. The lease term extended for seventeen years at the time of condemnation plus renewals and offered a substantially below market rental. After receiving notice of the District's intent to acquire the restaurant. Taco Bell succeeded in leasing a new site. Although the new location would generate higher sales, the relocation entailed a capital investment of $625,000 and a higher rent. Taco Bell sought compensation from the District for loss of goodwill at its current site which it valued between $866,000 and $963,937. The trial court rejected the District's claim that lost goodwill amounted only to $84,000 and eventually awarded Taco Bell $525,000.

On appeal, the District argued that the trial court failed to distinguish between leasehold "bonus value" and goodwill. Bonus value is the present value of the difference between the market value rents and the contracted rate through the remaining term of the lease. It is relevant to a lessee in condemnation proceedings where at the time of condemnation the contracted rental is below market rents. The District contended that the bonus value should have been deducted from Taco Bell's award. In the original lease between the lessor and lessee a provision entitling Taco Bell to the bonus value in the event of condemnation was deleted by the parties. The District construed this deletion to be an assignment of the bonus value to the lessor, guaranteeing to the lessor the actual market value of the property. The court of appeals agreed with this construction and ordered that the award be reduced accordingly.

§ 97.06(c)(10) Insurance and Indemnity.

Must the tenant maintain public liability and third-party property damage insurance? With what limits? Will the tenant be required to maintain fire and extended coverage on fixtures and merchandise? Plate glass insurance? Business interruption insurance?

§ 97.06(c)(11) Hazardous Materials.

May the tenant cause or permit hazardous or toxic materials to be used, stored, treated, disposed of, produced, generated or brought upon the site? If not, how can the tenant paint or clean the premises since most paints and cleaning fluids contain such substances?

§ 97.06(c)(12) Surrender of Premises.

At the end of the term, what physical condition must the premises be left in? What can the tenant remove? What must the tenant remove?

§ 97.06(c)(13) Defaults; Tenant's Breaches.

What conduct constitutes a default by the tenant? Certainly repeated failure to pay rent, but what about the tenant's customers using the wrong parking spaces? Or the tenants holding a sale without the landlord's prior consent? Or subleasing space to a subsidiary? What is the landlord's measure of damage for tenant's breach?

Law firm partnerships have been successful in negotiating "caps" on partner liability for rent. Sometimes each partner's "several" liability for the total rent is limited to the money the landlord spent in luring the tenant: free rent, tenant improvement allowances, moving expenses, lease takeover amounts, and brokerage commissions. n200

§ 97.06(c)(14) Landlord's Breaches.

What constitutes an act of default by the landlord? Failure to maintain books and records so tenants can determine the actual costs of common area maintenance? Breach of a promise giving the tenant an "exclusive" in a shopping center? If essential services are interrupted--the elevator stops in a high rise building, the air conditioning fails in the summer in an Atlanta shopping mall--what rent adjustment is to be made? What is the tenant's measure of damage when the landlord breaches?

§ 97.06(c)(15) Protection of Lenders.

Is the tenant obligated to subordinate its lease to the lien of a lender's mortgage? Is the tenant obligated to accept from the lender a promise not to disturb the tenant's occupancy on foreclosure? Must the tenant sign a non-disturbance clause presented by the lender even if there are provisions in it the tenant doesn't like?

Is the tenant obligated to remain in possession if the landlord sells or the lender forecloses and displaces the old landlord with a new one?

§ 97.06(c)(16) Rent: Minimum, Percentage, Tax and Insurance Pass Throughs, and Common Area Assessments.

§ 97.06(c)(16)(i) Minimum Rent.

Most shopping center leases obligate the tenant to pay a base or minimum rent. The developer hopes that the base rents will be sufficient to pay all fixed costs, especially mortgage payments. Some shopping developers look to the base rents for profits as well. Commercial lenders look to these fixed rent guarantees in determining how much they can safely lend to a shopping center developer to construct a new center. Once the center's revenue record is well-established, refinancing could be based on total rent, including some portion of rents historically collected as a percentage of gross sales above the minimum.

To protect the income stream against inflation, the shopping center landlord needs more than a fixed minimum rent. The rent must take account of three factors. The first is the general change in the value of money. No landlord entering a fifteen-year lease wants a fixed minimum rent negotiated in 1990 dollars payable in the dollars of the year 2005. The issues here, once the base rent has been agreed between landlord and tenants, are the amounts of the increases, if they are fixed sums, or the appropriate mechanism for determining increases, if they are variable, perhaps by the selection of an appropriate index (different inflation indices reflect different underlying cost changes), n201 the determination of when, exactly, the rent should be adjusted, and whether adjustments should move in both directions, or only upward. (Indexed rent provisions almost always establish a flow below which rents don't fail, even if the index slides.)

The landlord hopes to meet financing costs (mortgage payments) out of rent. If the mortgage interest rate is fixed, not adjustable, the landlord may feel less need for an indexed minimum rent. If the mortgage interest rate is adjustable, the landlord might prefer the lease index to be the same as the one in the note and mortgage.

The landlord is protected against inflation in a second way. Tenants usually pay for the landlord's operating costs for the common areas of the center--maintenance, insurance, property taxes. The landlord apportions these among the tenants.

Common-area assessments in shopping center leases typically provide that each tenant pay a fraction of the total costs. Typically, the numerator of the fraction is the floor area occupied by the tenant. The denominator would be the floor area of all the space in the shopping center. You can see readily the issues that pop out when landlords and tenants define exactly what space is to be included in numerator and denominator. The tenant wants to exclude from its numerator any unproductive spaces such as a basement or mezzanine used for storage, bathrooms, or shop offices. The landlord wants to exclude from the denominator any common areas not actually leased to rent-paying tenants such as atriums, walkways, and parking lots. If the denominator includes only *rented* space, the landlord will be in a good position to pass through 100% of all common area assessments, property taxes, insurance increases, and so forth.

Mr. Halper explains that "measurements are usually taken from the outside exterior walls to the center line of party walls. Columns are ignored for these purposes." n202

Leases often provide a means for tenants to audit management and maintenance practices to be sure they are getting their money's worth.

Why the Selection of the Base Year of a common area maintenance ("CAM") Is Important. When buildings have been open and in use for a few years, it is easy for tenants to estimate their potential liability expenses. They can look to a history of past operating expenses. But in a newly constructed building if the tenant is obligated to pay all operating expenses, the tenant will seek a CAM *cap*--an outer limit above which the landlord pays.

As mentioned before, in an expense *stop*, the tenants pay all increases in expenses above a base year. The year selected can make a big difference. Say construction begins in 1995 but the building isn't completed until 1996. Property taxes are included in the CAM. The tax assessor values the property in 1995 at $250,000 because the building was under construction on the "tax day"--the day assessments are determined for the property tax. In 1996, the building is completed by the tax day, and valued at $4,000,000. Say the tax rate is 2% of assessed value. If the landlord uses 1995 as the CAM base year, the tenants will pay property taxes assessed above $5,000 ($250,000 x 2%). In 1996, they will be paying $75,000 ($4,000,000 x .02 = $80,000--$5,000). Had 1996 been chosen as the base year, the tenants would pay nothing in taxes unless the value of the building increased above $4,000,000, or the tax rate rose above 2%.

The Connections Between Expenses Included in the CAM and Services Provided. The lessor will list everything she can think of as a cost to be passed through to the tenants. The list may go on for pages. But suppose the lessor included "security," expecting to hire a few attendants to assist shoppers with directions and disperse rowdy teenagers. The tenant expected armed, uniformed security guards. There were none. The lessor might have avoided a futile and heated dispute over whether including "security" in the list of reimbursable CAM items obligated the lessor to employ security guards by specifying that the CAM list was "for definitional purposes only, and is not a basis for imposing obligations on the lessor." n203

The lessor seeks to include all conceivable expenses within the CAM. What about capital expenditures such as a new roof? The lease needs to specify a procedure for determining whether an expenditure is to be treated as a maintenance expense and charged to the tenants in the year the landlord incurs it, or whether it is a capital improvement to be amortized over its useful life so that tenants are charged only a portion of the total cost in the year the landlord spends it. If the cost is to be amortized, an interest rate should be specified.

Tenant Audits of Lessor Expenses. Leases often provide a way for tenants to audit management and maintenance practices to be sure the tenants aren't being overcharged and are getting their money's worth. The tenants need to limit expenses to what is reasonable, actual and competitive. They need to be sure they are being charged no more than their agreed CAM formula. n204

Tenants want to be sure the lessor isn't charging them for the landlord's personal expenses, overhead, expenses incurred on other properties, or unreasonably high expenses paid to relatives or suppliers who are under-charging the lessor at other properties and making up those bargain rates by over-charging expenses to this center.

Lessors find audits time consuming and intrusive. Some lawyers suggest that lessors prohibit tenants from hiring auditors on contingent fees, fees based on how much the auditor is able to deduct from the lessor's CAM charges. Contingent fee auditors are overly aggressive as far as lessors are concerned, deluge owners with lists of allegedly inaccurate charges and badger lessors into reducing CAM charges to avoid litigation. n205

Rent Abatement for Tenant Repairs. Georgio panics when, one month after taking possession of the space in Happy's center and in the middle of the Christmas sales season, a pipe directly over his store entrance starts leaking profusely, drenching (and humiliating) his best customer. He informs Happy's maintenance supervisor who seems preoccupied with other problems. Can Georgio hire a plumber and deduct the plumbing bill from his rent?

Georgio might think that the leak makes his space unfit for commercial purposes, leaving him free to walk away from his lease. In many states this is true, n206 but probably not in California. n207 During the lease negotiations Georgio suggests the following:

> Landlord agrees that tenant may perform, or cause to be performed, any repair tenant believes necessary for the operation of the leased premises, and that landlord shall promptly reimburse tenant for all expenses incurred by tenant in connection with such repairs. Tenant is entitled to delay payment of

any rent due until such time as landlord reimburses tenant for such expenses.

Happy, however, should be wary of where such clauses may lead. Happy may disagree with Georgio as to what repairs are necessary. Also, Georgio might not care much about the price of the repair, and may go along with an expensive solution the plumber suggests to ensure the problem never, ever occurs again. Happy submits this clause as a substitute for Georgio's:

> Landlord agrees to begin diligently to make repairs required of landlord under the terms of the lease within thirty days of receiving written notice from tenant that such repairs are necessary.

One solution to these competing clauses is for the lease to specify that Georgio may only make repairs after notice to landlord of an emergency which poses the threat of immediate severe damage to tenant's property, employees, or customers, the repair of which is required by the terms of this lease to be performed by landlord.

§ 97.06(c)(16)(ii) Percentage Rent; Rationale.

Bear in mind, though, that the term "gross income" had no "definite and inflexible meaning under all circumstances." Courts interpret each lease "to ascertain the sense in which it was used by the parties ... ." n208

Exclusions From Gross: While "gross" is the customary measure used in the percentage rent clause, tenants try their best to exclude from gross sales any merchandise sold at low or no-profit margins. The tenant seeks to avoid paying rent on money it is holding as a conduit for vendors such as vending machine and telephone booth proceeds, lottery tickets and charitable collections. Typically sought after exclusions include: refunds to customers for returned merchandise, sales taxes, sales of store fixtures and equipment, bulk sales to a single purchaser following a disaster such as a fire, delivery charges and many others.

Calculating the Rent Due: The percentage rent usually doesn't "kick in" until it is larger than the minimum rent (otherwise the "minimum" rent wouldn't really be the minimum rent). For example, suppose a tenant renting 20,000 square feet was paying a minimum rent of $3 per square foot per year, and a percentage rent of 1.5% of gross sales.

The rent would never be less than the base rent, (20,000 x $3) = $60,000. The percentage rent doesn't start until gross sales are big enough so that 1.5% of them is greater than $60,000. This is

$$\frac{60{,}000}{.015} = 4{,}000{,}000$$

So, if the tenant's gross sales are $4 million or less, she pays $60,000 in rent. If they rise above $4 million (say, $5 million), she pays 1.5% of $5,000,000 ($75,000).

"Gross," Not Net: Invariably, percentage rent is a function of gross sales, not net. Why? Mr. Halper explains:

> "Gross" sales, not "net," are used because they are easier to compute and less subjective than a measure which would allow the tenant a deduction for operating expenses. Percentage rent should be based upon a tenant's sales volume and not upon the actual profits of the store. It is very difficult to determine whether or not a particular store in a chain actually makes a profit after giving effect to the allocation of the general and administrative expenses that are incurred chain wide.

If "net" were used, the individual owner of a shop might consider carrying family members as employees at high wages to reduce apparent profit levels and thus defeat a landlord's claim to percentage rent. The use of "gross" sales also provides the greatest incentive for tenants to minimize their expenses, since none of their cost savings are shared with

the landlord whose "take" depends on total volume alone.

Moreover, real estate investment trusts that invest in a property whose rent is based in part on profits lose the tax-free pass through on income from the center which they would otherwise have enjoyed under *IRC § 856(d)(2)(A)*.

Exclusions From Gross: While "gross" is the customary measure used in the percentage rent clause, tenants try their best to exclude from gross sales any merchandise sold at low or no-profit margins. Typical exclusions include: refunds to customers for returned merchandise, sales taxes, vending machine and telephone booth proceeds, sales of store fixtures and equipment, bulk sales to a single purchaser following a disaster such as a fire, delivery charges, charitable collections, and many others.

Selecting the Percentage: Percentages vary with the type of business involved. High-turnover, low-net tenants (supermarkets, department stores, drug stores) pay very small percentages (1-2%). Low-turnover, high-net tenants (jewelry stores, beauty shops, restaurants) pay greater shares (5-10%). Often, the percentage declines as gross sales increase. This is one way for the tenant to soften the impact of inflation on "gross sales." n209 Of course, the landlord is better protected against inflation by a fixed percentage increase, not a declining one. Otherwise, if tenants' expenses rose over time but profit margins declined, the percentage rent could become a significant burden.

Enforcement: For small tenants who operate their own stores, the temptation can be overwhelming to pocket cash and not report it to the landlord to avoid percentage rent. Family-run small businesses that depend on cash, like arcades or laundromats, are not likely ever to show a percentage rent. Temptation mounts especially for small tenants just at the point where the "gross" exceeds the minimum rent and percentage rent begins to kick in. Enforcement of percentage leases is by landlord audit. The tenant's gross income is often measured by the sums it reports to a government agency. The Internal Revenue Service (federal income tax returns) and the State Board of Equalization (state sales tax) are favorites. Leases provide that the landlord pay the costs of audits, but the tenant pays the cost if the audit shows substantial under-reporting of gross income.

Percentage Rent Caps: Some tenants negotiate rent caps in shopping center leases like those found in adjustable rate mortgages, to limit the amount by which the rent can increase monthly, annually, or over the life of the lease. Naturally, most landlords resist "capping."

A cap on lease payments helps tenants to persuade their lenders to finance the construction of tenant improvements secured only by an unsubordinated lease. The cap assures the leasehold mortgagee that ground rents won't skyrocket beyond the tenant's reach. "Caps" may also cut down on tenant defaults, thus benefiting landlords, too.

Tenants Excepted from Percentage Rent Obligations: Service businesses like banks, professional offices, travel agencies, and repair shops don't usually pay percentage rent. In the 1980s, the conventional wisdom was that these tenants should be kept on short leases or CPI-adjusted terms. In the 1990s, landlords who had disregarded this advice and entered long-term leases with such tenants that had fixed increases at three- or five-year intervals profited because those fixed increases assumed much higher inflation rates than actually occurred in the early 1990s.

§ 97.06(c)(17) How Office Building Rent Clauses Differ from Those in Shopping Center Leases.

The landlord's sharing a percentage of the tenant's gross income rent is justifiable in shopping centers because the center's success is a joint effort. The landlord's marketing, tenant selection and maintenance practices affect the tenant's bottom line. The same is far less true of the office building landlord. An accounting or law firm's gross income is not very sensitive to the particular location and operation of the office tower it chooses. Percentage rents in office leases appear only in retail uses such as restaurant and concession leases like the news-and-snack-stand stores on the ground floor.

Office rent clauses often provide for fixed rents with "bumps"--adjustments every five years being common. The amount of the increase could be set in advance, keyed to CPI, or tied to a later appraisal of fair market value.

Reappraisal clauses often specify arbitration for cases where the landlord and tenant can't agree on the fair rental value later. They each select an appraiser, and those two designate a third. Landlord and tenant each documents its claimed rent and the arbitrators decide usually somewhere in between. A variation is "baseball" arbitration. Each side picks a number and the arbitrator just selects one or the other. The arbitrator isn't free to choose any other sum. Fearing an "outlier" estimate could lead to the other party's preferred rent being selected, "baseball" arbitration induces compromise, often making arbitration unnecessary.

§ 97.06(c)(18) "Use," "Continuous Use," "Exclusive Use," and Assignment Clauses.

The precursor of the shopping center lease was drafted for freestanding shops--usually chain stores--fronting on sidewalks, one next to the other in "strip" commercial zones, the Main Street USA pattern. Shopping centers evolved in the U.S. only after World War II. In 1950 there were fewer than 100 such centers. By 1988, there were 17,500 with $220 billion in annual sales. At first, shopping center lawyers copied chain store leases, and eventually found them wanting.

The distinguishing features of a shopping center were that a single landlord controlled more than one store, and those stores shared a common parking lot. The owner of a single building on Main Street wasn't particularly concerned with what type of business the tenant conducted as long as it was legal and didn't do damage to the building. The owner didn't much care if the tenant closed early, opened late, conducted business on weekends or even if the tenant went out of business as long as those rent checks kept coming. Nor did the strip commercial tenant have a chance to control the sorts of shops that neighboring owners let in, and so didn't lose sleep worrying about the tenant mix on Main Street. n210

The shopping center changed all that. The center solved the ubiquitous parking shortage that plagued Main Street. It also privatized security and maintenance. Paid security guards and janitorial crews kept the center safe and clean, more than could be said for many Main Streets USA, especially in big cities. Because one landlord controlled the center, merchants looked to their lessor for protection against excessive competition and to lure other merchants whose presence would draw customers to the center.

At the core of the shopping center concept emerged merchandising principles. The power of major department stores to draw shoppers to smaller tenants was harnessed. At first, specialty shops like those selling women's shoes wanted "exclusives"--the right to be the only women's shoe salon in the mall. Soon merchants learned that comparative shopping was so important for some items that a center denying its patrons that opportunity would forfeit sales to centers less restrictive in their leasing policies.

Even the placement of shops in a center is orchestrated. Big stores anchoring the mall are placed at its ends so that shoppers drift past the smaller merchants on their way from one anchor to the other, enticed to make impulse buys at smaller stores as they make their way across.

The food sellers are clustered. The tenant mix and location are adjusted from time to time based on detailed, continuing studies of shopper behavior.

> Which stores belong in which centers is one question. Where they should go within a center is another. Traditional wisdom dictates some rules of thumb for tenant placement. Anchor stores should be placed at opposite ends of the mall and far enough from entrances to pull shoppers past smaller mall shops, or placed at the ends of side wings of the mall, or, if the mall is huge, spaced throughout.

Shops offering complementary types of products are sometimes grouped to increase traffic for each store. In other cases, shoe stores, jewelry shops, women's ready-to-wear retailers, and other stores are spaced throughout the centers to capture business from customers who may visit only part of a center when they shop.

A recent study (see Stephen Brown, *Tenant Placement in Planned Shopping Centres: Implications of an Observation Study*, Journal of Property Research, Summer 1991, pp. 179-187) of the 180,000-square-foot, two-anchor Abbycentre shopping center in Belfast, Ireland, conducted by researchers at the University of Ulster, validates most tenant placement rules of thumb. More than 40 percent of 250 shopping groups (people shopping together) studied patronized one of the anchors n211

§ 97.06(c)(19) Uses.

Shopping center leases usually contain clauses for "use," "continuous use," and "exclusives." A "use" clause defines what the tenant can sell or how the tenant can use the leased premises. A "continuous use" clause requires the tenant to be open for business continuously for certain prescribed hours and days. An "exclusive" clause is the lessor's promise to a tenant that no other tenant will offer specified goods or services in the mall.

None of these clauses are big issues in office leases. Office building lessors seldom care what uses tenants make of the premises as long as those uses are lawful, don't interfere with the peace and quiet of other tenants, and don't involve retailing. Office building owners seldom care what hours its tenants keep. And office tenants rarely insist on being the only accountants or lawyers in the building--although doctors and medical malpractice lawyers aren't thrilled to share space, ground floor banks like exclusivity, and fancy professional firms aren't paying top dollar rents to have their well-heeled clients share elevators with IRS or INS clientele.

The common law rule is that tenants are free to use leased property for any lawful purpose as long as they don't commit waste, unless the lease restricts the tenant's use. A shopping center landlord might argue that the dynamic relationship among tenants in a shopping center and the tenants' obligation to pay percentage rent both support his claim that courts should imply "use" restrictions in shopping center leases. A minority of courts will imply restrictions on use from a clause demising the premises for specific purposes. n212 But most courts don't. n213

A clause to effectively restrict the tenant's use must be specific. n214 A description of the tenant's use does not automatically limit the tenant to that use. There is a difference between a description of tenant's business and a limitation of a tenant to that particular business. n215

If the lease contains no "use" clause, and the tenant assigns or subleases, the landlord may be in for an unpleasant surprise when Benetton, say, or an Armani boutique, is replaced by a pet supply shop. n216

Without lease clauses defining the "uses" permitted to each tenant, the careful orchestration would disintegrate, and performance of the center could prove a disappointment. The shopping center lessor wants to maximize gross sales of the *entire* center. To do this it is necessary to offer a variety of complementary goods and services. If goods or services were limited to just a few types, even the most commonly sought or highly profitable, significant opportunities for sales of other types of goods or services could be lost. The lessor also seeks to maximize synergy within the center, the chance that shoppers headed into one store will make impulse purchases in others.

The lessor needs to reinforce the marketing image of the center. In a discount center, there is no room for pricey retailers. In a center for upscale shoppers who want a five-star amenity level, off-price retailing is out. Off-price retailers are often able to sell goods at prices cheaper than small boutique operators can buy those goods wholesale.

A shopping center landlord is likely to ban certain uses altogether, particularly uses that might destroy a "family oriented" shopping center, such as "adult" entertainment. n217 But such clauses must be explicit (e.g., no "topless" waitresses or waiters). Vague clauses will not do. n218

The lessor who agrees to a broad use clause risks tenants changing their stores in such a way that the character of the center is destroyed. A clause drafted too narrowly can prevent the tenant from keeping up with consumer trends. A use clause may also limit the number of potential assignees. (Is a McDonalds that agrees to sell "primarily hamburgers, soft drinks and fries" restrained from offering McPizzas and McBBQs or from assigning its lease to hotdog vendors such as Nathan's or Pinks Chili Dogs?)

In order to preserve "exclusives" the lessor has granted to other tenants, some lessors insist that restaurants attach a menu to the "use" clause and promise not to revise or add items to it without the lessor's consent. McDonalds won't go along with the menu test but many national fast food chains will.

Some use clauses purport to restrict the type of business that can be conducted in the demised space, in order to protect "exclusives" of its other tenants. But a "use" clause designed to protect the exclusive of a pizzeria fails to achieve that purpose when the lessor only prohibits tenants from subleasing or assigning to others whose "*primary*" business is selling pizza. A lessor had promised a pizzeria there would be no other pizzeria in the center. K-Mart, a tenant in the center, subleased a former "eatery express" to a rival pizzeria. The original pizzeria sued the lessor for $500,000 for breaching its exclusive. The original pizzeria lost, because K-Mart wasn't "primarily" in the pizzeria business although it had allowed a sub-lessee to sell pizza within K-Mart. n219

Drafting a "use" provision is no easy matter. One lawyer offers this example:

> [a] ladies ready-to-wear store encompasses no less than three separate and distinct types of business which should be separated within a shopping center. One such business would be "a ladies popular priced ready-to-wear store featuring blouses, skirts, separates, and sportswear." This, naturally, is different form a "ladies ready-to-wear store featuring higher priced dresses, suits, coats, and evening wear." Both of these stores are different from a "ladies specialty store featuring lingerie, foundation garments and accessories." n220

It may be that phrases like "popularly priced" are so vague as to be incapable of enforcement. In one case, a tenant had an exclusive right to sell "high quality clothing" and was protected against any other tenant offering goods of "the same quality." The master appointed by the judge found the phrase so difficult to substantiate that the exclusive became unenforceable. n221 The shopping center lessor will also seek to control the appearance of the lessee's space, insisting on the right to approve signs, window displays, exterior paint color and decor. Once there is agreement on the wording of the "use" clause, the lessor will want to be sure the "tenant will not use or *permit or suffer* use of all or any part of the property for any other use." That way, if the lessee sublets or assigns, the tenant will still be liable if the lessee's sublessee or assignee violates the use provisions.

§ 97.06(c)(20) Continuous Use.

"Continuous use" clauses are often vital to the successful functioning of a shopping center.

> [U]niform business hours for the tenants, and of a consistent approach to the enforcement of that policy, contributes materially to the success of both the mall as a whole and its individual tenants by reducing confusion among potential customers as to the availability of services and thereby encouraging the optimal level of traffic n222

Covenants by tenants agreeing to "continuous use and operation" are common, but many national chain stores and fast

food operators refuse to sign continuous use clauses. Yet when the anchors close, there is little point to most smaller retailers staying open. Tenants are sometimes able to negotiate promises that if the anchor closes its doors, the tenant may leave or be entitled to a rent reduction. n223

In one typical case, a shoe store closed but continued to pay rent. The lessor wanted to repossess the space by implying a duty to operate from the "use" clause. It read: "Lessee shall have the right to use the Premises for the retail sale ... of shoes ... and for no other purposes." Not good enough, ruled the court. The provision didn't compel the lessee to operate a shoe store. "Clearly the lease does not mandate that Morse Shoes 'shall use' the premises for the sale of shoes; it does not impose upon Morse Shoes an affirmative obligation to maintain an operational shoe store." n224

Landlords whose leases have no "continuous use" clauses sometimes petition for courts to imply them.

A lease calling for percentage rent might arguably be said to imply that the tenant will use his best efforts to generate sales. n225 The percentage rent clause was cited by the California Supreme Court in *Lippman v. Sears Roebuck & Co.*, n226 when the court implied a continuous use obligation. The court analogized to output or "requirements" contracts where one party agrees to get all or certain of its supplies for a plant or business from another. Each party has an implied obligation to stay in business. Of course, percentage rent seldom kicks in until certain minimum sales figures have been achieved. Where business is so bad the tenant is forced to close its doors, the landlord can't reasonably expect the tenant would have attained those minimum levels. So the tenant will contend that the store closure didn't defeat the landlord's expectations of a percentage. Courts divide when asked to imply a continuous use obligation in percentage leases, with most refusing. n227 That is why the issue is almost always addressed these days in shopping center leases.

One lucky South Carolina landlord persuaded the courts of that state to imply a "continuous use" clause in a lease that didn't have one, and ordered the tenant, who had boarded up, to pay $400,000 in "damages." The tenant was a popular supermarket chain, Bi-Lo, and the lead tenant in the center. The tenant had closed up shop to relocate in a competing center 135 feet from the landlord's property, and didn't want its old space to be used by a rival.

The tenant was such a successful chain that it had bargained for a lease with no percentage rent. So the tenant's bargaining position in this case robbed the landlord of one of its better (only occasionally successful) arguments, that a percentage clause implies the tenant won't shut down.

Nonetheless, the South Carolina court concluded that an anchor tenant owes an implied duty of good faith and fair dealing to the landlord and the other tenants in the center not to go out of business. "If the anchor tenant were permitted to leave the premises vacant, the landlord's purpose for signing the lease would be defeated." n228

Like most leases, this one had a "use" provision. A concurring judge believed that Bi-Lo, by going out of business and refusing to allow its lease to be terminated, was actually using the premises for a purpose other than as a supermarket.

> The lease required that "the leased premises shall be used only for the operation of a supermarket," There is abundant evidence from which it can be inferred that Bi-Lo did not merely allow the premises to stand vacant but, in fact, affirmatively used the premises for a purpose not allowed by the lease; namely as part of a scheme to stifle competition.

Of course, no landlord would want to rely on the circumstances of this case instead of contracting for a continuous use. But when the lease has no such provision, there are cases implying one--along with a great many more cases refusing.

A covenant of continuous use was also implied in a strip center that had no anchor. n229 There, the Pennsylvania Superior Court invoked the doctrine of necessary implication, based on the "clear intentions of the parties" and to "avoid injustice." n230 Similarly, a Utah appellate court held a supermarket had breached its implied obligation of good faith and fair dealing by replacing its supermarket with a "warehouse box store" despite a use clause in the lease

providing that the tenant could conduct "a supermarket, drug store and pharmacy or any other lawful retail selling business not directly in conflict or competition with another major tenant in the shopping center." n231 Of course, no landlord would want to rely on the circumstances of these cases instead of contracting for a continuous use. But when the lease has no such provision, there are cases implying one--along with a great many more cases refusing.

Imagine the hardship to the landlord whose lease has no "continuous use" clause when a lead tenant shuts its doors. In more than one neighborhood center, food markets and drug stores boarded up as mergers and acquisitions forced inefficient locations shut. It was cheaper for many a supermarket to mail the landlord the minimum monthly rent than to pay a full-time staff, and keep shelves stocked when gross sales yielded zero or negative nets.

Once a store is boarded up, other merchants in the center complain of vandalism, graffiti, declining sales, and falling morale. The most expedient option for the landlord whose lease doesn't have a continuous use provision is to buy out the tenant's lease at a premium. The space may not have been worth much to the tenant but vacated space is an even greater liability to the landlord--one she may have to pay dearly to cancel.

When major tenants close their doors, smaller tenants suffer but not in silence. n232 They often come forward claiming that the closure violates an implied covenant of their tenure--that the center would enjoy the drawing power of major anchors. Don Sherwood, a Los Angeles lawyer whose "boutique" firm specializes in negotiating and litigating leases for shopping centers, divides small tenant claims into three groups. Some want contributions to tenant improvements so they can strengthen the shopper appeal of their own space and/or rent reductions during the time the anchor space is dark. Some want out of their leases. A third group wants life-of-lease rent reductions--good even after the closed space is relet and reopened. For the first two claimants he recommends landlords adopt a conciliatory posture, mindful always that whatever break one tenant receives, other tenants will soon hear about and demand. As for the third group, litigation may be the only answer.

Retailers who may be anchor tenants themselves don't need to rely on courts implying that the withdrawal of other anchors from the center is a breach of their understanding with the landlord. Strong tenants put clauses like this one in their leases:

> *Other Tenancies in Shopping Center.* Landlord agrees that the execution and delivery of the Original Lease by Tenant was made upon the express condition that other retail store buildings shall be constructed on the Entire Premises in the locations shown on Exhibit B to the original Lease. Landlord represents and warrants that the Broadway Store contains not less than 143,407 square feet of Floor Area and the Mervyn's Store contains not less than 80,688 square feet of Floor Area.

Even with such provisions the protected tenant may have no right to veto changes in the space occupied by the named tenants and no right to damages or injunctive relief if the anchors later reduce their space in the center. n233

§ 97.06(c)(21) Exclusive Use.

§ 97.06(c)(21)(i) In General

The restrictive covenant or exclusive use provisions raise perhaps the greatest difficulty of all in fitting the shopping center lease to the operation of the center. "The tenant desires an exclusive in order to protect its investment in the premises against a competitor." n234 The exclusive may bar a similar enterprise, or restrict other tenants from selling goods. Some tenants, as mentioned, simply can't be indulged in their requests to be the exclusive purveyors of certain goods or services in the center. But others may have to be granted that limited monopoly. They won't sign up without it, and the center needs them. There is always the problem of definition. Burger King wants to be the only seller of hamburgers in the center. Can the pizza place offer hamburger subs and pizza-burgers? The Lebanese restaurant a ground lamb pita-burger?

Robert A. Silverman, a lawyer in Philadelphia, guides drafters of "exclusive" clauses:

> --Don't promise a tenant the protection of an "exclusive" against other tenants whose leases give them the right to sell anything commonly found in their types of operation, as drug stores, supermarkets and department stores customarily insist. If you do, the fried chicken restaurant chain is likely to squawk when the supermarket opens a deli and take-away counter selling--you guessed it--fried chicken wings. And the video rent shop owner will feel upstaged when the drug store starts renting video tapes. n235

The landlord was smart in taking this advice when he granted a drug store the right to be the only drug store in the center. Later, when a variety store began selling many of the same items as the drug store, the lessor was able to argue persuasively that the variety store was not a drug store because it did not fill prescriptions. n236 Had the lessor given the drug store the exclusive right to sell aspirins, the lessor would have needed a handful of them himself.

Don Sherwood reminds us:

> A lessor who grants a tenant the exclusive right to sell candy in a shopping center had better prohibit all other tenants from selling candy. If she hasn't, she has no way to protect the candy "exclusive." A better drafting technique is to grant, say, the See's Candy Shop the right to be the only candy store in the center. That way, when Saks sells Godiva chocolates, See's can't complain, since Saks isn't a candy store, even though it sells candy. n237

Another tip from Robert A. Silverman:

> --Don't promise there won't be other supermarkets in the center, just that "landlord will not enter into any lease that permits tenant to operate a supermarket." That way, if a tenant does open a supermarket without the landlord's consent, the landlord isn't automatically liable to the tenant whose exclusive was infringed. n238

This advice is especially important these days when many tenants are going bankrupt and some bankruptcy courts are willing to disregard the use provisions of leases. But smart tenants know this, too, and many are more insistent than ever that the landlord warrant there will be no competing uses in the center, not just that the landlord won't enter any. They want the landlord to be responsible for breaches by tenants of "use" and "exclusive" provisions. This can be especially difficult for the landlord who had leased space earlier in the center with no use restrictions. A tenant is not bound by exclusives the landlord extends later to subsequent tenants. The tenant who was there first may also enjoy the right to assign or sublet for a different use, or any use. So it sometimes happens that the tenant with an exclusive use on the day it takes possession later runs into direct competition as the result of an earlier tenant's assignment. The landlord is still liable on the exclusive use covenant unless the tenant had seen the exclusive on the existing leases and consented to the exceptions arising out of them.

Restrictive covenants are strictly construed, but generally upheld against challenges based on unconscionability or antitrust laws if they serve a valid business purpose and are reasonable in area and duration. However, under certain circumstances they can be illegal restraints of trade under state common law or statutes, violations of the Sherman Antitrust Act, or § 5 of the Federal Trade Commission Act, which declares unlawful "unfair methods of competition in or affecting commerce." None of these laws apply to the freestanding shop or the mini-mall. Even at 150,000 square feet, the landlord seldom needs to worry. But regional malls that are so large they can be seen as retail city centers are vulnerable. n239

Exclusives By Implication. Some authors believe a restrictively worded "use" clause implies an "exclusive," that the lessor won't rent to competing users. They base their analysis on a theory of implied and reciprocal negative easements.

Professor Burke contends that the *quid pro quo* for a tenant's promise to abide by a use restriction is an implied promise by the lessor not to compete with the tenant's use. n240

Conversely, it could be argued that the landlord's interest in maximizing gross sales throughout the center, and the tenant's interest in generating the most foot traffic may both best be served by having a number of shops in direct competition with each. Customers value the chance to compare goods and prices. Long ago, shopping center developers learned, for instance, that four or five women's shoe stores might each do better than any one of them would have done on their own. Customers simply didn't buy shoes in malls where they couldn't comparative shop. n241 The tenant who desires an exclusive should not rely on courts to imply one. The tenant should obtain an explicit promise from the landlord. The promise should be worded so as to protect the tenant's exclusive against both prior and later tenants. n242

§ 97.06(c)(21)(ii) The Separate Right of One Tenant to Enforce Its Exclusive Right Against Another Tenant. n243

Happy leases spaces in her center on exclusives for their respective uses to an ice cream parlor, a bakery, a gallery of usable art--in that sequence. When the gallery owner later subleases part of her shop to "Cake and Art," the baker protests that the "Cake and Art" vendor is violating the baker's exclusive. The landlord refuses to take action. Has the baker the right to enjoin the gallery owner and her artful cake maker directly?

First, of course, there is the problem of interpreting the lease. What restrictions were intended? Second, it has to be determined whether the bakery really has been damaged. Does "Cake and Art" really cost the baker lost sales, or are its clientele so distinct that the baker loses little or nothing? Third, there is the law of covenants and servitudes.

For covenants to run so that the original promisee may sue a successor to the original promisor, the original parties must have intended it to run, evidenced by "and her successor and assigns" appearing in the original promise--and attached both to the burden (promise) and benefit of the covenant. ("Lessor hereby covenants for her successors and assigns with lessee, for his successors and assigns ... .") The covenant must touch and concern land. Use, exclusives, and continuous operation clauses all qualify. The covenantor, covenantee, and their successors must be in privity of estate. For equitable enforcement it is sufficient that those burdened by a covenant have had timely notice of it (*i.e.,* before they acquired their interest). Notice may be actual, inquiry or constructive.

Happy leased first to the bakery, then the gallery owner.

May B sue to enjoin G's "Cake and Art" sublease? As a prior lessee, B is suing on a covenant in a lease that didn't exist when he executed his lease. But B may overcome this embarrassment of timing by invoking three theories:

> (1) In the lease with B, Happy may have expressly or impliedly promised to preserve B's bakery exclusive in later leases. G would then be on inquiry or constructive, if not actual, notice of it: Constructive, if the H-B lease were recorded; inquiry, by virtue of B's being the only bakery in the center. Even if Happy didn't promise B she would contract with later tenants not to sell baked goods, if there is a restriction of that sort in G's lease, B may successfully imply that the use restriction in B's lease evidences that an exclusive in all later leases was intended.
>
> (2) B's exclusive implies Happy promised to protect it by inserting covenants not to compete in all later leases. This is called an implied reciprocal negative servitude. To be enforceable, B must establish that G had notice of it--actual, constructive, or inquiry.
>
> (3) B could be regarded as a third party beneficiary of the covenant in G's lease restricting B's use of the premises to usable art, if G's lease was so restricted.

Suppose B retaliates by selling paintings, ceramics, and designer pot holders. Can G enforce a covenant in the H-B lease

limiting B's use of the premises to the sale of baked goods and only to the sale of baked goods? Yes, on the theory that G is a beneficiary of that covenant. The covenant was made by Happy specifically for the benefit of subsequent tenants in the center.

§ 97.06(c)(22) Assignment.

§ 97.06(c)(22)(i) The Rationale for Implying a Tenant May Assign a Lease Absent a Non-Assignment Clause.

Lease assignments can be looked at in many different ways. Leases are assigned by landlords to mortgagees as part of mortgage financing transactions. Tenants assign leases when they sell their businesses. How is it possible for both the landlord and the tenant to assign the same lease? Actually it is possible.

A lease isn't something that any one person owns. There are two parties to a lease. The lease represents some rights and some obligations to each party. What a landlord assigns is his right to receive rent and other amounts payable under the lease and the right to force the tenant to comply with the tenant's obligations under the lease. When a tenant assigns a lease, it is transferring its rights to occupy the demised premises and whatever other rights it has under the lease. n244

The right to assign is part of the tenant's exit strategy, and anyone who enters a real estate deal should plan how to make a graceful exit especially if things go badly.

Types of Lease Clauses Regarding the Tenant's Right to Assign. Leases often address the issue of tenant assignability.

(1) Some clauses restate the default rule. In the absence of a lease provision governing assignment, the tenant has the right freely to assign in most states. However, the original tenant remains liable as a surety for the rent if the assignee doesn't pay. Leases sometimes release an assigning lessee from further liability when a new tenant assumes the old lease. n245 Major retailers seek the right to assign at will--free of use restrictions.

(2) Some leases allow assignment with the prior consent of the lessor, specifying no standard by which that consent is to be exercised.

(3) Some leases require the lessor's prior written consent, and that "consent shall not be unreasonably withheld."

(4) Some leases list reasons lessors must invoke in order to justify withholding consent.

(5) Some leases permit the lessor to withhold consent in his or her "sole and absolute" discretion.

(6) Some leases permit free assignability but specify that if the assignee pays more rent than the tenant had contracted to pay, the lessor has the right to all or a percentage of it, or to a fee for assignment.

(7) Some leases absolutely prohibit the tenant's assigning.

§ 97.06(c)(22)(ii) Must the Landlord Act Reasonably if Lease Bars Assignment?

Most courts hold that if the lease absolutely bars assignment or subletting, the landlord can withhold consent arbitrarily or for no reason. n246 The Restatement allows a landlord to prohibit assignment absolutely--with no requirement that the landlord act reasonably--but only if the lease expressly gives the lessor the absolute right to withhold consent. n247 Clauses barring assignment without the lessor's consent, and specifying that the lessor may grant or deny consent in the lessor's sole discretion are also upheld in most states. In a growing number of states, n248 the lessor's disapproval must be reasonable. n249 This is the rule in a small but increasing number of states. Courts in these states justify their

requiring landlords to be "reasonable" in turning down a proffered assignee by pointing out that prohibitions against assignment are restraints on alienation, and only "reasonable" restraints are enforceable. n250 "[M]odern courts have almost universally adopted the view that restrictions on the tenant's right to transfer are to be strictly construed.." n251 Also, the UCC "good faith and fair dealing" obligation implied in every contract bars the lessor acting arbitrarily. n252 But "unreasonable consent" is only a default rule, implied when the lease calls for prior consent to an assignment without specifying any basis for the lessor's refusing consent.

§ 97.06(c)(22)(iii) If Landlord's Consent Is Required and Landlord Must Be Reasonable, What Factors Can Landlord Consider in Evaluating a Proffered Assignee or Sublessee?

Among the legitimate factors landlords may consider in assessing reasonableness: the financial responsibility of the proposed assignee or subtenant, whether the new tenant's use will require alteration of the premises, the legality of the proposed use, the nature of the occupancy, and the compatibility of the tenant's use with the uses of other tenants in the same shopping center or office building. Courts have held it improper for a landlord to reject an assignee or sublessee on considerations of personal taste, sensibility or convenience, n253 or to raise the rent. n254

§ 97.06(c)(22)(iv) "Recapture" Clauses.

If a tenant abandons the lease, the landlord who relets the property can keep the excess rent above what the departing tenant was to have paid as long as the court finds that the landlord has "accepted" the abandonment, was reletting on its own behalf, and wasn't in a position to seek compensation from the old tenant if the new tenant's rent had been lower than what the old tenant was obligated to pay. n255

What if the tenant doesn't abandon, but prefers to capture the excess rent itself by subleasing? The tenant's rights depend on what the lease provides about assignment, or what the law implies absent an express provision. The lessor doesn't have the legal right just because the tenant requests the right to assign or sublease. Such a request is not tantamount to an abandonment or anticipatory repudiation by the tenant. n256

Some leases do give the landlord the option of terminating the lease when the landlord rejects a proposed assignee. These are called "recapture" clauses. By "recapturing" the lease term, the landlord can also "recapture" the increased value of the tenancy. They give the landlord a chance to relet the premises for increased rent.

Landlords don't see why tenants should profit from the passive gains that would come their way by assigning their leases at a premium. Tenant's counsel might suggest the landlord would be incensed at the suggestion tenants should share in any premium the landlord might earn by assigning *her* interest and selling out. So why shouldn't the tenant enjoy the same privilege with his leasehold interest? Further, if market rental values decline, the landlord will almost certainly resist rent reductions as long as the original tenant is solvent and bound by the lease.

§ 97.06(c)(22)(v) The Negotiating Strategies of Commercial Landlords and Tenants Under California's Statute on the Rights of Commercial Lessors to Recapture and Bar Assignments Absolutely For No Reason.

A California appellate court thought an assigning tenant was right in trying to resist the landlord's recapturing the lease premium value even though the lease gave the landlord the right to terminate if the tenant sought to assign or sublease:

> [i]f a lessor may not unreasonably withhold consent to an assignment or a sublease, there is even more reason why he/she should not be allowed to terminate the lease without a commercially reasonable justification, since termination is much more drastic than simply withholding consent. The law does not favor forfeitures, and forfeiture provisions in leases must be strictly construed. n257

Following the appellate court opinion in this case, the California legislature enacted several amendments to clarify the rights of commercial landlords. The legislature declared that the public policy of the state favored freedom of contract,

and authorized parties to commercial leases to "negotiate and conduct their affairs in reasonable reliance on the rights and protections given them under the laws of the state." n258

After the statute was enacted, the California Supreme Court reversed the appellate court and held that the landlord had been right all along. A recapture clause under which a lessor might terminate the entire lease if the lessee asked to assign or sublease all or part of the premises was not an unreasonable restraint on alienation. It did not violate the implied covenant of good faith and fair dealing. It was separate and distinct from the landlord's obligation under the lease to act reasonably in deciding whether to accept a proffered assignee. n259

The new statute provides:

(1) Landlords (commercial and residential) may exercise all remedies against a breaching tenant, particularly the remedy of continuing to recover the rent as it falls due, if the tenant has the right to sublet or assign, "subject only to reasonable limitations."

Those limitations may take the form of standards and conditions expressed in the lease, as long as they were reasonable when the lease was first entered and later when the tenant sought to assign or sublease. Conditions and standards are presumed reasonable unless the tenant meets the burden of proving otherwise. The standards may also be those implied by law.

Implicitly, if a lease prohibits assignment or subleasing absolutely or unreasonably, the landlord is denied the remedial option of continuing to hold a breaching tenant liable as if the lease were still in effect. However, a clause requiring consent with no standard for its exercise is enforceable because courts will imply a requirement that consent may not be unreasonably withheld.

(2) The landlord is not allowed to continue holding the tenant liable for rent following a breach if the breach resulted solely because of "acts of maintenance or preservation" or "efforts to relet the property" or "the appointment of a receiver upon initiative of the lessor to protect the lessor's interest in the property." n260

(3) In a lease of real property "for other than residential purposes" the landlord "may absolutely prohibit transfer." n261 The landlord may also condition transfer of a non-residential lease on any express standard. The landlord can reserve "some or all of any consideration the tenant receives from a transferee in excess of the rent under the lease. n262

(4) If the lease makes no provision for assignment, the tenant's interest is presumed freely assignable, and all ambiguities restricting transfer are interpreted to favor transferability. n263

(5) Commercial landlords in California are now free to enforce "recapture" provisions--as long as what they are recapturing is the value of the space, and not the value of the tenant's business. n264

(6) If the lease requires the landlord's consent but provides no standard for giving or withholding consent, impliedly consent may not be withheld unreasonably. n265 The tenant has the burden of proving consent was withheld unreasonably. That burden the tenant meets automatically if the landlord fails to respond to the tenant's written request for reasons justifying its withholding. The tenant has the right to assign if the landlord withholds consent unreasonably and hasn't expressly reserved the right to do so. The lessor has no right to remove an assignee in possession.

The tenant has the right to assign if the landlord withholds consent unreasonably and hasn't expressly reserved the right to do so. The lessor has no right to remove an assignee in possession.

Thus, the California statute follows the Restatement in allowing lessors to reserve the right to refuse assignments absolutely and without cause.

Commercial landlords in California are now free to insist on "recapture," and tend to do this in two ways. First, they seek rights of first refusal when a tenant proposes to assign or sublease. Second, they reserve the right to pocket any "surplus" or "premium" that the tenant is able to charge the assignee above the contract rent.

Knowledgeable tenants modify both these approaches. The "right of first refusal" is impractical, they will contend in negotiating with their landlords, because "local brokerage representatives will be reluctant to invest time and energy in showing the premises when they are aware that the landlord could swoop in and recapture the space after all the hard work without compensation to the broker." n266

Instead, the landlord might be given a "right of first offer," obligating the tenant to present the space to the landlord before offering it to anyone else. If the landlord takes up the offer, the landlord releases the tenant from further liability on the lease. If not, the tenant is free to market the space however possible.

The catch in provisions that the tenant must remit to the landlord any premium the assignee agrees to pay above the tenant's original agreed rent is well described by one distinguished practitioner:

> Leases that require ... the profits to be delivered to the landlord are an invitation to the tenant to sublease or assign at the exact rental rate payable by the tenant, since there is no incentive for the tenant to attain a higher rental level. n267

Tenants contend that the landlord may be better off splitting a premium with the tenant, not hogging it all, so the tenant has something to gain from marketing the space aggressively.

But many landlords would prefer to discourage the tenant from trying to sublease at all. The sublease market is seldom as good as the leasing market because tenants prefer to deal directly with the landlord. The landlord wants to keep tenants out of the real estate business, and especially doesn't want them negotiating with other tenants in the building or center that the landlord sees as possible candidates for additional space. So the "total bonus value to the landlord" clause may really be just an invitation to the vacating tenant to negotiate a termination with the landlord. The landlord may not have meant it to be a revenue-generating device.

If the landlord and tenant really do agree to split the profits from the tenant's assigning or subleasing, "profits" will have to be defined in the lease. The tenant will want to recoup its marketing, brokerage, unamortized tenant improvement costs, and any rent it had to pay before it found a sublessee.

The landlord won't want the tenant to offer the space at below market rents, or rents lower than it is prepared to accept. The landlord may insist on full recapture if the tenant doesn't continue to use a majority of the originally demised space.

Recapture provisions can run five to ten pages in a closely negotiated office building lease.

§ 97.06(c)(23) Lease Takeovers.

In overbuilt markets, some landlords try to lure tenants by promising to take over the tenant's obligation under its existing lease. A landlord who induces a tenant *to breach* its present lease risks liability. n268 To establish liability for interference with a contract, the plaintiff must establish: (1) a valid contract, (2) that the defendant knew about it, (3) the defendant intended to induce the promisor to breach, (4) the promisor did breach, (5) as a result of the defendant's unjustified and wrongful conduct, (6) causing damage to the plaintiff. n269 A landlord's promise *to take over* a tenant's existing lease in a competing building isn't evidence of inducing the tenant to breach that lease. Quite the contrary! The landlord is agreeing to pay the rent on the existing lease or find a suitable assignee. Granting concessions and allowances to lure tenants from other buildings is itself no tort, just normal competitive behavior. n270 Among the

defenses available to the landlord: the tenant was dissatisfied with its old space and was looking to move anyway. n271

A landlord who takes over the tenant's old lease may figure on being able to sublet the space and make up any difference between the tenant's contract rent and what the sublessee pays. The landlord has to understand the extent of that obligation, needs copies of the lease documents, needs to know the base rent and the tenant's liability for operating expenses, insurance and taxes. The landlord also needs an opinion of counsel guaranteeing interpretation of possibly ambiguous but important provisions in the lease, particularly those concerning the use clause, the rights of the tenant to assign or sublet, the tenant's ownership right to improvements, and the tenant's obligation to restore the premises at the expiration of the old lease term.

The landlord will probably want to avoid having to pay for breaches the tenant committed before having agreed to the takeover, and will certainly resist liability for publicly imposed costs such as asbestos removal or sprinkler retrofitting.

Most "takeover" landlords negotiate an assignment of the old lease from the tenant to themselves. This has some big downsides for the "takeover" landlord. Suppose the tenant moves into the new building and breaches its lease there. The "takeover" landlord will still be liable under the assignment for the tenant's rent under the old lease.

What if the tenant doesn't vacate its former premises on time? The "takeover" landlord may be liable to the tenant's former landlord for damages caused by the delay.

Lawyers recommend that instead of assuming the old lease, the takeover landlord should agree to indemnify the tenant for the difference between its old contract rent, and the rent obtained by re-renting the old space. The "takeover" landlord conditions its indemnity on the tenant not breaching either lease and using best efforts to find a new tenant for the old space. n272 The tenant is usually allowed to offset rent in its new space against the indemnity.

§ 97.06(c)(24) Lease Extension, Options and Cancellation Rights.

Tenants often seek from landlords an option for expansion space. Landlords don't like giving tenants options on space in future years because then the landlord can't rent that space for a term that could conflict with the optionor's rights.

A tenant who succeeds in getting an option she can exercise anytime in the next three years effectively bars the landlord from renting that space for three years. If her option is exercisable only at the end of three years, the landlord can rent that space for up to three years but no longer. Of course, the landlord may luck out and find someone willing to take the space subject to the optionee's rights. But landlords approach the granting of options gingerly.

There are other risk-sharing arrangements to provide expansion space to a large tenant without either the landlord or the tenant assuming the entire risk of marketing the intended expansion space. For example, the tenant may not have to lease all of its expansion space as of the date of initial occupancy. Instead, its lease of the expansion space would start on a certain date, perhaps five or even eight years after initial occupancy. The parties would split the marketing risk until that point by the tenant paying a standby fee that may be a fraction of the rental value of the space. Or, a tenant might agree to pay a portion of the rental value until the space is leased if the space is not leased before a specified date. Under these arrangements, there must be some inducement for the landlord to lease the space to an interim user.

A variation involves either a toss-out premium to be paid by the tenant if it later elects not to occupy the standby space, or an annual standby fee that might increase with time so long as the tenant wishes to maintain its expansion options. Under this arrangement, the stand-by fee supposedly compensates the landlord on a statistical basis for the loss it incurs by not being able to commit the space for an extended lease term to an interim tenant. As the potential standby period shortens, the possibility of an interim lease also decreases. n273

The tenant firm that is sure it will need more space several years hence may be prepared to commit now for that space.

There are many ways to set future rents. The landlord and tenant can agree now to a preset rent with, perhaps, a cost of living adjustment. They can agree to a base rent with "bumps"--increases at fixed future intervals.

They can contract for rent based on the fair market value of the space as determined when the tenant acquires the new space--with arbitration if the parties can't agree. They can contract for rent based on fair market value at the date of future occupancy but with an agreed discount.

They could contract for fair market rent but with either a floor (to protect the landlord) or a cap (to protect the tenant). A typical "floor" is that the rent on future space won't be lower than the contract rent on the space the tenant already occupies. A typical "cap" is that the rent on future space won't exceed the tenant's rent on the space it already occupies by more than 25%.

Cautious tenants may want to reserve a right to back out if the rent set in the future proves unacceptable.

If the parties agree to an option, the landlord wants the tenant's option right to end well before the end of the lease term so the landlord has plenty of time to market the space. The tenant wants to be sure it doesn't lose its option, inadvertently, which can happen especially when the lease is long. The tenant wants notice by the landlord as the time to exercise the option draws near.

A valuable option tenants on a long-term lease may sometimes negotiate for themselves is the right to cancel the lease after a few years. The partners in a law firm, for instance, caught in a spiral of downsizing and falling market rents may rejoice on recalling they have the right to cancel well before the stated lease maturity date. The firm may even be able to negotiate a big immediate reduction in rent to trade away the cancellation right even though the cancellation option is years away. n274

§ 97.06(c)(25) Commencement of the Lease Term.

There are many reasons the lessor may not be in a position to deliver possession of leased space to a new tenant on time. The old tenant may hold over. The center may be under construction and not yet completed when the lease was scheduled to begin. The lessor may have contracted to make improvements to the space the tenant is scheduled to occupy but the improvements may not be finished on time. The failure to finish may be due to change orders that delayed completion--the fault of the lessor or the fault of the lessee--depending on who insisted on the changes.

The lessor's idea of when the space is ready for occupancy may differ from the tenant's. The tenant wants to see all the other tenants in place, and expects to be in a position to ring up sales before having to pay the first day's rent. The lessor wants to start collecting rent on the day liability starts accruing for payments on the lessor's permanent financing, usually the date of "substantial completion." Sometimes "completion" is defined for a shopping center or office building as the day a certificate of use is issued by the building department. n275 That certificate may be forthcoming well before each tenant's shop is outfitted with carpeting, a second coat of paint, shelving, display cases, a working telephone, signs and lighting. An alternative is for the architect to certify completion when all the requirements in the plans and specs have been fulfilled.

The tenant cannot afford to wait until the day the lease was supposed to begin to learn that the opening is delayed. The tenant needs advance notice of when the center will be open for business because the tenant must order merchandise, hire personnel, advertise, get a telephone and fax machine in place, and order stationery. The tenant expects the parking lot to be paved, elevators and escalators to be running.

The lessor expects to be forgiven if the delayed opening is due to strikes, casualties like floods or earthquakes, bad weather. The tenant doesn't care why commencement was delayed and would like to hold the landlord accountable for lost profits, moving costs, wages, the rental of temporary space and other expenses the tenant was forced to incur

because of the delayed opening. n276

The tenant's remedies for a delayed commencement caused by the lessor could be that the tenant has no obligation to take the space at all, has the option of taking the space with a rent abatement for the period of the delay plus actual damages or liquidated damages caused by the delay.

The lessor would prefer a provision like this: "If Lessor, for any reason whatever, cannot deliver possession of the Lease Premises to Lessee at the Estimated Delivery Date, this Lease shall not be void or voidable, nor shall Lessor be liable for any loss or damage resulting therefrom ... ."

§ 97.06(d) Questions About the Happy-Georgio Lease.

A shopping center developer leases land for 50 years from a landowning family eager to hedge their payments against inflation. So in their ground lease they obtain a minimum fixed rent plus "50% of all the percentage rent" which the shopping center developer receives from his retail tenants. The cunning developer doesn't enter standard percentage rent leases. Instead, his leases call for annual rent increases of 10%--fixed, not based on the retailer's "take" at all. Most of the developer's tenants end up paying less than they would with standard percentage rent clauses. When the lessors demand their 50%, the developer replies, "I don't owe you anything because I'm not collecting any percentage rent myself, just fixed rents that go up 10% a year."

QUESTION:

What argument will lessors make in their claim for something more than a fixed minimum rent?

ANSWER:

The lessors will argue that the 10% fixed rent increases take the place of percentage rent. They will contend that the tenant is acting in bad faith in structuring subleases this way. The 10% increase serves the same inflation buffering purposes as a percentage rent clause so the landlord should be entitled to half of it.

QUESTION:

How would this provision affect the tenant's claim to a share of the fixed rent increases?

Additional Rent. (i) Tenant shall pay Additional Rent to Landlord on or before the first day of March for the previous calendar years (the "Comparison Year") in the amount of one-third of the amounts by which Net Subtenant Rents for any Comparison Year (as herein defined) exceeds Net Subtenant Rents for the Base Year (as herein defined).

(ii) "Net Subtenant Rents" means Subtenant Rents less Subtenant Expenses. Herein "Subtenant Rents" means minimum rents, percentage rents, increased minimums and other consideration in the nature of rent (including any reimbursements for Subtenants Expenses from subtenants to Tenant paid to Tenant based on cash actually received) from subleases.

ANSWER:

This provision is sufficiently inclusive to protect the tenant from the landlord's ploy.

Happy wants the right to approve any assignee because she is promising her other tenants the panache of a Georgio, and they are banking on it. Georgio can imagine wanting out if business is slow. But he agrees that Happy should have the right to approve any assignees. She has a certain quality of tenant in mind which is why she negotiated this favorable lease with him.

QUESTION:

Suppose Georgio offers Happy a substitute tenant he thinks perfectly sound but she doesn't. What items might be added to a clause barring assignment without the landlord's consent to prevent Georgio being locked into a lease that is, practically speaking, unassignable?

ANSWER:

A termination provision might be added to the assignment clause so that if the landlord doesn't accept Georgio's proffered assignee, the lease will be terminated, and with it, Georgio's liability for future rent.

Alternately or in addition, criteria for Happy's acceptance of an assignee might be specified in the lease.

Georgio might be given the chance to cure objections by finding a new assignee or correcting the problem cited by the landlord with the proffered assignee.

QUESTION:

At common law, if Georgio's lease makes no provision for assignment, is he free to assign even to a tenant whose credit history is seriously blighted with default?

ANSWER:

Yes. Leases are presumably freely assignable absent provisions to the contrary.

QUESTION:

Georgio's right to assign is subject to Happy's prior written approval. The lease specifies no standard for approval. He finds a willing assignee Happy doesn't accept, and asks her why. She says, "It's my decision. Not yours." May he assign despite the lack of consent or regard Happy as being in breach of an implied obligation under the lease not to unreasonably withhold her consent for Georgio to assign?

ANSWER:

No. Under the California statute, the landlord can't refuse consent unreasonably. "Reasonable" depends in the proffered assignee's ability to perform, not the landlord's desire to capture increased rental value.

If things don't work out for Georgio in Happy's center, he will want to assign. Imagine he comes up with an assignee--The Gap. (They sell Levi Strauss merchandise, jeans and such, and are among the most successful retailers in the U.S.). Happy grows faint when she hears it. "No way. My other tenants--a custom jeweler, a Maud Frizon boutique, an art gallery--will freak and run. You must be kidding."

PROBLEM:

Describe the evidence Georgio would hope to produce in order to prevail in a trial on whether Happy was being reasonable when she said no to The Gap because its market appeal was to buyers incompatible with the image of the center, and the expectations of other tenants already in place.

ANSWER:

Georgio would need evidence that other tenants in the center will benefit from the customers drawn by The Gap.

Demographics would be useful showing The Gap shoppers to be just like those drawn to the other shops in the center. Also, evidence will help showing that The Gap is at least as good a credit risk, if not a better one than Georgio.

§ 97.06(e) Lender and Tenant.

§ 97.06(e)(1) Priority of Lien.

Apartment renters would probably not be concerned about how the landlord's lender could affect their lives. If a lease is for one year or less, the question may never arise. But if a tenant had decorated an apartment lavishly and persuaded the landlord to give a three-year lease, the question might be of some importance. With a large investment in improvements, the tenant wouldn't want to risk being evicted if the mortgagor forecloses.

§ 97.06(e)(2) When Loan Is Superior to Lease: A Surprising Twist for the Lender Relying on a Lease.

Recording act priority rules set the boundaries. If the mortgagee was there first, and had entered and recorded its deed of trust before the tenant entered the lease, the lender's interest is superior to the tenant's. On foreclosure, the tenant could be evicted. n277

In states where the lease is automatically terminated, a lender who wants to be sure its best tenants aren't given a chance to walk away just when they are most needed (following foreclosure) will want to have reserved in its mortgage the right to subordinate the mortgage to any subsequent leases. The lender will want to subordinate only partially, reserving its rights to condemnation and fire insurance proceeds, and to terminate any tenant options to buy the property.

Recently an appellate court, in *Dover Mobile Estates v. Fiber Form Products, Inc.,* n278 affirmed the California rule that if a lease is subordinate to a mortgage, so that the lender or a purchaser at foreclosure could terminate the lease, then the tenant, too, enjoys the option of terminating on foreclosure. The lender argued for the New York rule, that the superior lienor should have the option of terminating the lease or keeping the tenant in place. The court ruled no. This was an especially disappointing result for the lender in *Dover,* who had actually bought the property at foreclosure in a reliance on the lease. The lease had a clause subordinating it to prior or subsequent mortgages. So, the court elected "to follow the rule that the trustee's sale automatically terminates the lease."

The *Dover* court threw one bone to lenders fuming over the decision. A landlord could obtain a non-disturbance promise from her lender for the benefit of the tenant. Such clauses provide that the lender with a superior lien will not disturb a tenant's possession by foreclosure as long as the tenant is not in default under the lease. Commercial tenants often request "non-disturbance" clauses. After the *Dover* case, California lenders should grant them eagerly.

The Urban Land Institute *Handbook for Shopping Center Developers* recommends that all leases contain a provision subordinating the lease to the mortgagee. But the handbook reports that *major* tenants usually insist on "an explicit non-disturbance agreement ... providing that even if the building is foreclosed and sold under a deed of trust or mortgage, as long as the tenant is performing his obligations under the lease, he will not be disturbed." n279

Dover now gives lenders an incentive to confer this right on *all* subordinating tenants it wouldn't wish to leave the center following a foreclosure.

A lawyer points out that the lender needs more than a non-disturbance clause: It is dangerous to accept this [a non-disturbance clause] without the additional provision in the lease that in the event of foreclosure tenant will attorn to the purchaser at foreclosure sale. n280

However, the lender who offers a tenant a non-disturbance promise in order to avoid the risk of the tenant's leaving after a foreclosure can't condition that promise in ways unacceptable to the tenant. "Fairness," reciprocity, mutuality--these

are the goals implicit in the non-disturbance promise. The tenant who rejects a burdensome, heavily conditioned non-disturbance and attornment agreement will surely prevail.

One thoughtful federal judge gave the subordinated tenant an option less drastic than termination following a foreclosure. That court held that when a lender forecloses, a tenant subordinate to the mortgagee may have reasonable ground for insecurity based on analogy to Uniform Commercial Code principles, specifically UCC § 2-609 with respect to whether it may remain in possession. The tenant may "demand adequate assurance of due performance and until it receives such assurance may, if commercially reasonable, suspend any performance for which he has not already received the agreed return." n281

The tenant would have no right to terminate if the lender acquired title by a deed in lieu of foreclosure. This is so because (i) lease covenants respecting the property run with the land, and (ii) the purchaser from the lessor acquires the lessor's interest as it exists at the time of purchase. There is no relation back to the time the mortgage lien arose, as there is on foreclosure. When the lender becomes a grantee under a deed in lieu of foreclosure, the tenant is already in possession. The lender is treated the same as any subsequent purchaser. As a subsequent purchaser, if the lender has inquiry, constructive or actual notice of the tenant's interest, it takes subject to it.

When the lease predates the mortgage, a lease amendment may not be superior to the mortgage. A lessee in possession before the lessor mortgages the fee has an interest free of the mortgage. If the lessor defaults on the mortgage, and the mortgagee forecloses, the purchaser at the foreclosure sale takes subject to the lease as it existed when the mortgage was first entered. The lessor and lessee may have amended the lease. If the amendment came after the mortgage, the amendments are subordinate to the mortgage. To see why this makes sense, consider the example of a five-year lease at a rent below current market value that was about to expire when the lessor mortgaged the fee. The mortgagee counted on the lease expiring and rent going up. But just after the mortgage is entered, the lessor amends the lease by extending its term for another five years at the old rent in exchange for the tenant, a retail chain store, leasing additional space in another of the lessor's properties. If the lessor defaults on the mortgage, the foreclosure sale purchaser takes free of the lease extension. When a lease predates the mortgage, the mortgagee takes subject to the lease, but only to the lease as it existed at the creation of the mortgage. Otherwise, the lessor and lessee by amendment could defeat the mortgagee's reasonable expectations about the lease. n282

§ 97.06(e)(3) When the Lease Is Superior to the Loan: A Tenant's Undisclosed Purchase Option May Not Be.

If the tenant's interest is superior to the lender's, the tenant has no right to terminate its lease. Conversely, the tenant has the right to remain, and the lender cannot remove the tenant lawfully following foreclosure as long as the tenant doesn't breach its lease covenants. The tenant gets to stay no matter how big a bargain its lease has become, and even if it was precisely that bargain rent which drove the borrower into default on the loan. The tenant's interest may be superior because it was entered first and the lender took with notice, or because the lender subordinated its mortgage lien to the tenant's lease. If the tenant was there when the loan was made, the lender could acquire as security only the interest the lessor still owned. At the time of the loan, if that interest had already been diminished by the previously granted lease, the lender takes its security interest subject to the lease.

Suppose your landlord mortgaged the building after your lease was entered, and your lease contained no subordination clause. The landlord's lender probably has inquiry or actual notice of your interest either because you were in possession, or had recorded. Hence, your entitlement would survive the mortgagee's foreclosure.

If you happened to have an option to buy the building, and exercised that option, you could take free of the lien of the mortgage, if the lender had actual, inquiry or constructive knowledge of your option.

If you recorded your option or could prove the lender actually knew about it, you are home free. Suppose, though, the

option wasn't part of the lease, the lease was recorded, but the option was not. Does your possession as tenant put the lender to the duty of inquiring whether you have any interest in the property except as a tenant? Not at all, decided one California appellate court. n283 The purchaser didn't have a duty to make inquiry of a tenant because the tenant's possession was consistent with the record title and there were no circumstances indicating the tenant had additional rights. Certainly, a cautious, well-advised lender would always seek an estoppel certificate from a tenant declaring all the tenant's rights.

§ 97.06(e)(4) Scrutinizing the Lease to Close All Escape Hatches.

A prudent lender will want to be sure a major tenant can't terminate a lease without the lender's consent--even if the landlord breaches an "exclusive" clause, fails to keep the center clean, or sells the parking lot to the city housing authority. The lender will insist that the tenant's only remedies for landlord's breach of the lease are for damages and equitable relief, not termination.

Landlords often reserve the right to terminate the lease after a fire, earthquake, hurricane or other disaster, should rebuilding appear impractical. Sometimes a public agency takes part of a center in condemnation for a public use (widening a road, for instance). If the center can't function successfully without the missing piece, landlords sometimes enjoy the right to close down the center and terminate leases. Although these clauses contemplate the death of the center, they don't worry the lender much. The lender who buys at its own foreclosure sale becomes the landlord. Termination of leases under these clauses will occur at the landlord's or lender's option--not the tenant's.

Some leases also give the *tenant* the option of terminating in the event of destruction or partial condemnation. That provision is unacceptable to a lender. If the tenant decided to terminate, the lender could get stuck foreclosing on a center with yawning stretches of vacant space.

§ 97.06(e)(5) Eliminating an Embarrassing Source of Liability to a Foreclosing Lender with Many Shopping Center Loans in the Same Market Area.

The "exclusive operation" clause can be worrisome to the lender when the landlord has promised the tenant an exclusive not only over the shopping center, but also "any other property directly or indirectly owned or controlled by the landlord" within some prescribed radius. A major lender with stakes in other centers nearby could find itself easily in breach of this provision if it purchased the property at foreclosure. That is why thoughtful developers never promise exclusives to more than the shopping center proper, not to other properties they may own then or in the future. n284

§ 97.06(e)(6) Conclusion: Seeing the Lease Through the Lender's Eyes.

The bottom line is that "use," "continuous use," "exclusive use" and assignment clauses must all be drafted with a third party interest kept firmly in mind--that of the landlord's lender. Leases that lenders disapprove must be redrafted. Lenders' lawyers are paid to see that the borrower complies. The experienced landlord prefers to anticipate the lender's requirements than be forced to renegotiate the lease.

A lender in a state like California will be advised by its attorneys to give desirable tenants whose leases are subordinate to the mortgage a "nondisturbance" agreement. A non-disturbance promise is that the tenant's right to possession won't be affected by the mortgagee foreclosing. Only by extending such a promise can a California lender be sure the tenant won't have the option of terminating the lease if the lender forecloses. "Sauce for the goose, sauce for the gander," is the California rule. A lender whose superior lien gives it the right to terminate a tenant's lease on foreclosure must relinquish that right or risk the tenant's electing to terminate should the lender foreclose.

Non-Disturbance, Attornment and Subordination Agreement:

1. Provided Tenant is not in default under the terms of the Lease, the right of possession of Tenant to

the leased Premises shall not be affected or disturbed by Mortgagee in the exercise of any of its rights under the Mortgage or any note secured thereby, and any sale of the Premises pursuant to the exercise of any rights and remedies under the Mortgage or otherwise shall be made subject to Tenant's right of possession under the Lease.

2. Tenant shall attorn to Mortgagee or any purchaser of the Premises and the Lease shall continue, in accordance with its terms, between Tenant and Mortgagee or such purchaser (Mortgagee or such purchaser being hereinafter sometimes called "Successor Landlord") except that (a) notwithstanding the Lease (i) all eminent domain awards are to be paid directly to and, except as provided in clause (b) of this paragraph, retained by Successor Landlord as its sole property (except that Tenant may interpose against the condemning authority separate claims for its fixtures, moving expenses and leasehold improvements provided (1) Tenant expended its own funds therefor and (2) such claims do not reduce the amount of the award to which Successor Landlord is entitled) and (ii) all insurance proceeds are to be paid directly to and, except as provided in clause (b) of this paragraph, retained by Successor Landlord as its sole property (except that Tenant shall be entitled to the proceeds of all insurance paid for by Tenant covering Tenant's fixtures, inventory and contents), (b) if the Lease requires that all or a portion of the insurance proceeds or eminent domain award be applied toward restoration, Successor landlord agrees to allow the utilization of such net proceeds or net award (that is, in each instance, the net amount actually received and retained by Successor Landlord after deducting all necessary expenses of determination of the amount and collection thereof, including but not limited to adjustor, legal and expert fees and expenses) toward restoration in accordance with the Lease, shall (i) keep control and possession of such proceeds or award and apply same toward restoration and periodically pay contractors and vendors directly upon properly received requisitions, paid receipts, waivers of lien and other requisites imposed by Mortgagee in its then applicable standard form of Building Loan Agreement and (ii) never be required to expend toward such restoration any monies in excess of such net proceeds or net award and (c) this paragraph and paragraphs 3 and 6 hereof, if applicable, shall modify the Lease.

3. Successor Landlord shall not be (a) liable for any act or omission of any prior landlord (including Landlord), (b) liable for the return of any security deposit not actually received by Successor Landlord, (c) subject to any offsets or defenses which Tenant might have against any prior landlord (including Landlord) to the extent such offset or deduction could have been (whether or not actually) covered by Tenant by available insurance, and in no event shall any available offset or deduction be applicable to the minimum or base rent required to be paid by Tenant under the Lease but such offset or deduction (if available under this sentence) shall be applied only against rent escalations, percentage or overage rents, common area maintenance and the like, (d) bound by any advance payment of rent or additional rent made by Tenant to Landlord except for rent or additional rent applicable to the then current month, (e) bound by any amendment or modification of the Lease made without the written consent of Successor Landlord or (f) bound to effect or pay for any construction for Tenant's initial occupancy, but shall be bound to pay for construction contained in the Lease required to be performed subsequent to both the (1) opening by Tenant in the Premises for the conduct of its business and (2) commencement of Tenant's obligation to pay rent.

4. The Lease shall be subject and subordinate to the lien of the Mortgage and to all of the terms, conditions and provisions thereof, to all advances made or to be made thereunder, and to any renewals, extensions modifications or replacements thereof, including any increases therein or supplements thereto.

5. The foregoing provisions shall be self-operative. However, Tenant agrees to execute and deliver to Mortgagee or to any person to whom Tenant herein agrees to attorn such other instrument as either shall request in order to effectuate said provisions.

6. Anything herein or in the Lease to the contrary notwithstanding, in the event that Mortgagee or a

purchaser shall acquire title to the Premises, Mortgagee and such purchaser shall have no obligation, nor incur any liability, beyond Mortgagee's or purchaser's then interest, if any, in the Premises and Tenant shall look exclusively to such interest, if any, of Mortgagee or such purchaser in the Premises for the payment and discharge of any obligations imposed upon Mortgagee hereunder or under the Lease, and Mortgagee and such purchaser are hereby released or relieved of any other liability hereunder and under the Lease. Tenant agrees that, with respect to any money judgment which may be obtained or secured by Tenant against Mortgagee or such purchaser, Tenant shall look solely to the estate or interest owned by Mortgagee or such purchaser in the Premises, and Tenant will not collect or attempt to collect any such judgment out of any other assets of Mortgagee or such purchaser.

FOOTNOTES:

(n1)Footnote 178. Several state legislatures have reduced one source of risk to the landlord by prohibiting local governments from enacting commercial rent controls. *See, e.g.*, N.M. Stat. Ann. § 47-8A-1 (prohibiting enactment of rent control ordinances for *all* privately owned real property) and Cal. Civ. Code §§ 1954.25-1954.31. In California, the clamor for shop rents to be controlled arose first in Berkeley when neighborhood-serving Ma-and-Pa stores (small markets, dry cleaners, shoe repairs) began to be displaced by upscale boutiques and trendy restaurants.

DiSciullo, *Negotiating a Commercial Lease from the Tenant's Perspective*, 18 Real Est. L.J. 27 (1989).

(n3)Footnote 180. Jerry Adler, High Rise: How 1,000 Men and Women Worked Around the Clock for Five Years and Lost $200 Million Building a Skyscraper 208 (Harper Collins 1993).

(n4)Footnote 181. *See* Sidney G. Saltz, *Do Tough Landlord Lease Forms Really Pay Off?*, 20 Real Est. Rev. 55 (Summer 1990), suggesting landlord should "lighten up" and avoid harsh lease provisions in order to improve their reputation in the commercial real estate community, and encourage tenants to renew.

(n5)Footnote 182. Here are three examples:

(1) Will the warranty of habitability implied in residential leases by many courts be implied in commercial leases? Absent an authoritative ruling, all aspects of maintenance, repair and what would happen if the property were partially or totally damaged need to be negotiated. The policy arguments for implying such a clause in favor of the tenant and against have been well drawn. The issue is not likely to be resolved one way or the other anytime soon. *See* Note, *An Economic Analysis of Implied Warranties of Fitness in Commercial Leases, 94 Colum. L. Rev. 658 (1994)* (because the lessor owns the reversion and can take advantage of economies of scale, the lessor is the most efficient warrantor). *See* Fred William Bopp III, *The Unwarranted Implication of a Warranty of Fitness in Commercial Leases--An Alternative Approach, 41 Vand. L. Rev. 1057 (1988)* (implying a warranty of fitness as basis for the lessee to terminate is unwarranted because of the superior bargaining power of many commercial tenants, but allowing tenants to plead lack of habitability as a defense to an otherwise summary action for possession would be appropriate).

(2) Is a tenant who takes under an "as is" clause liable for asbestos removal? In *Brown v. Green, 35 Cal. Rptr. 2d 598 (Cal. Sup. Ct. 1994)* , the Court observed that the answer was "context-dependent." But the Court affirmed an appellate court opinion holding the tenant liable in a case involving "the long-term lease of an entire warehouse-like building by sophisticated business partners who had substantial experience in leasing commercial property: lessees who were on written notice of at least the potential for asbestos contamination prior to executing the lease, who inspected the building and elected not to investigate the possible presence of hazardous materials before negotiating and signing an agreement that by its terms shifted the major risks of property ownership to the lessee, negated any repair obligations on the part of the lessor, and omitted any representations respecting the condition of the property. In addition, the cost of complying with the mandated work, although substantial in absolute numbers, is less than 5 percent of the total rent payable over the life of the lease."

(3) The Americans with Disabilities Act (ADA), *42 U.S. Code §§ 12101-12213*, prohibits discrimination against the disabled seeking access to "places of public accommodation." Examples of public accommodation include hotels, restaurants, movie theaters, schools, shops and banks. Barriers to access need to be eliminated. This may require installing ramps and making curb cuts. Generally in the absence of lease provisions to the contrary, the landlord is charged with the task of bringing common areas into ADA compliance and the tenant is responsible for compliance within the leased space. *See* Michael F. Jones, *Commercial Leases Under the Americans with Disabilities Act*, 22 Real. Est. L.J. 185 (Winter 1992). The landlord may be able to recoup some of the cost through common area maintenance assessments. Where a single tenant occupies an entire building, the tenant may have to pay for all the ADA upgrades. Today no careful lease fails to allocate the responsibility for compliance explicitly between landlord and tenant.

(n13)Footnote 190. Emmanuel B. Halper, Shopping Center and Store Leases 58 (Law Journal Seminar Press 1989, first published in 1979).

(n14)Footnote 191. In one disputed lease, the premises were constructed following the execution of the lease. The plans showed a "footprint" of 13,020 square feet, as well as a 628-square-foot mezzanine containing a lunch room, bathrooms and an office. The lessor wanted to count the mezzanine as part of the gross leasable area for calculating rent. The tenant pointed out the definition in the lease of "gross leasable area": "measured from the outside face of the front and rear exterior walls and the midpoint of the common walls on either side of the Demised Premises." This came to 13,020 square feet. The lease described the leasable area as 13,029 square feet. The lessor insisted the mezzanine would have been included as part of the gross leasable area under most industry definitions. The court held that the tenant was right. The parties' intent as to the meaning of "gross leasable area" could be inferred from the lease itself without resort to industry standards. *British American Dev. Corp. v. Fay's Drug Co., Inc., 577 N.Y.S.2d 528 (N.Y.A.D. 1991)* .

(n24)Footnote 201. *Determining the "right" price index.*

> The index normally used in leases is the *Consumer Price Index, All Urban Consumers*, applicable to the area in which the project is located ... . From the tenant's standpoint, the *CPI for Urban Wage Earners and Clerical Workers* is a better index because it tends to increase a bit more slowly than the *All Urban Consumers index* ... . Since the relevance of any of these indexes to a commercial lease is arguable at best, the particular index to be used is just a matter of negotiation. The differences between the various indexes may be slight, but the use of a more favorable index can add up to significant savings over the term of the lease.

(n27)Footnote 204. *See, e.g., Enterprise-Laredo Assocs. v. Hacher's, Inc., 839 S.W.2d 822 (Tex. App. 1992).* The lease contained a "more-favored-nation" provision regarding CAM charges, that no tenant would later be charged CAM assessments on a more favorable basis than this tenant without giving this tenant the benefit of that more favorable treatment. The lessor overcharged the tenant for years. The tenant finally wised up, demanded an audit, and discovered the overcharges. The court allowed the tenant recovery with interest but only for the four years of overcharges preceding the tenant's complaint. The tenant's claim was based on breach of contract and the Texas statute of limitations for contract actions is four years from the date the cause of action arose, not the date of discovery. The overcharging had been going on longer than that. The trial court had granted the tenant's claim for relief under the Texas Deceptive Trade Practices Act but was reversed on appeal. That statute was designed as a consumer protection measure, the appellate court held, not as an alternate remedy in a breach of contract action brought by a well-represented, knowledgeable commercial tenant. To achieve a full recovery the tenant should have acted sooner.

See, e.g., Enterprise-Laredo Assocs. v. Hacher's, Inc., 839 S.W.2d 822 (Tex. App. 1992).

(n44)Footnote 221. *Sullivan Bros. Clothing, Inc. v. North Dartmouth Joint Venture, 332 N.E.2d 926 (Mass. 1975)* .

(n45)Footnote 222. *Freed v. Cassinelli, 1984 Ohio App. LEXIS 11265* (Ohio App. Oct. 31, 1984) .

(n46)Footnote 223. Typical promises that if the anchors leave, the tenant may depart, read like this:

(1) Landlord agrees that the execution and delivery of the Original lease by Tenant be made upon the express condition that other retail store buildings shall be constructed on the Entire Premises in the locations shown on Exhibit B to the Original Lease.

(2) Landlord represents and warrants that the Broadway Store contains not less than 143,407 square feet of Floor Area and the Mervyn's Store contains not less than 80,688 square feet of Floor Area.

The lessor might bargain for written notice and a chance to find new anchors before a tenant could depart when the old anchors left. The lessor might also seek to remove the right of the tenant to terminate and, instead, to restrict the tenant's remedy to damages based on proof of earnings lost due to the anchor's departure.

(n47)Footnote 224. *Carollton Central Plaza Assoc. v. Morse Shoe, Inc., 1989 U.S. Dist. Lexis 5842* (E.D. La., May 24, 1989) .

(n48)Footnote 225. An anchor tenant on a percentage lease was held liable to the landlord for the diminution in the value of the center caused by anchor's leasing operations with approximately 20 years remaining on a 30-year lease. The measure of damage was the difference between the value of the shopping center before and immediately after the breach. *Hornwood v. Smith's Food King No. 1, 807 P.2d 208 (Nev. 1991)* . On remand, the landlord's appraiser pegged the decreased value at $1,425,000. The tenant's appraiser saw no decrease or, at most $216,000. The trial judge entered a judgment for $1,425,000 without an evidentiary hearing. On tenant's appeal, the Nevada Supreme Court ordered the trial court to hold a hearing. *Smith's Food King No. 1 v. Hornwood, 836 P.2d 1241 (1992)* .

(n49)Footnote 226. *Lippman v. Sears Roebuck & Co.,, 280 P.2d 775 (Cal. 1955)* .

(n50)Footnote 227. *See, e.g., Casa D'Angelo, Inc. v. A & R Realty Co., 553 N.E.2d 515 (Ind. App. 1990)* (tenant has no duty to produce percentage rent so had no duty to continue operating a restaurant); *Walgreen Ariz. Drug Co. v. Plaza Ctr. Corp., 647 P.2d 643 (Ariz. 1982)* (even though base rent was low because landlord expected tenant to be a magnet to draw customers to other shops in the center, percentage rent clause creates no implied obligation for continuous operation); 2401 *Philadelphia Ave. Corp. v. Federation of Jewish Agencies, 466 A.2d 132 (Pa. Super. 1983)* (use and occupancy clause is not a covenant to use); *Fifth Avenue Shopping Center, Inc. v. Grand Union Co., 491 F. Supp. 77 (N.D. Ga. 1980)* ; *Fuller Market Basket, Inc. v. Gillingham & Jones, Inc., 539 P.2d 868 (Wash. App. 1975)* (grocery store in shopping center--no implied covenant will be implied in lease that tenant must continue to operate); *cf. Fodor v. First Nat'l Supermarkets, 589 N.E.2d 17 (Ohio St. 1992)* (in order to justify implying a lease covenant it must be clear that the reason the covenant wasn't placed in the lease is that to do so would be to state the obvious); *Kroger Corp. v. Bonny Corp., 216 S.E.2d 341 (Ga. App. 1975)* (no continuous use obligation implied from percentage lease of supermarket).

A few courts will imply a continuous use clause if the fixed-base rent is a token rent, an insubstantial sum. *See College Block v. Atlantic Richfield Co., 254 Cal. Rptr. 179 (1988)* ; *Thompson Dev. v. Kroger Co., 186 W. Va. 482, 413 S.E.2d 137 (1991)* . *See generally,* Kathleen A. Furlong and Phyllis L. Volk, *Continuous Operation Clauses* in Patrick A. Randolph, The Commercial Property Lease 71 (1993).

(n81)Footnote 258. Cal. Civ. Code § 1995.270(a).

(n82)Footnote 259. *Carma Devs. (Cal.), Inc. v. Marathon Dev. Cal., Inc., 826 P.2d 710 (Cal. 1992)* . Courts in other states have enforced the landlord's reservation in the lease of rents the tenant receives from subtenants--without the benefit of a statute on the point. *See, e.g., KCP Corp. v. The Book Press, 636 A.2d 325 (Vt. 1993)* .

(n83)Footnote 260. Cal. Civ. Code § 1951.4(c).

(n84)Footnote 261. The question the legislature failed to answer was whether a lessor could allow the lessee to assign with the lessor's prior consent "in the lessor's sole and absolute" discretion. Such clauses are probably enforceable under California common law but there is room for argument whether the statute subsumes this provision as one type of "absolute prohibition." Except for absolute prohibitions, the statute requires all other consent provisions to be subject to "express standards or conditions," or a "reasonableness" standard is implied. It isn't clear whether "sole discretion" constitutes an "express standard or condition." *See* Susan E. Myster, *Protecting Landlord Control of Transfers: The Status of "Sole Discretion" Clauses in California Commercial Leases, 35 Santa Clara L. Rev. 845 (1995).* The author argues the case for legislative clarification. The Legislature disapproved a provision that would have sanctioned lessors using a "sole and absolute" discretion standard when the statute was enacted initially.

(n85)Footnote 262. *Id.* § 1995.240.

(n86)Footnote 263. *Id.* §§ 1995.210, 1995.220.

(n87)Footnote 264. In *Ilkhchooyi v. Best, 45 Cal. Rptr. 2d 766 (Cal. App. 1995)* , an appellate court characterized as unconscionable and, hence, unenforceable, a landlord's attempt to enforce a 75% recapture because the recapture included the value of the tenant's business. The tenant was selling the business along with its interest in the lease. The 75% recapture provision applied to amounts constituting "rent or other consideration, including without limitation any consideration of a tenant's business, business opportunity, good will, a covenant not to compete and/or the like, either initially or over the term of the assignment or sublease ... ." Along with an assignment of the lease, the tenant sold personal property and a covenant not to compete and refused to share the consideration with the lessor. When the lessor returned a rent check drawn on the business account but signed by the assignee, the assignee was so distressed by the lessor's intransigence, he reduced his offer for the business by $40,000. (He had signed the check as an employee of the lessor before they had concluded their deal.) The court held the clause unenforceable but overturned a trial court punitive damage judgment of $30,000. The case may encourage tenants in a mood to challenge lessor recapture clauses to argue the premiums they are getting from assignees are not consideration for the value of the lease but consideration for the value of the tenant's business.

(n88)Footnote 265. There is a statutory exception to the rule that the landlord's consent, absent a standard, cannot be unreasonably withheld. In leases entered before September 23, 1983, landlords who reserved the right to consent can withhold it for no reason whatever. 1983 was the year that *Cohen v. Ratinoff* implemented a reasonableness-for-consent test. When the landlord conditioned assignment on consent in leases entered after September 23, 1983, the landlord's consent may not be withheld unreasonably if the lease requires consent but contains no express standard for exercise.

(n96)Footnote 273. Marvin Garfinkel, *Counseling the Tenant on Leasing a Large Office,* from ABA Section on Real Prop., Prob. & Trust Law 25, 28 (ABA 1993).

(n97)Footnote 274. *See* Kenneth A. Posner, *The Story of Law Firm X's Lease Restructuring,* Real Est. Fin. J. 29 (Winter 1994).

(n98)Footnote 275. But building department practices vary across the county regarding when the certificate will be issued, and there are temporary certificates, conditional certificates, and final certificates. Moreover, there can be a considerable delay between the final satisfactory inspection and the actual issuance of the piece of paper called the certificate of use.

(n99)Footnote 276. Sometimes the shopping center or office is ready for occupancy, up and running, but the tenant's space hasn't been outfitted and made ready for occupancy. Tenant improvements may be lacking. If the tenant was responsible for making the tenant improvements, delay occasioned by the improvements being late won't justify the tenant refusing to pay rent. The lease commences on the date originally agreed. If the lessor is responsible for making the tenant improvements, the lessor may become liable for the delay.

(n100)Footnote 277. *Exception:* Residential tenants in cities with rent control laws can't be evicted without "good cause," as defined in those ordinances. Lenders purchasing on foreclosure, even those whose liens pre-date the ordinance and the lease, may be subject to rent control laws. *Compare Gross v. Superior Ct., 217 Cal. Rptr. 284 (1985)* (state unlawful detainer statute held not to preempt "good cause" eviction provision protecting tenure of rent controlled tenants) *with Guttenberg Sav. & Loans Ass'n v. Rivera et al., 428 A.2d. 1289 (N.J. 1981)* (mortgagee whose loan was recorded before tenants took possession held entitled to evict tenants following foreclosure despite state "good cause" eviction statute). This result is justified because the purchaser at foreclosure acquires the lender's interest as it existed when the lessor first gave the lender a security interest in the property. The lender acquired its security title at that date. Since the lease came later, the lessee takes subject to the mortgage, assuming the mortgage was recorded or the lessee had inquiry or actual knowledge of the prior mortgage. A senior lienholder can evict the tenant after foreclosing. The subordinate lessee could have protected himself by insisting on a promise of non-disturbance from the lender before and as a condition to entering the lease. There is an old juridical twist, though, by which subordinate lessees at risk of their leases being terminated are given the right themselves to terminate their leases even when the foreclosing senior lienor would have preferred the lessee stay put. It's sort of a "what's good for the goose is good for the gander" idea. Or maybe a case of the long-buried doctrine of mutuality of remedy arising from the grave like the undead who populate a certain genre of horror movies.

CHAPTER 97 CONSTRUCTION AND DEVELOPMENT LAW

12-97 Thompson on Real Property, Thomas Editions § 97.07

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 97.07 Special Features of Construction and Post-Construction Financing in Commercial Developments.

[Go To Supp]

§ 97.07(a) Introduction.

Real estate lenders traditionally divide into those which make construction loans, and those which fund only fully completed projects. Construction loans are made short-term to pay the costs of construction. The construction lender advances funds as construction progresses and allocates some of the loan proceeds as interest. The construction loan payoff date usually coincides with completion of the project. The construction lender is usually counting on a post-construction or permanent loan made following completion of the project to pay off the construction loan. A post-construction or permanent loan might also refinance an existing permanent loan, or allow an owner to extract appreciated value from the property, tax free.

One of the construction lender's biggest credit risks is that the project won't be completed. Even if the construction lender stages loan draws carefully, a half-finished project isn't really worth half of its total cost. Until the project is completed, the construction lender's credit risk can be sizeable.

In many cases the property is worth more vacant than just after construction begins. With good title, land use entitlements, approved plans and specs for a building, and a hazardous waste clearance, a vacant site has a demonstrable value.

Once construction begins there can be mechanic's liens, a need to have the site released from a blanket encumbrance, the obligation of the site owner to complete construction, and so on. If the proposed improvement is stopped midway, completion must either be funded, or what had been built so far must be demolished. If the site had been legally subdivided according to a subdivision map act approval, the subdivision may have to be erased of record in a proceeding sometimes called a "reversion to acreage." All of these possibilities can result in the site being worth less after construction begins than it was worth before construction.

When construction is completed, the project receives a certificate of use or occupancy. A vacant building may not be much more valuable than a vacant site. But if the project can be sold or fully leased (hopefully, at the prices or rents projected in the developer's pro forma), its value should be greater than it had been when the land was vacant.

Traditionally, the construction lender wouldn't advance funds until the developer obtained a commitment from a post-construction lender to provide a big enough loan to pay off ("take out") the construction loan once the project was finished.

The "interest" risk of the post-construction lender is long term; its loan will be in place for three to thirty years, as against maturities of six months to two years for the construction loan. The construction lender handles its interest risk through the use of variable rate loans using the prime rate, LIBOR, n285 U.S. Treasuries, lenders average cost of funds, or some other floating index. Commercial "permanent" loans are often written for fixed rates.

The credit risks of the two types of lenders are different. After completion, the construction lender's credit risk is reduced by the permanent lender's promise to finance the project on completion. In comparison, the post-construction lender often manages its credit risk by conditioning its loan commitment on the developer's ability to secure tenants whose rents will cover debt service on the project.

Construction lenders typically charge 150 to 250 basis points (i.e., 1.5-2.5%) over LIBOR, plus an origination fee between 1/4-1/2%, for a two-year period. Deals under $10 million are not typically priced using LIBOR, but rather, the Corporate Base Rate, which is 125 basis points (1.25%) higher than LIBOR. A good middle-market developer's rate would be about 150 basis points over the Corporate Base Rate, plus a 1% fee, for 18 months.

The lender's net return is not limited to the interest charged on the outstanding loan, but also includes various fees. All construction loans require an initial loan fee to cover the cost of underwriting, structuring and closing the loan. As with the interest rate, fees are subject to negotiation and vary widely between projects. For this reason, it is very important to look at total pricing, including loan fees, when comparing loans.

Although loan fees and interest rates are negotiable, the following costs generally are not. The borrower is required to pick up all legal, title and closing costs, as well as the costs of an appraisal and an outside inspector who will go out on a monthly basis at a cost of $150-1,500 per visit, depending on the complexity of the project. Sometimes the developer is able to persuade the lender to "cap" the legal, title or closing costs, with the developer paying the actual costs below the cap and the lender paying the rest. There is also an up-front fee for reviewing all the plans and specs, doing a budget estimate, and comparing the lender's budget estimate to the developer's.

§ 97.07(b) The Usual Risks and Risk Avoidance Devices of the Construction Lender.

Consider the risks of a construction lender who agrees to advance funds to a developer on a project not yet built:

Risk 1: Overbudget. Overtime. The project may cost more and take longer to build than the developer's budget forecasted.

Avoidance 1: The construction lender reviews the developer's plans and construction cost estimates for accuracy. It also reviews the construction contracts.

The construction lender attempts to obtain the developer's personal promise to complete the project on time and on budget, resisting the developer's importunities to make the loan "non-recourse." That promise is embodied in a construction loan agreement which gives the lender the right to stop funding if the developer defaults or if the project is progressing slower or more expensively than planned.

The construction lender may insist that the developer obtain a surety, performance or payment bond obligating the bond company to guarantee, complete or pay for the completion of the project.

Risk 2: Out of Balance Funding. The developer may seek larger than necessary disbursements from the construction loan in the early stages of construction, which causes the funds remaining with the lender to be insufficient to complete the project if the developer becomes insolvent or disinterested in the project.

Avoidance 2: The construction lender tries to prevent "front end loading" of the construction loan fund by estimating what each stage of the project will cost, verifying through architects and its own experts how much work has been done before each construction loan advance is to be paid to the developer, and withholding a certain percentage (from 5 to 15%), until after satisfactory completion.

Real estate lender James Moore explains, if the inspector reports that the amount funded is not going to be sufficient to complete the project, the lender has several options: n286

> First, we notify the borrower that they are "out-of-balance." At that point, our legal documentation gives us the right to stop advancing funds. They then have a ten-day period to respond or explain away our concern, or give us a check or a satisfactory guarantee to make up the amount by which they are out-of-balance. If they fail to do any of these things, and we're absolutely confident that they are out-of-balance, we can take action under the legal documents and begin withholding payments. There would have to be ample evidence of a short-fall or we'd risk legal exposure as well as damage to our reputation.
>
> We insist in all projects that there be some additional money the development can draw upon to cover change orders, upgrades, or cost overruns due to a sub having underbid the job. The typical amount would be 5% of hard costs (general contractor's costs) and 2 or 3% of soft costs (title, legal appraisal, architectural items). n287

Risk 3: Value on Completion Less Than Construction Cost. The budget may be adequate but the completed project may not be worth what it cost to build. The project may not be rentable for enough to repay the loan.

Avoidance 3: The construction lender reviews the developer's market analysis and independent appraisers verify the developer's estimate of project value. The construction lender also checks the borrower's credit history and financial resources to see if the borrower has the means to pay any deficiency that may arise between the value of the project at completion and the construction loan balance. The construction lender may--and usually does--insist that another solvent and responsible lender commit itself to make a loan on completion sufficient to pay off the construction loan.

The construction lender may insist the developer enter leases with high quality ("credit") tenants in advance of construction at rents sufficient to service a permanent loan which is big enough to pay off the construction loan.

Risk 4: Interest Rate Fluctuations Causing Project to Become Uneconomic. Interest rates may rise so high during construction that the project income upon completion, which would have been sufficient to pay the initial loan rate, will not cover the higher rate.

Avoidance 4: The lender handles its interest risk by using variable-rate construction loans which float with the bank's prime rate, LIBOR, or the corporate base rate. A few lenders make fixed rate loans. Since these are for relatively short terms (six months to two years), the lenders who make fixed-rate loans construction loans (usually savings associations) have either matched them with fixed-rate deposits or are prepared to take the gamble because of the construction loan's short maturities. A lender concerned about the ability of the project or the developer to absorb open-ended interest rate liability will make a fixed-rate loan, cap the variable rate, or urge the borrower to enter an agreement to swap its floating rate obligation for a fixed-rate one.

Risk 5: Disasters and Calamities Affecting Construction. Calamities such as strikes, bad weather, and vandalism may

prevent timely completion.

Avoidance 5: The lender requires the developer to buy "all risk" insurance against calamities and name the lender as beneficiary.

Risk 6: Diversion of Funds. The developer may divert construction funds away from the project, leaving contractors and subcontractors unpaid.

Avoidance 6: To prevent the developer from diverting funds, the lender may issue joint checks to the developer and general contractor, or insist that the contractor provide the names of all subcontractors and material suppliers on the job, and write checks directly to them. The lender will want from all subcontractors and contractors lien waivers of their rights under mechanics' lien laws.

Risk 7: Developer Distraction. The developer may be working on several projects at once and decide that this one isn't the one most deserving of her attention.

Avoidance 7: Lenders definitely prefer projects where the developer has substantial funds at risk, as the developer is less likely to lose interest in the project. To discourage the developer from "cherry picking" a more promising project and letting this one slide, the lender may insist on a mortgage on all or some of the property the developer owns or later acquires before paying off the construction loan. This is called "cross collateralization."

Under recording act principles, the priority of the construction lender's lien to other properties won't be established until it is recorded in the chain of title to those properties. Merely describing the other properties in the mortgage on the development site won't be sufficient.

Further, if the developer doesn't acquire other sites until after the construction loan is made, the after-acquired *property clause* is, at best, a promise by the developer to subject after-acquired property to the construction lender's lien. In some states, such a promise will be enforced only if the subsequently acquired site bears a functional relationship to the primary site. n288 Not only will a developer resist such a requirement, the developer's lenders on the other sites can be expected to balk at subordinating their liens or waiving their "due on encumbrance" rights which allow them to accelerate existing loans if new ones are secured by the same property.

Risk 8: Failure of Post-Construction Lender to "Take Out" the Construction Loan. When the project is completed, the construction lender is counting on being repaid by another lender providing a long-term loan to the borrower. However, the borrower may not be able to find such a lender, may find one who is not willing to lend enough to pay off the construction loan, or may find one only willing to lend when the building is leased up, or nearly so. Additionally, the post-construction lender may breach its commitment to fund or find a legal means of avoiding it.

Avoidance 8: If the developer can't obtain a commitment from a permanent or post construction lender, the construction lender may write the loan so that, upon completion of the project, the construction loan becomes a post-construction loan at very high rates, to encourage the developer to try hard to find a permanent lender.

If a loan commitment is obtained from a permanent lender, the construction lender will review its terms and insist on limiting "escape" clauses by having the permanent lender approve title, building plans and environmental audits in advance. The construction lender will make the developer's breach of the terms of the post-construction loan a breach of the construction loan.

The construction lender may obtain a promise directly from the post-construction lender to buy the construction loan on completion; the construction lender can then enforce this promise directly, instead of having to rely on its status as a third-party beneficiary of a commitment letter from the permanent lender to the developer. These are called buy-sell

agreements. They are signed by the construction and post-construction lender and often by the borrower as well. n289 They provide that when the project is completed, the post-construction lender will buy and the construction lender will sell the construction loan. Buy-sell agreements make it difficult for the borrower to finance the "take out" loan elsewhere.

Risk 9: Mechanics' Liens. The construction lender requires a first lien on the development property because it will have to assign that lien to the post-construction lender. The post-construction lender will also insist on having a secured first lien. However, if the developer fails to pay laborers and material suppliers, they may be able to assert liens superior to the construction loan. The post-construction lender won't fund its commitment until those mechanics' liens are released of record.

Avoidance 9: To assure itself a first lien, the construction lender insists on a policy of title insurance specifically protecting the lender against mechanics' liens. The astute post-construction lender will also insist that it have a first lien that is in fact superior to mechanics' liens because a title policy will not be good enough if the title insurer has defenses, exclusions or exceptions in the policy that it could invoke to avoid paying off the liens. The post-construction lender "buys" or takes an assignment of the construction loan in order to enjoy the lien priority of that earlier loan, free of any intervening liens that may have been filed after the construction project began.

§ 97.07(c) Commercial Lending Cycle.

§ 97.07(c)(1) Traditional Lenders.

Because most construction lenders won't commit themselves until the developer finds a permanent lender, the commercial lending cycle is convoluted:

Step One: The developer obtains a post-construction lender's commitment to lend upon completion.

Step Two: Armed with that commitment, the developer goes to a construction lender for a commitment letter.

Step Three: The post-construction (A) and construction lender (B) reach some form of agreement that on completion, (A) will provide sums sufficient to pay off the (B) loan.

1. That agreement may be in the form of a buy-sell: (A) agrees to buy the (B) loan, and (B) agrees to sell that loan to (A), and only to (A).

2. Or the developer/borrower may sign all the notes and mortgages at the outset, putting the documents in escrow until the project is completed. In this arrangement, called a piggyback, the developer doesn't have to do anything further. As long as (A) and (B) agree that the project is completed, (A) releases funds to pay off the (B) loan, (B) releases its mortgage or deed of trust, and the (A) mortgage is recorded.

Both of these arrangements obligate the developer to borrow and the lender to lend, with the construction lender a third-party beneficiary of the permanent lender's promise to fund on completion.

3. The developer may also resist the lender's structuring the transaction as a buy-sell or a piggyback. The developer may prefer to hold just an option commitment from the post-construction lender, retaining the freedom to shop later for a better long-term loan.

Step Four: The construction loan is closed and construction begins. Payments are disbursed as the work progresses according to a building loan agreement between the developer and the construction lender, obligating the developer to build according to agreed plans and specs.

Step Five: The construction loan is funded in stages and the project is built.

Step Six: When the terms of the post-construction lender's commitment letter have been met, the post-construction loan is closed, funds are disbursed to satisfy the construction loan and the balance, if any, is paid to the borrower.

§ 97.07(c)(2) Wall Street and the Securitization of Loans.

Securitization is a way for developers to find new, alternative sources of financing by creating a debt instruments which target an identifiable segment or subsegment of the capital market; *i.e.*, the project loan is made like a marketable security. n290 Securitization does not identify a particular type of loan transaction. The developer and her investment banker create a marketable security to sell to investors who might not have had the ability or desire to originate a traditional loan for the project. n291 The market for this product is estimated to be anywhere between $600-700 billion to $800 billion.

The issuer structures the new security to attract investors and often uses component debt and various investor assurances to do so. Component debt divides the large debt into smaller chunks, each with distinct features attractive to different subsegments. Dividing the debt this way allows the developer to meet each investor along his demand curve instead of paying the full amount to a single investor/traditional lender. The issuer also wants to give the investor sufficient information to judge the issue but remove the hassle of rigorous real estate analysis since many issues target segments without the ability to properly analyze the project. n292 Investors in these segments may reject the issue for the inability to do the analysis alone. The issuer can meet her goal by performing all the analysis a traditional lender would and providing that to the investors, getting the issue rated by an agency such as Standard and Poor's, or by enhancing her credit through either a third-party guarantor or self-enhancement (create two classes of security, one rated investment grade for investors unable or unwilling to do the real estate analysis and the other of inferior grade or unrated for non-risk adverse investors).

Developers and issuers may face problems trying to securitize commercial loans. The securitized loan may involve only one property or project, which concentrates risk. Further, the property may not be worth the remaining value of the loan, increasing the risk of loss. Lastly, there is no uniform standard of underwriting analysis and evaluation which may allow questionable loans to be securitized.

Securitization of loans runs directly into the Securities Act of 1933 n293 and Securities and Exchange Commission ("SEC") regulations compelling com-pliance with extensive registration requirements. However, the developer/issuer can avoid registration through private placement, n294 certain large mortgage transactions, n295 getting the issue guaranteed by a bank, n296 or having a state or federally chartered thrift issue the security. n297 Where no exemption applies, the issue must be registered prior to offer and sale.

§ 97.07(d) Selecting the Lender.

Experienced developers know where money can be found. Inexperienced developers use loan brokers or loan representatives of major lenders. Life insurance companies have been important sources of loan funds for commercial real estate. So have pension funds, REITs and firms such as GE capital. Commercial banks usually stick to construction loans and avoid permanent or postconstruction financing because their deposits are short-term and very interest-sensitive. Savings associations were traditionally home-lenders but forayed into commercial finance, long-term and construction loans, with sometimes disastrous results in the 1980s.

Institutional lenders are notoriously conservative, eager to stay within conventional bounds. John Maynard Keynes observed:

A "sound" banker, alas, is not one who foresees danger and avoids it, but one who, when he is ruined, is ruined in a conventional and ordinary way along with his fellows, so that no one can really blame him. n298

Developers who have a choice prefer construction lenders who won't insist on full personal liability. Construction lenders prefer lending to developers who have their own money at risk and aren't looking to lenders for one hundred percent of a project's cost. The recourse nature of the construction loan is sometimes subject to negotiation. Construction lending expert James Moore elaborates:

> Our standard underwriting, as with almost any bank, is a full-recourse loan. The larger the developer, and the more clout they have, the more often they negotiate for some limitation on recourse. For us to limit our recourse means there has got to be significant equity in the project, or a good substitute such as pre-leases or a take-out loan, that reduce our risk in the transaction. In my opinion, equity in a project, above all else, is the key consideration in negotiating limitations on recourse. I'd rather someone had their own funds at risk as an incentive to protect a project, than someone who had signed a piece of paper promising later to write a check if things go wrong. We can fight for years in court trying to collect on the borrower's written guarantee. A borrower with equity at risk is a better bet to repay a loan. n299

Of course, developers shop for the lowest interest rates and loan closing costs, but they consider other things too. Developer Roger Torriero, President of Griffin Related Properties, which has developed numerous high rise office complexes, mixed-use developments and commercial sites throughout California, particularly in Orange County, Los Angeles, and San Francisco, explains:

> When we look at a construction lender we're looking at the sophistication of the loan officers and the experience they have had with similar projects. If you get loan officers who don't know what they're doing you can spend a lot of time educating them about what's going on with the project and trying to convince them that they're secure and that it's okay to advance the funds. This can be very frustrating. Along with this we look closely at their track record for making timely advances.
>
> We also look at the recourse component. Some lenders require corporate and personal guarantees for a loan. Obviously we avoid giving personal guarantees whenever possible; in fact, we'll generally do whatever is needed to negotiate away any personal guarantee requirement. We generally have to give certain corporate guarantees, like a completion guarantee. Banks are almost always going to require some guarantee beyond the security in the project.
>
> Some lenders have very strict bonding requirements for the subcontractors. Getting the subcontractors bonded, which creates a guarantor for the completion of the subcontractors' work, can be very expensive. We like to get bonds from some of our subcontractors, like a granite supplier, for example, but we don't like to be required to have Westinghouse Elevator get a bond. There's just no need for it. Of course the main concern is almost always the interest rate and whether it's fixed or floating, and if it's floating, what index it's tied to, and at how many points over the index. n300

§ 97.07(e) Loan Participations and Syndications.

§ 97.07(e)(1) The Distinction Between Participations and Syndications.

Increasingly, commercial borrowers aren't able to deal with just one lender to finance their projects. They have to involve several. This raises special problems for the borrower and the lenders.

In a standard loan "participation" arrangement, an originating lender, frequently a commercial bank, agrees to sell all or part of a note and deed of trust, usually to other banks. The bank that puts the deal together is the "lead"; those who buy

interests in the loan are "participants." n301

Commonly, participations are structured in one of two ways:

> 1. The debt is secured by one mortgage. The debt is evidenced by a series of notes or bonds, each one for a fraction of the total debt. Each participating lender gets one of the fractionalized notes. The lead lender or a common trustee holds onto the mortgage.
>
> 2. The debt is secured by one mortgage on a single property or by many mortgages, each on a different property. The debt is evidenced by a single note. The "lead" lender sells "participation certificates" in the note to other institutions. n302 To see what these documents look like, *see* Robert H. Wiorski, *United States League of Savings Institutions Illustrative Secondary Market Agreements*, 51 U.S. League of Savings Insts. Legal Bull. 303 (1985).

An alternative to "participation" is "syndication." When lenders agree to syndicate a loan, each is directly liable to the borrower for its agreed share of the total--but only for its share. If one lender pulls out, the borrower suffers the shortfall and scrambles to make it up by using the borrower's own resources, by persuading the remaining lenders to increase their shares or by finding a new lender to join the party. In a participation arrangement, the lead bank agrees to make the loan and is solely and fully liable to the borrower. Afterwards, it may sell shares in the loan, or all of it, to others.

§ 97.07(e)(2) The Downside of Syndications and Participations.

Sharing loans is expensive; instead of one bank making an appraisal, three or four appraisers--one for each institution--may prepare estimates of value. Instead of one lawyer representing the lender, there may be one lawyer for each, and a cacophony of drafting requests, unless the borrower insists they all agree to speak through one representative. Usually the borrower is forced to pay the lender's legal fees--always a joyless burden--and one which is multiplied by the number of participating lenders.

Should there be cost overruns on a construction loan or some other default, lenders may disagree on the best course of action. Some may want to avoid foreclosure at all costs and work out a feasible repayment schedule with the borrower. Other lenders may be harsh and unforgiving, licking their chops at the chance of acquiring the troubled property through a speedy foreclosure. A well-drafted participation or syndication agreement will spell out, in the event of default, whether any bank can put the loan into foreclosure, whether a majority can pull the plug, or whether only the lead has that discretion.

Patricia Frobes, a real estate partner at the law firm of O'Melveny & Myers, cautions:

> "Work outs" are going to be complicated when many lenders own a piece of the loan. No matter how much power the loan participation documents give the lead lender, all lenders will be asked to sign off on modifications or releases of the deed of trust. n303 Moreover, in California especially, the precipitous action of any one of the lenders can put the others at legal jeopardy. Imagine, for instance, one lender takes funds from a borrower's account to cover a judgment on the note. Won't the borrower invoke CCP § 726 against all the lenders, claiming that the set-off terminates the other enforcement rights under the note and deed of trust? n304

§ 97.07(e)(3) Why Participations and Syndications Are Commonly Used.

Why then, have loan participations and syndications become so common? James Moore n305 explains:

> 1. *Portfolio diversification*: Say a lender has $1 billion to lend. It could make ten loans of $100 million

or forty loans of $25 million. The transaction costs of making forty loans will be four times greater, but if any single loan "goes sideways," it probably won't significantly affect the balance sheet or the traded value of the bank's stock. On the other hand, if the bank made only ten loans and one went bad, there might be serious balance sheet repercussions.

Another aspect of diversification is that banks not already involved in real estate may want some real estate loans in their portfolios without incurring the costs of setting up a full real estate department. They prefer buying a piece of a real estate loan from a lender experienced in underwriting such loans.

2. *Legal limits*: Banks are regulated. They have limits on how much of their total assets they can lend to any single borrower. By participating or syndicating, a lead bank with special competence in real estate lending can earn origination fees on many more loans than it could legally hold in its own portfolio.

3. *Reassurance*: Lead banks like knowing that other lenders agree with them that a loan is a good credit risk and is priced appropriately. Bank managers who find themselves with an unsalable portfolio know they've probably done something wrong. Maybe they've taken on too much risk or priced their loans below market.

4. *Customer request*: Occasionally an important customer requests the lead bank to involve another lender. The customer may have business or personal reasons for the request. A bank wanting to keep the customer happy may prefer sharing some of the customer's loans with a rival bank, rather than risk losing the customer entirely.

§ 97.07(e)(4) Regulatory or Market Pressure.

In addition to Mr. Moore's points, a fifth reason for loan participation arrangements derives from the pressure occasionally felt by banks and insurance companies to divest their real estate holdings. Wall Street stock analysts, federal and state banking regulators and insurance regulators may urge institutions to reduce the percentage of real estate in their portfolios because office and retail markets in many U.S. cities are overbuilt. Yet banks and insurance companies know there are profitable opportunities in real estate. To make real estate loans indirectly, banks may form new lending vehicles.

Here is one possible format: The bank puts up, say, $30,000,000. It then finds a pension fund willing to invest $70,000,000. The bank subordinates its $30,000,000 to the pension fund's $70,000,000. Together, they approach other institutions for an additional $100,000,000 of senior debt. The bank, in other words, will be subordinated to both groups of investors.

The resulting fund is then administered by the bank to make construction loans to builders at relatively low loan/value ratios and only on projects for which builders have already obtained buyers, tenants, and permanent loan commitments.

The bank is putting its money into an entity that makes the loan but it isn't making the loan directly. The bank's advisors are hoping that regulators and analysts won't regard the bank's investment as a real estate investment, but as something else instead (almost anything else will do).

The bank will collect substantial fees for processing and servicing the individual construction loans and managing the investment vehicle. Its rate of return should look pretty good to its stockholders. n306

§ 97.07(e)(5) Characterizing the Legal Relationship Among Loan Participants.

Because banks share participations in each others' loans so often, they sometimes lean heavily on personal relationships

and depend less on carefully drawn documents to define their respective roles and responsibilities. Informality invites confusion when a lead bank files bankruptcy, gets merged or acquired out of existence, or the debtor defaults.

§ 97.07(e)(6) Priority Between the Participants and Third-party Creditors.

Third parties may seek a share of the foreclosure proceeds by disputing the claims of the loan participants that they each have a prior security interest in a mortgage on the foreclosed property. They may contend that the loan participants are actually unsecured creditors of the lead lender. If the lead is in bankruptcy, they will try to show that the participants holding "participation certificates" were actually unsecured creditors of the bankrupt lead and not part-owners of the foreclosed mortgage. They will assert that the lead didn't sell the mortgage to the participants, but rather that the participants actually lent money to the lead to make the loan. The claim that the participants are unsecured creditors of the "lead" and not co-owners of the mortgage is strengthened if the lead commingled proceeds from the participation mortgage with proceeds from its own portfolio, or if the participants had been paid on some basis other than the yield on the underlying mortgage. The participants must prove they bought fractional shares in the underlying mortgage in order to be treated as secured creditors in bankruptcy and to share foreclosure sale proceeds as senior lienors. n307

Alternately, the participants may seek to prove that the lead bank was an agent for the participants or a trustee. As a trustee or agent the lead would owe them a fiduciary duty of care. This characterization would strengthen their claim to an ownership interest in the underlying mortgage. It also implies that if things go wrong, the lead will be accountable to the others and any funds collected on the note will belong to the participants as beneficiaries of an implied trust.

If a bankruptcy court characterizes the relationship between lead and participant as that of creditor-debtor and holds that the participants do *not* have a direct interest in the note and deed of trust, they become unsecured creditors of the lead lender in bankruptcy. n308

§ 97.07(e)(7) Lien Priority Among the Participants.

If a default occurs and foreclosure proceeds don't bring enough money to pay off all the participants, the proceeds are apportioned pro rata in the absence of a contrary agreement. n309 There is authority that the lead lender also shares in the proceeds pro rata unless it guaranteed payment to the participants. n310 Lastly, there are decisions subordinating the lead as an implied trustee or implied guarantor. Most participation agreements address and resolve this priority issue explicitly.

§ 97.07(e)(8) The Joint Venture Trap.

The most disastrous characterization for a participant is to be treated as a joint venturer with the "lead." If the debtor defaults on the underlying note and deed of trust and the participant and the lead are joint venturers, they may be liable for sharing any losses that accrue. The lead might also be able to commit the participants as joint venturers to additional debt. Most courts do not classify lead and participant as joint venturers because one feature of a joint venture is missing: an agreement to share profits and losses. In loan participations, the buyer of the loan is only agreeing to receive interest payments. n311

§ 97.07(e)(9) Title Insurance.

If the participants in a mortgage don't have direct ownership rights in the mortgage, they may not be covered by the mortgagee's title policy even though the mortgagee's assignees are protected by the ALTA extended coverage policy. They should list themselves as insureds on the policy, obtain an endorsement extending coverage to them when they enter the participation agreement, record their agreement and notify the title insurer of their interest.

§ 97.07(e)(10) The Agreement Is Crucial.

Well-advised lenders enter into detailed inter-lender agreements. n312 James Moore and Glenn Sonnenberg offer these guidelines:

> 1. One lender should be designated as an agent for the others with power to make day-to-day decisions and disburse funds.
>
> 2. Only that agent should be listed as the beneficiary in the deed of trust. When more than one beneficiary appears on title, no responsible trustee will mail a notice of default or proceed to foreclose without the written authorization of all the beneficiaries. This can result in costly processing delays.
>
> 3. All participating lenders should be given a direct interest in the security instrument even though the agent is empowered to act for them in realizing on the security. Otherwise, they could risk being general unsecured creditors of the agent instead of being secured creditors of the mortgagor.
>
> 4. Sometimes lenders will insist that the consent of a plurality or a majority of lenders be obtained as a condition to foreclosing, modifying the loan terms, accepting a deed in lieu of foreclosure, etc. This sort of requirement isn't fatal as long as the agreement specifies what the agent is to do in the event the requisite consensus isn't attained. Especially regarding the response to default, the agent should be empowered to foreclose unless the lenders first adopt a clear alternate strategy.
>
> 5. The obligations of the participant to the lead and the lead to the participants should be clearly described. If some participants fail to fund their commitment, what liability have they to the others? Are the participants relying on the lead's assessment of the credit-worthiness of the borrower and the value and earning power of the security property? Is the lead obligated to account for and disburse mortgage payments from the borrower to the participants? Is the lead obligated to provide detailed financial information about the borrower to the participants after a default and during workout negotiations? Is the lead agreeing to subordinate its interest to theirs in the event of default? n313
>
> 6. Under what conditions, if any, may the participants remove the lead? n314

§ 97.07(f) Appraisals.

Lenders need property appraisals in deciding whether to make a loan (the decision process is called underwriting). For most institutional lenders (banks, insurance companies, pension funds) the standards for those appraisals are set by regulators. n315 For instance, all lenders whose accounts are insured by the federal government must meet appraisal standards issued by the Office of Thrift Super-vision. n316 The federal rules don't require appraisals for small loans (less than $250,000). n317 For large transactions, an appraisal must be prepared by a state certified appraiser. n318 This has prodded states into regulating the appraiser profession. n319 Federal regulation requires appraisers to conform to generally accepted standards as evidenced by the Uniform Standards of Professional Appraisal Practice promulgated by the Appraisal Standards Board of the Appraisal Foundation, unless safe banking practices require a stricter standard. n320

The OTS regulations define market value:

> *Appraisal* means a written statement independently and impartially prepared by a qualified appraiser setting forth an opinion as to the market value of an adequately described property as of a specific date(s), supported by the presentation and analysis of relevant market information. n321

This seemingly innocuous definition of market value has led to heated debate between real estate industry advocates

and federal regulators. n322 Real estate industry spokespeople contend that in depressed markets the present worth of an office or shopping center property, as measured by recent sales of similar property, may not be sensible. "[A]ppraisals based on historic data and current market property values fail the test of practicality. They are comparable to looking over your shoulder to predict what's ahead." n323 They urge that appraisals be based on the "income approach--a potentially more reliable appraisal method for determining the value of investment real estate." n324 They contend that the key factors are employment growth, leasing activity, space needed per employee, impact of new development on supply, and a demand-based real estate market model. By using current market sales prices and not allowing lenders to refinance existing loans or make new ones based on projected future income streams, the OTS is accused of further depressing already depressed markets.

The real estate industry didn't urge this shift from market sales prices to rental income yields when markets were buoyant. In the 1980s, the prices people were willing to pay for property often exceeded the realistic income-generating potential of the property.

Lenders and their regulators point out that when loans go bad, distressed property is often sold at whatever price the market will bear. So the market or sales comparison approach to value is the most realistic one for them to use.

§ 97.07(f)(1) Three Approaches to Value.

Appraisers conventionally use three approaches to value: (1) the direct sales or market comparison approach, (2) the cost approach, and (3) the income approach. There are judgment calls under each approach to value.

In the direct sales or market comparison approach, the appraiser assumes no one would pay more for a property than they would for an equally desirable one (the principle of substitution). Since all properties are different, the appraiser needs to decide which "comps" to include. The appraiser can make adjustments by adding or subtracting for the features of each comp that are different from the property being appraised, such as the appraiser needing to account for differences between the subject and the comp properties in their location, time of sale, condition of sale, financing, age of the properties, quality of design and construction, square footage, number of rooms, parking spaces, condition of the building, and anything else that common sense would suggest could bear on value.

Comps aren't as useful in rapidly changing markets as in stable ones. Unique and rarely traded properties make poor candidates for this approach.

The cost approach assumes that no one would pay more for a building than what it would cost to build a new one. n325

In using the cost approach, appraisers still have to come up with a valuation for the land. For land value, they use a market comparison approach, or a variation on the income method--land residual--described later.

There are three ways to estimate the costs of improvements: (1) quantity survey, (2) unit in place, and (3) aggregate cost per unit.

The *quantity survey* involves reducing the structure to its bare components--tons of steel, number of windows, hours of labor--and pricing them. Experienced contractors are quite good at it. Others may find this a difficult procedure.

The *unit-in-place* method divides the project into bigger components that are often subcontracted (foundations, framing, dry wall, plumbing, floors, roofs). Each is valued separately and then totalled. n326

The *aggregate cost per unit* is based on rough estimates of what it costs to build similar properties based on a square or cubic foot basis.

If the appraised property is an older one, the appraiser must estimate its depreciated value, taking into account curable and incurable physical depreciation, functional obsolescence, and changes in tenant or consumer preferences that make the building economically less or more desirable than a new one.

The income approach assumes that the property is worth the discounted present value of the net future rents it will generate. This capitalization approach can be summarized by the equation V = I/R, where V is the market value of the property, I is the annual net operating income, and R is the cap rate.

The appraiser estimates the annual gross income and subtracts operating expenses from it to derive what is called the Net Operating Income (NOI = gross income less operating expenses). The NOI is independent of debt service (the interest and principal repayment on debt). Debt service is subtracted from NOI to obtain the before tax cash flow (BTCF). (NOI /ms DS = BTCF).

The "income" under this approach isn't necessarily the actual rent schedule of the appraised property. It could be the "fair rental value of the property. Cautious appraisers won't give the owner credit for *higher* rents than the lessor is currently receiving (unless the leases are about to expire). But the appraiser may regard with skepticism a current rent greater than other landlords are netting for comparable space (even if the leases in the appraised property have years to run). Tenants paying above market rents might "walk" (breach), go broke, or negotiate lower rents by threatening not to renew.

By using NOI, which is net income before deducting debt service, the investor's rate of return is being computed as if 100% cash had been paid for the property. As we saw in our earlier discussion of leveraging, the investor can increase the rate of return by borrowing at an interest rate lower than the cap rate. The investor reduces the rate of return by borrowing at an interest rate greater than the "all cash" cap rate.

We would expect cap rates to be higher than, say, the going market interest rates or a federally insured certificate of deposit of a maturity comparable to the real estate investor's contemplated holding period when the investor is purchasing a depreciating asset, when the investment comes with credit risk greater than that on a government-backed obligation, and when the realty may be hard to liquidate when the investor wants to sell it. Sometimes, though, cap rates on real property are lower than interest rates on government-insured certificates of deposit, despite the greater credit risk in real estate. This can happen when the increase in land value is expected to outpace the building's depreciation, and when building costs are rising rapidly because of inflation.

A tricky part of the income approach involves selecting a rate at which to capitalize the annual net operating income. A cap rate is an interest rate that takes into account the fact that a building is a depreciating asset. The higher the cap rate, the lower the value of the building. You can see how this is so by considering interest rates on savings. The higher the interest rate, the less money the saver needs to put in the bank in order to yield a given amount of income. Say the saver targets her income-from-savings goal at $100,000/year. If interest rates are 5%, she needs $2,000,000 to reach the goal. If rates are 10%, she only needs $1,000,000. The same relationship holds between property values and cap rates. A low cap rate translates into a bigger multiplier of income, resulting in a higher property value.

The three most common ways of determining the cap rate are: (1) market extraction, (2) band of investment, and (3) Ellwood.

The *market extraction* method involves finding recently sold properties that are like the one being appraised. The appraiser puts into the "V = I/R" equation the price those properties brought, and their net operating incomes to derive a cap rate. The appraiser comes up with a value for the property by dividing the cap rate from those other properties into the estimate of the net operating income for the appraised property. For instance, say a comparable property with $20,000 NOI recently sold for $200,000. The cap rate would be 10% because $200,000 = $20,000/10%. The appraised value for a property with a $35,000 NOI would be $350,000 (= $35,000/10%).

The *band of investment* method seeks to find the rate of return an equity investor would expect. In its simplest form the rate of return is the before tax cash flow divided by the amount of the equity investment (BTCF/equity = rate of return). By seeing what investors are willing to accept on other investments and factoring for risk, the appraiser comes up with the rate of return that would be acceptable for the appraised property. That rate becomes the cap rate in the appraiser's cost approach formula.

The *Ellwood* method employs a complicated formula designed to capture the present value of the future returns on an investment. It takes into account mortgage amortization and property appreciation or loss of equity over time. n327

If the appraiser obtains different values for the same property using these approaches, they must be reconciled.

§ 97.07(f)(2) Discounted Cash Flow.

Discounted Cash Flow (DCF) analysis, a variation on the Internal Rate of Return method, can be thought of as an extension of the income approach. While the simplicity of the income approach makes it an attractive candidate for appraising value, it also lacks flexibility.

For instance, the income approach assumes that annual returns remain constant, whereas everyone knows that annual returns on a project will fluctuate. In the early years, rents may be lower for many reasons. Few projects are completely rented upon completion and special deals are often made to induce tenants to sign during this time. Later on, a successful project may generate more income due to increased rents and higher occupancy. Or, a project may generate less-than-average income in a year it undergoes major renovation. An aging building is likely to generate less rent due to vacancy as well as depreciation. n328

"The value of property, generally speaking, is determined by its productiveness--the profits which its use brings to the owner." n329

While the simplicity of the capitalized income approach discussed earlier makes it an attractive candidate for appraising value, it lacks flexibility. Lenders are using a variation of the capitalized income method called "discounted cash flow" or "net present value" more and more frequently n330 Discounted cash flow is popularly used because it considers real costs, evaluates the time value of money and produces a figure which measures the cash impact of an investment. n331

The capitalized income approach assumes constant annual returns, though it is extremely unlikely returns will be constant. Realistically, returns on a project will fluctuate as the project matures. In early years, rents may be lower to attract tenants, or occupancy may be very low, or operating costs high since efficiencies have not been established. As time goes on, occupancy may increase, rents may be higher and operation costs reduced as the management becomes more efficient. Capital outlays to improve or expand the project may drastically reduce returns in some years. And in the end, occupancy may fall off and rents be driven down by the age of the building. n332 However, even though the income from the building has fallen, the building itself may still have "reversionary" value since it may be sold or improved to generate more income. Or the owner may have to pay in even more to have the project demolished. The income approach does not consider these fluctuations in cash flow directly. n333 DCF considers these cash inflow/outflow fluctuations while maintaining the relative simplicity of the capitalized income approach. n334

Though interest rates will not remain constant for the life of the project (nor should they be expected to), the DCF method discounts all future cash flows by a constant interest rate. This "discount rate" is derived from many factors. Rather than guessing at interest rates in the future, discounted cash flow uses a rate which reflects the cost, risk and duration of the project.

In discounting projected future earnings to present value, the objective is to use a discount rate

> which reflects an amount which an investor would expect as its rate of return on an investment of comparable risk. Capitalization rates are, therefore, a function of, among other things, prevailing market rates of return for minimal risk loans or investments, adjusted upward for the risks that the projected income stream will be achieved. n335

By viewing the project as an investment of capital for which there are alternatives, developers can compare the anticipated returns of the project with returns on the same funds invested elsewhere. Using a constant rate allows developers to consider the cost of capital, and the interest cost of doing the project and use that rate as a floor below which they cannot go, since by earning less return on the project than they are spending to finance it, they are losing money. The cost of debt is a true cost and the lowest possible discount. If developers do not make returns greater than the interest they pay for debt, they are losing money.

It is not the income or earnings of the project which is evaluated but actual cash flows. "Earnings" or "income" or "profit" are accounting terms used to measure profitability and can not be spent. Rates of return derived from income, earnings or profit do not consider the time value of money and are subject to accounting manipulation. (*For instance,* a small change in depreciation methods can greatly affect the results of a calculation based on income, profits or earnings.) Cash flows show the net monies in and out of a project, and consider not only immediate costs and incomes, but future increased rentals and or capital infusions to the project. Using the discounted cash flows to evaluate a project shows how crucial to overall profitability timing can be. Deferring taxes, impact fees, renovations etc. even for short periods can have substantial savings. (However, the savings need to be balanced with the deferral of income as well. Where the cash infusion does not generate more income, deferral is preferable. But where the infusion brings greater returns, the transaction needs to be examined carefully in light of the timing issues.) Net present values consider the time value of money and increase a developer's ability to spend money on the project over a long time.

The actual calculation for net present value (NVP) of a cash flow, a series of irregular payments, is the sum of the present values of each payment plus the present value of the reversion. Note that discounted cash flows are more accurate earlier in the analysis, because information is generally better for the earlier years, but the effect of the time value of money will tend to make errors in the later years less important. n336

The first step in calculating the (NPV) is to estimate cash flows for the expected life of the project. A typical series of flows might be:

T0 ($2,000,000) (purchase price)

T1 $130,000

T2 $200,000

T3 $225,000

T4 $223,000

T5 $230,000

T6 $150,000 (lower cash flow due to major renovation)

T7 $300,000

T8 $325,000

T9 $330,000 + $2,700,000 (last periods income plus sale of project proceeds).

An appraiser using discounted cash-flow-analysis estimates each future year's net income using data such as:

> 1. Historical operating expenses (energy bills, janitor contracts) [and] building management forecasts;
>
> 2. Existing leases and billed escalation rates;
>
> 3. Must-take space, rights of first refusal, [or] options given to existing tenants[;]
>
> 4. Market rents considering the supply and demand in existing, under-construction, and proposed buildings, and considering all building moratoria and zoning adjustments;
>
> 5. Existing financing;
>
> 6. Repair history and estimated life of major building systems (heating, ventilation, air conditioning, and roofs);
>
> 7. Commissions to leasing brokers in the area and tenant improvements allowances generally given to attract tenants in the marketplace;
>
> 8. Proposed renovations, mandatory retrofitting (asbestos removal, fire sprinklers), and possible expansions; and
>
> 9. Economic factors, including job markets in the area, for purposes of estimating general and local inflation for income and expenses.

Estimating net income yearly rather than in one "stabilized" year permits the appraiser to make detailed adjustments. Discounted cash flow also permits the appraiser and the investment officer to view the impacts that innovative financing mechanisms, such as income guarantees and master leases, will have on the property's value. n337 When calculating cash flow projections, it is important to focus on where the projections came from. Assumptions need to be realistic, not fantastic; otherwise, the end result will not be reliable. Once a reasonable range is established, the numbers can be combined in different ways to see how future incomes would change in certain situations. A sensitivity analysis looks at how income changes when one variable fluctuates between its extremes while the others remain constant. The sensitivity analysis shows how responsive income would be to swings in a particular variable's value. Where income is higher dependent on that variable remaining at or above a certain level, the developer needs to consider whether it is realistic that the variable remain constant, and the consequences of fluctuation. A second analysis is a scenario analysis, wherein multiple variables fluctuate. While it is more complicated than a sensitivity analysis, it is a more reasonable approach since a change in one variable often triggers changes in others. Using computer spreadsheets makes these calculations much simpler.

The next step in a discounted cash flow analysis is determining the discount rate for the project. The discount rate depends chiefly on interest rate expectations, the cost of debt, and equity investors' expected returns.

> [R]eal estate discount rates are market-derived ... . [I]nvestment advisors ... examine competing investments for yield rate requirements. Real estate investment does not operate in a vacuum; it competes for cash along with real estate securities, Treasury notes, stocks, bonds, gold, and other investments. The discount rates required for real estate investments therefore rise and fall according to supply and demand

> in the real estate markets and world financial markets. n338

Certainly no one can expect to know the interest rates for future years, and it is highly unlikely that interest rates will remain constant over a long period. However, the appraiser may either choose a single discount rate based on her assumptions of the costs and risks associated with the project for the reasons discussed above, or she may choose a separate rate for each cash flow based on her expectations of the interest rate at that future time. (Generally, long-term rates are higher than short-term rates so the discount rates should slowly rise over the life of the project.) The discount rate for a particular project is dependent on many things: the cost of debt, the cost of equity (the return investors expect on their money), the opportunity cost of a particular investment. n339 Consider the following various ways to reach an appropriate discount rate:

> Periodic income is discounted by a yield rate derived by investigating the market and competing investment vehicles. Generally the yield rate consists of the return rate plus the risk rate. Often it is expressed as a spread (for example, 150 basis points, or 1.5%) over U.S. Treasury issues. An inflation rate may be added to the rate as well. n340

Using a discounted cash flow allows analyzing flexibility in both the discount rate and income streams rather than constraining analysis to constant values.

Lastly, the appraiser discounts each cash flow by its respective discount rate, and then adds the discounted flows together to determine the present value of the property or project. In our example, assuming an 11% discount rate:

T0 <$2,000,000> * 1/(1+.11)[0]	= <2,000,000>/1	= $ 2,000,000.00
T1 $130,000 * 1/(1+.11)[1]	= 130,000/ 1.11	= $ 117,117.12
T2 $200,000 * 1/(1+.11)[2]	= 200,000/1.2321	= $ 162,324.49
T3 $225,000 * 1/(1+.11)[3]	= 225,000/1.367631	= $ 164,518.06
T4 $223,000 * 1/(1+.11)[4]	= 223,000/1.5180704	= $ 146,897.01
T5 $230,000 * 1/(1+.11)[5]	= 230,000/1.6850582	= $ 136,493.80
T6 $150,000 * 1/(1+.11)[6]	= 150,000/1.8704146	= $ 80,196.12
T7 $300,000 * 1/(1+.11)[7]	= 300,000/2.0761602	= $ 144,497.52
T8 $325,000 * 1/(1+.11)[8]	= 325,000/2.3045378	= $ 141,026.11
T9 ($330,000+$2,700,000) * 1/(1+1)[9]	= 3,030,000/2.5580369	= $ 1,184,502.10

Discounted Cash Flow = $277,572.33

The present value of the project is $277,572.33.

Investors and lenders sometimes refer to Internal Rate of Return or IRR of a project. The IRR is the discount rate for which the discounted cash flow of a project is 0. It is determined by a procedural counterpart to DCF analysis. n341

[IRR is the] discount rate at which the present value of all net investment returns including any return of capital from the disposal of the investment, exactly equals the capital outlay for the investment ... .

In other words, the IRR calculation is a DCF analysis solved backwards--i.e., all cash inflows and outflows are analyzed to find what discount rate can be applied to make them exactly equivalent to the original capital outlay. n342 Where DCF attempts to determine the present value of a project based on expected cash flows and discount rates, IRR measures the rate at which money in an investment grows. IRR determines the projected return on a project given projected cash flows and project value. IRRs are used to compare a potential project with other projects and investments. DCF and IRR calculations are useful for both independent and mutually exclusive projects. Wherever a DCF or IRR is positive, the project is profitable. If the developer has a choice between two projects, the one with the higher NPV (net present value) creates more wealth, and the one with the higher IRR has a faster generation of wealth. Negative NPVs and IRRs are money losers.

An appraiser estimating future income or calculating a discount rate knows that the accuracy of the forecast, even a few years into the future, is highly suspect. The likelihood that a particular future income will match his prediction is virtually nil. Dollar figures and discount rate estimates are proxies for "myriad assumptions, educated estimates and experienced hunches." n343 Discounted cash flow lets the appraiser play with a lot more glass beads in the great Glass Bead Game. n344

§ 97.07(f)(2)(i) Land Residual Approach.

When land can't be appraised by the market or sales comparison method because there aren't enough reliable "comps," the land residual approach is sometimes used. This method presumes that the building and the land can be appraised separately. The appraiser must estimate the income that the improved site can generate and find separate capitalization rates for the land and the building.

At the time of this appraisal, the building doesn't exist; nor, probably, does a lease. The appraiser must calculate what the net fair market rental value of the building would be if it were completed and successfully rented.

The appraiser determines the construction cost of the building, and assumes the building is worth that much. The appraiser then determines what the investor in the improvements needs to achieve. The appraiser searches for an appropriate annual market rate of return on the building investment: a capitalization rate appropriate to this type of an investment. The portion of the estimated annual yield necessary to satisfy the investor in the improvements is subtracted from the total *estimated* net operating income. What is left after subtracting the building investor's annual expected return is the annual residual income to land. The appraiser capitalizes that to come up with the residual value of the site.

The Appraisal Institute offers this example: n345

Estimated Building Value (based on cost of construction)	$450,000	
Net Operating Income	$85,500	
Building Value x Cap Rate Multiplier (1/.0866)		
($450,000 x.15)	- 67,500	
Residual Income to Land	$18,000	
Land Value		
(capitalized: 18,000/0.09)		200,000
Indicated Property Value		$650,000

Note that the example assigns a higher cap rate to the land (9%) than to the building (82/3%), indicating the greater riskiness of an investment in vacant land than in a built site.

This technique is often used when the land is vacant or the building is new and has no accrued depreciation. The appraiser may consider several hypothetical buildings and uses of the site to see which produces the highest net residual income attributable to the land. When the cost of producing a building exceeds the value such a building contributes to the site, this method isn't applicable.

Real estate development companies would like their lenders to appraise pre-development land this way because they can get land loans based on post-development value. Applying the land residual method to undeveloped land, the appraiser first estimates the costs of development. These are subtracted from the revenues the developer will receive from home sales when the property is fully developed. The lender then discounts costs and revenues to net present value, ascribing the difference to land value.

The land residual method of appraisal is sometimes called the "developers approach" for determining the value of undeveloped property. Courts in some states have held that testimony based on the land residual approach to value is not admissible in the valuation of undeveloped land condemned by public agencies in eminent domain proceedings. n346 The costs of development are deemed too conjectural and uncertain. So are the estimated selling prices of houses years hence. The suitability of property for development is a factor which may be considered in valuing the land through other methods such as by the market or comparable sales approach. In federal courts and many states, the land residual technique is allowed in condemnation proceedings.

Suppose a lender makes a land acquisition and development loan to the developer based on a land residual approach. The lender agrees with the developer's assumptions and appraises the land at twice the developer's original purchase price. The real estate market falters. The developer defaults, the lender ends up selling the site for less than the debt. The lender's shareholders and federal insurers could have a good cause of action against the lender's appraiser or the lender's managing directors and officers for negligence. n347

§ 97.07(f)(2)(ii) Statistical Approach.

A last type of appraisal is based on statistical analysis. The statistical approach is similar to the market comparison method, but on a much larger scale. The statistical method analyzes the sales, values and physical characteristics of up to hundreds of similar properties. Raw data is analyzed to evaluate the effect of differences in value and determine the reliability of the outcomes.

The statistical method removes much of an appraiser's subjective evaluations since the appraisal is basically the "average" of a great sample of real transactions rather than appraiser opinions or projected sales. Since the figures from the sample do not change, the analysis can be duplicated or it can reflect the average of particular segments within the sample. Once data is initially collected, the appraisal for a single property would be more cost efficient than methods which appraise each comparable property.

The statistical approach is not without drawbacks. Certain property variations may not be measurable. Attempting to compile information while either excluding the variables or using a subjective replacement for them could lead to inaccurate valuations. Furthermore, the initial cost of compiling data could be huge. n348

§ 97.07(f)(3) Appraiser Liability for Faulty Appraisals. n349

§ 97.07(f)(3)(i) Theories of Appraisal Liability.

Much of the financial crisis among savings associations and banks was attributed to faulty real estate appraisals. n350 When loans go bad soon after they are made, the borrower and lender each may turn to the appraiser to cover their losses. n351

When a loan is refused because the appraiser says it isn't worth the price the borrower is prepared to pay, the borrower may claim the appraiser caused her to lose a good deal.

Appraisers may be liable for failing to properly perform their contractual obligations and their contract liability may extend to protect assignees of the contract.

Under the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), n352 certain standards are mandated for appraisers. Failure to comply with those standards can be a further source of liability. n353 The statute defines an appraisal violation as knowing or reckless conduct that constitutes a breach of a fiduciary duty, a violation of a law or regulation, or unsafe and unsound practices. n354

Bank appraisers may be liable on common law theories of negligence, negligent misrepresentation, or fraud. n355 The *Restatement (Second) of Torts* on negligent misrepresentation:

> One who, in the course of his business, profession or employment ... supplies false information for the guidance of others in their business transactions, is subject to liability for pecuniary loss caused to them by their justifiable reliance upon the information, if he fails to exercise reasonable care or competence in obtaining or communicating the information. n356

There are significant limits on the appraiser's liability for "false information." For instance, comment (a) indicates that the professional needs to *know* the information is false or lack any reasonable basis for making the statement. When one appraiser's unreasonably high value had been derived from false financial statements certified by independent auditors, the appraiser was held not to be the "proximate cause" of the mischief. n357

Appraisers can sometimes resist liability by distinguishing "false information" (i.e., facts) from dubious *opinions* of value. This distinction doesn't always work because "appraisers may be held accountable for their opinions in such a way that they will be considered representations of fact" n358 when the appraiser's opinions or conclusions are based on facts the appraiser got wrong.

§ 97.07(f)(3)(ii) Some Examples of Actionable Appraisal Failures.

Here are some examples of how appraisers can get things wrong:

1. --*Misdescription of Property*. The appraiser didn't describe the property properly, basing her appraisal on the house having 3800 square feet when in fact it had only 2800. "The number of bedrooms was wrong, the number of baths was wrong, the number of skylights was wrong, the number of fireplaces was wrong ... ." n359 Moreover, even though the property was in total disrepair, the shrubbery was dying, the swimming pool was dirty, there were holes in the roof due to construction, there was no covering over the construction area, the floors were warped and discolored and the new construction joints were unusable," the appraiser had reported none of this. n360

2. --*Misreading of Applicable Zoning*. "[t]he appraiser's opinion of value was based on the assumption that the land was zoned R-3, a zoning classification which permitted detached and semi-detached dwellings. In fact, however, the land was zoned R-2, which permitted only semi-detached dwellings." n361 The appraiser also projected a development permitting 24 lots on a 947-foot road, but a local ordinance permitted only a 500-foot road ending in a cul-de-sac, which would support far fewer subdivided lots.

3. --*The "Comps" Weren't Comparable*. An appraiser had used three comps in estimating the value of a home at $400,000: "[t]he first did not exist, the second was a nursery school, and was sold for its value as

> a business, and the third, which [the appraiser] said was 3,000 square feet was, in fact, half that size and it had sold for $175,000, not $375,000 as [the appraiser] claimed." n362

This decision is worrisome to appraisers because estimates of market value based on comparables inevitably involve subjective judgments. Indeed, the reason the accounting profession has "refused to adopt current market value as the basis for financial accounting is the inability of appraisers to produce consistent value conclusions." n363 But the appraiser's alleged oversight in selecting "comps" in this case was extraordinary.

§ 97.07(f)(3)(iii) When Appraisers May Prevail.

The potential for liability articulated in appellate opinions does not mean that appraisers always lose cases at trial. Often they win on the facts. The authors of a 1990 law review article saw "few reported cases that held the appraiser liable." n364 What the Wallers found was that *summary judgments* in favor of appraisers were being reversed. Plaintiffs were getting their day in court, although they didn't necessarily win after trial. Of course, the pressure to settle is great when appraisers or their insurers are facing the costs of a trial.

§ 97.07(f)(3)(iv) The Sovereign Immunity Defense.

Litigants challenging appraisals often lose summarily if the appraisal was prepared for a federal government agency. Some courts have ruled that private persons have no right to sue a federal entity unless the suit is authorized under the Federal Tort Claims Act, n365 which precludes recovery on "any claim arising out of ... misrepresentation." n366 Other courts have found for the government on the assumption that FHA and VA appraisals are made for the government as insurer or guarantor and not for the benefit of homebuyers. n367 A condition to plan approval was to fill to elevation of the 50-year flood line, which was done. No representations were made to buyer about the fill or flood line. Plaintiffs' homes were twice flooded. The Army Corp of Engineers determined that the FHA had miscalculated the flood line. Plaintiffs' claim that the U.S.' duty to provide decent housing safe from flooding was breached by the FHA's negligent failure to correctly establish the floodline was denied because plaintiff could not frame any tort cause of action without including the tort of misrepresentation). "Almost without exception, appraisers valuing property for FHA and VA financing owe a duty of care to the government only, and are therefore not liable to buyers and sellers." n368

§ 97.07(f)(3)(v) Exculpatory Language.

Here is language from a shopping center appraisal written to protect the appraiser from claims by prospective investors (clients):

> No Guaranty or Warranty

The appraiser makes no guarantee or warranty, whether implied or expressed, concerning the value set forth in the appraisal. The appraisal merely sets forth the appraiser's opinion of such value based upon the special premises provided by the client, information gathered, and assumptions made by the appraiser with respect to the Property.

> Indemnification and Hold Harmless

The client hereby indemnifies and agrees to hold the appraiser harmless from and against any liability, loss, cost or expense incurred or suffered by the appraiser as a result of any assertion or claim of any liability or responsibility for the payment of performance or any obligation of the client or which arises from any unauthorized use of the appraisal. Furthermore, notwithstanding anything to the contrary herein contained, the liability of the appraiser to the client shall be limited to the amount of the fee paid therefore as liquidated damages. Such amount is agreed upon by client and appraiser as liquidated damages due to the difficulty and inconvenience of ascertaining and measuring actual damages, and the uncertainty thereof; and no other damages, rights or remedies shall in any case be collectible, enforceable or available to the client, but client shall accept such amount as client's total damages and relief. The appraiser's

responsibility is limited to client, and the use of the appraisal by third parties shall be at the risk of client or any such third party.

Legal, Engineering, Financial, Structural or Mechanical Components; Nature, Hidden or Unapparent Conditions, and Soil

No responsibility is assumed for matters legal in character or nature, nor matters of survey, nor of any architectural, structural, mechanical or engineering nature. No opinion is rendered as to the title of the subject property, which is presumed to be good and merchantable. The property is appraised as if free and clear of all liens or encumbrances unless otherwise stated, with the seller receiving cash or its equivalent, and it is assumed that the purchaser would take advantage of maximum financing available. The property being appraised and the value estimates are based on the assumption that the property is under responsible ownership and competent management. It is assumed that there is full compliance with all applicable federal, state, and local environmental regulations and laws unless noncompliance is stated, defined, and considered in the consultation report. It is assumed that all applicable zoning and use regulations and restrictions have been complied with, unless a nonconformity has been stated, defined, and considered in the consultation report. It is assumed that all required licenses, certificates of occupancy, consents, or other legislative or administrative authority from any local, state, or national government or private entity or organization have been or can be obtained or renewed for any use on which the value estimate contained in this report is based.

Please note that no advice was given regarding soils and potential for settlement, drainage and such (seek assistance from qualified architect and/or engineer), nor matters concerning liens, title status, legal marketability and such (seek legal assistance). The lender and owner shall inspect the property before any disbursement of funds; further it is likely that the lender or owner may wish to require inspections by a qualified and licensed civil engineer or other expert.

The appraiser has inspected as far as possible, by observation, the land; however, it was not possible to personally observe conditions beneath the soil. The value estimate considers there being no such conditions that would cause a loss of value. The land or the soil of the area being appraised appears firm; however, subsidence in the area is unknown. The appraiser does not warrant against this condition or the occurrence of problems arising from soil conditions.

The appraisal is based on there being no hidden, unapparent, or apparent conditions of the property site, suboil or toxic materials which would render it more or less valuable. No responsibility is assumed for any such conditions or for any expertise or engineering to discover them.

Subsurface Rights

Subsurface rights (minerals and oil) were not considered in this appraisal unless otherwise specifically stated.

Toxic Materials

Unless otherwise stated in this report, the appraiser signing this report has no knowledge concerning the presence or absence of any toxic materials and/or hazardous substances, including without limitation asbestos, polychlorinated biphenyls, petroleum leakage, or agricultural chemicals, which may or may not be present on the property, or other environmental conditions, were not called to the attention of nor did the appraiser become aware of such during the appraiser's inspection. The appraiser has no knowledge of the existence of such materials on or in the property unless otherwise stated. The appraiser, however, is not qualified to test such substances or conditions. If the presence of such substances, such as asbestos, urea formaldehyde, foam insulation, or other hazardous substances or environmental conditions, may affect the value of the property, the value estimated is predicated on the assumption that there is no such condition on or in the property or in such proximity thereto that it would cause a loss in value. No responsibility is assumed for any such conditions, nor for any expertise or engineering knowledge required to discover them. The client is urged to retain an expert in the field of environmental impacts upon real estate, if so desired.

Terms of Full Disclosure

The State of Texas does not have a full disclosure law regarding real estate transactions. Therefore, the appraiser had to confirm all sales and rental comparables with brokers, property managers, mortgage brokers, grantors, grantees and other parties familiar with the transaction. The results are limited by the accuracy of the information supplied by the aforementioned individuals. Whenever possible, the information was verified by county records.

Disabilities Compliance

It is assumed there is full compliance with all requirements of title III, of Americans with Disabilities Act (ADA) unless noncompliance is stated, defined, and considered in the appraisal report. No responsibility is assumed by the appraiser for any such conditions or for any expertise or architectural/design knowledge and cost required to identify such noncompliance. Although the appraiser may have observed some items of possible noncompliance, a comprehensive list with related costs has not been developed. The value estimate is predicated on the assumption that there is no curable or incurable functional obsolescence, or related cost-to-cure imposed by the regulations of this law unless otherwise stated in this report. The client is urged to retain an expert in this field, if desired.

§ 97.07(f)(4) When Lenders May Be Liable for Faulty Appraisals Made Initially for the Lender.

The lender often has the deepest pocket, so it is not surprising that "[b]orrowers, equity investors, junior lenders, and participating lenders in a loan participation agreement are all potential plaintiffs in a suit to recover damages from a lender that negligently prepares or uses an appraisal opinion." n369 Defaulting borrowers will also defend against foreclosure and deficiency judgment actions by claiming they relied on the lender's faulty appraisal when they agreed to borrow. n370

Some lenders try to limit their exposure by denying borrowers access to appraisal reports. But the Equal Credit Opportunity Act was amended in 1991 to give home mortgage applicants a legal right to obtain a copy, on written demand, of the real estate appraisal information they paid for and that the lender used in granting or denying the application. n371

The buyer doesn't have to hire the appraiser directly to have standing to sue. As long as the buyer acts in direct and provable reliance on a faulty appraisal, he can sue the lender, even if the appraiser is an independent contractor, rather than an employee of the lender. n372 The plaintiff does, generally, have to show third party beneficiary status in the appraisal contract. In some states, a more liberal "foreseeable plaintiff" standard is available. n373

Courts differ over whether the borrower can justifiably rely on the lenders' appraisal. One court concluded:

> [a] financial institution acting within the scope of its conventional activities as a lender of money owes no duty of care to a borrower in preparing an appraisal of the security for a loan when the purpose of the appraisal simply to protect the lender by satisfying it that the collateral provides adequate security for the loan ... . One who seeks financing to purchase real property has many means available to assess the property's value and condition, including comparable sales, advice from a realtor, independent appraisal, contractors' inspections, personal observation and opinion, and the like. n374

On the other hand, another court observed:

> [t]he appraiser should also reasonably expect the home purchaser, who pays for the appraisal and to whom the results are reported ... will rely on the appraisal to reaffirm his or her belief the home is worth the price he or she offered to pay for it. n375

The facts in these two leading cases can serve to distinguish them. The first was a refinancing. The borrower had

already lived in the house for two years before applying for the refinancing. n376 In the second case, which the borrower won, the appraiser had overlooked major structural defects, and the borrower's purchase had been made contingent on the appraisal. n377

Courts which are reluctant to hold lenders liable to borrowers for faulty appraisals reason that borrowers could escape repaying their loans if they could reasonably rely on defects in the lender's appraisal. Lenders would then become inadvertent guarantors of the value and quality of the security property. This would work a reversal of the traditional positions of debt and equity investors. The equity investor is supposed to be at greatest risk. "[a] strong public policy exists, if our financial institutions are to remain solvent, to prevent a conventional money lender from having to ensure [the success of every investment]." n378

Don't chalk up increasing lender liability as nothing more than another example of American litigiousness. n379 The House of Lords has held that house purchasers may rely on the valuations their lenders require as a condition to making mortgage loans. n380

§ 97.07(f)(5) When Lender May Be Liable to Mortgage Investors for Faulty Appraisals Which Lure Them Into Investing.

Courts do seem to differentiate borrowers from mortgage investors in faulty-appraisal lender-liability cases. Investors in mortgage loans have been allowed to get back their total investments--with interest--from *mortgage brokers* which had used faulty independent appraisals to entice the investors. Courts reasoned that the mortgage broker hired the appraiser, could have required indemnity in its contract with the appraiser, should be given every incentive to select appraisers carefully, and can obtain insurance against loss. n381

Some who are relying on lenders' appraisals insist that lenders warrant the accuracy of appraisal information.

§ 97.07(g) The Loan Commitment.

The first binding legal document that emerges in most commercial loans is a commitment to make the loan from the lender to the borrower. It often takes the form of a letter responding to the borrower's loan application. Sometimes the commitment and application are contained in one document which the lender supplies and the borrower fills in.

The loan commitment recites the terms of the loan and the lender's requirements for making the loan. Commitments for major commercial loans are written both for construction and permanent loans. n382

Construction loans are used to finance the construction of a project. Funds are disbursed as construction progresses. Interest is paid (usually monthly) from undisbursed loan proceeds which are calculated on the sums actually drawn by the borrower. Typically, these loans are recourse or, if nonrecourse, the borrower guarantees completion of the project. The entire principal is due on completion or a short time thereafter. Permanent loans finance existing, completed projects. They are written for longer terms than construction loans. The entire principal is paid out at loan closing and repaid with interest and monthly amortization. Permanent loans are usually nonrecourse.

Some agreements are bilateral contracts, enforceable by either the lender or the borrower, obligating the lender to lend and the borrower to borrow. Others are unilateral and obligate the lender to lend but give the borrower the choice whether to borrow:

> In the early stages of the lending industry, many commitments were so-called unilateral contracts that compelled the lender to lend but gave the borrower the right to borrow or lose its commitment fee as the sole remedy. Loan commitments frequently were drafted in this fashion. As loans have become more complicated, projects larger, and rates more flexible, however, in almost every transaction (except a

standby commitment, as discussed below), the lender will require the commitment to be bilateral so the lender must loan, and the borrower must borrow. n383

§ 97.07(g)(1) The Standby Commitment.

Some agreements are bilateral contracts, enforceable by either the lender or the borrower, obligating the lender to lend and the borrower to borrow. Others are unilateral and obligate the lender to lend but give the borrower the choice whether to borrow. These are called standby commitments. n384 The borrower usually pays a hefty nonrefundable fee for a standby commitment since it is an option to borrow. Often lenders issue these for fee income, not expecting most borrowers to want the loan because the commitment contemplates a loan at a high interest rate or other onerous terms. The borrower purchases the commitment to obtain a construction loan, hoping to find better financing when the project is built. When commitment contracts are vague and don't specifically obligate the borrower to borrow, they will be read against the lender (invariably the drafter), and treated as standby commitments, even if the lender mistakenly believed it had entered a binding mutual commitment with the borrower.

§ 97.07(g)(2) Principal Reason for Breach.

The main reason borrowers and lenders are tempted to walk away from loan commitments is interest rate fluctuations. A 1% increase in the interest rate from 11% to 12%, for a 20-year loan for $15,000,000, amounts to $3,302,850. If a post-construction lender agrees to an 11% rate and rates have risen to 12% when the project is completed several years later the lender has $3,000,000 worth of incentive to find ways to avoid this commitment. Similarly, if rates go down a point, the borrower has a good reason to look elsewhere for a post-construction loan. The interest rate risk is exacerbated because long-term financing is often at fixed rates. Adjustable rates and shorter term loans (not fully amortized) have been used to mitigate the long-term lender's interest risk.

In deciding loan commitment cases, courts take into account the motivations of the parties, such as whether interest rates are rising or falling. n385

§ 97.07(g)(3) Contents of Commitment Letter.

A well drafted commitment letter will contain:

1. Identities of the parties, specifically, the entity that will be borrowing the money and the entity the lender will seek to hold liable for damages if the loan does not close. If a parent company is taking title to the property in the name of a subsidiary, the parent should be named in the commitment so the lender doesn't get stuck suing the subsidiary if the parent decides to find money on better terms elsewhere.

2. Amount of loan. n386

3. Dates and amount of loan repayments, including interest.

4. Prepayment privileges and premiums.

5. A description of the security property.

6. Commitment fee, and whether it is refundable if the borrower goes through with the loan or decides not to.

7. Deadlines for acceptance of the commitment by the borrower and for loan closing.

8. Documentation required to close the loan.

9. Conditions precedent to the lender's obligation to close. These usually include:

a. Organizational Documents.

1) Borrower's partnership, incorporation, or limited partnership documents;

2) Incumbency certificates;

3) Resolutions of directors authorizing the borrowing;

4) Good standing certificates;

5) Representations and warranties.

b. Attorney's Opinions. Opinions of counsel to the borrower (and any other necessary entity, such as a guarantor or lessee), addressing:

1) Organization of the entity;

2) Authorization for execution of the loan documents;

3) Proper execution and delivery of the loan documents;

4) Enforceability of the loan documents;

5) Absence of violations of usury laws;

6) Compliance with zoning and land use laws;

7) Absence of litigation which would affect the value of the security or the ability of the borrower to repay the loan; and

8) Such other matters as lender's counsel may request.

c. Insurance.

1) Title insurance;

2) Flood insurance;

3) Casualty and liability insurance;

4) Worker's compensation and employer's liability insurance.

d. Survey.

e. Plans and Specifications.

f. Contracts.

g. Permits.

h. Appraisals.

i. Bonds.

j. Leases.

k. Soil Test.

l. Financial Statements.

m. Environmental Report. n387

§ 97.07(g)(4) Expenses.

The commitment usually provides that the borrower will pay all of the lender's expenses in connection with preparing the loan document, whether the loan is closed or not. These include legal fees, preparation of loan documents, recording and filing fees, title insurance premiums and survey and appraisal fees. Because the borrower pays the lender's legal fees, the lender's lawyers have every incentive to bill to the max. Borrowers try to negotiate caps on legal fees or, at the very least, obtain a promise by the lender and borrower to use their best efforts to keep fees at a minimum.

§ 97.07(g)(5) Environmental Report.

Lenders appreciate the risks under the Comprehensive Environmental Response, Compensation and Liability Act ("C.E.R.C.L.A.") n388 inherent in the ownership of a contaminated site. However, under C.E.R.C.L.A. § 101(20)(a), lenders who acquire security property through foreclosure or who act to protect their security interest are protected from the Environmental Protection Agency ("E.P.A.") or Department of Justice ("D.O.J.") bringing a C.E.R.C.L.A. enforcement action against them. How lenders can lose this exemption by becoming too involved in running the business or overseeing its environmentally sensitive activities is detailed in the E.P.A.'s rules. n389 The lender doesn't risk liability just for failing to perform an environmental audit; but no informed lender wants to risk having to foreclose on a polluted property. A typical loan commitment requirement is:

> Within 30 days following applicant's acceptance of any commitment issued by lender but at least 14 days prior to closing, applicant shall furnish an environmental report to lender. Lender reserves the right to retain, at applicant's expense, an independent consultant to review any report prepared by applicant and/or conduct its own investigation of the property. Lender's obligation to fund is contingent on its approving the environmental report.
>
> Smart borrowers add this sentence:
>
> Lender will approve the environmental report prior to the applicant paying the loan commitment fee or any other fees or expenses in connection with this loan. If lender disapproves the report, the applicant has no further liability hereunder and lender will refund applicant's commitment fee, if it had been paid in advance.

Later, the lender may insist on an environmental indemnity from the borrower, promising to hold the lender harmless from any claims arising because of hazardous substances or non-compliance with environmental laws. n390 The borrower may seek to limit its liability under this provision to the time period in which the borrower owns the property.

§ 97.07(g)(6) Lease Approvals.

Here is a typical lease approval clause:

> All leases for the Property are subject to review and approval by Lender. Prior to Loan Closing, Applicant shall furnish a standard form lease for the Property for review and approval by Lender. All leases executed subsequent to such approval must substantially conform to the standard lease form and, if Lender so requires, be subject to review and approval by Lender. Without limitation, all such leases shall be for a minimum term of _____ years, shall be with bona fide, arm's length tenants, shall not contain any rental or other concessions not approved by Lender, and shall provide that the tenant pay a pro-rata share of, or increases in, tax, insurance, and other operating expenses. Biographical and financial information on each tenant shall be submitted for Lender's review and approval with each lease.

This clause straightjackets the borrower. It implicitly limits the borrowers' modifying or canceling existing leases. It slows down the process of entering new leases, or granting significant special concessions to equally desirable tenants on short notice.

A borrower might want to limit how long the lender may take before approving a lease by deeming any lease not rejected within a certain time as approved. The borrower would also prefer that leases which conform to the lender's standard form be deemed automatically approved. A borrower's form would provide:

> No additional examinations or approvals by the lender of the form for leases shall be necessary if space is leased using the approved lease form without substantial modification. As leases are signed, the lender shall be provided with a fully executed original counterpart or certified copy of each lease and any amendments thereto and guarantees thereof. Further, the borrower shall not be required to seek the prior approval of economic terms in any future leases or any modifications to leases in any transactions involving less than _____ square feet at a rental rate which is not less than the original rate under leases for similar space in effect at the time of the loan closing. Any approvals or actions to be made by the lender shall be made within ten (10) days after submission; failure to act by the lender shall constitute consent or approval, as the case may be. n391

§ 97.07(g)(7) Completion.

One seemingly innocuous term that highlights how difficult drafting a commitment letter involves defining "completion." Permanent loan commitments will always require that a project be completed by a certain date in order to fund. This deadline becomes critical for construction lenders who intensely fear losing their permanent financing. So what constitutes completion? California, by statute, defines completion as "actual completion of the work of improvement, n392 a not entirely helpful circularity.

Some permanent loan commitments are conditioned on "substantial completion," which tracks case law barring lenders from refusing to fund loans because minor work was left undone. One definition states there is substantial completion when the tenant can "occupy or utilize the project or a designated portion thereof for the use for which it is intended." This leaves it up to the parties to provide evidence as to when they each feel this condition has been met. Some contracts allow the architect to determine when substantial completion arises. A building can be considered substantially complete even though there are a number of "punch-list" items yet to be completed by the contractor. This list is usually prepared by the general contractor and submitted to the architect for approval. Typical punch-list items might include touch-up painting, the installation of missing door hardware, and the balancing of mechanical systems.

Permanent lenders sometimes specify that the permanent loan can't be closed merely upon the completion of the shell building; they require completion of various tenant finish work, or, alternately, that funds be placed in an escrow

account for completion of tenant work.

"Substantial completion" is an obviously ambiguous phrase. For this reason some prefer a tighter definition. For example, a bright-line approach would define completion as the moment the certificate of use or occupancy is issued. This definition has problems too, because it takes the deadline out of the hands of the developer, construction lender, or architect and places the decision with a governmental agency or building inspector. Building code inspectors are generally in no hurry to give these certificates, and may therefore be unmoved by a developer's plea that permanent financing may be lost. A developer with a $15,000,000 loan costing $137,000 a month in interest with a "completion" deadline closing in would probably prefer a loose "substantial completion" definition that would at least allow an impassioned plea for the permanent lender to come to the rescue and pay off the construction loan, even though the developer has yet to receive a certificate of occupancy. Moreover, the building inspector only cares whether the project complies with local codes. Many contract items including furniture and fixtures, color, graphics, floor coverings, paint, wall coverings, and decoration may be of no concern to the building inspector but are of great concern to lenders, owners, and tenants.

§ 97.07(g)(8) Assignment.

A post-construction lender doesn't want just any borrower. It is relying on the one whose loan application was approved. Consequently, the typical commitment provides:

> This agreement shall not be assigned by you without our prior written consent which may be withheld in our sole discretion. For purposes of this paragraph, any change in the control of your operation or in the composition of your entity from that originally represented to us, will be deemed an assignment.

The construction lender should find this paragraph troubling since, if the borrower defaults on either the construction or the take-out loan, the construction lender may have to foreclose. Should that occur, what happens to the post-construction lender's obligation to fund? What language does the construction lender need in the post-construction commitment letter so that it or a purchaser from it can keep the post-construction commitment in place? Obviously, the right to compel an assignment of the developer's loan to the construction lender or its purchaser at foreclosure.

Some developers have no fear of defaulting and fully expect to sell their projects on completion. They may negotiate for the right to assign the "take-out" commitment if all goes well with the project. Here is a clause one such developer negotiated in a take-out commitment:

> One time during the term of the proposed loan herein, the entire subject property may be transferred to one new, arm's-length ownership entity provided that, in Lender's sole judgment, (1) the proposed transferee meets Lender's customary credit standards, (2) the new ownership entity has a demonstrated capability in the ownership and management of buildings similar to the loan security or has retained a management firm with such demonstrated expertise, (3) the Lender's loan on the subject property at the time of transfer must not exceed 75% of value (Value determined by sales price at the time of transfer), (4) the total debt on the subject property at the time of transfer must not exceed 85% of value, and (5) at the time of transfer, the Property is producing net income after debt payment of all operating expenses sufficient to provide combined debt service (debt service on Lender's loan plus debt service on any secondary financing provided by the seller) coverage of not less than 1.15 to 1.0. The secondary loan documents shall be submitted to Lender for its review and approval prior to the transfer. Lender reserves the right to charge a processing fee equal to 1% of the loan balance for processing the approval of the permitted transfer.

§ 97.07(h) Holdbacks and Gap Financing.

The post-construction loan commitment will often provide that the borrower must achieve a certain rent roll on leases approved by the lender before it gets all of the loan proceeds. These conditions are commonly required in office buildings, shopping centers, and apartment projects. The lender will usually agree to lend a certain minimum amount--a "floor"--until the required rent roll is achieved. If the borrower-developer secures the necessary leases in time, the balance of the promised loan will be funded up to its "ceiling" or "top." (Hence, the name, floor-ceiling or floor-top loans.)

If the "floor" is $10,000,000 and the "ceiling" is $15,000,000, what might happen to a construction lender counting on a disbursement of $14,000,000 to pay off the construction loan? There is a potential "gap" of $4,000,000.

Here is suggested form language for a single disbursement deal with a holdback:

Disbursements:

1. In the amount of $ _____ (A) _____ upon completion of construction of the improvements and compliance on or before _____ (B) _____ with all of the terms and conditions herein, with repayment at the constant rate per annum aforesaid (the "Loan Disbursement"); and

2. The Loan Disbursement shall be subject to a holdback for all unfinished, unleased or unoccupied space equal to the greater of _____ (C) _____ per square foot or _____ (D) _____% of our engineer's estimate to complete the space plus our estimate of leasing commissions. Upon completion, leasing and occupancy, any amount so held back shall be subject to disbursement at the rate per square foot set forth above, within _____ (E) _____ months from the date of the Loan Disbursement but not later than _____ (F) _____ in no more than _____ (G) _____ disbursements, not more often than once very _____ (H) _____ months, and subject to and upon your compliance with the conditions and requirements contained in this Commitment including the following hereof with respect to each such disbursement of holdback funds:

a. An affidavit in form of Exhibit _____ (I) _____ attached hereto, certifying as of the date of closing the continuing status of the existing tenancies required for prior disbursement(s);

b. A rider to the policy of title insurance described above, insuring in the amount the entire indebtedness, the priority of our first lien securing the same and extending the effective date of such policy to the date of such disbursement;

c. The original lease(s) for the disbursement in question, including short form lease(s) and existing amendments which, after approval by us, shall not be amended in any way without our consent nor rent collected thereunder more than one month in advance and the tenants thereunder shall be in occupancy, which tenants as well as their guarantors thereunder shall at the time of closing be solvent and free from bankruptcy, reorganization or arrangement proceedings or a general assignment for benefit of creditors; such lease(s) to be assigned to us at the time of closing upon our form of assignment instrument, which shall be recorded;

d. Statement in form of Exhibit B attached hereto, signed by each of the tenants under the leases delivered to us prior to such disbursement;

e A dated-down certification from your architect certifying to the completion of the tenant finish work in the space for which the disbursement in question is to be made,

readiness for occupancy and such other matters as may be appropriate, together with an unconditional certificate of occupancy for such space (or such other unconditional certificate of appropriate governmental authorities evidencing compliance with all zoning, building and applicable regulations);

f. Subordination of Mortgage Agreements in the form satisfactory to our counsel, executed and acknowledged by each of the tenants under those leases delivered to us as aforesaid prior to such disbursement;

g. Such other documentation or information as we may reasonably request in connection with such disbursement;

h. No default shall exist under this Commitment or under any of the documents evidencing and securing the loan.

In the event that at the time you apply for a holdback disbursement in accordance with the foregoing, the project has achieved a leasing and occupancy level of _____ (J) _____% under leases approved by us, with all tenants thereunder in occupancy and paying rent and you have complied with the terms and conditions of this Commitment including those set forth above, the full amount of the funds being held back by us under this subparagraph shall thereupon be disbursed to you.

The amounts so disbursed hereunder will be consolidated with the existing indebtedness and the total amount thereof shall be repaid at a constant rate per annum payable monthly which when applied first to fixed interest and the balance to principal will completely amortize the consolidated indebtedness on a date _____ (K) _____ years from the first day of the calendar month immediately following the First Disbursement.

All obligation on our part to disburse any portion of the holdback funds shall terminate on the earlier of _____ (L) _____ months from the date of the Loan Disbursement or _____ (M) _____. n393

The developer may be required to fill the gap with a personal guaranty, a letter of credit, a deposit of securities or other collateral, a commitment from equity partners to contribute the necessary funds, or a letter from an institution specifically in the business of providing "gap" financing.

Those institutions agree to make loans (second mortgages if the post-construction lender will allow it) at very high rates. They charge a small ransom for the "gap" commitment letter, and their rates far exceed those that most post-construction lenders would charge for the full loan. Some of these institutions, if called upon to fund all the gap commitments they have written, simply wouldn't have the cash to do it. None of them are in business to fund, just to promise to fund. But they exist because construction lenders often insist on "gap" commitments and some developers have nowhere else to go for them.

Gaps can arise from causes other than the post-construction lender's rent roll requirements. Suppose there is a project cost overrun. The construction lender may decide to fund it if foreclosing on the incomplete project is its only other choice. The result is a gap between what the post-construction lender initially agreed to lend and the actual balance of the construction loan.

§ 97.07(i) Legitimate Reasons for the Post-Construction Lender Not to Fund.

The construction lender examines all the conditions which the post-construction lender attached to its commitment to be sure they can be met. It pushes for the post-construction lender to approve the title, survey, lease forms the borrower

will be using, environmental audits, and anything else in existence before the construction lender makes its commitment to fund in reliance on the post-construction lender's commitment letter. The form of note and security interest (mortgage or deed of trust) can be nailed down between borrower and post-construction lender quickly enough. All of these items will be summarized in a comfort or approval letter signed by the post-construction lender and addressed to the developer and the construction lender.

There are some matters which the post-construction lender just can't sign off at the outset. The most important of these is that the project has been completed substantially according to the plans and specifications the post-construction lender agreed to fund.

Permanent lenders require that any "substantial" (or an equivalent term) change in the plans be approved by them. Obviously the permanent lender can't be burdened with approving every change to a project--the height of light fixtures or the location of electrical outlets, for example. On the other hand, reducing the number of parking spaces or the total square footage of the project would be substantial.

Post-construction lenders have lost lawsuits when they refused to fund because of minor failures of completion. n394 When completion is "95% done," the post-construction lender who refuses to close its loan stands on slippery ground. However, it may legitimately insist on "holding back" sufficient funds to finish the work, escrowing these until the project architect certifies completion and the city issues a certificate of use.

§ 97.07(j) Remedies for Breach of Loan Commitments.

§ 97.07(j)(1) The Borrower's Remedies.

Although it might surprise many borrowers, remedies for a lender's breach of a loan commitment relating to real estate are generally based on the assumption that money is always readily available for borrowing. Similarly, a lender's remedies for a borrower's breach of a loan commitment are generally based on the assumption that creditworthy borrowers are ready, willing and able to close on loans. For this reason, the damages available to a non-breaching party in the context of a loan commitment are generally rather modest and the large judgments granted in other lender liability cases or for default on a loan itself are unusual. Most breaches of loan commitments are anticipatory breaches. Rarely does a party breach as a loan is being funded.

* * *

A borrower has six generally recognized possible remedies: substitute interest rate damages, reliance damages, lost equity damages, lost future profit damages, specific performance, statutory remedies and, possibly, punitive damages.

Substitute Interest Rate Damages: Damages based on a substitute interest rate are the most common awards entered for borrowers where a lender breaches a loan commitment. Such an award allows a borrower to recover as damages from the breaching lender an amount equal to the present value of the difference between the rate of interest specified in the loan commitment and the rate of interest ultimately obtained from another lender over the lifetime of the loan. If there is no change in the interest rate between the two loans, the recoverable damages generally would be the minimal expenses related to obtaining the loan from another lender.

* * *

Lost Equity Damages: Although damages based on an interest rate differential and consequential damages are the general measure of damages awarded for a lender's breach of a loan commitment, a few

borrowers have been awarded lost equity damages. If a borrower is unable to locate alternative financing following breach by a lender and as a result loses the property, the lost equity in the property may be awarded. *Landes Construction Co. v. Royal Bank of Canada, 833 F.2d 1365 (9th Cir. 1987)* (the "loss of equity" estimate of damages is a broadening of the traditional damage determination).

* * *

Lost Profits: Even more difficult for a borrower to recover against a breaching lender than the loss of equity in a real estate project are projected lost profits associated with the project. Although a few borrowers have successfully sought lost future profits caused by the lender's breach of a loan commitment, the general rule is that lost future profits that would have been derived from a new real estate project are not recoverable because such damages were not foreseeable at the time the commitment was made or because they are too speculative. n395

Developers often recover lost profits from lenders who form joint ventures with them and pull out, especially when the developer's compensation is based on future earnings and the lender cancels after the developer has spent a lot of time on the project, maybe even completing the first phase. n396

Specific Performance: Under unique circumstances, a borrower may be entitled to specific performance. The general rule is that specific performance is available only when the plaintiff has no adequate legal remedy. A party to a breached loan commitment is generally considered to have an adequate legal remedy.

* * *

A borrower's legal remedy is more likely to be deemed inadequate and specific performance granted if the borrower's inability to obtain substitute financing is related to the breaching lender's secured position in the property to which the breach of the loan commitment relates ... . Incidental damages may also be awarded in connection with a decree for specific performance. n397

Statutory Remedies: In addition to the common law remedies, new state laws have provided other remedies for a lender's breach. For instance, New York passed a comprehensive banking law that included banking board authority to promulgate regulations and rules and to impose fines or penalties for lenders that fail "to disburse funds in accordance with a written commitment or agreement to make a mortgage loan." 4 N.Y. Banking Law Section 595-a1(c).

§ 97.07(j)(2) Lenders' Remedies for Breach of Loan Commitments.

Although such an occurrence is rarely considered by borrowers, lenders also may be injured by breach of a loan commitment. The remedies available to lenders, however, are quite limited--unlike those available to borrowers. Assuming the commitment is not an "option contract," lenders may seek damages resulting from lower interest rates, if such is the case, after the loan commitment breach or liquidated damages provided for in the loan documents. Although technically not impossible, granting a lender's claim for specific performance against the borrower would have to involve unique circumstances.

Although there appear to be no reported decisions granting specific performance by a lender against a borrower, case law does indicate that in certain rare exceptions such a remedy might be available. For example, some commentators have argued that a lender should be entitled to specific performance on the grounds that each loan transaction is indeed unique. They argue that a lender may be forced to undertake a less desirable loan, that the substitute loan may contain greater risks, or that the interest rate damage calculation may be worth less to the lender than if specific performance had been ordered. D. Draper, *The Broken Loan Commitment: A Modern View of the Mortgage Lender's Remedy, 59 Cornell L. Rev.*

418, 433 (1974). However, these arguments are generally not accepted by the courts, which continue to hold that a lender's only interest is in being repaid and therefore monetary damages provide an adequate remedy. n398

A lender's damages for breach of a loan commitment, absent a liquidated damages clause, are usually the loss, if any, on a substitute loan rate of interest. A borrower's damages for a lender's breach include: any increased interest the borrower must pay on a substitute loan; foreseeable expenditures made in reliance on the loan; lost equity in the property (possibly); lost profits (rarely); specific performance (almost never); and (as yet) no punitive damages. n399

§ 97.07(j)(3) The Lender's Commitment Letter Does Not Automatically Incorporate Promises the Borrower Makes in Its Loan Application.

A borrower filled out a loan application for a "take out" commitment from Prudential Insurance Company seeking a long-term loan for $24,500,000. Above the signature line on the standard loan form, a printed document, was a promise by the borrower to give the lender a first mortgage. Along with the standard two-page application, the borrower agreed to a five-page typewritten rider with 34 conditions.

The project was the Hyatt Regency Hotel in Phoenix, Arizona. It was already under construction when the developers began arranging construction and permanent financing. Hence, there was always the possibility that mechanics' liens could arise that would have a lien priority superior to the lien of a later mortgage. Mechanics' liens in Arizona, as in many states, relate back to the commencement of construction.

To deal with the potential mechanics' lien problem the developer agreed to obtain a title company policy insuring Prudential and the construction lender, United California Bank, against mechanics' liens having priority over their mortgages.

The hotel was completed and opened for business. The construction lender and the developer informed Prudential that it was time for Prudential to fund the take-out loan. But by that time disputes between the developer, the general contractor and subcontractors had arisen. Mechanics' and material liens had been filed against the hotel.

Prudential refused to fund because it was not going to have an in fact first lien, as promised in the loan *application*. Prudential's determination not to fund based on the title insurer's guarantee of a first lien instead of a lien in fact, had been reinforced when in preliminary discussions with the title insurer. Prudential learned that the insurer was evaluating defenses to payment based on the borrower's conduct and the precise language of the policy.

Prudential argued that the terms of the loan application and its rider should be read as part of the loan commitment. Unfortunately for Prudential, the only document incorporated by reference into its loan commitment was the five-page rider, not the two-page standard loan application form which contained the borrower's promise of a first mortgage.

Ordinarily, a loan application might be considered an offer, and the lender's commitment an acceptance of the offer. But construction loan applications are so incomplete, they are difficult to construe as formal legal offers. Often, they have been compared to sales presentations.

Prudential also contended that its right to a first mortgage could be implied from the circumstances of the transaction, lending practice generally, and the borrower's warranty in its deed of trust that it was conveying free of encumbrances.

The flaw in this aspect of Prudential's argument was that it had entered the deal fully aware that a potential mechanics' lien problem existed and had agreed to accept title insurance of a first lien in place of an in fact first lien until the time for its performance had arrived.

As for the borrower's warranty against encumbrances in the deed of trust, that was construed not as an affirmative promise of a first lien but as a promise to indemnify Prudential if it suffered a loss resulting from the borrower not having had a first lien.

Prudential also claimed that it should not be required to fund into a default. The developer was insolvent. However, the loan commitment had no provision conditioning Prudential's performance on the borrower's continued solvency or no adverse change in the borrower's financial situation.

The trial court after a 76-day trial, in a 72-page opinion, found against Prudential. Its refusal to fund constituted an anticipatory repudiation. The trial court was upheld on appeal. n400

Prudential's case for refusing to fund would have been improved dramatically if its obligation to fund had been conditioned on its having a right to a first lien and a right not to fund if the borrower's financial situation deteriorated materially between the commitment and loan closing date. The "first lien" condition actually appeared in early drafts of the loan commitment but got left out as the borrower and Prudential negotiated their deal. The construction lender, UCB, might have resisted a clause giving the permanent lender a right not to fund if there were a "material adverse change" on the borrower's balance sheet. But UCB would have been hard-pressed to deny Prudential the same "first" lien priority condition it had obtained on the very loan it was to have assigned to Prudential as part of the five-party agreement.

United California Bank (now First Interstate, but hereafter referred to as UCB) made this loan as the lead bank in a participation with a number of other lenders. Following the foreclosure and lawsuit, UCB sold the hotel to a consortium of buyers for more than $30,000,000.

UCB and the developers had agreed to split the recovery (approximately $15 million) fifty/fifty. With that sum, UCB and the other participating lenders still earned less than they had expected on their investment, but didn't take too bad a loss.

When Prudential refused to fund the take-out loan, UCB considered suing for specific performance, but decided to pursue a damage action instead. An action for damages is the preferred remedy in Arizona. Specific performance is only available only if damages are proved to be an inadequate remedy. Since all UCB and the other banks wanted was a return on their investment, money damages were clearly sufficient.

Second, UCB was eager to foreclose, obtain title and sell the hotel as quickly as possible. Waiting for specific performance would have meant waiting until its lawsuit with Prudential was resolved before foreclosing and selling the hotel. Pursuing a damage claim gave them the option of selling earlier--although not, perhaps, until a trial court determined the hotel's worth as of the date of Prudential's breach.

Third, UCB's agreement with the developers to share the costs of litigation and any recovery increased the chance that one or the other of them would have provable damage. If the court found the hotel was worth more than the amount of the construction loan, the developers would have a claim for lost "equity" value. If the court found the hotel was worth less than the amount of the construction loan, UCB would have a claim for the shortfall.

UCB bid the full unpaid balance of the loan at foreclosure because, at that time, UCB believed the property was worth at least $25,000,000. A bid lower than that would have automatically been an admission that there was no equity value in the property. n401

Following the case, Prudential paid the sums, as ordered, approximately $11.5 million plus accrued interest (approximately $15 million in all). Of course, it had the benefit of those funds during the years of litigation which

coincided with record high interest rates (approaching 20% a year).

§ 97.07(j)(4) Lender and Borrower Must Show "Good Faith" in Negotiating Gaps in the Loan Commitment.

The commitment letter seldom contains "all the final and definitive terms" of the deal. When disputes arise after the commitment about the terms and conditions of the final loan, both parties are obligated to negotiate in "good faith" their differences about the documents necessary to a closing. n402 As one lawyer puts it: (1) Never stop negotiating; (2) Always appear willing to compromise. n403

The term "good faith" appears in the Uniform Commercial Code n404 and in § 206, *Restatement (Second) of Contracts* (1981) as a duty imposed in all contracts.

Definitions of "good faith" abound but there is no consensus about its proper meaning. It could be interpreted as nothing more than an admonition against intentional dishonesty (fraud) or an attempt to build community standards of fair play into all contracts. In fact, it often figures prominently in court opinions holding lenders liable for breaching their obligations under commitment letters. n405

§ 97.07(k) Alternatives to Post-Construction Financing.

Many developers don't like take-out commitments and have found construction lenders willing to live without the comfort of them.

Developer/Builder Fred Johnson, for over 25 years a successful developer of residential projects and subdivisions in California, Hawaii, and New Mexico, explains his position on take-out commitments:

> I don't use take-out commitments. In most cases in this economic climate they aren't being used any more. Years ago they were very common. In fact they were required before you could even get a construction loan. But when the interest rates started swinging up and down by 3-5% [in the late 1970s-early 1980s], they were just too risky.
>
> There are many reasons permanent lenders can invent for refusing to fund. If they don't want to fund--for say interest rate reasons--they're going to find some other reason not to. Sure, you can sue them. Maybe you'll recover something. But it won't be for six years and it'll cause a million headaches.
>
> Developers have more confidence in their projects than permanent lenders do. Therefore, the developer wants a chance to finish the project, lease it, and then get the permanent financing with a successful project in hand. I generally negotiate a mini-perm with my construction lender. This type of construction loan carries through the construction phase and lasts for between two and five years after completion. During this time I can get my leases, and find the most favorable possible 20-year loan. n406

Developer Roger Torriero on take-out commitments and mini-perms:

> Take-out commitments will rarely give the best terms available on a project, because they're issued in advance of the completion of the project the lender is taking a risk. Lenders don't take risks without compensation. The earlier in the project the take-out commitment is issued the more it's going to cost. If you get a take-out commitment before the construction, the financing terms of the take-out will almost never be as good as those you can get on a completed project.
>
> With our projects we will negotiate a standby commitment with our construction lender that gives us time once we have completed construction to find a permanent lender. The interest and terms of the standby commitment will generally be very high as an inducement by the construction lender for us to

get permanent financing. If we can't get permanent financing there's probably a reason, so the increased interest rate on the standby is justified in the lender's eyes. n407

The most common alternatives to a post-construction commitment are bullet, mini-perm, or bowtie loans, or rollover mortgages. These are defined here:

Bullet Loans. These are relatively short-term loans (with 3- to 10-year terms) with provisions for periodic interest rate adjustments (e.g., every 5 years) and with interest-only payments or with partial amortization based on long-term (e.g., 25 to 35-year) amortization schedules.

Sometimes bullet loans are structured as long-term loans (e.g., 25-year term) with a so-called provision permitting the lender to call in the loan after a stipulated period of time (e.g., 10 years), at which time the borrower must satisfy the outstanding loan balance by refinancing or by selling the property. Originally, these loans were designed for developers without takeout commitments whose construction loans had expired and who could not immediately obtain adequate post-construction financing. At present, these loans are being made primarily by life insurance companies to developers who are purchasing or refinancing existing properties with strong rental schedules. *See generally* Ling and Peiser, *Choosing Among Alternative Financing Structures*, 17 Real Est. Rev. 39, 40 (Summer 1987). Sometimes they are also used by insurance companies in a process called "matched funding" whereby monies received from pension funds (in respect to which a fixed rate of return is guaranteed under a so-called guaranteed investment contract) are loaned out as bullet loans at slightly higher rates (without any prepayment privilege) to assure the lenders of a profit spread during the matching terms of the investment contracts.

Mini-perms and Bowtie Loans. The mini-permanent loan, or mini-perm, is a combined construction-permanent loan that is relatively short-term (e.g., 7 to 10 years) and converts from an interest-only construction loan to a (pre-negotiated) fixed rate permanent loan once construction is completed. The principal advantage to the developer-borrower is that it has a number of years after construction is completed to negotiate a satisfactory post-construction loan without paying a prepayment fee; moreover, based on the accumulating equity in the project the borrower can refinance for a larger loan amount when interest rates decline and be in a position to pay off the mini-perm loan amount and cash out some tax-free equity.

The "bowtie loan" is attractive to developers because, while it features a floating rate (like the variable rate mortgage), it contains a cap on interest payments, so that any interest above a stipulated ceiling amount is deferred as a balloon payment that is not payable until the loan matures. Conversely, if rates should decline, the lower interest expenses may help offset declining revenues during a recession. These loans are made primarily by commercial banks, thrift organizations, and finance companies. They are usually short-term (e.g., loan terms of 5 to 10 years), permit prepayment without a penalty, and are secured by second as well as first mortgage liens. They derive their name from the fact that their rates move up and down in irregular patterns.

Rollover Mortgages. Ordinarily, the rollover mortgage has a long-term amortization schedule (e.g., 25 to 35 years), and because the term of the loan is so short (e.g., 3 to 5 years) it is customary for the lender to extend, or "roll over," the loan for another short-term period at the prevailing market rate of interest for short-term loans if the borrower has not refinanced elsewhere. For a discussion of these mortgage devices *see generally* Madison and Dwyer paragraph 3.04[3][d] (1989). n408

One author implies an explanation for why construction lenders and developers became so inclined in the late 1980s to proceed without the safety net of a take-out commitment.

The Perils of Prolonged Prosperity for Real Estate Markets

Anthony Downs
Senior Fellow, the Brookings Institution

> As the 1980s come to an end, the American economy as a whole is enjoying its seventh straight year of continuous prosperity. This is the longest peacetime economic expansion in American history. The vast majority of Americans benefit from prosperity, and therefore regard it as a blessing. But prolonged prosperity has also had some negative impacts upon American real estate markets ... .
>
> Prolonged prosperity also lulls many people into a false sense of economic security. It helps them forget not only past general economic maladies like unemployment and low profits, but the possibilities that particular projects may fail ... .
>
> Prolonged prosperity reduces sensitivity to risks among other key real estate players too. Lenders become less cautious about extending credit to developers, thereby contributing to over-building.

In the early 1990s, many "mini-perm" lenders learned what happens when no other lenders are ready to fund the refinancing needed to pay off the "mini-perm" at maturity. The "mini-perm" lender has the choice of foreclosing or extending the loan term. Often, the interest rates on mini-perms are structured to rise swiftly after the "pay off" date. The high rate is geared towards pushing borrowers into refinancing. But if refinancing isn't feasible because the project doesn't generate sufficient income, "disincentive" mini-perm rates can lead to bankruptcy filings. That is how many "mini-perm" lenders came to study "work out" menus (alternatives for restructuring loan repayment schedules) to avoid foreclosure.

§ 97.07(l) Keeping the Loan "at Margin" and "In Balance": The Mini-Perm Lender's Way to Call for More Borrower Equity Money When Market Values Are Falling.

Construction lenders protect themselves against having to foreclose on completed but economically un-viable projects in a number of ways.

> 1. "*At Margin*." They may require the borrower to sign a covenant to preserve the lender's original loan-to-value ratio. If the lender had promised to make a 75% loan of $75 million when the completed project looked like it would be worth $100,000,000, and the value drops to $50,000,000, the developer should pay the loan down to $37,500,000.
>
> 2. "*Loan Balance*." The borrower may also assure the lender that there will always be enough money in the construction loan account to complete the project.

If construction costs are greater than estimated, or rental income projections fall below the levels that the borrower and lender assumed when they entered their loan, the "loan balance" and "at margin" clauses give the lender the right to withhold disbursements and to demand additional equity money from the borrower.

The lender's demand for additional equity will most likely be based on an interest reserve which was calculated according to the lender's appraisal and the developer's *pro forma* showing the rent levels the building would achieve after completion. The lender and borrower would have assumed that interest on the loan would be capable of being met from rents once the project was up and running. If those rent levels come to appear unduly optimistic, they will no longer cover the interest costs as originally anticipated. The lender will want the borrower to fill the expected interest

gap ahead of time, withholding interest payments from the construction loan account and insisting the borrower pay interest now to avoid getting short-changed later.

The lender will find courts in some states reluctant to allow foreclosure absent a monetary, material default, and when the lender's "security interest" is impaired only in the sense that paper projections of revenue fall short of the lender's initial assumptions.

How bad things can get is depicted in these exhibits, supplied by James Moore. The first exhibit shows the borrower's *pro forma.* This was the developer's estimate of rental income: 95% occupancy at $2.00 per square foot per month, by the 18th month. The lender's original appraisal was more cautious: 93% occupancy at $1.95 per square foot per month. The actual rents are a disaster: 75% rented at $1.75 per square foot. In addition, the developer had expected to collect $30,000 per month in parking revenue. Instead, the developer has to give away parking to the tenants. The developer is also short $2.00 per square foot per year in expenses expected to be passed forward to tenants in their leases. The developer has had to absorb these expenses personally.

NOI	$1.9MM	$1.4MM
/ 1.25 / .105 =	$14.6MM	$10.6MM
Value @ 10% cap.	$19MM	$14MM

Exhibit 1 shows the result of these project income short-falls on the interest payments that will be due on the $13,000,000 construction loan at 10% interest. If the original estimates of income had proved accurate, the lender would have had a $56,831 "cushion," as the monthly net operating income would have exceeded the debt service by that margin. Under the "actual" (presently projected) rents, there will be a shortfall of nearly $100,000 per month. The lender would prefer not waiting 18 months later to see if these sad projections materialize. It will want to treat the loan as "out of balance" much earlier, and invoke its "at margin" clause now.

The lender would call upon the borrower to "top up" the loan in a sum revealed in Exhibit 2. This exhibit shows the originally estimated uses of funds and sources of repayment. Exhibit 2 shows an exposure value of $3,101,000 18 months into the loan.

The exposure value is the difference between the original projected cost of completing and renting the project and the later projection. In Exhibit 2 we see that rents are going to be about $800,000 lower than originally estimated, and the cost of completion, mostly due to the landlord having to pay for tenant improvements in order to attract tenants, has gone up from $20.90 per square foot to $40.00 per square foot. Taking these two changes into account, the new projected cost of completion is going to be $3,101,000 greater than originally anticipated.

The exposure value of $3,101,000 is the amount it will take to complete the project that the lender had expected to be completed for $18,640,000. Now it will cost $21,741,000. Unless that $3.1 million gap is closed, the lender will get stuck with an unrented, incomplete project. The borrower could close by raising $3.1 million or the lender could fund the gap by increasing its loan from $13 million to $16.1 million. The items that have worsened from the original estimates are tenant improvements and interest reserves.

Tenant improvements represent the landlord's contribution to the tenant to cover the cost of completing the core and shell, which is all that most office developers in the U.S. provide. The tenant is responsible for making the space usable--for installing wall partitions, floor and ceiling finishes, carrying heating and air conditioning from a central source on each floor to the rest of the floor, and providing phone and telecom hookups, furniture, and window covering.

The increase in interest reserves is due to the reduction in projected rents. The interest reserve (net) is the difference between interest that will be due on the construction loan during its expected three-year duration and the projected rents available for debt service that the borrower/developer is able to collect during that period. The lender assumed the project would be completed and rented before the construction loan was repaid from the proceeds of a refinancing. The lender assumes that rents collected while the construction loan is outstanding will be allocated to the payment of interest. As projected rents fall, due to pessimism about rental market conditions, the interest reserve needs to be increased. If interest rates were to rise, interest reserves would also have to be increased.

Predictably, the developer is going to be distressed when the lender threatens to withhold construction money based on nothing more than its gloomy projections of future rents. The lender's allegation that the loan is "out of balance" isn't the result of a cost overrun which any responsible, well-capitalized developer would be prepared to pay out of pocket. Rather, this imbalance is a result of the lender's cheerless appraisal that present market conditions have deteriorated since the loan was made, and may also be influenced by the developer's lack of success to date in leasing. The developer also knows that the lender probably won't risk a delay in construction by withholding funds necessary to keep the project on track. If the lender threatens foreclosure, the developer will certainly contend that the lender's security interest isn't impaired as long as the project's value on completion will exceed or equal the construction loan balance on that date.

What can happen to the lender who isn't able to induce the borrower to cough up additional funds and guarantees is seen in Exhibit 3. The reduced rent levels translate into an annual net operating income $500,000 less than originally expected. A cautious permanent lender will discount those rents by a certain percentage and then capitalize them. Under current market assumptions regarding both the discounting and capitalization of income, the project will be worth only $14,000,000 instead of $19,000,000. A construction lender who puts up as much as indicated by the 18-month scenario of Exhibit 2--without additional borrower equity--stands to lose over $3 million on a refinancing.

In Exhibit 2, net operating income (NOI) is divided by 1.25 because permanent lenders expect a debt coverage ratio not to exceed 80%. In other words, for every dollar of debt service, lenders expect to see $1.25 of NOI. This is a standard underwriting ratio that the permanent lender will apply in determining how much of a loan to make. The .105 is the presumed interest rate, which was 10.5% at the time.

These numbers show why--based on projected rents and debt service at the time this exhibit was drawn--the most a permanent lender could be expected to lend would be $10.6 million. But the construction lender will have loaned $13 million.

That is why the construction lender stands to lose $3 million. Deducting loan origination fees and costs for the permanent loan, there will be a $3 million shortfall when the permanent loan is funded to take out the construction loan.

Another way of deriving the $3 million figure is from Exhibit 2. If someone doesn't come up with $3 million, the project will not be completed and rented. Most likely, the construction lender is going to have to advance that $3 million to get the job done. If the construction lender advances the $3 million, it will have made a loan substantially in excess of the value of the building.

No other sensible lender or buyer can be expected to come forward to bail out the hapless, under-secured construction lender. This is what the construction lender's definition and early enforcement of the "in-balance" clause is designed to prevent.

As the construction lender shifts this risk to the developer/borrower through "loan balance" and "at margin" clauses, even the most buoyant of developers may come to wish they had arranged "take out" financing in advance of the construction loan, as most developers would have done prior to the mid-1980s.

A construction lender defends the use of "loan balance" and "at margin" provisions by comparing real estate to the stock market where such provisions are common. n409

A STOCK INVESTMENT/REAL ESTATE LOAN COMPARISON

Since real estate is considered by institutional investors as an alternative to, or diversification within a stock and bond portfolio, I believe that comparing real estate to stock has some merit illustratively.

I. *A Margin Call*--When you open a margin account at a brokerage firm, and borrow $5,000 against $11,000 of IBM stock, you agree to re-margin the collateral for the loan if the stock value drops. If your IBM stock drops to $8,000 in value, you have a very short period of time to either: (a) pay down the loan to $4,000 or less; or (b) provide additional stock to increase the collateral value above $10,000. Even though you did absolutely nothing to cause the collateral value to drop, and you are not happy about the situation, you do not expect the stock broker to maintain the same loan at a higher loan to value. Yet when the same scenario happens in real estate [$15MM loan against a $20MM appraised value; 18 months later, appraised value drops to $17MM], many people view it as "unreasonable" for a lender to discuss a paydown of the loan or additional collateral.

II. *A Capital Call ("Loan Balancing")*--If IBM's shareholders voted to recapitalize the company by another 25%, then each shareholder would be given an option: (a) to increase their stock holdings by 25% to maintain their percentage ownership; or (b) allow their additional shares to be sold to another investor, thereby diluting this original shareholder's percentage ownership. In the above example, you would not expect your broker to advance $2,750 on your behalf (25% of $11,000) to protect your ownership interest in IBM. However, when a development requires additional capital (Tenant Improvements; Interest; Operating Expenses; etc.), there is automatically an expectation that the lender will cover all or *at least* part of this capital call. At least in the IBM stock example, the value of the collateral should have increased! When more interest or tenant improvements are needed, the real estate value is usually declining simultaneously.

III. *An Option*--When your IBM stock dropped from $11,000 in value to $8,000, would you sell me an option for $1.00 to buy your stock at $8,000 anytime in the next 3 years,

when I'm not willing to pay something meaningful for that option today? Of course not. You'd be taking all the downside, but giving me all the upside *for free* ($1). However, when a bank has a $15MM loan on a property appraised for $20MM, and later the costs go up by $2MM while the value drops to $18MM, most people assume it's the bank's responsibility to lend all (or most) of the $2MM increased costs. A truly non-recourse loan implies that upon maturity (*or default*), if the property is worth more than the debt, you can pay off the debt and keep the upside; if the value is below the non-recourse debt, you can give the property to the lender and avoid the additional loss. If this $2MM "out of balance" (increased costs) creates a default, the borrower can provide the $2MM to cure the default and keep the $3MM of value above the debt. If he chooses not to, why should the lender lend him $2MM of the $3MM that the borrower has to protect, and effectively give the borrower the option (for free) to walk away if the value drops by only $1MM or more?

§ 97.07(m) Shortcomings in Some of the Construction Lender's Risk Avoidance Devices.

Earlier, we listed the risks of construction lending and some of the ways lenders could reduce those risks. One risk reduction technique was the requirement of a commitment letter from a post-construction lender. The pros and cons of this device have been outlined in the preceding sections. Three other devices--bonding, direct payments to contractors, and title insurance--will now be considered.

§ 97.07(m)(1) Bonding: Surety, Payment, and Performance Bonds.

Bonds are usually required by statute for public works. They are used in private projects to give owners or lenders further comfort in the ability of their chosen general contractor to complete the job on time, on budget, leaving no unpaid subcontractors, suppliers or laborers behind who could file mechanics' liens against the project.

Bonds are costly, about one percent of the construction cost. The premium varies with the track record and resources of the contractor being bonded, and the risks of building in the particular geographic area. n410

A surety company makes its own investigations of the contractor and its own analysis of the plans and budget for a project. Thus, the mere fact that a bond has been issued by a reputable surety company provides a measure of comfort. n411

Lenders can require bonding as a means of protecting their interests. They can contract for developers to obtain bonds from a surety, guaranteeing "against unpaid claims of mechanics and materialmen and ... that the project will be completed on time for the contract price." There are several types of bonds which sureties underwrite, but the relevant ones for construction lenders are payment and performance bonds.

Performance Bonds. n412 Performance bonds guarantee that the contractor/developer will perform the work under the terms and conditions of the construction contract, subject to the amount of the bond, within the agreed cost. If the developer defaults, the surety may either complete the contract personally, or provide the lender with funds to contract with another developer to complete the contract. The surety is likely to choose the latter route because its contribution will be limited to the amount of the bond, whereas under the former option, it may well end up spending more than the bond amount. n413 A performance bond does not guarantee the lender repayment of the loan, or hold the lender harmless from collateral damage that a defaulting contractor may cause.

Payment Bonds. A payment bond, often issued with a performance bond for one premium, insures the property owner and the lender against the claims of third parties--workmen, subcontractors n414 and suppliers for labor and materials

used in completing the contract. They insure that the general contractor will pay all subcontractors the sums due. This should prevent mechanics' liens from being filed on the project property or provide funds for the release of justified liens. Both bonds are necessary in order to ensure the project will be completed without increasing the lender's exposure.

Bonding would appear to be an ideal completion assurance device. Not only does the surety provide the "owner with substantial protection at a relatively insignificant cost ... it also allows the owner a single and identifiable place to seek recovery for a default in the performance of his contract." n415 Besides adding to project cost, bonds are often not available to contractors who don't have great financial strength.

Defenses. Bonds are usually subject to numerous defenses to payment, for example:

> (1) The liability of the surety may be limited to the construction described in the original construction contract for an amount of coverage geared to the original construction price, so that the surety would not be liable for design or construction changes (which are virtually inevitable). n416

To eliminate this defense to payment the lender should contract expressly for protection if the plans are modified or time extensions are granted for completion. The lender might also contract for continued surety coverage if cost increases do not exceed the original contract price by some agreed amount--10% is common.

> (2) Losses are generally not covered if caused by matters outside the construction contract (e.g., the contract provides for a 15% holdback, but the loan agreement provides for only a 10% holdback and the developer has squandered the extra 5% of the construction funds) or for losses occasioned by violations of the construction contract (e.g., the developer makes payments in advance of dates specified in the construction contract). n417

The lender should attempt to negotiate dual obligee provisions, naming the lender as beneficiary, and immunizing the lender from defenses arising out of the contractor's actions which the lender did not expressly authorize in writing. At a minimum, the surety should be required to give the lender ample notice of the owner's failure to perform and an adequate time to cure the owner's breach of the construction agreement.

> (3) Where the bond covers a subcontractor, rather than the general contractor, the surety may argue that the failure to perform arose from the failure of the other subcontractors, not the bonded subcontractor. n418

The solution here is to "have a single general contract that covers all of the work and which is itself covered by performance and payment bonds." n419

> (4) Based on the so-called Los Angeles clause in some surety bonds, the surety may claim that its liability is conditional on the performance by other parties to the agreement. For example, where the project cost is $1 million, $800,000 to be supplied by the construction loan and $200,000 by the developer, the surety may claim its performance under the bond is conditioned on the developer, or, on default by the developer, the construc-tion lender supplying the $200,000. Or, where parts of the project are being constructed by others not covered by the surety bond, the surety company may claim that the performance of the contractor was hampered or frus-trated by the breach of other contractors. Or, the surety may claim that the contractor was prevented from performing because the developer delayed in approving a change order or making payments to subcontractors. n420

As indicated above, all these defenses can be mitigated by the lender negotiating appropriate changes to the standard form bond. Lastly, the owner is not entirely protected from a developer's default because the damage caused by default may exceed the bonded amount. Therefore, commentators have suggested that the bonds' real importance to lenders is

the knowledge the contractor was solvent enough to obtain it. n421 But the alert lender may insist that cost overruns be funded by the developer as they occur, and that the construction loan be kept "in balance." By dealing only with developers willing and able to invest additional equity as the project proceeds, construction lenders close the funding gap left open by the bond ceiling being no higher than the projected construction cost. The trouble comes when a developer who, on signing the loan agreement, appeared willing and able, later becomes reluctant or strapped for funds.

§ 97.07(m)(2) Making Payments Directly to Contractor or Subcontractors.

Frequently, the construction lender will reserve the right to make disbursement checks jointly payable to the developer and the contractor, or to the contractor and the subcontractors, or even the right to make payments directly to each subcontractor. The lender's purpose in obtaining control over the payment of disbursements is to protect itself against forged lien waivers and to forestall the improper diversion of construction loan funds from the subcontractors by either the developer or the general contractor. However, if the construction lender makes payments directly to the subcontractors, it may unwittingly become liable to the Internal Revenue Service and to the subcontractors for any unpaid or unwithheld FICA taxes.

In addition, there is case law suggesting that when a lender steps into the shoes of another party in the project, the lender must assume all of the responsibilities of that party to others and, protect the interests of the party whose prerogatives it has preempted. For example, in *M.S.M. Corp. v. Knutson Co.,* the construction lender, bypassing the developer, made loan advances directly to the contractor and was held liable, as a fiduciary, to the developer for loan funds diverted by the lender to satisfy an unrelated debt owed to it by the contractor, even though the developer owed the contractor an amount far in excess of the diverted amounts. In so holding, the Minnesota court stated that:

> When a mortgagee undertakes to disburse funds for a mortgagor under a construction contract, a fiduciary relationship arises. Under such circumstances, the mortgagee has the duty not only to apply all of the proceeds to the use of the mortgagor without diverting them for unrelated obligations incurred by contractors or subcontractors, but also to account for all of the sums, expended on behalf of the mortgagor and to furnish adequate proof of the sums paid and the purpose of the disbursement. *[167 N.W.2d 66, 68 (Minn. 1969)* (*per curiam*).] n422

§ 97.07(m)(3) Title Insurance.

The construction lender counts on a title insurance company insuring a first lien free of prior mechanics' liens. Cautious title insurers inspect the site and check the public records to make sure there are no prior mechanics' liens. But even if there were, and the insurer agreed to insure free of them anyway, as it did in *United Cal. Bank v. Prudential Ins. Co.*, the insurer may have defenses to payment. Lenders' title policies exclude from coverage any loss or damage "created" or "suffered" by the insured. In one case a construction lender agreed to fund about 75% of a project's estimated cost. The borrowers were expected to put up some of the cost as construction progressed--and didn't. For this and other reasons, the lender withheld funds from the construction loan. Subcontractors went unpaid and filed liens. The title insurer had agreed to protect the lender's lien priority, but the insurer escaped liability by arguing that the lender deliberately withheld funds, and this act "created" the mechanics' liens. n423

§ 97.07(n) Portfolio Management and Diversification.

§ 97.07(n)(1) Shifting the Interest Rate Risk: Interest Rate Swaps for Real Estate Developers and Lenders.

Construction loans are customarily written at variable rates. In contrast, post-construction financing for commercial projects is often at fixed rates. Lenders with fixed rate sources of funds (time deposits) and variable rate income from loans can swap their variable rate loans with lenders whose portfolios have just the opposite characteristics. The result of the swap is that each lender is better able to match its income with its liabilities. Developers can do the same.

Developers who customarily borrow construction loans at floating rates (prime plus) remember the early 1980s when the prime bank lending rate pushed 20%. Those who fear the possibility of a return to those rates and whose projects simply can't absorb those increases seek to swap their floating rate construction loan obligations with fixed rate obligations.

An Example of the Swap, Using Numbers n424

The following example shows how one counterparty can sell its comparative borrowing advantage to the other, while both counterparties are hedging their risks by matching their assets with their liabilities. Counterparty "X" is a highly-rated public company, capable of raising long-term, fixed rate debt at extremely favorable prices. X can borrow at a 10% fixed rate. X is a consumer finance company, and uses the money that it borrows long-term to make short-term, floating rate loans. Counterparty "Y" is a strong company, but without the name recognition and borrowing power of X. It could borrow at a fixed rate of 12%. Y is a savings and loan, and uses the money it currently borrows at short-term, floating rates to originate long-term, fixed rate mortgages.

X has a 2% borrowing advantage, which it would like to sell to Y. Furthermore, X would be better off with floating rate debt, because it has floating rate assets, and Y would be better off with fixed rate debt, because it has fixed rate assets. The solution is for X to borrow at fixed rates, and Y to borrow at floating rates; the counterparties then swap interest payments on the debt. X becomes the floating rate payor, and Y becomes the fixed rate payor.

X borrows $10,000,000 at 10% fixed rate, and Y borrows $10,000,000 at LIBOR plus75%. The75% is a spread which reflects Y's credit risk to the lender. Y then pays 10.5% interest on a notional amount of $10,000,000 to X, and X pays the LIBOR rate on a notional amount of $10,000,000 to Y. Note that the interest is calculated on the notional amount of $10,000,000; X or Y might have borrowed more or less than that amount, but chose to swap interest rates on a chosen principal amount of $10,000,000.

The result of the swap is that X is borrowing at the short-term, LIBOR floating rate. This is what X could probably do in the open market, because X is strong enough to pay no spread on LIBOR. Y is paying 10.5% fixed rate to X, and is receiving only LIBOR in return. Y must also make up the75% spread on the $10,000,000 it borrowed at LIBOR, because it is not receiving this part of the debt from X. Thus, Y's all-in cost of the swap is 10.5% paid to X, plus75% paid to its floating-rate debt--a total cost of 11.25%. Y saves75% compared to its own fixed rate cost of funds of 12%. X makes a profit of.50% from the swap, because it borrowed at 10% fixed rate, and received 10.5% from Y.

X and Y now have matched assets and liabilities. X has "sold" its comparative borrowing advantage to Y for a50% profit, and Y has saved75% on borrowing fixed rate funds. Furthermore, the swap does not reflect the liabilities on the counterparties' balance sheets--X's balance sheet continues to reflect fixed rate debt, and Y's reflects floating rate debt.

§ 97.07(n)(2) Real Estate Income Stream Swaps.

In addition to interest rate swaps, lenders also use income stream swaps to manage and diversify portfolios. n425 While an interest rate swap is basically an exchange of liabilities between parties, the real estate swap is an exchange of income streams without exchanging the underlying real estate ownership. n426 Parties to the swap exchange a payment on principal based on the return of a broad based real estate index for a payment on principal based on a return of fixed or floating interest rate. n427 By exchanging particular streams of income, lenders can recognize comparative advantages not available through an interest rate swap and realize joint savings, diversify, and hedge. n428 The risk involved in an income swap is the difference between cash flows per payment period, not the entire cash flow. Default on the swap would indicate negative contract value and bankruptcy of one party. n429 So unless the trade is misvalued by a large margin, risk of default depends only on the bankruptcy of one party.

§ 97.07(o) Caps, Floor, and Collars.

As an alternative to trading an obligation you have for one you would rather have, a person with a floating asset or obligation can buy a hedge against the rate floating too high or too low. These are called "caps," "floors," or "collars." Say your loan was at an adjustable rate which was tied to a U.S. Treasury price index. Say your adjustable rate was 9% on the day you borrowed. You want to be sure that your mortgage rate of interest will never exceed 10%. You could find a payor (a buyer) who would, for a premium or fixed fee, agree to pay the excess above 10% on your loan, should there ever be one. Thus, your obligation to your lender would be "capped" at 10%.

Your lender, on the other hand, might have promised depositors on long-term accounts a fixed rate of interest, say 9%. Having reloaned the proceeds to you at a floating rate, the lender might want to be protected against the possibility that the floating rate could fall below 9% causing a shortfall for its promised payments to its depositors. For a fee, it could purchase a promise from a payor to make up the difference between 9% and the floating rate on your loan should the latter fall below 9%. This is called a "floor."

A "collar" is a swap in which one party agrees to be the floating rate payor on the cap in exchange for the other becoming the floating rate payor on the floor.

Consider the following example: A developer borrows a construction loan at prime plus 1%. When the loan is arranged, the prime rate is 8.5%. The developer figures the deal will be profitable as long as construction loan interest is held to less than 10%, so the developer trades a cap for a floor on the loan. The developer receives a promise from the lender to pay all the interest on the loan above 10% and the developer agrees to pay no less than, say, 9% interest on that loan, even if the prime rate should fall below 9%. The lender may become the promisee on the floor and the promisor on the cap, or may sell these positions to investors.

Pricing swaps, caps, and floors is much like pricing any futures market for interest rates. It is a topic of lively concern to number-crunching financial experts. n430

Thomas McCarthy, Vice President of Finance, Maguire/Thomas Partners, in an interview February 14, 1991, thought that interest rate swaps are better hedging devices than caps, floors and collars: n431

> [Caps, floors and collars are] variations on a swap, as they're derived from the swap market. The cap allows a borrower to place a bet that the index that you choose to cap, most likely it's Eurodollar--LIBOR--will not exceed a given fixed rate. With a premium payment, you can purchase a contract that will, in essence, protect you if LIBOR ever exceeds, say, 9%. Today the 90-day LIBOR is 6.5%, roughly. If LIBOR does go above 9%, then that counterparty to that contract will pay *you* the difference. Likewise, you can sell a floor, obliging you to pay a counterparty if LIBOR goes *below* a given rate. A collar is simply a concept of selling the floor and buying a cap simultaneously. You can benefit if interest rates are in between the floor and the cap, or if they exceed the cap. But you are penalized if rates go below the floor.
>
> We feel that interest rate swaps are a more efficient execution. If one wants to bet that interest rates may be going down, then you simply swap only a portion of your loan. If I want to gain 75% of the value of the possible decline in interest rates, then I'll be swapped on 25% of my loan. I think that's a better execution, generally speaking, than a cap or a floor because there's usually a built-in premium for caps and collars. You often have to pay that premium in cash up front. That's not always true for people who have the time and expertise to analyze the market. We found that the marginal benefit was not worth the time that we were putting in to watching these products closely. We've also looked into using futures. You can create collars, floors and swaps in the futures market. But that also necessitates becoming an expert, specialized trader, and monitoring the futures market. Frankly, that's not our business. It's much easier for us to say, "I want to have half of my deal fixed. I'm going to swap it."

In residential construction financing, however, McCarthy believes that caps might be preferable to swaps because of the relatively short terms of residential construction loans.

app	= proportionate increase in property value expected over holding period.
SFF[y]%[n]	= sinking fund factor at rate y for holding period.
n	= length of holding period, years.

(n44)Footnote 328. Developers veer away from DCR and IRR methods when cash income from a property is as good as it is going to be in the foreseeable future. But this is one of the times when the discipline of DCR or IRR is most needed. *See* Stephen E. Roulac, *The Demise of the IRR?,* 9 Real Est. Fin. 11 (1993).

(n45)Footnote 329. *Monongahela Navigation Co. v. United States, 148 U.S. 312, 328 (1893)* .

(n46)Footnote 330. Discounted cash flow is the present value of all present and future cash flows.

(n47)Footnote 331. The popularity has moved into the courts as well. One commentator notes that, "[c]onsistent with its general acceptance and vast application in the financial community, the 'discounted cash flow' method has become the valuation 'methodology of choice' in Delaware appraisal proceedings." Joseph E. Calio, *New Appraisals of Old Problems: Reflections on the Delaware Appraisal Proceeding, 32 Am. Bus. L.J. 1, 48-49 (1994)* (discussing generally the calculation of discounted cash flow) (footnotes omitted). Discounted cash flow analysis is also integral to the securitization of property. Leslie K. Beckhart, Note, *No Intrinsic Value: The Failure of Traditional Real Estate Appraisal Methods to Value Income-Producing Property, 66 S. Cal. L. Rev. 2251, 2294-95 (1993).*

(n48)Footnote 332. Developers veer away from Discounted Cash Flow and Internal Rate of Return calculations when cash income has stabilized and is as good as it will be in the foreseeable future. That time, however, is when the evaluation under these methods is most needed, useful and enlightening. When cash does become constant, the owner must pay even greater attention to the effects cash outflows for improvements and maintenance affect profitability, and consider whether the return generated by the constant (low) rents is worth the risks inherent in owning the project at all. A DCF or Internal Rate of Return analysis could reveal that the investment actually loses money or that returns in the market are better for projects of the same risk. *See* Stephen E. Roulac, *The Demise of the IRR?,* 9 Real Est. Fin. 11 (1993).

(n49)Footnote 333. Indirectly, these future costs and incomes may figure in the selection of the "cap" rate under the Ellwood or market extraction method.

(n81)Footnote 365. Federal Tort Claims Act, *28 U.S.C. § 2680*(h).

(n82)Footnote 366. *See United States v. Neustadt, 366 U.S. 696 (1961)* . The purchaser of an FHA insured house sued, claiming reliance on a faulty appraisal and overpayment for the property. The U.S. Supreme Court held the suit barred by *28 U.S.C. § 2680(h)*. However, the result in *Neustadt* was not followed by *JM Mechanical Corp. v. U.S., 716 F.2d 190 (3d Cir. 1983)* which found an exception to § 2680(h). JM was a subcontractor on a project where HUD was the insurer of the mortgage. HUD had discretion to acquire the mortgage on mortgagor's default but was required to have assurances of completion. The bonds were invalid, but HUD allowed continued work on the project without

disclosing the invalidity of the assurances. JM claimed it was led to believe the bonds were properly in place and suffered $78,800 damage as a result of the contractor's default. The court held that the government could not invoke the protection of § 2860(h) for a claim for recovery based on the government's breach of duty to perform certain acts (such as the securing of valid performance and payment bonds) and that the overlap of misrepresentation and negligence claims do not bar negligence claims. *See also Smith v. United States, 1990 U.S. Dist. LEXIS 6434 (E.D. Pa. 1990)* (plaintiffs' claim that a negligent inspection by HUD, which plaintiffs neither saw nor directly relied on, by HUD resulted in an appraisal higher than the value of the property, causing plaintiffs to overpay HUD for the house dismissed as HUD had no affirmative duty to inspect the house for the buyer, and at most HUD misled plaintiffs by its inspection and appraisal and was therefore protected by § 2680(h)).

(n83)Footnote 367. *See Gay v. Broder, 167 Cal. Rptr. 123 (1980)* (deciding that *38 U.S.C. § 1810(b)(5)* as amended was intended to protect the Veterans' Admini-stration from becoming guarantor upon inadequate security even though plaintiff had paid for the appraisal); *Baroni v. United States, 662 F.2d 287 (5th Cir. 1981) , cert. denied, 460 U.S. 1036 (1983)* (Developer submitted plans for a subdivision which were approved by the FHA (now part of HUD)).

(n84)Footnote 368. *Baroni v. United States, 662 F.2d 287 (5th Cir. 1981) . See also Gay v. Broder, 167 Cal. Rptr. 123 (1980)* . In this case, the veteran sued the appraiser for a negligent *under* valuation which forced the borrower to use more expensive conventional financing. The court saw a special danger in holding appraisers liable for undervaluing property: they might be tempted to overvalue just to avoid suits by rejected borrowers.

(n85)Footnote 369. Robin Paul Malloy, *Lender Liability for Negligent Real Estate Appraisals, 1984 U. Ill. L. Rev. 53, 96.*

(n86)Footnote 370. *See First Fed. Sav. Bank v. Knauss, 370 S.E.2d 906 (S.C. 1988)* (borrower testified he probably didn't see the appraisals before entering the loans, and so court concluded he wasn't relying on them, and held borrower subject to a deficiency judgment).

(n87)Footnote 371. *15 U.S.C. § 1691*(e).

(n88)Footnote 372. In *Barry v. Raskov, 283 Cal. Rptr. 463 (1991)* and *Christiansen v. Roddy, 231 Cal. Rptr. 72 (1986)* , mortgage brokers were held liable to investors whose money the brokers had solicited for what turned out to be bad loans based on negligent independent appraisals. *Shaucat Salahutdin v. Valley of California, Inc., 29 Cal. Rptr. 2d 463 (1994)* criticized *Christiansen* saying that *Christiansen* "ignores the overlap of the concepts of breach of a duty of care (negligence) and constructive fraud in actions against fiduciaries ... [and the] result appears to turn on whether the theory of the case is described as negligent misrepresentation or constructive fraud--essentially a matter of pleading rather than distinctions based upon the conduct of the agent."

(n89)Footnote 373. *See* 1488, *Inc. v. Philsec Inv. Corp., 939 F.2d 1281, 1290 (5th Cir. 1992)* ("... Texas courts have held that liability for the information contained in surveying reports and accounting reports may be extended to 'persons or class of persons whom the maker of the representation intends to benefit or who foreseeably may be expected to act in reliance on it'.").

(n91)Footnote 375. *Larsen v. United Fed. Sav. & Loan Ass'n of Des Moines, 300 N.W.2d 281, 287 (Iowa 1981)* .

(n92)Footnote 376. In *Nymark v. Heart Fed. Sav. & Loan Ass'n, 283 Cal. Rptr. 53 (1991)* , a borrower refinanced for $100,000. Four years later, the county ordered the house to be vacated until severe, hazardous construction defects were cured. Repair estimates exceeded $50,000. The borrower refused to make any further payments and sued the lender because its loan appraisal said the home was "A+ quality" and "the roof, foundation, plumbing, mechanical, and electrical all appear OK," even though they weren't. The trial and appellate court both ruled for the lender which had cross-complained for judicial foreclosure as well as a deficiency judgment for the unsecured principal.

(n101)Footnote 385. *See* Morton P. Fisher, Jr., *What You Need to Know About Loan Commitments,* 10 Prac. Real. Est. Law. 23, 28 (May 1994).

(n102)Footnote 386. A lender issued a loan commitment for a "maximum loan amount" of $5.25 million to be determined by an appraisal and a detailed analysis of estimated income and expenses. The borrower paid a non-refundable fee of $78,500 for the commitment. Following the appraisal, the lender agreed to lend only $4,875,000--not enough to construct the project. The borrower wanted its commitment fee returned. The lender's answer was: "take the loan offered or forfeit the fee." The borrower argued that orally the lender had promised to lend the full construction cost, was now going back on that promise and wouldn't refund the commitment fee. The court decided with the lender, holding that neither a fraud nor a negligent misrepresentation claim could supplant the written promise required by the Statute of Frauds, and here the lender never promised the full $5.25 million in writing. *Breckenridge Creste Apts., Ltd. v. Citicorp Mtg., Inc., 826 F. Supp. 460 (N.D. Ga. 1993) , aff'd, Breckenridge Creste v. Citicorp, 21 F.3d 1126 (11th Cir. Ga. 1994)* .

CHAPTER 98 FINANCING PUBLIC-PRIVATE DEVELOPMENT AND RENEWAL AGREEMENTS THROUGH TAX INCREMENTS 1

12-98 Thompson on Real Property, Thomas Editions § 98.01

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 98.01 Introduction.

Developers are sometimes courted by local governments eager for help in rebuilding older parts of the city. Through urban redevelopment, local governments can offer special incentives to developers willing to build politically desired projects:

1. The city as partner may provide assistance in securing the necessary land use approvals.

2. The city can pay for financial feasibility and market studies, soil reports, environmental audits, title reports, surveys, appraisals, architectural and engineering work.

3. The city may abate local property taxes.

4. In some instances federal and state grants are available, and the city may assist the developer in obtaining these special funds.

5. The city may use its eminent domain powers to acquire sites if state and local laws authorize condemnation for urban redevelopment, as many do.

6. The city can sell land to developers at less than its acquisition cost or fair market value.

7. The city can lease land to developers through a long-term ground lease, minimizing the developer's front-end equity contribution.

8. The city can hold title to the land until the developer is ready to begin construction, which can save the developer sizable land-holding costs.

9. The city can pay for site preparation costs--relocation assistance to existing owners and tenants, demolition, soil preparation, grading and construction of building pads.

10. The city can pay for parking garages, streets, curbs, gutters, sidewalks, street lighting, plazas, malls, and parks.

11. In some states the redevelopment agency can float bonds in anticipation of the increase in property taxes which the redevelopment project is expected to yield. Bond proceeds can be used to acquire redevelopment sites, subsidize the sale price to developers of those sites, underwrite the costs of affordable housing, and pay for parking garages, street improvements, landscaping, museums, city office buildings, and other amenities in the redevelopment area.

Under federal n2 and state n3 enterprise zone legislation, tax incentives are available to certain types of businesses and grants are available to local governments and community development corporations to stimulate economic development in targeted areas characterized by high unemployment rates, poverty, recent job losses and plant closures. Tax incentives include tax credits or deductions for each new job, or for each job given to residents within the zone, accelerated depreciation deductions for businesses, capital gains exclusion and ordinary loss deduction for the purchase of stock by a corporation used to purchase property within an enterprise zone, expanded tax exempt probate activity bond financing, tax increment bond financing, special assessment bond financing, and rebates or exemptions from local business gross receipts and property taxes. The city can allow the developers to collect rents from occupied buildings in slum areas. n4

CHAPTER 98 FINANCING PUBLIC-PRIVATE DEVELOPMENT AND RENEWAL AGREEMENTS THROUGH TAX INCREMENTS 1

12-98 Thompson on Real Property, Thomas Editions § 98.02

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 98.02 Summary Description of Urban Renewal Programs in the U.S.

[Go To Supp]

§ 98.02(a) Goals and Assumptions of Redevelopment.

Redevelopment financing began in the late 1940s and early 1950s. n5 The ostensible purpose of the early redevelopment laws was to eliminate the physical, social, and economic liabilities caused by blight--measured conventionally by run-down and abandoned buildings, unused land, high crime rates, and low property tax revenues. n6

A subcommittee of a Presidential Advisory Committee in 1953 concluded that the problem of slums in central cities was being caused by neglect by city governments. Cities didn't adequately enforce zoning, health, and housing codes, resulting in illegal overcrowding, among other conditions. The absence of parks, garbage collection, street maintenance, and street lighting were also assailed as "some of the causes of slums." "As the blight spreads, it is inevitably followed by crime, fire, disease, and delinquency." n7

The operating assumption was that the physical deterioration of buildings contributed to social disorder, so if the "slum" buildings could be eliminated or cleaned up, crime and disease would abate. Not much was said or written in the early debates of urban renewal about jobs and poverty. That emphasis was to come much later. It also took several decades before policymakers accepted the fact that most people displaced from one area would probably just relocate nearby. As they relocated, they would find themselves even worse off than before, because so much of the low-rent housing stock had been demolished through urban renewal.

Many central city business interests and organized labor became persuaded that federal urban renewal money could be a way to help declining downtowns compete with the fast-growing suburbs. n8 Civic leaders hoped to upgrade the traditional retail centers of cities and attract property tax-paying businesses--hotels and restaurants, research parks and offices. n9

Were these programs successful? Here is a planner's view:

> From the vantage point of the mid-1980s ... many central cities, even those given up as lost causes,

> seem to be experiencing a turnaround and urban renewal projects ranging from government-sponsored convention and cultural centers to luxury apartments have played a significant role. How much of a role is hard to say. Would the renaissance have happened anyway, without displacing any poor people? In the absence of definitive studies on a city-by-city basis we cannot be certain. It is my judgment that urban renewal was a crucial factor in urban rebirth and that it took almost a generation to demonstrate a substantial return. n10

§ 98.02(b) Land Write-down.

Urban development began in the central business districts of big cities. They were often hemmed in by deteriorating low-rent housing. That housing was to be acquired by local government agencies for rehabilitation or demolition. The cleared sites were intended to be used for private projects designed, built, and occupied by private firms. Acquiring and clearing blighted sites would cost more than the vacant "green field" sites of the suburbs. To make the costs of urban sites competitive with suburban ones, the federal government was persuaded to "write down" the land cost of urban sites by giving cities grants to cover two-thirds of the cost. The city was able to meet the matching share in cash or by contributions "in kind" such as street widenings, parks, or planning services. The government grants covered the gap between what the land had cost to acquire, replat, and service with new roads and utilities, and what price developers were willing to pay. The cities sold or leased most of the cleared sites to private developers at about 30% of the actual cost. n11

§ 98.02(c) Redevelopment Has Arrived in Post-World War II Town Centers and Suburbs.

Although redevelopment got its start in cities like Baltimore, Boston, Chicago, New Haven, New York, Philadelphia, and Washington, D.C., n12 it is now a vital tool for recycling the older post-World War II suburban town centers.

Dan Young, the longtime mayor of Santa Ana, California, explains:

> We are a throw-away society. Everything in the U.S. is disposable, even cities. Once the buildings in a city are out-of-fashion and aging, the population increasingly poor and migrant, the crime rates up and school quality down, affluent people abandon it to move perhaps only fifteen minutes away to professionally landscaped, architect-designed, traffic engineered, privately funded new communities like our neighbor across the freeway, Irvine. Older cities like ours can't expect federal and state governments to lavish money on us to refurbish our infrastructure. What little funding they offer--highway money, for example--requires local matching grants. And all our local tax revenues are committed to keeping ourselves and our unionized public employees afloat. Redevelopment and tax increment financing is our only tool for survival. n13

§ 98.02(d) How the Constitutional "Public Use" Requirement Was Overcome.

Courts upheld the use of eminent domain for "slum clearance" despite challenges based on the requirement of the *Fifth Amendment to the U.S. Constitution* that "takings" of private property be for a "public use." The court evolved the notion that "public use" couldn't be equated literally with "use by the public" because not all government-acquired property has to be open to public access--defense installations, for instance. Nor does title have to vest ultimately in the government. For example, title to low- and moderate-income housing could be transferred to residents. So the phrase "public use" came to mean no more than "public purpose," "public benefit," or "public welfare." From there it was a short step to courts accepting legislative declarations of "public use and necessity" as conclusive of the "public use" question. n14

Second, to the U.S. Supreme Court, the "public use" requirement became "coterminous with the scope of a sovereign's police powers." n15 The Court has affirmed earlier case law, that "one person's property may not be taken for the benefit of another private person without a justifying public purpose, even though compensation be paid." n16 But the

Court's bottom line is that "where the exercise of the eminent domain power is rationally related to a conceivable public purpose, the Court has never held a compensated taking to be proscribed by public use clause." n17

Urban redevelopment statutes were upheld almost unanimously even though following clearance, redevelopment sites were usually sold to private redevelopers. The courts declared that resale for private use was "incidental" to the main justification for these laws: "blight" removal. Removing blight was, constitutionally, a sufficient public purpose. n18 Where once privately owned properties are acquired by eminent domain and sold to private developers, those sales have to be conditioned on the buyer clearing the site, removing blight, and building according to a publicly promulgated redevelopment plan. The "public use" finds its justification in the conditions imposed by the redevelopment agency on the private redeveloper. n19

Even though the U.S. Supreme Court articulated a lax constitutional standard and lower courts have nearly unanimously upheld redevelopment statutes, the "public use" requirement is not a judicial rubber stamp for all eminent domain cases. The Supreme Court of Mississippi, n20 Supreme Court of Florida, n21 and the Supreme Court of Delaware n22 have found an insufficient and consequential "public purpose" in condemnations which had a substantial private benefit component. The propriety of using governmental authority for these public benefit projects, even if they required taking property from one private party and turning it over to another private party, was reinforced in the 1981 *Poletown* case, n23 (discussed in more detail below, and the 1984 *Midkiff* case. n24 In *Poletown,* a viable, nonblighted residential neighborhood was condemned so the property could be turned over to a private owner for construction and operation of an automobile body plant. The proclaimed public use was alleviating unemployment and revitalizing the economic base of the community.

In *Midkiff,* the Court upheld a state statute authorizing the state to require large landowners to sell their lands to tenants at prices set by the state. Here the public use was land reform. Again, dicta from the Court showed an almost unlimited notion of the public use requirement: "The 'public use' requirement is thus coterminous with the scope of a sovereign's police powers." n25 "But where the exercise of the eminent domain power is rationally related to a conceivable public purpose, the Court has never held a compensated taking to be proscribed by the Public Use Clause." n26

Poletown was the object of considerable attention after its ruling underwent a stunning reversal in 2004 by the state supreme court that originally approved it. n27 The reversal of *Poletown* helps explain the very high interest in a similar public domain case that came before the U.S. Supreme Court in 2005.

In that case, *Kelo v. City of New London, Connecticut,* several nonblighted private residences were condemned by the city of New London, Connecticut, and the property was turned over to commercial and residential development associated with an adjacent research facility. n28 The putative public use was the public economic benefits of creating new jobs, increasing tax and other revenues, and contributing to urban revitalization. The U.S. Supreme Court affirmed the state court decision, thus approving this application of eminent domain power. n29 Justice O'Connor, the author of the *Midkiff* decision approving the use of eminent domain power to effect land reform, vigorously dissented in *Kelo,* arguing that the decision eliminated "any distinction between private and public use of property--and thereby effectively [deleting] the words 'for public use' from the *Takings Clause of the Fifth Amendment*." n30

Only a few hours after the Court announced its decision in *Kelo*, the city of Freeport, Texas, began proceedings to condemn several shrimp processing waterfront properties in order to undertake a marina development project. n31 Two days later, Boston condemned several waterfront properties for similar purposes. n32 In a dramatic backlash, the large majority of legislatures quickly introduced or pledged to introduce legislation to clarify or restrict the power of eminent domain. n33

§ 98.02(e) Policy Reactions to Redevelopment Destroying More Low-Income Housing than It Replaced.

Redevelopment was vigorously attacked as poor people were rousted from their dwellings. African-Americans and

Puerto Ricans accounted for about two-thirds of those displaced. n34 Novelist James Baldwin called "urban renewal" nothing but "negro removal." Conservative scholar and Reagan White House domestic policy advisor Martin Anderson wrote a book detailing all this called *The Federal Bulldozer*. n35

Later, exacting standards were mandated by federal and state governments for relocation assistance to dislocated individuals and firms uprooted by redevelopment. n36 Relocation programs weren't entirely satisfactory because many residents vacated as soon as areas were targeted for renewal and never received the relocation money they could have had if they had waited longer.

The more effective remedy against redevelopment becoming a thinly disguised scheme for displacing low-income tenants and homeowners is the local ballot box. Alerted to the dangers of condemnation, homeowners and resident groups mount vigorous attacks against redevelopment because they know it can result in the demolition of housing. n37 Politically savvy redevelopment agencies today are unlikely to put housing inside a project boundary and, if they do, will often commit themselves not to use eminent domain to acquire housing or small businesses.

Many state urban redevelopment laws now are written to require some replacement housing for low- and moderate-income people. For example, California law requires 20% of redevelopment-generated revenue to be used for low- and moderate-income housing. A 1984 study found that, although redevelopment agencies in California had built at least 25,000 more housing units than they had destroyed, very low-income units suffered a net loss. n38

California cities not willing to provide their statutory share of "social" housing may have to forego the use of redevelopment altogether. More than one affluent suburban town in California has canceled its proposed redevelopment project because of local political opposition to the low-income housing project the town could have had to accept. n39

The California statute also mandates that 15% of all new or rehabilitated housing units within the project area--if built by entities other than the redevelopment entity--be affordable to persons of low and moderate income housing. Instead of providing the units within the project area, this requirement may now be met outside the project area on a two-for-one basis. n40

§ 98.02(f) The Generations of Federal Programs That Replaced Urban Renewal.

Eventually federal subsidies for redevelopment were replaced by federal grants to cities directly targeted to the social and economic needs of the urban residents. One reason for the program shift to social programs and away from redevelopment was the "widespread belief among urban technicians that previous programs had failed to help the poor partly because they were too concerned by physical rebuilding and not concerned enough for the social need of residents." n41 These programs have gone through several iterations.

§ 98.02(g) Economic Development.

The trend in state and local government is to supplement or replace redevelopment activity with economic development programs, administered much the way redevelopment is. These new agencies may be given the power to formulate economic development plans and to use eminent domain and tax increment financing. Economic development agencies aren't limited to working in blighted areas or required to build housing for low- or moderate-income people. n42

§ 98.02(h) The Poletown Episode.

The controversial case of *Poletown Neighborhood Council v. City of Detroit, 304 N.W.2d 455 (Mich. 1981)* , which resulted in destruction of residential areas to make way for an automobile manufacturing plant, was unanimously overturned by the Michigan Supreme Court in *County of Wayne v. Hathcock, 684 N.W.2d 765 (Mich. 2004)* , the latter court emphasizing that an eminent domain taking must be for a public use; *Kelo v. City of New London, 843 A.2d 500*

(Conn. 2004) (the city's delegation of eminent domain power to a private, non-profit economic development corporation was held constitutional). The detailed background of *Poletown* follows.

In 1980 the General Motors Corporation announced, to immense joy in Detroit, that if the city could find a suitable site the corporation would construct an assembly plant as part of a $40 billion modernization program, described as one of the most extensive in American business history. The proposed General Motors plant, to be situated on 465 acres in Detroit and Hamtramck, could benefit from as much as $320 million in public subsidies n43

Poletown Neighborhood Council v. City of Detroit,

410 Mich. 616, 304 N.W.2d 455 (1981) **[citations omitted]**

Per Curiam.

This case arises out of a plan by the Detroit Economic Development Corporation to acquire, by condemnation if necessary, a large tract of land to be conveyed to General Motors Corporation as a site for construction of an assembly plant. The plaintiffs, a neighborhood association and several individual residents of the affected area, brought suit in Wayne Circuit Court to challenge the project.

* * *

The trial lasted 10 days and resulted in a judgment for defendants and an order on December 9, 1980, dismissing plaintiffs' complaint. The plaintiffs filed a claim of appeal with the Court of Appeals on December 12, 1980, and an application for bypass with this Court on December 15, 1980.

We granted a motion for immediate consideration and an application for leave to appeal prior to decision by the Court of Appeals to consider the following questions: Does the use of eminent domain in this case constitute a taking of private property for private use and, therefore, contravene Const. 1963, Art. 10, § 2?

Did the court below err in ruling that cultural, social and historical institutions were not protected by the Michigan Environmental Protection Act?

We conclude that these questions must be answered in the negative and affirm the trial court's decision.

This case raises a question of paramount importance to the future welfare of this state and its residents: Can a municipality use the power of eminent domain granted to it by the Economic Development Corporations Act, *M.C.L. § 125.1601 et seq.* ; M.S.A. § 5.3520(1) *et seq.*, to condemn property for transfer to a private corporation to build a plant to promote industry and commerce, thereby adding jobs and taxes to the economic base of the municipality and state?

* * *

Plaintiffs-appellants urge us to distinguish between the terms "use" and "purpose," asserting they are not synonymous and have been distinguished in the law of eminent domain. We are persuaded the terms have been used interchangeably in Michigan statutes and decisions in an effort to describe the protean concept of public benefit. The term "public use" has not received a narrow or inelastic definition by this Court in prior cases. Indeed, this Court has stated that "'[a] public use changes with changing conditions of society'" and that "'[t]he right of the public to receive and enjoy the benefit of the use determines whether the use is public or private.'"

* * *

In the instant case the benefit to be received by the municipality invoking the power of eminent domain is a clear and significant one and is sufficient to satisfy this Court that such a project was an intended and a legitimate object of the Legislature when it allowed municipalities to exercise condemnation powers even though a private party will also, ultimately, receive a benefit as an incident thereto.

The power of eminent domain is to be used in this instance primarily to accomplish the essential public purposes of alleviating unemployment and revitalizing the economic base of the community. The benefit to a private interest is merely incidental.

Our determination that this project falls within the public purpose, as stated by the Legislature, does not mean that every condemnation proposed by an economic development corporation will meet with similar acceptance simply because it may provide some jobs or add to the industrial or commercial base. If the public benefit was not so clear and significant, we would hesitate to sanction approval of such a project. The power of eminent domain is restricted to furthering public uses and purposes and is not to be exercised without substantial proof that the public is primarily to be benefitted. Where, as here, the condemnation power is exercised in a way that benefits specific and identifiable private interests, a court inspects with heightened scrutiny the claim that the public interest is the predominant interest being advanced. Such public benefit cannot be speculative or marginal but must be clear and significant if it is to be within the legitimate purpose as stated by the Legislature. We hold this project is warranted on the basis that its significance for the people of Detroit and the state has been demonstrated.

Plaintiffs' complaint also alleged that the proposed project violates the Michigan Environmental Protection Act (MEPA), *M.C.L. § 691.1201 et seq.* ; M.S.A. § 14-528(201) *et seq.* because it "will have a major adverse impact on the adjoining social and cultural environment which is referred to as Poletown." The trial court dismissed this claim, stating that "'social and cultural environments' are matters not within the purview of the MEPA and outside its legislative intent." We agree.

* * *

Coleman, C. J., and Moody, Levin, Kavanagh and Williams, JJ., concur.

Fitzgerald, Justice (dissenting).

This Court today decides that the power of eminent domain permits the taking of private property with the object of transferring it to another private party for the purpose of constructing and operating a factory, on the ground that the employment and other economic benefits of this privately operated industrial facility are such as to satisfy the "public use" requirement for the exercise of eminent domain power. Because I believe the proposed condemnation clearly exceeds the government's authority to take private property through the power of eminent domain, I dissent.

In the spring of 1980, General Motors Corporation informed the City of Detroit that it would close its Cadillac and Fisher Body plants located within the city in 1983. General Motors offered to build an assembly complex in the city, if a suitable site could be found. General Motors set four criteria for the approval of a site: an area of between 450 and 500 acres; a rectangular shape (3/4 mile by 1 mile); access to a long-haul railroad line; and access to the free-way system. The city evaluated a number of potential sites and eventually made an in-depth study of nine sites. Eight of the sites were found not to be feasible, and the ninth, with which we are concerned, was recommended. It occupies approximately 465 acres in the cities of Detroit and Hamtramck. A plan was developed to acquire the site, labeled the Central Industrial Park, under the *Economic Development Corporations Act, 1974 PA 338.* As authorized by the

statute, the project plan contemplated the use of condemnation to acquire at least some of the property within the site.

This action was brought by several residents faced with the loss of their property to condemnation as part of the project. After an expedited trial on the merits, the circuit court entered judgment for the defendants, the effect of which is to allow the pending condemnation actions under the Michigan "quick take" statute, *1980 PA 87,* to proceed.

* * *

Despite the limited value of decisions in other states, several points can be made. First, while it is difficult and perhaps futile to categorize individual states as utilizing a "broad" or "narrow" interpretation of "public use" for condemnation purposes, Michigan law seems most consistent with that of states that give a more limited construction to the term. While our decisions have sometimes used the phrase "public purpose" (a phrase often associated with a broad interpretation), the result of our decisions has been to limit the eminent domain power to situations in which direct governmental use is to be made of the land or in which the private recipient will use it to serve the public. The slum clearance cases are really the only significant departure from these principles, and, as noted above, those decisions have been sustained only because of the conclusion that the clearing of a blighted area is a public use. In this respect, the scope of "public use" in Michigan is quite similar to that in states that have rejected development projects on the theory that they would improve general economic conditions. *City of Owensboro v. McCormick, 581 S.W.2d 3* (Ky., 1979) ; *Karesh v. City Council of the City of Charleston, 271 S.C. 339, 247 S.E.2d 342 (1978)* . Certainly, we have never sustained the use of eminent domain power solely because of the economic benefits of development as have cases that allowed condemnation in similar circumstances.

Second, it is worth noting that the Maryland and Minnesota cases cited above are distinguishable in that in each it was the governmental unit that selected the site in question for commercial or industrial development. By contrast, the project before us was initiated by General Motors Corporation's solicitation of the city for its aid in locating a factory site.

The majority relies on the principle that the concept of public use is an evolving one; however, I cannot believe that this evolution has eroded our historic protection against the taking of private property for private use to the degree sanctioned by this Court's decision today. The decision that the prospect of increased employment, tax revenue, and general economic stimulation makes a taking of private property for transfer to another private party sufficiently "public" to authorize the use of the power of eminent domain means that there is virtually no limit to the use of condemnation to aid private businesses. Any business enterprise produces benefits to society at large. Now that we have authorized local legislative bodies to decide that a different commercial or industrial use of property will produce greater public benefits than its present use, no homeowner's, merchant's or manufacturer's property, however productive or valuable to its owner, is immune from condemnation for the benefit of other private interests that will put it to a "higher" use.

* * *

The condemnation contemplated in the present action goes beyond the scope of the power of eminent domain in that it takes private property for private use. I would reverse the judgment of the circuit court.

Ryan, J., concurs.

Ryan, J. (dissenting).

This is an extraordinary case.

The reverberating clang of its economic, sociological, political, and jurisprudential impact is likely to be heard and felt for generations. By its decision, the Court has altered the law of eminent domain in this state in a most significant way and, in my view, seriously jeopardized the security of all private property ownership.

This case will stand, above all else, despite the sound intentions of the majority, for judicial approval of municipal condemnation of private property for private use. This is more than an example of a hard case making bad law--it is, in the last analysis, good faith but unwarranted judicial imprimatur upon government action taken under the policy of the end justifying the means.

* * *

Stripped of the justifying adornments which have universally attended public description of this controversy, the central jurisprudential issue is the right of government to expropriate property from those who do not wish to sell for the use and benefit of a strictly private corporation. It is not disputed that this action was authorized by statute. The question is whether such authorization is constitutional.

* * *

As a general rule, when the object of eminent domain is to take land for ultimate conveyance to a private corporation to use as it sees fit, the state constitution will forbid it as a taking for private use.

* * *

Accordingly, land may not be condemned for private corporations engaged in the business of water-power mills, *Ryerson v. Brown, 35 Mich. 333 (1877)* ; cemeteries, *Board of Health v. Van Hoesen, 49 N.W. 894 (Mich. 1891)* ; or general retail, *Shizas v. Detroit, 52 N.W.2d 589 (Mich. 1952)* . In this case, land has been condemned solely for a private corporation engaged in the business of manufacturing automobiles.

It is plain, of course, that condemnation of property for transfer to private corporations is not wholly proscribed. For many years, and probably since the date of Michigan's statehood, an exception to the general rule has been recognized. The exception, which for ease of reference might be denominated the instrumentality of commerce exception, has permitted condemnation for the establishment or improvement of the avenues of commerce--highways, railroads, and canals, for example--and can be traced to the common law where it was considered an exception to a general rule.

* * *

Justice Campbell said:

"It is a principle which no respectable authority has ventured to deny, that property can never be condemned for private improvements, except where they belong to a class that cannot usually exist without the exercise of that power, and where the public welfare requires that they shall be encouraged. The improvements which unite both these conditions have been found in practice to be very few, and to be confined generally to some of the various kinds of roads or ways by land or by water." *Ryerson v. Brown, supra 343-344* (separate opinion).

* * *

It cannot for an instant be maintained, however, nor has anyone suggested, that the case before us

> falls within the instrumentality of commerce exception. In fact, the only authorities that even arguably support or justify the use of eminent domain in this case are the "slum clearance" cases.
>
> * * *
>
> Simply put, the object of eminent domain when used in connection with slum clearance is not to convey land to a private corporation as it is in this case, but to erase blight, danger and disease.
>
> The inapplicability of the slum clearance cases is evident. In the case before us the reputed public "benefit" to be gained is inextricably bound to ownership, development and use of the property in question by one, and only one, private corporation, General Motors, and then only in *the* manner prescribed by the corporation. The public "benefit" claimed by defendant to result can be achieved only if condemnation is executed upon an area, within a timetable, essentially for a price, and entirely for a purpose determined not by any public entity, but by the board of directors of General Motors. There may never be a clearer case than this of condemning land for a private corporation.
>

The GM plant was said to have resulted in the confiscation of the residences of 3,000 people, 100 businesses, and 16 churches. n44 It spawned much scholarly commentary. n45 By 1985 a Los Angeles Times reporter was able to write: "Four years after the bulldozers swept away much of Poletown, the furious residents are long gone, the prayer vigils and the protests are over and the Cadillac, Buick and Oldsmobile luxury cars are finally starting to roll off the assembly line." n46 The plant in 1985 wasn't employing the 6,000 workers first promised, just 4,500, due to increased use of robotics. The GM plant at Hamtramck was still open, as of August 24, 1992, but by September 14, 1992, it was on GM's list of scheduled plant closures. It was listed as producing Cadillacs. n47 The plant has never prompted much new development in the neighborhood. n48 The Michigan Supreme Court reversed its position in 2004. n49

App. 1996)* (redevelopment area was a "blighted area" under Blight Elimination and Slum Clearance Act; city had reasonable grounds for concluding that property was necessary for successful redevelopment of area); *City of Jamestown v. Leevers Supermarkets, Inc., 552 N.W.2d 365 (N.D. 1996)* (city resolution designating development area for commercial properties in city's downtown area was not legally invalid on ground that city council found that development plan was consistent with sound "needs" of municipality, rather than "necessary" for municipality's welfare); *Hawaii Housing Auth. v. Midkiff, 467 U.S. 229, 240 (1984)* ; *Arrington v. Urban Redevelopment Auth. (In re Condemnation), 822 A.2d 135 (Pa. Commw. Ct. 2003)* (property was taken for a public purpose, but it could be permitted to revert to private ownership when the public purpose was discharged).

(n12)Footnote 16. *Thompson v. Consolidated Gas Corp., 300 U.S. 55, 60 (1937)* .

(n13)Footnote 17. *Hawaii Hous. Auth. v. Midkiff, 467 U.S. 229, 241 (1984)* .

(n14)Footnote 18. Transfers of property from one group of owners to another have since been upheld by the U.S. Supreme Court in other contexts as long as there was some defensible reason for the shift. In *Hawaii Hous. Auth. v. Midkiff, 467 U.S. 229 (1984)* , the Court upheld the state's condemnation of private estates for the purpose of selling the property to existing lessees. In *National R.R. Passenger Corp. (Amtrak) v. Boston & Maine Corp., 502 U.S. 807 (1991)* , the U.S. Supreme Court approved the ICC's condemnation of 49 miles of Boston and Maine track to convey it to the Central Vermont Railroad, hoping Central would upgrade the track and lease Amtrak "trackage rights" for its passenger service.

(n15)Footnote 19. Where there are no conditions limiting the buyer to use the property but the eminent domain acquisition is justified only because the redevelopment agency contemplates a "certain type" of redevelopment, "public purpose" may be lacking. For example, in *City of Vicksburg v. Thomas, 645 So. 2d 940 (Miss. 1994)* , the Mississippi Supreme Court found no public purpose in the City of Vicksburg's condemnation of Thomas' privately owned water front property for resale to Harrah's casino. The court disagreed with the city's contention that it was incumbent on Thomas to prove fraud or a "clear abuse of discretion since the legislature has made its determination of public necessity." *Id. at 942* . Instead, the court focused the issue on "whether Thomas' property would be put to an appropriate public use." *Id. at 942* . The City alleged the public benefit would come from increased employment and city taxes when Harrah's built a casino on the site. But the sales contract between the City and Harrah's did not limit the use of the site solely to that of a casino. Instead, Harrah's under applicable zoning, could have utilized the site for various uses. "The City failed to provide conditions, restrictions, or covenants in the contract with Harrah's to ensure that the property will be used for the purposes of gaming enterprise." *Id. at 942* .

(n16)Footnote 20. *See City of Vicksburg v. Thomas, 645 So. 2d 940 (Miss. 1994).* Later, in *Morley v. Jackson Redev. Auth., 632 So. 2d 1284 (Miss. 1994)* , the Mississippi Supreme Court ruled that the burden of proof as to the "public purpose" is on the condemnor. Even though the case was remanded for failure to present evidence as to its "public purpose," the court was hostile to condemnation with an incidental and indirect "public purpose" stating: "The primary purpose of the taking by [the Jackson Redevelopment Authority] ("JRA") is to sell the property to another private party who will develop the property. The incidental purpose is to remove slum and blighted conditions in downtown Jackson. This is not semantics. It is a matter of whether the *takings clause* is to have any validity at all and whether private property owners are to be afforded due process of law ... . Here, ["public purpose"] is indirect and, at best, speculative. We require much more of a showing of public purpose than is shown here." *Id. at 1290* .

(n17)Footnote 21. *Baycol, Inc. v. Downtown Dev. Agency, 315 So. 2d 451 (Fla. 1975)* . The Supreme Court of Florida, quashed the lower court's judgment for condemnation of Baycol's land for construction of a parking garage and a shopping center. The court reasoned that a private shopping center created the public need for parking and the condemning body cannot create "subsequent [public] necessity by first taking property and applying it to a private interest which constitutes basis for later created 'public need.' " *Id. at 458* .

(n18)Footnote 22. Wilmington Pkg. Auth. v. Land w/ *Improvements, 521 A.2d 227 (Del. 1986)* . The Supreme Court of Delaware sustained the lower court's determination that the primary beneficiary of the condemnation was the News Journal Company, rather than the public. *Id. at 234* . The record demonstrated that the Wilmington Parking Authority ("WPA") had disposed of 500 parking spaces within ten to twelve blocks of the project site. This fact, in conjunction with the WPA's prior business relations with the News Journal Company, rendered the taking one for private rather than public purposes.

CHAPTER 98 FINANCING PUBLIC-PRIVATE DEVELOPMENT AND RENEWAL AGREEMENTS THROUGH TAX INCREMENTS 1

12-98 Thompson on Real Property, Thomas Editions § 98.03

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 98.03 The Formalities of Community Redevelopment.

[Go To Supp]

The procedures for establishing urban redevelopment programs usually derive from state enabling laws. The steps prescribed in them are fairly similar, although the details vary. Even within a state community practices may differ, although all the cities in the state are acting within the boundaries of the same enabling legislation. To illustrate the legal framework, here is the procedure California's redevelopment law contemplates. n50

§ 98.03(a) Form an Agency.

California cities and counties are specifically given the right to create redevelopment agencies. They do this by establishing or designating a redevelopment agency. The agency's board of directors can be appointed by elected officials (the mayor or the county board of supervisors). The city council can designate itself as the redevelopment board. Sometimes cities rely on non-profit public corporations, run like private real estate firms, to handle day-to-day redevelopment decisions.

A separate entity can mean more staff, more meetings, and a lengthy approval process, since important decisions may have to be made by both the city council or county board of supervisors and the redevelopment agency board. It can also lead to a bureaucracy which is aggressive, pro-business, and deal-oriented, and a staff easy for private developers to work with but one which may be out of touch with political reality and neighborhood sentiment. A separate board can also help isolate elected officials from the political turbulence stirred up by some redevelopment decisions.

California's Community Redevelopment Law contains strict conflict-of-interest rules as would any well-considered redevelopment law. Among these rules: No agency officer or employee who participates in the formation of the project area or approves plans or policies can acquire any interest in any property within a project area. n51

The powers of the redevelopment agencies usually include the right to use eminent domain, that is, to force reluctant owners to sell. Private property owners whose sites the agency acquires are entitled to be paid "just compensation." n52 The use of eminent domain is probably the feature of redevelopment that causes the most vocal opposition, especially

when housing and small businesses are forced out. California agencies have this authority although they often pledge not to use it in certain project areas--notably where homeowners or tenants band together and resist being forced out. n53

§ 98.03(b) Delineate a Redevelopment Area.

The legislative body of the city must designate a "survey area" from which a project area or areas may be selected. The agency then chooses one or more redevelopment areas--"areas of the community established by the adoption of a redevelopment plan within which the redevelopment agency is authorized to use its powers." n54

§ 98.03(c) Public Hearing.

Requirements for public notice and hearings vary from state to state. They may be needed to establish a redevelopment district, n55 designate a redevelopment area, declare an area blighted, or use tax increment financing. In California, both the redevelopment agency and the city are required to hold public hearings when redevelopment plans are adopted or amended, and when property is disposed of, for certain capital expenditures. In larger cities, the redevelopment agency must hold hearings every other year to review the progress of all their projects. n56

§ 98.03(d) Find and Declare Blight.

The redevelopment board can declare a project area "blighted" if it meets the statutory definition of blight. That standard focuses on the physical condition of buildings in the area--dilapidation, overcrowding--and in the layout of the land--street and subdivision layouts that are obsolete and uneconomic. n57 A blighted area is characterized by conditions that impose a serious physical, social or economic burden on a community that cannot reasonably be expected to be alleviated or reversed by private enterprise acting alone. Not every site or property in the area needs to be blighted. n58 Blight need only "predominate." But non-blighted properties can only be included if they are found necessary for the effective redevelopment of the area. n59

California redevelopment is restricted to "predominantly urbanized" defined as (eighty percent) areas, so it can't be used as a tool for developing "green field" areas. n60 Many a successful redevelopment project failed to meet the statutory standard, but no one challenged the finding of blight in time. n61 "In time" in California is within 60 days after the redevelopment plan is adopted.

One way to stop cities from using redevelopment laws for any and all general economic development programs is to close loopholes in the statutory definitions of "blight." This isn't as easy as it may seem. The Oregon legislature enacted a long, precise statutory definition of the term "blight," and required public participation and even voter referenda. Even after the state enacted all of these reforms, Oregon local governments continued inventively expanding the boundaries of their definitions of "blight" to fit local political goals which reached well beyond the statutory definitions. n62

§ 98.03(e) Draft, Adopt, and Implement a Redevelopment Plan.

The redevelopment agency and planning commission then cooperate in drafting and adopting a preliminary redevelopment plan. This plan must conform to the community's general plan, and include a legal description, an open space and street layout, the number of dwellings contemplated, and a non-discrimination clause, among other data.

The redevelopment plan may be presented to the redevelopment agency and legislative body at a joint public hearing. The documents considered at the hearing are the redevelopment plan, the environmental impact report, the implementation plan and the report to the council. The agency must present sufficient facts so that the local legislative body is able to make the findings required by law to support the ordinance adopting the redevelopment plan. The procedure is lengthy and takes approximately one year.

After adoption, the plan becomes the "fundamental document governing a redevelopment agency's activities and basically acts as the agency's charter. It is usually a very general document providing the agency with flexibility to implement its program." n63

The agency then formulates procedures for fulfilling the plan. This step usually involves soliciting proposals from private developers. Experienced agencies often enter informal discussions with business and development groups well before designating a project area and drafting a plan, because they want to be sure their plan is feasible and of interest to developers.

Part of the implementation involves a detailed financing plan describing anticipated costs and revenue sources. Most redevelopment agencies use *tax increment* financing. n64

The following case depicts how courts have justified the use of urban redevelopment and tax increment financing in situations far removed from any blighted areas--conventionally defined. It also describes tax increment financing, principal means of financing redevelopment.

SIGMA TAU GAMMA v. CITY OF MENOMONIE

288 N.W.2d 85 (Wis. 1980)

Beilfuss, Chief Justice.

This is an appeal by the plaintiff, Sigma Tau Gamma Fraternity House Corporation, from a judgment dismissing its complaint against the defendant, City of Menomonie, brought under ch. 32, Stats. The complaint challenged the right of the city to condemn its property. The plaintiff contends the condemnation is not authorized by the terms of sec. 66.46, Stats., the Tax Increment Law, and further asserts the Tax Increment Law is unconstitutional on its face and as applied because of lack of uniformity of taxation and the lack of a public purpose as required by the Wisconsin Constitution. It also alleges several substantive and procedural deficiencies which it claims invalidate the condemnation. This court granted a petition to bypass the Court of Appeals because of the state-wide importance of the issues raised.

On January 3, 1977, the City of Menomonie approved Tax Incremental District 1 to become effective May 1, 1977, pursuant to the provisions of sec. 66.46, Stats. The district consisted of Block 126, and Lots 1, 2 and 6 of Block 119 of the Original Plat of the City of Menomonie, including a portion of Fifth Avenue between Broadway and Second Streets scheduled to be vacated. Under the Tax Increment Law, sec. 66.46, Stats. (Law of 1975, c. 105), cities are authorized to create within their boundaries tax increment districts to assist them in financing needed public improvement projects in areas 25 percent of which are found to be "a blighted area," in need of "rehabilitation or conservation work" within the meaning of sec. 66.435, or suitable for "industrial sites" within the meaning of sec. 66.52. When such a district is created, a tax incremental base is determined by the Department of Revenue. The tax incremental base of a district is equal to the full aggregate value of the taxable property within the district at the time it is formed. Sec. 66.46(5). In the years following the creation of the district, all positive tax increments over and above the tax incremental base, which are due to the increased valuation of the property within the district, are upon receipt by the city treasurer deposited into a special fund to be used to pay for the costs of the project undertaken by the city. This is done until such time as the city completely recovers its costs or until the expiration of twenty years from the date of the creation of the district. Sec. 66.46(6). The effect of tax incremental financing is to require those municipalities that share the city's tax base, and that benefit from an increase in that tax base, to share in the cost of improvements in the district undertaken by the city.

As a prerequisite to the creation of a tax increment district, the planning commission is to prepare and adopt a proposed project plan which must then be approved by the local legislative body within six months after the Department of Revenue certifies to the city clerk the tax incremental base of the proposed district. Sec. 66.46(4), Stat. In this case the project plan approved by the Menomonie Planning Commission and city council called for the city's acquisition and sale of the full amount of land within the district to Mr. Donald Williams who was to construct on it a 25,000 square foot supermarket together with accompanying parking facilities and landscaping.

Williams was at that time the owner of a supermarket several blocks away from the district, but was looking for a new location where he could expand. Although the city had made earlier attempts to encourage commercial development in the area, it was not until after Williams had submitted his proposal to the city that the precise boundaries for Tax Incremental District 1 were determined.

Following completion of the project, the tax yield of the property within the district was expected to increase from $3,481 in 1976 to $24,282 per year thereafter because of the improvements. Project costs and income were estimated as follows:

Costs		Income	
Property Acquisition	$278,000	Sale of Land	$154,000
Appraisal Costs	2,000	Sale of Bonds	220,000
Relocation Costs	50,000		
Land Clearance	40,000		
Utility Relocation	4,000		$374,000
	$374,000		

The bonds were to be retired with the tax increment income generated by the improvement.

Plaintiff is the owner of Lots 6, 7 and 8 of Block 126 in the northwest corner of Tax Incremental District 1. The Sigma Tau Gamma Fraternity House is situated on Lots 7 and 8. The house itself is in satisfactory condition and presently serves as the residence of the student members of Sigma Tau Gamma Fraternity.

On January 2, 1978, the city adopted a resolution declaring the taking of plaintiff's property necessary "for the purpose of elimination of blighted and slum areas within the City of Menomonie and [to] encourage improvements within such areas pursuant to N.C. Gen. Stat. § 39-50, entitled 'Tax Incremental Law.' " Plaintiff was served with a jurisdictional offer on March 22, 1978, but did not respond. The matter was assigned to the Dunn County Condemnation Commission which, following a hearing, filed its award on June 2, 1978.

* * *

We conclude that Tax Increment Law (Sec. 66.46, Stats.) does not authorize the city to acquire property by condemnation ... and the Tax Increment Law is constitutionally valid.

The plaintiff contends that the Tax Increment Law does not itself authorize a city to condemn property, but only provides a method of financing redevelopment projects or public improvements which a city is authorized to undertake under other statutes ... .

A careful reading of the Tax Increment Law itself and the legislative declaration which accompanied it support plaintiff's position that the law was intended only as a financing vehicle for projects, not as a new and independent authorization for further urban redevelopment projects.

* * *

Certainly a city does have the power to eliminate blight by acquiring land by condemnation, but in order to exercise that power it must proceed under the specific statute authorizing condemnation for that purpose. We conclude it did not do so in this instance.

The Tax Incremental Law requires only that the city council adopt a resolution containing the finding that at least 25 percent of the property within the district is a "blighted area" or else meets one of the other criteria. Following its adoption of a resolution containing the finding, the city proceeded to acquire, by condemnation or otherwise, all of the land within the district. There is no indication in the statute itself that the legislature intended to permit a city to take all property within the district upon the mere finding that 25 percent of it was blighted.

* * *

Plaintiff next contends that the city is attempting to acquire its property for other than a public purpose. In its brief, plaintiff asks this court to conclude that the primary goal of the city in condemning its property was not the elimination of blight, but rather "to obtain an increased assessment on the property which will begin to benefit the public only after the tax increment bonds will be amortized."

The city's stated purpose in acquiring plaintiff's property is to eliminate blight in its downtown area. Assuming the area in question is blighted and acquisition of plaintiff's property is reasonably necessary for the elimination of such blight, the city has the lawful authority to condemn the Sigma Tau Gamma Fraternity House under appropriate statutory authorization.

* * *

Under the Blighted Area Law ... the purpose of the taking is to eliminate slums and blight. This purpose is accomplished by the acquisition and clearance of the blighted land. Once the public purpose is accomplished, the city may lawfully return the property to private ownership ... .

Furthermore, in order to accomplish the legitimate goal of the law ... the city could also condemn structures that were themselves unoffending, and even land that was standing vacant, if their acquisition was necessary for the elimination of the blight.

* * *

If the area in which plaintiff's property is located is blighted, and if the acquisition of plaintiff's property is reasonably necessary for the elimination of that blight, then the city may lawfully condemn plaintiff's property, despite the fact that the property itself has been properly maintained and is presently in satisfactory condition ... .

The plaintiff further contends that the Tax Increment Law violates the tax uniformity requirement of *Art. VIII, sec. 1 of the Wisconsin Constitution* ... [which] provides in part: "The rule of taxation shall be uniform ... ."

* * *

Under tax increment financing ... there is no ... disproportionate impact upon taxpayers within the same territorial boundaries of the unit imposing the tax. All taxpayers within the territorial limits of each local governmental unit--county, school or V.T.A.E. district, etc.--continue to be taxed at a uniform rate based upon valuations uniformly arrived at. No taxpayer or group of taxpayers is being singled out for preferential treatment either in the form of an exemption from taxation or a tax credit. Thus, we conclude, taxation under tax incremental financing is uniform.

A second limitation on the taxing power, however, is that taxes must be levied and expended for a public rather than a private purpose. Although often linked to the uniformity requirement, the public purpose doctrine is a separate

and inherent limitation on the power of taxation.

* * *

Plaintiff argues that under tax incremental financing, just as in negative-aid financing, the second prong of the public purpose doctrine is violated. Tax revenue from property within the tax incremental district must be surrendered by taxing authorities to the city sponsoring improvement of that area.

In this respect also, however, tax incremental financing can be distinguished. For unlike negative-aid financing, tax revenue taken from the other taxing authorities under tax incremental financing is used to accomplish a public purpose within their territorial limits. As the legislature expressly found, taxing authorities which share the cities' tax base do benefit from the expansion of that tax base which results from urban redevelopment or other public improvements. Because whatever money generated from the tax incremental district is used only to pay for public improvements in that district and because the elimination of blight is a public purpose, both requirements of the public purpose doctrine would seem to be satisfied.

We also note that if the city was unable to undertake such projects in the first place, the other taxing authorities would be completely without the additional revenue which plaintiff now claims they are forced to surrender to the city. The increased tax revenue is due, after all, to the city-sponsored project. In light of this fact, it is difficult to see how the other local governmental entities are being forced to relinquish any revenue to which they would otherwise be entitled.

For these reasons and because of the strong presumption of constitutionality to be accorded all legislative enactments, we hold the Tax Increment Law is constitutional.

Because we have determined that the Tax Increment Law authorized the financing of the statutorily described public improvements but does not authorize the acquisition of private property by condemnation, that part of the trial court judgment which approved the condemnation of the plaintiff's property by condemnation by virtue of the Tax Increment Law and the general condemnation statutes must be reversed. That part of the judgment that held the Tax Increment Law to be constitutionally valid is affirmed.

Judgment affirmed in part, reversed in part and remanded for further proceedings not inconsistent with this opinion. No appeal costs to be taxed.

* * *

The city in this case was motivated to form the tax increment district in the first place because the downtown area was stagnant and further threatened by a new shopping mall that had been built on the north end of town near an interstate highway. Without city intervention, more downtown deterioration in this city of 15,000 could have been expected.

The tax increment site consisted of a city block, one-half of an adjoining block, and the intersecting street between the two which the city vacated to create the needed parcel for the grocery store project. At the time, the site contained several stores (some vacant, dating back to the turn of the century, now in poor condition), the fraternity house, a few older houses that had been converted into student rentals, and, at the end of the block, the house of the chancellor of the University of Wisconsin-Stout. That house was also vacant because the chancellor chose not to reside in it.

The fraternity's claimed motivation for filing suit was to preserve its site--a "hallowed tradition." Counsel for the city believes the fraternity's primary motivation was to get a higher price for the house than the city was initially willing to pay.

If Sigma Tau Gamma had lost, its property would have been acquired by condemnation. The purchase price would have been set through a court-ordered valuation process. Even after the Wisconsin Supreme Court held that the city could not

condemn the property under the Tax Increment Law, the city could have started condemnation proceedings from ground zero under the Blighted Area Law. The city decided not to because "a financial decision was made that the delay in beginning the project was, in the end, going to cost more than the additional amount paid by the negotiated price. In other words, the increase in construction costs while awaiting the redevelopment law condemnation procedure, as well as the lost increase in revenue because of the more efficient store and the better location, outweighed the benefit to be obtained by completing the condemnation." n65

Having won, Sigma Tau Gamma didn't have to sell at all. But after the case was decided, the fraternity negotiated a sale of the fraternity house. With the sale proceeds, the fraternity was able to build a new house in the city.

The city sold the entire redevelopment site, including the fraternity house, to a grocery store owner, Donald Williams. Don's SuperValu of Menomonie is independently owned, but part of a voluntary marketing group called SuperValu Stores. Of course, Mr. Williams was always the "real" purchaser, so he had to approve in advance the price the city agreed to pay the fraternity. Mr. Williams financed his purchase and construction by proceeds from an industrial revenue bond which is being repaid out of tax increment funds. n66

The grocery store is a commercial success. The bondholders are paid promptly. The city has continued to use tax increment financing for other projects. Most citizens of Menomonie approve of the project. It has not resulted in a boom downtown but it has kept the downtown alive and well, a noteworthy accomplishment. n67

Rptr. 2d 334 (2000)* (evidence did not support findings that the project area was predominantly urbanized or suffered from blight); *Beach-Courchesne v. City of Diamond Bar, 95 Cal. Rptr. 2d 265 (2000)* (evidence supported findings that the project area was predominantly urbanized, but not that it was blighted); Housing and Redevelopment Authority in *and for the City of Richfield v. Walser Auto Sales, Inc. 630 N.W.2d 662 (Minn. App. 2001)* (the evidence established "blight"); *Rukab v. City of Jacksonville Beach, 811 So.2d 727 (Fla. App. 2002)* (landowners entitled to an additional opportunity to challenge the "blight" designation); *Aposporos v. Urban Redevelopment Commission of the City of Stamford, 790 A.2d 1167 (Conn. 2002)* (city required to make a renewed finding of blight).

(n9)Footnote 58. A good example of what blight is *not* comes from *Sweetwater Valley Civic Ass'n v. City of Nat'l City, 133 Cal. Rptr. 859 (1976)* . National City officials perceived development of an unbuilt 130 acres as an irresistible redevelopment opportunity. Most of the land--103 acres--produced far less property tax revenue than other land in National City, graced as it was with an 18-hole golf course, a driving range, and a putting green. Slapping the hands of the redevelopment agency for even thinking about condemning and redeveloping this perfectly tranquil open space, Justice Clark reminded us:

> "A finding of blight requires: (1) that the area suffer 'either social or economic liabilities, or both, requiring redevelopment in the interest of the health, safety, and general welfare' and (2) the existence of one of the characteristics of blight. (Section 33030 (fn. 3).) [I]t is not sufficient to merely show that the area is not being put to its optimum use, or that the land is more valuable for other uses."

California Redevelopment Law has now been amended to require at least two of the conditions in *Cal. Health & Safety Code § 33031* to be met, one physical, one economic. California's law also now requires the redevelopment agency to prepare an implementation plan showing specifically how the alleviation of blight is to be achieved by the proposed plan, any public improvements and any sale or lease of land to private developers. *Henry County Bd. v. Village of Orion, 663 N.E.2d 1076 (Ill. App. 1996)* (Feasibility study determining no more than four of 300 parcels of improved property within proposed real property tax increment financing (TIF) district were blighted because of inadequate utilities supported finding that financing new sewer system as redevelopment project public improvement would not substantially benefit proposed TIF district, as required under the Tax Increment Allocation Redevelopment Act.); *Hirth v. City of Hoboken, 766 A.2d 803 (N.J. Super. 2001)* (determination that area is blighted may be based on a planning consultant's report).

(n10)Footnote 59. *See Gonzales v. City of Santa Ana, 12 Cal. App. 4th 1335 (1993)* (The city's project involved a widening and beautification of Bristol Street, Santa Ana. The city had not shown why properties located on streets other than Bristol had been included. The case was remanded to give the city one last chance to prove the necessity for condemning those properties.); *Panama City Beach Community Redevelopment Agency v. State, 831 So. 2d 662 (Fla. 2002)* (undeveloped land may qualify as "blighted" area); *Fitzke v. City of Hastings, 582 N.W.2d 301 (Neb. 1998)* (land may not be added to an existing redevelopment area unless it is established that the additional land is itself blighted or substandard).

(n11)Footnote 60. State redevelopment statutes differ sharply over whether vacant sites may be condemned for urban redevelopment. *Compare Oliver v. City of Clairton, 98 A.2d 47 (Pa. 1953)* (vacant site may be included within redevelopment project boundaries and condemned) with *Beebe Imp. Corp. v. City of New York, 129 N.Y.S.2d 263 (1954)* (site consisting almost entirely of vacant land may not be taken for redevelopment under New York constitution and statutory powers granted cities).

The court in *Beebe*, relying on the language of the New York statute, observed:

> The area involved in the case at bar is at best an eyesore, and I doubt if it would be seriously contended even by plaintiff that it is not a blight on the community and a detriment to the growing residential quality of the neighborhood. But this does not necessarily mean that it is a slum or insanitary or substandard within the purview of the statute. No persons live in the area. It consists entirely of vacant land--the sheds and shacks in no sense of the word constitute improvements; the only improvements are the gasoline stations and welding plant, and these do not themselves appear to be either substandard or insanitary. I cannot regard this as a condemnation of "buildings or improvements not in themselves insanitary or substandard ... ."

Beebe Imp. Corp. v. City of New York, 129 N.Y.S.2d 263, 268 (1954) .

The Pennsylvania statute defined redevelopment area as "[a]ny area, whether improved or unimproved ... ." *Oliver, 98 A.2d at 52* .

CHAPTER 98 FINANCING PUBLIC-PRIVATE DEVELOPMENT AND RENEWAL AGREEMENTS THROUGH TAX INCREMENTS 1

12-98 Thompson on Real Property, Thomas Editions § 98.04

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 98.04 Tax Increment Financing (T.I.F.).

[Go To Supp]

§ 98.04(a) How T.I.F. Works.

The number of states authorizing the use of tax increments as a primary financing mechanism for redevelopment has been on the rise. n68 One scholar counted fourteen states authorizing T.I.F. by 1979. n69 Another was able to find 30 states with tax increment financing laws on the books by 1987. n70

To understand what tax increment financing is, start with how property tax liability is determined. First, a tax base must be set. The tax base is usually the fair market value of the property to be taxed. But "assessed" value could be something other than "fair market value" because tax assessors might be using a standard other than market value, and because state law might require some other standard to be used. n71

Second, a tax rate is selected, usually by local government officials, bounded in some states by constitutional limitations.

Finally, the tax base is multiplied by the tax rate to derive the tax due.

"Tax increment" financing freezes the tax base as it existed just before the redevelopment project boundary was established. All local taxing entities continue receiving property taxes from the properties within the project area predicated on the old tax base. The old base is multiplied by the current tax rate, which is usually set each fiscal year absent constitutional rate limitations. All the property tax above that level is the tax increment. The redevelopment agency may use as much of the increment as necessary to finance the redevelopment project. n72

§ 98.04(b) Capitalizing the Tax Increment Through Municipal Bond Financing.

Future tax revenues can be used to secure present cash by the redevelopment agency selling a bond to be repaid by the anticipated cash flow. n73

To appreciate the economics of tax increment bond financing, start with the fact that redeveloped property (after it has been improved with offices and shops) usually yields a substantial tax increment. Say a developer agrees to build $200,000,000 worth of offices, shops, and condos on a vacant site. Relying on that agreement, the city places the site in a redevelopment area. At a property tax *rate* of 1%, the developer's improvements would yield a tax increment of $2,000,000 in annual property tax revenues above the pre-developed tax yield [base ($200,000,000) x rate (1%) = $2,000,000].

There are advantages to bonding the increment instead of pledging it to obtain a conventional loan. Property tax payments are a relatively secure source of repayment. The government's lien for unpaid taxes is superior to any mortgage lien. A rational over-leveraged owner may decide to stop making loan and tax payments when the value of her equity falls to zero. But even when the owner has lost her equity, a rational mortgage lender will keep making property tax payments unless the value of the property falls nearly to zero--to a price below the capitalized value of the property tax. Hence, bonds secured by property taxes can be floated for much higher loan-to-value ratios than conventional mortgages secured by the property's net cash flow.

Redevelopment agencies hope that interest on all the bonds issued by the agency will be exempt from federal income tax as is interest generally on municipal bonds. n74 Investors pay a premium for tax exempt bonds depending on their tax bracket and the supply of such bonds in the marketplace. This enables borrowers to pay less than they would pay to borrow against a conventional mortgage with interest fully taxable to the investor. However, under *I.R.C. § 141(a)* enacted as part of the Tax Reform Act of 1986, strict limits were imposed on the use of tax exempt by municipalities to facilitate industrial and other forms of private enterprise. Redevelopment bonds can qualify for tax exempt status but only with careful tax planning. n75

Cash flow from tax increments is only as secure, though, as the developer's promise to build. No buildings = no tax increment. Without increased property tax revenues, there will be no revenue to repay bondholders. For this reason, bond underwriters may require more than the developer's bare promise that tax or lease revenues will be there, on time, to pay bondholders their due. They may insist on an impeccable guarantor like a government agency or a major insurance company, bank, or "blue chip" corporation. The right guarantee helps garner a favorable rating from one of the credit agencies mentioned earlier. Otherwise, the underwriter will be selling "junk" bonds, that is, unrated securities. The guarantor, in turn, will look to a public redevelopment agency, a city, or the developer for ample security so it can pocket its hefty fee without worry. The guarantor's aspiration is to sell its signature without taking any uncovered risk:

> This overall process provides local governments with a flexible funding source for redevelopment activity that avoids much of the red-tape and delay associated with grant programs. In some states, T.I.F. also avoids the constraints of voter approval, municipal borrowing or debt limitations. However, these advantages in administrative flexibility and circumventing local political pressure create greater potential for abuse by redevelopment officials, particularly when projects appear economically feasible without such public assistance. [Footnotes omitted] n76

§ 98.04(c) Impact of Redevelopment on Other Taxing Entities.

Commentators disagree about the impact of T.I.F. on taxing entities other than the redevelopment agency. Property taxes are shared by cities, counties, school districts, special assessment districts, community colleges, and other entities. When redevelopment is financed by T.I.F., the "increment" is diverted entirely to the redevelopment agency unless a different arrangement is negotiated. The other taxing districts continue receiving tax revenues based on the pre-redevelopment valuations of property within the tax increment/redevelopment district. n77

After the redevelopment bonds are paid, the incremental property taxes are then allocated by law to those tax entities that would have received them had the redevelopment area not been created. Redevelopment agencies can forestall returning the tax base to the other underlying taxing entities when the redevelopment bonds are repaid by refinancing

their debt so it never gets repaid. n78 Another way to hoard the tax increment indefinitely is by amending the project area and continuing to expand it. When a redevelopment project area is amended, the base year for tax increment calculations stays as it was.

The Wisconsin court accepted the argument that these other public agencies aren't shortchanged by a tax-increment-funded redevelopment project because each entity continues receiving the same share of property taxes it had been getting before redevelopment. The other entities also benefit eventually when the costs of redevelopment are finally met and the tax increment is then shared by all entities. It is only fair that those entities share the burden of paying for redevelopment by deferring their receipt of revenues from the tax increment. This makes sense if the area would not have been revived but for redevelopment. The other tax-sharing entities would be no worse off. They may even be better off.

Deterioration might have continued, resulting in future property value declines. Besides, the redevelopment projects often stimulate new construction and an upgrading of property outside the project area. Property tax revenues from the surrounding area will be divided among all the taxing entities.

Still, if the new projects would have been built anyway, either in the project area or elsewhere within the same taxable boundaries, a city could use redevelopment as a device for siphoning anticipated property tax revenues away from other taxing entities. n79 This is the crux of the argument that TIF robs other taxing entities of property tax revenues:

> Imagine driving to your local voting precinct to vote in the general election. Among the various candidates and issues that you are going to vote on, is a tax millage increase proposal for the purpose of funding a development project in your municipality. You think about the pros and cons of permitting the local government to raise your taxes for that purpose and conclude that your hard earned money can be better spent on things other than municipal development. You also consider the possibility that the project may likely be funded by private investors in any event. Regardless of your thoughts that the project will ultimately benefit your neighborhood, you vote against the millage proposal because you really just feel that taxes are getting out of hand.
>
> As you are driving home, you pass your neighborhood's public elementary school. You think about the school millage increase proposal you had approved earlier the same year. A smile comes to your face because you know that you have a voice in how much a municipality can tax your property, and for what purpose. The following spring you notice that the construction crews have begun to work on the development project which had been defeated by the voters on the last election. The newspaper report explains that the project is being funded by a plan called tax increment financing, and that this will not require an added tax levy on your property. You are not really sure how this is accomplished, but you are glad that this could be done without requiring a new tax levy.
>
> What the article did not say, however, is that the development project will be funded by diverting property tax revenues (from your land) which were approved for the school districts, police department, county, and other local services. Indeed, if the project lasts for more than a year, your school district and other local services may be required to ask for an additional millage increase just so that they can stay abreast of inflation. n80

It isn't easy to tell for sure whether TIF leaves other taxing entities worse off or not. But in Alabama the local governing body must try. It must certify that "the proposed tax increment district on the whole has not been subject to growth and development through investment by private enterprise and it is not reasonable to anticipate that the land in the district will be developed without the adoption of the plan." n81

One study found Michigan cities using tax increment financing had greater property value growth, other things equal,

than cities not using it: n82

> This does not imply, however, that the growth is necessarily due to the TIF adoption. It may simply be the case that local municipal officials are in a good position to see growth coming and implement the TIF mechanism to maximize their own revenues and budgets at the expense of local school districts. This cynical view of the TIF mechanism would suggest that the mechanism is a budget manipulation tool, not an economic development tool. The results of the analysis presented in this paper do not answer this question ... . Such an analysis is not yet possible for Michigan cities due to date limitations. As a result, the causality issue awaits further investigation. n83

§ 98.04(d) The Right of Other Tax Agencies to Protest a Redevelopment Plan.

Some state legislatures are sensitive to the plight of school districts threatened by having redevelopment agencies siphon tax revenues away from them through tax increment financing. In Pennsylvania, school districts must be given a formal presentation of the proposed redevelopment tax increment district and an opportunity to meet with the redevelopment authority to discuss the project plan and tax increment financing. n84 In addition, the school district's governing body has the choice of opting to participate or not in the tax increment district. n85

Counties and school districts in California had a statutory right to protest--and used it--when they suspected cities were diverting their tax base through redevelopment. A county or other affected taxing agency could call for the creation of a fiscal review committee to identify tax effects and suggest changes in the redevelopment plan that would alleviate tax shifting burdens. The law specifically allowed a redevelopment agency to enter agreements with school districts or other taxing entities to redirect tax increment funds back to them "in lieu of taxes." n86 Faced with a challenge under this law, many redevelopment agencies negotiated contracts splitting some of the tax increment with the protesting tax entities. Seasoned redevelopment executives were often able to anticipate challenges by other taxing entities, and headed them off by making tax-splitting deals and incorporating them into the project proposed from the start. The California statute has now been amended, eliminating fiscal review committees, and instead directing agencies to pay affected taxing entities specified amounts at specified times during the life of a redevelopment plan. n87

§ 98.04(e) Statutory Limitations on T.I.F.

Cities have resorted to T.I.F. financing because municipal debt limitations often barred borrowing and general obligation bonds were often deemed too risky to the city's credit rating. Given the flexibility of this financing, there have been attempts to expand municipal financing through the use of T.I.F. For example, the Wisconsin state legislature passed a statute explicitly reciting that T.I.F. bonds did not constitute debt within the meaning of the constitution, therefore averting the constitutionally imposed debt limit. n88 The Wisconsin Supreme Court, however, held that T.I.F. bonds, regardless of the statutory recitals, were debt within the meaning of the state constitution, and therefore limited to the constitutionally imposed 5%. n89

Other states have determined that T.I.F. is not a panacea for the shortcomings of convention municipal financing and have placed limits on T.I.F. through a variety of measures. One of the most common limitations on T.I.F. is the amount of debt to be financed or the area to be included in tax increment districts. n90 Another very common measure is term limits for the development district and the underlying T.I.F. bond. n91 As the Wisconsin Supreme court noted, these limitations serve two purposes; they prevent municipalities from overextending themselves and becoming overburdened by the long-term financial obligations, and they impose the burden of repayment on "those who create the obligation, and not future generations." n92

> A tax increment is computed by multiplying the total in property taxes levied and collected by the municipality and all other taxing entities on the taxable real property in an urban renewal project area in a year by a fraction, the numerator of which is equal to that year's market value of all taxable real property in the area minus the tax increment base and the denominator of which is equal to that year's market value of all taxable real property in the area.

Tax Increment Financing Commission, 1999 U.S. Dist. LEXIS 7447* (No. 99-0374-CV-W-6, W.D. Mo. May 17, 1999) Fn. 2 (on the failure of TIF to produce the funds necessary to pay back the initial investment).

(n10)Footnote 77. *See, e.g.*, Ill. Ann. Stat. § 11-74.4-8(a) (*see now* 65 ILCS 5/11-74.4-8a). *Delogu v. State, 720 A.2d 1153 (Maine 1998)* (enabling statute authorized use of credit enhancement tax increment financing to assist modernization of private shipbuilding). *See also State ex. rel. Village of Bel-Ridge v. Lohman, 966 S.W.2d 356 (Mo. App. E.D. 1998)* (describing how the Director of Finance must disperse the TIF funds received).

(n11)Footnote 78. The Texas legislature made this difficult for redevelopment agencies by requiring a two-thirds approval of the qualified electorate for tax increment bonds to be refunded. § 4332. *Harvey v. City of Oklahoma City, 111 P.3d 239 (Okla. 2005)* (city's use of tax increment financing did not violate the state constitutional prohibition of incurring long-term financing without voter approval). In Hawaii, on the other hand, the county is given carte blanche to refund bonds "for the purpose of paying or retiring or in exchange for tax increment bonds previously issued by the county." Haw. Rev. Stat. § 46-106 (1991).

(n12)Footnote 79. The use of T.I.F. funds in California is limited by a requirement that some of the money must be dedicated to low and moderate income housing--not less than 20% of all property taxes allocated to the redevelopment agency. Health & Safety Code § 33030 et seq.

Anecdotal evidence that property tax skimming is a pervasive motive for redevelopment comes from the fact that tax increment financing has so seldom been used in the one jurisdiction in California where the city and county governments are one and the same-- *San Francisco. Denham Springs Economic Development District v. All Taxpayers, Property Owners, et al., 894 So. 2d 325 (La. 2005)* (tax increment financing statute requires use of dedicated taxes for only their dedicated purposes).

CHAPTER 98 FINANCING PUBLIC-PRIVATE DEVELOPMENT AND RENEWAL AGREEMENTS THROUGH TAX INCREMENTS 1

12-98 Thompson on Real Property, Thomas Editions § 98.05

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 98.05 Dealing with the Developer.

N.C. Gen. Stat. §§ 30-37 to 39-37

§ 98.05(a) Early Consultation.

Sophisticated redevelopment agencies won't initiate the redevelopment process without good reason to believe private developers actually want to develop in the designated redevelopment site. If the agency's program isn't tailored to market requirements, the agency risks getting stuck with an unusable site, an impractical plan, or both. n93

§ 98.05(b) Developer Selection Procedures: R.F.P.s, I.F.B.s, R.F.Q.s.

In California, redevelopment agencies aren't obliged to sell to the highest bidder. "No particular method or procedure is prescribed for the disposition of property." n94 If the property is sold or leased without public bidding, there needs to be a public hearing before the agency signs off in the disposition. Thus, "redevelopment agencies have been granted a unique power for a public agency--that of direct negotiation with prospective developers for the disposition of property without the need of undertaking any bidding or other competitive process." n95 Competitive bidding procedures are required in some states. n96

The selection of a single private developer to carry out the redevelopment agency's project has been sustained against an attack based on federal antitrust statutes under the state action exemption. n97

While a redevelopment agency could offer the land it has acquired to the highest competitive bidder with no strings attached, redevelopment agencies seldom do. Because they attach exacting and costly detailed conditions to the developer's reuse of the site, they are likely not to get as much for it as they would if the site were sold without "strings." But a no-strings sale would defeat the rationale for redevelopment in most situations.

Agencies commonly issue Requests for Proposals (R.F.P.s) or "invitations for bids" (I.F.B.s) based on the criteria they have promulgated and embodied in the R.F.P. document--the factors (in addition to price) that the redevelopment agency and city council are going to take into account in selecting a developer.

The cost to a developer of submitting a response to a redevelopment agency on a request for a proposal can easily amount to hundreds of thousands of dollars. An agency can keep developer selection costs low by issuing a request for qualifications (R.F.Q.) instead. An R.F.Q. describes a developer's track record and financial strength. It enables the agency to evaluate the applicants' past achievements, design skills, and financial strengths. The agency then narrows the field to a "short list" of candidates.

In a second stage submission, the applicants can be asked to offer specific project proposals. Alternately, the agency can enter negotiations with the best R.F.Q. respondent. If no deal can be struck with the most promising candidate, the agency turns to the second best proposal.

§ 98.05(c) The Disposition and Development Agreement.

Formally, a redevelopment agency usually contracts with a private developer by entering a "property disposition and development agreement" (D.D.A.) for the sale (or leasing) and redevelopment of the site. n98

The D.D.A. will detail the project to be built on the site--design, timing, land price. In California, the project must be built by some entity other than the redevelopment agency because redevelopment agencies are barred by statute from constructing buildings and holding title to land post-development.

After selecting a developer, most California redevelopment agencies don't rush directly into a D.D.A.. Instead, the agency begins with an exclusive negotiation agreement, a commitment to try to make a deal with the chosen developer. Although there is no statutory provision for formal "exclusive negotiation agreements," they are quite common in California. The developer usually makes a good faith deposit--cash, a certified check, or letter of credit--which the agency may keep if the developer fails to negotiate in good faith, or which the agency applies to any deposit requirements in the resulting D.D.A. if all goes well. The agency makes clear that entering negotiations doesn't obligate it to enter a deal without the official ratification required by statute. n99

§ 98.05(d) The Public Agenda.

Public agencies often seek "imageable" landmark buildings to give their downtown a new and brighter look. They may want a pedestrian-friendly ambience. Their wish list may include public facilities they hope the developer will pay to create--a park, a library, an art museum. Minority subcontractors will sometimes be favored, or the employment of local residents will be promoted during and after construction. Also, city redevelopment agencies want sites developed quickly because property tax revenues aren't assessable and collectible on buildings until they are built. The trade-off for achieving these objectives is that the redevelopment agency may sell the land at less than its highest price.

Cities are especially eager for projects that will produce sales tax revenues. California statutes allow cities to retain 1% of the sales taxes generated within their boundaries. That revenue helps compensate cities for the traffic and tumult that comes with making room for a retail hub. California cities that don't lure retail enterprises forfeit the sales taxes their residents pump into the coffers of nearby towns with big retailing centers--shopping centers, auto sales malls, hotels, and restaurants. n100 That is why there is such fierce competition among cities for shopping malls, car dealerships, and discount retailing. These are big sales tax money machines for local governments. The developers of these big sales tax generators often strike sweetheart deals with towns desperate for the revenue--deals which, in effect, split the future sales tax between the city and the entrepreneur.

If a legislation is enacted to allocate the sales tax based on city population, and not place-of-sale, these deals won't be as attractive to cities.

Even in states where sales taxes aren't returned to the "point of sale" city, the "discount" retailers and auto malls are sometimes attractive because of the property taxes they pay. Redevelopment projects figure significantly in competition

among cities for tax-yielding projects, because redevelopment enables cities to offer prime retailers financial incentives funded out of tax increments. Those incentives might include subsidized land costs, parking facilities, the use of eminent domain if necessary to acquire the site, and expedited land use approvals.

§ 98.05(e) Public Agenda Deal Points.

After the project design has been negotiated, experienced redevelopment lawyers urge their agency client to focus on the following deal points:

1. Obtain a fair price for the land;

2. Commit the developer by requiring early and substantial cash (debt or equity) in the project;

3. Require a hefty good faith deposit or performance guarantees;

4. Minimize public financing;

5. Defer major financial commitments on the part of the agency until the developer is firmly bound to proceed;

6. Obtain sufficient revenue from the project by way of land sale proceeds, lease rentals, tax increment and developer payments to make the project financially feasible for the agency; and

7. In a phased project, condition the developer's right to build the more attractive portions of the project (from the developer's standpoint) on the developer's commitment to complete the entire project.

§ 98.05(f) The Private Redeveloper's Agenda.

Lawyers and planners caution developers to make sure the agency is committed to go through with the project; that it has the legal authority to acquire and sell the site it is offering; that the process isn't "wired" to award the project to a favored developer; and that the submission requirements are realistic.

> Once the developer has decided that the agency is serious, honest, and responsible, he must do some research on the awarding agency's objectives. The developer should determine what the agency wants to see in the proposal, what type of development, amenities, or features it will value most, what attorneys, architects, hotel operators, or other team members will be the biggest asset, what level of minority participation will be expected, and what financial offer will probably be necessary to be competitive. Following such a realistic assessment, the developer must then assemble the right team and start to develop his proposal. n101

A developer will generally negotiate to:

1. Tie up the site early under an agreement with the agency so that it can undertake market and feasibility studies, do its planning, and contract with potential tenants;

2. Obtain agency commitments for the most public financial participation the developer can justify;

3. Obtain environmental assessments, planning approvals, and other entitlements as soon as possible;

4. Bind the agency to a realistic but firm time schedule for accomplishing its tasks under the agreement;

5. Limit the developer's obligation to proceed by conditioning it on obtaining tenant commitments and financing;

6. Minimize the developer's front-end costs for studies and development plans until the project is ready to move ahead; and

7. Divide large projects into phases so that the developer can decide which parts to build.

§ 98.05(g) Changing or Amending the Plan.

Once a deal is negotiated, a D.D.A. entered into, and work begun, large projects to be built over many years commence uncharted courses. Neither markets nor politics remain constant for long. The redevelopment agency, the developer, or both may initiate a renegotiation. The developer reacts to shifts in demands or costs. The public agency responds to elected officials who have altered their political agendas. The developer may have made concessions in obtaining land use approvals that necessitate design changes. Lenders and major tenants, seldom parties to the original negotiation, sometimes need design and scheduling changes--on very short notice. Renegotiation of the original D.D.A. is the upshot, a familiar part of the redevelopment game. n102

FOOTNOTES:

(n1)Footnote 93. New Jersey law requires that a preliminary tax increment financing plan be submitted to the state Commissioner of the Department of Community Affairs and the State Treasurer, and that it include "a list of developers who seem willing to enter into written agreements ... and the developments they propose to sponsor." Okla. Stat. tit. 16, §§ 201-203

CHAPTER 98 FINANCING PUBLIC-PRIVATE DEVELOPMENT AND RENEWAL AGREEMENTS THROUGH TAX INCREMENTS 1

12-98 Thompson on Real Property, Thomas Editions § 98.06

AUTHOR: Professor George Lefcoe The Law Center University of Southern California

§ 98.06 A Critique of Public-Private Co-Ventures.

Not all observers are equally sanguine about public entities, cities especially, becoming entrepreneurs in public-private development deals. Their critique stresses the following points: n103

1. Balance is needed between government and the private sector if the state is to protect individuals from the "coercive exercise of private power, while private sources of capital serve as a check on the emergence of an all too powerful state apparatus." There might be a role for government working with the private sector to provide low-income housing, job training, and housing for the homeless, but not "to get a Saks Fifth Avenue or a Neiman Marcus located in a downtown shopping center." n104

2. When local governments have a direct financial stake in a project, they are sorely tempted to grant land use approvals promiscuously, short-changing those adversely affected by redevelopment projects. Cities have approved projects at densities the ordinary developer could never achieve, densities inconsistent with sound local planning. n105 They have also protected their co-venturers by turning down projects that could potentially have competed for tenants and customers.

3. Cities take risks in these projects for which they are often unprepared and uncompensated, simply because they don't have staff as expert as the developer's in negotiating the basic deal.

4. The result is that some deals violate clauses found in many state constitutions barring gifts of public money and barring public investment in private enterprises.

5. Public financial accountability rarely accompanies redevelopment deals. Only final agreements are available for city council and public review. "Alternatives dropped along the way seldom come to light, and the complexity of the business deal increases the likelihood that few people will understand it well enough to raise informed objections." n106

6. While cities tend to calculate benefits completely, many costs are hidden. These include: "the

opportunity costs tied to below-market interest rates, deferred paybacks, tax abatements, and in-kind contributions ... ." n107

7. Because tax increment financing doesn't involve a direct property tax increase, it may escape the accessibility of voter approval in states where property tax increases would have been required. Yet the T.I.F. scheme can drain taxes from other taxing entities and, as one state court chief justice observed, "[i]f the whole project goes plop, the taxpayer is the ultimate surety." n108

The counterarguments run something like this:

1. Cities may have to join private developers in urban redevelopment and economic development "joint venture" projects in order to bring service jobs to the unemployed, unskilled underclass of the inner city and bring them back into the mainstream economy. Doing this "constitutes one of the great challenges to American city planning ... . Do you join in meeting it, or catcall from the sidelines?" n109

2. It isn't all bad for city governments to share in the profits of redevelopment, because it gives public officials a more balanced outlook in evaluating the self-serving claims of parochial homeowners and local merchants wary of competition. Local governments and school districts with surplus lands would have no incentive to put sites to better uses if they couldn't share in redevelopment gains. Moreover, redevelopment makes sense because it slows the premature conversion of open space in remote areas by making central locations feasibly developable.

3. City redevelopment agencies can and do hire expert consultants and staff to negotiate and process deals. The degree of risk a city takes has more to do with the locality's options and how much of the upside potential the city or agency desires than with city inability to assess and price risks accurately.

4. In an era of tax cutbacks and public budget deficits, cities need entrepreneurial ways of "making a buck" without raising taxes. Getting into joint ventures with private developers is a good way to raise public revenue painlessly. When local governments share in the developer's percentage rents and resale profits, the locality is appropriately rewarded for good planning, public amenities, crime-controlled environments, and other "public goods."

5. Financial accountability to the public can be increased by pressure from good government groups, counties and school districts faced with the loss of tax increments, and developers outside redevelopment boundaries seeking to secure a "level playing field" among all urban land investors.

6. "Hidden" subsidies can be outlawed or required to be made public by special statutes or requirements that the city council specifically approve all subsidies to the developer, direct or indirect.

7. T.I.F.-financed bonds could be made subject to the same voter approval as other property tax bond issues.

(n3)Footnote 105. This is what the plaintiff successfully argued in *Municipal Art Soc'y v. City of New York, 522 N.Y.S.2d 800 (1987)* . The city owned a redundant coliseum on a prime site in midtown Manhattan. It welcomed RFPs from private redevelopers, agreeing to adjust the sales price to the density which city planning officials would ultimately approve. Under New York City ordinances, a discretionary density bonus of up to 20% could be granted to developers who improved subway stations near their sites. In striking down the deal, the New York court wrote:

> Although the transaction may well have been structured to paint a different picture, the clear fact of the matter is that in return for the grant ... of the twenty percent floor area ratio bonus, the City is obtaining not only $35 to $40 million of local subway improvements, but an additional $57 million in cash to be employed for other purposes. This is not contemplated by the Zoning Resolution.

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.01

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.01 Introduction to Real Estate Contracts and Outline of Chapter.

The focus of this chapter is the negotiation and drafting of the contract for the purchase and sale of real property, both commercial and residential. The chapter also considers the rights and remedies of the parties in the event of default under agreements for the purchase and sale of real property. Although there are widespread variations from state to state in the form of contract used in real estate transactions, the chapter is organized in the order in which terms generally tend to appear in standard form agreements of sale.

The chapter addresses the provisions that are minimally necessary for a valid, legally binding and enforceable contract. However, the primary focus of the chapter is on the legal issues that tend to dominate contract negotiations among business people. The chapter contains a description and analysis of the specific contractual language used by knowledgeable legal counsel to strategically allocate the risks and potential problems inherent in the acquisition and disposition of real property, and to limit their clients' liability with respect to those risks that they agree to assume.

§ 99.01(a) Considerations from Purchaser's Perspective.

From the axiom that every parcel of real property is unique, it follows that the, preprinted standard form contract for the sale and purchase of real estate cannot, without considerable careful tailoring, adequately protect the buyer's aspirations for a particular piece of land. Yet, all too often, after vigorously negotiating the economic terms, purchasers sign the form presented to them by sellers or their real estate agents. n1 In so doing, they allow non-economic terms of transcendent importance that are buried in the small print to slip into the transaction by default. After all, the single-spaced form discourages revision and, bearing the imprimatur of a title insurance company or legal publisher, appears neutral and somewhat official. n2 But buyer's ability to develop the property for buyer's intended use--or to walk away from the deal without personal liability if buyer determines the property is unsuitable--depends upon the protective clauses buyer inserts in the form or includes in an addendum.

The purchaser's primary objective in amending the standard form purchase agreement is to transform an absolute contract into a conditional one. Purchasers do this by stipulating as a condition for settlement of the contract the removal of any obstacles which could interfere with their intended development of the property. For example, purchasers insist in the contract that they will not settle unless they can obtain satisfactory financing, zoning approval or

variance, satisfactory results from test boring, topographical or other engineering tests, sewer allocation and a title report and survey which do not disclose defects which would impair the intended development or make it unreasonably expensive. Because purchaser is not at fault for being unwilling to settle, purchaser should also require that, if the conditions are not met, purchaser is entitled to the full refund of purchaser's earnest money deposit.

§ 99.01(b) Considerations from Seller's Perspective.

In the disposition of real property the typical seller has three principal legal objectives: The first is to receive the agreed purchase price in exchange for delivering the deed of conveyance on a date certain, or to be free to promptly offer the property for sale to other prospective purchasers without interference from the contract purchaser whose interest in the property is extinguished. In other words, seller's worst nightmare is to have the subject property tied up indefinitely without any certainty that the transaction will eventually close. n3 Seller's second objective is to limit its liability to the refund of purchaser's deposit (without interest) in the event of seller's default prior to closing for any reason. Seller's third objective is to limit its open-ended or unrestricted contingent liability with respect to the subject property after closing. For example, a contractual warranty with respect to certain aspects of the property's operation need not survive closing, or may survive closing only for some limited period of time. There may be a strict monetary ceiling on seller's maximum exposure to liability for damages in the event the warranted item should prove to have been untrue.

Additional considerations arise when seller is disposing of some, but less than all, of the seller's property. In such cases, seller must consider and, if necessary, provide for the reservation of easements for access, ingress and egress, and for restrictions upon purchaser's use and development, with respect to the portion being conveyed.

FOOTNOTES:

(n1)Footnote 1. In most jurisdictions the completion of form real estate contracts by licensed real estate agents is not considered to be engaging in the unauthorized practice of law, at least where the form contract has been prepared or approved by a local bar association or legal counsel for the local association of realtors. L.S. Tellier, *Drafting, or Filling in Blanks in Printed Forms, of Instruments Relating to Land by Real Estate Agents, Brokers, or Managers as Constituting Practice of Law, 53 A.L.R.2d 788 (1957)* . "With respect to the sales contract, the majority of courts allow agents to complete standardized contracts, the form of which has been approved by an attorney, if the agent merely fills in the blank spaces." Peter J. Shedd, *Real Estate Agents and the Unauthorized Practice of Law,* 10 Real Est. L. J. 135, 138 (1981).

(n2)Footnote 2. In many jurisdictions the standard form contract has been drafted by the local board of realtors, and contains provisions for the protection of the sellers to whom its members owe fiduciary duties of loyalty, diligence and competence.

> [I]t is ... probable that the buyer ... will ... sign a printed form supplied by the real estate agent. In this he will be flying in the face of fortune and may suffer bitter regrets when he finds that the contract holds him to a bad bargain, does not express the intention of the parties or is unenforceable for indefiniteness. But sign it he will, for the American lay public is not yet convinced that a lawyer is needed at this juncture and prefers to thrust itself into the hands of the real estate agent. This is somewhat anomalous, for certainly the reputation of these agents is not above reproach and obviously they are the creatures of the seller ... .

John C. Payne, *A Typical House Purchase Transaction in the United States,* 30 Conv. & Prop. Law 194, 199 (1966). *See also Isaacs Business Ventures, Inc. v. Thompson, 636 N.Y.S.2d 906 (1996)* (vendors who claimed that the parties' oral agreement modified a real estate contract provision stating that the contract could not be changed except in writing did not present sufficient grounds to take the case out of the statute of frauds requiring a writing).

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.02

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.02 Preliminary Provisions.

[Go To Supp]

§ 99.02(a) Identification of Parties.

A satisfactory identification of the purchaser and seller is generally a requirement of the Statute of Frauds for an enforceable contract for the sale of real property. Where either party is a corporation, the contract should state its address and jurisdiction of incorporation. A party transacting with a corporation should satisfy itself that the corporate officers who execute the contract have been duly authorized to act by resolution of the board of directors (and, if necessary, by action of the shareholders) n4 so that the contract constitutes the valid and binding obligation of the corporation. Similarly, a party transacting with a general or limited partnership should satisfy itself that the partner or partners executing the contract of sale have been duly authorized to act under the terms of the partnership agreement so that the contract constitutes the valid and binding obligation of the partnership. An opinion of legal counsel as to the formation, existence, capacity and authority of the purchasing or selling entity should be delivered upon contract execution.

Where the buyer is a limited liability entity, the seller may seek to require the personal guarantee of the principals. From the perspective of the limited liability entity itself, a precise identification of its status and the capacity in which the principals are signing the agreement may be essential as a matter of state corporation or limited partnership law to protect individual principals against personal liability under the contract. n5

Particular care is required where the purchasing entity has yet to be formed as of the date of contract formation. n6

The principals executing the agreement on behalf of a limited liability entity to be formed should expressly provide for their release from liability and the substitution of the entity as contract purchaser upon its formation. Some degree of flexibility should be reserved as to the name, jurisdiction of organization and other aspects of the to-be-formed entity. Where there has been no colorable or apparent compliance with the statutory formalities for creating a corporation, the other party may be entitled to withdraw from the contract. n7

It is familiar practice in real estate transactions for a nominee (sometimes called a "dummy" or "straw man") to sign a contract of sale as purchaser instead of the real party in interest. Absent misrepresentation, it is generally not considered

fraudulent to use a nominee for the purchase of property or for the nominee to conceal the fact that the nominee is acting for another. However, if the nominee misrepresents the principal's identity knowing that the seller would not transact if in possession of the facts, seller may refuse to convey or may obtain rescission upon discovering the principal's identity. n8

§ 99.02(b) Statement of Consideration.

By statute or case law, most jurisdictions require a statement of consideration or purchase price as essential for the enforceability of a contract of sale. n9

§ 99.02(c) Definitions.

Important terms (e.g., the parties and the subject property) that will recur throughout the document may be defined by means of a parenthetical when they first appear, or in a separate section of the document devoted to the definition of terms. Whichever format is used, the definition of terms imposes a discipline on the contract drafter which seeks to avoid a patchwork of inconsistent, confusing and potentially ambiguous cross references. Once a term has been defined, subsequent repetitions should appear with initial capitalization, and random capitalization of undefined terms should be avoided.

FOOTNOTES:

(n1)Footnote 4. Because it is tantamount to a decision to abandon the corporate enterprise, shareholder notification and participation are statutory requirements for the decision to transfer substantially all corporate assets. *See, e.g., Sterman v. Hornbeck, 457 N.W.2d 874 (Wis. App. 1990)* ; Model Business Corp. Act § 12.02 (1979).

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.04

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.04 Description of Property Conveyed.

Article 9 of Uniform Commercial Code

Generally, the conveyance of real property includes the land, all improvements permanently attached to the land, and items of a permanent nature affixed to the improvements which the parties probably intend to pass to the buyer upon a sale of the structure in which they are contained.

§ 99.04(a) Description of Real Property.

The Statute of Frauds in most jurisdictions provides that a contract to convey real estate is not enforceable absent a writing signed by (or on behalf of) the party against whom enforcement is sought n11 which contains a description of the real estate that is sufficiently definite to make possible an identification of the real estate with reasonable certainty. Ideally the description should either define the location, length and bearing of each boundary line, and furnish the dimensions of the subject property, or incorporate by reference information to that effect contained in a recorded plat. It is also common in the description to make reference to the source of seller's title ("being the same property conveyed to seller by deed recorded in Book ___, at Page ___") to aid the title examiner in tracing the chain of seller's title.

In the real world, however, a description meeting this ideal standard is the rare exception to the rule. Contracts, particularly in residential transactions, tend to be executed around the seller's dining room table late at night following protracted back-and-forth negotiation. Most sellers do not have readily available a current survey of the subject property from which a proper description may be prepared. It is common practice, therefore, for the contract to contain a shorthand description which often includes little more than the property's street address. In recognition of this practice, courts have tended to relax the requirement that the property description must unambiguously and precisely describe the subject property without resort to extrinsic evidence. n12 Rather, the description used in the contract should be the best legal description available. It is understood, for example, that the description of the property in the contract of sale need not be as complete as in the deed of conveyance. n13 It is essential, however, that a description by street address identify the city, county and state in which the property is located. n14

§ 99.04(b) Description of Personal Property.

§ 99.04(b)(1) Fixtures and Chattels.

Because of the indefinite nature of the rule of law that the conveyance of real property includes items which the parties would probably have intended to pass to buyer, it is in seller's interest to specify items such as dishwashers, electric ranges and other "built-ins" that are or are not intended to be conveyed. In the sale of income-producing property, it is customary to specifically exclude tenant fixtures and other property owned by tenants.

§ 99.04(b)(2) Service Contracts; Trade Names.

The disposition of commercial property constitutes the conveyance of a going concern, and includes all intangible personal property necessary for the operation of the business, such as contract rights, franchises, trade names, and telephone directory listings. Purchaser should include a clause requiring seller to assign at closing all rights under unexpired guaranties relating to the roof, furnaces, and the like. For seller's benefit, purchaser should agree to indemnify and hold seller harmless against liability under any service contracts assigned to purchaser.

(n1)Footnote 11. 37 C.J.S. *Statute of Frauds* §§ 201-206 (1961).

(n2)Footnote 12. *Herzog v. Ross, 196 S.W.2d 268 (Mo. 1946)* .

(n3)Footnote 13. Carol A. Yzenbaard, Residential Real Estate Transactions 53 (1991); Karl B. Holtzschue, Real Estate Contracts 35-36 (1985). *Dontzin v. Myer, 694 A.2d 264 (N.J. Super. 1997)* (description of land is sufficient if it furnishes the means by which a certain identification of land can be made); *Gagne v. Stevens, 696 A.2d 411 (Me. 1997)* (agreement to convey from 120-acre tract a tract "in the approximate size of" 30 acres plus or minus was an insufficient description to satisfy the Statute of Frauds); *Levesque Builders, Inc. v. Cadwell Hoerle, 717 A.2d 252 (Conn. App. 1998)* (all that is required by Statute of Frauds is that description of land be "reasonably certain"; reference to contract and map established this certainty); *Firstline Corp. v. Valdosta-Lowndes Cty. Indus. Auth., 511 S.E.2d 538 (Ga. App. 1999)* (contract did not make clear which 20 out of 27 acres were intended to be transferred and thus insufficiently described land, falling short of the requirements of the Statute of Frauds); *Lewis v. Adams, 979 S.W.2d 831 (Tex. App. 1998)* (where land was described only as "168.32 acres, Wm Holland Survey, A-30" and grantor owned tract of greater acreage such that precise 168.32 acres could not be identified, description was insufficient to satisfy Statute of Frauds). *But see In re Estate of Looney, 975 S.W.2d 508 (Mo. App. 1998)* (price is an essential term; method of payment is not).

(n4)Footnote 14. A description such as '309 E. Mercer Street,' without mention of city, county and state, is potentially ambiguous in that as many cities might have such an address as there are ships named 'Peerless.' The extrinsic fact that the seller happens to own only one of these myriad lots is suggestive but not conclusive. Although land is not sold 'short' as regularly as stock, people often intend to assume legal obligations to transfer real estate that they do not own (expecting to acquire it in time to perform), and sometimes they are held to such obligations irrespective of intent. Hence, if there is a 309 E. Mercer Street in Seattle, and another in Eastport, Maine, and seller only owns the one in Seattle, and has never heard of Eastport, still 'the devil himself knoweth not the mind of man.'

Curtis J. Berger and Quintin Johnstore, Land Transfer And Finance 636 (4th ed. 1993). *Key Design Inc. v. Moser, 983 P.2d 653 (Wash. 1999)* presented an invitation to the Washington State Supreme Court to alter a fifty-year old rule requiring that a contract for conveyance of platted property describe the property by correct lot number, block number, addition, city, county and state. Absent a clear showing that the rule is incorrect and harmful, the court refused to do so, especially in light of the clarity of the rule. *Micciche v. Homes by Timbers, Inc., 767 N.Y.S.2d 56 (2003)* (purchaser not entitled to rescind a real estate contract with incorrect property description, when the true description was not peculiarly within the knowledge of the vendor).

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.05

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.05 Purchase Price; Deposit.

§ 99.05(a) Statement of Purchase Price; Manner of Payment.

An accurate description of the amount of the purchase price, or the mechanism (e.g., appraisal) or formula (e.g., the price per acre or square foot based upon a survey of the subject property to be obtained at buyer's expense prior to closing) to be used in determining the purchase price, n15 and the terms of payment are essential to the enforceability of a real estate contract. It is common for the contract to specify the manner and form of payment of the purchase price at closing, typically by delivery of a certified or cashier's check in the case of residential transactions, and by wire transfer of federal funds in large-scale commercial transactions.

§ 99.05(b) Allocation of Purchase Price.

The contractual allocation of the purchase price among the non-depreciable land, depreciable improvements, tangible personal property and contract rights and other intangible assets may be useful for the purchaser in contesting property assessments for purposes of local ad valorem taxation, and for establishing the cost basis for purposes of depreciation. Although the parties' allocation will not be conclusive, a reasonable allocation may be of persuasive value in dealing with taxing authorities. Similarly, an allocation of the purchase price should be made for the purpose of establishing tax basis where portions of the property are subject to different zoning classifications or other factors that cause them to differ widely in value.

§ 99.05(c) Deposit.

The deposit made by the buyer at the time the contract is signed (together with accrued interest thereon, if the contract obligates the holder to maintain the deposit in an interest-bearing escrow account) n16 will be (a) refunded to buyer if a condition precedent to buyer's obligation to purchase the subject property is not satisfied or not waived, (b) applied to the purchase price if closing occurs, or (c) forfeited to seller (perhaps to be shared with the broker under the terms of the contract) if buyer defaults (perhaps as liquidated damages if the contract so provides and applicable law so permits).

§ 99.05(c)(1) Amount; Liquidated Damages.

The amount of the down payment or "earnest money" deposited by purchaser when the contract is executed is a function of the negotiating strength of the parties and local custom. It is usually determined with the possibility of purchaser's default, and the expenses likely to be incurred by seller as a result, in mind. n17 Ideally from purchaser's perspective, the purchaser's liability for failure to close for any reason whatsoever, or for no reason at all, should be limited to loss of its deposit. n18 However, the typical standard form agreement for the sale and purchase of real estate gives seller the option of proceeding against a defaulting purchaser for damages or to retain purchaser's deposit as liquidated damages.

To be upheld as liquidated damages, the deposit must represent a reasonable allocation of responsibility for the damages caused by purchaser's default, which are incapable of accurate estimation. n19

§ 99.05(c)(2) Form of Deposit; Escrow Agent.

The deposit will most commonly be made in the form of buyer's check. A promissory note is unsatisfactory to most sellers. The irrevocable, unconditional letter of credit has become the preferred form of deposit of choice in commercial real estate transactions for buyers unwilling to tie up their assets in the form of substantial cash deposits. n20

At least until the conditions precedent to buyer's obligation to acquire the property have been satisfied or waived, it is unlikely that an informed buyer would feel comfortable with delivering the deposit directly to the seller. In residential transactions, it is common for the broker to seek to hold the deposit as a control device. The title insurance company that will be searching title and conducting closing, or the attorney for either party, are other potential depositories. In any case, appropriate escrow instructions should be prepared and executed. For example, the deposit holder should be required to maintain the deposit in an interest-bearing trust account. Buyer's deposit check should be promptly deposited, and the escrow holder should confirm in writing to seller that buyer's check has cleared for payment. n21

§ 99.05(d) Financing.

§ 99.05(d)(1) Seller Purchase Money Financing.

In a large-scale commercial transaction, the form and content of the deferred purchase money promissory note and deed of trust to be delivered to seller at closing should be attached to the contract of sale as exhibits in order to avoid protracted negotiation at the closing table. n22 In residential transactions, the contract may simply obligate the parties to use the form of financing instruments in common use in the real property jurisdiction.

§ 99.05(d)(2) Assumption of Existing Indebtedness.

A portion of the purchase price may be payable by buyer becoming personally liable upon an existing mortgage by expressly assuming and agreeing to pay the mortgage. Alternatively, buyer may take title subject to the existing mortgage, but without becoming personally liable for repayment of the mortgage debt. n23 In either event, the contract should state the salient terms of seller's mortgage, including the interest rate, monthly payment, maturity, and the amount of the unpaid principal balance of the existing indebtedness as of the date of settlement, which should be confirmed by a letter from the holder of the existing financing delivered to purchaser at closing. Provision should be made for the payment of any fees to the existing lender and for allocating the risk that the existing loan contains a provision enabling the existing lender to condition its consent to any transfer of the subject property to an increase in the interest rate or other modification of the terms of payment.

(n1)Footnote 15. *Knoxville Med. Investors, Ltd. v. National Healthcorp L.P., 385 S.E.2d 110 (Ga. App. 1989)* .

(n2)Footnote 16. An escrow holder has no duty to deposit funds in an interest-bearing account absent instructions to do so. *Hannon v. Western Title Ins. Co., 260 Cal. Rptr. 21 (App. 1989)* .

(n3)Footnote 17. Emanuel B. Halper, *People and Property: Exculpation Clauses in Contracts*, Real Est. Rev., Spring 1979, at 69, 71.

(n4)Footnote 18. An example of a liquidated damages clause follows:

> The following shall apply if Seller cancels this contract as a result of Purchaser's default:
>
> (a) Purchaser shall pay $_____ to Seller. This amount shall be liquidated and final damages.
>
> (b) The parties have agreed upon liquidated final damages in case of a default by Purchaser because it would be difficult to calculate and prove the nature and extent of the damages which may be incurred by Seller as a result of a default by Purchaser.
>
> (c) Upon the payment of liquidated final damages, Seller and Purchaser shall be entirely relieved of liability under this contract.

Id.

(n5)Footnote 19. If the deposit does not represent such a reasonable allocation of responsibility for damages to the benefit of the vendor, the liquidated damage provision will be unenforceable because it would be construed as a penalty. *Grossinger Motorcorp v. American Nat'l, 607 N.E.2d 1337 (Ill. App. 1992)* (noting three requirements for validity of liquidated damages clause: (1) parties agreed to clause in advance, (2) the amount bears a reasonable relationship to the damages suffered, and (3) actual damages are uncertain or difficult to prove).

(n6)Footnote 20. The letter of credit has been imported into real estate transactions from international commercial transactions in which its use originated. The letter of credit is an undertaking by the issuing bank to make payment to the holder upon the presentation, before the letter's expiration date, of certain documents described in the letter. (A bank will issue a letter of credit usually for a fee generally equal to one percent of the amount of the letter of credit and the deposit in the issuing bank of its customer's funds sufficient to offset the amount of the letter of credit if the issuing bank is called upon to make payment).

The well-publicized incidence of financial institution failures in the late 1980's and early 1990's focused sellers' attention on the need to investigate and approve the financial standing of the issuers of letters of credit they accept in lieu of cash deposits under real estate contracts of sale. Letters of credit are issued under the terms and conditions of the Uniform Customs and Practices for Documentary Credits issued by the International Chamber of Commerce.

(n7)Footnote 21. Unfortunately, occasionally an escrow agent with a long-standing relationship with a purchaser may accept a buyer's deposit check subject to an informal understanding not to deposit it until instructed to do so by the buyer. If the buyer should become unwilling or unable to perform its obligation to purchase the property, the seller will have considerable difficulty collecting the deposit to which it is entitled. Although this practice will surely expose the escrow agent to liability to an injured purchaser for fraud, a state-of-the-art deposit clause along the following lines is suggested for prophylactic purposes:

> Contemporaneously with its execution and delivery of this Contract, the Purchaser has delivered to the escrow agent a deposit in the sum of $_____ (the "Deposit"). The Deposit shall be deposited by the escrow agent in an interest-bearing account and held by the escrow agent in escrow in accordance with the terms of this Contract. The escrow agent shall confirm in writing to the Seller that it has deposited the Deposit in such interest-bearing account, that the Deposit check has cleared for payment and that the escrow agent has actual funds in the amount of the Deposit in such account which the escrow agent shall hold in escrow in accordance with the terms of this Contract. All references in this Contract to the Deposit shall include all interest earned thereon. By its execution of this Contract, the escrow agent

agrees to perform its obligations under this paragraph.

(n8)Footnote 22. A typical contract provision on the subject states as follows:

At settlement Purchaser shall execute and deliver to Seller, and Seller shall accept delivery of, a deferred purchase money promissory note in the form and content of Exhibit _____, payable to the order of Seller in the amount of $_____, secured by a deferred purchase money deed of trust in the form and content of Exhibit _____.

(n9)Footnote 23. A typical contract provision on the subject states as follows:

At settlement Purchaser shall take title to the Property subject to (but shall not assume or become responsible for and makes no warranty as to the payment of) the lien of an existing first deed of trust securing a loan in the original principal amount of $_____ bearing interest at the rate of _____ percent (_____%) per annum. At settlement the unpaid principal balance thereof shall be $_____. A copy of the deed of trust and the note secured thereby and a summary of the terms thereof are attached hereto as Exhibit _____.

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.06

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.06 Representations and Warranties.n24

[Go To Supp]

§ 99.06(a) Seller's Representations and Warranties.

Perhaps the most common technique of "flushing out" problems with the subject property, n25 and thereafter compensating for property deficiencies, is for the seller to warrant the condition of the property. In order to overcome the doctrine of merger, it is necessary to provide that seller's warranties are intended by the parties to survive closing and delivery of the deed of conveyance.

Limitations on both the duration of the survivability of seller's warranties, and the maximum dollar amount of seller's liability for breach of individual warranties and of all warranties in the aggregate, are often the subject of considerable negotiation in commercial real estate transactions. Compromise over the extent of seller's warranties is often achieved by limiting the scope of seller's warranties to the best of seller's actual knowledge, with or without duty on seller's part to investigate.

A warranty that survives closing is seller's invitation to purchaser to cease investigating the subject matter of seller's warranty and to accept the substitution of seller's contractual contingent liability for some bargained-about aspect of the property. However, from seller's perspective, the costs of sale are now indeterminate, uncertain and uncontrollable. n26 Sellers seek to limit their liability for misrepresentation of fact in contracts, inadvertent or otherwise, to the return of purchaser's deposit. Knowledgeable purchasers will require seller to reimburse the cost of title examination and survey, physical inspection, attorney's fees, and other expenses incurred in contemplation of purchase.

In addition to the express representations set forth below, purchasers have been known to request sellers' general representation, imported from the disclosure requirements imposed on sellers of securities under the federal securities laws, that seller has neither made any misstatement of a material fact, nor omitted to state a material fact necessary in order to make seller's contractual representations and warranties not misleading.

§ 99.06(a)(1) Express Representations by Seller.

§ 99.06(a)(1)(A) As to Title.

Seller will be asked to warrant that it is the owner of record and in fact of the subject property, that its title to the property is marketable and insurable under a full coverage owner's title insurance policy at standard rates and without exception, and that it has the right to sell the property without the agreement of any other person. The owner's policy of title insurance is in addition to and will substitute for seller's title warranty as the primary source of protection for purchaser if a title defect arises after closing. The purpose of seller's title warranty, therefore, is to provide a basis for buyer to seek reimbursement of expenses incurred in investigating the property (including the examination of seller's title) in the event the transaction is aborted by reason of the incurably defective condition of seller's title. Seller may also be asked to warrant that there are no pending or proposed special assessments affecting the subject property.

§ 99.06(a)(1)(B) Condition of Property.

From purchaser's perspective, seller should warrant that the building is free from termites or other infestation, that there are no existing structural defects, and that the roof, the heating, ventilating, cooling, plumbing and electrical systems, the elevators and other equipment will be in good operating condition and repair on the closing date, subject to any exceptions specified on an exhibit attached to the contract. Seller's willingness and ability to make representations and warranties concerning the condition of the property will depend upon the relative negotiating strength of the respective parties, the length of time seller has owned the property (e.g., an institutional lender disposing of property owned for a brief period following foreclosure or acceptance of a deed in lieu of foreclosure may be expected to offer a reduced price or favorable financing terms in return for an "as is" sale), and the identity of the seller (e.g., an executor disposing of property owned by a decedent's estate will be reluctant to warrant the condition of the property). n27

§ 99.06(a)(1)(C) Compliance with Laws.

Seller should warrant that there are no notices, suits or judgments pending or threatened relating to violations of any building code, fire, health or other governmental regulation, ordinance or requirement affecting the subject property which have not been corrected. Knowledgeable sellers will make certain that the warranty covers violations noted or issued as of the date of the contract of sale, rather than the date of closing. n28 This limitation serves as protection against a strategic purchaser triggering a municipal inspection after the contract is signed in order to extract concessions from the seller, or escape purchaser's obligations under the contract. n29

§ 99.06(a)(1)(D) No Condemnation Threatened or Pending.

Seller should warrant that no condemnation or annexation proceedings involving the subject property are pending, and that seller has not received notice of any such proceedings threatened by any governmental entity with eminent domain or annexation authority.

§ 99.06(a)(1)(E) As to Existing Financing.

Where a portion of the purchase price is payable by purchaser assuming or taking title subject to seller's existing financing, it is customary for seller to warrant that the unpaid principal balance on the closing date will not be less or more than a specified amount, that the property may be transferred without lender's consent and without any modification of the interest rate or terms of payment of the existing debt, and that the existing indebtedness will not be in default on the closing date.

§ 99.06(a)(1)(F) As to Leases and Tenants.

In the sale of income-producing property, seller should warrant that the rent roll attached as an exhibit to the contract is accurate and complete as of the date of the contract, showing for each lease the name of the tenant, the space leased, the minimum base rental and any provision for escalations, tenant's obligation to contribute to the cost of real estate taxes, operating expenses and similar charges, the amount of any security deposited by tenant, and the commencement date of

the term and the length of the lease, including any renewal options. Seller should warrant that neither landlord nor tenant is in default under any provision of existing leases.

§ 99.06(a)(2) Implied Warranties by Seller.

Until the middle of the 20th century American courts almost universally adhered to the doctrine of caveat emptor and refused to imply any warranties in the sale of either new or existing real property. n30 This policy was based on the theory that the parties to the contract were of equal bargaining power, and the purchaser had both the ability and the opportunity to inspect the property before the conveyance. n31 With the post-World War II construction boom and resulting instances of poor quality due to hurried construction, American courts, realizing that perhaps the average homebuyer did not have the ability to make a proper inspection, n32 began to break down the strict application of caveat emptor. Further contributing to the decline of caveat emptor in real property transactions were two decisions in English courts, n33 as well as the development of the Uniform Commercial Code. n34

§ 99.06(a)(2)(A) Builder's Implied Warranties in New Construction.

Perhaps the earliest case recognizing an implied warranty was *Vanderschrier v. Aaron*. n35 In *Vanderschrier*, the purchasers sued the builder-vendor when the house they had purchased before completion was damaged because of defective construction of the sewer line. n36 The court limited its holding to homes that were still under construction when sold, stating that, "the bargain implied in law between the sellers and the buyers was the completion of the entire house in such a way that it would be reasonably fit for its intended use ... ." n37 The court refused to address warranties in completed homes "except to say only that the vendor of a completed house, in respect of which there is no work going on and no work to be done, does not generally, in the absence of some express bargain or warranty, undertake any obligation with regard to condition of the house." n38

The *Vanderschrier* limitation to homes still under construction when sold was not to last long. In 1964, the Colorado Supreme Court extended the implied warranty doctrine to homes which were completed at the time of contracting. n39 Plaintiffs had purchased a newly constructed home from the builder-vendor and, within four months, the walls began to crack. n40 In holding that an implied warranty existed, the court rejected the idea "that a different rule should apply to the purchaser of a house which is near completion than would apply to one who purchases a new house ... . To say that the former may rely on an implied warranty and the latter cannot is recognizing a distinction without a reasonable basis for it." n41 Framing the warranty in terms of applicable building codes, the court held that a home should be built in a workmanlike manner and be suitable for habitation. n42

The vast majority of states have followed *Carpenter*, either by judicial decision n43 or by statute. n44 These states now allow the original purchaser a cause of action based on an implied warranty. These implied warranties are known by various names such as "habitability," n45 "quality," n46 "workmanship," n47 or "fitness." n48

Whatever label is used, courts have had difficulty defining the parameters of the implied warranty, as well as identifying the party liable when an implied warranty is found to exist. n49 Courts also are divided over whether an implied warranty is based on contract, requiring privity, or on tort.

Generally, the implied warranty does not require that the home be perfect, but that it be reasonably suited for its intended use. n50 Thus, some courts describe the warranty as requiring that the dwelling be free from major structural defects and be constructed in a workmanlike manner. n51 Others require that the home be reasonably fit for occupancy as a place of abode, n52 thus distinguishing between homes that are uninhabitable as opposed to simply aesthetically unacceptable. n53 In addition, courts have been generally unwilling to extend an implied warranty to structures that are not part of the home. n54

Generally, only a party to the original sales contract is liable for breach of implied warranty. In the usual situation, this

will be the builder-vendor. n55 In instances where the builder and vendor are not the same person, courts have allowed purchasers to bring suit against one or the other. n56 Courts have also considered allowing actions to be maintained against lenders, subcontractors and developers with varying degrees of success. n57 A builder-vendor liability attaches only if the builder-vendor was in the business of selling homes n58 or a person regularly engaged in building, so that the sale is commercial rather than casual or personal in nature. n59 However, a recent decision has allowed the purchaser to sue a builder who was not in the business of selling homes for profit. n60

The question of whether the implied warranty of habitability is based on contract or tort is important because it will determine the requirement of privity, if any, as well as the type and amount of damages that may be awarded to the homeowner. n61

The measure of damages is the difference between the value of the home as warranted less the value at the time of acceptance, plus incidental and consequential damages, or the cost of repair of the defect, whichever is lower. n62 These damages are usually considered economic in nature with the general rule that economic losses are recoverable in contract, not tort. n63 Based on the nature of damages sought, many courts have determined that an action for breach of the implied warranty of habitability is an action in contract, and thus requires privity. n64

Unlike an action brought in contract, an action brought in tort does not generally require privity. The difference between the two actions has been said to lie in the nature of the claim. Where damages are claimed because goods purchased failed to meet some standard of quality, then the action lies in contract. However, where it is claimed that a defective product constitutes a danger to the safety of persons or property other than the product itself, the action lies in tort. n65 One court preferred to focus on activity rather than consequences. n66

COMPUTER-ASSISTED RESEARCH

LEXIS: builder or vendor w/50 "implied warrant!" w/50 "new!
construct!"

§ 99.06(a)(2)(B) Implied Warranties in Existing Construction.

While the majority of states today recognize some form of implied warranty in the sale of a newly constructed home to the first purchaser, n67 many of these states have not been as willing to extend the implied warranty to a subsequent purchaser. The problem most often arises where the home is relatively new and latent structural defects first become apparent after the original purchaser has sold the property. n68

Courts that have extended an implied warranty have relied on the rationale behind the origins of implied warranties and have generally rejected any requirement of privity. In a mobile society, it is foreseeable that a house will be resold, frequently within a short period of time. Thus, the extension of the warranty for a reasonable period of time should not place undue hardship on the builder-vendor. n69 In addition to actions based on implied warranty, courts have sometimes allowed similar actions to be based on tort or strict liability. n70

One of the earliest cases to hold that the builder-vendor's implied warranty applied to subsequent purchasers was *Barnes v. Mac Brown & Co.* n71 There the court allowed the second purchaser to recover for latent defects, not discoverable by reasonable inspection, which manifested themselves after re-sale. n72 A growing number of states have begun to allow recovery by subsequent purchasers against the builder-vendor. n73

Courts that recognize the extension of implied warranty have held that liability extends only for latent defects which are not discoverable through a reasonable inspection. n74 In addition to requiring a reasonable inspection by the purchaser, courts have also required that any defect manifest itself within a reasonable time. n75 As with the requirement of reasonable inspection, courts have given little guidance as to what constitutes a reasonable amount of time. n76 Two

states limit the time by statute to only one year, n77 while New Jersey has provided a ten-year warranty for major construction defects. n78

COMPUTER-ASSISTED RESEARCH

LEXIS: builder or vendor w/50 "implied warrant!"

§ 99.06(a)(3) Seller's Duty to Disclose.

Historically, the risks associated with the purchase of used property have fallen on the purchaser. As with implied warranties, until recently sellers were almost completely protected by the doctrine of caveat emptor, and had no duty to disclose defects in their property to prospective buyers. n79 Today, however, this doctrine is significantly weakened, and courts have found a duty to disclose in several situations. n80

§ 99.06(a)(3)(A) Negligent Misrepresentation.

In keeping with the recognition that sellers and purchasers are generally not on equal bargaining terms, courts have often focused on whether a misrepresented fact about the property was discoverable by the purchaser. Courts have generally used language to the effect that sellers have a duty not to falsely represent a condition known only to them and which could not be expected to be discovered by the purchaser's diligence. n81 The misrepresented condition must be a material condition, which courts have defined as one which has an effect on the property's value. n82 If the seller has made repairs to such a condition while owner of the property, but is unsure of whether the condition has been completely corrected, the seller would be well-advised to disclose the existence of the condition and the state of the repairs that were made. n83 However, there may not be a duty to disclose a condition which is not considered dangerous. n84

By contrast, the doctrine of caveat emptor may still operate to protect the seller if the defective condition is open to observation or discoverable, the purchaser has an opportunity to examine the premises, and there is no evidence of fraud on the part of the seller. n85

§ 99.06(a)(3)(B) Fraudulent Concealment.

In order to triumph over a defense of caveat emptor, a buyer will likely have to prove not only that the seller actively and knowingly concealed a defect, but also that the buyer could not have detected the defect with reasonable diligence. Frequently, the court will have to determine whether the buyer should be charged with constructive notice of the defect, in effect defeating the buyer's claim. n86 Also, if there is a question as to whether the buyer had such notice, the general move towards recognizing a duty to disclose will often preclude an award of summary judgment in favor of the seller. n87

§ 99.06(a)(3)(C) Latent Defects.

Whether the seller has "negligently misrepresented" the non-existence of a defect or "fraudulently concealed" such a defect may seem a matter of semantics. What is clear, however, is that where a defect is latent, and materially affects the value of the property in question, courts will generally find a duty to disclose such defects. n88 Thus, sellers have been required to disclose latent defects such as a weak, cracked foundation, n89 a leaky roof, n90 and unstable soil conditions. n91

It should be emphasized that defects known or knowable to a buyer upon reasonable inspection do not fall within the scope of seller's duty to disclose. n92

§ 99.06(a)(3)(D) Easements, Building Codes, and Ordinance Violations.

The doctrine of caveat emptor remains partially intact in questions involving the disclosure of easements, non-compliance with city ordinances, and building code violations. In such cases, courts focus on the materiality of the non-disclosed fact. Thus, if the easement or violation materially affects the value of the property, the seller will probably have a duty to disclose. n93 By contrast, if the non-disclosed fact is not material to the sale of the property, there is generally no duty to disclose. n94 It is important to note, however, that even if there is no duty to disclose certain facts, if the purchaser directly asks about such conditions, the seller is under an obligation to answer truthfully. n95 A court may also consider whether information regarding a legal impairment to the property is accessible to the purchaser. n96

§ 99.06(a)(3)(E) Special Conditions.

With the movement from caveat emptor to disclosure in the area of physical defects, questions also have arisen as to a seller's duty to disclose non-physical defects. Many states have enacted statutes regarding the materiality of non-physical defects, sometimes referred to as stigmas, typically providing that such defects are not material and need not be disclosed by the seller. n97 Although the fact that a property has some non-physical defect is statutorily immaterial, the seller still has a duty to disclose information if directly asked. n98 Similarly, if the stigma has been created by the seller, the seller may have a duty to disclose even the presence of poltergeists. n99

§ 99.06(a)(3)(F) Infestation.

The most common infestation problem, particularly with respect to residences, is termites. Termite damage can be so costly, and so difficult to detect, that most lending institutions now require a termite inspection before lending money to prospective buyers. Not surprisingly, courts now almost uniformly hold termite infestation to be a dangerous condition, certainly material, and one which must be disclosed by the seller. n100 It has been far less frequently litigated, but in certain situations, the seller may also have to disclose infestation by other insects, such as roaches. n101

§ 99.06(a)(3)(G) Environmental Hazards.

The last half of the 20th century has seen the development of hazards far more dangerous than insect infestation. Land and buildings are threatened by substances that are difficult to detect and often highly expensive to remove. In response, some states have enacted legislation requiring disclosure of environmental hazards to buyers. n102 Courts have also recognized this problem, and have held that such environmental hazards are dangerous and material, and must be disclosed, n103 even to the point of holding the seller liable for the real estate agent's non-disclosure. n104

§ 99.06(b) Purchaser's Representations and Warranties.

Purchasers who are not individuals generally are expected to warrant that they have been duly formed, and that the parties executing the contract have been duly authorized to act on behalf of the named purchaser by all requisite action of the purchasing entity. Purchaser should also warrant that it has not dealt with any broker in connection with the acquisition of the subject property, except as specified in the contract.

§ 99.06(c) Survival of Representations and Warranties.

In order to avoid the effect of the doctrine of merger described below, the contract should specifically provide that the representations and warranties are intended to survive closing and the execution and delivery of the deed of conveyance. The issue of survivability of seller's warranties may be expected to generate heated negotiation in commercial transactions, leading to a compromise involving the development of a standard of materiality, the carving out of specific exceptions for certain representations and warranties (e.g., warranties of title), a limitation on the time of survival of other warranties, and separate dollar limitations on seller's exposure to liability for breach of individual warranties and of all warranties in the aggregate. n105

§ 99.06(d) Merger by Deed.

There is a presumption that all undertakings by the seller in the contract of sale are deemed satisfied or waived by the delivery of the deed to the purchaser at closing. Known as the doctrine of merger, this rule of law provides that seller's contractual duties and obligations are discharged upon acceptance of the deed unless they are reaffirmed in the deed or in some other document executed contemporaneously therewith, or unless they are expressly made to survive closing under the terms of the contract of sale. n106 Judicial impatience with the doctrine of merger has led to the creation of exceptions, n107 the most notable being for contractual obligations that are considered "collateral" to the deed. n108 The defense of merger is generally inapplicable in a cause of action for fraud. n109

Although commonly considered a doctrine that benefits sellers by relieving them from contractual promises not repeated in the deed of conveyance, the doctrine of merger is equally available to purchasers. Thus, restrictions on the use or development of property conveyed to purchaser that were contained in the contract of sale but did not appear in the deed of conveyance have been held merged into the deed and unenforceable against purchaser. n110

FOOTNOTES:
(n1)Footnote 24. In contract law, a warranty is basically a written or oral undertaking or stipulation that a certain fact in relation to the subject matter of the contract is or will be as it is stated or promised to be. A warranty differs from a representation in that a warranty must always be given contemporaneously with, and as a part of, the contract, while a representation precedes and induces the contract. While that is their difference in nature, their difference in consequence or effect is this: Upon the breach of a warranty, the contract remains binding, and only damages are recoverable for their breach; upon a false representation by the seller, the purchaser may elect to avoid the contract and recover the entire price paid.

William A. Thau, Negotiating the Purchase and Sale of Real Estate (Real Est. Rev. Portfolio Series No. 8 1975).

(n2)Footnote 25. The purchaser who submits the initial contract, will usually ask for broad warranties and representations with the expectation that not all of those requested will be given. It is in the seller's responses to the requested warranties and representations that the purchaser learns facts about the property and the seller.

(n17)Footnote 40. *Carpenter v. Donohoe, 388 P.2d 399, 400 (Colo. 1964)* .

(n18)Footnote 41. *Carpenter v. Donohoe, 388 P.2d 399, 402 (Colo. 1964)* . In a recent decision, the Illinois high

court used the same reasoning to extend the warranty to significant additions to existing residences. "An owner claiming that latent defects exist in a major addition to a structure should be provided the same protection for the addition as that given to [new home buyers]. In both cases, the owner of the house usually has little knowledge regarding the construction. The purchaser of both a completed home and an addition places the same trust in the builder that the structure being erected is suitable for living. Further, the ordinary buyer is not in a position to discover hidden defects in a structure even through the exercise of ordinary and reasonable care." *VonHoldt v. Barba & Barba Constr., 677 N.E.2d 836, 839 (Ill. 1997)* . The addition increased the size of the house by 40%. As it does with newly constructed homes, the implied warranty inures to the benefit of subsequent purchasers. In this case, however, the suit, brought eleven years after the completion of the addition was time-barred.

(n38)Footnote 61. *See* William K. Jones, *Economic Losses Caused by Construction Deficiencies: The Competing Regimes of Contract and Tort, 59 U. Cin. L. Rev. 1051 (1991). Rousseau v. K.N. Const., Inc., 727 A.2d 190 (R.I. 1999)* raised the question of whether a home buyer could sue in tort an engineer who had reported on suitability of the

property, for economic loss only. Noting that it had "long adhered to a tradition of providing increased protection and an opportunity for recovery in cases in which consumers deal with commercial entities" (*id. at 193),* the court held that an action in tort was available even if the damages were wholly economic.

(n39)Footnote 62. *Jordan v. Talaga, 532 N.E.2d 1174 (Ind. App. 1989)* .

(n40)Footnote 63. *Vistein v. Keeney, 593 N.E.2d 52, 62 (Ohio App. 1990)* .

(n41)Footnote 64. *Smith v. Old Warson Dev. Co., 479 S.W.2d 795 (Mo. 1972)* ; *San Luis Trails Ass'n v. E.M. Harris Bldg. Co., 706 S.W.2d 65 (Mo. App. 1986)* (liability imposed for mere deterioration or loss of bargain resulting from latent structural defects is contractual); *Council of Unit Owners of Breakwater House Condo. v. Simpler, 603 A.2d 792 (Del. 1992)* (cause of action for breach of implied warranty may lie not only in contract involving new construction, but also in one involving older structures that have been substantially reconstructed); *Vistein v. Keeney, 593 N.E.2d 52, 59 (Ohio App. 1990)* (privity required with contractor where purchaser sued vendor and vendor's contractor claiming economic loss). An excellent and extended discussion of the policy reasons for abandoning the privity bar to suit by subsequent purchaser against vendor builders appears in *Nichols v. R.R. Beaufort & Assocs., 727 A.2d 174 (1999)* . In rejecting the bar, the Rhode Island Supreme Court noted that in a highly mobile society, refusal to extend the protection of the warranty to subsequent purchasers left a large class of innocent purchasers unprotected. The refusal to offer remedial avenues to such purchasers was unjustifiable in light of the fact that defects in new home construction do not always manifest themselves immediately and subsequent buyers, like original buyers, have little opportunity to inspect for such defects and a lack of knowledge and expertise to detect them.

While holding that privity will no longer be a bar to suit by a subsequent purchaser, the court was careful to restate the limitations on the legal exposure of the vendor-builder. The key limitation:

> [W]e limit the extension of implied-warranty liability to home buyers who are not in privity with the builder to latent defects existing at the time of the home's original sale that were not known to or were not reasonably discoverable by the buyer when he or she purchased the house, and "which become manifest after the subsequent owner's purchase and which were not discoverable had a reasonable inspection of the structure been made prior to the purchase."

Id. at 181 . Further, subsequent purchasers must discover such defects within a reasonable period of time, defined by the court as 10 years, after the builder has completed the work at issue. Finally, the burden of proof as to the link between the faulty workmanship and the defect is on the subsequent purchaser. *Id.* at 182 .

(n42)Footnote 65. *Sensenbrenner v. Rust, Orling & Neale, Architects, Inc., 374 S.E.2d 55 (Va. 1988)* (homeowner did not have action against architect and subcontractor who were hired by homeowner's contractor where there was no privity of contract between the homeowner and the architect and damages primarily involved economic losses).

(n43)Footnote 66. *Kennedy v. Columbia Lumber & Mfg. Co., 384 S.E.2d 730 (S.C. 1989)* ("[I]f a builder performs construction in such a way that he violates a contractual duty only, then his liability is only contractual. If he acts in a way as to violate a legal duty, however, his liability is both in contract and in tort.").

(n54)Footnote 77. *Md. Real Prop. Code Ann. § 10-204(b)(1)*(1988); *Va. Code Ann. § 55-70.1E* (1986).

(n55)Footnote 78. *N.J. Stat. Ann. § 46:3B-3(B)(3).*

(n56)Footnote 79. *See Peek v. Gurney, L.R. 6 H.L. 377 (1873)* (no duty to disclose defects in an arm's length transaction regardless of how "morally censurable" non-disclosure would be).

(n57)Footnote 80. Two developments, one societal and one legal, have conspired to erode the caveat emptor doctrine. First, the economic status of middle-class America has enabled families to move more often, resulting in more sales of used housing. Because of this, equal bargaining power and the purchaser's ability to properly inspect, two pillars of the caveat emptor creed, could no longer be assumed. Second, the introduction of the Uniform Commercial Code into contract law has had a significant effect on the law governing real estate sales as well. *See above* note 34. *See e.g., Shapiro v. Sutherland, 76 Cal. Rptr. 2d 101 (1998)* (duty of disclosure extends to disclosure of existence of noisy neighbors where disturbance caused by those neighbors materially affected the value and desirability of the property); *Fimbel v. DeClark, 695 N.E.2d 125 (Ind. App. 1998)* (seller had duty to disclose unsuitability of soil for septic system to buyer whom seller knew wanted to build homes on the property).

(n58)Footnote 81. *See McWilliams v. Barnes, 242 P.2d 1063, 1065 (Kan. 1952)* . In *McWilliams*, the seller had informed the purchaser that certain drainpipes were connected to and emptied into the city sewer system. Ten months later, the purchaser discovered that the drainpipes actually emptied into a backyard pit which overflowed with sewage. The Kansas Supreme Court found for the purchaser, holding that such facts could not be expected to be discovered by the purchaser prior to signing the contract. *Id. at 1066* . *See also Chapman v. Hosek, 475 N.E.2d 593 (Ill. 1985)* (misrepresentation of necessity for flood insurance and of local weather conditions); *Gilchrist Timber Co. v. ITT*

Rayonier, 696 So. 2d 334 (Fla. 1997) (noting that a seller who negligently transmits false information may be held liable for negligent misrepresentation under § 552 of the Restatement (Second) of Torts); *Billian v. Mobil Corp., 710 So. 2d 984 (Fla. App. 1998)* (where buyer sues for non-disclosure of a material defect it is not necessary to buyer's claim that seller have intended to defraud buyer).

(n59)Footnote 82. *Karoutas v. Homefed Bank, 283 Cal. Rptr. 809, 811 (1991)* .

(n60)Footnote 83. *See Anderson v. Harper, 622 A.2d 319 (Pa. 1993)* . Prior to selling their home to the Andersons, the Harpers made repairs to a faulty septic system, but did not obtain the required permits for such work. The court found that since the Harpers did not obtain the required permits, they could not assume that the latent, dangerous condition had been rectified. Without knowing whether the condition had been corrected, the Harpers had a duty to disclose the defect to the Andersons. *Anderson v. Harper, 622 A.2d 319, 323 (Pa. 1993)* .

(n61)Footnote 84. *See Gozon v. Henderson-Dewey & Assocs., 458 A.2d 605 (Pa. 1983)* (leaky swimming pool); *Mobley v. Copeland, 828 S.W.2d 717 (Mo. 1992)* (slight electrical current in swimming pool).

(n62)Footnote 85. *Layman v. Binns, 519 N.E.2d 642, 645 (Ohio 1988)* . In *Layman,* the sellers had braced a defective basement wall with steel beams, and the wall was actually bulging when the purchasers viewed the home. *Id.* at 641. The court found no duty on the part of the sellers to expressly disclose the defective wall because the defect was not latent. *Id.* at 645.

(n63)Footnote 86. *See Grant v. Wrona, 662 S.W.2d 227, 230-31 (Ky. 1983)* (buyer did not have constructive notice of rotten wood where the seller had covered the wood with fresh paint prior to placing the home on the market). *See also Flakus v. Schug, 329 N.W.2d 859 (Neb. 1983)* . In *Flakus,* the buyers noticed one sump pump in the basement laundry room, but the seller had concealed two other sump pumps in basement closets, which went undetected until the buyers experienced significant water damage. The first sump pump was not enough to give the buyer constructive notice of the property's water defects, and the court found for the buyers on their fraudulent concealment claim. *Id. at 863* ; *Smalls v. Blueprint Development, Inc., 497 S.E.2d 54 (1998)* (buyer could not avail himself of passive concealment exception to doctrine of caveat emptor where express provision in contract noted the possibility that lots were subject to wetlands regulation).

(n64)Footnote 87. *See George v. Lumbrazo, 584 N.Y.S.2d 704 (1992)* . Summary judgment was improper because questions of fact remained as to whether the seller intentionally concealed cracks in the wall with panelling, and as to whether the buyer should have discovered the cracks; *Gantt v. Bennett, 231 Ga. App. 238, 499 S.E.2d 75 (1998)* (buyer could prevail on "passive concealment" claim where seller knew of inappropriately installed sewer system, failed to disclose it, and fact was material and not apparent to the buyer).

(n65)Footnote 88. "... Where a vendor is aware of defects or conditions which substantially affect the value or habitability of the property and the existence of which are unknown to the purchaser and would not be disclosed by reasonably diligent inspection, then the vendor has a duty to disclose the same to the purchaser ... [his] failure to disclose will give rise to a cause of action in favor of the purchaser." *Thacker v. Tyree, 297 S.E.2d 885, 888 (W. Va. 1982)* .

(n66)Footnote 89. *Id.*

(n67)Footnote 90. *Johnson v. Davis, 480 So. 2d 625 (Fla. 1985)* . The court stated that cases applying the doctrine of caveat emptor were "not in tune with the time and [did] not conform with current notions of justice, equity, and fair dealing." *Id. at 628-29* .

(n68)Footnote 91. *Blake v. Doe, 623 N.E.2d 1229 (Ohio 1993)* .

(n69)Footnote 92. *Blaylock v. Cary, 709 So. 2d 1128 (Ala. 1997)* (no duty to disclose water damage defect where

buyer had knowledge of it); *Nelson v. Wiggs, 699 So. 2d 258 (Fla. App. 1997)* (flood-prone nature of property was knowable through reasonable steps to ascertain it; therefore seller has no duty to disclose it).

(n70)Footnote 93. *See, e.g., Revitz v. Terrell, 572 So. 2d 996 (Fla. 1990)* (fraudulently obtained flood insurance was a material fact which sellers had a duty to disclose); *Curran v. Heslop, 252 P.2d 378 (Cal. 1953)* (fraudulent concealment of building code violations was a material fact which affected the value of the home and should have been disclosed).

(n71)Footnote 94. An example of a non-disclosed fact which is not considered material to the sale is the existence of easements for public utilities, which are generally not dangerous and are to be expected. *See, e.g., Sevin v. Kelshaw, 417 Pa. Super. 1, 611 A.2d 1232, 1238 (Pa. Super. Ct. 1992)* (existence of easement for municipal waterline not material; no duty to disclose even though easement not publicly recorded). *See also* Annotation, *Construction and Effect of Provision in Contract for Sale of Realty by which Purchaser Agrees to take Property "As Is" or in Its Existing Condition, 8 A.L.R. 5th 312 (1992).*

(n72)Footnote 95. *See Kraft v. Lowe, 77 A.2d 554 (D.C. 1950)* (no duty to disclose a violative sewer system; however, seller had obligation to provide the truth when asked about the sewer).

(n73)Footnote 96. *See Gilbey v. Cooper, 310 N.E.2d 268 (Ohio 1973)* . In *Gilbey*, the state had taken a permanent easement to build a road and a temporary easement for "work purposes," neither of which was actually recorded until three days after the property was sold. *Id. at 269* . Because the purchasers could not have discovered the easements prior to completing the sale, the sellers had a duty to disclose this information. *Id. at 270* ; *Norris v. Mitchell, 495 S.E.2d 809 (Va. 1998)* (seller is not required to disclose restrictions of record).

(n74)Footnote 97. The following Connecticut statutes are typical:

20-329cc "Psychologically impacted" defined: As used in sections 20-329cc to 20-329ff, inclusive, "psychologically impacted" means the effect of certain circumstances surrounding real estate which includes, but is not limited to: (1) the fact that an occupant of real property is, or was at any time suspected to be, infected or has been infected with the human immunodeficiency syndrome, as defined in section 19a-581; or (2) the fact that the property was at any time suspected to have been the site of a homicide, other felony, or a suicide.

20-329dd Psychological Impact. No disclosure required. No cause of action. (a) the existence of any fact or circumstance which may have a psychological impact on the purchaser or lessee is not a material fact that must be disclosed in a real estate transaction. (b) no cause of action shall arise against an owner of real estate or his agent for the failure to disclose to the transferee that the transferred property was psychologically impacted, as defined in section 20-329cc.

Conn. Gen. Stat. §§ 20-329cc, 20-329dd (Supp. 1994). *See also Cal. Civ. Code § 1710.2*; *Ky. Rev. Stat. Ann. § 207.250*; *La. Rev. Stat. Ann. § 1468*; *Md. Code Ann., Real Property, § 2-120*; *N.C. Gen. Stat. § 39-50*; *Okla. Stat. tit. 59, § 858-513*, N.Y. R.P.L. 443-a.

(n75)Footnote 98. *See VanCamp v. Bradford, 623 N.E.2d 731, 738 (Ohio 1993)* (non-disclosure of rape which occurred in home after being asked about bars on windows was sufficient for jury determination of materiality).

(n76)Footnote 99. *See Stambovsky v. Ackley, 572 N.Y.S.2d 672 (1991)* . In *Stambovsky*, the seller had publicized and promoted her home as "haunted" for over ten years, but had not disclosed the fact to its eventual purchaser. The court held that having informed the public of the haunting, the seller owed the same duty to the purchaser. *Id. at 677.* "[W] here a condition which has been created by the seller materially impairs the value of the contract and is peculiarly within the knowledge of the seller or unlikely to be discovered by a prudent purchaser exercising due care with respect to the subject transaction, nondisclosure constitutes a basis for rescission as a matter of equity." *Id. at 676* .

(n77)Footnote 100. *See Quashnock v. Frost, 445 A.2d 121 (Pa. Super. Ct. 1982)* . Even an "as is" clause in the sale contract does not relieve the seller of his obligation to disclose termite infestation. *Stemple v. Dobson, 400 S.E.2d 561 (W. Va. 1990)* .

(n78)Footnote 101. *See, e.g., Weintraub v. Krobatsch, 64 N.J. 445, 317 A.2d 68 (N.J. 1974)* (roach infestation). The court called the no-duty-to-disclose cases, relied on by the seller, "a line of singularly unappetizing cases which [were] out of tune with [the] times." *Id. at 71.*

(n79)Footnote 102. New Hampshire is a good example. Sellers of property in New Hampshire are required to disclose the presence of radon gas and lead paint. *See N.H. Rev. Stat. Ann. § 477:4-a*.

(n80)Footnote 103. *Schnell v. Gustafson, 638 P.2d 850 (Colo. App. 1981)* (absence of privity did not relieve a duty to disclose where seller misrepresented the fact that uranium tailings existed below the home).

(n81)Footnote 104. *See Roberts v. Estate of Barbagallo, 531 A.2d 1125 (Pa. 1987)* .

(n82)Footnote 105. *Brody v. Foedish, 631 N.Y.S.2d 80 (1995)* (specific disclaimers in a real estate purchase contract negated any allegations that the written agreement was executed in reliance upon contrary oral allegations); *Ainsworth v. Perreault, 563 S.E. 2d 135 (Ga App. 2002)* ("entire agreement" clause in real estate contract).

(n83)Footnote 106. Toys '*R' Us, Inc. v. Atlanta Economic Dev. Corp., 393 S.E.2d 44 (Ga. App. 1990)* ; *St. Louis Park Inv. Co. v. R.L. Johnson Inv. Co., 411 N.W.2d 288 (Minn. App. 1987)* . *Salerno v. D'Alessandro, 213 A.D.2d 391, 623 N.Y.S.2d 305 (1995)* (the provisions in the merger clause of the contract were sufficiently specific to bar the purchasers from any claim that they were fraudulently induced to enter into the contract); *Hunt v. Kojac,, 666 N.Y.S.2d 330 (1997)* (where contract had provided that septic system was situated within boundaries of property, this provision, omitted from deed, merged into deed; suit for breach of provision barred by doctrine of merger).

(n84)Footnote 107. *See generally Durden v. Century 21 Compass Points, Inc., 541 So. 2d 1264 (Fla. App. 1989)* ; *Cohan v. Sicular, 625 N.Y.S.2d 278 (1995)* (a merger clause in the contract prevented recovery against the vendor and the vendor's attorney, but not against brokers who were not party to the contract); *Lasher v. Paxton, 956 P.2d 647 (Colo. App. 1998)* (merger doctrine did not extinguish attorney fee provision in sales contract; such provision held not to relate to the kinds of issues, specifically title, quantity, possession and emblements of land, for which merger doctrine was created); *Bruggeman v. Jerry's Enterprises, Inc., 591 N.W.2d 705 (Minn. 1999)* (by its very nature a repurchase option agreement could not be performed prior to the closing and therefore merger doctrine did not extinguish it).

(n85)Footnote 108. In *American Nat'l Self Storage, Inc. v. Lopez-Aguiar, 521 So. 2d 303 (Fla. App. 1988)* , seller warranted that sufficient water, sewer and electric service existed at the property line for a 45,000 square foot warehouse building. In fact, no such utilities were available at the perimeter of the property, and purchaser was forced to spend $25,000 to extend services to the property line. Seller claimed that the contract containing the warranty had been merged into the deed. The court rejected seller's argument on the basis that such a warranty would not usually be included in the deed and was therefore collateral to the deed or independent of the deed. The doctrine of merger would be most clearly applicable to matters of title and quantity of land. Thus, if the contract calls for 10 acres and the legal description in the deed is for only 9.5 acres, upon discovering the insufficiency a buyer would be barred by the doctrine of merger from suit on the contract provision; *Empire Mgt. & Dev. v. Greenville Assoc., 496 S.E.2d 440 (Va. 1998)* (rent guarantee clause in sales contract collateral to conveyance and did not merge).

(n86)Footnote 109. *Long v. Fitzgerald, 659 N.Y.S.2d 544 (1977)* (general merger clause in deed will not bar claim for fraudulent inducement; specific disclaimer clauses, indicating purchasers had inspected premises, were acquainted with condition and took property "as is" would bar the claim).

(n87)Footnote 110. *Thibodeaux v. Holk, 540 So. 2d 1378 (Ala. 1989)* . *See also Reed v. Hassell, 340 A.2d 157 (Del. Super. 1975)* .

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.07

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.07 Conditions.

[Go To Supp]

The two-stage method of transferring property (i.e., the agreement of sale and subsequent closing separated by an executory period of varying length) allows fertile minds to devise conditions that may serve to release either party from its contractual obligations. Most often the conditions relate to problems of concern to purchasers (e.g., ability to obtain rezoning or institutional financing commitment). However, conditions may also relate to seller's ability to correct some deficiency. n111

It is necessary to correctly distinguish between promises and conditions. A promise creates a duty on the part of the promisor to perform, and non-performance places the promisor in breach of contract. A condition is an event that is not certain to occur but which must occur (unless excused) before performance under the contract becomes due. Generally speaking, as far as buyer is concerned, the more conditions, attached to buyer's performance, and the broader they are phrased, the better. Seller's interest is usually the opposite. As much as sellers dislike conditions, they dislike warranties more. One way to overcome a seller's reluctance to accept a highly conditioned contract of sale is to first submit a draft containing a comprehensive set of seller's warranties. Seller's response may be to a suggest that the warranties be converted into conditions.

§ 99.07(a) Conditions for Purchaser's Protection.

The buyer's imagination and negotiating clout are the only limits on the conditions which may be inserted for the buyer's protection. For example, if the land is part of an assembly, purchaser should make settlement contingent upon the acquisition of contiguous parcels. Or, if a minimum acreage is required for the intended use, purchaser's obligation should be contingent upon the receipt of a satisfactory survey. Other common contingencies are site plan and subdivision approvals by local government and the availability of utilities. Any adverse change in zoning, actual or imminent, or any exercise of the power of eminent domain prior to settlement, should be included as grounds for termination of the contract. Similarly, if a parcel is being acquired to expand a structure on adjacent land, the purchaser will want assurance that the parcel is indeed contiguous with and adjacent to the purchaser's other property. Or, if the purchaser intends to assume a deed of trust, or is relying upon a tenant for income before development begins, the receipt of satisfactory "estoppel letters" from the mortgagee or tenant should be a condition to the buyer's obligations.

From the purchaser's perspective, conditions are used to achieve several objectives: (1) as a substitute for, or to supplement, seller's representations and warranties concerning some physical status of the real property (e.g., the nature and quality of seller's title, the character of the soil and subsurface of unimproved property, the rent roll of improved property); n112 (2) to enable purchaser to meet a perceived need, absent which purchaser is unwilling to consummate the transaction (e.g., obtaining a commitment for financing, securing a new tenant for vacant space); and (3) to enable the purchaser to effect some change to the property to facilitate its intended use (e.g., rezoning, subdivision approval, building permit). n113

In addition to the foregoing legitimate objectives, the conditions described below may be drafted so as to enable less scrupulous purchasers to strategically withdraw from the contract prior to closing for any reason whatsoever without forfeiting the deposit or incurring liability for damages for breach of contract. For example, a financing condition may describe the terms of financing so narrowly (perhaps by limiting purchaser's obligation to accept financing from a single specified lender) that a buyer could effectively manipulate whether or not the condition is satisfied. A structural inspection contingency that is subject to purchaser's "satisfaction," and without affording seller the opportunity to remedy defects, may be similarly manipulated.

With the above conditions inserted in the form, the purchase agreement begins to resemble an offer for an option. Indeed, a conditional contract is a hybrid option and agreement of sale with one major difference: If the purchaser is entitled to the full refund of purchaser's deposit if a condition cannot be satisfied, then the purchaser enjoys the best of both worlds--purchaser has effectively tied up the land during the feasibility period without paying compensation to the landowner.

However, a heavily conditioned contract may backfire on an unwary or overreaching purchaser. If the enforceability of the contract depends upon purchaser's unilateral subjective determination made in its sole and absolute discretion, a court may decide that the contract is illusory and, therefore, unenforceable by either party. n114 Knowledgeable purchasers protect against this result by providing for purchaser to recover something less than the entire deposit (i.e., for some nominal forfeiture to provide sufficient consideration and mutuality of obligation) in the event the contract is terminated by purchaser for non-satisfaction of condition.

The conditions for which the purchaser negotiates should be expressly waivable at purchaser's option. Courts have permitted sellers to walk away from deals where conditions could not be satisfied, notwithstanding purchasers' claims that the conditions were intended for the sole benefit of purchasers willing to waive them. n115

Finally, purchasers should be warned that a condition imposes a duty on the intended beneficiary to act diligently and in good faith to achieve its satisfaction. n116

COMPUTER-ASSISTED RESEARCH

LEXIS: Land or property or real w/50 builder or vendor or seller & buyer or purchaser w/50 condition! or contingen!

§ 99.07(a)(1) Feasibility Study.

A study period prior to settlement enables the purchaser to agree upon a contract and obtain control over the property before expending substantial sums on thorough investigation and market studies to determine the economic viability and likelihood of success of the proposed development. n117 Purchasers use the study period to identify, analyze and resolve potential problems posed by their intended acquisition of the subject property. For example, in the acquisition of property for development, buyer requires time to determine that water, gas, electricity, storm and sanitary sewer lines and other utilities are available at the perimeter of the site in sufficient capacity to service the buyer's intended development. Sophisticated sellers should not object to a reasonable feasibility period, and will use it to their advantage

by arguing that seller warranties should be limited because the purchaser will have had ample opportunity to make an independent investigation of the parcel.

A party vested with contractual discretion must exercise that discretion reasonably and may not do so arbitrarily and capriciously. Thus, an implied obligation of good faith and fair dealing may act as a limit on the purchaser's discretion in exercising a right to terminate if the cost of performance proves to be economically impractical. n118

§ 99.07(a)(2) Financing; Sale of Existing Property.

A competent financing contingency provision will address the following considerations:

1. The maximum amount sought to be borrowed by the purchaser, using the subject property as security, without which purchaser will be unable to perform its obligation to acquire the property.

2. The period of time over which, and the rate at which, the loan will be amortized or repaid (i.e., whether the loan will be self-amortizing or require a "balloon" payment).

3. The maximum interest rate, including "points," that purchaser is willing to pay.

4. Whether seller reserves the right to obtain financing for purchaser, including the right to provide financing by deferring a portion of the purchase price on terms no less favorable to purchaser than set forth in the financing contingency provision. n119

5. Time limits for each stage of the process, i.e., purchaser's application, receipt of commitment, etc.

6. An obligation that purchaser notify seller regarding satisfaction of the contingency and provide information and documentation to support a claim of non-satisfaction.

A purchaser seeking to rely upon the non-occurrence of a financing condition as an excuse for non-performance must be prepared to prove the purchaser's reasonable efforts made in good faith to obtain financing. n120 Thus, a purchaser who applies for a loan in excess of the amount specified in the financing contingency provision, or on terms otherwise more favorable than that described in the contingency, will not be entitled to invoke the condition and obtain the return of its deposit. n121 Applications for financing must be made in a manner that would cause a lender to evaluate the request seriously and respond formally. For example, where a residential real estate sales contract permitted purchasers to cancel the contract if they could not secure financing, oral inquiries made on two occasions to a mortgage broker as to whether purchasers would qualify for a loan did not satisfy the requisite level of good faith. However, the implied obligation to make reasonable efforts to obtain financing does not include the execution of a personal guarantee by the president and sole stockholder of a corporate purchaser. n122

An agreement by purchaser to use "best efforts" to satisfy a financing contingency imposes additional obligations on purchaser to secure a mortgage. In such circumstances, three contacts and one application have been held insufficient. n123

Reasonableness, good faith and best efforts are questions for determination by the trier of fact. Summary judgment would rarely be appropriate where there is a dispute over such factual questions. n124

It is a common feature in residential transactions for purchasers to condition the acquisition on the sale of their existing residences. In markets characterized by an excess inventory of unsold houses, sellers are frequently induced by their brokers to accede to such arrangements, but only if the contract of sale contains a so-called "kick-out" clause by which the property may continue to be offered for sale in the hope of finding a purchaser willing to make an unconditional offer at the same price, in which event the first purchaser must choose between waiving its contingency or terminating

the contract. n125

COMPUTER-ASSISTED RESEARCH

LEXIS: purchaser or buyer & reasonable! or best w/5 efforts or "good faith" w/50 financ!

§ 99.07(a)(3) Structural Inspection; Soil Tests; Infestation.

In an effort to minimize risk, the developer's obligation to purchase undeveloped land should be contingent upon purchaser's approval of engineering reports regarding soil conditions and drainage.

Seller should seek to impose some standard of objectivity on buyer's part in determining whether the physical inspection condition has been met. For example, a provision that there are no defects which would constitute violations of the building code is superior to a clause requiring satisfaction to purchaser's subjective satisfaction or in purchaser's unrestricted discretion. Similarly, seller should reserve the right to cure defects identified by purchaser's inspection, and to extend the time for closing accordingly. n126

§ 99.07(a)(4) Zoning.

It should be made a condition of purchaser's obligation to close on the acquisition of the subject property that there be no proceeding pending or threatened to change or redefine the zoning classification of any portion of the property. In the acquisition of undeveloped land, the premises should be finally and effectively zoned (without right of appeal) for purposes of buyer's intended development, including satisfactory rights of ingress and egress.

Where the buyer's obligation to acquire the property is subject to its ability to secure a rezoning to permit buyer's intended development, the contract of sale should further provide for seller's required joinder in executing an application and related documents, and affirmative duty to cooperate in purchaser's rezoning effort, all without cost or liability to seller. n127

§ 99.07(a)(5) Title.

The typical standard form purchase agreement is likely to contain the condition that the property be free of encumbrances with seller's good title of record and in fact, subject, however, to conditions and restrictions of record. That would not protect the buyer in the event that a title report shows public utility easements or lack of access to a major road two conditions that could impair the intended development. The purchaser may still be required to close rather than forfeit a substantial deposit. A knowledgeable purchaser will require that title to the property be marketable, good of record and in fact, and insurable under a full coverage owner's policy of title insurance issued by a title company of purchaser's selection, at standard rates and without exception, n128 although the purchaser may allow, as "permitted exceptions," matters which would not interfere with the planned improvement of the property.

§ 99.07(a)(6) Estoppel Letters.

It is customarily a condition of purchaser's obligation to close on the acquisition of income-producing property that purchaser shall have received estoppel letters from all tenants (or, at a minimum, from all anchor tenants and a specified percentage of satellite tenants) to the effect that (a) the lease is in full force and effect, and has not been amended; (b) tenant is not entitled to any renewal or expansion rights; (c) tenant does not have an option to purchase the property; (d) tenant has not prepaid any rent other than for the current month; (e) tenant is not entitled to any free rent or other concessions or abatement; (f) all work required under the terms of the lease to be performed by landlord has been satisfactorily completed, and tenant does not claim that landlord is in default in the performance of any of landlord's obligations under the terms of the lease; and (g) there are no security deposits except as specified.

Where a portion of the purchase price is payable by purchaser assuming or taking title subject to seller's existing mortgage, the receipt of a satisfactory estoppel certificate from seller's lender should be made a condition of purchaser's obligation to close. In addition to consenting to purchaser's acquisition of the subject property and certifying the current outstanding balance, date of next payment and escrow balance, the estoppel letter should unequivocably state that the loan is in good standing without default.

§ 99.07(b) Conditions for Seller's Protection.

As was the case with conditions for purchaser's protection, a condition imposes a duty on the intended beneficiary to act diligently and in good faith to achieve its satisfaction. Thus, a contract of sale contingent upon seller obtaining subdivision approval obligates seller to make good faith efforts to obtain approval. n129

Rodriguez, 782 N.Y.S.2d 448 (2004)* (purchasers defaulted on their real estate contract by failing to notify the vendor about their ability to obtain financing by the deadline).

(n11)Footnote 121. *Price v. Bartkowiak, 715 F. Supp. 76 (S.D.N.Y. 1989)* (purchaser did not make good faith effort to satisfy financing contingency in applying for 30-year loan under contract contingent upon purchaser's ability to obtain financing commitment for "at least" 25 years); *Silva v. Celella, 545 N.Y.S.2d 367 (1989)* .

(n12)Footnote 122. *Educational Placement Serv. v. Watts, 789 S.W.2d 902 (Tenn. App. 1989)* .

(n13)Footnote 123. *Grossman v. Melinda Lowell, Attorney at Law, P.A., 703 F. Supp. 282 (S.D.N.Y. 1989)* :

> Lowell failed to use her best efforts to obtain a mortgage in this case. Three telephone calls and the submission of one application, which was denied several days following the signing of the contract, did not constitute 'best efforts', when at least 50 days still remained to obtain a mortgage, and there were many other avenues that were easily explorable, such as mortgage brokers and banks situated within a reasonable distance from the property.

(n14)Footnote 124. *Educational Placement Serv., Inc. v. Watts, 789 S. W. 2d 902 (Tenn. App. 1989)* .

(n15)Footnote 125. A typical contract provision on the subject states as follows:

> This contract is contingent on the purchaser's ability to complete closing of the sale of purchaser's present house located at _____ in _____. Purchaser shall have the right to terminate this contract and receive the return of purchaser's entire deposit in the event purchaser notifies seller, before the close of business on, _____ time being of the essence, that such closing has not been consummated through no fault of purchaser. Purchaser agrees that if seller hereafter obtains a back-up contract for the sale of subject property from another buyer which is not contingent upon the sale of the buyer's existing residence, then purchaser will have 72 hours in which to amend this contract by deleting this paragraph, or this contract shall be null and void and the deposit shall be returned to purchaser in full.

(n16)Footnote 126. In *Amend v. McCabe, 664 So. 2d 1183 (La. 1995)* , the court held that a provision of a real estate sales contract requiring the vendors to provide an inspection report relating to wood -destroying pest did not require the sellers to inspect the home for structural termite damage; *Kotkin v. Aronson, 815 A.2d 962 (N.J. 2003)* (discovery of and inability to eliminate radon gas justified termination of the contract).

(n17)Footnote 127. "Although it would normally be in the seller's interest to cooperate, as the land will sell for a much higher price if it is rezoned, there are dangers that antizoning pressures will be applied and the seller will be in a

better position obligated by contract to cooperate." John S. Kellogg, *Real Estate Contracts, in* The Real Estate Handbook 96 (Maury Seldin ed., 1980).

(n18)Footnote 128. These two qualifiers are necessary to overcome the maxim, applicable to most all forms of insurance, that there is no such thing as an uninsurable risk, only a too low premium.

(n19)Footnote 129. *Savino v. Deleyer, 554 N.Y.S. 2d 710 (1990)* .

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.08

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.08 Minimizing Environmental Liability.

[Go To Supp]

In recent decades, the possibility of liability arising from contaminated property has become a major concern of both purchasers and sellers of real property. With potential cleanup costs running into the millions of dollars and the ever increasing scope of federal and state regulation, purchasers, sellers and even lenders n130 are now cautioned to fully investigate before finalizing any transfer of property.

§ 99.08(a) Federal Environmental Laws.

A variety of federal laws and regulations impact upon the transfer and ownership of real property. Liability under federal environmental laws is generally strict, joint and several.

§ 99.08(a)(1) National Environmental Policy Act.

Enacted in 1969, The National Environmental Policy Act n131 was intended as a Congressional declaration of national environmental policy. n132 It imposes an obligation on all federal agencies to consider the impact of the agency's actions on the environment. n133 While NEPA does not require any action for purely private projects, it does require an environmental assessment whenever any federal government funds will be used in connection with private projects, such as federal financing or funding of construction projects. n134

§ 99.08(a)(2) Resource Conservation and Recovery Act.

The Resource Conservation and Recovery Act n135 was designed to create a "cradle to grave" regulatory scheme over hazardous wastes. n136 RCRA regulates the generation, transportation, handling, storage and disposal of hazardous wastes, as identified by the statute. n137 While RCRA exempts small quantity generators of hazardous waste, anyone generating more than 100 kilograms of waste per month becomes subject to the record-keeping, permit and testing requirements. n138

RCRA encompasses all active generators of hazardous wastes and disposal sites. Therefore, anyone contemplating

purchase or sale (since RCRA imposes closure and post-closure requirements) n139 of such a site should consult RCRA for all necessary compliance requirements. Mere ownership of land may be sufficient basis for liability. n140

§ 99.08(a)(3) Clean Water Act.

The Clean Water Act n141 prohibits the unauthorized discharge of pollutants into navigable waters unless a permit is obtained in compliance with the National Pollutant Discharge Elimination System. n142 To promote compliance, CWA authorizes both civil and injunctive relief, and criminal penalties and fines up to $25,000 per day per violation. n143 Liability under CWA is strict, n144 joint and several. n145

§ 99.08(a)(4) Clean Air Act.

Substantially revised in 1990, the Clean Air Act prohibits the emission of pollutants into the air in violation of EPA-promulgated standards. n146 Regulation under the CAA is achieved through the joint efforts of both state and federal agencies. n147 Penalties for violations range from administrative penalties or fines to injunctions and criminal sanctions for knowing violations. n148

§ 99.08(a)(5) Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

The Comprehensive Environmental Response, Compensation, and Liability Act is the most significant environmental legislation affecting the purchase, sale and financing of real property. n149 Significantly amended in 1986, n150 CERCLA is designed to be remedial in nature n151 and to provide a means for the cleanup of hazardous waste sites and releases. n152 To effect the goals of CERCLA, definitions of such terms as "release," n153 "owner or operator," n154 "facility," n155 and "contractual relationship," n156 are intentionally broad, with the potential to encompass virtually any environmental contamination by any party associated with the land. n157

§ 99.08(a)(5)(A) Liability Under CERCLA.

Emphasizing its remedial purpose, judicial interpretation of CERCLA provides that liability be construed as strict. n158 The statutory definition of liability is the standard of liability under the Clean Water Act n159 which also has been construed as strict. n160 Liability is also joint and several, n161 retroactive, n162 and can be asserted without a showing of causation. n163 Once a party has been found liable under CERCLA, liability can include costs of cleanup or remedial actions taken by either the government or a private party. n164 Costs may also include damages for injury to natural resources and the expense of any health assessment or study. n165 The total of these costs can potentially run into the millions of dollars and may far exceed the value of the property after cleanup. n166

§ 99.08(a)(5)(B) Potentially Responsible Parties.

CERCLA provides for four classes of potentially responsible parties (PRPs). n167 Once again, these categories are defined broadly and are designed to bring all possible parties within the liability of CERCLA.

The four classes of PRPs include:

1. the present owner or operator of a facility; n168

2. the owner or operator of a facility at the time any hazardous substance was disposed of;

3. any person who arranged for disposal or treatment or who arranged with a transporter for transport of a hazardous substance; and

4. any person who accepted any hazardous substance for transport to a disposal or treatment facility.

n169

Perhaps one of the most important implications of the four categories of PRPs is that the current owner or operator need not have been the party that either disposed of, or caused a release of any hazardous substances. n170 Liability of a PRP may be asserted even when there has not yet been a release but there exists a threat of release. n171

§ 99.08(a)(5)(C) CERCLA Statutory Defenses.

CERCLA provides three defenses. Two are asserted rarely. The third, while seemingly more broad, has been construed quite narrowly. n172

The first two defenses encompass acts of God and acts of war n173 and provide little in the way of practical relief to anyone facing CERCLA liability. The third defense, known as the "innocent purchaser" defense, provides greater opportunity to escape liability. n174 CERCLA § 9607(b)(3) provides that there shall be no liability imposed on a person otherwise liable who can establish, by a preponderance of the evidence, that a release was caused solely by an act or omission of a third party, other than an employee or in connection with a contractual relationship, if the party (a) exercised due care, and (b) took all precautions against foreseeable acts or omissions of any third party.

While at first glance this seems to provide an escape from liability for any party exercising due care, it has not been construed nearly so broadly. The defense excludes persons whose liability is based on a contractual relationship with a third party. n175 The term contractual relationship is extensively defined to include land contracts, deeds or other instruments transferring title or possession. n176 However, any PRP acquiring property in this way may escape liability if it can be shown that the PRP, at the time of acquisition, did not know and had no reason to know the property contained any hazardous substances. n177 This so-called "innocent purchaser" defense is predicated upon the showing of several factors, including establishing that at the time of acquisition all "appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice ... were undertaken." n178

Factors such as the specialized knowledge of the PRP, relationship of the purchase price to the value of uncontaminated property, the obvious presence of contamination and the ability to detect such contamination are all to be considered by the courts. n179 These various factors have become elements of what has come to be known as environmental due diligence, and is perhaps the most important element in a successful challenge to CERCLA liability. n180 Absent a showing of the proper exercise of due care, an innocent landowner defense will not be available. n181

COMPUTER-ASSISTED RESEARCH

LEXIS: CERCLA or "comprehensive environmental response compensation and liability act" w/50 defense*

§ 99.08(b) State Environmental and Common Law Claims.

§ 99.08(b)(1) State Environmental Laws.

Various federal statutes allow states to establish their own permit programs and thus administer federal law at the state level. The Clean Water Act, for example, authorizes each state desiring to administer its own permit program for discharges to submit a plan and, upon approval by the EPA, to issue permits according to that plan. n182 The EPA retains the right to withdraw approval and administer the plan itself. n183 Similar provisions can also be found in the Clean Air Act. n184

In addition to state statutes enacted to implement clean air and clean water requirements, many states have enacted a variety of statutes regulating the transfer of contaminated property, solid waste disposal and creating their own superfund requirements. n185 Because of the potential liability associated with these regulations, it is advisable to

investigate the appropriate state regulations before a transfer of ownership is completed or even contemplated.

§ 99.08(b)(2) State Common Law Claims.

In addition to statutory liability, a variety of state common law claims may be brought asserting either additional liability or as a defense to possible liability. Common law actions may include nuisance, trespass, negligence, strict liability and misrepresentation.

A nuisance claim may assert either private or public nuisance. A private nuisance claim may be brought by an individual whose property rights have been disturbed, while a public nuisance is actionable where the property and health or safety of a considerable number of persons are threatened. n186 However, where purchasers acknowledge in the contract that they have inspected and are familiar with the condition of the property, they may be subsequently barred from asserting a claim of nuisance or trespass. n187

Some courts have held that the disposal of hazardous substances on property constituted an ultra-hazardous activity and, therefore, the former property owner could be held strictly liable to a subsequent purchaser. n188

Certain contract claims, such as fraud and misrepresentation, have been brought against sellers with varying success. One court has held that where the vendor intentionally failed to disclose mercury contamination and the purchaser detrimentally relied on the vendor's non-disclosure, a colorable claim for fraud was established. n189 In contrast, the Fourth Circuit has held that, under South Carolina law, a vendor was not required to disclose environmental problems when those problems could have been discovered through other sources and, therefore, the purchaser could not recover on the theory of negligent misrepresentation. n190

§ 99.08(c) Risk Allocation Through Contract Provisions.

Various contractual provisions and doctrines have been asserted as defenses to liability for environmental damage. These include "as is" clauses, representations, warranties, indemnifications and the doctrine of caveat emptor. While these claims have had some success, perhaps the best defense is the knowledge that comes from a thorough investigation of property before the transfer of any interest.

§ 99.08(c)(1) "As Is" Clauses.

A number of cases have dealt with the application of "as is" clauses contained in contracts of sale. As a general rule, courts have construed these clauses as merely a warranty disclaimer and, as such, preclusive only of claims based on breach of warranty. n191 The "as is" clause cannot act to shift affirmative obligations of the parties imposed by statute, independent of the contract. n192 As a result, "as is" clauses offer little protection to a seller of contaminated property unless it can be established that the "as is" clause was negotiated and was more than standard boiler-plate. n193

§ 99.08(c)(2) Representations and Warranties.

Often a purchaser will seek warranties from the seller that the property complies with all applicable laws. n194 Warranties and representations are also useful to force the seller to focus attention on the condition of the property, former uses, disposal of hazardous substances and possible spills or discharges. Environmental warranties may be conditioned as to time limitations and materiality standards.

§ 99.08(c)(3) Indemnification.

Although contractual indemnification provisions can never defeat a claim of liability asserted by the government, they may be useful in defeating or minimizing claims asserted by third parties. n195 Language found in CERCLA, while apparently contradictory, has been interpreted as allowing parties to indemnify themselves against the risk of CERCLA

liability. CERCLA § 9607(e) provides that:

No indemnification, hold harmless, or similar agreement or conveyance shall be effective to transfer from the owner or operator of any facility or from any person who may be liable for a release or threat of release under this section, to any other person the liability imposed under this section. Nothing in this subsection shall bar any agreement to insure, hold harmless or indemnify a party to such agreement for any liability under this section. n196

While the majority of courts interpret this language as allowing private parties to enter into indemnity agreements, there have been several contrary interpretations. n197 The first such interpretation construed the second sentence of § 9607(e) as completely negating the first, thereby allowing parties to negotiate freely over CERCLA liability. n198 This interpretation has been criticized as an attempt to defeat the remedial policy of CERCLA by allowing parties to attempt to indemnify themselves against government liability. n199

A second interpretation asserts that indemnification clauses between PRPs are per se invalid, and only those agreements that allocate liability to third persons, such as insurance companies, are valid. n200 This approach would allow liability to be contractually expanded, but not reduced or shifted. n201 This result has also been criticized as being opposed to the generally favored policy of freedom of contract. n202

The third, and most widely accepted, approach provides that CERCLA § 9607(e) should be read as allowing parties to negotiate, not with respect to government liability, but to reach indemnification agreements between themselves. n203 This approach seems to be the most logical. By allowing parties to indemnify against possible liability they may increase the possibility of financial responsibility, thereby supporting CERCLA's remedial goals.

Having determined that indemnification agreements between PRP's are allowable, the next issue is whether such an agreement contemplates liability such as CERCLA. Courts have held that, where there is no indication the parties contemplated such liability, the indemnification provision will not be applicable. n204 Other courts have held that, where indemnification provisions are sufficiently broad, they will indemnify against CERCLA liability despite the failure to specifically mention CERCLA. n205

Consideration should be given to requiring the indemnifying party to provide an escrow arrangement or letter of credit to ensure the ability to meet claims that may arise. n206

COMPUTER-ASSISTED RESEARCH

LEXIS: CERCLA or "comprehensive environmental response compensation and liability act" & indemni! & property

§ 99.08(c)(4) Caveat Emptor.

The doctrine of caveat emptor has been interpreted as not in keeping with the policies underlying CERCLA. n207 In reaching this conclusion courts have considered that application of the doctrine would completely bar recovery by a purchaser regardless of other equities affecting the parties. n208 While not allowed as a defense to liability, caveat emptor may be considered in mitigation of the amount due. n209

§ 99.08(c)(5) Environmental Audits.

With the ever increasing potential for environmental liability in any real estate transaction, it is in the best interests of both purchaser and seller to conduct an environmental audit to determine the likelihood of potential liability before finalizing or even entering into a contract of sale. The purpose of the environmental audit is to provide all information necessary so the parties can decide the best way to proceed with the transaction, if at all. n210 Knowledge of the environmental condition of property is of obvious importance to the purchaser's ability to establish itself as an innocent

purchaser. n211 The value of an environmental audit to the seller is in alerting it to currently unknown conditions, and the need to negotiate with the purchaser concerning allocation of the cost of cleanup before the sale. The results of the audit may suggest to seller the need to rescind the contract and keep control over the property and its cleanup. In the wake of *Fleet Factors*, many lenders will not extend credit without an environmental audit. n212

Should the parties decide to enter into a contract before conducting an environmental audit, the contract should provide for the right to terminate the contract in the event the audit shows substantial contamination. Seller may prefer to terminate the contract in order to retain control over the cleanup. n213 A termination provision should state the triggering mechanism (e.g., cleanup cost exceeding a certain dollar amount). The contract should allocate the cost of the environmental audit and require that information be kept confidential.

Both parties will want to approve the firm conducting the audit; both parties may want a representative present when samplings are taken or interviews are conducted; and both parties may request copies of all documents generated.

The audit should include a thorough site inspection, a review of the chain of title, former uses of the site, seller's environmental records, EPA files, and the conduct of soil and groundwater samples. Seller may want to restrict the times the audit is to be conducted and require advance notice so as to avoid interference with seller's business.

The contract should also provide for the consequences if contamination is found, such as indemnification, abatement of the price, postponement of the scheduled closing date to allow cleanup to occur before closing, or termination of the transaction. n214

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.09

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.09 Equitable Conversion and Risk of Loss.

There is generally a hiatus, known as the executory period, between the time a real estate purchaser identifies a property on the one hand, and when the transfer of title and possession occurs. The parties theoretically could sign the contract and close simultaneously, but ordinarily do not. The reason is that purchaser's willingness to acquire the property is subject to the satisfactory resolution of various contingencies including financeability, title search and survey, structural inspection, soil tests, review of tenant leases, rezoning and the like. Although purchaser could probably investigate all of these matters and submit a non-contingent offer to purchase, most purchasers are reluctant to invest the substantial sums required to investigate a property without first obtaining the seller's commitment to sell at a mutually satisfactory price. Also, purchaser fears the loss of the property during the pre-contractual study period to a rival purchaser who studies faster, or who thinks to tie up the property before commencing the study process.

Because of the need for this hiatus period between contract formation and contract performance, it is foreseeable that the operative facts upon which the parties structured the acquisition of improved real property may change. Most dramatically, such change may be the result of fire, hurricane, tornado or other act of God. The issue of who bears the risk of loss during the executory period also arises in the context of condemnation and rezoning.

The common law risk of loss rule in a particular state is a "default" rule in the sense that it becomes operative only if the parties fail to agree and make provision in the contract of sale for their respective rights and responsibilities in the event of loss.

§ 99.09(a) Fire; Casualty.

The risk of fire or casualty loss during the executory period may be allocated in a variety of ways. n215 However, even when the risk has been allocated, questions may arise as to the allocation of insurance proceeds in the event of damage to the property.

As a general rule, in the absence of a specific provision in the contract, the risk of loss is usually allocated in one of three ways. n216 The majority rule holds that, by operation of the doctrine of equitable conversion, the vendee becomes the equitable owner of the property and, as a result, bears the risk of loss. n217 Equitable conversion operates to place

the equitable title in the vendee, while the vendor retains bare legal title. While possession is not necessary for equitable conversion, it may serve to reenforce the placing of the burden on the vendee.

Although equitable conversion remains the majority view, courts in several jurisdictions have attempted to ease the burden of its application on the vendee. These courts have held that where the vendor brings suit for either damages or specific performance, as a result of the vendee's failure to perform due to damage to the property during the executory period, the vendor will not prevail where the vendor has failed to fulfill all the contract conditions. n218 For example, where the vendor failed to meet the condition precedent of conveying marketable title, equitable conversion would not apply to place the risk of loss on the vendee. n219

A minority of states have adopted the position taken by the Uniform Vendor and Purchaser Risk Act that the risk of loss remains with the vendor during the executory period unless and until the vendee obtains possession. n220 This view is based on the belief that the party in possession is likely to have the greater interest in protecting the property. Several states have adopted this view, which leaves the risk of loss with the vendor unless and until the vendee acquires possession. n221

A third rule leaves the risk of loss with the vendor until the transfer of title. This has been termed the "Massachusetts Rule." n222 According to this interpretation, where the value of the improvements constitutes a large part of the total contract price, and the contract indicates that the buildings are an important part of the contract, the contract will be construed as no longer binding if the improvements are destroyed. n223 In this situation, the purchaser is entitled to rescission, as well as the return of its deposit. n224 If, however, the damage is not significant, or the improvements did not constitute a significant part of the contract, then the vendor is entitled to specific performance with an appropriate abatement in the contract price. n225

The best way to avoid dispute is to specifically allocate risk of loss in the contract. Any such provision should specify which party, either vendor or vendee, will incur the cost of insurance. It is also advisable to provide whether the property shall be repaired or whether the insurance proceeds should be used as an abatement of the purchase price.

It is generally held that, where the doctrine of equitable conversion is operative, both the vendee, as equitable owner, and the vendor, as the holder of legal title, have an insurable interest in the property. n226 An analogous, although somewhat different, situation arises where the parties have entered into an installment sales contract or a contract for deed. Generally, equitable conversion is applicable and both parties have an insurable interest in the property. However, unlike the typical deed of trust or mortgage, insurance proceeds will not be applied to repair of damages, regardless of whether the vendor or vendee has paid the premiums, unless the contract specifically provides. n227 This means that the vendor is entitled to have insurance proceeds either held in trust and applied to the monthly installments or applied directly to the remaining purchase price, n228 and the vendee is not entitled to rescind the contract. n229

It has also been held that where the risk of loss was on the vendor, and on the eve of closing the property was damaged by lightning, the seller was not allowed to receive the full purchase price and retain the insurance proceeds. n230 However, where property had been damaged prior to the execution of the contract and the contract made no reference to the insurance proceeds, the seller was entitled to retain the proceeds and the buyer took the property as is. n231

LEXIS: purchase* & title & allocat! w/50 risk w/50 fire or casualty or loss

§ 99.09(b) Condemnation.

The *Fifth Amendment of the Constitution* provides, in part, that private property shall not be taken for public use without just compensation. n232 Property may be condemned for a variety of government uses. n233 When the property

condemned is the subject of an executory contract, questions arise as to who, between the vendor and vendee, bears the risk of loss, or, perhaps more appropriately, who is entitled to the condemnation award. Generally, compensation is due to any person who owns or has an interest in the property at the time it is condemned, n234 which may be the owner of either the legal or the equitable title. n235

When the doctrine of equitable conversion is applicable, and the vendee is considered the equitable owner, the vendee is normally entitled to the condemnation award. n236 The same has been held when the vendee is in possession under a contract for deed, or installment contract. However, when the condemnation award is less than the remaining balance due on the contract for deed, the vendor's legal interest is considered a lien upon the condemnation award. n237 Thus, even where the market value of the remainder was adequate to protect the vendor's interest, the vendor was entitled to a lien on the entire award. n238 When the condemnation award exceeds the vendor's interest, the vendor is entitled to recover only to the extent of its interest, with the vendee entitled to the remainder. n239

Some exceptions to the general application of the doctrine of equitable conversion are applied. For example, when the contract is subject to conditions which have not been met and, therefore, the court would not enforce specific performance, the vendee will not be entitled to the condemnation award. n240 In addition, in states that have adopted the Uniform Vendor and Purchaser Risk Act, n241 a vendee who is not in possession will not be entitled to any portion of the condemnation award. n242 In this instance, the vendee is entitled to recover its deposit and no more. n243

LEXIS: "executory contract" w/50 condemn! & property

§ 99.09(c) Rezoning.

Generally, zoning laws in existence at the time of executing the contract will not be viewed as an encumbrance and the vendee must accept the property subject to existing zoning. n244 This was true even when property constituting a non-conforming use was destroyed by fire after closing and could not be rebuilt to its former condition. n245

In regard to zoning ordinances enacted during the executory period, courts are divided. One view holds that changes in zoning laws during the executory period are to be considered a mutual mistake of fact, thereby allowing the contract to be voided. n246 However, the second and more generally accepted view holds that, absent an express provision to the contrary, the vendee bears the risk of any change in zoning laws. n247

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.10

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.10 Title.

[Go To Supp]

§ 99.10(a) Seller's Duty to Deliver.

§ 99.10(a)(1) Marketable Title.

Perhaps one of the most heavily litigated and confusing provisions in the contract for the sale of land is the requirement of marketable title. It is common for the contract to provide that title be marketable and, in the absence of a specific provision, the obligation to provide marketable title is generally presumed by implication. n248

Marketable title has been defined in a variety of ways. n249 Generally, marketable title includes title that is not open to reasonable doubt. n250 It is title that persons of reasonable prudence and intelligence, guided by competent legal advice, would be willing to take and pay fair value for. n251 Marketable title allows the record owner to hold land in peace and to be reasonably sure that no flaw or doubt would arise to disturb its market value when the time comes to sell. n252 Title that is subject to litigation is not marketable. n253 However, where the possible defect is remote n254 or only a mere possibility, n255 the purchaser will not be relieved of the duty to go forward under the contract. In the absence of a contrary meaning, merchantable title, good title and marketable title are considered synonymous. n256 Sufficiency of marketable title is a question of law for the court. n257 Marketability of title is determined at the date set for closing and the seller has until that date to cure any defects. n258

Questions concerning marketability frequently arise in two main areas: those based on chain of title defects and those based on encumbrances. Chain of title defects affect ownership in the property and make the title unmarketable. Such defects can include incorrect spelling of names, misdescription of the property and title acquired by adverse possession. n259 Courts differ as to whether a title acquired by adverse possession is marketable. A few courts have held that where the possibility of litigation is remote the title is marketable. n260 Other courts have determined that any claim of adverse possession renders a title unmarketable. n261 Today, many states have enacted statutes that are intended to cure chain of title defects, often by reason of passage of time. n262

A title that is subject to an encumbrance is not marketable. n263 Common encumbrances include easements, n264 unexpired leases, n265 unpaid taxes, n266 liens, n267 encroachments n268 and easements. n269 While zoning

ordinances will not normally render a title unmarketable, n270 an existing violation of a zoning ordinance will. n271 In addition, one recent decision has held that where the subject property was contaminated by hazardous waste the title was unmarketable. n272 Another recent decision held that title to landlocked land is not marketable. n273

COMPUTER-ASSISTED RESEARCH

LEXIS: sale w/5 land or property or real w/50 "marketable title"

§ 99.10(a)(2) Insurable Title.

While a majority of contracts for the sale of land contain either an express or an implied provision requiring the seller to deliver marketable title, n274 the contract may instead, or in addition, require insurable title. However, an intent to accept insurable title in place of marketable title should be clear in light of the possible consequences to the purchaser. n275

When a contract requires both insurable and marketable title, the contract establishes a dual standard and the purchaser is entitled to both marketability as well as insurability. n276 However, where a contract requires that title be insurable, the title need not also be marketable. n277 Vendor's ability to deliver marketable title is irrelevant when insurable title is required by the contract. n278

When a contract requires the seller to deliver insurable title, the seller generally assumes the burden of delivering an insurable title without exception other than as provided for. n279 Where the contract provides that a specific title company shall insure the title, the purchaser need not accept the title if the named insurer will not insure. n280 It is irrelevant if a different title company will insure. However, where the contract provides only that the title be insurable without naming an insurer, the purchaser must accept the title as insured by any company, in accordance with the contract. n281 Where a particular title company has been named, the parties generally commit the decision of insurability to the judgment of the designated insurer. n282

§ 99.10(b) Evidence of Title.

§ 99.10(b)(1) Title Abstract.

An abstract of title is a concise statement in an orderly form of the substance of documents or facts appearing on the public record which affect title to real property. n283 The abstract should include all recorded encumbrances, liens and liabilities to which the property may be subject, as well as a summary of the deeds and other instruments evidencing title, arranged in chronological order. n284 The abstract may be used to determine marketability or insurability of title.

As opposed to the requirement that the seller deliver marketable title, n285 a seller is, absent a specific requirement in the contract, under no duty to deliver an abstract of title. n286 However, where the contract imposes such a duty on the seller, delivery of the abstract is a condition precedent to the purchaser's obligation to perform. n287 In addition, it is generally not sufficient for the seller to provide an abstract brought down only to the point of its grantor, but must generally bring the abstract down to a point of time within the contemplation of both parties. In order to provide the greatest protection to the purchaser, the abstract should preferably be brought down to the date of the conveyance or closing. n288

Liability of the abstractor is considered by the majority of courts to be in contract. n289 This duty is variously described as one of ordinary care and diligence, n290 or the duty to perform skillfully and diligently. n291 Recently, some courts have begun to extend liability of the abstractor to persons beyond the party who ordered the abstract and have allowed recovery by a third party who relied on the abstractor's services. n292

§ 99.10(b)(2) Preliminary Title Report.

Similar to an abstract of title, the preliminary title report or binder may be used to determine the marketability or condition of the particular title. When this duty is assumed by a title insurer it may be liable in tort for negligence in preparation. However, the contrary view holds that the purpose of the issuance of the preliminary title report, as prepared by a title insurer, is distinct from the preparation of an abstract and is prepared only to determine the insurability of the title. n293 In fact, it has been held that a title insurer owes no duty to abstract the title. n294 The distinction has been phrased as whether the issuance of the title commitment and policy places a duty on the title insurance company to search for and disclose to the insured any reasonably discoverable information that would affect the insured's decision to close the contract to purchase. n295

Cases which adopt the view that the preparer of a preliminary title report may be liable in tort generally stress that one function of the preliminary commitment is similar to that of the report of the abstractor, i.e., to provide knowledge concerning the state of title so that the purchaser may structure transactions concerning the property. n296

The view that the title insurer may be liable as an abstractor when it issues a preliminary title report has been criticized on the basis that the function of the title insurer is solely to insure title, n297 and its liability should be on the contract for insurance only. n298 Thus, a preliminary title report is simply a statement of the terms and conditions upon which the insurer is willing to issue its title policy. n299

§ 99.10(c) Title Insurance.

As opposed to other forms of insurance, in which the insurer assumes the risk of future events, n300 title insurance insures against things which have already occurred, with the title insurer attempting to eliminate risk. Title insurance is a personal indemnity contract with the main purpose to defend the insured's title. n301 It is a contract of insurance against defects in title, unmarketability, liens and encumbrances other than what is excepted in the policy. n302

The title insurer may, but need not always, conduct a search of the title prior to issuing its policy. n303 Generally the search is done by an agent or employee of the title company but may also be conducted by an outside attorney approved by the title company. n304 As opposed to other forms of insurance, the premium for a title policy is paid one time at issuance, and generally covers both the search, if any, as well as the insurance.

§ 99.10(d) Type of Deed.

The deed serves to actually transfer title. To be effective the deed must contain the names of the grantor and grantee, a description of the property and words of conveyance. n305 The Statute of Frauds requires every deed to be in writing. In addition, the deed must be delivered to be valid. n306

The most common type of deed used in real estate transaction is the general warranty deed. Other types of deeds include quitclaim deeds, special warranty deeds, executor's deeds, trustee's deeds and bargain and sale deeds. Unless the contract specifically provides for a particular type of deed, a deed that is customary to the area is acceptable.

The general warranty deed is delivered by the seller to the purchaser at closing. It provides that the grantor warrants against any acts or omissions that might affect the quality of title conveyed. n307 It should be noted that a warranty deed is not title insurance and does not eliminate the need for title insurance. n308

The warranty deed usually includes covenants of seisin, n309 against encumbrance, n310 of warranty and of quiet enjoyment. The grantor of the general warranty deed warrants not only to its grantee but also to remote grantees. n311 The giving of a warranty deed is not an assurance that the title is marketable. n312

The special warranty deed differs from the general warranty deed in that the grantor warrants only as to those acts

which occurred during its ownership. n313

As opposed to either a general or special warranty deed, a quitclaim deed provides no warranties and serves only to release, as well as convey, whatever interests the grantor has at the time of the transfer. n314 It is important to note that in some jurisdictions a grantee under a quitclaim deed may not be considered an innocent purchaser for value, which may preclude the grantee from receiving the benefit of recording statutes. n315

Similar to the quitclaim deed is the deed of bargain and sale. While it may contain covenants, it normally does not warrant title. n316 The bargain and sale deed does convey the grantor's purported title, as opposed to the quitclaim deed.

When either an executor's or trustee's deed is being used, it is important to examine either the will or trust to verify the powers of the executor or trustee to execute the deed. Local statutes granting powers of executors and trustees should also be examined. n317

(n28)Footnote 275. *See Regency Highland Assocs. v. Sherwood, 388 So. 2d 271 (Fla. App. 1980)* (title company may agree to insure a title even though there are existing lawsuits, notices lis pendens and liens, and, unless excepted in the contract, purchaser would be required to accept such title).

(n29)Footnote 276. *New York Investors v. Manhattan Beach Bathing Parks Corp., 243 N.Y.S. 548 (1930) , aff'd, 176 N.E. 6 (N.Y. 1931)* .

(n30)Footnote 277. *Creative Living, Inc. v. Steinhauser, 698 S.W.2d 400 (Tex. App. 1985)* (by contracting for an insurable title the general rule of marketability is abrogated).

(n31)Footnote 278. *Aronoff v. Lenkin Co., 618 A.2d 669 (D.C. 1992)* . The opposite is also true, so that where the contract calls for marketable title, a defect will render title unmarketable even if a title insurance company stood ready to insure it. *Nelson v. Anderson, 676 N.E.2d 735 (Ill. App. 1997)* (property was subject to a restrictive covenant).

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.11

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.11 Provisions with Respect to Closing.

Because the contract of sale is the blueprint for closing, the contract drafter must anticipate and provide for the mechanics of consummating the sale at the time of contract formation.

§ 99.11(a) Closing Date and Place.

Although it is common practice for real estate sales contracts to contain a specific date, time and place for closing, there is substantial judicial authority that a contract will not be unenforceable for lack of a specified time for closing. Instead the court will imply a reasonable closing date. n318

§ 99.11(b) Seller's Obligations at Closing.

The contract should describe with specificity the documents to be executed and delivered at closing by seller, including the deed of conveyance, bill of sale, assignment of leases, and notice letters to tenants advising them of the sale and the address to which future rent payments are to be directed. Original copies of all leases and service contracts with respect to the property should be delivered to purchaser at closing.

Seller should be required to deliver exclusive possession of the property to purchaser at closing, subject only to the rights of specified tenants, if any. It is customary in residential transactions for purchaser to inspect the property after seller has vacated but prior to closing in order to determine that seller has removed all personal property and has left the property in the condition required by the terms of the contract. n319

§ 99.11(c) Purchaser's Obligations at Closing.

Purchaser will be required to pay the purchase price in full according to the terms of the contract. If a portion of the purchase price is being deferred, purchaser should be required to execute and deliver a deferred purchase money promissory note and deed of trust or mortgage in the form attached as an exhibit to the contract, or in the standard form in customary use in the real property jurisdiction. A purchaser who is not an individual may be required to deliver an opinion of counsel at closing to the effect that the documents to be executed and delivered by purchaser at closing have been duly authorized, validly executed and constitute the binding obligation of purchaser, enforceable in accordance

with their respective terms. n320

§ 99.11(d) Closing Costs; Allocation.

A provision in the contract specifically allocating the cost of title search and insurance, recordation and transfer taxes, escrow fees, lender service charges and other closing costs will prevent disputes at closing over each side's understanding of the prevailing local custom regarding such items.

§ 99.11(e) Proration of Taxes, Interest, Insurance, Delinquent Rents, Prepaid Rents.

The contract should provide for the buyer to reimburse the seller at closing for items paid in advance by the seller with respect to the period following closing which are properly the responsibility of purchaser, such as real estate taxes for the period from the closing date through the end of the real estate tax fiscal year. Conversely, if real estate taxes are paid in arrears, buyer should receive credit for the portion of the current real estate tax fiscal year during which seller had possession. n321 Condominium or homeowners' association assessments, prepaid or accrued interest on any mortgage being assumed by purchaser, and prepaid premiums for any policies of insurance with respect to the property which purchaser continues after closing should be similarly prorated. Arrangements should be made to have utility meters read on the date of settlement and bills to that date paid by seller.

Unless closing occurs on the first day of the month, rents for the month in which closing occurs should be prorated as of the closing date. Provision should also be made for the proration of percentage rentals payable annually or quarterly. Buyer should receive credit for any prepaid rents collected in advance of the closing date with respect to periods subsequent to closing. Buyer should also receive credit for any security deposits collected by the seller which the new owner will be obligated to return to the tenants.

The method of handling delinquent rentals on any leases with space tenants of the subject property may be the subject of considerable negotiation. Ideally seller would prefer to increase the purchase price by the amount of delinquent rentals, and assign to purchaser the right to collect such rentals. Alternatively, seller will seek agreement that the first rentals collected from delinquent tenants by purchaser after closing be remitted to seller to satisfy delinquencies. From purchaser's perspective, the ideal solution is to promise only to continue to bill tenants for delinquent rentals, and to remit to seller any rentals actually collected from delinquent tenants that are above and beyond the rent due for the current month. n322 Purchaser should seek seller's agreement not to pursue legal proceedings against defaulting tenants to enforce the collection of delinquent rentals after closing.

FOOTNOTES:

(n1)Footnote 318. *Seabaugh v. Sailer, 679 S.W.2d 924 (Mo. App. 1984)* .

(n2)Footnote 319. If purchaser has been allowed to take possession of the property prior to closing, the following conditions of purchaser's pre-closing occupancy should be addressed in the contract of sale: (a) the characterization of purchaser's legal status during the executory period (from seller's perspective, the arrangement should be structured as a license to facilitate summary removal if purchaser fails to close); (b) the per diem fee or other consideration to be paid by purchaser; (c) passage of the risk of loss to purchaser effective upon transfer of possession; (d) the satisfaction or waiver of all conditions upon purchaser taking possession; and (e) increasing the size of purchaser's non-refundable deposit to an amount equal to the difference between the purchase price and the amount financed so that purchaser's entire "equity" is at risk in the event purchaser fails to close. Similar issues need to be addressed in the contract in the event seller is permitted to remain in possession of the property after closing.

(n3)Footnote 320. *Daugherty v. Bruce Realty & Dev., Inc., 892 S.W.2d 332 (Mo. App. 1995)* (when a developer breached the contract by failing to complete the construction free from defective materials and in a workmanlike manner, the purchaser was relieved of the duty to appear and close).

(n4)Footnote 321. Assessments for public improvements, if any, completed prior to the date of settlement (*e.g.*, roads, sewers and, paving and the like) are customarily the responsibility of seller, even though the balance of the installments for such improvements may not become payable until after closing, on the theory that the purchase price agreed to be paid by purchaser reflects the additional value created by the existing improvements. Accordingly, such assessments should be paid by seller before closing, or allowance made for them at the time of closing. If, as is typical, assessments for public betterments are payable in annual installments, then the unpaid installments of such assessments (including those which are to become due and payable after settlement) should be discharged by seller at closing.

(n5)Footnote 322. A typical contract provision on the subject states as follows:

> During the period after settlement Purchaser shall deliver to Seller any and all rents accrued but uncollected as of the date of settlement when subsequently collected by Purchaser; provided, however, that Purchaser shall apply rents received after settlement first to payment of the current rent then due, and thereafter to delinquent rents.

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.12

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.12 Operation of Property During Executory Period.

Agreements for the sale and purchase of real property typically require the seller to continue to manage and operate the property in substantially the same manner as prevailed on the date of contract execution, and to maintain the property in substantially the same repair, order and condition as prevailed on the date the contract was executed, reasonable wear and tear excepted. In the case of income-producing property, seller should be required to obtain the written consent of purchaser before entering into any new lease, renewing, extending or otherwise modifying any existing lease, consenting to any sublease or assignment, or taking any action to terminate or otherwise enforce the terms of existing leases. Purchaser may be required to act reasonably and promptly in responding to such requests. Purchaser's failure to respond within a specified reasonable time after receipt of seller's request for approval may be deemed to constitute purchaser's consent. n323

Seller should agree to cooperate fully with purchaser to insure that the transfer of possession takes place without inconvenience to the tenants, and with the least possible disruption in the normal operation of the property and in the duties of the employees. Seller should not mortgage or encumber the property during the executory period. Purchaser should have access to the property during normal business hours throughout the period prior to closing. Seller should agree to furnish purchaser with all information concerning the property that purchaser reasonably requests during the executory period.

FOOTNOTES:
(n1)Footnote 323. Purchaser has a legitimate interest in requiring the ability to review and approve the identity of new tenants and the terms of new leases. However, where the property contains vacant space or if space should become vacant during the executory period, seller stands to suffer a loss if purchaser's objection prevents seller from entering into a proposed new lease and purchaser thereafter fails or refuses to close. The contract should require purchaser to make seller whole for the loss of the bargain.

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.13

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.13 Indemnity.

Unless the leases and service agreements themselves provide for the release of seller following a transfer of title, it is ordinarily impractical to seek to obtain the commercial property seller's release from post-closing liability under contractual obligations to third parties assumed by buyer. Buyer should indemnify seller and hold seller harmless against any loss, cost or expense incurred by seller by reason of buyer's failure to perform any duty under any tenant lease, service contract or other obligation with respect to the subject property transferred by seller and assumed by buyer at closing.

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.14

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.14 Breach of Contract.

[Go To Supp]

While most purchasers and sellers hope and believe that the contract between them will, like most contracts, be fully performed with no problems, not all contracts are performed as planned. As a result, the contract should provide remedies which will best protect the parties in the event of breach by either party. Common remedies for breach of contract for the purchase and sale of real property include specific performance, damages, and forfeiture of deposit or liquidated damages. In addition to a provision for damages the parties should also consider the liability for attorney's fees.

§ 99.14(a) Events of Default.

Generally a party will be in default of a contract for the conveyance of real property when that party fails to meet a condition of the contract such as the inability to deliver title as required by the contract. n324 The contract may also be breached when one party repudiates before the other party has had the opportunity to fulfill all the conditions precedent. n325 In general, the buyer's failure to take title or the seller's failure to deliver title may result in a breach of the contract, with appropriate remedy to be determined according to the type of breach as well as any contract provisions.

§ 99.14(b) Remedies for Breach of Contract.

§ 99.14(b)(1) Specific Performance.

Because each parcel of land is considered unique, as a general rule damages are an inadequate remedy for the breach of a contract for the purchase and sale of real property, and specific performance will ordinarily be granted to buyer or seller. n326

However, where there is an adequate remedy at law, specific performance will not be granted. n327 In addition, specific performance may not be allowed where the contract is vague, n328 or fails to state with reasonable certainty the terms regarding parties, consideration or terms of payment, n329 or in cases of gross inadequacy of consideration. n330 When the time for performance is not indicated in the contract the court may imply a reasonable time and grant specific

performance. n331 The party requesting specific performance must be able to demonstrate that it has either offered to perform, or is ready, willing, and able to perform, all essential elements of the contract. n332

A suit for specific performance by the purchaser may be coupled with a request for abatement. Such a request may be appropriate where the purchaser may be required to accept defects in the title upon the granting of specific performance. n333 However, if the purchaser signs the contract with the knowledge that the seller is unable to convey the full interest as stated in the contract, purchaser may not request an abatement n334 but may still enforce the contract without the abatement. n335

COMPUTER-ASSISTED RESEARCH

LEXIS: sale or purchase w/50 real! or land or property w/50 breach w/5 contract & "specific performance"

§ 99.14(b)(2) Damages.

Where the seller has breached, the purchaser may be entitled to damages under one of two rules. These are commonly known as the American Rule or loss of bargain, and the English Rule or good faith rule. n336

When the vendor has breached, the American Rule allows the purchaser to recover as damages the difference between the contract price and the market value of the property as of the date of breach, plus interest and reasonable expenses. n337 To calculate the market value it is helpful to use comparable sales or a resale of the subject property within a reasonable time of breach. n338 When there is no difference between market value and the contract price, the purchaser may be limited to nominal damages such as recovery of out-of-pocket expenses. n339

As opposed to the loss of bargain rule, the good faith rule holds that the purchaser is not entitled to the benefit of purchaser's bargain where the seller acted in good faith, believing to have good title. n340 The measure of damages here is limited to the money paid on deposit, plus expenses and interest. n341 However, where seller acts in bad faith, knowing seller did not have good title, purchaser is entitled to loss of bargain damages. n342

When the purchaser breaches the contract the seller is also entitled to damages measured by the difference between the contract price and the fair market value of the property as of the date of breach. n343

COMPUTER-ASSISTED RESEARCH

LEXIS: breach w/50 damages w/50 "american rule" or "loss of bargain rule" or "english rule" or "good faith rule"

§ 99.14(b)(3) Forfeiture of Deposit; Liquidated Damages.

When the seller breaches a contract for the sale of land, the purchaser will normally be allowed to recover the deposit. n344 Unless the contract so provides, the purchaser is not limited to a return of the deposit and may seek damages or specific performance for seller's default.

When the purchaser is the breaching party, absent a provision otherwise or even where there is no provision, the seller will be allowed to retain any deposit made by the purchaser. n345 Often the contract will contain a provision for liquidated damages. n346 In order to be valid as a liquidated damages provision the prospective harm must be impossible or difficult to ascertain or prove, and the amount provided for must be reasonable. n347 Unless a court determines that the provision actually provides for a penalty it will usually be upheld. n348

Among the considerations appropriate to the court's determination of the propriety of the amount of the down payment as liquidated damages are the amount of money paid by buyer to seller, the period (if any) of buyer's possession, the

change in market value between contract or sale and default and the rental potential of the property during this time. n349

COMPUTER-ASSISTED RESEARCH

LEXIS: breach w/50 sale w/50 land or real or property w/50 damages w/50 deposit or liquidation

§ 99.14(b)(4) Liability for Attorney's Fees.

As a general rule, each party is responsible for its own costs of litigation, including attorney's fees. n350 Attorney's fees may be recoverable where the contract so provides n351 or where allowable by statute. n352 Pursuant to a contract provision, one court allowed both parties to recover attorney's fees from each other. n353 Since attorney's fees are not ordinarily recoverable, parties wishing to protect themselves should provide for recovery in the contract.

App. 2003)* (seller made fraudulent misrepresentations to buyers about flooding in the basement). *See also Romm v. Flax, 668 A.2d 1 (Md. App. 1995)* (the vendors' failure to provide a disclosure or disclaimer statement to the purchasers made the contract voidable at the option of the purchasers).

(n2)Footnote 325. *See McKenna v. Woods, 574 A.2d 836 (Conn. App. 1990)* ; *Berryhill v. Hatt, 428 N.W.2d 647 (Iowa 1988)* ; *Oxford Funding Corp. v. James H. Northrup, Inc., 516 N.Y.S.2d 33 (1987)* ; *Sirkin v. Hutchcraft, 507 So. 2d 765 (Fla. App. 1987)* ; *Carmel v. Dieckmann, 617 S.W.2d 459 (Mo. App. 1981)* ; *Tesmer Bldrs., Inc. v. Cimato, 629 N.Y.S.2d 594 (1995)* (unilateral rescission of the real estate contract constituted anticipatory repudiation and entitled the vendors to keep the down payment); *Truman L. Flatt & Sons Co., Inc. v. Schupf, 649 N.E.2d 990 (Ill. 1995)* (letter from purchaser's attorney to vendor's attorney did not constitute anticipatory repudiation).

(n3)Footnote 326. William B. Stoebuck and Dale A. Whitman, The Law of Property §§ 10.3-10.8 (3d ed. 2000). The doctrine of equitable conversion, previously considered in § 99.09(a), *supra*, has also provided theoretical justification for the award of specific performance to land sale purchasers. Ralph E. Boyer, et al., The Law of Property § 14.8 (4th ed. 1991). A widely discussed opinion by a New Jersey court temporarily cast some doubt on the automatic availability of specific performance. In *Centex Homes Corp. v. Boag, 320 A.2d 194 (N.J. Super. 1974)* , the court refused to grant specific performance to the developer against the defaulting contract purchaser of a unit in a 3600-unit high-rise condominium project. The court observed broadly that:

> the subject matter of the real estate transaction--a condominium apartment--unit has no unique quality but is one of hundreds of virtually identical units being offered by a developer for sale to the public.

Id. at 198 .

Subsequent decisions in New Jersey and elsewhere granting specific performance to the purchasers of condominium units would seem to confirm the opinion that "it would be unwise to read too much into the *Centex* case." John E. Cribbitt, Et Al., Principles Of The Law Of Property 181 (3d ed. 1989); *Giannini v. First Nat'l Bank of Des Plaines, 483 N.E.2d 924 (Ill. App. 1985)* ; *Pruitt v. Graziano, 521 A.2d 1313 (N.J. Super. 1987)* . A contract *vendor* of a real estate contract does not lose the right to specific performance by buying the property at a tax sale. *Kofmehl v. Steelman, 908 P.2d 391 (Wash. App. 1996)* ; *Vigneaux v. Carriere, 845 A.2d 304 (R.I. 2004)* (the purchaser was a ready, willing and able buyer and thus entitled to specific performance of the real estate contract); *Sugar v. Blum, 2004 Ohio App. LEXIS 1233* (No. 02 CA 234, Mar. 18, 2004) (because the contract was for the purchase of real estate, the court could order specific performance).

(n4)Footnote 327. *See Bissett v. Gooch, 409 N.E.2d 515 (Ill. App. 1980)* ; *Rutherford v. Impson, 366 So. 2d 944 (La. App. 1978)* . *But see Surman v. Blansett, 539 S.E.2d 890 (Ga. App. 2000)* (specific performance on a real estate contract was properly ordered where the fair market value of the property at the time the contract was executed was approximately the same as the purchase price in the contract).

(n5)Footnote 328. *See Calvary Temple Assembly of God v. Lossman, 557 N.E.2d 1309 (Ill. App. 1990)* (description of property must be clearly set forth in writing or specific performance will not be allowed).

1160 (Ind. App. 1981) ; *Long v. Brown, 593 S.W.2d 371 (Tex. Civ. App. 1979)* ; *Carson v. Isabel Apts., Inc., 579 P.2d 1027 (Wash. App. 1978)* ; *Nikolis v. Reznick, 625 N.Y.S.2d 580 (1995)* (award of interest held proper, even though contract was silent as to calculation of interest); *Hegner v. Reed, 770 N.Y.S.2d 87 (2003)* (vendor retained entire down payment of $130,000 when purchasers anticipatorily breached the real estate contract for the sale of a house); *Piano 230 North Corp. v. 230 North Realty, LLC, 758 N.Y.S.2d 339 (2003)* (vendor entitled to retain down payment when purchaser refused to go forward with the closing after receiving a "time is of the essence" letter).

(n19)Footnote 342. *See Ocean Air Tradeways, Inc. v. Arkay Realty Corp., 480 F.2d 1112 (9th Cir. 1973)* ; *BGW Dev. Corp. v. Mt. Kisco Lodge No. 1552, 669 N.Y.S.2d 56 (A.D. 1998)* (purchaser may recover "loss of bargain" where seller breached in bad faith); *Sirles v. Harvey, 682 N.Y.S.2d 747 (1999)* (loss of bargain damages available only upon showing of seller's bad faith or fraud).

(n20)Footnote 343. *See Roesch v. Bray, 545 N.E.2d 1301 (Ohio App. 1988)* (sale of home one year after breach was reasonable approximation of market value at time of breach); *Van Moorlehem v. Brown Realty Co., 747 F.2d 992 (10th Cir. 1984)* ; *Aboud v. Adams, 507 P.2d 430 (N.M. 1973)* ; *but see Kuhn v. Spatial Design, Inc., 585 A.2d 967 (N.J. Super. 1991)* (in a declining market the measure of a vendor's damages when contract is breached by the buyer is the contract price less the resale price, instead of the value at the time of breach, if the resale is within a reasonable time); *Trapp v. Barley, 897 S.W.2d 159 (Mo. App. 1995)* (vendors entitled to both actual and liquidated damages); *Riley v. St. Germain, 723 A.2d 1120 (RI 1999)* . Vendees were required to pay damages for breach, including vendor's carrying costs and difference between initial contract price agreed to by vendees and price at which property ultimately sold where vendor had made reasonable effort at mitigating damages. The court noted:

> [a]lthough some purchase and sale agreements provide that the seller's remedy for a buyer's default is retention of the buyer's deposit in lieu of any further damages, this contract contained no such limiting language. To be sure, the plaintiffs are now bearing the burden of losses caused in part by a dramatically declining real-estate market. But as between the defaulting buyers and the ready-and-willing sellers, it would be unfair to require the defendants to absorb these losses when, as the trial justice found, they acted reasonably and responsibly to mitigate their damages after the plaintiffs breached the contract.

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.15

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.15 Miscellaneous Provisions.

§ 99.15(a) Assignment of Contract Rights and Obligations.

A contract of sale is generally assignable absent specific agreement to the contrary. n354 However, where a portion of the purchase price is being financed by seller or by the buyer's assumption of existing financing upon which seller will remain liable, the vendor may be entitled to the obligation of the named contract purchaser and may not be required to accept the obligation of an assignee. n355 Similarly, where closing is contingent upon purchaser's ability to satisfy a condition, such as rezoning, that requires considerable expertise or personal effort, a restriction against assignment may be implied.

Whether or not the assignee of a contract for the purchase of real property assumes the duties of the purchaser under the contract such that the contract vendor may enforce the contract against the assignee depends upon the terms of the assignment agreement, and the facts and circumstances surrounding the assignment. n356

§ 99.15(b) Notices.

The contract of sale should describe the manner in which notices, requests and other communications are to be given (e.g., in writing and sent by registered or certified mail addressed to purchaser or seller as specified, with a copy to the respective party's attorney), and the time when notices are considered effective (e.g., forty-eight hours after depositing in the U.S. Mail, or upon receipt or refusal by the addressee to accept delivery).

§ 99.15(c) Entire Agreement; Modification and Amendment.

In order to prevent a party from claiming reliance upon prior correspondence, negotiations, or other written or oral understandings, a provision should be included under which the parties acknowledge that the contract contains their entire agreement on the subject of the transaction, and that all prior understandings and statements are merged into the contract. The provision should further provide that no waiver, modification or amendment of the contract will be valid or enforceable unless in writing and signed by the party against whom enforcement is sought.

§ 99.15(d) Time of the Essence.

The law recognizes that people make significant plans in reliance on the occurrence of closing of real estate transactions at the appointed time. n357 Accordingly, when it has been negotiated between the parties and expressly made a part of their agreement, making time of the essence is an effective, time honored tool of real estate contract administration and enforcement. It provides certainty and objectivity in the definition of rights and obligations between contracting parties. The unsatisfactory alternative would be a time for performance which is subject to adjournment and, ultimately, to a test of reasonableness applied by the trier of fact. A negotiated agreement requiring performance on a specified date and at a specified time n358 will be strictly enforced, no matter how slight the delay, without resort to litigation to determine whether the defaulting party's non-performance should be excused. n359

However, time is not of the essence unless the contract so provides. n360 Where a contract for the sale of real property does not contain a time of the essence clause, the law permits the parties a reasonable time in which to tender performance, even when the contract designates a specific date on which performance is to be tendered. If the original contract does not expressly make time of the essence, time may be made of the essence by an agreement modifying the original contract. Alternatively, either party unilaterally may make time of the essence after the contract is executed by good faith notice to the other assigning a reasonable time for completion of the transaction. n361

COMPUTER-ASSISTED RESEARCH

LEXIS: contract or agreement w/50 sale w/ 50 closing & time w/5 essence

§ 99.15(e) Liability for Brokerage Commission.

Although the absence of a reference in the contract to payment of a broker's commission does not necessarily impair enforceability, n362 the better practice is for the contract to allocate to seller the obligation to pay brokerage commissions. The broker, if willing, should execute the agreement to acknowledge its understanding that the commission is earned and payable if and only if closing occurs. n363 The contract should also address the broker's share, if any, of the earnest money deposit payable to seller as damages in the event of purchaser's default.

§ 99.15(f) Duty to Cooperate; Further Assurances.

Purchaser may be asked to cooperate with seller to accomplish a tax-free "like-kind" exchange of the subject property for other property to be acquired from a third party and transferred to the seller either simultaneously with closing on the sale of the subject property or within 180 days thereafter. n364 A knowledgeable purchaser will condition its consent upon seller's undertaking to reimburse purchaser for any additional legal fees or other expenses incurred by purchaser in connection with the exchange.

§ 99.15(g) Binding Effect.

Although the death of a party does not excuse such party's estate from performance of the decedent's obligations under the contract, it is customary for the agreement to recite the law's presumption that the parties intend for the contract to bind and inure to the benefit of their respective heirs and personal representatives. Purchaser should, therefore, seek inclusion of an option by purchaser's executor to terminate the contract in the event of purchaser's death before closing. n365

FOOTNOTES:
(n1)Footnote 354. Milton R. Friedman, Contracts and Conveyances of Real Property 182 (5th ed. 1991).

(n2)Footnote 355. Milton R. Friedman, Contracts and Conveyances of Real Property 183-4 (5th ed. 1991). *Finch v. Beneficial New Mexico, Inc., 905 P.2d 198 (N.M. 1995)* (a mortgage granted on real property that was subject to a real estate contract was not an assignment, even though legal and equitable title had passed to the purchaser before the

mortgage foreclosed).

(n3)Footnote 356. *Midtaune v. Burns, 434 N.W.2d 474 (Minn. App. 1989)* ; *P/T Ltd. II v. Friendly Mobile Manor, Inc., 556 A.2d 694 (Md. App. 1989)* ; *Treasure Valley Bank v. Long, 759 P.2d 1108 (Or. App. 1988)* .

(n4)Footnote 357. "Often interests of third parties are also at issue. The seller may have to pay his lender out of the proceeds of the sale on the day of closing. The buyer may have a loan commitment which expires if closing is delayed. Either buyer or seller may have scheduled simultaneous closings on property." Theodore H. Hellmuth, Missouri Practice-Real Estate Law § 40 (1985).

(n5)Footnote 358. The rules described in this subsection apply not only to the closing date, but also to various other dates provided in the contract, such as the time for obtaining financing commitments and correcting title defects. *See, e.g., Kakalik v. Bernardo, 439 A.2d 1016 (Conn. 1981)* . Knowledgeable practitioners do not rely upon a boilerplate time of the essence clause, but rather err on the side of caution by expressly making time of the essence with respect to each and every such deadline. *CDC Nassau Assoc. v. Fatoullah, 163 A.D.2d 227, 558 N.Y.S.2d 946 (1990)* (where contract was unclear as to dates to which time of the essence clause applied, purchaser entitled to specific performance notwithstanding failure to appear at time of closing); *Prime Group, Inc. v. Northern Trust Co., 215 Ill. App. 3d 1065, 159 Ill. Dec. 918, 576 N.E.2d 841 (Ill. App. 1990)* ; *Arnhold v. Ocean Atlantic Woodland Corporation, 284 F.3d 693 (8th Cir. 2001)* (closing required to be completed by a specific date).

(n6)Footnote 359. *See, e.g., Gorrie v. Winters, 518 A.2d 515 (N.J. Super. 1986)* (upholding seller's termination of contract for sale of nine-acre tract of land at 11:45 a.m. for purchaser's failure to appear at scheduled 11:00 a.m. closing). However, courts tend to find a waiver of the provision making time essential by the party demanding strict compliance. *See, e.g., Stevens v. Cliffs at Princeville Assocs., 684 P.2d 965 (Haw. 1984) , reconsideration denied, 744 P.2d 780* ; William B. Stoebuck and Dale A. Whitman, The Law of Property § 10.9 (3d ed. 2000); *Fairfax v. Oaks Dev. Co., 713 N.W.2d 704 (Iowa 2006)* (action by purchasers to enjoin forfeiting interest after failure to make timely payments, because notice requirements had not been met).

(n7)Footnote 360. *Limpus v. Armstrong, 322 N.E.2d 187 (Mass. App. 1975)* ("The mere fact that the agreement specified a date for closing did not make time of the essence."). In fact, the failure of the parties to fix a time for performance does not render the contract unenforceable. If the parties do not agree upon the time for performance, an agreement for performance within a reasonable time will be implied. *Buehring v. Hudson, 219 S.W.2d 810 (Tex. App. 1949)* ; *E. Shepherdstown Devs., Inc. v. J. Russell Fritts, Inc., 398 S.E.2d 517 (W. Va. 1990)* (where the contract did not fix a time for performance, a 40-month delay by purchaser in closing under contract contingent upon approval of proposed development plan by local planning officials justified seller's refusal to perform); *Lou v. Main St. Assocs., 212 A.D.2d 675, 622 N.Y.S.2d 761 (1995)* (time not of essence under the contract).

(n8)Footnote 361. The notice must be clear, distinct and unequivocal, and must fix a reasonable time within which to perform. What constitutes a reasonable time depends on the facts and circumstances of the particular case. The party giving notice need not state specifically that time is of the essence, as long as the notice specifies a time for closing and warns that failure to close on that date will result in default. *Sohayegh v. Oberlander, 547 N.Y.S.2d 98 (1989)* ; *Limpus v. Armstrong, 322 N.E.2d 187 (Mass. App. 1975)* ; *Johnson v. Gregg, 807 S.W.2d 680 (Mo. App. 1991)* ; *Mazzaferro v. Kings Park Butcher Shop, Inc., 503 N.Y.S.2d 134 (1986)* ; *Knight v. McClean, 566 N.Y.S.2d 952 (1991)* (after five-year delay in closing, seller's attempt to establish closing date two weeks from time-of-the-essence notice to purchaser held unreasonable); Karl B. Holtzschue, Real Estate Contracts 82 (1985). *Piano 230 North Corp. v. 230 North Realty, LLC, 758 N.Y.S.2d 339 (2003)* (purchaser forfeited the down payment after refusing to proceed when the vendor's attorney declared time was of the essence).

(n9)Footnote 362. *Cf. Nelson v. Rebello, 530 N.E.2d 798 (Mass. App. 1988)* .

(n10)Footnote 363. The traditional rule of law that a broker is entitled to a commission upon producing a customer

ready, willing and able to buy upon the terms and for the price given the broker by the owner has been construed to mean that, once a customer is produced by the broker and accepted by the seller, the commission is earned, whether or not the sale is actually consummated. In a minority of states, the broker is considered to have earned his or her commission only after the purchaser completes the transaction by closing the title in accordance with the provisions of the contract. *Ellsworth Dobbs, Inc. v. Johnson, 236 A.2d 843 (N.J. 1967)* ; *Tristram's Landing, Inc. v. Wait, 327 N.E.2d 727 (Mass. 1975)* ; *Winer v. Ceslik, 786 A.2d 516 (Conn. App. 2001)* (contract was void, so commission had to be returned to seller).

(n11)Footnote 364. No gain or loss on an exchange of real property is recognized if property held for productive use in a trade or business, or for investment, is exchanged solely for other such property. *I.R.C. § 1031 (1988)*. Since 1984, Congress has authorized tax-free exchanges on a non-simultaneous basis so long as closing occurs within 180 days after closing on the disposition of taxpayer's property. Me. Rev. Stat. Ann. tit. 145, § 6201(3).

(n12)Footnote 365. Milton R. Friedman, Contracts and Conveyances of Real Property 10 (5th ed. 1991).

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.16

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.16 Execution on Behalf of Purchaser and Seller; Counterparts.

Although the contract of sale should be signed by both parties, the Statute of Frauds requires only the signature of the party against whom enforcement is sought. There is no requirement that a signature be in any particular form so long as there is some reliable indication that the party to be charged intended to authenticate the writing. Thus, the signature need not necessarily appear at the end of the document. n366 A stamped or typewritten signature is sufficient to constitute a signed writing, n367 as is a mailgram. n368

For the convenience of the parties, the contract may provide for execution in two or more counterpart copies, which shall have the same force and evidentiary effect as if all parties had executed a single copy of the contract.

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.17

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.17 Acknowledgement and Recordation.

Particularly in a rising economic market, the seller must be prevented from seeking a more favorable deal during the executory period by "shopping" the contract of sale to other prospective purchasers. Although the contract purchaser will have a cause of action for damages against the unscrupulous seller, an unrecorded contract may not be enforceable by specific performance against the claim of a subsequent purchaser in good faith and for value without notice of the contract. n369

Accordingly, for the purchaser's protection it is advisable that the contract of sale be in recordable form and promptly recorded in the public land records to place subsequent purchasers on constructive notice of purchaser's interest in the property. In order to overcome the legitimate objection of seller's counsel that recordation of the contract will constitute a cloud on seller's title in the event of purchaser's non-performance, purchaser may execute and deliver into escrow a termination and release of the contract to be recorded upon purchaser's default.

CHAPTER 99 REAL ESTATE CONTRACTS

12-99 Thompson on Real Property, Thomas Editions § 99.18

AUTHOR: Professor Alan M. Weinberger School of Law Saint Louis University

§ 99.18 Short-form Memorandum of Sale.

In order to overcome the legitimate objection to recordation expressed by sellers that the purchase price should not become a matter of public information, the parties should execute and acknowledge a recordable memorandum of sale to place third parties on constructive notice of purchaser's rights. The short-form agreement should identify the property and the parties, and state that a contractual relationship exists between them with respect to the property and the time for closing. Other terms of the full contract of sale, including the consideration, may be omitted.

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.01

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.01 Nature of the Installment Land Sales Contract.

U.C.C. § 3-606

The installment land sales contract is one of three security devices most often used in credit transactions involving real estate. The other two are the mortgage and the deed of trust. Under the installment land sales contract, the property is sold for the payment of the purchase price in a series of installments over a period of time. n1 While there is a separate developed body of law governing mortgages and deeds of trust, the principles governing installment land sales contracts are a hybrid composed of property law and contract law. n2 The transaction involves the transfer of title to real property, and the elements of the transaction are controlled by the terms of the contract between the vendor and the purchaser.

In a normal sale of real property the contract of sale is designed to control the rights of the parties for the short period of time between the agreement to sell and the closing, usually a time span of only a few weeks; however, in the installment sales contract the relationship between the vendor and purchaser may continue for several years before the title is ultimately transferred. During this period of time, the rights of the parties are controlled by the contract. n3

The installment land sales contract has been referred to as a "poor man's mortgage." n4 In a mortgage, the promise to repay is secured by the lien on the purchased property. In a land sales contract, the purchaser's promises contained in the contract are secured by the fact that the purchaser will not receive title to the subject property until the purchase price has been fully paid. The advantage to the purchaser of the installment land contract is the fact that the owner of the property will finance the acquisition of the property. This means that the purchaser does not have to go through the lengthy and expensive and sometimes unsuccessful process of institutional financing. In light of the savings and loan crisis of the early 1990's, lending institutions became increasingly cautious in making real estate loans. Often, purchasers fail to qualify even though they are capable of making the required monthly payments. The land sales contract therefore offers an alternative to institutional financing. The land sales contract has become especially popular in the vacation home sector of the real estate market and in the purchase of farm land.

The vendor, too, enjoys the advantage of the installment land sales contract in not having to wait for the processing of one or more vendee loan applications. The vendor in an installment land sales contract usually does not convey title to

the premises until all the terms of the contract have been met. Thus, if the vendee defaults in any aspect of the contract, the vendor ordinarily has power to terminate the contract and retain title to the property and all monies paid, including any interest paid. Thus, in theory, the vendor has a quick and simple remedy on default and does not have to go through the complicated and slow statutory foreclosure procedure required for mortgages. n5

Possession of the premises is often granted to the purchaser on the condition that the purchaser remain in good standing under the contract. Under the doctrine of equitable conversion, the vendee in possession under a contract is often viewed as the equitable owner of the property and is thus usually responsible for the payment of taxes and insurance during the life of the contract and, of course, thereafter. n6 According to this doctrine, in some states the vendor's interest in an installment land sales contract is a personal property rather than a real property interest. n7 Inconsistencies may arise in those states that treat the land sales contract as a real property interest for some purposes, such as recording, but then view it as a personal property interest for other purposes, such as intestate succession. In these states, often for some purposes, such as recording, we treat the land sales contract like a real property interest, but then for other purposes, such as intestate succession, land sales contracts are treated as personal property. n8 Land installment contracts are also subject to laws prohibiting race and other discrimination in sales of housing. n9

COMPUTER-ASSISTED RESEARCH

LEXIS: installment w/1 land w/1 contract!

FOOTNOTES:

(n1)Footnote 1. Some states have tried to define the installment land sales contract by statute. The Ohio definition is as follows:

> "Land installment contract" means an executory agreement which by its terms is not required to be fully performed by one or more of the parties to the agreement within one year of the date of the agreement and under which the vendor agrees to convey title in real property located in this state to the vendee and the vendee agrees to pay the purchase price in installment payments, while the vendor retains the title to the property as security for the vendee's obligation. Ohio Rev. Code Ann. § 5313.01.

See also Cal. Civ. Code § 2985. Other states have defined the relationship by case law. *See, e.g., Boyd v. Watts, 342 S.E.2d 840 (N.C. 1986) . See also Shelter Mut. Ins. Co. v. Crunk, 102 S.W.3d 560, 564 (Mo. Ct. App. 2003)* (defining an installment land sale contract or "contract for deed").

(n2)Footnote 2. *Ellis v. Butterfield, 570 P.2d 1334, 1336 (Idaho 1977)* ; *Woods v. Cobbins, 2004 Ohio 5767 (Ohio Ct. App. 2004)* (No. 20295, Oct. 8, 2004) (a land installment contract must satisfy the statute of frauds).

(n3)Footnote 3. The contract may or may not be recorded. *Green v. Hemmert, 703 So. 2d 391 (Civ. App. Ala. 1997)* (in the absence of a statute requiring that a contract must be written or evidenced in writing, a valid contract may be partly written and partly oral); *Muina v. Canning, 717 So. 2d 550 (Fla. 1998)* (notarization and recording of an agreement is not essential for the validity of a contract for a deed); *Fadelsak v. Hagley, 2003 Ohio App. LEXIS 3117* (No. 02 CA 41, Jun. 25, 2003) (ruling that an installment land contract can be imputed from the objective manifestations and intent of the parties, regardless of the written language of the agreement).

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.02

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.02 Installment Land Sales Contracts and Mortgages Compared.

U.C.C. § 3-606(2)

Both mortgages and land sales contracts are means for financing the acquisition of real property. Under the land sales contract the seller, in effect, agrees to finance the purchase of the property by taking a purchase money mortgage. n10 In a true purchase money mortgage or deed of trust transaction, the seller transfers the title to the property to the buyer and takes back a promissory note and deed of trust or mortgage to secure the payment of the note. In the land sales contract, the contract replaces the note and deed of trust. The seller thus provides the financing and receives from the buyer a series of payments over a period of time. When all payments of principal and interest have been made, the buyer owns the property outright and free of the encumbrance of the seller's security interest.

However, in most states there are significant differences between the legal incidents of the land sales contract and the mortgage. Ostensibly, the seller has greater powers and protections under a land sales contract than under a mortgage. The seller in the land sales contract is not bound by the statutory rules governing foreclosures and deficiency judgments. n11 Also, normally a mortgagor has the right of possession, while the right of possession in land sales contracts is governed by the contract. The seller in a land sales contract typically has greater power than a mortgagee to seize the property, if it is in the hands of the buyer, and to retain all monies paid to date if there is default. n12 If there is a default under the contract, theoretically the seller can simply void the contract, retake the property and retain all monies paid. n13 The buyer, unlike the mortgagee, cannot force the sale of the property and have the proceeds applied to the debt and the excess refunded. n14

Compared to the mortgagor, the contract buyer has far fewer rights concerning redemption. Generally, there is no right to redeem the property upon payment of the amount in default. n15 Also, the buyer who is in default has no right to have payments returned to him, with only the obligation to respond in damages if the seller can show harm. n16

However, a state may declare that the land sales contract will be treated exactly as a mortgage and that the purchaser will have all the rights and remedies of a mortgagor. n17

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.03

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.03 Recordation of the Contract.

Problems frequently arise from the failure to record real estate contracts. Some contracting parties are reluctant to record their contract, because they do not wish the details of the transaction to become a matter of public record. However, under most state recording statutes, an installment purchaser is unprotected against a subsequent purchaser for value who has no actual or constructive notice of the installment land sales contract. n18 Thus, by not recording, the purchaser runs the risk that a subsequent purchaser of the property from the record title holder will acquire superior rights. If the record owner re-sold or mortgaged the property after the unrecorded contract sale, buyer or mortgagee could acquire rights in the land superior to those of the contract buyer.

The harshness of this situation is somewhat alleviated in notice and race-notice recording states by the fact that usually the purchaser under a land sales contract is given the right of possession at the time of signing the contract; subsequent transactions will often be subject to the rights of parties in possession because possession itself gives notice to any prospective subsequent purchasers. However in a pure race state, mere possession is not sufficient to protect the land sales purchaser. Even in notice and race-notice states, there is often a question of what type of possession is sufficient to give notice. This is especially true in cases of unimproved land or land that is not to be occupied year-round. Courts are often called on to decide whether the erection of a fence or the use of the land as an occasional vacation spot is sufficient occupancy to give a subsequent purchaser notice under the statute. n19 Of course, the greatest number of land sales contracts involve just this type of land. These are not clear-cut issues and courts frequently rule against the contract purchaser who has not recorded. For this reason the purchaser should place on the public record some evidence of the contract. n20

While recording is clearly in the best interests of the purchaser, it often is not in the best interests of the vendor, and since the vendor is usually the one in the best bargaining position, the vendor may attempt to keep the contract unrecorded. One reason the vendor may be reluctant to record is the need to quickly resell the property if the purchaser defaults. In order to do this the vendor must be able to produce a clear title. If the contract has been recorded, the recording is a cloud on the title and must be cleared before the title will be marketable. While several judicial remedies are available to clear the title, resort to those remedies compromises one of the advantages of using the contract device, which is to avoid time-consuming judicial procedures. The vendor would much rather keep the title unencumbered by not recording the land sales contract.

If the contract is recorded, the vendor may attempt to avoid remedial judicial action by requiring the purchaser to execute a quitclaim deed when the land sales contract is executed. The deed is then held in escrow as long as the contract is being performed, but delivered to the vendor in case of purchaser's default. The validity of this approach is uncertain, but the vendor would be better off having the quitclaim deed executed after the date of the signing of the contract. n21 Of course, there would have to be some separate consideration, such as a waiver of default or a restructuring of the purchase terms, to support the execution of the quitclaim deed.

Some vendors attempt to resolve the recording problem by simply prohibiting the recording of the instrument or executing the document in a form that is not recordable. The purchaser can refuse to accept a contract which is not in recordable form, and an outright prohibition on recording is probably not enforceable, since it runs contrary to public policy. One state statute expressly invalidates non-recordation clauses. n22

LEXIS: land w/1 contract w/50 record! OR installment w/1 contract! w/50 record!

FOOTNOTES:

(n1)Footnote 18. American state recording statutes are usually distinguished as race-notice statutes (*e.g.*, Cal. Civ. Code § 1214), notice statutes (*e.g.*, Mass. Gen. L. ch. 183, § 4), and race statutes (*e.g.*, N.C. Gen. Stat. § 47-18(a)). *Whitaker v. Whitaker, 901 A.2d 223 (Md. App. 2006)* (failure to record a loan repayment agreement, which constituted a land installment contract); *Gorzeman v Thompson, 986 P.2d 29 (Ore. App. 1999)* .

(n2)Footnote 19. *Beals v. Cryer, 426 N.E.2d 253 (Ill. App. 1981)* .

(n3)Footnote 20. *First Fed. Sav. Bank v. Hartley, 799 N.E.2d 36 (Ind. Ct. App. 2003)* (holding that recordation of the contract will not protect the purchaser from existing encumbrances, such as a bank's mortgage, even when improvements to the land have been made).

(n4)Footnote 21. There is no question that a mortgagor can relinquish the right of redemption in a separate transaction *after* the execution of the mortgage, if there is sufficient consideration. However, it is equally clear that a mortgagor cannot relinquish the right of redemption at the time of the execution of the mortgage. Applying these principles to a land sales contract would suggest that a quitclaim deed would preferably be executed by the purchaser after the signing of the contract. *See* Grant Nelson & Dale Whitman, Real Estate Finance Law § 3.31 (5th ed. 2007); *First Ill. Nat'l Bank v. Hans, 493 N.E.2d 1171 (Ill. App. 1986)* .

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.04

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.04 Right to Possession Under the Land Sales Contract.

In the typical real estate earnest money contract, possession of the premises passes at the closing when the purchaser has paid the full purchase price for the property. n23 However, in a land sales contract the parties are free to contract as to time of possession. Generally, the parties agree that the purchaser has the right to possession as soon as the contract is signed. n24 The parties are, of course, free to contract that possession may pass at any time between the signing of the land sales contract and the payment of the full purchase price.

Problems often arise if the parties fail to mention a time for possession in the contract. Under traditional vendor-purchaser law, possession passed only upon payment of the full purchase price. Thus, unless the parties agreed to an earlier time of possession, the purchaser was not entitled to possession until the full purchase price had been paid. n25 However, in the case of land sales contracts, courts have now largely reversed the old vendor-purchaser rules. Today, the courts assume that the purchaser under a land sales contract is entitled to possession upon the signing of the contract, unless the contract specifies some other time. n26 The reasoning behind this change is the growing view that the land sales contract is merely a mortgage substitute and that the vendor is holding title merely to secure a debt that is owed by the purchaser. n27 As in a purchase money mortgage situation, it would be unnecessary for the seller to retain possession of the premises.

If the right of possession is unclear, the court may also consider who pays the taxes and whether or not the purchaser is required to pay interest on the unpaid balance of the contract price. Unless the contract states to the contrary, the party who pays the taxes on the property is entitled to possession of the premises. n28 Some courts have also held that if the vendor is receiving interest on the unpaid balance, the vendor is essentially a mortgagee and that the purchaser is therefore entitled to possession. n29

The conduct of the parties can also influence a court's decision about when possession should be transferred. If the vendor allows the purchaser to take possession after the signing of the contract, many courts will assume that was the intention of the parties and will allow the purchaser to remain in possession as long as the contract is in force and not in breach. n30

Right to possession becomes an issue under contract sales when the vendor tries to collect rent from the purchaser in

possession. Courts agree that a purchaser in rightful possession is under no obligation to pay rent. n31 However, in most states, if the purchaser defaults on the terms of the contract, not only can the vendor declare the contract void, but the purchaser who remains in possession would be liable for rent. n32

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.05

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.05 Destruction of the Property Being Purchased Under Contract.

[Go To Supp]

One issue not covered by the provisions in many land sales contracts is that of which party bears the risk of loss between the date of the execution of the contract and the date that title passes. Traditionally, under the doctrine of equitable conversion the risk of loss in a real estate contract is on the purchaser of the property, unless the contract specifies differently. n33 Some states have altered the traditional rule by statute or case law. n34 Often, the deciding factor is when the right to possession shifts. Under the Uniform Vendor-Purchaser Risk of Loss Act, the vendor retains the risk of loss for major destruction until possession has shifted to the purchaser, or until title passes, whichever occurs first. The risk of loss for minor damage remains with the purchaser.

Under most land sales contracts where the purchaser is given the right to possession, the risk of loss will shift to the purchaser, at least for major destruction. Therefore, the purchaser should insure the premises and should be required to do so under the terms of the contract. Failure to insure should be grounds for the vendor declaring the contract void, or at least the vendor should be empowered by the contract to purchase insurance and charge the cost back to the purchaser. If the vendor does insure the property and a loss occurs, many courts rule that the vendor holds the insurance proceeds in trust for the purchaser. n35 If the vendor receives more than the balance due on the contract, often the excess must be turned over to the purchaser. n36

When the *purchaser* carries the insurance and a loss occurs, the purchaser is deemed to hold the proceeds in trust for the vendor and must use the proceeds to pay off the contract. n37 Without the vendor's consent, the purchaser cannot use the insurance money to rebuild. n38 This can be a great inconvenience to the purchaser and could be altered by the contract terms. In states which treat the land sales contract more like a mortgage, often the courts will allow the purchaser to retain the proceeds and rebuild so long as the vendor's security interest is not impaired. n39

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.06

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.06 The Purchaser's Right to Assign.

As a general rule, unless the contract specifically prohibits assignment, a purchaser is free to assign contract rights under a land sales contract to a third party. n40 The transfer may take the form of an assignment of the original contract or a resale of the purchaser's interest by means of a new contract. If the new purchaser specifically agrees to assume all the obligations of the original contract, the new purchaser becomes primarily liable to the original vendor for the performance of all the terms of the contract. n41 Of course, the original purchaser remains liable to the original vendor, but only as a surety.

In many cases, the nature of the assignment transaction is not clear. The third party simply pays the original purchaser the equity and then begins making payments to the original vendor. No formal assignment is made, and often the contract between the parties is a mere verbal agreement for the third-party purchaser to "pick up the payments." In these cases, the courts must determine whether an assignment has been made and the third-party purchaser has thus assumed the contract, or an independent contract has been entered into between the original purchaser and the third-party purchaser. The court's determination of whether an assignment has taken place may affect the rights of the original vendor. If no assignment has taken place, there will be no privity of contract between the original vendor and the third party purchaser. Thus, the rights of the original vendor to sue the third-party vendor directly may be affected. n42

Courts in most states will enforce contract clauses that prohibit assignment by the purchaser, but they tend to construe the clauses narrowly. n43 Courts usually view these clauses the same way they view restrictive clauses on assignments and subleases in rental contracts. Thus, if the contract clause simply prohibits assignment of the purchaser's interest and the purchaser enters into a new sales contract with the third-party purchaser, the original contract clause has not been violated. n44 Similarly, courts usually hold that if the contract requires the vendor's permission prior to assignment, the vendor's permission may not be unreasonably withheld.

In cases where the contract does prohibit assignment or any transfer of the purchaser's interest, some purchasers have attacked these clauses as being unlawful restraints on alienation. These claims have met with mixed results and the courts have usually enforced the clauses, if the vendor has been able to show that a transfer would impair the security interest. n45

Where an assignment has taken place, the assignee takes only what the assignor had to assign. If there is a forfeiture clause, the assignee takes subject to the same clause and runs the risk of losing the property. If the assignor's contract requires the assignor to insure, the assignee must now insure the property. n46

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.07

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.07 The Purchaser's Right of Prepayment.

In general, the terms of the contract control the right of prepayment. There is no inherent right to prepay on an installment land sales contract, and in the absence of a provision granting the right to prepay, the purchaser must pay as set forth in the contract. n47

If the contract allows prepayment, but only under certain terms and upon the payment of certain fees, those terms must be complied with in order to prepay the contract. Some states have enacted statutes that allow prepayment of land sales contracts under certain conditions, even if the contract provides to the contrary. n48 At least one state has taken the position that, if the contract is silent on the subject of prepayment, prepayment will be allowed. n49 The better practice is to insert a clause in the contract dealing with prepayment; courts will usually enforce such a clause, unless its terms are extreme.

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.08

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.08 Vendor Remedies upon Default.

(d)

§ 100.08(a) Overview.

Usually, whenever a default occurs under an installment land sales contract, the purchaser is in possession of the property, and the vendor has received some payments and still holds legal title to the property. The property may have declined in value during the contract, either because of market factors or general wear and tear. It is also possible that the property will have increased in value during the period of the contract. However, most often, the vendor will face some damages as a result of the failure of the purchaser to perform. The vendor usually will want to be made whole and to receive the benefit of the bargain. One of the perceived advantages of the land sales contract is that the vendor will have a much easier time getting the land back than if a mortgage had been used. However, the remedy of resuming possession of the land may not fully compensate the vendor.

If the vendor has parted with the land and the purchaser has defaulted under the contract, the vendor has several possible remedies other than using the forfeiture provision of the contract. The vendor may bring an action for damages for breach of the contract, or may sue for specific performance, or for strict foreclosure, or for the payment of the purchase price, or the vendor may ask for a judicial sale of the property. n50

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 vendor! w/5 remed! w/15 default

§ 100.08(b) Forfeiture and Rescission.

The typical land sales contract contains a forfeiture clause which provides that if the purchaser defaults on the contract, the vendor may declare a forfeiture of the purchaser's interest in the contract. n51 The typical breach is the failure of the purchaser to make timely payments. Generally, the contract will provide that upon the breach of the contract by the purchaser (1) the vendor may *declare* the contract breached and the purchaser's interest in the land terminated, (2) the land is returned to the vendor, and (3) the vendor keeps all monies paid. However, in many situations this remedy will either not fully compensate the vendor for the loss or will grossly penalize the purchaser for the default. Historically,

many states would routinely enforce these clauses regardless of the effect on the purchaser. However, as more and more states have begun to regard the land sales contract as a substitute for a mortgage, the courts are increasingly favoring enforcement of other remedies which may be more equitable. n52

One of the problems courts face in enforcing forfeiture clauses is deciding which of the alternative remedies is proper. On one hand, if the contract provides that the vendor may declare a forfeiture upon breach of the contract, it could be argued that the contract has been rescinded. n53 If so, then the courts should attempt to put the parties where they were before the transaction took place. This would mean that the vendor should get the land back and the purchaser should get the money back. n54 To allow the vendor to get the land back and retain the monies paid would be inconsistent with the idea that the contract had been rescinded. Also, since the purchaser has used the land for a period, a rental obligation would have been incurred. In many instances the monies paid by the purchaser would exceed the rental value and the value of the improvements, and the court may consider it unfair to allow the vendor to keep the excess. n55

However, some courts view the forfeiture remedy as a contract-based procedure. If the contract provides forfeiture as a remedy upon breach, the vendor is simply declaring the contract breached and no longer has an obligation to perform; the vendor can retain the monies paid as liquidated damages. The court will be concerned about seeing that the vendor gets the benefit of the bargain or is placed in the position as if the contract had been performed. Under this theory, the value of improvements and rental value are not important. Under basic contract law, upon breach of the contract the innocent party should be returned to the position the party would have been in had the contract been performed. Thus, the purchaser would be entitled to payment of all the monies due under the contract. If the vendor gets the property back, the property will be treated as payment on the contract price. If the land value combined with the payments that have been made equal the contract price, then neither party would be entitled to any further relief. However, if the land value and the monies paid do not equal the contract price, the vendor should be entitled to recover damages. Conversely, if the land value and the payments exceed the contract price, the purchaser should get a refund. Most land sales contracts provide that the retention of the monies paid, in addition to getting the land back, is to be viewed as liquidated damages. If the court adopts the contract breach theory of forfeiture, it will then judge the validity of the retention on the monies paid as liquidated damages as it does in any other liquidated damages clause.

Often, the courts do not articulate clearly which theory they are following, and sometimes seem to adopt a hybrid of the two. A few courts have decided to allow the vendor to decide which theory to adopt. California allows the vendor to seek rescission-based damages, which are essentially the return of the property and the compensation for the rental value during the time the purchaser occupied the property, or to seek damages for breach of contract, which are essentially the benefit of the bargain damages. n56

In states that recognize the validity of the forfeiture clause, courts seem to consider the enforcement of the clause as more equitable in nature than legal. n57 Thus the courts may refuse to enforce the forfeiture clause under either theory, unless the purchaser has had a chance to redeem the land or will get back some of the money paid under the contract. n58

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 forfeit! or resci!

§ 100.08(c) Strict Foreclosure.

Many states that treat the installment land sales contract as a mortgage, n59 consequently make available the remedy of strict foreclosure. n60 Under strict foreclosure, the court states a date by which the purchaser must pay the unpaid balance of the contract, plus interest and legal charges. If the purchaser fails to make timely payment, the purchaser's rights in the property are terminated and the vendor is once again owner of the property unencumbered by the rights of the vendor. n61

Since strict foreclosure is based on the contract nature of the transaction, if the property were worth less than the damages incurred by the breach of the contract, the vendor ought to be entitled to a deficiency judgment for the difference. However, in most instances states have anti-deficiency judgment statutes which apply to strict foreclosure actions of mortgages and they may apply these statutes to strict foreclosures of land sales contracts. n62

If the property is worth more than the debt owed, then under the contract theory of damages, the purchaser would be entitled to restitution of the excess amount. However, courts have traditionally been reluctant to grant such relief. What is more likely is that if the difference between the amount owed and the value of the property is great, the court will order that the property be sold at public sale rather than allow strict foreclosure.

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 strict w/1 foreclos!

§ 100.08(d) Judicial Sale.

Another remedy available to the vendor is foreclosure by judicial sale of the property. The main difference between strict foreclosure and foreclosure by judicial sale is that the deadline for remedying the default triggers a court order for sale, rather than termination of the purchaser's rights in the property. n63 From the proceeds of the sale, the court will order the vendor to be paid and any surplus to be refunded to the purchaser or any other claimants. The advantage of this type of foreclosure for the purchaser is that there is a method to ensure that the vendor does not get a windfall; if the purchaser has built up some equity in the property, that equity may be retained by the purchaser. As in a strict foreclosure, if there is a deficiency, the vendor should be entitled to a judgment for that amount, unless a statute prevents deficiency judgments.

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 judicial w/1 sale

§ 100.08(e) Specific Performance.

Another remedy available to the vendor is that of specific performance. n64 Under this remedy, the vendor tenders title to the purchaser and demands the purchase price in full. If the purchaser fails to perform, the vendor seeks a court order for the payment of the purchase price. This remedy is most successful in cases where the original contract contains a clause accelerating the payments upon default so that it may be shown that the purchaser owes the entire purchase price.

Specific performance is an effective remedy when the purchaser has the funds to comply with the order or when the property would be very difficult to resell. However, since this is an equitable action, the purchaser will not be ordered to perform if he can show that the prior failure was involuntary. In other words, if the purchaser failed to perform because of inability to make the payments, an order to perform will not be issued if the inability to make payments has not changed. However, if the failure to perform is voluntary and the purchaser in fact has the means to comply, an order to perform will be an effective and available remedy. Also, specific performance may be available as a remedy for the purchaser to enforce against the vendor. n65 In a California case, the court granted the purchaser specific performance of a land sales contract, even though she was in default, when it found that there was sufficient security for the payment of the debt and that she had paid over half of the purchase price of the property. n66

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 specific w/1 performance

§ 100.08(f) Payment of the Purchase Price.

Some jurisdictions consider the remedy of payment of the purchase as distinct from an action for specific performance. n67 Although the two remedies may differ in form, the result is usually the same. The main difference is that a suit for specific performance is an equitable remedy and the action for payment of the purchase price is one at law. The right to a jury trial may be present in the legal action but not in the equitable proceeding.

In the action for payment of the purchase price, the vendor sues the purchaser for breach of contract and asks that the purchaser be ordered to tender the purchase price as agreed upon in the contract. Upon tender, the vendor will convey the property to the purchaser. One advantage of this remedy over specific performance is that the equitable defense of inability to perform would not be available. Of course, if, in fact, the purchaser cannot perform, ordering the purchaser to perform will be useless.

COMPUTER-ASSISTED RESEARCH

LEXIS: specific w/1 performance w/30 payment w/2 purchase w/1 price w/50 land w/1 contract!

§ 100.08(g) Damages.

One other remedy available to the vendor in the case of default by the purchaser is to affirm the existence of the contract and sue for damages for the breach of the contract. n68 This remedy is best used when the value of the land exceeds the amount owed on the contract. The measure of damages in a land sales contract case would be the difference between the fair market price and the amount still owed on the contract. n69 The vendor also has the option of keeping the contract alive and simply suing for past due installments; however, in most cases this would be a futile act. Generally, the vendor wishes to treat the breach as a material one and as substantial enough to end the contract. If the contract has been materially breached, the purchaser no longer has a right to occupy the premises and possession should be returned to the vendor. This would be so, even if there is no forfeiture clause in the contract. If the value of the land exceeds the amount due on the contract, the vendor should return the excess to the purchaser. If, however, the amount due on the contract exceeds the current value of the land, the vendor should be able to retain the property and get a damage judgment for the deficit. While this may appear to be identical to a forfeiture remedy, there is a slight difference, because in an action for damages, the vendor may not regain the land and keep all payments made if that exceeds the amount of damage suffered by the vendor.

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.09

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.09 Purchaser Protection on Default.

[Go To Supp]

§ 100.09(a) Overview.

As noted earlier, many courts treat the land sales contract similar to a mortgage. n70 They thus offer to the purchaser a number of protections that are usually afforded to the mortgagor. For example, some states now give land sales purchasers a period of redemption to either bring payments current or to pay the total amount due. Also, courts in some states will order a judicial sale if there has been a breach of the contract, and will refund any excess amounts to the purchaser. Courts are also becoming somewhat reluctant to enforce forfeiture clauses and are requiring some sort of foreclosure procedure in the event of a breach. In addition to these protections, some equitable protections are afforded to the purchasers.

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 purchaser w/15 protect! w/15 default

§ 100.09(b) Waiver.

Often vendors are quite tolerant in dealing with purchasers in land sales contracts. Since the vendor wants the contract to be performed, the vendor often will not insist on strict compliance with the terms of the contract. This is most often true in connection with late payments. While the contract may state that time is of the essence in payment, often the vendor will willingly accept payments after the due date. After a period of time, the vendor may lose patience or, if the payment is not made, the vendor may wish to declare a forfeiture or pursue other remedies. The purchaser will argue that the conduct of the vendor has constituted a waiver of provisions of the contract and that the vendor is legally bound to accept the late payment. Many courts have accepted this argument. n71

While many states accept the theory of waiver, there is no agreement on just what conduct by the vendor will result in a waiver. Usually, acceptance of one late payment without protest will not result in a waiver. n72 However, beyond that statement there is little agreement among the courts. The cases are difficult to reconcile. It often seems that the courts are more likely to accept the waiver doctrine in cases where the purchaser has built up substantial equity, and are less

likely to accept the doctrine in cases where the purchaser has little or no equity and the payments made by the purchaser do not even equal the rental value of the property. n73

What is clear is that a waiver can take place regardless of the intent of the vendor. No court seems to require that the vendor intend the actions to be a waiver in order to find that a waiver has occurred. What is essential is a finding that the purchaser has been lulled into believing that prompt performance is not required and that late performance is acceptable. n74

Acceptance of late payments may act as a waiver of demanding prompt payment, but would not act as a waiver of payment altogether. The best protection for the vendor in accepting a late payment is to protest the late payment and insist that all future payments be made in a timely fashion and inform the purchaser that future late payments will be refused. Courts have held that such conduct will preclude use of the waiver defense. n75

The waiver defense can be invoked against any of the terms of the contract in addition to the payment provisions. Thus, not only could the vendor lose the right to insist on prompt payment, but failure to declare a forfeiture because of late payment might cause loss of the right to declare a forfeiture in the future. n76 The same would be true for failure to invoke an optional balloon payment clause.

If the vendor has engaged in conduct which would give the purchaser the right to invoke the waiver defense, the question then arises as to what the vendor can do to reinstate rights and avoid further waivers. Generally, courts required that the vendor must give the purchaser clear and reasonable notice that further non-compliance will not be accepted and that the purchaser has a reasonable time to cure his latest default. n77 The amount of time that is considered reasonable will depend on the breach and the time needed to correct the breach.

Many vendors try to avoid the waiver defense by inserting clauses in contracts which provide that acceptance of late payments or other forbearance by the vendor will not constitute a waiver. As with other self-serving clauses in contracts, these clauses are seldom enforced. n78

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 vendor! w/30 waive!

§ 100.09(c) Election of Remedies.

In a state that recognizes forfeiture as a remedy, the vendor will face the defense of election of remedies. If the vendor decides to declare a forfeiture and retake the property, the vendor may be barred from using any other remedy, including suing for any type of deficiency judgment. n79 Often the harshness of this rule is ameliorated by courts when the equities are with the vendor or there is some question whether the election has actually taken place. n80 The basis for this rule is that the vendor cannot pursue two inconsistent remedies. If the vendor chooses to pursue the forfeiture remedy, the contract is considered terminated; if the vendor pursues the breach remedy, the contract is considered still in effect.

Determining at what point in time the vendor must make the election has been a troublesome issue. Early cases suggested that as soon as the vendor sent out the forfeiture notice, the election was made and could not be changed. However, recent cases have taken a more lenient approach. Today, it is often possible to defer an election of remedies until a judgment is obtained n81 or the purchaser has materially changed position in reliance on the vendor's conduct.

COMPUTER-ASSISTED RESEARCH

LEXIS: vendor! w/15 election w/1 remed!

§ 100.09(d) Redemption.

As was stated earlier in the section on vendor remedies, one factor which makes asserting forfeiture clauses difficult is that many states now offer the purchaser a right of redemption after default similar to the mortgagor's equity of redemption. This right to reinstate or complete the contract, even after default, is granted in some states by statute. n82 In these states, the purchaser is given a set number of days either from the date of default or from the date on which the vendor sends a notice of default to cure the defect.

In states which require that the land sales contract be terminated by foreclosure, there is always a period of redemption. That period runs from the time of the notice of default until the action to foreclose is completed. n83

Some states indirectly confer a redemption period by requiring the vendor to give the purchaser notice before exercising the forfeiture clause of the contract. During the notice period the purchaser can avoid the forfeiture clause by completing the contract. n84

A few states have enacted statutes which give the purchaser a right to reinstate the contract upon payment of any amounts in default. n85 This right generally exists up until the date of forfeiture or foreclosure. Other states have accomplished the same result using the equity powers of the court in cases where the purchaser has accumulated substantial equity in the property. n86

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 redemption

§ 100.09(e) Restitution.

In some states, the purchaser is offered the protection of the equitable doctrine of restitution. In these states, to the extent that the purchaser's payments exceed the vendor's loss, the purchaser is entitled to a refund of that excess. This is a purely equitable remedy and is usually tied to the court's displeasure with the forfeiture provisions of the contract.

In California, the purchaser is entitled to restitution to the extent that the payments plus the cost of the improvements exceed the vendor's losses. n87 This is a liberal approach to restitution. In most states, the court will grant restitution only if the amount that the vendor is retaining greatly exceeds the vendor's loss. n88

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.10

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.10 Title Considerations.

§ 100.10(a) Vendor's Title.

Unless the contract provides otherwise, the vendor is required to tender marketable title to the property. This means that the title must be free of encumbrances and free from substantial doubts as to the validity of title. n89 Often the contract provides that the purchaser will take the property subject to easements and restrictions of record. The contract may also list some specific encumbrances which the purchaser agrees to accept.

Absent a contrary provision in the contract, the vendor does not have to furnish a title policy or in any other way prove that the title is marketable. The burden is usually on the purchaser to search the record and determine if the title is marketable. In this respect, the land sales contract is similar to an earnest money contract. However, under a land sales contract, the vendor is not required to possess marketable title until the time for delivery, which may be years after the contract is entered into. n90 Thus, while the contract is in force, the vendor does not have an obligation to have marketable title. The title could be encumbered or have defects during that time and the purchaser would have no remedy or excuse for non-performance. Because of this risk, some purchasers insert provisions in the contract that require the vendor to have marketable title before the transfer of title or, if the vendor encumbers the property, that the purchaser can suspend or cease payments or make payments on behalf of the vendor. Some state statutes prohibit the vendor from encumbering the property in an amount greater than the unpaid purchase price. n91

Thus, absent a statute or contract provision, the purchaser cannot complain about title defects until the time for transfer of title. However, if the defect is one that cannot be cured, the purchaser may be able to allege a breach of contract before the time for transfer of title. n92

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 contract! w/50 vendor! w/15 title

§ 100.10(b) Pre-existing Liens.

As a general rule, the purchaser under a land sales contract takes the property subject to all prior recorded liens or

encumbrances. Often the purchaser will be buying property that is subject to a blanket mortgage covering not only the contract property, but additional property. The amount of the mortgaged indebtedness usually far exceeds the purchase price of the lot that is being bought. However, absent provisions for partial release in the blanket mortgage, the mortgage will not be released until the entire debt is paid. Thus, the purchaser could be making payments which the vendor applies to the blanket mortgage, but when the time comes for conveyance of title to the purchaser there is still money owed on the blanket mortgage and the mortgagee will not release the lot from the encumbrance.

The purchaser should examine the title prior to signing the contract to ascertain if there are any records of encumbrances and, if any are found, what the provisions are for lot releases. Otherwise, the only remedy may be to bring an action for breach of contract after making all the payments.

COMPUTER-ASSISTED RESEARCH

LEXIS: land w/1 w/1 contract! w/50 prior w/5 lien! or encumbrance!

§ 100.10(c) Post-contract Liens.

Generally, if the purchaser records the contract, the purchaser's interest in the property will be superior to all subsequent liens and transfers. Once recorded, the contract will put all parties on notice and will relate back to the date of the contract or recording. n93 If the contract is not recorded, the purchaser may not have priority over third parties who subsequently acquire an interest in the property without notice of the purchaser's interest. Certainly, in a race state the purchaser who fails to record will lose priority to third parties who record first. In other jurisdictions, the question of notice will be of paramount importance.

Actual notice exists in most cases where the purchaser takes possession of the land at the time the contract is signed. In states other than race states, the actual notice of possession will usually give notice to third parties and will preserve the purchaser's priority. Occasionally, the possession is deemed insufficient to give actual notice. n94

Another reason for recording the land sales contract is to preserve the purchaser's priority over subsequent judgment liens against the vendor that may attach to the property. In states which recognize that the vendor retains title under the land sales contract, a judgment lien will attach to that interest. n95 Of course, a recorded contract will have priority over the judgment lien. But if the purchaser has failed to record or the judgment creditor is not otherwise on notice of the purchaser's interest, the lien will prevail over the purchaser's interest. If equitable conversion applies to the contract, the vendor's interest may be considered as personal property and the lien may not attach. n96

CHAPTER 100 INSTALLMENT LAND SALES CONTRACTS

12-100 Thompson on Real Property, Thomas Editions § 100.11

AUTHOR: Professor Buddy O. H. Herring School of Law Wake Forest University

§ 100.11 Bankruptcy.

Before 1978, purchasers under a land sales contract faced a difficult, if not impossible, task if the vendor declared bankruptcy. Under § 70(b) of the pre-1978 Bankruptcy Act, the trustee could assume or reject all executory contracts, including land sales contracts. In *In re New York Investors Mutual Group, Inc.*, n97 the court held that if the trustee rejected the contract, the purchaser could bring a suit for damages for breach of contract, but had no special claim to the property and in most cases ended up with nothing but a claim that was never paid or was paid at a fraction of its worth.

Under the 1978 Reform of the Bankruptcy Act, the purchaser under a land sales contract is accorded much more favorable treatment. While the trustee still has the right to affirm or reject the contract, n98 that right is subject to the right of the purchaser who is in possession to obtain legal title by completing payments under the contract. n99 Thus, a purchaser in possession can obtain title by completing the contract. However, if the purchaser is not in possession, the trustee may reject the contract and leave the purchaser with only an action for damages for breach, which is treated as an unsecured claim. n100 In addition, the purchaser not in possession is given a secured claim for the amount already paid; the claim for damages for breach of contract is an unsecured claim. n101

CHAPTER 101 MORTGAGES, DEEDS OF TRUSTS AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions § 101.01

AUTHOR: Professor Jerome J. Curtis, Jr. McGeorge School of Law University of the Pacific

§ 101.01 History, Theories and Making of Mortgages.

§ 101.01(a) Development of the English Mortgage.

One early antecedent of the modern mortgage was the gage, which seems to have begun, not as security for a debt at all, but rather as payment subject to a right to recapture the gage upon substituting a different form of payment. The gage existed in Anglo-Saxon times and was, in essence, a "redeemable forfeit" under which the land and the debt were equated so that, if there were no redemption, the gagee had no personal claim and was left only with the land. n1

By the 13th century, two types of gages were present; both put the gagee in actual possession of the land. Under the first, the *vivum vadium* (living pledge), it was agreed that the gagee would apply the rents and profits to the debt. Under the second, the *mortuum vadium* (dead pledge), the rents and profits were not applied to the debt, but were retained by the gagee as interest. The gagee who failed to apply the income to the debt was regarded as a usurer and, though technically the gage was nevertheless lawful, upon the gagee's death if the gage had not been terminated, the gagee "dies as a sinner and his chattels are forfeited to the king." n2 A gage might be usufructory or proprietary, the former giving a right only to the rents and profits and the latter giving a property right to the gagee. The gage existed only so long as the gagee actually possessed the land. Should the gagee lose possession for any reason, even by reason of being ousted by the debtor, the gage terminated, and the courts would not assist the gagee in recovering possession. Some have speculated that an equity of redemption was recognized but, whether it was or not, by the early 14th century, the law courts enforced gages strictly according to their terms. n3

Because of the Church's ban on interest, Christian lenders used the mortgage as a device to earn a profit on moneylending, but without calling it interest. Still, Christian lenders had to take possession of the land to enjoy the benefits of the mortgage. Jewish lenders did not suffer under the constraints of the Church's attitude on usury and were permitted to adhere to their own laws in commercial matters. Jewish law recognized a gage which did not require the creditor to take possession of the land; a decided advantage from the point of view of Christian lenders who were secure only so long as they succeeded in maintaining possession. The Jewish gage ceased to have any significance in England upon the banishment of the Jews by Edward I in 1290. n4

By the 15th century, the gage had been blended with the law of estates to produce a conveyance of title to the

moneylender, subject to the condition subsequent that timely payments of the debt be made. n5 Littleton explains that this device was dubbed mortgage (i.e., a dead gage) because:

> ... it is doubtful whether the feoffor will pay at the day limited such sum; and if he doth not pay, then the land which is put in pledge upon condition for the payment of the money is taken from him for ever, and so dead to him on condition. And if he doth pay the money, then the pledge is dead as to the tenant. n6

The precise point in time when the conveyance upon condition was accepted as a legitimate security device is uncertain, but by the 17th century it was not only accepted but had been supplanted by an unconditional transfer of a fee accompanied with a covenant by the grantee to reconvey on timely repayment. n7 Despite this development, mortgages still left the mortgagees in possession. Although after the enactment of the Statute of Uses in 1536 it was possible to create springing executory interests, and thus to create contingent freehold interests in mortgagees, mortgagees nevertheless bargained for immediate possession in order to collect income in the form of rents and profits rather than interest. Not until the mid-16th century were mortgagors left in possession, for by then equity had begun to compel mortgagees in possession to account to their mortgagors. n8

At the same time, the chancellor was beginning to recognize the modern redemption rights of mortgagors while the law courts literally enforced the terms of the conveyance. Before a court of law, a mortgagor had no interest in the land upon a default; after default it was too late for the mortgagor to exercise any right of entry and any undertaking by the mortgagee to reconvey was binding only if the debt were timely paid. n9 The chancellor, however, would sometimes compel a reconveyance to the mortgagor after a default, that is, would permit the mortgagor to redeem.

Various theories have been advanced to explain the chancellor's solicitude for defaulted mortgagors. The chancellor may have been influenced by Roman law which, since Justinian, had required mortgagees in possession to reconvey to their debtors once the value of the rents and profits collected was sufficient to retire the debt. n10 Whatever may have been the antecedents of the equitable right of redemption, it seems rather clear that by the early 17th century this right was being perceived as absolute. n11 At first, equity afforded relief from forfeiture only upon such equitable considerations as fraud, mistake, and unconscionability. n12 As late as 1684, Lord Nottingham was reversed for allowing redemption, the Lord Keeper remarking:

> Now, when by a contingency it happens to be a good bargain, there is no reason to raise an equity from thence to take the estate from the mortgagee. n13

Yet, by the end of the 17th century, it was firmly established that the "right of redemption could not be clogged or fettered in any way; any agreement which had this effect was void." n14 The focus was no longer on the equities of the particular case, but rather upon the conclusively presumed inequality of the relative bargaining positions of mortgagors and mortgagees. Redemption had become an absolute right because forfeiture

> puts the borrower too much in the power of the lender, who, being distressed at the time, is too inclinable to submit to any terms proposed on the part of the lender. n15

The equitable right to redeem, of course, made the titles of mortgagees after default unmarketable, since the mortgagees could not rest assured that at some future date their mortgagors would not seek equity's aid through a bill to redeem. This led, in turn, to equitable foreclosure of the right to redeem via a decree in chancery barring the redemption right if not exercised with a time stipulated in the decree. n16

§ 101.01(b) Theories of Mortgages in the United States.

In the United States three theories have been used to explain the mortgage. In most instances, the outcome of a particular controversy will not depend on the theory applied, although occasionally the theories produce conflicting

results, especially in relation to the rights of mortgagees after default. These theories are (1) the title theory, (2) the lien theory, and (3) the intermediate theory, with the lien theory being predominant in the United States.

It should be noted that it is sometimes difficult to determine to which of these theories a particular jurisdiction adheres, for a state may take a lien theory approach to certain controversies and a title theory approach to others. n17 This is particularly common in states which view themselves as title states but which do not recognize mortgagees as being entitled to possession or rents before default, a recognition that should put them in the group of states adopting the intermediate theory. n18

§ 101.01(b)(1) The Title Theory.

At one time most jurisdictions accepted the English characterization of a mortgage as a conveyance of a defeasible interest. This was probably the result of the enthusiasm with which the New York courts, which had a profound impact on the development of American equity jurisprudence, followed Lord Mansfield. n19 While the theory has now been spurned by most states, it continues in a number of them, particularly in the east. n20

Because they view mortgages as transfers of legal defeasible interests, title theory states generally confer upon mortgagees the usual incidents of ownership of a corporeal estate and thus, in the absence of a contrary agreement, recognize a right of possession in mortgagees. n21 This recognition of the right to possession distinguishes title theory states from the lien theory states. Unless the terms of the contract permit mortgagors to retain possession, mortgagees in title theory states are usually entitled to possession upon the giving of the mortgage and, in any event, may maintain legal actions to secure possession upon default. n22 Some title theory states, though they permit the parties to agree otherwise, permit mortgagors to occupy the premises until default. n23 In lien theory states, at least in theory, mortgagors cannot be denied possession except through foreclosure or, in many of them, pursuant to agreement. n24 This difference in the allocation of possessory rights can produce divergent approaches to other questions which are discussed in several succeeding sections. In general, however, the parties to a mortgage in a title theory state agree that the mortgagor may retain possession until default. It can be noted that it is usually only the respective rights of mortgagors and mortgagees after default which vary according to the theory invoked, although other issues can occasionally be impacted, such as the liability of a mortgagor for waste or the rights of mortgagees after default against tenants of their mortgagors. Likewise, mortgagees may find it easier in title theory states than in lien theory states to secure control of the security before foreclosure and sometimes can even do so without seeking foreclosure.

In title theory and lien theory jurisdictions alike, mortgage contracts almost always entitle mortgagors to keep possession until default. It has been stated that, in the absence of an express agreement permitting mortgagors to retain possession, courts are eager to find an implicit agreement to that effect; n25 the extent of the judicial enthusiasm is, however, open to question. n26 Moreover, the title and lien theory states are not different in determining the rights of strangers to the mortgages, for even title theory states recognize the preeminent title of mortgagors in non-mortgage contexts. Thus, Massachusetts refused to excuse a trespass on the grounds that the plaintiff had mortgaged the premises, n27 and in Tennessee the title theory is "only applied when necessary to protect the mortgagee's security afforded by the estate." n28

§ 101.01(b)(2) The Lien Theory.

In most American states, the legal concept of a mortgage as a transfer of a legal title has been totally eclipsed by the view of the equity courts that title remains in the mortgagor and that the mortgagee holds only a lien as security. n29 Unlike title theory states where the "mortgage is one thing at law and another in equity" (an estate in the former and

security in the other), n30 in lien theory jurisdictions the mortgagor retains both legal and equitable title while the mortgagee is remitted to lienholder status. n31 Until the interest of the mortgagor is extinguished through foreclosure, all the usual legal incidents of ownership belong to the mortgagor, most importantly the right of possession, although through the appointment of a receiver or under a clause assigning rents and profits mortgagees in lien theory states can sometimes reap some of the possessory benefits before foreclosure. n32

The lien theory is, in part, the product of statutes restricting the legal remedies of mortgagees. The first of these enactments took place in South Carolina in 1791 and decreed that mortgagees could not maintain actions for possession after default. n33 Typically, the statutes provide that mortgagees may not take possession except via foreclosure. n34 Variants include statutory provisions that, unless the parties otherwise agree, mortgagees are not entitled to possession before foreclosure, n35 as well as statutes denying possession to mortgagees before foreclosure notwithstanding contrary agreements. n36 Lien theory states are not in agreement about the enforceability of mortgage agreements granting possessory rights to mortgagees after default and before foreclosure. As indicated, some statutes clearly render such agreements unenforceable, n37 but some courts without the aid of statutory enactments have refused to enforce the agreements on the grounds that they are inconsistent with the characterization of mortgages as liens. n38 Other lien theory states see nothing inappropriate in agreements conferring possessory rights on mortgagees after default and before foreclosure. n39

COMPUTER-ASSISTED RESEARCH

LEXIS: lien pre/1 theory w/50 mortgage

§ 101.01(b)(3) The Intermediate Theory.

Other states n40 strike a position intermediate between the title and lien theories, holding that, prior to default, mortgagees hold mere liens or, "at best, a superficial title," n41 but that after default they acquire a legal interest. The primary distinction between title states and intermediate theory states is that, in the absence of a contrary agreement, the mortgagee in the intermediate theory states is not entitled to possession until default, while in the title theory states the mortgagee is entitled to possession upon the giving of the mortgage. It is therefore difficult to believe that so-called title theory states which do not give possession to mortgagors until defaults are not, in reality, intermediate theory states. n42

§ 101.01(b)(4) Deeds of Trust.

Although in a very few circumstances, deeds of trust, where they are accepted as legitimate security devices, produce results different than those that would obtain under a mortgage, n43 in most states the rights of the trustor and beneficiary are equated with those of mortgagor and mortgagee. n44

§ 101.01(c) Form and Requisites of Mortgages.

At common law, to create a mortgage valid between the mortgagor and mortgagee no particular form is necessary beyond the basic requirements of an underlying obligation to be secured and a written and delivered manifestation of the mortgagor's intent to secure the obligation with his realty. n45 It is basic law that there can be no mortgage without a debt, but the evidence of debt can take any number of forms and need not be a personal obligation. n46 Whether a mortgage is regarded as a transfer of a legal interest or simply as the creation of a lien, for purposes of the statute of frauds it is regarded as an interest in realty and therefore is unenforceable unless evidenced by a writing satisfying the statute of frauds; n47 in addition, the writing must be delivered if it is to take effect as a mortgage. n48 Security

agreements falling short of the requirements for legal mortgages may nevertheless be deemed as equitable mortgages. n49

Despite the simplicity of the requirements for a valid mortgage, however, mortgages typically contain many more provisions than a simple manifestation of intent to encumber land because, without more, mortgages, though valid between the parties, may not survive transfer of the encumbered premises to third parties. In order to preserve mortgages against third parties claiming interests in the premises, prudence dictates that the mortgage be recorded n50 and that the secured obligation be described with some specificity. n51

Lenders desiring to secure federal insurance on their secured loans or to place their loans through the secondary market must employ terms approved by the appropriate federal agency. n52 Because of the dominant role of the federal government in the secondary mortgage market, it can be plausibly maintained that a federal common law of mortgages has evolved. The prevalence of uniform forms for mortgage documents and the role of the federal courts in adjudicating disputes involving the federal government or its instrumentalities as mortgagees seem to be producing, in many respects, somewhat uniform forms for debts secured by mortgages and for the mortgages themselves.

§ 101.01(c)(1) The Mortgage Obligation.

Without a debt there can be no mortgage, n53 but the debt need not be one for which anyone is personally liable, and there is respectable authority that it need not be supported by consideration. n54 This does not mean that consideration must be given for the mortgage since a security interest in land, like any other interest in realty, can be created by gratuitous conveyance. n55 Thus, a mortgage can be given to secure a debt previously incurred by the mortgagor or by someone else. n56 Whether the secured debt must itself be supported by consideration is another matter which has generated some confusion in the cases and is discussed below in this section. n57 While dictum often appears in decisions to the effect that personal liability is required on the obligation, n58 such language should not be taken at face value. n59 Surely, the secured obligation can be one for which the mortgagor or a third party is personally liable and, in most cases, there is personal liability, as where the purchaser of land gives the seller a personal promissory note in partial payment of purchase price together with a purchase money mortgage. Yet, there seems little doubt that personal responsibility is not essential, as is evident from cases upholding mortgages given to secure non-recourse notes. n60

The underlying obligation, with the possible exception of the so-called "gift" mortgages and debts which are time-barred under the statute of limitations, must be enforceable. It must be collectible from the debtor's general assets, in which case the debtor is personally bound, or out of the specified property, as is true, for example, where a mortgage is given to secure a non-recourse note. Thus, if the mortgagor has a valid defense to enforcement of the obligation, there is no debt and hence no mortgage. n61 A debt unenforceable because of fraud practiced on the mortgagor cannot be secured by a mortgage; n62 however, debts unenforceable against mortgagors may become enforceable against subsequent grantees and/or the interests of such grantees. n63

The question arises whether a debt unsupported by consideration can be secured by a mortgage. A square split of authority exists over validity of gift mortgages, that is, mortgages given to secure gratuitous promises. The American Law Institute at its annual meeting in 1991 tentatively adopted the position that consideration is simply not required, n64 but the reporters acknowledged the division in the case law. n65 An obligation unenforceable between the original parties may become enforceable if the benefit of the obligation is transferred to a holder in due course or if, under common law principles, the obligor is estopped from asserting a defense against a subsequent good faith purchaser of the chose in action.

Title theory states generally uphold mortgages securing debts which have become unenforceable because of the running of the statute of limitations upon the debt. In these jurisdictions, mortgagees may foreclose, but they are not entitled to deficiency judgments. n66 The theory seems to be that the limitation period affects only the debt, not the mortgagee's title and remedies based on that title. Further, the debtor is entitled to no equitable relief unless the debtor does equity

by paying the debt despite the running of the statute of limitations on the personal liability. Similar reasoning has led to decisions in both title and lien theory states that trustees under deeds of trust may foreclose even though the underlying debt is unenforceable under the statute of limitations. n67 Most lien theory states are in accord with the title theory states on the effect of the running of the statute upon mortgages, but many of them refuse to enforce mortgages after the debts are time-barred. n68 While enforcing security interests after the debts have become unenforceable because of the limitation period may seem inconsistent with the general requirement that the debt be enforceable, it can be reconciled with the general principle by limiting the general principle to cases where substantive defenses to the enforcement of the obligation exist. Of course, this rationale does not explain decisions enforcing mortgages given to secure gratuitous promises.

Only obligations capable of being reduced to a liquidated sum can be secured by mortgages. n69 Nearly all mortgage obligations are promises to pay money, usually to repay with interest the amount of the loan. Often the amount of the loan is uncertain, as in the cases of open accounts, home equity loans, and construction loans. Nevertheless, in these latter types of cases, the amount owing at any particular time can be determined in monetary terms. When the obligation cannot be reduced to monetary terms, it is impossible to establish a redemption price or to ascertain whether a foreclosure sale has produced a surplus. Such considerations caused one court to doubt that a promise to consent to a zoning application could be secured by a mortgage. n70 Similarly, a promise to provide emotional support was held incapable of being secured under a mortgage. n71 The requirement that the debt be liquidated can be satisfied at the time of foreclosure, even though at an earlier time it could not have been met. n72

Unless it is within the statute of frauds, the obligation secured by a mortgage does not have to be written. n73 In almost all cases, however, the obligation is evidenced by a writing, usually a note or bond, which exists independently of the mortgage, and the terms of which may or may not be incorporated into the mortgage. n74 It is generally agreed that, regardless of whether the obligation itself must be reduced to writing, the terms of the obligation need not be set forth in the mortgage. Certainly, between the original parties to the transaction there should be no concern over including the terms of the obligation in the mortgage so long as the debt can be established by competent evidence. n75 When the rights of third parties--usually successors in interest to mortgagees--become involved, it is occasionally required by judicial decision or statute that certain minimal information about the debt be stated in the mortgage, but by the weight of authority mortgages are valid against third parties, even if they supply no information about the debt other than the identity of the mortgagee. n76 That the debt need not be specifically described in the mortgage is justified on the ground that, if the mortgagee is identified, third parties should be able to ascertain the terms of the obligation by making inquiry of the mortgagee. n77 In practice, third parties make such an inquiry even when the terms of the obligation are set forth in great detail in the mortgage because, without inquiring, they would be unable to determine if the original amount of the debt had been reduced through payments or perhaps increased as the result of accumulated interest, late charges, and the like. It should, therefore, be difficult for third parties to assert that they have been misled where they have not inquired of the mortgagee.

A few states require that some terms of the obligation be specifically included in the mortgage. In Illinois, the amount of the mortgage, if known, should be stated, as well as the maturity date. n78 In Kentucky the amount of the debt should also be stated. n79 Georgia requires a statement of the maturity date. n80 The Colorado Supreme Court has intimated that the debt must be described in the security instrument, n81 but a decision of the Colorado Court of Appeals has denied the existence of such a requirement. n82 In California an acceleration clause in connection with certain residential mortgages is not valid unless it is set forth in its entirety in both the evidence of indebtedness and the security instrument, although failure to include the clause in both instruments presumably will not invalidate the security instrument itself. n83

In practice the major provisions of the obligation are normally identified in the mortgage. Commonly, the mortgage will recite that it is given to secure a promissory note and will identify the principal amount of the note. Other information may also be given. Although this information may not be required, its inclusion occasionally can raise problems where the information is inaccurate. If a discrepancy exists between the actual terms of the debt and the description thereof in

the mortgage, it is clear that as between the parties to the transaction the actual terms govern. n84

Although the debt is enforceable between the original parties according to its terms, despite an erroneous description in the security instrument, it has been suggested that third parties can be misled by such discrepancies, especially by a recitation understating the amount of the debt. n85 Where the amount has been overstated, the mortgage is generally upheld unless the mis-description was designed to defraud others. n86 Because of the reality that the amount owing on an obligation so often varies during its lifetime and because of the practice of third parties making inquiry of mortgagees about the balance when taking a conveyance of or encumbrance on the encumbered property, it is usually held that third parties cannot rely on recitations of the amount in the security instrument but should ascertain the amount by making inquiry of the secured parties. n87 This reasoning seems equally applicable to understatements of the amount of the debt. n88

Mortgages are often given to secure future extensions of credit (future advance clause) or even all present and future loans (dragnet clause). Such mortgages are discussed in some detail *infra,* n89 but it bears noting in the present context that they are enforceable and can be cited as further support of the view that the amount of the debt need not be recited in the security instrument. n90

§ 101.01(c)(2) The Security Instrument.

A legal security instrument may take one of two forms. In all states it can take the form of a mortgage, and in about half of the states it can appear as a deed of trust. The legal requirements for the security instrument are generally identical for each type of instrument, with the exception that for deeds of trust a trustee should be named. Whether a security interest is regarded as a defeasible legal title or as a lien, it is an interest in real property and thus is subject to the statute of frauds and to the usual delivery requirements for instruments affecting title to realty. n91 The statute of frauds will usually be satisfied by a writing that (1) identifies the mortgagor and mortgagee (and also the trustee if intended), n92 (2) describes the realty interest encumbered, and (3) manifests the intent to make the realty interest security for a debt. n93 For a discussion of the specificity with which these matters should be addressed, the reader is referred to the chapter dealing with conveyances. n94

In title theory states, it is arguable that additional technical requirements must be met. n95 A simple manifestation to encumber title as security might not suffice in some title theory states. Words of conveyance, such as "transfer," "bargain and sell," and the like, may be necessary suggesting that language "mortgaging" the land might not suffice; n96 further, words of inheritance might be necessary to mortgage the land for a period beyond the mortgagor's lifetime. n97 It has been contended that even in lien theory states the legal requirements for a conveyance must be met to create a formal mortgage, n98 but this position has not won wide acceptance. n99 In all likelihood, such concerns are relatively insignificant, since legally defective mortgages even in title and lien theory states alike will invariably be salvaged as equitable mortgages. n100

Where all the requirements for an enforceable legal mortgage are not present, but the parties intended to create a security interest in land, the courts of equity often will give effect to that intention by treating the transaction as an equitable mortgage. The situations in which equitable mortgages arise are treated in § 101.08(a) through 101.08(b)(4).

As previously noted, n101 it is seldom required that the debt be described in the mortgage.

Under the Uniform Land Transactions Act, the requirement for an enforceable mortgage is merely a "security

agreement containing a description of the collateral" signed by the debtor. n102 Several states have similar provisions easing the technical requirements for formal mortgages. n103

§ 101.01(d) Federal Influence.

Since the New Deal, the federal government has taken an increasingly significant role in influencing the law of mortgages in the country. Until the 1970's the federal government concentrated on regulating lenders. The national government chartered saving and loan associations and gave them a preference in making real estate loans. Most importantly, the federal government in granting mortgage insurance through the Federal Housing Administration, was instrumental in causing lenders to make long-term loans with full amortization of principal and interest in lieu of the short-term loans with balloon payments that had been so common. By the early 1970's the federal government shifted its focus away from the lenders and to the secondary market; that is, it concentrated its efforts on developing and maintaining a nation-wide market for the sale of mortgage debt, and in the course of this effort promulgated essentially uniform forms for mortgage documentation. n104

Several factors contributed to the change in the federal orientation. First, the savings and loans associations faced stiff competition for mortgage money from other lenders, such as real estate investment trusts and pension funds. Secondly, interest rates began to experience great fluctuations, which often made it difficult for savings and loan associations to make loans, because they were compelled to pay greater interest to their depositors than they could recoup from the loan portfolios. In this environment, the federal government saw its role as developing a market for the associations to market their portfolios in order to generate capital for new loans or, as Professor Burke expresses it, "to keep the mortgage portfolios of the associations current, so that their borrowing would be at rates lower than their lending." n105 Congress thus authorized the Federal National Mortgage Association (FNMA), which had formerly dealt primarily in Federal Housing Administration and Veterans Administration loans, to purchase conventional mortgage loans as well and then to sell them to investors. The market thereby enabled lenders in areas of the nation where funds are not readily available to market their loans in the secondary market to investors in other regions and, although selling their loans at a discount, to realize an immediate profit and to obtain new funds for further loans. n106 FNMA, although originally created as a federal agency, is today a private corporation with several appointees of the President of the United States on its board of directors. n107 The Government National Mortgage Association and the Federal Home Loan Mortgage Corporation also play a role in maintaining the secondary market. n108

In the context of the law of mortgages, the significance of this federal cultivation of the secondary market is two-fold. First, in order to provide purchasers some assurance of what they are buying, FNMA and FHLMC collaborated in producing uniform note and mortgage forms for use in loans to be sold in the secondary market. n109 Secondly, the use of these federally approved forms permits arguments to be made that a uniform federal common law should be employed in resolving disputes arising under them, at least where the federal government or its instrumentality is a litigant.

The federally approved forms are not uniform in the strict sense, since there is an effort to tailor them to acceptable peculiarities of local law.

While the law of mortgages, like that of real property generally, is usually thought of as the exclusive domain of the states, the pervasive involvement of the federal government in the field often raises issues of federal preemption. The federally approved mortgage form provides that it "shall be governed by federal law and the law of the jurisdiction in which the Property is located." n110 The courts have been grappling for some time with the conflicts that can arise between the local and federal law with respect to mortgagors and mortgagees.

A leading case illustrating the problem is *United States v. Stadium Apartments, Inc.,* n111 in which the federal government successfully argued that a foreclosure of a mortgage held by it could not be subject to Idaho's statutory redemption right. The mortgage in question provided for a waiver of the right to redeem statutorily "to the extent permitted by law" without specifying federal or state law. The Ninth Circuit, however, concluded that, when a federally insured mortgage is involved, federal common law should be invoked to protect the "federal program against loss." n112 Numerous other decisions have agreed that no statutory redemption right survives a foreclosure by the federal government or its instrumentalities. n113 On the other hand, the Ninth Circuit also subjected a foreclosure of a Farmers Home Administration loan to state statutory redemption rights, finding that federal policy would be advanced by permitting statutory redemption of Farmers Home Administration loans. n114 Some cases suggest that federal law determines the remedies available to the federal government or its instrumentality. The federal government has succeeded in securing the appointment of a receivership where state law would not countenance the appointment. n115 It has recovered deficiency judgments in the face of a state anti-deficiency statutes. n116

The Supreme Court has asserted that, while federal law is determinative of these types of controversies, state law may often be incorporated in the federal law. In *United States v. Kimbell,* n117 the Court indicated that the federal interest in a national standard, and the impact of a state rule upon the federal interest involved, should play a prominent role in determining whether the federal law should incorporate the state rule. This method of analysis has resulted in holdings that a foreclosure of a Small Business Administration loan is subject to state statutory redemption rights. n118

§ 101.01(e) Mortgage Loan Contracts.

§ 101.01(e)(1) Formation and Terms.

Contracts to lend and borrow money on the security of a mortgage or deed of trust are governed by the traditional rules of contract formation. These agreements are commonly referred to as loan commitments and range from the comparatively straightforward undertakings by home mortgage lenders to extremely detailed agreements to finance large construction projects. An enforceable loan commitment requires agreement on the terms of the loan, the realty which will serve as security, and mutuality of obligation. n119 With respect to the terms, parties must agree upon the principal amount of the loan, the rate of interest, and the terms of repayment. n120 The security must be described with sufficient specificity to permit it to be located. In most states commitments are within the statute of frauds, at least if they are for amounts above levels established by statute and, accordingly, must be reduced to a writing. n121

The requirement for mutuality of obligation is a common source of difficulty. Under general common law principles, a promise unsupported by consideration is unenforceable. Both parties to a commitment must be obligated to perform before a legally enforceable contract is formed. A promise by a lender is not binding without consideration. The necessary consideration may take two forms: a reciprocal promise by the borrower to borrow, or the actual receipt of something of some tangible value to the lender. Borrowers are seldom willing to obligate themselves to close a loan since they desire the choice of accepting more favorable terms from other lenders if available before closing. Often, however, borrowers pay a fee to their lenders as consideration for keeping their offers to lend open for a time. This fee, sometimes referred as a loan commitment fee or a stand-by fee, is sufficient consideration to support the promise to lend and, in effect, recreates in borrowers an option to close or not. n122 These commitment fees must be distinguished from the myriad of other fees which typically accompany commitment agreements. Appraisal fees, documentation fees, processing fees, and related charges are not meant to support a promise by the lender to lend and, although they may be non-refundable, they do not by themselves provide consideration for any promise to fund the loan.

Under most residential loan commitments, it is fairly apparent that the parties did not intend to impose an obligation on the borrower to close the loan. Residential loan commitments are almost always either options to borrow or, in all too many instances, merely statements of intent to lend. Where the lender receives no consideration for a firm offer to lend, and simply indicates that it is willing or prepared to make a particularly described loan, the lender is free to decline to fund the loan, as many residential borrowers learn when interest rates climb between the time they thought they had commitment and closing. In many commercial loans and especially with construction commitments, though, the agreement makes it clear that the lender is assuming a legal obligation to fund the loan and the lender receives a legitimate commitment fee to support the undertaking. Where the lender is legally obligated to fund the loan, the question becomes whether the commitment fee was merely consideration to support the promise to fund or was payment intended as liquidated damages in the event the borrower refused to close the loan. Numerous courts have treated commitment fees as valid provisions for liquidated damages. n123 It would seem that the commitment fee could not be both consideration for an option and liquidated damages, for there would be no obligation to be breached and compensated for by damages if the borrower merely held an option; yet, courts occasionally speak of the fees as both creating options and constituting liquidated damages. n124

When it comes to determining whether the borrower is legally obligated to close the loan, results are often difficult to predict. With residential loans, the documents usually make it fairly clear that no such duty was undertaken. In these loans, even though a commitment fee may have been paid to the lender, it was meant only to render the lender's promise to fund irrevocable; the lender's promise was not given to support any reciprocal promise by the borrower to accept the loan. Apart from these typical residential cases, the documents vary so greatly that it is impossible to generalize. Often there are ambiguities in the commitment agreements. Here, as with the residential commitment, there is the possibility of finding that the borrower held an option with no obligation to close. Secondly, particularly with permanent construction lenders who typically demand a hefty deposit when the commitment is executed, the deposit may be treated as a vehicle for giving the lender liquidated damages in the event the borrower opts not to close the loan. Under this construction, although the borrower would be obliged to close, forfeiture of the deposit would be the lender's sole remedy.

LEXIS: loan or mortgage pre/1 commitment w/50 require! or enforce!

§ 101.01(e)(2) Remedies for Breach by Lender.

Upon breach by a lender of an enforceable commitment contract, the borrower has two potential remedies: damages and specific performance.

If the borrower has been able to secure financing from another source after the breach, on terms more favorable than those in the breached contract, the damages should be limited to recovery of any commitment and other fees paid to the lender and the costs incurred in preparing to close the breached loan contract. n125 But, if more favorable financing could not be obtained, the damages should also include the present value of the increased loan contract. n126 Computing the value of these increased costs is relatively simple, if an appropriate interest rate to use in making the calculation can be established. n127 One could reduce to present value all payments that would have been made under the breached agreement and that will be made under the new one; the difference would represent the borrower's damages. n128 Consequential damages would also include lost opportunities, so long as the proof is not speculative. n129 One court allowed recovery for equity in property lost because of the breach. n130

Specific performance is usually denied borrowers, absent proof that the lender's conduct has made it difficult or impossible for the borrower to secure new financing. Mere breach by the lender does not entitle the borrower to specific performance since, presumably an adequate legal remedy exists. But, where the lender simply refused to fund the loan but has partially performed before repudiating the commitment, leaving the borrower with an unfinished construction

project and a recorded cloud on his title, an adequate legal remedy may not be available, since other lenders will probably refuse credit. In this situation, specific performance may be available.

LEXIS: loan or mortgage pre/1 commitment w/50 remedy!
or breach or damage

§ 101.01(e)(3) Remedies for Breach by Borrower.

Where a borrower fails to close the loan when legally obligated to do so, the redress of the lender should be restricted to money damages. Specific performance is not a proper remedy where the legal remedies afford adequate compensation. Since lenders seek merely a profit on their loans, legal relief in the form of monetary awards seems sufficient. n131

However, damages too are not always available to lenders. Usually lenders are able to place the funds with other borrowers on terms equally favorable to the lenders as the terms in the commitment agreement with the breaching borrower. If such is the case, recovery should be limited to unreimbursed costs incurred in preparing to close the rejected loan and any lost interest on the funds between the date of the commitment and replacement of the funds elsewhere. Where the actual loss to the lenders is offset by greater profits on a later placement of the funds, no damages would have been sustained.

Upon suffering a default, lenders are obliged to attempt to mitigate their damages by making reasonable efforts to place the funds elsewhere.

If the lender is unable to obtain comparable or better terms to place the funds, damages are, of course, appropriate and should be measured by computing the present value of all payments that would have been received under the agreement which was breached and of all payments under the replacement loan. The difference between these figures with interest thereon would seem the appropriate measure. n132

CHAPTER 101 MORTGAGES, DEEDS OF TRUSTS AND RELATED LIENS

12-101 Thompson on Real Property, Thomas Editions § 101.02

AUTHOR: Professor Jerome J. Curtis, Jr. McGeorge School of Law University of the Pacific

§ 101.02 Rights and Duties Before Default.

§ 101.02(a) Possession.

§ 101.02(a)(1) Mortgagor's Right to Possession.

Whether the mortgagor is entitled to possess the encumbered property is dependent upon the theory of mortgages espoused by the particular jurisdiction and the enforceability of provisions in the mortgage agreement addressing the right to possession.

In title theory states, the mortgagor, absent an agreement to the contrary, is not entitled to possession because legal title to the possessory estate has been transferred to the mortgagee. n133 Similarly, intermediate states afford the mortgagor the right to possession until default at which time the title to the possessory estate passes to the mortgagee who may take possession unless precluded from doing so by agreement. n134 In practice, in both types of jurisdictions, most mortgages provide that the mortgagor may keep possession until default and often authorize the mortgagee to elect to take possession upon a default. It has been asserted that courts in title theory states are quick to find agreements between mortgagors and mortgagees conferring the right to possession on the former at least until default, n135 but the issue does not appear to have arisen in recent years. The dearth of authority is probably evidence of the prevalence of express agreements favoring the possessory right of the mortgagors. It is worth noting that statutes in some title theory states require that mortgagors of residential property intended for their personal use be permitted to occupy the premises until default notwithstanding the general rule in those states. n136

Lien theory states, which regard the mortgagor as an owner who cannot be divested of the incidents of ownership except by foreclosure or perhaps agreement, recognize a possessory interest in the mortgagor. Mortgagors in lien theory states, except where there are enforceable provisions in their mortgage agreements to the contrary, retain all the usual incidents of legal possession, including the right to lease the premises to others. n137 One limitation on the prerogatives of mortgagors, however, is the law of waste. Frequently, mortgages contain rents and profits clauses which purport to grant mortgagees the right to the income from the property upon default and the right to take possession in order to effect the collection. Such clauses have received varied receptions in lien theory states and are the subject of § 101.02(a)(c)(3), *infra.*

On this issue the deed of trust deserves separate comment. Despite the theoretical legal title of the trustee, that title is usually regarded as existing solely for security purposes, and the trustee is not afforded the right to possession simply because of the deed of trust. n138 In adjudicating possessory claims under deeds of trust, courts resolve them by reference to the principles governing mortgages. In title theory states, the beneficiary is entitled to possession under a deed of trust unless the trustor and beneficiary have otherwise agreed, which, of course, they almost always have. n139 In lien theory states, the trustor is entitled to possession until foreclosure unless there is an enforceable agreement conferring possession on the beneficiary. n140

COMPUTER-ASSISTED RESEARCH:

LEXIS: "title theory" "lien theory" /s possession

§ 101.02(a)(2) Mortgagee in Possession.

In both title and lien theory states, mortgagees sometimes take, or find themselves in, possession of the encumbered property. Of course, in title theory jurisdictions, they are legally entitled to possession unless by agreement or conduct they have renounced or conditioned the right. n141 Lien theory states are divided about the enforceability of agreements purporting to entitle mortgagees to possession upon default by mortgagors, although most of them permit mortgagees to take possession with the consent of their mortgagors. Regardless of the basis of the mortgagees' possession, however, they assume significant burdens upon assuming the status of a mortgagee in possession.

A mortgagee in possession is one lawfully occupying the premises. n142 However, the mortgagee's possession must be founded upon the mortgage, whether the justification be consent or good faith entry, if the mortgagee is to avoid being classified as trespasser; n143 otherwise, the mortgagee in possession will be treated as a trespasser. n144

In title theory states, where mortgagees are entitled to possession except where they have somehow renounced the right, as by agreement with the mortgagors, it is relatively simple for them to acquire the status of a mortgagee in possession. Any taking of possession under color of the mortgage, except perhaps one effected by force, n145 would confer "mortgagee in possession" status on the mortgagee. In intermediate theory states, the same result would obtain so long as the mortgagor was in default at the time of entry by the mortgagee.

Lien theory states justify awarding possession lawfully to mortgagees in the face of their general recognition of the mortgagor as owner upon a finding that the mortgagor has consented to the mortgagee's entry. In some lien theory states, mortgagors may voluntarily put their mortgagees in possession after a default. n146 In many lien theory states, this consent may be given in the mortgage itself as, for example, through a rents and profits clause. n147 Even without consent on the part of the mortgagor, lien theory states often confer "mortgagee in possession" status upon mortgagees who take possession in the good faith belief that the mortgage authorizes entry. The most common example of such an entry is that of a mortgagee purchasing at a defective foreclosure sale by the mortgagee. n148 Here, the mortgagee may not have acquired a perfect title to a possessory estate, but the foreclosure sale was based upon the mortgage and the mortgagee's claim to possession is traceable to the mortgage. Where, however, the defect renders the foreclosure sale void, and not merely voidable, it has been held that the purchasing mortgagee in possession is not a mortgagee in possession. n149

Factual disputes can arise as to whether the actions of a mortgagee have amounted to the taking of possession and, of course, because of the rather onerous burdens cast upon mortgagees in possession, mortgagees are well advised to be circumspect in their dealings with the mortgaged premises to avoid the unwanted assumption of those burdens. The mere receipt of rents under a rents and profits clause will probably not make one a mortgagee in possession, n150 while managing the property in the absence of the mortgagor probably will. n151

Despite the major responsibilities imposed on mortgagees in possession, there are also several advantages. First, once

mortgagee in possession status is gained, the mortgagee is entitled to retain possession until the mortgagor redeems or the mortgage is foreclosed. n152 The right of the mortgagee to keep possession is graphically illustrated by cases allowing mortgagees to remain in possession until payment or foreclosure, where the statute of limitations has run on the mortgage debt. n153 Even a forcible reentry by the mortgagor will not terminate the possessory right of a mortgagee in possession. n154 Other advantages include being in a position to oversee the mortgaged property, to avoid threatened waste by the mortgagor, and to collect rents, although these benefits can often be obtained by less burdensome means. A mortgagee in possession is also entitled to full damages from those tortiously injuring the property. n155

Mortgagees in possession assume obligations to their mortgagors and to others. To their mortgagors they are bound (1) to manage the property in a prudent manner, and (2) to apply the net income to the mortgage debt. n156 Mortgagees in possession are not true fiduciaries, but courts often speak as though their duties closely approximate those of true fiduciaries. Mortgagees in possession are required to exercise reasonable care in protecting the property. n157 They must make necessary repairs. n158 Because the duty includes exercising reasonable care to render the property productive, they are chargeable with the rental value of the property after deducting the costs of taxes and other necessary expenses paid. n159

As possessors, mortgagees in possession owe third parties the usual obligations which the law of torts imposes upon possessors and, in addition, may incur liabilities in tort and contract in connection with managing the property. n160

According to the majority view, mortgagees in possession who pay necessary property taxes do so in satisfaction of their duty to protect the mortgagor's interest and not to acquire an adverse interest; similarly, in purchasing the property at a tax sale, mortgagees in possession take title on behalf of the mortgagor. n161 Some jurisdictions permit a mortgagee not in possession to appropriate a tax title for the mortgagee's own benefit. n162 Mortgagees in possession are not entitled to compensation for the value of their personal services in managing and protecting the property n163 unless the mortgagor has agreed to compensation and local law enforces such an agreement. n164

Because junior lienors have interests in the equity of redemption, mortgagees in possession owe them the same duties owed the mortgagor. n165

Mortgagees in possession receive all rents and profits on behalf of the mortgagor and must apply them to the mortgage debt and account to the mortgagor. n166 However, it is only the net income which must be set off against the mortgage debt, since the mortgagee is entitled to credit for expenditures incurred in fulfilling the duty to manage the property. Unless the parties arrange a private accounting, an accounting can be compelled only in an equitable proceeding to redeem brought by the mortgagor or in a foreclosure proceeding brought by the mortgagee. n167 The mortgagor in demanding an accounting must also do equity by offering to pay the mortgage debt.

It is generally agreed that the occupancy of a mortgagee in possession, by itself, cannot form the basis of an adverse possession claim n168 although some states hold otherwise. n169 Possession following a breach in the mortgagee's duty to account has been treated as the commencement of adverse possession. n170

Although mortgagees in possession may enter into leases encumbering subordinate interests, such leases are subject to the right of mortgagors to redeem. n171 This view has been carried to the extreme of giving a mortgagor the benefit of improvements made by a tenant of a mortgagee in possession. n172

Mortgagees in possession also owe third parties the usual tort obligations the law imposes on possessors of land. n173 They have also been held liable for damages on real covenants running with the land. n174 In title theory jurisdictions liability results from the succession of the estate from mortgagor to mortgagee, which places the covenantee and mortgagee in privity of estate; n175 lien theory states are divided on the issue, with most holding that, since legal title remains in the mortgagor until foreclosure, there is no succession of interest between mortgagor and mortgagee and hence no privity of estate between the covenantee and mortgagee. n176 Because the burdens of covenants can run in

equity without privity of estate, it would seem that mortgagees in possession could be bound by equitable servitudes. n177 There is also the risk that, in taking possession, mortgagees will so involve themselves in the management of the property or business conducted there that they incur tort and contract liabilities arising out of such involvement.

As a remedy for default, a receivership often holds greater attraction to mortgagees than taking possession as a mortgagee in possession. While receivership is not always an available remedy, n178 it should always be at least considered by a secured party contemplating becoming a mortgagee in possession. A recurring problem is that facing construction lenders whose developer-mortgagors have abandoned the project before completion. The lender may be entitled to the appointment of a receiver but, if not, must then choose between foreclosing against the uncompleted project or completing construction. Under the first course, the lender runs the risk that foreclosure will not bring a sufficient price to retire the construction loan. The second course converts the lender into a mortgagee in possession with all the concomitant obligations. Moreover, many other liabilities can be thrust upon those who become mortgagees in possession, not the least of which is the possibility of being responsible for hazardous material clean-up costs under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). n179

§ 101.02(b) Receiverships.

A court of equity has inherent authority to appoint a receiver to take charge of mortgaged property and to collect the rents and profits. The power is not dependent on provisions in the security instrument authorizing the appointment, nor does such a provision in the instrument give a right to the appointment. n180 Once appointed, the receiver becomes an officer of the court with duties owed to both mortgagors and mortgagees. n181 The grounds for securing the appointment of a receiver vary among the states, but, since receiverships are creatures of equity, the presence of equitable grounds is essential, n182 such as insolvency of the mortgagor, n183 inadequacy of the security, n184 threat of waste, n185 existence of a rents and profits clause, n186 and the non-availability of adequate legal remedies. n187 Mortgagees often seek receivership to avoid the liabilities of mortgagees in possession when their mortgagors have defaulted and abandoned or neglected the encumbered property.

The usual objective in seeking a receiver is the preservation of the physical or financial security, and indeed it is often held that proof of impending waste is essential to the appointment of a receiver. n188 Thus, if a mortgagor is neglecting to care for the property, a receiver may be sought to take physical possession in order to maintain the premises. The financial worth of the security may also be safeguarded by a receiver applying income to the payment of real estate taxes and other charges against the property. n189 A secondary objective is sometimes to dampen the mortgagor's resistance to foreclosure. Some mortgagors, while in possession, do all they can to forestall foreclosure by asserting unmeritorious defenses; once a receiver takes over the property, the incentive to persist in such conduct may be abated. n190

While a receiver can be appointed in conjunction with foreclosure proceedings, foreclosure is not a prerequisite for appointment. Nevertheless, receivership is more easily obtained when foreclosure is proceeding simultaneously than otherwise. n191 At least in title theory states, it can be contended that mortgagees have adequate legal remedies in ejectment after default, since they are then usually entitled to possession. Should mortgagees in title theory states seek foreclosure along with the appointment of a receiver, equity regards as done what ought to be done and, to preclude prejudice to the foreclosing mortgagees occasioned by the time lag between the petition for foreclosure and the foreclosure sale, may in appropriate circumstances appoint a receiver to serve pending foreclosure. n192

The foreclosing mortgagee should not be subjected to depreciation in the value of the property while the foreclosure is

pending, and thus, regardless of the applicable theory, a receiver should be appointed in conjunction with foreclosure upon a showing that the property value will decline if the mortgagor is left in possession or that, without the rents and profits, the security will be inadequate. n193 Even if a mortgagee does not wish to institute a foreclosure, n194 though grounds for foreclosure exist, a receivership would seem nevertheless appropriate where misconduct by the mortgagor poses a threat to the adequacy of the security. Still, courts often erect additional hurdles. A common additional factor often mentioned in the cases is the insolvency of the mortgagor, but insolvency is little more than a "make-weight reason," for mortgagees bargain for security in specific property and should not be forced to accept the general credit of their debtors in substitution. n195 The key is whether the evidence establishes that a receivership is necessary to avoid prejudice to mortgagees while foreclosure is pending. If prejudice is demonstrated, appointment should be available whether a judicial or private foreclosure is pending. On the other hand, inadequacy of security even when accompanied by mortgagor insolvency should not suffice without proof that waste or other threatened impairment is likely unless equity intervenes and appoints a receiver.

In lien theory states, the right of mortgagors to possession and all its fruits until foreclosure, including rents and profits, might be seen as placing a formidable barrier in the path of mortgagees seeking a receivership. Yet, these states generally proceed according to the same rules as title theory states. n196

In some jurisdictions, a provision in the security instrument can be crucial in establishing the secured party's entitlement to a receiver. In some states, a clause conferring entitlement to a receiver upon certain contingencies may be enforced without the usual showing of waste, debtor insolvency, or inadequacy of security. n197 In California, for example, a rents and profits clause may be the basis for a specific performance action seeking the appointment of a receiver to collect the rents and profits without proof of inadequate security and the like. n198 In other jurisdictions, such provisions do not obviate the need to establish independent equitable grounds. n199

§ 101.02(c) Rents and Profits.

§ 101.02(c)(1) Mortgage Antedating Lease.

The right of a mortgagee to enforce leases made by a mortgagor after a mortgage has been given often varies depending upon whether the title or lien theory of mortgages is followed. Privity of estate or privity of contract must exist between parties before they are mutually bound and benefitted by covenants in a lease. It is rare that a tenant undertakes a contractual obligation for the benefit of a prior mortgagee, and therefore the rights of the prior mortgagee against the tenant are usually dependent upon a finding that privity of estate exists between them.

Under the title theory, there is no privity of estate between a prior mortgagee and a subsequent tenant. This is because in entering into the later lease, the mortgagor is not transferring any interest of the mortgagee. Additionally, it may be observed, in this situation the mortgagor has kept a reversion and thus, not having assigned the entire interest to the tenant, does not create that mutual and successive privity necessary to establish privity of estate between the mortgagee and the tenant. n200 As a result, the mortgagee can neither enforce the tenant's lease obligations nor be held responsible for the mortgagor's obligations as landlord. n201 Should the mortgagor default, the mortgagee may, of course, foreclose or assert the title theory mortgagee's right of possession. If the mortgagee elects to take possession, the mortgagee thus asserts the priority of the mortgage and repudiates the mortgagor's right to let the premises, thereby giving the tenant the option of accepting the mortgagee as a new lessor or of vacating the premises and terminating the rental obligations. n202 In addition, whether or not the mortgagee has taken possession, if the mortgagee has taken an assignment of rent and profits, the mortgagee will be able to enforce the burdens of the lease against the subsequent tenant as a contract

assignee. The tenant's liability here is based on privity of contract, and the lack of privity of estate, even in title theory states, should be immaterial. In contrast, not having assumed the burdens of the lease, the mortgagee should not be held personally responsible for the mortgagor's obligations under the lease. n203

On the other hand, the tenant in title theory states, just as in lien theory ones, will have taken the leasehold subject to the prior mortgage, since the mortgagor could transfer to the tenant no greater rights than the mortgagor held. Therefore, the mortgagee, unless barred by agreement or otherwise, n204 may oust the tenant from the premises upon a breach of the mortgage debt. Privity between the mortgagee and the tenant is not necessary to enable the mortgagee to enforce interests in the premises antedating the lease. This right in the mortgagee to evict the subsequent tenant puts the mortgagee in a position to compel the tenant either to vacate the premises or to agree to such terms as the mortgagee proposes. Often mortgagees offer to allow the tenant to remain upon the condition that the tenant tender performance due under the lease with the mortgagor to the mortgagee; where the tenant agrees to the proposal, a contractual relationship is established between the mortgagee and the tenant, who then becomes the tenant of the mortgagee rather than the mortgagor.

In lien theory states, the rights of mortgagees against subsequent tenants of their mortgagors are vastly different. In lien theory states mortgagors are entitled to possession until foreclosure, absent an enforceable agreement providing otherwise. The enforceability of such agreements is discussed at § 101.02(c)(3), *infra*. Consequently, even after a default by mortgagors, mortgagees cannot demand that tenants tender performance to them under penalty of eviction for refusing to do so, unless an enforceable rents and profits clause gives rise to such entitlement. Until foreclosure, the relevant privity of estate is between the mortgagor and the tenant, leaving contractual privity based upon a rents and profits clause or other agreement as the only potential basis for holding the tenant personally bound to the mortgagee.

Although most jurisdictions agree that junior leases are destroyed by a foreclosure in which the lessees are joined, there is a split of authority on the question whether such leases survive foreclosure if the tenants are omitted from the foreclosure. n205

§ 101.02(c)(2) Mortgages After Leases.

As in the cases of leases antedating mortgages, the theory to which a particular state subscribes can be critical in determining the ability of the mortgagee to claim the benefits of a lease made before the mortgage.

In title theory states, where the lease exists at the time the mortgage is given, the mortgagor is transferring to the mortgagee a landlord's reversion and consequently is putting the tenant and the mortgagee in privity of estate. n206 The mortgagee is therefore entitled to claim the benefit of all covenants binding the tenant, including the covenant to pay rent, and may be obliged to perform the lessor's obligations under the lease. n207 Despite the privity between them, tenants may continue to pay rent to their mortgagors until their mortgagees notify them that henceforth rents are to be paid to the mortgagees. n208 It would seem, though, that the mortgagee might not be bound to perform the lessor's undertakings until default by the mortgagor since until default the mortgagor may retain a right of entry which should preclude that type of privity between the mortgagee and the tenant necessary for the burdens of covenants to run to the mortgagee; upon default, the right of entry is gone, and the mortgagee is completely substituted for the tenant. n209 With respect to the benefits of the tenant's covenants, however, complete substitution is unnecessary to establish privity between the mortgagee and the tenant. n210

Although in title theory states mortgagees have sufficient privity with tenants under leases antedating the mortgage to enforce the undertakings of tenants under the leases, it is generally held that this right is not self-executing. The right is

not exercisable until the mortgagee notifies the tenant of an election to enforce the covenants. Thus, after notice, the tenant must pay rent to the mortgagee rather than to the mortgagor. Rents, however, which were due but unpaid when the notice was given, as well as rents paid in advance to the mortgagor before notice, are not among the entitlements of the mortgagee. n211

In lien theory states the same rule governs mortgages given after leases as governs those given before leases. n212 In both cases, to the mortgagor is entitled to possession and all its incidents, including the rights to let and collect rents, until foreclosure. The mortgagor does not hold a sufficient interest in the premises to claim the benefit of any covenants in the lease, except perhaps where the mortgage contains a rents and profits clause. Such a clause purports to assign rents to the mortgagee and can take a variety for forms. The law governing such clauses is not uniform and is taken up in § 101.02(c)(3), *infra.*

The right to enforce the tenants' covenants aside, in neither title nor lien theory jurisdictions may a mortgagee evict a tenant except upon a breach by the tenant of a dependent covenant in the lease. Because the lease preceded the mortgage, the mortgagee took subject to the lease and thus is subordinate to the tenant's possessory interest. Of course, in title theory states, if the tenant were to default in performing obligations under the lease, the mortgagee could elect to exercise any rights to terminate the lease by reason of the tenant's breach given under the lease or local law. In doing so, the mortgagee would assume the status of a mortgagee in possession with its accompanying liabilities. In lien theory states, even a breach by the tenant will not permit the mortgagee to terminate the lease, since that prerogative belongs to the mortgagor until foreclosure.

The existence of a lease can raise questions in the context of foreclosure, a matter taken up in § 101.04(b)(3), *infra.*

§ 101.02(c)(3) Rents and Profits Clauses.

Most mortgages contain provisions transferring the rents and profits to the mortgagee. n213 These clauses take a number of forms. They can purport to be absolute and present assignments of the income from the premises. n214 More likely, they will transfer the rents and profits merely as "further security." In fact, some courts hold that clauses purporting to work absolute, present assignments, at least presumptively, create only inchoate security interests. n215 The presence or absence of the common clause reciting that the assignment "is for further security," may be quite probative of whether an absolute assignment will be recognized. n216 No matter the form or interpretation of these clauses, they are designed to permit mortgagees to take possession and collect rents or to secure the appointment of a receiver when the mortgagees believe their security is in jeopardy. Often the clause is worded as a conditional assignment providing that, upon mortgagor default, the mortgagee shall be entitled to rents or that a receiver may be appointed to take control of the premises and collect the rent. Such a conditional assignment of rents has been upheld as a self-perfecting assignment upon default. n217

Rents and profits clauses may be invoked independently of foreclosure actions. n218 The clauses do not, however, cover general business income derived from a mortgagor's operations on the premises. n219

In title and intermediate states, mortgagees will be entitled to take possession and collect rents without rents and profits clauses although even in these states an assignments clause can aid in securing the appointment of a receiver. n220

In lien theory states, these clauses have received varied treatment. They have been found totally unenforceable in some lien jurisdictions as constituting impermissible clogs on the mortgagor's right to possession until foreclosure. n221 It is sometimes held that absolute assignments conditioned on default are enforceable and self-executing upon default,

although this approach is not carried to the logical conclusion that, upon default, the mortgagee is burdened with the status of a mortgagee in possession. n222 The usual view in lien theory jurisdictions seems to be that the clauses, even if worded as absolute assignments, create a type of security interest which is not self-executing; that is, which requires some action by the mortgagee to become operative, or at least to presume that such was the intent of the parties. n223 In many of these jurisdictions, perfection requires the taking of possession by the mortgagee, the appointment of a receiver, or the sequestration of rents by court order. n224 A demand on the tenant for the rents may sometimes suffice. n225 California courts, for example, although they acknowledge the possibility of an absolute, present assignment of rents and profits, have never accorded such an interpretation to a rents and profits clause, and have insisted upon some action by the mortgagee to perfect the security interest. n226 In 1996, the California legislature for all practical purposes abolished the distinctions among the various types of assignments of rents and profits by providing that all assignments should be deemed perfected upon recordation and setting methods for their enforcement. n227

A major consideration facing any mortgagee wanting to perfect a security interest under a rents and profits clause is the possibility that, unless perfection is made through the appointment of a receiver, the mortgagee may become a mortgagee in possession. It is generally accepted that the mere collection of rent will not constitute one a mortgagee in possession. However, the mortgagee in collecting rents may become entangled in the operation of the property to such an extent that the mortgagee will be treated as a possessor and, hence, become saddled with the burdens of a mortgagee in possession. The risk of becoming a mortgagee in possession can be avoided by securing the appointment of a receiver to collect the income from the property. It is to ease the task of securing the appointment of a receiver that rents and profits clauses are often included in security instruments, for in many jurisdictions the appointment is more readily available where the clause is present than when it is not. n228

§ 101.02(d) Waste and Other Injury to Premises.

§ 101.02(d)(1) Waste by Mortgagors.

The security instrument almost always contains a covenant by the mortgagor to refrain from waste, but even in the absence of such an undertaking, the mortgagor, by common law or statute, may not commit waste. The mortgagee, too, if in possession, by reason of the duties imposed on mortgagees in possession, must avoid wasteful conduct; usually the mortgagee also has affirmative obligations that go beyond avoiding waste. Waste is of three types: voluntary, permissive, and ameliorative. Voluntary waste has been defined as the intentional injuring or destroying of the premises, or the unprivileged alteration of the nature and character of the premises. n229 Permissive waste is the failure to exercise that degree of care over the premises which a prudent owner would display in protecting them, n230 and it may include failing to pay property taxes. n231 Ameliorative waste occurs when changes are made in the property which increase its value. n232 It is not clear, however, in lien theory states, that permissive waste is actionable. n233

While title and lien theory states differ as to the requisites for waste, they both generally agree that mortgagors lawfully in possession are privileged to deal with the property as such property is customarily used. In title theory states, this flows from the fictional license given mortgagors let into possession by their mortgagees, n234 and in lien theory states it is a corollary of the mortgagor's title to a possessory interest.

Title and lien theory jurisdictions disagree as to whether waste requires proof of impairment of the mortgagee's security. When a mortgagor is let into possession in title theory states, the law of waste relating to landlord-tenant law is used by analogy to determine the permissible conduct of the mortgagor. Because the mortgage in these states granted legal title to the possessory estate to the mortgagee, mortgagors who have been allowed to take possession have been characterized as tenants at will, tenants at sufferance, tenants for a terms, or *sui generis* tenants. n235 Landlords have

more than a security interest in the leased premises; they have a legitimate interest in receiving the premises back at the end of their leases in the same condition in which they stood at the time they were let. While their tenants do not guarantee that the property will be returned to the lessors in their condition at the commencement of the lease, they are obliged to refrain from waste without regard to whether their acts or omissions have any impact on the value of the property. Accordingly, because of this analogy to landlord/tenant law, a determination of whether a mortgagor commits waste involves no consideration of impairment of the mortgagee's security; rather, the diminution in the value of the premises occasioned by the waste, limited by the outstanding balance on the mortgage debt, constitutes the damages recoverable in title theory states. n236 Since the amount collected cannot exceed the mortgage debt and must be credited against the debt, mortgagors suffer no undue hardship. n237

In lien theory states, in contrast, it is difficult to conceive of mortgagors in possession as committing waste since they own legal possessory estates. Nevertheless, in recognition of the legitimate security interests of mortgagees, lien theory states treat unprivileged acts or omissions by mortgagors as waste to the extent they impair the security. n238 The leading case in these jurisdictions is *Van Pelt v. McGraw*, n239 recognizing the tort of impairing security. Despite some early decisions restricting the tort of impairing security to intentional acts, negligence is today a sufficient basis. n240 The *Van Pelt* case has received legislative sanction in some statutes. n241 Thus, lien theory states recognize a legal claim for damages against mortgagors whose conduct results in a diminution in the adequacy of mortgagee's security. n242 However, a judgment for damages is often unavailable against the original mortgagor until a foreclosure sale is conducted to test the adequacy of the security, and, if the sale price proves inadequate, the availability of a deficiency judgment renders moot any inquiry into liability in waste. n243 An issue can sometimes arise in lien theory states with anti-deficiency statutes as to whether mortgagors can be held accountable for impairing security. n244

There is some confusion about what constitutes an impairment of security under the lien theory. Many lien theory states articulate a standard which almost parrots that employed in the title theory states: diminution in value attributable to the waste. n245 Others require proof that the waste has reduced the value of the security below the amount of the debt. n246

Despite the divergence of title and lien theory states over the need to show impairment of security in establishing a damage claim, impairment is a consideration in all states when mortgagees resort to equity in seeking to prevent waste. Injunctive relief will be denied, in most title and lien theory states, where there is no threat to the security. n247 For security to be adequate, the value of the property after the waste must be more than equal to the mortgage debt, for a prudent lender will certainly want a cushion. It would seem that adequacy should be measured at the time relief is sought, rather than with reference to the time the debt was contracted, since the property value may have increased or decreased greatly or the debt may have been significantly reduced in the interim.

Because the waste is fundamentally a tort, rather than a contractual breach, successors in interest to the mortgagor are usually held to the same standards as govern original mortgagors. n248 There is some authority to the effect that the successors are not bound to avoid permissive waste unless they are contractually obliged to do so. n249 Non-assuming grantees have been held bound by the same obligations respecting waste as bind original mortgagors. n250

§ 101.02(d)(2) Waste by Third Parties.

When persons other than the mortgagor or the mortgagor's successor injure the property, courts apply the same principles in establishing the mortgagee's remedies against the third parties as they would follow if the mortgagor were involved.

Mortgagors, too, may proceed against third parties who injure the property, and generally are entitled to collect full damages to the property, although they must share such recoveries with their mortgagees. n251 Even in title theory states, in which--as between mortgagors and mortgagees--the latter are regarded as legal owners, in disputes between mortgagors and third parties a legal title is recognized in the mortgagors.

In title theory states, just as lessors have redress in tort against third parties injuring the leased premises, so mortgagees, as owners of the legal estate, are entitled to damages from the third parties. This may seem inconsistent with the majority view in the United States that owners of limited real estate interests are limited to recovery for injuries to those interests and cannot collect full damages. n252 But the position is not as harsh as it may at first appear since the mortgagee must credit any recovery against the mortgage debt and remit any surplus to the mortgagor, who is thus being compensated for the injuries to the mortgagor's interest.

In lien theory states, mortgagees hold protected interests in their security, and those impairing the security are held legally responsible whether they be mortgagors or others. It was once thought that third persons could not be held liable in waste to mortgagees unless they had knowledge of the mortgages. n253 There is also some question whether third parties are responsible to mortgagees for permissive waste. n254

Of course, successors of original mortgagors can bind themselves contractually to maintain the premises and to refrain from actions injurious to the premises and thereby incur contractual obligations to mortgagees. n255 An assuming grantee should, therefore, be personally bound to the mortgagee on a covenant to repair if the mortgagee qualified as an intended beneficiary. It is conceivable that a non-assuming grantee would be bound, in title theory states, by covenants respecting maintenance on the rationale that the burden runs with the land. n256

LEXIS: third party waste remed! damage

§ 101.02(e) Application of Hazard Insurance Proceeds.

A somewhat controversial question is whether mortgagors or mortgagees are entitled to the proceeds of a hazard policy received after an insured loss. The standard mortgage requires the mortgagor to maintain fire insurance on the mortgaged property. Federal law requires certain mortgagors to insure against floods. There is some variance in the standard mortgage provisions addressing the application of the proceeds, but usually both mortgagor and mortgagee are insured as their interests may appear. n257 A literal reading of such policy language has prompted some courts to allow mortgagees to collect the policy proceeds and apply them to reduction or satisfaction of the mortgage debt against the wishes of their mortgagors and without showing insufficiency of remaining security. n258 As an Arkansas court held, in construing an agreement that the mortgagor keep the premises "insured at all times with a Co-Insurance clause," such a provision "constitutes an appropriation in advance of the insurance money to the satisfaction of the mortgage indebtedness." n259 Other courts have been more protective of the desires of mortgagors who want to use the proceeds to rebuild or repair.

One California intermediate appellate court has ruled that, under the implied covenant of good faith and fair dealing, mortgagees may not prohibit application of the proceeds to rebuilding except where the security is impaired. n260 Another California court went so far as to hold that mortgagors were entitled to the insurance proceeds even if they did not intend to rebuild so long as the mortgagee's security was not impaired. n261 A third California court refused to allow foreclosure for failure to maintain insurance coverage, as required by agreement, in the absence of impairment of security. n262 The holdings of the latter two cases were abrogated by the California legislature, but the legislature expressly stated its intention not to vitiate the holding of the first case. n263

Other courts view the insurance as designed to maintain the adequacy of the mortgagee's security. They conclude that, so long as the proceeds are used to rebuild, there is no impairment and that the terms of the policy do not by themselves give the mortgagee the right to control the proceeds. n264

§ 101.02(f) Prepayment Penalties.

A debtor has no right, except where the loan agreement or a statute n265 provides otherwise, to pay a debt before maturity, because the creditor is entitled to the benefit of the loan agreement, including interest over the agreed-upon life of the loan. n266 Many mortgage agreements, however, provide that, upon the payment of a penalty (commonly unearned interest for several months), the borrower may nevertheless prepay all or part of the outstanding indebtedness. In addition, mortgage agreements usually contain acceleration clauses permitting lenders to call the full loan due upon a default or other happening, and these clauses may or may not also call for a prepayment penalty when the loan is accelerated. n267

Where mortgagors voluntarily prepay all or part of the outstanding balance of their loans, there is usually no question of the enforceability of a prepayment penalty clause except, perhaps, as to the reasonableness of the amount of the penalty. Most courts seem to view these clauses as simply providing an alternative means of performance for mortgagors with the result that prepayment is not viewed as a breach; this approach renders immaterial any inquiry into the reasonableness of the charge since it is not designed as compensation for any breach. n268 Some courts have asked whether the penalty clauses constitute unenforceable penalties rather than valid provisions for liquidated damages, n269 although this approach seems to be in some disfavor. n270

Most of the litigation involving prepayment penalty clauses has taken place in the context of accelerations. n271 One study n272 has concluded that earlier cases refusing to sanction prepayment penalties upon accelerations have been undercut by later cases. In the early 1980's, lenders often employed prepayment penalty clauses that were sufficiently ambiguous as to permit arguments that they applied only upon voluntary prepayments. n273 Sometimes these decisions were based on the finding that, because the entire outstanding balance became due upon an acceleration, there was no prepayment except possibly where the debtor has intentionally defaulted. n274 In reaction to these types of decisions, lenders began using prepayment penalty clauses which clearly purported to entitle them to a penalty upon both voluntary prepayments and accelerations, and the courts now seem willing, at least with regard to non-residential loans, to enforce these clauses according to their terms. n275

Legislation may impose limitations on the amount of prepayment penalty. In Virginia, for example, loans of less than $75,000 secured by the borrower's residence may be prepaid upon payment of a penalty that cannot exceed 2% of the outstanding balance. n276 In California, in the case of certain loans secured by residential property, prepayment penalties are authorized during the first five years of the loan but limits are placed upon the amount of the penalties, n277 but no prepayment penalty can be collected upon an acceleration pursuant to a due-on-sale clause where the loan is secured by certain residential property. n278
